7. Advocate for federal legislation to support the creation of student loan savings accounts that allow for pre-tax dollars to be used to pay for student loans.
8. Work with other concerned organizations to advocate for legislation and regulation that would result in favorable terms and conditions for borrowing and for loan repayment, and would permit 100% tax deductibility of interest on student loans and elimination of taxes on aid from service-based programs.
9. Encourage the creation of private-sector financial aid programs with favorable interest rates or service obligations (such as community- or institution-based loan repayment programs or state medical society loan programs).
10. Support stable funding for medical education programs to limit excessive tuition increases, and collect and disseminate information on medical school programs that cap medical education debt, including the types of debt management education that are provided.
11. Work with state medical societies to advocate for the creation of either tuition caps or, if caps are not feasible, pre-defined tuition increases, so that medical students will be aware of their tuition and fee costs for the total period of their enrollment.
12. Encourage medical schools to (a) Study the costs and benefits associated with non-traditional instructional formats (such as online and distance learning, and combined baccalaureate/MD or DO programs) to determine if cost savings to medical schools and to medical students could be realized without jeopardizing the quality of medical education; (b) Engage in fundraising activities to increase the availability of scholarship support, with the support of the Federation, medical schools, and state and specialty medical societies, and develop or enhance financial aid opportunities for medical students, such as self-managed, low-interest loan programs; (c) Cooperate with postsecondary institutions to establish

collaborative debt counseling for entering first-year medical students; (d) Allow for flexible scheduling for medical students who encounter financial difficulties that can be remedied only by employment, and consider creating opportunities for paid employment for medical students; (e) Counsel individual medical student borrowers on the status of their indebtedness and payment schedules prior to their graduation; (f) Inform students of all government loan opportunities and disclose the reasons that preferred lenders were chosen; (g) Ensure that all medical student fees are earmarked for specific and well-defined purposes, and avoid charging any overly broad and ill-defined fees, such as but not limited to professional fees; (h) Use their collective purchasing power to obtain discounts for their students on necessary medical equipment, textbooks, and other educational supplies; (i) Work to ensure stable funding, to eliminate the need for increases in tuition and fees to compensate for unanticipated decreases in other sources of revenue; mid-year and retroactive tuition increases should be opposed.

13. Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties.

14. Take an active advocacy role during reauthorization of the Higher Education Act and similar legislation, to achieve the following goals: (a) Eliminating the single holder rule; (b) Making the availability of loan deferment more flexible, including broadening the definition of economic hardship and expanding the period for loan deferment to include the entire length of residency and fellowship training; (c) Retaining the option of loan forbearance for residents ineligible for loan deferment; (d) Including, explicitly, dependent care expenses in the definition of the "cost of attendance"; (e) Including room and board expenses in the definition of tax-exempt scholarship income; (f) Continuing the federal Direct Loan Consolidation program, including the ability to "lock in" a fixed interest rate, and giving consideration to grace periods in renewals of federal loan programs; (g) Adding the ability to refinance Federal Consolidation Loans; (h) Eliminating the cap on the student loan interest deduction; (i) Increasing the income limits for taking the interest deduction; (j) Making permanent the education tax incentives that our AMA successfully lobbied for as part of Economic Growth and Tax Relief Reconciliation Act of 2001; (k) Ensuring that loan repayment programs do not place greater burdens upon married couples than for similarly situated couples who are cohabitating; (l) Increasing efforts to collect overdue debts from the present medical student loan programs in a manner that would not interfere with the provision of future loan funds to medical students.

15. Continue to work with state and county medical societies to advocate for adequate levels of medical school funding and to oppose legislative or regulatory provisions that would result in significant or unplanned tuition increases.

16. Continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden of medical students, and monitor the short-and long-term impact of the economic environment on the availability of institutional and external sources of financial aid for medical students, as well as on choice of specialty and practice location.

17. Collect and disseminate information on successful strategies used by medical schools to cap or reduce tuition.

18. Continue to monitor the availability of and encourage medical schools and residency/fellowship programs to (a) provide financial aid opportunities and financial planning/debt management counseling to medical students and resident/fellow physicians; (b) work with key stakeholders to develop and disseminate standardized information on these topics for use by medical students, resident/fellow physicians, and young physicians; and (c) share innovative approaches with the medical education community.

19. Seek federal legislation or rule changes that would stop Medicare and Medicaid decertification of physicians due to unpaid student loan debt. The AMA believes that it is improper for physicians not to repay their educational loans, but assistance should be available to those physicians who are experiencing hardship in meeting their obligations.

20. Related to the Public Service Loan Forgiveness (PSLF) Program, our AMA supports increased medical student and physician participation in the program, and will: (a) Advocate that all resident/fellow physicians have access to PSLF during their training years; (b) Advocate against a monetary cap on PSLF and other federal loan forgiveness programs; (c) Work with the United States Department of Education to ensure that any cap on loan forgiveness under PSLF be at least equal to the principal amount borrowed; (d) Ask the United States Department of Education to include all terms of PSLF in the contractual obligations of the Master Promissory Note; (e) Encourage the Accreditation Council for Graduate Medical Education (ACGME) to require residency/fellowship programs to include within the terms, conditions, and benefits of program appointment information on the employer's PSLF program qualifying status; (f) Advocate that the profit status of a physician's training institution not be a factor for

PSLF eligibility; (g) Encourage medical school financial advisors to counsel wise borrowing by medical students, in the event that the PSLF program is eliminated or severely curtailed; (h) Encourage medical school financial advisors to increase medical student engagement in service-based loan repayment options, and other federal and military programs, as an attractive alternative to the PSLF in terms of financial prospects as well as providing the opportunity to provide care in medically underserved areas; (i) Strongly advocate that the terms of the PSLF that existed at the time of the agreement remain unchanged for any program participant in the event of any future restrictive changes; (j) Monitor the denial rates for physician applicants to the PSLF; (k) Undertake expanded federal advocacy, in the event denial rates for physician applicants are unexpectedly high, to encourage release of information on the basis for the high denial rates, increased transparency and streamlining of program requirements, consistent and accurate communication between loan servicers and borrowers, and clear expectations regarding oversight and accountability of the loan servicers responsible for the program; (l) Work with the United States Department of Education to ensure that applicants to the PSLF and its supplemental extensions, such as Temporary Expanded Public Service Loan Forgiveness (TEPSLF), are provided with the necessary information to successfully complete the program(s) in a timely manner; and (m) Work with the United States Department of Education to ensure that individuals who would otherwise qualify for PSLF and its supplemental extensions, such as TEPSLF, are not disqualified from the program(s).

21. Advocate for continued funding of programs including Income-Driven Repayment plans for the benefit of reducing medical student load burden.

22. Strongly advocate for the passage of legislation to allow medical students, residents and fellows who have education loans to qualify for interest-free deferment on their student loans while serving in a medical internship, residency, or fellowship program, as well as permitting the conversion of currently unsubsidized Stafford and Graduate Plus loans to interest free status for the duration of undergraduate and graduate medical education.

23. Continue to monitor opportunities to reduce additional expense burden upon medical students including reduced-cost or free programs for residency applications, virtual or hybrid interviews, and other cost-reduction initiatives aimed at reducing non-educational debt.

24. Encourage medical students, residents, fellows and physicians in practice to take advantage of available loan forgiveness programs and grants and scholarships that have been historically underutilized, as well as financial information and resources available through the Association of American Medical Colleges and American Association of Colleges of Osteopathic Medicine, as required by the Liaison Committee on Medical Education and Commission on Osteopathic College Accreditation, and resources available at the federal, state and local levels.

25. Support federal efforts to forgive debt incurred during medical school and other higher education by physicians and medical students, including educational and cost of attendance debt.

26. Support that residency and fellowship application services grant fee assistance to applicants who previously received fee assistance from medical school application services or are determined to have financial need through another formal mechanism.

Cares Act Equity and Loan Forgiveness in the Medicare Accelerated Payment Program D-305.953

In the setting of the COVID-19 pandemic, our AMA will advocate for additional financial relief for physicians to reduce medical school educational debt.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 306
(A-24)

Introduced by: Edmond Cabbabe, MD

Subject: Unmatched Graduating Physicians

Referred to: Reference Committee C

- 1 Whereas, the U.S. is expected to have an alarming and deeply concerning shortage of
2 physicians in primary and specialty care; and
3
- 4 Whereas, the number of practicing physicians is decreasing due to burnout, retirement,
5 pursuing non-clinical practices, and other causes; and
6
- 7 Whereas, the current number of medical students, residents, and fellows will not prevent such a
8 shortage; and
9
- 10 Whereas, the U.S. Congress has repeatedly failed to provide funding to educate the necessary
11 number of physicians to provide needed care of our aging and expanding population; and
12
- 13 Whereas, physician assistants (PAs), and advanced practice providers (APPs)/Nurse
14 Practitioners (NPs) have increasingly replaced licensed physicians in providing primary and
15 some specialty care due to geographic and economic shortage of physicians; and
16
- 17 Whereas, many states have allowed non-physician extenders to practice medicine
18 independently rather than in collaboration with licensed physicians; and
19
- 20 Whereas, a large number of physicians graduate from medical schools in the U.S. or abroad
21 take and pass USMLE part one and two, then apply for residency, but fail to get one of the
22 limited number of post graduate training spots in the U.S.; and
23
- 24 Whereas, these graduating physicians spend six to eight years in undergraduate and graduate
25 studies before graduating, and some of them serve a year of internship required to graduate.
26 They spend huge sums of money to complete their studies, sit for and pass the rigorous USMLE
27 tests, spend thousands of dollars on their applications for the matching programs and
28 interviews; and
29
- 30 Whereas, these unfortunate physicians face the very hard reality of a sudden irreversible
31 interruption of their careers, including, but not limited to large outstanding debts they cannot
32 repay, temporary to permanent interruption of their education, and the threat of never being able
33 to care for patients, while others who are less qualified, less educated, and less financially
34 burdened, such as APPs/NPs can practice medicine with or without collaborating with a
35 licensed physician; and
36
- 37 Whereas, in 2014, Missouri passed a law allowing these unfortunate graduating physicians to
38 obtain a license called Assistant Physician (AP) which allow these physicians without residency
39 to work in underserved areas in primary care, and only in collaboration with a licensed Missouri
40 physician; and

1 Whereas, many other states have passed similar or much less restrictive laws, under different
2 titles and processes such as Graduate Physician, Associate Physician, etc., some of them
3 allowing this group to gradually practice independently without a residency; and
4

5 Whereas, the number of these unfortunate graduating physicians has grown by the thousands
6 each year, yet Congress did not provide the needed funding to create enough residency slots to
7 train these physicians who would partially solve the expected shortages; and
8

9 Whereas, many of these graduating physicians, after practicing in collaboration with licensed
10 physicians, acquiring additional skills and experience, were able to match into a residency
11 program; therefore be it
12

13 RESOLVED, that our American Medical Association Board of Trustees study the role these
14 unmatched physicians can play in providing care to our patients, their impact of lessening the
15 impact of physician shortages, and provide recommendations on how to enroll these graduating
16 physicians with a uniform title, privileges, geographic restrictions, and collaboration choices, and
17 report to the House of Delegates at the next Interim meeting. (Directive to Take Action)

Fiscal Note: Minimal - less than \$1,000

Received: 4/22/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 307
(A-24)

Introduced by: California

Subject: Access to Reproductive Health Services When Completing Physician Certification Exams

Referred to: Reference Committee C

1 Whereas, the Supreme Court’s 2022 ruling in Dobbs. v. Jackson overturned the 1972 Roe v
2 Wade decision; and
3
4 Whereas, at least 26 states immediately enacted laws to ban or restrict abortion care in
5 response to the Supreme Court’s ruling in Dobbs v. Jackson; and
6
7 Whereas, national specialty societies host mandatory board certification exams in locations that
8 often require interstate travel for trainees completing residency and fellowship programs; and
9
10 Whereas, existing AMA policy supports encouraging American Board of Medical Specialties
11 member boards to assess whether initial board certification processes should be revised to
12 allow for testing requirements and arrangements that accommodate physicians' training and
13 employment schedules; and
14
15 Whereas, pregnant trainees may encounter health emergencies during the time frame of
16 completing mandatory board certification exam requirements that necessitate access to a full
17 spectrum of reproductive healthcare services, interventions and treatment options, including
18 abortion; therefore be it
19
20 RESOLVED, that our American Medical Association encourage national specialty boards who
21 hold in-person centralized mandatory exams for board certification to offer alternative methods
22 of taking mandatory board certification examinations, such as virtual boards examinations, or to
23 locate them outside of states that are in the process of banning or restricting or that have
24 banned or restricted abortion, gender affirming care or reproductive healthcare services. (New
25 HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/23/2024

RELEVANT AMA POLICY

H-295.923 Medical Training and Termination of Pregnancy

1. Our AMA supports the education of medical students, residents and young physicians about the need for physicians who provide termination of pregnancy services, the medical and public health importance of access to safe termination of pregnancy, and the medical, ethical, legal and psychological principles associated with termination of pregnancy.
2. Our AMA will advocate for the availability of abortion education and clinical exposure to medication and procedural abortion for medical students and resident/fellow physicians and opposes efforts to interfere

with or restrict the availability of this education and training.

3. In the event that medication and procedural abortion are limited or illegal in a home institution, our AMA will support pathways for medical students and resident/fellow physicians to receive this training at another location.

4. Our AMA will advocate for funding for institutions that provide clinical training on reproductive health services, including medication and procedural abortion, to medical students and resident/fellow physicians from other programs, so that they can expand their capacity to accept out-of-state medical students and resident/fellow physicians seeking this training.

5. Our AMA encourages the Accreditation Council for Graduate Medical Education to consistently enforce compliance with the standardization of abortion training opportunities as per the requirements set forth by the relevant Residency Review Committees.

[Modified: Res. 317, I-22; Modified: Res. 309, I-21; Appended: Res. 957, I-17; Modified: CME Rep. 1, A-15; Modified: CME Rep. 2, A-14; Reaffirmed: CME Rep. 2, A-04; Res. 315, I-94.]

D-5.999 Preserving Access to Reproductive Health Services

Our AMA: (1) recognizes that healthcare, including reproductive health services like contraception and abortion, is a human right; (2) opposes limitations on access to evidence-based reproductive health services, including fertility treatments, contraception, and abortion; (3) will work with interested state medical societies and medical specialty societies to vigorously advocate for broad, equitable access to reproductive health services, including fertility treatments, fertility preservation, contraception, and abortion; (4) supports shared decision-making between patients and their physicians regarding reproductive healthcare; (5) opposes any effort to undermine the basic medical principle that clinical assessments, such as viability of the pregnancy and safety of the pregnant person, are determinations to be made only by healthcare professionals with their patients; (6) opposes the imposition of criminal and civil penalties or other retaliatory efforts, including adverse medical licensing actions and the termination of medical liability coverage or clinical privileges against patients, patient advocates, physicians, other healthcare workers, and health systems for receiving, assisting in, referring patients to, or providing reproductive health services; (7) will advocate for legal protections for patients who cross state lines to receive reproductive health services, including contraception and abortion, or who receive medications for contraception and abortion from across state lines, and legal protections for those that provide, support, or refer patients to these services; and (8) will advocate for legal protections for medical students and physicians who cross state lines to receive education in or deliver reproductive health services, including contraception and abortion. [Appended: Res. 711, A-23; Reaffirmation: A-23; Appended: Res. 317, I-22; Modified: BOT Rep. 4, I-22; Reaffirmed: Res. 224, I-22; Res. 028, A-22.]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 308
(A-24)

Introduced by: Resident and Fellow Section

Subject: Transforming the USMLE Step 3 Examination to Alleviate Housestaff Financial Burden, Facilitate High-Quality Patient Care, and Promote Housestaff Well-Being

Referred to: Reference Committee C

- 1 Whereas, the United States Medical Licensing Examination (USMLE) Step 3 is the final
2 licensure examination in the USMLE series for physician licensure, which is taken during
3 residency training¹; and
4
5 Whereas, Step 3 is a two-day examination, with the first day (“Foundations of Independent
6 Practice,” 7 hours of testing) focused on basic science principles and the second day
7 (“Advanced Clinical Medicine,” 9 hours of testing) focused on application of clinical knowledge;
8 and
9
10 Whereas, the first testing day consists of multiple-choice questions and the second day consists
11 of a combination of multiple-choice questions and computer-based case simulations¹; and
12
13 Whereas, the cost of registering to take Step 3 was \$915 in 2023, with an increase to \$925 in
14 2024 and subsequent annual fee increases²; and
15
16 Whereas, the Step 3 test preparation question bank costs an individual resident \$429 in 2023,
17 which an increase for each renewal period³; and
18
19 Whereas, given that the computer-based simulation section utilizes software from a company
20 called *Primum*, which differs drastically from the Electronic Medical Record, trainees often
21 purchase CCS Cases to learn the software, which costs at minimum \$70; and
22
23 Whereas, therefore, the total cost of Step 3 preparation and examination is at least \$1,400 per
24 trainee, not including two missed days of work; and
25
26 Whereas, trainees may have to use their designated days off to prepare for and to sit for the
27 examination, exacerbating moral injury and burnout; and
28
29 Whereas, the objective of Step 3 is to test general medicine concepts primarily in an ambulatory
30 setting, which does not accurately reflect the sub-specialization and complexity of modern-day
31 medicine, and, therefore, does not justify a numerical score across disciplines; and
32
33 Whereas, Step 3 was designed for examination after successful completion of one’s medical
34 degree, however, USMLE recommends completion of one post-graduate year of training prior to
35 taking the exam⁴; and
36
37 Whereas, specialty choice is highly predictive of examination score; trainees in general
38 medicine fields (i.e. family medicine, emergency medicine, internal medicine, medicine-

1 pediatrics, and pediatrics) obtain significantly higher scores on Step 3 compared to more
2 specialized fields, supported by a retrospective study (n=36,805) of U.S. and Canadian medical
3 school graduates who took Step 3 for the first time between 1999 and 2002⁵; and
4

5 Whereas, the National Board of Medical Examiners (NBME) published data from 275,392
6 board-certified physicians who passed Step 3 between 2000 and 2017 indicating that a higher
7 score inversely correlated with likelihood of disciplinary action from the medical board (though
8 limitations included treating all disciplinary actions equally, which does not translate directly to
9 medical and/or surgical skills)⁶; and
10

11 Whereas, there are no published data that correlate one's numeric Step 3 score with true
12 clinical skills and beneficial patient outcomes; and
13

14 Whereas, preparing for Step 3 on top of clinical duties during residency may detract from on-
15 the-job learning and patient care, especially for trainees who pursue fellowships, as Step 3
16 scores are a component of the application process; and
17

18 Whereas, residency programs do not give residents protected study time for Step 3, thus,
19 residents must prepare for the examination on top of their 60-80+ hour work-weeks; and
20

21 Whereas, a one-day, pass/fail examination has the potential to reduce trainee costs, promote
22 trainee well-being, and encourage more learning via patient care in lieu of question banks;
23 therefore be it
24

25 RESOLVED, that our American Medical Association supports changing the United States
26 Medical Licensing Examination (USMLE) Step 3 from a numerically-scored examination to a
27 pass/fail examination (New HOD Policy); and be it further
28

29 RESOLED, that our AMA supports changing USMLE Step 3 from a two-day examination to a
30 one-day examination (New HOD Policy); and be it further
31

32 RESOLVED, that our AMA supports the option to take USMLE Step 3 after passing Step 2-
33 Clinical Knowledge (CK) during medical school (New HOD Policy); and be it further
34

35 RESOLVED, that our AMA advocates that residents taking the USMLE Step 3 exam be allowed
36 days off to take the exam without having this time counted for PTO or vacation balance.
37 (Directive to Take Action)

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/24

RELEVANT AMA POLICY:

Proposed Single Examination for Licensure H-275.962: Our AMA: (1) endorses the concept of a single examination for medical licensure; (2) urges the NBME and the FSMB to place responsibility for developing Steps I and II of the new single examination for licensure with the faculty of U.S. medical schools working through the NBME; (3) continues its vigorous support of the LCME and its accreditation of medical schools and supports monitoring the impact of a single examination on the effectiveness of the LCME; (4) urges the NBME and the FSMB to establish a high standard for passing the examination; (5) strongly recommends and supports actively pursuing efforts to assure that the standard for passing be criterion-based; that is, that passing the examination indicate a degree of knowledge acceptable for practicing medicine; and (6) will work with the appropriate stakeholders to study the advantages, disadvantages, and practicality of combining the USMLE Step 1 and Step 2 CK exams into a single licensure exam measuring both foundational science and clinical knowledge competencies. [CME Rep. B, I-89; Reaffirmed: Sunset Report, A-00; Modified: CME Rep. 2, A-10; Reaffirmed: BOT Rep. 3, I-14; Appended: Res. 309, A-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 309
(A-24)

Introduced by: Resident and Fellow Section

Subject: Disaffiliation from the Alpha Omega Alpha Honor Medical Society due to Perpetuation of Racial Inequities in Medicine

Referred to: Reference Committee C

- 1 Whereas, founded in 1902, the Alpha Omega Alpha (AOA) Honor Medical Society consists of
2 over 200,000 medical student and physician members across 135 chapters with a mission to
3 recognize high educational achievement¹; and
4
- 5 Whereas, AOA membership is disproportionately White: a 2017 cohort study of 4,655 medical
6 students illustrated that AOA membership for White students was nearly 6 times greater than
7 that for Black students and nearly 2 times greater than that for Asian students²; and
8
- 9 Whereas, Black medical students are significantly less likely to be inducted into AOA compared
10 to other groups, according to a 2019 cohort study that examined data from 11,781 ERAS
11 applications³; and
12
- 13 Whereas, exclusion from AOA membership also disproportionately impacts Hispanic/Latino,
14 American Indian/Alaska Native, and Native Hawaiian/Pacific Islander students⁴; and
15
- 16 Whereas, these inequities are especially concerning given the differential access AOA
17 membership affords; AOA members are prioritized for interview invites and have greater odds of
18 matching into traditionally competitive specialties (i.e., dermatology, plastic surgery, orthopedic
19 surgery, urology, radiation oncology, and otolaryngology)⁵; and
20
- 21 Whereas, according to AOA’s website, 75% of medical school deans are AOA members,
22 suggesting that membership can amplify success over the course of one’s career¹; and
23
- 24 Whereas, entry into AOA relies heavily upon clerkship grades, which are subject to significant
25 biases, with studies showing students of color tend to receive lower clerkship grades compared
26 to their White counterparts, particularly those who are underrepresented in medicine (UIM),
27 even after controlling for test scores⁴; and
28
- 29 Whereas, in clinical evaluations, White medical students have a greater propensity to be
30 characterized by their professional attributes such as “knowledgeable,” while Black students are
31 more likely to be described by personal characteristics like “pleasant”⁶; and
32
- 33 Whereas, UIM students face additional burdens and energy expenditures that non-UIM students
34 do not experience, such as activation via triggers, internal dialogue, and threat response, which
35 may negatively impact their clerkship grades; and
36
- 37 Whereas, UIM students additionally face difficulty finding peer support networks, trouble
38 establishing peer-working relationships, and experiences of racism while being expected to lead

1 uncompensated diversity, equity, and inclusion efforts at their institutions, all of which can
2 detract from academic and clinical duties; and
3

4 Whereas, multiple institutions have disaffiliated from AOA due to racial inequities in
5 membership, including the University of San Francisco School of Medicine, the Yale School of
6 Medicine, and the Icahn School of Medicine at Mount Sinai⁷⁻⁹; and
7

8 Whereas, in 2020, AOA evolved eligibility criteria to promote diversity by increasing the number
9 of members per class and by allowing chapters to develop their own metrics, although this
10 change has failed to address the structural issues perpetuated by AOA^{10,11}; and
11

12 Whereas, disaffiliation from AOA entails eliminating institutional ties to the AOA national
13 organization, and residency applicants select “no AOA chapter at my school” under the ERAS
14 awards section; and
15

16 Whereas, disaffiliation from AOA is a critical step toward promoting equity in admissions and
17 medical education at large, and disaffiliation sends a compelling message that medical
18 education needs alternative, equitable mechanisms to recognize the excellence of trainees;
19 therefore be it
20

21 RESOLVED, that our American Medical Association recognizes that the Alpha Omega Alpha
22 Honor Medical Society disproportionately benefits privileged trainees (New HOD Policy); and be
23 it further
24

25 RESOLVED, that our AMA supports institutional disaffiliation from the Alpha Omega Alpha
26 Honor Medical Society due to its perpetuation of racial inequities in medicine (New HOD Policy);
27 and be it further
28

29 RESOLVED, that our AMA recognizes that the Alpha Omega Alpha Honor Medical Society
30 perpetuates and accentuates discrimination against trainees of color that is inherent in medical
31 training. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 310
(A-24)

Introduced by: Jill Owens, MD, Pennsylvania Chair

Subject: Accountability & Transparency in GME funding with Annual Report

Referred to: Reference Committee C

- 1 Whereas, funding for Graduate Medical Education (GME) is derived from both public and
2 private sources; and
3
4 Whereas, the federal government is by far the largest contributor to GME; and
5
6 Whereas, various programs that support physician workforce development are managed by
7 agencies within the Departments of Health and Human Services, Veterans Affairs, and Defense;
8 and
9
10 Whereas, Medicare is the largest source of federal GME funding and Medicaid, a joint federal-
11 state program, is the second largest source of support for GME; and
12
13 Whereas, the ACGME does not control and has no involvement in resident/fellow salaries; and
14
15 Whereas, each Sponsoring Institution's Graduate Medical Education Committee must approve
16 annual recommendations to administration regarding resident/fellow salaries and benefits; and
17
18 Whereas, the Institute of Medicine's (IOM) Committee on Government and Financing of
19 Graduate Medical Education (GME) put out their report "Graduate Medical Education That
20 Meets the Nation's Health Needs" in 2014; and
21
22 Whereas, it was in 2016 that CME last gave its report on Accountability and Transparency in
23 GME funding (CME Report 5-A-16); and
24
25 Whereas, it was from CME report 5 at A-16 that our American Medical Association adopted
26 policy H305.929 with provisions 3) and 4) committing to overall transparency and specifically
27 financial transparency with regard to Graduate Medical Education; and
28
29 Whereas, The Consolidated Appropriations Act of 2021 added 1000 new Medicare-funded
30 residency positions for the first time since 1997; and
31
32 Whereas, it was in 2022 that our AMA, through house policy H305.930, called for appropriate
33 increases in resident salaries; and therefore be it
34
35 RESOLVED, that our American Medical Association work with interested parties (including but
36 not limited to the CMS, VA, DOD and others) to issue an annual report detailing the quantity of
37 GME funding for each year including how those funds are allocated on a per resident or fellow
38 basis, for a minimum of the previous 5 years (Directive to Take Action); and be it further,
39
40 RESOLVED, that our AMA reaffirm policy H 305.929 (Last modified 2016). (Reaffirm HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 311
(A-24)

Introduced by: Pennsylvania Delegation

Subject: Physician Participation in Healthcare Organizations

Referred to: Reference Committee C

1 Whereas, within Pennsylvania there have been discussions of healthcare organizations
2 expanding the involvement of Advanced Care Practitioners (APP) within the healthcare
3 organization boards; and
4

5 Whereas, in the state of Pennsylvania, the Pennsylvania Medical Society has passed a
6 prophylactic policy “that all doctor’s medical and surgical societies both existing and newly
7 established should be chaired by MD’s or DO’s”; and
8

9 Whereas, our AMA supports physician participation in healthcare organizations via H 405.953
10 (2017) which says:

- 11 1. Our AMA will advocate for and promote the membership of physicians on the boards of
12 healthcare organizations including, but not limited to, acute care providers; insurance
13 entities; medical device manufacturers; and health technology service organizations.
- 14 2. Our AMA will promote educational programs on corporate governance that prepare and
15 enable physicians to participate on health organization boards.
- 16 3. Our AMA will provide physicians, the public, and health care organizations information
17 on the positive impact of physician leadership; therefore be it
18

19 RESOLVED, that our American Medical Association reaffirm H 405.953. (Reaffirm HOD Policy)
20

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

RELEVANT AMA POLICY

Participation of Physicians on Healthcare Organization Boards H-405.953

1. Our AMA will advocate for and promote the membership of physicians on the boards of healthcare organizations including, but not limited to, acute care providers; insurance entities; medical device manufacturers; and health technology service organizations.
2. Our AMA will promote educational programs on corporate governance that prepare and enable physicians to participate on health organization boards.
3. Our AMA will provide physicians, the public, and health care organizations information on the positive impact of physician leadership.

Citation: Res. 001, A-17;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 312
(A-24)

Introduced by: Georgia

Subject: AMA Collaboration with FSMB to Assist in Licensing Reentrant Physicians

Referred to: Reference Committee C

1 Whereas, physicians take time out of continuous practice for a variety of reasons, such as for
2 mental or physical health issues, family or personal life events; and
3
4 Whereas, such time off from practice raises questions about a physician's fitness to return to
5 active practice; and
6
7 Whereas, state medical boards are charged with protecting the public and must evaluate
8 physicians wishing to return to practice to determine their readiness to practice in a safe and
9 competent manner; and
10
11 Whereas, the Federation of State Medical Boards (FSMB) established the Workgroup on
12 Reentry in 2023 to evaluate and revise its existing policies on physician reentry to practice; and
13
14 Whereas, the FSMB Workgroup on Reentry found a paucity of research to support
15 development of reentry policies, procedures, and resources for state medical boards; and
16
17 Whereas, a survey of state medical boards found that only 57% have a policy or formal process
18 for the evaluation or retraining for physician reentry to practice; and
19
20 Whereas, no structured/consistent criteria or standardized processes exist across the country to
21 facilitate reentry without subjectivity, bias or possibly arbitrariness; and
22
23 Whereas, there is a need for a consistent approach to reentry to practice, informed by evidence
24 based criteria, where available; and
25
26 Whereas, the collection of relevant research and data will require multiple sources of
27 information beyond state medical boards, including specialty societies, certification boards and
28 post licensure training programs; and
29
30 Whereas, the AMA, with its broad representation within the House of Medicine has the
31 resources to support such data collection and research; therefore be it
32
33 RESOLVED, that our American Medical Association work with the FSMB, specialty and
34 subspecialty societies, and other relevant stakeholders to study and develop evidence-based
35 criteria for determining a physician's readiness to reenter practice and identify resources for the
36 evaluation and retraining of physicians seeking to reenter active practice. (Directive to Take
37 Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

2. <https://www.fsmb.org/siteassets/advocacy/policies/board-requirements-on-re-entry-to-practice.pdf>

RELEVANT AMA POLICY

Physician Reentry D-300.984

Our AMA:

1. Will continue to collaborate with other appropriate organizations on physician reentry issues including research on the need for and the effectiveness of reentry programs.
2. Will work collaboratively with the American Academy of Pediatrics and other interested groups to convene a conference on physician reentry which will bring together key stakeholders to address the development of reentry programs as well as the educational needs of physicians reentering clinical practice.
3. Will work with interested parties to establish a physician reentry program (PREP) information data base that is publicly accessible to physician applicants and which includes information pertaining to program characteristics.
4. Will support efforts to ensure the affordability and accessibility, and to address the unique liability issues related to PREPs.
5. Will make available to all interested parties the physician reentry program (PREP) system Guiding Principles for use as a basis for all reentry programs:
 - a. Accessible: The PREP system is accessible by geography, time and cost. Reentry programs are available and accessible geographically across the United States and include national and regional pools of reentry positions. Reentering physicians with families or community ties are not burdened by having to relocate to attend a program. The length of time of reentry programs is standardized and is commensurate with the assessed clinical and educational needs of reentering physicians. The cost of reentry programs is not prohibitive to the physician, health care institutions or the health care system.
 - b. Collaborative: The PREP system is designed to be collaborative to improve communication and resource sharing. Information and materials including evaluation instruments are shared across specialties, to the extent possible, to improve program and physician performance. A common nomenclature is used to maximize communication across specialties. Reentry programs share resources and create a common repository for such resources, which are easily accessible.
 - c. Comprehensive: The PREP system is comprehensive to maximize program utility. Physician reentry programs prepare physicians to return to clinical activity in the discipline in which they have been trained or certified and in the practice settings they expect to work including community-based, public health, and hospital-based or academic practice.
 - d. Ethical: The PREP system is based on accepted principles of medical ethics. Physician reentry programs will conform to physician licensure statutes. The standards of professionalism, as stated in the AMA Code of Medical Ethics, must be followed.
 - e. Flexible: The PREP system is flexible in structure in order to maximize program relevancy and usefulness. Physician reentry programs can accommodate modifications to program requirements and activities in ways that are optimal to the needs of reentering physicians.
 - f. Modular: Physician reentry programs are modularized, individualized and competency-based. They are tailored to the learning needs of reentering physicians, which prevents the need for large, expensive, and standardized programs. Physicians should only be required to take those modules that allow them to meet an identified educational need.
 - g. Innovative: Innovation is built into a PREP system allowing programs to offer state of the art learning and meet the diverse and changing needs of reentry physicians. Physician reentry programs develop and utilize learning tools including experimenting with innovative and novel curricular methodologies such as distance learning technologies and simulation.
 - h. Accountable: The PREP system has mechanisms for assessment and is open to evaluation. Physician reentry programs have an evaluation component that is comparable among all specialties. Program assessments use objective measures to evaluate physician's competence at time of entry, during the program and at time of completion. Program outcomes are measured. Reliability and validity of the measures are established. Standardization of measures exist across programs to assess whether or not national standards are being met.
 - i. Stable: A funding scheme is in place to ensure the PREP system is financially stable over the long-term. Adequate funding allows physician reentry programs to operate at sufficient and

appropriate capacity. j. Responsive: The PREP system makes refinements, updates and other changes when necessary. Physician reentry programs are equipped to address systemic changes such as changes in regulations. Additionally, the PREP system is prepared to respond efficiently to urgent health care needs within society including mobilizing clinically inactive physicians temporarily into the workforce to attend to an acute public health crisis, such as a terrorist, biological, chemical, or natural disaster.

6. Our AMA encourages each state which does not grant a full and unrestricted license to physicians undergoing reentry to develop a non-disciplinary category of licensure for physicians during their reentry process.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 313
(A-24)

Introduced by: Oklahoma

Subject: CME for Rural Preceptorship

Referred to: Reference Committee C

1 Whereas, rural Americans are more likely to die from heart disease, cancer, unintentional injury,
2 chronic lower respiratory disease, and stroke than their urban counterparts¹; and

3
4 Whereas, there are fewer health care providers per capita in nonmetropolitan areas; Although
5 nearly 20% of the U.S. population lives in rural areas, less than 10% of U.S. doctors practice in
6 rural areas²; and

7
8 Whereas, there are fewer health care providers per capita in nonmetropolitan areas; Although
9 nearly 20% of the U.S. population lives in rural areas, less than 10% of U.S. doctors practice in
10 rural areas²; and

11
12 Whereas, Continuing Medical Education (CME) credits are vital to all physicians; and

13
14 Whereas, being a “preceptor” for medical students, residents, fellows, and other allied health
15 professional students requires countless hours of preparation; and

16
17 Whereas, the American Osteopathic Association (AOA) offers category 1B credit to its members
18 for participation in the AOA Didactic and Preceptor Program⁴; and

19
20 Whereas, 60 AOA category 1B credits may be applied to the required 120 hours of CME for
21 AOA physicians⁴; and

22
23 Whereas, the American Academy of Family Physicians offers CME credits to its members for
24 teaching of medical students, residents, and other allied health professional students⁵; and

25
26 Whereas, the American Medical Association (AMA) does not recognize the AOA credits
27 awarded for teaching and being a preceptor; and

28
29 Whereas, recognizing such efforts would encourage more physicians to be involved in preceptor
30 programs especially rural, which in turn would expose more students to the practice of medicine
31 in more rural and underserved areas; therefore be it

32
33 RESOLVED, that our American Medical Association along with the Council of Medical
34 Education, formulate a “toolkit” to teach physicians who serve as preceptors, especially in rural
35 and underserved areas, how to be better preceptors and the process on claiming AMA Category
36 1 credits for preparation and teaching medical students, residents, fellows, and other allied
37 health professional students training in Liaison Committee on Medical Education/Accreditation
38 Council for Graduate Medical Education accredited institutions, thereby making them a more
39 effective preceptor (Directive to Take Action); and be it further

1 RESOLVED, that our AMA study formulating a plan, in collaboration with other interested
2 bodies, to award AMA Category 1 credits to physicians who serve as preceptors in rural and
3 underserved areas teaching medical students, residents, fellows, and other allied health
4 professional students training in Liaison Committee on Medical Education/Accreditation Council
5 for Graduate Medical Education accredited institutions thereby improving the rural healthcare
6 workforce shortage (Directive to Take Action); and be it further

7
8 RESOLVED, that our AMA devise a method of converting those credits awarded by other
9 organizations into AMA recognized credits for the purpose of CME. (Directive to Take Action)

10
Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/22/2024

RELEVANT AMA POLICY

H-300.977, Revisions to Physician's Registration Award

Our AMA has adopted the following changes in the Physician's Recognition Award:

to accept recertification by an AMA-recognized specialty board in satisfaction of requirements for a three-year PRA certificate;

(2) to allow credit for international conferences when these have been approved by the AMA prior to the event; and

(3) to allow credit for teaching to be reported for AMA PRA Category 2 Credit™ toward the award.

H-300.988, Restoring Integrity to Continuing Medical Education

The AMA (1) supports retention of the definitions of continuing medical education in the Physicians' Recognition Award ("Continuing medical education consists of educational activities which serve to maintain, develop, or increase the knowledge, skills, and professional performance and relationships that a physician uses to provide services for patients, the public, or the profession. The content of CME is that body of knowledge and skills generally recognized and accepted by the profession as within the basic medical sciences, the discipline of clinical medicine, and the provision of health care to the public."); (2) urges members of the medical profession to be attentive to the distinction between continuing medical education and continuing education which is not related directly to their professional activities; (3) believes that accredited sponsors should designate as continuing medical education only those continuing education activities which meet the definition of continuing medical education; (4) encourages the ACCME and state medical associations on the state level to weigh seriously, in considering the sponsor's continued accreditation, instances where an accredited sponsor identifies non-continuing medical education activities as continuing medical education; and (5) encourages state medical boards to accept for credit continuing education which relates directly to the professional activities of physicians, although each state with mandatory continuing medical education for reregistration of license has the prerogative of defining the continuing education it will accept for credit.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 314
(A-24)

Introduced by: Women Physicians Section

Subject: Reducing the Lifetime Earnings Gap in the U.S. with Similar Educational Attainment by Employing the Gainful Employment Rule

Referred to: Reference Committee C

1 Whereas, the value of a college education was demonstrated in a 2002 Census Bureau study
2 that “estimated in 1999, the average lifetime earnings of a Bachelor’s degree holder was \$2.7
3 million, and 75 percent more than that earned by high school graduates in 1999”; and
4

5 Whereas, according to the Georgetown’s College Payoff report, those who possess “some
6 postsecondary education, even without earning a degree, add nearly one quarter of a million
7 dollars to lifetime earnings...and earnings rise substantially for those with Doctoral and
8 Professional degrees...”; and
9

10 Whereas, the Social Security Administration reports that “lifetime earnings have important
11 implications for retirement outcomes, including the level of Social Security benefits”; and
12

13 Whereas, “there are substantial differences in lifetime earnings by educational attainment”; and
14

15 Whereas, the Social Security Administration states recent research reflects that “men with
16 graduate degrees earn \$1.5 million more in median lifetime earnings than high school
17 graduates, and women with graduate degrees earn \$1.1 million more”; and
18

19 Whereas, according to the Georgetown College Payoff report, “the largest gender gap in
20 earnings is for those with professional degrees...men earn about a million dollars more over a
21 lifetime than women with these degrees”; and
22

23 Whereas, the Federal Registrar states that gainful employment reflects the “reasonable
24 relationship between the loan debt incurred by students in a training program and income from
25 employment after the training”; and
26

27 Whereas, “the Higher Education Act requires that certificate programs at all institutions and
28 degree programs at private for-profit colleges must provide training that prepares students for
29 gainful employment in a recognized occupation;” and “programs would have to show that:
30

31 a. “Graduates can afford their yearly debt payments...and the share of their annual
32 earnings needed to devote to paying their debt must be equal to or less than 8 percent,
33 or equal to or less than 20 percent of their discretionary earnings.”
34

35 b. “At least half of graduates have higher earnings than a typical high school graduate in
36 their State’s labor force who never pursued a postsecondary education”; and
37

38 Whereas, according to the U.S. Department of Education, the Biden-Harris Administration
39 “released final regulations that establish the most effective set of safeguards ever against

1 unaffordable debt or insufficient earnings for postsecondary students” and continue to seek
2 ways to reduce the student debt burden; therefore be it

3
4 RESOLVED, that our American Medical Association collaborate with higher education
5 authorities to research physician career outcomes and explore financial value transparency
6 among higher educational institutional programs that grant professional and doctoral degrees
7 beyond six years following graduation in light of the new gainful employment regulations and
8 transparency provisions that will take effect July 1, 2024 (Directive to Take Action); and be it
9 further

10
11 RESOLVED, that our AMA continue to work with key stakeholders and advocate for the
12 resolution of the student loan crisis to protect physicians from unaffordable student debt and
13 poor earning outcomes. (Directive to Take Action)

14
Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/3/2024

RELEVANT AMA POLICY

Principles of and Actions to Address Medical Education Costs and Student Debt H-305.925

The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will:

1. Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy.
2. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research.
3. Encourage the expansion of National Institutes of Health programs that provide loan repayment in exchange for a commitment to conduct targeted research.
4. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit: (a) inclusion of all medical specialties in need, and (b) service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas.
5. Encourage the National Health Service Corps to have repayment policies that are consistent with other federal loan forgiveness programs, thereby decreasing the amount of loans in default and increasing the number of physicians practicing in underserved areas.
6. Work to reinstate the economic hardship deferment qualification criterion known as the "20/220 pathway," and support alternate mechanisms that better address the financial needs of trainees with

educational debt.

7. Advocate for federal legislation to support the creation of student loan savings accounts that allow for pre-tax dollars to be used to pay for student loans.
8. Work with other concerned organizations to advocate for legislation and regulation that would result in favorable terms and conditions for borrowing and for loan repayment, and would permit 100% tax deductibility of interest on student loans and elimination of taxes on aid from service-based programs.
9. Encourage the creation of private-sector financial aid programs with favorable interest rates or service obligations (such as community- or institution-based loan repayment programs or state medical society loan programs).
10. Support stable funding for medical education programs to limit excessive tuition increases, and collect and disseminate information on medical school programs that cap medical education debt, including the types of debt management education that are provided.
11. Work with state medical societies to advocate for the creation of either tuition caps or, if caps are not feasible, pre-defined tuition increases, so that medical students will be aware of their tuition and fee costs for the total period of their enrollment.
12. Encourage medical schools to (a) Study the costs and benefits associated with non-traditional instructional formats (such as online and distance learning, and combined baccalaureate/MD or DO programs) to determine if cost savings to medical schools and to medical students could be realized without jeopardizing the quality of medical education; (b) Engage in fundraising activities to increase the availability of scholarship support, with the support of the Federation, medical schools, and state and specialty medical societies, and develop or enhance financial aid opportunities for medical students, such as self-managed, low-interest loan programs; (c) Cooperate with postsecondary institutions to establish collaborative debt counseling for entering first-year medical students; (d) Allow for flexible scheduling for medical students who encounter financial difficulties that can be remedied only by employment, and consider creating opportunities for paid employment for medical students; (e) Counsel individual medical student borrowers on the status of their indebtedness and payment schedules prior to their graduation; (f) Inform students of all government loan opportunities and disclose the reasons that preferred lenders were chosen; (g) Ensure that all medical student fees are earmarked for specific and well-defined purposes, and avoid charging any overly broad and ill-defined fees, such as but not limited to professional fees; (h) Use their collective purchasing power to obtain discounts for their students on necessary medical equipment, textbooks, and other educational supplies; (i) Work to ensure stable funding, to eliminate the need for increases in tuition and fees to compensate for unanticipated decreases in other sources of revenue; mid-year and retroactive tuition increases should be opposed.
13. Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties.
14. Take an active advocacy role during reauthorization of the Higher Education Act and similar legislation, to achieve the following goals: (a) Eliminating the single holder rule; (b) Making the availability of loan deferment more flexible, including broadening the definition of economic hardship and expanding the period for loan deferment to include the entire length of residency and fellowship training; (c) Retaining the option of loan forbearance for residents ineligible for loan deferment; (d) Including, explicitly, dependent care expenses in the definition of the "cost of attendance"; (e) Including room and board expenses in the definition of tax-exempt scholarship income; (f) Continuing the federal Direct Loan Consolidation program, including the ability to "lock in" a fixed interest rate, and giving consideration to grace periods in renewals of federal loan programs; (g) Adding the ability to refinance Federal Consolidation Loans; (h) Eliminating the cap on the student loan interest deduction; (i) Increasing the income limits for taking the interest deduction; (j) Making permanent the education tax incentives that our AMA successfully lobbied for as part of Economic Growth and Tax Relief Reconciliation Act of 2001; (k) Ensuring that loan repayment programs do not place greater burdens upon married couples than for similarly situated couples who are cohabitating; (l) Increasing efforts to collect overdue debts from the present medical student loan programs in a manner that would not interfere with the provision of future loan funds to medical students.
15. Continue to work with state and county medical societies to advocate for adequate levels of medical school funding and to oppose legislative or regulatory provisions that would result in significant or unplanned tuition increases.
16. Continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden of medical students, and monitor the short-and long-term impact of the economic environment on the availability of institutional and external sources of financial aid for medical students, as well as on choice of specialty and practice location.

17. Collect and disseminate information on successful strategies used by medical schools to cap or reduce tuition.
18. Continue to monitor the availability of and encourage medical schools and residency/fellowship programs to (a) provide financial aid opportunities and financial planning/debt management counseling to medical students and resident/fellow physicians; (b) work with key stakeholders to develop and disseminate standardized information on these topics for use by medical students, resident/fellow physicians, and young physicians; and (c) share innovative approaches with the medical education community.
19. Seek federal legislation or rule changes that would stop Medicare and Medicaid decertification of physicians due to unpaid student loan debt. The AMA believes that it is improper for physicians not to repay their educational loans, but assistance should be available to those physicians who are experiencing hardship in meeting their obligations.
20. Related to the Public Service Loan Forgiveness (PSLF) Program, our AMA supports increased medical student and physician participation in the program, and will: (a) Advocate that all resident/fellow physicians have access to PSLF during their training years; (b) Advocate against a monetary cap on PSLF and other federal loan forgiveness programs; (c) Work with the United States Department of Education to ensure that any cap on loan forgiveness under PSLF be at least equal to the principal amount borrowed; (d) Ask the United States Department of Education to include all terms of PSLF in the contractual obligations of the Master Promissory Note; (e) Encourage the Accreditation Council for Graduate Medical Education (ACGME) to require residency/fellowship programs to include within the terms, conditions, and benefits of program appointment information on the employer's PSLF program qualifying status; (f) Advocate that the profit status of a physician's training institution not be a factor for PSLF eligibility; (g) Encourage medical school financial advisors to counsel wise borrowing by medical students, in the event that the PSLF program is eliminated or severely curtailed; (h) Encourage medical school financial advisors to increase medical student engagement in service-based loan repayment options, and other federal and military programs, as an attractive alternative to the PSLF in terms of financial prospects as well as providing the opportunity to provide care in medically underserved areas; (i) Strongly advocate that the terms of the PSLF that existed at the time of the agreement remain unchanged for any program participant in the event of any future restrictive changes; (j) Monitor the denial rates for physician applicants to the PSLF; (k) Undertake expanded federal advocacy, in the event denial rates for physician applicants are unexpectedly high, to encourage release of information on the basis for the high denial rates, increased transparency and streamlining of program requirements, consistent and accurate communication between loan servicers and borrowers, and clear expectations regarding oversight and accountability of the loan servicers responsible for the program; (l) Work with the United States Department of Education to ensure that applicants to the PSLF and its supplemental extensions, such as Temporary Expanded Public Service Loan Forgiveness (TEPSLF), are provided with the necessary information to successfully complete the program(s) in a timely manner; and (m) Work with the United States Department of Education to ensure that individuals who would otherwise qualify for PSLF and its supplemental extensions, such as TEPSLF, are not disqualified from the program(s).
21. Advocate for continued funding of programs including Income-Driven Repayment plans for the benefit of reducing medical student load burden.
22. Strongly advocate for the passage of legislation to allow medical students, residents and fellows who have education loans to qualify for interest-free deferment on their student loans while serving in a medical internship, residency, or fellowship program, as well as permitting the conversion of currently unsubsidized Stafford and Graduate Plus loans to interest free status for the duration of undergraduate and graduate medical education.
23. Continue to monitor opportunities to reduce additional expense burden upon medical students including reduced-cost or free programs for residency applications, virtual or hybrid interviews, and other cost-reduction initiatives aimed at reducing non-educational debt.
24. Encourage medical students, residents, fellows and physicians in practice to take advantage of available loan forgiveness programs and grants and scholarships that have been historically underutilized, as well as financial information and resources available through the Association of American Medical Colleges and American Association of Colleges of Osteopathic Medicine, as required by the Liaison Committee on Medical Education and Commission on Osteopathic College Accreditation, and resources available at the federal, state and local levels.
25. Support federal efforts to forgive debt incurred during medical school and other higher education by physicians and medical students, including educational and cost of attendance debt.

26. Support that residency and fellowship application services grant fee assistance to applicants who previously received fee assistance from medical school application services or are determined to have financial need through another formal mechanism. [CME Report 05, I-18; Appended: Res. 953, I-18; Reaffirmation: A-19; Appended: Res. 316, A-19; Appended: Res. 226, A-21; Reaffirmed in lieu of: Res. 311, A-21; Modified: CME Rep. 4, I-21; Reaffirmation: A-22; Appended: CME Rep. 02, A-23; Appended: Res. 311, A-23]

Medical Education Debt Cancellation in the Face of a Physician Shortage During the COVID-19 Pandemic D-305.951

Our AMA will study the issue of medical education debt cancellation and consider the opportunities for integration of this into a broader solution addressing debt for all medical students and physicians. [Res. 301, A-22]

Exclusion of Medical Debt That Has Been Fully Paid or Settled H-373.996

Our AMA supports the principles contained in The Medical Debt Relief Act as drafted and passed by the US House of Representatives to provide relief to the American consumer from a complicated collections process and supports medical debt resolution being portrayed in a positive and productive manner. [Res. 226, I-10; Reaffirmed: BOT Rep. 04, A-20]

Medical Student Debt and Career Choice D-305.952

1. Our AMA encourages key stakeholders to collect and disseminate data on the impacts of medical education debt on career choice, especially with regard to the potentially intersecting impacts of race/ethnicity, socioeconomic status, and other key sociodemographic factors.
2. Our AMA will monitor new policies and novel approaches to influence career choice based on the key factors that affect the decision to enter a given specialty and subspecialty. [CME Rep. 4, I-21; Reaffirmed: CME Rep. 02, A-23]

Principles for Graduate Medical Education H-310.929

Our AMA urges the Accreditation Council for Graduate Medical Education (ACGME) to incorporate these principles in its Institutional Requirements, if they are not already present.

(1) PURPOSE OF GRADUATE MEDICAL EDUCATION AND ITS RELATIONSHIP TO PATIENT CARE. There must be objectives for residency education in each specialty that promote the development of the knowledge, skills, attitudes, and behavior necessary to become a competent practitioner in a recognized medical specialty.

Exemplary patient care is a vital component for any residency/fellowship program. Graduate medical education enhances the quality of patient care in the institution sponsoring an accredited program. Graduate medical education must never compromise the quality of patient care. Institutions sponsoring residency programs and the director of each program must assure the highest quality of care for patients and the attainment of the program's educational objectives for the residents.

(2) RELATION OF ACCREDITATION TO THE PURPOSE OF RESIDENCY TRAINING. Accreditation requirements should relate to the stated purpose of a residency program and to the knowledge, skills, attitudes, and behaviors that a resident physician should have on completing residency education.

(3) EDUCATION IN THE BROAD FIELD OF MEDICINE. GME should provide a resident physician with broad clinical experiences that address the general competencies and professionalism expected of all physicians, adding depth as well as breadth to the competencies introduced in medical school.

(4) SCHOLARLY ACTIVITIES FOR RESIDENTS. Graduate medical education should always occur in a milieu that includes scholarship. Resident physicians should learn to appreciate the importance of scholarly activities and should be knowledgeable about scientific method. However, the accreditation requirements, the structure, and the content of graduate medical education should be directed toward preparing physicians to practice in a medical specialty. Individual educational opportunities beyond the residency program should be provided for resident physicians who have an interest in, and show an aptitude for, academic and research pursuits. The continued development of evidence-based medicine in the graduate medical education curriculum reinforces the integrity of the scientific method in the everyday practice of clinical medicine.

(5) FACULTY SCHOLARSHIP. All residency faculty members must engage in scholarly activities and/or scientific inquiry. Suitable examples of this work must not be limited to basic biomedical research. Faculty can comply with this principle through participation in scholarly meetings, journal club, lectures, and similar academic pursuits.

(6) **INSTITUTIONAL RESPONSIBILITY FOR PROGRAMS.** Specialty-specific GME must operate under a system of institutional governance responsible for the development and implementation of policies regarding the following; the initial authorization of programs, the appointment of program directors, compliance with the accreditation requirements of the ACGME, the advancement of resident physicians, the disciplining of resident physicians when this is appropriate, the maintenance of permanent records, and the credentialing of resident physicians who successfully complete the program. If an institution closes or has to reduce the size of a residency program, the institution must inform the residents as soon as possible. Institutions must make every effort to allow residents already in the program to complete their education in the affected program. When this is not possible, institutions must assist residents to enroll in another program in which they can continue their education. Programs must also make arrangements, when necessary, for the disposition of program files so that future confirmation of the completion of residency education is possible. Institutions should allow residents to form housestaff organizations, or similar organizations, to address patient care and resident work environment concerns. Institutional committees should include resident members.

(7) **COMPENSATION OF RESIDENT PHYSICIANS.** All residents should be compensated. Residents should receive fringe benefits, including, but not limited to, health, disability, and professional liability insurance and parental leave and should have access to other benefits offered by the institution. Residents must be informed of employment policies and fringe benefits, and their access to them. Restrictive covenants must not be required of residents or applicants for residency education.

(8) **LENGTH OF TRAINING.** The usual duration of an accredited residency in a specialty should be defined in the "Program Requirements." The required minimum duration should be the same for all programs in a specialty and should be sufficient to meet the stated objectives of residency education for the specialty and to cover the course content specified in the Program Requirements. The time required for an individual resident physician's education might be modified depending on the aptitude of the resident physician and the availability of required clinical experiences.

(9) **PROVISION OF FORMAL EDUCATIONAL EXPERIENCES.** Graduate medical education must include a formal educational component in addition to supervised clinical experience. This component should assist resident physicians in acquiring the knowledge and skill base required for practice in the specialty. The assignment of clinical responsibility to resident physicians must permit time for study of the basic sciences and clinical pathophysiology related to the specialty.

(10) **INNOVATION OF GRADUATE MEDICAL EDUCATION.** The requirements for accreditation of residency training should encourage educational innovation and continual improvement. New topic areas such as continuous quality improvement (CQI), outcome management, informatics and information systems, and population-based medicine should be included as appropriate to the specialty.

(11) **THE ENVIRONMENT OF GRADUATE MEDICAL EDUCATION.** Sponsoring organizations and other GME programs must create an environment that is conducive to learning. There must be an appropriate balance between education and service. Resident physicians must be treated as colleagues.

(12) **SUPERVISION OF RESIDENT PHYSICIANS.** Program directors must supervise and evaluate the clinical performance of resident physicians. The policies of the sponsoring institution, as enforced by the program director, and specified in the ACGME Institutional Requirements and related accreditation documents, must ensure that the clinical activities of each resident physician are supervised to a degree that reflects the ability of the resident physician and the level of responsibility for the care of patients that may be safely delegated to the resident. The sponsoring institution's GME Committee must monitor programs' supervision of residents and ensure that supervision is consistent with: (A) Provision of safe and effective patient care; (B) Educational needs of residents; (C) Progressive responsibility appropriate to residents' level of education, competence, and experience; and (D) Other applicable Common and specialty/subspecialty specific Program Requirements. The program director, in cooperation with the institution, is responsible for maintaining work schedules for each resident based on the intensity and variability of assignments in conformity with ACGME Review Committee recommendations, and in compliance with the ACGME clinical and educational work hour standards. Integral to resident supervision is the necessity for frequent evaluation of residents by faculty, with discussion between faculty and resident. It is a cardinal principle that responsibility for the treatment of each patient and the education of resident and fellow physicians lies with the physician/faculty to whom the patient is assigned and who supervises all care rendered to the patient by residents and fellows. Each patient's attending physician must decide, within guidelines established by the program director, the extent to which responsibility may be delegated to the resident, and the appropriate degree of supervision of the resident's participation in the care of the patient. The attending physician, or designate, must be available to the resident for consultation at all times.

(13) EVALUATION OF RESIDENTS AND SPECIALTY BOARD CERTIFICATION. Residency program directors and faculty are responsible for evaluating and documenting the continuing development and competency of residents, as well as the readiness of residents to enter independent clinical practice upon completion of training. Program directors should also document any deficiency or concern that could interfere with the practice of medicine and which requires remediation, treatment, or removal from training. Inherent within the concept of specialty board certification is the necessity for the residency program to attest and affirm to the competence of the residents completing their training program and being recommended to the specialty board as candidates for examination. This attestation of competency should be accepted by specialty boards as fulfilling the educational and training requirements allowing candidates to sit for the certifying examination of each member board of the ABMS.

(14) GRADUATE MEDICAL EDUCATION IN THE AMBULATORY SETTING. Graduate medical education programs must provide educational experiences to residents in the broadest possible range of educational sites, so that residents are trained in the same types of sites in which they may practice after completing GME. It should include experiences in a variety of ambulatory settings, in addition to the traditional inpatient experience. The amount and types of ambulatory training is a function of the given specialty.

(15) VERIFICATION OF RESIDENT PHYSICIAN EXPERIENCE. The program director must document a resident physician's specific experiences and demonstrated knowledge, skills, attitudes, and behavior, and a record must be maintained within the institution. [CME Rep. 9, A-99; Reaffirmed: CME Rep. 2, A-09; Reaffirmed: CME Rep. 14, A-09; Modified: CME Rep. 06, I-18; Reaffirmed: CME Rep. 01, I-22]

Abolish Discrimination in Licensure of IMGs H-255.966

1. Our AMA supports the following principles related to medical licensure of international medical graduates (IMGs):

A. State medical boards should ensure uniformity of licensure requirements for IMGs and graduates of U.S. and Canadian medical schools, including eliminating any disparity in the years of graduate medical education (GME) required for licensure and a uniform standard for the allowed number of administrations of licensure examinations.

B. All physicians seeking licensure should be evaluated on the basis of their individual education, training, qualifications, skills, character, ethics, experience and past practice.

C. Discrimination against physicians solely on the basis of national origin and/or the country in which they completed their medical education is inappropriate.

D. U.S. states and territories retain the right and responsibility to determine the qualifications of individuals applying for licensure to practice medicine within their respective jurisdictions.

E. State medical boards should be discouraged from a) using arbitrary and non-criteria-based lists of approved or unapproved foreign medical schools for licensure decisions and b) requiring an interview or oral examination prior to licensure endorsement. More effective methods for evaluating the quality of IMGs' undergraduate medical education should be pursued with the Federation of State Medical Boards (FSMB) and other relevant organizations. When available, the results should be a part of the determination of eligibility for licensure.

2. Our AMA will continue to work with the FSMB to encourage parity in licensure requirements for all physicians, whether U.S. medical school graduates or international medical graduates.

3. Our AMA will continue to work with the Educational Commission for Foreign Medical Graduates and other appropriate organizations in developing effective methods to evaluate the clinical skills of IMGs.

4. Our AMA will work with state medical societies in states with discriminatory licensure requirements between IMGs and graduates of U.S. and Canadian medical schools to advocate for parity in licensure requirements, using the AMA International Medical Graduate Section licensure parity model resolution as a resource.

5. Our AMA will: (a) encourage states to study existing strategies to improve policies and processes to assist IMGs with credentialing and licensure to enable them to care for patients in underserved areas; and (b) encourage the FSMB and state medical boards to evaluate the progress of programs aimed at reducing barriers to licensure--including successes, failures, and barriers to implementation. [BOT Rep. 25, A-15; Appended: CME Rep. 4, A-21]

Recommendations for Future Directions for Medical Education H-295.995

Our AMA supports the following recommendations relating to the future directions for medical education:

(1) The medical profession and those responsible for medical education should strengthen the general or

broad components of both undergraduate and graduate medical education. All medical students and resident physicians should have general knowledge of the whole field of medicine regardless of their projected choice of specialty.

(2) Schools of medicine should accept the principle and should state in their requirements for admission that a broad cultural education in the arts, humanities, and social sciences, as well as in the biological and physical sciences, is desirable.

(3) Medical schools should make their goals and objectives known to prospective students and premedical counselors in order that applicants may apply to medical schools whose programs are most in accord with their career goals.

(4) Medical schools should state explicitly in publications their admission requirements and the methods they employ in the selection of students.

(5) Medical schools should require their admissions committees to make every effort to determine that the students admitted possess integrity as well as the ability to acquire the knowledge and skills required of a physician.

(6) Although the results of standardized admission testing may be an important predictor of the ability of students to complete courses in the preclinical sciences successfully, medical schools should utilize such tests as only one of several criteria for the selection of students. Continuing review of admission tests is encouraged because the subject content of such examinations has an influence on premedical education and counseling.

(7) Medical schools should improve their liaison with college counselors so that potential medical students can be given early and effective advice. The resources of regional and national organizations can be useful in developing this communication.

(8) Medical schools are chartered for the unique purpose of educating students to become physicians and should not assume obligations that would significantly compromise this purpose.

(9) Medical schools should inform the public that, although they have a unique capability to identify the changing medical needs of society and to propose responses to them, they are only one of the elements of society that may be involved in responding. Medical schools should continue to identify social problems related to health and should continue to recommend solutions.

(10) Medical school faculties should continue to exercise prudent judgment in adjusting educational programs in response to social change and societal needs.

(11) Faculties should continue to evaluate curricula periodically as a means of insuring that graduates will have the capability to recognize the diverse nature of disease, and the potential to provide preventive and comprehensive medical care. Medical schools, within the framework of their respective institutional goals and regardless of the organizational structure of the faculty, should provide a broad general education in both basic sciences and the art and science of clinical medicine.

(12) The curriculum of a medical school should be designed to provide students with experience in clinical medicine ranging from primary to tertiary care in a variety of inpatient and outpatient settings, such as university hospitals, community hospitals, and other health care facilities. Medical schools should establish standards and apply them to all components of the clinical educational program regardless of where they are conducted. Regular evaluation of the quality of each experience and its contribution to the total program should be conducted.

(13) Faculties of medical schools have the responsibility to evaluate the cognitive abilities of their students. Extramural examinations may be used for this purpose, but never as the sole criterion for promotion or graduation of a student.

(14) As part of the responsibility for granting the MD degree, faculties of medical schools have the obligation to evaluate as thoroughly as possible the non-cognitive abilities of their medical students.

(15) Medical schools and residency programs should continue to recognize that the instruction provided by volunteer and part-time members of the faculty and the use of facilities in which they practice make important contributions to the education of medical students and resident physicians. Development of means by which the volunteer and part-time faculty can express their professional viewpoints regarding the educational environment and curriculum should be encouraged.

(16) Each medical school should establish, or review already established, criteria for the initial appointment, continuation of appointment, and promotion of all categories of faculty. Regular evaluation of the contribution of all faculty members should be conducted in accordance with institutional policy and practice.

(17a) Faculties of medical schools should reevaluate the current elements of their fourth or final year with the intent of increasing the breadth of clinical experience through a more formal structure and improved faculty counseling. An appropriate number of electives or selected options should be included. (17b)

Counseling of medical students by faculty and others should be directed toward increasing the breadth of clinical experience. Students should be encouraged to choose experience in disciplines that will not be an integral part of their projected graduate medical education.

(18) Directors of residency programs should not permit medical students to make commitments to a residency program prior to the final year of medical school.

(19) The first year of postdoctoral medical education for all graduates should consist of a broad year of general training. (a) For physicians entering residencies in internal medicine, pediatrics, and general surgery, postdoctoral medical education should include at least four months of training in a specialty or specialties other than the one in which the resident has been appointed. (A residency in family practice provides a broad education in medicine because it includes training in several fields.) (b) For physicians entering residencies in specialties other than internal medicine, pediatrics, general surgery, and family practice, the first postdoctoral year of medical education should be devoted to one of the four above-named specialties or to a program following the general requirements of a transitional year stipulated in the "General Requirements" section of the "Essentials of Accredited Residencies." (c) A program for the transitional year should be planned, designed, administered, conducted, and evaluated as an entity by the sponsoring institution rather than one or more departments. Responsibility for the executive direction of the program should be assigned to one physician whose responsibility is the administration of the program. Educational programs for a transitional year should be subjected to thorough surveillance by the appropriate accrediting body as a means of assuring that the content, conduct, and internal evaluation of the educational program conform to national standards. The impact of the transitional year should not be deleterious to the educational programs of the specialty disciplines.

(20) The ACGME, individual specialty boards, and respective residency review committees should improve communication with directors of residency programs because of their shared responsibility for programs in graduate medical education.

(21) Specialty boards should be aware of and concerned with the impact that the requirements for certification and the content of the examination have upon the content and structure of graduate medical education. Requirements for certification should not be so specific that they inhibit program directors from exercising judgment and flexibility in the design and operation of their programs.

(22) An essential goal of a specialty board should be to determine that the standards that it has set for certification continue to assure that successful candidates possess the knowledge, skills, and the commitment to upgrade continually the quality of medical care.

(23) Specialty boards should endeavor to develop a consensus concerning the significance of certification by specialty and publicize it so that the purposes and limitations of certification can be clearly understood by the profession and the public.

(24) The importance of certification by specialty boards requires that communication be improved between the specialty boards and the medical profession as a whole, particularly between the boards and their sponsoring, nominating, or constituent organizations and also between the boards and their diplomates.

(25) Specialty boards should consider having members of the public participate in appropriate board activities.

(26) Specialty boards should consider having physicians and other professionals from related disciplines participate in board activities.

(27) The AMA recommends to state licensing authorities that they require individual applicants, to be eligible to be licensed to practice medicine, to possess the degree of Doctor of Medicine or its equivalent from a school or program that meets the standards of the LCME or accredited by the American Osteopathic Association, or to demonstrate as individuals, comparable academic and personal achievements. All applicants for full and unrestricted licensure should provide evidence of the satisfactory completion of at least one year of an accredited program of graduate medical education in the US.

Satisfactory completion should be based upon an assessment of the applicant's knowledge, problem-solving ability, and clinical skills in the general field of medicine. The AMA recommends to legislatures and governmental regulatory authorities that they not impose requirements for licensure that are so specific that they restrict the responsibility of medical educators to determine the content of undergraduate and graduate medical education.

(28) The medical profession should continue to encourage participation in continuing medical education related to the physician's professional needs and activities. Efforts to evaluate the effectiveness of such education should be continued.

(29) The medical profession and the public should recognize the difficulties related to an objective and valid assessment of clinical performance. Research efforts to improve existing methods of evaluation and

to develop new methods having an acceptable degree of reliability and validity should be supported.

(30) Methods currently being used to evaluate the readiness of graduates of foreign medical schools to enter accredited programs in graduate medical education in this country should be critically reviewed and modified as necessary. No graduate of any medical school should be admitted to or continued in a residency program if his or her participation can reasonably be expected to affect adversely the quality of patient care or to jeopardize the quality of the educational experiences of other residents or of students in educational programs within the hospital.

(31) The Educational Commission for Foreign Medical Graduates should be encouraged to study the feasibility of including in its procedures for certification of graduates of foreign medical schools a period of observation adequate for the evaluation of clinical skills and the application of knowledge to clinical problems.

(32) The AMA, in cooperation with others, supports continued efforts to review and define standards for medical education at all levels. The AMA supports continued participation in the evaluation and accreditation of medical education at all levels.

(33) The AMA, when appropriate, supports the use of selected consultants from the public and from the professions for consideration of special issues related to medical education.

(34) The AMA encourages entities that profile physicians to provide them with feedback on their performance and with access to education to assist them in meeting norms of practice; and supports the creation of experiences across the continuum of medical education designed to teach about the process of physician profiling and about the principles of utilization review/quality assurance.

(35) Our AMA encourages the accrediting bodies for MD- and DO-granting medical schools to review, on an ongoing basis, their accreditation standards to assure that they protect the quality and integrity of medical education in the context of the emergence of new models of medical school organization and governance.

(36) Our AMA will strongly advocate for the rights of medical students, residents, and fellows to have physician-led (MD or DO as defined by the AMA) clinical training, supervision, and evaluation while recognizing the contribution of non-physicians to medical education.

(37) Our AMA will publicize to medical students, residents, and fellows their rights, as per Liaison Committee on Medical Education and Accreditation Council for Graduate Medical Education guidelines, to physician-led education and a means to report violations without fear of retaliation. [CME Rep. B, A-82; Amended: CLRPD Rep. A, I-92; Res. 331, I-95; Reaffirmed by Res. 322, A-97; Reaffirmation I-03; Modified: CME Rep. 7, A-05; Modified: CME Rep. 2, I-05; Appended: CME Rep. 5, A-11; Reaffirmed: CME Rep. 3, A-11; Modified: CME Rep. 01, I-17; Appended: Res. 961, I-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 315
(A-24)

Introduced by: Maryland

Subject: Cease Reporting of Total Attempts of USMLE STEP1 and COMLEX-USA
Level 1 Examinations

Referred to: Reference Committee C

1 Whereas, in September 2021, the United States Medical Licensing Examination (USMLE) made
2 an official announcement regarding the implementation of a revised assessment format for
3 STEP1, wherein the conventional numeric scoring system and binary pass/fail outcomes would
4 be replaced solely with a pass/fail designation for examinations commencing in January 2022¹;
5 and
6
7 Whereas, alongside this transition, the passing threshold for STEP1 was heightened, and the
8 permissible number of attempts was reduced from six to four,¹ with the aim of alleviating the
9 psychological burden commonly associated with the examination process, while concurrently
10 fostering a more comprehensive evaluation of applicants; and
11
12 Whereas, the pass rate for all examinees in 2022 declined to 82%, compared to the previous
13 rate of 88% in 2021 prior to the introduction of the new scoring system² and
14
15 Whereas, studies have indicated significant performance disparities between men and women
16 taking STEP1, as well as variations based on the age at the time of examination;^{3,4} and
17
18 Whereas, the process of preparing for and undertaking the USMLE STEP1 exam has been
19 associated with excessive stress and social isolation⁵; and
20
21 Whereas, research has revealed that medical students encounter higher levels of burnout,
22 depressive symptoms, suicidal ideation, and substance use compared to the general
23 population;^{6,7} and
24
25 Whereas, the transition to a binary scoring system has led to heightened pressure to pass the
26 exam on the first attempt; and
27
28 Whereas, the implementation of the pass/fail scoring system has also led to an increased
29 emphasis on extracurricular activities and the STEP2 exam, a more clinically relevant exam, as
30 the primary means of distinguishing applicants and maintaining competitiveness;⁸ and
31 Whereas, in contrast to the STEP2 exam, STEP1 is considered less clinically relevant and an
32 inadequate indicator of future professional competence as a physician;⁹ and
33
34 Whereas, given that STEP1 has moved to pass/fail and is now a mere threshold to be crossed,
35 lacks clinical significance compared to STEP2, and is an inadequate indicator of future
36 professional competence as a physician, it is reasonable to move away from reporting failed
37 attempts or total number of attempts to residency and fellowship programs, as well as licensure
38 authorities; and

1 Whereas, transitioning away from reporting failed attempts on the STEP1 and Level 1
2 examinations would be another potential avenue to better support medical student mental
3 health and wellness and would align with the goal of creating a more comprehensive and
4 balanced evaluation of medical students; and

5
6 Whereas, our AMA has ample policy regarding supporting the mental health and wellness of
7 trainees in both the undergraduate and graduate medical education levels (H-345.970); and

8
9 Whereas, our AMA has expressed its support for the holistic review of medical school applicants
10 and has encouraged residency directors not to utilize ranked passing scores as a screening
11 criterion (H-275.953); therefore be it

12
13 **RESOLVED**, that our American Medical Association advocate that NBME and NBOME cease
14 reporting the total number of attempts of the STEP1 and COMLEX-USA Level 1 examinations to
15 residency and fellowship programs and licensure. (Directive to Take Action)

Fiscal Note: Minimal - less than \$1,000

Received: 5/6/2024

RELEVANT AMA POLICY

The Grading Policy for Medical Licensure Examinations H-275.953

1. Our AMA's representatives to the ACGME are instructed to promote the principle that selection of residents should be based on a broad variety of evaluative criteria, and to propose that the ACGME General Requirements state clearly that residency program directors must not use NBME or USMLE ranked passing scores as a screening criterion for residency selection.
2. Our AMA adopts the following policy on NBME or USMLE examination scoring: (a) Students receive "pass/fail" scores as soon as they are available. (If students fail the examinations, they may request their numerical scores immediately.) (b) Numerical scores are reported to the state licensing authorities upon request by the applicant for licensure. At this time, the applicant may request a copy of his or her numerical scores. (c) Scores are reported in pass/fail format for each student to the medical school. The school also receives a frequency distribution of numerical scores for the aggregate of their students.
3. Our AMA will: (a) promote equal acceptance of the USMLE and COMLEX at all United States residency programs; (b) work with appropriate stakeholders including but not limited to the National Board

of Medical Examiners, Association of American Medical Colleges, National Board of Osteopathic Medical Examiners, Accreditation Council for Graduate Medical Education and American Osteopathic Association to educate Residency Program Directors on how to interpret and use COMLEX scores; and (c) work with Residency Program Directors to promote higher COMLEX utilization with residency program matches in light of the new single accreditation system.

4. Our AMA will work with appropriate stakeholders to release guidance for residency and fellowship program directors on equitably comparing students who received 3-digit United States Medical Licensing Examination Step 1 or Comprehensive Osteopathic Medical Licensing Examination of the United States Level 1 scores and students who received Pass/Fail scores.

Improving Mental Health Services for Undergraduate and Graduate Students H-345.970

Our AMA supports: (1) strategies that emphasize de-stigmatization and enable timely and affordable access to mental health services for undergraduate and graduate students, in order to improve the provision of care and increase its use by those in need; (2) colleges and universities in emphasizing to undergraduate and graduate students and parents the importance, availability, and efficacy of mental health resources; and (3) collaborations of university mental health specialists and local public or private practices and/or health centers in order to provide a larger pool of resources, such that any student is able to access care in a timely and affordable manner

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 316
(A-24)

Introduced by: New England

Subject: Reassessment of Continuing Board Certification Process

Referred to: Reference Committee C

1 Whereas, the continuing board certification process (CBC), previously known as maintenance of
2 certification (MOC) process put forth by the American Board of Medical Specialties (ABMS) and
3 American Osteopathic Association (AOA) has been recognized by a variety of state medical
4 societies and our American Medical Association (AMA) to be expensive and burdensome for
5 physicians without providing independent studies showing benefits for physicians, patients, or
6 the general public; and
7

8 Whereas, a 2023 Survey of Clinical Oncologists ([https://connection.asco.org/magazine/asco-](https://connection.asco.org/magazine/asco-member-news/asco-members-weigh-abim-maintenance-certification-program)
9 [member-news/asco-members-weigh-abim-maintenance-certification-program](https://connection.asco.org/magazine/asco-member-news/asco-members-weigh-abim-maintenance-certification-program)) found that an
10 overwhelming majority (82%) felt that MOC was an unnecessary addition beyond typical
11 Continuing Medical Education (CME) requirements, with additional, widespread agreement
12 (74%) that MOC does not improve their clinically relevant knowledge or improve the quality of
13 patient care; and
14

15 Whereas, the National Board of Physicians and Surgeons (NBPAS), was founded in 2015
16 specifically to address the acknowledged onerous CBC process and offers a less burdensome
17 and expensive alternative; and
18

19 Whereas, item 30 of policy D-275.954 calls to “Support a recertification process based on high
20 quality, appropriate Continuing Medical Education (CME) material directed by the AMA
21 recognized specialty societies covering the physician’s practice area...to ensure lifelong
22 learning”, which, along with requiring initial ABMS board certification, is one of the mechanisms
23 utilized by NBPAS to certify physicians; and
24

25 Whereas, our AMA policy, D-275.954¹ Continuing Board Certification, limits discussion of CBC
26 to only ABMS and member boards, thus imposing its imprimatur on these boards to the
27 exclusion of alternative boards, preempting an evidenced-based, thorough, and comprehensive
28 discussion and evaluation of the current CBC opportunities available to physicians; and
29

30 Whereas, our AMA policy, H-275.926² Medical Specialty Board Certification Standards,
31 specifically excludes our AMA from considering NBPAS as an accepted alternative CBC
32 pathway because it does not provide its own certification exam nor ongoing, thus limiting
33 physician choice and autonomy and discriminating against the approximately 11,000 physicians
34 who are currently certified by NBPAS; and
35

36 Whereas, policies D-275.954 and H-275.926 do not provide evidence to support accepting
37 ABMS CBC over NBPAS CBC nor provide evidence that NBPAS CBC is inferior to ABMS CBC
38 with respect to physician competence, patient safety, patient satisfaction, malpractice rates, or
39 any other measures of physician performance; and

1 Whereas, NBPAS CBC has demonstrated their legitimacy as a widely accepted certification
2 body as they are recognized by major national accrediting bodies, including, the Joint
3 Commission, the National Committee on Quality Assurance (NCQA), the Utilization Review
4 Accreditation Commission (URAC), the Council for Affordable Quality Healthcare (CAQH),
5 Medicare and Medicaid, and Det Norske Veritas, Inc. (DNV) and many insurers also accept
6 CBC through NBPAS including Blue Cross Blue Shield (BCBS), United Healthcare (UHC),
7 Aetna, Humana, Priority, and Geisinger Health Plan; and
8

9 Whereas, the Massachusetts Medical Society convened a meeting with the Accreditation
10 Council for Continuing Medical Education (ACCME®) followed by a joint meeting with AOA,
11 ABMS, and NBPAS that included presentations by each board. The data presented and
12 discussion in those meetings failed to offer substantial evidence that ABMS CBC process
13 subsequent to initial board certification resulted in improved quality of care and better patient
14 outcomes compared to NBPAS, leading us to question if the current reliance on ABMS CBC
15 and exclusion of NBPAS CBC meets the needs of physicians, patients, and the public; therefore
16 be it
17

18 RESOLVED, that our American Medical Association undertake a thorough review and analysis
19 of the available literature, data, and evidence to re-examine and update the accepted standards
20 for continuing board certification including policy H-275.926, Medical Specialty Board
21 Certification Standards, so the standards reflect the best manner to assess physicians'
22 knowledge and skills necessary to practice medicine. (Directive to Take Action)
23

Fiscal Note: Minimal - less than \$1,000

Received: 5/7/2024

1. AMA Policy D-275.954 Continuing Board Certification
2. AMA Policy H-275.926

RELEVANT AMA POLICY

Continuing Board Certification D-275.954

Our AMA will:

1. Continue to monitor the evolution of Continuing Board Certification (CBC), continue its active engagement in discussions regarding their implementation, encourage specialty boards to investigate and/or establish alternative approaches for CBC, and prepare a report regarding the CBC process at the request of the House of Delegates or when deemed necessary by the Council on Medical Education.
2. Continue to review, through its Council on Medical Education, published literature and emerging data as part of the Councils ongoing efforts to critically review CBC issues.
3. Continue to monitor the progress by the American Board of Medical Specialties (ABMS) and its member boards on implementation of CBC, and encourage the ABMS to report its research findings on the issues surrounding certification and CBC on a periodic basis.
4. Encourage the ABMS and its member boards to continue to explore other ways to measure the ability of physicians to access and apply knowledge to care for patients, and to continue to examine the evidence supporting the value of specialty board certification and CBC.
5. Work with the ABMS to streamline and improve the Cognitive Expertise (Part III) component of CBC, including the exploration of alternative formats, in ways that effectively evaluate acquisition of new knowledge while reducing or eliminating the burden of a high-stakes examination.
6. Work with interested parties to ensure that CBC uses more than one pathway to assess accurately the competence of practicing physicians, to monitor for exam relevance and to ensure that CBC does not lead to unintended economic hardship such as hospital de-credentialing of practicing physicians.

7. Recommend that the ABMS not introduce additional assessment modalities that have not been validated to show improvement in physician performance and/or patient safety.
8. Work with the ABMS to eliminate practice performance assessment modules, as currently written, from CBC requirements.
9. Encourage the ABMS to ensure that all ABMS member boards provide full transparency related to the costs of preparing, administering, scoring and reporting CBC and certifying examinations.
10. Encourage the ABMS to ensure that CBC and certifying examinations do not result in substantial financial gain to ABMS member boards, and advocate that the ABMS develop fiduciary standards for its member boards that are consistent with this principle.
11. Work with the ABMS to lessen the burden of CBC on physicians with multiple board certifications, particularly to ensure that CBC is specifically relevant to the physicians current practice.
12. Work with key stakeholders to (a) support ongoing ABMS member board efforts to allow multiple and diverse physician educational and quality improvement activities to qualify for CBC; (b) support ABMS member board activities in facilitating the use of CBC quality improvement activities to count for other accountability requirements or programs, such as pay for quality/performance or PQRS reimbursement; (c) encourage ABMS member boards to enhance the consistency of quality improvement programs across all boards; and (d) work with specialty societies and ABMS member boards to develop tools and services that help physicians meet CBC requirements.
13. Work with the ABMS and its member boards to collect data on why physicians choose to maintain or discontinue their board certification.
14. Work with the ABMS to study whether CBC is an important factor in a physicians decision to retire and to determine its impact on the US physician workforce.
15. Encourage the ABMS to use data from CBC to track whether physicians are maintaining certification and share this data with the AMA.
16. Encourage AMA members to be proactive in shaping CBC by seeking leadership positions on the ABMS member boards, American Osteopathic Association (AOA) specialty certifying boards, and CBC Committees.
17. Continue to monitor the actions of professional societies regarding recommendations for modification of CBC.
18. Encourage medical specialty societies leadership to work with the ABMS, and its member boards, to identify those specialty organizations that have developed an appropriate and relevant CBC process for its members.
19. Continue to work with the ABMS to ensure that physicians are clearly informed of the CBC requirements for their specific board and the timelines for accomplishing those requirements.
20. Encourage the ABMS and its member boards to develop a system to actively alert physicians of the due dates of the multi-stage requirements of continuous professional development and performance in practice, thereby assisting them with maintaining their board certification.
21. Recommend to the ABMS that all physician members of those boards governing the CBC process be required to participate in CBC.
22. Continue to participate in the Coalition for Physician Accountability, formerly known as the National Alliance for Physician Competence forums.
23. Encourage the PCPI Foundation, the ABMS, and the Council of Medical Specialty Societies to work together toward utilizing Consortium performance measures in Part IV of CBC.
24. Continue to assist physicians in practice performance improvement.
25. Encourage all specialty societies to grant certified CME credit for activities that they offer to fulfill requirements of their respective specialty boards CBC and associated processes.
26. Support the American College of Physicians as well as other professional societies in their efforts to work with the American Board of Internal Medicine (ABIM) to improve the CBC program.
27. Oppose those maintenance of certification programs administered by the specialty boards of the ABMS, or of any other similar physician certifying organization, which do not appropriately adhere to the principles codified as AMA Policy on Continuing Board Certification.
28. Ask the ABMS to encourage its member boards to review their maintenance of certification policies regarding the requirements for maintaining underlying primary or initial specialty board certification in addition to subspecialty board certification, if they have not yet done so, to allow physicians the option to focus on continuing board certification activities relevant to their practice.
29. Call for the immediate end of any mandatory, secured recertifying examination by the ABMS or other certifying organizations as part of the recertification process for all those specialties that still require a

secure, high-stakes recertification examination.

30. Support a recertification process based on high quality, appropriate Continuing Medical Education (CME) material directed by the AMA recognized specialty societies covering the physicians practice area, in cooperation with other willing stakeholders, that would be completed on a regular basis as determined by the individual medical specialty, to ensure lifelong learning.

31. Continue to work with the ABMS to encourage the development by and the sharing between specialty boards of alternative ways to assess medical knowledge other than by a secure high stakes exam.

32. Continue to support the requirement of CME and ongoing, quality assessments of physicians, where such CME is proven to be cost-effective and shown by evidence to improve quality of care for patients.

33. Through legislative, regulatory, or collaborative efforts, will work with interested state medical societies and other interested parties by creating model state legislation and model medical staff bylaws while advocating that Continuing Board Certification not be a requirement for: (a) medical staff membership, privileging, credentialing, or recredentialing; (b) insurance panel participation; or (c) state medical licensure.

34. Increase its efforts to work with the insurance industry to ensure that continuing board certification does not become a requirement for insurance panel participation.

35. Advocate that physicians who participate in programs related to quality improvement and/or patient safety receive credit for CBC Part IV.

36. Continue to work with the medical societies and the American Board of Medical Specialties (ABMS) member boards that have not yet moved to a process to improve the Part III secure, high-stakes examination to encourage them to do so.

37. Our AMA, through its Council on Medical Education, will continue to work with the American Board of Medical Specialties (ABMS), ABMS Committee on Continuing Certification (3C), and ABMS Stakeholder Council to pursue opportunities to implement the recommendations of the Continuing Board Certification: Vision for the Future Commission and AMA policies related to continuing board certification.

38. Our AMA, through its Council on Medical Education, will continue to work with the American Board of Medical Specialties (ABMS) and ABMS member boards to implement key recommendations outlined by the Continuing Board Certification: Vision for the Future Commission in its final report, including the development and release of new, integrated standards for continuing certification programs that will address the Commissions recommendations for flexibility in knowledge assessment and advancing practice, feedback to diplomates, and consistency.

39. Our AMA will work with the ABMS and its member boards to reduce financial burdens for physicians holding multiple certificates who are actively participating in continuing certification through an ABMS member board, by developing opportunities for reciprocity for certification requirements as well as consideration of reduced or waived fee structures.

40. Our AMA will continue to publicly report its work on enforcing AMA Principles on Continuing Board Certification.

Medical Specialty Board Certification Standards H-275.926

1. Our AMA:

(1) Opposes any action, regardless of intent, that appears likely to confuse the public about the unique credentials of American Board of Medical Specialties (ABMS) or American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) board certified physicians in any medical specialty, or take advantage of the prestige of any medical specialty for purposes contrary to the public good and safety.

(2) Opposes any action, regardless of intent, by organizations providing board certification for non-physicians that appears likely to confuse the public about the unique credentials of medical specialty board certification or take advantage of the prestige of medical specialty board certification for purposes contrary to the public good and safety.

(3) Continues to work with other medical organizations to educate the profession and the public about the ABMS and AOA-BOS board certification process. It is AMA policy that when the equivalency of board certification must be determined, the certification program must first meet accepted standards for certification that include both a) a process for defining specialty-specific standards for knowledge and skills and b) offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. In addition, accepted standards, such as those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination.

(4) Opposes discrimination against physicians based solely on lack of ABMS or equivalent AOA-BOS board certification, or where board certification is one of the criteria considered for purposes of measuring quality of care, determining eligibility to contract with managed care entities, eligibility to receive hospital staff or other clinical privileges, ascertaining competence to practice medicine, or for other purposes. Our AMA also opposes discrimination that may occur against physicians involved in the board certification process, including those who are in a clinical practice period for the specified minimum period of time that must be completed prior to taking the board certifying examination.

(5) Advocates for nomenclature to better distinguish those physicians who are in the board certification pathway from those who are not.

(6) Encourages member boards of the ABMS to adopt measures aimed at mitigating the financial burden on residents related to specialty board fees and fee procedures, including shorter preregistration periods, lower fees and easier payment terms.

American Medical Association House of Delegates

Resolution: 317
(A-24)

Introduced by: New York

Subject: Physician Participation in the Planning and Development of Accredited Continuing Education for Physicians

Referred to: Reference Committee C

1 Whereas, Accredited Continuing Education is recognized as essential for the continuing
2 professional and personal development for physicians in order to improve the health and
3 wellbeing of patients as well as the community; and
4
5 Whereas, Accredited Continuing Medical Education (ACCME) current policies and guidelines do
6 not require an accredited provider of Continuing Education (CE) providing education for
7 physicians to be organizations for (or led) by physicians; and
8
9 Whereas, many such non-physician led accredited CE provider entities are engaged in
10 providing accredited CE to physicians; and
11
12 Whereas, accredited providers are not required to disclose to its physician learners whether any
13 physicians were engaged in the planning and development of the CE activity; and
14
15 Whereas, ACCME policies require that all accredited CE identify professional practice gaps for
16 the development of CE activities; and
17
18 Whereas, to ensure that all accredited CE for physicians addresses the needs of physician
19 learners that CE for physicians is planned and developed with physician involvement; and
20
21 Whereas, MSSNY adopted policy 50.985 Requiring Physician Participation in the Planning and
22 Development of Accredited Continuing Medical Education for Physicians; therefore be it
23
24 RESOLVED, that our American Medical Association petition the Accredited Continuing Medical
25 Education to develop policies which require physician participation in the planning and
26 development of accredited continuing education for physicians. (Directive to Take Action)

Fiscal Note: Minimal - less than \$1,000

Received: 5/8/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 318
(A-24)

Introduced by: American Urological Association

Subject: Variation in Board Certification and Licensure Requirements for
Internationally-Trained Physicians and Access to Care

Referred to: Reference Committee C

- 1 Whereas, there exists significant variation in board certification requirements for physicians who
2 complete post-graduate training (i.e. resident/fellowship) outside of the United States,
3 “internationally trained physicians”; and
4
- 5 Whereas, while half of the American Board of Medical Specialties’ member boards allow board
6 certification from physicians accredited in other countries outside of Canada, the scope and
7 variations in board certification requirements is not well-documented and the degree to which
8 these requirements are able to ensure quality is not well understood; and
9
- 10 Whereas, according to projections published by the Association of American Medical Colleges,
11 the United States will face a physician shortage of up to 86,000 physicians by 2036; and
12
- 13 Whereas, the Health Resources and Services Administration projects a 34 percent non-metro
14 adequacy for all physician types by 2036; and
15
- 16 Whereas, two of five physicians are reaching the traditional retirement age of 65 within the next
17 10 years; and
18
- 19 Whereas, 87% of American physicians are board certified; and
20
- 21 Whereas, 25% of licensed physicians are international medical graduates; and
22
- 23 Whereas, approximately one in five U.S. physicians were born and attended medical school
24 outside of the United States and Canada (non-U.S. IMGs, as compared to Americans who
25 attend medical school abroad), totaling more than 203,500 physicians as of 2021; and
26
- 27 Whereas, the number of international medical graduates has grown by nearly 18% since 2010,
28 as compared to the 15% rise in U.S. medical graduates in the same time period; and
29
- 30 Whereas, while existing AMA and AMBS policy opposes the linkage between board certification
31 and medical licensure or staffing/clinical privileges, the true extent to which this continues to
32 occur is not well-understood and board certification may create a secondary barrier to practicing
33 and may limit the locations and types of practices available to internationally-trained physicians;
34 and
35
- 36 Whereas, licensing requirements in certain states can be an impediment to practice for
37 internationally-trained physicians, certain states, such as Tennessee, Florida, Wisconsin,
38 Virginia have begun to implement pathways for internationally-trained physicians to achieve

1 provisional licensure to practice medicine, and additional states such as Idaho and Arizona are
2 considering similar legislation; and

3
4 Whereas, board certification exceeds baseline requirements for state medical licensing,
5 assuring the public that physicians and specialists demonstrate the additional clinical skills and
6 professional behavior to provide safe and high-quality specialty care; and

7
8 Whereas, some states have begun to consider alternate pathways to licensure without
9 completion of an ACGME-accredited residency program for U.S. medical graduates under the
10 pretense that this will increase access to care particularly in rural areas, it is unclear the effects
11 these proposed pathways will actually have on rural access issues and there does not currently
12 exist a system to ensure the quality of the training they receive post medical school; and

13
14 Whereas, according to the AMA Workforce Mapper, there has not been an substantive increase
15 in non-physician providers practicing in rural and underserved areas, despite the broadening of
16 scope of practice for non-physician providers under the pretense of increasing access to care;
17 and

18
19 Whereas, advocating for increased funding for Graduate Medical Education funding continues
20 to be a major priority of our AMA, the allocation of these funds to require full re-training for a
21 fully-trained physician who has completed post-graduate training in another country may not be
22 good stewardship of limited resources; therefore be it

23
24 RESOLVED, that our American Medical Association work with the American Board of Medical
25 Specialties to study the variation in board certification requirements for internationally trained
26 physicians as well as the impact this may have on physician practices and addressing physician
27 shortages including the impact of these pathways on maintaining public assurance of a well-
28 trained physician workforce (Directive to Take Action); and be it further

29
30 RESOLVED, that our AMA study the potential effects of increasing access to board certification
31 for internationally-trained physicians on projected physician workforce shortages (Directive to
32 Take Action); and be it further

33
34 RESOLVED, that our AMA work with the Federation of State Medical Boards to study the
35 existing alternate pathways to licensure for physicians who have not completed an ACGME-
36 accredited post-graduate training program and the positive and negative impacts of these
37 pathways on addressing physician shortages. (Directive to Take Action)

38
Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/8/2024

RELEVANT AMA POLICY

Medical Specialty Board Certification Standards H-275.926

1. Our American Medical Association opposes any action, regardless of intent, that appears likely to confuse the public about the unique credentials of American Board of Medical Specialties (ABMS) or American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) board certified physicians in any medical specialty, or take advantage of the prestige of any medical specialty for purposes contrary to the public good and safety.
2. Our AMA opposes any action, regardless of intent, by organizations providing board certification for non-physicians that appears likely to confuse the public about the unique credentials of medical specialty board certification or take advantage of the prestige of medical specialty board certification for purposes contrary to the public good and safety.
3. Our AMA continues to work with other medical organizations to educate the profession and the public about the ABMS and AOA-BOS board certification process. It is AMA policy that when the equivalency of board certification must be determined, the certification program must first meet accepted standards for certification that include both
 - a. a process for defining specialty-specific standards for knowledge and skills and
 - b. offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. In addition, accepted standards, such as those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination.
4. Our AMA opposes discrimination against physicians based solely on lack of ABMS or equivalent AOA-BOS board certification, or where board certification is one of the criteria considered for purposes of measuring quality of care, determining eligibility to contract with managed care entities, eligibility to receive hospital staff or other clinical privileges, ascertaining competence to practice medicine, or for other purposes. Our AMA also opposes discrimination that may occur against physicians involved in the board certification process, including those who are in a clinical practice period for the specified minimum period of time that must be completed prior to taking the board certifying examination.
5. Our AMA advocates for nomenclature to better distinguish those physicians who are in the board certification pathway from those who are not.
6. Our AMA encourages member boards of the ABMS to adopt measures aimed at mitigating the financial burden on residents related to specialty board fees and fee procedures, including shorter preregistration periods, lower fees and easier payment terms.
7. Our AMA encourages continued advocacy to federal and state legislatures, federal and state regulators, physician credentialing organizations, hospitals, and other interested parties to define physician board certification as the medical profession establishing specialty-specific standards for knowledge and skills, using an independent assessment process to determine the acquisition of knowledge and skills for initial certification and recertification.

Medical Licensure H-275.978

Our AMA: (1) urges directors of accredited residency training programs to certify the clinical competence of graduates of foreign medical schools after completion of the first year of residency training; however, program directors must not provide **certification** until they are satisfied that the resident is clinically competent;

- (2) encourages licensing boards to require a certificate of competence for full and unrestricted **licensure**;
- (3) urges licensing boards to review the details of application for initial **licensure** to assure that procedures are not unnecessarily cumbersome and that inappropriate information is not required. Accurate identification of documents and applicants is critical. It is recommended that boards continue to work cooperatively with the Federation of State Medical Boards to these ends;
- (4) will continue to provide information to licensing boards and other health organizations in an effort to prevent the use of fraudulent credentials for entry to medical practice;
- (5) urges those licensing boards that have not done so to develop regulations permitting the issuance of special purpose licenses, with the exception of special licensing pathways for "assistant physicians." It is recommended that these regulations permit special purpose **licensure** with the minimum of educational requirements consistent with protecting the health, safety and welfare of the public;
- (6) urges licensing boards, specialty boards, hospitals and their medical staffs, and other organizations that evaluate physician competence to inquire only into conditions which impair a physician's current ability to practice medicine;
- (7) urges licensing boards to maintain strict confidentiality of reported information;
- (8) urges that the evaluation of information collected by licensing boards be undertaken only by persons experienced in medical **licensure** and competent to make judgments about physician competence. It is recommended that decisions concerning medical competence and discipline be made with the participation of physician members of the board;
- (9) recommends that if confidential information is improperly released by a licensing board about a physician, the board take appropriate and immediate steps to correct any adverse consequences to the physician;
- (10) urges all physicians to participate in continuing medical education as a professional obligation;
- (11) urges licensing boards not to require mandatory reporting of continuing medical education as part of the process of reregistering the license to practice medicine;
- (12) opposes the use of written cognitive examinations of medical knowledge at the time of reregistration except when there is reason to believe that a physician's knowledge of medicine is deficient;
- (13) supports working with the Federation of State Medical Boards to develop mechanisms to evaluate the competence of physicians who do not have hospital privileges and who are not subject to peer review;
- (14) believes that licensing laws should relate only to requirements for admission to the practice of medicine and to assuring the continuing competence of physicians, and opposes efforts to achieve a variety of socioeconomic objectives through medical **licensure** regulation;
- (15) urges licensing jurisdictions to pass laws and adopt regulations facilitating the movement of licensed physicians between licensing jurisdictions; licensing jurisdictions should limit physician movement only for reasons related to protecting the health, safety and welfare of the public;
- (16) encourages the Federation of State Medical Boards and the individual medical licensing boards to continue to pursue the development of uniformity in the acceptance of examination scores on the Federation Licensing Examination and in other requirements for endorsement of medical licenses;
- (17) urges licensing boards not to place time limits on the acceptability of National Board **certification** or on scores on the United States Medical Licensing Examination for endorsement of licenses;
- (18) urges licensing boards to base endorsement on an assessment of physician competence and not on passing a written examination of cognitive ability, except in those instances when information collected by a licensing board indicates need for such an examination;
- (19) urges licensing boards to accept an initial license provided by another board to a graduate of a US medical school as proof of completion of acceptable medical education;
- (20) urges that documentation of graduation from a foreign medical school be maintained by boards providing an initial license, and that the documentation be provided on request to other licensing boards for review in connection with an application for **licensure** by endorsement;
- (21) urges licensing boards to consider the completion of specialty training and evidence of competent and honorable practice of medicine in reviewing applications for **licensure** by endorsement;
- (22) encourages national specialty boards to reconsider their practice of decertifying physicians who are capable of competently practicing medicine with a limited license;
- (23) vigorously opposes any state or other government agency plan for mandated recertification of physicians for the purpose of relicensure or reregistration;
- (24) supports the Federation of State Medical Boards' efforts to assure that organizations that use the Federation's copyrighted disciplinary data secure permission to do so and accompany their publications with an explanation that comparison between states based on those data alone is misleading to the public and does a disservice to the work of the state medical boards;

(25) urges that the state medical and osteopathic boards that maintain a time limit for completing licensing examination sequences for either USMLE or COMLEX to adopt a time limit of no less than 10 years for completion of the licensing exams; and

(26) urges that state medical and osteopathic licensing boards with time limits for completing the licensing examination sequence provide for exceptions that may involve personal health/family circumstances.

Licensure for International Medical Graduates Practicing in U.S. Institutions with Restricted Medical Licenses D-255.977

Our AMA will advocate that qualified international medical graduates have a pathway for **licensure** by encouraging state medical licensing boards and the member boards of the American Board of Medical Specialties to develop criteria that allow: (1) completion of medical school and residency training outside the U.S.; (2) extensive U.S. medical practice; and (3) evidence of good standing within the local medical community to serve as a substitute for U.S. graduate medical education requirement for physicians seeking full unrestricted **licensure** and board **certification**.

Credentialing Issues D-275.989

Our AMA encourages state medical licensing boards, the Federation of State Medical Boards, and other credentialing entities to accept **certification** by the Educational Commission for Foreign Medical Graduates (a member of InTealth) as proof of primary source verification of an IMG's international medical education credentials.

Mechanisms to Measure Physician Competency H-275.936

Our AMA: (1) continues to work with the American Board of Medical Specialties and other relevant organizations to explore alternative evidence-based methods of determining ongoing clinical competency; (2) reviews and proposes improvements for assuring continued physician competence, including but not limited to performance indicators, board **certification** and recertification, professional experience, continuing medical education, and teaching experience; and (3) opposes the development and/or use of "Medical Competency Examination" and establishment of oversight boards for current state medical boards as proposed in the fall 1998 Report on Professional **Licensure** of the Pew Health Professions Commission, as an additional measure of physician competency.

Physician Competence H-275.996

Our AMA: (1) urges the American Board of Medical Specialties and its constituent boards to reconsider their positions regarding recertification as a mandatory requirement rather than as a voluntarily sought and achieved validation of excellence; (2) urges the Federation of State Medical Boards and its constituent state boards to reconsider and reverse their position urging and accepting specialty board **certification** as evidence of continuing competence for the purpose of re-registration of **licensure**; and (3) favors continued efforts to improve voluntary continuing medical education programs, to maintain the peer review process within the profession, and to develop better techniques for establishing the necessary patient care data base.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 319
(A-24)

Introduced by: Minority Affairs Section

Subject: AMA Support of U.S. Pathway Programs

Referred to: Reference Committee C

1 Whereas, Association of American Medical Colleges (AAMC) defines “underrepresented in
2 medicine” as those racial and ethnic populations that are underrepresented in the medical
3 profession relative to their numbers in the general population”¹; and
4

5 Whereas, AAMC reports that across the U.S. physician workforce, American Indian and Alaska
6 Natives represent 0.3%; Black / African Americans represent 5.2%; Hispanic, Latino, or of
7 Spanish Origin represent 6.3%; and Native Hawaiian / Other Pacific Islanders represent 0.1%,
8 and comprise racial and ethnic identities that are considered underrepresented in medicine
9 despite their significantly and respectively higher percentages in the U.S. population²; and
10

11 Whereas, a U.S. Supreme Court ruling in 2023 ended affirmative action in school admissions,
12 which is expected to result in a significant impact on medical education and diversity in
13 medicine; and
14

15 Whereas, the AMA invested \$14.1 million since 2019 through the Accelerating Change in
16 Medical Education initiative, which awarded grants to 37 medical schools and resulted in the
17 creation of a community of innovation aimed at creating the medical schools of the future³; and
18

19 Whereas, the AMA Reimagining Residency grant program was devised to transform residency
20 training to best address the workplace needs of our current and future health care system³; and
21

22 Whereas, the AMA’s ChangeMedEd Innovation Grant Program has awarded \$1.5 million in
23 grants since 2018³; and
24

25 Whereas, our AMA House of Delegates adopted Council on Medical Education Report 5 (June
26 2021), “Promising Practices Among Pathway Programs to Increase Diversity in Medicine”⁴; and
27

28 Whereas, the 1910 Flexner report caused significant harm to historically Black medical schools,
29 the diversity of the physician workforce, and the outcomes of minoritized and marginalized
30 patient populations⁵; therefore be it
31

32 RESOLVED, that our American Medical Association establish a grant program to support
33 existing and new K-16 pathway, STEMM and pre-med programs whose goals include, scaling
34 organizational grantees’ ability to expand their reach among youth; increasing diversity in
35 medicine; achieving health equity; improving medical education (Directive to Take Action); and
36 be it further
37

38 RESOLVED, that our AMA establish a diverse advisory body comprised of AMA member
39 physicians and trainees, staff, and allied organization representatives in medicine and public
40 health to co-develop the grant program (i.e., administration; grantee criteria and selection;
41 periodic reporting) (Directive to Take Action); and be it further

- 1 RESOLVED, that our AMA convene a summit among pathway and STEMM programs regarding
2 best practices, collaboration and strategic planning. (Directive to Take Action)

Fiscal Note: To Be Determined

Received: 5/8/2024

RELEVANT AMA POLICY

Plan for Continued Progress Toward Health Equity H-180.944

Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity. [BOT Rep. 33, A-18; Reaffirmed: CMS Rep. 5, I-21; Reaffirmed: CMS Rep. 1, I-23]

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was

initiated by the Commission to End Health Care Disparities.

12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.

13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs. [CME Rep. 1, I-06; Reaffirmation I-10; Reaffirmation A-13; Modified: CCB/CLRPD Rep. 2, A-14; Reaffirmation: A-16; Appended: Res. 313, A-17; Appended: Res. 314, A-17; Modified: CME Rep. 01, A-18; Appended: Res. 207, I-18; Reaffirmation: A-19; Appended: Res. 304, A-19; Appended: Res. 319, A-19; Modified: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22; Modified: Res. 320, A-23]

Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession H-350.979

Our AMA supports increasing the representation of minorities in the physician population by: (1) Supporting efforts to increase the applicant pool of qualified minority students by: (a) Encouraging state and local governments to make quality elementary and secondary education opportunities available to all; (b) Urging medical schools to strengthen or initiate programs that offer special premedical and precollegiate experiences to underrepresented minority students; (c) urging medical schools and other health training institutions to develop new and innovative measures to recruit underrepresented minority students, and (d) Supporting legislation that provides targeted financial aid to financially disadvantaged students at both the collegiate and medical school levels.

(2) Encouraging all medical schools to reaffirm the goal of increasing representation of underrepresented minorities in their student bodies and faculties.

(3) Urging medical school and undergraduate admissions committees to proactively implement policies and procedures that operationalize race-conscious admission practices in admissions decisions, among other factors.

(4) Increasing the supply of minority health professionals.

(5) Continuing its efforts to increase the proportion of minorities in medical schools and medical school faculty.

(6) Facilitating communication between medical school admission committees and premedical counselors concerning the relative importance of requirements, including grade point average and Medical College Aptitude Test scores.

(7) Continuing to urge for state legislation that will provide funds for medical education both directly to medical schools and indirectly through financial support to students.

(8) Continuing to provide strong support for federal legislation that provides financial assistance for able students whose financial need is such that otherwise they would be unable to attend medical school.

(9) Recognizing the consideration of race in admissions is a necessary safeguard in creating a pipeline to an environment within medical education that will propagate the advancement of health equity through diversification of the physician workforce. [CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CME Rep. 01, A-18; Modified: Res. 320, A-23; Appended: Res. 320, A-23]

Underrepresented Student Access to US Medical Schools H-350.960

Our AMA: (1) recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population; (2) supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students; (3) recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination; (4) is committed to promoting truth and reconciliation in medical education as it relates to improving equity; (5) recognizes the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations; (6) will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine; (7) will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school; (8) will recommend that

medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants; (9) will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine; and (10) will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979, (1) (a) encouraging state and local governments to make quality elementary and secondary education available to all. [Res. 908, I-08; Reaffirmed in lieu of Res. 311, A-15; Appended: CME Rep. 5, A-21; Appended: Res. 305, I-22]

Revisions to AMA Policy on the Physician Workforce H-200.955

It is AMA policy that:

- (1) any workforce planning efforts, done by the AMA or others, should utilize data on all aspects of the health care system, including projected demographics of both providers and patients, the number and roles of other health professionals in providing care, and practice environment changes. Planning should have as a goal appropriate physician numbers, specialty mix, and geographic distribution.
- (2) Our AMA encourages and collaborates in the collection of the data needed for workforce planning and in the conduct of national and regional research on physician supply and distribution. The AMA will independently and in collaboration with state and specialty societies, national medical organizations, and other public and private sector groups, compile and disseminate the results of the research.
- (3) The medical profession must be integrally involved in any workforce planning efforts sponsored by federal or state governments, or by the private sector.
- (4) In order to enhance access to care, our AMA collaborates with the public and private sectors to ensure an adequate supply of physicians in all specialties and to develop strategies to mitigate the current geographic maldistribution of physicians.
- (5) There is a need to enhance underrepresented minority representation in medical schools and in the physician workforce, as a means to ultimately improve access to care for minority and underserved groups.
- (6) There should be no decrease in the number of funded graduate medical education (GME) positions. Any increase in the number of funded GME positions, overall or in a given specialty, and in the number of US medical students should be based on a demonstrated regional or national need.
- (7) Our AMA will collect and disseminate information on market demands and workforce needs, so as to assist medical students and resident physicians in selecting a specialty and choosing a career.
- (8) Our AMA will encourage the Health Resources & Service Administration to collaborate with specialty societies to determine specific changes that would improve the agency's physician workforce projections process, to potentially include more detailed projection inputs, with the goal of producing more accurate and detailed projections including specialty and subspecialty workforces.
- (9) Our AMA will consider physician retraining during all its deliberations on physician workforce planning. [CME Rep. 2, I-03; Reaffirmation I-06; Reaffirmation I-07; Reaffirmed: CME Rep. 15, A-10; Reaffirmation: I-12; Reaffirmation A-13; Appended: Res. 324, A-17; Appended: CME Rep. 01, A-19; Reaffirmation: I-22]

Promising Practices Among Pathway Programs D-350.980

Our AMA will establish a task force to guide organizational transformation within and beyond the AMA toward restorative justice to promote truth, reconciliation, and healing in medicine and medical education. [CME Rep. 5, A-21]

Continued Support for Diversity in Medical Education D-295.963

Our AMA will: (1) publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population; (5) directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or

funding in medical education; (6) advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement; (7) investigate the impacts of state legislation regarding DEI-related efforts on the education and careers of students, trainees, and faculty; (8) recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts; and (9) collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure. [Res. 325, A-03; Appended: CME Rep. 6, A-11; Modified: CME Rep. 3, A-13; Appended: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22; Appended: Res. 319, A-22; Modified: Res. 319, A-23]

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 3-A-24

Subject: Support Removal of BMI as a Standard Measure in Medicine and Recognizing Culturally-Diverse and Varied Presentations of Eating Disorders

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee D

1 INTRODUCTION

2

3 At the 2023 Annual Meeting of the American Medical Association (AMA) House of Delegates,
4 Council on Science and Medicine (CSAPH) Report 7-A-23, “Support Removal of BMI as a
5 Standard Measure in Medicine and Recognizing Culturally-Diverse and Varied Presentations of
6 Eating Disorders,” was adopted as amended, though the following recommendations were referred
7 for study:

8

9 That our AMA recognizes:

- 10 (6) that in some clinical circumstances Body Mass Index (BMI) may have utility and that BMI
11 > 35 should continue to be used for risk stratification.
12 (7) that BMI is a useful tool for population level surveillance of obesity trends due to its ease of
13 use and low risk for application inconsistencies.
14 (8) that BMI is useful as an initial screener for metabolic health risks. (New HOD Policy)

15

16 BACKGROUND

17

18 CSAPH Report 7-A-232, which evaluated the problematic history of BMI and explored other
19 alternatives to BMI, outlined the harms and benefits to using BMI and concluded that BMI is
20 inaccurate in measuring body fat in multiple groups because it does not account for the
21 heterogeneity across race/ethnic groups, sexes, and age-span. The report’s recommendations
22 recognized the issues with the use of BMI clinically and highlighted the need to use other methods.
23 This report is a follow-up to that report which will focus on studying the recommendations noted
24 above to assess if the evidence supports the inclusion of these recommendations into AMA policy.

25

26 METHODS

27

28 English language articles will be selected from searches of PubMed and Google Scholar using the
29 search terms “Body Mass Index (BMI)”, “BMI over 35 AND clinical utility”, “BMI AND obesity
30 trends”, and “BMI AND metabolic health risks”. Additional articles will be identified by manual
31 review of the reference lists of pertinent publications. Web sites managed by government agencies
32 and applicable organizations will also be reviewed for relevant information.

33

34 DISCUSSION

35

36 Ideally, an obesity classification system would be based on a practical measurement widely
37 available to clinicians regardless of their setting, would accurately predict health risk (prognosis),

1 and could be used to assign treatment strategies and goals.¹ The most accurate measures of body fat
2 adiposity such as underwater weighing, dual-energy x-ray absorptiometry (DEXA) scanning,
3 computed tomography (CT), and magnetic resonance imaging (MRI) are impractical for use in
4 everyday clinical encounters.¹ Estimates of body fat, including body mass index (BMI, calculated
5 by dividing the body weight in kilograms by height in meters squared) and waist circumference,
6 have limitations compared to these imaging methods, but still provide relevant information and are
7 easily obtained in a variety of practice settings.¹ Although BMI does not directly measure body fat,
8 its utility as a risk estimate has been demonstrated in multiple population studies.²⁻⁵ However, in
9 some instances, the use of BMI as a surrogate measure of body fat may lead to an incorrect
10 estimation of risk.^{3,6} The inherent problems with using BMI alone to estimate risk is exemplified by
11 the obesity paradox, the observed inverse correlation between BMI and mortality in patients with
12 existing chronic heart failure, coronary heart disease, and chronic kidney disease.^{3,7,8} However, it
13 should be noted that the obesity paradox is not observed among people with very low BMI (<18.5)
14 and very high (BMI >40.0). Although reasons for the obesity paradox remain uncertain, proposed
15 confounding factors include the poor sensitivity of BMI to detect excess adiposity versus lean
16 muscle mass, body fat distribution, and the independent contribution of fitness.^{3,9-11}

17
18 Further, the current BMI classification system is misleading regarding the effects of body fat mass
19 on mortality rates.^{1,12} Numerous comorbidities, lifestyle issues, gender, ethnicities, medically
20 significant familial-determined mortality effectors, duration of time one spends in certain BMI
21 categories, and the expected accumulation of fat with aging are likely to significantly affect
22 interpretation of BMI data, particularly in regard to morbidity and mortality rates.¹² Such
23 confounders as well as the known clustering of obesity in families, the strong role of genetic factors
24 in the development of obesity, the location in which excessive fat accumulates, its role in the
25 development of type 2 diabetes and hypertension, and so on, need to be considered when being
26 applied to the general population.^{12,13}

27 28 *Should BMI >35.0 be used for risk stratification?*

29
30 Currently, a BMI of 25.0 – 29.9 in the United States represents individuals who have “overweight”
31 and a BMI of 30.0 and above represents people who have “obesity.”¹⁴ Simply put, obesity is a
32 chronic, progressive, relapsing, and treatable multi-factorial, neurobehavioral disease, wherein an
33 increase in body fat promotes adipose tissue dysfunction and abnormal fat mass physical forces,
34 resulting in adverse metabolic, biomechanical, and psychosocial health consequences.¹⁵ However,
35 obesity is influenced by multiple factors. The environment influences the relationship between
36 genetics and obesity risk.^{13,14,16} Further, adverse workplace, school, social, and home environments,
37 known as “obesogenic environments,” affect physical and social structures and play a role in an
38 individual’s obesity risk.¹⁴ For example, greater availability of fast-food restaurants, poor
39 neighborhood walkability, and perceived safety risks can limit access to physical activity and
40 healthy food options.^{14,17} Additional risks for developing obesity include insufficient sleep and low
41 socioeconomic status, in part mediated by chronic stress and food insecurity, which are commonly
42 experienced by racial and ethnic minority populations.^{14,18}

43
44 The literature about the use of BMI for risk stratification is mixed. For example, in many studies
45 there is a clear empirical link between BMI and various health outcomes – especially in the case of
46 high BMIs (BMI>40.0).¹⁹ There is an observed relationship between obesity (BMI>35.0) and
47 elevated mortality risk. In examining excess deaths in the U.S. associated with individuals with a
48 BMI>35.0, some studies found that the highest number of deaths is associated with obesity, while
49 other studies noted a 22 percent reduction in longevity among men who have obesity.¹⁹⁻²¹ These

1 results were consistent across diverse data sets, with multiple meta-analyses observing a 20–30
2 percent increased risk of mortality for obese individuals.^{19,22,23}

3
4 However, in contrast to the above findings, studies have found that the association between BMI
5 and all-cause mortality is a controversial topic. Multiple studies, including several systematic
6 reviews and meta-analyses, have attempted to explain this association, and found different
7 results.^{22,24–27} The general association of BMI and all-cause mortality follows a U or J curve, with
8 very high mortality among people with very low BMI (<18.5) and very high BMI (BMI >40.0).²⁴
9 The most common unexpected finding is that people defined as having a normal or ideal weight
10 with BMI of 18.5 to 25.9 do not necessarily have the best survival.²⁴ In many cases, overweight
11 people (BMI 25.0 to 30.0), and those who have mild to moderate obesity, (BMI of 30.0 to 35.0 and
12 35.0 to 40.0), show the best survival.²⁴ This phenomenon has been described as the “obesity
13 paradox” and it is the subject of intense review due to the potential and very significant impact on
14 many aspects of routine clinical practice and healthcare in general.^{24,28–31} The obesity paradox has
15 been described not only in the general population but also in multiple cohorts of people with highly
16 prevalent medical conditions including diabetes, heart disease, kidney disease, cancer, stroke, and
17 rheumatoid and osteo arthritis, among others.^{22,24,32–37}

18
19 Further, it is worth pointing out two important caveats regarding current thresholds used to
20 diagnose overweight and obesity and risk. The first is that although there is favor for the
21 assignment of specific BMI cut-offs and increasing risk, relationships between body weight or fat
22 distribution and conditions that impair health represent a continuum.¹ For example, studies have
23 shown that increased risk for type 2 diabetes and premature mortality occurs well below a BMI of
24 30.0.^{1,38} The second is there is a complex association between BMI and all-cause mortality when
25 evaluated in the context of comorbidities and baseline mortality risk.¹ In general, comorbidities are
26 better predictors of mortality risk except at extreme BMIs (BMI <15.0, 15.0 to 18.5, and ≥45.0). In
27 patients with no or few comorbidities, BMI seems to better define mortality risk.¹ Aggressive
28 management of comorbidities may provide better survival outcomes for patients with BMI between
29 normal and moderate obesity (BMI of 18.5 to 25.0 and 35.0 to 40.0).^{1,38}

30
31 *Should BMI be used for population level surveillance of obesity trends?*

32
33 BMI is by far the simplest and most cost-effective option for tracking obesity at the population
34 level.^{19,40} Its continued use by medical professionals, health researchers, and governmental agencies
35 forms the basis of collective knowledge about the epidemiology of obesity in the U.S. and abroad.¹⁹
36 The authority afforded by its use in science and medicine is further compounded by the public’s
37 ability to quickly interpret research using BMI.^{19,41} Even at the individual level, the widespread
38 availability of BMI equations and charts across numerous forms of media and communications –
39 such as personal health-tracking applications/devices – encourages the self-evaluation of one’s
40 health relative to their weight, as the general population is empowered to freely calculate their own
41 BMI. BMI, therefore, serves as a surveillance mechanism setting a standard by which changes in
42 population health can be tracked.^{19,41–44} However, as mentioned in the previous BMI report
43 (CSAPH Report 7 A-23), the ease of calculating BMI only applies to the adult population and is
44 inaccurate in children and adolescents because of growth. In the United States, obesity in children
45 and adolescents are defined using threshold values from the 2000 CDC sex-specific body mass
46 index-for-age growth charts.

47
48 In general, most existing obesity surveillance systems in the U.S. rely on BMI. Surveillance
49 science has been slow to take advantage of research that identifies alternative anthropometric
50 measures of obesity.⁴⁵ Combining two or more different anthropometric measures, such as waist-
51 to-hip ratio and waist-circumference-to-height ratio, has been shown to work well and may be more

1 sensitive to the accumulation of abdominal fat.⁴⁵⁻⁴⁷ However, these measurements are more
2 invasive and require additional considerations such as how to track trends using other measures and
3 how to interpret those new measures on a population level. The biggest issue with current
4 surveillance systems of obesity is that most surveillance does not include the measurement of
5 policy or environmental factors that may influence obesity.^{45,48} For example, there are still gaps in
6 the availability of surveillance systems for areas such as community-level estimates of obesity-
7 related environments, policies, programs, partnerships, and social norms; community-based
8 physical activity programs; surveillance of local policies on nutrition standards for foods and
9 beverages; community-level data on exposure to food marketing; national- and community-level
10 data on worksite programs; and obesity-related policies on college campuses.^{45,48} Further, high-risk
11 populations, i.e., demographic or health status subgroups, are often not adequately represented in
12 national or state-level surveys and longitudinal BMI measure analyses are uncommon, particularly
13 among low-resource populations, which are at greater risk of having obesity.^{45,48}

14
15 *Should BMI be used as an initial screener for metabolic health risks?*

16
17 The current use of BMI as an evaluative and predictive tool is controversial.⁴⁹ Originally conceived
18 as a practical index of relative body weight, BMI is now wielded in medicine as a measure for
19 disease and health risk, despite studies showing that BMI can be an inaccurate proxy for
20 cardiometabolic markers of health (i.e., blood pressure, cholesterol levels) and imprecise in its
21 prediction of health risks when applied to the diversity of human bodies.⁴⁹⁻⁵² The use of BMI as an
22 initial screener for metabolic health risks is controversial. An example of why it is controversial
23 can be examined in a subgroup of individuals that has been identified within the obese population,
24 who do not display the typical metabolic disorders associated with higher BMI's and are
25 hypothesized to have lower risk of obesity-related complications. Metabolically healthy obesity
26 (MHO) has been previously defined as a subgroup of obese (which is measured by having a BMI
27 ≥ 30) individuals who do not have insulin resistance, lipid disorders, or hypertension.^{53,54} Multiple
28 studies indicate 10-25 percent of individuals who have obesity, according to their BMI, can be
29 categorized as MHO.⁵³⁻⁵⁵ A study which used the National Health and Nutrition Examination
30 Survey, a nationally representative sample of adults living in the U.S., to examine the MHO
31 phenotype, found a prevalence of 32 percent among obese adults over the age of 20.^{53,56} Further,
32 studies examining cardiovascular disease (CVD) outcomes or all-cause mortality, were not able to
33 demonstrate a significant association between MHO and increased risk of CVD and morbidity and
34 mortality.⁵³

35
36 Further, when thinking about screening tools, specificity should be factored in. Research has shown
37 that BMI does not appropriately represent racial and ethnic minorities. For example, a longitudinal
38 study of healthy women found that at the same BMI, Asians had more than double the risk of
39 developing type 2 diabetes than Whites; Hispanics and Blacks also had higher risks of diabetes
40 than Whites, but to a lesser degree.⁵⁷ Studies have found that Blacks have lower body fat and
41 higher lean muscle mass than Whites at the same BMI, and therefore, at the same BMI, may be at
42 lower risk of obesity-related diseases.^{57,58} Finally, as mentioned in the previous BMI report
43 (CSAPH Report 7 A-23) BMI has the following limitations: older adults tend to have more body
44 fat than younger adults at an equivalent BMI; women have greater amounts of total body fat than
45 men with an equivalent BMI; muscular individuals, or highly-trained athletes, may have a high
46 BMI because of increased muscle mass; and BMI also does not account for the life cycle and
47 location of accumulated fat caused by hormones.⁵⁹⁻⁶¹ Given these limitations, certain groups of
48 people are [?] more likely to be misclassified if BMI alone is used, and therefore these individuals
49 may be subject to more unnecessary diagnostic testing/evaluation, unnecessary anxiety, and higher
50 health care spending leading to inequities.

1 EXISTING AMA POLICY

2
3 Under existing AMA Policy H-440.866, “The Clinical Utility of Measuring Body Mass Index and
4 Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity,” the
5 AMA supports: (1) greater emphasis in physician educational programs on the risk differences
6 among ethnic and age groups at varying levels of BMI and the importance of monitoring waist
7 circumference in individuals with BMIs below 35 kg/m²; (2) additional research on the efficacy of
8 screening for overweight and obesity, using different indicators, in improving various clinical
9 outcomes across populations, including morbidity, mortality, mental health, and prevention of
10 further weight gain; and (3) more research on the efficacy of screening and interventions by
11 physicians to promote healthy lifestyle behaviors, including healthy diets and regular physical
12 activity, in all of their patients to improve health and minimize disease risks.

13
14 Further, under AMA Policy H-440.797, “Support Removal of BMI as a Standard Measure in
15 Medicine and Recognizing Culturally-Diverse and Varied Presentations of Eating Disorders,” the
16 AMA recognizes: (1) the issues with using BMI as a measurement because: (a) of the historical
17 harm of BMI, (b) of the use of BMI for racist exclusion, and (c) BMI cutoffs are based primarily on
18 data collected from previous generations of non-Hispanic White populations and does not consider
19 a person's gender or ethnicity; (2) the significant limitations associated with the widespread use of
20 BMI in clinical settings and suggests its use be in a conjunction with other valid measures of risk
21 such as, but not limited to, measurements of: (a) visceral fat, (b) body adiposity index, (c) body
22 composition, (d) relative fat mass, (e) waist circumference and (f) genetic/metabolic factors; (3)
23 that BMI is significantly correlated with the amount of fat mass in the general population but loses
24 predictability when applied on the individual level; and (4) that relative body shape and
25 composition heterogeneity across race/ethnic groups, sexes, genders, and age-span is essential to
26 consider when applying BMI as a measure of adiposity.

27
28 CONCLUSION

29
30 BMI is an imperfect measure of body fat and may be influenced by many factors, including body
31 composition of muscle mass, fat distribution, visceral vs. subcutaneous fat, and ectopic fat.²⁴
32 Physical fitness and nutritional status may play a more important role than BMI in predicting
33 overall health and risk of mortality.^{24,53} Current use of BMI as an evaluative and predictive tool is
34 troubling. Originally conceived as a practical index of relative body weight, BMI is now wielded in
35 medicine as a measure for disease and health risk, despite studies showing that BMI can be an
36 inaccurate proxy for cardiometabolic markers of health (i.e., blood pressure, cholesterol levels) or
37 lifestyle factors (i.e., physical activity, eating habits) and imprecise in its prediction of health risks
38 when applied to the diversity of human bodies.⁴⁹⁻⁵² There is a complex association between BMI
39 and all-cause mortality when evaluated in the context of comorbidities and baseline mortality
40 risk.²⁴ Obesity is an important risk factor for many chronic and common clinical conditions.
41 However, comorbidities are better predictors of mortality risk except at extreme BMIs.²⁴ In patients
42 with no or few comorbidities, BMI seems to better define mortality risk.²⁴

43
44 The U.S. currently conducts population level surveillance of obesity and individual obesity-related
45 behaviors. However, to fully understand the etiology of obesity and the effects of prevention
46 efforts, current surveillance systems must be expanded in terms of settings, measures, periodicity,
47 and populations.⁴⁵ Increases in funding and infrastructure for local surveillance would assist in
48 obtaining data on underserved populations to better understand health disparities in obesity and
49 prevention efforts.⁴⁵ Also critical is the addition of environmental and policy measures to
50 surveillance systems to allow for a better understanding of the global obesity epidemic and the
51 effects of obesity prevention initiatives on the population.⁴⁵

1 An accurate diagnosis of obesity prevents patients at risk due to excess adiposity from being
2 erroneously labeled as “normal” and avoids labeling patients with no excess fat as overweight or
3 obese.¹⁴ As a result, this report supports the need to screen for secondary causes of obesity such as
4 environmental factors, hormonal abnormalities (i.e., hypothyroidism, hypercortisolism), psychiatric
5 diagnoses (i.e., binge eating disorder), iatrogenic obesity (i.e., medications), and genetic syndromes
6 (i.e., proopiomelanocortin deficiency).^{14,62} Further, assessment for weight-related comorbidities
7 such as nonalcoholic fatty liver disease or obstructive sleep apnea is important to understand the
8 complexity of obesity in patients and guide treatment.^{14,62}

9
10 RECOMMENDATION

11
12 The Council on Science and Public Health recommends that the following be adopted, and the
13 remainder of the report be filed.

14
15 1. That AMA Policy H-440.797, “Support Removal of BMI as a Standard Measure in Medicine
16 and Recognizing Culturally-Diverse and Varied Presentations of Eating Disorders,” be amended by
17 addition to read as follows:

18
19 1. Our AMA recognizes:

- 20 1. the issues with using body mass index (BMI) as a measurement because: (a) the
21 eugenics behind the history of BMI, (b) the use of BMI for racist exclusion, and (c)
22 BMI cutoffs are based on the imagined ideal Caucasian and does not consider a
23 person’s gender or ethnicity.
- 24 2. the significant limitations associated with the widespread use of BMI in clinical
25 settings and suggests its use be in a conjunction with other valid measures of risk such
26 as, but not limited to, measurements of: (a) visceral fat, (b) body adiposity index, (c)
27 body composition, (d) relative fat mass, (e) waist circumference and (f)
28 genetic/metabolic factors.
- 29 3. that BMI is significantly correlated with the amount of fat mass in the general
30 population but loses predictability when applied on the individual level.
- 31 4. that relative body shape and composition heterogeneity across race/ethnic groups,
32 sexes, and age-span is essential to consider when applying BMI as a measure of
33 adiposity.
- 34 5. that in some diagnostic circumstances, the use of BMI should not be used as a sole
35 criterion for appropriate insurance reimbursement.
- 36 6. the use of BMI within the context of comorbidities, baseline mortality risk, and
37 environmental factors such as chronic stressors, poor nutrition, and low physical
38 activity may be used for risk stratification.
- 39 7. BMI is a widely used tool for population level surveillance of obesity trends due to its
40 ease of use and low risk for application inconsistencies, but BMI does not fully capture
41 the complexity of the obesity epidemic.
- 42 8. that BMI, in combination with other anthropometric measures and environmental
43 factors, may be useful as an initial screener to identify individuals for further
44 investigation of metabolic health risks.

45
46 2. Our AMA supports further research on the application of the extended BMI percentiles and z-
47 scores and its association with other anthropometric measurements, risk factors, and health
48 outcomes.

49 3. Our AMA supports efforts to educate physicians on the issues with BMI and alternative
50 measures for diagnosing obesity. (Amend HOD Policy)

Fiscal Note: less than \$1,000

REPORT 6 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-24)
Greenhouse Gas Emissions from Metered Dose Inhalers and Anesthetic Gases
(Reference Committee D)

EXECUTIVE SUMMARY

INTRODUCTION. American Medical Association (AMA) Policy H-135.913, “Metered Dose Inhalers and Greenhouse Gas Emissions,” as adopted by the House of Delegates (HOD) at the 2023 Annual Meeting asked that our AMA study options for reducing hydrofluorocarbon use in the medical sector.

METHODS. English language articles were selected from searches of PubMed and Google Scholar using the search terms “metered dose inhalers” AND “dry powder inhalers” AND “sustainability” as well as “anesthetics” AND “sustainability.” Supplementary searches were performed on both effectiveness and cost differences between metered dose inhalers and dry powder inhalers. Additional articles were identified by manual review of the reference lists of relevant publications.

BACKGROUND. Metered-dose inhalers (MDIs) are medical devices used to deliver inhaled medication for individuals with asthma and chronic obstructive pulmonary disease. MDIs rely on a liquified-gas propellant to atomize medication for inhalation delivery. These propellants were first chlorofluorocarbons (CFCs) but then later transitioned to hydrofluorocarbons (HFCs) after it was found that CFCs were depleting the stratospheric ozone layer.¹ HFCs, while not causing ozone depletion, are potent greenhouse gases (GHG) and represent substantial proportions of the health care sector’s carbon footprint.²⁻⁴ Besides MDIs, alternative types of inhalers include dry powder inhalers (DPIs) and soft mist inhalers (SMIs), which both have significantly lower GHG emission profiles compared to MDIs.^{4,6} Currently, there is no DPI or SMI combined preventer and reliever regimen for asthma that is easy to use and affordable in the U.S., despite being more widely available in Europe.⁷

RESULTS. Except in circumstances where the patient cannot generate sufficient inspiratory airflow, such as with very young children (under the age of 5) or frail, older adults,⁸ research has demonstrated that DPIs are as effective and safe as MDIs for most patients.^{9,10} There is also evidence demonstrating that DPIs are easier to use and result in lower error rates compared to MDIs.¹¹⁻¹³ One potential reason for the lack of competitive, low-cost alternatives to MDIs has been pharmaceutical companies’ ability to maintain patent protections on their brand name products through secondary patents after the primary patent has expired.^{14,15} In addition to the use of HFCs in MDIs, the other major source of HFC/CFC use in health care comes from anesthetic gases, which includes the HFCs sevoflurane and desflurane and the CFC isoflurane.^{16,17} Clinical care recommendations by the American Society of Anesthesiologists Committee on Environmental Sustainability to reduce the negative environmental impact of anesthetic gases focus on delivery performance improvements, removing or avoiding the “worst” GHG offenders from hospital drug formularies, and substituting non-inhaled anesthetic gases when clinically appropriate.¹⁸

CONCLUSION. Switching to low carbon footprint inhalers is an opportunity to not only reduce GHG emissions from the health care sector, but also to improve chronic asthma management and health outcomes through the broader usage of DPI preventer inhalers containing an inhaled corticosteroid. With inhaled anesthetics, there are several relatively easy and well documented strategies to improve environmental sustainability which could be more widely adopted through expanded educational efforts and result in cost savings for health systems.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 6-A-24

Subject: Greenhouse Gas Emissions from Metered Dose Inhalers and Anesthetic Gases

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee D

1 INTRODUCTION

2
3 American Medical Association (AMA) Policy H-135.913, “Metered Dose Inhalers and Greenhouse
4 Gas Emissions,” as adopted by the House of Delegates (HOD) at the 2023 Annual Meeting asked
5 that our AMA study options for reducing hydrofluorocarbon use in the medical sector.

6 7 BACKGROUND

8
9 Asthma is a chronic respiratory disease that reversibly impacts the ability of air to move in and out
10 of the lungs due, usually to inflammation of the airways, and requires ongoing medical
11 management.^{19,20} The potential factors that cause asthma are both environmental and genetic,
12 including family history, allergies, viral respiratory infections, occupational exposures, smoking, air
13 pollution, and/or obesity.²¹ According to data from the National Health Interview Survey, during
14 2016 to 2018 approximately 8 percent of the U.S. population reported having asthma, with a higher
15 prevalence among Black persons (10.7 percent) compared to White persons (8 percent).²⁰ Chronic
16 obstructive pulmonary disease (COPD) refers to a group of respiratory diseases that cause airflow
17 blockage and make breathing more difficult, including emphysema and chronic bronchitis.²² About
18 16 million Americans have COPD and in 2018 it was the fourth leading cause of death in the
19 U.S.^{22,23} Exposure to tobacco smoke is a key contributor to the development and progression of
20 COPD, but environmental exposures to air pollutants, genetic factors, and respiratory infections
21 also play an important role.²³

22
23 Metered-dose inhalers (MDIs) are medical devices used to deliver inhaled medication, typically for
24 individuals with asthma and COPD. MDIs are pressurized and rely on liquefied-gas propellants to
25 atomize medication for inhalation delivery. The pharmaceutical industry historically used
26 chlorofluorocarbons (CFCs), specifically CFC-11, CFC-12, and CFC-114, as propellants. CFCs are
27 synthetic, nontoxic, and nonflammable chemicals that contain atoms of carbon, chlorine, and
28 fluorine. They were first developed in the late 1920s to replace toxic refrigerants that were being
29 used at the time.¹ Following their initial development, CFCs were widely adopted and used in foam
30 insulation, refrigeration, and aerosols (including MDIs).

31
32 While CFCs were found to be safe in their applications, they undergo significant chemical changes
33 in the upper atmosphere and by the early 1970s, chemists from the University of California
34 demonstrated that CFCs could be destroying the stratospheric ozone layer that helps shield the
35 Earth from the sun’s ultraviolet radiation.¹ By the 1980s, it was clear that stratospheric ozone loss
36 was getting worse every year and CFCs were a major contributor. The global environmental
37 response came in the late 1980s and resulted in the signing of the Montreal Protocol in 1987, which
38 phased out the use of CFCs. MDIs and other medical uses of CFCs were exempted under the

1 Montreal Protocol until safer alternatives could be identified. The pharmaceutical industry
2 introduced hydrofluorocarbon (HFC) (also known as hydrofluoroalkanes - HFA) propellants for
3 MDIs as replacements for CFCs in the mid-1990s, specifically HFC-134a in 1996 followed by
4 HFC-227ea in 2006. However, it took over 20 years, until 2016, for all CFCs to be phased out of
5 MDI applications.²
6

7 In addition to the use of HFCs in MDIs, modern anesthetic gases include the HFCs sevoflurane and
8 desflurane, the CFC isoflurane, and nitrous oxide.²⁴ Anesthetic gases have been excluded from
9 international protocols due to their medical necessity but measured concentrations of desflurane, the
10 most damaging in terms of GHG warming potential, in the atmosphere have increased over the last
11 few decades.²⁴ Therefore, exploring alternatives to the usage of these anesthetic gases is another
12 way health care systems can reduce their carbon footprint and improve sustainability.
13

14 This report outlines the greenhouse gas (GHG) emissions and climate impacts of the use of CFCs
15 and HFCs in the medical sector, with a focus primarily on MDIs and secondarily on anesthetic
16 gases, followed by a discussion of potential alternatives and how they compare in terms of their
17 carbon footprint, effectiveness, and cost.
18

19 METHODS

20

21 English language articles were selected from searches of PubMed and Google Scholar using the
22 search terms “metered dose inhalers” AND “dry powder inhalers” AND “sustainability” as well as
23 “anesthetics” AND “sustainability.” Supplementary searches were performed on both effectiveness
24 and cost differences between metered dose inhalers and dry powder inhalers. Additional articles
25 were identified by manual review of the reference lists of relevant publications. Data regarding
26 available asthma/COPD medications presented in Table 2 were extracted from FDA’s approved
27 drug website and individual medication prescribing sheets.²⁵
28

29 DISCUSSION

30

31 *Climate Impact of CFCs and HFCs*

32

33 Despite improvements to the ozone layer after the Montreal Protocol, HFCs are powerful GHG that
34 contribute to climate change. HFCs can be up to 3800 times more powerful of a GHG than carbon
35 dioxide (see Table 1) and there is now increasing attention on the environmental impacts of HFCs.²⁶
36 Atmospheric concentrations of common HFCs used in medical sector have been found to be
37 increasing since the early 1990s while CFCs previously used in MDIs have plateaued and decreased
38 (see Figure 1).²⁷ Reducing the use of MDIs is consistently noted among the top high-priority and
39 effective measures for reducing GHGs within the health care sector, as GHG emissions from the
40 use of MDIs are substantial. MDIs are the most used inhalers in the world.^{2,26} “In 2020, MDIs made
41 up 75 percent of inhalers in use in the United States, with the equivalent emissions impact of
42 driving half a million cars for a year.”²³ Due to their wide usage, MDI prescriptions can account for
43 about three percent of a health system’s carbon footprint.⁴
44

45 As such, there is an unfortunate feedback loop between ongoing climate change impacts and
46 treating asthma/COPD with MDI inhalers, as increased global warming will likely exacerbate
47 existing asthma and respiratory issues, potentially requiring more acute treatment options which
48 MDIs currently provide.²⁸ Recognizing the climate change impacts of HFCs, the Kigali
49 Amendment to the Montreal Protocol calls for the phasing out of HFCs due to their climate
50 warming potential, but medical uses for HFCs are currently exempted. Additionally, the American
51 Innovation and Manufacturing Act of 2020, enacted by the U.S. Congress, directs the

1 Environmental Protection Agency (EPA) to phase down the production and use of HFCs in
2 consumer products, such as aerosols, refrigerants, etc., by 2036 but the rule also does not apply to
3 MDIs.²⁹

4
5 Additionally, direct emissions of anesthetic gases have been estimated to represent about three
6 percent of the health care-related GHGs in high-income nations.³⁰ As noted in Table 1, desflurane
7 has a GHG warming potential around 5-20 times higher than sevoflurane and isoflurane over a 100-
8 year period and it is also generally more expensive.³¹ While nitrous oxide is not a HFC, it also has
9 deleterious climate impacts. Even though it has a lower global warming potential, it is also less
10 potent than other inhalable anesthetics so is typically used in higher concentrations and has a long
11 atmospheric lifetime, thus making it problematic from a sustainability perspective.

12 *Metered Dose Inhalers - What are the alternatives?*

13
14
15 Inhaled therapy is the primary pharmacological therapy for obstructive lung diseases such as COPD
16 and asthma.³² Obstructive lung disease management and control has two components, symptom
17 control and risk reduction.⁵ Inhalers are generally categorized as either reliever or preventer
18 inhalers, with recent formulations combining these different types into one inhaler that is
19 recommended for daily usage. Preventer inhalers contain an inhaled corticosteroid (ICS), and
20 the Global Initiative for Asthma (GINA) and the Expert Panel Working Group of the National
21 Asthma Education and Prevention Program Coordinating Committee (NAEPPCC) recommend
22 most patients with asthma receive an ICS treatment.^{5,33} Reliever inhalers include a short-acting β -
23 agonist (SABA) which is intended to be utilized during asthma exacerbation events. GINA does not
24 recommend treatment of asthma with SABA inhalers alone. Recent developments in asthma
25 treatment recommend combined therapy, including anti-inflammatory reliever (AIR), which
26 consists of ICS with a short-acting β -agonist reliever and maintenance and reliever therapy
27 (MART) (ICS-formoterol), also called SMART in some places (single inhaler maintenance and
28 reliever therapy), which combines ICS and long-acting beta-agonist (LABA) therapy together.⁵

29
30 In addition to different therapeutic approaches, there are different types of inhalers available:
31 pressurized metered dose inhalers (pMDI), dry powder inhalers (DPI), and soft mist inhalers
32 (SMIs). DPIs rely on delivering medication in the form of a fine powder that is activated by a
33 person's breathing and SMIs use a spring action mechanism to deliver the medication in a fine mist.
34 pMDIs and DPIs are the two most commonly prescribed and manufactured inhalers globally.⁶ Table
35 2 provides a list of U.S. Food and Drug Administration (FDA) approved asthma/COPD
36 medications, their therapy approach, and the type of inhalation device.

37
38 As shown in Table 2, SABA inhalers available in the U.S. are predominantly pMDIs while the ICS
39 and combination therapy treatments are available as both DPI and pMDI inhalers. There is only one
40 DPI reliever inhaler, the ProAir Respiclick/Digihaler, and only four inhalers are available as an
41 SMI; these are only approved for the treatment of COPD. Currently, there is no DPI anti-
42 inflammatory reliever (AIR) regimen, which combines ICS-SABA that is easy to use and
43 affordable in the U.S., despite being more widely available in Europe (more on cost considerations
44 below).⁷

45
46 Life cycle assessments comparing pMDIs to DPIs have overwhelmingly and consistently found that
47 DPIs have a much lower carbon footprint due to their lack of an HFC propellant.^{4,6} Estimates from
48 the U.K. have projected a 96 percent reduction in the existing carbon footprint of asthma treatment
49 if all pMDIs were switched to DPIs.⁶ Similar life cycle assessments comparing SMI versus pMDIs
50 in terms of overall carbon footprint found comparable reductions in GHG emissions.⁶ Additionally,
51 climate model estimates have demonstrated that the phasing out of HFCs, as proposed by the Kigali

1 Amendment to the Montreal Protocol, could deliver 0.3 to 0.5°C degrees of climate benefit by
2 2100.³⁴ As the Kigali Amendment exempts HFCs for medical uses, it is possible that the
3 elimination of HFCs in both medical uses and other commercial applications could deliver even
4 greater climate benefit.

5
6 *Safety and Effectiveness of MDIs*
7

8 A barrier to switching from MDIs to DPIs has been the concern that DPIs are not as effective or are
9 more difficult to use than MDIs. Except in circumstances where the patient cannot generate
10 sufficient inspiratory airflow, such as with very young children (under the age of 5) or frail, older
11 adults, research has demonstrated that DPIs are as effective and safe as MDIs for a majority of
12 patients.⁸⁻¹⁰ For example, a randomized controlled trial (RCT) of patients with COPD comparing
13 the efficacy of a DPI versus a pMDI pharmaceutical formulation, found that the different inhaler
14 types demonstrated similar efficacy and a similar proportion of patients in the different inhaler
15 groups experienced any adverse effects from treatment.⁹ In another study, researchers did a post-
16 hoc analysis of patients from the Salford Lung Study in Asthma (a 12 month, multi-site RCT study
17 conducted in the UK on patients with asthma and COPD) who switched from a pMDI to DPI during
18 the study.³⁵ Patients that switched to DPIs halved their inhaler carbon footprint without loss of
19 asthma control, and in fact, asthma control was consistently superior over the 12 months in the DPI
20 group compared to the control group.³⁶

21
22 Despite the popularity and widespread usage of MDIs, studies have shown that many patients use
23 MDIs incorrectly, despite educational trainings on usage, resulting in improper inhalation
24 techniques and poor asthma control and management.^{11,12} DPIs have been found to be easier to
25 correctly use compared to MDIs, which requires some level of coordination between inhaler
26 actuation and patient inspiration to ensure correct inhalation and treatment.^{11,13} Additionally, in a
27 recent survey of asthma and COPD patients' inhaler preferences done in the U.K., "environmental
28 sustainability" was found to be one of the more important characteristics, indicating that patients
29 may be inclined to switch inhalers from an MDI to a DPI if the environmental impacts were
30 discussed.³⁷

31
32 While MDIs are the most used inhaler in the U.S., the U.K. has recently designated DPIs as the
33 default treatment for patients 12 and older and removed two carbon-intensive inhalers from
34 formularies.³⁸ Additionally, DPIs are the primary inhaler used in several other European countries.³
35 For example, Sweden has a higher prevalence of asthma to the U.S. (11.6 percent of individuals in
36 2022 in Sweden compared to 7.7 percent in 2021 in the U.S.) and DPIs account for 90 percent of
37 inhalers used.^{39,40} Although there is no available evidence on the role of inhaler types to account for
38 health outcome differences, Sweden has demonstrated better asthma-related mortality outcomes
39 compared to the U.S.; in 2012 the age-standardized asthma mortality for the 5–34-year age group in
40 Sweden was 0.00 compared to 0.37 in the U.S.⁴¹

41
42 Additionally, Finland in the early 1990s launched a national ten year program intended to improve
43 asthma care and limit the projected increases in costs.⁴² As part of this national program, the
44 importance of preventative ICS versus reliever medications was emphasized and a shift was
45 promoted from MDIs to DPIs. As a result of this initiative, the number of patients using daily ICS
46 went from around 33 percent in 1987 to over 85 percent in 2004 and while DPIs only accounted for
47 29 percent of inhalers sold in 1993, by 2003 they accounted for 84 percent.⁴² These changes were
48 concurrent with improved health outcomes, including a reduction in asthma related deaths and
49 emergency room visits, and decreased direct annual costs associated with asthma.⁴²

1 With the manufacturing of HFC propellant inhalers being an important component of their GHG
 2 emissions, several pharmaceutical companies have made promises to replace existing pMDIs with
 3 new HFC propellant that have a lower carbon footprint.⁶ There are several new HFC inhaler
 4 formulations that have a much lower GHG warming potential (see Table 1), with at least one set to
 5 be released in 2025. This would help pharmaceutical companies meet their sustainability goals
 6 while also reducing GHG emissions from the overall healthcare sector, but these new HFC inhalers
 7 may be more costly than currently available low-GHG alternatives.

8
 9 *Cost considerations*

10
 11 Increased costs are another challenge of switching to DPIs from MDIs, which is partly driven by a
 12 lack of competitive DPIs/SMIs that have been approved and made available in the U.S. (as
 13 compared to Canada and European countries). At the start of 2019, there were no generic inhalers
 14 on the U.S. market. While there are multiple low-cost DPI inhalers available in Europe, there are
 15 few low-cost alternatives in the U.S.⁷ Researchers estimate that a global inhaler transition where
 16 DPIs are the prevailing inhaler used could take a decade to implement and may lead to increased
 17 patient costs.^{26,43} Currently, SABA relievers as DPIs compared to MDIs tend to be more expensive
 18 but the cost of HFC propellants is expected to rise due to global policy trends in phasing out the use
 19 of HFCs in products.²

20
 21 One potential reason for the lack of competitive, low-cost alternatives to the prevailing MDIs on the
 22 market has been pharmaceutical companies’ ability to maintain patent protections on their brand
 23 name products through secondary patents after the primary patent has expired.¹⁴ Primary patents on
 24 pharmaceuticals cover the active ingredients within the medication while secondary patents can be
 25 claimed for peripheral aspects of the product, such as the propellants and delivery devices.
 26 Research on revenue earned on brand-name inhaler products in the U.S. found that manufacturers
 27 earned \$67.2 billion while primary patents were active and \$110.3 billion (62 percent) after primary
 28 patents had expired but when secondary patents were active, reflecting the importance of these
 29 secondary patents for maintaining high revenues while limiting potential competition.¹⁴ The
 30 persistent high cost of inhalers in the U.S. has caught the attention of U.S. lawmakers. In January
 31 2024, U.S. Senator Tammy Baldwin (D-WI) and colleagues launched an investigation into four
 32 pharmaceutical companies in regard to their high prices for inhalers.⁴⁴

33
 34 Despite the increased costs of switching to DPIs from MDIs, improved asthma management could
 35 help balance existing cost differentials. The overreliance on SABA (relief) inhalers alone in asthma
 36 treatment results in poor asthma management and health outcomes, which can lead to greater health
 37 care costs.² As one study notes, “[a]ny increase in low-cost salbutamol MDIs can potentially be
 38 offset by improving care to drive down their use ... and by using more cost-effective controller
 39 medication. For patients with poor asthma control, escalating controller therapy is a cost-effective,
 40 but underused strategy.”² Evidence from other countries demonstrate that a concerted effort to
 41 increase the use of ICS medication and reduce reliance on relief (SABA) medication, can improve
 42 asthma outcomes and lower costs.^{42,45}

43
 44 Policy recommendations to reduce the negative economic impacts of switching to lower carbon
 45 footprint inhalers are severalfold. Lawmakers could incentivize early entry of greener generic
 46 inhalers by extending the 180-day exclusivity period awarded to the first generic manufacturers to
 47 successfully challenge patents on a particular drug-device combination. The U.S Patent and
 48 Trademark Office could also pursue reforms to further examine drug-device combination patents
 49 and ensure the quality of patents issued on new inhalers. Lastly, the Centers for Medicare and
 50 Medicaid Services could determine a favorable reimbursement rate that is applicable for any

1 greener inhalers when they gain approval, considering their overall environmental benefits, that
2 would make them more favorable to include on insurance formularies.¹⁵

3
4 *Other advantages to switching from MDIs to DPIs*

5
6 There are a few other advantages to switching from pMDIs to non-propellant inhalers, like DPIs.
7 First, because pMDIs can be challenging to use and less critical errors are made while using DPIs,
8 overall asthma care could improve.⁴⁵ Also, because not all pMDIs have a counter that shows how
9 many doses are left, sometimes they are used when empty, also leading to poor disease control.
10 Lastly, pMDIs are sometimes used with a spacer – which allows patients, particularly young
11 children who may have difficulty using the inhaler, to deliver the medication in a slower, more
12 controlled way – and these are supposed to be replaced every year.⁴⁶ However, a Dutch study found
13 that only 60 percent of pMDI users received a new spacer annually, which may imply suboptimal
14 quality of care. As DPIs do not require a spacer, their use eliminates these possible issues while also
15 reducing the generation of non-reusable plastics.⁴⁵

16
17 *Equity considerations*

18
19 There are important health equity considerations regarding asthma prevalence, management, and
20 related health outcomes in the U.S. that make following current GINA and NAEPPCC care
21 recommendations challenging.⁴⁷ Asthma disproportionality impacts Black, non-Hispanic, American
22 Indian/Alaska Native, and Puerto Rican populations.^{40,48,49} Additionally, individuals living below
23 100 percent of the poverty threshold have a higher asthma prevalence compared to other socio-
24 economic groups (10.4 percent compared to 6.8 percent among individuals at 450 percent of
25 poverty threshold or higher).⁴⁰ In terms of asthma management, racial and ethnic minority children
26 are more likely to rely on SABA rather than ICS therapies, which, as noted above, can result in
27 poorer asthma control and management.⁴⁹ Lastly, Black, non-Hispanics have a much higher asthma
28 mortality rate compared to other racial and ethnic groups (24.4 per million for Black, non-Hispanics
29 compared to 9.8 per million for white, non-Hispanic populations).⁴⁰ Financial barriers for those who
30 lack insurance coverage for recommended combined therapies and working through authorizations
31 and referrals for those with public health insurance also pose equity challenges.⁴⁷ Considering these
32 existing health disparities and equity challenges, increased costs associated with new asthma
33 medications could disproportionately impact low-income communities of color who are already
34 burdened by asthma and has the potential to increase existing health disparities if asthma
35 medication becomes more costly and inaccessible.

36
37 *Prevention as a primary strategy and alternative*

38
39 As noted above, two of the key risk factors for both asthma and COPD are tobacco smoke and air
40 pollution.^{21,23} Public health policy and educational campaigns over the last 50 years have been
41 remarkably successful at lowering the prevalence of smoking and limiting indoor exposure to
42 tobacco smoke, thus reducing this exposure pathway.⁵⁰⁻⁵² However, tobacco use still remains the
43 leading cause of preventable disease and death in the U.S.⁵⁰ The introduction of e-cigarettes and
44 vape pens in the past decade has led to an increase in e-cigarette usage, particularly among young
45 adults, which may reverse the decades long downward trend in tobacco usage.⁵³ As such, there is
46 still a critical need for continued public health efforts to reduce smoking and tobacco use, which
47 would reduce the prevalence of asthma and COPD. Common outdoor air pollutants, including
48 particulate matter, ozone, carbon monoxide, lead, sulfur dioxide, and nitrogen dioxide, are in part
49 anthropogenic (human-caused) and result from the burning of fossil fuels for electricity generation,
50 industrial uses, and motor vehicle use.^{54,55} Federal and state policy to reduce air pollution has
51 resulted in substantially better air quality over the last several decades, but high pollution levels are

1 still a concern in many urban areas and for those living close to major sources of pollution, with
2 low income communities of color experiencing disproportionately high exposure to air
3 pollution.^{56,57} Efforts to reduce fossil fuel emissions would thus have multiple co-benefits, including
4 minimizing anthropogenic climate change by reducing GHG emissions, building more resilient
5 communities, improving health equity, and reducing outdoor air pollutants resulting in improved
6 respiratory outcomes.^{55,58,59}

7 *Anesthetic gases – Solutions and alternatives*

9
10 Life cycle assessments of anesthetic gases have found that more than 95 percent of emissions occur
11 in their waste phase, in that they are emitted freely to the outdoor atmosphere during use through
12 medical gas evacuation systems or through unscavenged gas exhaled into the indoor environment
13 that then flows outdoors.^{18,30} To mitigate the negative environmental impact of anesthetic gases,
14 clinical care recommendations, including those in the *Greening the Operating Room* report by the
15 American Society of Anesthesiologists Committee on Environmental Sustainability, focus on
16 delivery performance improvements, removing or avoiding the “worst” GHG offenders from
17 hospital drug formularies, and substituting non-inhaled anesthetic gases when clinically
18 appropriate.¹⁸

19
20 Delivery performance improvements are aimed at lowering the volume of anesthetic gases
21 unnecessarily wasted or lost during usage. A simple way to minimize gas waste is to lower fresh
22 gas flows during the maintenance phase of the anesthetic, but continuous oxygen concentration
23 monitoring is critical to prevent the possibility of hypoxemia.^{16,18,31} Additional strategies to reduce
24 gas flow and minimize environmental contamination of anesthetic gases have been outlined by the
25 American Society of Anesthesiologists *Greening the Operating Room* report.

26
27 Another strategy to reduce wasted gas is through improved delivery infrastructure. In older hospital
28 buildings, nitrous oxide has been delivered through central piping systems, which over time have
29 leaked nitrous oxide into the atmosphere. It is estimated that most nitrous oxide loss happens prior
30 to its usage with the patient and it has been recommended that these piping systems should be
31 decommissioned in existing infrastructure and avoided in new construction.³¹ As an alternative, it is
32 recommended that portable canisters should be substituted and should be closed between uses to
33 avert continuous leaks.³¹ Lastly, in terms of performance improvement, innovative methods for
34 collecting and reusing anesthesia, thus preventing them from being released directly into the
35 atmosphere, are currently being researched and evaluated.¹⁸ However, these devices have not been
36 widely used or evaluated on their efficacy, safety, benefit, or cost.²⁴

37
38 When evaluating choice of inhaled anesthesia gases, two important considerations include GHG
39 warming potential and the gas flowrate.^{16,18} Desflurane has the highest GHG warming potential
40 compared to other inhaled anesthetic gases and while nitrous oxide has a lower GHG warming
41 potential, it requires greater quantities to meet similar clinical effectiveness. Nitrous oxide also
42 persists in the atmosphere for more than 100 years, making its impacts felt over a much longer
43 period of time compared to other anesthetic gases.¹⁶ The larger quantities needed, and longer
44 persistence in the atmosphere, makes nitrous oxide’s environmental impact substantially greater
45 than isoflurane or sevoflurane.³⁰ With these considerations, eliminating desflurane and nitrous
46 oxide to the greatest extent possible in clinical practice, is recommended for improving the climate
47 impact of anesthetic gases.⁶⁰ However, nitrous oxide continues to be useful for elimination of pain
48 with no real alternative and therefore the use of portable cannisters with nitrous oxide is
49 recommended versus using older building piping systems.^{24,61} With desflurane, there is limited
50 evidence of clinically meaningful differences over other anesthetic gases, except minor differences
51 in faster mean wake up times following surgery.³¹ However, desflurane is also more expensive than

1 other anesthetic gases, therefore it's elimination or reduction in usage could result in cost savings
2 for health care systems.³¹

3
4 A final practice consideration to improve sustainability and reduce GHG emissions is to use total
5 intravenous anesthesia and/or regional anesthesia to eliminate volatile anesthetic emissions
6 whenever possible. It is important to note that this recommendation is not a carbon-neutral strategy,
7 as considerations must be made for minimizing single use plastics and unnecessary use of drugs and
8 supplies, which also contribute to overall hospital waste streams that have their own carbon
9 footprint. That being said, this alternative has been found to be associated with substantially less
10 emissions, even considering their full life cycle.^{17,31} To offset environmental impacts from
11 intravenous anesthesia, there are several strategies to reduce anesthesia equipment waste generation
12 overall, including: using prefilled syringes and appropriate sized vials for an individual patient, only
13 opening equipment intended for immediate use, considering purchase of reusable or reprocessed
14 equipment over disposable, reprocessing or recycling suitable disposable equipment, adjusting
15 stock levels to minimize discarding expired items, reformulating prefabricated kits to eliminate
16 unnecessary items, reformulating anesthesia supply carts to eliminate unnecessary items, and
17 donating expired or unused open equipment.^{16,62}

18 19 *Challenges and barriers*

20
21 Efforts to make anesthesia care more environmentally friendly have met several barriers. These
22 include the need for more education among anesthesiologists on the environmental impacts of
23 different anesthesia options as well as a lack of support from hospital leadership to implement
24 sustainability efforts.⁶³ In a qualitative study of anesthesiologists, several participants reported a
25 lack of knowledge and feedback as impediments to sustainable practices.⁶⁴ An educational
26 intervention with this aim at the University of Wisconsin was found to be effective at reducing
27 GHG emissions through changes in anesthetic practices and resulted in cost savings for the
28 hospital.⁶⁵ Interestingly, the environmental impact of physician decisions was a greater motivational
29 impact than monetary savings.⁶⁵ Thus, further advocacy and education is warranted to guide and
30 encourage more sustainable anesthetic practices.¹⁷

31
32 Beyond increased education, efforts to bring practice changes to scale could include the integration
33 of sustainability metrics into the Quality Payment Program established by the Medicare Access and
34 Children's Health Insurance Program Reauthorization Act of 2015. If environmental costs,
35 including GHG emissions associated with clinical practices, were to be incorporated into the cost
36 component of the program, it could serve to reward waste reduction strategies and programs within
37 healthcare systems.⁶⁶

38 39 RELEVANT AMA POLICY

40
41 Current AMA policy recognizes that climate change is a public health crisis and supports action on
42 reducing greenhouse gas emissions and reducing global warming.⁶⁷ AMA policy recognizes that
43 minoritized and marginalized populations, children, pregnant people, the elderly, rural
44 communities, and those who are economically disadvantaged will suffer disproportionate harm
45 from climate change and the health care sector has an important role to play in reducing its
46 greenhouse gas emissions.^{67,68} Lastly, AMA policy on asthma control encourages physicians to
47 make appropriate use of evidence-based guidelines, to provide self-management education tailored
48 to the literacy level of the patient by teaching and reinforcing appropriate self-monitoring, the use
49 of a written asthma action plan, taking medication correctly, and avoiding environmental factors
50 that worsen asthma; and encourages physicians to incorporate the four components of care

1 (assessment and monitoring; education; control of environmental factors and comorbid conditions;
2 and appropriate medication selection and use).⁶⁹

3
4 CONCLUSIONS

5
6 Asthma and chronic obstructive pulmonary disease (COPD) are two respiratory diseases with a
7 large burden of disease in the U.S. and treatment options primarily consist of inhalation therapy,
8 particularly using metered dose inhalers (MDIs).^{20,22} MDIs rely on liquefied-gas propellants to
9 atomize medication for inhalation delivery and represent the most used inhalers in the world.^{2,3}
10 Propellants in MDIs were historically chlorofluorocarbons (CFCs) but following evidence of their
11 deleterious impact on the Earth's ozone layer, were switched to hydrofluorocarbons (HFCs). While
12 HFCs do not negatively affect the ozone layer, they are potent greenhouse gases (GHG) and
13 contribute a significant portion of overall emissions in the health care sector.²

14
15 Switching to low carbon footprint inhalers is an opportunity to not only reduce GHG emissions
16 from the health care sector, but also to improve chronic asthma management and health outcomes
17 through the broader usage of dry powder inhalers (DPI) or soft mist inhalers (SMI) containing an
18 inhaled corticosteroid. Other countries, particularly in Europe, have either made commitments to
19 switch primarily to using DPIs for asthma treatment or made the transition years ago and now an
20 overwhelming majority of asthma patients use DPIs.^{3,38,42} However, there are several barriers to
21 switching to low carbon footprint inhalers in the U.S., including a common perception among
22 physicians that DPIs are more difficult to use as well as cost and access barriers to more affordable
23 and environmentally friendly options available. While there are perceptions among physicians that
24 DPIs are more difficult to use for some vulnerable populations, research has demonstrated that a
25 relatively small proportion of asthma patients have insufficient respiratory capacity to use DPIs
26 effectively and that DPIs are just as clinically effective as MDIs.¹¹⁻¹³ The cost and access barriers
27 could be addressed through policy changes that incentivize the introduction of greener, generic
28 inhalers on the U.S. market and the inclusion of more environmentally friendly options on
29 insurance formularies.

30
31 In addition to the use of HFCs in MDIs, the other major source of HFC/CFC use in health care
32 comes from anesthetic gases, which includes the HFCs sevoflurane and desflurane and the CFC
33 isoflurane. With anesthetic gases, there are several well documented strategies to improve
34 environmental sustainability, including the removal or avoidance of the "worst" GHG offender
35 from hospital drug formularies (desflurane), substituting non-inhaled anesthetic gases when
36 clinically appropriate, and minimizing gas waste by lowering fresh gas flows during the
37 maintenance phase of the anesthesia.¹⁸ The switch to more environmentally friendly anesthesia
38 options presents an opportunity for health care systems to lower their carbon footprint and could
39 result in cost savings.

40
41 RECOMMENDATIONS

42
43 The Council on Science and Public Health recommends that the following be adopted, and the
44 remainder of the report be filed.

- 45
46 1. That Policy H-160.932, "Asthma Control" be amended by addition and deletion to read as
47 follows:

48
49 The AMA: (1) encourages physicians to make appropriate use of evidence-based
50 guidelines, including those contained in ~~Expert Panel Report III: Guidelines for the~~
51 ~~Diagnosis and Management of Asthma~~ released by the National Heart, Lung and Blood

1 ~~Institute and the National Asthma Education and Prevention Program Coordinating~~
 2 ~~Committee Expert Panel Working Group 2020 Focused Updates to the Asthma~~
 3 ~~Management Guidelines;~~ (2) encourages physicians to provide self-management education
 4 tailored to the literacy level of the patient by teaching and reinforcing appropriate self-
 5 monitoring, the use of a written asthma action plan, taking medication correctly, and
 6 avoiding environmental factors that worsen asthma; ~~and~~ (3) encourages physicians to
 7 incorporate the four components of care (assessment and monitoring; education; control of
 8 environmental factors and comorbid conditions; and appropriate medication selection and
 9 use); ~~and~~ (4) will, in collaboration with interested parties and organizations, develop
 10 content to help physicians talk through the different asthma control options and their known
 11 economic costs and environmental impacts. (Modify Current AMA Policy)

- 12
- 13 2. That Policy H-135.913, “Metered Dose Inhalers and Greenhouse Gas Emissions” be
 14 amended by addition and deletion to read as follows:
 15
- 16 1. Our AMA will advocate to reduce the climate effects of hydrofluorocarbon propellants
 17 in metered-dose inhalers and encourage strategies ~~for encouraging supporting~~
 18 the development and use of alternative inhalers and propellants with equal and or
 19 higher efficacy and less adverse effect on our climate.
 - 20 2. Our AMA ~~will advocate for~~ supports legislative and regulatory reforms; that increase
 21 access to affordable ~~to keep inhalers medications affordable and accessible, will urge~~
 22 FDA to consider metered dose inhaler propellant substitutions for the purposes
 23 of climate protection as drug reclassifications, with lower greenhouse gas emissions
 24 that align with current recommended standards of care. Reforms should aim to ensure
 25 the quality of patents issued on new drug-device combinations, prevent new patents for
 26 minor changes made to delivery systems, and remove barriers to market entry for
 27 generic inhalers.
 - 28 3. Our AMA supports consideration of the environmental impacts of inhalers when
 29 creating prescription drug formularies and for the federal government to factor
 30 environmental impact into price negotiations with pharmaceutical manufacturers.
 31 ~~without new patent or exclusivity privileges, and not allow these substitutions to~~
 32 ~~classify as new drug applications.~~
 - 33
 - 34 ~~3. Our AMA will study options for reducing hydrofluorocarbon use in the medical sector.~~
 35 ~~(Modify Current AMA Policy)~~

36

37 3. That the following new policy be adopted.
 38

39 **REDUCING ENVIRONMENTAL IMPACTS OF ANESTHETIC GASES**

40

41 The AMA, in collaboration with interested parties and organizations, will disseminate
 42 evidence-based content and recommended strategies to reduce the global warming impact
 43 of anesthetic gases and encourage the phasing out of desflurane as an anesthetic gas. (New
 44 HOD Policy)

Fiscal Note: \$5,000

Table 1: Global warming potential of CFC/HFCs used in current and possibly future MDIs as well as common anesthetic gases¹

	Name	Global Warming Potential
	Carbon dioxide – reference	1
MDI Propellants	HFO 1234ze (potential new propellant in future MDIs)	<1
	HFA152a (potential new propellant in future MDIs)	138
	HFA-134a (used in most current MDIs)	1300
	HFA-227ea (used in some current MDIs)	3350
	CFC-11 (previously used in MDIs)	4660
	CFC-12 (previously used in MDIs)	10200
Anesthetic Gases	Nitrous oxide ² (N ₂ O)	273
	Isoflurane (CF ₃ CHClOCHF ₂)	539
	Desflurane (CF ₃ CHFOCHF ₂)	2590
	Sevoflurane ((CF ₃) ₂ CHOCH ₂ F)	144
	Methoxyflurane (CHCl ₂ CF ₂ OCH ₃)	4

Table 2: FDA Approved Asthma and COPD Medications^a

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-24)
Prescribing Guided Physical Activity for Depression and Anxiety (Reference Committee D)

EXECUTIVE SUMMARY

INTRODUCTION. Resolution 421-A-23 modified existing American Medical Association (AMA) policy and asked that our AMA study the evidence of the efficacy of physical activity interventions (i.e., group fitness, personal training, or physical therapy) on behavioral activation and outcomes on depressive and anxiety symptoms and report its findings to the AMA House of Delegates by the 2024 Annual Meeting.

METHODS. English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: “physical activity prescribing” AND “depression”, “anxiety,” “park prescription programs,” “insurance reimbursement,” “minoritized communities,” “older (pregnant, minoritized, adolescent) individuals”. Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies and applicable professional and advocacy organizations, including the U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, the National Institute of Mental Health, and the American Council on Exercise were also reviewed for relevant information.

BACKGROUND. Approximately one in eight people (970 million) worldwide are affected by a mental health disorder and almost one in two (44 percent) will experience a mental health disorder in their lifetime.^{1,2} Depression is the leading cause of mental health-related disease burden, while anxiety is the most prevalent mental health disorders.^{1,3} Interventions for treatment of depression and anxiety often include medication and/or psychotherapy.⁴ However, one promising alternative to psychotherapy or pharmacotherapy to treat depression and anxiety is the prescription of physical activity. Research trials examining the effects of physical activity on depression and anxiety suggest that physical activity may have similar effects to the combination treatment of psychotherapy and pharmacotherapy. However, physical activity prescriptions have not been widely adopted therapeutically. The limited availability of evidence on the efficacy of physical activity prescriptions for various populations, patient resistance, and the difficulty of prescribing and monitoring physical activity in clinical settings remain major barriers to wider adoption.⁵⁻⁷ Further, a successful physical activity program is multi-faceted and needs to consider what an effective program will look like depending on the patient’s individual circumstances (i.e., current level of activity, age, access to facilities or safe outdoor spaces, existing chronic conditions, etc.).¹

CONCLUSION. This report outlines the biological mechanisms that contribute to the antidepressant effects of exercise, the current physical activity guidelines for specific age groups, what different levels of physical activity intensity entail, and what counts for the different types of activity (i.e., aerobic versus strength training). The report also evaluates the current clinical evidence on the efficacy of physical activity on mental health disorders in different populations, evidence on the efficacy of physical activity prescription programs, and the current challenges and barriers to implementing physical activity as a standard of care for mental health. The recommendations recognize the limitations in existing data on developing effective physical activity prescriptions, the need for education of health care professionals on the mental health benefits of physical activity, and a potential first step to incorporating physical activity into current standards of care.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 9-A-24

Subject: Prescribing Guided Physical Activity for Depression and Anxiety

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee D

1 Resolution 421-A-23, as adopted by the American Medical Association’s (AMA) House of
2 Delegates. That policy (H-470.997, “Exercise and Physical Fitness”) directs the AMA to:

3
4 “study evidence of the efficacy of physical activity interventions (i.e., group fitness, personal
5 training, or physical therapy) on behavioral activation and outcomes on depressive and anxiety
6 symptoms.”

7 8 BACKGROUND

9
10 In the U.S., five percent adults aged 18 and over experience regular feelings of depression and 12.5
11 percent have regular feelings of worry, nervousness, or anxiety.⁸ Feelings of depression, in this
12 case, is defined as feeling depressed daily and describing the level of depression as “somewhere in
13 between a little and a lot” or “a lot” or feeling depressed weekly and describing the level of
14 depression as “a lot.” There are several different types of depressive disorders but, in general,
15 depression is a mood disorder that affects how a person feels, thinks, and handles daily activities.
16 Individuals may experience symptoms of persistent sadness or hopelessness, loss of motivation,
17 low self-attitude, decreased energy, changes in sleep, appetite and concentration, anhedonia, and
18 sometimes suicidal ideation.⁹ According to the National Institute of Mental Health, major
19 depression is one of the most common mental health diagnoses in the U.S. and an estimated 21.0
20 million U.S. adults (a little over eight percent) have had at least one major depressive episode over
21 their lifetime.⁹ There are a variety of etiologies involved in depression, including genetic,
22 environmental, psychological, and biochemical factors.¹⁰ An individual has an increased risk of
23 depression if they have a family history of depression, they have experienced trauma, major life
24 changes, stress, chronic pain, certain physical illnesses (such as diabetes, cancer, or Parkinson’s),
25 or as a side effect to certain medication.¹⁰

26
27 Anxiety is a normal physiologic reaction and oftentimes can be positive. When anxiety is
28 excessive, including somatic anxiety and impacts day-to-day functioning, it is considered an
29 anxiety disorder.¹¹ Anxiety disorders are a spectrum of anxiety-related illnesses including but not
30 limited to Obsessive Compulsive Disorder (OCD), Panic Disorder, Agoraphobia, and Generalized
31 Anxiety Disorder (GAD).¹¹ Symptoms of generalized anxiety disorder may include feeling restless,
32 on-edge, difficulty concentrating, increased irritability, and sleep disruption.¹¹ Anxiety comes from
33 a complex interaction between biology and environment. Some factors may include genetics, brain
34 function and chemistry, individual temperament, development, and one’s perception of threats.¹¹
35 Anxiety disorders are often comorbid with other mental health conditions, including depressive
36 disorders.

1 Interventions for treatment of depression and anxiety often include medication and/or
2 psychotherapy, with the greatest evidence of effectiveness often including a combination of both
3 medication and psychotherapy.⁴ However, evidence has demonstrated a beneficial effect of
4 exercise interventions on the prevention of depression. A recent meta-analysis found that people
5 with high levels of exercise had lower odds of developing depression.¹² In other countries such as
6 Australia, lifestyle management is recommended as the first-line treatment approach, though in
7 practice, pharmacotherapy is often provided first.^{13,14} While the many physical and mental health
8 benefits of regular physical activity are well documented, as of 2019, only 23 percent of adults in
9 the U.S. were meeting recommended levels of physical activity.^{15,16,17} Many people in the U.S.
10 could benefit from increased physical activity to help prevent, better manage, and improve mental
11 health issues like depression and anxiety.

12 13 METHODS

14
15 English language reports were selected from searches of the PubMed and Google Scholar databases
16 using the search terms: “physical activity prescribing” AND “depression”, “physical activity
17 prescribing”, AND “anxiety”, “park prescription programs”, “prescribing physical activity”, AND
18 “insurance reimbursement,” “minoritized communities” AND “prescribing physical activity,” and
19 “physical activity for mental health” AND “older (pregnant, minoritized, adolescent) individuals”.
20 Additional articles were identified by manual review of the reference lists of pertinent publications.
21 Web sites managed by federal agencies and applicable professional and advocacy organizations,
22 including the U.S. Department of Health and Human Services (HHS), Centers for Disease Control
23 and Prevention (CDC), the National Institute of Mental Health, and the American Council on
24 Exercise were also reviewed for relevant information.

25 26 DISCUSSION

27
28 Physical activity is defined as bodily movement produced by movement of skeletal muscles that
29 results in energy expenditure.^{18,19} Exercise is a type of physical activity that involves planned,
30 structured, and repetitive bodily movement, performed to maintain or improve one’s physical
31 fitness.¹⁸ Numerous guidelines exist to promote recommended amounts of physical activity. HHS
32 has developed general guidelines for physical activity for different age groups and populations with
33 specific health concerns.²⁰ Specific recommendations for each group are summarized in Table 1,
34 but for adults, the general recommendation is at least 150 minutes to 300 minutes of moderate-
35 intensity physical activity each week (e.g., walking or biking at a leisurely to moderate-pace, and
36 slow swimming) or 75 to 150 minutes of vigorous-intensity aerobic physical activity per week
37 (e.g., fast-pace walking or biking, jogging, or sports play).

38
39 Physical activity intensity is based on the energy expenditure incurred during the activity, as
40 expressed by multiples of 1 MET, which is the ratio of the metabolic rate for an activity divided by
41 a standardized expression of the resting metabolic rate (RMR).²⁰ It has been noted that different
42 populations, based on gender, age, etc., have different RMRs and correction factors have been
43 applied to adjust for these individual differences.²⁰ However, in general, physical activity is
44 categorized into three intensity levels, based on expended energy: light-intensity (1.6-2.9 METs),
45 moderate-intensity (3-5.9 METs), and vigorous-intensity (≥ 6 METs).²⁰ It is important to note that
46 energy expenditure is also determined by an individual’s physical fitness. In other words, an
47 individual who regularly exercises may find fast-paced walking to be a moderate intensity exercise
48 versus someone who has historically been physically inactive may find it to be of vigorous
49 intensity. Lastly, different types of physical activity are based on the type of movement and the
50 way in which different components of the body are engaged. Table 2 defines several common types
51 of movement. To note, many physical activities combine more than one type of movement.

Biological Mechanisms Underlying the Role of Physical Activity on Depression and Anxiety

It has been demonstrated that exercise has beneficial effects in reducing symptoms of depression such as low mood, anhedonia, and loss of interest and on body functions such as cardiorespiratory system and cognitive function.²¹ However, more research is needed into the mechanisms underlying the antidepressant effects of exercise. Most studies on the mechanisms of the antidepressant effect of exercise are mouse/rodent model studies, with some clinical studies in humans when feasible.^{21,22} The biological pathways whereby regular physical activity might confer resilience include promoting an anti-inflammatory state, reducing the negative effects of oxidative stress, serving as a buffer against stress and stress-related disorders/chronic diseases, and enhancing neuroplasticity and neurogenesis.²¹⁻²⁵ In addition, exercise causes an increase in neurotransmitters associated with increased activity of dopamine, 5-hydroxytryptamine, and noradrenaline in the central nervous system.

Anti-inflammatory and Antioxidant Factors

A mechanism in which regular exercise and/or physical fitness may confer resilience is through minimizing inflammation. Psychological stress and physical inactivity/low aerobic fitness have all been associated with persistent, systemic, low-grade inflammation, and are associated with adverse effects on mental and physical health.^{21,26,27} Systemic markers of inflammation include tumor necrosis factor alpha (TNF α), interleukin (IL)-1, IL-6, IL-8 and C-reactive protein (CRP), with elevated basal IL-6 and CRP levels being closely associated with persistent depressive symptomatology and cognitive dysfunction.²⁸ A randomized control trial (RCT) designed to assess the relative efficacy of aerobic exercise to augment selective serotonin reuptake inhibitor (SSRI) treatment of major depressive disorder (MDD) in treatment-resistant patients, found those who had high basal levels of serum TNF α were found to have a greater decrease in depressive symptoms over the 12-week aerobic exercise intervention.^{28,29} These results suggest that high serum TNF α levels may differentially predict better outcomes with exercise and antidepressant medication as treatment as opposed to antidepressant medications alone, wherein high serum TNF α levels are linked to a poor treatment response.^{28,29}

Oxidative Stress (OS)

Oxidative and nitrosative stress occurs when excess reactive oxygen species and reactive nitrogen species are produced as a byproduct of metabolic processing and have harmful effects on the body.²¹ Organs such as the brain are particularly vulnerable to this damage because it has a high metabolic rate and lower antioxidant levels.^{21,30} As a result, oxidative stress pathways may contribute towards the pathophysiology of psychiatric disorders, such as depression. Over time, the resulting damage may counteract neuroplasticity and contribute some of the structural abnormalities in people with depression.²¹ Moderate aerobic exercise has been shown to reduce OS and inflammation.²¹ It also reduces the concentration of several inflammatory biomarkers, such as IL-6, homocysteine, and TNF- α , and restrains the activity of nicotinamide adenine dinucleotide (NADH) oxidase, which results in metabolic oxidative stress.²¹ One study illustrated that voluntary wheel running alleviated depression-like symptoms in male rats with prenatal ethanol exposure and that the positive effects of exercise were linked to increased levels of antioxidants.^{21,31} In clinical studies, a 12-week aquatic exercise program in older adults with depression (n = 92) was shown to reduce depression and anxiety and decrease OS.^{21,32}

Neurogenesis and Neuroplasticity

1 The beneficial effects of physical activity and increased cardiorespiratory fitness on brain health
2 are well recognized. Chronic stress, exemplified by high level glucocorticoid exposure, decreases
3 neurotrophic factor expression/signaling, neurogenesis and gliogenesis in the brain; this appears to
4 be associated with reduced volumes of stress-sensitive brain regions as well as depression and
5 cognitive dysfunction.^{28,33,34} By contrast, regular exercise has been shown to enhance positive
6 mood, decrease depression and anxiety, and increase cognitive function such as learning and
7 memory in both animal and human studies.^{28,29,35} Possible biological mechanisms mediating these
8 effects include structural (i.e., increased neurogenesis, synaptogenesis, gliogenesis and
9 angiogenesis) and cellular/molecular changes in the brain.^{28,35,36} Together, they can promote
10 enhanced neuroplasticity and may be capable of blocking and/or reversing the detrimental effects
11 of chronic stress on the brain.

12
13 One important growth factor that has received much attention is brain-derived neurotrophic factor
14 (BDNF).^{28,37} BDNF plays a critical role in integrating behavioral and metabolic responses to
15 various challenging environments, including exercise.^{28,37} Studies of outpatients with MDD and
16 persistent depressive disorder demonstrated that both acute and regular exercise caused an increase
17 in BDNF.²¹ A study of elderly women with major depression showed that a single exercise session
18 significantly increased serum BDNF levels; however, it showed a significant secondary decrease in
19 BDNF serum levels after 30 min of rest. This suggests that acute exercise might be beneficial for
20 MDD treatment, but further studies are needed.^{21,38}

21 22 EFFICACY OF PHYSICAL ACTIVITY ON DEPRESSION AND ANXIETY IN DIFFERENT 23 POPULATIONS

24
25 The sections below examine current evidence in the literature about the efficacy of physical
26 activity on anxiety and depression in children and adolescents, older adults, adults with chronic
27 health conditions and/or disability, pregnancy, and minoritized communities. There are many
28 limitations in current literature surrounding the benefits of physical activity on anxiety and
29 depression which includes, but are not limited to, the nature of the patient sample; the methods
30 used to document anxiety and depression in the patient sample; the lack of inclusion of
31 symptomology to describe anxiety disorders and depressive disorders in the patient sample;
32 heterogeneity within the group of individuals who have similar depressive disorders or anxiety
33 disorders; and the lack of objective measures of either functional or quality of life impairment.
34 Further, it should be acknowledged that depression and anxiety are complex disorders that are
35 influenced by many factors and are often comorbid with other mental health conditions.

36 37 *Children and Adolescents*

38
39 A systematic review and meta-analysis which included studies involving 2441 participants aged
40 less than 19 years old, aimed to understand if physical activity interventions were associated with
41 significant reductions in depressive symptoms compared with the control condition in children and
42 adolescents.³⁹⁻⁴⁴ This meta-analysis showed that physical activity interventions produced greater
43 reductions in depressive symptoms compared with the control conditions.³⁹⁻⁴⁴ However, these
44 differences were not detected after a mean follow-up of 21 weeks, possibly due to the limited
45 number of studies with follow-up outcomes.³⁹⁻⁴⁴ Previous studies have shown that physical activity
46 had greater benefits in participants aged 13 years or older than in younger participants.⁴⁵ It also has
47 been demonstrated that three physical activity sessions per week and interventions that were shorter
48 than 12 weeks induced greater benefits on depressive symptoms compared with other frequencies
49 and durations.⁴⁵ These findings were reflected in the results of previous meta-analyses on the
50 association between physical activity and depression, suggesting that increasing amounts of
51 physical activity may not translate into greater reductions in depressive symptoms.^{39,46,47} A recent

1 cross-sectional study found a U-shaped association between physical activity frequency and mental
2 health, such that 10 to 15 sessions per month induced the greatest mental health improvements.^{39,48}
3 In contrast, there is other evidence that greater than 10 to 15 sessions per month of physical activity
4 have increasingly beneficial effects on mental health.^{39,49} These discrepancies in the literature
5 highlight the need for more comprehensive studies in this population to better understand the
6 benefits of physical activity on depressive symptoms.

7 8 *Older Adults*

9
10 Regular physical activity can help older adults, aged 50 years and older, maintain and improve their
11 mental health and cognitive ability, and reduce symptoms of depression and anxiety.⁵⁰⁻⁵² It can also
12 improve other functional abilities, including physical function and balance, thereby preventing falls
13 and fall-related injuries.^{50,51,53} In addition to serving as an important pathway for improved mental
14 health, physical activity brings social benefits, as being active offers the chance to build
15 relationships and strengthen social networks around an older person.⁵⁰

16
17 One study examined the minimal dose of moderate to vigorous physical activity (MVPA)
18 associated with a reduced risk of depression and depressive symptoms in 4016 older adults, over a
19 10-year period.⁵⁰ Depression and depressive symptoms were measured using the short form of the
20 Centre for Epidemiological Studies Depression scale along with the Composite International
21 Diagnostic Interview for diagnosis of a major depressive episode during the past 12 months. Older
22 adults performing between 400 to 600 MET minutes per week had a 16 percent lower rate of
23 depressive symptoms and 43 percent lower odds of major depression.⁵⁰ These findings were
24 consistent with meta-analytic data suggesting that mental health benefits among adults can be
25 achieved with physical activity below public health recommendations (600 MET-min/wk).
26 Specifically, an activity volume equivalent to 2.5 hours per week of brisk walking was associated
27 with a 25 percent lower risk of depression, and half that activity volume was associated with an 18
28 percent lower risk compared with no activity.^{46,50} Minimally sufficient activity doses for depressive
29 symptoms and major depressive disorder vary based on chronic disease status.⁵⁰ For depressive
30 symptoms, older adults with chronic disease showed a significantly reduced risk (seven percent) at
31 the WHO guideline threshold of 600 MET-min/wk, although the greatest decreases occurred with
32 increasing physical activity dose, with a similar outcome observed for major depression.^{50,54}
33 Further, previous meta-analytic evidence that suggested significantly larger antidepressant effects
34 of exercise training among adults with chronic illness who were meeting WHO guidelines for
35 physical activity.^{50,54-56}

36 37 *Adults With Chronic Health Conditions and/or Disability*

38
39 Regular physical activity is recommended for adults with chronic health conditions and/or a
40 disability and can provide both physical and cognitive benefits.^{20,54} For many chronic conditions,
41 physical activity provides therapeutic benefits and is part of recommended treatment for the
42 condition.⁵⁷ The benefits of physical activity for people with disabilities have been studied in
43 diverse groups with disabilities related to traumatic events or to chronic health conditions. These
44 groups include people with previous stroke, spinal cord injury, multiple sclerosis, Parkinson
45 disease, muscular dystrophy, cerebral palsy, traumatic brain injury, limb amputations, mental
46 illness, intellectual disability, and dementias including Alzheimer.^{20,57} Studies have shown there
47 was moderate-certainty to high-certainty evidence that physical activity decreased symptoms of
48 anxiety and depression in people with chronic conditions.^{20,57,58}
49 It should be noted that data assessing the benefits of physical activity in individuals with a
50 disability is very limited. In individuals who are disabled and with schizophrenia or major
51 depressive disorder, there is moderate-certainty evidence for the beneficial effects of physical

1 activity on quality of life.^{20,54,59} There is also moderate-certainty evidence that physical activity can
2 have beneficial effects on cognition in people who are disabled with multiple sclerosis, Parkinson's
3 disease, a history of stroke, ADHD and major clinical depression.^{20,54,59}

4 5 *Pregnancy*

6
7 There is limited evidence on the efficacy of physical activity in reducing symptoms of anxiety and
8 depression in people who are pregnant. Most studies focus on pregnant women, and this highlights
9 a gap in current literature. Depression in pregnancy is a significant public health problem; both
10 pregnancy and childbirth are some of the factors that contribute to the development of
11 depression.^{60,61} The incidence of depression in pregnancy ranges from 6–25 percent.^{60,62–64} The
12 incidence of depression during pregnancy, also varies depending on trimester.⁶⁰ It is estimated that
13 the onset of depression occurs in 7.4 percent (2.2–12.6 percent) of pregnant women in the first
14 trimester, in 12.8 percent (10.7–14.8 percent) of pregnant women in the second trimester, and in
15 12.0 percent (7.4–16.7 percent) of pregnant women in the third trimester.^{60,65} In addition, according
16 to WHO data, depression during pregnancy is a strong risk factor for the development of
17 postpartum depression, which may affect 10–15 percent of pregnant women in the period of up to
18 12 months after delivery.^{54,60} Moreover, prior studies have shown that a lack of proper treatment of
19 depression in people who are pregnant and may have a negative impact on the fetus (i.e., premature
20 delivery, reduced birth weight, as well as an increase in the concentration of stress hormones in the
21 child).^{60,66} Early and correct diagnosis can minimize the negative effects of depression on the birth
22 parent's, fetus's, and child's health.^{60,67}

23
24 Even a small amount of physical activity during pregnancy may reduce the severity of depressive
25 symptoms, as well as the occurrence of depression.⁶⁰ The best forms of activity during pregnancy
26 include walking, yoga, swimming and general exercises (i.e., breathing, posture, and Kegel
27 exercises).⁶⁸ However, it should be noted that the physical capacity of pregnant women varies in
28 terms of their baseline physical activity levels and individual trimesters.⁶⁸ Research on the
29 influence of supervised training on depressive disorders shows that aerobic exercises performed
30 three times a week for about 60 minutes can significantly reduce the symptoms of depression in
31 pregnant women.^{60,69–71} However, there are also reports indicating that physical activity already at
32 the level of 1–2 sessions a week may also be beneficial in reducing the frequency and severity of
33 depressive symptoms in pregnant women.⁷² Being physically active in pregnancy not only has
34 benefits of lowering the risk of developing depression in pregnancy, but also has the benefits of
35 lowering the risk of developing depression in early and late postpartum.^{60,70} In addition, evidence
36 suggests that women who do not exercise are more at risk of developing depressive disorders, both
37 during pregnancy and postpartum compared to women who exercise.^{60,70}

38 39 *Minoritized Communities*

40
41 Data on the benefits of physical activity on mental health in minoritized communities is limited,
42 and many barriers exist for these communities. However, it has been noted that minority
43 populations are more likely to seek care for mental health concerns from their primary care
44 providers versus behavioral health professionals, underscoring an important opportunity for
45 primary care physicians to engage with their patients on this issue.⁷³ Strategies to reduce depressive
46 symptoms and improve emotional well-being in older Hispanic/Latinx adults are largely absent
47 from the scientific literature. One study suggests that older Hispanic/Latinx adults displayed
48 improvements in depressive symptoms at the 24-month follow up period following an exercise

1 intervention that included four weekly one-hour group-based exercise classes targeting strength
2 training, endurance, balance and flexibility.⁷⁴ The results of this study were consistent with
3 previous research documenting the therapeutic health effects of structured exercise in older adults
4 using Latin dance.^{74,75} Culturally appropriate and cost-effective intervention modalities to reduce
5 depression in Hispanics/Latinxs are both needed and critical given the stigma associated with
6 mental health disorders in this population and reluctance in taking antidepressant medication.^{74,76}

7
8 Multiple studies have found a significant inverse relationship between physical activity and
9 depressive symptoms in Black adults.⁷⁷⁻⁸⁰ In a mixed-methods study on aspects of depression
10 among low-income black youth, life challenges faced by participants diminished the potential anti-
11 depressant effects of exercise – highlighting the importance of the social determinants of health
12 role as a moderator in the effectiveness of exercise as a therapy.⁸¹ The available research has
13 limitations and further studies are needed in this population to assess the benefits of physical
14 activity on mental health.

15 16 *Anxiety Studies*

17
18 Studies assessing the impact of physical activity on anxiety disorders are limited. One study
19 investigated cross-sectional and longitudinal associations between different amounts of moderate-
20 to-vigorous physical activity and anxiety symptoms in older adults (50 years of age and older) in
21 Ireland.⁸² Compared with the inactive group, the minimally- and very-active groups were
22 associated with an 8.4 percent and 18.8 percent lower odds of anxiety, respectively.⁸² However,
23 following adjustment, only high volumes of physical activity were significantly associated with
24 lower prevalence of anxiety.⁸²

25
26 Another study aimed to document the effect of add-on treatment with structured physical exercise
27 in a clinical population of adolescents hospitalized for depression and anxiety in a psychiatric
28 hospital in Belgium.⁸³ A group of 52 adolescent inpatients were randomly assigned to a physical
29 exercise or control social relaxation program three to four times per week over a six-week period
30 (20 hours in total).⁸³ The results showed a reduction in anxiety symptoms over time in both groups.
31 Therefore, it was concluded that there was no benefit of sufficient effect size to attain
32 significance.⁸³ To date, there is a significant lack of evidence for a reduction in symptoms of
33 anxiety with exercise in young ambulatory patients.

34
35 Finally, a study in Sweden investigated the effects of an exercise intervention on symptoms of
36 anxiety and to evaluate the benefit of moderate/high intensity exercise vs low intensity exercise, in
37 primary care patients diagnosed with anxiety disorder.⁸⁴ Included in the study were patients aged
38 18 to 65 years of age and were diagnosed with anxiety disorders using Diagnostic and Statistical
39 manual of Mental disorders (DSM-IV and V), including panic disorder (PD; DSM 300.01),
40 generalized anxiety disorder (GAD; DSM 300.02) and anxiety not otherwise specified (NOS; DSM
41 300.00).⁸⁴ This study shows that both low- and moderate/high intensity exercise interventions
42 improved anxiety symptoms at follow-up.⁸⁴ This was done using self-assessed severity of
43 perceived anxiety symptoms using the clinically well-established psychiatric assessment scale
44 Beck Anxiety Inventory.⁸⁴ These effects were independent of depressive symptoms, which is
45 important to assess given the well-known benefits of exercise for patients with MDD.⁸⁴⁻⁸⁶ Severity
46 of ongoing symptoms of depression was self-assessed using the Montgomery Åsberg Depression
47 Rating Scale (MADRS-S).⁸⁴ Although no clear dose-response effect of exercise intensity was
48 observed, there was a significant trend in the proportion of patients with improved anxiety
49 symptoms with increased exercise intensity.⁸⁴

What is a Physical Activity Prescription?

Physicians may recognize the therapeutic benefit of physical activity and may have even counseled their patients to “exercise more,” as part of their treatment. In fact, in a cross-sectional survey among faculty and staff from a large academic tertiary care medical center in the southeastern U.S. with nearly 200 respondents, more than half (58 percent) said they recommended exercise as part of treatment but roughly only a quarter offered specific exercise instructions (24 percent) or followed national guidelines (30 percent).⁸⁷ This type of general clinical advice to exercise is not what is referred to as a physical activity prescription.

A physical activity prescription is one that dictates a specific regimen of physical activity and, like any other medical prescription, includes details on the type, dose, frequency, duration, and therapeutic goal.⁸⁸ Another key component of the physical activity prescription is connecting patients with appropriate, supportive physical activity resources.⁸⁹ A critical component of counseling or prescribing physical activity to patients is understanding what different levels of physical activity intensity entail and what counts for the different types of activity (i.e., aerobic activities versus muscle strengthening).

It is also important to distinguish between physical therapy and a physical activity prescription. Physical therapy’s universal aim is “to identify and maximize human movement potential within the spheres of promotion, prevention, treatment and rehabilitation,” and has the potential to be an effective promotion of physical activity.⁹⁰ However, physical therapy has generally been employed as a means for restoration and maintenance of physical functioning in individuals who have experienced a disabling condition, loss of movement, or injury, as opposed to a method to improve physical activity in general.⁹⁰ Part of this is due to the insurance industry’s payment system, which does not generally pay for physical activity programming.

Effectiveness of Physical Activity Prescriptions for Depression and Anxiety

While there have been numerous studies assessing the relationship (causal or otherwise) between physical activity and mental health disorders, there are fewer available studies evaluating the effectiveness of physical activity prescription-type interventions designed specifically for the treatment of depression and/or anxiety. A 2014 meta-analysis evaluating exercise as a treatment for depression identified five RCTs where exercise was found to be beneficial in the treatment of depression.⁹¹ Specifically, treatment programs with exercise done at least three times a week, for a minimum of nine weeks, at moderate intensity were shown to be an effective for treatment of depression.⁹¹

A 2018 meta-analysis of RCTs evaluating the effects of Baduanjin (a traditional Chinese mind-body exercise) in adults diagnosed with any mental (depression, anxiety or mood) or physical illness (e.g., fatigue, diabetic mellitus, cancer, drug addiction, heart disease, stroke, and musculoskeletal disorder) found that despite wide heterogeneity among treatment interventions, in terms of frequency, length, intensity, etc., the Baduanjin intervention was effective in reducing both anxiety and depression among the patients.⁹² A more recent RCT assessed the impact of Baduanjin on patients diagnosed with lung cancer who were experiencing depression and anxiety. After an eight-week intervention, the treatment group had statistically significant lower self-reported depression and anxiety scores compared to baseline.⁹³ Despite the positive and consistent findings on the impact of Baduanjin on depression and anxiety, the cultural context of these studies and focus on Baduanjin specifically may reduce the generalizability to the U.S. population.

1 There is also qualitative evidence from general practitioners in New Zealand on a physical activity
 2 prescription program, the Green Prescription, for treating depression. The Green Prescription
 3 program involved a prescription for physical activity provided by a general practitioner or nurse
 4 and lasted for a three-month period. Within those three months, individuals received monthly
 5 phone calls from patient support counselors to help set realistic physical activity goals and identify
 6 solutions for barriers encountered. All general practitioners interviewed in the study emphasized
 7 the importance of physical activity to improve mood and treat depression and noted its usefulness
 8 in helping lessen the need for pharmacotherapy.⁹⁴

9
 10 *Making Physical Activity Assessment and Prescription a Medical Standard of Care*

11
 12 In April 2015, the American College of Sports Medicine and Kaiser Permanente convened a joint
 13 consensus meeting to discuss the development and implementation of a physical activity vital sign
 14 (PAVS) to be obtained and recorded regularly.^{95,96} PAVS was documented based on the answers
 15 from two questions: 1. On average, how many days per week do you engage in moderate to
 16 vigorous physical activity (like a brisk walk) and 2. On average, how many minutes do you engage
 17 in physical activity at this level? It resulted in a “call to action” for current and future clinicians
 18 and the health care community to implement a PAVS in daily practice with every patient.^{95,96} The
 19 health care team is uniquely positioned to address the importance of a healthy lifestyle, including
 20 physical activity, in the prevention and treatment of disease and disability.

21
 22 As a result, Kaiser Permanente, Greenville Health System in South Carolina, and Intermountain
 23 Healthcare System in Utah successfully integrated the use of PAVS.^{95,97} These organizations have
 24 been able to manage workflows and include the measure in their electronic health record alongside
 25 other vital signs. They have accomplished this goal working alongside different health record
 26 vendors, including Epic, HELP2, and iCentra.^{95,97} Further, a study of 2.1 million adult patients from
 27 Kaiser Permanente in Southern California demonstrated that within the first year of
 28 implementation, they were able to capture a PAVS on 85 percent of eligible patients.^{95,97}
 29 Importantly, the PAVS showed similar results to the reported number of minutes of exercise
 30 compared with other self-reported physical activity questionnaires, such as Behavioral Risk Factor
 31 Surveillance System (BRFSS) (50 percent) and the National Health and Nutrition Examination
 32 Survey (NHANES) (59.6 percent).^{95,97}

33
 34 Best practices to implement a uniform PAVS and physical activity prescription include increased
 35 education on benefits of physical activity on health, collaboration with large medical associations,
 36 alignment with current initiatives (i.e. Physical Activity Guidelines for Americans), and
 37 collaboration with local community groups, organizations, or facilities for counseling and
 38 assistance with culturally appropriate, basic physical activity information.⁹⁵ Due to its successful
 39 implementation, there are readily accessible resources (professionals, patient materials, and access
 40 to adequate facilities/equipment) to implement the recommendations for integrating PAVS and
 41 avenues to re-educate practicing clinicians and health care team members.⁹⁵ Further, at the level of
 42 the individual physician, medical practice, and health care system, there are a variety of incentives
 43 tied to quality measures or metrics.^{95,98}

44
 45 *When prescribing physical activity, what has been demonstrated to work well?*

46
 47 Treatment programs that incorporate aerobic activities at a moderate level of intensity either in a
 48 group or individual setting have been shown to be effective.⁹¹ Programs that included some level of
 49 supervision by an individual trained in physical activity were recommended to achieve beneficial
 50 treatment.⁹¹ Physicians should consider the following when developing a physical activity
 51 prescription for their patients. First and foremost, the prescription must be tailored to the individual

1 and incorporate the following four steps: (1) take an exercise history, (2) identify any
2 contraindications and refer those who require medical clearance to a sports/exercise specialist, (3)
3 develop an effective but realistic program, and (4) provide advice on how to reduce sedentary
4 behavior.⁶ These considerations are critical, as developing an effective and specific physical
5 activity program will depend on the patient's current level of activity and must be considerate of
6 age and existing chronic conditions.⁹⁹ Another component of an effective physical activity
7 prescription is considering exercise that integrates physical activity into an individual's daily life or
8 habits, rather than making it an extra chore.^{6,100}

9
10 A critical component of implementing physical activity prescriptions is the integration of PAVS in
11 electronic health records.^{97,100} Additionally, it has been recommended that a successful physical
12 activity prescription intervention must engage the larger health care team, not just the clinician.^{89,100}
13 For the Green Prescription program in New Zealand, the health care team responsible for providing
14 the physical activity prescription included patient support counsellors and nurses, who helped carry
15 out more of the time-consuming tasks and administration of the program.⁸⁹ For additional guidance
16 and resources on prescribing physical activity, the American College of Sports Medicine's Exercise
17 site has a step-by-step guide for clinicians to utilize in their practice.¹⁰¹

18 19 CHALLENGES AND BARRIERS

20
21 A challenge for physicians in prescribing physical activity is the heterogenous nature of exercise
22 activities and programs (as outlined above, there are many ways to exercise and at different levels
23 of intensity, frequency, etc.) and knowing what is most appropriate for the patient. Another major
24 barrier for physicians is the amount of need time to spend with patients to talk through a physical
25 activity prescription, including, but not limited to, doing a baseline assessment, creating an
26 individually tailored plan, and connecting the patient with appropriate resources.^{94,100} Additionally,
27 there is no standard of practice in the U.S. (like nutritional counseling) for physical activity
28 counseling and prescription within a clinical setting.⁸⁹ However, the global health initiative,
29 Exercise is Medicine®, is working to make physical activity assessment and promotion a standard
30 within clinical care.¹⁰²

31
32 Barriers that will be further discussed below also include inadequate provider reimbursement,
33 training, and self-efficacy, insufficient health care system support, and scarcity of certified
34 community resources to refer for evidence-based physical activity programming.¹⁰³⁻¹⁰⁵ Poor care
35 coordination and the inability to follow the progress of a referred patient are also important barriers
36 to consider when establishing sustainable clinical-community linkages for physical activity-related
37 care.^{103,106}

38 39 *Billing and Reimbursement for Prescribing Physical Activity*

40
41 Billing rules set by the Centers for Medicare and Medicaid Services (CMS) and private insurers
42 prohibit most allied health professionals from receiving reimbursement for providing exercise
43 programming in mental health settings.¹⁰⁷⁻¹⁰⁹ It should also be noted that some private insurance
44 companies offer their members a variety of incentives to engage in exercise, such as reimbursement
45 for gym memberships, cash rebates for selecting healthy food at the grocery store, and reduced
46 premiums for people who engage in regular exercise.^{107,113,114} A number of health insurance
47 companies offer their members incentives for engagement in exercise.¹⁰⁷ Large corporations also
48 offer incentives for engagement in exercise, such as on-site fitness equipment.^{107,115} However, this
49 creates an inequitable barrier for individuals who do not have access to private insurance
50 companies or work for large corporations.

51

Logistical and Workflow Barriers for Physical Activity Assessment and Referrals

Despite the availability of evidence-based programs to improve physical health and wellness behaviors among people with mental health conditions, there are multiple policies and funding barriers that make it difficult for community mental health programs to offer these programs to consumers.^{107,116} Health care policies typically “carve out” mental health funds from physical health funds, denying community mental health programs the financial ability to offer exercise programming.^{107,116} Few funds are set aside for community mental health programs to train staff to deliver preventive health services like exercise programs.^{107,108,116}

These barriers are perpetuated by fragmentation of preventive care in the U.S. and may explain the lack of standardized physical activity community-referral programs.¹⁰³ The national health promotion objectives have included a specific target to increase the proportion of primary care clinicians who routinely assess and counsel their patients on physical activity.¹⁰³ Occasional surveys of primary care practitioners and patients suggest that there has been little improvement over the last decade in physical activity assessment and promotion in clinical visits. The rates of clinician-initiated physical activity counseling continue to be low (<35 percent), particularly among women and racial minorities.^{103,117} Rates for physical activity counseling among patients with CVD (41.2 percent), hypertension, (44.2 percent), obesity (46.9 percent), and diabetes mellitus (56.3 percent) are also suboptimal.^{103,117}

Further, even though patients can be referred to either self-managed or community-based physical activity professionals/programs, health care systems are often unwilling to refer patients outside their system unless the professional/program referred to is part of a network where quality can be ensured and controlled.^{95,103} The development of a database of local physical activity programming and other health resources (e.g., medical fitness centers, gyms with certified programming and personnel, parks, trails, community centers) classified by age, clinical conditions, insurance benefits, and other factors (such as cost, activities offered) can enable the provision of a robust, personalized list of potential places and programs when integrating into the clinical workflow, electronic health record (EHR), and patient portals.^{103,118}

Education of the Health Care Workforce

To provide beneficial patient education, our nation’s health care professionals must be educated in the vital role physical activity and/or structured exercise plays in preventing, treating, and managing disease and the need to screen, motivate, and educate patients about physical activity.^{95,119} At the medical school level, there are innovative curricula, including those at the University of South Carolina School of Medicine Greenville and the University of Wisconsin, where exercise and lifestyle medicine are integrated into all four years of the students’ undergraduate medical education.^{95,120,121} The Accreditation Council for Graduate Medical Education sets the program requirements for residency and fellowship programs.^{95,122} However, despite specific curricula to which a resident must be exposed during graduate medical training, in most specialties there are no current requirements that residents receive education and training in physical activity.

Electronic Health Record

A recommendation by the National Academies highlights the value of EHR to provide information to the health care team related to health and treatment.^{103,123} Providing information pertaining to physical activity in the EHR creates an opportunity for the HCP to discuss patients’ or clients’

1 physical activity habits.^{103,123} Discussion about physical activity will be easier if these measures are
2 collected in a similar method across time and can be used between health record systems.

3
4 Two suggested methods for capturing physical activity for the EHR are self-reports and wearable
5 devices such as pedometers or accelerometers.^{103,124} An example of a self-report questionnaire that
6 can ascertain compliance with the physical activity guidelines is called the Exercise Vital Sign
7 (EVS), modified from the Behavioral Risk Factor Surveillance System.^{97,103} The EVS consists of 2
8 questions that take approximately ≤ 1 minute to administer. Wearable activity monitoring (WAM)
9 devices provide information on activity such as accelerometers counts, steps, and estimated
10 minutes of physical activity at various intensity levels.^{97,103} These devices can be worn on clothing
11 or the waist, wrist, or ankle to measure physical activity. Comparisons of findings based on
12 behavior questionnaires versus wearable devices find a remarkably similar relationship between
13 physical activity and health outcomes, buttressing older data from questionnaire studies that
14 underpin current physical activity guidelines.¹²⁵

15
16 There are numerous devices available, with many wrist-based devices or smartwatches now also
17 tracking heart rate to enhance physical activity intensity estimation. However, to date, there is no
18 widespread integration of patient-generated data from wearable devices into the EHR.^{103,126} No
19 matter which method is used, self-report or wearable devices, linking physical activity data to the
20 EHR provides a forum for health care professionals to initiate discussion and counseling on
21 increasing physical activity. However, uniform access to wearable devices presents logistical and
22 equity issues. There are also data privacy, integrity, provenance, and quality considerations that
23 should be addressed. Integrating information into an EHR from external third-party sources can be
24 a challenge and requires planning and preparation.

25 26 *Environmental Equity Considerations*

27
28 Another potential barrier for successful implementation of physical activity prescription programs
29 is the community setting in which patients are expected to return and fulfill their physical activity
30 regimen. For example, in a study assessing the level of physical activity among adolescent girls in
31 relation to their proximity to parks, researchers found that girls who live near more parks,
32 particularly near those with amenities conducive to walking and with active features (i.e.,
33 playgrounds, multipurpose fields, etc.), engaged in more physical activity compared to those who
34 with access to fewer parks.¹²⁷ CDC's Active People, Healthy Nation campaign aims to get more
35 Americans physically active using a number of evidence-based strategies to increase physical
36 activity. As part of this campaign, CDC has noted "providing equitable and inclusive access to safe
37 places for physical activity is foundational to each strategy."¹²⁸ However, inclusive and safe places
38 to exercise are not equitably distributed among U.S. communities, with notable disparities in low
39 income, minority communities.^{128,129} Low income, minority communities face a number of societal,
40 institutional, and environmental barriers to meeting physical activity recommendations, including
41 lack of access to appropriate facilities (i.e., parks, recreation or fitness centers), perceived
42 unattractiveness or cleanliness of one's neighborhood, and perceived safety and concerns of
43 violence.¹²⁹ As such, the patient's neighborhood and socio-environmental conditions should be
44 considered when developing a patient's physical activity prescription.

45 46 *Evidence from other types of prescriptions for 'healthy behaviors'*

47
48 The topic of physical activity prescriptions raises a larger question on whether physician
49 prescriptions, which have historically been focused on pharmacological treatment, can be an
50 effective intervention to motivate behavior changes that improve health. Similar prescription
51 interventions include park prescription and healthy food prescription programs. Park Prescriptions

1 are programs or interventions that include a health or social service provider, encourages
2 patients/clients to spend time in nature, and have a goal of improving their health and well-being.¹³⁰
3 There are a few studies that have been conducted or are ongoing that aim to evaluate the
4 effectiveness of park prescription interventions on physical activity and mental health
5 outcomes.^{131,132} In one RCT study evaluating a park prescription program intended to increase
6 physical activity in parks, the intervention group demonstrated improved park use, physical activity
7 in parks, recreational physical activity, and psychological quality of life.¹³² However, one challenge
8 in evaluating these types of programs is the ability to discern the independent effect of the
9 ‘physical activity’ and ‘park/nature’ components of the program. Parks prescription interventions
10 often have overlapping goals of improving access to nature and increasing physical activity. Thus,
11 if one is trying to discern which component is helping with improved mental health outcomes, it is
12 unclear which aspect of the program is “doing the work.” This is a useful distinction to understand
13 as there may be different biological mechanisms involved that connect access to nature/green space
14 and mental health.

15
16 Similar to a lack of physical activity, a poor-quality diet is a leading risk factor for non-
17 communicable diseases and has been implicated in the growing prevalence of chronic diseases,
18 such as obesity and diabetes.¹³³ As a result, there has been a growing interest in incorporating “food
19 as medicine” interventions within health care systems, one of which is the “produce prescription”
20 program.¹³⁴ With this type of intervention, a physician or health care worker identifies patients who
21 may be eligible to receive free or discounted healthy produce and patients are provided subsidized
22 or free healthy foods, with options to redeem prescribed coupons at local food stores, farmers
23 markets, or the direct provision of fresh produce at a community based organization, healthcare
24 center, or delivered directly to their home.¹³⁴ A 2021 systematic review of literature evaluating the
25 effectiveness of these types of interventions found there were statistically significant increases in
26 fruit and vegetable consumption and decreases in body mass index and glycated hemoglobin
27 (HbA1c) levels among program participants.¹³⁴ Whether either of these prescription-type programs
28 demonstrate long-term improvements in health outcomes has yet to be studied, but the current
29 evidence suggests they are effective at improving the adoption of healthy behaviors in the short
30 term. Generally positive evidence from these other types of prescription programs provides
31 credence to explore physician prescription programs as a worthwhile intervention to promote
32 healthy behavior change in individual patients.

33 34 RELEVANT AMA POLICY

35
36 Under existing AMA Policy H-440.859 “American's Health” the AMA supports improving health
37 through increased activity and proper diet a priority and calling on the federal government and state
38 governments to develop new and innovative programs in partnership with the private sector that
39 encourage personal responsibility for proper dietary habits and physical activity of individual
40 Americans.

41
42 Policy H-150.965, “Awareness, Diagnosis and Treatment of Depression and other Mental Illnesses
43 H-345.984” encourages medical schools, primary care residencies, and other training programs as
44 appropriate to include the appropriate knowledge and skills to enable graduates to recognize,
45 diagnose, and treat depression and other mental illnesses, either as the chief complaint or with
46 another general medical condition, and supports additional research into the course and outcomes
47 of patients with depression and other mental illnesses who are seen in general medical settings and
48 into the development of clinical and systems approaches designed to improve patient outcomes.
49 The policy also recognizes the impact of violence and social determinants on women’s mental
50 health. Further, the policy states that the AMA will work with the National Institute on Mental
51 Health and appropriate medical specialty and mental health advocacy groups to increase public

1 awareness about depression and other mental illnesses, to reduce the stigma associated with
2 depression and other mental illnesses, and to increase patient access to quality care for depression
3 and other mental illnesses.

4 5 CONCLUSIONS

6
7 Mental health disorders are among the leading causes of global health-related burden, with
8 substantial individual and societal costs.^{1,2} Depression is the leading cause of mental health-related
9 disease burden, while anxiety is the most prevalent mental health disorder.¹ The role of lifestyle
10 management approaches, such as exercise, sleep hygiene and a healthy diet, varies between clinical
11 practice guidelines in different countries. In U.S. clinical guidelines, psychotherapy or
12 pharmacotherapy is recommended as the initial treatment approaches, with lifestyle approaches
13 considered as ‘complementary alternative treatments’ where psychotherapy and pharmacotherapy
14 are ‘ineffective or unacceptable.’^{1,13}

15
16 One potential alternative to psychotherapy or pharmacotherapy to treat depression and anxiety is
17 the prescription of physical activity. There have been hundreds of research trials examining the
18 effects of physical activity on depression, with more limited studies examining the effects of
19 physical activity on anxiety. Many of these studies suggest that physical activity may have similar
20 effects to psychotherapy and pharmacotherapy (and with numerous advantages over psychotherapy
21 and pharmacotherapy, in terms of cost, side-effects and ancillary health benefits).^{1,135,136} Despite the
22 evidence for the benefits of physical activity, it has not been widely adopted therapeutically as a
23 prescribed alternate to psychotherapy or pharmacotherapy. The limited availability of evidence on
24 the efficacy of physical activity prescriptions for various populations, patient resistance, the
25 difficulty of prescribing and monitoring physical activity in clinical settings, as well as the huge
26 volume of largely incommensurable studies, have impeded wider adoption.⁵⁻⁷

27
28 Further, a critical component of counseling or prescribing physical activity to patients is
29 understanding what different levels of physical activity intensity entail and what counts for the
30 different types of activity (i.e., aerobic activities versus muscle strengthening).¹ Physicians have
31 expressed that insufficient knowledge or training is the most common potential barrier to
32 prescribing exercise for patients with mental health conditions.¹³⁷ There are also many
33 environmental equity considerations that need to be addressed before a physical activity
34 prescription program can be applied broadly.

35
36 Despite these barriers, there are promising practices that can be implemented to begin
37 incorporating physical activity prescriptions as a standard of care. One of these practices include
38 the introduction of physical activity vital sign (PAVS).^{95,96} PAVS is reliable and feasible and has
39 been validated against established survey tools to quantify physical activity engagement. It has also
40 been successfully implemented in large-scale demonstration projects.^{97,103} Other practices include
41 integrating the benefits of prescribing physical activity into undergraduate, graduate, and
42 continuing medical education, establishing partnerships and community links to sustain and
43 support equitable physical activity programs, and continued research into the efficacy of
44 prescribing physical activity to treat depression and anxiety.

45 46 RECOMMENDATIONS

47
48 The Council on Science and Public Health recommends that the following be adopted, and the
49 remainder of the report be filed.

50

1 1. That our AMA amend policy H-470.997, "Exercise and Physical Fitness" by addition and
2 deletion to read as follows:

3
4 Exercise and Physical Fitness H-470.997

5 1. Our AMA encourages all physicians to utilize the health potentialities of exercise for their
6 patients as a most important part of health promotion and rehabilitation and urges state and local
7 medical societies to emphasize through all available channels the need for physical activity for all
8 age groups and both sexes. The AMA encourages other organizations and agencies to join with the
9 Association in promoting physical fitness through all appropriate means.

10 ~~Our AMA will study evidence of the efficacy of physical activity interventions (i.e., group fitness,~~
11 ~~personal training, or physical therapy) on behavioral activation and outcomes on depressive and~~
12 ~~anxiety symptoms.~~

13
14
15 2. Our AMA advocates for continued research towards development of structured physical activity
16 treatment plans for the specific diagnoses of anxiety and depression, as well as longitudinal studies
17 to examine the effects of physical activity on health outcomes, particularly later in life.

18
19 3. Our AMA encourages:

- 20 1. education of health care professionals on the role of physical activity and/or structured
21 exercise in treating and managing anxiety and depression and the need to screen, motivate,
22 and educate patients of all ages about the benefits of physical activity, including positive
23 mental health benefits.
24 2. health care payers and employers to provide coverage for gym memberships and access to
25 other physical activity programs.
26 3. the implementation, trending, and utilization of physical activity measures, such as
27 physical activity vital signs (PAVS), in the medical record for treatment prescription,
28 counseling, coaching, and follow up of physical activity for therapeutic use. (Modify HOD
29 Policy)

Fiscal note: less than \$1,000

Table 1 – Key Guidelines for Physical Activity, adopted from the U.S. Department of Health and Human Services Physical Activity Guidelines for Americans, 2nd edition.²⁰

Age group/Population	Guidelines
Preschool-Aged Children (ages 3 through 5 years)	<ul style="list-style-type: none"> • Should be physically active throughout the day to enhance growth and development. • Active play that includes a variety of activity types is encouraged.
Children and Adolescents (ages 6 through 17 years)	<ul style="list-style-type: none"> • Should do 60 minutes (1 hour) or more of moderate-to-vigorous physical activity daily. Most of the 60 minutes or more per day should be either moderate- or vigorous intensity aerobic physical activity and should include vigorous-intensity physical activity on at least 3 days a week. • Should include muscle-strengthening physical activity on at least 3 days a week. • Should include bone-strengthening physical activity on at least 3 days a week.
Adults (ages 18 through 64 years)	<ul style="list-style-type: none"> • Should do at least 150 minutes (2 hours and 30 minutes) to 300 minutes (5 hours) a week of moderate-intensity, or 75 minutes (1 hour and 15 minutes) to 150 minutes (2 hours and 30 minutes) a week of vigorous-intensity aerobic physical activity, or an equivalent combination of moderate- and vigorous-intensity aerobic activity. • Should also do muscle-strengthening activities of moderate or greater intensity and that involve all major muscle groups on 2 or more days a week, as these activities provide additional health benefits.
Older Adults (aged 65+ years)	<ul style="list-style-type: none"> • For those who are able, recommended physical activity is the same as healthy adults. • As part of their weekly physical activity, should do multicomponent physical activity that includes balance training as well as aerobic and muscle-strengthening activities. • If unable to meet the above guidelines, they should be as physically active as their abilities and conditions allow.
Women During Pregnancy and the Postpartum Period	<ul style="list-style-type: none"> • Should do at least 150 minutes (2 hours and 30 minutes) of moderate-intensity aerobic activity a week during pregnancy and the postpartum period. • Should consult with their health care provider to monitor progress of pregnancy and whether or how to adjust their physical activity during pregnancy and after the baby is born.
Adults With Chronic Health Conditions and Adults with Disabilities	<ul style="list-style-type: none"> • For those who are able, recommended physical activity is the same as healthy adults. • If unable to meet the above guidelines, should engage in regular physical activity according to their abilities and should avoid inactivity. • Should be under the care of a health care provider and can consult with a health care professional or physical activity

	specialist about the types and amounts of activity appropriate for their abilities and chronic conditions.
--	--

Table 2 – Different forms of physical activity and bodily movements ²⁰

Activity Type	Definition and examples
Endurance (or aerobic) activities	Increases breathing and heart rate. Examples include brisk walking or jogging, biking, dancing, swimming.
Strength training or resistance training	Causes your muscles to contract against outside resistance. Examples include lifting weights or using resistance bands.
Bone-strengthening activity	Also referred to as weight-bearing or weight-loading activity, produces force on your bones that promotes bone growth and strength. Examples include jumping jacks, running, brisk walking, and weightlifting.
Balance activities	Activities aimed at improving postural control. They are particularly helpful for older adults as they help prevent falls. Examples include yoga, lower body strength training, and targeted exercises to improve balance.
Flexibility activities	Stretches muscles and helps individuals stay limber, improving range of motion and circulation. Examples include yoga and everyday stretching.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-24)
Teens and Social Media (Resolution 430-A-23)
(Reference Committee D)

EXECUTIVE SUMMARY

OBJECTIVE: This report examines the available evidence regarding the impacts of social media on the health of youth as well as the potential actions and interventions for government, policy makers, technology companies, researchers, parents, and children.

METHODS: English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: “teens” AND “social media” as well as “adolescents” AND “social media.” Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies and applicable professional and advocacy organizations were also reviewed for relevant information.

RESULTS: There is a pervasive presence of digital media, smartphones, and social media in nearly all aspects of youth and adolescent life. Despite substantial research efforts, the evidence is too weak to promote a uniform interpretation of the impact of social media on adolescent health at the population level. There are several factors contributing to the weak evidence including: (1) the reciprocal associations between social media use and health; (2) the lack of consistent and comparable methodologies; (3) entanglement of impact and exposure as a byproduct of social media’s ubiquity; (4) different dynamics and trends depending on level of analysis; (5) the wide variety of interactions, behaviors, and health impacts engendered by social media; and (6) reliance on cross-sectional studies with high heterogeneity. Although the evidence is too weak to provide a uniform interpretation, there are clear positive and negative trends. There is some evidence of potential benefit in the form of improved social support, identity development, civic engagement, and self-directed learning. There is also some evidence of potential harm including negative impacts on sleep, physical activity, and mental health, as well as exposure to inappropriate content, and data privacy issues. Furthermore, it is apparent that the relative risks and benefits of social media likely depend on individual differences in: (1) engagement with social media (e.g., what kids see and do online, who they talk to, when they use social media, and how they use social media); (2) pre-existing strengths and weaknesses; and (3) the cultural, social, and physical environment.

CONCLUSION: Even though the evidence of harm is limited there is an urgent need for action for two reasons. First, the lack of algorithmic transparency, privacy protections, and accountability and redress for online harassment on most platforms is concerning given the power, reach, and ubiquity of social media. Second, the potential harms are serious particularly during sensitive developmental periods, therefore, proactively creating digital environments that protect and enrich children’s and adolescents’ health and well-being is beneficial regardless of the evidence of harm. There are two key approaches that would likely facilitate the creation of safer, developmentally appropriate environments: (1) federal and state legislative action (e.g., expansion of the Children’s Online Privacy Protection Act (COPPA), implementation of age-appropriate design, and mechanisms to address online harassment, and (2) development and widespread adoption of industry standards to benchmark platform operations, transparency, and data use. In addition to improving the digital environment, it is imperative that there are simultaneous efforts to address harms that still arise including: (1) education and training on digital media literacy and the potential harms posed by social media; (2) improved screening and support for those who experience harms (e.g., problematic internet use and online harassment); and (3) continued research of the health impacts of social media.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 10-A-24

Subject: Teens and Social Media

Presented by: David J. Welsh MD, MBA, Chair

Referred to: Reference Committee D

1 INTRODUCTION

2
3 At the 2023 Annual Meeting of the American Medical Association (AMA) House of Delegates
4 (HOD), Resolution 430, “Teens and Social Media” was adopted. The policy (H-478.976, “Teens
5 and Social Media,”) as adopted, asked that our AMA “study and make recommendations for
6 teenage use of social media, including proposing model state and federal legislation as needed,
7 with a report back at the 2024 Annual Meeting.”

8
9 At the 2023 Interim Meeting of the AMA HOD, Resolution 915, “Social Media Impact on Youth
10 Mental Health,” was referred. The resolution asked that our AMA:

- 11
12 (1) work with relevant parties to develop guidelines for age-appropriate content and access and
13 to develop age-appropriate digital literacy training to precede social media engagement
14 among children and adolescents;
15
16 (2) amend policy D-478.965 by insertion as follows: (4) advocates for and support media and
17 social networking services addressing and developing safeguards for users,
18 including protections for youth online privacy, effective controls allowing youth and
19 caregivers to manage screentime content and access, and to develop age-appropriate digital
20 literacy training; and
21
22 (3) advocate that the federal government requires social media companies to share relevant
23 data for further independent research on social media’s effect on youth mental health and
24 fund future federal research on the potential benefits and harms of social media use on
25 youth mental health.

26
27 METHODS

28
29 English language reports were selected from searches of the PubMed and Google Scholar databases
30 using the search terms: “teens” AND “social media” as well as “adolescents” AND “social media.”
31 Additional articles were identified by manual review of the reference lists of pertinent publications.
32 Web sites managed by federal agencies and applicable professional and advocacy organizations
33 were also reviewed for relevant information.

34
35 BACKGROUND

36
37 The co-occurrence of the growing ubiquity of social media use by adolescents and teens and the
38 increase in poor mental health, among these same age groups, is alarming. These trends have

1 prompted calls for action and research around adolescents and teens and their use of social media.
2 A common theme in the research is that social media is not inherently beneficial or harmful.
3 Instead, the effects of social media likely depend on what kids see, their pre-existing strengths and
4 weaknesses, and their environment.¹⁻⁴ In particular, child-social media interactions may be
5 bidirectional as users shape their experience which in turn shapes them and vice versa.^{5,6} Further,
6 many argue that it is important to move away from the false dichotomy of whether social media is
7 hurting or helping adolescents -- instead researchers, parents, and policy makers should consider
8 who is using social media, what are they using it for, when are they using it, and how are they
9 using it.⁷⁻⁹ The focus of this report will be on adolescents and teens aged 10-17.

10 *Social Media Privacy, Transparency and Accountability*

11 The American Psychological Association (APA) defines social media as, “interactive technologies
12 that facilitate the creation and sharing of information, ideas, interests, and other forms of
13 expression through virtual communities and networks.”¹⁰ This can include social networking,
14 gaming, virtual worlds, video sharing sites, and blogs.³ Social media, internet use, and screentime
15 all fall under the umbrella of digital media - the parent category of all interactive media consumed
16 through screens.¹ These terms are used interchangeably throughout the rest of the report, unless
17 noted otherwise.
18
19
20

21 The different forms of social media have different possibilities for action and engagement, known
22 as affordances. Affordances, include things like visibility, editability, persistence, replicability,
23 searchability, scalability, and reachability and they manifest as the capacity for public posting,
24 sharing functions, auto-scroll, gamified interaction, push notifications, private messaging,
25 affiliations, and running counts of feedback on posts.¹¹⁻¹³
26

27 Affordances can have meaningful influence on the actions of the user; therefore, many researchers
28 advocate for an affordances approach to understanding and evaluating social media.¹⁴ This is
29 important because affordances are powered by and interact with computational algorithms. These
30 algorithms moderate content by generating recommendations, ranking and removing content, and
31 targeting ads.³ A challenge with content moderation is that it is intrinsically subjective. The value
32 and appropriateness of content depends on the context – the who, what, why, how, and when of the
33 information being shared may determine if it is elevated, downplayed, or removed.
34

35 Most platforms use a mix of artificial intelligence and human editing to enforce content
36 moderation.³ This can create intentional manipulation of information on the part of individuals. For
37 instance, Facebook allowed advertisers to choose to exclude whole racial, ethnic, and age groups
38 from seeing their ads.^{3,15,16} Similarly, TikTok issues separate content moderation approaches for
39 different countries depending on the degree of social conservatism.^{3,17} Many platforms can and do
40 selectively reduce or increase the prominence of content from certain users without violating the
41 terms of use.^{3,18} There is also unintentional, or at a minimum unexplained, manipulation of
42 information, caused by using machine learning algorithms for content modification. Machine
43 learning algorithms are black box mechanisms that learn without explicitly being programmed.
44 Companies know the inputs, outputs, and training data that go into their algorithms, but the internal
45 processes by which most machine learning algorithms work are less clear. Additionally, algorithms
46 are proprietary, so companies are reluctant to share the details they do have.^{3,19,20} Consequently, the
47 intrinsic subjectivity of content moderation is made more opaque by machine learning algorithms
48 as well as the platforms’ lack of transparency about them.^{3,21}
49

50 Relying on machine learning for content modification is not inherently harmful, but it can create
51 recursive feedback loops that exacerbate problems with harmful content and misinformation. The

1 algorithms send users more of the content that they engage with, thereby creating the impression
 2 that theories and behaviors they are seeing are potentially more prominent than they are. Moreover,
 3 many users do not realize that social media platforms are designed to show them content that is
 4 most likely to keep them engaged and on the platform rather than providing a comprehensive view
 5 of the content of friends and family.^{3,22} There is some evidence that recursive feedback loops and
 6 echo chambers exacerbate vaccine hesitancy.^{3,23–25} Similarly, content modification, and the echo
 7 chambers it creates had a significant impact on behavior during the 2016 Election.^{3,26–28}

8
 9 Ultimately, the current processes for content moderation introduce bias on both the front end (e.g.,
 10 the training data that informs the algorithms and intentional modification of information) and on
 11 the back end (e.g., recursive feedback loops and echo chambers). Content moderation also
 12 leverages user data, often in ways the user is unaware of, which raises ethical and privacy concerns.

13
 14 Furthermore, there is concern among users that companies like Facebook (now Meta) both
 15 overlook the risks posed by their product and misrepresent their internal findings when necessary
 16 to benefit the company.^{3,29,30} It is for these reasons that many criticize platforms and call for
 17 evaluation of algorithm bias, transparency, justice, and accountability.^{3,20}

18 19 *Adolescence as a sensitive period*

20
 21 One of the reasons parents, clinicians, researchers, and policy makers have raised alarm about
 22 social media use among adolescents is that adolescence is a developmentally sensitive period.
 23 There are three key features of adolescent brain development that may impact how youth engage
 24 with social media: (1) heightened sensitivity to rewards and dynamic changes in the dopaminergic
 25 system;^{3,31–33} (2) protracted maturation of brain networks that support cognitive function;³⁴ and (3)
 26 neural sensitivity to specific types of social information.^{3,35} As a result, adolescence is a time of
 27 tremendous cognitive, social, emotional, and physical change that involves both opportunity for
 28 maturation and vulnerability to environmental stressors.^{3,36} Evidence from developmental
 29 neuroscience illustrates that adolescence is a time of heightened risk taking, impulsivity, and
 30 sensitivity to social stimuli.^{4,37} Consequently, adolescents are particularly susceptible to
 31 environmental influences like drugs, social stress, cognitive training, and likely social media.^{3,4,38–41}
 32 There is some concern that constant engagement in social media in early adolescence may alter
 33 neural sensitivity to rewards and punishment.^{3,42} Furthermore, changes in the reward circuit may be
 34 a factor in excessive and problematic internet and social media use.^{3,43}

35
 36 At the same time, self-presentation and identity exploration is an important part of adolescence that
 37 social media can support.^{3,14,44,45} It is a critical time for building relationships and developing a
 38 social support system.³ Adolescents demonstrate an increased ability to consider other perspectives,
 39 which drives empathetic and prosocial behaviors on the one hand, as well as increased social
 40 comparison on the other.^{3,46} The strong desire for social connectedness demonstrated by
 41 adolescents suggests that they may be relaxed regarding privacy settings and connecting with
 42 strangers.^{35,47} Online environments and social media interactions may also lower inhibitions and
 43 accelerate intimacy.⁴⁸ In this way, online environments create both benefits and risks to
 44 development of identity and social connectedness.⁴⁸ Adolescence is also a time of increased
 45 flexibility and plasticity so researchers and public health practitioners advocate leveraging the
 46 plasticity of adolescent brain for health promotion.³⁷

47
 48 Ultimately, the power of social media to influence well-being likely depends on developmental
 49 stage.⁴⁹ There is some evidence that the concept of adolescence should be expanded to include
 50 individuals aged 10 to 24.⁴⁰ An expanded definition of adolescence is essential for developmentally

1 appropriate framing of laws, social policies, and service systems. There are ethical reasons to limit
2 marketing to children and teens as they may struggle to resist advertising.⁵⁰

4 YOUTH PREVALENCE, MOTIVATIONS, AND EXPERIENCES ON SOCIAL MEDIA

6 According to a 2022 Pew survey, 95 percent of teens in the U.S. have a smartphone and 97 percent
7 use the internet daily, which represents a 22 percent increase over the last eight years.⁵¹ The
8 omnipresence of both internet and mobile devices in how youth engage in relationships, learn, and
9 experience milestones reflects a massive cultural shift since the early 2000s.⁵² Smartphone use
10 starts in early adolescence, with 40 percent of children ages 8 to 12 owning a smartphone and 18
11 percent reporting social media use every day.⁵³

13 The 2022 Pew survey also found that 35 percent of teens report using YouTube, Instagram,
14 TikTok, Snapchat, and Facebook almost constantly.⁵¹ Fifty-five percent of teens thought they used
15 social media the right amount, 36 percent thought they use social media too much, and eight
16 percent thought they used it too little.⁵¹ Additionally, 54 percent thought it would be somewhat
17 hard to give up social media.⁵¹ Findings from the Pew study mirror older studies reporting that 50
18 percent of teens describe themselves as constantly connected and feel that they are addicted.^{1,2}
19 There are slight demographic differences as well. Black and Hispanic teens may use online media
20 more than their White peers.⁵¹ Girls use social media more than boys and also report that they
21 would have a harder time giving up social media.⁵¹ Finally, teens over 15 use social media more
22 than teens under 15.⁵¹

24 The most popular platform is YouTube, used every day by 95 percent of teens.⁵¹ YouTube is
25 followed by TikTok at 67 percent, Instagram and Snapchat at 60 percent, Facebook at 32 percent,
26 and then Twitter, Twitch, WhatsApp, Reddit, and Tumbler.⁵¹

28 Despite widespread use among children and adolescents, robust independent safety analyses on the
29 impact of social media on youth have not yet been conducted.⁴ Currently, we do not yet have
30 enough evidence to determine if social media is sufficiently safe for children and adolescents. Yet,
31 the body of research about potential harm evidences the importance of understanding the possible
32 risks and proactively creating digital environments that safeguard children's and adolescents'
33 mental health and well-being during critical stages of development.⁴

35 *MOTIVATIONS FOR USE*

37 Motivations for social media use among teens include social interaction, connection, curiosity-
38 driven learning, information sharing, entertainment, relaxation, stress relief, escapism, novelty
39 seeking, social capital, and appearance feedback.^{3,54-56} Moreover, there is evidence that the ways in
40 which youth engage with social media can improve and enrich their lives through social support,
41 connection, community building, identity development, civic engagement, and exposure to new
42 ideas.⁵⁷

44 *Friendship, social support, and connection*

46 Social media plays a vital role in the development and maintenance of friendships and social
47 connectedness.^{54,57,58} Communication with friends and family is often reported as the most
48 important function of social media,^{59,60} particularly when family and friends are far away.⁶¹ Fifty-
49 seven percent of teens have met a new friend online.^{60,62} There appear to be some gender
50 differences in how boys and girls interact with friends on social media. Sixty-one percent of boys
51 and 52 percent of girls made friends online, and video games play a critical role in boys' friendship

1 development.⁶² In contrast, one study found that on average, teen girls spend over two hours a day
 2 on TikTok, Snapchat, and YouTube and over 90 minutes a day on Instagram and messaging apps.⁶³
 3 Roughly, 69 percent of teens feel better connected to their friends' feelings, 83 percent better
 4 connected to their friends' lives, and 68 percent receive social support during tough times from
 5 friends through social media.⁶² In this way, social media may be helpful in combating social
 6 isolation and building social capital.^{3,64}

7
 8 There is some evidence that social media can both reduce stigma and be a venue for sharing coping
 9 strategies.³ Social media provides a way for youth to connect with people in the same position,
 10 which can be particularly valuable to adolescents who feel excluded or otherwise lack offline
 11 support, including patients with rare diseases, individuals with disabilities, those who struggle with
 12 mental illness and/or obesity, and marginalized groups (e.g., LGTBQ+ youth).^{1,4} For instance,
 13 through social media, teens who are neurodivergent can connect socially with others in a way that
 14 is manageable for them, thereby reducing loneliness.^{3,65} Social media may also help teens and
 15 youth coping with grief,⁶⁶ navigating foster care,⁶⁷ dealing with cancer, diabetes, rare diseases,^{68,69}
 16 and mental illness.^{3,70} Sharing on social media about losses and stressors can provide a sense of
 17 connection, support, and understanding.⁷¹ Similarly, social media can provide support and
 18 connection for young people who live in communities where sexual and gender diversity are not
 19 accepted, which may buffer them from stigma and loneliness.^{3,72-74} This is particularly true for
 20 LGTBQ teens in rural areas that are able to find support they do not have offline by connecting
 21 with other queer youth.^{3,72,75-77}

22
 23 It is not clear if online and in-person relationships are equivalent; however, friendship and social
 24 connection facilitate a sense of belonging.^{3,78} Moreover, friendship can reduce anxiety and improve
 25 life satisfaction in its own right.^{3,79} Cross-sectional studies among undergrads provide some
 26 evidence that people who use social media to connect with a diverse friend group tend to have
 27 higher social self-efficacy.^{3,80} Yet, the relative support provided by online social connection may be
 28 influenced by the individual and how they engage with social media.^{3,81}

29 *Self-expression, Identity exploration, and Independence*

30
 31
 32 There is some evidence that social media can support self-expression, identity exploration, and
 33 independence.^{3,14,44,45,57,60,82,83} Adolescents who communicated more with friends online had a
 34 greater self-concept clarity.⁶⁰ One systematic review found that LGBTQ youth negotiated and
 35 explored identity using social media to manage identities through anonymity, censoring locations
 36 and content, restricting audiences, and using multiple accounts.⁷² This suggests social media may
 37 support the mental health and well-being of LGTBQ youth through identity management.⁷² In
 38 particular, the online environment of social media creates a space to reveal and express
 39 differences.⁸⁴ Similarly, many cis girls are meticulous about which platforms and accounts they use
 40 for specific tasks, because it allows them to experiment with different forms of expression and
 41 ways of presenting themselves to their peers.^{3,85} Self-disclosure, a key process in asserting personal
 42 agency, may be facilitated through digital platforms.^{3,81}

43 *Self-directed learning, Creative expression, and Civic engagement*

44
 45
 46 Social media can also facilitate exposure to new ideas, raise awareness about current events,
 47 increase community participation and civic engagement, and allow collaboration on schoolwork.²
 48 A study of teens in western countries found that social media use predicts greater ability for both
 49 reading and navigating information online.^{3,86} There is also some evidence that when social media
 50 is used for classroom writing exercises, students demonstrate less writing anxiety and increased
 51 agency.⁸⁷ Similarly, online fanfiction communities facilitate informal learning by creating a space

1 for youth to build literary skills and support the same skills in others.⁸⁷ The same can be said for
 2 other hobbies, interests, and activities that have a social media component and roughly 70 percent
 3 of teens use social media to express their creative side.⁵⁴ The informal learning environment of
 4 social media facilitates empowerment and agency among some young people.^{3,88} It has also been
 5 associated with increases in self-motivation among adolescents.^{3,88}

6
 7 About two-thirds of teens ages 13-18 reported using social media to learn about different points of
 8 view or show support,⁵⁴ and 64 percent of teens look for news online.^{3,89} Furthermore, evidence
 9 suggests youth who engage in online political discussions also engage in offline political
 10 discussions.^{3,89,90} Therefore, social media may be a vehicle to engage and utilize the social and
 11 political power of young people through civic engagement.^{3,90-92} Social media can facilitate
 12 political democracy, cultural democracy, and spread of knowledge.⁹³ Finally, there is some
 13 evidence that adolescents both seek out and share health information on social media.^{53,54}
 14 Therefore, it may be an effective tool for health interventions and health promotion.^{1,94,95} On the
 15 other hand, health misinformation can exacerbate adoption of harmful behaviors.⁹⁶

16 17 *ONLINE HARASSMENT AND EXPOSURE TO INAPPROPRIATE CONTENT*

18 19 *Cyberbullying and online harassment*

20
 21 There is evidence that social media increases risk of cyberbullying among youth.^{1-3,60,83,97}
 22 According to a recent Pew survey, 46 percent of U.S. teens ages 13 to 17 report ever experiencing
 23 at least one of six cyberbullying behaviors.⁵¹ Name-calling was most common, with 32 percent of
 24 teens reporting they have been called an offensive name online or on their cellphone.⁵¹ False
 25 rumors (22 percent), receipt of explicit images (17 percent), pervasive questions about location (15
 26 percent), physical threats (10 percent), and the sharing of explicit images of them without their
 27 consent (7 percent) were also reported.⁵¹ There appear to be slight demographic differences in who
 28 experiences cyberbullying. Specifically, studies have shown that black teens experience more
 29 cyberbullying than their white peers,^{51,98} LGBTQ youth experience more cyberbullying than their
 30 cisgender and heterosexual peers,^{51,98} and adolescent girls experience more cyberbullying than
 31 adolescent boys.^{51,63,99,100} Evidence also suggests that relationship issues (e.g., feeling left out and
 32 interpersonal drama) were the most common reason for cyberbullying among adolescent girls.^{63,100}

33
 34 Studies suggest that the size and type of the network as well as anonymity of those on the network
 35 impact the likelihood of harassment, but it is not easily predicted.^{3,101,102} For instance, online
 36 harassment occurs often among video game users, particularly female gamers who commonly
 37 report sexual harassment.^{3,103,104} One study found that indiscreet posting, time spent on social
 38 media, and personality traits were all predictors of cyberbullying.¹⁰⁵ There is some evidence of a
 39 relationship across studies between cyberbullying and depression among children and adolescents;
 40 however, the evidence of the effect of cyberbullying on other mental health conditions is
 41 inconsistent.¹⁰⁰ Adolescents' self-view and interpersonal relationships may be affected through
 42 social comparison and negative interactions, like cyberbullying and exposure to inappropriate
 43 content.⁹⁷

44
 45 Responses to cyberbullying are most often passive, with a pervasive lack of awareness or
 46 confidence that anything can be done.¹⁰⁰ Despite the prevalence of cyberbullying, some evidence
 47 suggests that in-person bullying is more common.^{3,106}

48 49 *Exposure to inappropriate content and misinformation*

50

1 One major concern of parents, clinicians, researchers, and policy makers is that poorly regulated
 2 and moderated social media can result in youth exposure to inappropriate content (e.g., alcohol,
 3 tobacco, risky sexual behaviors, cyberflashing, porn, and self-harm).^{1-3,107} A survey of more than
 4 1,300 teens aged 13 to 17 found nearly three-fourths had seen pornography online, with social
 5 media being the point of access for about 18 percent.^{3,108} Moreover, average first exposure was at
 6 12 years old and accidental exposure accounted for 40 percent of cases.^{3,108} Cyberflashing – the
 7 electronic transmission of sexually explicit photos without the recipients’ consent – is a particularly
 8 troubling form of online harassment.^{3,109} One survey found that 37 percent of girls and 20 percent
 9 of boys aged 12 to 18 had received sexual photos online, often from strangers,^{3,110} and another
 10 study found more than 6 percent reporting the first flashing incident occurred between the ages of
 11 12 and 14.^{3,111} It is difficult to evaluate brief and limited exposures; however, there is evidence that
 12 repeated exposure to inappropriate content in childhood was associated with risky sexual behavior
 13 later in life.¹⁰⁷ Similarly, exposure to alcohol, tobacco, or risky sexual behaviors may be associated
 14 with initiation of those behaviors.¹

15
 16 Teens and adolescents may also be uniquely vulnerable to misinformation and disinformation
 17 because their maturity and cognitive capacities are still evolving.^{3,112} Misinformation and
 18 disinformation can take a variety of forms including clickbait, hoax, rumor, satire, propaganda, and
 19 conspiracy theories.^{113,114} Examples include things like foreign interference, political deceit, and
 20 claims for ineffective and unproven natural remedies and medical advice.¹¹² Concerningly, many
 21 people lack the ability to identify misinformation and disinformation as evidenced by one study
 22 which found that the percentage of people who share fake news without the intention to mislead is
 23 five times higher than intentional spreaders.¹¹⁵ A 2018–2019 survey of 3,446 U.S. high-school
 24 students demonstrated that 52 percent believed that a grainy video claiming to show ballot-stuffing
 25 in the 2016 Democratic primaries constituted ‘strong evidence’ of voter fraud in the US, and only
 26 0.1 percent were able to track down the original video even though a quick search showed that it
 27 was actually shot in Russia.^{112,116} Similarly, two-thirds could not tell the difference between news
 28 stories and ‘sponsored content’ (i.e. adverts) on a website.^{112,116} Although teens and adolescents
 29 may be particularly vulnerable to misinformation and disinformation, there is currently very little
 30 data available to provide a clear picture of how misinformation and disinformation may affect their
 31 development, well-being, and rights.¹¹²

32 33 IMPACTS OF SOCIAL MEDIA ON ADOLESCENT HEALTH

34
 35 To understand the impacts of social media on adolescent health, the conflicting and often reciprocal
 36 mechanisms through which online experience and health (physical and mental) influence each
 37 other must be disentangled.³ However, there are several factors that make this extremely
 38 challenging, including:

- 39
 40 (1) the direction of the relationship between social media and health is difficult to determine -
 41 social media use influences health and health influences social media use;
- 42 (2) the research lacks uniform, consistent, and comparable methodologies;
- 43 (3) social media is so ubiquitous it is difficult to separate the impact of exposure;
- 44 (4) different levels of analysis may reveal different dynamics – with large scale studies
 45 showing population level trends and psychological studies showing mixed, small, or no
 46 associations;
- 47 (5) social media is not a monolith, the affordances of different platforms and types of social
 48 media engender a wide variety of interactions, behaviors, and health impacts; and
- 49 (6) the heterogeneity of the literature and the primary reliance on cross-sectional studies (or
 50 meta-analysis of cross-sectional studies) make definitive conclusions and causal

1 relationships limited. Most of the associations are qualified or limited to certain
2 populations.³

3 *Social Media and Physical Health: Sleep, Physical Activity, and Obesity.*

4
5 There is evidence that social media use can disrupt sleep.^{1-3,97,107,117,118} Specifically, increased
6 duration of computer, internet, and social media exposure,^{3,118} and the presence of a tv, computer,
7 or mobile device in the bedroom in childhood were associated with fewer minutes of sleep, greater
8 risk of sleep disturbances, longer sleep latency, worse sleep quality, and daytime dysfunction.^{1,119}
9 Gaming predicted delayed bedtimes and reduced attention the following day.^{3,120} One study found
10 that screen-based digital media use is closely associated with sleep duration and sleep quality in
11 teens; however, they cautioned that more research was needed to determine the direction of the
12 effect.^{3,121} Another study found that smartphone use at night can delay sleep among adolescents.^{3,122}
13 In a nationally representative sample, one-third of parents of teens 12-17 had rules about
14 smartphone use at bedtime and those kids had less daytime sleepiness.^{3,123}

15
16 However, it is not clear if social media or devices more broadly are driving the relationship. There
17 are three likely ways in which digital media use may disrupt sleep.^{3,124} First, social media displaces
18 sleep thereby delaying bedtime, disrupting sleep, and reducing sleep duration.^{3,121,124} Second,
19 devices can disrupt circadian rhythms through light emissions which heighten arousal and decrease
20 sleepiness.^{3,122,124} Third, social media may be psychologically stimulating in such a way that makes
21 sleep difficult.^{3,124,125} Determining which mechanism(s) are driving the association between digital
22 media and poor sleep is necessary given that the cascading impacts of poor sleep and the potential
23 harms of social media overlap significantly.

24
25 Observational studies suggest a significant association between poor sleep quality and excess social
26 media use and negative mental health outcomes.^{3,126} Therefore, the interplay between social media
27 and sleep quality may impact mental health outcomes. Sleep loss is a risk factor for depression,
28 mood disturbances, injuries, attention problems, and excessive weight gain.^{3,127-129} Additionally,
29 teens with restricted sleep have more problems with emotion regulation, anxiety, hostility, and
30 fatigue.^{3,130} One study also found that sleep-deprived participants showed worse mood, more social
31 media use, and problems with concentration.^{3,131} Moreover, findings from the Youth Risk Behavior
32 Survey illustrated that teens who sleep four or fewer hours a night have 5.9 times higher odds of
33 having a serious suicide attempt.^{3,132} Some studies showed sleep quality mediating the relationship
34 between social media use and negative mental health outcomes in youth.¹²⁶ In particular, if social
35 media displaces sleep and hobbies, it can be predictive of anxiety and depression.^{3,133} Similarly,
36 when screen time displaces sleep and exercise it is predictive of problematic use.^{3,134,135} However,
37 the current body of evidence on the directionality and relationships between social media use,
38 mental health, and sleep is inconclusive.^{3,126}

39
40 There is some evidence that social media use may correlate to non-adequate nutrition, non-
41 physiologic postures, weight gain, and obesity.^{1,2,107,117} Excessive TV viewing in early childhood is
42 associated with an increased risk of obesity.¹ Social media could be displacing physical activity,
43 sleep, studying, and other hobbies, resulting in a more sedentary lifestyle and an increased risk of
44 obesity.^{3,107,136} In support of this, another study found that increased digital media use was
45 associated with a sedentary lifestyle.^{3,137} Social media use is also associated with consumption of
46 fast food, sugary drinks, snacks, and mindless eating.^{3,138} One study theorizes that this may be
47 occurring because social media is displacing regular meals.^{3,138}

48 *Social Media and Mental Health: Anxiety, Depression, and Loneliness*

49
50

1 The findings on the association between social media and adolescent mental health are small,
2 inconsistent, or non-existent. Moreover, the differences in findings appear to be explained by
3 bidirectional interactions, methodological weaknesses and differences, and/or individual rather than
4 population differences.

5
6 Several meta-analyses, systematic reviews, and other studies have found small negative
7 associations between social media use and depression, anxiety, psychological distress,¹³⁹
8 loneliness, internalizing problems, and low offline social support.^{3,139-147} At the same time,
9 numerous other studies found the relationship between social media and adolescent mental health is
10 non-existent, mixed, or inconsistent.¹⁴⁸⁻¹⁵¹ Specifically, there was no significant association
11 between social media use and depression, anxiety, and life satisfaction.^{148,150,152} Additionally, there
12 is inconsistent evidence that social media makes social comparison, envy, and well-being worse.¹⁴⁹
13 Importantly, many of these studies note that predictive relationships between social media use and
14 well-being are reciprocal, as well as present only in certain populations, developmental windows,
15 or among certain patterns of use.^{49,141-143,151-155}

16
17 For instance, one review found that early studies show comparison and envy are common on social
18 media and linked to ill-being, whereas recent studies find positive, person-specific, conditional, and
19 reciprocal effects.¹⁴⁹ Similarly, one study found that social media use in and of itself is not a
20 predictor of life satisfaction; rather the relationship between self-reported estimates of social media
21 use and life satisfaction is more nuanced, reciprocal over time, gender specific, and likely
22 dependent on analytic methods.¹⁵² Another study found that life satisfaction is most negatively
23 associated with social media use in younger adolescents, but also noted possible developmental
24 windows of sensitivity -- at ages 14-15 and 19 for boys and at ages 11-13 and 19 for girls.⁴⁹ A
25 longitudinal study that characterized subgroups based on type of social media use found that the
26 high social media use subgroup predicted higher depressive symptoms, panic disorder, delinquent
27 behaviors, family conflict, and lower family and friend support than the high Instagram/Snapchat
28 and low social media subgroup.¹⁵⁴ Similarly, in a study of U.S. undergrads, social media use was
29 not predictive of impaired mental health; however, “vaguebooking” -- the practice of making a post
30 on social media that is intentionally vague but highly personal and emotional -- was predictive of
31 suicidal ideation.¹⁵¹ This suggests how individuals use social media is more important than the
32 amount of time they spend on social media, particularly considering that perceived parent-child
33 conflict was a stronger predictor of mental health issues than social media use.¹⁵¹

34
35 There is also some evidence that young people who report symptoms of depression are using
36 digital tools to learn about and help their mental health problems.¹⁵⁵ One study found that girls and
37 LGBTQ teens were more likely to seek out online resources for mental health and showed interest
38 in stories of others with similar experiences.¹⁵⁵ Those who benefit most from social media appear
39 to be those who are marginalized as well as those with chaotic home lives, suggesting the benefits
40 of online social support are most salient when offline social support is lacking.^{51,54} These findings
41 highlight the importance of researching patterns, quality, and type of use in addition to amount of
42 use.

43
44 Additionally, there are methodological issues that further complicate definitive conclusions.
45 Several studies note that wide variation in methods and rigor make it difficult to synthesize
46 findings.^{139,143,154,156,157} For instance, one systematic review found a small association between self-
47 reported social media use and depressive symptoms, but noted that the studies had high
48 heterogeneity, which suggests that other factors are likely moderating the relationship.¹⁴³ Another
49 systematic review argued that small associations and inconsistent results may be influenced by
50 choice of mental health indication (e.g., presence of well-being is not necessarily the absence of ill-
51 being and vice versa).¹⁴⁹ Furthermore, the research on social media and adolescent well-being

1 primarily comes from cross-sectional studies, therefore causal associations may be
2 unwarranted.^{49,140,152,156-158} Finally, this research should consider a person-specific approach as
3 individual differences may explain the mixed and inconsistent results.¹⁵⁶

4
5 Ultimately, the presence of small associations as well as inconsistent and conflicting results
6 highlights that the evidence is still too weak to promote a uniform interpretation or to support the
7 conclusion that social media causes changes in adolescent mental health at the population level.^{3,159}
8 Moreover, the fact that social media use is linked in complex and ubiquitous ways with other
9 aspects of life means it is unclear what such a small effect demonstrates.¹⁵⁹ Ultimately, more
10 research is needed along with improved transparency and greater appreciation for individual
11 differences.^{4,159}

12 *Problematic Internet Use and Internet Gaming Disorder*

13
14
15 Internet gaming disorder is defined as persistent and recurrent use of the internet to engage in
16 games, leading to clinically significant impairment or distress.⁴¹ Problematic internet use is defined
17 as internet use that creates psychological, social, school and/or work difficulties in a person's
18 life.¹⁶⁰ This can include video gaming, social media use, web-streaming, and buying; however,
19 those activities are characterized as excessive or poorly controlled preoccupations, urges, or
20 behaviors regarding computer use and internet access that lead to impairment or distress. The key
21 factor is that internet use becomes problematic when it causes dysfunction in daily life activities
22 (e.g., school, sleep, exercise).^{3,26,161} There appears to be significant overlap in internet gaming
23 disorder, problematic social media use, and problematic internet use.^{3,162,163} At this point it is
24 unclear whether problematic social media use and gaming disorder are distinct or different
25 manifestations of disordered tech use.³

26
27 There is some evidence that internet gaming disorder predicts depression, anxiety, social phobia,
28 poor school performance, sleep disruption, and poor relationships with parents and peers.^{3,164-167}
29 There is also some evidence that problematic internet use is associated with depression,
30 disturbances in sleep and mood, upward social comparisons, cybervictimization, and poor
31 academic performance.^{3,4,58,72,168-172} Problematic social media use is most common among older age
32 groups and may be associated with irritability, nervousness, loneliness, and morning tiredness.¹⁶⁹
33 There are gender differences in internet gaming disorder, as it affects males 5 times more than
34 females.¹⁷³ Moreover, there is some evidence that boys are more addicted to games whereas girls
35 are more addicted to social media.^{3,174}

36
37 Some researchers suggest that problematic internet use could explain the small negative
38 associations between social media and youth mental health. For instance, problematic social media
39 use mediated the association between depressive symptoms and cyberbullying.¹⁴² Additionally, one
40 study found that teens with problematic internet use reported more difficulty identifying and
41 describing emotions, and there is some evidence that emotion regulation is a significant mediator in
42 quality of parent-adolescent relationship.¹⁷⁵ Some researchers theorize that problematic internet use
43 might be a coping strategy to compensate for emotion regulation deficits, which might explain why
44 a good relationship with parents reduces problematic internet use.¹⁷⁵ However, problematic use is
45 more complex than simply the amount of time spent on social media. It includes enduring
46 preoccupation with social media, inability to stop, neglect of one's health and other areas of one's
47 life.¹⁵⁶ Therefore, more research is needed to better understand the relationships between
48 problematic internet use, social media, and adolescent mental health.

49 *Attention and Learning*

50

1 There is limited evidence that social media use negatively impacts attention and learning. One
2 study found that time spent on social media predicts concentration problems in adolescent girls.^{3,176}
3 Additionally, there are small associations between both frequency of social media use and number
4 of platforms and attention deficit hyperactivity disorder (ADHD).^{3,177-179} However, it is not clear
5 what is driving the association between social media use and decreased attention.¹
6

7 There is some evidence that reading on screens is fundamentally distracting.^{3,180} Others have
8 suggested that multitasking is the root of the problem. High proportions of youth engage in heavy
9 smartphone use and media multitasking.⁹⁷ Moreover, a recent meta-analysis found associations
10 between multitasking and problems with attention, behavior regulation, impulsiveness, and
11 memory.^{3,181} Specifically, media multitasking is associated with negative effects on cognitive
12 control, academic performance, and socioeconomic functioning.^{3,97,181,182} One study found that in
13 three hours of studying, adolescents experienced an average of 35 social media distractions that
14 diverted attention.^{3,183} Additionally, another study found that the number of social media accounts
15 correlated with parent reports of symptoms of inattention, hyperactivity, impulsivity, oppositional
16 defiant disorder, anxiety, and depressive symptoms, and adolescent reports of fear of missing out
17 and loneliness.¹⁷⁹ Therefore, it has been suggested that the amount of time spent online can have
18 bidirectional effects on depressive symptoms and ADHD; this risk is particularly heightened in
19 those with pre-existing poor mental health.¹²⁶
20

21 *Body Image and Eating Disorders*

22

23 Significant research exists on the association between social media use and body image, but the
24 findings are limited, and causal factors are difficult to differentiate. There is some evidence that
25 social media use and consequent exposure to appearance-focused content may be weakly
26 associated with poorer body image.^{3,4,184,185} A cross-sectional study found that greater levels of self-
27 objectifying social media use predicted greater body shame among youth, and the association was
28 mediated by an associated increase in body surveillance.^{3,186} Specifically, the role of body
29 surveillance was stronger among girls and adolescents who are particularly focused on others for
30 approval.¹⁸⁶ Body image concerns may be a key mechanism underlying the associations between
31 adolescent girls' social media use and mental health.¹⁸⁷
32

33 A scoping review found that social media use may have a variety of impacts on diet, exercise, and
34 body image.¹⁰⁷ Similarly, another study found that the same platform that helped some patients find
35 recovery support was also a source of body shaming and rumination for others.^{3,188} Another review
36 found that peer influences on social media span from healthy eating and exercise to disordered
37 eating, and that dietary information shared on social media often misaligns with national dietary
38 standards.¹⁸⁹ Similarly, one study found youth had an increased ability to recall unhealthy food,
39 beverages, and brands particularly when celebrities and influencers are promoting them.¹⁹⁰
40

41 PRIVACY

42

43 Researchers have found that the growing use of social networks has led to the emergence of ethical
44 and privacy concerns regarding the management of user data and how social networks train
45 algorithms for economic purposes to organize the content shown to users.^{1,191} The new privacy
46 paradox is that these sites have become so ubiquitous that users feel they must disclose information
47 on them even though these sites do not provide adequate privacy controls.^{3,192} Specifically, the
48 privacy policies used by platforms either require or allow users to review and consent to their data
49 collection and data use practices; however, most respondents agreed to the terms without reviewing
50 them.^{3,193,194} This could be because the policies themselves are long and technical, they do not

1 provide consumers with meaningful choices, and people are skeptical of whether policies achieve
2 their goals.¹⁹⁴ Concern over what platforms do with user data coupled with a sense of futility over
3 having the agency to change anything may explain why a recent Pew survey found overall strong
4 bipartisan support for more regulation of what companies can do with people's data, with 72
5 percent of Americans reporting that there should be more regulation than there is now.¹⁹⁴

6
7 These issues may be even more salient for children. A recent Pew study found that Americans
8 worry about kids' online privacy, with 89 percent of respondents reporting that they are very or
9 somewhat concerned about social media platforms knowing personal information about kids.¹⁹⁴
10 Similar concern arises over how advertisers, online games, and gaming apps collect and use
11 children's data.¹⁹⁴ However, respondent expectations regarding responsibility for protecting kids is
12 placed primarily on parents at 85 percent, followed by technology companies at 59 percent and the
13 government at 46 percent.¹⁹⁴

14
15 The Children's Online Privacy Protection Act (COPPA), which was enacted in 1998, recognizes
16 that young children cannot consent to the terms of use for data collection, and thus prohibits
17 enticing personal disclosures through games and restricts advertising to children. Yet, COPPA only
18 applies to kids under 13. Consequently, recent legislation has focused on age-appropriate design
19 and proposed additional protections for adolescents.

20
21 There is mixed evidence on how adolescents and adults feel about online privacy. There is some
22 evidence that older users are more concerned about privacy than youth.¹⁹⁵ Additionally, a strong
23 desire among adolescents for social connectedness suggests that youth may be more inclined to
24 have relaxed privacy settings and show a greater willingness to connect with strangers.^{3,35,196}
25 However, a different study found a negative relationship between age and privacy; noting that
26 young people are more likely to have taken action to protect their privacy than older people.¹⁹²
27 Therefore, it is possible that the studies finding that young people are not concerned about their
28 privacy may be because they are taking more precautions.

29 30 POTENTIAL APPROACHES TO PROTECT CHILDREN ON SOCIAL MEDIA

31
32 Despite widespread use among children and adolescents, the evidence on the potential harms and
33 benefits is too weak to promote a uniform interpretation of the impact of social media on
34 adolescent health at the population level. Nonetheless, the current body of research does highlight
35 the importance of understanding the risks and benefits and proactively creating digital
36 environments that protect and enrich children's and adolescents' health and well-being during
37 critical stages of development.^{1-4,41}

38 39 *Recommendations for Industry*

40
41 The most common recommendation for the social media industry is improved privacy protections,
42 improved transparency, and a better system of reporting inappropriate content and ill-actors. Yet
43 aside from internal efforts, like Facebook's Oversight Board, there has been little voluntary
44 governance action on the part of industry.¹⁹⁷ Highlighting the success of the Global Internet Forum
45 to Counterterrorism, the National Academy of Science, Engineering, and Medicine (NASSEM)
46 argues that the International Organization for Standardization (ISO) should convene an ongoing
47 technical working group comprised of industry, academic, and civil stakeholders to develop
48 standards for social media platform design, transparency, and data use.^{3,198} Other researchers,
49 professional organizations, and policy makers also advocate for development of industry
50 standards.^{4,197}

1 Specifically, the goals of the work group would be to develop standards that: (1) limit the personal
2 information companies collect, the types of content available, and the prompts to extend time on a
3 platform; and (2) develop easy to use, universal, transparent systems for reporting, follow-up, and
4 adjudication for cases of online harassment and abuse.^{3,4,197} Specifically, efforts should be made to
5 move to a functional privacy system that emphasizes transparency of and access to inputs and
6 outputs. On the front-end inputs would include: (1) a clear process for content moderation and use;
7 (2) contents of privacy agreements; and (3) mandatory disclosures to users.³ On the back-end,
8 standard outputs might include: (1) platform health measures (e.g., content moderation and take
9 down policies and data at the community, group level to evaluate platform toxicity); (2)
10 algorithmic transparency standards and summaries at the user level; and (3) reports on efforts to
11 remediate youth mental health problems on the platform.^{3,4} This would improve privacy protections
12 and transparency by making it clear what data is collected from minors, how it is collected and
13 used, and what the consequences of use are. Furthermore, this would give companies and
14 researchers more straightforward guidelines for measuring data collection risks that children
15 encounter online, as well as technical standards to benchmark platform operations, transparency,
16 and data use.³ Arguably social media platforms would benefit from a standard guide of assessment
17 to evaluate how their products influence youth well-being.

18
19 However, developing standards is insufficient unless social media companies adopt the standards
20 both as their policy and as provisions in their terms of service.³ There is a precedent of self-
21 regulation in media (e.g., tv, movies, videogames, music) using industry standards, as well as early
22 efforts at self-regulation evidenced by Facebook's Oversight Board.^{3,197,199-201} However, given that
23 the success of social media is contingent on engaging as many people for as long as possible,
24 implementing standards aimed to reduce controversial, emotional, and inflammatory content might
25 not be in their best interest. This is evidenced by the pending lawsuit to enjoin the California Age-
26 Appropriate Design Code Act on first amendment violation claims.^{202,203} Enacting a regulatory
27 framework across jurisdictions on global companies is not always legally or logistically viable;
28 however, voluntarily adopting standards now could reduce the likelihood of more sweeping
29 regulatory action later.^{3,197,204,205} Furthermore, evidence from political science literature on
30 transnational governance shows that multistakeholder regulatory standards setting schemes can be
31 a vital part of the corporate regulatory toolbox.¹⁹⁷ However, more research is needed to see how
32 and if they can be implemented to protect adolescent social media users.¹⁹⁷

33
34 A public statement of compliance with standards and a commitment to uphold those standards in
35 the terms of service would be a meaningful step towards an enforceable legal structure.³
36 Specifically, the Federal Trade Commission (FTC) can penalize firms that engage in unfair or
37 deceptive business practices and has used this authority against companies that have failed to honor
38 commitments made in their privacy policies and similar agreements.²⁰⁶⁻²⁰⁸ Audit and systemic risk
39 reports of compliance with the standards should be available to the FTC, researchers, and the
40 public. Social media companies should make a good faith effort to ensure access to data that
41 facilitates research on the effects of social media on child and adolescent health possibly including
42 removal of the prohibition on researchers' use of publicly available data.³ More transparency would
43 allow for comparisons across platforms and over time, which would provide a better insight for the
44 companies, the public, and the FTC. Creation of a standard would also support and inform the
45 FTC's use of consent decrees as a regulatory tool.^{3,209} Once a company agrees to a consent decree –
46 terms of the decree determine obligations to remediate regardless of whether the terms are within
47 the FTC's authority.^{3,210} Creation of an industry standard could support the FTC's governance by
48 consent decree, even for providers who do not explicitly adopt the standard.³

1 Once standards have been created and adopted, it would be much easier to assess and remedy
2 harms posed by social media. For instance, standards could be used to evaluate whether the
3 platform has age-verification processes, data encryption, and privacy policies.³ Similarly, they
4 could be used to determine whether a platform's content is suitable for children by evaluating the
5 likelihood of exposure to illegal and maladaptive behavior.⁴¹ The first step towards benchmarking
6 is transparency and more fair competition in an opaque market.³ For instance, ethical artificial
7 intelligence (AI) tool kits could help facilitate more open communication among technology
8 developers, researchers, policy makers, and civil society.^{3,211} Additionally, public documentation of
9 the provenance of the dataset used to calibrate machine learning models is gaining traction as way
10 to mitigate harms from biased models.^{3,212}

11
12 NASEM makes a persuasive case that an ongoing technical workgroup to develop industry
13 standards, ideally facilitated by ISO, as well as near uniform industry adoption of the standards in
14 their policies and terms of service would improve privacy protections, improve algorithmic and
15 other transparency, and facilitate a better system of reporting inappropriate content and ill-actors.
16 However, this is new territory and despite the ISO's strong track record of developing complex
17 technical international standards (e.g., information security management and data protection), it is
18 difficult to fully assess if something similar would be an effective tool to regulate social media.^{3,198}

19 20 *Recommendations for the Federal Government*

21
22 In addition to developing and adopting industry standards, another approach is to improve privacy
23 protections and age-appropriate design at the federal and state level through legislation. This is
24 further supported by the Surgeon General's Advisory on the effects of social media on youth
25 mental health, which urges action to ensure social media environments are healthy and safe.⁴ As
26 noted earlier, COPPA recognizes that young children cannot consent to the terms of use for data
27 collection, and thus prohibits enticing personal disclosures through games and restricts advertising
28 to children.²¹³ Currently, when companies violate COPPA by collecting data for children under the
29 age of 13, the FTC can and has issued fines. Specifically, in 2019, the FTC required Google to pay
30 \$170 million for data collection in violation of COPPA.²¹⁴ However, COPPA only protects children
31 under the age of 13 so arguably one way to improve privacy protections for children would be to
32 expand COPPA to include all minors. In 2021, legislation to extend COPPA protections to kids
33 through age 16 was proposed with the Children and Teens' Online Privacy Protection Act, which
34 would also require platforms and providers to report on foreseeable risks of harm.²¹⁵ However,
35 there has been no action on the proposed legislation. The FTC also has authority over unfair and
36 deceptive practices in commerce. Therefore, in response to concerns about the erosion of consumer
37 privacy, in particular with data collection and use practices, the FTC has issued guidance
38 documents on internet advertising.^{3,216-218} Moreover, there is proposed rulemaking on commercial
39 surveillance and data security.^{3,219} Additional guidance and/or revisions from the FTC regarding
40 how to make systems for reporting cases of online harassment and abuse that comply with COPPA
41 would be beneficial.³

42
43 In addition to improving children's privacy and better regulating social media providers through
44 the FTC and COPPA, it may be beneficial to develop support programs for children and
45 adolescents who experience digital abuse and evaluate the effectiveness of such programs, and the
46 US Substance Abuse and Mental Health Services Administration is well positioned to do this.³
47 Finally, assuming industry leaders do not voluntarily remove the prohibitions in their terms of
48 service on the use of publicly available data for research, Congress could pass legislation to ensure
49 researchers can access data to examine the effects of social media on child and adolescent health.³

50 *Recommendations for State and Local Agencies*

1
2 One potential way of making technology safer for kids is through age-appropriate design.^{3,4} Some
3 of the goals of age-appropriate design include: (1) centering the rights and developmental needs of
4 children and (2) improving privacy protections by addressing and modifying what data is collected
5 from minors, how it is collected, and how it is used. In practice this might look like collecting the
6 minimum information necessary and prohibiting the use of that information in commerce. It might
7 also include shifting the burden to establish users' age to the producers of the technology as was
8 done in the United Kingdom.^{3,220} It would also likely discourage developmentally inappropriate
9 persuasive design features (e.g., push notifications, like buttons, tones for new content, and endless
10 scrolling).⁴¹

11
12 The increasing concerns about social media use and adolescent health has prompted federal, state,
13 and local legislators to propose age-appropriate design measures to protect children while using the
14 internet and internet-based forms of communication, including social media.^{221,222} In 2023, 35
15 states and Puerto Rico introduced legislation around social media and youth, and 12 states enacted
16 bills or adopted resolutions.²²¹ By and large, the goals of the legislation are to: (1) create study
17 commissions and task forces to evaluate the relationship between social media and adolescent
18 health; (2) require age verification and/or parental consent to open social media accounts; and (3)
19 adding digital and media literacy to K-12 curriculums.

20
21 For instance, Utah enacted the Utah Social Media Regulation Act, which requires age verification
22 of state residents and parental consent for those under the age of 18 to open an account.²²³ It also
23 limits the hours of access for certain users, subject to parental or guardian direction, and provides
24 for a private right of action. Similarly, Arkansas created the Social Media Safety Act which
25 requires age verification and parental consent for use of social media. It also establishes a
26 mechanism for liability for failure to perform age verification for use of social media and for illegal
27 retention of data.²²⁴ In 2022, California passed the Age-Appropriate Design Code Act (AADC).²⁰²
28 The law was modeled after the United Kingdom's Age-Appropriate Design Code which advocates
29 for businesses to consider the best interests of children when designing, developing, and providing
30 online services, products, or features likely to be accessed by children. Notable obligations under
31 the Age-Appropriate Design Code Act include requiring providers to: (1) configure a high level of
32 default privacy settings; (2) assess whether algorithms, data collection, or targeted advertising
33 systems could harm children; and (3) use clear, age-appropriate language for user-facing
34 information and documents.²²² In 2023 a lawsuit to invalidate the AADC on first amendment free
35 speech grounds was filed in federal court by NetChoice, a coalition representing the country's tech
36 companies.²⁰³ The District for the Northern District of California granted a preliminary injunction
37 against the AADC, the California Attorney General appealed, and a decision by the Ninth Circuit
38 Court of Appeals is anticipated in Spring 2024.^{202,203,225}

39
40 Efforts around age-appropriate design legislation are relatively new so the overall impacts are
41 unclear. However, age verification, digital media literacy, and continued research appear beneficial
42 and do not have obvious risks. Likewise, expansion of COPPA and provision of resources and
43 support for those who experience online harassment have little formal evidence of effectiveness but
44 are rationally grounded.

45 46 *Recommendations for Parents and Kids*

47
48 Parents and children are encouraged to use social media functions that facilitate social support,
49 online companionship, emotional intimacy, and healthy socialization; particularly during periods of
50 isolation, during stress, mental health crisis, and for marginalized groups.⁴¹ To achieve this, it is
51 recommended that families should collectively develop, review, and follow a family media use

1 plan, which should outline developmentally appropriate types, times, methods, places for, and
2 amounts of acceptable media use.^{1,2,4,41} For instance, there is evidence of the impact of excessive
3 digital technology use (e.g., screentime, tv, and social media) by adolescents on negative health
4 impacts.^{1,2,226} However, there has been a push among researchers to move away from focusing on
5 screentime and instead to consider how, why, when, and with whom youth are engaging online.
6 Despite this, the American Association of Pediatrics, American Psychological Association, and
7 many other organizations and policy makers advocate for screen time limits and media-free time.^{1,2}
8 Specifically, it is recommended that adolescents abstain from using screens 1 hour before bed and
9 that adolescents should not sleep with digital devices in their bedrooms.^{7,52} Additionally, there is
10 some evidence supporting open, non-judgmental communication between caregivers and children
11 and some degree of parental monitoring of social media use.^{1,2,41,97} Recent surveys suggest roughly
12 63 percent of adolescents and 70.8 percent of parents reported parental monitoring, and 74.3
13 percent of adolescents reporting being friends with their parents online.¹⁷⁹ Open communication is
14 helpful for teaching digital literacy, which is necessary for children to understand the limits of “free
15 digital products” that process access in exchange for data on user demographics, politics, mental
16 health, and sexuality generated through engagement and viewing behavior.⁵⁰

17 18 *Recommendations for Clinicians*

19
20 It is recommended that clinicians be aware of and talk with children and families about the risks
21 and benefits of social media use.^{1-3,107,227} Specifically, communication with adolescents is the most
22 effective in the context of a therapeutic alliance that is open and non-judgmental.⁹⁷ Physicians
23 should encourage: (1) setting boundaries for screentime and social media use; (2) discuss the risks
24 and benefits of social media, including impact of smartphones on learning and the importance of
25 digital media literacy; and (3) encourage communication between caregivers and children and
26 advocate use of the Family Media Toolkit and Family Media Use Plan.^{1,2,58,60,97}

27 28 *Recommendations for Training and Education*

29
30 One way to reduce potential harm to adolescents using social media is through improved digital
31 media literacy. Specifically, it is important to train adolescents and those teaching and advising
32 them skills for assessing and validating information on social media and the internet more
33 broadly.^{41,50,60,97,227} Moreover, the approach to digital media literacy needs to be multi-tiered and
34 tailored to children, parents, educators, and clinicians. Specifically, comprehensive digital media
35 literacy should be integrated into the standards set by state boards of education. Moreover, the U.S.
36 Department of Education should draw national attention to the importance of comprehensive
37 digital media literacy.³ This is necessary to create both an online environment that protects youth
38 and social media consumers who are empowered to protect themselves. Furthermore, educators and
39 clinicians need to be trained in digital media literacy so they can adequately teach and advise
40 adolescents on the risks and benefits of social media.¹⁻⁴ This could include incorporation of digital
41 media literacy requirements for licensure as well as ongoing professional development training and
42 resources for both educators and clinicians.³ In addition to incorporating digital media literacy into
43 training and licensure, additional efforts to improve dissemination of health-related digital media
44 literacy is suggested.²²⁷

45 46 *Recommendations for Research*

47
48 Currently, the research on social media and adolescent health is limited.^{3,4} Therefore, federal and
49 non-profit research funders should support a research agenda that prioritizes: (1) the health
50 consequences of social media use and the mechanisms of harm, (2) the epidemiology of
51 problematic use, (3) interventions and other efforts to reduce and remediate harms arising from

1 social media, (4) the role of parents and other adults in influencing positive use, and (5) algorithmic
2 audits.^{3,4} There is a need for validated tools to measure exposure to social media affordances, data
3 sharing, and the establishment of long-term cohort studies. Special emphasis should be given to
4 interdisciplinary approaches and study designs that attempt to understand causal directions.

5 6 RELEVANT AMA POLICY

7
8 The AMA has existing policy that addresses social media and mental health, gun violence, internet
9 pornography, online streaming of sexual encounters, the effects of video game and internet
10 overuse, disinformation, cannabis marketing, and online human subjects' research. In general,
11 these policies advocate the use of education and legislation to: (1) increase awareness about
12 potential risks associated with social media and internet use; and (2) reduce exposure to harmful
13 content (e.g., gun violence, pornography, disinformation, etc.) particularly for children,
14 adolescents, and young adults. Current policy also supports development and implementation of
15 clinical tools for identification and treatment of harms that arise from exposure as well as continued
16 research into potential harms and the effectiveness of screening and treatment. Detailed
17 information on the current AMA policies can be found in the appendix.

18 19 CONCLUSION

20
21 Digital media, smartphones, and social media have a pervasive presence in nearly all aspects of
22 youth and adolescent life. Despite substantial research efforts, the evidence is too weak to promote
23 a uniform interpretation of the impact of social media on adolescent health at the population level.
24 There are several factors contributing to the weak evidence including: (1) the reciprocal
25 associations between social media use and health; (2) the lack of consistent and comparable
26 methodologies; (3) entanglement of impact and exposure as a byproduct of social media's ubiquity;
27 (4) different dynamics and trends depending on level of analysis; (5) the wide variety of
28 interactions, behaviors, and health impacts engendered by social media; and (6) reliance on cross-
29 sectional studies with high heterogeneity.

30
31 Although the evidence is too weak to provide a uniform interpretation, there are clear positive and
32 negative trends. There is some evidence of potential benefit in the form of improved social support,
33 identity development, civic engagement, and self-directed learning. There is also some evidence of
34 potential harm including negative impacts on sleep, physical activity, and mental health, as well as
35 exposure to inappropriate content, and data privacy issues. Furthermore, it is apparent that the
36 relative risks and benefits of social media likely depend on individual differences in: (1)
37 engagement with social media (e.g., what kids see and do online, who they talk to, when they use
38 social media, and how they use social media); (2) pre-existing strengths and weaknesses; and (3) the
39 cultural, social, and physical environment.

40
41 Even though the evidence of harm is limited there is an urgent need for action for two reasons.
42 First, the lack of algorithmic transparency, privacy protections, and accountability and redress for
43 online harassment on most platforms is concerning given the power, reach, and ubiquity of social
44 media. Second, the potential harms are serious, particularly during sensitive developmental
45 periods; therefore, proactively creating digital environments that protect and enrich children's and
46 adolescents' health and well-being is beneficial regardless of the evidence of harm. There are two
47 key approaches that would likely facilitate the creation of safer, developmentally appropriate
48 environments. First, federal and state legislative action (e.g., expansion of COPPA, implementation
49 of age-appropriate design, and mechanisms to address online harassment), and second,
50 development and widespread adoption of industry standards to benchmark platform operations,
51 transparency, and data use. In addition to improving the digital environment, it is imperative that

1 there are simultaneous efforts to address harms that still arise including: (1) education and training
2 on digital media literacy and the potential harms posed by social media; (2) improved screening
3 and support for those who experience harms (e.g., problematic internet use and online harassment);
4 and (3) continued research of the health impacts of social media.

5
6 RECOMMENDATION

7
8 The Council on Science and Public Health recommends that the following be adopted, and the
9 remainder of the report be filed:

10
11 1. That our AMA:

- 12
13 (1) urges physicians to: (a) educate themselves about social media; (b) be prepared to
14 counsel patients and/or their guardians about the potential risks and harms of social media;
15 and (c) consider expanding clinical interviews to inquire about social media use.
16 (2) encourages further clinical, epidemiological, and interdisciplinary research on the
17 impact of social media on health.
18 (3) supports education of clinicians, educators, and the public on digital media literacy and
19 the health effects of social media.
20 (4) recognizes that the relative risks and benefits of social media may depend on individual
21 differences (e.g., social media engagement, pre-existing traits, and environment).
22 (5) supports legislative, regulatory, and associated initiatives (e.g., development of industry
23 standards, age-appropriate design, and funding programs that support those harmed by
24 online harassment).
25 (6) will collaborate with professional societies, industry, and other stakeholders to improve
26 social media platform privacy protections, transparency (e.g., algorithmic, data, and
27 process), data sharing processes, and systems for accountability and redress in response to
28 online harassment. (New HOD Policy)

29
30 2. That current AMA policy D-478.965, "Addressing Social Media and Social Networking
31 Usage and its Impacts on Mental Health D-478.965" be amended by addition and deletion
32 to read as follows:

33
34 Our AMA: (1) will collaborate with relevant professional organizations to: (a) support the
35 development of continuing education programs to enhance physicians' knowledge of the
36 health impacts of social media and social networking usage; and (b) support the
37 development of effective clinical tools and protocols for the identification, treatment, and
38 referral of children, adolescents, and adults at risk for and experiencing health sequelae of
39 social media and social networking usage; (2) advocates for schools to provide safe and
40 effective educational programs by which so that (a) all students can learn to identify and
41 mitigate the onset of mental health sequelae of social media and social networking usage,
42 (b) all students develop skills in digital literacy to serve as an individual protective
43 foundation for interaction with various types of digital media (including social media), and
44 (c) at risk students' access to social media can be limited and/or closely monitored as
45 individually appropriate; (3) affirms that use of social media and social networking has the
46 potential to positively or negatively impact the physical and mental health of individuals,
47 especially adolescents and those with preexisting psychosocial conditions; (4) advocates
48 for and support media and social networking services addressing and developing
49 safeguards for users, including protections for youth online privacy, effective controls
50 allowing youth and caregivers to manage screentime content and access, and development
51 and dissemination of age-appropriate digital literacy training; and (5) advocates for the

- 1 study of the positive and negative biological, psychological, and social effects of social
- 2 media and social networking services use. (Modify Current HOD Policy)

Fiscal Note: \$5,000 - \$10,000

APPENDIX: Relevant AMA Policy

Addressing Social Media and Social Networking Usage and its Impacts on Mental Health D-478.965

Our AMA: (1) will collaborate with relevant professional organizations to: (a) support the development of continuing education programs to enhance physicians' knowledge of the health impacts of social media and social networking usage; and (b) support the development of effective clinical tools and protocols for the identification, treatment, and referral of children, adolescents, and adults at risk for and experiencing health sequelae of social media and social networking usage; (2) advocates for schools to provide safe and effective educational programs by which students can learn to identify and mitigate the onset of mental health sequelae of social media and social networking usage; (3) affirms that use of social media and social networking has the potential to positively or negatively impact the physical and mental health of individuals, especially adolescents and those with preexisting psychosocial conditions; (4) advocates for and support media and social networking services addressing and developing safeguards for users; and (5) advocates for the study of the positive and negative biological, psychological, and social effects of social media and social networking services use.

Minimizing the Influence of Social Media on Gun Violence H-478.977

1. Our American Medical Association calls upon all social media sites that allow posting of videos, photographs, and written online comments encouraging and glorifying the use of guns and gun violence to vigorously and aggressively remove such postings.
2. Our AMA strongly recommends social media sites continuously update and monitor their algorithms in order to detect and eliminate any information that discusses and displays guns and gun violence in a way that encourages viewers to act violently.
3. Our AMA will work with social media sites to provide educational content on the use of guns, inherent dangers, and gun safety in an effort to end the ongoing and devastating effects of gun violence in our communities.

Internet Pornography: Protecting Children and Youth Who Use the Internet and Social Media H-60.934

Our AMA:

- (1) Recognizes the positive role of the Internet in providing health information to children and youth.
- (2) Recognizes the negative role of the Internet in connecting children and youth to predators and exposing them to pornography.
- (3) Supports federal legislation that restricts Internet access to pornographic materials in designated public institutions where children and youth may use the Internet.
- (4) Encourages physicians to continue efforts to raise parent/guardian awareness about the importance of educating their children about safe Internet and social media use.
- (5) Supports school-based media literacy programs that teach effective thinking, learning, and safety skills related to Internet and social media use.
- (6) Actively support legislation that would strengthen child-centric content protection by internet service providers and/or search engines in order to limit the access of pornography to minors on the internet and mobile applications.

Addressing Public Health Disinformation Disseminated by Health Professionals D-440.914

Our AMA will collaborate with relevant health professional societies and other stakeholders:

- (a) on efforts to combat public health disinformation disseminated by health professionals in all forms of media,
- (b) address disinformation that undermines public health initiatives, and

(c) implement a comprehensive strategy to address health-related disinformation disseminated by health professionals that includes:

- (1) Maintaining AMA as a trusted source of evidence-based information for physicians and patients.
- (2) Ensuring that evidence-based medical and public health information is accessible by engaging with publishers, research institutions and media organizations to develop best practices around paywalls and preprints to improve access to evidence-based information and analysis.
- (3) Addressing disinformation disseminated by health professionals via social media platforms and addressing the monetization of spreading disinformation on social media platforms.
- (4) Educating health professionals and the public on how to recognize disinformation as well as how it spreads.
- (5) Considering the role of health professional societies in serving as appropriate fact-checking entities for health-related information disseminated by various media platforms.
- (6) Encouraging continuing education to be available for health professionals who serve as fact-checker to help prevent the dissemination of health-related disinformation.
- (7) Ensuring licensing boards have the authority to take disciplinary action against health professionals for spreading health-related disinformation and affirms that all speech in which a health professional is utilizing their credentials is professional conduct and can be scrutinized by their licensing entity.
- (8) Ensuring specialty boards have the authority to take action against board certification for health professionals spreading health-related disinformation.
- (9) Encouraging state and local medical societies to engage in dispelling disinformation in their jurisdictions.

Television Broadcast and Online Streaming of Sexual Encounters and Public Health Awareness on Social Media Platforms H-485.994

Our AMA urges television broadcasters and online streaming services, producers, sponsors, and any associated social media outlets to encourage education about inclusive safe sexual practices, including but not limited to condom use and abstinence, in television or online programming of sexual encounters, and to accurately represent the consequences of unsafe sex.

Medical and Public Health Misinformation Online D-440.915

Our AMA:

- (1) encourages social media companies and organizations, search engine companies, online retail companies, online healthcare companies, and other entities owning websites to further strengthen their content moderation policies related to medical and public health misinformation, including, but not limited to enhanced content monitoring, augmentation of recommendation engines focused on false information, and stronger integration of verified health information;
- (2) encourages social media companies and organizations, search engine companies, online retail companies, online healthcare companies, and other entities owning websites to recognize the spread of medical and public health misinformation over dissemination networks and collaborate with relevant stakeholders to address this problem as appropriate, including but not limited to altering underlying network dynamics or redesigning platform algorithms;
- (3) will continue to support the dissemination of accurate medical and public health information by public health organizations and health policy experts; and
- (4) will work with public health agencies in an effort to establish relationships with journalists and news agencies to enhance the public reach in disseminating accurate medical and public health information.

Marketing Guardrails for the "Over-Medicalization" of Cannabis Use D-95.958

Our AMA will: (1) send a formal letter to the Food and Drug Administration and Federal Trade Commission requesting more direct oversight of the marketing of cannabis for medical use; (2)

generate a formal letter for use by state medical societies requesting more direct oversight by state government of the marketing of cannabis; (3) support and encourage federal, state, and private sector research on the effects of cannabis marketing to identify best practices in protecting vulnerable populations, as well as the benefits of safety campaigns such as preventing impaired driving or dangerous use; (4) encourage state regulatory bodies to enforce cannabis-related marketing laws and to publicize and make publicly available the results of such enforcement activities; (5) encourage social media platforms to set a threshold age of 21 years for exposure to cannabis advertising and marketing and improve age verification practices on social media platforms; (6) encourage regulatory agencies to research how marketing best practices learned from tobacco and alcohol policies can be adopted or applied to cannabis marketing; and (7) support using existing AMA channels to educate physicians and the public on the health risks of cannabis to children and potential health risks of cannabis to people who are pregnant or lactating.

Principles of Human Subjects Research Shall Apply to Online Medical Research Projects H-460.898

Our American Medical Association declares social media sites' terms of service as an insufficient proxy for informed consent prior to being enrolled in any medical experiment and recommends that online social networks provide users with specific informed consent outlining the aims, risks and possible benefits of any medical experimental study prior to study enrollment.

Emotional and Behavioral Effects of Video Game and Internet Overuse H-60.915

Our AMA supports increased awareness of the need for parents to monitor and restrict use of video games and the Internet and encourage increased vigilance in monitoring the content of games purchased and played for children 17 years old and younger.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 11-A-24

Subject: Stand Your Ground Laws

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee D

1 INTRODUCTION

2

3 American Medical Association Policy H-145.966, “Stand Your Ground Laws” as adopted by the
4 House of Delegates at the 2023 Annual Meeting (Resolution 435), asked that our AMA study the
5 public health implications of “Stand Your Ground” laws and castle doctrine.

6

7 BACKGROUND

8

9 “Castle doctrine” refers to the legal right of a person to defend himself against an intruder in his
10 home or other property, even if the use of deadly force is required. Stand Your Ground (SYG) laws
11 expanded castle doctrine beyond one’s home or property to public spaces where individuals have a
12 legal right to be. Prior to the enactment of SYG laws, most states followed the common law self-
13 defense rule, which imposed a duty to retreat before using force in self-defense, if safe retreat was
14 possible. SYG laws generally removed the duty to retreat from a threat before using force in self-
15 defense. Under SYG laws, individuals are allowed to use force, including lethal force, if they
16 reasonably believe it is necessary to protect themselves or others from imminent harm.

17

18 In 2005, Florida passed the first SYG law in the United States.¹ According to the National
19 Conference of State Legislatures, as of March 2023, laws in at least 28 states and Puerto Rico
20 provide that there is no duty to retreat from an attacker in any place in which one is lawfully
21 present.² At least ten states include language stating one may “stand his or her ground,” while eight
22 states permit the use of deadly force in self-defense through judicial decisions or jury instructions.²

23

24 Those who support the enactment of SYG laws generally believe that people have a fundamental
25 right to “defend themselves from attack with proportionate force in every place they have a lawful
26 right to be” which is thought to deter criminals by increasing their perceived risk of encountering
27 an armed victim.² Critics are concerned these laws “unnecessarily encourage the use of deadly
28 force as a low-cost license to kill instead of reserving it only as a protective measure.”³ SYG laws
29 are commonly referred to as “shoot first” laws and are thought to encourage people to take the law
30 into their own hands. There are also concerns that the laws exacerbate social inequities.

31

32 In this report, your Council on Science and Public Health reviews the available evidence regarding
33 the public health impact of castle doctrine and SYG laws.

34

35 METHODS

36

37 English language articles were selected from searches of PubMed and Google Scholar using the
38 search terms “stand your ground”, “castle doctrine”, “self-defense law”. Additional articles were

1 identified by manual review of the reference lists of pertinent publications. Web sites managed by
 2 government agencies and nonprofit organizations were also reviewed for relevant information.

3
 4 DISCUSSION

5
 6 There has been little research on the public health implications of castle doctrine. Researchers have
 7 sought to evaluate the effect of SYG and expanded self-defense laws on various factors including
 8 crime rates, homicide rates, and racial disparities in the application of the laws. It is worth noting at
 9 the outset that evaluating the effects of SYG laws is challenging, in part because the duty to retreat
 10 is a less distinct element of self-defense in practice.⁴ Also because there are variations in the laws
 11 across jurisdictions and implementation of the law may also deviate from the original intent.⁴

12
 13 *Impact of SYG laws on homicide, firearm homicide, and violent crime*

14
 15 A retrospective analysis of data from 2000 to 2017 examined justifiable homicide (citizen-related
 16 justifiable homicide with a firearm) and homicide (non-justifiable citizen-related homicide) rates
 17 before and after enactment of SYG laws and in states with and without SYG laws. In states with
 18 SYG laws, the overall justifiable homicide rate was 0.126 per 100,000 population compared with
 19 0.047 per 100,000 population in states without SYG laws. The homicide rate was 4.663 per
 20 100,000 population in states with SYG laws compared to 3.301 per 100,000 population states
 21 without SYG laws.⁵ In states with SYG laws, the rate of justifiable homicide increased with the
 22 enactment of SYG laws, from 0.091 pre-law to 0.141 per 100,000 population post-law, a 54.9
 23 percent increase.⁵ The homicide rate also increased with the enactment of SYG from 4.208 to 4.663
 24 per 100,000 population, a 10.8 percent increase.⁵ In states without SYG laws, the justifiable
 25 homicide rates increased 20 percent, from 0.044 to 0.053 per 100,000 population, but homicide
 26 rates decreased from 3.424 to 3.344 per 100,000 population, a 2.3 percent decrease.⁵ The findings
 27 suggest that justifiable homicide and homicide were disproportionately higher in states with SYG
 28 laws and both the justifiable homicide rate by firearm and homicide rate had significant increases
 29 in states with SYG laws compared to states without such laws. While the intent of SYG laws was
 30 to deter violent crime, this analysis indicates the laws have had the opposite effect.⁵

31
 32 Similarly, a cohort study evaluating the association of SYG laws with homicide and firearm
 33 homicide, nationally and by state, found that SYG laws were associated with an 8 – 11 percent
 34 national increase in monthly rates of homicide and firearm homicide.⁶ Forty-one states were
 35 analyzed, including 23 states with SYG laws and 18 states without SYG laws. SYG laws were
 36 associated with a mean national increase of 7.8 percent in monthly homicide rates and 8.0 percent
 37 in monthly firearm homicide rates.⁶ Increases in violent deaths varied across states, with the largest
 38 increases (16.2 to 33.5 percent) found in the South (e.g., Alabama, Florida, Georgia, Louisiana).
 39 The study found no differential associations by demographic group.⁶

40
 41 A systematic review examining the available evidence on the impacts associated with SYG laws
 42 (or other expansions of self-defense laws) on violence, injury, crime, and firearm-related outcomes
 43 found the laws were associated with no change to small increases in violent crime (total and
 44 firearm homicide, aggravated assault, robbery) on average across states.⁷ While Florida-based
 45 studies showed robust increases (24 percent to 45 percent) in firearm and total homicide.⁷

46
 47 RAND's Gun Policy in America initiative examines the effects of firearm laws to improve public
 48 discussions and support the development of fair and effective firearm policies. Their review of the
 49 evidence on SYG laws concluded that there is moderate evidence that they may increase homicide
 50 rates, supportive evidence that they may increase firearm homicides, and limited evidence that they
 51 may increase the overall violent crime rates.⁸

Evaluating Florida's SYG law

Several studies have focused on evaluating Florida's SYG law specifically. In addition to this being the first jurisdiction with a SYG law, the high-profile and fatal shooting of Trayvon Martin, an unarmed Black teenager occurred in Sanford, Florida on February 26, 2012. Martin was killed by a White neighborhood watch volunteer who was later acquitted of second-degree murder and manslaughter on the basis of self-defense. The jury in the case was instructed about Florida's SYG law. The Governor of Florida created a Task Force on Citizen Safety and Protection to review the Florida statute to help "ensure the rights of all Floridians and visitors, including the right to feel safe and secure in our state."⁹ The task force recommended keeping the SYG law in place, noting that all persons who are conducting themselves in a lawful manner have a fundamental right to stand their ground and defend themselves from attack with proportionate force in every place they have a lawful right to be.⁹

In evaluating the Florida law, several studies have found that it led to an increase in homicides and firearm homicides. A study evaluating whether Florida's SYG law had an impact on homicide and homicide by firearm between 2005 and 2014 found that the law was associated with a 24.4 percent increase in homicide and a 31.6 percent increase in firearm-related homicide.¹⁰ Researchers found no change in rates of suicide or suicide by firearm.¹⁰ A separate analysis of Florida's law found it was associated with a 44.6 percent increase in adolescent firearm homicide and may also exacerbate racial disparities.¹¹ A third analysis found that the impact of the law differed significantly by county urbanization, unemployment, and pre-law homicide rates.¹² The largest increases in homicide and firearm homicide occurred in proportionally safer, richer, and less ethnically diverse suburban counties. These findings suggest that the law may have had the opposite effect than intended, and more strongly impacted counties considered safe, suburban and economically successful.¹²

Social inequities

It has been hypothesized that SYG laws will exacerbate social inequities in violent victimization as and that Black defendants accused of crimes will not have the same protections under these laws as similarly situated White defendants.¹³ However, a systematic review that examined comparisons by race showed mixed findings, indicating there are not dramatic differences in increases in homicide rates among Black versus White people following the enactment of SYG laws.⁷ Data suggests that at least in Florida, there appears to be racial bias in the criminal justice process in rulings on SYG cases.⁷ In examining SYG cases in Florida from 2005 to 2013, it was found that race of the victim was a significant predictor of case outcome.¹⁴ After controlling for other variables, the defendant is two times more likely to be convicted in a case that involves White victims compared to those involving non-White victims.¹⁴

A separate examination of FBI data from 2005-2010, examining more than 53,000 homicides, found large disparities in rulings justified based on the race of the defendant and the victim.¹⁵ Nationally, the likelihood of a homicide being ruled justified is 281 percent greater when the defendant is White and the victim is Black compared to cases where both the defendant and victim are White.¹⁵ White-on-Black homicides were the most likely to be ruled as justified (11.4 percent) while Black-on-White homicide was least likely to be ruled as justified (1.2 percent).¹⁵

There is very little evidence examining gender differences in the implementation of SYG laws and a lack of focus on the impacts of these laws on intimate partner violence or domestic violence, the most common forms of violence against women.⁷

POSITION OF OTHER NATIONAL ORGANIZATIONS

In 2013, the American Bar Association convened a National Task Force on SYG Laws to review and analyze the recently enacted Stand Your Ground laws in multiple states and their impact on public safety and the criminal justice system.³ The Task Force has conducted a comprehensive legal and multidisciplinary analysis of the impact of the SYG laws. The national investigation revealed several important findings:

1. Based on recent empirical studies, SYG states experienced an increase in homicides.
2. Multiple states have attempted to repeal or amend SYG laws.
3. The application of SYG laws is unpredictable, uneven, and results in racial disparities.
4. An individual’s right to self-defense was sufficiently protected prior to SYG laws.
5. Victims’ rights are undermined in states with statutory immunity from criminal prosecution and civil suits related to SYG cases.

EXISTING AMA POLICY

Existing AMA policy does not address self-defense, castle doctrine, or SYG laws. Current policy does recognize that violence represents a public health crisis which requires a comprehensive public health response and solution (Policy D-145.995, “Gun Violence as a Public Health Crisis”). Policy also recognizes that uncontrolled ownership and use of firearms is a serious threat to the public's health inasmuch as the weapons are one of the main causes of intentional and unintentional injuries and deaths (Policy H-145.997, “Firearms as a Public Health Problem in the United States - Injuries and Death”). AMA policy also affirms that physical and verbal violence between law enforcement officers and public citizens, particularly within racial and ethnic minority populations, is a social determinant of health (Policy H-515.95, “Research the Effects of Physical or Verbal Violence Between Law Enforcement Officers and Public Citizens on Public Health Outcomes”).

CONCLUSION

“Castle doctrine” refers to the legal right of a person to defend himself against an intruder in his home or other property, even if the use of deadly force is required. There is a lack of studies examining the impact of these laws. SYG laws, or expanded castle doctrine, generally removed the duty to retreat from a threat before using force in self-defense. Under SYG laws, individuals are allowed to use force, including lethal force, if they reasonably believe it is necessary to protect themselves or others from imminent harm. While SYG laws can be challenging to evaluate, the best available evidence shows that these laws are associated with increased homicide and firearm homicide rates, resulting in preventable violent deaths. The application of SYG laws is unpredictable, uneven, and likely results in racial disparities.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted and the remainder of this report be filed.

1. That Policy H-145.966, “Stand Your Ground Laws” be adopted by addition and deletion to read as follows:

Our AMA opposes stand your ground laws, which remove the duty to retreat before using lethal force if a person feels there is imminent risk of bodily harm, as these laws have been

1 shown to increase homicide and homicide firearm rates and there is evidence of racial
2 inequity in the implementation of the laws.

3

4 Our AMA ~~will~~ supports continued study of the public health implications of
5 “Stand Your Ground” laws and castle doctrine. (Modify Current HOD Policy)

6

7 2. That Policies H-145.997, “Firearms as a Public Health Problem in the United States -
8 Injuries and Death,” D-145.995, “Gun Violence as a Public Health Crisis,” H-145.975,
9 “Firearm Safety and Research, Reduction in Firearm Violence, and Enhancing Access to
10 Mental Health Care,” and D-145.999 “Epidemiology of Firearm Injuries” be reaffirmed.
11 (Reaffirm HOD Policy)

Fiscal Note: Less than \$1,000

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-24)
Decreasing Youth Access to E-Cigarettes (Resolution 919-I-22)
(Reference Committee D)

EXECUTIVE SUMMARY

BACKGROUND: This report examines the available evidence regarding the health effects of electronic cigarettes and the evidence of effectiveness of federal, state, and local regulations to restrict youth access to e-cigarettes (i.e., face-to-face sales mandates, limits on marketing and promotion, retailer licensing, price policy implementation, flavor restrictions, inclusion of e-cigarettes in smoke-free indoor air policies, and the development of educational initiatives).

METHODS: English language reports were selected from searches of the PubMed, Google Scholar, and Cochrane Library databases using the search terms: “e-cigarettes”, “ENDS”, “electronic cigarette”, AND “youth access.” Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies and applicable professional and advocacy organizations were also reviewed for relevant information.

RESULTS: Despite the recent decline in e-cigarette use among high school students and ongoing efforts at the national, state, and local levels to implement tobacco control strategies, including Food and Drug Administration (FDA) regulatory actions, e-cigarette use among adolescents remains alarmingly high. According to the National Youth Tobacco Survey (NYTS), 2.13 million students use e-cigarettes, with 4.6 percent of middle school and 10.0 percent of high school students reporting current use. There is clear evidence of adverse health effects due to e-cigarette use, but the evidence on the long-term impacts is more attenuated, not as strong, and often based on small cross-sectional or relatively short longitudinal epidemiological studies. Additionally, there is limited evidence of the effectiveness of state-level efforts like face-to-face sales mandates, marketing and promotion limits, retailer licensing, price policies and taxes, and flavor restrictions on reducing e-cigarette initiation and use.

CONCLUSION: Despite the limited evidence, many policies enacted to address youth access to e-cigarettes are rooted in evidence-based nicotine control strategies that worked well with traditional cigarettes. Therefore, it seems likely that they have the potential to reduce e-cigarette initiation and use. Continued research is needed to better understand effective interventions and policies, including how they influence traditional cigarette smoking, e-cigarette vaping, and other tobacco use.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 13-A-24

Subject: Decreasing Youth Access to E-Cigarettes

Presented by: David J. Welsh MD, MBA, Chair

Referred to: Reference Committee D

INTRODUCTION

1
2 The American Medical Association (AMA) House of Delegates (HOD) referred Resolution 919,
3 “Decreasing Youth Access to E-cigarettes” for study. This resolution asked that our AMA support
4 the inclusion of disposable and tank-based e-cigarettes in the language and implementation of any
5 restrictions that are applied by the Food and Drug Administration (FDA) or other bodies to
6 cartridge-based e-cigarettes. It also proposed amendments to policy H-495.986, “Tobacco Product
7 Sales and Distribution,” to (1) support measures that prevent retailers from opening new tobacco
8 specialty stores in proximity to elementary schools, middle schools, and high schools and (2)
9 support measures that decrease the overall density of tobacco specialty stores, including but not
10 limited to, preventing retailers from opening new tobacco specialty stores in proximity to existing
11 tobacco specialty stores.

12
13 The Reference Committee recommended adoption of the policy as amended, with amendment by
14 deletion of number 2 above due to concerns that the density recommendations represented the
15 restriction of free commerce capabilities. The resolution was ultimately referred for study due to
16 the introduction of significant amendments on the HOD floor seeking to clarify multiple points in
17 existing policy unrelated to the amendments proposed by the resolution.

18
19 The Council has previously presented several reports to the HOD on e-cigarettes, these include
20 CSAPH Report 6-A-10, “Use of Electronic Cigarettes in Smoking Cessation Programs,”; CSAPH
21 2-I-14, “Electronic Cigarettes, Vaping, and Health: 2014 Update”; and CSAPH 5-A-18, “Tobacco
22 Harm Reduction: A Comprehensive Nicotine Policy to Reduce Death and Disease Caused by
23 Smoking.” The AMA Board of Trustees also provides the HOD with an annual update on tobacco,
24 which includes updates on e-cigarettes. This report will not repeat information included in those
25 reports, but rather will provide an update on the narrow ask of the resolution, which focuses on
26 youth access.

27
28 METHODS

29
30 English language reports were selected from searches of the PubMed, Google Scholar, and
31 Cochrane Library databases using the search terms: “e-cigarettes”, “ENDS”, “electronic cigarette”,
32 AND “youth access.” Additional articles were identified by manual review of the reference lists of
33 pertinent publications. Web sites managed by federal agencies and applicable professional and
34 advocacy organizations were also reviewed for relevant information.

35
36 BACKGROUND

1 Tobacco use is the leading cause of preventable disease, disability, and death in the United States
2 (U.S.). Moreover, tobacco product use, including the use of e-cigarettes, during adolescence
3 increases the risk for lifelong nicotine addiction and adverse health consequences. This is an
4 extremely important issue considering that in 2023, roughly 2.80 million U.S. middle and high
5 school students used at least one tobacco product, including e-cigarettes.¹

6 7 *Current Prevalence and Recent Trends Among Youth*

8
9 Youth e-cigarette use remains a critical public health concern in the U.S. For the 10th year, e-
10 cigarettes have been the most commonly used tobacco product among both middle and high school
11 students. According to the most recent data from the National Youth Tobacco Survey (NYTS),
12 2.13 million students use e-cigarettes with 4.6 percent of middle school and 10.0 percent of high
13 school students reporting current use.^{1,2} From 2022 to 2023, a significant decline in current e-
14 cigarette use occurred among high school students (from 14.1 percent to 10.0 percent); this decline
15 did not reflect a switch to cigarettes, whose use remained stable at 1.6 percent. While e-cigarette
16 use increased among middle school students from 3.3 percent in 2022 to 4.6 percent in 2023, this
17 increase was not statistically significant. Among students who had ever used an e-cigarette, 46.7
18 percent reported current use, 25.2 percent used e-cigarettes daily, and 89.4 percent used flavored e-
19 cigarettes with fruit (63.4 percent) and candy (35.0 percent) being the most common flavors.¹

20
21 Disposables were the most used device type among students who reported current e-cigarette use,
22 with over 60 percent of students using disposable e-cigarettes. Prefilled and refillable pods or
23 cartridges and open tank and mod systems were less frequently used at 16.1 percent and 5.9 percent
24 respectively.¹ Disposable e-cigarettes have changed dramatically in recent years. Between 2017
25 and 2022, e-cigarettes quintupled in volume capacity, nearly tripled in average nicotine strength,
26 and fell in average per ml price of e-liquid by nearly 70 percent.³ The increased popularity of
27 disposable e-cigarettes may be because they are relatively inexpensive, have a high nicotine
28 content, and they are exempt from the 2020 FDA enforcement prioritization of prefilled and
29 closed-cartridge e-cigarettes for flavors other than tobacco and menthol.⁴

30 31 *Perceptions of harm and motivations for use*

32
33 Several systematic reviews and studies have evaluated motivations for e-cigarette use and
34 perceptions of harm. Commonly reported motivations include curiosity, appealing flavors, family
35 and peer influence, and stress reduction.⁵⁻⁸ One systematic review found that social acceptability,
36 convenient and customizable features, a variety of flavors, and a lack of awareness about the
37 presence of nicotine as common reasons for e-cigarette use.⁹ Another found that youth report flavor
38 variety, device modifiability, the ability to perform tricks, and concealment from authority figures
39 among the primary appeals of e-cigarettes.¹⁰ Findings suggest that prevalence of both e-cigarette
40 and cigarette use among parents, siblings, and close friends was higher in adolescents who have
41 ever used an e-cigarette.⁷

42
43 Adolescent e-cigarette users also exhibit lower perceptions of harm and more positive attitudes
44 towards e-cigarettes when compared with non-users.^{7,8,11} Specifically, in comparison to non-users,
45 young people who were e-cigarette users were more likely to perceive e-cigarettes as healthier and
46 less addictive than tobacco cigarettes.^{8,12-14} One study found most e-cigarette users view flavored e-
47 cigarettes as less harmful with 55.5 percent believing they were not addictive.¹³ Other reviews echo
48 this concerning finding that many individuals were unaware that e-cigarettes contained nicotine.^{9,11}
49 Still others found youth perceived gradations in harm relating to the frequency and intensity of use
50 and by type of product.¹⁵ In contrast, nonusers were more prone to consider e-cigarettes harmful to
51 children.⁷

1 HEALTH EFFECTS OF E-CIGARETTE USE

2
3 The health effects of e-cigarette use have been reviewed in previous CSAPH reports. The evidence
4 on the health impacts of e-cigarettes is mixed. There are clear short term adverse effects that could
5 result from using e-cigarettes including sore throat, headache, cough, elevated heart rate, nausea,
6 and vomiting.^{11,16} Additionally, there are severe acute adverse effects including nicotine poisoning
7 from accidental ingestion, e-cigarette or vaping product associated lung injury, and trauma from
8 exploding devices that has been reported.¹⁷ However, the evidence on long term impacts of e-
9 cigarettes is more attenuated, not as strong, and often based on small cross-sectional or relatively
10 short longitudinal epidemiological studies.

11
12 Despite the limited evidence on the long-term effects of e-cigarettes on health, there are potentially
13 concerning trends regarding the association between both e-cigarette use and exposure to the
14 ingredients found in e-cigarette vapor and negative cardiovascular, pulmonary, immune, and
15 developmental health impacts that warrant continued study and evaluation.

16 *Safety of Aerosolized e-liquid*

17
18 Propylene glycol, glycerol, nicotine, flavoring agents, and their degradation byproducts (e.g.,
19 formaldehyde, acetaldehyde, acrolein, glycidol) have all been shown to have deleterious effects on
20 respiratory tissues and function.^{18,19} An analysis of 30 products on the U.S. market revealed that 13
21 were more than one percent by weight flavor chemicals identified as reactive aldehydes.¹⁹ Reactive
22 aldehydes are also thought to be the primary contributors to combustible cigarette-induced
23 cardiovascular disease and chronic obstructive pulmonary disease (COPD).^{20,21} Multiple analyses
24 of e-cigarette vapor's cytotoxicity have demonstrated that while it varies, some flavors are
25 cytotoxic or contain flavoring chemicals at concentrations high enough to be cytotoxic when
26 vaped.^{19,22}

27
28 E-cigarette vapor also contains heavy metals, likely from the heating element metals that are
29 released into the aerosols.^{20,23,24} A lifetime of chromium and nickel exposure from daily inhalation
30 of two mL e-liquid was used to estimate the risk of cancer and noncancer health effects, with
31 chromium and nickel estimated to be the primary contributors. Notably, nickel is one of the few
32 carcinogens found to be higher in e-cigarettes than in combustible cigarettes.^{20,25} E-cigarette vapor
33 contains copious fine and ultra fine particles.²² There is strong evidence that frequent low or short-
34 term levels of exposure to fine and ultrafine particles can contribute to pulmonary and systemic
35 inflammatory processes as well as potentially increasing the risk of cardiovascular and respiratory
36 disease.^{22,26-28} Moreover, higher e-liquid nicotine concentration is associated with higher particle
37 numbers.²²

38
39 Finally, most e-cigarettes contain nicotine, which activates the sympathetic nervous system,
40 thereby directly effecting the cardiovascular system.^{20,29} Nicotine-stimulated catecholamine release
41 by the sympathetic nervous system activates β -adrenergic receptors in the heart, resulting in
42 increased heart rate, cardiac contractility, and workload.^{20,30} Long-term overstimulation of the
43 sympathetic nervous system can result in cardiac remodeling, which promotes the development of
44 heart failure and increases arrhythmogenesis.^{20,29} Nicotine also affects the vasculature by inducing
45 vasoconstriction, resulting in elevated blood pressure.^{20,29,30} In a randomized study of healthy
46 younger smokers, acute use of nicotine-containing e-cigarettes had vascular hemodynamic effects
47 suggestive of vascular remodeling and increased sympathetic activation of the cardiovascular
48 system.^{20,31} The findings suggest cardiovascular changes consistent with the development of
49 cardiovascular disease with nicotine inhalation from e-cigarettes.²⁰
50

1 *Cardiovascular, Pulmonary, and Immunological Impacts of e-cigarette use*

2
3 There is some evidence that using e-cigarettes may negatively affect cardiovascular function. One
4 review found that cardio-respiratory function in e-cigarette users was more impaired than in never
5 smokers.^{16,32} Reviews have also found that chronic e-cigarette users had elevated heart rate and
6 blood pressure.^{16,20} Other studies found that e-cigarettes may be associated with inflammation,
7 oxidative stress, and hemodynamic imbalance, leading to increased risk of cardiovascular
8 disease.^{20,33–35} E-cigarette use might be linked to pre-symptomatic cardiovascular dysfunction,
9 which could have a significant health impact during adulthood.³³ Research has also found that e-
10 cigarette use was associated with sympathetic activation, vascular stiffening, and endothelial
11 dysfunction.^{20,36} There is also evidence of higher incidence tissue damage and compromised
12 vascular function among e-cigarette users compared to non-users.³⁶

13
14 The aerosol condensate generated from different e-cigarette devices, products, and e-liquids results
15 in different effects on endothelial and pulmonary epithelial cell toxicity, likely a result of the
16 extreme variability in product characteristics.²⁰ There is some evidence that e-cigarette users'
17 airways are more friable than non-users.^{16,37} The same review found changes in lung function over
18 3.5 years of use and speculated that long-term exposure could lead to emphysema, loss of
19 pulmonary capillaries, and reduced airway function.^{16,38} Another review found increased
20 biomarkers of pulmonary disease among observational epidemiological studies associated with
21 vaping as well as a higher incidence of pulmonary disease.³⁶ Several large population-based studies
22 in adolescents have noted increased asthma diagnoses, school absences due to asthma, and
23 respiratory symptoms for youth who currently use or have used e-cigarettes.^{20,33}

24
25 There is some evidence suggesting e-cigarette use is associated with increased oxidative stress
26 which can cause the release of pro-inflammatory cytokines.^{16,39,40} Therefore, it is possible that e-
27 cigarette use may impair ability to fight infection.¹⁶ Similarly, research has found that e-cigarette
28 use might be associated with reduced pulmonary immune function.¹¹

29
30 FEDERAL ACTIONS

31
32 *Legislative actions*

33
34 Since 2018, federal legislative activity has included the 2019 amendment of the Federal Food,
35 Drug, and Cosmetic Act to raise the federal minimum age for sale of tobacco products from 18 to
36 21 years. In 2020, the Preventing All Cigarette Trafficking (PACT) act was amended to prevent
37 online sales of e-cigarettes to children.⁴¹ Specifically, it requires remote sellers of tobacco products
38 to pay all applicable federal, state, and local taxes, and comply with all applicable state and local
39 laws including age verification. PACT also prohibits delivery vendors from using the U.S. postal
40 service to ship e-cigarettes. These federal legislative actions arose in conjunction with
41 administrative and judicial actions.

42
43 *Administrative actions*

44
45 In January of 2020, the FDA finalized enforcement policy on unauthorized flavored open-system
46 tank- and cartridge-based e-cigarettes that appeal to children, including fruit and mint ingredients,
47 but excluded menthol and tobacco-flavored products.⁴² Importantly, disposable e-cigarettes were
48 exempt from the policy and as a result there was a market shift to disposables. More recently,
49 federal legislation expanded the definition of tobacco products to include synthetic nicotine in
50 March 2022, in response to the emergence and market proliferation of disposable e-cigarettes with
51 e-liquids advertising synthetic nicotine -- thereby granting FDA regulatory authority over these

1 products. To date, the FDA has authorized marketing of 23 tobacco-flavored e-cigarette products
2 and devices from three companies with the FDA citing potential smoking cessation benefits to
3 adults and low risks posed to youth.^{43,44} Meanwhile, all other disposable e-cigarette brands are
4 being sold without marketing authorization.³

5 6 STATE AND LOCAL ACTIONS

7
8 Considering the success of tobacco control policies to reduce traditional cigarette smoking among
9 youth, there is reason to believe extending similar policies like online sales restrictions, limits on
10 marketing and promotion, package and labeling requirements, retailer licensing requirements,
11 retailer zoning and location restrictions, taxes, and flavor restrictions could reduce e-cigarette
12 initiation and use among youth.⁴⁵

13 14 *Online Sales Restrictions*

15
16 In 2020, PACT was amended to include e-cigarettes, thus prohibiting online sales of e-cigarettes to
17 children. Yet, there are serious enforcement challenges posed by online sales and delivery services.
18 A study that reviewed FDA e-cigarette warning letters issued by the Center for Tobacco Products
19 to online retailers in 2018 showed that 98.2 percent of violations pertained to the sales of an e-
20 cigarette product to a minor and/or use of marketing that appeals to children.⁴⁶

21
22 In response, state and local governments have begun enacting legislation to further prohibit and
23 regulate online sales. In June 2019, San Francisco, California, became the first city in the U.S. to
24 ban the retail and online sale of e-cigarettes.^{47,48} As of May 2022, the Public Health Law Center
25 also found that at least fourteen states have laws prohibiting direct-to-consumer shipments of some
26 tobacco products. Five of these states have enacted more comprehensive laws, including extending
27 these prohibitions to e-cigarettes.⁴⁹ Additionally, an evaluation of e-cigarette delivery laws found
28 extensive heterogeneity. There were 34 states with e-cigarette delivery sales laws in place, and of
29 those states, 27 required at least one form of age verification, 12 required mandatory packaging
30 labels, seven required permits for online vendors, seven required government ID for release, four
31 did not specify, and 11 had no specific requirements.⁵⁰

32 33 *Limits on marketing and promotion*

34
35 While the FDA has broad authority to restrict the advertising and marketing of all tobacco
36 products, the FDA and FTC only currently require e-cigarette ads to be factually accurate and
37 avoid targeting youth.^{10,45}

38
39 A recent study of online e-cigarette vendors in California found that 50 percent of the websites
40 included marketing themes related to physical health benefits of e-cigarette use, 57.7 percent had
41 sales, discounts, and other promotions, 65.4 percent had fruit-flavored disposable e-cigarettes, 69.2
42 percent had promotional email newsletters, and 88.9 percent did not require users to create an age-
43 verified account to receive email newsletters.⁵¹ This is concerning considering that the lessons
44 learned from traditional cigarette control demonstrate that the retail environment is a key driver of
45 cigarette use.^{52,53} Furthermore, a longitudinal cohort study using PATH data found that past 12-
46 month and past 30-day e-cigarette use was significantly associated with recalled exposure to e-
47 cigarette advertisement on social media, websites, and at gas stations and convenience stores.⁵⁴
48 Similarly, research demonstrates that e-cigarette use was associated with advertising and media
49 exposure.⁵³

50

1 Presently, there is little to no evidence that limits on marketing and promotion reduce e-cigarette
2 use among youth, but there is a growing body of evidence that suggests marketing and promotion
3 to youth are common and that exposure to e-cigarette advertising is associated with e-cigarette use.
4 Therefore, continued efforts to regulate youth exposure to e-cigarettes in media, advertising, and
5 other promotion is warranted.

6 7 *Retailer licensing*

8
9 Requiring retailers to obtain a license to sell e-cigarettes is another traditional cigarette control
10 measure that might be helpful at reducing e-cigarette initiation and use. One cross-sectional study
11 suggests that strong local tobacco retailer license ordinances, particularly those that also provide
12 adequate resources to fund regular compliance checks and enforcement, may lower rates of
13 cigarette and e-cigarette use among youth and young adults.⁵⁵ For instance, participants in
14 jurisdictions with more restrictive ordinances had lower odds of ever cigarette use and of past 30-
15 day use.⁵⁵ Additionally, compliance checks of vendors have been shown to reduce sales to minors;
16 however, the actual impact on smoking rates is less clear as youth obtain e-cigarettes from means
17 other than legal purchase.⁵⁵

18
19 Currently, 40 states and territories require retailers to obtain a license to sell e-cigarettes over the
20 counter.⁵⁶ Furthermore, when retailer licensing was implemented in Pennsylvania, it resulted in a
21 significant decline in past 30-day e-cigarette use by adolescents.⁴⁵ A review of e-cigarette tobacco
22 retail licensing law, identified 23 laws that clearly defined a license term, 23 laws required a
23 license fee, and 19 laws identified penalties for violations that included both license suspension and
24 revocation.⁵⁷ The evidence of effectiveness of retailer licensing regulations on e-cigarette initiation
25 and use is limited, but promising.

26 27 *E-cigarette tax and other price strategies*

28
29 There is strong evidence that increasing traditional cigarette taxes decreases cigarette consumption
30 and increases quit rates among both adults and adolescents.⁵⁸⁻⁶⁰ Additionally, increasing the price
31 of tobacco reduces tobacco initiation among youth.⁵⁹ Therefore, e-cigarette taxes and price
32 strategies have been proposed as a potential tool to reduce e-cigarette use. However, the
33 effectiveness of e-cigarette taxes and price strategies may depend on whether e-cigarettes and
34 traditional cigarettes are used concurrently or as substitutes. If either e-cigarettes or traditional
35 cigarettes are substitutes, then increased taxes on one would drive users to the other and vice
36 versa.⁵⁸

37
38 As of February 2024, 36 states and Washington DC have enacted an e-cigarette tax.⁵⁶ There is
39 some evidence that e-cigarette taxes increased e-cigarette prices and reduced sales of e-cigarettes,
40 but they also increase sales of traditional cigarettes, suggesting the two may be substitutes.^{3,61-63} In
41 contrast, one study found that higher cigarette excise taxes decrease both cigarette and e-cigarette
42 purchases, suggesting that cigarettes and e-cigarettes are used in tandem.⁶⁴ as Additionally, one
43 prospective cohort study of young adults in the U.S. found that increased prices of rechargeable e-
44 cigarette products did not significantly change past 30-day e-cigarette use or cigarette use.⁶⁵

45
46 While there is some evidence e-cigarette taxes curb e-cigarette use among youth, more evidence is
47 needed to assess their effectiveness and better understand their impact on traditional cigarette use.

1 *Flavor restrictions*

2
3 In 2009 the FDA banned flavored cigarettes, but it was not until 2020 that similar federal bans
4 were extended to e-cigarettes -- banning all non-tobacco and non-menthol flavored cartridge-based
5 e-cigarettes.¹⁰ Although the FDA flavor ban is a step in the right direction, disposable e-cigarettes
6 were exempt, and the market shifted accordingly. A longitudinal cohort survey of adults aged 18-
7 24 from Atlanta, Boston, Minneapolis, Oklahoma City, San Diego, Seattle found that only 8.4
8 percent of participants reduced their e-cigarette use after the FDA ban was implemented.⁶⁶ Instead,
9 while 35.8 percent used available flavors like tobacco and menthol, 30.4 percent continued to use
10 tank-based e-cigarettes, and 10.1 percent switched to tank-based e-cigarettes.⁶⁶

11
12 This highlights the need for additional action at the state and local level. In 2018, San Francisco
13 was the first city to ban all flavored tobacco products, including menthol, in conventional
14 cigarettes.⁴⁷ After more than 200 localities imposed a variety of restrictions, Michigan became the
15 first state to ban all flavored e-cigarettes under a temporary emergency order that is renewable.⁴⁷
16 Currently, over 360 localities have passed flavor restrictions.⁶⁷ Evidence is limited, but there are
17 some promising findings from New York City and Massachusetts suggesting that sales for flavored
18 tobacco products decreased overall following a ban.⁴⁵ Additionally, a cross-sectional study found
19 that statewide restrictions on the sale of flavored e-cigarettes in Massachusetts, New York, Rhode
20 Island, and Washington were associated with a reduction in total e-cigarette sales.⁶⁸

21
22 *E-cigarette retailer zoning and location restrictions*

23
24 Current evidence indicates that e-cigarette retailers are frequently located near schools. In a study
25 of two counties in Kentucky, an estimated 67.5 percent of sampled schools had at least one tobacco
26 retailer that also sold e-cigarettes within one mile (1.61 km) of the school.⁶⁹ Another study from
27 Orange County, California found that over half of public middle and high schools had at least one
28 e-cigarette specialty retailer within one mile of the school.⁷⁰

29
30 One study identified a significant positive association between e-cigarette retailer density within a
31 half-mile of a high school and the likelihood that a student ever and currently used e-cigarettes.⁷¹
32 Another study identified a significant positive association between the presence of e-cigarette
33 specialty retailers within one-quarter mile of a middle school and the likelihood of e-cigarette
34 lifetime use. However, a significant positive association was not present among high school
35 students.⁷² While site-based studies have found varying results, a study based on geospatial data
36 found an association between the presence of tobacco retailers near certain schools and e-cigarette
37 use among students, but this association was not consistent across all the studied counties.⁷³ Other
38 research suggests a positive association between higher retailer density in egocentric residential
39 neighborhoods around homes and current smoking in adults and adolescents; however, the density
40 of retailers and their proximity to schools showed either no association or an inverse association
41 with adolescent smoking.⁷⁴ Likewise, another study found that e-cigarette retailer proximity and
42 density surrounding a school were not significantly associated with the likelihood of ever or
43 currently using e-cigarettes.⁷⁵

44
45 Many states and localities have tried to reduce exposure, initiation, and use of e-cigarettes through
46 retailer zoning and location restrictions and these efforts are rationally grounded; however more
47 research is needed to conclusively determine the impact of retailer proximity and youth initiation.

1 *Product packaging*

2
3 Under the Deeming Rule, e-cigarettes are required to include warning labels about the
4 addictiveness of nicotine. Additionally, 33 states have implemented their own packaging laws.⁴⁵
5 There is some evidence that text-based warning messages influenced young non-smokers'
6 perceptions in a way that may dissuade e-cigarette use, but warnings appearing on advertisements
7 had little impact.⁷⁶ One study found that the perceived warning effectiveness for discouraging
8 youth initiation was higher for warnings that focused on negative impacts to the brain and harmful
9 chemicals compared to warnings focusing on nicotine dependency or use disorder.⁷⁷ In conclusion,
10 there is limited evidence of the effectiveness of warning labels on e-cigarettes; however, there is
11 evidence that many adolescents are unaware that e-cigarettes contain nicotine. Ultimately, more
12 research is needed on nicotine warnings for e-cigarettes, including on the message content,
13 placement, and the impact on consumers' product knowledge, risk perceptions, and use
14 intentions.⁷⁸

15
16 *State and local regulatory efforts and pre-emption issues*

17
18 State and local efforts to enact e-cigarette regulations often come across preemption barriers.
19 Although many states have made efforts to enhance e-cigarette regulations through limits on
20 promotions and advertising, requiring licensing for over-the-counter sales, including e-cigarettes in
21 smoke free air policies, and implementing face-to-face sales mandates, state level preemption is
22 prohibiting many cities and municipalities from implementing stricter local policies. In the U.S., 25
23 states preempt stricter local e-cigarette regulations in 55 laws. Specifically, 19 laws preempt
24 advertising regulations, 11 laws preempt licensure requirements, four laws preempt ordinances for
25 indoor clean air, and 21 laws preempt youth access. States without preemption laws should be
26 encouraged to adopt language that expressly preserves local authority.⁷⁹

27
28 EXISTING AMA POLICY

29
30 Existing AMA policy recognizes that the use of products containing nicotine in any form among
31 youth, including e-cigarettes, is unsafe and can cause addiction. Furthermore, the AMA supports
32 legislation and associated initiatives to prevent e-cigarettes from reaching youth and young adults
33 through various means, including, but not limited to, CDC research, education, and a campaign for
34 preventing and reducing use by youth, young adults and others of e-cigarettes, and combustible and
35 emerging tobacco products (Policy H-495.972, "Electronic Cigarettes, Vaping, and Health"). The
36 AMA also supports applying the same marketing and sales restrictions that are applied to tobacco
37 cigarettes, including prohibitions on television advertising, product placement in television and
38 films, and the use of celebrity spokespeople; requires the use of secure, child- and tamper-proof
39 packaging and design, and safety labeling on containers of replacement fluids (e-liquids) used in e-
40 cigarettes (Policy H-495.973, "FDA to Extend Regulatory Jurisdiction Over All Non-
41 Pharmaceutical Nicotine and Tobacco Products").

42
43 AMA policy supports the development of model legislation regarding enforcement of laws
44 restricting children's access to tobacco, including but not limited to attention to the following
45 issues: (a) provision for licensure to sell tobacco and for the revocation thereof; (b) appropriate
46 civil or criminal penalties (e.g., fines, prison terms, license revocation) to deter violation of laws
47 restricting children's access to and possession of tobacco; (c) requirements for merchants to post
48 notices warning minors against attempting to purchase tobacco and to obtain proof of age for
49 would-be purchasers; (d) measures to facilitate enforcement; (e) banning out-of-package cigarette
50 sales ("loosies"); and (f) requiring tobacco purchasers and vendors to be of legal smoking age
51 (Policy H-495.986, "Tobacco Product Sales and Distribution").

1 CONCLUSION

2
3 Despite the recent decline in e-cigarette use among high school students and ongoing efforts at the
4 national, state, and local levels to implement tobacco control strategies, including FDA regulatory
5 actions, e-cigarette use among adolescents remains unacceptably high. According to the NYTS,
6 2.13 million students use e-cigarettes, with 4.6 percent of middle school and ten percent of high
7 school students reporting current use.¹ There is clear evidence of adverse health effects due to e-
8 cigarette use, but the evidence on the long-term impacts is more attenuated, not as strong, and often
9 based on small cross-sectional or relatively short longitudinal epidemiological studies.

10 Additionally, there is limited evidence of the effectiveness of state-level efforts like face-to-face
11 sales mandates, marketing and promotion limits, retailer licensing, price policies and taxes, and
12 flavor restrictions on reducing e-cigarette initiation and use. Despite the limited evidence, many
13 policies enacted to address youth access are rooted in evidence-based nicotine control strategies that
14 worked well with traditional cigarettes. Therefore, it seems likely that they have the potential to
15 reduce e-cigarette initiation and use. Continued research is needed to better understand effective
16 interventions and policies, including how they influence traditional cigarette smoking, e-cigarette
17 vaping, and other tobacco use.

18
19 RECOMMENDATIONS

20
21 The Council on Science and Public Health recommends that the following be adopted, and the
22 remainder of the report be filed:

- 23
24 1. That our AMA supports the inclusion of all forms of e-cigarettes (e.g., disposable, refillable
25 cartridge, and tank-based e-cigarettes) in the language and implementation of relevant nicotine-
26 based policies and regulations by the Food and Drug Administration or other regulatory
27 agencies. (New HOD Policy)
28
29 2. That current AMA Policy H-495.986, "Tobacco Product Sales and Distribution," be amended
30 by addition to read as follows:

31
32 Tobacco Product Sales and Distribution, H-495.986

33 (1) recognizes the use of e-cigarettes and vaping as an urgent public health epidemic and will
34 actively work with the Food and Drug Administration and other relevant stakeholders to
35 counteract the marketing and use of addictive e-cigarette and vaping devices, including but not
36 limited to bans and strict restrictions on marketing to minors under the age of 21;

37 (2) encourages the passage of laws, ordinances and regulations that would set the minimum age
38 for purchasing tobacco products, including electronic nicotine delivery systems (ENDS) and e-
39 cigarettes, at 21 years, and urges strict enforcement of laws prohibiting the sale of tobacco
40 products to minors;

41 (3) supports the development of model legislation regarding enforcement of laws restricting
42 children's access to tobacco, including but not limited to attention to the following issues: (a)
43 provision for licensure to sell tobacco and for the revocation thereof; (b) appropriate civil or
44 criminal penalties (e.g., fines, prison terms, license revocation) to deter violation of laws
45 restricting children's access to and possession of tobacco; (c) requirements for merchants to
46 post notices warning minors against attempting to purchase tobacco and to obtain proof of age
47 for would-be purchasers; (d) measures to facilitate enforcement; (e) banning out-of-package
48 cigarette sales ("loosies"); and (f) requiring tobacco purchasers and vendors to be of legal
49 smoking age;

50 (4) requests that states adequately fund the enforcement of the laws related to tobacco sales to
51 minors;

- 1 (5) opposes the use of vending machines to distribute tobacco products and supports
2 ordinances and legislation to ban the use of vending machines for distribution of tobacco
3 products;
4 (6) seeks a ban on the production, distribution, and sale of candy products that depict or
5 resemble tobacco products;
6 (7) opposes the distribution of free tobacco products by any means and supports the enactment
7 of legislation prohibiting the disbursement of samples of tobacco and tobacco products by
8 mail;
9 (8) (a) publicly commends (and so urges local medical societies) pharmacies and pharmacy
10 owners who have chosen not to sell tobacco products, and asks its members to encourage
11 patients to seek out and patronize pharmacies that do not sell tobacco products; (b) encourages
12 other pharmacists and pharmacy owners individually and through their professional
13 associations to remove such products from their stores; (c) urges the American Pharmacists
14 Association, the National Association of Retail Druggists, and other pharmaceutical
15 associations to adopt a position calling for their members to remove tobacco products from
16 their stores; and (d) encourages state medical associations to develop lists of pharmacies that
17 have voluntarily banned the sale of tobacco for distribution to their members; and
18 (9) opposes the sale of tobacco at any facility where health services are provided; and
19 (10) supports measures that decrease the overall density of tobacco specialty stores, including
20 but not limited to, preventing retailers from opening new tobacco specialty stores in close
21 proximity to schools. (Modify Current AMA Policy)

22
23 That our AMA reaffirm Policies H-495.970, “Regulation of “Cool/Non-Menthol” Tobacco
24 Products, H-495.971 “Opposition to Addition of Flavors to Tobacco Products,” and H-495.976,
25 “Opposition to Exempting the Addition of Menthol to Cigarettes.” (Reaffirm HOD Policy)

Fiscal Note: less than \$1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 401
(A-24)

Introduced by: Integrated Physician Practice Section

Subject: Addressing Social Determinants of Health Through Closed Loop Referral Systems

Referred to: Reference Committee D

1 Whereas, existing policy addresses data collection on social determinants of health (H-165.822)
2 as well as data interoperability between physician practices, community-based organizations,
3 and other related social care organizations (H-160.896); and
4
5 Whereas, once patients are screened positive for social needs, these patients are then referred
6 to community-based organizations and other related social care organizations for intervention;
7 and
8
9 Whereas, the White House Office of Science and Technology Policy's *U. S. Playbook to*
10 *Address Social Determinants of Health* supports the development of "backbone organizations"
11 as infrastructure to link health care systems to community service organizations¹; and
12
13 Whereas, "backbone organizations" should be able to act as closed loop referral systems that
14 keep updated lists of community resources and track completion of referrals; and
15
16 Whereas, physician practices still report challenges with using closed loop referral systems to
17 address social determinants of health²; therefore be it
18
19 RESOLVED, that our American Medical Association study the effectiveness and best practices
20 of closed loop referral systems in addressing social determinants of health. (Directive to Take
21 Action)
22

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/17/2024

RELEVANT AMA POLICY

Health Plan Initiatives Addressing Social Determinants of Health H-165.822

Our AMA:

1. recognizing that social determinants of health encompass more than health care, encourages new and continued partnerships among all levels of government, the private sector, philanthropic organizations, and community- and faith-based organizations to address non-medical, yet critical health needs and the underlying social determinants of health;
2. supports continued efforts by public and private health plans to address social determinants of health in health insurance benefit designs;
3. encourages public and private health plans to examine implicit bias and the role of racism and social determinants of health, including through such mechanisms as professional development and other training;
4. supports mechanisms, including the establishment of incentives, to improve the acquisition of data related to social determinants of health, while minimizing burdens on patients and physicians;
5. supports research to determine how best to integrate and finance non-medical services as part of health insurance benefit design, and the impact of covering non-medical benefits on health care and societal costs; and
6. encourages coverage pilots to test the impacts of addressing certain non-medical, yet critical health needs, for which sufficient data and evidence are not available, on health outcomes and health care costs.

Expanding Access to Screening Tools for Social Determinants of Health/Social Determinants of Health in Payment Models H-160.896

1. Our AMA supports payment reform policy proposals that incentivize screening for social determinants of health and referral to community support systems.
2. Our AMA: (a) will advocate for data interoperability between physicians' practices, public health, vaccine registries, community-based organizations, and other related social care organizations to promote coordination across the spectrum of care, while maintaining appropriate patient privacy; (b) adopts the position that electronic health records should integrate and display information on social determinants of health and social risk so that such information is actionable by physicians to intervene and mitigate the impacts of social factors on health outcomes; (c) will advocate for adequate standards and capabilities for electronic health records to effectively tag and protect sensitive data before it can be shared or reshared; and (d) supports ongoing monitoring and data collection regarding unintended harm to patients from sharing information on social determinants of health and social risk.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 402
(A-24)

Introduced by: Medical Student Section

Subject: Guardianship and Conservatorship Reform

Referred to: Reference Committee D

1 Whereas, 1.3 million people (including their \$50 billion in assets) are in court-appointed
2 guardianships or conservatorships, the vast majority of which are permanent guardianships, the
3 most restrictive form and the most difficult and expensive to amend¹; and
4

5 Whereas, due to wide state variation, data on guardian abuse is limited, but reports indicate
6 hundreds of cases of physical and financial abuse¹⁻⁴; and
7

8 Whereas, a Senate Committee on Aging report noted the harm of our guardianship system on
9 older and disabled patients, and emphasized the need for less restrictive alternatives¹; and
10

11 Whereas, the elderly American population is projected to nearly double by 2060 and comprise
12 over 20% of the total population^{1,5-6}; and
13

14 Whereas, physicians play a major role in determining guardianships by providing medical
15 evidence and expertise⁷; and
16

17 Whereas, individuals with intellectual and developmental disabilities (IDD) face barriers to
18 adequate capacity determinations that increase their risk of overly restrictive guardianships⁸;
19 and
20

21 Whereas, supported decision making (SDM) is a less restrictive alternative to guardianships
22 already adopted by 12 states and several other countries that demonstrates preservation of
23 decision-making capacity, cognitive function, and social support⁹⁻¹¹; therefore be it
24

25 RESOLVED, that our American Medical Association support federal and state efforts to collect
26 anonymized data on guardianships and conservatorships to assess the effects on medical
27 decision making and rates of abuse (New HOD Policy); and be it further
28

29 RESOLVED, that our AMA study the impact of less restrictive alternatives to guardianships and
30 conservatorships including supported decision making on medical decision making, health
31 outcomes, and quality of life. (Directive to Take Action)
32

RELEVANT AMA POLICY

H-140.845 Encouraging the Use of Advance Directives and Health Care Powers of Attorney

Our AMA will: (1) encourage health care providers to discuss with and educate young adults about the establishment of advance directives and the appointment of health care proxies; (2) encourage nursing homes to discuss with resident patients or their health care surrogates/decision maker as appropriate, a care plan including advance directives, and to have on file such care plans including advance directives; and that when a nursing home resident patient's advance directive is on file with the nursing home, that advance directive shall accompany the resident patient upon transfer to another facility; (3) encourage all physicians and their families to complete a Durable Power of Attorney for Health Care (DPAHC) and an Advance Directive (AD); (4) encourage all medical schools to educate medical students and residents about the importance of having a DPAHC/AD before becoming severely ill and encourage them to fill out their own DPAHC/AD; (5) along with other state and specialty societies, work with any state that has technical problems with their DPAHC/AD to correct those problems; (6) encourage every state medical association and their member physicians to make information about Living Wills and health care powers of attorney continuously available in patient reception areas; (7) (a) communicate with key health insurance organizations, both private and public, and their institutional members to include information regarding advance directives and related forms and (b) recommend to state Departments of Motor Vehicles the distribution of information about advance directives to individuals obtaining or renewing a driver's license; (8) work with Congress and the Department of Health and Human Services to (a) make it a national public health priority to educate the public as to the importance of having a DPAHC/AD and to encourage patients to work with their physicians to complete a DPAHC/AD and (b) to develop incentives to individuals who prepare advance directives consistent with our current AMA policies and legislative priorities on advance directives; (9) work with the Centers for Medicare and Medicaid Services to use the Medicare enrollment process as an opportunity for patients to receive information about advance health care directives; (10) continue to seek other strategies to help physicians encourage all their patients to complete their DPAHC/AD; and (11) advocate for the implementation of secure electronic advance health care directives. [CCB/CLRPD Rep. 3, A-14; Reaffirmed: BOT Rep. 9, I-15; Reaffirmed: Res. 517, A-16; Reaffirmed: BOT Rep. 05, I-16; Reaffirmed in lieu of: Res. 121, A-17]

Code of Medical Ethics Opinion 2.1.2 Decisions for Adult Patients Who Lack Capacity

Respect for patient autonomy is central to professional ethics and physicians should involve patients in health care decisions commensurate with the patient's decision-making capacity. Even when a medical condition or disorder impairs a patient's decision-making capacity, the patient may still be able to participate in some aspects of decision making. Physicians should engage patients whose capacity is impaired in decisions involving their own care to the greatest extent possible, including when the patient has previously designated a surrogate to make decisions on his or her behalf.

When a patient lacks decision-making capacity, the physician has an ethical responsibility to:

- (a) Identify an appropriate surrogate to make decisions on the patient's behalf:
 - (i) the person the patient designated as surrogate through a durable power of attorney for health care or other mechanism; or
 - (ii) a family member or other intimate associate, in keeping with applicable law and policy if the patient has not previously designated a surrogate.
- (b) Recognize that the patient's surrogate is entitled to the same respect as the patient.
- (c) Provide advice, guidance, and support to the surrogate.
- (d) Assist the surrogate to make decisions in keeping with the standard of substituted judgment, basing decisions on:
 - (i) the patient's preferences (if any) as expressed in an advance directive or as documented in the medical record;
 - (ii) the patient's views about life and how it should be lived;
 - (iii) how the patient constructed his or her life story; and
 - (iv) the patient's attitudes toward sickness, suffering, and certain medical procedures.
- (e) Assist the surrogate to make decisions in keeping with the best interest standard when the patient's preferences and values are not known and cannot reasonably be inferred, such as when the patient has not previously expressed preferences or has never had decision-making capacity. Best interest decisions should be based on:
 - (i) the pain and suffering associated with the intervention;
 - (ii) the degree of and potential for benefit;
 - (iii) impairments that may result from the intervention;
 - (iv) quality of life as experienced by the patient.
- (f) Consult an ethics committee or other institutional resource when:
 - (i) no surrogate is available or there is ongoing disagreement about who is the appropriate surrogate;
 - (ii) ongoing disagreement about a treatment decision cannot be resolved; or
 - (iii) the physician judges that the surrogate's decision:
 - a. is clearly not what the patient would have decided when the patient's preferences are known or can be inferred;
 - b. could not reasonably be judged to be in the patient's best interest; or
 - c. primarily serves the interests of the surrogate or other third party rather than the patient.

AMA Principles of Medical Ethics: I,III,VIII; Issued: 2016

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 403
(A-24)

Introduced by: Medical Student Section

Subject: Occupational Screenings for Lung Disease

Referred to: Reference Committee D

1 Whereas, from 1999 to 2016, the average years of potential life lost due to pneumoconiosis has
2 increased from 8.1 to 12.6 years¹; and

3
4 Whereas, the recent resurgence of pneumoconiosis poses a threat to younger patients, with
5 increased disease burden at initial diagnosis, and affects a growing number of occupations such
6 as metal miners, denim workers, pottery and ceramics workers, and stone masons²⁻⁶; and

7
8 Whereas, laborers affected by pneumoconiosis are disproportionately of Latine or American
9 Indian descent, are more likely to live in isolated and rural communities without access to
10 adequate preventive care, and are less likely to have graduated high school⁷⁻⁸; and

11
12 Whereas, many laborers who depended heavily on mobile health clinics and screening centers
13 were left without options for care when many of these were halted due to COVID⁸; and

14
15 Whereas, occupational screening measures, including the federal National Institute for
16 Occupational Safety & Health's Coal Workers' Health Surveillance Program for radiographic and
17 spirometric screenings, have helped decrease pneumoconiosis mortality^{5,9-12}; therefore be it

18
19 RESOLVED, that our American Medical Association amend Policy H-365.988, "Integration of
20 Occupational Medicine, Environmental Health, and Injury Prevention Programs into Public
21 Health Agencies" by addition and deletion as follows:

22
23 Integration of Occupational Medicine, Environmental Health, and
24 Injury Prevention Programs into Public Health Agencies, H-365.988
25 Our AMA ~~supports~~: (1) supports the integration of occupational
26 health and environmental health and injury prevention programs
27 within existing health departments at the state and local level; (2)
28 supports taking a leadership role in assisting state medical societies
29 in implementation of such programs; ~~and~~ (3) supports working with
30 federal agencies to ensure that "health" is the primary determinant
31 in establishing environmental and occupational health policy; (4)
32 recognizes barriers to accessibility and utilization of such programs;
33 (5) recognizes inequities in occupational health screenings for
34 pulmonary lung disease and supports efforts to increase
35 accessibility of these screenings in marginalized communities; and
36 (6) encourages utilization of accessible screenings, such as those
37 used in the NIOSH Coal Workers Health Surveillance Program, for
38 other at risk occupational groups and utilization of these free
39 screenings. (Modify Current HOD Policy)
40

RELEVANT AMA POLICY

H-185.936 Lung Cancer Screening to be Considered Standard Care

Our AMA: (1) recommends that coverage of screening low-dose CT (LDCT) scans for patients at high risk for lung cancer by Medicare, Medicaid, and private insurance be a required covered benefit; (2) will empower the American public with knowledge through an education campaign to raise awareness of lung cancer screening with low-dose CT scans in high-risk patients to improve screening rates and decrease the leading cause of cancer death in the United States; and (3) will work with interested national medical specialty societies and state medical associations to urge the Centers for Medicare & Medicaid Services and state Medicaid programs to increase access to low-dose CT screening for Medicaid patients at high risk for lung cancer by including it as a covered benefit, without cost-sharing or prior authorization requirements, and increasing funding for research and education to improve awareness and utilization of the screening among eligible enrollees. [Sub. Res. 114, A-14; Appended: Res. 418, A-22; Appended: Res. 112, A-23]

H-135.944 Further Limit of Asbestos in the United States

Our AMA supports legislation further restricting the use of asbestos in the United States. [Res. 215, A-07; Reaffirmed: BOT Rep. 22, A-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 404
(A-24)

Introduced by: Medical Student Section

Subject: Protections Against Surgical Smoke Exposure

Referred to: Reference Committee D

1 Whereas, surgical smoke refers to smoke produced by electrical surgical devices in the
2 operating room, which can pose an occupational hazard to healthcare workers^{1, 2, 3}; and
3
4 Whereas, the carcinogenic effects of surgical smoke exposure from one operation have been
5 estimated to be equal to the effects of smoking one pack of cigarettes (or six unfiltered
6 cigarettes per gram of tissue ablated)^{2,4}; and
7
8 Whereas, surgical smoke can cause acute effects such as headache, cough, sore throat, eye
9 irritation, nausea, and dizziness^{5,6}; and
10
11 Whereas, surgical smoke is associated with an increased risk of cancer, inflammatory interstitial
12 pneumonia, and emphysema among surgeons compared to the general population^{7,8,9}; and
13
14 Whereas, the harms of surgical smoke cannot be sufficiently prevented by use of surgical
15 masks or by general operating room ventilation^{5,10}; and
16
17 Whereas, the CDC recommends the use of local exhaust ventilation (such as portable smoke
18 evacuators and room suction systems) alongside general ventilation to adequately reduce
19 exposure to harmful particulates, but local exhaust ventilation is often not used¹¹⁻¹⁴; and
20
21 Whereas, NIOSH's Health and Safety Practices Survey of Healthcare Workers indicates that
22 staff who receive increased training and who work at employers with standard procedures for
23 surgical smoke hazards are more likely to use local exhaust ventilation¹³; and
24
25 Whereas, the Occupational Safety and Health Association (OSHA) has no standardized
26 protocol for surgical smoke exposure, but the National Fire Protection Association (NFPA)
27 recently included a requirement to capture smoke in their 2024 edition of the Health Care
28 Facilities Code, which is used by the Centers for Medicare and Medicaid Services¹⁵⁻¹⁶; and
29
30 Whereas, fifteen states have laws to reduce surgical smoke exposure¹⁶; therefore be it
31
32 RESOLVED, that our American Medical Association support efforts to limit surgical smoke
33 exposure in operating rooms. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/5/2024

RELEVANT AMA POLICY

H-365.996 Regulation of Occupational Carcinogens

The AMA supports using the best available scientific data, including data derived from animal models, as a basis for regulation of occupational carcinogens.

[Sub. Res. 81, I-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13; Modified: CSAPH Rep. 8, A-23]

H-365.980 OSHA Regulations Pertaining to Physicians' Offices and Hospitals

The AMA continues to review the data and rationale used to substantiate OSHA regulations pertaining to medical practice in physician offices and health care facilities. Where OSHA rules and regulations are found to be unnecessary or inappropriate, the AMA will work for their modification or repeal. [Sub. Res. 218, A-94; Reaffirmed: BOT Rep. 29, A-04; Reaffirmed: BOT Rep. 19, A-14]

H-295.939 Protecting Medical Trainees from Hazardous Exposure

1. Our AMA will encourage all health care-related educational institutions to apply the Occupational Safety and Health Administration (OSHA) Blood Borne Pathogen standard and OSHA hazardous exposure regulations, including communication requirements, equally to employees, students, and residents/fellows.
2. Our AMA recommends: (a) that the Accreditation Council for Graduate Medical Education revise the common program requirements to require education and subsequent demonstration of competence regarding potential exposure to hazardous agents relevant to specific specialties, including but not limited to: appropriate handling of hazardous agents, potential risks of exposure to hazardous agents, situational avoidance of hazardous agents, and appropriate responses when exposure to hazardous material may have occurred in the workplace/training site; (b) (i) that medical school policies on hazardous exposure include options to limit hazardous agent exposure in a manner that does not impact students' ability to successfully complete their training, and (ii) that medical school policies on continuity of educational requirements toward degree completion address leaves of absence or temporary reassignments when a

pregnant trainee wishes to minimize the risks of hazardous exposures that may affect the trainee's and/or fetus' personal health status; (c) that medical schools and health care settings with medical learners be vigilant in updating educational material and protective measures regarding hazardous agent exposure of its learners and make this information readily available to students, faculty, and staff; and (d) medical schools and other sponsors of health professions education programs ensure that their students and trainees meet the same requirements for education regarding hazardous materials and potential exposures as faculty and staff. [Sub. Res. 229, I-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13; Modified: CME/CSAPH Joint Rep. 01, A-19]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 405
(A-24)

Introduced by: Medical Student Section

Subject: Default Proceed Firearm Sales and Safe Storage Laws

Referred to: Reference Committee D

1 Whereas, default proceed sales, referred to as the “Charleston loophole,” allow vendors to
2 proceed with firearm sales if a background check is inconclusive after three business days, and
3 related deaths and injuries have resulted in \$88 million in settlements¹⁻³; and
4

5 Whereas, in 2021, the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) received
6 5,201 transaction denials due to delayed background checks, which are intended to result in
7 retrieval of firearms from individuals who were able to purchase a firearm but later failed their
8 background check⁴⁻⁹; and
9

10 Whereas, perpetrators in both the 2015 Charleston Church and 2017 Sutherland Springs
11 shootings obtained firearms through default proceed sales, despite criminal records that should
12 have restricted them from purchasing firearms⁹⁻¹¹; and
13

14 Whereas, 22% of default proceed sales in 2018 resulted in transfer of a gun to prohibited
15 purchasers with a history of domestic violence¹²; and
16

17 Whereas, 77% of delayed background checks remain unresolved after 88 days, resulting in
18 destruction of the record, the transaction request, and any data collected from the Federal
19 Bureau of Investigation’s National Instant Criminal Background Check System¹³⁻¹⁵; and
20

21 Whereas, while the AMA has supported the Bipartisan Background Checks Act, the AMA has
22 not publicly supported the Default Proceed Sale Transparency Act¹⁶⁻¹⁸; and
23

24 Whereas, the Giffords Law Center defines safe storage of firearms as locked storage of an
25 unloaded firearm with ammunition stored in a separate location¹⁹; and
26

27 Whereas, while the AMA supports child access prevention (CAP) laws, these laws vary widely
28 in their applicability, with some only applying if reasonable belief exists that a child could gain
29 access to the firearm, some only if a child does gain access to a firearm, and some only if a
30 child causes injury or death with a firearm¹⁹⁻²⁰; and
31

32 Whereas, unlike CAP laws, safe storage laws broadly require storage that also prevents access
33 by unauthorized adults and firearm theft²⁰; and
34

35 Whereas, 20 states have CAP laws, but only 5 states have safe storage laws²⁰⁻²¹; and
36

37 Whereas, 1 million firearms were stolen from private owners from 2017 to 2021, and studies
38 indicate that guns stored unlocked are more likely to be stolen and that 80% of perpetrators in
39 K-12 school shootings stole their firearms from a relative²²⁻²⁵; and
40

1 Whereas, most firearms used in crimes start as legal purchases that are later trafficked as
2 illegal firearms, often through theft, with nearly half of the 1.4 million documented firearms used
3 in crimes from 2017 to 2021 being purchased 3 years or less prior to the crime²⁶⁻²⁹; and
4

5 Whereas, the majority of stolen firearms are stolen from vehicles, with at least 40,000 firearms
6 stolen in 2020³⁰⁻³¹; and
7

8 Whereas, while household access to a firearm is associated with a 1700% increased suicide
9 risk, safe storage can account for 60% of the reduction in suicide mortality³²⁻³⁶; and
10

11 Whereas, the AMA has not publicly supported the Firearm Owners Responsibility and Safety
12 Act, which would have created a comprehensive federal safe storage requirement not limited to
13 child access³⁷; therefore be it
14

15 RESOLVED, that our American Medical Association amend Policy H-145.996, "Firearm
16 Availability," by addition as follows;
17

18 Firearm Availability H-145.996

19 1. Our AMA: (a) advocates a waiting period and background check
20 for all firearm purchasers; (b) encourages legislation that enforces
21 a waiting period and background check for all firearm purchasers;
22 (c) opposes firearm sales to individuals for whom a background
23 check has not been completed; (d) opposes destruction of any
24 incomplete background checks for firearm sales; (e) advocates for
25 public annual reporting by relevant agencies on inappropriate
26 firearm sales, including number of default proceed sales; number of
27 firearms retrieved from individuals after these sales through
28 criminal investigations, across state lines, or via other means; and
29 average time passed between background check completion and
30 retrieval; and (f) urges legislation to prohibit the manufacture, sale
31 or import of lethal and non-lethal guns made of plastic, ceramics, or
32 other non-metallic materials that cannot be detected by airport and
33 weapon detection devices.

34 2. Our AMA supports requiring the licensing/permitting of firearms-
35 owners and purchasers, including the completion of a required
36 safety course, and registration of all firearms.

37 3. Our AMA supports "gun violence restraining orders" for
38 individuals arrested or convicted of domestic violence or stalking,
39 and supports extreme risk protection orders, commonly known as
40 "red-flag" laws, for individuals who have demonstrated significant
41 signs of potential violence. In supporting restraining orders and
42 "red-flag" laws, we also support the importance of due process so
43 that individuals can petition for their rights to be restored.

44 4. Our AMA advocates for (a) federal and state policies that prevent
45 inheritance, gifting, or transfer of ownership of firearms without
46 adhering to all federal and state requirements for background
47 checks, waiting periods, and licensure; (b) federal and state policies
48 to prevent "multiple sales" of firearms, defined as the sale of
49 multiple firearms to the same purchaser within five business days;
50 and (c) federal and state policies implementing background checks
51 for ammunition purchases.

52 (Modify Current HOD Policy); and be it further

1 RESOLVED, that our American Medical Association amend Policy H-145.990, "Prevention of
2 Firearm Accidents in Children," by addition as follows:

3
4 Prevention of Firearm Accidents in Children H-145.990

5 1) Our AMA (a) supports increasing efforts to reduce pediatric
6 firearm morbidity and mortality by encouraging its members to (i)
7 inquire as to the presence of household firearms as a part of
8 childproofing the home; (ii) educate patients to the dangers of
9 firearms to children; (iii) encourage patients to educate their
10 children and neighbors as to the dangers of firearms; and (iv)
11 routinely remind patients to obtain firearm safety locks, to store
12 firearms under lock and key, and to store ammunition separately
13 from firearms;(b) encourages state medical societies to work with
14 other organizations to increase public education about firearm
15 safety; (c) encourages organized medical staffs and other physician
16 organizations, including state and local medical societies, to
17 recommend programs for teaching firearm safety to children; and
18 (d) supports enactment of Child Access Prevention laws and other
19 types of comprehensive safe
20 storage laws that are consistent with AMA policy.

21 2) Our AMA and all interested medical societies wil (a) educate the
22 public about: (b) best practices for firearm storage safety; (c)
23 misconceptions families have regarding child response to
24 encountering a firearm in the home; and (c) the need to ask other
25 families with whom the child interacts regarding the presence and
26 storage of firearms in other homes the child may enter.

27 (Modify Current HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/5/2024

RELEVANT AMA POLICY

H-145.970 Violence Prevention

Our AMA: (1) encourages the enactment of state laws requiring the reporting of all classes of prohibited individuals, as defined by state and federal law, to the National Instant Criminal Background Check System (NICS); (2) supports federal funding to provide grants to states to improve NICS reporting; and (3) encourages states to automate the reporting of relevant information to NICS to improve the quality and timeliness of the data. [BOT Rep. 11, I-18; Reaffirmed: CSAPH Rep. 3, I-21]

H-145.972 Firearms and High-Risk Individuals

Our AMA supports: (1) the establishment of laws allowing family members, intimate partners, household members, and state, federal, local, and tribal law enforcement personnel to petition a court for the removal of a firearm when there is a high or imminent risk for violence; and (2) the establishment of laws and procedures through which physicians and other medical professionals can, in partnership with appropriate parties, contribute to the inception and development of such petitions; (3) prohibiting persons who are under domestic violence restraining orders, convicted of misdemeanor domestic violence crimes or stalking, from possessing or purchasing firearms; (4) expanding domestic violence restraining orders to include dating partners; (5) requiring states to have protocols or processes in place for requiring the removal of firearms by prohibited persons; (6) requiring domestic violence restraining orders and gun violence restraining orders to be entered into the National Instant Criminal Background Check System; and (7) efforts to ensure the public is aware of the existence of laws that allow for the removal of firearms from high-risk individuals.

Our AMA will work with relevant parties to update medical curricula and physician training regarding how to approach conversations with patients and families and to utilize Extreme Risk Protection Orders. [CSAPH Rep. 04, A-18; Reaffirmed: BOT Rep. 11, I-18; Reaffirmed: CSAPH Rep. 3, I-21; Modified: Res. 405, A-23]

H-145.991 Waiting Periods for Firearm Purchases

The AMA supports using its influence in matters of health to effect passage of legislation in the Congress of the U.S. mandating a national waiting period that allows for a police background and positive identification check for anyone who wants to purchase a handgun from a gun dealer anywhere in our country. [Sub. Res. 34, I-89; Reaffirmed: BOT Rep. 8, I-93; Reaffirmed: BOT Rep. 50, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Modified: Res. 401, A-17; Reaffirmation: A-18; Reaffirmation: I-18]

H-145.992 Waiting Period Before Gun Purchase

The AMA supports legislation calling for a waiting period of at least one week before purchasing any form of firearm in the U.S. [Res. 171, A-89; Reaffirmed: BOT Rep. 50, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Reaffirmation: A-18]

H-145.978 Gun Safety

Our AMA: (1) recommends and promotes the use of trigger locks and locked gun cabinets as safety precautions; and (2) endorses standards for firearm construction reducing the likelihood of accidental discharge when a gun is dropped and that standardized drop tests be developed. [Res. 425, I-98; Reaffirmed: Res. 409, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmation A-13; Modified: CSAPH Rep. 8, A-23]

H-145.999 Gun Regulation

Our AMA supports stricter enforcement of present federal and state gun legislation and the imposition of mandated penalties by the judiciary for crimes committed with the use of a firearm, including the illegal possession of a firearm. [Sub. Res. 31, I-81; Reaffirmed: CLRPD Rep. F, I-91; Amended: BOT Rep. I-93-50; Reaffirmed: Res. 409, A-00; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Modified: Res. 401, A-17; Reaffirmation: I-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 406
(A-24)

Introduced by: Medical Student Section, American Association of Public Health Physicians

Subject: Opposition to Pay-to-Stay Incarceration Fees

Referred to: Reference Committee D

1 Whereas, "pay-to-stay" fees require individuals to pay for their own imprisonment to cover
2 housing and food costs and are used in 49 states, including \$249 daily in Connecticut, \$80 daily
3 in Maine and Kentucky, \$66 daily in Ohio, and \$20 daily in Alabama¹⁻⁵; and
4

5 Whereas, average hourly wages during incarceration are \$0.13 to \$1.30 per hour, and in the
6 first year after release, 49% earn \$500 or less and 80% earn less than \$15,000⁶⁻⁷; and
7

8 Whereas, because only 10-15% are ever collected, pay-to-stay fees do not significantly
9 contribute to prison budgets, but permanently damage the credit records of individuals leaving
10 incarceration if not paid within 180 days after release and harm future prospects for stable
11 employment and housing^{5,8,9}; and
12

13 Whereas, pay-to-stay fees keep formerly incarcerated individuals trapped in a cycle of poverty
14 and imprisonment, as debts hinder re-entry, contribute to recidivism, and force individuals to
15 forgo basic necessities in order to make payments¹⁰⁻¹²; therefore be it
16

17 RESOLVED, that our American Medical Association oppose fees charged to incarcerated
18 individuals for room and board and advocate for federal and state efforts to repeal statutes and
19 ordinances which permit inmates to be charged for room and board. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

RELEVANT AMA Policy

D-430.992 Reducing the Burden of Incarceration on Public Health

1. Our AMA will support efforts to reduce the negative health impacts of incarceration, such as: (1) implementation and incentivization of adequate funding and resources towards indigent defense systems; (2) implementation of practices that promote access to stable employment and laws that ensure employment non-discrimination for workers with previous non-felony criminal records; and (3) housing support for formerly incarcerated people, including programs that facilitate access to immediate housing after release from carceral settings.
2. Our AMA will partner with public health organizations and other interested stakeholders to urge Congress, the Department of Justice, the Department of Health and Human Services, and state officials and agencies to minimize the negative health effects of incarceration by supporting programs that facilitate employment at a living wage, and safe, affordable housing opportunities for formerly incarcerated individuals, as well as research into alternatives to incarceration. [Res. 902, I-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 407
(A-24)

Introduced by: Medical Student Section, American Association of Public Health Physicians

Subject: Racial Misclassification

Referred to: Reference Committee D

- 1 Whereas, the National Center for Health Statistics maintains a National Death Index (NDI), a
2 centralized database of death record information on file in state vital statistics offices¹⁻²; and
3
- 4 Whereas, this data can be linked to databases maintained by agencies like the Centers for
5 Disease Control, Food and Drug Administration, and Centers for Medicare and Medicaid
6 Services to increase the availability of information on an individual's cause of death¹⁻⁵; and
7
- 8 Whereas, a key limitation of these vital statistic data is the misclassification of race and ethnicity
9 on death certificates and in other databases (e.g., inaccurate from minority identification to
10 white), limiting the quality and applicability of data available for racial and ethnic minority
11 populations experiencing health disparities⁶⁻⁷; and
12
- 13 Whereas, populations more likely to be misclassified on their death certificates include, but are
14 not limited to, American Indians and Alaska Natives (AI/AN), Asian Americans, and Native
15 Hawaiians and Other Pacific Islanders (NHPI)^{6,8-13}; and
16
- 17 Whereas, a retrospective linkage of regional records maintained by the Indian Health Service
18 and Oklahoma State Health Department Vital Records reported a 29% underestimation of all-
19 cause mortality in the AI/AN population⁶; and
20
- 21 Whereas, an updated version of the National Longitudinal Mortality Study (1999-2011
22 decedents versus 1990-1998 decedents) found that racial misclassification remained high at
23 40% for the AI/AN population and changed from 5% to 3%, for the Hispanic population and from
24 7% to 3% for the Asian or Pacific Islander (API) population¹⁴⁻¹⁵; and
25
- 26 Whereas, racial misclassification on death certificates is compounded by missing or incorrect
27 race and ethnicity data in other databases, such as those maintained by federal health
28 programs, hospital systems, and related entities¹⁵⁻¹⁹; and
29
- 30 Whereas, a 2021 study of 4,231,370 Medicare beneficiaries who utilized home health care
31 services in 2015 found substantial racial misclassification of self-identified Hispanic, Asian
32 American, Pacific Islander, and AI/AN beneficiaries (more than 80% for AI/AN in 24 states and
33 Puerto Rico) as non-Hispanic white²⁰; and
34
- 35 Whereas, a 2019 study that conducted ICD-9/ICD-10 record linkages between the Northwest
36 Tribal Registry and Oregon and Washington hospital discharge datasets increased the
37 ascertainment of neonatal abstinence syndrome cases among AI/AN newborns by 8.8% in
38 Oregon and by 18.1% in Washington²¹; and

1 Whereas, according to the United States Centers for Disease Control and Prevention, more
2 AI/AN patients are misclassified as another race in cancer registry records than patients in other
3 racial groups, likely from one group to identification as non-Hispanic white²²⁻²³; and
4

5 Whereas, a 2021 prospective observational study of patients admitted to an urban Level 1
6 trauma center found that 45 of 98 patients self-identifying as Hispanic (45.9%) had inaccurately
7 recorded ethnicity in the trauma registry²⁴; and
8

9 Whereas, decedent race and ethnicity may be subject to bias as a 2018 project by the National
10 Consortium for Urban Indian Health found that 48% of surveyed funeral directors were recording
11 an individual's race on death certificates by observation of the individual rather than asking their
12 next of kin^{9,25}; and
13

14 Whereas, mortality-related research data, combined with other clinically-based registries, is a
15 fundamental tool for establishing public health priorities (e.g., advocacy, resource allocation,
16 stakeholder engagement) at the local, state, tribal and federal level and is an important part of
17 Indigenous Data Sovereignty (H-460.884)²⁶; therefore be it
18

19 RESOLVED, that our American Medical Association amend H-85.953, "Improving Death
20 Certification Accuracy and Completion," by addition as follows:
21

22 Improving Death Certification Accuracy and Completion H-85.953

23 1. Our AMA: (a) acknowledges that the reporting of vital events is
24 an integral part of patient care; (b) urges physicians to ensure
25 completion of all state vital records carefully and thoroughly with
26 special attention to the use of standard nomenclature, using legible
27 writing and accurate diagnoses; and (c) supports notifying state
28 medical societies and state departments of vital statistics of this
29 policy and encouraging their assistance and cooperation in
30 implementing it.

31 2. Our AMA also: (a) supports the position that efforts to improve
32 cause of death statistics are indicated and necessary; (b) endorses
33 the concept that educational efforts to improve death certificates
34 should be focused on physicians, particularly those who take care
35 of patients in facilities where patients are likely to die, namely in
36 acute hospitals, nursing homes and hospices; and (c) supports the
37 concept that training sessions in completion of death certificates
38 should be (i) included in hospital house staff orientation sessions
39 and clinical pathologic conferences; (ii) integrated into continuing
40 medical education presentations; (iii) mandatory in mortality
41 conferences; and (iv) included as part of in-service training
42 programs for nursing homes, hospices and geriatric physicians.

43 3. Our AMA further: (a) promotes and encourages the use of ICD
44 codes among physicians as they complete medical claims, hospital
45 discharge summaries, death certificates, and other documents; (b)
46 supports cooperating with the National Center for Health Statistics
47 (NCHS) in monitoring the four existing models for collecting
48 tobacco-use data; (c) urges the NCHS to identify appropriate
49 definitions, categories, and methods of collecting risk-factor data,
50 including quantification of exposure, for inclusion on the U.S.
51 Standard Certificates, and that subsequent data be appropriately
52 disseminated; and (d) continues to encourage all physicians to
53 report tobacco use, exposure to environmental tobacco smoke, and
54 other risk factors using the current standard death certificate format.

1 4. Our AMA further supports HIPAA-compliant data linkages
2 between Native Hawaiian and Tribal Registries, population-based
3 and hospital-based clinical trial and disease registries, and local,
4 state, tribal, and federal vital statistics databases aimed at
5 minimizing racial misclassification. (Modify Current HOD Policy)
6

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA Policy

H-315.963 Accurate Collection of Preferred Language and Disaggregated Race and Ethnicity to Characterize Health Disparities

Our AMA encourages the Office of the National Coordinator for Health Information Technology (ONC) to expand their data collection requirements, such that electronic health record (EHR) vendors include options for disaggregated coding of race, ethnicity, and preferred language. [Res. 03, I-19]

H-350.950 Tribal Public Health Authority

Our AMA will support; (1) the Department of Health and Human Services issuing guidance, through the Centers for Disease Control and Prevention and the Indian Health Service, on Public Health and Tribal-affiliated data-sharing with American Indian and Alaska Native Tribes and Villages and Tribal Epidemiology Centers; and (2) the use of data-sharing agreements between local and state public health departments and American Indian and Alaska Native Tribes and Villages and Tribal Epidemiology Centers. [Res. 206, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 408
(A-24)

Introduced by: Medical Student Section, American College of Physicians

Subject: Indian Water Rights

Referred to: Reference Committee D

1 Whereas, the United States is a signatory of the 2007 United Nations Declaration on the Rights
2 of Indigenous People (UNDRIP), which states that Indigenous Peoples “have the right to own,
3 use, develop, and control the lands, territories and resources that they possess by reason of
4 traditional ownership or other traditional occupation or use, as well as those which they have
5 otherwise acquired”¹; and

6
7 Whereas, nearly half of American Indian/Alaska Native (AI/AN) households on reservations lack
8 access to clean water or adequate sanitation, including 6.5% of American Indian households on
9 and off reservations and 13.5% of Alaska Native villages and reservations (compared to under
10 1% of the general US population)²⁻⁶; and

11
12 Whereas, regardless of income, AI/AN households are 10 times as likely as white households to
13 lack indoor plumbing, an early correlate of high COVID rates on reservations^{2,7}; and

14
15 Whereas, only 42 AI/AN Tribes and Villages meet Environmental Protection Agency (EPA)
16 standards for water quality⁸; and

17
18 Whereas, a third of Navajo Nation residents lack access to clean water and are 67 times more
19 likely than other Americans to live without running water or toilets, due in part to drought and
20 heavy metals, such as uranium, leached from abandoned mining sites⁹⁻¹¹; and

21
22 Whereas, unsafe groundwater resources on the Navajo Nation and other Tribal lands, lead to
23 higher rates of cancer, kidney disease, autoimmune disorders, skin infection, diabetes, and
24 infant hospitalizations for pneumonia¹²⁻¹⁴; and

25
26 Whereas, water systems are part of Indigenous ways of knowing and ceremonies in many
27 Indigenous cultures, thus water insecurity impacts physical, cultural, and spiritual wellbeing in
28 AI/AN communities, with loss of culture itself a risk factor for many chronic conditions among
29 AI/AN individuals¹³⁻¹⁷; and

30
31 Whereas, individuals without adequate water sources require vehicles, sleds, or wheelbarrows
32 to travel miles to wells and water stations and haul water back to their homes¹⁸; and

33
34 Whereas, Navajo Nation families spend \$43,000 per acre-foot of water with hauled water,
35 compared to \$600 for the average American with running water¹⁶; and

36
37 Whereas, *Winters v US* (1908) ruled that Tribes and their members have a right to sufficient
38 water access for residential, economic, governmental, and other needs¹⁹⁻²⁰; and

1 Whereas, lengthy disputes over Indian water rights to settle claims of water rights holders and
2 improve water management in AI/AN communities are expensive to litigate²¹; and
3

4 Whereas, Congress must approve all Indian water right settlements between Tribes, states, and
5 the US, delaying implementation, funds, and land transfers for years²²⁻²⁴; and
6

7 Whereas, the Biden-Harris Administration is coordinating federal agencies to meet Tribal water
8 needs, support Indian water right settlements, and increase Tribal participation in stewardship of
9 federal lands and water systems of significance to Tribal Nations²⁵; and
10

11 Whereas, the Indian Health Service (IHS) investigates and manages environmental health
12 services on Tribal lands, including the provision of health services²⁶; and
13

14 Whereas, the IHS provides environmental engineering and sanitation facilities to AI/AN
15 communities, including the cooperative development and construction of safe water sources,
16 wastewater management, and solid waste systems²⁷⁻²⁸; and
17

18 Whereas, Indian water rights settlements harm access to health care, considering the year long
19 closure of a newly constructed hospital on the Navajo Nation due to inadequate access to on-
20 site water²⁹; and
21

22 Whereas, for every \$1 spent on water and sewage infrastructure, the IHS could save \$1.23 in
23 healthcare costs from diseases related to unsafe water³⁰; therefore be it
24

25 RESOLVED, that our American Medical Association raise awareness about ongoing water
26 rights issues for federally-recognized American Indian and Alaska Native Tribes and Villages in
27 appropriate forums (Directive to Take Action); and be it further
28

29 RESOLVED, that our AMA support improving access to water and adequate sanitation, water
30 treatment, and environmental support and health services on American Indian and Alaska
31 Native trust lands. (New HOD Policy)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/10/2024

RELEVANT AMA Policy

H-135.928 Safe Drinking Water

Our AMA supports updates to the U.S. Environmental Protection Agency's Lead and Copper Rule as well as other state and federal laws to eliminate exposure to lead through drinking water by:

- (1) Removing, in a timely manner, lead service lines and other leaded plumbing materials that come into contact with drinking water;

- (2) Requiring public water systems to establish a mechanism for consumers to access information on lead service line locations;
 - (3) Informing consumers about the health-risks of partial lead service line replacement;
 - (4) Requiring the inclusion of schools, licensed daycare, and health care settings among the sites routinely tested by municipal water quality assurance systems;
 - (5) Creating and implementing standardized protocols and regulations pertaining to water quality testing, reporting and remediation to ensure the safety of water in schools and child care centers;
 - (6) Improving public access to testing data on water lead levels by requiring testing results from public water systems to be posted on a publicly available website in a reasonable timeframe thereby allowing consumers to take precautions to protect their health;
 - (7) Establishing more robust and frequent public education efforts and outreach to consumers that have lead service lines, including vulnerable populations;
 - (8) Requiring public water systems to notify public health agencies and health care providers when local water samples test above the action level for lead;
 - (9) Seeking to shorten and streamline the compliance deadline requirements in the Safe Drinking Water Act; and
 - (10) Actively pursuing changes to the federal lead and copper rules consistent with this policy.
- [Res. 409, A-16; Modified: Res. 422, A-18; Reaffirmed: BOT Rep. 29, A-19]

D-440.924 Universal Access for Essential Public Health Services

Our AMA: (1) supports equitable access to the 10 Essential Public Health Services and the Foundational Public Health Services to protect and promote the health of all people in all communities; (2) encourages state, local, tribal, and territorial public health departments to pursue accreditation through the Public Health Accreditation Board (PHAB); (3) will work with appropriate stakeholders to develop a comprehensive list of minimum necessary programs and services to protect the public health of citizens in all state and local jurisdictions and ensure adequate provisions of public health, including, but not limited to clean water, functional sewage systems, access to vaccines, and other public health standards; and (4) will work with the National Association of City and County Health Officials (NACCHO), the Association of State and Territorial Health Officials (ASTHO), the Big Cities Health Coalition, the Centers for Disease Control and Prevention (CDC), and other related entities that are working to assess and assure appropriate funding levels, service capacity, and adequate infrastructure of the nation's public health system, including for rural jurisdictions. [Res. 419, A-19; Modified: CSAPH Rep. 2, A-22]

H-350.977 Indian Health Service

The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.

(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.

(3) Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health

professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.

(4) Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.

(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

(6) Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.

(7) Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs. [CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13; Appended: Res. 305, A-23; Reaffirmed: BOT Rep. 09, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 409
(A-24)

Introduced by: Medical Student Section and American Association of Public Health
Physicians

Subject: Toxic Heavy Metals

Referred to: Reference Committee D

- 1 Whereas, toxic heavy metals (THMs) including mercury, lead, cadmium, chromium, and arsenic
2 enter the environment through natural processes as well as via anthropogenic activities such as
3 power plants, landfills, mining, fossil fuel use, urban runoff, and agriculture¹⁻³; and
4
5 Whereas, national regulations protecting the public from THM exposure are sporadic, eg no air
6 quality standards for cadmium levels, no regulations on heavy metals in soil⁴⁻⁶; and
7
8 Whereas, urban farms and gardens are at risk of higher levels of heavy metal contaminants in
9 soil, air, water, and food⁶⁻⁹; and
10
11 Whereas, individuals at military bases are chronically exposed to toxic heavy metals due to the
12 use of burn pits¹⁰; and
13
14 Whereas, the World Health Organization (WHO) ranks the US in the top 10 for highest levels of
15 arsenic contamination in groundwater, and dangerous levels of arsenic have been found in
16 drinking water wells in over 25 states, exposing over 2 million people¹¹⁻¹²; and
17
18 Whereas, infant and toddler foods have been found to contain THM levels above recommended
19 limits by the Food and Drug Administration (FDA), although the FDA advises that even low
20 levels of THMs can accumulate in children causing chronic illness¹³; and
21
22 Whereas, American Indian persons are exposed to THMs from historic mining sites and on
23 average have higher THM blood levels, associated with heart and lung disease risk¹⁴⁻¹⁵; and
24
25 Whereas, low-income and minoritized communities are disproportionately exposed to
26 chronically high THM levels from hazardous waste sites and air pollution^{9,16-23}; and
27
28 Whereas, THMs may cause acute adverse effects at high concentrations such as psychosis and
29 multi-organ toxicities, and chronic exposure, even below current regulatory limits, may increase
30 risk for heart disease, stroke, dementia, cancer, and infertility^{1,3-4,24-25}; and
31
32 Whereas, the American Heart Association states that THMs are a direct risk factor for
33 cardiovascular disease and recommends protections to prevent public exposure and
34 development of clinical monitoring standards³⁻⁴; and
35
36 Whereas, inconsistency across thresholds between the FDA, EPA, Agency for Toxic
37 Substances and Disease Registry, and WHO and lack of updates reflecting new research
38 contribute to difficulty in THM regulation and resulting unchecked bioaccumulation^{12,15,26};
39 therefore be it

1 RESOLVED, that our American Medical Association urge governmental agencies to establish
2 and enforce limits for identified hazardous pollutants and heavy metals in our food, water, soil,
3 and air (Directive to Take Action); and be it further
4

5 RESOLVED, that our AMA support efforts to monitor and educate individuals on (a) the chronic
6 effects of exposure to toxic heavy metals including at levels below regulation limits, and (b) the
7 burden of toxicity in communities, especially near urban, Superfund, and industrial sites.
8 (New HOD Policy)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/18/2024

RELEVANT AMA Policy

H-135.911 Environmental Health Equity in Federally Subsidized Housing

1. Our American Medical Association acknowledges the potential adverse health impacts of living in close proximity to Superfund sites or other contaminated lands.
2. Our AMA advocates for mandated disclosure of Superfund sites or other contaminated lands proximity to those purchasing, leasing, or currently residing in housing in close proximity to Superfund sites or other contaminated lands.
3. Our AMA supports efforts of public agencies to study the safety of proposed public housing expansions with respect to pollutant exposure and to expand construction of new public and publicly subsidized housing properties on lands without demonstrated unsafe levels of hazardous pollutants. [Res. 415, A-23]

H-135.949 Support of Clean Air and Reduction in Power Plant Emissions:

(1)Our AMA supports (a) federal legislation and regulations that meaningfully reduce the following four major power plant emissions: mercury, carbon dioxide, sulfur dioxide and nitrogen oxide; and (b) efforts to limit carbon dioxide emissions through the reduction of the burning of coal in the nation's power generating plants, efforts to improve the efficiency of power plants and continued development, promotion, and widespread implementation of alternative renewable energy sources in lieu of carbon-based fossil fuels. (2) Our AMA will: (a) support the Environmental Protection Agency's proposal, under the Clean Air Act, to regulate air quality for heavy metals and other air toxins emitted from smokestacks. The risk of dispersion through air and soil should be considered, particularly for people living downwind of smokestacks; and (b) urge the EPA to finalize updated mercury, cadmium, and air toxic regulations for monitoring air quality emitted from power plants and other industrial sources, ensuring that recommendations to protect the public's health are enforceable. [Res. 429, A-03; Reaffirmation I-07; Reaffirmed in lieu of Res. 526, A-12; Reaffirmed: Res. 421, A-14; Modified: Res. 506, A-15; Modified: Res. 908, I-17; Appended: Res. 401, A-22]

D-135.022 Addressing Inequity in Onsite Wastewater Treatment

(1)Our American Medical Association supports that federal, state, local, and tribal, governments suspend enforcement of sanitation laws that could result in criminal charges, fines, jail time, and potential property loss for residents who lack the means to purchase functioning septic systems, especially in underserved communities and American Indian reservations. (2) Our AMA supports research by federal, state, and local governments to develop strategies to reduce insufficient wastewater management and eliminate detrimental health effects due to inadequate wastewater systems. (3) Our AMA will work with interested parties to reduce and eliminate inadequate wastewater treatment systems. [Res. 407, A-23]

D- 135.997 Environmental Contributors to Disease and Advocating for Environmental Justice

Our AMA will (1) advocate for the greater public and private funding for research into the environment causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease and environmental racism as a priority public health issues; (3) encourage federal, state, and local agencies to address and remediate environmental injustice, environmental racism, and all other environmental conditions that are adversely impacting health, especially in marginalized communities; and (4) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies. [Res. 402, A-03; Appended: Res. 927, I-11; Reaffirmed in lieu of: Res. 505, A-19; Modified: Res. 415, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 410
(A-24)

Introduced by: Medical Student Section

Subject: Access to Public Restrooms

Referred to: Reference Committee D

1 Whereas, when surveyed, 1 in 5 reported experiencing a public bowel/urinary accident, and
2 over half said they or a relative struggled to find public restrooms in the past week;¹ and
3
4 Whereas, the US has only 8 public toilets per 100,000 people, far fewer than Iceland (56),
5 Switzerland (46), and New Zealand (45);² and
6
7 Whereas, public restrooms are important to sanitation and infection control, with limited access
8 directly tied to recent hepatitis A outbreaks in San Diego and Philadelphia;³⁻⁹ and
9
10 Whereas, people who are unhoused, especially those who menstruate, are affected by
11 restricted restroom access due to inability to pay, and public urination or defecation can lead to
12 criminal and civil penalties, including lifelong sex offender registration homelessness;¹⁰⁻¹⁴ and
13
14 Whereas, several states and municipalities' Restroom Access Acts (RAAs) require business to
15 provide restrooms to customers with permanent bowel-related conditions, but these laws are
16 minimally enforced and exclude many other individuals with medical needs;¹⁴ and
17
18 Whereas, public restrooms are often inequitable in size in number for women and transgender,
19 nonbinary, and gender-diverse individuals, despite different usage than cis men;¹⁵⁻¹⁷ and
20
21 Whereas, women often need restrooms more than cis men due to menstruation and higher
22 rates of Crohn's disease, irritable bowel syndrome, cystitis, and incontinence;¹⁸⁻²² and
23
24 Whereas, while restroom parity laws in numerous states and municipalities have increased the
25 ratio of women's to men's stalls and improved access, they often do not apply retroactively and
26 do not address parity for transgender, nonbinary, and gender-diverse individuals;²³ and
27
28 Whereas, transgender people are up to 6 times more likely to avoid public restrooms due to
29 discrimination, harassment, and being questioned for their gender;²⁴ and
30
31 Whereas, gender-inclusive bathrooms have demonstrated reductions in wait times for women
32 by over 60 seconds while increasing wait times for men by only 20 seconds;²⁵ and
33
34 Whereas, several cities have passed ordinances requiring new buildings to have gender-neutral
35 bathrooms and incentivizing construction of new public restrooms;²⁶⁻³⁰ therefore be it
36
37 RESOLVED, that our American Medical Association support access to clean, accessible, and
38 permanent public restrooms that, at minimum, contain a toilet and sink, regardless of any
39 identifying characteristics such as gender identity, appearance, employment status, or
40 commercial status (New HOD Policy); and be it further

1 RESOLVED, that our AMA support parity in restroom access by gender identity, including
2 increasing the number of female and gender-neutral bathrooms available in both new and
3 existing buildings. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA Policy

H-65.964 Access to Basic Human Services for Transgender Individuals

Our AMA: (1) opposes policies preventing transgender individuals from accessing basic human services and public facilities in line with one's gender identity, including, but not limited to, the use of restrooms; and (2) will advocate for the creation of policies that promote social equality and safe access to basic human services and public facilities for transgender individuals according to one's gender identity. [Res. 010, A-17]

D-90.992 Preserving Protections of the Americans with Disabilities Act of 1990

1. Our AMA supports legislative changes to the Americans with Disabilities Act of 1990, to educate state and local government officials and property owners on strategies for promoting access to persons with a disability.
2. Our AMA opposes legislation amending the Americans with Disabilities Act of 1990, that would increase barriers for disabled persons attempting to file suit to challenge a violation of their civil rights.
3. Our AMA will develop educational tools and strategies to help physicians make their offices more accessible to persons with disabilities, consistent with the Americans With Disabilities Act as well as any applicable state laws. [Res. 220, I-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 411
(A-24)

Introduced by: Oklahoma

Subject: Missing and Murdered Indigenous Persons

Referred to: Reference Committee D

1 Whereas, there is an epidemic of violence and a rising number of cases of abduction and
2 murder of American Indian and Alaska Native persons (AI/AN) in the United States (U.S.), with
3 greater than 2 in 5 AI/AN women raped in their lifetime, and homicide reported in the top 10
4 leading causes of death according to The National Intimate Partner and Sexual Violence Survey
5 (NIPSVS) ^{1, 2, 3}; and
6

7 Whereas, the NIPSVS reported that non-Hispanic AI/AN individuals experienced the second
8 highest rate of homicide compared to their counterparts in all other racial and ethnic groups in
9 2020³; and
10

11 Whereas, due to factors such as racial misclassification, underreporting, and distrust between
12 law enforcement and Indigenous communities, published statistics likely underestimate the
13 number of sexual violence crimes and missing and murdered AI/AN persons⁴; and
14

15 Whereas, the U.S. Bureau of Indian Affairs has called for additional investigative resources to
16 address this epidemic of violence¹; and
17

18 Whereas, in 2019, President Trump signed Executive Order 13898, which established the two-
19 year, multi-agency Operation Lady Justice Task Force to address the concerns of AI/AN Tribes
20 and Villages regarding missing and murdered persons⁵; and
21

22 Whereas, in 2020, Operation Lady Justice released their first report in collaboration with tribal
23 leaders and community members which suggested establishing local, tribal, regional, and
24 national alert systems for AI/AN persons similar to Amber Alert⁵; and
25

26 Whereas, in 2020, Public Law No. 116-165, Savanna's Act, was signed into law to increase
27 coordination and data-sharing among Federal, State, Tribal, and local law enforcement
28 agencies in an attempt to improve federal prosecution rates and involvement in missing or
29 murdered AI/AN person-cases⁶; and
30

31 Whereas, in 2021, the US Department of Interior launched the formation of the Missing &
32 Murdered Unit (MMU) to provide additional resources and interagency cooperation with
33 necessary stakeholders such as the Federal Bureau of Investigation on this pressing issue⁷; and
34

35 Whereas, the Urban Indian Health Institute, one of the nation's 12 Tribal Epidemiology Centers,
36 found that the rate of missing AI/AN women in Washington State was 78.64 per 100,000, which
37 was more than four times the rate for non-Hispanic white women in 2018⁸; and

1 Whereas, in 2022, Washington State established a statewide and first-in-the-nation Missing and
2 Murdered Indigenous Women's and People's Alert System (MIPA)⁹; and

3
4 Whereas, MIPA makes AI/AN persons eligible for law enforcement assistance who do not
5 otherwise meet strict AMBER Alert criteria and can also be used for AI/AN persons believed to
6 be in danger and presumed to be unable to return to safety without assistance⁹; and

7
8 Whereas, in the 6 months since it was first implemented, the Washington State MIPA has been
9 activated 33 times and 27 individuals have been located, with 4 of those cases directly
10 attributed to MIPA¹⁰; and

11
12 Whereas, several states have now passed legislation to coordinate responses between tribal
13 and non-tribal law enforcement entities and implement AI/AN-specific emergency alert systems,
14 including Arizona, Colorado, Minnesota, Montana, North Dakota, Nebraska, New Mexico,
15 Oregon, South Dakota, and California^{8, 11, 12}; and

16
17 Whereas, the Urban Indian Health Institute has also challenged lawmakers and policymakers to
18 consider a number of factors in their responses to this crisis, including law enforcement stigma
19 towards substance use in AI/AN communities, non-reporting of LGBTQ2S+ identification for
20 missing and murdered AI/AN persons, lack of coordination between tribal, state, and federal law
21 enforcement, and inadequate protocols regarding AI/AN persons living away from their tribal
22 lands⁹; therefore be it

23
24 RESOLVED, that our American Medical Association supports emergency alert systems for
25 American Indian and Alaska Native tribal members reported missing on reservations and in
26 urban areas. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/22/2024

RELEVANT AMA POLICY

Addressing Sexual Violence and Improving American Indian and Alaska Native Women's Health Outcomes D-350.985

1. Our AMA advocates for mitigation of the critical issues of American Indian/Alaska Native women's health that place Native women at increased risk for sexual violence, and encourages allocation of sufficient resources to the clinics serving this population to facilitate health care delivery commensurate with the current epidemic of violence against Native women.
2. Our AMA will collaborate with the Indian Health Service, Centers for Disease Control and Prevention (CDC), Tribal authorities, community organizations, and other interested stakeholders to develop programs to educate physicians and other health care professionals about the legal and cultural contexts of their American Indian and Alaska Native female patients as well as the current epidemic of violence against Native women and the pursuant medical needs of this population.
3. Our AMA will collaborate with the Indian Health Service, CDC, Tribal authorities, and community organizations to obtain or develop appropriate American Indian and Alaska Native women's health materials for distribution to patients in the spirit of self-determination to improve responses to sexual violence and overall health outcomes. [Res. 208, I-15]

Preventing Anti-Transgender Violence H-65.957

Our AMA will: (1) partner with other medical organizations and stakeholders to immediately increase efforts to educate the general public, legislators, and members of law enforcement using verified data related to the hate crimes against transgender individuals highlighting the disproportionate number of Black transgender women who have succumbed to violent deaths; (2) advocate for federal, state, and local law enforcement agencies to consistently collect and report data on hate crimes, including victim demographics, to the FBI; for the federal government to provide incentives for such reporting; and for demographic data on an individual's birth sex and gender identity be incorporated into the National Crime Victimization Survey and the National Violent Death Reporting System, in order to quickly identify positive and negative trends so resources may be appropriately disseminated; (3) advocate for a central law enforcement database to collect data about reported hate crimes that correctly identifies an individual's birth sex and gender identity, in order to quickly identify positive and negative trends so resources may be appropriately disseminated; (4) advocate for stronger law enforcement policies regarding interactions with transgender individuals to prevent bias and mistreatment and increase community trust; and (5) advocate for local, state, and federal efforts that will increase access to mental health treatment and that will develop models designed to address the health disparities that LGBTQ individuals experience.
Res. 008, A-19

Missing Children Identification H-60.996

The AMA supports (1) development of a means of identifying children; and (2) education of the public and parents on the fingerprinting and documentation of characteristic identifying marks as a matter of record, should it be necessary to assist officials in locating a missing child. [Res. 98, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14]

Fund for Public Health Emergency Response H-440.825

Our AMA supports the reauthorization and appropriation of sufficient funds to a public health emergency fund within the Department of Health and Human Services to facilitate adequate responses to public health emergencies without redistributing funds from established public health accounts. [Res. 420, A-16]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 412
(A-24)

Introduced by: Indiana

Subject: Lithium Battery Safety

Referred to: Reference Committee D

1 Whereas, more pieces of equipment utilize lithium batteries; and
2
3 Whereas, lithium batteries have limited useful lifetime use; and
4
5 Whereas, disposal and recycling of lithium batteries is not a well-established system; and
6
7 Whereas, improper storage of lithium batteries can lead to fires; and
8
9 Whereas, putting out lithium battery fires can be difficult and requires robust resources; and
10
11 Whereas, rural communities' fire department coverage resources can be less robust and less
12 able to handle lithium battery fires; and
13
14 Whereas, local agencies often are not aware of lithium battery storage in their area; therefore be
15 it
16
17 RESOLVED, that our American Medical Association seek legislation to increase environmental
18 and public safety oversight of lithium batteries and businesses that store and dispose of lithium
19 batteries. (Directive to Take Action)
20

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/23/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 413
(A-24)

Introduced by: Michigan

Subject: Sexuality and Reproductive Health Education

Referred To: Reference Committee D

1 Whereas, the American Academy of Pediatrics (AAP) has identified the timely need for equitable
2 access to comprehensive sex education as a critical component of adolescent health; and
3

4 Whereas, the Centers for Disease Control and Prevention (CDC) states: “A quality sexual health
5 education curriculum includes medically accurate, developmentally appropriate, and culturally
6 relevant content and skills that target key behavioral outcomes and promote healthy sexual
7 development. The curriculum is age-appropriate and planned across grade levels to provide
8 information about health risk behaviors and experiences.”; and
9

10 Whereas, the CDC identifies the following benefits of students receiving sexual health education:
11 Delay initiation of sexual intercourse; Have fewer sex partners; Have fewer experiences of
12 unprotected sex; Increase their use of protection, specifically condoms; and, Improve their
13 academic performance; and
14

15 Whereas, meta-analysis of comprehensive sex education programs showed marked effectiveness
16 reducing sexual partners, unprotected sex, sexually transmitted infections (STIs), and pregnancy,
17 while abstinence-only sex education programs did not indicate a statistically significant reduction in
18 these measures; and
19

20 Whereas, states that have laws that require or stress abstinence-only programs have higher rates
21 of teenage pregnancy; and
22

23 Whereas, in states that do not require medically accurate sexual education, rates of teen
24 pregnancy, birth, and sexually transmitted infection are the highest; and
25

26 Whereas, 95 percent of unintended pregnancies were due to lack of contraception use and
27 incorrect or inconsistent contraception usage; and
28

29 Whereas, the APP states that “comprehensive sex education should occur across the
30 developmental spectrum, beginning at early ages and continuing throughout childhood and
31 adolescence”; and
32

33 Whereas, our American Medical Association Policy H-170.968 also recognizes the importance of
34 “developmentally appropriate sexuality education programming in the schools at all levels, at local
35 option and direction”; therefore be it
36

37 RESOLVED, that our American Medical Association reaffirm AMA Policy H-170.968, “Sexuality
38 Education, Sexual Violence Prevention, Abstinence, and Distribution of Condoms in Schools,” and
39 continue to advocate for the adoption of developmentally appropriate, culturally sensitive,
40 comprehensive sexuality and reproductive health education and reproductive rights curriculum.
41 (Reaffirm HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA POLICY**Sexuality Education, Sexual Violence Prevention, Abstinence, and Distribution of Condoms in Schools H-170.968**

- (1) Supports the concept of sexuality education in the home, when possible, as well as developmentally appropriate sexuality education programming in the schools at all levels, at local option and direction;
- (2) Urges schools at all education levels to implement comprehensive, developmentally appropriate sexuality education programs that: (a) are based on rigorous, peer reviewed science; (b) incorporate sexual violence prevention; (c) show promise for delaying the onset of sexual activity and a reduction in sexual behavior that puts adolescents at risk for contracting human immunodeficiency virus (HIV) and other sexually transmitted diseases and for becoming pregnant; (d) include an integrated strategy for making condoms and other effective barrier protection methods available to students and for providing both factual information and skill-building related to reproductive biology, sexual abstinence, sexual responsibility, contraceptives including condoms, alternatives in birth control, and other issues aimed at prevention of pregnancy and sexual transmission of diseases; (e) utilize classroom teachers and other professionals who have shown an aptitude for working with young people and who have received special training that includes addressing the needs of LGBTQ+ youth; (f) appropriately and comprehensively address the sexual behavior of all people, inclusive of sexual and gender minorities; (g) include ample involvement of parents, health professionals, and other concerned members of the community in the development of the program; (h) are part of an overall health education program; and (i) include culturally competent materials that are language-appropriate for Limited English Proficiency (LEP) pupils;
- (3) Continues to monitor future research findings related to emerging initiatives that include abstinence-only, school-based sexuality education, and consent communication to prevent dating violence while promoting healthy relationships, and school-based condom availability programs that address sexually transmitted diseases and pregnancy prevention for young people and report back to the House of Delegates as appropriate;
- (4) Will work with the United States Surgeon General to design programs that address communities of color and youth in high risk situations within the context of a comprehensive school health education program;
- (5) Opposes the sole use of abstinence-only education, as defined by the 1996 Temporary Assistance to Needy Families Act (P.L. 104-193), within school systems;
- (6) Endorses comprehensive family life education in lieu of abstinence-only education, unless research shows abstinence-only education to be superior in preventing negative health outcomes;
- (7) Supports federal funding of comprehensive sex education programs that stress the importance of preventing unwanted teenage pregnancy and sexually transmitted infections via comprehensive education, including contraceptive choices, abstinence, and safer sex, and opposes federal funding of community-based programs that do not show evidence-based benefits; and
- (8) Extends its support of comprehensive family-life education to community-based programs promoting abstinence as the best method to prevent teenage pregnancy and sexually-transmitted diseases while also discussing the roles of condoms and birth control, as endorsed for school systems in this policy;
- (9) Supports the development of sexual education curriculum that integrates dating violence prevention through lessons on healthy relationships, sexual health, and conversations about consent; and
- (10) Encourages physicians and all interested parties to develop best-practice, evidence-based, guidelines for sexual education curricula that are developmentally appropriate as well as medically, factually, and

technically accurate. [CSA Rep. 7 and Reaffirmation I-99; Reaffirmed: Res. 403, A-01; Modified Res. 441, A-03; Appended: Res. 834, I-04; Reaffirmed: CSAPH Rep. 7, A-09; Modified: Res. 405, A-16; Appended: Res. 401, A-16; Appended: Res. 414, A-18; Appended: Res. 428, A-18; Modified: Res. 413, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 414
(A-24)

Introduced by: California

Subject: Addressing the Health Sector’s Contributions to the Climate Crisis

Referred to: Reference Committee D

1 Whereas, the sharp rises of greenhouse gas (GHG) emissions has already warmed the planet
2 by more than 1.2°C over pre-industrial levels, which has negatively affected public health;¹ and
3

4 Whereas, globally, the U.S. health care sector is responsible for 25% of all health care GHG
5 emissions, more than any other country;² and
6

7 Whereas, health care organizations spend over \$6.5 billion on energy each year, with that
8 amount rising to meet patients’ needs;³ and
9

10 Whereas, effective use of virtual health services can also reduce emissions in the health care
11 sector by reducing patient travel to physician offices and facilities;⁴ and
12

13 Whereas, “greenwashing” occurs when an entity makes a misleading claim or implies to
14 consumers that a product or service is environmentally friendly or has a greater positive
15 environmental impact than it actually does;⁵ and
16

17 Whereas, many physicians and health care facilities are looking for more sustainable and
18 environmentally friendly health care equipment and medications and can thus be vulnerable to
19 claims of “greenwashing” because the environmental reporting standards for health care
20 products can contain gaps that can make interpretation difficult and inconsistent;⁶ and
21

22 Whereas, the Securities and Exchange Commission (SEC) has proposed rule changes that
23 would require, among other things, GHG emissions reporting by all registrants, which would
24 also require reporting of a company’s climate targets, how they will meet those goals, and data
25 on their progress and how that progress was achieved;⁷ and
26

27 Whereas, the Inflation Reduction Act (IRA) has allocated almost \$400 billion toward efforts to
28 increase green energy and reduce carbon emissions;^{8,9} and
29

30 Whereas, the IRA also allocated \$3 billion to fund an environmental justice grant program to
31 provide grants to community-based organizations in disadvantaged communities;^{8,9} and
32

33 Whereas, in March 2023, the Centers for Medicare and Medicaid Services (CMS) issued a
34 categorical waiver that would allow most health care facilities to use a health care microgrid
35 system (HCMS) as a source of emergency power;¹⁰ and
36

37 Whereas, HCMS power sources can rely entirely on, or be supplemented by, a combination of
38 clean energy technologies, which include fuel cells, solar panels, wind turbines, and energy
39 storage systems;¹⁰ and

1 Whereas, our AMA has extensive policy establishing climate changes as a public health crisis,
2 supporting measurable targets for limiting global warming, reducing greenhouse gas emissions,
3 and encouraging the health sector to lead by example but does not have specific policy related
4 to efforts specific to the health care sector; therefore be it

5
6 RESOLVED, that our American Medical Association recognizes that clinical quality and safety
7 should not be sacrificed as strategies for reducing greenhouse gasses and waste (New HOD
8 Policy); and be it further

9
10 RESOLVED, that our AMA recognizes that animal-based agriculture is a significant contributor
11 to greenhouse gas emissions and supports efforts to increase and promote plant-based menu
12 options in hospital food services, for both health and environmental reasons (New HOD Policy);
13 and be it further

14
15 RESOLVED, that our AMA expects that health systems will provide transparency and avoid
16 misleading the public regarding their greenhouse gas emissions, including but not limited to
17 providing definitions used in the calculations of their net-zero emissions (New HOD Policy); and
18 be it further

19
20 RESOLVED, that our AMA opposes corporate “greenwashing,” or the act of making misleading
21 statements about the environmental benefits of products and/or services (New HOD Policy);
22 and be it further

23
24 RESOLVED, that our AMA supports the development of locally managed and reliable electrical
25 microgrids that operate independently from the larger electrical grid for hospitals and other
26 health care facilities to use as a way to reduce reliance on diesel generation for back-up
27 services while maintaining critical care functions during emergencies and supports grants being
28 provided to independent practices to facilitate this development (New HOD Policy); and be it
29 further

30
31 RESOLVED, that our AMA supports the use of virtual health care, where appropriate, with
32 reasonable reimbursement, as a strategy to reduce the carbon footprint of health care (New
33 HOD Policy); and be it further

34
35 RESOLVED, that our AMA support financial assistance for health care entities, including
36 community health centers, clinics, rural health centers, small- and medium-sized physician
37 practices, transitioning to environmentally sustainable operations (New HOD Policy); and be it
38 further

39
40 RESOLVED, that our AMA support the development of concise clinical guidelines and patient
41 education materials to assist physician practices and patients to reduce adverse organizational
42 and personal impacts on climate change. (New HOD Policy)

RELEVANT AMA POLICY

H-135.938 Global Climate Change and Human Health

Our AMA: 1. Supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change. 2. Supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies. 3. (a) Recognizes the importance of physician involvement in policymaking at the state, national, and global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public; and (b) recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes. 4. Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability. 5. Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk. 6. Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change policy decisions related to health care and treatment. 7. Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training. [Modified: CSAPH Rep. 2, I-22; Modified: Res. 424, A-22; Reaffirmation: I-19; Reaffirmed: CSAPH Rep. 04, A-19; Reaffirmation A-14; CSAPH Rep. 3, I-08]

D-135.966 Declaring Climate Change a Public Health Crisis

1. Our AMA declares climate change a public health crisis that threatens the health and well-being of all individuals. 2. Our AMA will protect patients by advocating for policies that: (a) limit global warming to no more than 1.5 degrees Celsius, (b) reduce US greenhouse gas emissions aimed at a 50 percent reduction in emissions by 2030 and carbon neutrality by 2050, and (c) support rapid implementation and incentivization of clean energy solutions and significant investments in climate resilience through a climate justice lens. 3. Our AMA will consider signing on to the Department of Health and Human Services Health Care Pledge or making a similar commitment to lower its own greenhouse gas emissions. 4. Our AMA encourages the health sector to lead by example in committing to carbon neutrality by 2050. 5. Our AMA will develop a strategic plan for how we will enact our climate change

policies including advocacy priorities and strategies to decarbonize physician practices and the health sector with report back to the House of Delegates at the 2023 Annual Meeting.
[Appended: CSAPH Rep. 02, I-22; Res. 420, A-22]

H-150.949 Healthful Food Options in Health Care Facilities

1. Our AMA encourages healthful food options be available, at reasonable prices and easily accessible, on the premises of health care facilities. 2. Our AMA hereby calls on all health care facilities to improve the health of patients, staff, and visitors by: (a) providing a variety of healthy food, including plant-based meals, and meals that are low in saturated and trans fat, sodium, and added sugars; (b) eliminating processed meats from menus; and (c) providing and promoting healthy beverages. 3. Our AMA hereby calls for health care facility cafeterias and inpatient meal menus to publish nutrition information. 4. Our AMA will work with relevant stakeholders to define “access to food” for medical trainees to include overnight access to fresh food and healthy meal options within all training hospitals.

[Appended: Res. 304, A-21; Modified: Res. 904, I-19; Modified: Res. 425, A-18; Appended: Res. 406, A-17; Reaffirmed: CSAPH Rep. 1, A-14; Res. 410, A-04]

G-630.135 Eliminating Food Waste Through Recovery

Our AMA will: (1) consider sustainability and mitigation of food waste in vendor and venue selection; and (2) encourage vendors and relevant third parties to practice sustainability and mitigate food waste through donations.

[Res. 603, A-18]

H-135.939 Green Initiatives and the Health Care Community

Our AMA supports: (1) responsible waste management and clean energy production policies that minimize health risks, including the promotion of appropriate recycling and waste reduction; (2) the use of ecologically sustainable products, foods, and materials when possible; (3) the development of products that are non-toxic, sustainable, and ecologically sound; (4) building practices that help reduce resource utilization and contribute to a healthy environment; (5) the establishment, expansion, and continued maintenance of affordable, accessible, barrier-free, reliable, and clean-energy public transportation; and (6) community-wide adoption of 'green' initiatives and activities by organizations, businesses, homes, schools, and government and health care entities.

[Modified: Res. 923, I-19; Modified: Res. 516, A-18; Reaffirmed in lieu of: Res. 504, A-16; Reaffirmed in lieu of Res. 402, A-10; Reaffirmation A-09; CSAPH Rep. 1, I-08]

D-120.929 Permitting the Dispensing of Stock Medications for Post Discharge Patient Use and the Safe Use of Multi-dose Medications for Multiple Patients

Our AMA will: (1) work with national specialty societies, state medical societies and/or other interested parties to advocate for legislative and regulatory language that permits the practice of dispensing stock-item medications to individual patients upon discharge in accordance with labeling and dispensing protocols that help ensure patient safety, minimize duplicated patient costs, and reduce medication waste; and (2) work with the Food and Drug Administration, national specialty societies, state medical societies and/or other interested parties to advocate for legislative and regulatory language that permits the practice of using multi dose medications, such as eye drops, injectables and topical medications in accordance with safe handling and dispensing protocols that help ensure patient safety, minimize duplicated patient costs, and reduce medication waste.

[Res. 234, I-21]

H-135.949 Support of Clean Air and Reduction in Power Plant Emissions

(1) Our AMA supports (a) federal legislation and regulations that meaningfully reduce the following four major power plant emissions: mercury, carbon dioxide, sulfur dioxide and nitrogen oxide; and (b) efforts to limit carbon dioxide emissions through the reduction of the burning of coal in the nation's power generating plants, efforts to improve the efficiency of power plants and continued development, promotion, and widespread implementation of alternative renewable energy sources in lieu of carbon-based fossil fuels. 2. Our AMA will: (a) support the Environmental Protection Agency's proposal, under the Clean Air Act, to regulate air quality for heavy metals and other air toxins emitted from smokestacks. The risk of dispersion through air and soil should be considered, particularly for people living downwind of smokestacks; and (b) urge the EPA to finalize updated mercury, cadmium, and air toxic regulations for

monitoring air quality emitted from power plants and other industrial sources, ensuring that recommendations to protect the public's health are enforceable.

[Appended: Res. 401, A-22; Modified: Res. 908, I-17; Modified: Res. 506, A-15; Reaffirmed: Res. 421, A-14; Reaffirmed in lieu of Res. 526, A-12; Reaffirmation I-07; Res. 429, A-03]

D-135.996 Reducing Sources of Diesel Exhaust

Our AMA will: (1) encourage the US Environmental Protection Agency (EPA) to set and enforce the most stringent feasible standards to control pollutant emissions from both large and small non-road engines including construction equipment, farm equipment, boats and trains; (2) encourage all states to continue to pursue opportunities to reduce diesel exhaust pollution, including reducing harmful emissions from glider trucks and existing diesel engines; (3) call for all trucks traveling within the United States, regardless of country of origin, to be in compliance with the most stringent and current diesel emissions standards promulgated by US EPA; and (4) send a letter to US EPA Administrator opposing the EPA's proposal to roll back the "glider Kit Rule" which would effectively allow the unlimited sale of re-conditioned diesel truck engines that do not meet current EPA new diesel engine emission standards.

[Modified: Res. 521, A-18; Reaffirmation A-14; Reaffirmation A-11; Reaffirmed in lieu of Res. 507, A-09; Res. 428, A-04]

H-135.931 Health Risks of Hydraulic Fracturing

1. Our AMA encourages appropriate agencies and organizations to study the potential human and environmental health risks and impacts of hydraulic fracturing. 2. Our AMA: (A) supports the full disclosure of chemicals placed into the natural environment during the petroleum, oil and natural gas exploration and extraction process; and (B) supports the requirement that government agencies record and monitor the chemicals placed into the natural environment for petroleum oil and natural gas extraction and the chemicals found in flowback fluids, to monitor for human exposures in well water and surface water, and to share this information with physicians and the public. 3. Our AMA supports research on the implementation of buffer zones or well set-backs between oil and gas development sites and residences, schools, hospitals, and religious institutions, to determine the distance necessary to ensure public health and safety.

[Appended: Res. 908, I-17; Appended: Sub. Res. 508, A-15; Res. 405, A-13]

D-480.963 COVID-19 Emergency and Expanded Telemedicine Regulations

Our AMA: (1) will continue to advocate for the widespread adoption of telehealth services in the practice of medicine for physicians and physician-led teams post SARS-COV-2; (2) will advocate that the Federal government, including the Centers for Medicare & Medicaid Services (CMS) and other agencies, state governments and state agencies, and the health insurance industry, adopt clear and uniform laws, rules, regulations, and policies relating to telehealth services that: (a) provide equitable coverage that allows patients to access telehealth services wherever they are located, and (b) provide for the use of accessible devices and technologies, with appropriate privacy and security protections, for connecting physicians and patients; (3) will advocate for equitable access to telehealth services, especially for at-risk and under-resourced patient populations and communities, including but not limited to supporting increased funding and planning for telehealth infrastructure such as broadband and internet-connected devices for both physician practices and patients; and (4) supports the use of telehealth to reduce health disparities and promote access to health care.

[Reaffirmation: A-22; Reaffirmed: Res. 239, A-22; Reaffirmed: CMS Rep. 7, A-21; Alt. Res. 203, I-20]

H-480.936 Telemedicine Services and Health Equity

Our AMA will encourage policymakers to recognize the scope and circumstances for underserved populations including seniors and patients with complex health conditions with the aim to ensure that these patients have the technology-use training needed to maximize the benefits of telehealth and its potential to improve health outcomes.

[Res. 213, A-23]

H-135.923 AMA Advocacy for Environmental Sustainability and Climate

Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities.

[Reaffirmation: I-19; Res. 924, I-16]

D-135.997 Environmental Contributors to Disease and Advocating for Environmental Justice

Our AMA will (1) advocate for the greater public and private funding for research into the environment causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease and environmental racism as a priority public health issues; (3) encourage federal, state, and local agencies to address and remediate environmental injustice, environmental racism, and all other environmental conditions that are adversely impacting health, especially in marginalized communities; and (4) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies.

[Modified: Res. 415, A-23; Reaffirmed in lieu of: Res. 505, A-19; Appended: Res. 927, I-11; Res. 402, A-03]

D-440.912 AMA Public Health Strategy

1. Our AMA will distribute evidence-based information on the relationship between climate change and human health through existing platforms and communications channels, identify advocacy and leadership opportunities to elevate the voices of physicians on the public health crisis of climate change, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050. 2. Our AMA Board of Trustees will provide an update on loss of coverage and uninsurance rates following the return to regular Medicaid redeterminations and the end of the COVID-19 Public Health Emergency, the ensuing financial and administrative challenges experienced by physicians, physician practices, hospitals, and the healthcare system; and a report of actions taken by the AMA and recommendation for further action to address these issues at I-2023. 3. Our AMA Board of Trustees will provide a strategic plan or outline for the AMA's plan to address and combat the health effects of climate change at I-2023. 4. Our AMA Board of Trustees will provide an update on the efforts and initiatives of the AMA's gun violence task force at I-2023. 5. Our AMA will continue to support increased funding for public health infrastructure and workforce, which should include funding for preventative medicine-related residency programs, to increase public health leadership in this country.

[Modified: BOT Rep. 05, I-23; BOT Rep. 17, A-23]

H-470.953 Evaluating Green Space Initiatives

Our AMA supports appropriate stakeholders in conducting studies to evaluate different green space initiatives that could be implemented in communities to improve patients' health and eliminate health disparities.

[Res. 905, I-15]

H-135.923 AMA Advocacy for Environmental Sustainability and Climate

Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities.

[Reaffirmation: I-19; Res. 924, I-16]

D-135.997 Environmental Contributors to Disease and Advocating for Environmental Justice

Our AMA will (1) advocate for the greater public and private funding for research into the environment causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease and environmental racism as a priority public health issues; (3) encourage federal, state, and local agencies to address and remediate environmental injustice, environmental racism, and all other environmental conditions that are adversely impacting health, especially in marginalized communities; and (4) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies.

[Modified: Res. 415, A-23; Reaffirmed in lieu of: Res. 505, A-19; Appended: Res. 927, I-11; Res. 402, A-03]

H-135.973 Stewardship of the Environment

The AMA: (1) encourages physicians to be spokespersons for environmental stewardship, including the discussion of these issues when appropriate with patients; (2) encourages the medical community to cooperate in reducing or recycling waste; (3) encourages physicians and the rest of the medical community to dispose of its medical waste in a safe and properly prescribed manner; (4) supports enhancing the role of physicians and other scientists in environmental education; (5) endorses legislation such as the National Environmental Education Act to increase public understanding of environmental degradation and its prevention; (6) encourages research efforts at ascertaining the physiological and psychological effects of abrupt as well as chronic environmental changes; (7) encourages international exchange of information relating to environmental degradation and the adverse human health effects resulting from environmental degradation; (8) encourages and helps support physicians who participate actively in international planning and development conventions associated with improving the environment; (9) encourages educational programs for worldwide family planning and control of population growth; (10) encourages research and development programs for safer, more effective, and less expensive means of preventing unwanted pregnancy; (11) encourages programs to prevent or reduce the human and environmental health impact from global climate change and environmental degradation. (12) encourages economic development programs for all nations that will be sustainable and yet nondestructive to the environment; (13) encourages physicians and environmental scientists in the United States to continue to incorporate concerns for human health into current environmental research and public policy initiatives; (14) encourages physician educators in medical schools, residency programs, and continuing medical education sessions to devote more attention to environmental health issues; (15) will strengthen its liaison with appropriate environmental health agencies, including the National Institute of Environmental Health Sciences (NIEHS); (16) encourages expanded funding for environmental research by the federal government; and (17) encourages family planning through national and international support.

[Reaffirmation I-16; Reaffirmed in lieu of Res. 402, A-10; Reaffirmed in lieu of Res. 417, A-04; Amended: CSA Rep. 8, A-03; Amended: CLRPD Rep. D, I-92; CSA Rep. G, I-89]

H-135.919 Climate Change Education Across the Medical Education Continuum

Our AMA: (1) supports teaching on climate change in undergraduate, graduate, and continuing medical education such that trainees and practicing physicians acquire a basic knowledge of the science of climate change, can describe the risks that climate change poses to human health, and counsel patients on how to protect themselves from the health risks posed by climate change; (2) will make available a prototype presentation and lecture notes on the intersection of climate change and health for use in undergraduate, graduate, and continuing medical education; and (3) will communicate this policy to the appropriate accrediting organizations such as the Commission on Osteopathic College Accreditation and the Liaison Committee on Medical Education.

[Res. 302, A-19]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 415
(A-24)

Introduced by: California

Subject: Building Environmental Resiliency in Health Systems and Physician Practices

Referred to: Reference Committee D

1 Whereas, climate change disproportionately impacts the most vulnerable;¹⁻³ and

2
3 Whereas, “resilience” is an effort to preemptively prepare for a crisis, absorb the impact of a
4 crisis, adjust to new conditions, and build on lessons learned to create a more robust future;⁴and

5
6 Whereas, significant investments in renewable energy sources, such as solar and hydro power,
7 can reduce facility emissions due to energy use;⁵and

8
9 Whereas, the World Health Organization (WHO) highlights the health care workforce as key
10 actors in developing a facility’s climate resilience because they are the main implementors of
11 climate change mitigation measures and serve as a direct link to communities and populations
12 most adversely affected by climate change;⁴ and

13
14 Whereas, the WHO notes that health care facilities can greatly reduce the potential risk to staff,
15 patients, and the surrounding communities by appropriately responding to, and reducing
16 exposure to, hazardous water and waste;⁴ and

17
18 Whereas, investments in flood- and storm-resistant construction and low-carbon construction
19 practices can increase a facility’s safety and durability in a changing climate;⁶ and

20
21 Whereas, the Inflation Reduction Act (IRA) has allocated almost \$400 billion toward efforts to
22 increase green energy and reduce carbon emissions;⁷ therefore be it

23
24 RESOLVED, that our American Medical Association support a resilient, accountable health care
25 system capable of delivering effective and equitable care in the face of changing health care
26 demands due to climate change (New HOD Policy); and be it further

27
28 RESOLVED, that our AMA encourage health care organizations to develop climate resilience
29 plans, for the continuity of operations in an emergency, that take into account the needs of
30 groups in their community that experience disproportionate risk of climate-related harm and
31 ensure the necessary collaboration between different types of healthcare facilities (New HOD
32 Policy); and be it further

33
34 RESOLVED, that our AMA recognizes that climate resilience and mitigation efforts will be
35 community-specific and supports physician engagement at the local level to promote community
36 alliances for environmental justice and equity. (New HOD Policy)

37

H-135.923 AMA Advocacy for Environmental Sustainability and Climate

Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities. [Reaffirmation: I-19; Res. 924, I-16]

D-440-912 AMA Public Health Strategy

1. Our AMA will distribute evidence-based information on the relationship between climate change and human health through existing platforms and communications channels, identify advocacy and leadership opportunities to elevate the voices of physicians on the public health crisis of climate change, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050. 2. Our AMA Board of Trustees will provide an update on loss of coverage and uninsurance rates following the return to regular Medicaid redeterminations and the end of the COVID-19 Public Health Emergency, the ensuing financial and administrative challenges experienced by physicians, physician practices, hospitals, and the healthcare system; and a report of actions taken by the AMA and recommendation for further action to address these issues at I-2023. 3. Our AMA Board of Trustees will provide a strategic plan or outline for the AMA's plan to address and combat the health effects of climate change at I-2023. 4. Our AMA Board of Trustees will provide an update on the efforts and initiatives of the AMA's gun violence task force at I-2023. 5. Our AMA will continue to support increased funding for public health infrastructure and workforce, which should include funding for preventative medicine-related residency programs, to increase public health leadership in this country. [Modified: BOT Rep. 05, I-23; BOT Rep. 17, A-23]

H-135.923 AMA Advocacy for Environmental Sustainability and Climate

Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities. [Reaffirmation: I-19; Res. 924, I-16]

H-135.973 Stewardship of the Environment

The AMA: (1) encourages physicians to be spokespersons for environmental stewardship, including the discussion of these issues when appropriate with patients; (2) encourages the medical community to cooperate in reducing or recycling waste; (3) encourages physicians and the rest of the medical community to dispose of its medical waste in a safe and properly prescribed manner; (4) supports enhancing the role of physicians and other scientists in environmental education; (5) endorses legislation such as the National Environmental Education Act to increase public understanding of environmental degradation and its prevention; (6) encourages research efforts at ascertaining the physiological and psychological effects of abrupt as well as chronic environmental changes; (7) encourages international exchange of information relating to environmental degradation and the adverse human health effects

resulting from environmental degradation; (8) encourages and helps support physicians who participate actively in international planning and development conventions associated with improving the environment; (9) encourages educational programs for worldwide family planning and control of population growth; (10) encourages research and development programs for safer, more effective, and less expensive means of preventing unwanted pregnancy; (11) encourages programs to prevent or reduce the human and environmental health impact from global climate change and environmental degradation. (12) encourages economic development programs for all nations that will be sustainable and yet nondestructive to the environment; (13) encourages physicians and environmental scientists in the United States to continue to incorporate concerns for human health into current environmental research and public policy initiatives; (14) encourages physician educators in medical schools, residency programs, and continuing medical education sessions to devote more attention to environmental health issues; (15) will strengthen its liaison with appropriate environmental health agencies, including the National Institute of Environmental Health Sciences (NIEHS); (16) encourages expanded funding for environmental research by the federal government; and (17) encourages family planning through national and international support. [Reaffirmation I-16; Reaffirmed in lieu of Res. 402, A-10; Reaffirmed in lieu of Res. 417, A-04; Amended: CSA Rep. 8, A-03; Amended: CLRPD Rep. D, I-92; CSA Rep. G, I-89]

H-135.919 Climate Change Education Across the Medical Education Continuum

Our AMA: (1) supports teaching on climate change in undergraduate, graduate, and continuing medical education such that trainees and practicing physicians acquire a basic knowledge of the science of climate change, can describe the risks that climate change poses to human health, and counsel patients on how to protect themselves from the health risks posed by climate change; (2) will make available a prototype presentation and lecture notes on the intersection of climate change and health for use in undergraduate, graduate, and continuing medical education; and (3) will communicate this policy to the appropriate accrediting organizations such as the Commission on Osteopathic College Accreditation and the Liaison Committee on Medical Education. [Res. 302, A-19]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 416
(A-24)

Introduced by: California

Subject: Furthering Environmental Justice and Equity

Referred to: Reference Committee D

1 Whereas, climate change disproportionately impacts the most vulnerable;¹⁻³ and

2
3 Whereas, communities of color, communities with predominantly low socioeconomic status,
4 immigrant and refugee communities and Indigenous communities are some of the communities
5 disproportionately burdened by “environmental hazards, unhealthy land uses, psychosocial
6 stressors, historical traumas, and systemic racism,” which can drive environmental health
7 disparities;⁵ and

8
9 Whereas, environmental impact statements and health impact assessments can help
10 communities understand the distribution of environmental burdens and benefits they face and
11 begin re-evaluating how the benefits and costs of environmental resources are distributed;⁵ and

12
13 Whereas, “redlined” areas were neighborhoods that local lenders flagged as high-risk
14 investments by virtue of the neighborhood’s racial and ethnic composition;⁶ and

15
16 Whereas, because of the redlining practices of the 1930s, large sources of pollution, such as
17 industrial plants, major roadways and shipping ports, were sited in and around these targeted
18 neighborhoods and these neighborhoods remain attractive to new polluting projects that require
19 access to cheap land, such as transportation projects;⁷ and

20
21 Whereas, redlining practices allowed for zoning decisions that exposed, and continue to
22 disproportionately expose, communities of color to the damaging effects of pollution and poor air
23 quality;⁸ and

24
25 Whereas, heat islands are urbanized areas that experience higher temperatures than outlying
26 areas and areas formerly graded D under Home Owners’ Loan Corporation policy have on
27 average approximately 23% tree canopy cover today;⁹ and

28
29 Whereas, the Inflation Reduction Act allocated \$3 billion to fund an environmental justice grant
30 program to provide grants to community-based organizations in disadvantaged communities;⁴
31 therefore be it

32
33 RESOLVED, that our American Medical Association support state and local climate-health risk
34 assessments, disease surveillance and early warning systems, and research on climate and
35 health, with actions to improve and/or correct the findings (New HOD Policy); and be it further

36
37 RESOLVED, that our AMA support measures to protect frontline communities from the health
38 harms of proximity to fossil fuel extraction, refining and combustion, such as the best available
39 technology to reduce local pollution exposure from oil refineries, or health safety buffers from oil
40 extraction operations (New HOD Policy); and be it further

1 RESOLVED, that our AMA support prioritizing greenspace access and tree canopy coverage for
2 communities that received a “D” rating from the Home Owners’ Loan Corporation, otherwise
3 known as being “redlined,” or that have been impacted by other discriminatory development and
4 building practice, thereby protecting residents of these communities from displacement. (New
5 HOD Policy)
6

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA POLICY

H-135.938 Global Climate Change and Human Health

Our AMA: 1. Supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change. 2. Supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies. 3. (a) Recognizes the importance of physician involvement in policymaking at the state, national, and global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public; and (b) recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes. 4. Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability. 5. Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk. 6. Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change

policy decisions related to health care and treatment. 7. Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training. [Modified: CSAPH Rep. 2, I-22; Modified: Res. 424, A-22; Reaffirmation: I-19; Reaffirmed: CSAPH Rep. 04, A-19; Reaffirmation A-14; CSAPH Rep. 3, I-08]

D-135.966 Declaring Climate Change a Public Health Crisis

1. Our AMA declares climate change a public health crisis that threatens the health and well-being of all individuals. 2. Our AMA will protect patients by advocating for policies that: (a) limit global warming to no more than 1.5 degrees Celsius, (b) reduce US greenhouse gas emissions aimed at a 50 percent reduction in emissions by 2030 and carbon neutrality by 2050, and (c) support rapid implementation and incentivization of clean energy solutions and significant investments in climate resilience through a climate justice lens. 3. Our AMA will consider signing on to the Department of Health and Human Services Health Care Pledge or making a similar commitment to lower its own greenhouse gas emissions. 4. Our AMA encourages the health sector to lead by example in committing to carbon neutrality by 2050. 5. Our AMA will develop a strategic plan for how we will enact our climate change policies including advocacy priorities and strategies to decarbonize physician practices and the health sector with report back to the House of Delegates at the 2023 Annual Meeting. [Appended: CSAPH Rep. 02, I-22; Res. 420, A-22]

H-135.939 Green Initiatives and the Health Care Community

Our AMA supports: (1) responsible waste management and clean energy production policies that minimize health risks, including the promotion of appropriate recycling and waste reduction; (2) the use of ecologically sustainable products, foods, and materials when possible; (3) the development of products that are non-toxic, sustainable, and ecologically sound; (4) building practices that help reduce resource utilization and contribute to a healthy environment; (5) the establishment, expansion, and continued maintenance of affordable, accessible, barrier-free, reliable, and clean-energy public transportation; and (6) community-wide adoption of 'green' initiatives and activities by organizations, businesses, homes, schools, and government and health care entities. [Modified: Res. 923, I-19; Modified: Res. 516, A-18; Reaffirmed in lieu of: Res. 504, A-16; Reaffirmed in lieu of Res. 402, A-10; Reaffirmation A-09; CSAPH Rep. 1, I-08]

H-135.923 AMA Advocacy for Environmental Sustainability and Climate

Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities. [Reaffirmation: I-19; Res. 924, I-16]

D-135.997 Environmental Contributors to Disease and Advocating for Environmental Justice

Our AMA will (1) advocate for the greater public and private funding for research into the environmental causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease and environmental racism as a priority public health issues; (3) encourage federal, state, and local agencies to address and remediate environmental injustice, environmental racism, and all other environmental conditions that are adversely impacting health, especially in marginalized communities; and (4) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies. [Modified: Res. 415, A-23; Reaffirmed in lieu of: Res. 505, A-19; Appended: Res. 927, I-11; Res. 402, A-03]

D-440.912 AMA Public Health Strategy

1. Our AMA will distribute evidence-based information on the relationship between climate change and human health through existing platforms and communications channels, identify advocacy and leadership opportunities to elevate the voices of physicians on the public health crisis of climate change, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050. 2. Our AMA Board of Trustees will provide an update on loss of coverage and uninsurance rates following the return to regular Medicaid redeterminations and the end of the COVID-19

Public Health Emergency, the ensuing financial and administrative challenges experienced by physicians, physician practices, hospitals, and the healthcare system; and a report of actions taken by the AMA and recommendation for further action to address these issues at I-2023. 3. Our AMA Board of Trustees will provide a strategic plan or outline for the AMA's plan to address and combat the health effects of climate change at I-2023. 4. Our AMA Board of Trustees will provide an update on the efforts and initiatives of the AMA's gun violence task force at I-2023. 5. Our AMA will continue to support increased funding for public health infrastructure and workforce, which should include funding for preventative medicine-related residency programs, to increase public health leadership in this country. [Modified: BOT Rep. 05, I-23; BOT Rep. 17, A-23]

H-470.953 Evaluating Green Space Initiatives

Our AMA supports appropriate stakeholders in conducting studies to evaluate different green space initiatives that could be implemented in communities to improve patients' health and eliminate health disparities. [Res. 905, I-15]

H-135.923 AMA Advocacy for Environmental Sustainability and Climate

Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities. [Reaffirmation: I-19; Res. 924, I-16]

D-135.997 Environmental Contributors to Disease and Advocating for Environmental Justice

Our AMA will (1) advocate for the greater public and private funding for research into the environmental causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease and environmental racism as a priority public health issues; (3) encourage federal, state, and local agencies to address and remediate environmental injustice, environmental racism, and all other environmental conditions that are adversely impacting health, especially in marginalized communities; and (4) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies. [Modified: Res. 415, A-23; Reaffirmed in lieu of: Res. 505, A-19; Appended: Res. 927, I-11; Res. 402, A-03]

H-135.949 Support of Clean Air and Reduction in Power Plant Emissions

(1) Our AMA supports (a) federal legislation and regulations that meaningfully reduce the following four major power plant emissions: mercury, carbon dioxide, sulfur dioxide and nitrogen oxide; and (b) efforts to limit carbon dioxide emissions through the reduction of the burning of coal in the nation's power generating plants, efforts to improve the efficiency of power plants and continued development, promotion, and widespread implementation of alternative renewable energy sources in lieu of carbon-based fossil fuels. 2. Our AMA will: (a) support the Environmental Protection Agency's proposal, under the Clean Air Act, to regulate air quality for heavy metals and other air toxins emitted from smokestacks. The risk of dispersion through air and soil should be considered, particularly for people living downwind of smokestacks; and (b) urge the EPA to finalize updated mercury, cadmium, and air toxic regulations for monitoring air quality emitted from power plants and other industrial sources, ensuring that recommendations to protect the public's health are enforceable. [Appended: Res. 401, A-22; Modified: Res. 908, I-17; Modified: Res. 506, A-15; Reaffirmed: Res. 421, A-14; Reaffirmed in lieu of Res. 526, A-12; Reaffirmation I-07; Res. 429, A-03]

H-135.973 Stewardship of the Environment

The AMA: (1) encourages physicians to be spokespersons for environmental stewardship, including the discussion of these issues when appropriate with patients; (2) encourages the medical community to cooperate in reducing or recycling waste; (3) encourages physicians and the rest of the medical community to dispose of its medical waste in a safe and properly prescribed manner; (4) supports enhancing the role of physicians and other scientists in environmental education; (5) endorses legislation such as the National Environmental Education Act to increase public understanding of environmental degradation and its prevention; (6) encourages research efforts at ascertaining the physiological and psychological effects of abrupt as well as chronic environmental changes; (7) encourages international

exchange of information relating to environmental degradation and the adverse human health effects resulting from environmental degradation; (8) encourages and helps support physicians who participate actively in international planning and development conventions associated with improving the environment; (9) encourages educational programs for worldwide family planning and control of population growth; (10) encourages research and development programs for safer, more effective, and less expensive means of preventing unwanted pregnancy; (11) encourages programs to prevent or reduce the human and environmental health impact from global climate change and environmental degradation. (12) encourages economic development programs for all nations that will be sustainable and yet nondestructive to the environment; (13) encourages physicians and environmental scientists in the United States to continue to incorporate concerns for human health into current environmental research and public policy initiatives; (14) encourages physician educators in medical schools, residency programs, and continuing medical education sessions to devote more attention to environmental health issues; (15) will strengthen its liaison with appropriate environmental health agencies, including the National Institute of Environmental Health Sciences (NIEHS); (16) encourages expanded funding for environmental research by the federal government; and (17) encourages family planning through national and international support. [Reaffirmation I-16; Reaffirmed in lieu of Res. 402, A-10; Reaffirmed in lieu of Res. 417, A-04; Amended: CSA Rep. 8, A-03; Amended: CLRPD Rep. D, I-92; CSA Rep. G, I-89]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 417
(A-24)

Introduced by: California

Subject: Reducing Job-Related Climate Risk Factors

Referred to: Reference Committee D

1 Whereas, heat causes more deaths per year in the U.S. than any other weather hazard; and

2
3 Whereas, individuals who work outdoors, especially those working in construction and
4 agriculture, may be frequently exposed to extreme heat conditions and be at-risk for
5 occupational heat-related illnesses, such as dehydration, heat exhaustion, and heat stroke;¹³
6 and

7
8 Whereas, the Occupational Safety and Health Administration Heat Illness Prevention tool
9 includes “indoor work in warm/hot environments with heat sources such as ovens, fires, hot tar,
10 and/or other radiant heat sources,” as a job-related risk factor for heat exposure at a
11 workplace;¹⁴ and

12
13 Whereas, indoor and outdoor cold work conditions need to be addressed as well; therefore be it

14
15 RESOLVED, that our American Medical Association support enforcement of existing outdoor
16 health standards and the establishment of enforceable indoor heat and outdoor cold illness
17 prevention standards, for occupational settings, schools, licensed health care and other
18 congregate facilities. (New HOD Policy)

19
Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA POLICY

D-135.967 Advocating for Heat Exposure Protections for All Workers

Our AMA: (1) will advocate for all workers to have access to preventive cool-down rest periods in shaded, ventilated, and/or cooled areas for prevention of injury from sun exposure and heat injury as well as appropriate access to emergency services when signs and symptoms of heat exposure injury; (2) will advocate for legislation that creates federal standards for protections against heat stress and sun exposure specific to the hazards of the workplace; (3) supports policy change at the federal level via legislation or administrative rule changes by the Occupational Safety and Health Administration (OSHA) that would require that workers receive health educational materials about prevention and recognition

of heat exhaustion and heat exposure injury that is in the worker's primary language: (4) will work with the United States Department of Labor, OSHA, and other appropriate federal stakeholders to develop and enforce evidence-based policies, guidelines, and protections against heat injury for workers independent of legal status; and (5) recognizes there are particular medical conditions and medications, including but not limited to psychotropics, which increase an individual's vulnerability to the negative impacts of heat and sun exposure and advocate for recognition of this, as well as additional protections as part of any guidelines, legislation or other policies. [Res. 502, I-21]

H-130.951 Heat-Related Illness

The AMA recognizes the significant public health threat imposed by heat-related emergencies, and provides the following policy: (1) Physicians should identify patients at risk for extreme heat-related illness such as the elderly, children, individuals with physical or mental disabilities, alcoholics, the chronically ill, and the socially isolated. Patients, family members, friends, and caretakers should be counseled about prevention strategies to avoid such illness. Physicians should provide patients at risk with information about cooling centers and encourage their use during heat emergencies. (2) The AMA encourages patients at risk for heat-related illness to consider wearing appropriate medical identification. [Reaffirmed: CSAPH Rep. 01, A-17; Reaffirmed: CSAPH Rep. 3, A-07; CSA Rep. 10, A-97]

H-135.938 Global Climate Change and Human Health

Our AMA: 1. Supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change. 2. Our AMA Board of Trustees will provide a strategic plan or outline for the AMA's plan to address and combat the health effects of climate change at I-2023. 4. Our AMA Board of Trustees will provide an update on the efforts and initiatives of the AMA's gun violence task force at I-2023. 5. Our AMA will continue to support increased funding for public health infrastructure and workforce, which should include funding for preventative medicine-related residency programs, to increase public health leadership in this country. [Modified: BOT Rep. 05, I-23; BOT Rep. 17, A-23]

H-135.973 Stewardship of the Environment

The AMA: (1) encourages physicians to be spokespersons for environmental stewardship, including the discussion of these issues when appropriate with patients; (2) encourages the medical community to cooperate in reducing or recycling waste; (3) encourages physicians and the rest of the medical community to dispose of its medical waste in a safe and properly prescribed manner; (4) supports enhancing the role of physicians and other scientists in environmental education; (5) endorses legislation such as the National Environmental Education Act to increase public understanding of environmental degradation and its prevention; (6) encourages research efforts at ascertaining the physiological and psychological effects of abrupt as well as chronic environmental changes; (7) encourages international exchange of information relating to environmental degradation and the adverse human health effects resulting from environmental degradation; (8) encourages and helps support physicians who participate actively in international planning and development conventions associated with improving the environment; (9) encourages educational programs for worldwide family planning and control of population growth; (10) encourages research and development programs for safer, more effective, and less expensive means of preventing unwanted pregnancy; (11) encourages programs to prevent or reduce the human and environmental health impact from global climate change and environmental degradation. (12) encourages economic development programs for all nations that will be sustainable and yet nondestructive to the environment; (13) encourages physicians and environmental scientists in the United States to continue to incorporate concerns for human health into current environmental research and public policy initiatives; (14) encourages physician educators in medical schools, residency programs, and continuing medical education sessions to devote more attention to environmental health issues; (15) will strengthen its liaison with appropriate environmental health agencies, including the

National Institute of Environmental Health Sciences (NIEHS); (16) encourages expanded funding for environmental research by the federal government; and (17) encourages family planning through national and international support. [Reaffirmation I-16; Reaffirmed in lieu of Res. 402, A-10; Reaffirmed in lieu of Res. 417, A-04; Amended: CSA Rep. 8, A-03; Amended: CLRPD Rep. D, I-92; CSA Rep. G, I-89]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 418
(A-24)

Introduced by: Resident and Fellow Section
Subject: Early and Periodic Eye Exams for Adults
Referred to: Reference Committee D

1 Whereas, eye exams are a screening tool that uses evidence-based medicine to assess for the
2 presence or absence of diseases to provide treatment and work to preserve vision¹⁻²; and
3
4 Whereas, the American Academy of Ophthalmology (AAO) recommends that all adults get a
5 complete eye examination by an ophthalmologist at age 40 in order to detect common diseases,
6 provide early treatment, and preserve vision³⁻⁴; and
7
8 Whereas, those under the age of 40 who are healthy and have good vision should receive a eye
9 exam every 5–10 years³⁻⁵; and
10
11 Whereas, adults who suffer from chronic systemic conditions are more likely to develop eye
12 disorders and subsequent vision loss from eye disorders than their healthy peers and would
13 benefit from earlier screening to better manage their disorders⁶⁻⁷; and
14
15 Whereas, diseases such as diabetes and high blood pressure, as well as family history of eye
16 disease, significantly raise an individual's chances of developing eye related disease, and
17 people with this history are not recommended to wait to get an eye exam until they are 40 years
18 old^{3,6-7}; and
19
20 Whereas, diabetic patients can develop diabetic retinopathy, earlier cataracts, and glaucoma;
21 this increased risk does not start when the patient can be classified as elderly, but has rather
22 been shown to start from the age of 45 years according to the Centers for Disease Control and
23 Prevention (CDC)⁸⁻¹¹; and
24
25 Whereas, according to the CDC, approximately 4.5% of adults aged 45–64 have undiagnosed
26 diabetes, something which a baseline or routine eye exam could aid in diagnosing as according
27 to the National Eye Institute⁸⁻¹²; and
28
29 Whereas, 40–45% of Americans with diabetes have visibly evident diabetic retinopathy, which
30 can show up early in the disease process of diabetes¹¹; and
31
32 Whereas, according to the CDC, early detection and treatment can prevent or delay blindness
33 due to diabetic retinopathy in 90% of people with diabetes, but 50% or more of them don't get
34 their eyes examined or are diagnosed too late for effective treatment and could therefore benefit
35 from early eye examinations¹; and

1 Whereas, hypertensive patients likewise have similar ocular manifestations such as:
2 hypertensive retinopathy, choroidopathy, and ocular neuropathy¹³⁻¹⁴; and
3

4 Whereas, earlier screening and treatment for these patients has been shown to reduce the
5 burden of blindness due to diabetic retinopathy and hypertensive eye disease¹⁵; and
6

7 Whereas, diabetes and hypertension continue to increase in prevalence in the U.S. making this
8 a growing issue that should be addressed sooner rather than later to decrease sequelae and
9 financial burden^{9,16}; and
10

11 Whereas, Medicare and other insurance companies do not cover routine eye examinations
12 without a pre-existing diagnosis¹⁷; and
13

14 Whereas, the AMA supports evidence-based screening in policy G-600.064, "AMA
15 Endorsement of Screening Tests or Standards," stating "Our AMA continues to advocate its
16 policies on medical necessity determinations to government agencies, managed care
17 organizations, third party payers, and private sector health care accreditation organizations."¹⁸;
18 and
19

20 Whereas, the AMA has policy supporting eye screenings for children (Encouraging Vision
21 Screenings for Schoolchildren H-425.977) and for the elderly (Eye Exams for the Elderly H-
22 25.990); however, for all adults, but especially for those adults at high risk, screenings need to
23 occur between childhood and old age¹⁹⁻²⁰; and
24

25 Whereas, the AAO has policy that supports the screening of children and the elderly, as well as
26 healthy adults at age 40, and particularly supports that all individuals who are "at high risk of
27 developing ocular abnormalities related to systemic diseases such as diabetes mellitus and
28 hypertension or who have a family history of eye disease, require periodic comprehensive eye
29 examinations to prevent or minimize vision loss²¹"; and
30

31 Whereas, the AMA does not have a policy encouraging eye screenings for either adults
32 between childhood and elderliness nor those especially vulnerable adults who are at high risk of
33 developing ocular abnormalities related to systemic diseases or who have a family history of
34 eye disease and addressing this gap will actively decrease vision loss; and
35

36 Whereas, current United States Preventive Services Task Force (USPSTF) guidelines do not
37 have any recommendations regarding adult eye examinations and have only weighed in on the
38 evidence regarding vision screening, stating "evidence is insufficient to assess the balance of
39 benefits and harms of screening for impaired visual acuity in older adults"²²; and
40

41 Whereas, vision screening as discussed in the USPSTF is a completely distinct diagnostic tool
42 to an eye examination which is discussed in this resolution; and
43

44 Whereas, the AAO describes vision screening as a distinct entity from eye examinations; and
45 furthermore that vision screenings are unable "to provide the same results as a comprehensive
46 eye and vision examination" from an ophthalmologist or optometrist and that "Comprehensive
47 eye examinations are the only effective way to confirm or rule out any eye disease²³"; and
48

49 Whereas, this is especially true in the setting of undiagnosed hypertensive and diabetic
50 retinopathies, where vision loss happens late in the course of the disease and where, according

1 to the CDC, patients “may not notice symptoms in the early stage. That’s why it’s very important
2 to get a dilated eye exam at least once a year to catch any problems early when treatment is
3 most effective²⁴”; and

4
5 Whereas, various recent proposals from the executive and legislative branches (including
6 President Biden’s 2022 budget request, House bill H.R. 33 introduced to the House of
7 Representatives in 2023, and the Senate bill S.842 introduced to the Senate also in 2023) have
8 proposed the creation of additional benefits for routine eye exams under Medicare Part B,
9 showing significant political interest in increasing insurance benefits for eye exams²⁵⁻²⁷; and

10
11 Whereas, by updating AMA policy H-25.990 to include eye examinations for those older than 40
12 years and who have chronic systemic conditions affecting development of eye disease our AMA
13 will be in line with current AAO guidelines^{3,4}; therefore be it

14
15 RESOLVED, that our American Medical Association amend policy H-25.990 “Eye Exams for the
16 Elderly” by addition to read as follows:

17
18 **Eye Exams for the Elderly and Adults H-25.990**

19 Our AMA (1) encourages the development of programs and/or outreach efforts to
20 support periodic eye examinations and access to affordable prescription eyeglasses for
21 elderly patients and adults who suffer from chronic systemic conditions that increase
22 their likelihood of developing eye disease as well as a baseline eye examination for all
23 adults aged 40 and above. (2) Our AMA encourages physicians to work with their state
24 medical associations and appropriate specialty societies to create statutes that uphold
25 the interests of patients and communities and that safeguard physicians from liability
26 when reporting in good faith the results of vision screenings.

27 (Modify Current HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA POLICY:

AMA Endorsement of Screening Tests or Standards G-600.064

(1) Delegates, state, or specialty societies submitting a resolution seeking endorsement or AMA adoption of specific screening tests must also submit an evidence-based review that determines the strength or quality of the evidence supporting their request, and that evaluates the degree to which the test satisfies the minimal criteria for validating the appropriateness of the screening test, which are: (a) the test must be able to detect the target condition earlier than without screening and with sufficient accuracy to avoid producing large numbers of false-positive and false-negative results; and (b) screening for and treating persons with early disease should improve the likelihood of favorable health outcomes compared with treating patients when they present with signs or symptoms of disease. (2) This review will be made available to the reference committee, which will either recommend to the House of Delegates that the resolution be referred or not be adopted. [CSA Rep. 7, A-02CC&B Rep. 3, I-08 Reaffirmed: CCB/CLRPD Rep. 3, A-12 Reaffirmed: CCB/CLRPD Rep. 1, A-22]

Early and Periodic Screening, Diagnosis, and Treatment D-290.987

Our AMA recognizes the importance of the Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) program and will advocate for EPSDT to remain intact as critical to the health and well-being of children. [Res. 708, I-05 Modified: CMS Rep. 1, A-15]

Insurance Coverage of Periodic Health Care Services H-185.965

Our AMA adopts the policy that patients should be able to receive insurance coverage for periodic services performed within an appropriately flexible interval (i.e., once annually, rather than having to wait precisely 365 days). [Res. 128, A-99 Reaffirmed: CMS Rep. 5, A-09 Modified: Sub. Res. 811, I-10 Reaffirmed: CMS Rep. 01, A-20]

Eye Exams for the Elderly H-25.990

1. Our American Medical Association encourages the development of programs and/or outreach efforts to support periodic eye examinations and access to affordable prescription eyeglasses for elderly patients.
2. Our AMA encourages physicians to work with their state medical associations and appropriate specialty societies to create statutes that uphold the interests of patients and communities and that safeguard physicians from liability when reporting in good faith the results of vision screenings.

[Res. 813, I-05 Reaffirmed: CSAPH Rep. 1, A-15, Modified: CMS Rep. 02, A-23]

Encouraging Vision Screenings for Schoolchildren H-425.977

Our AMA: (1) encourages and supports outreach efforts to provide vision screenings for school-age children prior to primary school enrollment; (2) encourages the development of programs to improve school readiness by detecting undiagnosed vision problems; and (3) supports periodic pediatric eye screenings based on evidence-based guidelines with referral to an ophthalmologist for a comprehensive professional evaluation as appropriate. [Res. 430, A-05 Modified: CSAPH Rep. 1, A-15]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 419
(A-24)

Introduced by: Medical Student Section

Subject: Addressing the Health Risks of Extreme Heat

Referred to: Reference Committee D

1 Whereas, since the 1960s, the annual number of heat waves in the US has tripled from 2 to 6,
2 with concurrent increases in heat intensity resulting in the hottest summer ever in 2023^{1,2}; and
3
4 Whereas, heat is the most deadly weather phenomenon and caused 1,714 deaths in 2022,
5 nearly 6 times as much as the 297 deaths in 2004^{3,4}; and
6
7 Whereas, prolonged heat exposure is associated with emergency visits, hospitalizations, and
8 deaths due to cardiovascular, kidney, respiratory, and psychiatric illnesses, adverse pregnancy
9 and birth outcomes, and increased healthcare costs⁵⁻⁷; and
10
11 Whereas, a 2023 study in *Circulation*, the journal of the American Heart Association, estimates
12 4,300 to 5,500 excess deaths due to heat by mid-century, based on socioeconomic status⁸; and
13
14 Whereas, 25% of the US experiences reduced resilience to extreme heat exposure, especially
15 due to housing quality, vehicle access, and poverty⁹; and
16
17 Whereas, because infrastructure in urban areas absorbs and re-emits heat more than natural
18 landscapes, daytime temperatures in these cities can increase by 1.7 degrees compared to
19 other areas, which further intensifies heat waves in metropolitan regions^{10,11}; and
20
21 Whereas, greenspaces in cities, such as large parks, can reduce temperatures by up to 2
22 degrees, mitigating the heat island effect and heat-related morbidity and mortality^{12,13}; and
23
24 Whereas, historically redlined neighborhoods have decreased tree canopy coverage and lower
25 normalized difference vegetation indexes (NDVIs) compared to other areas¹⁴; and
26
27 Whereas, the Stafford Act, passed in 1988, does not consider extreme heat a major disaster
28 eligible for Federal Emergency Management Agency (FEMA) assistance^{15,16}; and
29
30 Whereas, the Centers for Disease Control and Prevention (CDC) Climate and Health Technical
31 Report on “heat response plans” defines them as “a coordinated plan that describes and
32 organizes activities to prevent heat-related morbidity and mortality in a community,” including
33 surveillance, public health messaging, front-line health and social services, cooling centers,
34 water and fan distribution, energy assistance, and greenspaces¹⁷; and
35
36 Whereas, heat response plans, household air conditioning, and availability of cool areas have
37 been associated with decreased heat-related mortality, with a greater effect for elderly
38 populations and people in neighborhoods with low education levels^{18,19}; and

1 Whereas, many homes experience dangerously high indoor heat indexes during extreme heat,
2 but 7.5% lack air conditioning, including 12% of low-income households^{20,21}; and

3
4 Whereas, a 2021 study of 25 US cities found that nearly 90% of people were not within walking
5 distance of a cooling center and that people aged 65 and over were particularly affected²²;

6
7 Whereas, a US Census survey found that 26% of Americans were forced to forgo food,
8 medicine, or another necessary expense to pay an energy bill, and 17% had kept their home at
9 an unsafe or unhealthy temperature in the past year²³; and

10
11 Whereas, funding for the Low Income Home Energy Assistance Program (LIHEAP), which helps
12 families pay for energy bills and basic weatherization, has fallen from \$5.1 billion in 2009 to \$3.8
13 billion in 2022, and now less than 20% of eligible households receive aid^{24,25}; and

14
15 Whereas, an analysis of US public and private prisons revealed that a 10-degree temperature
16 increase is correlated with a 5.2% increase in mortality, 6.7% increase in cardiovascular
17 mortality, and 22% increase in suicide (mostly affecting men over 65)²⁶; and

18
19 Whereas, the Federal Bureau of Prisons suggests temperatures at “76°F in the cooling season
20 and 68°F in the heating season,” but its Facilities Operations Manual acknowledges that the
21 “age of heating and cooling systems” affects the ability to maintain these ranges²⁷; and

22
23 Whereas, many state attempts to implement temperature standards in prisons have stalled, and
24 44 states lack universal air conditioning in their prison systems, many of which are located in
25 deteriorating facilities that will be further affected by climate change^{28,29}; therefore be it

26
27 RESOLVED, that our American Medical Association support funding for subsidizing energy
28 costs and air conditioning units for low-income households to maintain safe temperatures during
29 periods of extreme temperature (New HOD Policy); and be it further

30
31 RESOLVED, that our AMA support the implementation and enforcement of state and federal
32 temperature standards in prisons, jails, and detention centers, including the implementation of
33 air conditioning in areas that experience dangerously high temperatures. (New HOD Policy)

RELEVANT AMA Policy

Heat-Related Illness H-130.951

The AMA recognizes the significant public health threat imposed by heat-related emergencies, and provides the following policy: (1) Physicians should identify patients at risk for extreme heat-related illness such as the elderly, children, individuals with physical or mental disabilities, alcoholics, the chronically ill, and the socially isolated. Patients, family members, friends, and caretakers should be counseled about prevention strategies to avoid such illness. Physicians should provide patients at risk with information about cooling centers and encourage their use during heat emergencies. (2) The AMA encourages patients at risk for heat-related illness to consider wearing appropriate medical identification. [CSA Rep. 10, A-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmed: CSAPH Rep. 01, A-17]

H-470.953 Evaluating Green Space Initiatives

Our AMA supports appropriate stakeholders in conducting studies to evaluate different green space initiatives that could be implemented in communities to improve patients' health and eliminate health disparities. [Res. 905, I-15]

Advocating for Heat Exposure Protections for All Workers D-135.967

Our AMA: (1) will advocate for all workers to have access to preventive cool-down rest periods in shaded, ventilated, and/or cooled areas for prevention of injury from sun exposure and heat injury as well as appropriate access to emergency services when signs and symptoms of heat exposure injury; (2) will advocate for legislation that creates federal standards for protections against heat stress and sun exposure specific to the hazards of the workplace; (3) supports policy change at the federal level via legislation or administrative rule changes by the Occupational Safety and Health Administration (OSHA) that would require that workers receive health educational materials about prevention and recognition of heat exhaustion and heat exposure injury that is in the worker's primary language; (4) will work with the United States Department of Labor, OSHA, and other appropriate federal stakeholders to develop and enforce evidence-based policies, guidelines, and protections against heat injury for workers independent of legal status; and (5) recognizes there are particular medical conditions and medications, including but not limited to psychotropics, which increase an individual's vulnerability to the negative impacts of heat and sun exposure and advocate for recognition of this, as well as additional protections as part of any guidelines, legislation or other policies. [Res. 502, I-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 420
(A-24)

Introduced by: Pennsylvania, Mississippi

Subject: Equity in Dialysis Care

Referred to: Reference Committee D

1 Whereas, kidney disease disproportionately affects communities of color; and
2
3 Whereas, Black or African Americans are almost four times more likely and Hispanic or Latino
4 Americans are 1.3 times more likely to have kidney failure compared to White or Caucasian
5 Americans; and
6
7 Whereas, although they make up only 13.5% of the population, Black Americans make up more
8 than 35% of dialysis patients; and
9
10 Whereas, the major causes of kidney disease, including diabetes, hypertension, and
11 cardiovascular disease, are all more prevalent among Black patients; and
12
13 Whereas, although a kidney transplant is the optimal treatment for kidney failure, Black patients
14 face barriers to access at every step of the process and on average wait a year longer than
15 White patients to receive a kidney transplant; and
16
17 Whereas, Black patients are less likely to receive a transplant evaluation, have less access to
18 the waitlist, spend longer on the transplant waitlist, are less likely to survive on the waitlist, and
19 have lower rates of graft survival post-transplant; and
20
21 Whereas, despite being preferred by many patients, home dialysis is underutilized compared to
22 dialysis delivered in a facility, particularly among communities of color; and
23
24 Whereas, Black and Hispanic patients are less likely to initiate home dialysis and are more likely
25 to fail on the modality within the first 90 days, after which point disparities in home dialysis
26 utilization widen; and
27
28 Whereas, this may be because common barriers to home dialysis such as unstable living
29 situations, poor health literacy and lower socioeconomic status may be overrepresented among
30 Black and Hispanic dialysis patients; and
31
32 Whereas, the National Kidney Foundation calls kidney disease ‘the under recognized public
33 health crisis’; therefore be it
34
35 RESOLVED, that our American Medical Association declare kidney failure as a significant public
36 health problem with disproportionate affects and harm to under-represented communities (New
37 HOD Policy); and be it further

1 RESOLVED, that our AMA vigorously pursue potential solutions and partnerships to identify
2 economic, cultural, clinical and technological solutions that increase equitable access to all
3 modalities of care including home dialysis. (Directive to Take Action)
4

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

RELEVANT AMA POLICY

Assuring Patient Access to Kidney Transplantation D-370.983

1. Our AMA will: (a) work with professional and patient-centered organizations to advance patient and physician-directed coordinated care for End Stage Renal Disease (ESRD) patients; (b) actively oppose any legislative or regulatory efforts to remove patient choice and physician involvement in ESRD care decisions; and (c) actively oppose any legislative or regulatory effort that would create financial incentives that would curtail the access to kidney transplantation.

2. Our AMA House of Delegates will be advised in a timely fashion regarding any legislative or regulatory efforts to abrogate patient and physician-advised decision-making regarding modality of care for ESRD.

3. Our AMA supports federal legislative and regulatory policies that improve kidney transplantation access by using evidence-based outcome measures which do not impede sound clinical judgment of physicians and surgeons.

Citation: Res. 201, A-19; Appended: Res. 210, I-19;

Medicaid Dialysis Policy for Undocumented Patients H-290.957

Our AMA will work with the Centers for Medicare and Medicaid Services and state Medicaid programs to cover scheduled outpatient maintenance dialysis for undocumented patients with end stage kidney disease under Emergency Medicaid.

Citation: Res. 121, A-21;

Advancing Quality Coordinated Care for Patients with End Stage Renal Disease H-370.957

Our AMA will work with Members of Congress and their staffs to ensure that any legislation which promotes integrated and patient-centered care for End Stage Renal Disease (ESRD) patients does not inappropriately impinge on the patient-physician relationship and is in the best interest of ESRD patients.

Citation: BOT Action in response to referred for decision: Res. 219, A-18;

UNOS Kidney Paired Donation Program H-370.960

Our AMA: (1) encourages the continued expansion of the United Network for Organ Sharing's (UNOS) Kidney Paired Donation program which provides a national registry of living donors, carries out ongoing data collection on key issues of concern in transplantation from living donors, and through its operational guidelines provides consistent, national standards for the transplant community; and (2) encourages voluntary coordination among private donor registries and UNOS to enhance the availability of organs for transplantation.

Citation: BOT Action in response to referred for decision Res. 2, A-13; Reaffirmation: I-19;

Cost-Saving Public Coverage for Renal Transplant Patients H-370.963

1. Our AMA supports private and public mechanisms that would extend insurance coverage for evidence-based treatment of renal transplant care for the life of the transplanted organ.

2. Our AMA will continue to offer technical assistance to individual state and specialty societies when those societies lobby state or federal legislative or executive bodies to implement evidence-based cost-saving policies within public health insurance programs.

Citation: Res. 104, A-13; Reaffirmation: I-19;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 421
(A-24)

Introduced by: American Society for Metabolic and Bariatric Surgery, Obesity Medicine Association, Society of American Gastrointestinal and Endoscopic Surgeons

Subject: Annual Conference on the State of Obesity and its Impact on Disease in America (SODA)

Referred to: Reference Committee D

1 Whereas, the American Medical Association (AMA) recognizes the critical importance of
2 addressing the impact of obesity on various chronic diseases, including hypertension,
3 cardiovascular disease, type 2 diabetes, and metabolic dysfunction-associated hepatitis; and
4
5 Whereas, obesity significantly increases the risk of developing these chronic conditions, leading
6 to substantial morbidity, mortality, and healthcare costs across the United States; and
7
8 Whereas, the AMA is committed to advancing evidence-based approaches to prevent and
9 manage obesity-related chronic diseases, improve patient outcomes, and enhance healthcare
10 delivery systems; and
11
12 Whereas, regular monitoring of epidemiological trends, development of effective disease
13 progression algorithms, and coordination of efforts to improve access to care are essential
14 components of addressing the multifaceted challenges posed by obesity-related chronic
15 diseases; therefore be it
16
17 RESOLVED, that our American Medical Association convene an annual meeting of its
18 Federation partners to comprehensively review the impact of obesity on hypertension,
19 cardiovascular disease, type 2 diabetes, metabolic dysfunction-associated hepatitis (MASH)
20 and other related comorbidities with a focus on monitoring epidemiology, developing algorithms
21 to combat disease progression, and coordinating efforts to improve access to care (Directive to
22 Take Action); and be it further
23
24 RESOLVED, that our AMA shall feature presentations, workshops, and panel discussions
25 covering the latest research findings, clinical guidelines, and best practices related to the
26 prevention, diagnosis, and management of obesity-related chronic diseases (Directive to Take
27 Action); and be it further
28
29 RESOLVED, that our AMA shall invite renowned experts, researchers, clinicians, policymakers,
30 and patient advocates to contribute their insights, experiences, and recommendations during
31 the annual meeting (Directive to Take Action); and be it further
32
33 RESOLVED, that our AMA shall collaborate with relevant stakeholders, including government
34 agencies, healthcare systems, insurers, community organizations, and industry partners, to
35 develop and implement strategies for combating obesity-related chronic diseases (Directive to
36 Take Action); and be it further

- 1 RESOLVED, that our AMA assist in the discussion of epidemiological trends, development of
2 evidence-based algorithms for disease management, and coordination of efforts to improve
3 access to care for patients affected by obesity-related chronic diseases (Directive to Take
4 Action); and be it further
5
6 RESOLVED, that our AMA shall publish a comprehensive report summarizing the discussions,
7 findings, and recommendations from each annual meeting and disseminate it to member
8 organizations, policymakers, healthcare providers, and the public (Directive to Take Action); and
9 be it further
10
11 RESOLVED, that the AMA shall convene the first annual meeting in 2025 and subsequent
12 meetings annually thereafter. (Directive to Take Action)

Fiscal Note: \$252,347 Annually: Convene an annual meeting of Federation partners on obesity

Received: 4/30/2024

RELEVANT AMA POLICY

Recognition of Obesity as a Disease H-440.842

Our American Medical Association recognizes obesity as a disease state with multiple pathophysiological aspects requiring a range of interventions to advance obesity treatment and prevention.

Res. 420, A-13 Reaffirmed: CSAPH Rep. 08, A-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 422
(A-24)

Introduced by: Ohio
Subject: Immunization Registry
Referred to: Reference Committee D

1 Whereas, the critical role of vaccines in our public health infrastructure is well-established; and
2
3 Whereas, every state maintains an immunization registry; and
4
5 Whereas, pediatric vaccines are routinely reported electronically to the appropriate state
6 registry; and
7
8 Whereas, immunization registry data is crucial for determining the effectiveness of a given
9 vaccine; and
10
11 Whereas, an increasing number of adult vaccines are administered by pharmacies; and
12
13 Whereas, a significant number of adult vaccines provided by pharmacies are not recorded in the
14 patient's primary medical records; and
15
16 Whereas, reporting vaccinations to government entities may require additional resources or
17 time; therefore be it
18
19 RESOLVED, that our American Medical Association develop model legislation requiring all
20 vaccine providers to participate in their statewide immunization information system (Directive to
21 Take Action); and be it further
22
23 RESOLVED, that our AMA support mandating all vaccine providers to report all immunizations
24 to their respective state immunization registry, for both adults and children (New HOD Policy);
25 and be it further
26
27 RESOLVED, that our AMA support reimbursement for reporting immunizations to state
28 registries by both public and private payers. (New HOD Policy)
29

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/26/2024

RELEVANT AMA POLICY

H-440.899 Immunization Registries

Our AMA encourages: (1) Physicians to participate in the development of immunization registries in their communities and use them in their practices for patients of all ages; (2) electronic health record (EHR) vendors to add features to automate the exchange of vaccination information in the patient EHR to state immunization registries to improve and help ensure completeness and accuracy of vaccination records. EHR vendors and registry administrators need to work with physicians and other health professionals to facilitate the exchange of needed vaccination information by establishing seamless, bidirectional communication capabilities for physicians, other vaccine providers, and immunization registries; and (3) all states to move rapidly to provide comprehensive lifespan immunization registries that are interfaced with other state registries. [Res. 415, A-99; Reaffirmed: 415, A-01; Reaffirmation A-09; Modified: CSAPH Rep. 4, I-14]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 423
(A-24)

Introduced by: Senior Physicians Section

Subject: HPV Vaccination to Protect Healthcare Workers over Age 45

Referred to: Reference Committee D

1 Whereas, there has been an increase with human papilloma virus (HPV) associated with head
2 and neck cancers¹; and

3
4 Whereas, health care workers (HCW) may be exposed to these oncogenic HPV in the course of
5 performance of their clinical tasks such as cauterization of cervical, vaginal, vulvar, penile
6 and/or anal cancers²; and

7
8 Whereas, many HCWs are over age 45 and thus not deemed eligible for HPV vaccine
9 insurance coverage or reimbursement according to Merck and Co., the current manufacturer, or
10 Center for Disease Control and Prevention (CDC) guidelines^{3,4}; and

11
12 Whereas, the cost of GARDASIL 9 without insurance coverage will cost a patient approximately
13 \$335 per dose with three doses required for maximum immunity attainment; and

14
15 Whereas, N-95 or equivalent masks are essential for significant protection during procedures;
16 therefore be it

17
18 RESOLVED, that our American Medical Association support all health care workers (HCWs)
19 who might be exposed to HPV in the course of their clinical duties and strongly encourage them
20 to wear masks, preferably N-95 (New HOD Policy); and be it further

21
22 RESOLVED, that our AMA will work with appropriate stakeholders to ensure that the HPV
23 vaccine should be offered to all HCWs with potential exposure to HPV oncogenic material at no
24 or minimal cost to the HCW individual (Directive to Take Action); and be it further

25
26 RESOLVED, that our AMA work with relevant stakeholders, including the CDC, to recommend
27 HPV vaccine to HCWs to prevent health care related transmission. (Directive to Take Action)

28
Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/2/2024

RELEVANT AMA POLICY

H-440.810 Availability of Personal Protective Equipment (PPE)

1. Our AMA affirms that the medical staff of each health care institution should be integrally involved in disaster planning, strategy and tactical management of ongoing crises.
 2. Our AMA supports evidence-based standards and national guidelines for PPE use, reuse, and appropriate cleaning/decontamination during surge conditions.
 3. Our AMA will advocate that it is the responsibility of health care facilities to provide sufficient personal protective equipment (PPE) for all employees and staff, as well as trainees and contractors working in such facilities, in the event of a pandemic, natural disaster, or other surge in patient volume or PPE need.
 4. Our AMA supports physicians and health care professionals and other workers in health care facilities in being permitted to use their professional judgement and augment institution-provided PPE with additional, appropriately decontaminated, personally-provided personal protective equipment (PPE) without penalty.
 5. Our AMA supports the rights of physicians and trainees to participate in public commentary addressing the adequacy of clinical resources and/or health and environmental safety conditions necessary to provide appropriate and safe care of patients and physicians during a pandemic or natural disaster.
 6. Our AMA will work with the HHS Office of the Assistant Secretary for Preparedness and Response to gain an understanding of the PPE supply chain and ensure the adequacy of the Strategic National Stockpile for public health emergencies.
 7. Our AMA encourages the diversification of personal protective equipment design to better fit all body types, cultural expressions and practices among healthcare personnel.
- [Res. 412, I-20; Appended: Res. 414, A-21; Modified; Res. 410, I-21]

D-440.955 Insurance Coverage for HPV Vaccine

Our AMA:

- (1) supports the use and administration of Human Papillomavirus vaccine as recommended by the Advisory Committee on Immunization Practices;
 - (2) encourages insurance carriers and other payers to appropriately cover and adequately reimburse the HPV vaccine as a standard policy benefit for medically eligible patients; and
 - (3) will advocate for the development of vaccine assistance programs to meet HPV vaccination needs of uninsured and underinsured populations.
- [Res. 818 I-06; Reaffirmed: CMS Report 01, A-16]

H-440.872 HPV Associated Cancer Prevention

1. Our American Medical Association:
 - a. urges physicians and other health care professionals to educate themselves and their patients about HPV and associated diseases, HPV vaccination, as well as routine HPV related cancer screening; and
 - b. encourages the development and funding of programs targeted at HPV vaccine introduction and HPV related cancer screening in countries without organized HPV related cancer screening programs.
2. Our AMA will intensify efforts to improve awareness and understanding about HPV and associated diseases in all individuals, regardless of sex, such as, but not limited to, cervical cancer, head and neck cancer, anal cancer, and genital cancer, the availability and efficacy of HPV vaccinations, and the need for routine HPV related cancer screening in the general public.
3. Our AMA supports legislation and funding for research aimed towards discovering screening methodology and early detection methods for other non-cervical HPV associated cancers.
4. Our AMA:
 - a. encourages the integration of HPV vaccination and routine cervical cancer screening into all appropriate health care settings and visits,
 - b. supports the availability of the HPV vaccine and routine cervical cancer screening to appropriate patient groups that benefit most from preventive measures, including but not limited to low-income and pre-sexually active populations,
 - c. recommends HPV vaccination for all groups for whom the federal Advisory Committee on Immunization Practices recommends HPV vaccination.
5. Our AMA encourages appropriate parties to investigate means to increase HPV vaccination rates by facilitating administration of HPV vaccinations in community-based settings including school settings.
6. Our AMA will study requiring HPV vaccination for school attendance.
7. Our AMA encourages collaboration with interested parties to make available human papillomavirus

vaccination to people who are incarcerated for the prevention of HPV-associated cancers.
[Res. 503, A-07; Appended: Res. 6, A-12; Reaffirmed: CSAPH Rep. 1, A-22; Reaffirmation:
A-22; Modified: Res. 916, I-22; BOT Action Sept 2023]

H-460.913 - Screening for HPV-Related Anal Cancer

Our AMA supports: (1) continued research on the diagnosis and treatment of anal cancer and its precursor lesions, including the evaluation of the anal pap smear as a screening tool for anal cancer; (2) advocacy efforts to implement screening for anal cancer for high-risk populations; and (3) national medical specialty organizations and other stakeholders in developing guidelines for interpretation, follow up, and management of anal cancer screening results.

[Res. 512, A-04; Reaffirmed: CSAPH Rep. 1, A-14; Appended: Res. 421, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 424
(A-24)

Introduced by: Senior Physicians Section

Subject: LGBTQ+ Senior Health

Referred to: Reference Committee D

1 Whereas, an estimated 2.7 million older Americans who identify as part of the LGBTQ+
2 community face unique and challenging health issues due to a combination of factors including
3 discrimination, social stigma, and lack of culturally competent healthcare¹; and
4

5 Whereas, LGBTQ+ seniors are more likely than other seniors to report poor general health,
6 mental health issues, social isolation and higher rates of multiple chronic co-morbidities²; and
7

8 Whereas, subsets of this community, in particular transgender seniors, face even higher rates
9 when compared to their LGBTQ+ cohorts³; and
10

11 Whereas, addressing the unique health needs of LGBTQ+ seniors require a comprehensive
12 approach that recognizes and respects their diverse identities and experiences; therefore be it
13

14 RESOLVED, that our American Medical Association create and disseminate educational
15 initiatives to increase awareness and understanding of senior LGBTQ+ health aging issues
16 among the general public, healthcare professionals, and policy makers (Directive to Take
17 Action); and be it further
18

19 RESOLVED, that our AMA develop and promote cultural competency training for clinicians in
20 caring for senior LGBTQ+ individuals (Directive to Take Action); and be it further
21

22 RESOLVED, that our AMA develop and promote policies and practices for implementation
23 within all healthcare settings that are inclusive and affirming for LGBTQ+ seniors (Directive to
24 Take Action); and be it further
25

26 RESOLVED, that our AMA advocate for increased funding and resources for research into
27 health issues of LGBTQ+ seniors. (Directive to Take Action)

RELEVANT AMA POLICY

H-160.991 Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations

Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.

2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.

3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.

4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people. [CSA Rep. C, I-81; Reaffirmed: CLRPD Rep. F, I-91; CSA Rep.8 - I-94; Appended: Res. 506, A-00; Modified and Reaffirmed: Res. 501, A-07; Modified: CSAPH Rep. 9, A-08; Reaffirmation A-12; Modified: Res. 08, A-16; Modified Res. 903, I-17; Modified: Res. 904, I-17; Res. 16, A-18; Reaffirmed: CSAPH Rep. 01 I-18]

H-295.878 Eliminating Health Disparities - Promoting Awareness and Education of Sexual Orientation and Gender Identity Health Issues in Medical Education

Our AMA: (1) supports the right of medical students and residents to form groups and meet on-site to further their medical education or enhance patient care without regard to their gender, gender identity, sexual orientation, race, religion, disability, ethnic origin, national origin or age; (2) supports students and residents who wish to conduct on-site educational seminars and workshops on health issues related to sexual orientation and gender identity; and (3) encourages medical education accreditation bodies to both continue to encourage and periodically reassess education on health issues related to sexual orientation and gender identity in the basic science, clinical care, and cultural competency curricula in undergraduate and graduate medical education.

[Res. 323, A-05; Modified in lieu of Res. 906, I-10; Reaffirmation A-11; Reaffirmation A-12; Reaffirmation A-16; Modified: Res. 16, A-18; Modified: Res. 302, I-19]

D-315.974 Promotion of LGBTQ-Friendly and Gender-Neutral Intake Forms

Our AMA will develop and implement a plan with input from the Advisory Committee on LGBTQ Issues and appropriate medical and community based organizations to distribute and promote the adoption of the recommendations pertaining to medical documentation and related forms in AMA policy H-315.967, "Promoting Inclusive Gender, Sex, and Sexual Orientation Options on Medical Documentation," to our membership.

[Res. 014, A-18]

G-635.125 AMA Membership Demographics

1. Stratified demographics of our AMA membership will be reported annually and include information regarding age, gender, race/ethnicity, education, life stage, present employment, and self-designated specialty.

2. Our AMA will immediately release to each state medical and specialty society, on request, the names, category and demographics of all AMA members of that state and specialty.

3. Our AMA will develop and implement a plan with input from the Advisory Committee on LGBTQ Issues to expand demographics collected about our members to include both sexual orientation and gender identity information, which may be given voluntarily by members and will be handled in a confidential manner.

[BOT Rep. 26, A-10; Reaffirmed: CCB/CLRPD Rep. 3, A-12; Appended: Res. 603, A-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 425
(A-24)

Introduced by: Women Physicians Section

Subject: Perinatal Mental Health Disorders among Medical Students and Physicians

Referred to: Reference Committee D

- 1 Whereas, perinatal mental health disorders contribute to 23 percent of maternal deaths; and
- 2
- 3 Whereas, one in eight women experience postpartum depression, which is a common perinatal
- 4 mental health disorder; and
- 5
- 6 Whereas, the DSM-V notes postpartum depression to be as a major depressive episode with
- 7 onset of symptoms within 4 weeks of delivery; and
- 8
- 9 Whereas, clinical research shows postpartum depression may occur up to 12 months after
- 10 delivery; and
- 11
- 12 Whereas, an estimated 80% of female physicians become mothers; and
- 13
- 14 Whereas, 6.5% to 20% of women in the general population develop postpartum depression; and
- 15
- 16 Whereas, resident physicians have reported a nearly four times greater rate of postpartum
- 17 depression than the general population; and
- 18
- 19 Whereas, the rate of matriculation of female students into medical school in 2022 was 55.6%
- 20 and has been increasing every year; and
- 21
- 22 Whereas, many physicians report lack of support during both pregnancy and the postpartum
- 23 period by both colleagues and their workplace; and
- 24
- 25 Whereas, symptoms of postpartum depression are noted to be worse in jobs where women
- 26 perceive a decreased sense of control over both work-life and family-life or jobs with less
- 27 flexibility; and
- 28
- 29 Whereas, female physicians have reported feeling discriminated at the workplace based on their
- 30 status as mothers; and
- 31
- 32 Whereas, untreated postpartum depression severely affects a woman's ability to return to
- 33 normal function and results in poorer outcomes for both the mother and infant; and
- 34
- 35 Whereas, 63% of physicians report symptoms or signs of burnout at least once per week in
- 36 2021; and
- 37
- 38 Whereas, suicide is a major cause of mortality for physicians relative to the general public; and
- 39
- 40 Whereas, untreated postpartum depression is a risk factor for suicide; and

1 Whereas, physicians are less likely to seek treatment for mental health conditions for fear of
2 repercussions; and

3
4 Whereas, postpartum depression often goes untreated due to concern from the mother for
5 stigma; and

6
7 Whereas, factors that help patients with postpartum depression include maternal-infant bonding,
8 familial and societal support, and maternal rest; therefore be it

9
10 RESOLVED, that our American Medical Association work with relevant stakeholders to identify
11 ways to increase screening for perinatal mental health conditions and reduce stigma
12 surrounding the diagnosis and treatment of perinatal mental health conditions (Directive to Take
13 Action); and be it further

14
15 RESOLVED, that our AMA advocate for reducing structural and systemic barriers to the
16 diagnosis and treatment of perinatal mental health conditions in physicians and medical
17 students. (Directive to Take Action)

18

RELEVANT AMA POLICY

Improving Mental Health Services for Pregnant and Postpartum Mothers H-420.953

Our AMA will: (1) support improvements in current mental health services during pregnancy and postpartum periods; (2) support advocacy for inclusive insurance coverage of and sufficient payment for mental health services during gestation, and extension of postpartum mental health services coverage to one year postpartum; (3) support appropriate organizations working to improve awareness and education among patients, families, and providers of the risks of mental illness during gestation and postpartum; (4) continue to advocate for funding programs that address perinatal and postpartum depression, anxiety and psychosis, and substance use disorder through research, public awareness, and support programs; and (5) advocate for evidence-based postpartum depression screening and prevention services to be recognized as the standard of care for all federally-funded health care programs for persons who are pregnant or in a postpartum state. [Res. 102, A-12; Modified: Res. 503, A-17; Modified: Res. 227, A-23]

Study of Medical Student, Resident, and Physician Suicide D-345.983

Our AMA will: (1) explore the viability and cost-effectiveness of regularly collecting National Death Index (NDI) data and confidentially maintaining manner of death information for physicians, residents, and medical students listed as deceased in the AMA Physician Masterfile for long-term studies; (2) monitor progress by the Association of American Medical Colleges, the American Association of Colleges of Osteopathic Medicine, and the Accreditation Council for Graduate Medical Education (ACGME) to collect data on medical student and resident/fellow suicides to identify patterns that could predict such events; (3) support the education of faculty members, residents and medical students in the recognition of the signs and symptoms of burnout and depression and supports access to free, confidential, and immediately available stigma-free mental health and substance use disorder services; (4) collaborate with other stakeholders to study the incidence of and risk factors for depression, substance misuse and substance use disorders, and attempted and completed suicide among physicians, residents, and medical students; and (5) work with appropriate stakeholders to explore the viability of developing a standardized reporting mechanism for the collection of current wellness initiatives that institutions have in place to inform and promote meaningful mental health and wellness interventions in these populations. [CME Rep. 06, A-19; Modified: Res. 326, A-22]

Factors Causing Burnout H-405.948

Our AMA recognizes that medical students, resident physicians, and fellows face unique challenges that contribute to burnout during medical school and residency training, such as debt burden, inequitable compensation, discrimination, limited organizational or institutional support, stress, depression, suicide, childcare needs, mistreatment, long work and study hours, among others, and that such factors be included as metrics when measuring physician well-being, particularly for this population of physicians. [Res. 208, I-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 426
(A-24)

Introduced by: New Jersey

Subject: Maternal Morbidity and Mortality: The Urgent Need to Help Raise Professional and Public Awareness and Optimize Maternal Health – A Call to Action

Referred to: Reference Committee D

- 1 Whereas, maternal mortality rate is considered an indirect indicator of the strength of an entire
2 healthcare system; and
3
4 Whereas, despite the numerous efforts by various maternal health organizations, Maternal
5 Morbidity and Mortality rates are continuing to increase; and
6
7 Whereas, over the course of the past 30 years, there has been a 261 % increase in rates of
8 diabetes, 149 % increase in rates of hypertensive disorders of pregnancy (gestational
9 hypertension, preeclampsia, eclampsia, HELLP syndrome), 182 % increase in rates of chronic
10 hypertension; and
11
12 Whereas, obesity is a well-recognized key contributor to these increases; and
13
14 Whereas, there is also increasing and compelling evidence that maternal obesity may affect
15 long-term outcomes of offspring and further highlights the major public health concern maternal
16 obesity poses and the need for increased efforts to optimize maternal weight and health before
17 achieving pregnancy; and
18
19 Whereas, despite published recommendations by the National Academies of Sciences,
20 Engineering, and Medicine for gestational weight gain, conversation about weight during
21 pregnancy has remained limited during prenatal care and 50 – 60% of women gain more than
22 recommended; and
23
24 Whereas, interpregnancy periods are interrelated as the postpartum period may constitute the
25 pregnancy period of a women’s next pregnancy; and
26
27 Whereas, excess gestational weight gain, especially over multiple pregnancies, is also likely to
28 be retained 20 years later resulting in higher risk of chronic disease and negatively impact a
29 women’s health in the long term; and
30
31 Whereas, social drivers of health, structural racism and various stressors have placed Black
32 women at higher risks for obesity and its impact; and
33
34 Whereas, obesity is preventable if the resources to treat or prevent obesity are made available
35 to those who need them the most; and
36
37 Whereas, personal responsibility is a part of dialogue, recognizing our societal responsibility to
38 help prevent and treat obesity by reducing the various barriers to health such as access and

1 affordability to healthy food, safe spaces that favor an active lifestyle, and access to trained
2 clinicians who can provide a full range of equitable obesity care especially to those who need it
3 the most can no longer wait; therefore be it
4

5 RESOLVED, that our American Medical Association policy no. D-245.994 be amended to
6 include the importance of all women achieving their healthiest weight before pregnancy,
7 maintaining healthy gestational weight gain, and optimizing weight loss postpartum (Modify
8 Current HOD Policy); and be it further
9

10 RESOLVED, that our AMA:

- 11 a) Advocate for access to effective obesity treatment (either medical or surgical) for patients.
- 12 b) Advocate for supporting physicians' ability to provide obstetrical and obesity care.
- 13 c) Advocate for additional funding for research on medical technology that influences human
14 behavior to promote healthy living.
- 15 d) Reaffirm policy no. H-440.902 and report back at A-25 on research on the
16 medical, psychological, and socioeconomic issues associated with
17 obesity, including reimbursement for evaluation and management of patients with obesity,
18 emphasizing pre-conception, gestational and postpartum obesity.
- 19 e) Provide medical recommendations on ways to eliminate barriers identified in prior obesity
20 research by our AMA.
- 21 f) Recommend that approaches to obesity prevention and treatment be included as an
22 element of medical education.

23 (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/3/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 427
(A-24)

Introduced by: New England

Subject: Condemning the Universal Shackling of Every Incarcerated Patient in Hospitals

Referred to: Reference Committee D

1 Whereas, as of February 1, 2022, there are 6,033 total male individuals, of whom 5,440 are
2 criminally sentenced, 24 are pre-trial detainees, and 569 face civil commitments, and 199 total
3 female individuals, of whom 155 are criminally sentenced, 40 are pre-trial detainees, and 4 face
4 civil commitments, who are in the jurisdiction of the Massachusetts Department of Corrections;¹
5 and

6
7 Whereas, in 2021, the average male justice-involved individual was 44 years old, and the
8 average female justice-involved individual was 42 years old in Massachusetts, with 951
9 individuals 60 years of age and over as of January 1, 2021,² and average age of individuals who
10 are incarcerated rising concurrently with their health needs;³ and

11
12 Whereas, in 2016, about 43% of federal justice-involved individuals reported ever having a
13 chronic condition, 33% reported currently having a chronic condition, and 31% had medical
14 visits outside of carceral facilities;⁴ and

15
16 Whereas, people of color are overrepresented in prisons and jails in Massachusetts, with
17 Whites accounting for 76% of the state population but 49% of prison or jail population, Blacks
18 accounting for 7% of the state population but 26% of prison or jail population, and Latinos
19 accounting for 10% of the state population but 24% of prison or jail population;⁵ and

20
21 Whereas, US carceral facilities provide health care for justice-involved individuals in both on-site
22 and off-site facilities depending on the type of service, with emergency, obstetrics, gynecology,
23 and cardiology procedural services more commonly provided at non-carceral hospital facilities;⁶
24 and

25
26 Whereas, universal shackling in a hospital refers to the placement of metal restraints around the
27 legs, wrists, or waist of justice-involved patients, regardless of age, illness, mobility, or criminal
28 record disposition,⁷ with the recent exception of perinatal patients in Massachusetts; and

29
30 Whereas, Massachusetts enacted legislation in 2014 to prevent perinatal shackling, or the use
31 of shackles for patients who are incarcerated and pregnant, in labor, or in postpartum recovery,
32 by correction officers while the attending physician or nurse treating the perinatal patient may
33 request immediate removal of restraints;⁸ and

34
35 Whereas, our American Medical Association has model state legislation to prohibit the practice
36 of shackling pregnant prisoners;⁹ and

37
38 Whereas, US Senators Elizabeth Warren and Corey Booker introduced the Dignity for
39 Incarcerated Women Act in 2017,¹⁰ and the First Step Act of 2018 placed a federal prohibition

1 on the use of restraints on individuals who are pregnant and in the custody of the federal
2 Bureau of Prisons or the US Marshals Service;^{11,12} and Whereas, Thirty-two states have
3 implemented some form of restriction on perinatal shackling, with 13 states banning shackling
4 throughout pregnancy, labor, postpartum, and during transport between carceral and health
5 care facilities;¹³ and

6
7 Whereas, physicians and nurses in hospitals routinely assess the necessity of physical or
8 pharmacological restraints on non-justice-involved patients who may harm themselves or
9 others, as well as document their use in the electronic medical record with descriptions of the
10 reason for restraint, form of restraint, and periodic re-evaluations of continued need for restraint
11 and any consequence on patient health;^{14,15} and

12
13 Whereas, the use of restraints on non-justice-involved patients in the hospital setting is
14 regulated by the Centers for Medicare and Medicaid Services, which mandate that the least
15 restrictive form of restraint that protects the safety of the patient, health care staff, and others is
16 used;^{16,17} and

17
18 Whereas, shackling patients under special circumstances including, but not limited to, old age,
19 loss of consciousness, terminal illness, or limited mobility, is unnecessary and excessive
20 restraint, thus cruel, inhuman, and degrading as defined by the Universal Declaration of Human
21 Rights, the International Convention on the Elimination of All Forms of Racial Discrimination,
22 and the International Covenant on Civil and Political Rights^{18,19,20} and in violation of the medical
23 ethics principle of nonmaleficence; and

24
25 Whereas, physical restraint use on patients is associated with delays in necessary emergency
26 operations, increased falls and deliriums, as well as elevated risks of in-hospital deaths and
27 venous thrombosis;^{21,22} and

28
29 Whereas, in psychiatric settings, restraints have led to inappropriate actions by staff, invoking a
30 fear response in patients and a loss of trust in the psychiatric staff,²³ ultimately causing patients
31 to be less likely to follow their treatment plan, use medical care, or consent to a surgical
32 procedure;²⁴ and

33
34 Whereas, formerly justice-involved individuals of color who experienced discrimination in
35 healthcare settings due to their criminal records are less likely to use primary care resources
36 upon release,²⁵ report worse mental and physical health following their release,²⁶ and are more
37 likely to report increased psychological distress;²⁷ and

38
39 Whereas, physicians have written about the moral injury and contribution to physician burnout
40 due to practicing in hospitals that routinely shackle every justice-involved patient;^{28,29} and

41
42 Whereas, violence against health care workers is of critical importance that should be
43 addressed through effective hospital security protocols and staff training;³⁰ and

44
45 Whereas, current hospital policies for shackling in Massachusetts align with policies governing
46 the shackling of non-justice-involved patients only in regard to justice-involved pregnant
47 individuals, yet permit the universal shackling of all non-pregnant justice-involved patients,
48 regardless of other special circumstances including, but not limited to, old age, loss of
49 consciousness, terminal illness, or limited mobility; therefore be it

50
51 RESOLVED, that our American Medical Association condemns the practice of universally
52 shackling every patient who is involved with the justice system while they receive care in

1 hospitals and outpatient health care settings (New HOD Policy); and be it further

2
3 RESOLVED, that our AMA advocate for the universal assessment of every individual who is
4 involved with the justice system who presents for care, by medical and security staff in
5 collaboration with correctional officers, to determine whether shackles are necessary or may be
6 harmful, and, if restraint is deemed necessary, that the least restrictive alternative to shackling
7 with metal cuffs is used when appropriate (Directive to Take Action); and be it further

8
9 RESOLVED, that our AMA advocate nationally for the end of universal shackling, to protect
10 human and patient rights, improve patient health outcomes, and reduce moral injury among
11 physicians. (Directive to Take Action)

12

RELEVANT AMA POLICY

Shackling of Pregnant Women in Labor H-420.957

1. Our AMA supports language recently adopted by the New Mexico legislature that "an adult or juvenile correctional facility, detention center or local jail shall use the least restrictive restraints necessary when the facility has actual or constructive knowledge that an inmate is in the 2nd or 3rd trimester of pregnancy. No restraints of any kind shall be used on an inmate who is in labor, delivering her baby or recuperating from the delivery unless there are compelling grounds to believe that the inmate presents:

- An immediate and serious threat of harm to herself, staff or others; or
- A substantial flight risk and cannot be reasonably contained by other means.

If an inmate who is in labor or who is delivering her baby is restrained, only the least restrictive restraints necessary to ensure safety and security shall be used."

2. Our AMA will develop model state legislation prohibiting the use of shackles on pregnant women unless flight or safety concerns exist.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 428
(A-24)

Introduced by: New England

Subject: Advocating for Education and Action Regarding the Health Hazards of PFAS
Chemicals

Referred to: Reference Committee D

1 Whereas, in 2019 the American Medical Association resolved to support research and policy to
2 address the effects of PFAS exposure¹ and supported legislation and regulation seeking to
3 address contamination, exposure, classification, and clean-up of per- and polyfluoroalkyl
4 substances as follows:² “our AMA: (1) supports continued research on the impact of
5 perfluoroalkyl and polyfluoroalkyl chemicals on human health; (2) supports legislation and
6 regulation seeking to address contamination, exposure, classification, and clean-up of PFAS
7 substances; and (3) will advocate for states, at minimum, to follow guidelines presented in the
8 Environmental Protection Agency’s Drinking Water Health Advisories for perfluorooctanoic acid
9 (PFOA) and perfluorooctane sulfonic acid (PFOS), with consideration of the appropriate use of
10 Minimal Risk Levels (MRLs) presented in the CDC/ATSDR Toxicological Profile for PFAS”; and
11

12 Whereas, per- and polyfluoroalkyl substances (PFAS), are a large class of chemicals with at
13 least one aliphatic perfluorocarbon moiety; this carbon - fluorine bond is exceptionally strong
14 and therefore highly resistant to degradation; thus the moniker “forever chemicals” because
15 these chemicals persist, have the potential to bioaccumulate and become more concentrated in
16 the environment with the passage of time;³ and
17

18 Whereas, PFAS are ubiquitous: they are found in “non-stick” products that resist stains, oil,
19 grease, and water including cookware,⁴ artificial turf, clothing, leather, carpets, food packaging,
20 firefighting foam, cosmetics, shampoos, sunscreens, pesticides; medical equipment such as
21 PPE, masks, gowns, IV tubing, and medications;⁵ and petroleum extraction (“fracking”) fluids;⁶
22 the latter are sometimes repurposed as road salt or as “biosolids” that are then spread on
23 crops⁷; and
24

25 Whereas, the PFAS chemicals PFOA and PFOS have recently been designated by the US EPA
26 as hazardous substances that can be responded to via Superfund;⁸ and while the EPA has set
27 health advisory levels at between 0.002 and 0.004 ng/L, health effects, according to the EPA,
28 can occur at any level;⁹ and
29

30 Whereas, PFAS exposure has been associated with endocrine disruption, immune suppression,
31 impaired organogenesis, damage to reproductive organs, and hepatotoxicity; low infant birth
32 weight, preeclampsia,¹⁰ impaired fertility, obesity, Type 2 diabetes, harms to neurocognitive and
33 behavioral development in children, and malignancies, including prostate, kidney, and testicular
34 cancer;¹¹ and
35

36 Whereas, PFAS exposure occurs via food, air, and water, including drinking water and rain;¹²
37 water can become contaminated when PFAS leaches into water supplies from plastic
38 containers, landfills, industrial and agricultural runoff, or following pesticide spraying (PFOS has
39 been detected in 6/10 tested pesticides at levels between 3.92 to 19.2 mg/kg);¹³ other common

1 sources of exposure include: ingestion of contaminated dust (from carpets, upholstery, etc.) as
2 well as migration into food or beverages from boxes/packaging/plastic bottles); in infants,
3 toddlers, and children, hand-to-mouth behavior is a significant source of exposure; and
4

5 Whereas, PFAS has direct impacts on the practice of medicine since they are used extensively
6 in medical products, including medications, IV tubing, and PPE;¹⁴ pharmaceuticals often
7 include a fluorine molecule to increase cell permeability to increase uptake;¹⁵ and persons with
8 high PFAS levels may be less responsive to certain medications, like vaccines;¹⁶ and
9

10 Whereas, like lead, exposure to PFAS is widespread, but like lead, mitigating exposure and
11 focusing on children and adults who are highly exposed is helpful since these persons can then
12 be identified and helped (ie, parents can be cautioned to use a different, PFAS-free water
13 source to use to make up baby formula, etc); like lead, limiting length and extent of high
14 exposure could potentially improve health outcomes; and
15

16 Whereas, PFAS chemicals disproportionately pose challenges to low income and minority
17 communities: some of the highest levels found across the country exist in lower income
18 communities, even when the exposure hazard is not disproportionate between low and high
19 income communities, the ability to respond with adequate filtration and monitoring efforts is
20 unequal; and
21

22 Whereas, the National Academy of Science, Engineering and Medicine has recommended¹⁷
23 that individuals with significant exposure to PFAS (including those who live near commercial
24 airports, military bases and farms where sewage sludge may have been used) be tested and
25 receive ongoing medical monitoring; PFAS blood testing in the population based C8 Dupont
26 study in 69,030 participants was essential in determining associated health conditions with
27 PFAS chemicals;^{18,19} and PFAS blood tests are currently available through Quest and other
28 providers;²⁰ and
29

30 Whereas, 99% of United States residents have various PFAS detectable in their blood²¹; and
31

32 Whereas, newly developed educational resources on PFAS are available and include a free
33 CME course on PFAS and comprehensive medical information and guidance on PFAS-REACH
34 project's website (funded by the NIH's National Institute of Environmental Health Sciences
35 (NIEHS))²² and the July 2022 National Academy of Science, Engineering and Medicine report
36 on PFAS;²³ therefore be it
37

38 RESOLVED, that our American Medical Association improve physician and public education
39 around the adverse health effects of PFAS and potential mitigation and prevention efforts.

RELEVANT AMA POLICY

Per- and Polyfluoroalkyl Substances (PFAS) and Human Health H-135.916

Our AMA: (1) supports continued research on the impact of perfluoroalkyl and polyfluoroalkyl chemicals on human health; (2) supports legislation and regulation seeking to address contamination, exposure, classification, and clean-up of (PFAS) substances; and (3) will advocate for states, at minimum, to follow guidelines presented in the Environmental Protection Agency's Drinking Water Health Advisories for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS), with consideration of the appropriate use of Minimal Risk Levels (MRLs) presented in the CDC/ATSDR Toxicological Profile for (PFAS).

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 429
(A-24)

Introduced by: New England

Subject: Assessing and Protecting Local Communities from the Health Risks of
Decommissioning Nuclear Power Plants

Referred to: Reference Committee D

1 Whereas, decommissioning nuclear power plants has long been known to pose many risks to
2 health to workers and to residents of nearby communities;¹ and
3

4 Whereas, over the coming years, the United States will be decommissioning many of its more
5 than 90 aging nuclear power plants;¹¹ there is a need, therefore, to develop processes for
6 decommissioning these facilities that are protective of health in Massachusetts and in other
7 states; and
8

9 Whereas, while the company responsible for the decommissioning of the nuclear reactor in
10 Plymouth had initially planned to release more than a million gallons of radioactive water into
11 Cape Cod Bay, the permit to allow said discharges has been tentatively denied by the
12 Massachusetts Department of Environmental Protection;¹² and
13

14 Whereas, according to Woods Hole Oceanographic Institute expert Dr. Ken Buesseler, tritium
15 levels inside this reactor water exceed seawater levels for tritium by a factor of a million;
16 Cesium-137 in the reactor water is 200 million times higher than seawater levels; and even if 99
17 percent of the cesium from the Pilgrim water is removed, the radioactive water will still contain
18 Cesium-137 at levels 2 million times higher than the levels in Cape Cod Bay;² and
19

20 Whereas, according to Dr. Buesseler, since Cesium-137 levels are elevated, it can be assumed
21 that strontium-90 is present in the water, along with other elements that are part of a group
22 called transuranics, which include known carcinogens such as plutonium, uranium, americium;²
23 and
24

25 Whereas, all of the radioactive elements known and suspected to be released from the Pilgrim
26 Nuclear Power Station located in Plymouth can cause cancers in humans, including lung
27 cancer, bone cancer, thyroid cancer, adult leukemia, and childhood leukemia;⁴ and
28

29 Whereas, the scientific consensus is that every additional exposure to radiation adds to the total
30 risk for genetic damage and thus for cancers like leukemia and increased radiation implies
31 increased incidence of these diseases in exposed populations; for solid cancers, the risk for
32 cancer from radiation is linearly proportional to cumulative exposure;⁵ and
33

34 Whereas, Pilgrim Nuclear Power Station has specifically been associated with increased
35 leukemia incidence in the local community; Dr. Richard Clapp, former Massachusetts state
36 cancer epidemiologist and professor emeritus of the Boston University School of Public Health,
37 found a fourfold excess of leukemia cases among those who lived or worked near the Plymouth
38 nuclear power plant, in a dose-response relationship;⁶ and

1 Whereas, Dr. Clapp's peer-reviewed case control study also showed increased infant mortality
2 and thyroid cancer;⁶ and
3

4 Whereas, while more exposure is always worse, even low-dose exposures to radiation increase
5 cancer risk, according to the National Academy of Sciences BEIR VII report³, especially among
6 vulnerable populations such as pregnant women, infants in the womb, and young children;
7 moreover, exposures to ionizing radiation in early life can cause lifelong damage and increase
8 risk of cancer across the lifespan;⁷ infants, children, and pregnant women are therefore
9 particularly vulnerable to any radiation emitted from the Pilgrim Nuclear Power Station; and
10 Whereas, recent studies suggest that proximity to ionizing radiation sources is also associated
11 with an increased risk of dementia;⁸ and
12

13 Whereas, radiation from nuclear power plants and the radioactive waste it generates pose
14 disproportionate challenges to low income and minority communities; some of the highest levels
15 of radiation found across the country from these energy sources exist in these communities;⁹ in
16 Massachusetts, Superfund sites and hazardous waste are more likely to be located in close
17 proximity to these populations;¹⁰ and
18

19 Whereas, there is cause for concern regarding potential future serious health sequelae among
20 local communities due to radionuclide exposure from the decommissioning of the nuclear power
21 plant in Plymouth; therefore be it
22

23 RESOLVED, that our American Medical Association advocate for strict limitations of aerosol,
24 soil, and/or water radionuclide releases in the decommissioning of US nuclear power plants in
25 order to protect health, particularly that of local vulnerable populations. (Directive to Take
26 Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/7/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 430
(A-24)

Introduced by: New England

Subject: Supporting the Inclusion of Information about Lung Cancer Screening within
Cigarette Packages

Referred to: Reference Committee D

- 1 Whereas, lung cancer is the leading cause of cancer-related death in Massachusetts, causing
2 more deaths than prostate cancer, breast cancer, and colorectal cancer combined;¹ and
3
4 Whereas, nearly three-fourths of people who smoke in the United States come from lower
5 socioeconomic statuses, with those below the poverty line twice as likely to smoke as those
6 above it;² and
7
8 Whereas, lung cancer incidence and lung cancer mortality are elevated among veterans and
9 Black Americans;³⁻⁶ and
10
11 Whereas, individuals who are lesbian, gay, or bisexual use tobacco at higher rates than those
12 who are straight, and those who are transgender use tobacco at higher rates than cisgender
13 individuals;⁷ and
14
15 Whereas, the tobacco industry spends nearly \$1,000,000 per hour on retail advertising and
16 price discounts, and the number of tobacco retailers per square mile is about five times higher in
17 the lowest-income neighborhoods than in the highest-income neighborhoods;⁸ and
18
19 Whereas, discriminatory marketing directed towards LBGTQ+ individuals has benefited the
20 tobacco industry while leading to higher smoking rates among LBGTQ+ individuals;⁹ and
21
22 Whereas, lung cancer screening has been shown to save lives in both large-scale randomized
23 trials and real-world settings,¹⁰⁻¹² but only 16.3 percent of individuals in Massachusetts who are
24 eligible undergo lung cancer screening with low-dose computed tomography (CT) annually;¹³
25 and
26
27 Whereas, 84 percent of individuals who meet the lung cancer screening eligibility criteria are not
28 aware of lung cancer screening through the low-dose CT scan;¹⁴ and
29
30 Whereas, 56 percent of individuals meeting lung cancer screening eligibility criteria in 2017
31 currently smoke and, therefore, frequently encounter health messaging
32 displayed within cigarette packages;¹⁵ and

1 Whereas, placing information about lung cancer screening effectiveness and eligibility along
2 with instructions on how to access screening could improve early detection through lung cancer
3 screening in populations at highest risk for lung cancer; and

4 Whereas, the combustible tobacco industry is expanding to include “non-combustible tobacco”
5 nicotine delivery devices such as (but not limited to) vaping and cheek pouches (e.g., Zyn); and
6

7 Whereas, use of some of these devices produces known carcinogens such as aerosolized
8 heavy metals and hydrocarbons;^{16,17} and
9

10 Whereas these devices have not been in use long enough to provide sufficient data on the
11 incidence of cancer associated with their use; therefore be it
12

13 RESOLVED, that our American Medical Association advocate for information about lung cancer
14 screening to be included within all combustible tobacco product packaging (Directive to Take
15 Action); and be it further
16

17 RESOLVED, that our AMA will work with appropriate public health organizations and
18 governmental agencies to monitor the impact of “non-combustible tobacco” nicotine delivery
19 devices on cancer epidemiology and promote appropriate cancer screening should the
20 suspected link be proven. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

RELEVANT AMA POLICY

H-495.989 Tobacco Product Labeling

Our AMA: (1) supports requiring more explicit and effective health warnings, such as graphic warning labels, regarding the use of tobacco (and alcohol) products (including but not limited to, cigarettes, smokeless tobacco, chewing tobacco, and hookah/water pipe tobacco, and ingredients of tobacco products sold in the United States); (2) encourages the Food and Drug Administration, as required under Federal law, to revise its rules to require color graphic warning labels on all cigarette packages depicting the negative health consequences of smoking; (3) supports legislation or regulations that require (a) tobacco companies to accurately label their products, including electronic nicotine delivery systems (ENDS), indicating nicotine content in easily understandable and meaningful terms that have plausible biological significance; (b) picture-based warning labels on tobacco products produced in, sold in, or exported from the United States; (c) an increase in the size of warning labels to include the statement that smoking is ADDICTIVE and may result in DEATH; and (d) all advertisements for cigarettes and each pack of cigarettes to carry a legible, boxed warning such as: "Warning: Cigarette Smoking causes CANCER OF THE MOUTH, LARYNX, AND LUNG, is a major cause of HEART DISEASE AND EMPHYSEMA, is ADDICTIVE, and may result in DEATH. Infants and children living with smokers have an increased risk of respiratory infections and cancer;" (4) urges the Congress to require that: (a) warning labels on cigarette packs should appear on the front and the back and occupy twenty-five percent of the total surface area on each side and be set out in black-and-white block; (b) in the case of cigarette advertisements, warning labels of cigarette packs should be moved to the top of the ad and should be enlarged to twenty-five percent of total ad space; and (c) warning labels following these specifications should be included on cigarette packs of U.S. companies being distributed for sale in foreign markets; and (5) supports requiring warning labels on all ENDS products, starting with the warning that nicotine is addictive. CSA Rep. 3, A-04 Modified: Res. 402, A-13 Modified: Res. 925, I-16 Modified: Res. 428, A-19

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 431
(A-24)

Introduced by: Massachusetts

Subject: Combatting the Public Health Crisis of Gun Violence

Referred to: Reference Committee D

1 Whereas, gun violence remains a national crisis; and
2
3 Whereas, gun violence is now the leading cause of death in US children and teens; and
4
5 Whereas, effective means of addressing this scourge have been woefully lacking and data
6 demonstrate that gun deaths among US children and teens increased 50% between 2019 and
7 2021; and
8
9 Whereas, gun violence is not a crisis of our second amendment but rather a crisis of public
10 health; therefore be it
11
12 RESOLVED, that our American Medical Association advocate for and strongly support
13 legislation, regulation, and reform that seeks to address the public health crisis posed by gun
14 violence. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/7/2024

RELEVANT AMA POLICY

D-145.992 Further Action to Respond to the Gun Violence Public Health Crisis

Our AMA will (a) make readily accessible on the AMA website the comprehensive summary of AMA policies, plans, current activities, and progress regarding the public health crisis of firearm violence; (b) establish a task force to focus on gun violence prevention including gun-involved suicide; (c) support and consider providing grants to evidence-based firearm violence interruption programs in communities, schools, hospitals, and clinics; (d) collaborate with interested state and specialty societies to increase engagement in litigation related to firearm safety; and (e) report annually to the House of Delegates on our AMA's efforts relating to legislation, regulation, and litigation at the federal, state, and local levels to prevent gun violence. BOT Rep. 2, I-22

D-145.995 Gun Violence as a Public Health Crisis

Our AMA: (1) will immediately make a public statement that gun violence represents a public health crisis which requires a comprehensive public health response and solution; and (2) will actively lobby Congress

to lift the gun violence research ban. Res. 1011, A-16 Reaffirmation: A-18 Reaffirmation: I-18 Reaffirmed: Res. 921, I-22

H-145.997 Firearms as a Public Health Problem in the United States - Injuries and Death

1. Our AMA recognizes that uncontrolled ownership and use of firearms, especially handguns, is a serious threat to the public's health inasmuch as the weapons are one of the main causes of intentional and unintentional injuries and deaths.

Therefore, the AMA:

(A) encourages and endorses the development and presentation of safety education programs that will engender more responsible use and storage of firearms;

(B) urges that government agencies, the CDC in particular, enlarge their efforts in the study of firearm-related injuries and in the development of ways and means of reducing such injuries and deaths;

(C) urges Congress to enact needed legislation to regulate more effectively the importation and interstate traffic of all handguns;

(D) urges the Congress to support recent legislative efforts to ban the manufacture and importation of nonmetallic, not readily detectable weapons, which also resemble toy guns; (5) encourages the improvement or modification of firearms so as to make them as safe as humanly possible;

(E) encourages nongovernmental organizations to develop and test new, less hazardous designs for firearms;

(F) urges that a significant portion of any funds recovered from firearms manufacturers and dealers through legal proceedings be used for gun safety education and gun-violence prevention; and

(G) strongly urges US legislators to fund further research into the epidemiology of risks related to gun violence on a national level.

2. Our AMA will advocate for firearm safety features, including but not limited to mechanical or smart technology, to reduce accidental discharge of a firearm or misappropriation of the weapon by a non-registered user; and support legislation and regulation to standardize the use of these firearm safety features on weapons sold for non-military and non-peace officer use within the U.S.; with the aim of establishing manufacturer liability for the absence of safety features on newly manufactured firearms.

3. Our AMA will support research examining the major sources of illegally possessed firearms, as well as possible methods of decreasing their proliferation in the United States.

4. Our AMA will work with key stakeholders including, but not limited to, firearm manufacturers, firearm advocacy groups, law enforcement agencies, public health agencies, firearm injury victims advocacy groups, healthcare providers, and state and federal government agencies to develop evidence-informed public health recommendations to mitigate the effects of violence committed with firearms.

5. Our AMA will collaborate with key stakeholders and advocate for national public forums including, but not limited to, online venues, national radio, and televised/streamed in-person town halls, that bring together key stakeholders and members of the general public to focus on finding common ground, non-partisan measures to mitigate the effects of firearms in our firearm injury public health crisis. CSA Rep. A, I-87 Reaffirmed: BOT Rep. I-93-50 Appended: Res. 403, I-99 Reaffirmation A-07 Reaffirmation A-13 Appended: Res. 921, I-13 Reaffirmed: CSAPH Rep. 04, A-18 Reaffirmation: A-18 Reaffirmation: I-18 Appended: Res. 405, A-19 Appended: Res. 907, I-22 Reaffirmed: Res. 921, I-22 Reaffirmation: A-23

D-440.912 AMA Public Health Strategy

1. Our AMA will distribute evidence-based information on the relationship between climate change and human health through existing platforms and communications channels, identify advocacy and leadership opportunities to elevate the voices of physicians on the public health crisis of climate change, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050.

2. Our AMA Board of Trustees will provide an update on loss of coverage and uninsurance rates following the return to regular Medicaid redeterminations and the end of the COVID-19 Public Health Emergency, the ensuing financial and administrative challenges experienced by physicians, physician practices, hospitals, and the healthcare system; and a report of actions taken by the AMA and recommendation for further action to address these issues at I-2023.

3. Our AMA Board of Trustees will provide a strategic plan or outline for the AMA's plan to address and combat the health effects of climate change at I-2023.

4. Our AMA Board of Trustees will provide an update on the efforts and initiatives of the AMA's gun violence task force at I-2023.
5. Our AMA will continue to support increased funding for public health infrastructure and workforce, which should include funding for preventative medicine related residency programs, to increase public health leadership in this country. BOT Rep. 17, A-23 Modified: BOT Rep. 05, I-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:432
(A-24)

Introduced by: American College of Preventive Medicine

Subject: Resolution to Decrease Lead Exposure in Urban Areas

Referred to: Reference Committee D

- 1 Whereas, lead is a toxic metal that can cause serious health problems, especially in children
2 and pregnant women^{1,2,3}; and
3
4 Whereas, the American Medical Association (AMA) supports efforts and advocacy to reduce
5 lead exposures⁴; and
6
7 Whereas, the Safe Drinking Water Act (amended 2020) prohibits the use of pipes, solder or flux
8 that were not “lead free” in the installation or repair of any public water system or any plumbing
9 in a residential or nonresidential facility providing water for human consumption⁵; and
10
11 Whereas, the AMA recognizes the importance of preventive health measures and the role of
12 environmental factors in public health⁶; therefore be it
13
14 RESOLVED, that our American Medical Association reaffirm the following policy H-135.928,
15 “Safe Drinking Water” in support of EPA’s Lead and Copper Rule and evidence-based research
16 demonstrating there is no safe level of lead for humans and therefore warrants immediate
17 Federal, State, and municipal action (Reaffirm HOD Policy); and be it further
18
19 RESOLVED, that our AMA advocates for accessible testing of domestic water supplies,
20 prioritizing testing for lead in potable water used by pregnant women, newborns and young
21 children, with the provision of accessible water filters in homes found to have elevated lead
22 levels in potable water (Directive to Take Action); and be it further
23
24 RESOLVED, that our AMA supports increased funding for lead pipe replacement and other
25 steps to eliminate lead from public and private drinking water supplies (New HOD Policy); and
26 be it further
27
28 RESOLVED, that our AMA promotes community awareness and education campaigns on the
29 causes and risks of lead and drinking water and steps that can be taken to eliminate these risks
30 (Directive to Take Action); and be it further
31
32 RESOLVED, that our AMA supports the development and use of searchable registries of
33 housing units known to have unresolved lead in the drinking water due to lead connectors to
34 water mains or other sources of lead in the drinking water in cities with significant public lead
35 exposure (Directive to Take Action); and be it further

- 1 RESOLVED, that our AMA urges healthcare providers to increase screening for lead exposure,
2 particularly in areas known to have lead pipes, and particularly in underserved areas (Directive
3 to Take Action); and be it further
4
5 RESOLVED, that our AMA calls for research into innovative and cost-effective methods for
6 elimination of lead in public and private water supplies and lead from lead pipe connectors to
7 such water supplies (Directive to Take Action).

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 5/8/2024

RELEVANT AMA POLICY

Environmental Health and Safety in Schools H-135.918

Our AMA: (1) supports the adoption of standards in schools that limit harmful substances from school facility environments, ensure safe drinking water, and indoor air quality, and promote childhood environmental health and safety in an equitable manner; (2) encourages the establishment of a system of governmental oversight, charged with ensuring the regular inspection of schools and identifying shortcomings that might, if left untreated, negatively impact the health of those learning and working in school buildings; (3) supports policies that increase funding for such remediations to take place, especially in vulnerable, resource-limited neighborhoods; and (4) supports continued data collection and reporting on the negative health effects of substandard conditions in schools. [BOT Rep. 29, A-19]

Safe Drinking Water H-135.928

Our AMA supports updates to the U.S. Environmental Protection Agency's Lead and Copper Rule as well as other state and federal laws to eliminate exposure to lead through drinking water by: (1) Removing, in a timely manner, lead service lines and other leaded plumbing materials that come into contact with drinking water; (2) Requiring public water systems to establish a mechanism for consumers to access information on lead service line locations; (3) Informing consumers about the health-risks of partial lead service line replacement; (4) Requiring the inclusion of schools, licensed daycare, and health care settings among the sites routinely tested by municipal water quality assurance systems; (5) Creating and implementing standardized protocols and regulations pertaining to water quality testing, reporting and remediation to ensure the safety of water in schools and child care centers; (6) Improving public access to testing data on water lead levels by requiring testing results from public water systems to be posted on a publicly available website in a reasonable timeframe thereby allowing consumers to take precautions to protect their health; (7) Establishing more robust and frequent public education efforts and outreach to consumers that have lead service lines, including vulnerable populations; (8) Requiring public water

systems to notify public health agencies and health care providers when local water samples test above the action level for lead; (9) Seeking to shorten and streamline the compliance deadline requirements in the Safe Drinking Water Act; and (10) Actively pursuing changes to the federal lead and copper rules consistent with this policy. [Res. 409, A-16; Modified: Res. 422, A-18; Reaffirmed: BOT Rep. 29, A-19]

Reducing Lead Poisoning H-60.924

1. Our AMA: (a) supports regulations and policies designed to protect young children from exposure to lead; (b) urges the Centers for Disease Control and Prevention to give priority to examining the current weight of scientific evidence regarding the range of adverse health effects associated with blood lead concentrations below the current "level of concern" in order to provide appropriate guidance for physicians and public health policy, and encourage the identification of exposure pathways for children who have low blood lead concentrations, as well as effective and innovative strategies to reduce overall childhood lead exposure; (c) encourages physicians and public health departments to screen children based on current recommendations and guidelines and to report all children with elevated blood levels to the appropriate health department in their state or community in order to fully assess the burden of lead exposure in children. In some cases this will be done by the physician, and in other communities by the laboratories; (d) promotes community awareness of the hazard of lead-based paints; and (e) urges paint removal product manufacturers to print precautions about the removal of lead paint to be included with their products where and when sold.
2. Our AMA will call on the United States government to establish national goals to: (a) ensure that no child has a blood lead level $>5 \mu\text{g/dL}$ ($>50 \text{ ppb}$) by 2021, and (b) eliminate lead exposures to pregnant women and children, so that by 2030, no child would have a blood lead level $>1 \mu\text{g/dL}$ (10 ppb).
3. Our AMA will call on the United States government in all its agencies to pursue the following strategies to achieve these goals: (a) adopt health-based standards and action levels for lead that rely on the most up-to-date scientific knowledge to prevent and reduce human exposure to lead, and assure prompt implementation of the strongest available measures to protect pregnant women and children from lead toxicity and neurodevelopmental impairment; (b) identify and remediate current and potential new sources of lead exposure (in dust, air, soil, water and consumer products) to protect children before they are exposed; (c) continue targeted screening of children to identify those who already have elevated blood lead levels for case management, as well as educational and other services; (d) eliminate new sources of lead introduced or released into the environment, which may entail banning or phasing out all remaining uses of lead in products (aviation gas, cosmetics, wheel weights, industrial paints, batteries, lubricants, and other sources), and the export of products containing lead, and setting more protective limits on emissions from battery recyclers and other sources of lead emissions; (e) provide a dedicated funding stream to enhance the resources available to identify and eliminate sources of lead exposure, and provide educational, social and clinical services to mitigate the harms of lead toxicity, particularly to protect and improve the lives of children in communities that are disproportionately exposed to lead; and (f) establish an independent expert advisory committee to develop a long-term national strategy, including recommendations for funding and implementation, to achieve the national goal of eliminating lead toxicity in pregnant women and children, defined as blood lead levels above $1 \mu\text{g/dL}$ (10 ppb).
4. Our AMA supports requiring an environmental assessment of dwellings, residential buildings, or child care facilities following the notification that a child occupant or frequent inhabitant has a confirmed elevated blood lead level, to determine the potential source of lead poisoning, including testing the water supply. [CCB/CLRPD Rep. 3, A-14; Appended: Res. 926, I-16; Appended: Res. 412, A-17]

Lead Contamination in Municipal Water Systems as Exemplified by Flint, Michigan H-60.918

1. Our AMA will advocate for biologic (including hematological) and neurodevelopmental monitoring at established intervals for children exposed to lead contaminated water with resulting elevated blood lead levels (EBLL) so that they do not suffer delay in diagnosis of adverse consequences of their lead exposure.
2. Our AMA will urge existing federal and state-funded programs to evaluate at-risk children to expand services to provide automatic entry into early-intervention screening programs to assist in the neurodevelopmental monitoring of exposed children with EBLL.
3. Our AMA will advocate for appropriate nutritional support for all people exposed to lead contaminated water with resulting elevated blood lead levels, but especially exposed pregnant women, lactating mothers and exposed children. Support should include Vitamin C, green leafy vegetables and other

calcium resources so that their bodies will not be forced to substitute lead for missing calcium as the children grow.

4. Our AMA promotes screening, diagnosis and acceptable treatment of lead exposure and iron deficiency in all people exposed to lead contaminated water. [Res. 428, A-16]

Universal Access for Essential Public Health Services D-440.924

Our AMA: (1) supports equitable access to the 10 Essential Public Health Services and the Foundational Public Health Services to protect and promote the health of all people in all communities; (2) encourages state, local, tribal, and territorial public health departments to pursue accreditation through the Public Health Accreditation Board (PHAB); (3) will work with appropriate stakeholders to develop a comprehensive list of minimum necessary programs and services to protect the public health of citizens in all state and local jurisdictions and ensure adequate provisions of public health, including, but not limited to clean water, functional sewage systems, access to vaccines, and other public health standards; and (4) will work with the National Association of City and County Health Officials (NACCHO), the Association of State and Territorial Health Officials (ASTHO), the Big Cities Health Coalition, the Centers for Disease Control and Prevention (CDC), and other related entities that are working to assess and assure appropriate funding levels, service capacity, and adequate infrastructure of the nation's public health system, including for rural jurisdictions. [Res. 419, A-19; Modified: CSAPH Rep. 2, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:433
(A-24)

Introduced by: Minority Affairs Section

Subject: Improving Healthcare of Rural Minority Populations

Referred to: Reference Committee D

1 Whereas, our American Medical Association recognizes that the health of rural communities
2 and their access to care are pressing concerns to our membership; and
3
4 Whereas, our AMA also recognizes that the health of minority communities and their access to
5 care are pressing concerns to our membership; and
6
7 Whereas, rural minorities are a unique population that are challenged by both minority and rural
8 concerns; and
9
10 Whereas, the U.S. Census Bureau reported that 97% of our country's total landmass is
11 considered rural with a total population of nearly 60 million people;¹ and
12
13 Whereas, the most recent census reported a significant increase in rural minorities, which now
14 account for 24% of all rural Americans;² and
15
16 Whereas, Black, Hispanic/Latino and American Indian & Alaska Native each comprise a
17 significant number of rural Americans;² and
18
19 Whereas, rural minorities have some of the lowest levels of income, educational attainment, and
20 life expectancy of all Americans;³ and
21
22 Whereas, the unique challenges of treating rural patients has led to a higher disease burden
23 and worse overall patient outcomes;³ and
24
25 Whereas, rural health providers currently experience profound physician vacancy rates and
26 staffing issues, particularly for agencies like the Indian Health Service;⁴ and
27
28 Whereas, Native Americans who live on tribal reservations carry the lowest life expectancy of
29 any racial group in the country and face unique challenges as a predominantly rural population;⁵
30 and
31
32 Whereas, our AMA membership has few rural minorities, which has potentially played a role in
33 this population not being adequately represented in our organization; and
34
35 Whereas, our AMA could benefit greatly from learning more about rural minorities, their health
36 care challenges, their perspectives, and their resourcefulness; therefore be it
37
38 RESOLVED, that our American Medical Association encourage health promotion, access to
39 care, and disease prevention through educational efforts and publications specifically tailored to
40 rural minorities (Directive to Take Action); and be it further

1 RESOLVED, that our AMA encourage federal, state and local governments of the unique health
2 and health-related needs of rural minorities in an effort to improve their quality of life (New HOD
3 Policy); and be it further

4
5 RESOLVED, that our AMA encourage the collection of vital statistics and other relevant
6 demographic data of rural minorities (New HOD Policy); and be it further

7
8 RESOLVED, that our AMA encourage organizations of the importance of rural minority health
9 (New HOD Policy); and be it further

10
11 RESOLVED, that our AMA research and study health issues unique to rural minorities, such as
12 access to care difficulties (Directive to Take Action); and be it further

13
14 RESOLVED, that our AMA channel existing policy for telehealth to support rural minority
15 communities (Directive to Take Action); and be it further

16
17 RESOLVED, that our AMA will encourage our Center for Health Equity to support rural minority
18 health through programming, equity initiatives, and other representation efforts. (New HOD
19 Policy)

20
Fiscal Note: To Be Determined

RELEVANT AMA POLICY

Improving Rural Health H-465.994

1. Our AMA (a) supports continued and intensified efforts to develop and implement proposals for improving rural health care and public health, (b) urges physicians practicing in rural areas to be actively involved in these efforts, and (c) advocates widely publicizing AMA's policies and proposals for improving rural health care and public health to the profession, other concerned groups, and the public.
2. Our AMA will work with other entities and organizations interested in public health to:
 - Encourage more research to identify the unique needs and models for delivering public health and health care services in rural communities.
 - Identify and disseminate concrete examples of administrative leadership and funding structures that support and optimize local, community-based rural public health.
 - Develop an actionable advocacy plan to positively impact local, community-based rural public health including but not limited to the development of rural public health networks, training of current and future rural physicians and public health professionals in core public health techniques and novel funding mechanisms to support public health initiatives that are led and managed by local public health authorities.
 - Advocate for adequate and sustained funding for public health staffing and programs.

[Sub. Res. 72, I-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CEJA Rep. 06, A-18; Appended: Res. 433, A-19; Modified: CSAPH Rep. 2, A-22; Reaffirmed: CMS Rep. 09, A-23; Reaffirmed: Res. 724, A-23]

Improving Health Care of American Indians H-350.976

Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.

(2) The federal government provide sufficient funds to support needed health services for American Indians.

(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.

(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.

(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.

(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.

(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.

(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.

(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.

(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.

(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations. [CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13; Reaffirmed: BOT Rep. 09, A-23]

Improving Healthcare of Hispanic Populations in the United States H-350.975

It is the policy of our AMA to: (1) Encourage health promotion and disease prevention through educational efforts and health publications specifically tailored to the Hispanic community.

(2) Promote the development of substance abuse treatment centers and HIV/AIDS education and prevention programs that reach out to the Hispanic community.

(3) Encourage the standardized collection of consistent vital statistics on Hispanics by appropriate state and federal agencies.

(4) Urge federal and local governments, as well as private institutions, to consider including Hispanic representation on their health policy development organization.

(5) Support organizations concerned with Hispanic health through research and public acknowledgment of the importance of national efforts to decrease the disproportionately high rates of mortality and morbidity among Hispanics.

(6) Promote research into effectiveness of Hispanic health education methods.

(7) Continue to study the health issues unique to Hispanics, including the health problems associated with the United States/Mexican border. [CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CEJA Rep. 01, A-20]

Improving Healthcare of Black and Minority Populations H-350.972

Our AMA supports:

(1) A greater emphasis on minority access to health care and increased health promotion and disease prevention activities designed to reduce the occurrence of illnesses that are highly prevalent among disadvantaged minorities.

(2) Authorization for the Office of Minority Health to coordinate federal efforts to better understand and reduce the incidence of illness among U.S. minority Americans as recommended in the 1985 Report to

the Secretary's Task Force on Black and Minority Health.

(3) Advising our AMA representatives to the LCME to request data collection on medical school curricula concerning the health needs of minorities.

(4) The promotion of health education through schools and community organizations aimed at teaching skills of health care system access, health promotion, disease prevention, and early diagnosis. [CLRPD Rep. 3, I-98; Reaffirmation A-01; Modified: CSAPH Rep. 1, A-11; Reaffirmed: CEJA Rep. 1, A-21]

Educational Strategies for Meeting Rural Health Physician Shortage H-465.988

1. In light of the data available from the current literature as well as ongoing studies being conducted by staff, the AMA recommends that:

A. Our AMA encourage medical schools and residency programs to develop educationally sound rural clinical preceptorships and rotations consistent with educational and training requirements, and to provide early and continuing exposure to those programs for medical students and residents.

B. Our AMA encourage medical schools to develop educationally sound primary care residencies in smaller communities with the goal of educating and recruiting more rural physicians.

C. Our AMA encourage state and county medical societies to support state legislative efforts toward developing scholarship and loan programs for future rural physicians.

D. Our AMA encourage state and county medical societies and local medical schools to develop outreach and recruitment programs in rural counties to attract promising high school and college students to medicine and the other health professions.

E. Our AMA urge continued federal and state legislative support for funding of Area Health Education Centers (AHECs) for rural and other underserved areas.

F. Our AMA continue to support full appropriation for the National Health Service Corps Scholarship Program, with the proviso that medical schools serving states with large rural underserved populations have a priority and significant voice in the selection of recipients for those scholarships.

G. Our AMA support full funding of the new federal National Health Service Corps loan repayment program.

H. Our AMA encourage continued legislative support of the research studies being conducted by the Rural Health Research Centers funded by the National Office of Rural Health in the Department of Health and Human Services.

I. Our AMA continue its research investigation into the impact of educational programs on the supply of rural physicians.

J. Our AMA continue to conduct research and monitor other progress in development of educational strategies for alleviating rural physician shortages.

K. Our AMA reaffirm its support for legislation making interest payments on student debt tax deductible.

L. Our AMA encourage state and county medical societies to develop programs to enhance work opportunities and social support systems for spouses of rural practitioners.

2. Our AMA will work with state and specialty societies, medical schools, teaching hospitals, the Accreditation Council for Graduate Medical Education (ACGME), the Centers for Medicare and Medicaid Services (CMS) and other interested stakeholders to identify, encourage and incentivize qualified rural physicians to serve as preceptors and volunteer faculty for rural rotations in residency.

3. Our AMA will: (a) work with interested stakeholders to identify strategies to increase residency training opportunities in rural areas with a report back to the House of Delegates; and (b) work with interested stakeholders to formulate an actionable plan of advocacy with the goal of increasing residency training in rural areas.

4. Our AMA will encourage ACGME review committees to consider adding exposure to rural medicine as appropriate, to encourage the development of rural program tracks in training programs and increase physician awareness of the conditions that pose challenges and lack of resources in rural areas.

5. Our AMA will encourage adding educational webinars, workshops and other didactics via remote learning formats to enhance the educational needs of smaller training programs.

[CME Rep. C, I-90; Reaffirmation A-00; Reaffirmation A-01; Reaffirmation I-01; Reaffirmed: CME Rep. 1, I-08; Reaffirmed: CEJA Rep. 06, A-18; Appended: Res. 956, I-18; Appended: Res. 318, A-19; Modified: CME Rep. 3, I-21; Reaffirmation: I-22; Reaffirmed: BOT Rep. 11, A-23]

Access to Physician Services in Rural Health Clinics H-465.984

Our AMA strongly encourages CMS and appropriate state departments of health to review the Rural Health Clinic Program eligibility and certification requirements to ensure that independent (e.g., physician) and provider-based (e.g., hospital) facilities are certified as Rural Health Clinics only in those areas that

truly do not have appropriate access to physician services. [Sub. Res. 717, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CMS Rep. 7, A-11; Reaffirmed: CMS Rep. 1, A-21]

Rural Health Physician Workforce Disparities D-465.997

Our AMA will monitor the status and outcomes of the 2020 Census to assess the impact of physician supply and patient demand in rural communities. [CME Rep. 3, I-21]

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 1-A-24

Subject: Council on Science and Public Health Sunset Review of 2014 House Policies

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee E

- 1 Policy G-600.110, “Sunset Mechanism for AMA Policy,” calls for the decennial review of
2 American Medical Association (AMA) policies to ensure that our AMA’s policy database is
3 current, coherent, and relevant. This policy reads as follows, laying out the parameters for review
4 and specifying the needed procedures:
5
- 6 1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A
7 policy will typically sunset after ten years unless action is taken by the House of Delegates to retain
8 it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset
9 the sunset “clock,” making the reaffirmed or amended policy viable for another 10 years.
10
 - 11 2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the
12 following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies
13 that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to
14 the appropriate AMA councils for review; (c) Each AMA council that has been asked to review
15 policies shall develop and submit a report to the House of Delegates identifying policies that are
16 scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one
17 of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or
18 (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it
19 makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent
20 justification (f) The Speakers shall determine the best way for the House of Delegates to handle the
21 sunset reports.
22
 - 23 3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier
24 than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or
25 has been accomplished.
26
 - 27 4. The AMA councils and the House of Delegates should conform to the following guidelines for
28 sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been
29 accomplished; or (c) when the policy or directive is part of an established AMA practice that is
30 transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of
31 Delegates Reference Manual: Procedures, Policies and Practices.
32
 - 33 5. The most recent policy shall be deemed to supersede contradictory past AMA policies.
34
 - 35 6. Sunset policies will be retained in the AMA historical archives.

1 RECOMMENDATION

2

3 The Council on Science and Public Health recommends that the House of Delegates policies listed
4 in the appendix to this report be acted upon in the manner indicated and the remainder of this report
5 be filed. (Directive to Take Action)

Fiscal Note: \$1,000.

APPENDIX: RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
D-120.946	Modification to the USP Chapter 797 Guidelines as Currently Written	<ol style="list-style-type: none"> 1. Our AMA will inform physicians on the far-reaching effects of the immediate-use exception to practice and patient safety. 2. Our AMA will encourage and facilitate as a convener for all state, medical school, and specialty organization delegates to the United States Pharmacopeial Convention to protest the "immediate-use" exception to the USP Chapter 797 guidelines as currently written, including the "one-hour-rule," and seek reasonable accommodation and modification of Chapter 797 guidelines with interested stakeholders. 3. Our AMA will encourage and facilitate as a convener for all state, medical school, and specialty organization delegates to the United States Pharmacopeial Convention to protest the USP Chapter 797 guidelines as currently written, including the prohibition to enter a container no more than twice, and seek reasonable accommodation and modification of Chapter 797 guidelines with interested stakeholders. 4. Our AMA will urge The Joint Commission and other deeming organizations to suspend the enforcement of the "immediate-use" exception to USP Chapter 797 as currently written, including the "one-hour-rule" until the reconvening of the USP in June 2015. 5. Our AMA will urge the USP to employ evidence-based methods to survey current medical practice as it relates to USP Chapter 797 guidelines. (Res. 520, A-14) 	Rescind, completed. AMA's stance on USP Chapter 797 policy can be found in Policy H-120.930, "USP Compounding Rules."
D-125.987	Biosimilar Product Naming and Labeling	Our AMA urges the FDA to finalize Guidance on the naming and labeling conventions to be used for biosimilar products, including those that are deemed interchangeable. Any change in current nomenclature rules or standards should be informed by a better and more complete understanding of how such changes, including requiring a unique identifier for biologic USANs would impact prescriber attitudes and patient access, and affect post marketing surveillance. Actions that solely enhance product identification during surveillance but act as barriers to clinical uptake are counterproductive. However, because of unique product attributes, a relatively simple way to identify and track which biosimilar products have been dispensed to individual patients must be established. If unique identifiers for biosimilar USANs are required to support pharmacovigilance, they should be simple and the resulting names	Retain, still relevant. Note: May be modified by CSAPH5-A-24, "Biosimilar/Interchangeable Terminology"

		should reinforce similarities by using the same root name following standards for nonproprietary names established by the USAN Council. (CSAPH Rep. 4, A-14)	
D-125.989	Substitution of Biosimilar Medicines and Related Medical Products	Our AMA urges that State Pharmacy Practice Acts and substitution practices for biosimilars in the outpatient arena: (1) preserve physician autonomy to designate which biologic or biosimilar product is dispensed to their patients; (2) allow substitution when physicians expressly authorize substitution of <u>a biologic or biosimilar an interchangeable product</u> ; (3) limit the authority of pharmacists to automatically substitute only those biosimilar products that are deemed interchangeable by the FDA in the absence of express physician authorization to the contrary, allow substitution of the biologic or biosimilar product when (a) the biologic product is highly similar to the reference product, notwithstanding minor differences in clinically inactive components; and (b) there are no data indicating clinically meaningful differences between the biological product and the reference product in terms of the safety, purity, and potency of the product. (Res. 918, I-08; Modified: CSAPH Rep. 1, I-11; Modified: CSAPH Rep. 4, A-14)	Retain as amended. Amendments noted here are consistent with those currently proposed in CSAPH 5-A-24, "Biosimilar/Interchangeable Terminology"
D-135.973	Safer Chemical Policies	Our AMA will review the recommendations of the National Academies of Sciences, <u>Engineering, and Medicine</u> with respect to chemical policy reform. (Res. 415, A-14)	Retain as amended to update terminology.
D-135.985	Air Pollution and Public Health	Our AMA: (1) promotes education among its members and the general public and will support efforts that lead to significant reduction in fuel emissions in all states; and (2) will declare the need for authorities in all states to expeditiously adopt, and implement effective air pollution control strategies to reduce emissions, and this position will be disseminated to state and specialty societies. (Res. 408, A-08; Reaffirmation A-14)	Retain; still relevant.
D-135.992	Mercury Pollution	Our AMA: (1) recognizes that the trading of air pollutants is potentially harmful for vulnerable populations, and that the Clean Air Mercury Rule is inconsistent with our AMA's health protective approach to air pollution ; (2) encourages state governments to be proactive in protecting citizens from harmful mercury emissions; (3) encourages reduction in mercury use in manufacturing wherever possible, and recognize that more must be done using available and emerging technology to reduce mercury emissions; (4) recommends increased vigilance, monitoring and tracking of mercury use and emissions in	Retain as amended. Mercury air pollution is regulated under the Mercury & Air Toxics Standards, which was passed in 2012. The Clean Air Mercury Rule is no longer relevant.

		<p>chlor-alkali facilities that use mercury in manufacturing processes;</p> <p>(5) encourages the US government to assume a leadership role in reducing the global mercury burden and work toward promoting binding, health-protective international standards;</p> <p>(6) supports the Environmental Protection Agency's national mercury emissions standards for cement kilns at limits based on the latest pollution control technology; and</p> <p>(7) supports modern and strict source monitoring of mercury emissions from cement plants.</p> <p>(CSAPH Rep. 1, I-06; Appended: Res. 501, A-11; Reaffirmation A-14)</p>	
D-150.973	Powdered Caffeine and Easy Unintentional Overdose	<p>Our AMA will: (1) seek <u>supports</u> regulation or legislation to banning the sale of powdered caffeine to minors; and (2) issue a statement condemning the sale of powdered caffeine in packaging so concentrated, so difficult to measure, and in sufficient quantity that misuse and overdose is too common.</p> <p>(Res. 217, I-14)</p>	Retain as amended to remove the portion of the directive that has been accomplished; convert to H-policy.
D-150.983	Food Stamp Incentive Program	<p>Our AMA supports legislation to provide a meaningful increase in the value of <u>SNAP food stamps</u> when used to purchase fruits and vegetables.</p> <p>(Res. 405, A-07; Reaffirmation A-13; Reaffirmation A-14)</p>	Retain as amended to update terminology.
D-190.972	Physician Credit Card Payments by Health Insurance Companies	<p>Our AMA will consider legislation on behalf of physicians that any credit card transaction/bank fees are paid by the insurer and not the health care provider.</p> <p>(Res. 225, I-14)</p>	Retain; still relevant.
D-20.993	Promotion of Rapid HIV Test	<p>Our AMA will work with any and all local and state medical societies, and other interested US and international organizations, to increase access to and utilization of Food and Drug Administration-approved rapid HIV testing in accordance with the quality assurance guidelines for rapid HIV testing developed by the Centers for Disease Control and Prevention. Additionally, pre- and post-test counseling should be performed in accordance with guidelines established by the CDC.</p> <p>(Res. 511, A-05; Modified: CCB/CLRPD Rep. 2, A-14)</p>	Retain; still relevant.
D-440.943	Obstructive Sleep Apnea	<p>Our AMA: (1) recognizes Obstructive Sleep Apnea (OSA) as a major public health issue; (2) encourages a national public education campaign by appropriate federal agencies and relevant advocacy groups; (3) encourage research into the association of OSA with metabolic, cardiovascular, respiratory, and other diseases; and (4) encourages that all physicians become knowledgeable about the diagnosis and management of OSA.</p> <p>(Res. 521, A-09; Reaffirmed: Res. 107, A-14)</p>	Retain; convert to H-policy.

D-450.988	Performance Measures for Evidence-Based Medicine	Our AMA will continue to ensure the quality of medical care through the appropriate use of evidence-based clinical performance measures. (Res. 506, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; convert to H-policy.
D-460.969	Navajo Birth Cohort Study	1. Our AMA recognizes the public health importance of the Navajo Birth Cohort Study for our Native American population and other populations exposed to uranium. 2. Our AMA will urgently endeavor to convene key stakeholders involved with the Navajo Birth Cohort Study and appropriate high-level officials of the Centers for Disease Control and Prevention, with the goal of achieving a resolution of any issues that have prevented the release of full funding to the university contracted to perform this study, as mandated by Congress. (Res. 932, I-14)	Retain as amended; convert to H-Policy. The study is ongoing, so funding issues appear to have been addressed.
D-460.979	Physicians and Clinical Trials	Our AMA supports elimination of the use of restrictive covenants or clauses that interfere with scientific communication in agreements between pharmaceutical companies or manufacturers of medical instruments, equipment and devices, and physician researchers. (Res. 610, I-04; Modified: CSAPH Rep. 1, A-14)	Retain; convert to H-policy.
D-485.999	Unrealistic Expectations from Surgery on Television	Our AMA opposes television programs that minimize the seriousness and risks of surgery and distort patient expectations. (Res. 609, I-04; Modified: CSAPH Rep. 1, A-14)	Retain; convert to H-policy.
D-60.969	Legal Protection and Social Services for Commercially Sexually Exploited Youth	Our AMA will work with state medical societies and specialty societies to: (1) where appropriate, advocate for legal protection and alternatives to incarceration for commercially sexually exploited youth as an alternative to prosecution for crimes related to their sexual or criminal exploitation; and (2) encourage the development of appropriate and comprehensive services as an alternative to criminal detention in order to overcome barriers to necessary services and care for commercially sexually exploited youth. (Res. 4, I-14)	Rescind. Addressed in current policies H-60.912 and H-65.948.
D-60.976	Childhood Anaphylactic Reactions	Our AMA will: (1) urge all schools, from preschool through 12th grade, to: (a) develop Medical Emergency Response Plans (MERP); (b) practice these plans in order to identify potential barriers and strategies for improvement; (c) ensure that school campuses have a direct communication link with an emergency medical system (EMS); (d) identify students at risk for life-threatening emergencies and ensure these children have an individual emergency care plan that is formulated with input by a physician; (e) designate roles and responsibilities among school staff for handling potential life-threatening emergencies, including administering medications, working with EMS and local emergency departments, and contacting	Retain; still relevant.

		<p>families; (f) train school personnel in cardiopulmonary resuscitation; (g) adopt the School Guidelines for Managing Students with Food Allergies distributed by FARE (Food Allergy Research & Education); and (h) ensure that appropriate emergency equipment to deal with anaphylaxis and acute asthmatic reactions is available and that assigned staff are familiar with using this equipment; (2) work to expand to all states laws permitting students to carry prescribed epinephrine or other medications prescribed by their physician for asthma or anaphylaxis; (3) support increased research to better understand the causes, epidemiology, and effective treatment of anaphylaxis; (4) urge the Centers for Disease Control and Prevention to study the adequacy of school personnel and services to address asthma and anaphylactic emergencies; (5) urge physicians to work with parents and schools to ensure that all their patients with a food allergy have an individualized emergency plan; and (6) work to allow all first responders to carry and administer epinephrine in suspected cases of anaphylaxis. (CSAPH Rep. 1, A-07; Modified: CCB/CLRPD Rep. 2, A-14)</p>	
<p>H-10.963</p>	<p>Safe In-Line Skating</p>	<p>1. Our AMA encourages physicians to counsel patients, and their parents when appropriate, that full protective equipment should be worn and appropriate safety measures be taken to prevent in-line skating injuries. Consistent with recommendations of the American Academy of Pediatrics, prevention efforts should include the following: (a) Full protective gear should be worn at all times. This would include wrist guards, elbow pads, kneepads, and a helmet. The helmet should be certified by the ASTM, the ANSI, or the Snell Foundation. (b) Unsafe activities such as hitching or truck surfing, which is latching onto a moving vehicle, should be avoided. (c) Training for beginners should be encouraged, and novice skaters should start in an indoor or outdoor rink rather than on the street. (d) Skaters should not skate in the dark and should learn to look for road debris or defects that could cause them to lose their balance. (e) Skaters, especially children with balance problems, physical disabilities, or uncorrected vision or hearing problems should do so in a rink or another protected place.</p> <p>2. Our AMA encourages federal agencies and industries to support research on patterns of equipment use and frequency of protective equipment use for in-line skating.</p> <p>3. Our AMA will continue to work with the Consumer Product Safety Commission, Centers for Disease Control and Prevention, national in-line skating organizations, and medical specialty</p>	<p>Retain; still relevant.</p>

		<p>societies, the AMA Alliance and the Federation to encourage in-line skaters to wear protective equipment.</p> <p>4. Our AMA encourages medical specialty societies and state and local medical societies to advocate for state and local legislation to improve the safety of in-line skating through: (a) the use of appropriate protective equipment (especially helmets); (b) the designation of protected areas for in-line skating; (c) prohibitions against hitching a ride behind a moving vehicle; (d) the assurance that protective equipment is available at skating rental shops; and (e) the provision of training and educational materials. Such legislation should include a surveillance component to monitor compliance.</p> <p>(CCB/CLRPD Rep. 3, A-14)</p>	
<p>H-10.964</p>	<p>Helmets for Riders of Motorized and Non-motorized Cycles</p>	<p>General Helmet Use: Our AMA: (1) encourages physicians to counsel their patients who ride motorized and non-motorized cycles to use approved helmets and appropriate protective clothing while cycling; (2) encourages patients and families to inform and train children about safe cycle-riding procedures, especially on roads and at intersections, the need to obey traffic laws, and the need for responsible behavior; (3) encourages community agencies, such as those involving law enforcement, schools, and parent-teacher organizations, to promote training programs for the responsible use of cycles; (4) urges manufacturers to improve the safety and reliability of the vehicles they produce and to support measures to improve cycling safety; (5) advocates further research on the effectiveness of helmets and on the health outcomes of community programs that mandate their use; (6) encourages efforts to investigate the impact of helmet use by riders of motorcycles and all bicycles, in order to establish the risk of major medical trauma from not wearing helmets, the costs added to the health care system by such behavior, and the payers of these added costs (i.e., private insurance, uncompensated care, Medicare, Medicaid, etc.); (7) supports the exploration of ways to ensure the wearing of helmets through the use of disincentives or incentives such as licensing fees, insurance premium adjustments and other payment possibilities.</p> <p>Bicycles: Our AMA: (1) actively supports bicycle helmet use and encourages physicians to educate their patients about the importance of bicycle helmet use; (2) encourages the manufacture, distribution, and utilization of safe, effective, and reasonably priced bicycle helmets; and (3) encourages the availability of helmets at the point of bicycle purchase.</p>	<p>Retain; still relevant.</p>

		<p>Scooters: Our AMA: (1) recommends the use of protective gear (certified helmets, elbow and knee pads, closed-toe shoes) for riders of scooters, especially children and adolescents; (2) encourages physicians to counsel patients, and their parents when appropriate, that full protective equipment should be worn and appropriate safety measures should be taken to prevent scooter injuries (e.g., riding away from traffic, and close supervision of riders under the age of eight); and (3) urges companies that manufacture or sell scooters to include appropriate information about the safe use of scooters on the scooters themselves, on or inside scooter packaging, on their web sites, and at the point of sale.</p> <p>Motorcycles: Our AMA: (1) encourages physicians to be aware of motorcycle risks and safety measures and to counsel their patients who ride motorcycles to wear appropriate protective gear and helmets that meet federal safety standards, receive appropriate training in the safe operation of their motorcycle, comply with state licensing laws, and avoid riding a motorcycle while under the influence of alcohol and other drugs; (2) endorses the concept of legislative measures to require the use of helmets when riding or driving a motorcycle; (3) supports federal regulatory rules to make the receipt of federal highway funds by a state dependent on passage of mandatory motorcycle helmet laws by that state; (4) urges constituent societies to support the enactment or preservation of state motorcycle helmet laws; and (5) supports rider education legislation, which is more easily implemented and more effective than legislation requiring manufacturers to emphasize the dangers of operating motorcycles. (CCB/CLRPD Rep. 3, A-14)</p>	
<p>H-120.936</p>	<p>Improve Safety of Mail-Ordered Medication</p>	<p>Our AMA supports the establishment of national guidelines for mail-order pharmacies to ensure that medications reach patients in a safe and timely manner with full potency, and that when medication is damaged or loses potency during shipment, it should be replaced by the pharmacy at no cost to the patient. (Res. 917, A-14)</p>	<p>Retain; still relevant.</p>
<p>H-120.962</p>	<p>National Mail Order Pharmacy Practices</p>	<p>1. The AMA insists that mail-order pharmacy companies respect the prescribing authority of physicians and dispense prescription medications only in the amounts prescribed; and recommends that mail order pharmacy companies charge only a reasonable and small shipping and handling fee per shipment in order not to encourage patients to request amounts of medications greater than those warranted by their physician's best judgment. 2. Our AMA opposes charging patients more than one co-pay for multiple prescriptions of the same</p>	<p>Retain as amended to remove clause that has been accomplished.</p>

		<p>or varying doses of a long-term medication within a 90-day period when evidence-based medicine dictates that less than 90-day prescriptions should be written during the initialization and dose stabilization of a newly prescribed long-term medication or during change in dosing of a long-term medication currently being taken.</p> <p>3. Our AMA will make traditional pharmacies, including national chains, mail order pharmacies, appropriate insurance carriers, and pharmaceutical benefit management companies aware of its policy opposing the charging of patients more than one co-pay for multiple prescriptions of the same or varying doses of a long term medication within a 90 day period when evidence based medicine dictates that less than 90 day prescriptions should be written during the initialization and dose stabilization of a newly prescribed long term medication or during change in dosing of a long term medication currently being taken.</p> <p>(Sub. Res. 506, I-96; Reaffirmed: CSAPH Rep. 3, A-06; Appended: Res. 121, A-07; Reaffirmed: BOT Rep. 8, A-11; Reaffirmation A-14)</p>	
<p>H-120.968</p>	<p>Medication (Drug) Errors in Hospitals</p>	<p>(1) Our AMA encourages individual physicians to minimize medication errors by adhering to the following guidelines when prescribing medications:</p> <p>(a) Physicians should stay abreast of the current state of knowledge regarding optimal prescribing through literature review, use of consultations with other physicians and pharmacists, participation in continuing medical education programs, and other means.</p> <p>(b) Physicians should evaluate the patient's total status and review all existing drug therapy before prescribing new or additional medications (e.g., to ascertain possible antagonistic drug interactions).</p> <p>(c) Physicians should evaluate and optimize patient response to drug therapy by appropriately monitoring clinical signs and symptoms and relevant laboratory data; follow-up and periodically reevaluate the need for continued drug therapy.</p> <p>(d) Physicians should be familiar with the hospital's medication-ordering system, including the formulary system; the drug use review (DUR) program; allowable delegation of authority; procedures to alert nurses and others to new drug orders that need to be processed; standard medication administration times; and approved abbreviations.</p> <p>(e) Written drug or prescription orders (including signatures) should be legible. Physicians with poor handwriting should print or type medication orders if direct order entry capabilities for computerized systems are unavailable.</p>	<p>Retain; still relevant.</p>

		<p>(f) Medication orders should be complete and should include patient name; drug name (generic drug name or trademarked name if a specific product is required); route and site of administration; dosage form (if applicable); dose; strength; quantity; frequency of administration; and prescriber's name. In some cases, a dilution, rate, and time of administration should be specified. Physicians should review all drug orders for accuracy and legibility immediately after they have prescribed them.</p> <p>(g) Medication orders should be clear and unambiguous. Physicians should: (i) write out instructions rather than use nonstandard or ambiguous abbreviations (e.g., write "daily" rather than "qd" which could be misinterpreted as "qid" or "od"); (ii) not use vague instructions, such as "take as directed"; (iii) specify exact dosage strengths (such as milligrams) rather than dosage form units (such as one vial) (an exception would be combination products, for which the number of dosage form units should be specified); (iv) prescribe by standard nomenclature, using the United States Adopted Names (USAN)-approved generic drug name, official name, or trademarked name (if a specific product is required) and avoid locally coined names, chemical names, unestablished abbreviated drug names (e.g., AZT), acronyms, and apothecary or chemical symbols; (v) always use a leading "0" to precede a decimal expression of less than one (e.g., 0.5 ml), but never use a terminal "0" (e.g., 5.0 ml); (vi) avoid the use of decimals when possible (e.g., prescribe 500 mg instead of 0.5 g); (vii) spell out the word "units" rather than writing "u"; (viii) and use the metric system. Instructions with respect to "hold" orders for medications should be clear.</p> <p>(h) Verbal medication orders should be reserved only for those situations in which it is impossible or impractical for the prescriber to write the order or enter it in a computer. Verbal orders should be dictated slowly, clearly, and articulately to avoid confusion. The order should be read back to the prescriber by the recipient (e.g., nurse, pharmacist); when read back, the recipient should spell the drug name and avoid abbreviations when repeating the directions. A written copy of the verbal order should be placed in the patient's medical record and later confirmed by the prescriber in accordance with applicable state regulations and hospital policies.</p> <p>(2) Our AMA encourages the hospital medical staff to take a leadership role in their hospital, and in collaboration with pharmacy, nursing, administration, and others, to develop and improve organizational systems for monitoring, reviewing,</p>	
--	--	---	--

		and reporting medication errors and, after identification, to eliminate their cause and prevent their recurrence. (BOT Rep. 11, A-94; Reaffirmed by Sub. Res. 508, I-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	
H-120.975	Certifying Indigent Patients Unable to Pay for Pharmaceutical Manufacturers' Free Drug Programs	Our AMA: (1) supports Pharmaceutical Research and Manufacturers of America (PhRMA) programs for indigent patients and the development of a universal application process, eligibility criteria and form for all prescription drug patient-assistance programs to facilitate enrollment of patients and physicians; (2) encourages PhRMA to provide information to physicians and hospital medical staffs about member programs that provide pharmaceuticals to indigent patients; (3) urges drug companies to develop user-friendly and culturally sensitive uniform centralized policies and procedures for certifying indigent patients for free or discounted medications for <u>patients unable to pay</u> ; and (4) opposes the practice of charging patients to apply for or gain access to pharmaceutical assistance programs. (Sub. Res. 105, I-92; Sub. Res. 507, A-96; Appended: Sub. Res. 513, I-97; Reaffirmation I-98; Reaffirmation I-00; Reaffirmation A-01; Amended: Res. 513, A-02; Reaffirmed and Appended: Sub. Res. 705, I-03; Reaffirmed and Modified: BOT Rep. 13, A-04; Reaffirmation I-04; Modified: CSAPH Rep. 1, A-14)	Retain as amended to include person-first language.
H-125.980	Abbreviated Pathway for Biosimilar Approval	Our AMA supports FDA implementation of the Biologics Price Competition and Innovation Act of 2009 in a manner that 1) places appropriate emphasis on promoting patient access, protecting patient safety, and preserving market competition and innovation; 2) includes planning by the FDA and the allocation of sufficient resources to ensure that physicians understand the distinctions between biosimilar products that are considered highly similar, and those that are deemed interchangeable. Focused educational activities must precede and accompany the entry of biosimilars into the U.S. market, both for physicians and patients; and 3) includes compiling and maintaining an official compendium of biosimilar products, biologic reference products, and their related interchangeable biosimilars as they are developed and approved for marketing by the FDA. (Res. 220, A-09; Reaffirmation A-11; Modified: CSAPH Rep. 1, I-11; Modified: CSAPH Rep. 4, A-14)	Retain; still relevant. Note: May be modified by CSAPH5-A-24, "Biosimilar/Interchangeable Terminology."
H-130.936	Tornado Safety and Manufactured Homes	Our AMA believes that: 1. Owners of manufactured home parks should provide a plan, developed with and approved by local authorities, for the evacuation and sheltering of residents of the park in severe weather events	Retain; still relevant.

		<p>such as tornadoes, high winds, or floods. The plan should advise residents of the vulnerability of manufactured homes in tornadoes and other extreme wind events and that evacuation to a safer location is necessary. The shelter or evacuation plan should be posted conspicuously in the park and the park owner should provide each resident with a copy of the approved shelter or evacuation plan.</p> <p>2. State and local government authorities in regions at increased risk for tornadoes and other extreme wind events should enact measures to either provide, or require owners of manufactured home parks in their jurisdiction to provide, as appropriate, an approved common storm shelter or safe room for all residents of manufactured homes in the park as protection against tornadoes and other extreme wind events.</p> <p>3. Research is needed to enhance the design and construction of manufactured homes and manufactured home tie down/anchoring systems to withstand extreme wind forces and wind-blown debris.</p> <p>4. Federal, state, regional, and local authorities should coordinate policies, processes, and procedures to ensure that manufactured homes are installed and inspected in accordance with established guidelines and standards, including requirements for the installation and inspection of tie down/anchoring systems.</p> <p>5. Incentives should be developed for all homeowners (including those who live in manufactured homes), businesses, and local governments in regions at increased risk for tornadoes and other extreme wind events for the installation of home or community safe rooms and storm shelters, in accordance with federal and professional guidelines and standards.</p> <p>6. All citizens should consider purchasing a NOAA Weather Radio All Hazards public alert radio for use in disasters and other emergency situations. Citizens also should develop a plan for where they will go and what they will do when a severe weather alert is issued. (CSAPH Rep. 3, I-14)</p>	
<p>H-135.991</p>	<p>Clean Air</p>	<p>(1) The AMA supports setting the national primary and secondary ambient air quality standards at the level necessary to protect the public health. Establishing such standards at the level necessary to protect the public health. Establishing such standards at a level "allowing an adequate margin of safety," as provided in current law, should be maintained, but more scientific research should be conducted on the health effects of the standards currently set by the EPA.</p>	<p>Retain as amended. The deleted sentence in first clause is not a complete sentence and does not add value to the policy as written. The third resolve recommended for deletion is redundant with existing and newer AMA policy H-135.949, with the newer resolve having more specific language on encouraging regulations that reduce hazardous emissions.</p>

		<p>(2) The AMA supports continued protection of certain geographic areas (i.e., those with air quality better than the national standards) from significant quality deterioration by requiring strict, but reasonable, emission limitations for new sources.</p> <p>(3) The AMA endorses a more effective hazardous pollutant program to allow for efficient control of serious health hazards posed by airborne toxic pollutants.</p> <p>(4) The AMA believes that more research is needed on the causes and effects of acid rain, and that the procedures to control pollution from another state need to be improved.</p> <p>(5) The AMA believes that attaining the national ambient air quality standards for nitrogen oxides and carbon monoxide is necessary for the long-term benefit of the public health. Emission limitations for motor vehicles should be supported as a long-term goal until appropriate peer-reviewed scientific data demonstrate that the limitations are not required to protect the public health.</p> <p>(BOT Rep. R, A-82; Reaffirmed: CLRPD Rep. A, I-92; Amended: CSA Rep. 8, A-03; Reaffirmation I-06; Reaffirmed in lieu of Res. 509, A-09; Reaffirmation I-09; Reaffirmation A-14)</p>	
H-145.977	Use of Conducted Electrical Devices by Law Enforcement Agencies	<p>Our AMA: (1) recommends that law enforcement departments and agencies should have in place specific guidelines, rigorous training, and an accountability system for the use of conducted electrical devices (CEDs) that is modeled after available national guidelines; (2) encourages additional independent research involving actual field deployment of CEDs to better understand the risks and benefits under conditions of actual use. Federal, state, and local agencies should accurately report and analyze the parameters of CED use in field applications; and (3) policy is that law enforcement departments and agencies have a standardized protocol developed with the input of the medical community for the evaluation, management and post-exposure monitoring of subjects exposed to CEDs.</p> <p>(CSAPH Rep. 6, A-09; Modified: Res. 501, A-14)</p>	Retain; still relevant.
H-15.950	Child Safety Seats - Public Education and Awareness	<p>Our AMA supports efforts to require child safety seat manufacturers to include information about the importance of rear-facing safety seats until children are two <u>at least four</u> years of age or until they reach the maximum height or weight specifications of their car seat, at which time they should be placed in a forward-facing child safety system with a harness as recommended by the American Academy of Pediatrics.</p> <p>(Res 922, I-14)</p>	Retain as amended to bring the age recommendation in line with current AAP recommendations.
H-15.951	All-Terrain Vehicles	<p>Our AMA: supports publicizing the dangers of all-terrain vehicles, especially to persons unlicensed to drive other vehicles; encourages manufacturers and</p>	Retain; still relevant.

		dealers of ATVs to provide information regarding the safe operation of such vehicles; and seeks federal legislation to require sellers of all-terrain vehicles in the United States to promote the sale and use of suitable helmets to be used when operating or riding as a passenger on ATVs; and federal and state legislation and/or regulation to maximize safety of ATV operation including but not limited to (a) wearing suitable helmets and protective gear when operating or riding as a passenger on an ATV, (b) providing some safety instruction and training to all operators of ATVs, and (c) ensuring appropriate licensure for all operators of ATVs. (CCB/CLRPD Rep. 3, A-14)	
H-15.986	Automatic (i.e., Passive) Restraints to Prevent Injuries and Deaths from Motor Vehicle Accidents	The AMA (1) supports legislation to promote availability of effective seat belts in school buses in the U.S.; and (2) supports legislative action to promote availability of effective seat belts in all motor vehicles in public use (e.g., public and private buses, taxicabs, and any other vehicles carrying passengers). (Sub. Res. 2, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmation A-04; Reaffirmed: BOT Rep. 29, A-04; Modified: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-150.931	Payment for Nutrition Support Services	Our AMA recognizes the value of nutrition support teams services and their role in positive patient outcomes and supports payment for the provision of their services. (Res. 705, A-14)	Retain; still relevant.
H-150.948	Increasing Awareness of Nutrition Information and Ingredient Lists	Our AMA supports federal federal legislation or rules requiring restaurants, retail food establishments, and vending machine operators that have menu items common to multiple locations, as well as all school and workplace cafeterias, especially those located in health care facilities, to have available for public viewing ingredient lists, nutritional information, and standard nutrition labels for all menu items. (Sub. Res. 411, A-04; Reaffirmation A-07; Reaffirmed in lieu of Res. 413, A-09, Res. 416, A-09 and Res. 418, A-09; Modified: BOT Rep. 1, A-14)	Retain as amended so as not limit legislation to the federal level.
H-155.988	Public Health and Safety Awareness	The AMA believes that attention to personal health and safety can dramatically improve well-being and reduce health care costs. (Res. 42, I-83; Reaffirmed: CLRPD Rep. 1, I-93; Reaffirmed: CMS Rep. 5, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-170.972	Role of Physicians in Improving Adolescent Health	The AMA supports programs that encourage teen health and supports the involvement of medical students, residents, and other physicians in educational efforts to enhance teen health. (Res. 431, A-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Modified: CSAPH Rep. 1, A-14)	Retain; still relevant.

H-170.985	Science, Technology, Engineering and Mathematics Education	Our AMA is committed to working with other concerned organizations and agencies to improve science, technology, engineering and mathematics (STEM) education and literacy in the nation, and to increase interest in STEM on the part of the nation's youth, particularly underrepresented minorities. (Res. 2, A-88; Reaffirmed: Sunset Report, I-98; Modified and Reaffirmed: CSAPH Rep. 2, A-08; Reaffirmed in lieu of Res. 514, A-09; Reaffirmed in lieu of Res. 524, A-09; Modified: Res. 516, A-14)	Retain; still relevant.
H-175.995	Hair Analysis - A Potential for Medical Abuse	The AMA opposes chemical analysis of the hair as a determinant of the need for medical therapy and supports informing the American public and appropriate governmental agencies of this unproven practice and its potential for health care fraud. (Sub. Res. 67, I-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-245.981	Vitamin K Prophylaxis in Newborn Infants	The AMA supports the intramuscular administration of a single dose of 0.5-1 mg of vitamin K1 in neonates at birth to prevent vitamin K deficiency bleeding. (Res. 514, A-94; Reaffirmed: CSA Rep. 6, A-04; Modified: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-25.994	Increased Liaison, Communication and Educational Efforts with the Elderly	The AMA supports (1) increasing communications and understanding between organized medicine and the elderly; (2) continuing contact with organizations such as the AARP, offering speakers for their meetings, and pursuing other steps to improve their understanding of physicians' problems and concerns; and (3) encouraging state and county medical societies to undertake similar efforts to increase liaison with the elderly. (Res. 133, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-280.962	Dehydration	Evaluation and Management in Older Adults: The policy of the AMA is that undergraduate, graduate and continuing education programs for physicians and allied health professionals be encouraged to teach the science of dehydration in older adults; and that assessment of hydration status and potential for dehydration be incorporated when appropriate in hospital discharge planning, home health agency and nursing home assessments. The AMA: (1) encourages development of programs to increase physician awareness and skills in the evaluation of dehydration in long-term care residents and older adults living in the community setting; (2) encourages a leadership role for physicians as active team participants in long-term care facilities	Retain; still relevant.

		<p>regarding quality assurance programs assessing the hydration status of residents and recommend appropriate reimbursement for those services; (3) encourages development of programs to increase awareness of the potential problem of dehydration in community residents; (4) encourages community nursing facilities that do not provide daily clinical laboratory services to make them available for residents so that necessary data on patient status can be provided promptly, even on a STAT basis. The ready availability of laboratory services could present unnecessary hospitalizations; and (5) encourages the expansion of research efforts in this area. (CSA Rep. 1, A-94; Reaffirmation A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	
<p>H-30.936</p>	<p>Prevention of Impaired Driving</p>	<p>Our AMA: (1) acknowledges that all alcohol consumption, even at low levels, has a negative impact on driver skills, perceptions, abilities, and performance and poses significant health and safety risks; (2) supports 0.04 percent blood-alcohol level as per se illegal for driving, and urges incorporation of that provision in all state drunk driving laws; and (3) supports 21 as the legal drinking age, strong penalties for providing alcohol to persons younger than 21, and stronger penalties for providing alcohol to drivers younger than 21. Education: Our AMA: (1) favors public information and education against any drinking by drivers; (2) supports efforts to educate physicians, the public, and policy makers about this issue and urges national, state, and local medical associations and societies, together with public health, transportation safety, insurance, and alcohol beverage industry professionals to renew and strengthen their commitment to preventing alcohol-impaired driving; (3) encourages physicians to participate in educating patients and the public about the hazards of chemically impaired driving; (4) urges public education messages that now use the phrase "drunk driving," or make reference to the amount one might drink without fear of arrest, be replaced with messages that indicate that "all alcohol use, even at low levels, impairs driving performance and poses significant health and safety risks;" (5) encourages state medical associations to participate in educational activities related to eliminating alcohol use by adolescents; and (6) supports and encourages programs in elementary, middle, and secondary schools, which provide information on the dangers of driving while under the influence of alcohol, and which emphasize that teenagers who drive should drink no alcoholic beverages whatsoever; and will continue to work with private and civic groups</p>	<p>Retain as amended as on-board devices or ignition interlock devices are now well supported by evidence and recommended the Community Preventive Services Task Force (CPSTF) for people who have been convicted of drunk driving.</p>

		<p>such as Mothers Against Drunk Driving (MADD) to achieve those goals.</p> <p>Legislation: Our AMA: (1) supports the development of model legislation which would provide for school education programs to teach adolescents about the dangers of drinking and driving and which would mandate the following penalties when a driver under age 21 drives with any blood alcohol level (except for minimal blood alcohol levels, such as less than .02 percent, only from medications or religious practices): (a) for the first offense - mandatory revocation of the driver's license for one year and (b) for the second offense - mandatory revocation of the driver's license for two years or until age 21, whichever is greater; (2) urges state medical associations to seek enactment of the legislation in their legislatures; (3) urges all states to pass legislation mandating all drivers convicted of first and multiple DUI offenses be screened for alcoholism and provided with referral and treatment when indicated; (4) urges adoption by all states of legislation calling for administrative suspension or revocation of driver licenses after conviction for driving under the influence, and mandatory revocation after a specified number of repeat offenses; and (5) encourages passage of state traffic safety legislation that mandates screening for substance use disorder for all DUI offenders, with those who are identified with substance use disorder being strongly encouraged and assisted in obtaining treatment from qualified physicians and through state and medically certified facilities.</p> <p>Treatment: Our AMA: (1) encourages that treatment of all convicted DUI offenders, when medically indicated, be mandated and provided but in the case of first-time DUI convictions, should not replace other sanctions which courts may levy in such a way as to remove from the record the occurrence of that offense; and (2) encourages that treatment of repeat DUI offenders, when medically indicated, be mandated and provided but should not replace other sanctions which courts may levy. In all cases where treatment is provided to a DUI offender, it is also recommended that appropriate adjunct services should be provided to or encouraged among the family members actively involved in the offender's life;</p> <p>Repeat Offenders: Our AMA: (1) recommends the following measures be taken to reduce repeat DUI offenses: (a) aggressive measures be applied to first-time DUI offenders (e.g., license suspension and administrative license revocation), (b) stronger penalties be leveled against repeat offenders, including second-time offenders, (c) such legal sanctions must be linked, for all offenders, to substance abuse assessment and treatment services,</p>	
--	--	---	--

		<p>to prevent future deaths in alcohol-related crashes and multiple DUI offenses; and (2) calls upon the states to coordinate law enforcement, court system, and motor vehicle departments to implement forceful and swift penalties for second-time DUI convictions to send the message that those who drink and drive might receive a second chance but not a third.</p> <p>On-board devices: Our AMA: (1) supports further testing of on-board devices <u>or ignition interlock devices</u> to prevent the use of motor vehicles by intoxicated drivers; this testing should take place among the general population of drivers, as well as among drivers having alcohol-related problems; (2) encourages motor vehicle manufacturers and the U.S. Department of Transportation to monitor the development of ignition interlock technology, and plan for use of such systems by the general population, when a consensus of informed persons and studies in the scientific literature indicate the systems are effective, acceptable, reasonable in cost, and safe; and (3) supports continued research and testing of devices which may incapacitate vehicles owned or operated by DUI offenders without needlessly penalizing the offender's family members. (CCB/CLRPD Rep. 3, A-14)</p>	
H-365.978	Adult Film Industry Worker Safety and Health	<p>Our AMA: (1) supports legislation that would require the mandatory use of condoms in the production of adult films; (2) supports legislation that would improve the ability of local health departments and Occupational Safety and Health Administration (OSHA) to investigate and control occupational exposures to infectious diseases and enforce workplace regulations in a timely manner; and (3) urges that existing OSHA and other occupational standards be vigorously enforced to reduce exposure to infectious diseases within the adult film industry. (Res. 407, A-10; Reaffirmation A-14)</p>	Retain; still relevant.
H-370.966	Amend Federal Law to Allow Clinical Research on the Safety and Effectiveness of HIV-Infected-to-HIV-Infected Organ Transplantation	<p>Our AMA adopts a policy position in support of amending the Federal National Organ Transplant Act of 1984 (42 U.S.C. ? 274) to allow for clinical research to fully evaluate the clinical risks and benefits of HIV-infected organ donation to HIV-infected patients who elect to accept such organs and will work to support introduction and enactment of legislation to amend the Federal National Organ Transplant Act of 1984 (42 U.S.C. ? 274) to allow for clinical research to fully evaluate the clinical risks and benefits of HIV-infected organ donation to HIV-infected patients who elect to accept such organs. (Res. 2, I-11; Reaffirmed in lieu of Res. 5, I-14)</p>	Rescind, accomplished. This was accomplished by the HOPE Act, which AMA supported.
H-370.974	Working Toward an Increased	<p>The AMA supports efforts to increase the number of all potential bone marrow donors registered in</p>	Retain; still relevant.

	Number of Minorities Registered as Potential Bone Marrow Donors	national bone marrow registries, especially minority donors, to improve the odds of successful HLA matching and bone marrow transplantation. (Res. 501, I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	
H-440.836	Role of Pharmacists in Improving Immunization Rates	Our AMA believes that: 1. Physicians and medical professional organizations should support state and federal efforts to engage pharmacists in vaccinating target populations that have difficulty accessing immunizations in a medical home. Before administration of a vaccine, pharmacists should assess the immunization status of the patient, which includes checking an immunization registry when one exists. Pharmacists should ensure that a record of vaccine administration is transmitted to the patient's primary care physician and documented in the immunization registry, and that written or electronic documentation is provided to the patient. 2. Vaccination programs in pharmacies should promote the importance of having a medical home to ensure appropriate and comprehensive preventive care, early diagnosis, and optimal therapy. Physicians and pharmacists should work together in the community to: (a) establish referral systems to facilitate appropriate medical care if the patient's conditions or symptoms are beyond the scope of services provided by the pharmacies; and (b) encourage patients to contact a primary care physician to ensure continuity of care. 3. State educational requirements for pharmacists who administer vaccines should be based on ACIP recommendations and recognized standards and guidelines derived with input from physicians and pharmacists with demonstrated expertise in immunization practices. (CSAPH Rep. 4, I-14)	Retain; still relevant.
H-440.837	Reducing Salmonella Outbreaks	Our AMA supports USDA and FDA efforts to improve standards for Salmonella testing and sampling in chicken slaughter facilities and other food processing plants to reduce human Salmonella infection. (Res. 506, A-14)	Retain; still relevant.
H-440.838	Genomic-Based Approaches to the Risk Assessment, Management and Prevention of Type 2 Diabetes	Our AMA encourages continued research into the potential of genomic information to improve risk assessment, management and prevention of type 2 diabetes, and will report back on important advances as appropriate. (CSAPH Rep. 2, A-14)	Retain; still relevant.
H-440.884	Food Allergic Reactions in Schools and Airplanes	Our AMA recommends that all: (1) schools provide increased student and teacher education on the danger of food allergies; (2) schools have a set of emergency food allergy guidelines and emergency anaphylaxis kits on the	Retain; still relevant.

		<p>premises, and that at least one member of the school administration be trained and certified in the indications for and techniques of their use; and (3) commercial airlines have a set of emergency food allergy guidelines and emergency anaphylaxis kits on the premises, and that at least one member of the flight staff, such as the head flight attendant, be trained and certified in the indications for and techniques of their use.</p> <p>(Res. 415, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	
<p>H-440.899</p>	<p>Immunization Registries</p>	<p>Our AMA encourages: (1) physicians to participate in the development of immunization registries in their communities and use them in their practices for patients of all ages; (2) electronic health record (EHR) vendors to add features to automate the exchange of vaccination information in the patient EHR to state immunization registries to improve and help ensure completeness and accuracy of vaccination records. EHR vendors and registry administrators need to work with physicians and other health professionals to facilitate the exchange of needed vaccination information by establishing seamless, bidirectional communication capabilities for physicians, other vaccine providers, and immunization registries; and (3) all states to move rapidly to provide comprehensive lifespan immunization registries that are interfaced with other state registries.</p> <p>(Res. 415, A-99; Reaffirmed: 415, A-01; Reaffirmation A-09; Modified: CSAPH Rep. 4, I-14)</p>	<p>Retain; still relevant.</p>
<p>H-440.919</p>	<p>Toward the Control of E. Coli Infection</p>	<p>The AMA: (1) urges physicians to: (a) familiarize themselves with infection due to E. coli 0157:H7; (b) regularly request culture for this organism in any study of infection associated with bloody diarrheal stools; and (c) expand efforts to educate consumers, food processors, and food handlers about the general importance of proper food handling and preparation; and (2) encourages and supports the continuing efforts of the FDA, and of the U.S. Department of Agriculture and its Food Safety and Inspection Service, to develop new and improved methods and technologies for reducing or eliminating bacterial contamination of meat and meat products for human consumption.</p> <p>(Sub. Res. 509, I-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	<p>Retain; still relevant.</p>
<p>H-440.922</p>	<p>Gambling Can Become Compulsive Behavior</p>	<p>The AMA: (1) encourages physicians to advise their patients of the addictive potential of gambling; (2) encourages states which operate gambling programs to provide a fixed percentage of their revenue for education, prevention and treatment of gambling compulsive behavior disorder; and (3) requests that states which operate</p>	<p>Retain as amended to reflect updated language of the DSM-5-TR, which refers to “gambling disorder.”</p>

		<p>gambling programs affix to all lottery tickets and display at all lottery counters a sign which states that gambling <u>disorder</u> may become a compulsive behavior and help is available through your local gambling hotline.</p> <p>(Res. 430, A-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	
H-440.938	Multiple-Drug Resistant Tuberculosis - A Multifaceted Problem	<p>(1) Testing <u>Screening</u> for tuberculous infection should be performed routinely on all HIV-infected patients, according to current recommendations from the <u>CDC U.S. Public Health Service</u>.</p> <p>(2) Testing for HIV infection should be routinely performed on all <u>Routine HIV testing is recommended for persons with active tuberculosis.</u></p> <p>(3) Reporting of HIV infection and tuberculosis should be linked to enhance appropriate medical management and epidemiologic surveillance.</p> <p>(43) Aggressive contact tracing should be pursued for cases of active tuberculosis, especially if HIV-infected contacts or multiple-drug resistant tuberculosis strains have been involved.</p> <p>(54) HIV-infected health care workers and their physicians must be aware of the high risk of clinical TB for persons whose immune systems are compromised, due to HIV or other causes. They should be carefully apprised of their risk, and the risks and benefits of their caring for persons with active TB or suspected TB should be carefully considered.</p> <p>(65) HIV-infected and other immunocompromised patients should be sufficiently separated from tuberculosis patients and the air they breathe so that transmission of infection is unlikely.</p> <p>(76) All health care workers should have a tuberculin skin test upon employment, with the frequency of retesting determined by the prevalence of the disease in the community in <u>accordance with CDC recommendations.</u> Individuals with a positive skin test should be evaluated and managed according to current public health service recommendations.</p> <p>(87) Health care facilities that treat patients with tuberculosis should rigorously adhere to published public health service <u>CDC guidelines</u> for preventing the nosocomial transmission of tuberculosis.</p> <p>(98) Adequate and safe facilities must be available for the care of patients with tuberculosis; in some areas this may necessitate the establishment of sanitariums or other regional centers of excellence in tuberculosis treatment.</p> <p>(109) Clinical tuberculosis laboratories should develop the capability of reliably performing or having reliably performed for them rapid identification and drug susceptibility tests for tuberculosis.</p>	Retain as amended. Updated terminology for accuracy, including reference of appropriate federal agency.

		<p>(41<u>10</u>) Routinely, drug susceptibility tests should be performed on isolates from patients with active tuberculosis as soon as possible.</p> <p>(42<u>11</u>) A program of directly observed therapy for tuberculosis <u>is a standard of care</u> should be implemented when patient compliance is a problem.</p> <p>(43<u>12</u>) The AMA should enlist the aid of the Pharmaceutical Research and Manufacturers of America (PhRMA) in encouraging manufacturers to develop new drugs and vaccines for tuberculosis.</p> <p>(44<u>13</u>) The federal government should increase funding significantly for tuberculosis control and research to curtail the further spread of tuberculosis and encourage development of new and effective diagnostics, drug therapies, and vaccines.</p> <p>(45<u>14</u>) The special attention of physicians, public health authorities, and funding sources should be directed toward high risk and high incidence populations such as the homeless, immigrants, minorities, health care workers in high risk environments, prisoners, children, adolescents, and pregnant people <u>women</u>.</p> <p>(46<u>15</u>) The AMA will develop educational materials for physicians that will include but not be limited to the subtleties of testing for TB in HIV-infected individuals; potential risk to HIV-infected individuals exposed to infectious diseases, including TB; and other issues identified in this report.</p> <p>(47<u>16</u>) The AMA encourages physicians to remain informed about advances in the treatment of tuberculosis, including the availability of combination forms of drugs, that may reduce the emergence of drug-resistant strains. (BOT Rep. OO, A-92; Sub. Res. 505, I-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	
<p>H-440.942</p>	<p>State Health Officer Report at Annual Meeting of State Medical Society Meetings</p>	<p>The AMA urges each state medical society to extend to their respective state health officer a standing invitation to participate in and report to the annual meeting of their house of delegates upon issues, accomplishments, problems, and needs of public health significance within the state. (Res. 429, I-91; Reaffirmed by Res. 417, I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	<p>Retain; still relevant.</p>
<p>H-45.976</p>	<p>Drug and Alcohol Use in Aviation</p>	<ol style="list-style-type: none"> 1. Our AMA urges the FAA to establish programs for personnel involved in all facets of aviation that reduce the impact of drug and alcohol use in order to further aviation safety. 2. Our AMA encourages continued studies by the Federal Aviation Administration of problems in the use of alcohol by pilots in general aviation and flight crews of commercial airlines. 	<p>Retain; still relevant.</p>

		(CCB/CLRPD Rep. 3, A-14)	
H-460.901	Genomics in Hypertension: Risk Prediction and Treatment	Our AMA encourages continued research on the genetic control of blood pressure, including in pediatric populations, and the development of genomic-based tools that may assist health professionals in better predicting risk and targeting therapy for hypertension, and supports the view that hypertension clinical trial designs should attempt to reduce phenotypic heterogeneity in order to improve the quality and interpretation of results. (CSAPH Rep. 1, I-14)	Retain; still relevant.
H-460.938	Effects of Electric and Magnetic Fields	The AMA: (1) will continue to monitor developments and issues related to the effects of electric and magnetic fields, even though no scientifically documented health risk has been associated with the usually occurring levels of electromagnetic fields; (2) encourages research efforts sponsored by agencies such as the National Institutes of Health, U.S. Department of Energy, and the National Science Foundation to continue on exposures to electromagnetic fields and their effects, average public exposures, occupational exposures, and the effects of field surges and harmonics; and (3) supports broad dissemination of findings and recommendations of authoritative, multidisciplinary committees, such as those convened under the auspices of the National Academy of Sciences, National Council on Radiation Protection, International Agency for Research on Cancer, and the National Institute for Environmental Health Sciences. (CSA Rep. 7 - I-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-460.940	Support for Federal Funding of Early-Stage Embryo Research	The AMA supports federal funding of biomedical research which promises significant human and scientific benefits. (Res. 242, I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-460.988	Need for Continued Use of Animals in Research and Education	The AMA supports (1) the humane use of animals essential to research, education and the development of drugs and medical devices; and (2) efforts to assure the availability of animals for these purposes. (Res. 140, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-480.949	Nanotechnology, Safety and Regulation	Our AMA: (1) recognizes the benefits and potential risks of nanotechnology; (2) supports responsible regulation of nanomaterial products and applications to protect the public's health and the environment; and (3) encourages continued study on the health and environmental effects of exposure to nanomaterials.	Retain; still relevant.

		(CSAPH Rep. 2, A-13; Reaffirmed in lieu of Res. 510, A-14)	
H-480.975	Patents on Medical and Surgical Procedures	The AMA condemns the patenting of medical and surgical procedures and will work with Congress to outlaw this practice. (Sub. Res. 2, A-94; Reaffirmed: BOT Rep. 29, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-490.910	Secondhand Smoke	1. Our AMA urges the President of the United States to issue an Executive Order making all federal workplaces, including buildings and campuses, entirely smoke free and urges its federation members to do the same. 2. Our AMA supports legislation that prohibits smoking while operating or riding in a vehicle that contains children. (Res. 417, A-09; Appended: Res. 202, A-14)	Retain; still relevant.
H-490.912	Tobacco as an Incentive in Behavior Modification Programs	The AMA condemns the use of tobacco as an incentive in behavior modification programs. (CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-490.915	Tobacco Use in Prison Populations	It is the policy of our AMA to (1) recognize and promote the policy that all anti-smoking policies that apply to the general population should apply equally to persons who are incarcerated in local jails, state prisons, and federal prisons; (2) work actively to stop the manufacture of cigarettes by any prison or jail system in the United States; (3) work actively to stop the subsidy of cigarette sales in all jail and prison systems; (4) ensure that the prohibition of smoking by minors be enforced in the correctional system; (5) be committed to smoking cessation programs in correctional facilities and encourage physicians working in correctional systems to include smoking cessation counseling and programs for their patients who smoke; (6) work through its representative to the National Commission on Correctional Health Care to ensure that smoking cessation counseling be made a national standard for correctional medicine; (7) develop model legislation providing for smoke-free prison areas for all inmates, and particularly that common areas including cell blocks and recreation areas not be smoking areas; and (8) support legislation banning smoking in prisons and jails. (CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-495.979	Evaluation of the Health Hazards of Clove Cigarettes	AMA's existing policy vigorously opposing the use of any tobacco product is extended to include explicit opposition to the use of clove cigarettes. Further, AMA recognizes that clove cigarette smoking may present an additional hazard to susceptible individuals. (CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.

H-495.980	Cigar Smoking	Our AMA will work to have federal and state governments take legal, regulatory, and educational action to protect the public from the ill effects of cigar smoking in a manner similar to those actions taken regarding cigarettes. (CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-495.982	Tax-Free Tobacco Products	Our AMA encourages Native American nations to stop selling tax-free tobacco products because of the profound public health implications of the sale of tax-free tobacco products. (CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Retain; still relevant.
H-495.984	Tobacco Advertising and Media	Our AMA: (1) in keeping with its long-standing objective of protecting the health of the public, strongly supports a statutory ban on all advertising and promotion of tobacco products; (2) as an interim step toward a complete ban on tobacco advertising, supports the restriction of tobacco advertising to a "generic" style, which allows only black-and-white advertisements in a standard typeface without cartoons, logos, illustrations, photographs, graphics or other colors; (3) (a) recognizes and condemns the targeting of advertisements for cigarettes and other tobacco products toward children, minorities, and women as representing a serious health hazard; (b) calls for the curtailment of such marketing tactics; and (c) advocates comprehensive legislation to prevent tobacco companies or other companies promoting look-alike products designed to appeal to children from targeting the youth of America with their strategic marketing programs; (4) supports the concept of free advertising space for anti-tobacco public service advertisements and the use of counter-advertising approved by the health community on government-owned property where tobacco ads are posted; (5) (a) supports petitioning appropriate government agencies to exercise their regulatory authority to prohibit advertising that falsely promotes the alleged benefits and pleasures of smoking as well worth the risks to health and life; and (b) supports restrictions on the format and content of tobacco advertising substantially comparable to those that apply by law to prescription drug advertising; (6) publicly commends those publications that have refused to accept cigarette advertisements and supports publishing annually, via JAMA and other appropriate publications, a list of those magazines that have voluntarily chosen to decline tobacco ads, and circulation of a list of those publications to every AMA member; (7) urges physicians to mark the covers of magazines in the waiting area that contain tobacco	Retain; still relevant.

		<p>advertising with a disclaimer saying that the physician does not support the use of any tobacco products and encourages physicians to substitute magazines without tobacco ads for those with tobacco ads in their office reception areas;</p> <p>(8) urges state, county, and specialty societies to discontinue selling or providing mailing lists of their members to magazine subscription companies that offer magazines containing tobacco advertising;</p> <p>(9) encourages state and county medical societies to recognize and express appreciation to any broadcasting company in their area that voluntarily declines to accept tobacco advertising of any kind;</p> <p>(10) urges the 100 most widely circulating newspapers and the 100 most widely circulating magazines in the country that have not already done so to refuse to accept tobacco product advertisements, and continues to support efforts by physicians and the public, including the use of written correspondence, to persuade those media that accept tobacco product advertising to refuse such advertising;</p> <p>(11) (a) supports efforts to ensure that sports promoters stop accepting tobacco companies as sponsors; (b) opposes the practice of using athletes to endorse tobacco products and encourages voluntary cessation of this practice; and (c) opposes the practice of tobacco companies using the names and distinctive hallmarks of well-known organizations and celebrities, such as fashion designers, in marketing their products;</p> <p>(12) will communicate to the organizations that represent professional and amateur sports figures that the use of all tobacco products while performing or coaching in a public athletic event is unacceptable. Tobacco use by role models sabotages the work of physicians, educators, and public health experts who have striven to control the epidemic of tobacco-related disease;</p> <p>(13) (a) encourages the entertainment industry, including movies, videos, and professional sporting events, to stop portraying the use of tobacco products as glamorous and sophisticated and to continue to de-emphasize the role of smoking on television and in the movies; (b) will aggressively lobby appropriate entertainment, sports, and fashion industry executives, the media and related trade associations to cease the use of tobacco products, trademarks and logos in their activities, productions, advertisements, and media accessible to minors; and (c) advocates comprehensive legislation to prevent tobacco companies from targeting the youth of America with their strategic marketing programs; and</p>	
--	--	--	--

		<p>(14) encourages the motion picture industry to apply an "R" rating to all new films depicting cigarette smoking and other tobacco use. (CSA Rep. 3, A-04; Appended: Res. 427, A-04; Reaffirmation A-05; Reaffirmation A-14)</p>	
<p>H-500.975</p>	<p>AMA Corporate Policies on Tobacco</p>	<p>(1) Our AMA: (a) continues to urge the federal government to reduce and control the use of tobacco and tobacco products; (b) supports developing an appropriate body for coordinating and centralizing the Association's efforts toward a tobacco-free society; and (c) will defend vigorously all attacks by the tobacco industry on the scientific integrity of AMA publications. (2) It is the policy of our AMA to continue to use appropriate lobbying resources to support programs of anti-tobacco health promotion and advertising. (3) Our AMA's House of Delegates endorses the April 24, 1996, statement by the AMA Secretary-Treasurer that all physicians, health professionals, medical schools, hospitals, public health advocates, and citizens interested in the health and welfare of our children should review their personal and institutional investments and divest of any tobacco holdings (including mutual funds that include tobacco holdings); and specifically calls on all life and health insurance companies and HMOs to divest of any tobacco holdings. (4) Our AMA defines the Tobacco Industry as companies or corporate divisions that directly produce or purchase tobacco for production or market tobacco products, along with their research and lobbying groups, including the Council for Tobacco Research and the Smokeless Tobacco Research Council. A company or corporate division that does not produce or market tobacco products but that has a tobacco producing company as or among its owners will not be considered a prohibited part of the tobacco industry as long as it does not promote or contribute to the promotion, sale and/or use of tobacco products. If such promotional practices begin, the company will be placed on an "unacceptable for support" list. (5) Accordingly, it is the policy of our AMA (a) not to invest in tobacco stocks or accept financial support from the tobacco industry; (b) to urge medical schools and their parent universities to eliminate their investments in corporations that produce or promote the use of tobacco and discourage them from accepting research funding from the tobacco industry; (c) to likewise urge all scientific publications to decline such funded research for publication; and (d) to encourage state and county medical societies and members to divest of any and all tobacco stocks. (6) Our AMA (a) encourages state and local medical societies to determine whether candidates</p>	<p>Retain; still relevant.</p>

		for federal, state and local offices accept gifts or contributions of any kind from the tobacco industry, and publicize their findings to both their members and the public; and (b) urges state and county medical societies and local health professionals along with their allies to support efforts to strengthen state and local laws that require public disclosure of direct and indirect expenditures to influence legislation or ordinances, given recent allegations about tobacco industry strategies. (CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	
H-505.962	Smoking on International Flights	The AMA (1) will join other concerned organizations to seek an FAA ban on smoking on all flights originating from or destined to the U.S.; and (2) in conjunction with the World Health Organization and the World Medical Association, will work with the medical department of the International Civil Aviation Organization to ban smoking on all international flights. (CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14)	Rescind, accomplished. Smoking is banned on international flights.
H-505.963	Federal Efforts Related to Smoking Cessation	Our AMA endorses supports the use of the federally-funded National Tobacco Quitline network and ongoing media campaigns to help Americans quit using tobacco. (CSA Rep. 3, A-04; Modified: CSAPH Rep. 1, A-14)	Retain as amended.
H-55.970	Uniform Cancer Staging	Our AMA (1) supports the tumor, node involvement, metastasis (TNM) system accepted by the American Joint Committee on Cancer and the Union for International Cancer Control for staging of cancer; (2) urges that this system be used in any published articles or information and be included as a requirement in Instructions to Authors; (3) encourages each state association to use this system in any educational forum or scientific meeting which it sponsors; and (4) supports general utilization of the Cancer Staging Manual developed by the American Joint Committee on Cancer. (CCB/CLRPD Rep. 3, A-14)	Retain; still relevant.
H-55.972	Early Detection and Prevention of Skin Cancer	Our AMA: (1) encourages all physicians to (a) perform skin self-examinations and to examine themselves and their families on the first Monday of the month of May, which is designated by the American Academy of Dermatology as Melanoma Monday; (b) examine their patients' skins for the early detection of melanoma and nonmelanoma skin cancer; (c) urge their patients to perform regular self-examinations of their skin and assist their family members in examining areas that may be difficult to examine; and (d) educate their patients concerning the correct way to perform skin self-examination; (2) supports mechanisms for the	Retain; still relevant.

		<p>education of lay professionals, such as hairdressers and barbers, on skin self-examination to encourage early skin cancer referrals to qualified health care professionals; and (3) supports and encourages prevention efforts to increase awareness of skin cancer risks and sun-protective behavior in communities of color. Our AMA will continue to work with the American Academy of Dermatology, National Medical Association and National Hispanic Medical Association and public health organizations to promote education on the importance of skin cancer screening and skin cancer screening in patients of color. (CCB/CLRPD Rep. 3, A-14)</p>	
H-60.923	Meningococcal Vaccination for School Children	<p>Our AMA supports efforts to require that school children receive meningococcal vaccine per <u>as recommended by</u> the Advisory Committee on Immunization Practices guidelines. (Res. 414, A-14)</p>	<p>Retain as amended. The Advisory Committee on Immunization Practices recommends vaccines for use in the population but does not make decisions on school requirements.</p>
H-60.938	Adolescent Sexual Activity	<p>Our AMA (a) endorses the joint position "Protecting Adolescents: Ensuring Access to Care and Reporting Sexual Activity and Abuse"; and (b) supports the following principles for consideration in development of public policy: (i) Sexual activity and sexual abuse are not synonymous and that many adolescents have consensual sexual relationships; (ii) It is critical that adolescents who are sexually active receive appropriate confidential health care and screening; (iii) Open and confidential communication between the health professional and adolescent patient, together with careful clinical assessment, can identify the majority of sexual abuse cases; (iv) Physicians and other health care professionals must know their state laws and report cases of sexual abuse to the proper authority in accordance with those laws, after discussion with the adolescent and/or parent as appropriate; (v) Federal and state laws should support physicians and other health care professionals in their role in providing confidential health care to their adolescent patients; and (vi) Federal and state laws should affirm the authority of physicians and other health care professionals to exercise appropriate clinical judgment in reporting cases of sexual activity. (Res. 825, I-04; Modified: CSAPH Rep. 1, A-14)</p>	<p>Retain as amended to remove language endorsing a specific joint position statement, while retaining the principles.</p>
H-60.979	Physical Activity Guidelines	<p>Our AMA supports the continued expert review and development of national guidelines regarding physical activity for all ages and the dissemination of such guidelines to physicians. (Res. 186, I-90; Reaffirmed: Sunset Report, I-00; Modified: BOT Rep. 10, A-14)</p>	<p>Retain; still relevant.</p>
H-60.996	Missing Children Identification	<p>The AMA supports (1) development of a means of identifying children; and (2) education of the public and parents on the fingerprinting and</p>	<p>Retain; still relevant.</p>

		<p>documentation of characteristic identifying marks as a matter of record, should it be necessary to assist officials in locating a missing child. (Res. 98, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	
<p>H-75.985</p>	<p>Access to Emergency Contraception</p>	<p>It is the policy of our AMA: (1) that physicians and other health care professionals should be encouraged to play a more active role in providing education about emergency contraception, including access and informed consent issues, by discussing it as part of routine family planning and contraceptive counseling; (2) to enhance efforts to expand access to emergency contraception, including making emergency contraception pills more readily available through pharmacies, hospitals, clinics, emergency rooms, acute care centers, and physicians' offices; (3) to recognize that information about emergency contraception is part of the comprehensive information to be provided as part of the emergency treatment of sexual assault victims <u>and/or survivors</u>; (4) to support educational programs for physicians and patients regarding treatment options for the emergency treatment of sexual assault victims <u>and/or survivors</u>, including information about emergency contraception; and (5) to encourage writing advance prescriptions for these pills as requested by their patients until the pills are available over-the-counter. (CMS Rep. 1, I-00; Appended: Res. 408, A-02; Modified: Res. 443, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	<p>Retain as amended to reference updated terminology.</p>
<p>H-75.991</p>	<p>Requirements or Incentives by Government for the Use of Long-Acting Contraceptives</p>	<p>(1) Involuntary use of long-acting contraceptives because of child abuse raises serious questions about a person's fundamental right to refuse medical treatment, to be free of cruel and unusual punishment, and to procreate. The state's compelling interest in protecting children from abuse may be served by less intrusive means than imposing contraception on parents who have committed child abuse. The needs of children may be better met by providing close supervision of the parents, appropriate treatment and social services, and foster placement care when necessary. There is not sufficient evidence to demonstrate that long-acting contraceptives are an effective social response to the problem of child abuse. Before long-acting contraceptives could be considered as a response to individual cases of child abuse, the issue would need to be addressed by society broadly. Society must be careful about taking shortcuts to save resources when constitutional rights are involved. (2) Serious questions are raised by plea bargains, or negotiations with child welfare authorities, that</p>	<p>Retain as amended to update terminology.</p>

		<p>result in the use of long-acting contraceptives. Such agreements are made in inherently coercive environments that lack procedural safeguards. In addition, cultural and other biases may influence decisions by the state to seek the use of a long-acting contraceptive.</p> <p>(3) If welfare or other government benefits were based on the use of long-acting contraceptive agents, individuals would be required to assume a potentially serious health risk before receiving their benefits. Government benefits should not be made contingent on the acceptance of a health risk.</p> <p>(4) Individuals should not be denied access to effective contraception because of their <u>inability to pay indigence</u>. Use of long-acting contraceptives should be covered by Medicaid and other health insurance programs, both public and private.</p> <p>(5) Long-acting contraceptives may be medically contraindicated. Assessing the health risks of long-acting contraceptives is substantially outside the purview of courts and legislatures.</p> <p>(BOT Rep. EE, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmation A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	
<p>H-80.996</p>	<p>Scientific Status of Refreshing Recollection by the Use of Hypnosis</p>	<p>The AMA believes that (1) With witnesses and victims concerning refreshing recollection, the use of hypnosis should be limited to the investigative process. Specific safeguards should be employed to protect the welfare of the subject and the public, and to provide the kind of record that is essential to evaluate the additional material obtained during and after hypnosis; (2) A psychological assessment of the subject's state of mind should be carried out prior to the induction of hypnosis in an investigative context, and informed consent should be obtained; (3) Hypnosis should be conducted by a skilled psychiatrist or psychologist, who is aware of the legal implications of the use of hypnosis for investigative purposes; a complete taped and/or precise written record of the clinician's prior knowledge of the case must be made; complete videotape recordings of the pre-hypnotic evaluation and history, the hypnotic session, and the post-hypnotic interview, showing both the subject and the hypnotist, should be obtained; (4) Ideally, only the subject and the psychiatrist or psychologist should be present; (5) Some test suggestions of known difficulty should be given to provide information about the subject's ability to respond to hypnosis; (6) The subject's response to the termination of hypnosis and the post-hypnotic discussion of the experience of hypnosis are of major importance in discussing the subject's response; (7) Medical responsibility for the health and welfare of the subject cannot be abrogated by</p>	<p>Retain; still relevant.</p>

		<p>the investigative intent of hypnosis; and (8) Continued research should be encouraged. (CSA Rep. K, I-84; Reaffirmed: CSA Rep. 5, A-94; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14)</p>	
<p>H-85.953</p>	<p>Improving Death Certification Accuracy and Completion</p>	<p>1. Our AMA: (a) acknowledges that the reporting of vital events is an integral part of patient care; (b) urges physicians to ensure completion of all state vital records carefully and thoroughly with special attention to the use of standard nomenclature, using legible writing and accurate diagnoses; and (c) supports notifying state medical societies and state departments of vital statistics of this policy and encouraging their assistance and cooperation in implementing it.</p> <p>2. Our AMA also: (a) supports the position that efforts to improve cause of death statistics are indicated and necessary; (b) endorses the concept that educational efforts to improve death certificates should be focused on physicians, particularly those who take care of patients in facilities where patients are likely to die, namely in acute hospitals, nursing homes and hospices; and (c) supports the concept that training sessions in completion of death certificates should be (i) included in hospital house staff orientation sessions and clinical pathologic conferences; (ii) integrated into continuing medical education presentations; (iii) mandatory in mortality conferences; and (iv) included as part of in-service training programs for nursing homes, hospices and geriatric physicians.</p> <p>3. Our AMA further: (a) promotes and encourages the use of ICD codes among physicians as they complete medical claims, hospital discharge summaries, death certificates, and other documents; (b) supports cooperating with the National Center for Health Statistics (NCHS) in monitoring the four existing models for collecting tobacco-use data; (c) urges the NCHS to identify appropriate definitions, categories, and methods of collecting risk-factor data, including quantification of exposure, for inclusion on the U.S. Standard Certificates, and that subsequent data be appropriately disseminated; and (d) continues to encourage all physicians to report tobacco use, exposure to environmental tobacco smoke, and other risk factors using the current standard death certificate format. (CCB/CLRPD Rep. 3, A-14; Modified: Speakers Rep., A-15)</p>	<p>Retain; still relevant.</p>
<p>H-90.970</p>	<p>Disabled Parking</p>	<p>Our AMA: (1) encourages physicians to become familiar with laws in their states for certifying a patient's need for disabled parking privileges; and (2) supports efforts to educate the public on the appropriate use of parking spaces for the disabled.</p>	<p>Retain; still relevant.</p>

	(CCB/CLRPD Rep. 3, A-14)

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 2-A-24

Subject: Comparative Effectiveness Research

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee E

1 INTRODUCTION

2

3 American Medical Association (AMA) Policy H-450.922, “Comparative Effectiveness Research,”
4 as adopted at A-23 asked that “our American Medical Association study the feasibility of including
5 comparative effectiveness studies in various FDA drug regulatory processes, including
6 comparisons with existing standard of care, available generics and biosimilars, and drugs
7 commonly used off-label and over-the-counter.” This report serves as the Council on Science and
8 Public Health’s response to this charge.

9

10 METHODS

11

12 English language articles were selected from searches of PubMed and Google Scholar using the
13 search terms “comparative effectiveness research” and “comparative effectiveness research AND
14 regulation.” Additional articles were identified by manual review of the reference lists of pertinent
15 publications. Web sites managed by government agencies and applicable organizations were also
16 reviewed for relevant information.

17

18 BACKGROUND

19

20 Comparative effectiveness research (CER) is defined by the National Academy of Medicine as “the
21 generation and synthesis of evidence that compares the benefits and harms of alternative methods
22 to prevent, diagnose, treat, and monitor a clinical condition or to improve the delivery of care.”¹ At
23 the simplest level, CER shifts the clinical research question from “is this safe?” and “does this
24 work?” to “is this better?”. The question posed by the original resolution thus becomes whether the
25 U.S. Food and Drug Administration (FDA) should ask sponsors to prove their new drug (or device)
26 is superior to existing options on the market as a part of the regulatory process – either pre- or post-
27 market approval.

28

29 The AMA has published several previous reports detailing the benefits of CER (including Council
30 on Medical Service (CMS) Report 5-I-16 and CMS Report 4-I-19) and include a thorough list of
31 principles the AMA holds for a federally funded CER entity. Briefly, these reports were focused on
32 the incorporation of value into the pricing of pharmaceuticals, which include utilizing CER to
33 better understand the long-term cost of a treatment compared to its alternatives. As such, this report
34 will focus solely on the use of CER in the regulatory context.

1 DISCUSSION

2
3 *The Authority of the FDA*

4
5 Under the Food, Drug and Cosmetics Act, the FDA assesses new drug applications for two criteria:
6 safety and efficacy.² Within those criteria, however, the FDA commonly assesses new drug
7 applications in the context of the disease state and the drug landscape.³ Per the FDA's Guidance for
8 Industry, the risk-benefit analysis for new drug applications includes the following criteria: (1)
9 analysis of the condition, (2) current treatment options, (3) benefit, and (4) risk and risk
10 management.⁴ A new drug may be known to have serious side effects and toxicity, but if it is used
11 to treat a terminal disease with no currently available treatment, the risk-benefit analysis by the
12 FDA and its advisory committees may support approval. For example, the FDA advisory
13 committee evaluating Trogarzo (ibalizumab-uiyk) for the treatment of multi-drug resistant HIV
14 found that the underlying clinical trial design resulted in difficulty assessing the durability of the
15 drug's effectiveness.⁵ However, given the limited options for this high-need population, the
16 advisory committee found this uncertainty to be tolerable, and ultimately recommended approval.

17
18 Under the current regulatory framework, the most common method to demonstrate efficacy and
19 safety is through placebo-controlled studies. Using this model, researchers seek to prove that their
20 new drug is efficacious by having beneficial outcomes compared to a placebo (passive control). By
21 contrast, a CER approach for medications (or devices) may measure superiority, non-inferiority, or
22 equivalence. CER requires an active control, in which outcomes of the agent are compared to a
23 proven, efficacious treatment rather than being compared to placebo.^{6,7} It should be noted that CER
24 of active control superiority, non-inferiority, and equivalence studies are all routinely utilized by
25 the FDA in approval decisions in the current regulatory framework, most commonly in instances
26 where a placebo-controlled study may be unethical to perform.

27
28 *Re-labeling Generic Drugs*

29
30 CER is commonly used for evaluating the efficacy of off-label applications for drugs, as they may
31 not have placebo-controlled clinical trials supporting off-label use.⁸⁻¹⁰ One of the potential results
32 of CER in this context is that non-inferiority trials may result in the re-labeling of drugs to expand
33 approved indications. For example, lenvatinib (trade name Lenvima) was first granted orphan drug
34 status in 2012 for treating thyroid cancer, but later had its approved indications revised by the FDA
35 to include first-line treatment of unresectable hepatocellular carcinoma after a non-inferiority trial
36 was performed comparing lenvatinib and sorafenib.¹¹

37
38 The issue, however, comes down to which drugs are selected for evaluation and ultimately
39 submitted for re-labeling. In the instance of lenvatinib, which is still under patent, the non-
40 inferiority trial was sponsored by the patent holder and pharmaceutical company, Eisai.¹² Seeking
41 labeling changes for off patent products, like generic medicines or medical devices, with no
42 industry sponsor is much rarer due to the lack of financial incentive. One example of the
43 difficulties in updating the labeling for a generic medicine is metformin, a first-line treatment for
44 type 2 diabetes. In this instance, concerns over elevated rates of lactic acidosis resulted in the initial
45 1994 labeling having a contraindication of metformin in patients with elevated creatine levels.¹³ By
46 the mid-2000s, however, evidence suggested that this adverse event was rare, and lactic acidosis
47 incidence rates in patients with diabetes receiving metformin were similar to those not receiving
48 metformin.¹⁴ Despite this evidence, it took four years and two citizen petitions by a group of
49 physician experts and academic partners to get partial updates to the labeling of metformin.¹³ Given
50 the additional level of effort and advocacy required, using research (CER or otherwise) to inform
51 updates in labeling of generic drugs is exceedingly rare and burdensome.

1 The AMA vigorously supports the physician's ability to exercise clinical judgement and prescribe
2 medications off-label, yet the inclusion (or exclusion) of indications and contraindications in the
3 FDA labeling can have significant ramifications on clinical uptake of medications and coverage by
4 insurers.¹⁵⁻¹⁸

6 *Novel Drug Submissions*

8 Perhaps more nuanced is the potential role of CER in new drug applications and approvals, and
9 whether the FDA should consider if a new drug is superior to what already exists on the market
10 before granting approval. Proponents argue that this approach has multiple benefits to the system,
11 gives patients and physicians a better understanding of which medications to prioritize in treatment
12 plans, incentivizes research into understudied diseases, disincentivizes advertising which conflates
13 newness with effectiveness, and reduces the financial burden on government entities to fund post-
14 market CER trials.¹⁹

16 A common example of how CER could have been used in the approvals process is the case of
17 esketamine. Ketamine, which was originally approved by the FDA for as an anesthetic in 1970, has
18 received attention for use in treatment-resistant depression (TRD).²⁰ Under normal chemical
19 synthesis conditions, ketamine is made up of a 50:50 mixture of the enantiomers (R)-ketamine and
20 (S)-ketamine (also known as esketamine). In 2019, Janssen received FDA approval for a nasal
21 spray for TRD treatment that comprised of pure esketamine (i.e., no (R)-ketamine), under the trade
22 name Spravato.²¹ Esketamine was approved for TRD utilizing a placebo-controlled study, in which
23 esketamine performance was found to be effective compared to placebo.^{22,23}

25 Since its approval, however, esketamine has not been found to be superior to ketamine.²⁴ What is
26 different, though, is their price. Esketamine is an on-patent medication, and as such was estimated
27 by the Institute for Clinical and Economic Review to cost approximately \$39,000/year compared to
28 \$5,300/year for generic ketamine.²⁵ However, due to other factors such as insurance reimbursement
29 and manufacturer rebates, some studies found that patients may pay less out-of-pocket for
30 esketamine, thus driving them towards the product which generates the most profit for the
31 pharmaceutical company.²⁶

33 However, this is ultimately not an issue for the FDA to adjudicate. Deviation from the FDA's role
34 of evaluating "is it safe?" and "is it effective?" would be a radical expansion of scope and would
35 likely endanger the ability for new medications to enter the market. As described above, the FDA
36 already evaluates new drugs or devices within the context of available treatments and the severity
37 of the disease.

39 Instead, the case of esketamine/ketamine further highlights the importance of AMA's advocacy
40 efforts to make sure patients have access and insurance coverage to all medications that are deemed
41 appropriate by their physician, whether they are prescribed for off-label indications or not.
42 Esketamine and ketamine, while similar, have different administration routes and side effect
43 profiles. As such, having both available in the physician's toolbox allows for the patient-physician
44 relationship to be the guide to the treatment plan.

46 Additionally, "is it better?" may be a difficult bar to quantify, particularly for use cases with high
47 levels of heterogeneity. For example, the addition of a zipper to a new medical device may not
48 directly result in improved outcomes for patients, but a physician may appreciate the option. There
49 are also questions as to for *whom* these new medications or devices need to be better. As noted
50 above, esketamine may be more accessible for individuals who are averse to needles or otherwise

1 unable to receive an infusion. Similarly, a new device may make modifications to allow for easier
2 implantation by a physician with a dexterity impairment, but not impact patient care. It is unclear
3 how CER could effectively capture these important use-cases in which innovation and choice is
4 beneficial, but not measurable by clinical outcomes.

5
6 Finally, a requirement to prove that new medicines are better than current options may
7 inadvertently isolate patient populations and make health inequities harder to overcome. For
8 example, clopidogrel is an anti-platelet medicine commonly used for reducing the risk of stroke
9 and heart attack. It is available as a generic medicine, taken orally, and is cheap, highly effective,
10 and well-studied.²⁷ As such, it may be difficult for any new competing medication to become
11 approved if it were required to prove superiority to clopidogrel, placing some patients at a
12 disadvantage. Alternatives to clopidogrel are incredibly important to individuals with CYP2C19
13 genetic mutations, which can make them either hyper- or hypo-metabolizers of clopidogrel,
14 leading to reduced efficacy or increased side effects, respectively.²⁸ CYP2C19 mutations are more
15 prevalent in individuals of Asian and African ancestry.²⁹

16
17 The pharmacogenomic response to clopidogrel is well-known and has resulted in an FDA black
18 box warning on its label.³⁰ As such, one could imagine that CER for the purposes of a clopidogrel
19 alternative could instead focus on its performance in relevant CYP2C19 genotypes. But this
20 difference in response was not always known (the black box warning was added 13 years after
21 approval), and there are likely an incalculable number of genetic mutations that influence drug
22 interactions that are yet to be known and considered in prospective CER.

23 24 CURRENT AMA POLICY

25
26 As described above, the AMA has a long history of supporting off-label prescribing and
27 reimbursement. Per Policy H-120.988, “Patient Access to Treatments Prescribed by Their
28 Physicians,” “[o]ur AMA confirms its strong support for the autonomous clinical decision-making
29 authority of a physician and that a physician may lawfully use an FDA approved drug product or
30 medical device for an off-label indication when such use is based upon sound scientific evidence or
31 sound medical opinion; and affirms the position that, when the prescription of a drug or use of a
32 device represents safe and effective therapy, third party payers, including Medicare, should
33 consider the intervention as clinically appropriate medical care, irrespective of labeling, should
34 fulfill their obligation to their beneficiaries by covering such therapy, and be required to cover
35 appropriate 'off-label' uses of drugs on their formulary.”

36
37 Additionally, per Policy H-460.909, “Comparative Effectiveness Research,” the AMA broadly
38 supports well-funded, scientifically rigorous CER entities, with two highlighted principles: “[t]he
39 CER entity must not have a role in making or recommending coverage or payment decisions for
40 payers,” and “[p]hysician discretion in the treatment of individual patients remains central to the
41 practice of medicine. CER evidence cannot adequately address the wide array of patients with their
42 unique clinical characteristics, co-morbidities and certain genetic characteristics. In addition,
43 patient autonomy and choice may play a significant role in both CER findings and
44 diagnostic/treatment planning in the clinical setting.”

45 46 CONCLUSION

47
48 Comparative effectiveness research is a critical tool for helping physicians give patients the highest
49 quality, most affordable care possible. However, it may not be the most effective tool for
50 determining what drugs should be available on the market. Instead of using CER as a regulatory

1 requirement, it is likely better suited to be used as a tool for bringing affordable, effective
2 medications to patients.

3

4 RECOMMENDATIONS

5

6 The Council on Science and Public Health recommends that the following be adopted and the
7 remainder of the report be filed:

8

9 (1) That policy H-450.922, "Comparative Effectiveness Research" be amended by deletion to
10 read as follows:

11

12

Our AMA will:

13

14

15

16

17

18

19

20

21

22

23

~~(1) study the feasibility of including comparative effectiveness studies in various FDA drug regulatory processes, including comparisons with existing standard of care, available generics and biosimilars, and drugs commonly used off-label and over-the-counter; and~~
~~(2)~~ (1) ask the National Institutes of Health to support and fund comparative effectiveness research for approved drugs, including comparisons with existing standard of care, available generics and biosimilars, and drugs commonly used off-label and over-the-counter. (Amend HOD Policy)

(2) That policies H-120.988, "Patient Access to Treatments Prescribed by Their Physicians", and H-460.909, "Comparative Effectiveness Research" be reaffirmed. (Reaffirm HOD Policy)

Fiscal note: less than \$1,000

APPENDIX

RELEVANT AMA POLICY

Patient Access to Treatments Prescribed by Their Physicians H-120.988

1. Our AMA confirms its strong support for the autonomous clinical decision-making authority of a physician and that a physician may lawfully use an FDA approved drug product or medical device for an off-label indication when such use is based upon sound scientific evidence or sound medical opinion; and affirms the position that, when the prescription of a drug or use of a device represents safe and effective therapy, third party payers, including Medicare, should consider the intervention as clinically appropriate medical care, irrespective of labeling, should fulfill their obligation to their beneficiaries by covering such therapy, and be required to cover appropriate 'off-label' uses of drugs on their formulary.
2. Our AMA strongly supports the important need for physicians to have access to accurate and unbiased information about off-label uses of drugs and devices, while ensuring that manufacturer-sponsored promotions remain under FDA regulation.
3. Our AMA supports the dissemination of generally available information about off-label uses by manufacturers to physicians. Such information should be independently derived, peer reviewed, scientifically sound, and truthful and not misleading. The information should be provided in its entirety, not be edited or altered by the manufacturer, and be clearly distinguished and not appended to manufacturer-sponsored materials. Such information may comprise journal articles, books, book chapters, or clinical practice guidelines. Books or book chapters should not focus on any particular drug. Dissemination of information by manufacturers to physicians about off-label uses should be accompanied by the approved product labeling and disclosures regarding the lack of FDA approval for such uses, and disclosure of the source of any financial support or author financial conflicts.
4. Physicians have the responsibility to interpret and put into context information received from any source, including pharmaceutical manufacturers, before making clinical decisions (e.g., prescribing a drug for an off-label use).
5. Our AMA strongly supports the addition to FDA-approved labeling those uses of drugs for which safety and efficacy have been demonstrated.
6. Our AMA supports the continued authorization, implementation, and coordination of the Best Pharmaceuticals for Children Act and the Pediatric Research Equity Act.

Comparative Effectiveness Research D-460.973

Our AMA will solicit from our members and others articles or postings about current clinical topics where comparative effectiveness research should be conducted and will periodically invite AMA members to recommend topics where the need for comparative effectiveness research is most pressing, and the results will be forwarded to the Patient-Centered Outcomes Research Institute (PCORI) once it is established, or to another relevant federal agency.

Res. 221, A-11. Reaffirmed: BOT Rep. 7, A-21

Comparative Effectiveness Research H-460.909

The following Principles for Creating a Centralized Comparative Effectiveness Research Entity are the official policy of our AMA:

PRINCIPLES FOR CREATING A CENTRALIZED COMPARATIVE EFFECTIVENESS RESEARCH ENTITY:

- A. Value. Value can be thought of as the best balance between benefits and costs, and better value as improved clinical outcomes, quality, and/or patient satisfaction per dollar spent. Improving value in the US health care system will require both clinical and cost information. Quality comparative clinical effectiveness research (CER) will improve health care value by enhancing physician clinical judgment and fostering the delivery of patient-centered care.
- B. Independence. A federally sponsored CER entity should be an objective, independent authority that produces valid, scientifically rigorous research.
- C. Stable Funding. The entity should have secure and sufficient funding in order to maintain the necessary infrastructure and resources to produce quality CER. Funding source(s) must safeguard the independence of a federally sponsored CER entity.
- D. Rigorous Scientifically Sound Methodology. CER should be conducted using rigorous scientific methods to ensure that conclusions from such research are evidence-based and valid for the population studied. The primary responsibility for the conduct of CER and selection of CER methodologies must rest with physicians and researchers.
- E. Transparent Process. The processes for setting research priorities, establishing accepted methodologies, selecting researchers or research organizations, and disseminating findings must be transparent and provide physicians and researchers a central and significant role.
- F. Significant Patient and Physician Oversight Role. The oversight body of the CER entity must provide patients, physicians (MD, DO), including clinical practice physicians, and independent scientific researchers with substantial representation and a central decision-making role(s). Both physicians and patients are uniquely motivated to provide/receive quality care while maximizing value.

G. Conflicts of Interest Disclosed and Minimized. All conflicts of interest must be disclosed and safeguards developed to minimize actual, potential and perceived conflicts of interest to ensure that stakeholders with such conflicts of interest do not undermine the integrity and legitimacy of the research findings and conclusions.

H. Scope of Research. CER should include long term and short term assessments of diagnostic and treatment modalities for a given disease or condition in a defined population of patients. Diagnostic and treatment modalities should include drugs, biologics, imaging and laboratory tests, medical devices, health services, or combinations. It should not be limited to new treatments. In addition, the findings should be re-evaluated periodically, as needed, based on the development of new alternatives and the emergence of new safety or efficacy data. The priority areas of CER should be on high volume, high cost diagnosis, treatment, and health services for which there is significant variation in practice. Research priorities and methodology should factor in any systematic variations in disease prevalence or response across groups by race, ethnicity, gender, age, geography, and economic status.

I. Dissemination of Research. The CER entity must work with health care professionals and health care professional organizations to effectively disseminate the results in a timely manner by significantly expanding dissemination capacity and intensifying efforts to communicate to physicians utilizing a variety of strategies and methods. All research findings must be readily and easily accessible to physicians as well as the public without limits imposed by the federally supported CER entity. The highest priority should be placed on targeting health care professionals and their organizations to ensure rapid dissemination to those who develop diagnostic and treatment plans.

J. Coverage and Payment. The CER entity must not have a role in making or recommending coverage or payment decisions for payers.

K. Patient Variation and Physician Discretion. Physician discretion in the treatment of individual patients remains central to the practice of medicine. CER evidence cannot adequately address the wide array of patients with their unique clinical characteristics, co-morbidities and certain genetic characteristics. In addition, patient autonomy and choice may play a significant role in both CER findings and diagnostic/treatment planning in the clinical setting. As a result, sufficient information should be made available on the limitations and exceptions of CER studies so that physicians who are making individualized treatment plans will be able to differentiate patients to whom the study findings apply from those for whom the study is not representative.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 4-A-24

Subject: Sex and Gender Differences in Medical Research

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee E

1 INTRODUCTION

2
3 At the 2023 Annual meeting of the American Medical Association (AMA’s) House of Delegates,
4 subclause 7 of Resolution 004 was referred. It stated that “[our AMA encourage] the [U.S. Food
5 and Drug Administration (FDA)] to internally develop criteria for identifying medication and
6 medical devices seeking FDA approval that were developed based on research that did not include
7 adequate participation of women, and sexual and gender minorities [SGM].” Testimony at the
8 meeting cited concern with this being too prescriptive of an approach for the AMA to take with the
9 FDA on this topic. This report serves as the Council on Science and Public Health’s response.

11 METHODS

12
13 English language articles were selected from searches of PubMed and Google Scholar using the
14 search terms “gender bias AND clinical trials”, “sex bias AND clinical trials”, “gender differences
15 AND adverse events”, and “sex differences AND adverse events”. Additional articles were
16 identified by manual review of the reference lists of pertinent publications. Web sites managed by
17 government agencies and applicable organizations were also reviewed for relevant information.

19 BACKGROUND

20
21 There has been a long and unfortunately exclusionary history for women, and sex and gender
22 minorities (SGM) participating in clinical trials. Women participating in clinical trials became a
23 topic of intense discussion in the United States and Europe after the tragic discovery of birth
24 defects caused by thalidomide in the 1950s.¹ In response, Congress passed the Kefauver-Harris
25 amendment to the Food, Drug, and Cosmetics Act in 1962 which dramatically expanded the role of
26 the FDA beyond evaluating safety, but also effectiveness, resulting in the modern phased clinical
27 trial model we know today.² By 1977, however, fears of another teratogen like thalidomide resulted
28 in the FDA introducing regulations which functionally barred all women “of child-bearing age”
29 from participating in clinical trials outside of life-saving drugs.³

30
31 After these regulations, the scientific community quickly recognized the impact that excluding
32 women from clinical trials had on health equity, including a call from the U.S. Public Health
33 Service Task Force on Women’s Health to improve women’s participation in clinical trials.⁴ In
34 1993, the FDA repealed their 1977 rule, and Congress passed a mandate that all studies funded by
35 the National Institute of Health (NIH) include women and assess differences amongst sexes.^{5,6}

36
37 However, despite the changes in the regulatory environment, inequities in clinical trial participation
38 and outcomes persist. These inequities have previously been studied in detail by the Council, and

1 can be found in the 2016 report “An Expanded Definition of Women’s Health.”⁷ This report
2 outlined the ways in which health differences experienced by women are not just associated with
3 reproductive health, and includes biological and socioeconomic factors that impact the risk and
4 severity of conditions such as cardiovascular disease, autoimmune disease, Alzheimer’s disease,
5 and substance use disorders. Further, women’s participation in research (both as participants and as
6 investigators), was discussed, including the lack of female animals used in preclinical research
7 impacting the ability to predict pharmacokinetic or pharmacodynamic differences using biologic
8 sex as a variable.

9
10 Briefly, examination of clinical trials find that enrollment of women is still lower than expected –
11 for example, in 740 clinical trials for cardiovascular disease (N = 862,652 adults), only 38 percent
12 were women.⁸ This trend is also observed across disease state, including psychiatric conditions and
13 cancer.⁹

14
15 Reasons for this gap are multi-factorial, and include concerns related to side effects, impact on
16 fertility, lack of women researchers, and the inability to take time for multiple site visits.¹⁰ At the
17 request of Congress, the National Academy of Sciences, Engineering, and Mathematics released a
18 2022 consensus study towards building equity in women and underrepresented groups in
19 research.¹¹ In its recommendations, the report recommends a variety of strategies: starting with
20 intention, establishing a foundation of trust, being proactive about removing barriers, being
21 flexible, maintaining a strong network of interested groups, being cognizant of social and
22 professional expectations, working in a representative team, and prioritizing resources for equity.

23
24 Participation of SGM in clinical trials is even less representative of the population. SGM, which
25 may include individuals identifying as gay, lesbian, transgender, gender non-binary, or gender
26 expansive, have historically been omitted entirely as a category for clinical research, even when
27 they are a high-risk population. For example, surveys have found that individuals identifying as
28 gay or lesbian have an approximately 61 percent prevalence of a substance use disorder compared
29 to 24 percent for individuals identifying as heterosexual.¹² Yet despite the higher risk of substance
30 use disorders, one analysis found that typically less than 5 percent of substance use disorder studies
31 from 2007 to 2012 reported sexual orientation as a relevant participant demographic.¹³ Similarly, a
32 review of 764 cancer clinical trials from 1991 to 2017 (N = 462,449 patients) found that no trial
33 reported sexual identity, and only two patients were reported as anything other than male or female
34 – and in those instances, they were listed as the non-actionable categories “not reported” and
35 “unknown.”¹⁴ Despite the lack of recognition in studies, SGM are at higher risk for developing
36 cancers related to human immunodeficiency virus and human papillomavirus, or hormone-
37 dependent cancers such as breast cancer in individuals receiving hormone therapy.^{15,16}

38
39 The lack of participation of women and the lack of even tracking SGM in clinical trials has clear
40 impacts on the care those populations subsequently receive. One commonly cited statistic is that
41 women experience adverse drug reactions (ADRs) approximately twice as often as men, with the
42 underlying reason being that lack of women’s participation in clinical trials has led to poor
43 understanding of the influence of sex on pharmacokinetics.¹⁷ In an analysis of NIH-funded clinical
44 trials performed in 2015, only 26 percent of studies explicitly used sex as a variable in their
45 analysis, 72 percent made no mention of sex at all, and many studies with low enrollment of
46 women still represented their data to suggest that it is generalizable across sexes.¹⁸ For SGM, lack
47 of interest by the research community contributes to the ongoing feelings of invisibility and
48 mistrust of physicians.¹⁹

1 THE REGULATORY RESPONSE

2
3 The originally proposed resolution calls for the FDA to develop criteria for identifying medication
4 and devices which did not adequately include women and SGM in clinical trials. In recent years,
5 there have been several efforts at the FDA to improve diversity in clinical trials, in part driven by
6 the Food and Drug Administration Safety and Innovation Act of 2012 (FDASIA) and the Food and
7 Drug Omnibus Reform Act of 2022 (FDORA).

8
9 Under Section 907 of FDASIA, FDA was tasked with evaluating clinical trial participation based
10 on sex, age, race, and ethnicity. The “Section 907 report” included a 2014 action plan for enhanced
11 collection, and included recommendations on more robust demographic information, training for
12 reviewers to be more scrutinizing of demographic data, and tackling barriers for enrollment for
13 certain subpopulations.²⁰

14
15 Per FDORA, all drug and device sponsors are required to consider racial and ethnic diversity
16 through the use of a Diversity Action Plan, to be submitted at the same time as their study
17 protocol.²¹ These plans require drug and device sponsors to describe their rationale for enrollment,
18 broken down by age, sex, racial, and ethnic characteristics, and a specific plan for how they intend
19 on achieving these goals, including specific outreach. As of this writing (January 2024), the
20 guidance has not been finalized, but it is expected to be public before the AMA 2024 Annual
21 Meeting.

22
23 In August 2023, the FDA released an additional draft Guidance for Industry, “Postmarketing
24 Approaches to Obtain Data on Populations Underrepresented in Clinical Trials for Drugs and
25 Biological Products”, which would allow the FDA to require post-market studies as a condition for
26 approval for drugs or devices which did not have adequately diverse populations in the clinical
27 trials.²² Populations explicitly cited in the guidance include (but are not limited to): race, ethnicity,
28 sex, age, gender identity, disability, pregnancy status, and lactation status. These post-market
29 studies may include single-arm trials, randomized trials, real-world data collection, or pooled
30 studies to assess pharmacokinetics and/or pharmacodynamics in populations understudied in the
31 initial trials.

32
33 Finally, post-market studies do not always need to be conducted by the drug sponsor. While post-
34 approval agreements may be strong incentives for drug sponsors with named drugs to maintain
35 their approval while on-patent, many commonly used drugs that are currently off-patent and
36 available as generics were developed without representative women or SGM participation in their
37 clinical trials. As such, there is a distinct possibility that post-market trial requirements for generic
38 drugs could result in lower cost medications simply leaving the marketplace. In those instances,
39 targeted studies for medications at higher-risk for sex- and gender-specific adverse events may be
40 well-suited for federal or academic entities.

41
42 EXISTING AMA POLICY

43
44 The AMA maintains a plethora of policies seeking to improve equity in both patient outcomes and
45 workforce representation. Specific to this report, the AMA has policy recognizing the differences
46 in health outcomes for women in cardiovascular disease (H-525.975, “Heart Disease in Women”),
47 substance use (H-30.943, “Alcohol Use Disorder and Unhealthy Alcohol Use Among Women”),
48 pharmacological response (D-525.993, “Education on Sex-Based Response to Opioids”), and even
49 pharmaceutical advertising (D-105.996, “Impact of Pharmaceutical Advertising on Women's
50 Health”). The AMA maintains policy specific to the health care needs of other gender identities,
51 including a recognition of the higher risk for cancer in this population (H-160.991, “Health Care

1 Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations”), and the need for improved
2 gender identity and sexual orientation documentation in medical trials (H-315.967, “Promoting
3 Inclusive Gender, Sex, and Sexual Orientation Options on Medical Documentation”). Additionally,
4 it is the policy of the AMA that the FDA perform regular surveillance of research trial participants,
5 and to adequately fund activities that increase participant diversity in trials (H-460.911, “Increasing
6 Minority, Female, and other Underrepresented Group Participation in Clinical Research”).
7

8 CONCLUSION

9

10 The lack of women and SGM participation in clinical trials has resulted in health inequities.
11 Although it may have started as a well-intentioned response to teratogenic medication adverse
12 events, legislative and regulatory actions have contributed to a drug and device development
13 environment with limited inclusion and information on women and sex and gender minorities.
14 Since the early 1990s, there have been changes to the regulatory landscape and efforts to improve
15 the diversity of the research and development workforce, but progress is slow. The FDA has
16 demonstrated a commitment to improving diversity in clinical trials which should be applauded,
17 supported, and promptly strengthened.
18

19 RECOMMENDATIONS

20

21 The Council on Science and Public Health recommends that the following be adopted and the
22 remainder of the report be filed:
23

24 That policy H-525.988, “Sex and Gender Differences in Medical Research” be amended by
25 addition and deletion to read as follows:

26 Our AMA:

- 27 (1) reaffirms that gender exclusion in broad medical studies questions the validity of the
28 studies' impact on the health care of society at large;
- 29 (2) affirms the need to include all genders in studies that involve the health of society at
30 large and publicize its policies;
- 31 (3) supports increased funding into areas of women's health and sexual and gender
32 minority health research;
- 33 (4) supports increased research on women's health and sexual and gender minority health
34 and the participation of women and sexual and gender minorities in clinical trials, the
35 results of which will permit development of evidence-based prevention and treatment
36 strategies for all women and sexual and gender minorities from diverse cultural and ethnic
37 groups, geographic locations, and socioeconomic status;
- 38 (5) recommends that all medical/scientific journal editors require, where appropriate, a sex-
39 based and gender-based analysis of data, even if such
40 comparisons are negative; and
- 41 (6) recommends that medical and scientific journals diversify their review processes to
42 better represent women and sexual and gender minorities; and
- 43 (7) supports the FDA's requirement of actionable clinical trial diversity action plans from
44 drug and device sponsors that include women, and sex and gender minorities; and
- 45 (8) supports the FDA's efforts in conditioning drug and device approvals on post-marketing
46 studies which evaluate the efficacy and safety of those products in women and sex and
47 gender minorities when those groups were not adequately represented in clinical trials; and
- 48 (9) supports and encourages the National Institute of Health and other grant-making
49 entities to fund post-market research investigating pharmacodynamics and
50 pharmacokinetics for generic drugs that did not adequately enroll women, and sex and

1 gender minorities in their clinical trials, prioritizing instances when those populations
2 represent a significant portion of patients or reported adverse drug events. (Amend HOD
3 Policy)

Fiscal note: less than \$1,000

CITED AMA POLICY

Sex and Gender Differences in Medical Research H-525.988

Our AMA:

- (1) reaffirms that gender exclusion in broad medical studies questions the validity of the studies' impact on the health care of society at large;
- (2) affirms the need to include all genders in studies that involve the health of society at large and publicize its policies;
- (3) supports increased funding into areas of women's health and sexual and gender minority health research;
- (4) supports increased research on women's health and sexual and gender minority health and the participation of women and sexual and gender minorities in clinical trials, the results of which will permit development of evidence-based prevention and treatment strategies for all women and sexual and gender minorities from diverse cultural and ethnic groups, geographic locations, and socioeconomic status;
- (5) recommends that all medical/scientific journal editors require, where appropriate, a sex-based and gender-based analysis of data, even if such comparisons are negative; and
- (6) recommends that medical and scientific journals diversify their review processes to better represent women and sexual and gender minorities.

An Expanded Definition of Women's Health H-525.976

Our AMA recognizes the term "women's health" as inclusive of all health conditions for which there is evidence that women's risks, presentations, and/or responses to treatments are different from those of men, and encourages that evidence-based information regarding the impact of sex and gender be incorporated into medical practice, research, and training.

Inclusion of Women in Clinical Trials H-525.991

Our AMA: (1) encourages the inclusion of women, including pregnant women when appropriate, in all research on human subjects, except in those cases for which it would be scientifically irrational, in numbers sufficient to ensure that results of such research will benefit both men and women alike; (2) supports the National Institutes of Health policy requiring investigators to account for the possible role of sex as a biological variable in vertebrate animal and human studies; and (3) encourages translation of important research results into practice.

Increasing Minority, Female, and other Underrepresented Group Participation in Clinical Research H-460.911

1. Our AMA advocates that:

a. The Food and Drug Administration (FDA) and National Institutes of Health (NIH) conduct annual surveillance of clinical trials by gender, race, and ethnicity, including consideration of pediatric and elderly populations, to determine if proportionate representation of women and minorities is maintained in terms of enrollment and retention. This surveillance effort should be modeled after National Institute of Health guidelines on the inclusion of women and minority populations. b. The FDA have a page on its web site that details the prevalence of minorities and women in its clinical trials and its efforts to increase their enrollment and participation in this research; and c. Resources be provided to community level agencies that work with those minorities, females, and other underrepresented groups who are not proportionately represented in clinical trials to address issues of lack of access, distrust, and lack of patient awareness of the benefits of trials in their health care. These minorities include Black Individuals/African Americans, Hispanics, Asians/Pacific Islanders/Native Hawaiians, and Native Americans.

2. Our AMA recommends the following activities to the FDA in order to ensure proportionate representation of minorities, females, and other underrepresented groups in clinical trials: a. Increased fiscal support for community outreach programs; e.g., culturally relevant community education, community leaders' support, and listening to community's needs; b. Increased outreach to all physicians to encourage recruitment of patients from underrepresented groups in clinical trials; c. Continued education for all physicians and physicians-in-training on clinical trials, subject recruitment, subject safety, and possible expense reimbursements, and that this education encompass discussion of barriers that currently constrain appropriate recruitment of underrepresented groups and methods for increasing trial accessibility for patients; d. Support for the involvement of minority physicians in the development of partnerships between minority communities and research institutions; and e. Fiscal support for minority, female, and other underrepresented groups recruitment efforts and increasing trial accessibility.

3. Our AMA advocates that specific results of outcomes in all clinical trials, both pre- and post-FDA approval, are to be determined for all subgroups of gender, race and ethnicity, including consideration of pediatric and elderly populations; and that these results are included in publication and/or freely distributed, whether or not subgroup differences exist.

Heart Disease in Women H-525.975

1. Our AMA supports increased awareness and education on preventive measures for heart disease in women and encourages comprehensive care of heart disease in women.

2. Our AMA urges research to address the gaps in knowledge related to coronary pathophysiology and diagnostic, treatment, and interventional strategies for heart disease in women; and to better understand the role of demographic, socioeconomic, and psychological factors in the onset of heart disease in women.

Alcohol Use Disorder and Unhealthy Alcohol Use Among Women H-30.943

The AMA recognizes the prevalence of unhealthy use of alcohol among women, as well as current barriers to diagnosis and treatment. The AMA urges physicians to be alert to the presence of alcohol-related problems among women and to screen all patients for alcohol use disorder and dependence. The AMA encourages physicians to educate women of all ages about their increased risk of damage to the nervous system, liver and heart disease from alcohol and about the effect of alcohol on the developing fetus. The AMA encourages adequate funding for research to explore the nature and extent of alcohol use disorder and unhealthy alcohol use among women, effective treatment modalities for women with alcohol use disorder and unhealthy alcohol use, and variations in alcohol use among ethnic and other subpopulations. The AMA encourages all medical education programs to provide greater coverage on alcohol as a significant source of morbidity and mortality in women.

Education on Sex-Based Response to Opioids D-525.993

Our AMA will include educational materials for physicians regarding sex-based differences in their resources related to the opioid epidemic. These sex-based differences include the perception of pain, the impact of co-morbid conditions, response to opioids, risks for opioid use disorder, issues with access, and outcomes of addiction treatment programs among women.

Impact of Pharmaceutical Advertising on Women's Health D-105.996

1. Our AMA urges the US Food and Drug Administration (FDA) to assure that all direct-to-consumer advertising of pharmaceuticals includes information regarding differing effects and risks between the sexes.
2. Our AMA urges the FDA to assure that advertising of pharmaceuticals to health care professionals includes specifics outlining whether testing of drugs prescribed to both sexes has included sufficient numbers of women to assure safe use in this population and whether such testing has identified needs to modify dosages based on sex.

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991

1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.

Promoting Inclusive Gender, Sex, and Sexual Orientation Options on Medical Documentation H-315.967

Our AMA: (1) supports the voluntary inclusion of a patient's biological sex, current gender identity, sexual orientation, preferred gender pronoun(s), preferred name, and clinically relevant, sex specific anatomy in medical documentation, and related forms, including in electronic health records, in a culturally-sensitive and voluntary manner; (2) will advocate for collection of patient data in medical documentation and in medical research studies, according to current best practices, that is inclusive of sexual orientation, gender identity, and other sexual and gender minority traits for the purposes of research into patient and population health; (3) will research the problems related to the handling of sex and gender

within health information technology (HIT) products and how to best work with vendors so their HIT products treat patients equally and appropriately, regardless of sexual or gender identity; (4) will investigate the use of personal health records to reduce physician burden in maintaining accurate patient information instead of having to query each patient regarding sexual orientation and gender identity at each encounter; and (5) will advocate for the incorporation of recommended best practices into electronic health records and other HIT products at no additional cost to physicians.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 5-A-24

Subject: Biosimilar/Interchangeable Terminology

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee E

1 INTRODUCTION

2
3 Resolution 245-A-23, which was referred by the American Medical Association’s (AMA) House of
4 Delegates, stated as follows:

5
6 That our American Medical Association repeal policy H-125.976, Biosimilar
7 Interchangeability Pathway (Rescind HOD Policy);

8
9 That our AMA advocate for state and federal laws and regulations that support
10 patient and physician choice of biosimilars and remove the “interchangeable”
11 designation from the FDA’s regulatory framework. (Directive to Take Action)

12
13 This report serves as the Council on Science and Public Health’s findings and recommendations
14 after review of the evidence surrounding the “interchangeable” designation for biosimilar
15 medications.

16
17 METHODS

18
19 English language articles were selected from searches of PubMed and Google Scholar using the
20 search terms “biosimilar AND interchangeable.” Additional articles were identified by manual
21 review of the reference lists of pertinent publications. Web sites managed by government agencies
22 and applicable organizations were also reviewed for relevant information.

23
24 BACKGROUND

25
26 This report deals with several technical terms, including discussion as to how they overlap and
27 differ. As such, definitions are provided in Appendix 1 of this report for the following terms:
28 biologic drug, small molecule drug, generic drug, biosimilar, and interchangeable.

29
30 Biosimilars are a classification of biologic medical products (such as recombinant proteins and
31 gene therapies) which are nearly identical to an existing U.S. Food Drug and Administration (FDA)
32 -approved biologic medicine (called the reference product or innovator product). In that sense, they
33 are often thought of as the equivalent to the “generic” designation for small-molecule drugs,
34 however they have several key differences which will be discussed later in this report.

35 Biosimilars are a relatively new class of large molecule medication, with the first follow-on (i.e., a
36 new medication approved in an already established drug class) protein, Omnitrope (somatropin),

1 not receiving FDA approval until 2005.¹ However, the FDA has not had a dedicated regulatory
2 pathway for approving biosimilars until passage of the Patient Protection and Affordable Care Act
3 of 2010, which resulted in the first true biosimilar being approved in 2015, when the leukocyte
4 growth factor Zarxio (filgrastim-sndz) was deemed to be biosimilar to Neupogen (filgrastim).² As
5 of December 2023, there have been 45 biosimilars approved by the FDA, including products such
6 as biosimilars for Humira (adalimumab), Avastin (bevacizumab), and Lantus (insulin glargine).

7
8 Biosimilars have a unique naming convention compared to other classes of drugs. First, all biologic
9 drugs are branded, even if they are a biosimilar. To distinguish between two biologic products, a 4-
10 letter suffix is added to the non-proprietary name. For example, filgrastim is a recombinant form of
11 granulocyte colony-stimulating factor. The first biologic drug product in this class was produced by
12 Amgen under the trade name Neupogen (filgrastim). Once Neupogen lost its market exclusivity,
13 biosimilars such as Zarxio (filgrastim-sndz), Nivestym (filgrastim-aafi), and Releuko (filgrastim-
14 ayow) were approved by the FDA. These were all found by the FDA to have similar efficacy and
15 function to Neupogen but have their own brand name and suffix. This naming strategy is intended
16 to convey that biosimilars such as Zarxio and Nivestym are *similar*, but not identical to Neupogen,
17 and allows for easier pharmacovigilance in the event that those differences result in adverse event
18 profile differences. For biologic drugs approved after March 23, 2020, the originator product also
19 contains a 4-letter suffix.

20
21 Similar to the generic drug market, approvals of biosimilars are generally thought to lead to
22 increased access and lower costs for expensive medications on the market. Per one analysis from
23 2016 (before nearly all biosimilars entered the market) biologic drugs comprised less than one
24 percent of prescriptions in the United States, but accounted for over 28 percent of drug
25 expenditures.³ Since then, one study estimates that biosimilars saved patients \$56 billion in
26 medication spending, and account for approximately 60 percent of a given biologic drug's sales
27 volume when biosimilar competition exists.⁴ It should be noted, however, that the introduction of a
28 biosimilar is not a guaranteed method for reducing cost and increasing access – somatropin, the
29 first biologic drug to have a biosimilar approved, has actually had a nearly 20 percent increase in
30 the reference product unit price since the introduction of follow-on competition, even though the
31 follow-on product is markedly cheaper.⁵

32 33 *Distinctions with Generic Drugs*

34
35 As described above, many often think of biosimilars as the “generic drug” version of biologic
36 medicines. However, there are several key differences, which are also summarized in Appendix 2.⁶
37 The first major distinction between biosimilar large molecule drugs and generic small molecules
38 drugs is the complexity of the underlying medicine. Small molecule drugs generally consist of
39 relatively simple organic chemical structures with atom counts on the scale of 10s, and atomic
40 weights on the scale of 100s of Daltons (Da). For example, acetylsalicylic acid (aspirin) has the
41 chemical formula of C₉H₈O₄ (21 total atoms), and a molecular weight of 180 Da. Biologic drugs,
42 by comparison, typically consist of thousands of atoms – adalimumab, a monoclonal antibody used
43 for autoimmune disorders, has a molecular formula of C₆₄₂₈H₉₉₁₂N₁₆₉₄O₁₉₈₇S₄₆ (20,067 total atoms)
44 and a molecular weight of 144,190 Da.

45
46 Biologic drug efficacy is very sensitive to the secondary, tertiary, and even quaternary structure,
47 which describes how the molecule is folded and packed into shape.⁷ For example, many biosimilars
48 are antibody-based drugs, which require very specific folding patterns to generate the receptor
49 binding affinity needed to provide the drugs action in the body. The “active” portion of the
50 biosimilar may be a tiny fraction of the overall molecule while they also may contain several large
51 components that do not contribute meaningfully to the efficacy of the medication. As such,

1 biosimilars may have different chemical structures than their reference product, but if the
2 difference only exists in non-active portions of the structure and does not impact other elements
3 such as folding or polarity, then in theory they will retain similar efficacy.
4

5 To produce such complex moieties, biologic drugs are manufactured using unique strategies such
6 as bioreactors. Rather than pursuing traditional chemical synthesis, manufacturers leverage living
7 cells such as yeast or E. coli that are genetically modified to produce the desired product. Due to
8 the relative lack of control over bioreactor manufacturing, there can be high levels of both inter-
9 and intra-batch variability resulting in changes in protein sequence, higher order structure,
10 aggregation, charge heterogeneity, oxidation, and any byproducts from the bioreactor organism
11 that may impact drug function and immunogenicity.⁸ Additionally, since the organisms responsible
12 for producing the biologic drug are their own living system, they evolve and mutate over time,
13 meaning that the output will slowly, irreversibly drift over time.⁹ As such, there is significant
14 effort, from industry and regulators, dedicated to monitoring and probing biologic drug
15 manufacturing to ensure drug safety and efficacy are preserved in these manufacturing conditions.⁸
16 Differences in manufacturing of biologics and small molecule drugs result in another key
17 distinction – biosimilars are designed to have *similar* function and efficacy, but it is an impossible
18 task to ever perfectly reproduce composition and structure.
19

20 Considering their unique composition, mechanism of action, and manufacturing, biosimilars and
21 their approvals are regulated via their own distinct pathway by the FDA. Established by the
22 Biologics Price Competition and Innovation Act of 2009 (BPCIA, passed within the broader
23 Affordable Care Act), biosimilars are approved via an abbreviated 351(k) pathway compared to the
24 505(j) pathway for other small molecule generic drugs. Per the Hatch-Waxman Act, generic small
25 molecule drug manufacturers are only required to establish bioequivalence for FDA approval.¹⁰
26 Compared to small molecule generic drugs, biosimilar manufacturers are required to prove that
27 their product utilizes the same mechanism of action, analytical studies proving similarity of the
28 biologically active components, animal studies assessing toxicity, and clinical studies assessing
29 efficacy, immunogenicity, pharmacokinetics, and pharmacodynamics.¹¹ As a result, the cost
30 associated with developing, testing, and seeking approval for a biosimilar is significantly higher
31 than that of a generic drug – with some estimates as high as nine years and \$300 million per
32 biosimilar.^{12,13}
33

34 *Interchangeability*

35

36 There is a continuing tension in how to best describe biosimilars. On the one hand, biosimilar
37 naming and terminology needs to convey that they have been found to perform the same as the
38 reference product. Yet on the other hand, it needs to convey that they are chemically *similar* – not
39 identical. Due to the relative infancy of the field, the clinical implications have yet to be fully
40 understood, especially when there can be significant molecule structural or compositional
41 differences between biologic products that otherwise perform similarly.¹⁴⁻¹⁸
42

43 One of the primary sources of tension around communicating biosimilar drugs similarity and
44 differences is the utilization of the term “interchangeable.” As alluded to by the original Resolution
45 245-A-23, there are additional distinctions and implications between biosimilars and small
46 molecule generic drugs when it comes to interchangeability and pharmacy-level substitutions. Per
47 the BPCIA, “interchangeable” is an additional designation that can be given to biosimilars that
48 allows for pharmacists to perform a substitution of two biologic drugs, if allowed by their state
49 pharmacy laws, similar to generic small molecule drugs for their brand name product. Per the
50 Public Health Service Act, “the [term interchangeable in] reference to a biological product [...]

1 means that the biological product may be substituted for the reference product without the
2 intervention of the health care professional who prescribed the reference product.”¹⁹

3 Beyond the baseline evidence that manufacturers provide for biosimilar approval, to be deemed
4 “interchangeable” manufacturers must perform a switching study or interchangeable trial -- a two-
5 arm clinical trial in which one arm receives the reference product continuously, and the other
6 switches from the reference product to the biosimilar and back again. If there are no substantive
7 differences in efficacy or immunogenicity upon switching back and forth between biosimilar and
8 the reference product, the biosimilar may be deemed “interchangeable.” It should be noted that to
9 receive the initial FDA approval as a biosimilar, the drug must already have proven to have similar
10 efficacy and immunogenicity to the reference product. Instead, interchangeable trials are meant to
11 assess if there are any changes in efficacy and immunogenicity caused by the act of switching itself
12 after a patient has already initiated treatment.

13
14 The “interchangeable” designation is therefore used primarily by pharmacists for performing
15 medication substitutions. These medication substitutions are often required due to formulary
16 restrictions by pharmacy benefits managers, cost-savings to the patient or available stock, among
17 others. State laws vary greatly for how pharmacists may substitute biosimilars and other generic
18 small molecule drugs.²⁰ For example, in Illinois, a pharmacist may substitute a biologic product
19 with an approved interchangeable biosimilar after alerting the prescriber and the patient. In North
20 Carolina, however, pharmacists may only substitute interchangeable biologics if it will result in
21 cost savings for the patient, but they are not required to communicate this to the prescriber.

22
23 The international approach to biosimilar substitutions is mixed, which may be expected for a
24 relatively new class of highly complex medicines.²¹ The European Union’s regulatory arm, the
25 European Medicines Agency (EMA), does not have an additional category or testing requirements
26 for substitutions and deems all biosimilars approved by the EMA to be interchangeable. However,
27 individual member countries may have their own regulations.²²

28
29 Beyond its role in state-level pharmacy laws, the interchangeable designation is often one of
30 frustration for physicians, patients, and pharmacists. Due to their similarity to another drug,
31 patients may expect that a biosimilar can be substituted at the pharmacy like other generic small
32 molecule drugs, barring formulary restrictions. However, the interchangeability requirements leave
33 patients confused, bring added work for physicians and pharmacists to communicate access
34 challenges and mediate procurement of the appropriate agent to the patient. Further, educating
35 patients on the regulatory nuance between biosimilar and interchangeability can leave everyone
36 frustrated and confused with the process and potentially lead to treatment delays.

37
38 From a manufacturer’s perspective, the interchangeable designation is a highly desirable one. The
39 price of many biologic drugs is substantial, and being made available for pharmacy-level
40 substitutions may be a significant competitive advantage in a growing marketplace. In one instance,
41 the interchangeable designation of Semglee (insulin glargine-yfgn) resulted in the removal of the
42 reference product, Lantus (insulin glargine), entirely from major pharmacy benefit managers’ drug
43 formularies.²³ To further incentivize biosimilar developers to pursue interchangeable status, the
44 FDA allows for the first interchangeable biosimilar of a drug to obtain market exclusivity status for
45 a year.²⁴ However, given the high cost of bringing a biosimilar to market, performing an additional
46 clinical trial to evaluate switching may be an additional barrier to entry for smaller biosimilar
47 sponsors. Additionally, biologic drugs which have a biosimilar competitor available will be exempt
48 from Medicare drug price negotiations with the newly founded Drug Price Negotiation Program.²⁵

1 From a regulator’s perspective, the interchangeable designation likely seems to be a cautious step
2 towards regulating a new class of drugs where immunogenicity concerns are high. However, it is
3 unclear if those concerns have been realized. Additionally, much of the interchangeable framework
4 is directly outlined in the BPCIA, meaning it would require an act of Congress to significantly
5 change it.

6 7 REGULATORY MOVEMENT

8
9 According to the FDA’s Purple Book Database at the time of writing, there have been 45 biosimilar
10 products approved in the United States, and seven have received the interchangeable designation.²⁶
11 Clinical trial data for failed studies is generally not published, but there have been no indications
12 that any biosimilar which has pursued the interchangeable study has failed to achieve the
13 interchangeable designation.

14
15 In late 2023, scientists from the FDA’s Center for Drug Evaluation and Research published a meta-
16 analysis evaluating the outcomes of 44 treatment switches across 21 different biosimilars, with a
17 total of 5252 patients. In their review, they found that “no differences in terms of major safety
18 parameters such as deaths, [non-fatal serious adverse events], and discontinuations were observed
19 when patients are switched (to or from a biosimilar and its reference biologic) or not switched.”²⁷
20 This supports the findings of European regulators, which stated “[the] EMA has approved 86
21 biosimilar medicines since 2006. These medicines have been thoroughly reviewed and monitored
22 over the past 15 years and the experience from clinical practice has shown that in terms of efficacy,
23 safety and immunogenicity they are comparable to their reference products and are therefore
24 interchangeable.”²⁸

25
26 The above-mentioned FDA study appears to be part of a larger movement within the federal
27 government more broadly to re-evaluate the role of interchangeable status. In September 2023, the
28 FDA published a draft guidance to change the labeling for biosimilars.²⁹ Prior to this guidance,
29 biologic medicine labeling had two distinct sections: a “biosimilarity statement” and an
30 “interchangeability statement,” where if not deemed interchangeable, the statement would be
31 blank. Under the new guidance, the two are combined into a single statement to allow for those
32 who are legally required to understand interchangeability status to be easily able to find it on
33 product labeling, while prescribers or patients do not feel that their medication is of lower quality
34 when seeing a blank interchangeability statement.

35
36 These movements by the FDA away from the interchangeable designation are matched by other
37 federal entities. In a March 2022 report from the Office of the Inspector General (OIG), they found
38 that Medicare was over-spending on biologic medicines by not fully incorporating biosimilars into
39 their offerings, and instead focusing too heavily on reference products.³⁰ OIG estimated that
40 Medicare Part D spending on biologics could be decreased by 18 percent (\$84 million) annually,
41 and out-of-pocket spending on these products for Medicare beneficiaries could decrease by 12
42 percent (\$1.8 million) annually, if biosimilars were more broadly used.

43
44 Under current regulations, biosimilars may only be substituted with those deemed interchangeable,
45 and only after explicit approval by the Centers for Medicare & Medicaid Service (CMS). In
46 November 2023, CMS proposed rule changes to Medicare Advantage and Medicare Part D that
47 would allow for plans to immediately substitute all biosimilars, including those not deemed
48 interchangeable, for the reference product.³¹ On January 4th, 2024, the AMA submitted comment to
49 CMS on this proposed change, and cited concern that CMS movement was premature barring
50 regulatory changes from the FDA, and that patients currently receiving the reference product
51 should be exempt from substitutions without approval from their physician.

1 In March 2024, the Biden Administration released its draft budget for fiscal year 2025, which
2 included a policy proposal to allow for all biosimilars, regardless of interchangeability status, be
3 eligible for pharmacy level substitutions.³² At the time of this report’s writing (March 2024), it is
4 unclear if this policy will be included in the final, approved budget for fiscal year 2025, but it is
5 generally consistent with the direction federal regulations on biosimilar interchangeability has
6 taken in recent years.

7 8 CURRENT AMA POLICY

9
10 The AMA currently has several policies regarding biosimilars, particularly around reimbursement
11 and cost coverage. Of particular relevance to this report are two policies (full text of policies found
12 at the end of this report): (1) H-125.976 “Biosimilar Interchangeability Pathway,” states amongst
13 other clauses, that “[the AMA] strongly support the pathway for demonstrating biosimilar
14 interchangeability”; and (2) D-125.989 “Substitution of Biosimilar Medicines and Related Medical
15 Products,” which urges State Pharmacy Practice Acts to limit the authority of pharmacists to
16 substitute biosimilars only when they have been deemed interchangeable by the FDA.

17 18 CONCLUSION

19
20 At the crux of this issue is balancing patient access to medications against the unknown risks of a
21 newer class of highly complex medicines. Given the current state of the published evidence
22 between the European Union and FDA reviews, it appears that the previous concerns over toxicity
23 and immune response of switching biosimilars have not been realized. However, it is important to
24 recognize that the evidence on interchangeability is still limited and that the field of biosimilars is
25 in its infancy compared to our knowledge of generic small molecule drugs. Additionally, the term
26 interchangeable, however flawed, is utilized by several entities beyond the FDA, including for
27 Medicare reimbursement and state pharmacy laws. Therefore, the Council recommends that an
28 approach be taken to retain the FDA’s ability to assess and monitor potential risks of switching
29 without placing an outsized importance and advantage in the marketplace on the completion of
30 additional switching trials that have yet to yield value for patients and physicians.

31 32 RECOMMENDATIONS

33
34 The Council on Science and Public Health recommends that the following be adopted and the
35 remainder of the report be filed:

- 36
37 1. That Policy H-125.976, “Biosimilar Interchangeability Pathway” be rescinded. (Rescind
38 HOD Policy)
39 2. That our AMA encourage the FDA to continually collect data and critically evaluate
40 biosimilar utilization including the appropriateness of the term “interchangeable” in
41 regulatory activities. (Directive to Take Action)
42 3. That Policy D-125.989 “Substitution of Biosimilar Medicines and Related Medical
43 Products” be amended by addition and deletion to read as follows:

Our AMA urges that State Pharmacy Practice Acts and substitution practices for biosimilars in the outpatient arena: (1) preserve physician autonomy to designate which biologic or biosimilar product is dispensed to their patients; (2) allow substitution when physicians expressly authorize substitution of an interchangeable a biologic or biosimilar product; (3) limit the authority of pharmacists to automatically substitute only those biosimilar products that are deemed interchangeable by the FDA. in the absence of express physician authorization to the contrary, allow substitution of the biologic or biosimilar product when (a) the biologic product is highly similar to the reference product.

notwithstanding minor differences in clinically inactive components; and (b) there are no data indicating clinically meaningful differences between the biological product and the reference product in terms of the safety, purity, and potency of the product. (Modify Current HOD Policy)

4. That Policy D-125.987, “Biosimilar Product Naming and Labeling” be reaffirmed. (Reaffirm HOD Policy)

Fiscal note: less than \$1,000

CITED AMA POLICIES

Biosimilar Interchangeability Pathway H-125.976

Our AMA will: (1) strongly support the pathway for demonstrating biosimilar interchangeability that was proposed in draft guidance by the FDA in 2017, including requiring manufacturers to use studies to determine whether alternating between a reference product and the proposed interchangeable biosimilar multiple times impacts the safety or efficacy of the drug; and (2) issue a request to the FDA that the agency finalize the biosimilars interchangeability pathway outlined in its draft guidance “Considerations in Demonstrating Interchangeability With a Reference Product” with all due haste, so as to allow development and designation of interchangeable biosimilars to proceed, allowing transition to an era of less expensive biologics that provide safe, effective, and accessible treatment options for patients.

Res. 523, A-18

Substitution of Biosimilar Medicines and Related Medical Products D-125.989

Our AMA urges that State Pharmacy Practice Acts and substitution practices for biosimilars in the outpatient arena: (1) preserve physician autonomy to designate which biologic or biosimilar product is dispensed to their patients; (2) allow substitution when physicians expressly authorize substitution of an interchangeable product; (3) limit the authority of pharmacists to automatically substitute only those biosimilar products that are deemed interchangeable by the FDA.

Res. 918, I-08. Modified: CSAPH Rep. 1, I-11. Modified: CSAPH Rep. 4, A-14.

Biosimilar Product Naming and Labeling D-125.987

Our AMA urges the FDA to finalize Guidance on the naming and labeling conventions to be used for biosimilar products, including those that are deemed interchangeable. Any change in current nomenclature rules or standards should be informed by a better and more complete understanding of how such changes, including requiring a unique identifier for biologic USANs would impact prescriber attitudes and patient access, and affect post marketing surveillance. Actions that solely enhance product identification during surveillance but act as barriers to clinical uptake are counterproductive. However, because of unique product attributes, a relatively simple way to identify and track which biosimilar products have been dispensed to individual patients must be established. If unique identifiers for biosimilar USANs are required to support pharmacovigilance, they should be simple and the resulting names should reinforce similarities by using the same root name following standards for nonproprietary names established by the USAN Council.

CSAPH Rep. 4, A-14

APPENDIX 1

Definitions of key terms:

Biologic drug (or large molecule drugs): a classification of drugs which are produced by living organisms (such as human or animal cells, yeast, or bacteria), rather than by chemical synthesis. As such, this class of drug tends to replicate or mimic common biologic entities. For example, antibody- or protein-based drugs are common examples of biologic drugs.

Small molecule drug: A classification of drugs based on the number of atoms (typically <100) in their structure. Small molecule drugs are generally prepared using chemical synthesis techniques. Small molecule drugs are estimated to represent over 90 percent of all pharmaceuticals used in the clinic today. Typically, small molecule drugs function by binding to a biological entity (protein, receptor, etc.) and altering its function.

Generic drug: A drug produced by a second manufacturer after the patent or other market protections have expired, allowing for manufacturers to be able to produce their own products with the same chemical substance as a branded drug. The term generic drug only applies to small molecule drugs, with few exceptions.

Biosimilar: A biologic drug that has a very similar structure and function to a branded biologic drug after its patent or market protections have expired. Unlike generic drugs, biosimilars are not required to be the same chemical compound, but they are required to have the same chemical structure to act on the body and efficacy.

Interchangeable: An additional designation provided for biosimilar drugs by the FDA. This designation is not required for market approval and indicates that a biosimilar has successfully demonstrated no changes in efficacy or immunogenicity when the biosimilar is substituted for the reference product after a patient has already initiated treatment with the reference product. This designation has implications for reimbursement, and state regulations around pharmacist practice.

APPENDIX 2

Table 1: Comparison of follow-on products for small molecule vs. biologic medicines.

Type of Medicine	<u>Small Molecule</u>	<u>Biologic</u>
<i>Name of Follow-on Product</i>	Generic	Biosimilar
<i>Drug Molecule Complexity</i>	Low	High
<i>Size</i>	Small (10s of Dalton)	Very Large (1000s of Dalton)
<i>Manufacturing Process</i>	Chemical synthesis	Bioreactor
<i>Characterization</i>	Simple	Complex
<i>Batch-to-Batch Variability</i>	Low	High, with potential for permanent formulation drift over time
<i>Regulatory Pathway</i>	Abbreviated New Drug Application	Abbreviated Biologics Licensing Agreement
<i>Can Pharmacist Make Substitution?</i>	Yes, if state pharmacy practice laws allow	Yes, if manufacturer successfully completes additional clinical trial where patients switch back and forth between reference and follow-on product AND state pharmacy practice laws allow
<i>Nonproprietary Name</i>	Same as reference product	Same as reference product with additional 4 letter suffix

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 7-A-24

Subject: Androgen Deprivation in Incarceration

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee E

NOTE FROM THE COUNCIL: This report discusses sexual crimes, including against minors. The policy question posed in this report centers on the medical treatment and rehabilitation of those who have been convicted of sexual crimes, often against minors. Please use caution when reading, discussing, disseminating, and debating the contents of this report as they may be re-traumatizing or triggering.

1 INTRODUCTION

2
3 Resolution 501-A-23, “AMA Study of Chemical Castration in Incarceration” was adopted and
4 states that “our AMA study the use of chemical castration in the treatment of incarcerated
5 individuals with paraphilic disorders and for other individuals who commit sexual offenses,
6 including ethical concerns over coercion in its use as an alternative to incarceration and in
7 probation and parole proceedings.”
8

9 This report serves as the Council on Science and Public Health’s response to this charge. For the
10 purposes of this report, the term “androgen deprivation” (AD) will be substituted for “chemical
11 castration” to be more consistent with scientific literature, and to avoid the potential confusion of
12 reversible AD with irreversible surgical castration, typically performed by surgical removal of the
13 testes (orchiectomy).
14

15 METHODS

16
17 English language articles were selected from searches of PubMed and Google Scholar using the
18 search terms “chemical castration”, “androgen deprivation”, “chemical castration AND
19 incarceration”, and “androgen deprivation AND incarceration”. Additional articles were identified
20 by manual review of the reference lists of pertinent publications. Web sites managed by
21 government agencies and applicable organizations were also reviewed for relevant information.
22

23 BACKGROUND

24
25 Sexual crimes can cause significant trauma in their victims. Survivors can be subject to a lifetime
26 of psychological trauma including self-blame, post-traumatic stress disorder, suicidal ideation, and
27 structural changes in the brain.¹⁻⁴ This may be further challenging for those who experience this
28 abuse at a younger age. However, incident rates of child sexual abuse may be difficult to properly
29 assess due to the nature of the victims – e.g., victims may not understand they have been the
30 victims of a crime, or they may rely on their assailant for their basic needs. One study estimates
31 that up to 27 percent of girls and eight percent of boys experience childhood sexual assault in the

1 United States.⁵ Per the U.S. Sentencing Commission, approximately 1,000 cases per year in Federal
2 courts involve sexual abuse, with 94 percent of offenders being men.⁶

3
4 The public perception of perpetrators of sexual crimes is extremely negative, resulting in the
5 feeling that actions against these offenders should be more punitive and less rehabilitative
6 compared to those who have committed non-sexual offenses.⁷ Due to the prevalence and the
7 severity of these crimes, along with the social outrage, public officials often seek non-traditional
8 approaches for dissuading future sexual abuse, such as sexual offender registries, which are outside
9 of the scope of this report.

10
11 One of the approaches, currently utilized in seven states (see Appendix 1), is the use of drugs to
12 lower testosterone levels, with the belief that lower testosterone will reduce the likelihood of an
13 individual committing a sexual crime. This report seeks to describe the current science in the
14 diagnosis and management of paraphilic disorders, examine the utilization of AD in the criminal
15 justice system, and discuss the ethical issues presented by legal mandates for AD in a carceral
16 setting.

17 18 PARAPHILIC DISORDERS, STIGMA, AND THE CRIMINAL JUSTICE SYSTEM

19
20 It is important to distinguish the difference between paraphilias and paraphilic disorders. Per the
21 Diagnostic and Statistical Manual of Mental Disorders (DSM), a paraphilia is “any intense and
22 persistent sexual interest other than sexual interest in genital stimulation or preparatory fondling
23 with phenotypically normal, physically mature, consenting human partners.”⁸ Examples of
24 paraphilic disorders included in the DSM are exhibitionistic disorder, voyeuristic disorder,
25 pedophilic disorder, and frotteuristic disorder. If the paraphilia is causing distress or impairment to
26 either the individual or another person, it may be classified as a paraphilic disorder. The presence
27 of a paraphilia itself does not necessarily warrant clinical intervention or a paraphilic disorder
28 diagnosis. Additionally, it is critical to distinguish between paraphilic thoughts and paraphilic
29 behaviors. This distinction is especially important when discussing criminal acts. Many individuals
30 with paraphilic disorders do not act upon their desires, but they are still distressing and the
31 individual would benefit from clinical support.⁹

32
33 Individuals with paraphilic disorders are subject to intense social stigma, which often results in
34 feelings of guilt, shame, and self-loathing.¹⁰ Clinically, this presents multiple issues, such as
35 individuals being less likely to seek care, and making it more difficult to recruit patients for clinical
36 trials of new treatments. This is particularly true in instances where individuals could be required to
37 disclose that they are experiencing urges to perform criminal acts, even if they do not act upon
38 them. As such, blanket approaches, particularly in the form of legal mandates, should be
39 approached with skepticism as to whether they are truly informed by research and best practices, or
40 a manifestation of the social stigma and bias towards punitive measures for those convicted of
41 sexual offenses. Many of those with paraphilic disorders are themselves survivors of abuse, often
42 experienced in childhood.¹¹

43
44 Treatment for paraphilic disorders is difficult and nuanced. Paraphilic disorders are highly
45 heterogeneous in their manifestation and presentation, ranging from urges to actions, which is
46 further complicated by the social stigma preventing many from seeking care. AD seeks to reduce
47 testosterone, and thus arousal. While this may be effective for some, many convicted of sexual
48 crimes report that they were not seeking sexual gratification, but rather acted out of grievance,
49 impulsivity, or a desire to exert control.¹² This highlights the intersection of many paraphilic
50 disorders with other psychological conditions, emphasizing the importance of consistent,

1 adjunctive psychotherapy, and why many pharmacotherapy approaches for paraphilic disorders go
2 beyond just AD, often including antidepressants, anxiolytics, and mood stabilizers.¹³⁻¹⁶

3 4 ANDROGEN DEPRIVATION IN A CLINICAL SETTING

5
6 AD therapy is a commonly accepted medical treatment approach for managing prostate cancers,
7 where hormones such as testosterone are required for cancer cell growth and proliferation.¹⁷
8 Medications used for AD regimens vary and include leuprorelin, goserelin, and triptorelin, but
9 generally the mechanism of AD action is either as an agonist or antagonist against luteinizing
10 hormone-releasing hormone (LHRH), resulting in a reduction of testosterone production. Patients
11 receiving AD for prostate cancer report loss of libido (up to 91 percent) and erectile dysfunction
12 (up to 95 percent).¹⁸ The high prevalence of sexual dysfunction, as well as the decrease in systemic
13 testosterone levels (and thus presumed decrease in behaviors associated with testosterone, such as
14 aggression) have led to the theoretical utility of AD for managing some types of paraphilic
15 disorders.

16
17 As AD influences hormones, the level of side effects particularly in long-term use can be serious.
18 In a long-term study of men with paraphilic disorders being administered triptorelin, 11 of 18 men
19 saw decreases in bone density, with other reported side effects including persistent hot flashes,
20 diffuse pain, and erectile dysfunction with age-appropriate sexual partners.¹⁹ Depot
21 medroxyprogesterone acetate (DMPA), which is the required medication for AD in the carceral
22 context in California (described below), is contraindicated for people with adrenal disease, severe
23 hypertension, risk of thromboembolic disease, diabetes mellitus, severe depressive disorder,
24 pituitary disease, and meningioma. These side effects often result in high rates of discontinuation,
25 which in the context of most state laws described later, would require the individual to return to
26 prison.²⁰ Due to the side effect profile, the duration of treatment is a critical component. In the
27 oncology setting, the duration of treatment is often on the scale of months, and there is some
28 interest in an intermittent approach (where patients cycle on and off treatment) to better manage
29 side effects.²¹ Patients with paraphilic disorders may receive AD for years, thus subjecting them to
30 more serious side effects.²²

31
32 The evidence base for AD as a treatment for paraphilic disorders primarily comprises of case
33 reports, small cohort, or uncontrolled studies. With those caveats, the current published works
34 generally support that AD may be effective for treating some people with paraphilic disorders. In
35 one study, 29 men previously convicted of sexual crimes and presenting with paraphilic behaviors
36 (child molestation, exhibitionism, or frottage) were treated with DMPA for six months.²³ In that
37 period, one reported committing a sexual crime, while most described a near complete suppression
38 of criminal sexual thoughts and activities. Another study of 46 male patients with paraphilic
39 disorders undergoing group psychotherapy found that patients receiving DMPA in conjunction
40 with psychotherapy had a lower relapse rate (15 percent) compared to those using psychotherapy
41 alone (68 percent).²⁴ These findings are generally observed across the literature, with a meta-
42 analysis (N = 22,181 persons across 69 total studies) finding that hormonal medication had an odds
43 ratio of 3.08 for remission (thoughts, actions, or both) compared to an odds ratio of 1.45 for
44 cognitive-behavioral therapy alone, with the caveat that most hormonal medication included in
45 their analysis was administered in conjunction with cognitive-behavioral therapy.²⁵

46
47 Finally, studies nearly universally focus on the impact of AD on men. While sexual crimes are
48 disproportionately committed by men (97 percent of arrests for rape and 93 percent of arrests for
49 other sexual crimes in 2019 were men), there is a noted lack of research available for treatment of
50 women and people of other gender identities with paraphilic disorders, particularly those which
51 may be utilizing hormone therapy for gender affirming care.²⁶

ANDROGEN DEPRIVATION THERAPY IN THE CARCERAL SETTING

As of this writing, there are seven states (California, Florida, Iowa, Louisiana, Montana, Wisconsin, and Alabama) which use AD in some component of their judicial response to sexual crimes. A summary of state approaches is provided in Appendix 1 of this report. State approaches to AD generally vary over the level of discretion over who receives it, the duration, and whether it is tied to parole and/or probation.

In California, if an individual is convicted of a crime that is sexual in nature against a victim under the age of 13, a long-acting injection of DMPA may be a condition of their parole. If the individual has two convictions for sexual crimes against a minor, this injection is mandatory as a condition to receive parole.²⁷

In Florida, all individuals convicted of sexual assault (regardless of age of victim) may be required, at the discretion of the presiding judge, to receive AD upon completion of their prison sentence after consulting a medical professional, not necessarily a physician.²⁸ The judge can decide the duration of AD, which can be lifelong. If an individual does not appear for their court-mandated AD administration, they are charged with an additional felony. Similar to California, AD in Florida becomes mandatory upon a second conviction.

Alabama, which adopted its AD statute in 2019, allows judges to decide if someone convicted of sexual crimes against a victim under 12 years old will receive AD after their first offense. Additionally, those convicted in Alabama are required to pay for their AD for an indeterminate period of time, but inability to pay may not be used as the basis to deny parole. It is unclear at this time if court-mandated AD would be reimbursed by insurance.

Interestingly, there does not appear to be a clear trend in the recent actions of states and AD laws. For example, Alabama enacted its statute in 2019, while a legislator in New Mexico introduced an AD bill in 2021 but it failed to pass. Meanwhile, Oregon (2001) and Georgia (2006) both had AD statutes that have since been repealed. In Oregon, the law was a time-limited pilot program that was not renewed upon its conclusion.²⁹ In Georgia, references to AD were removed from laws as an unspecified “policy decision,” with no other public justification provided.³⁰

When trying to measure if AD laws are effective at reducing recidivism, it is critical to appreciate the difficulty in recruiting, retaining, and measuring behavioral outcomes in populations of those convicted of sexual crimes. This is a highly stigmatized population, and studies often require self-reporting of thoughts and actions and may involve confessing to a crime or thoughts that they feel deep shame towards. Efforts to measure recidivism as an endpoint are incredibly difficult to assess accurately due to the previously described factors which cause sexual violence to be underreported. This is especially true if AD is administered as a mandatory condition of parole. Individuals receiving parole are already a self-selecting population – they have indicated that they do not want to be incarcerated any more, meaning that incarceration is a deterrent for them. As such, individuals who receive AD as a condition of parole may already be a population less likely to re-offend, and the effect of AD on recidivism rates versus the fear of being incarcerated may be impossible to disentangle.

1 ETHICAL AND CONSTITUTIONAL CONCERNS

2
3 AD laws have been constitutionally challenged in state courts. For example, in 1984, a Michigan
4 man convicted of rape was sentenced to one year in prison and five years of probation only if he
5 received DMPA for AD.³¹ The Michigan Court of Appeals found in *People v. Gauntlett*, this
6 approach to be unconstitutional, with the rationale that DMPA was not FDA-approved for AD, and
7 that the individual could not provide informed consent if this was court-mandated administration.³²

8
9 While many AD laws in other states have not been challenged in courts, the outcome in Michigan
10 highlights several of the criticisms against AD laws. Beyond concerns of drug efficacy, safety, and
11 consent, there are additional concerns around the constitutionality of AD laws. For example, some
12 have argued that AD violates the Eighth Amendment’s protection against cruel and unusual
13 punishment, or even that government intervention and mandating behavior-altering drugs may
14 violate an individual’s First Amendment rights to have freedom of thought or mental autonomy.³³

15
16 Even in instances where an individual is provided a choice to receive AD, it is unlikely that this
17 would truly be free from coercion. The social stigma of those with paraphilic disorders can be
18 magnified in the carceral setting, and often results in those convicted of sexual crimes being
19 targeted for violence. One study, for example, found that individuals convicted of sexual crimes
20 made up 15 percent of an inmate population, but were the victims for over 30 percent of homicides
21 in prison.³⁴

22
23 Finally, while AD laws are intended to reduce the likelihood of committing additional sexual
24 crimes, they do impact fertility and selective enforcement harkens back to America’s dark history
25 of eugenics. In the 1920s, dozens of states enacted eugenic sterilization laws, resulting in the
26 forceful sterilization of populations deemed undesirable – often inmates, and disproportionately
27 used against Black men and women.³⁵ Particularly in instances where the use of AD is at the
28 discretion of the court, legal scholars worry that racist stereotypes of hyper-sexual Black men will
29 result in disproportionately higher rates of AD administered to marginalized and minoritized
30 groups, which could serve as a modern eugenics law.³⁶

31
32 A review of the available literature was unable to identify analysis of the rate at which AD is used
33 in the carceral setting, nor the demographics of those receiving it.

34
35 CURRENT AMA POLICY

36
37 The AMA, through both its policy and administration of the Code of Medical Ethics, has a strong
38 history of opposing the use of medicine as punishment. Of particular relevance is Opinion 9.7.2,
39 “Court-Initiated Medical Treatment in Criminal Cases” (full text available at end of report), which
40 notes such treatments “raise important questions as to the rights of prisoners, the powers of judges,
41 and the ethical obligations of physicians” and that “medical ethics do not require a physician to
42 carry out civic duties [i.e., court-initiated medical treatments like AD] that contradict fundamental
43 principles of medical ethics.” The Code states that physicians who participate in court-initiated
44 medical treatments should only do so “if the procedure being mandated is therapeutically
45 efficacious” and is “not a form of punishment.” Additionally, the Code explains that physicians
46 should “[t]reat patients based on sound medical diagnoses, not court defined behaviors” and that
47 they should “[d]ecline to provide treatment that is not scientifically validated.”

48
49 As of this writing, it is likely that state laws imposing AD fail to meet the standards set forth by the
50 Code of Medical Ethics. States either utilize automatic mandates or rely solely on the discretion of
51 the courts for deciding who requires AD, removing physician discretion and clinical judgement, as

1 well as eliminating the ability for the patient to provide consent. Additionally, some statutes
2 specifically cite that AD must be performed using DMPA, which has not been FDA-approved for
3 AD nor is it known to be included in any clinical guidelines for AD in the context of prostate
4 cancer or paraphilic disorder treatment.¹⁸ Finally, instances where AD may be optional as a
5 condition for parole or probation likely violate patient voluntariness, in that a patient is forced to
6 choose between extended incarceration or receiving a medicine, thus producing a highly coercive
7 situation.

8
9 CONCLUSION

10
11 Sexual crimes can cause significant trauma in their victims and survivors may experience a lifetime
12 of psychological trauma including self-blame, post-traumatic stress disorder, suicidal ideation, and
13 structural changes in the brain. The public perception of perpetrators of sexual crimes is extremely
14 negative, resulting in the feeling that actions against these offenders should be more punitive and
15 less rehabilitative. While policymakers have sought non-traditional approaches to reduce the
16 prevalence of sexual crimes in their communities, current state laws which remove physicians and
17 instead mandate AD for convicted sex offenders are not supported by science and are contrary to
18 the Code of Medical Ethics. AD should be viewed as a single tool in the physician's toolbox for
19 treating some paraphilic disorders and should only be initiated using informed consent and a
20 physician's best clinical judgement for a given patient and their circumstances, regardless of
21 whether the examination occurs in a prison or a clinic.

22
23 RECOMMENDATIONS

24
25 The Council on Science and Public Health recommends that the following be adopted and the
26 remainder of the report be filed:

- 27
28 1. That Policy H-430.977, "AMA Study of Chemical Castration in Incarceration" be
29 rescinded. (Rescind HOD Policy)
30
31 2. That our AMA:
32
33 a. Opposes laws, regulations, and actions of the court which remove physician
34 autonomy and clinical judgement from treatment decisions regarding androgen
35 deprivation (also known as chemical castration) for those convicted of sexual
36 crimes.
37 b. Opposes linkages of criminal sentencing, parole, or probation to court-mandated
38 androgen deprivation.
39 c. Encourages data collection on the utilization, court mandates, duration of therapy,
40 and clinical outcomes of androgen deprivation in the carceral setting.
41 d. Supports continued research for effective treatments for paraphilic disorders,
42 including efforts to reduce stigma and recruit patients with paraphilic disorders
43 into clinical trials. (New HOD Policy)
44
45 3. That Policies D-430.997, "Support for Health Care Services to Incarcerated Persons," H-
46 430.978 "Improving Care to Lower the Rate of Recidivism," and H-345.981 "Access to
47 Mental Health Services" be reaffirmed. (Reaffirm HOD Policy)

Fiscal note: less than \$1,000

APPENDIX 1

Table 1: Summary of state laws regarding androgen deprivation therapy (as of January 2024)

State	Code	Mandatory?	Age for victims and applications	Duration	Notes
Alabama	Section 15-22-27.4: Parole of persons convicted of sex offense involving person under 13 years of age	Discretion of court as a condition of parole	Sex crime with a victim under the age of 13	Can continue until the department of corrections deem no longer necessary	
California	CA Penal Code Section 645	First conviction: At court's discretion Second or subsequent conviction: Required	Any sex crimes against someone 13 years or younger	Continued until the Department of Corrections deems treatment no longer necessary	Specifically requires the use of medroxyprogesterone acetate.
Florida	Florida Statute 794.0235	First conviction: At court's discretion Second or subsequent conviction: Required	Applies to sexual battery convictions (adult or minors)	Duration will be determined by court and can be up to the life of the offender.	Requires a court appointed medical expert determination that defendant is appropriate candidate for treatment.
Iowa	903B.10 Hormonal intervention therapy	First conviction: At court's discretion Second or subsequent conviction: Required unless court or board of parole determines the treatment would not be effective	For "serious sex offenses" with a minor under the age of 12 (sexual abuse of all degrees, assault, and sexual exploitation)	Treatment will continue until the agency in charge of supervision deems no longer necessary.	Offenders have to pay a "reasonable fee" to pay for the costs of treatment
Georgia	Formerly Ga. Code Ann. § 16-6-4 (2002) and Ga. Code Ann. § 42-9-44.2 (2002)	n/a	n/a	n/a	Repealed in 2006
Louisiana	RS 14:43:6	First conviction: At court's discretion Second or subsequent conviction: Required	All cases of first- or second-degree rape, OR sexual battery and molestation when the victim is under 13	Court will specify the duration of treatment, up to the life of the defendant.	Requires a court appointed medical expert determination that defendant is appropriate candidate for treatment

State	Code	Mandatory?	Age for victims and applications	Duration	Notes
Montana	45-5-212 Assault on minor	First conviction: At court's discretion Second or subsequent conviction: Required	Applies to all convictions (adult or minors) of: -Sexual assault -Rape -Incest	Can continue until the department of corrections deem no longer necessary	
Oregon	Formerly Ore. Rev. Stat. § 144.625 (2001), Ore. Rev. Stat. § 144.627 (2001), Ore. Rev. Stat. § 144.629 (2001), Ore. Rev. Stat. § 144.631 (2001)	n/a	n/a	n/a	Repealed in 2001
Wisconsin	Wisconsin Statutes, Section 302.11(1)(b)2 Wisconsin Legislative Council IM-2021-07: Requirement for chemical castration	Discretion of Department of Corrections of Parole Commission	Sex crimes with a victim below the age of 13	Unspecified	

CITED AMA POLICY

Opinion 9.7.2, “Court-Initiated Medical Treatment in Criminal Cases”

Court-initiated medical treatments raise important questions as to the rights of prisoners, the powers of judges, and the ethical obligations of physicians. Although convicted criminals have fewer rights and protections than other citizens, being convicted of a crime does not deprive an offender of all protections under the law. Court-ordered medical treatments raise the question whether professional ethics permits physicians to cooperate in administering and overseeing such treatment. Physicians have civic duties, but medical ethics do not require a physician to carry out civic duties that contradict fundamental principles of medical ethics, such as the duty to avoid doing harm.

In limited circumstances physicians can ethically participate in court-initiated medical treatments. Individual physicians who provide care under court order should:

- (1) Participate only if the procedure being mandated is therapeutically efficacious and is therefore undoubtedly not a form of punishment or solely a mechanism of social control.
- (2) Treat patients based on sound medical diagnoses, not court-defined behaviors. While a court has the authority to identify criminal behavior, a court does not have the ability to make a medical diagnosis or to determine the type of treatment that will be administered. When the treatment involves in-patient therapy, surgical intervention, or pharmacological treatment, the physician’s diagnosis must be confirmed by an independent physician or a panel of physicians not responsible to the state. A second opinion is not necessary in cases of court-ordered counseling or referrals for psychiatric evaluations.
- (3) Decline to provide treatment that is not scientifically validated and consistent with nationally accepted guidelines for clinical practice.
- (4) Be able to conclude, in good conscience and to the best of his or her professional judgment, that to the extent possible the patient voluntarily gave his or her informed consent, recognizing that an element of coercion that is inevitably present. When treatment involves in-patient therapy, surgical intervention, or pharmacological treatment, an independent physician or a panel of physicians not responsible to the state should confirm that voluntary consent was given.

Support for Health Care Services to Incarcerated Persons D-430.997

Our AMA will:

- (1) express its support of the National Commission on Correctional Health Care Standards that improve the quality of health care services, including mental health services, delivered to the nation’s correctional facilities;
- (2) encourage all correctional systems to support NCCHC accreditation;
- (3) encourage the NCCHC and its AMA representative to work with departments of corrections and public officials to find cost effective and efficient methods to increase correctional health services funding;
- (4) continue support for the programs and goals of the NCCHC through continued support for the travel expenses of the AMA representative to the NCCHC, with this decision to be reconsidered every two years in light of other AMA financial commitments, organizational memberships, and programmatic priorities;
- (5) work with an accrediting organization, such as National Commission on Correctional Health Care (NCCHC) in developing a strategy to accredit all correctional, detention and juvenile facilities and will advocate that all correctional, detention and juvenile facilities be accredited by the NCCHC no later than 2025 and will support funding for correctional facilities to assist in this effort; and
- (6) support an incarcerated person’s right to: (a) accessible, comprehensive, evidence-based contraception education; (b) access to reversible contraceptive methods; and (c) autonomy over the decision-making process without coercion.

Improving Care to Lower the Rate of Recidivism H-430.978

Our American Medical Association will advocate and encourage (1) federal, state, and local legislators and officials to increase access to community mental health facilities, community drug rehabilitation facilities, appropriate clinical care, and social support services (e.g., housing, transportation, employment, etc.) to meet the needs of indigent, homeless, and released previously incarcerated persons; and (2) federal, state, and local legislators and officials to advocate prompt reinstatement in governmental medical programs and insurance for those being released from incarceration facilities.

Access to Mental Health Services H-345.981

Our AMA advocates the following steps to remove barriers that keep Americans from seeking and obtaining treatment for mental illness:

- (1) reducing the stigma of mental illness by dispelling myths and providing accurate knowledge to ensure a more informed public;
- (2) improving public awareness of effective treatment for mental illness;
- (3) ensuring the supply of psychiatrists and other well trained mental health professionals, especially in rural areas and those serving children and adolescents;
- (4) tailoring diagnosis and treatment of mental illness to age, gender, race, culture and other characteristics that shape a person's identity;
- (5) facilitating entry into treatment by first-line contacts recognizing mental illness, and making proper referrals and/or to addressing problems effectively themselves; and
- (6) reducing financial barriers to treatment.

Subject: Decreasing Regulatory Barriers to Appropriate Testosterone Prescribing

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee E

1 INTRODUCTION

2
3 Our American Medical Association (AMA) House of Delegates referred the second Resolve of
4 Resolution 519-A-23, “Decreasing Regulatory Barriers to Appropriate Testosterone Prescribing.”
5 The referred resolve asked that our AMA study the outcomes of expanding access to testosterone
6 through decreasing state and health insurer regulatory requirements. In addition to the process
7 limitations, other barriers to care for testosterone prescribing include prescription drug monitoring
8 program (PDMP) state database reporting, telehealth, 30-day supply, and mail delivery limitations.
9

10 METHODS

11
12 English-language reports were selected from a PubMed and Google Scholar search through
13 January 2024, using the text terms “testosterone,” “prescribing,” “barriers,” and “regulations.”
14 Additional articles were identified by manual review of the references cited in these publications.
15 Further information was obtained from the Internet sites of medical specialty societies, federal and
16 state agencies, human rights organizations, legal organizations, among others to identify regulatory
17 and legal barriers to testosterone treatments, prescribing, and access when medically indicated.
18

19 BACKGROUND

20
21 Testosterone is a hormone that is naturally produced in the body of all individuals. Testosterone
22 replacement therapy (TRT) has been explored as a therapy for a variety of conditions, including
23 low serum testosterone levels, hypogonadism, erectile dysfunction, osteoporosis, diabetes mellitus,
24 and hypoactive sexual desire disorder.¹⁻⁷ Synthetic testosterone is classified as an anabolic-
25 androgenic steroid designed to mimic natural testosterone.
26

27 Testosterone is also a vital component of gender affirming hormone therapy (GAHT) for
28 transgender, non-binary, and/or gender diverse (TND) individuals, aiding in the development of
29 secondary sex characteristics aligning with their gender identity including physical changes such as
30 increased muscle mass and strength, fat redistribution, cessation of menstrual periods, heightened
31 sex drive, facial and body hair growth, deepening of voice, and clitoral enlargement, among
32 others.^{8,9} These effects may begin within 1-6 months, while some may take up to 2-5 years after
33 initiating therapy. The effects may significantly alleviate gender dysphoria, depression,
34 psychological symptoms, and suicidality while enhancing overall quality of life, interpersonal
35 functioning, psychological adjustment, sexual function, body satisfaction, and self-esteem among
36 TND individuals.^{8,10,11} GAHT is often maintained throughout life, and discontinuation of hormone
37 therapy can lead to bone loss in TND individuals, particularly those who have undergone gonad
38 removal, which highlights the importance for access to this therapy.¹²

1 Testosterone, when prescribed as part of medically monitored GAHT, is generally considered safe,
2 with severe side effects being exceptionally rare.¹³ Concerns regarding associations between
3 testosterone and severe adverse effects, including mood alterations and cardiovascular disease,
4 stem from administering multiple testosterone derivatives at doses ranging from 10 to 100 times
5 higher than the normal physiologic levels. Individuals using high doses of testosterone have
6 reported withdrawal symptoms, such as depression, fatigue, irritability, loss of appetite, decreased
7 libido, and insomnia.¹⁴ TRT, as compared to performance enhancing use, includes testosterone
8 prescriptions within the physiological dosage range which is considered safe. Studies consistently
9 demonstrate significant positive effects on various aspects of mental health and well-being among
10 patients on TRT.^{13,15} However, health care experts have called for further research into the long-
11 term risks associated with testosterone products, including its potential impact on cardiovascular
12 health and the occurrence of breast/chest and endometrial cancers.^{16, 13,17-19}

13 14 DISCUSSION

15 16 *Policy Affecting Appropriate Testosterone Prescribing in the United States*

17
18 Recently, there has been a significant increase in state laws banning gender affirming care (GAC)
19 including GAHT for TND people. Across the nation, state legislatures, governors, and
20 administrative agencies are increasingly implementing measures to limit access to gender-affirming
21 care, particularly targeting youth. GAC is supported by all major medical associations representing
22 over 1.3 million U.S. physicians, including the AMA.²⁰

23
24 Since 2021, 23 states have enacted laws that prohibit healthcare professionals from providing
25 gender-affirming medical interventions, including hormone therapy and surgeries, to minor
26 patients.²¹ These legislative measures effectively ban evidence-based care for TND youth by
27 imposing legal and professional penalties on health care professionals who provide GAC.²² Some
28 states have also taken steps to limit access to GAC for adults.²³ In addition to limiting access to
29 medically necessary care, providers of GAC have also been threatened with violence, jeopardizing
30 physician safety and practice.²⁴

31
32 On a national level, in 2021, U.S. Department of Health and Human Services (HHS), Office for
33 Civil Rights (OCR) expanded its interpretation and enforcement of Section 1557 of the Affordable
34 Care Act (ACA) and Title IX of the Civil Rights Act, to include protection against discrimination
35 based on sexual orientation and gender identity, ensuring access to GAC.²⁵ This was reiterated in
36 2022, when HHS issued a notice affirming its support for TND youths' access to gender-affirming
37 care.²⁶

38 39 *Regulatory Barriers to Appropriate Testosterone Prescribing*

40
41 The primary regulatory obstacle to appropriate testosterone prescribing, in addition to state-based
42 laws restricting care for TND patients, is its controlled substance scheduling status. Testosterone is
43 currently categorized as a Schedule III drug under the Controlled Substances Act (CSA). Such
44 classification indicates a potential for misuse, in addition to a potential to lead to physical
45 dependence or psychological dependence.²⁷ Uniquely, testosterone was added to the Controlled
46 Substances Act by the Anabolic Steroids Control Act of 1990, which classified all anabolic steroids
47 as schedule III-controlled substances, with the aim to stop chemical performance enhancement in
48 sports.²⁸ Congress effectively circumvented FDA's regulatory authority, by bypassing the typical
49 scientific and evidence review to inform scheduling.²⁹ The act faced opposition from the AMA, the
50 FDA, and the National Institute on Drug Abuse and despite this opposition was enacted by
51 Congress.²⁹⁻³¹

1 As a Schedule III controlled substance, testosterone is subject to more stringent regulations
2 compared to other prescription medications. Regulations on controlled substances include shorter
3 validity periods for prescriptions (physicians must rewrite prescriptions every 6 months),
4 limitations on refill quantities (limited to 30-day supplies), and potential exclusions from telehealth
5 and mail-order services of testosterone. Testosterone restrictions necessitate frequent
6 communication between individuals using testosterone and their prescriber to maintain a
7 continuous supply.²⁹ Amid the COVID-19 pandemic, temporary adjustments in regulations enabled
8 individuals to acquire 100-day medication supplies via mail services, however testosterone
9 remained exempt from these alterations due to its classification as a controlled substance.^{29,32}

10 *Prescription Drug Monitoring Programs*

11 PDMPs are state-level electronic databases intended for public health surveillance, prescription
12 monitoring, and to inform clinical decision-making. PDMPs track dispensed prescriptions based on
13 the schedule level designated in the state controlled substances act (CSA). As of 2023, eight states
14 monitor schedule II – IV via their PDMP, 45 states, territories, and districts monitor Schedules II
15 through V, 32 states track “drugs of concern” (i.e., drugs not scheduled under their state CSA), and
16 one state monitors all prescription medications.³³ Currently, testosterone is a monitored substance
17 in all state PDMPs. Patients have raised concerns regarding the surveillance of medications,
18 including fears of being outed by their health care professionals, pharmacists, law enforcement and
19 others with access to their states’ PDMP data.³⁴

20 Almost all PDMPs can be used by court officials, probation and parole officers, and law
21 enforcement agencies to prevent controlled substance diversion or monitor a patient’s prescription
22 use with a court order, search warrant, or subpoena.³⁵ Law enforcement permission to access
23 PDMPs varies by state. As of 2022, 25 states require an active investigation or “official duties,” 18
24 require a subpoena, 17 require a court order, and 11 require a search warrant to view PDMP
25 records.^{36,37} (See Table 1) Some states have multiple forms of law enforcement access requirements
26 that are accepted.⁵⁵ As GAC becomes criminalized in some states, access to this data by law
27 enforcement could be devastating for patients.

28 HIPAA’s Privacy Rule regulates the use and disclosure of protected health information (PHI) by
29 covered entities, but it does not specifically include PDMP data. In December 2023 members of
30 Congress urged HHS to revise the Health Insurance Portability and Accountability Act (HIPAA)
31 regulations to include PDMPs, after briefings with major pharmacies revealed that law enforcement
32 agencies were secretly obtaining thousands of prescription records without a warrant.³⁸ All eight
33 major pharmacy chains reported that “they do not require a warrant prior to sharing pharmacy
34 records with law enforcement agents, unless there is a state law that dictates otherwise.”³⁸ Gaps in
35 federal privacy coverage of both medical, prescription, and PDMP data raises concerns to deter
36 physician prescribing, pharmacist dispensing, and patients procuring medically indicated
37 testosterone.³⁹ Ongoing research is essential to investigate the unintended consequences associated
38 with granting law enforcement access to medical prescription histories, especially in the absence of
39 a court order.

40 *Insurer or Payer Barriers to Testosterone Prescribing and Access*

41 Many transgender individuals do not have health insurance. Those with health insurance often
42 encounter challenges with public and private insurers denying coverage for GAC, leaving patients
43 with large out-of-pocket cost.^{40–42} Findings from a 2022 nationally representative survey by the
44 Center for American Progress show that over 25 percent of transgender participants faced denials
45 for hormone therapy by health insurance providers.⁴³ According to the 2022 Employee Benefits

1 Survey, among the 30 percent of U.S employer-provided health plans providing GAC, only 25
2 percent cover GAC-related prescription drug therapy.⁴⁴ Moreover, only 26 percent include
3 physician visits for GAC and only 21 percent cover GAC-related lab tests, both of which are
4 typically necessary to be prescribed testosterone.⁴⁴

5
6 Even though a large number of insurance companies now provide coverage to TND individuals
7 because of federally mandated laws, many continue to deny coverage.⁴⁵ In 2021, 13 states reported
8 that coverage of GAHT is not addressed in their states' statute or policy, and 2 states exclude
9 coverage of GAHT.⁴⁶ The U.S. Transgender Survey reports that of adults utilizing GAHT, 21
10 percent (2,526 insured patients) of treatment claims have been denied.⁴⁷ Beyond these denials,
11 TND individuals report various insurance-related hurdles, such as difficulties in obtaining coverage
12 for GAC and other medical services, updating health insurance records, and issues related to
13 network adequacy.⁴³ For example, individuals with insurance often need to obtain prior
14 authorization before testosterone can be covered, delaying care up to 7 business days or more.⁴⁸
15 Among TND individuals, nonprescription hormone use is significantly higher among those whose
16 claims were denied or were uninsured.⁴⁷

17
18 Testosterone access is further complicated by insurance industry formulary drug tiers, in which
19 "non-preferred" testosterone products are restricted via prior authorization or higher cost-sharing
20 requirements.⁴⁶ In 2021, 34 out of 51 state Medicaid programs covered GAHT, while nine states
21 and two territories did not provide coverage.⁴⁹ Confirmation regarding GAHT coverage could not
22 be verified for eight states and three territories.⁴⁹

23
24 There have been some successful initiatives to improve GAC accessibility through the expansion of
25 state Medicaid essential health benefit plans and the explicit inclusion of GAC, including GAHT,
26 in state Medicaid coverage laws.⁵⁰ For instance, in 2023 Colorado became the first state to
27 explicitly integrate gender-affirming care to treat gender dysphoria, encompassing surgical
28 procedures, hormone therapy, and mental and behavioral health services, into its benchmark health
29 insurance plan for essential health benefits.⁵¹ While further studies are needed to assess the impact
30 of Colorado's expanded care, the coverage of GAC contributes to improved health outcomes while
31 reducing gender dysphoria, depression, anxiety, and suicidality among TND Coloradans.^{52,53}

32 33 AMA POLICY AND ADVOCACY

34
35 The AMA has robust policy regarding gender-affirming care, patient privacy, health equity,
36 medical necessity, protecting the provider-patient relationship, telehealth, and prior authorization.
37 Of particular relevance to this report is AMA Policy H-185.927, "Clarification of Evidence-Based
38 Gender-Affirming Care," which emphasizes the importance of evidence-based gender-affirming
39 care as determined through shared decision making between patients and physicians. This policy
40 instructs our AMA to "oppose laws and policies that criminalize, prohibit or otherwise impede the
41 provision of evidence-based, gender-affirming care" and to "advocate for federal, state, and local
42 laws and policies to protect access to evidence-based care for gender dysphoria and gender
43 incongruence." Additionally, our AMA advocates for equitable coverage of gender-affirming care
44 by health insurance providers, both public and private, through Policy H-185.950, "Removing
45 Financial Barriers to Care for Transgender Patients."

46
47 AMA policy H-315.983, "Patient Privacy and Confidentiality," affirms that HIPAA should be the
48 minimal standard for protecting client-patient privilege, and that law enforcement agencies
49 requesting private medical information should only be given access through a court order granted
50 through clear and convincing evidence, with the records subject to stringent security measures.

51

1 Further, Policy G-605.009 directs the AMA to convene experts and stakeholders to “identify issues
2 with physician payment and reimbursement for gender-affirming care and recommend solutions to
3 address these barriers to care.” The Task Force to Preserve the Patient-Physician Relationship
4 When Evidence-Based, Appropriate Care Is Banned or Restricted has invited interested Federation
5 partners to participate and is in the process of implementing this policy.
6

7 Protecting access to GAC has been a priority for the AMA for many years. Since the legislative
8 attempts to ban GAC first emerged, the AMA has been working closely with state medical
9 associations to oppose these inappropriate intrusions in the practice of medicine. The AMA has
10 submitted testimony and sent letters to legislators in several states and has assisted behind-the-
11 scenes in many more states. In 2021, the AMA also publicly urged governors across the country to
12 reject state legislation aimed at prohibiting medically necessary gender affirming care for minor
13 patients.⁵⁴ AMA advocacy has also supported state “shield laws” to protect physicians who provide
14 GAC and their patients from interstate enforcement of GAC bans and promote telehealth access to
15 GAC. The AMA has also been very active in litigation and has submitted numerous amicus briefs
16 urging courts to overturn laws that ban GAC.
17

18 Additionally, in 2019 the AMA published an issue brief with GLMA emphasizing the importance
19 of health insurance coverage for transgender patients and asserting the medical community's duty
20 to advocate for evidence-based care, reiterating that medical decisions should be made by patients,
21 their relatives and health care professionals, not politicians.⁵⁵ Lastly, in response to policy that was
22 adopted at the 2023 Annual Meeting Annual, D-270.983, “Decreasing Regulatory Barriers to
23 Appropriate Testosterone Prescribing,” the AMA asked the FDA to review the evidence on
24 testosterone, with the possibility of updating recommendations to send to the DEA regarding its
25 scheduling. In this letter the AMA conveyed concerns to the FDA Commissioner about the current
26 scheduling of testosterone-containing drug products, suggesting that the existing schedule may
27 unnecessarily restrict access to care for patients in critical need.⁵⁶
28

29 CONCLUSION

30

31 Addressing regulatory obstacles to appropriate testosterone prescribing requires a multifaceted
32 approach that encompasses both physician and patient perspectives. Initiatives such as rescheduling
33 testosterone to expand access through telehealth and reducing regulation on dispensing are crucial
34 steps toward ensuring equitable access to care. These measures not only enhance the availability of
35 testosterone therapy but also promote patient-centered care by facilitating access to qualified health
36 care professionals regardless of geographic location. Legislative and regulatory efforts must focus
37 on addressing barriers such as the lack of confidentiality, privacy, and security of medical health
38 data, which can undermine patient trust and deter individuals from seeking necessary care.
39

40 RECOMMENDATIONS

41

42 The Council on Science and Public Health recommends that the following be adopted, and the
43 remainder of the report be filed:
44

- 45 1. That policy D-270.983, “Decreasing Regulatory Barriers to Appropriate Testosterone
46 Prescribing,” be amended by addition to read as follows:
47
 - 48 A. Our AMA will ask the FDA to review the available evidence and other data on
49 testosterone and submit updated recommendations, if warranted, to the DEA, for its
50 consideration of the scheduling of testosterone-containing drug products.
51

- 1 B. Our AMA supports policies to remove barriers that delay or impede patient access to
2 prescribed testosterone. (New HOD Policy)
3
4 C. Our AMA will continue to work alongside our partner organizations to promote
5 advocacy and physician education on testosterone prescribing. (New HOD Policy)
6
7 2. That Policies H-65.976, “Nondiscriminatory Policy for the Health Care Needs of LGBTQ
8 Populations,” H-140.824, “Healthcare Equity Through Informed Consent and a
9 Collaborative Healthcare Model for the Gender Diverse Population,” H-160.991, “Health
10 Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations,” H-185.927
11 “Clarification of Evidence-Based Gender-Affirming Care,” H-95.946, “Prescription Drug
12 Monitoring Program Confidentiality,” H-315.983, “Patient Privacy and Confidentiality,”
13 D-185.981, “Addressing Discriminatory Health Plan Exclusions or Problematic Benefit
14 Substitutions for Essential Health Benefits Under the Affordable Care Act,” and D-
15 480.964, “Established Patient Relationships and Telemedicine” be reaffirmed. (Reaffirm
16 HOD Policy)

Fiscal Note: less than \$1,000

TABLE 1. The National Alliance for Model State Drug Laws Map of The Types of Authorized Recipients of PDMP Information – Law Enforcement Officials

The National Alliance for Model State Drug Laws. *Compilation of Prescription Monitoring Program Maps*. The National Alliance for Model State Drug Laws; 2016. Accessed January 31, 2024. <https://namsdl.org/wp-content/uploads/Compilation-of-Prescription-Monitoring-Program-Maps.pdf>

Note: As of 2019, Nebraska requires a subpoena, court order or approval, and a written request.⁵⁷ As of 2021, Missouri requires a subpoena, court order or approval for law enforcement to access their state PDMP.⁵⁸

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 12-A-24

Subject: Universal Screening for Substance Use and Substance Use Disorders during Pregnancy

Presented by: David J. Welsh, MD, MBA, Chair

Referred to: Reference Committee E

1 INTRODUCTION

2

3 American Medical Association (AMA) Policy H-95.906, “De-Stigmatization and Management of
4 Substance Use Disorders” as adopted at the 2023 Annual Meeting asks that our AMA study the
5 feasibility, potential methodologies, and implications of early universal screening for substance use
6 and substance use disorders during pregnancy.

7

8 At the meeting, robust testimony was heard regarding screening with concerns being raised
9 regarding the complexity of screening when paired with mandatory reporting requirements. This
10 report investigates the implications, feasibility, and methodology of universal screening for
11 substance use and substance use disorders during pregnancy. This report serves as the Council on
12 Science and Public Health’s (CSAPH) findings and recommendations regarding universal
13 screening for substance use and substance use disorders during pregnancy.

14

15 METHODS

16

17 English-language reports were selected from a PubMed and Google Scholar search through
18 November 2023, using the text terms “screening”, “universal screening”, “pregnancy”, and
19 “substance use.” Additional articles were identified by manual review of the references cited in
20 these publications. Further information was obtained from the Internet sites of specialty physician
21 societies, federal and state agencies, U.S. Department of Health and Human Services (HHS), and
22 U.S. Preventive Services Task Force (USPSTF) to identify validated screening tools,
23 recommendations, clinical guidelines, and position statements.

24

25 BACKGROUND

26

27 Nationally, one in five people use illicit substances during pregnancy.¹ Polysubstance use, which is
28 defined as the use of two or more substances, is also common during pregnancy.² Data suggests
29 that 38.2 percent of pregnant women who drink alcohol also report using one or more substance,
30 the most common being tobacco and cannabis.² Overdose rates during pregnancy and the
31 postpartum period increased 81 percent (from 6.56 to 11.85 per 100,000) from 2017 to 2020.³ This
32 trend has been exacerbated by the COVID-19 pandemic, leading to a surge in overdose-related
33 deaths and intensifying concerns about pregnancy-associated substance use, primarily driven by
34 synthetic opioids and psychostimulants (e.g., fentanyl, methamphetamine, cocaine).³⁻⁵ In an
35 analysis of data from 2017-2019 by the Centers of Disease Control, mental health conditions,
36 including overdose and poisoning related to substance use disorder (SUD), were the leading causes
37 of pregnancy-related death.⁶

1 Despite pregnancy offering a critical window for engaging individuals in medical care, pregnant
2 individuals with SUD, particularly opioid use disorder (OUD), often avoid both prenatal and
3 preventive health care due to stigma, discrimination, inaccessibility of services, and prosecution or
4 loss of infant custody.^{7,8} Compounding these barriers, pregnant individuals with SUD face
5 substantial complications linked to poorer obstetric and neonatal health outcomes including the
6 pregnant persons' mortality, poor fetal growth, preterm birth, neonatal abstinence syndrome, and
7 other conditions.⁹ Even for those who are receiving treatment, returning to substance use in the
8 postpartum period is prominent and can often result in fatal overdose due to decreased tolerance. In
9 the postpartum period, overdose rates peak 7 to 12 months post-delivery for pregnant people who
10 use substances.^{10,11} During this critical period, treatment adherence is further complicated by the
11 physical need of the infant for maternal bonding.¹²

12
13 Persistent racial disparities in perinatal OUD treatment contribute to significant challenges. Studies
14 indicate that Black and Hispanic women are less likely to receive medications for opioid use
15 disorder (MOUD) compared to their White counterparts.^{13,14} Moreover, these challenges are
16 compounded by further racial disparities, particularly affecting individuals of color, notably
17 American Indian and Alaskan Native women, who encounter discrimination within both the health
18 care system and the family regulation system.^{15,16} Rural communities, despite experiencing higher
19 rates of substance exposure in utero, encounter additional barriers in accessing essential care.^{8,17}
20 These disparities are indicative of broader social and economic inequities, including heightened
21 obstacles to reproductive health care, underscoring the urgent need for targeted interventions and
22 systemic changes.

23 24 DISCUSSION

25
26 Identification of substance use at any point during a pregnancy can support improved patient
27 outcomes within the parent-infant dyad. AMA policy H-320.953, "Definitions of 'Screening' and
28 'Medical Necessity,'" defines screening as "health care services or products provided to an
29 individual without apparent signs or symptoms of an illness, injury or disease for the purpose of
30 identifying or excluding an undiagnosed illness, disease, or condition." Screening can be conducted
31 using brief, in-depth, written, verbal, or computerized screening instruments and does not include
32 biological specimens, such as urine or blood.¹⁸ Universal screening, involving the screening of
33 every pregnant individual, is designed to minimize clinician bias in individualized screening
34 decisions and promote more standardized care while also destigmatizing substance use disorders.

35
36 Clinical screening tools recommended for prenatal substance use include the Prenatal Substance
37 Abuse Screen for Alcohol and Drugs also known as the "4Ps" which stands for Parents, Partner,
38 Past, and Present.¹⁹ The 4Ps and the 4Ps Plus, which includes additional questions about depression
39 and domestic violence are the only validated behavioral health screening instruments designed
40 specifically for pregnant women.²⁰ The 4Ps Plus screener is one of the only validated tools for
41 substance use during pregnancy demonstrating overall reliability of 0.62, relatively high sensitivity
42 (87 percent), and specificity (76 percent).²¹ Additionally, the CRAFFT instrument is recommended
43 for screening substance use in adolescents and young adults, generally from ages 12 to 21.²² The
44 CRAFFT instrument has shown efficacy in detecting adolescent substance use, but it has not been
45 thoroughly evaluated for use during pregnancy. Lastly, the National Institute on Drug Abuse
46 (NIDA) Quick Screen is validated for screening for substance use in adults, but has not been
47 validated for screening for pregnant individuals.²³ Despite screening instruments demonstrating
48 strong performance on certain metrics, none exhibit consistently adequate performance across all
49 studied measures. For example, in one study the NIDA Quick Screen exhibited notable specificity
50 (0.99) across all substances but displayed very poor sensitivity (0.10–0.27). Often, screening
51 instruments exhibit significant variations based on race, prenatal clinic, and economic status.²³

1 Future research endeavors should aim to identify the most effective screening instrument for
2 substance use during pregnancy.²⁴

3
4 Current clinical guidelines address screening for substance use. The American Society of Addiction
5 Medicine (ASAM) and American College for Obstetricians and Gynecologists (ACOG)
6 recommend early universal screening for substance use during the first prenatal visit using a
7 validated screening to improve maternal and infant outcomes, advising early universal screening,
8 brief intervention, and referral for treatment (SBIRT) model for the treatment of pregnant patients
9 with OUD.²⁵ The SBIRT model has demonstrated effectiveness for reducing substance use.²⁶
10 Universal screening for opioid use is recommended instead of screening based factors such as
11 “poor adherence to prenatal care or prior adverse pregnancy outcomes” to minimize missed cases
12 of substance use as well as provider stereotyping and stigmatization of patients.²⁵ ASAM and
13 ACOG committee opinion stresses the importance of a coordinated multidisciplinary approach
14 without criminal sanctions for optimal support of the parent-infant dyad, discouraging health care
15 professionals from separating the parent-infant dyad based solely on screening or SUD diagnosis,
16 and emphasizing that screening should be done in partnership with pregnant people.²⁵ Further, the
17 committee recommendations address clinical practices for chronic pain management,
18 pharmacotherapy, monitoring infants for neonatal abstinence syndrome, opioid prescriptions during
19 pregnancy, breastfeeding, postpartum supportive services, and the integration of contraceptive
20 counseling into SUD treatment for people of reproductive age.²⁵

21
22 In 2020 the U.S Preventive Services Task Force (USPSTF) updated their 2008 recommendation on
23 screening for unhealthy drug use for adults and adolescents, conducting two commissioned reviews
24 of the evidence on screening (i.e., asking questions about unhealthy drug use). Unhealthy drug use
25 is defined as “the use of illegal drugs and the nonmedical use of prescription psychoactive
26 medications (i.e., use of medications for reasons, for duration, in amounts, or with frequency other
27 than prescribed or use by persons other than the prescribed individual,” this definition does not
28 include alcohol or tobacco products.²⁷ The USPSTF concluded that there is insufficient evidence to
29 assess the balance of benefits and harms of screening for unhealthy drug use in adolescents.
30 However, for adults 18 years and older, the USPSTF denoted a B grade recommendation,
31 concluding that screening has a moderate net benefit when services for accurate diagnosis, effective
32 treatment, and appropriate care can be offered or referred.²⁷

33
34 Of the 30 identified screening tools many had a sensitivity of 75 percent for detecting unhealthy
35 drug use, misuse, dependence, or use disorders.²⁷ In this recommendation there are no tools
36 suggested for screening during pregnancy, with the USPSTF only reviewing 12 studies that
37 assessed the accuracy of 15 screening tools in nonpregnant people.²⁷ The majority of studies had
38 varying definitions of the reference standard (i.e., drug use, misuse, abuse, dependence, and
39 disorders) and no studies directly addressed the benefits or harms of screening on reducing drug
40 use, drug-related health, social, or legal outcomes in adults or adolescents.²⁷ Lastly, the USPSTF
41 noted several areas where further research is needed to develop recommendations. These include
42 the effectiveness of screening in adolescents; optimal screening intervals; accuracy of screening
43 tools; harms associated with punitive screening results; and strategies to improve access to
44 pharmacotherapy and psychosocial interventions.²⁷

45
46 The USPSTF commissioned two systematic reviews to evaluate the potential benefits and harms of
47 substance use screening, psychosocial interventions, pharmacotherapy, and the accuracy of
48 screening tools.²⁸ They found that despite the availability of validated screening tools, there are no
49 direct studies on the benefits or harms of universal screening for adults or adolescents.²⁸
50 Psychosocial and pharmacotherapy interventions often do not show statistically significant
51 improvement for screen-identified populations, except for those with OUD seeking treatment.²⁸

1 While physicians are crucial in addressing SUD, universal screening may not be justified without
2 sufficient evidence for its benefits across all types of unhealthy drug use due to the lack of
3 available treatment and local resources.²⁸ Physicians must carefully consider the consequences of
4 screening in their clinical setting and the availability of treatment resources before implementing
5 screening programs for SUDs. An examination conducted through a systematic review of research
6 on involuntary substance use treatment revealed no evidence supporting the benefits of this practice
7 and underscored a clear potential for harm.²⁹

8
9 Overall, available medical society and health care organization statements regarding the efficacy of
10 universal screening are mixed. While the Substance Abuse and Mental Health Services
11 Administration recommends universal screening during pregnancy as a part of SBIRT in routine
12 health care settings, the U.S. Department of Defense, Veterans Affairs, and the American Academy
13 of Family Physicians indicate that evidence is insufficient to recommend routine screening for
14 illicit drug use.^{27,29-32} Additionally, the American Psychiatric Association position statement
15 advocates for health care professionals to implement universal evidence-based screening methods
16 for substance use and co-occurring mental health disorders among pregnant and lactating women,
17 ensuring consistency and non-discrimination.³³ Screening during pregnancy should aim to enhance
18 access to evidence-based treatment for substance use, as well as optimize medical, obstetric, and
19 psychiatric care; emphasizing that screening should not be punitive in nature.³³ Thus, consensus
20 regarding universal screening for substance use during pregnancy varies and depends on the patient
21 subpopulation.

22 23 *Substance Use in Pregnancy and Reporting Implications*

24
25 The Child Abuse Prevention and Treatment Act initially enacted in 1974 and updated with the
26 Comprehensive Addiction Recovery Act in 2016 (CAPTA/CARA), is a federal law that mandates
27 the establishment of Plans of Safe Care to ensure the well-being and safety of newborns affected
28 by substance use, as well as their families or caregivers.³⁴ While physicians must notify the state
29 when a newborn has been exposed to substances per CAPTA/CARA, they are not required to file a
30 report of suspected child abuse or neglect unless stipulated by state law.³⁵ The notification
31 requirement necessitates the submission of deidentified, aggregate data on the number of children
32 falling within relevant categories.³⁶ Research shows that over 80 percent of health care
33 professionals are not familiar with CAPTA/CARA.³⁷ Even though the notification requirement
34 itself does not mandate the inclusion of patient-identifying information, there can still be adverse
35 consequences for the parent-infant dyad.³⁶

36
37 Beyond federal standards, many states have implemented additional notification and reporting
38 requirements for substance use in pregnancy. Twenty-four states and the District of Columbia (DC)
39 have passed laws classifying prenatal drug use as child abuse or neglect. Thirty-seven states and
40 DC mandate reporting of “suspected” prenatal drug use to the state.³⁸ “Suspected” drug use
41 involves assumptions or indications based on behavior or symptoms, whereas confirmatory
42 laboratory results directly detect the presence of drugs in the body through analytical testing. Some
43 states go further by requiring health care professionals to conduct prenatal substance use tests if
44 they suspect substance use.¹⁶ These measures compel health care professionals to report pregnant
45 or postpartum individuals for alleged child abuse, in some states this includes receiving MOUD.
46 Additionally, certain states have enacted legislation aimed at prosecuting pregnant individuals who
47 use substances. This legislation usually involves labeling such behavior as fetal assault, chemical
48 endangerment, and even murder.³⁹ The consequences of these laws and reports can be profound,
49 including resulting in family separation, arrests, criminal charges, and incarceration, creating a
50 cascade of adverse health outcomes that extend beyond the parent and infant. State-level policies
51 concerning child abuse and mandatory reporting are associated with reduced utilization of prenatal

1 and postpartum care among women who engage in substance use during pregnancy.⁴⁰ More
2 information is needed regarding the health outcomes and equity implications related to these
3 reporting laws. To alleviate potential adverse effects, including legal consequences tied to inquiring
4 about substance use and documenting and reporting responses, clinicians should be well-versed in
5 state requirements and adhere to best practices regarding informed consent for screening, recording
6 screening results in medical records, reporting results to medico-legal authorities, and ensuring
7 confidentiality protection.⁴¹

8 9 *Challenges in Universal Screening*

10
11 Physician confidence in conducting screening and brief interventions with pregnant patients varies.
12 A survey of 1,500 U.S. adult medicine clinicians found that almost all (95 percent) of those who
13 conducted screening and brief interventions in their practice reported implementing these measures
14 with pregnant patients for alcohol use.⁴² However, less than half (46.5 percent) of these clinicians
15 felt confident in their screening practices.⁴² In a study examining patient experiences and analyzing
16 data from 103,608 people in the Pregnancy Risk Assessment Monitoring System between 2016 and
17 2018, around 95 percent of individuals reported being asked about cigarette or alcohol use during
18 prenatal care, and 80 percent reported being asked about drug use.⁴³ The study reveals disparities in
19 substance use screening during prenatal care appointments.⁴³ Further research is needed to
20 understand the impact of screening approaches on outcomes in prenatal care settings.

21
22 A 1990 study in Pinellas County, Florida found profound racial disparities in child protective
23 services (CPS) reporting during delivery against a background of universal screening for alcohol
24 and illicit drug use in public and private prenatal care.⁴⁴ Around 15 percent of both Black and
25 White mothers identified as using substances, with Black mothers exhibiting significantly higher
26 rates of entering treatment compared to White mothers.⁴⁴ Despite higher treatment rates, Black
27 mothers using substances were referred to CPS at much higher rates than their White counterparts
28 using substances.⁴⁴ The researchers wrote, “we conclude that the use of illicit drugs is common
29 among pregnant women regardless of race and socioeconomic status. If legally mandated reporting
30 is to be free of racial or economic bias, it must be based on objective medical criteria.”⁴⁴ A 2012
31 article that drew heavily on the Florida study showed that, despite nearly universal screening for
32 prenatal drug use among Medicaid patients in one California county, and similar results among
33 racial groups enrolled in Medicaid, overall CPS referrals for Black mothers occurred at nearly four
34 times the rate of White mothers.¹⁵ The authors caution that we cannot count on universal screening
35 to promote equity, either through making referrals more objective or through improved treatment
36 participation rates.¹⁵

37
38 Lastly, in a study examining primary care physicians' implementation of screening, several barriers
39 were identified.⁴⁵ Time constraints, challenges related to parental involvement (for adolescents),
40 perceived ineffectiveness of brief intervention services, and a lack of training in providing brief
41 intervention were among the obstacles to screening and brief intervention.⁴⁵ Physicians
42 recommended boosting screening rates through increased reimbursement and the allocation of
43 dedicated resources.⁴⁵

44 45 **AMA POLICY AND ADVOCACY**

46
47 Our AMA maintains comprehensive policies addressing substance use during pregnancy. AMA
48 Policy H-420.969, “Legal Interventions During Pregnancy,” states that criminal sanctions or civil
49 liability for harmful behavior by the pregnant woman toward her fetus are inappropriate; that
50 pregnant [people who use substances or have a substance use disorder] should be provided with
51 rehabilitative treatment appropriate to their specific physiological and psychological needs; and

1 that in order to minimize the risk of legal action by a pregnant patient or an injured fetus, the
2 physician should document medical recommendations made including the consequences of failure
3 to comply with the physician's recommendation. Policy H-420.962, "Perinatal Addiction - Issues in
4 Care and Prevention," encourages the federal government to expand funding allocated to drug
5 treatment, prevention, and education to establish and make broadly available specialized treatment
6 programs for [pregnant people with substance use disorder] and breastfeeding people wherever
7 possible.

8
9 AMA Policy H-420.950, "Substance Use Disorders During Pregnancy," reiterates our AMA's
10 support of brief interventions and referral for early comprehensive treatment using a coordinated
11 multidisciplinary approach without criminal sanctions. Additionally, this policy opposes any efforts
12 to imply that a positive verbal substance use screen, a positive toxicology test, or the diagnosis of
13 substance use disorder during pregnancy automatically represents child abuse and opposes the
14 filing of a child protective services report or the removal of infants from their mothers solely based
15 on a single positive prenatal drug screen without appropriate evaluation. Our AMA further
16 advocates for appropriate medical evaluation prior to the removal of a child and advocates that
17 state and federal child protection laws be amended so that pregnant people who use substances
18 and/or have a SUD are only reported to child welfare agencies when protective concerns are
19 identified by the clinical team, rather than through automatic or mandated reporting of all pregnant
20 people with a positive toxicology test, positive verbal substance use screen, or diagnosis of a SUD.
21 This policy position is reiterated in D-95.983, "Mandatory Drug Screening Reporting," which
22 states that our AMA will work with appropriate state and specialty medical societies and with state
23 legislative bodies to ensure that physicians not be required to report patients with [positive] urine
24 drug test results to the police; and continue to promote education of physicians regarding the
25 importance of referring patients found to have [positive] urine drug tests for appropriate medical
26 treatment.

27
28 Additionally, in 2022 our AMA and several other medical societies jointly formulated model state
29 legislation to facilitate the "enhancement of access to evidence-based, non-judgmental, and non-
30 punitive maternal treatment."⁴⁶ The proposed legislation, titled "An Act to Create and Implement
31 Family Care Plans for Infants, Children, and Families," underscores the significance of establishing
32 and defining "plans of family care."⁴⁶ These plans aim to provide "supportive care and fulfillment
33 of needs for pregnant, postpartum, and parenting individuals, newborns, children, and families."⁴⁶

34 35 CONCLUSION

36
37 In theory, universal screening for substance use in pregnancy presents a potential avenue for
38 enhancing health outcomes for pregnant individuals who use substances and their infants as well as
39 preserving the parent-infant dyad. However, amidst the backdrop of stringent state policies,
40 mandatory reporting, and obstacles in accessing evidence-based care, universal screening may have
41 unintended consequences. Additional research on the impacts of mandatory reporting laws of
42 substance use in pregnant people needs to be addressed to reduce bias, inequities in care, and fear
43 of pregnant people to access the care they need.

44 45 RECOMMENDATIONS

46
47 The Council on Science and Public Health recommends that the following be adopted, and the
48 remainder of the report be filed:

- 49
50 1. That our AMA:

51

- 1 A. Encourage ongoing research on the benefits and risks of universal screening for
2 substance use during pregnancy including the impact of mandatory reporting laws,
3 evaluation of patient outcomes, effectiveness across different age groups, optimal
4 screening intervals, equity considerations, and efficacy of different screening tools.
5
6 B. Support the development and dissemination of physician education and training on
7 federal and state laws governing mandatory notification and reporting of substance
8 use during pregnancy, and the benefits and consequences of screening
9 implementation in health care settings on a state-by-state basis. (New HOD Policy)
10
11 2. That AMA policy H-420.950, "Substance Use Disorders During Pregnancy," be amended
12 by addition and deletion to read as follows:

13 Our AMA will:

- 14 (1) support brief interventions (such as engaging a patient in a short conversation,
15 providing feedback and advice) and referral for early comprehensive treatment of pregnant
16 individuals with opioid use and opioid use disorder (including naloxone or other overdose
17 reversal medication education and distribution) using a coordinated multidisciplinary
18 approach without criminal sanctions;
19
20 (2) acknowledges the health benefits of identifying substance use during pregnancy and
21 opposes any efforts, including mandatory reporting laws, that to imply that a positive
22 verbal substance use screen, a positive toxicology test, or the diagnosis of substance use
23 disorder during pregnancy automatically represents child abuse or neglect;
24 (3) support legislative and other appropriate efforts for the expansion and improved access
25 to evidence-based treatment for substance use disorders during pregnancy;
26 (4) oppose the filing of a child protective services report or the removal of infants from
27 their ~~mothers~~ parent(s) solely based on a ~~single positive~~ prenatal drug screen and/or
28 biological test(s) for substance use without appropriate evaluation;
29 (5) advocate for appropriate medical evaluation prior to the removal of a child, which takes
30 into account (a) the desire to preserve the individual's family structure, (b) the patient's
31 treatment status, and (c) current impairment status when substance use is suspected or
32 confirmed; and
33 (6) advocate that state and federal child protection laws be amended so that pregnant
34 people with substance use and substance use disorders are only reported to child welfare
35 agencies when protective concerns are identified by the clinical team, rather than through
36 automatic or mandated reporting of all pregnant people with a positive toxicology test,
37 positive verbal substance use screen, ~~or~~ diagnosis of a substance use disorder, or use of
38 evidence-based treatments for substance use disorder. (Modify Current HOD Policy)
39
40 3. That current AMA policies H-420.969, "Legal Interventions During Pregnancy," and D-
41 95.983, "Mandatory Drug Screening Reporting" be reaffirmed. (Reaffirm HOD Policy)
42

Fiscal Note: \$1,000 - \$5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 501
(A-24)

Introduced by: Medical Student Section

Subject: Fragrance Regulation

Referred to: Reference Committee E

1 Whereas, fragrances include many contact allergens, irritants, cross-reactors, or other substance
2 or natural extract often found in personal care products, cosmetics, household products, drugs,
3 and wound care products¹⁻¹¹; and
4

5 Whereas, individuals with fragrance sensitivity experience adverse effects after exposure,
6 especially patients with allergies, asthma, eczema, lung disease, and migraine^{1,2-26}; and
7

8 Whereas, due to wide use, fragrances are the most common cause of contact allergy and lead
9 to debilitating systemic dermatologic, neurologic, and immunologic side effects¹²⁻¹⁶; and
10

11 Whereas, large surveys show that over 30% of individuals may experience fragrance sensitivity,
12 50% prefer that healthcare facilities be fragrance-free, and 7% lose workdays due to workplace
13 fragrance exposure^{1,11-14}; and
14

15 Whereas, fragranced products can lower both indoor and outdoor air quality by releasing
16 hazardous air pollutants that contribute to diseases and illness^{1,5,8,14,22}; and
17

18 Whereas, the severity of fragrance sensitivity often meets Americans with Disabilities Act (ADA)
19 criteria for a disability (“physical or mental impairment that substantially limits one or more major
20 life activities”) and may be considered an “invisible disability” (“impairment...not always obvious
21 to the onlooker”)³⁰⁻³²; and
22

23 Whereas, *Core v. Champaign County Board of County Commissioners* (2012) and *McBride v. the*
24 *City of Detroit* (2009) found that severe fragrance sensitivity can be an invisible disability, leading
25 Detroit to add a fragrance-free policy to their employee ADA handbook³³⁻³⁴; and
26

27 Whereas, fragrance-free policies are recommended by the Centers for Disease Control and
28 Prevention, the American Lung Association, and the US Department of Labor Office of Disability
29 Employment Policy and are in place in multiple healthcare facilities, workplaces, schools, and
30 other organizations across the US³⁵⁻³⁹; and
31

32 Whereas, the US Food and Drug Administration and US Consumer Product Safety Commission
33 do not currently regulate fragrances^{2,40-45}; and
34

35 Whereas, the European Union has already banned nearly 1,400 chemicals from cosmetics and
36 required premarket safety assessments, mandatory registration, and government authorization
37 for the use of certain materials, compared to only 30 chemicals in the US⁴⁶⁻⁴⁸; therefore be it

1 RESOLVED, that our American Medical Association recognize fragrance sensitivity as a
2 disability where the presence of fragranced products can limit accessibility of healthcare settings
3 (New HOD Policy); and be it further
4

5 RESOLVED, that our AMA encourage all hospitals, outpatient clinics, urgent cares, and other
6 patient care areas inclusive of medical schools to adopt a fragrance-free policy that pertains to
7 employees, patients, and visitors of any kind (New HOD Policy); and be it further
8

9 RESOLVED, that our AMA work with relevant parties to advocate for governmental regulatory
10 bodies, including but not limited to the Occupational Safety and Health Administration (OSHA),
11 the Centers for Disease Control and Prevention (CDC), and the National Institute for
12 Occupational Safety and Health (NIOSH) to recommend fragrance-free policies in all medical
13 offices, buildings, and places of patient care (Directive to Take Action); and be it further
14

15 RESOLVED, that our AMA work with relevant parties to support the appropriate labeling of
16 fragrance-containing personal care products, cosmetics, and drugs with warnings about
17 possible allergic reactions or adverse events due to the fragrance, and advocates for increased
18 categorization in the use of a “fragrance free” designation (Directive to Take Action); and be it
19 further
20

21 RESOLVED, that our AMA support increased identification of hazardous chemicals in fragrance
22 compounds, as well as research focused on fragrance sensitivity in order to remove these
23 allergens from products applied to one’s body. (New HOD Policy)
24

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 3/28/2024

RELEVANT AMA POLICY

H-440.855 National Cosmetics Registry and Regulation

1. Our AMA: (a) supports the creation of a publicly available registry of all cosmetics and their ingredients in a manner which does not substantially affect the manufacturers' proprietary interests and (b) supports providing the Food and Drug Administration with sufficient authority to recall cosmetic products that it deems to be harmful.
2. Our AMA will monitor the progress of HR 759 (Food and Drug Administration Globalization Act of 2009) and respond as appropriate. [BOT Action in response to referred for decision Res. 907, I-09; Reaffirmed in lieu of: Res. 502, A-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:502
(A-24)

Introduced by: Medical Student Section

Subject: Tribally-Directed Precision Medicine Research

Referred to: Reference Committee E

1 Whereas, an estimated 80% of data used in precision medicine is from people with European
2 ancestry, limiting generalizability of research and possibly exacerbating health inequities¹⁻⁶; and
3
4 Whereas, effects of ongoing cultural genocide and colonization increase chronic disease burden
5 and reduce quality of care for American Indian and Alaska Native (AI/AN) persons^{3,7-11}; and
6
7 Whereas, a 2021 study found that AI/AN persons are underrepresented at only 0.3% of
8 research participants while comprising 3% of the US population, while non-Hispanic whites were
9 overrepresented at 82% while comprising 59% of the US population^{2,4,6,9,12}; and
10
11 Whereas, a National Institutes of Health (NIH) report on AI/AN engagement in the All of Us
12 Research Program noted a need for comanagement of precision medicine research with AI/AN
13 communities and consideration of the distinct ethical, legal, and social contexts when engaging
14 AI/AN communities in research, including their status as political entities¹³⁻¹⁶; and
15
16 Whereas, AI/AN researchers have developed specific models to recruit AI/AN persons for
17 clinical trials that account for the complex geopolitical climates of sovereign governments that
18 extend far beyond considerations of race and ethnicity, such as the principles for engaging in
19 ethical research with Indigenous people by Claw et al. and the Circle of Trust^{9,14,17-19}; and
20
21 Whereas, the Indian Health Service does not have the resources or facilities to support
22 precision medicine research without institutional partnerships²⁰; and
23
24 Whereas, a 2022 White House Office of Science and Technology Policy memorandum
25 recognized the value of Indigenous knowledge in scientific advances and created a working
26 group to include Indigenous perspectives in federal decisions and grantmaking²¹; therefore be it
27
28 RESOLVED, that our American Medical Association support clinical funding supplements to the
29 National Institutes of Health, the U.S. Food and Drug Administration, and the Indian Health
30 Service to promote greater participation of the Indian Health Service, Tribal, and Urban Indian
31 Health Programs in clinical research. (Directive to Take Action)

Fiscal Note: Minimal - less than \$1,000

Received: 4/5/2024

RELEVANT AMA Policy

H-460.884 Indigenous Data Sovereignty

Our AMA: (1) recognizes that American Indian and Alaska Native (AI/AN) Tribes and Villages are sovereign governments that should be consulted before the conduct of research specific to their members, lands, and properties; (2) supports that AI/AN Tribes and Villages' Institutional Review Boards (IRBs) and research departments retain the right to oversee and regulate the collection, ownership, and management of research data with the consent of their members, and that individual members of AI/AN Tribes and Villages retain their autonomy and privacy regarding research data shared with researchers, AI/AN Tribes and Villages, and governments, consistent with existing protections under 45 CFR 46; and (3) encourages: (a) the use and regular review of data-sharing agreements for all studies between academic medical centers and AI/AN Tribes and Villages be mutually agreed upon and aligned with AI/AN Tribes' and Villages' preferences, and (b) the National Institutes of Health and other stakeholders to provide flexible funding to AI/AN Tribes and Villages for research efforts, including the creation and maintenance of IRBs. [Res. 003, I-22]

H-460.911 Increasing Minority, Female, and other Underrepresented Group Participation in Clinical Research

1. Our AMA advocates that: a. The Food and Drug Administration (FDA) and National Institutes of Health (NIH) conduct annual surveillance of clinical trials by gender, race, and ethnicity, including consideration of pediatric and elderly populations, to determine if proportionate representation of women and minorities is maintained in terms of enrollment and retention. This surveillance effort should be modeled after National Institute of Health guidelines on the inclusion of women and minority populations. b. The FDA have a page on its web site that details the prevalence of minorities and women in its clinical trials and its efforts to increase their enrollment and participation in this research; and c. Resources be provided to community level agencies that work with those minorities, females, and other underrepresented groups who are not proportionately represented in clinical trials to address issues of lack of access, distrust, and lack of patient awareness of the benefits of trials in their health care. These minorities include Black Individuals/African Americans, Hispanics, Asians/Pacific Islanders/Native Hawaiians, and Native Americans. 2. Our AMA recommends the following activities to the FDA in order to ensure proportionate representation of minorities, females, and other underrepresented groups in clinical trials: a. Increased fiscal support for community outreach programs; e.g., culturally relevant community education, community leaders' support, and listening to community's needs; b. Increased outreach to all physicians to encourage recruitment of patients from underrepresented groups in clinical trials; c. Continued education for all physicians and physicians-in-training on clinical trials, subject recruitment, subject safety, and possible expense reimbursements, and that this education encompass discussion of barriers that currently constrain appropriate recruitment of underrepresented groups and methods for increasing trial accessibility for patients; d. Support for the involvement of minority physicians in the development of partnerships between minority communities and research institutions; and e. Fiscal support for minority, female, and other underrepresented groups recruitment efforts and increasing trial accessibility. 3. Our AMA advocates that specific results of outcomes in all clinical trials, both pre- and post-FDA approval, are to be determined for all subgroups of gender, race and ethnicity, including consideration of pediatric and elderly populations; and that these results are included in publication and/or freely distributed, whether or not subgroup differences exist. [BOT Rep. 4, A-08; Reaffirmed: CSAPH Rep. 01, A-18; Modified: Res. 016, I-22]

D-460.976 Genomic and Molecular-based Personalized Health Care

Our AMA will: (1) continue to recognize the need for possible adaptation of the US health care system to prospectively prevent the development of disease by ethically using genomics, proteomics, metabolomics, imaging and other advanced diagnostics, along with standardized informatics tools to develop individual risk assessments and personal health plans; (2) support studies aimed at determining the viability of prospective care models and measures that will assist in creating a stronger focus on prospective care in the US health care system; (3) support research and discussion regarding the multidimensional ethical issues related to prospective care models, such as genetic testing; (4) maintain a visible presence in genetics and molecular medicine, including web-based resources and the development of educational materials, to assist in educating physicians about relevant clinical practice issues related to genomics as they develop; and (5) promote the appropriate use of pharmacogenomics in drug development and clinical trials. [CSAPH Rep. 4, A-06; Reaffirmed: CSAPH Rep. 4, A-10; Reaffirmed: CSAPH Rep. 01, A-20]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 503
(A-24)

Introduced by: Albert L. Hsu, MD

Subject: Unregulated Hemp-Derived Intoxicating Cannabinoids, and Derived Psychoactive Cannabis Products (DPCPs)

Referred to: Reference Committee E

- 1 Whereas, hemp was taken off the controlled substances list in 2018 by the Agriculture
2 Improvement Act;^{1,2} and
3
- 4 Whereas, the 2018 Farm Bill legalized hemp but included “derivatives” and “isomers” of the
5 plant in the definition of hemp, as long as content of delta-9 THC by weight is less than 0.3%;^{1,2}
6 and
7
- 8 Whereas, since 2018, processes have been developed to chemically derive over a dozen
9 different intoxicating cannabinoids from hemp at varying potency levels;^{1,2} and
10
- 11 Whereas, the recent amplified availability and use of Hemp-Driven Intoxicating Cannabinoids
12 (e.g. delta-8 tetrahydrocannabinol (THC) and over a dozen others) pose significant health risks,
13 particularly to youth;^{1,2} and
14
- 15 Whereas, reporting of adverse reactions to consumption of products containing Hemp-Derived
16 Intoxicating Cannabinoids has increased;^{1,2} and
17
- 18 Whereas, these products are marketed progressively and assertively in eye-catching ways to
19 attract public consumption, particularly that of young consumers;^{1,2} and
20
- 21 Whereas, there are no regulations imposing age restrictions on intoxicating hemp-derived
22 products, which are widely available online and in brick-and-mortar establishments like gas
23 stations, grocery stores, and convenience stores;^{1,2} and
24
- 25 Whereas, some of these intoxicating hemp-derived products intentionally mimic commercial
26 food products that appeal to children;^{1,2} and
27
- 28 Whereas, many of these products are mislabeled, alleging inaccurate potency, and not
29 disclosing presence of combinations of intoxicating cannabinoids or other toxic byproducts or
30 contaminants;^{1,2} and
31
- 32 Whereas, direct effects of these particular cannabinoids on the body include (but are not limited
33 to): impairment of cognitive function, memory and judgment; hallucinations; anxiety; nausea,
34 vomiting; dizziness, tremor; loss of consciousness, death; dependency (and prolonged use may
35 result in dependency, leading to addiction and withdrawal symptoms);^{1,2} and
36
- 37 Whereas, “Derived Psychoactive Cannabis Products” (DPCPs) have psychoactive properties
38 similar to cannabis, but are chemically derived and not grown;² and

1 Whereas, DPCPs have been available in every state, including those that have banned Δ -8
2 THC, because the loophole allows for engineering of new DPCPs, including Δ -6 THC, Δ -10
3 THC, Δ -11 THC, THC-A, THC-O, THC-P, THC-V, THC-JD, PHC, HHC, HHC-P, and HXC;^{1,2}
4 and

5
6 Whereas, DPCPs are very new (unknown and unproven and uncharacterized), and we have
7 minimal data on short- and long-term risks from use;² and

8
9 Whereas, DPCP use has been associated with psychiatric, lung, chest, and heart disorders, as
10 well as injuries and poisonings;² and

11
12 Whereas, DPCPs have been consumed accidentally by children, partly due to lack of age laws
13 in many states, poor labeling, lack of childproof containers, and marketing to young people
14 (including product packaging mimicking well-known food brands that appeal to children,
15 including Cap'n Crunch, Cocoa Puffs, Froot Loops, Starbursts and Sour Patch Kids);² and

16
17 Whereas, DPCPs have been marketed in ways to attract children, such as added in candy,
18 chips, and chocolates. DPCPs are also inexpensive (sometimes < \$5) and stores are
19 disproportionately located in low-income areas;² and

20
21 Whereas, most states do not require testing for chemical contaminants, even though DPCPs
22 are commonly synthesized using hash solvents known to be hazardous to human health;² and

23
24 Whereas, potency limits are rare, despite conclusive evidence that more potent products carry
25 higher risk of harms;² and

26
27 Whereas, there is a complex interplay between the endocannabinoid system and the estrogen
28 system in the central nervous system, raising concerns about how use of these products may
29 impact fertility, pregnancy, breastfeeding, and contraception; therefore, be it

30
31 RESOLVED, that our American Medical Association work with other interested organizations to
32 increase public awareness and promote education on the dangers of Derived Psychoactive
33 Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids (Directive to Take
34 Action); and be it further

35
36 RESOLVED, that our AMA work with other interested organizations to advocate to close the
37 loophole in the 2018 Farm bill that allows Derived Psychoactive Cannabis Products (DPCPs)
38 and Hemp-Derived Intoxicating Cannabinoids to be regulated as hemp (Directive to Take
39 Action); and be it further

40
41 RESOLVED, that our AMA work with other interested organizations to advocate for prohibition
42 of Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating
43 Cannabinoids (unless and until properly tested in humans) (Directive to Take Action); and be it
44 further

45
46 RESOLVED, that our AMA work with other interested organizations to advocate for further
47 research on the health impacts of Derived Psychoactive Cannabis Products (DPCPs) and
48 Hemp-Derived Intoxicating Cannabinoids, including the potential dangers of these products to
49 children, pregnant women and other vulnerable populations (Directive to Take Action); and be it
50 further

1 RESOLVED, that our AMA report back on this issue at A-25. (Directive to Take Action)

2

Fiscal Note: Modest - between \$1,000 - \$5,000)

Received: 4/23/2024

20. AMA Council on Science and Public Health (CSAPH) report 6 (I-23) on "Marketing Guardrails for the 'Over-Medicalization' of Cannabis Use"

Relevant AMA policy:

Regulation of Cannabidiol Products H-120.926

Our AMA will: (1) encourage state controlled substance authorities, boards of pharmacy, and legislative bodies to take the necessary steps including regulation and legislation to reschedule U.S. Food and Drug Administration (FDA)-approved cannabidiol products, or make any other necessary regulatory or legislative change, as expeditiously as possible so that they will be available to patients immediately after approval by the FDA and rescheduling by the U.S. Drug Enforcement Administration; (2) advocate that an FDA-approved cannabidiol medication should be governed only by the federal and state regulatory provisions that apply to other prescription-only products, such as dispensing through pharmacies, rather than by these various state laws applicable to unapproved **cannabis** products; and (3) support

comprehensive FDA regulation of cannabidiol products and practices necessary to ensure product quality, including identity, purity, and potency.

Cannabis Product Safety D-95.956

Our American Medical Association will draft state model legislation to help states implement the provisions of AMA policies H-95.924, **Cannabis** Legalization for Adult Use and H-95.936, **Cannabis** Warnings for Pregnant and Breastfeeding Women that currently do not have such model language, including regulation of retail sales, marketing and promotion (especially those aimed at children), misleading health claims, and product labeling regarding dangers of use during pregnancy and breastfeeding.

Marketing Guardrails for the "Over-Medicalization" of Cannabis Use D-95.958

Our AMA will: (1) send a formal letter to the Food and Drug Administration and Federal Trade Commission requesting more direct oversight of the marketing of **cannabis** for medical use; (2) generate a formal letter for use by state medical societies requesting more direct oversight by state government of the marketing of **cannabis**; (3) support and encourage federal, state, and private sector research on the effects of **cannabis** marketing to identify best practices in protecting vulnerable populations, as well as the benefits of safety campaigns such as preventing impaired driving or dangerous use; (4) encourage state regulatory bodies to enforce **cannabis**-related marketing laws and to publicize and make publicly available the results of such enforcement activities; (5) encourage social media platforms to set a threshold age of 21 years for exposure to **cannabis** advertising and marketing and improve age verification practices on social media platforms; (6) encourage regulatory agencies to research how marketing best practices learned from tobacco and alcohol policies can be adopted or applied to **cannabis** marketing; and (7) support using existing AMA channels to educate physicians and the public on the health risks of **cannabis** to children and potential health risks of **cannabis** to people who are pregnant or lactating.

Cannabis Warnings for Pregnant and Breastfeeding Women H-95.936

Our AMA advocates for regulations requiring point-of-sale warnings and product labeling for **cannabis** and **cannabis**-based products regarding the potential dangers of use during pregnancy and breastfeeding wherever these products are sold or distributed.

Taxes on Cannabis Products H-95.923

Our AMA encourages states and territories to allocate a substantial portion of their **cannabis** tax revenue for public health purposes, including: substance abuse prevention and treatment programs, **cannabis**-related educational campaigns, scientifically rigorous research on the health effects of **cannabis**, and public health surveillance efforts.

Cannabis and Cannabinoid Research H-95.952

1. Our AMA calls for further adequate and well-controlled studies of marijuana and related cannabinoids in patients who have serious conditions for which preclinical, anecdotal, or controlled evidence suggests possible efficacy and the application of such results to the understanding and treatment of disease.
2. Our AMA urges that marijuana's status as a federal schedule I controlled substance be reviewed with the goal of facilitating the conduct of clinical research and development of cannabinoid-based medicines, and alternate delivery methods. This should not be viewed as an endorsement of state-based medical **cannabis** programs, the legalization of marijuana, or that scientific evidence on the therapeutic use of **cannabis** meets the current standards for a prescription drug product.
3. Our AMA urges the National Institutes of Health (NIH), the Drug Enforcement Administration (DEA), and the Food and Drug Administration (FDA) to develop a special schedule and implement administrative procedures to facilitate grant applications and the conduct of well-designed clinical research involving **cannabis** and its potential medical utility. This effort should include: a) disseminating specific information for researchers on the development of safeguards for **cannabis** clinical research protocols and the development of a model informed consent form for institutional review board evaluation; b) sufficient funding to support such clinical research and access for qualified investigators to adequate supplies of **cannabis** for clinical research purposes; c) confirming that **cannabis** of various and consistent strengths and/or placebo will be supplied by the National Institute on Drug Abuse to investigators registered with the DEA who are conducting bona fide clinical research studies that receive FDA approval, regardless of whether or not the NIH is the primary source of grant support.

4. Our AMA supports research to determine the consequences of long-term **cannabis** use, especially among youth, adolescents, pregnant women, and women who are breastfeeding.
5. Our AMA urges legislatures to delay initiating the legalization of **cannabis** for recreational use until further research is completed on the public health, medical, economic, and social consequences of its use.
6. Our AMA will advocate for urgent regulatory and legislative changes necessary to fund and perform research related to **cannabis** and cannabinoids.
7. Our AMA will create a **Cannabis** Task Force to evaluate and disseminate relevant scientific evidence to health care providers and the public.

Cannabis Legalization for Adult Use (commonly referred to as recreational use) H-95.924

Our AMA: (1) believes that **cannabis** is a dangerous drug and as such is a serious public health concern; (2) believes that the sale of **cannabis** for adult use should not be legalized (with adult defined for these purposes as age 21 and older); (3) discourages **cannabis** use, especially by persons vulnerable to the drug's effects and in high-risk populations such as youth, pregnant women, and women who are breastfeeding; (4) believes states that have already legalized **cannabis** (for medical or adult use or both) should be required to take steps to regulate the product effectively in order to protect public health and safety including but not limited to: regulating retail sales, marketing, and promotion intended to encourage use; limiting the potency of **cannabis** extracts and concentrates; requiring packaging to convey meaningful and easily understood units of consumption, and requiring that for commercially available edibles, packaging must be child-resistant and come with messaging about the hazards about unintentional ingestion in children and youth; (5) laws and regulations related to legalized **cannabis** use should consistently be evaluated to determine their effectiveness; (6) encourages local, state, and federal public health agencies to improve surveillance efforts to ensure data is available on the short- and long-term health effects of **cannabis**, especially emergency department visits and hospitalizations, impaired driving, workplace impairment and worker-related injury and safety, and prevalence of psychiatric and addictive disorders, including **cannabis** use disorder; (7) supports public health based strategies, rather than incarceration, in the handling of individuals possessing **cannabis** for personal use; (8) encourages research on the impact of legalization and decriminalization of **cannabis** in an effort to promote public health and public safety; (9) encourages dissemination of information on the public health impact of legalization and decriminalization of **cannabis**; (10) will advocate for stronger public health messaging on the health effects of **cannabis** and cannabinoid inhalation and ingestion, with an emphasis on reducing initiation and frequency of **cannabis** use among adolescents, especially high potency products; use among women who are pregnant or contemplating pregnancy; and avoiding **cannabis**-impaired driving; (11) supports social equity programs to address the impacts of **cannabis** prohibition and enforcement policies that have disproportionately impacted marginalized and minoritized communities; and (12) will coordinate with other health organizations to develop resources on the impact of **cannabis** on human health and on methods for counseling and educating patients on the use **cannabis** and cannabinoids.

Cannabis Legalization for Medicinal Use D-95.969

Our AMA: (1) believes that scientifically valid and well-controlled clinical trials conducted under federal investigational new drug applications are necessary to assess the safety and effectiveness of all new drugs, including potential **cannabis** products for medical use; (2) believes that **cannabis** for medicinal use should not be legalized through the state legislative, ballot initiative, or referendum process; (3) will develop model legislation requiring the following warning on all **cannabis** products not approved by the U.S. Food and Drug Administration: "Marijuana has a high potential for abuse. This product has not been approved by the Food and Drug Administration for preventing or treating any disease process."; (4) supports legislation ensuring or providing immunity against federal prosecution for physicians who certify that a patient has an approved medical condition or recommend **cannabis** in accordance with their state's laws; (5) believes that effective patient care requires the free and unfettered exchange of information on treatment alternatives and that discussion of these alternatives between physicians and patients should not subject either party to criminal sanctions; (6) will, when necessary and prudent, seek clarification from the United States Justice Department (DOJ) about possible federal prosecution of physicians who participate in a state operated marijuana program for medical use and based on that clarification, ask the DOJ to provide federal guidance to physicians; and (7) encourages hospitals and health systems to: (a) not recommend patient use of non-FDA approved **cannabis** or **cannabis** derived products within healthcare facilities until such time as federal laws or regulations permit its use; and (b) educate medical staffs on **cannabis** use, effects and **cannabis** withdrawal syndrome.

Medical Marijuana License Safety D-95.959

1. Our AMA supports efforts to include medical **cannabis** license certification in states' prescription drug monitoring programs when consistent with AMA principles safeguarding patient privacy and confidentiality.
2. Our AMA will continue its monitoring of state legislation relating to the inclusion of **cannabis** and related information in state PDMPs.
3. Our AMA will review existing state laws that require information about medical **cannabis** to be shared with or entered into a state prescription drug monitoring program. The review should address impacts on patients, physicians and availability of information including types, forms, THC concentration, quantity, recommended usage, and other medical **cannabis** details that may be available from a dispensary.

Cannabis Intoxication as a Criminal Defense H-95.997

Our AMA believes a plea of **cannabis** intoxication not be a defense in any criminal proceedings.

Expungement, Destruction, and Sealing of Criminal Records for Legal Offenses Related to Cannabis Use or Possession H-95.910

1. Our AMA supports automatic expungement, sealing, and similar efforts regarding an arrest or conviction for a cannabis-related offense for use or possession that would be legal or decriminalized under subsequent state legalization or decriminalization of adult use or medicinal cannabis.
2. Our AMA supports automatic expungement, sealing, and similar efforts regarding an arrest or conviction of a cannabis-related offense for use or possession for a minor upon the minor reaching the age of majority.
3. Our AMA will inquire to the Association of American Medical Colleges, Accreditation Council for Graduate Medical Education, Federation of State Medical Boards, and other relevant medical education and licensing authorities, as to the effects of disclosure of a cannabis related offense on a medical school, residency, or licensing application.
4. Our AMA supports ending conditions such as parole, probation, or other court-required supervision because of a cannabis-related offense for use or possession that would be legal or decriminalized under subsequent state legalization or decriminalization of adult use or medicinal cannabis.

Preventing the Elimination of Cannabis from Occupational and Municipal Drug Testing Programs H-95.902

Our American Medical Association supports the continued inclusion of **cannabis** metabolite analysis in relevant drug testing analysis performed for occupational and municipal purposes (pre-employment, post-accident, random and for-cause).

Alcohol and Drug Use and Addiction Education H-170.992

Our AMA: (1) supports continued encouragement for increased educational programs relating to use of and addiction involving alcohol, **cannabis** and controlled substances; (2) supports the implementation of alcohol and **cannabis** education in comprehensive health education curricula, kindergarten through grade twelve; and (3) encourages state medical societies to work with the appropriate agencies to develop a state-funded educational campaign to counteract pressures on young people to use alcohol, **cannabis** products, and controlled substances.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 504
(A-24)

Introduced by: California
Subject: FDA Regulation of Biosimilars
Referred to: Reference Committee E

1 Whereas, biologics drugs account for 2% of pharmaceutical prescriptions by volume, but
2 account for 37-43% of current U.S. pharmaceutical spending and 90% of net pharmaceutical
3 spending growth over the past decade;¹⁻⁶ and
4
5 Whereas, biologic drugs, typically recombinant proteins or monoclonal antibodies, are
6 significantly more expensive than small molecule drugs; prices average ~\$10,000-\$40,000 per
7 patient per year, and can be as costly as \$250,000 per patient per year;¹⁻⁶ and
8
9 Whereas, biosimilar medications are defined by the Food and Drug Administration (FDA) and
10 European Medicines Agency (EMA) as “highly similar to and have no clinically meaningful
11 differences in terms of safety, purity, and potency when compared to an originator biologic that
12 is already approved;”⁷ and
13
14 Whereas, under the 2010 Biologics and Price Competition Act, the FDA created a licensure
15 pathway (called the 351(k) pathway) for approving biosimilars of originator biologics; the first
16 biosimilar was approved by the FDA in 2015;⁷ and
17
18 Whereas, the approval process is more stringent for a biosimilar in comparison with a generic
19 small molecule, requiring approval through the Biologics License Application Pathway and post-
20 marketing surveillance;⁸ and
21
22 Whereas, in 2018, the FDA standardized requirements for approving “interchangeable
23 biologics”, defined as a biosimilar that meets additional requirements that allow it to be
24 substituted for an originator biologic without the intervention of the health care professional who
25 prescribed the reference product, much like how generic drugs are routinely substituted for
26 brand name drugs, i.e., “pharmacy-level substitution;”⁹ and
27
28 Whereas, existing regulations allow physicians to specify when a pharmacy-level substitution is
29 not clinically appropriate, such as for reasons of allergies or concern for adverse reactions to
30 inactive ingredients; and
31
32 Whereas, U.S. regulatory requirements to designate a biosimilar as ‘interchangeable’ are
33 significantly more stringent than those in Europe; to demonstrate ‘interchangeability’ the FDA
34 requires a Phase 3 switching non-inferiority trial, in which patients are repeatedly switched
35 between the biosimilar and reference biologic agent, whereas the EMA considers biosimilars as
36 ‘interchangeable’ without the need for additional crossover “switching” studies;¹⁰⁻¹⁶ and
37
38 Whereas, long-term clinical studies of biosimilars in European countries have not demonstrated
39 any notable difference in the efficacy or safety of biosimilar products relative to originators,
40 which challenges the necessity for these switching studies;¹⁵⁻¹⁶ and

1 Whereas, the FDA requirements to achieving an “interchangeable” designation in the U.S. are
2 another reason that uptake of biosimilars has been lower in the U.S. than in other Organization
3 for Economic Cooperation and Development (OECD) countries;¹⁰⁻²⁵ and
4

5 Whereas, pharmaceutical companies have made huge investments in the U.S. to market
6 biologics as superior to their biosimilar counterparts; which may explain why biosimilars only
7 have an average market penetration rate of 20%, compared with 80% in Europe;¹⁷⁻²⁵ and
8

9 Whereas, a survey of 510 U.S. community oncologists illustrated significant knowledge gaps in
10 the use of biosimilars and this translated into hesitancy in prescribing biosimilars;²⁶ and
11

12 Whereas, a recent American Society of Clinical Oncology (ASCO) policy statement recognized
13 that “biosimilars and reference products can be considered equally efficacious for the purpose
14 of inclusion in ASCO clinical practice guidelines,” regardless of its FDA designation as
15 “interchangeable”, and supports removal of this distinction;^{27,28} therefore be it
16

17 RESOLVED, that our American Medical Association recognize that, by definition, Biosimilar
18 medications are clinically equivalent to their reference Biologic and therefore do not need a
19 designation of “interchangeability;” (New HOD Policy); and be it further
20

21 RESOLVED, that our AMA support a rigorous approval process for Biosimilar medications and
22 oppose the application of the redundant designation of “interchangeability” with the reference
23 biologic drug (New HOD Policy); and it be further
24

25 RESOLVED, that AMA support the development of a model and a process for biologic and
26 biosimilar medication prescribing that protects physician decision-making when a pharmacy-
27 level substitution is not clinically appropriate (New HOD Policy); and be it further
28

29 RESOLVED, that our AMA support physician education on the clinical equivalence of
30 Biosimilars, the FDA approval process and the post-market surveillance that is required. (New
31 HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/23/2024

RELEVANT AMA POLICY

H-125.980 Abbreviated Pathway for Biosimilar Approval

Our AMA supports FDA implementation of the Biologics Price Competition and Innovation Act of 2009 in a manner that 1) places appropriate emphasis on promoting patient access, protecting patient safety, and preserving market competition and innovation; 2) includes planning by the FDA and the allocation of sufficient resources to ensure that physicians understand the distinctions between biosimilar products that are considered highly similar, and those that are deemed interchangeable. Focused educational activities must precede and accompany the entry of biosimilars into the U.S. market, both for physicians and patients; and 3) includes compiling and maintaining an official compendium of biosimilar products, biologic reference products, and their related interchangeable biosimilars as they are developed and approved for marketing by the FDA.

[Modified: CSAPH Rep. 4, A-14; Modified: CSAPH Rep. 1, 1-11; Reaffirmation A-11; Res. 220, A-09.]

H-125.976 Biosimilar Interchangeability Pathway

Our AMA will: (1) strongly support the pathway for demonstrating biosimilar interchangeability that was proposed in draft guidance by the FDA in 2017, including requiring manufacturers to use studies to determine whether alternating between a reference product and the proposed interchangeable biosimilar multiple times impacts the safety or efficacy of the drug; and (2) issue a request to the FDA that the agency finalize the biosimilars interchangeability pathway outlined in its draft guidance "Considerations in Demonstrating Interchangeability With a Reference Product" with all due haste, so as to allow development and designation of interchangeable biosimilars to proceed, allowing transition to an era of less expensive biologics that provide safe, effective, and accessible treatment options for patients. [Res 523, A-18]

D-125.989 Substitution of Biosimilar Medicines and Related Medical Products

Our AMA urges that State Pharmacy Practice Acts and substitution practices for biosimilars in the outpatient arena: (1) preserve physician autonomy to designate which biologic or biosimilar product is dispensed to their patients; (2) allow substitution when physicians expressly authorize substitution of an interchangeable product; (3) limit the authority of pharmacists to automatically substitute only those biosimilar products that are deemed interchangeable by the FDA. [Modified: CSAPH Rep. 4, A-14, Modified: CSAPH Rep. 1, 1-11; Res. 918, I-08]

D-330.960 Cuts in Medicare Outpatient Infusion Services

1. Our AMA will actively support efforts to seek legislation to ensure that Medicare payments for drugs fully cover the physician's acquisition, inventory and carrying cost and that Medicare payments for drug administration and related services are adequate to ensure continued patient access to outpatient infusion services.
2. Our AMA will continue strong advocacy efforts working with relevant national medical specialty societies to ensure adequate physician payment for Part B drugs and patient access to biologic and pharmacologic agents. [Reaffirmation: I-18; Reaffirmed: CMS Rep. 10, A-16; Reaffirmation A-15; Reaffirmed and Modified: CMS Rep. 3, I-08; Res. 926, I-03]

D-330.904 Opposition to the CMS Medicare Part B Drug Payment Model

1. Our AMA will request that the Centers for Medicare & Medicaid Services (CMS) withdraw the proposed Part B Drug Payment Model.
2. Our AMA will support and actively work to advance Congressional action to block the proposed Part B Drug Payment Model if CMS proceeds with the proposal.
3. Our AMA will advocate against policies that are likely to undermine access to the best course of treatment for individual patients and oppose demonstration programs that could lead to lower quality of care and do not contain mechanisms for safeguarding patients.
4. Our AMA will advocate for ensuring that CMS solicits and takes into consideration feedback from patients, physicians, advocates, or other stakeholders in a way that allows for meaningful input on any Medicare coverage or reimbursement policy that impacts patient access to medical therapies, including policies on coverage and reimbursement.
[Res. 241, A-16]

H-110.983 Medicare Part B Competitive Acquisition Program (CAP)

Our AMA will advocate that any revised Medicare Part B Competitive Acquisition Program meet the following standards to improve the value of the program by lowering the cost of drugs without undermining quality of care:

- (1) it must be genuinely voluntary and not penalize practices that choose not to participate;
- (2) it should provide supplemental payments to reimburse for costs associated with special handling and storage for Part B drugs;
- (3) it must not reduce reimbursement for services related to provision/administration of Part B drugs, and reimbursement should be indexed to an appropriate healthcare inflation rate;
- (4) it should permit flexibility such as allowing for variation in orders that may occur on the day of treatment, and allow for the use of CAP-acquired drugs at multiple office locations;
- (5) it should allow practices to choose from multiple vendors to ensure competition, and should also ensure that vendors meet appropriate safety and quality standards;
- (6) it should include robust and comprehensive patient protections which include preventing delays in treatment, helping patients find assistance or alternative payment arrangements if they cannot meet the cost-sharing responsibility, and vendors should bear the risk of non-payment of patient copayments in a way that does not penalize the physician;
- (7) it should not allow vendors to restrict patient access using utilization management policies such as step therapy; and
- (8) it should not force disruption of current systems which have evolved to ensure patient access to necessary medications.

[Reaffirmed: CMS Rep. 4, A-22; Reaffirmed: CMS Rep. 4, I-19; Res. 216, I-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 505
(A-24)

Introduced by: Medical Student Section

Subject: Mitigating the Harms of Colorism and Skin Bleaching Agents

Referred to: Reference Committee E

1 Whereas, colorism is defined as discrimination which treats people with lighter skin more
2 favorably than those with darker skin, including within a given racial or ethnic group,
3 distinguishing it from racism;¹⁻⁴ and
4

5 Whereas, studies associate colorism with differences in health outcomes, treatment in clinical
6 settings, income, education, housing, and marital status;¹⁻¹³ and
7

8 Whereas, due to the social value of lighter skin entrenched in colorism and the implicit
9 understanding that lighter skin tone lessens discrimination, practices such as depigmentation
10 and skin bleaching have increased;^{2,7} and
11

12 Whereas, skin bleaching or lightening aims to lighten someone's skin in either specific areas
13 ('dark spots') or their overall skin tone, with creams serving as a common agent;¹⁵⁻¹⁹ and
14

15 Whereas, some skin lightening agents are evidence-based medical treatments for
16 dermatological conditions such as pigmentation disorders, when prescribed, instructed, and
17 supervised by a physician such as a dermatologist;²⁰⁻²⁷ and
18

19 Whereas, unsupervised skin lightening is an alarming public health concern due to associated
20 adverse effects and the large global supply of unregulated products, widely available over-the-
21 counter via online shopping such as Amazon and social media such as Tik Tok;¹⁵⁻³¹ and
22

23 Whereas, the three most common components in skin lightening agents that have faced
24 scrutiny from the medical and scientific communities are hydroquinone, mercury, and topical
25 corticosteroids, with the Food and Drug Administration (FDA) listing 22 specific products
26 confirmed to have unsafe levels of hydroquinone and mercury;³²⁻⁴² and
27

28 Whereas, the FDA and other public health agencies have raised concerns about the lack of
29 effective regulation of skin lightening agents due to illegal shipments into the US, their over-the-
30 counter availability despite lack of FDA approval, and marketing and sales tactics targeting
31 communities of color, immigrants, and people with darker skin;⁴³⁻⁴⁶ and
32

33 Whereas, the Personal Care Products Safety Act and the Cosmetic Safety Enhancement Act
34 would both improve regulation of cosmetic products such as skin lightening agents by
35 increasing safety tests, verifying international suppliers, and investigating counterfeits;⁴⁷⁻⁴⁸ and
36

37 Whereas, the long history and psychological harms of colorism and the widespread pressures to
38 engage in unsupervised skin bleaching result in many individuals starting in adolescence,
39 experiencing depression due to discrimination, and wanting to "acquire beauty," "appear more

1 white or European,” enhance their social mobility or romantic life, and even “avoid police
2 encounters,” highlighting the intersecting effects of colorism and racism;^{20-27,49-53} and
3

4 Whereas, recent pieces in the *Journal of the American Academy of Dermatology* have raised
5 concern about the public health impacts of colorism and skin bleaching;⁵⁴⁻⁵⁵ and
6

7 Whereas, the international implications of the skin bleaching product market, especially for
8 communities of color and immigrants in the US, suggest the potential for partnerships at the
9 international level with the World Medical Association and other parties; therefore be it

10
11 RESOLVED, that our American Medical Association support efforts to reduce the unsupervised
12 use of skin lightening agents, especially due to colorism or social stigma, that do not limit
13 evidence-based use by qualified clinicians (New HOD Policy); and be it further
14

15 RESOLVED, that our AMA work with the World Medical Association and other interested parties
16 to mitigate the harms of colorism and unsupervised use of skin lightening agents. (Directive to
17 Take Action)
18

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA Policy

Racism as a Public Health Threat H-65.952

1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.
3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.
4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies. [Res. 5, I-20; Reaffirmed: Res. 013, A-22; Modified: Speakers Rep., A-22]

Representation of Dermatological Pathologies in Varying Skin Tones H-295.853

Our AMA encourages comprehensive, inclusive and equitable representation of a diverse range of skin tones in all dermatologic and other relevant medical educational resources for medical students, physicians, non-physician healthcare providers and patients. [Res. 505, I-21]

Pulse Oximetry in Patients with Pigmented Skin D-480.957

Our AMA recognizes that pulse oximeters may not accurately measure oxygen saturation in all skin tones and will continue to urge the US Food and Drug Administration to (1) ensure pulse oximeters provide accurate and reliable readings for patients with diverse degrees of skin pigmentation and (2) ensure health care personnel and the public are educated on the limitations of pulse oximeter technology so they can account for measurement error. [Res. 915, I-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 506
(A-24)

Introduced by: Medical Student Section

Subject: Screening for Image Manipulation in Research Publications

Referred to: Reference Committee E

1 Whereas, the scientific community has raised alarm regarding research misconduct involving
2 image manipulation, leading some journals to implement AI-based screening tools to detect
3 alterations indistinguishable to humans and sometimes themselves generated by AI;¹⁻² and
4

5 Whereas, the American Association of Cancer Research's AI-based Proofig is now used by
6 multiple journal publishers and has demonstrated improved efficacy in detecting image
7 manipulation compared to human analysts to reject publications;³⁻⁶ and
8

9 Whereas, image screening will likely lag behind advancements in image manipulation, such as
10 generative adversarial networks (GANs), a type of machine learning algorithm specifically
11 designed to deceive or evade other AI tools; and
12

13 Whereas, efforts to improve image screening tools therefore depend on as much data from
14 manipulated images as possible; therefore be it
15

16 RESOLVED, that our American Medical Association support the creation of a nationally
17 collaborative database of manipulated images from retracted publications to provide a test bank
18 for researchers developing augmented intelligence-integrated image screening tools. (New
19 HOD Policy)
20

RELEVANT AMA Policy

7.1.5 Misconduct in Research

Biomedical and health research is intended to advance medical knowledge to benefit future patients. To achieve those goals physicians who are involved in such research maintain the highest standards of professionalism and scientific integrity.

Physicians with oversight responsibilities in biomedical or health research have a responsibility to ensure that allegations of scientific misconduct are addressed promptly and fairly. They should ensure that procedures to resolve such allegations:

- (a) Do not damage science.
- (b) Resolve charges expeditiously.
- (c) Treat all parties fairly and justly. Review procedures should be sensitive to parties' reputations and vulnerabilities.
- (d) Maintain the integrity of the process. Real or perceived conflicts of interest must be avoided.
- (e) Maintain accurate and thorough documentation throughout the process.
- (f) Maintain the highest degree of confidentiality.
- (g) Take appropriate action to discharge responsibilities to all individuals involved, as well as to the public, research sponsors, the scientific literature, and the scientific community.

AMA Principles of Medical Ethics: I,III,V [Issued: 2016]

Fraud and Misrepresentation in Science H-460.972

The AMA: (1) supports the promotion of structured discussions of ethics that include research, clinical practice, and basic human values within all medical school curricula and fellowship training programs; (2) supports the promotion, through AMA publications and other vehicles, of (a) a clear understanding of the scientific process, possible sources of error, and the difference between intentional and unintentional scientific misrepresentation, and (b) multidisciplinary discussions to formulate a standardized definition of scientific fraud and misrepresentation that elaborates on unacceptable behavior; (3) supports the promotion of discussions on the peer review process and the role of the physician investigator; (4) supports the development of specific standardized guidelines dealing with the disposition of primary research data, authorship responsibilities, supervision of research trainees, role of institutional standards, and potential sanctions for individuals proved guilty of scientific misconduct; (5) supports the sharing of information about scientific misconduct among institutions, funding agencies, professional societies, and biomedical research journals; and (6) will educate, at appropriate intervals, physicians and physicians-in-training about the currently defined difference between being an "author" and being a "contributor" as defined by the Uniform Requirements for Manuscripts of the International Committee of Medical Journal Editors, as well as the varied potential for industry bias between these terms. [CSA Rep. F, I-88; Reaffirmed: Sunset Report, I-98; Reaffirmation I-03; Appended: Res. 311, A-11; Reaffirmed: CEJA Rep. 1, A-21]

Assessing the Potentially Dangerous Intersection Between AI and Misinformation H-480.935

Our American Medical Association will: (1) study and develop recommendations on the benefits and unforeseen consequences to the medical profession of large language models (LLM) such as, generative pretrained transformers (GPTs), and other augmented intelligence-generated medical advice or content, and that our AMA propose appropriate state and federal regulations with a report back at A-24; (2) work with the federal government and other appropriate organizations to protect patients from false or misleading AI-generated medical advice; (3) encourage physicians to educate our patients about the benefits and risks of consumers facing LLMs including GPTs; and (4) support publishing groups and scientific journals to establish guidelines to regulate the use of augmented intelligence in scientific publications that include detailing the use of augmented intelligence in the methods, exclusion of augmented intelligence systems as authors, and the responsibility of authors to validate the veracity of any text generated by augmented intelligence. [Res. 247, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 507
(A-24)

Introduced by: Illinois

Subject: Ban on Dual Ownership, Investment, Marketing or Distribution of
Recreational Cannabis by Medical Cannabis Companies

Referred to: Reference Committee E

1 Whereas, recreational cannabis legislation is often linked to perceived medical cannabis
2 acceptance. As the industry matures, there is significantly less time from when medical
3 cannabis is first legalized, to the first recreational sale. According to Marijuana Business
4 Daily, California took 7,308 days from medical to recreational to the state's first sale.
5 Massachusetts took just 1,463 days (<https://mjbizdaily.com/letter-of-the-law/> also see
6 reference 9); and

7
8 Whereas, national recreational cannabis sales account for over 60% of all legal cannabis
9 sales (and increasing) in 2020 ([https://mjbizdaily.com/chart-nationwide-sales-of-adult-use-
10 cannabis-further-eclipse-those-of-medical-marijuana/](https://mjbizdaily.com/chart-nationwide-sales-of-adult-use-cannabis-further-eclipse-those-of-medical-marijuana/)) with medical cannabis sales either
11 plateauing or declining; and

12
13 Whereas, national recreational cannabis sales are projected to account for approximately
14 75% of all legal retail cannabis sales in 2028 ([https://mjbizdaily.com/us-cannabis-sales-
15 estimates/](https://mjbizdaily.com/us-cannabis-sales-estimates/)); and

16
17 Whereas, for example, the number of medical cannabis patients in Oregon has been in a
18 freefall since adult-use cannabis sales began, down 65% from October 2015 to July 2019
19 ([https://mjbizdaily.com/chart-how-medical-cannabis-programs-fare-in-states-with-
20 recreational-markets/](https://mjbizdaily.com/chart-how-medical-cannabis-programs-fare-in-states-with-recreational-markets/)); and

21
22 Whereas, according to Americans for Safe Access (ASA): “After combing through thousands
23 of data points on the state programs, it is clear that, with a few exceptions, states that have
24 added recreational/adult-use markets are forgetting the needs of patients”
25 (<https://www.safeaccessnow.org/sos22>); and

26
27 Whereas, ASA concludes that medical cannabis companies are moving to recreational use;
28 and

29
30 Whereas, cannabis companies are broadening their offering to get a piece of both the
31 medical and recreational pie ([https://www.adweek.com/brand-marketing/marketing-cannabis-
32 within-the-confines-of-recreational-and-medical/](https://www.adweek.com/brand-marketing/marketing-cannabis-within-the-confines-of-recreational-and-medical/)); and

33
34 Whereas, a recent JAMA study noted that as “Cannabis legalization is expanding, making
35 understanding how cannabis companies legitimize themselves critical. Industry motivation to
36 increase consumption makes policies difficult to modify once established. Public health
37 actors have been wary of industry CSR activities, given research demonstrating such
38 programs are ineffectual by design and advance corporate interest;” and

1 Whereas, similar to tobacco companies, cannabis companies appear to use corporate social
2 responsibility (CSR) practices activities that normalize and legitimize the industry for the goal
3 to open markets and influence regulation (Wakefield T, Glantz SA, Apollonio DE. Content
4 Analysis of the Corporate Social Responsibility Practices of 9 Major Cannabis Companies in
5 Canada and the US. JAMA Network Open. 2022;5(8): e2228088.
6 doi:10.1001/jamanetworkopen.2022.28088); and
7

8 Whereas, industry motivation to increase consumption makes policies difficult to modify once
9 established (Room R, Cisneros Örnberg J. Government monopoly as an instrument for
10 public health and welfare: lessons for cannabis from experience with alcohol monopolies. Int
11 J Drug Policy. 2019;74:223-228. doi:10.1016/j.drugpo.2019.10.008); and
12

13 Whereas, there is volatility in the cannabis industry: In 2021, there were around 306 merger
14 and acquisition deals in the cannabis industry across North America, more than triple the
15 number in the previous year ([https://www.statista.com/statistics/1336787/mergers-and-
16 acquisitions-cannabis-industry-north-america/](https://www.statista.com/statistics/1336787/mergers-and-acquisitions-cannabis-industry-north-america/)); and
17

18 Whereas, if any traditional medical pharmaceutical company owned, invested, promoted or
19 distributed their addictive medication for recreational purposes (even indirectly), severe
20 criticism and ethical questions would ensue; and
21

22 Whereas, in Maryland, medical cannabis companies are prohibited from selling a controlling
23 interest within five years after converting to adult-use sales
24 ([https://mmcc.maryland.gov/Documents/2023%20 PDF Files/Adult-
25 Use%20Cannabis%20Legalization/COMAR%2014.17.01-.22%205.19.23 Watermarked.pdf](https://mmcc.maryland.gov/Documents/2023%20PDF%20Files/Adult-Use%20Cannabis%20Legalization/COMAR%2014.17.01-.22%205.19.23%20Watermarked.pdf));
26 and
27

28 Whereas, dual ownership of medical/recreational cannabis companies also can represent a
29 conflict of interest that can harm medical cannabis patients (i.e. diversion of cannabis
30 products when scarce to recreational dispensaries); and
31

32 Whereas, a survey by University of Chicago in 2019 found that seventy percent of those with
33 personal experience with opioid addiction say pharmaceutical firms are responsible for the
34 problem of opioid addiction, along with 59% of those without any opioid addiction among
35 their family or friends ([https://apnorc.org/projects/pharmaceutical-companies-and-drug-users-
36 most-often-blamed-for-opioid-crisis/](https://apnorc.org/projects/pharmaceutical-companies-and-drug-users-most-often-blamed-for-opioid-crisis/)); and
37

38 Whereas, initiating THC use at a potency of 12% is associated with almost a five-fold higher
39 risk for progression to cannabis use disorder symptom onset within a year; and
40

41 Whereas THC exhibits adverse cardiac, neurological and psychiatric effects (see
42 references); therefore be it
43

44 RESOLVED, that our American Medical Association support a permanent ban on medical
45 cannabis companies (and its related holding conglomerates) from owning, investing in,
46 distributing, or promoting recreational (or “adult use”) cannabis or any other activity relating
47 to recreational use of cannabis. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Relevant AMA Policy

Cannabis Legalization for Adult Use (commonly referred to as recreational use) H-95.924

Our AMA: (1) believes that cannabis is a dangerous drug and as such is a serious public health concern; (2) believes that the sale of cannabis for adult use should not be legalized (with adult defined for these purposes as age 21 and older); (3) discourages cannabis use, especially by persons vulnerable to the drug's effects and in high-risk populations such as youth, pregnant women, and women who are breastfeeding; (4) believes states that have already legalized cannabis (for medical or adult use or both) should be required to take steps to regulate the product effectively in order to protect public health and safety including but not limited to: regulating retail sales, marketing, and promotion intended to encourage use; limiting the potency of cannabis extracts and concentrates; requiring packaging to convey meaningful and easily understood units of consumption, and requiring that for commercially available edibles, packaging must be child-resistant and come with messaging about the hazards about unintentional ingestion in children and youth; (5) laws and regulations related to legalized cannabis use should consistently be evaluated to determine their effectiveness; (6) encourages local, state, and federal public health agencies to improve surveillance efforts to ensure data is available on the short- and long-term health effects of cannabis, especially emergency department visits and hospitalizations, impaired driving, workplace impairment and worker-related injury and safety, and prevalence of psychiatric and addictive disorders, including cannabis use disorder; (7) supports public health based strategies, rather than incarceration, in the handling of individuals possessing cannabis for personal use; (8) encourages research on the impact of legalization and decriminalization of cannabis in an effort to promote public health and public safety; (9) encourages dissemination of information on the public health impact of legalization and decriminalization of cannabis; (10) will advocate for stronger public health messaging on the health effects of cannabis and cannabinoid inhalation and ingestion, with an emphasis on reducing initiation and frequency of cannabis use among adolescents, especially high potency products; use among women who are pregnant or contemplating pregnancy; and avoiding cannabis-impaired driving; (11) supports social equity programs to address the impacts of cannabis prohibition and enforcement policies that have disproportionately impacted marginalized and minoritized communities; and (12) will coordinate with other health organizations to develop resources on the impact of cannabis on human health and on methods for counseling and educating patients on the use cannabis and cannabinoids.

Marketing Guardrails for the "Over-Medicalization" of Cannabis Use D-95.958

Our AMA will: (1) send a formal letter to the Food and Drug Administration and Federal Trade Commission requesting more direct oversight of the marketing of cannabis for medical use; (2) generate a formal letter for use by state medical societies requesting more direct oversight by state government of the marketing of cannabis; and (3) study marketing practices of cannabis, cannabis products and cannabis paraphernalia that influence vulnerable populations, such as children or pregnant people.

Cannabis Legalization for Medicinal Use D-95.969

Our AMA: (1) believes that scientifically valid and well-controlled clinical trials conducted under federal investigational new drug applications are necessary to assess the safety and effectiveness of all new drugs, including potential cannabis products for medical use; (2) believes that cannabis for medicinal use should not be legalized through the state legislative, ballot initiative, or referendum process; (3) will develop model legislation requiring the following warning on all cannabis products not approved by the U.S. Food and Drug Administration: "Marijuana has a high potential for abuse. This product has not been approved by the Food and Drug Administration for preventing or treating any disease process."; (4) supports legislation ensuring or providing immunity against federal prosecution for physicians who certify that a patient has an approved medical condition or recommend cannabis in accordance with their state's laws; (5) believes that effective patient care requires the free and unfettered exchange of information on treatment alternatives and that discussion of these alternatives between physicians and patients should not subject either party to criminal sanctions; (6) will, when necessary and prudent, seek clarification from the United States Justice Department (DOJ) about possible federal prosecution of physicians who participate in a state operated marijuana program for medical use and based on that clarification, ask the DOJ to provide federal guidance to physicians; and (7) encourages hospitals and health systems to: (a) not recommend patient use of non-FDA approved cannabis or cannabis derived products within healthcare facilities until such time as federal laws or regulations permit its use; and (b) educate medical staffs on cannabis use, effects and cannabis withdrawal syndrome.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 508
(A-24)

Introduced by: Mississippi

Subject: AMA to support regulations to decrease overdoses in children due to ingestion of edible cannabis

Referred to: Reference Committee E

1 Whereas, the American Association of Poison Control Centers shows more than 7,000
2 confirmed cases of kids younger than six years old who have eaten marijuana edibles were
3 reported to the nation's poison control centers between 2017 and 2021; and
4

5 Whereas, edibles are often packaged to look like candy or cookies and children unaware of the
6 risks may find them appealing; and
7

8 Whereas, consuming too much cannabis can lead to serious health problems in children
9 including confusion, hallucinations, tachycardia and vomiting, and in severe cases children can
10 experience trouble breathing or even coma; therefore be it
11

12 RESOLVED, that our American Medical Association work with the Food and Drug
13 Administration to strengthen how marijuana manufacturers can advertise their products,
14 including regulations that ensure the packaging does not appeal to children (Directive to Take
15 Action); and be it further
16

17 RESOLVED, that our AMA propose public awareness campaigns aimed at informing the
18 general population, especially parents and guardians, about the risks associated with edible
19 cannabis and the importance of safe storage and handling (Directive to Take Action); and be it
20 further
21

22 RESOLVED, that our AMA emphasize the importance of childproof packaging for all cannabis
23 products, along with advocating for stricter regulations to enforce this requirement. (New HOD
24 Policy)
25

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:509
(A-24)

Introduced by: Senior Physicians Section

Subject: Addressing Sarcopenia and its Impact on Quality of Life

Referred to: Reference Committee E

1 Whereas, sarcopenia, the progressive loss of skeletal muscle mass, strength, and function
2 typically associated with aging, poses significant health challenges to the rapidly growing senior
3 population¹; and
4

5 Whereas, sarcopenia contributes to increased risk of falls, fractures, disability, decreased
6 mobility, increased cardiovascular morbidity and mortality, cognitive decline, diminished length
7 and quality of life and increased healthcare costs^{2,3,4}; and
8

9 Whereas, sarcopenia is estimated to affect 10-16% of persons worldwide, especially the elderly
10 and malnourished⁵; and
11

12 Whereas, the prevalence of sarcopenia will predictably continue to rise in the aging population,
13 necessitating proactive measure to mitigate its impact; and
14

15 Whereas, sarcopenia is a potentially modifiable, multifactorial condition influenced by factors
16 such as inadequate nutrition, sedentary lifestyle, chronic diseases, hormonal changes and
17 inflammation⁶; and
18

19 Whereas, early detection, prevention, and management strategies are crucial measures in
20 addressing sarcopenia and its adverse consequences; therefore be it
21

22 RESOLVED, that our American Medical Association collaborate with appropriate entities to
23 develop and implement educational awareness targeting healthcare professionals, caregivers,
24 and the elderly population to increase knowledge about sarcopenia, its risk factors and
25 consequences, in order to facilitate prevention, early recognition and evidence-based
26 management as a routine part of clinical practice with elderly patients (Directive to Take Action);
27 and be it further
28

29 RESOLVED, that our AMA (1) support nutritional interventions aimed at optimizing protein
30 intake, essential amino acids, and micronutrients; (2) promote regular physical activity, including
31 resistance training, aerobic exercise, and balance exercises, tailored to individual capabilities
32 and preferences (New HOD Policy); and be it further
33

34 RESOLVED, that our AMA support allocation of resources for research initiatives aimed at
35 advancing our understanding of sarcopenia, its pathophysiology, risk factors, and treatment
36 modalities (New HOD Policy); and be it further
37

38 RESOLVED, that our AMA advocate for policy changes to support reimbursement for
39 sarcopenia screening, diagnosis, and interventions (Directive to Take Action); and be it further

- 1 RESOLVED, that our AMA collaborate with all stakeholders to integrate sarcopenia prevention
2 and management into public health agendas and aging-related initiatives. (Directive to Take
3 Action)

Fiscal Note: \$101,420: Contract with third parties to develop educational content and advertise beyond standard AMA channels.

RELEVANT AMA POLICY

H-425.994 Medical Evaluations of Healthy Persons

The AMA supports the following principles of healthful living and proper medical care: (1) The periodic evaluation of healthy individuals is important for the early detection of disease and for the recognition and correction of certain risk factors that may presage disease. (2) The optimal frequency of the periodic evaluation and the procedures to be performed vary with the patient's age, socioeconomic status, heredity, and other individual factors. Nevertheless, the evaluation of a healthy person by a physician can serve as a convenient reference point for preventive services and for counseling about healthful living and known risk factors. (3) These recommendations should be modified as appropriate in terms of each person's age, sex, occupation and other characteristics. All recommendations are subject to modification, depending upon factors such as the sensitivity and specificity of available tests and the prevalence of the diseases being sought in the particular population group from which the person comes. (4) The testing of individuals and of population groups should be pursued only when adequate treatment and follow-up can be arranged for the abnormal conditions and risk factors that are identified. (5) Physicians need to improve their skills in fostering patients' good health, and in dealing with long recognized problems such as hypertension, obesity, anxiety and depression, to which could be added the excessive use of alcohol, tobacco and drugs. (6) Continued investigation is required to determine the usefulness of test procedures that may be of value in detecting disease among asymptomatic populations.

[CSA Rep. D, A-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13; Reaffirmed: CMS Rep. 03, I-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 510
(A-24)

Introduced by: New Jersey

Subject: Study to investigate the validity of claims made by the manufacturers of OTC Vitamins, Supplements and "Natural Cures"

Referred to: Reference Committee E

- 1 Whereas, over 50 billion dollars are spent every year by vulnerable patients on advertised OTC
2 vitamins, supplements, and natural health cures; and
3
4 Whereas, cures are reported for diseases and conditions such as Diabetes, Hypertension, Liver
5 Disease, Prostate, ED, Neuropathy, Arthritis, Loss of Memory, Weight loss, and even Vision
6 Problems; and
7
8 Whereas, it is illegal to make false claims on the efficacy of medications, vitamins, supplements,
9 and "natural remedies"; and
10
11 Whereas, patients are advised that they can throw away their prescribed medications; and
12
13 Whereas, they accuse the pharmaceutical industry of a conspiracy to protect their profits while
14 hiding the truth about these "Natural" cures; and
15
16 Whereas, discontinuing medication without involvement of their Physician or Health Care
17 Provider could be deleterious to the patient's health; and
18
19 Whereas, in the advertisements, there are no peer reviewed scientific evidence is provided, only
20 inferences to scientific studies done at a "prestigious" university or a scientific breakthrough
21 discovered by a well know celebrity; and
22
23 Whereas, the FDA is overwhelmed with the number of these products which seem to appear
24 daily; therefore be it
25
26 RESOLVED, that our American Medical Association study the growing problem of
27 advertisements on OTC Vitamins, Supplements, and "Natural Cures" that claim health benefits
28 and cures. With report back at A-25 (Directive to Take Action); and be it further
29
30 RESOLVED, that our AMA collaborate with all the specialties which are affected by these claims
31 and gather scientific evidence showing benefits and false claims (Directive to Take Action); and
32 be it further
33
34 RESOLVED, that our AMA request that the FDA exercise its full scope of authority to protect our
35 patients by removing all the advertisements containing false claims of medical cures. (Directive
36 to Take Action)

Fiscal Note: Minimal - less than \$1,000

Received: 5/3/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 511
(A-24)

Introduced by: New England, American Academy of Allergy, Asthma, and Immunology
(AAAAI)

Subject: National Penicillin Allergy Day and Penicillin Allergy Evaluation & Appropriate
Delabeling

Referred to: Reference Committee E

- 1 Whereas, the American Medical Association has no policy on this resolution topic; and
2
3 Whereas, National Penicillin Allergy Day is the anniversary of Dr. Alexander Fleming's discovery
4 of penicillin on September 28, 1928; and
5
6 Whereas, more than 1 in 10 US persons report a prior allergy to a penicillin antibiotic but more
7 than 9 in 10 of these individuals do not have a confirmed allergy after appropriate investigation¹;
8 and
9
10 Whereas, a penicillin allergy label is associated with adverse consequences for individuals and
11 public health, such as a higher risk of treatment failures, C. diff colitis, antibiotic resistance,
12 surgical site infections, healthcare utilization, and death²⁻⁵; and
13
14 Whereas, most penicillin allergies are side effects or low risk reactions that do not prevent safe
15 use of penicillins and other beta-lactam therapeutics^{1,6}; and
16
17 Whereas, testing for penicillin allergy is safe and may include a skin test and/or administration of
18 a penicillin dose under observation (a drug "challenge" or "test" dose)⁶; and
19
20 Whereas, history-only evaluations with improved documentation or use in clinical decision rules
21 can result in a penicillin allergy delabeling⁷⁻¹⁰; therefore be it
22
23 RESOLVED, that National Penicillin Allergy Day, September 28, be recognized by the American
24 Medical Association (New HOD Policy); and be it further
25
26 RESOLVED, that our AMA promote penicillin allergy evaluation and appropriate delabeling.
27 (New HOD Policy)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 512
(A-24)

Introduced by: New York

Subject: Opioid Overdose Reversal Agents Where AED's Are Located

Referred to: Reference Committee E

1 Whereas, the number of overdose deaths in the US has continued to rise year by year for over
2 20 years, with nearly 110,000 dying by overdose in the year 2022, and opioids such as fentanyl
3 alone or in combination with other substances involved in the majority of overdose deaths¹; and
4

5 Whereas, naloxone is a mu opioid competitive antagonist which is effective in reversing opioid
6 overdose when administered intravenously or intranasally, has no abuse potential, has few side
7 effects or adverse events when administered to someone who has overdosed, is easy to
8 administer with little training required²⁻⁶; and
9

10 Whereas, the World Health Organization and the CDC have recommended widespread
11 availability of naloxone to reverse opioid overdoses^{7,8}; and
12

13 Whereas, expansion of the availability of naloxone is not associated with compensatory
14 increases in substance use or risk taking^{9,10}; and
15

16 Whereas, one modelling study conservatively estimated that in Alleghany County,
17 Pennsylvania, 16% of naloxone administrations occur within 200 yards of an AED location¹¹;
18 which would suggest that an additional 1/7 opioid overdoses could be reversed and potential
19 lives saved; therefore be it
20

21 RESOLVED, that our American Medical Association support the expansion of naloxone
22 availability through colocation of intranasal naloxone with AEDs in public locations. (New HOD
23 Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 5/8/2024

RELEVANT AMA POLICY

Increasing Availability of Naloxone and Other Safe and Effective Overdose Reversal Medications H-95.932

1. Our AMA supports legislative, regulatory, and national advocacy efforts to increase access to affordable naloxone and other safe and effective overdose reversal medications, including but not limited to collaborative practice agreements with pharmacists and standing orders for pharmacies and, where permitted by law, community-based organizations, law enforcement agencies, correctional settings, schools, and other locations that do not restrict the route of administration for naloxone and other safe and effective overdose reversal medications delivery.
2. Our AMA supports efforts that enable law enforcement agencies to carry and administer naloxone and other safe and effective overdose reversal medications .
3. Our AMA encourages physicians to co-prescribe naloxone and other safe and effective overdose reversal medications to patients at risk of overdose and, where permitted by law, to the friends and family members of such patients.
4. Our AMA encourages private and public payers to include all forms of naloxone and other safe and effective overdose reversal medications on their preferred drug lists and formularies with minimal or no cost sharing.
5. Our AMA supports liability protections for physicians and other healthcare professionals and others who are authorized to prescribe, dispense and/or administer naloxone and other safe and effective overdose reversal medications pursuant to state law.
6. Our AMA supports efforts to encourage individuals who are authorized to administer naloxone and other safe and effective overdose reversal medications to receive appropriate education to enable them to do so effectively.
7. Our AMA encourages manufacturers or other qualified sponsors to pursue the application process for over the counter approval of naloxone and other safe and effective overdose reversal medications with the Food and Drug Administration.
8. Our AMA supports the widespread implementation of easily accessible naloxone and other safe and effective overdose reversal medications rescue stations (public availability of naloxone and other safe and effective overdose reversal medications through wall-mounted display/storage units that also include instructions) throughout the country following distribution and legislative edicts similar to those for Automated External Defibrillators.
9. Our AMA supports the legal access to and use of naloxone and other safe and effective overdose reversal medications in all public spaces regardless of whether the individual holds a prescription.
10. Our AMA supports efforts to increase the availability, delivery, possession and use of mail-order overdose reversal medications, including naloxone, to help prevent opioid-related overdose, especially in vulnerable populations, including but not limited to underserved communities and American Indian reservation populations.

BOT Rep. 22, A-16 Modified: Res. 231, A-17 Modified: Speakers Rep. 01, A-17 Appended: Res. 909, I-17 Reaffirmed: BOT Rep. 17, A-18 Modified: Res. 524, A-19 Reaffirmed: BOT 09, I-19 Reaffirmed: Res. 219, A-21 Modified: Res. 505, A-23

Oppose Tracking of People who Purchase Naloxone D-120.930

Our AMA will: (1) oppose any policies, regulations, or laws that require personally identifiable information associated with naloxone prescriptions or purchases to be tracked, monitored, or utilized for non-clinical or non-public health care purposes; and (2) advocate for availability of naloxone as an over-the-counter medication.

Res. 219, A-21

Implementing Naloxone Training into the Basic Life Support (BLS) Certification Program D-130.961

Our AMA will collaborate with the American Heart Association and other interested parties to include naloxone use in training in BLS instruction.

Res. 530, A-19

Improvement in US Airlines Aircraft Emergency Kits H-45.981

1. Our AMA urges federal action to require all US air carriers to report data on in-flight medical emergencies, specific uses of in-flight medical kits and emergency lifesaving devices, and unscheduled diversions due to in-flight medical emergencies; this action should further require the Federal Aviation Administration to work with the airline industry and appropriate medical specialty societies to periodically review data on the incidence and outcomes of in-flight medical emergencies and issue recommendations regarding the contents of in-flight medical kits and the use of emergency lifesaving devices aboard commercial aircraft.

2. Our AMA will: (a) support the addition of naloxone, epinephrine auto injector and glucagon to the airline medical kit; (b) encourage airlines to voluntarily include naloxone, epinephrine auto injector and glucagon in their airline medical kits; and (c) encourage the addition of naloxone, epinephrine auto injector and glucagon to the emergency medical kits of all US airlines (14CFR Appendix A to Part 121 - First Aid Kits and Emergency Medical Kits).

3. That our American Medical Association advocate for U.S. passenger airlines to carry standard pulse oximeters, automated blood pressure cuffs and blood glucose monitoring devices in their emergency medical kits.

Res. 507, A-97 Amended: CSA Rep. 3, I-99 Reaffirmed: CSAPH Rep. 1, A-09 Reaffirmed in lieu of: Res. 502, A-16 Appended: Res. 524, A-18 Modified: Res. 508, A-22

Prevention of Drug-Related Overdose D-95.987

1. Our AMA: (a) recognizes the great burden that substance use disorders (SUDs) and drug-related overdoses and death places on patients and society alike and reaffirms its support for the compassionate treatment of patients with a SUD and people who use drugs; (b) urges that community-based programs offering naloxone and other safe and effective overdose reversal medications and other opioid overdose and drug safety and prevention services continue to be implemented in order to further develop best practices in this area; (c) encourages the education of health care workers and people who use drugs about the use of naloxone and other safe and effective overdose reversal medications and other harm reduction measures in preventing opioid and other drug-related overdose fatalities; and (d) will continue to monitor the progress of such initiatives and respond as appropriate.

2. Our AMA will: (a) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of a drug-related overdose; and (b) support the development of adjuncts and alternatives to naloxone to combat synthetic opioid-induced respiratory depression and overdose; and (c) encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for a drug-related overdose.

3. Our AMA will support the development and implementation of appropriate education programs for persons receiving treatment for a SUD or in recovery from a SUD and their friends/families that address harm reduction measures.

4. Our AMA will advocate for and encourage state and county medical societies to advocate for harm reduction policies that provide civil and criminal immunity for the possession, distribution, and use of "drug paraphernalia" designed for harm reduction from drug use, including but not limited to drug contamination testing and injection drug preparation, use, and disposal supplies.

5. Our AMA will implement an education program for patients with substance use disorder and their family/caregivers to increase understanding of the increased risk of adverse outcomes associated with having a substance use disorder and a serious respiratory illness such as COVID-19.

6. Our AMA supports efforts to increase access to fentanyl test strips and other drug checking supplies for purposes of harm reduction.

Res. 526, A-06 Modified in lieu of Res. 503, A-12 Appended: Res. 909, I-12 Reaffirmed: BOT Rep. 22, A-16 Modified: Res. 511, A-18 Reaffirmed: Res. 235, I-18 Modified: Res. 506, I-21 Appended: Res. 513, A-22 Modified: Res. 211, I-22 Appended: Res. 221, A-23 Reaffirmation: A-23 Modified: Res. 505, A-23

Substance Use Disorders During Pregnancy H-420.950

Our AMA will:

- (1) support brief interventions (such as engaging a patient in a short conversation, providing feedback and advice) and referral for early comprehensive treatment of pregnant individuals with opioid use and opioid use disorder (including naloxone or other overdose reversal medication education and distribution) using a coordinated multidisciplinary approach without criminal sanctions;
- (2) oppose any efforts to imply that a positive verbal substance use screen, a positive toxicology test, or the diagnosis of substance use disorder during pregnancy automatically represents child abuse;
- (3) support legislative and other appropriate efforts for the expansion and improved access to evidence-based treatment for substance use disorders during pregnancy;
- (4) oppose the filing of a child protective services report or the removal of infants from their mothers solely based on a single positive prenatal drug screen without appropriate evaluation;
- (5) advocate for appropriate medical evaluation prior to the removal of a child, which takes into account (a) the desire to preserve the individual's family structure, (b) the patient's treatment status, and (c) current impairment status when substance use is suspected; and
- (6) advocate that state and federal child protection laws be amended so that pregnant people with substance use and substance use disorders are only reported to child welfare agencies when protective concerns are identified by the clinical team, rather than through automatic or mandated reporting of all pregnant people with a positive toxicology test, positive verbal substance use screen, or diagnosis of a substance use disorder.

Res. 209, A-18 Modified: Res. 520, A-19 Modified: Res. 505, A-23

Medications for Opioid Use Disorder in Correctional Facilities H-430.987

1. Our AMA endorses: (a) the medical treatment model of employing medications for opioid use disorder (OUD) as the standard of care for persons with OUD who are incarcerated; and (b) medications for persons with OUD who are incarcerated, an endorsement in collaboration with relevant organizations including but not limited to the American Society of Addiction Medicine and the American Academy of Addiction Psychiatry.
2. Our AMA advocates for legislation, standards, policies and funding that require correctional facilities to increase access to evidence-based treatment of OUD, including initiation and continuation of medications for OUD, in conjunction with psychosocial treatment when desired by the person with OUD, in correctional facilities within the United States and that this apply to all individuals who are incarcerated, including individuals who are pregnant, postpartum, or parenting.
3. Our AMA advocates for legislation, standards, policies, and funding that require correctional facilities within the United States to work in ongoing collaboration with addiction treatment physician-led teams, case managers, social workers, and pharmacies in the communities where patients, including individuals who are pregnant, postpartum, or parenting, are released to offer post-incarceration treatment plans for OUD, including education, medication for addiction treatment and counseling, and medication for preventing overdose deaths, including naloxone (or any other medication that is approved by the United States Food and Drug Administration for the treatment of an opioid overdose), and help ensure post-incarceration medical coverage and accessibility to mental health and substance use disorder treatments, that include medication and behavioral health and social supports for addiction treatment.
4. Our AMA advocates for all correctional facilities to use a validated screening tool to identify opioid withdrawal and take steps to determine potential need for treatment for OUD and opioid withdrawal syndrome for all persons upon entry.

Res. 443, A-05 Reaffirmed: CSAPH Rep. 1, A-15 Appended: Res. 223, I-17 Modified: Res. 503, A-2

American Medical Association House of Delegates

Resolution: 513
(A-24)

Introduced by: New York
Subject: Biotin Supplement Packaging Disclaimer
Referred to: Reference Committee E

1 Whereas, although the use of biotin supplementation has become widespread for its supposed
2 stimulation of hair and nail growth, there is a sparsity in the scientific data supporting these
3 claims; and

4
5 Whereas, the FDA defines the recommended daily allowance of biotin to be 30 mcg per day for
6 an adult, the majority of biotin supplement brands have daily dosages ranging between 600-
7 10,000mcg; and

8
9 Whereas, there are no apparent negative side effects to taking megadosages of biotin, there is
10 evidence supporting its interference with many laboratory tests. In particular, excess biotin
11 may cause falsely low troponin levels, resulting in missed or delayed myocardial infarction
12 diagnoses, or false thyroid function tests leading to false diagnoses of Graves' disease;
13 therefore be it

14
15 RESOLVED, that our American Medical Association support efforts to have over-the-counter
16 biotin supplements provide a clear disclaimer on the bottle that states the possibility of lab test
17 interference (New HOD Policy); and be it further

18
19 RESOLVED, that our AMA advocates for greater awareness among both patients and
20 physicians in regards to biotin megadose interference. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 5/7/2024

YOUR P[⚡]WERFUL ALLY IN PATIENT CARE

2023 ANNUAL REPORT

FINANCIAL HIGHLIGHTS

(Dollars in millions)	2023	2022
Revenues	\$ 495.1	\$ 493.4
Cost of products sold and selling expense	27.8	30.6
General and administrative expenses	412.5	375.5
Operating results	49.7	82.9
Non-operating items	101.7	(117.9)
Changes in defined benefit postretirement plans, other than periodic expense, net of tax	(17.3)	29.4
Change in unrestricted equity	134.1	(5.6)
Change in donor restricted equity	(0.1)	0.1
Change in association equity	\$ 134.0	\$ (5.5)
Association equity at year-end	\$ 1,023.4	\$ 889.4
Employees at year-end	1,314	1,267

Association operating results

(in millions)

* Pro forma operating results: 1) 2013 excludes \$33 million in nonrecurring charges relating to AMA's headquarters relocation and 2) 2019 excludes \$36.2 million noncash pension termination expense reclassification from non-operating results.

2020 through 2022 results were impacted by a lack of travel due to the pandemic, as well as a hiring freeze and subsequent tight labor market. These savings were temporary in nature.

The story of the American Medical Association in 2023 was one of collective achievement, resolute leadership and powerful advocacy on behalf of physicians.

The AMA stood up to challenges against physicians and medical practice at the highest levels, including launching a campaign to stop short-term payment cuts to physicians while at the same time calling for significant reform of the overall Medicare physician payment system. The AMA also secured victories to defend scope of practice and reduce burdens from prior authorization—making meaningful progress in our AMA Recovery Plan for America’s Physicians.

In doing so, the AMA reinforced its role as the Physician’s Powerful Ally in Patient Care throughout 2023. We continued to remove obstacles that interfere with patient care and are known to drive physician burnout. We advanced innovative solutions to tackle health care’s most significant challenges while reimagining medical education, training and lifelong learning. And we continued to lead the charge to prevent chronic disease, improve health outcomes and eliminate inequities across health care.

Achieving significant wins for patients in 2023, AMA advocacy yielded more than 100 state-level victories against inappropriate scope of practice expansions by working closely with state medical associations. To advance solutions that promote physician well-being, the AMA recognized 72 hospitals and health systems in its Joy in Medicine™ Health System Recognition Program, which elevates and promotes best practices in caring for physicians and patients.

The AMA proudly announced the launch of the Rise to Health Coalition, a first-of-its-kind national initiative co-led by the AMA and the Institute for Healthcare Improvement and supported by numerous collaborators, including Race Forward. This innovative approach to eliminating historic inequities in health aligns multiple sectors—including health care organizations, physicians and other health care professionals—under a common framework and unified vision.

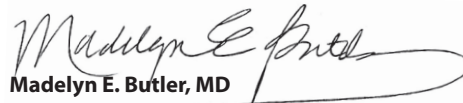

This work was made possible by another strong financial performance in 2023 and an impressive 3.4 percent growth in AMA’s dues-paying members. The hard work of dedicated AMA leadership and talented staff across

the organization continues to shape a vibrant, more fully engaged and more collaborative health care community, and paves the way for continued action and greater strength going forward.

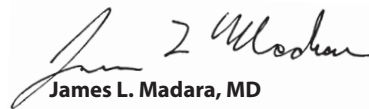

Knocking down obstacles and overcoming challenges is deeply embedded in the AMA’s DNA. With health care rapidly evolving, physicians and patients are looking to us to make sense of these changes and help them find their footing in an unfamiliar landscape. We are committed to this work, to always promoting the art and science of medicine and the betterment of public health, and to always placing the needs of physicians and patients at the core of our efforts and advocacy.

DEFENDING THE PRACTICE OF MEDICINE

In 2023 the AMA vigorously defended medicine across the country to keep care where it belongs: between physicians and their patients.

More than 100 state-level scope of practice wins in partnership with state medical associations and medical specialty societies

Keeping physicians at the center of medical care

Patients deserve care led by physicians. Through research, advocacy and education, the AMA in 2023 continued its work to stop inappropriate scope of practice expansions that threaten patient safety.

We promoted physician-led, team-based care and helped defeat legislation across the country that would have allowed:

- Physician assistants to practice independently without physician oversight.
- Pharmacists to prescribe medications.
- Optometrists to perform surgery.
- Scope of practice expansion for nurse practitioners and other APRNs.

To ensure more transparency in health care, the AMA worked with multiple state medical associations to introduce new or strengthen existing “Truth in Advertising”

laws so that patients know if the person providing care to them is a physician—or not. Two states enacted such laws in 2023.

Reforming the Medicare payment system

Last year the AMA continued to lead efforts to reform the Medicare payment system to eliminate the threat of annual payment reductions and implement solutions that would increase payments in line with annual increases in the cost of providing care. The AMA was able to secure the introduction of a number of bipartisan policies and significantly grew support for those solutions throughout the year.

Opposing efforts to undermine physicians

The AMA has continued to serve as a powerful voice for physicians in federal and state courts around the country on a broad range of issues, including several cases before the U.S. Supreme Court.

Working with state and federal policymakers, the AMA continued to oppose legislation and laws that interfere with the practice of medicine, including cases in which physicians are facing criminal, civil or administrative penalties for providing necessary care.

“I am so grateful that we have an organization that says **‘we’re not going to stand for this.’**”

Rasmeet Kaur Miller, MD
AMA member since 2019
On the crisis of physician burnout

The sold-out 2023 American Conference on Physician Health focused on bringing back the joy in medicine.

Follow us on social!

CHAMPIONING PHYSICIAN WELL-BEING

In a recent survey co-authored by the AMA, nearly 63 percent of physicians reported symptoms of burnout. We know that reducing burnout is integral to the delivery of high-quality patient care and health system sustainability. In 2023 the AMA continued its work to tackle the root causes of burnout and developed effective advocacy, research and resources needed to help physicians increase professional satisfaction and rediscover joy in their work.

Empowering health systems to reduce burnout

The AMA continues to expand its work in promoting physician wellness through the AMA Joy in Medicine™ Health System Recognition Program. This program is committed to advancing the science of physician burnout and recognizes those systems that are dedicated to organizational well-being. In 2023 the AMA recognized 72 health systems—bringing the total number of currently recognized organizations to 96.

Developing evidence-based resources for well-being and resiliency

The AMA is committed to developing evidence-based programs and resources dedicated to improving mental health and resiliency. Last year alone, we provided more than 100 new and updated AMA STEPS Forward® resources—including toolkits, webinars and podcast episodes—focused on reducing physician burnout and improving patient care.

2 million users have accessed the AMA STEPS Forward program to reduce burnout and improve patient care and practice efficiency.

Reducing the stigma of mental illness

Fear of repercussions and stigma associated with seeking care for mental health issues remains a huge barrier to physicians in getting the care they need. The AMA is part of a growing nationwide effort to remove stigmatizing mental health questions from applications for state licensing and credentialing applications used by medical groups, hospitals and health plans. As a direct result of the AMA's education and advocacy, 15 state medical boards, health systems and credentialing bodies removed potentially stigmatizing questions about mental illness from their applications, resulting in a huge step forward for physician well-being.

“The AMA is developing great policy at state and national levels that is making an impact and **improving patient care.**”

Carolynn Francavilla Brown, MD
AMA member since 2007
On prior authorization

AMA Past President Jack Resneck Jr., MD, talks on an episode of AMA Update about the work that led up to our big prior authorization win for physicians.

View this and other interviews on our AMA Update video and podcast series.

REMOVING OBSTACLES TO PATIENT CARE

In 2023 the AMA worked tirelessly to address the burdens that get in the way of patient care. Last year we saw a number of hard-earned results that came from our direct efforts to put the needs of physicians and patients first.

**\$15 BILLION IN SAVINGS
FOR PHYSICIANS**

and getting patients the care they
need without delay
(January 2024 CMS final rule
on prior authorization)

Fixing prior authorization

Prior authorizations often come at the expense of patients and physicians. That's why the AMA stands up to insurance companies to eliminate care delays, relieve physician burdens—and save patients' lives.

As a direct result of AMA advocacy efforts throughout 2023, the Centers for Medicare & Medicaid Services announced a final rule in early January 2024 that requires government-regulated health plans to reduce the timeframes for prior authorization decisions and to publicly report program metrics. This final rule will make important reforms to prior authorization that cut patient care delays and electronically streamline the process for physicians. Together, these changes will save physician practices an estimated \$15 billion over 10 years, according to the U.S. Department of Health and Human Services.

In 2023 we also worked with state medical associations across the country to enact prior authorization reform using AMA model legislation, data, testimony and other resources that resulted in more than 30 states introducing legislation—and at least nine new states enacting prior authorization laws.

Increasing access to life-saving medication

The AMA successfully advocated to make naloxone available over the counter and continued to advocate for responsible pricing and insurance coverage for this life-saving medication. We also advocated for revisions to the CDC's opioid prescribing guidelines that resulted in the CDC removing its dose and quantity thresholds for treating patients experiencing pain.

Maintaining access to care

The AMA successfully advocated to achieve passage of legislation to extend Medicare telehealth coverage through 2024. The 2024 Medicare payment rule preserves key telehealth policies, ensuring Medicare patients throughout the country (not only from rural areas) will continue to receive access to telehealth.

2023 IN REVIEW

The AMA rapidly delivered an educational offering through the AMA Ed Hub™ to help **physicians meet the new DEA MATE requirements** on substance use disorders and addiction. This offering was deployed within 24 hours of the new regulation issuance and significantly contributed to increased AMA Ed Hub engagement as well as membership growth.

 **226,000+**
messages to Congress

from patients and physicians in our **FixMedicareNow.org** grassroots effort

Convened the first annual **JAMA Summit**, bringing together 60+ leaders in medicine to discuss ways to improve the clinical trials enterprise. In early 2024, the pages of **JAMA®** will elaborate on the themes and innovative ideas that emerged from these discussions.

Through its Center for Health Equity, the AMA continued to strengthen physician and health system understanding and engagement around advancing equity. We launched the **National Health Equity Grand Rounds**, resulting in more than 11,000 viewers for important discourse about how to advance health equity, and we continued to publish the **Prioritizing Equity Series**, reaching 47 episodes.

In support of CDC's Project Firstline, the **AMA launched resources on infection prevention and control**, including webinars, podcasts and townhalls, so that frontline health care professionals can protect patients, coworkers and themselves from infectious disease threats.

To better meet the needs of academic researchers, **JAMA optimized the JAMA Express publication pathway** by promising to move select accepted manuscripts to publication within four weeks of submission.

 **37 MILLION**

the record-breaking number of readers, listeners and viewers who consumed **AMA digital content** in 2023 (excluding *JAMA* and AMA Ed Hub)

In 2023 the AMA established the **Firearm Injury Prevention Task Force**. The task force convenes subject matter experts across medical specialties to inform the development of resources for physicians and trainees to increase counseling of high-risk patients and awareness of available interventions.

To help ensure future physicians receive standardized training on how to consistently take accurate blood pressure measurements, the **AMA awarded financial grants** to eight academic institutions representing 18 total training programs for health care professionals including future physicians, nurses, physician assistants and pharmacists.

We held our bi-annual AMA ChangeMedEd® national conference from Sept. 27-29 in Chicago. This event brought together more than 500 leaders and innovators in medical education and related health care fields to catalyze change in medical education and **transform the way future physicians and residents are trained**. Nearly 150 presenters led more than 75 sessions including plenary sessions on educator well-being in medical education, reimagining residency, precision education, and equity, diversity and belonging.

The AMA announced Leelabati Biswas, a Rutgers Robert Wood Johnson Medical School MD/PhD candidate, as the winner of the **2023 AMA Research Challenge** and recipient of a \$10,000 grand prize, presented by Laurel Road. We received nearly 1,200 submissions, with 800 selected to present in our poster symposium. The top 50 scored posters competed in our semifinals and were scored by judges and AMA members, and the top five advanced to the finals and presented to a panel of physician experts.

8.6 million
YouTube views

Thanks to policy guidance provided by the AMA, five states passed bills that mandated Medicaid coverage of self-measured blood pressure devices and clinical support services, **increasing access for many underserved populations** in those states.

The AMA completed and published the inaugural **Health Equity in Organized Medicine survey**, which included responses from 68 organizations within the Federation of Medicine. We also hosted Health Equity Forums at our AMA House of Delegates meetings, reaching more than 680 delegate physicians.

As the application of augmented intelligence (AI) continues to grow and promises to transform health care, the AMA, in partnership with the University of Michigan, created a new online learning series “**AI in Health Care**” that introduces learners to foundational principles in AI and machine-learning.

JAMA also launched a new video and podcast series on “**AI and Clinical Practice**” to keep physicians informed on AI’s promise to transform treatment, training, research and publishing.

125 billion
AMA media
impressions

from more than 40,000 media stories on critical AMA issues

The **AMA Ed Hub**, the AMA’s online education platform, achieved unprecedented growth in users and engagement (compared to 2022):

46% INCREASE SESSIONS INCREASED TO 3.7 MILLION

72% INCREASE EDUCATION ACTIVITY USAGE INCREASED TO 3.6 MILLION

63% INCREASE COURSE ASSESSMENT COMPLETIONS INCREASED TO 615K

120% INCREASE UNIQUE NEW USER REGISTRATIONS UP 125K

In addition the AMA Ed Hub continued to expand its educational offering by signing on 14 new organizations to feature their education on the platform, bringing the total number of partners to 50.

The AMA continues to support faculty development through the **AMA Health Systems Science Scholars program** and the Coaching Implementation Workshop, with each program now having trained more than 200 faculty members from across the United States to advance these innovations in medical schools and residency programs.

The AMA piloted a **new physician credentialing solution** that improves the complex credentialing process for physicians and the health care industry. **VeriCre** addresses inefficiencies in credentialing by providing centralized, trusted and authoritative data that can be used to pre-populate applications and is designed to work with the varied workflows and software solutions within health care systems and institutions.

The AMA **released a how-to guide on integrating behavioral health care** for older adults and a behavioral health coding resource for physicians and care teams to leverage when administering behavioral health preventive services, screening and/or treatment plans.

MANAGEMENT'S DISCUSSION AND ANALYSIS

MANAGEMENT'S DISCUSSION AND ANALYSIS

Introduction

The objective of this section is to help American Medical Association (AMA) members and other readers of our financial statements understand management's views on the AMA's financial condition and results of operations. This discussion should be read in conjunction with the audited consolidated financial statements and notes to the consolidated financial statements.

Improving the health of the nation is at the core of the AMA's work. As the physicians' powerful ally in patient care, the AMA delivers on this mission by representing physicians with a unified voice in courts and legislative bodies across the nation, removing the largest governmental and private sector obstacles that interfere with optimal patient care, leading the charge to prevent chronic disease and confront public health crises, and driving the future of medicine to tackle the biggest challenges in health care and training the leaders of tomorrow. AMA's strategic arcs are supported by improving health outcomes, lifelong medical education and enhancing physician professional satisfaction and practice sustainability. Our advocacy, health equity and innovation initiatives act as accelerators across all arcs. AMA's foundation is built on science, membership, financial performance, marketing and communication, and talent and engagement.

2023 priorities continued to be led by the AMA Recovery Plan for America's Physicians, focusing on five key goals to re-build health care so that it works better for physicians and all those they serve: 1) fixing prior authorization to reduce the burden on practices and minimize care delays for patients; 2) reforming Medicare payment to promote thriving physician practices and innovation; 3) stopping scope creep that threatens patient safety; 4) supporting telehealth to maintain coverage and payment; and 5) reducing physician burnout and addressing the stigma around mental health. For example, through research, advocacy and education, the AMA continued to defend the practice of medicine against scope of practice expansions that threaten patient safety. Through AMA's work with the Center for Medicare & Medicaid Services (CMS), major prior authorization reforms under Medicare Advantage were achieved. The AMA facilitated over 226,000 contacts to Congress from patients and physicians as part of our FixMedicareNow.org grassroots campaign.

The results for 2020 through 2022 were dramatically impacted by the COVID-19 pandemic. Early in 2020, the AMA, like all other organizations, recognized that there was substantial uncertainty about the effects and risk of COVID-19 on our funding, financial condition, and results of operations. As a result, AMA took steps to ensure that programmatic activities and employment levels would be protected during a sustained pandemic, knowing the potential for economic uncertainty. AMA lifted a freeze on hiring

in the spring of 2021, but the level of open positions remained high through 2022 as the job market was very tight. Vacancies and limited travel for most of the three years garnered substantial savings that were temporary in nature resulting in unusually high operating income for AMA. Open positions were at a record high at the end of 2022 and although they dropped substantially by the end of 2023, remained above normal levels, providing over \$15 million in unplanned vacancy savings for 2023.

Pro forma net operating results

(in millions)

*Excluding the \$36.2 million non-cash pension termination charge

Looking forward, the AMA's 2024 budget assumes that vacancies will revert to normal levels and, with expansion of certain programmatic areas, expenses will increase, resulting in operating income at the board approved policy level.

The AMA is committed to its responsibility of ensuring that the organization focuses its finite resources on strategic arcs, accelerators and core mission activities while improving the quality and breadth of products and services for physicians and medical students. Our physicians' and medical students' voices are central to AMA's overall success.

The following pages discuss the 2023 consolidated financial results as compared to 2022. Additional detailed discussion of operating unit results is included in the section titled "Group Operating Results."

Consolidated financial results

Results from operations

Net operating results

(in millions)

As noted above, the unusually tight labor market that adversely impacted hiring and limited travel and in-person meetings through the first half of 2022 were major factors in spending levels running substantially less than budget during 2020 through 2022.

In 2023, AMA revenues were largely unchanged from the prior year, while expenses moved closer to budgeted levels, increasing \$34.2 million, resulting in a substantial decline in operating income compared to 2022.

In 2019, the AMA finalized termination of its defined benefit pension plan, providing lump sum payments to individuals that elected that option and purchasing a group annuity plan for participants that chose to remain in the plan. AMA recorded a \$38.2 million noncash reclassification of prior actuarial losses from non-operating expense to operating expense, titled pension termination expense, as well as reclassifying a \$2 million noncash tax benefit to income tax expense that was previously reported as a non-operating credit.

Excluding the \$36.2 million noncash pension termination expense (net of the \$2 million tax credit), AMA would have reported \$23.4 million in net operating income for 2019, shown as pro forma on the preceding page.

Results discussed below reflect AMA's actual results from operations in 2023 as compared to 2022. Any pro forma charts exclude the impact of the pension termination on 2019 results.

Revenues

In 2023, total revenue increased slightly, up by \$1.7 million over the prior year. Continued growth in AMA's royalties and increased investment income were largely offset by the absence of \$14.3 million in one-time recognition of deferred revenue upon liquidation of a subsidiary company of Health2047, Inc. (Health2047) in 2022 and a decline in publishing print advertising.

Consolidated investment income, which is dividend and interest income, net of management fees, increased in 2023, impacted in large part by higher interest rates. Market gains or losses are not included in investment income and are reported as non-operating results.

The number of AMA dues paying members increased by 3.4 percent in 2023, the 12th year of growth in the past 13 years. During that 13-year period, AMA dues paying membership increased by over 81,000. Dues revenue declined 1.5 percent in 2023 as growth in lower dues paying categories such as group memberships and sponsored memberships partially offset the decline in individual direct member categories.

Most other revenue categories were either slightly down or unchanged for the year.

Cost of products sold and selling expenses

All variable expenses related to the production, distribution and sale of periodicals, books, coding products and licensed products are included in the cost of products sold and selling expense categories. Examples include paper, sales commissions, promotional activities, distribution costs and third-party editorial costs.

In 2023, cost of products sold and selling expenses decreased \$2.8 million from the prior year, mainly due to the prior year inclusion of a \$2.7 million one-time recognition of deferred costs related to the Health2047 subsidiary's liquidation.

Contribution to general and administrative expenses

Cost of products sold and selling expenses are deducted from revenues to determine the amount of money available for the general and administrative expenses of the organization. Contribution to general and administrative expenses measures the gross margin derived from revenue-producing activities.

The contribution to general and administrative expenses increased \$4.5 million to \$467.3 million in 2023, with a small revenue improvement coupled with the absence of the one-time recognition of the Health2047 subsidiary's deferred costs accounting for most of the change.

Pro forma general and administrative expenses

(in millions)

*Excluding the non-cash pension termination charge

General and administrative expenses rose only \$37 million in 2023, or just under 10 percent, when compared to 2022. This was substantially less than the \$66.5 million budgeted increase for 2023, with over \$27 million in nonrecurring savings related to staffing, professional services and travel still impacting results.

Compensation and benefits increased \$27.3 million in 2023, up over 11 percent. Compensation, including temporary help, was \$17 million higher in 2023, a 7.2 percent increase which was a function of annual merit increases plus filling open positions. Fringe benefit costs increased \$2.8 million in total primarily due to higher medical, 401(k) plan and payroll tax expenses. Incentive compensation increased \$8.1 million after a \$7.8 million decline in 2022, as key performance indicators were achieved or exceeded in 2023.

Occupancy costs were largely unchanged as increased operating costs due to full return to the office were offset by reduced rent expense. In late 2022, AMA exercised a contraction option in the main headquarters lease whereby AMA relinquished one full floor of office space beginning in 2023 upon payment of a termination penalty. In late 2023, AMA negotiated an extension of the current headquarters lease in return for future contraction options and lease incentives. The impact will be amortized over the life of the lease.

Travel and meeting costs increased by \$5.2 million in 2023, as AMA resumed in-person meetings and travel for the full year. Technology costs were up \$4.4 million in 2023, due to cost increases and continued development of major AMA technology platforms for business units such as Publishing, Insurance Agency, and Membership marketing. As more technology moves to the cloud, costs associated with the technology platforms will be reflected in operating expense instead of capitalized as an asset and depreciated. This model has the benefit of reducing the need for in-house development expertise but also exposes AMA to more price risk from vendors.

Marketing and promotion costs remained largely unchanged in 2023. One-time approved marketing and media costs related to the launch of the AMA Recovery Plan for America's Physicians and membership promotion declined \$1.6 million but was offset by a \$1.1 million increase for the Advocacy marketing campaign on Medicare payment reform.

Outside professional services increased \$0.5 million in 2023, primarily in the strategic arcs, accelerators and core mission activities, led by a \$2 million increase in Advocacy related to the Physician Practice Survey and grassroots efforts supporting the Medicare payment reform campaign.

Other operating expenses were largely unchanged in 2023 as a write off of software and costs associated with liquidating a Health2047 affiliate were largely offset by a reduction in online subscription costs.

Operating results before income taxes

The AMA reported \$54.8 million in pre-tax operating income in 2023 compared to \$87.3 million in 2022. The prior year reflects substantially reduced expenses due to pandemic restrictions on travel and meetings, staffing freezes and tight labor markets. The current year results include over \$20 million in savings that is expected to diminish in 2024 as AMA continues to see improvement in recruiting.

Income taxes

Taxes increased \$0.7 million in 2023 when compared to 2022, reflecting higher taxable income in one of the subsidiaries.

Net operating results

Net operating income was \$49.7 million in 2023 compared to \$82.9 million in 2022, driven mainly by expenses starting to return to normal levels.

Non-operating items

The AMA reported a \$105 million gain in the fair value of its portfolio during 2023, recovering much of the \$115.1 million loss from 2022. Additional portfolio performance information is discussed in the group operating results section.

As a result of an accounting standard adopted in 2019 for postretirement benefit plans, non-operating results include \$3.9 million and \$3.5 million in postretirement plan interest expense and recognized actuarial losses and prior service credits for 2023 and 2022, respectively.

Revenue in excess of (less than) expenses

Revenues exceeded expenses by \$151.4 million in 2023, a combination of \$49.7 million in operating income, \$105 million gain in fair value in the portfolio and \$3.3 million in other non-operating expenses. The opposite occurred in 2022, where expenses exceeded revenues by \$35 million, a combination of \$82.9 million in operating income, the \$115.1 million loss in fair value in the portfolio and \$2.8 million in other non-operating expenses.

Accounting standards require organizations to recognize deferred actuarial losses and prior service credits or charges for defined benefit postretirement plans as a charge or credit to equity.

In 2023, AMA recorded a \$17.3 million charge to equity reflecting an actuarial loss for the postretirement health care plan, net of a reclassification of actuarial gains to operating expense and income tax. The loss resulted primarily from a change in the initial health care cost trend from 7.0 percent to 8.5 percent and less favorable claims cost experience.

In 2022, AMA recorded a \$29.4 million credit to equity reflecting an actuarial gain for the postretirement health care plan, net of a reclassification of actuarial losses for the plan to operating expense and income tax. The gain resulted primarily from higher interest rates that reduced the present value of plan liabilities.

Change in total association equity

(in millions)

The AMA reported a \$134 million increase in association equity in 2023. This reflects the amount by which revenues exceeded expenses, less the charge to equity for changes in defined benefit postretirement plans discussed above, as well as a small decrease in donor-restricted equity.

The AMA reported a \$5.5 million decrease in association equity in 2022. This reflects the amount by which expenses exceeded revenues, plus the credit to equity for changes in defined benefit postretirement plans discussed above, as well as a slight increase in donor-restricted equity.

Financial position and cash flows

The AMA's assets include cash, cash equivalents and investments; operating assets such as accounts receivable, inventory and prepaid expenses; fixed capital such as equipment, information technology hardware and software; and other assets. AMA assets are supported by association equity, operating liabilities and deferred revenue.

Assets

(in millions)

The AMA's total assets increased \$173.1 million in 2023. This includes a \$157.8 million increase in cash and investments resulting from \$61.5 million in free cash flow plus a \$105 million gain in the fair value of investment securities less \$8.7 million for investments in affiliates.

Fiduciary funds are premium payments from insurance customers not yet remitted to the carriers and funds held by the AMA for third parties for future use as approved by the third parties. This approximates the offsetting liability titled insurance premiums and other fiduciary funds payable.

Operating assets increased slightly in 2023, primarily due to an increase in accounts receivable. Changes in operating assets from year to year are largely due to timing of cash flows.

Other assets include operating lease right-of-use assets, property and equipment, investment in affiliates and investments in mutual funds maintained in separate accounts designated for various nonqualified benefit plans that are not available for operations. Operating lease right-of-use assets increased \$12.2 million in 2023 largely due to the extension of AMA's current headquarters lease in return for contraction rights and lease incentives. Property and equipment net book value decreased as new capital spending was exceeded by annual depreciation and

amortization of existing capital assets while AMA's investment in affiliates increased by \$6.4 million as investments of \$8.7 million were reduced by AMA's share of the affiliates' operating losses.

Operating liabilities increased \$33.3 million in 2023, led by increases in the postretirement health care plan liabilities, lease liability and accrued payroll. The postretirement health care plan liability increase was a function of the impact of a higher projected health care cost trend and adverse claims experience on the actuarially computed present value of plan liabilities. The \$5.8 million lease liability change includes an increase in the present value of the headquarters liability resulting from extending the lease as noted above, reduced by cash payments in excess of rent expense.

Deferred revenue represents funds received during the year that will not be recognized as income until the following year or thereafter. These amounts vary, as well as accounts payable and accrued expenses, depending on the timing of cash receipts and payments.

Cash flows

Cash, cash equivalents and donor-restricted cash increased \$2.6 million and \$1.4 million in 2023 and 2022, respectively. This comparison may cause misleading conclusions, as the change in cash and cash equivalents includes reductions for amounts invested in marketable securities, as well as cash inflows from non-operating activities.

Free cash flow measures the AMA's ability to fund operations, capital expenses and major programmatic initiatives from funds generated from operations. This measure excludes non-operating gains and losses.

Free cash

(in millions)

Free cash in 2023 totaled \$61.5 million, \$16.1 million higher than 2022, as changes in operating assets and liabilities more than offset the reduction in cash operating income.

Reserve portfolio

Reserves

(in millions)

The reserves and operating funds above do not include cash and investments in the for-profit subsidiaries and reflect only the not-for-profit entity's cash and investment portfolio values.

As of year-end 2023, the reserve portfolio's value was \$1,019.7 million compared to \$841.4 million in 2022, a \$178.3 million increase. That increase was mainly the result of a \$104.5 million gain in the fair value of the reserve portfolio plus a \$74.2 million transfer of 2022 excess operating funds to reserves. Operating funds totaled \$61.1 million in 2023, down \$23.8 million from 2022.

The AMA has established a required minimum reserve investment portfolio level that is adequate to cover 100 percent of annual general and administrative expenses (excluding grant expenses) plus an amount sufficient to pay long-term postretirement and lease liabilities (net of the right-of-use asset value). Operating funds, coupled with operating assets, are to be maintained at a level that allows payment of all operating liabilities.

AMA's reserves provide the backbone for the organization's long-term viability and independence, currently operating as a quasi-endowment fund, with a goal of achieving levels that could generate adequate funding to ensure the long-term future of the organization.

Reserve portfolio funds also provide the AMA with the ability to fund major strategic spending initiatives not within the operating budget. Spending from reserve funds is limited to dollar- or time-limited initiatives and capped at the amount by which reserves exceed the minimum requirement. Reserves may not be used for ongoing operating expenses. The Board of Trustees must authorize any use of reserves.

Permanent reserves and minimum reserve requirement

(in millions)

Contribution margin

(in millions)

Group operating results

The AMA is organized into various operating groups: Membership; Publishing, Health Solutions & Insurance; Strategic Arcs, Accelerators & Core Mission Activities; Administration and Operations; Affiliated Organizations; Unallocated Overhead; and Health2047 (including subsidiaries). Revenues and expenses directly attributed to those units are included in the group operating results. A financial summary of group operating results is presented at the end of this section. The prior year financial results have been updated to be consistent with the current year reported results for each group.

Contribution margin (net expenses)

Contribution margin equals individual group revenues minus cost of products sold, selling expenses, and direct general and administrative expenses such as compensation, occupancy, travel and meetings, technology costs and professional services.

Net expenses equals total spending, net of any revenue produced by the group, such as grants or other fee income. Total contribution margin and net expenses equals consolidated operating results before income taxes. The charts below separate groups with contribution margin from groups with net expenses.

The contribution margin generated by Membership; Publishing, Health Solutions & Insurance; as well as Investments, provides the funding for all mission-related activities of the AMA as well as funding for all administration and support operations required to run the organization.

Membership

The Membership group's net membership dues revenue includes the gross dues revenue collected, reduced by any commissions paid to state societies, and equals the membership dues revenue reported on the statement of activities.

In 2023, AMA again reported an increase in the number of dues-paying members, up 3.4 percent from 2022. In 12 of the last 13 years, AMA has reported increases in the number of dues-paying members, a major accomplishment. Membership continues to focus on expanding use of digital tools to engage physicians and retain them as lifelong members, group membership marketing, and expanding AMA's reach to physicians through programmatic activities.

Dues revenue was \$33.3 million, a \$0.4 million decrease from 2022. Although the number of physician members increased, most of the growth was in lower dues paying categories. Membership expenses are down \$1 million as 2022 results included a \$1 million one-time increase in marketing costs related to the launch of the AMA Recovery Plan for America's Physicians that did not recur in 2023. Membership's contribution margin increased \$0.6 million in 2023, as cost decreases more than offset the revenue decline.

Publishing, Health Solutions & Insurance

Publications in the JAMA Network include the *Journal of the American Medical Association (JAMA)* and the JAMA Network specialty journals. In the last decade, the JAMA Network has launched four new journals: *JAMA Oncology* in 2015 and *JAMA Cardiology* in 2016, which are hybrid journals offering open access options for research articles; *JAMA Network Open* in 2018, a fully open access journal; and *JAMA Health Forum* in 2021, a peer-reviewed, open-access, online journal focused on health policy, health care systems, and global and public health.

Publishing revenues are derived from advertising, subscriptions, site licensing, reprints, electronic licensing, open access fees and royalties. Publishing revenues decreased \$2.1 million in 2023, largely a function of a \$2.3 million decline in advertising. The continued drop in advertising revenue necessitated a change in strategy for Publishing as the business unit eliminated distribution of print journals to a controlled population of physicians who were included in measuring journal readership scores, a key indicator for ad placement. This change slightly reduced production and distribution costs and partially offset the advertising drop. It is expected to result in a larger benefit in 2024. Expenses declined \$1 million during 2023, primarily due to vacancy savings from unfilled positions. The contribution margin thus declined by \$1.1 million to \$1 million.

Health Solutions includes two major lines: Database Products, and Books and Digital Content.

Database Products includes royalties from licensed data sales and credentialing products revenue. Revenues increased in 2023, up \$0.8 million when compared to 2022, driven again in large part by a major compliance effort to upgrade existing customer contracts to full licenses. Expenses were up \$1.5 million driven by compensation from filling positions and increased technology costs, of which \$0.6 million relates to development of a new physician credentialing product. This is a credentials wallet that streamlines credentialing by pre-filling physician applications with authoritative, verified AMA data, reducing administrative burden for physicians and medical staff professionals. The resulting contribution margin declined by \$0.7 million in 2023 to \$53.6 million.

AMA-published books and coding products, such as CPT books, workshops, and licensed data files, make up the Books and Digital Content unit. Royalties and digital content sales drove a \$13.4 million revenue increase, as the market for electronic use of digital coding products continues to expand. A three percent price increase, after no increases in the pandemic years, as well as phasing in previous pricing model changes, were also factors. Coding book sales improved slightly in 2023 as the move from print products to digital slowed. Expenses were up slightly in 2023, driven by increased compensation from filling open positions, offset by a reduction in technology costs. The contribution margin increased by \$12.5 million to \$241 million.

The AMA has two active for-profit subsidiaries, the AMA Insurance Agency (Agency) and Health2047. The latter is discussed separately at the end of this discussion and analysis.

The Agency revenues improved by \$0.6 million in 2023, as increased investment income from higher interest rates offset a decline in commissions. The commission reduction was mainly due to continued decreases in commission rates to protect the viability of the plan, which allowed the Agency to avoid charging higher premiums to physician customers. The Agency, as broker, receives a commission on insurance policies sold. Expenses were up \$1.2 million mainly due to filling open positions and technology costs related to development of a new customer-facing platform. The contribution margin decreased to \$17.3 million from \$17.9 million in the prior year.

Other business operations net expenses were down \$0.4 million in 2023, as the prior year included \$0.7 million in one-time costs.

In total, Publishing, Health Solutions & Insurance contribution margin was \$309.4 million, up \$10.5 million from 2022.

Investments (AMA-only)

AMA-only investment income includes dividend and interest earnings on the AMA's portfolio. Investment income in AMA's for-profit subsidiaries is included as part of the group results for Publishing, Health Solutions & Insurance and Health2047.

Investments' revenue was \$18.1 million in 2023, a \$4 million increase over the prior year. Dividend and interest income continued to improve in 2023, impacted in large part by higher interest rates. The contribution margin also increased by \$4 million as expenses were unchanged.

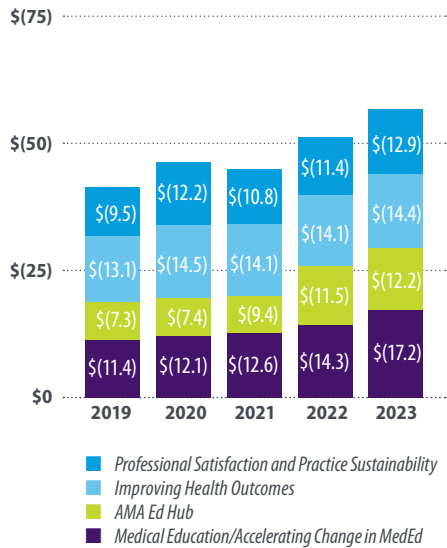

The net gain or loss on the market value of investments is not included in operating results but reported as a non-operating item. This amount is in addition to the investment income discussed above.

In 2023, AMA reported a net gain of \$105 million, compared to a \$115.1 million loss in 2022. The total investment return, including investment income, on the reserve portfolios was 14.9 percent, slightly less than the 15.4 percent gain in the composite benchmark index.

Net expenses

Strategic Arcs

(in millions)

The Strategic Arcs include direct costs associated with the groups for Improving Health Outcomes (IHO), Medical Education/Accelerating Change in Medical Education (ACE), the AMA Ed Hub and Professional Satisfaction and Practice Sustainability (PS2).

IHO focuses on confronting two of the nation’s most prevalent issues: cardiovascular disease and type-2 diabetes, setting a course of innovation and action aimed at reducing the disease and cost burden associated with these selected conditions.

The main focus during 2023 was on hypertension outcome goals as progress continues on implementation of cloud-based MAP BP (a three-step program that works to diagnose and manage patients with hypertension) dashboards at health care organizations (HCOs), providing a visual representation of their performance on five key blood pressure metrics, including stratification by ethnicity, race and gender. To improve the quality of care physicians provide to their patients with hypertension, the AMA collaborated with three channel partners to increase access to AMA MAP Metrics, which help identify gaps, track progress, and support quality improvement efforts. This reached approximately 5.5 million additional patients with hypertension across 683 organizations inclusive of health systems, Federally Qualified Health Centers, community health centers and medical groups. Over 8 million hypertension patients were reached through professionals using one or more individual components of AMA MAP BP. In addition, to help close a gap in blood pressure measurement training that exists within medical schools, the AMA awarded financial grants to eight academic institutions representing 18 total training programs for healthcare professionals allowing them to meaningfully engage in BP Measurement Essentials: Student Edition, AMA’s eLearning series. In 2023, net expenses were largely unchanged.

Advancing Professional Development includes Medical Education/ACE and the AMA Ed Hub.

While the undergraduate medical school consortium grants successfully concluded in 2018, all 32 consortium schools have continued collaboration and the consortium of schools has been substantially expanded. The consortium now acts as a learning collaborative so that best practices can be developed, shared, and implemented in medical schools across the country. The AMA ChangeMedEd® initiative held its bi-annual, national conference in Chicago, bringing together more than 500 leaders and innovators in medical education and related health care fields to catalyze change in medical education and transform the way future physicians and residents are trained. Nearly 150 presenters led over 75 sessions including plenary sessions on educator well-being in medical education, reimagining residency, precision education, and equity, diversity and belonging.

In 2019, the methods and learning from the undergraduate consortium initiative were extended to a new multi-year grant program for graduate medical education, designed to improve the transition from undergraduate to graduate medical education and to maintain and reinforce the positive changes initiated by the undergraduate consortium work.

One of the key outcomes of the ACE consortium was the development of Health Systems Science, a foundational platform and framework for the study and understanding of how care is delivered, how health professionals work together to deliver that care, and how the health system can improve patient care and health care delivery.

In 2023, the AMA advanced a conceptual model for precision education: a system that can leverage technology and data to improve education personalization and learning efficiency across the continuum, in support of students, residents, fellows, physicians, and ultimately the needs of patients. Innovation Grants were awarded to 13 sites applying precision education approaches in medical school, residency and continuing professional development. Medical Education is also responsible for defining or influencing standards for undergraduate, graduate and continuing medical education and providing support for the Council on Medical Education. Net expenses increased \$2.9 million in 2023 reflecting filling open positions, resumption of in-person meetings and travel as well as a \$0.9 million expense increase for precision education.

The AMA Ed Hub, formally launched in 2018, is a platform providing physicians and other health care providers content and educational services that support lifelong professional development. The Ed Hub has unified the AMA education portfolio and has piloted integration of external content providers, launched new content sets, and established internal development plans enterprise wide, including the Health Equity Education Center and the UME Curricular Enrichment Program. The Ed Hub also gives physicians and other health professionals a streamlined way to earn, track and report continuing medical education activities spanning clinical, practice transformation and professionalism topics. The number of external education

providers on the platform grew by ten organizations to 50 organizations and the Ed Hub achieved unprecedented growth in users and engagement in 2023, driven in large part by Ed Hub's rapid delivery of an education offering to help physicians and clinicians meet the new DEA MATE requirements on substance use disorders and addiction. Net expenses were up \$0.7 million in 2023 due largely to filling open positions.

PS2 includes three major streams of work: professional satisfaction/practice transformation, practice sustainability, and digital health, all designed to improve the day-to-day practice and professional experience of physicians and remove obstacles to care. The goals of this group are to promote successful models in both the public and private sectors. This includes expanding research of credible practice science, creating tools and other solutions to help guide physicians, care teams and health system leaders on developing and implementing strategies to optimize practice efficiencies, reduce burnout and improve professional well-being; ensuring the physician perspective is represented in the design, implementation and evaluation of new health care technologies; and shaping the evolution of payment models for sustainability and satisfaction.

In 2023, PS2 published more than 25 peer-reviewed studies on physician and practice issues, and led and funded a variety of research on high impact issues affecting physicians and health systems, such as burnout, workforce and EHR inbox workload. The AMA Joy in Medicine Health System Recognition Program recognized 72 health systems who met the evidenced-based criteria representing their commitment to organizational well-being. Providing over 100 new or updated AMA STEPS Forward® resources (toolkits, webinars, podcasts, and playbooks) helped drive the user growth to over two million. AMA also co-sponsored the 2023 American Conference on Physician Health with Stanford Medicine and Mayo Clinic with a record-breaking attendance of over 600 participants. In 2023, net expenses increased \$1.5 million, driven almost entirely by staffing and travel costs.

Accelerators & Core Mission Activities includes six groups: Advocacy; Health, Science & Ethics; Center for Health Equity (CHE); Integrated Health Model Initiative (IHMI); Enterprise Communications; and Marketing & Member Experience (MMX).

Advocacy includes federal and state level advocacy to enact laws and advance regulations on issues important to patients and physicians; economic, statistical and market research to support advocacy efforts; political education for physicians; grassroots advocacy; and maintaining relations with the federation of medicine. Advocacy led the launch of a major media campaign to urge Congress to address long-term, systemic reform of Medicare payments through the AMA's coalition. Other major initiatives included fighting scope creep by achieving more than 100 state-level scope of practice victories in strong collaboration with Federation partners and introducing or strengthening existing "Truth in Advertising" laws so that patients know if the person providing care is a physician; working with the Center for Medicare & Medicaid Services (CMS) to finalize several major prior authorization reforms under Medicare Advantage; ensuring that AMA's critical voice is represented in federal and state courts around the country on a broad range of issues; working with state and federal policymakers to oppose legislation and laws that interfere with the practice of medicine; and elevating the voice of physician leadership on critical issues of public health. In 2023, Advocacy net spending increased \$5.7 million, with \$2.5 million for compensation expenses and travel and meeting costs as in-person meetings resumed, \$1.9 million in media and professional service costs for the Medicare reform campaign, as well as \$1.5 million for the Physician Practice Survey initiative.

Health, Science & Ethics is involved in developing AMA policies on scientific, public health and ethical issues for the House of Delegates; providing leadership, subject matter expertise and scientifically sound content and evidence that underpins and informs both current and future AMA initiatives in areas such as infectious disease, drug policy and opioid prescribing; overseeing maintenance of the AMA *Code of Medical Ethics* and publication of the *AMA Journal of Ethics*, AMA's online ethics journal; and managing the United States Adopted Names (USAN) program, responsible for selecting generic names for drugs by establishing logical nomenclature classifications based on pharmacological or chemical relationships (reported separately in group operating results). This group launched several major initiatives in 2023 including a new website and learning center for the *AMA Code of Medical Ethics*, new resources on infectious disease and control, and the Firearm Injury Prevention Task Force. Net expenses increased \$1.1 million in 2023, mainly due to higher compensation and travel and meeting expenses.

AMA recognized that a key to long-term success in our strategic arcs is increasing our efforts to reduce health and health care disparities. As a result of a 2018 task force report, the AMA sought leadership to embed health equity initiatives as relevant into all strategic priorities and areas of the organization, creating a new group, the Center for Health Equity. The focus of this group is to elevate AMA's public role and responsibilities to improve health equity. In 2023, CHE expanded its efforts to establish

Accelerators & Core Mission Activities

(in millions)

an AMA presence in the health equity research literature with the publication of 43 Social Justice Education Ed Hub modules, the continuation of the Prioritizing Equity Series and launching the National Health Equity Grand Rounds, engaging over ten thousand viewers.

AMA-Satcher Health Leadership Institute at Morehouse School of Medicine, Medical Justice in Advocacy Fellowship is a unique, first of its kind post-doctoral fellowship designed to enhance physicians' advocacy leadership skills to improve health outcomes and advance health equity in the areas they serve or may serve. The Advocacy Fellowship successfully completed its second cohort of fellows, bringing the total number of fellows to 23.

CHE continued to convene members of the health ecosystem to share knowledge and to build alliances resulting in collaboration opportunities and collective action that advance health equity, including the official launch of the *Rise to Health: A National Coalition for Equity in Health Care* co-led by the Institute of Healthcare Improvement (IHI), uniting organizations toward action and shared solutions for systemic change and structural impact, and establishment of the Truth, Reconciliation, Healing and Transformation Task Force during the first half of 2023. CHE also represented AMA as an anchor mission partner for the collaborative on Chicago's west side, West Side United, and continued building staff capacity to understand concepts surrounding health equity and to operationalize equity in goal and metric setting and developing structural competency learning tools. CHE has largely achieved its planned level of growth and net expenses declined slightly in 2023.

IHMI brings together experts from patient care, medical terminology, and informatics around a common framework for defining and expressing health data. IHMI has been recognized as a leading authority on clinical content standards and is contributing to the development and use of clinical content through collaboration with Health Level 7 (HL7) FHIR (Fast Healthcare Interoperability Resources), the Gravity Project and others. A major initiative in the last several years has focused on development of a Self-Measured Blood Pressure (SMBP) software and services solution, which in 2023 was determined to be difficult for AMA to develop and maintain. As such, AMA decided to cease operations of the development team and focus on the clinical content standards work. IHMI net expenses increased \$2.4 million in 2023, reflecting a full year of development activity as well as costs associated with closing the SMBP program. The data standards team will be transferred to Health Solutions in 2024.

MMX extends the reach and impact of AMA's mission and advocacy initiatives and strengthens the AMA brand. MMX continues to take on increased oversight for managing the quality, timing and relevance of the experience physicians have at each point of interaction through AMA's digital publishing, health system engagement and member programs. MMX creates or packages AMA's content into digital formats and distributes AMA resources and thought leadership to intended audiences through owned and paid channels, raising awareness of AMA initiatives, resources and accomplishments and elevating the

voice of AMA and physicians. In 2023, almost 37 million unique individuals accessed AMA's website, a 5 percent increase over the record number of users in the prior year. The continuation of the AMA Recovery Plan for America's Physicians demonstrated its relevance with more than 80 percent of physicians saying it is important, with awareness of the campaign increasing 26 percent over the prior year. Video programming connected strongly with medical students with more than half the video views on YouTube attributed to the AMA Research Challenge. Net expenses increased slightly in 2023, by \$0.4 million, as higher staffing costs were partially offset by lower media marketing expenses for the Recovery Plan after the initial launch in 2022.

Ongoing responsibilities of the Enterprise Communications area include amplifying the work of individual operating units among their core audiences while providing consistency and alignment with the AMA narrative. Enterprise Communications distinctly communicates AMA's leading voice in science and evidence to embed equity, innovation, and advocacy across the AMA's strategic work throughout health care. Net expenses were unchanged in 2023, as increased staffing and technology costs were largely offset by the absence of costs for activities celebrating AMA's 175th anniversary in 2022.

Governance

Governance includes the Board of Trustees and Officer Services, the House of Delegates (HOD), Sections and Special Constituencies & International units. The Board of Trustees unit includes costs related to governance activities as well as expenses associated with support of the Strategic Arcs, Accelerators and Core Mission Activities. The HOD, Sections and Special Constituencies & International unit includes costs associated with annual and interim meetings, groups, sections and other HOD activities, as well as costs associated with AMA's involvement in the World Medical Association. In 2023, Governance net spending was up \$1.1 million, mainly reflecting the impact of a full year's in-person meeting and travel costs.

Administration and Operations

(in millions)

These units provide administrative and operational support for Publishing & Health Solutions, Membership, Strategic Arcs, Accelerators and Core Mission Activities, as well as other operating groups. Net expenses were up 7.6 percent in 2023, an increase of \$5.6 million, almost entirely due to compensation costs from filling open positions and merit increases.

Affiliated Organizations

Affiliated Organizations represent either grant or in-kind service support provided by the AMA to other foundations and societies. In some cases, the AMA is reimbursed for services provided. No net expenses were reported in 2023.

Unallocated Overhead

The net expenses in this area include costs not allocated back to operating units such as corporate insurance and actuarial services, employee incentive compensation, valuation allowances or other reserves. In 2023, these expenses total \$29.3 million, up from \$18.6 million in 2022. Higher incentive compensation was the main factor in the increase.

Health2047 and Subsidiaries

AMA owns a business formation and commercialization enterprise designed to enhance AMA's ability to define, create, develop and launch, with partners, a portfolio of products and technologies that will have a profound impact on many aspects of the U.S. health care system and population health, with a central goal of helping physicians in practice. The AMA Board of Trustees approved the use of reserves to establish this subsidiary with plans to use third-party resources to assist in funding spinoffs with commercial potential in future years. These liquidity events generally occur somewhere between eight and twelve years after the initial spinoff.

Health2047 funds initial projects and moves those that demonstrate commercial appeal into separate companies, along with necessary seed funding for the new companies. The initial stages generally involve seed money provided by Health2047, after which these companies should command additional investment from third parties to begin commercialization of the product, either through debt or equity financing. For those that achieve third-party funding, at some point in the future, the spinoffs will be sold or liquidated, at which time, AMA would expect to receive a financial return.

Since 2017, Health2047 has spun off or invested in 12 companies, Akiri, Inc. (Akiri), First Mile Care, Inc. (FMC), HXSquare, Inc. (HXS), Zing Health Enterprises, LP (Zing), Medcurio, Inc. (Medcurio), Phenomix Sciences, Inc. (Phenomix), Sitebridge Research, Inc. (Sitebridge), Emergence Healthcare Group, Inc. (Emergence), Heal Security, Inc. (Heal), Evidium, Inc. (previously Recovery Exploration Technologies, Inc.) (Evidium), Scholar Rx, Inc. (Scholar Rx) and IntellixAI, Inc. (IntellixAI).

In 2021 and 2022, Health2047 liquidated two of these companies, Akiri and HXS, as third-party financing efforts were unsuccessful. Upon liquidation of Akiri in 2022, there was an \$11.6 million gain from recognizing deferred revenue and expense for a customer contract entered into and paid in an earlier year. There was no material gain or loss upon the HXS liquidation. In 2023, Health2047 liquidated Emergence and recorded a \$2.2 million loss on liquidation.

As of December 31, 2023, Health2047 has an ownership interest in nine companies, including a consolidated subsidiary, FMC, one company accounted for using the equity method, Heal, and seven companies accounted for using the cost method, Zing, Medcurio, Phenomix, Sitebridge, Evidium, Scholar Rx and IntellixAI. The footnotes to AMA's financial statements include a detailed discussion on accounting for Health2047 spinoff companies. Third-party financing is expected to cover most long-term future costs for many of these companies.

Health2047 revenue in 2023 totaled a negative \$0.3 million, as the \$1.2 million loss in earnings of affiliates was partially offset by investment income and other operating revenue totaling \$0.9 million. In 2022, as result of the Akiri liquidation, Health2047 recognized \$14.3 million in revenue and \$2.7 million in associated costs for creating a custom platform for a customer. Both revenue and expense had been received or incurred in prior years but were deferred until the project was completed or abandoned, which occurred in 2022.

Costs increased by \$0.9 million in 2023 as a \$3.6 million increase was offset by the absence of the prior year \$2.7 million recognition of deferred costs. The gross \$3.6 million increase includes the \$2.2 million loss on liquidation of Emergence, as well as \$1.5 million in increased compensation.

Net expenses increased by \$15.4 million in 2023 mainly due to the cost increases plus the absence of the net \$11.6 million impact from recognizing the deferred revenue and expense that was reported in 2022.

The summary of group operating results is included on the following page.

American Medical Association Group operating results

(in millions)	Revenues		Margin (Expenses)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

For the years ended December 31, 2023 and 2022
(Columnar amounts in millions)

1. Nature of operations

The American Medical Association (AMA) is a national professional association of physicians with approximately 283 thousand members. The AMA serves the medical community and the public through standard setting and implementation in the areas of science, medical education, improving health outcomes, health equity, delivery and payment systems, ethics, representation and advocacy, policy development, and image and identity building. The AMA provides information and services to hundreds of thousands of physicians and includes journal and book publishing, physician credentialing, database licensing, insurance and other professional services for physicians.

The AMA classifies all operating results as revenues and expenses in the consolidated statements of activities. Non-operating items include net realized and unrealized gains and losses on investments, defined benefit postretirement plan non-service expense and other nonrecurring income or expense.

Donor-restricted association equity includes contributions restricted for use for a scope of practice program which are not available for general use by AMA.

2. Significant accounting policies

Consolidation policy

The accompanying consolidated financial statements include the accounts of the AMA and its subsidiaries, AMA Services, Inc., American Medical Assurance Company and Health2047 Inc. (collectively, the AMA).

AMA, through its wholly owned subsidiary, Health2047 Inc. (Health2047), has investments in nine companies or limited partnerships as of December 31, 2023. Health2047 controls and therefore consolidates the results of one company, First Mile Care, Inc.

The equity method of accounting is used to account for investments in companies or limited partnerships in which the AMA has significant influence but not overall control. The investments are initially recorded at the original amounts paid for common and convertible preferred stock, and subsequently adjusted for the AMA's share of undistributed earnings and losses from the underlying entities from the dates of formation. Each investment will be increased or reduced by any future additional contributions and distributions received, respectively. The cost method of accounting is used to account for investments in companies in which the AMA has neither significant influence nor overall control and where the fair value is not readily determinable.

The companies accounted for under the equity method of accounting during 2023 are Emergence Healthcare Group, Inc. (formed in January 2021 and liquidated in September 2023) and Heal Security, Inc. (formed in February 2021).

At December 31, 2023, AMA ownership interest is 33.3% in Heal Security, Inc. The book value of the investment accounted for under the equity method, net of convertible debt, at December 31, 2023 is \$0.9 million.

In addition, at December 31, 2023, AMA has ownership interest of 3.3% in Zing Health Enterprises, LP (formed in May 2020), 16.7% in Medcurio Inc., (formed in February 2020), 19.1% in Phenomix Sciences, Inc. (formed in August 2020), 11.3% in Evidium, Inc. (formerly Recovery Exploration Technologies, Inc., formed in August 2021), 18.4% in Sitebridge Research, Inc. (formed in January 2021), 6.0% in Scholar Rx, Inc. (formed in December 2022) and 6.1% in IntellixAI, Inc. (formed in May 2023). The investments in these entities are accounted for using the cost method, as AMA holds less than a 20% ownership and does not exercise significant influence over the entities. The book value of the seven investments carried at cost at December 31, 2023 is \$14.4 million.

Health2047 had investments in nine companies or limited partnerships as of December 31, 2022. Health2047 controlled and therefore consolidated the results of two companies, First Mile Care, Inc. and Akiri, Inc. (Akiri). Akiri was liquidated during 2022 resulting in recognition of \$14.3 million of deferred revenue, reported in grants and other income, and \$2.7 million of deferred costs, included in cost of products sold and selling expenses, related to completion of a customer contract entered into during 2017.

The companies accounted for under the equity method of accounting during 2022 were: HXSquare, Inc. (formed in January 2019 and liquidated in February 2022), Emergence Healthcare Group, Inc., Heal Security, Inc., and Evidium, Inc. During 2022, the AMA ceased application of the equity method to account for the investment in Evidium, Inc. as additional third-party investment resulted in AMA no longer exercising significant influence over this entity.

At December 31, 2022, AMA ownership interest was 20.1% in Emergence Healthcare Group, Inc. and 33.3% in Heal Security, Inc. The book value of the two investments accounted for under the equity method, net of convertible debt, at December 31, 2022 was \$1.8 million.

In addition, at December 31, 2022, AMA had an ownership interest of 3.6% in Zing Health Enterprises, LP, 12.1% in Medcurio Inc., 12.6% in Phenomix Sciences, Inc., 11.3% in Evidium, Inc., 18.8% in Sitebridge Research, Inc. and 6.0% in ScholarRx, Inc. The investments in these entities were accounted for using the cost method, as AMA held less than a 20% ownership and did not exercise significant influence over the entities. The book value of the six investments carried at cost at December 31, 2022 was \$7.1 million.

Use of estimates

Preparation of consolidated financial statements in conformity with accounting principles generally accepted (GAAP) in the United States of America requires management to make estimates and assumptions that affect reported amounts of assets, liabilities, revenues and expenses as reflected in the consolidated financial statements. Actual results could differ from estimates.

Cash equivalents

Cash equivalents consist of liquid investments with original maturities of three months or less and are recorded at cost, which approximates fair value.

Fiduciary funds

One of the AMA's subsidiaries, the AMA Insurance Agency, Inc., in its capacity as an insurance broker, collects premiums from the insured and, after deducting its commission, remits the premiums to the underwriter of the insurance coverage. Unremitted insurance premiums are invested on a short-term basis and are held in a fiduciary capacity. The AMA also collects and holds contributions on behalf of separate unincorporated entities with \$2.4 million and \$2.3 million held at December 31, 2023 and 2022, respectively.

Inventories

Inventories, consisting primarily of books and paper for publications, are valued at the lower of cost or net realizable value.

Property and equipment

Property and equipment are carried at cost, less accumulated depreciation and amortization. Depreciation and amortization are computed using the straight-line method over the estimated useful lives of the assets. Furniture and office equipment, hardware and software are depreciated or amortized over three to 10 years. Leasehold improvements are depreciated over the shorter of the estimated useful lives or the remaining lease term.

Revenue recognition

Revenue is recognized upon transfer of control of promised products or services to customers in an amount that reflects the consideration that AMA expects to receive in exchange for those products or services. AMA enters into contracts that generally include only one product or service and as such, are distinct and accounted for as separate performance obligations. Revenue is recognized net of allowances for returns and any taxes collected from customers, which are subsequently remitted to governmental authorities.

Nature of products and services

Membership dues are deferred and recognized as revenue in equal monthly amounts during the applicable membership year, which is a calendar year.

Licensing and subscriptions to scientific journals, site licenses, newsletters or other online products are recognized as revenue

ratably over the terms of the subscriptions or service period. Advertising revenue and direct publication costs are recognized in the period the related journal is issued. Book and product sales are recognized at the time the book or product is shipped or otherwise delivered to the customer. Royalties are recognized as revenue over the royalty term. Insurance brokerage commissions on individual policies are recognized as revenue on the date they become effective or are renewed, to the extent services under the policies are complete. Brokerage commissions or plan rebates on the group products are recognized as revenue ratably over the term of the contract as services are rendered.

Contract balances

AMA records a receivable when the performance obligation is satisfied and revenue is recognized. For agreements covering subscription or service periods, AMA generally records a receivable related to revenue recognized for the subscription, license or royalty period. For sales of books and products, AMA records a receivable at the time the product is shipped or otherwise delivered to the customer. These amounts are included in accounts receivable on the consolidated statements of financial position and the balance, net of allowance for doubtful accounts, was \$98.4 million and \$96.3 million as of December 31, 2023 and 2022, respectively.

The allowance for doubtful accounts reflects AMA's best estimate of probable losses inherent in the accounts receivable balance. The allowance is based on historical experience and other currently available evidence.

Payment terms and conditions vary by contract type, although terms generally include a requirement of payment within 30 to 60 days. Some annual licensing agreements carry longer payment terms. In instances where the timing of revenue recognition differs from the timing of invoicing, AMA has determined that these contracts generally do not include a significant financing component.

Prepaid dues by members are included as deferred membership dues revenue in the consolidated statements of financial position. Prepayments by customers in advance of the subscription, royalty or insurance coverage period are recorded as deferred subscriptions, licensing, insurance commissions and royalty revenue in the consolidated statements of financial position.

Income taxes

The AMA is an exempt organization as defined by Section 501(c)(6) of the Internal Revenue Code and is subject to income taxes only on income determined to be unrelated business taxable income. The AMA's subsidiaries are taxable entities and are subject to income taxes. See note 9.

Changes in presentation

In 2023, AMA realigned its business units to better reflect the current operations of the organization. As a result, the presentation of the functional expenses for 2022 in footnote 14 have been updated to be consistent with the current presentation.

3. New accounting standards update

In August 2020, Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) No. 2020-06, *Debt — Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging — Contracts in Entity's Own Equity (Subtopic 815-40) — Accounting for Convertible Instruments and Contracts in an Entity's Own Equity*. The amendments in this update are expected to improve, simplify, and enhance the financial reporting requirements for convertible instruments and contracts in an entity's own equity for all entities, including private companies. The new guidance is effective for the AMA for the year ending December 31, 2024. AMA does not expect there to be a material impact on the consolidated financial statements upon adoption.

In December 2023, FASB issued ASU No. 2023-09, *Improvements to Income Tax Disclosures*. This requires an entity to report the amount of income taxes paid disaggregated by federal, state, and foreign taxes as well as the amount of income taxes paid disaggregated by individual jurisdictions in which income taxes paid is equal to or greater than five percent of total income taxes paid. The new standard is effective for AMA for annual periods beginning after December 15, 2025. The adoption of the standard will expand certain footnote disclosures but will not have an impact on the AMA's consolidated financial statements.

4. Investments

Investments include marketable securities and venture capital and private equity investments that are carried at fair value.

In determining fair value, the AMA uses various valuation approaches. The FASB's Accounting Standards Codification (ASC) Topic 820, *Fair Value Measurements and Disclosures*, establishes a hierarchy for inputs used in measuring fair value that maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that the most observable inputs be used when available. Observable inputs are inputs that market participants would use in pricing the asset based on market data obtained from sources independent of the organization. Unobservable inputs are inputs that would reflect an organization's assumptions about the assumptions market participants would use in pricing the asset developed based on the best information available in the circumstances. The hierarchy is broken down into three levels based on the observability of inputs as follows:

Level 1—Valuations based on quoted prices in active markets for identical assets that the organization has the ability to access. Since valuations are based on quoted prices that are readily and regularly available in an active market, valuation of these products does not entail a significant degree of judgment.

Level 2—Valuations based on one or more quoted prices in markets that are not active or for which all significant inputs are observable, either directly or indirectly.

Level 3—Valuations based on inputs that are unobservable and significant to the overall fair value measurement.

The availability of observable inputs can vary from instrument to instrument and is affected by a wide variety of factors, including, for example, the liquidity of markets and other characteristics particular to the transaction. To the extent that valuation is based on models or inputs that are less observable or unobservable in the market, the determination of fair value requires more judgment.

The AMA uses prices and inputs that are current as of the measurement date, obtained through a third-party custodian from independent pricing services.

A description of the valuation techniques applied to the major categories of investments measured at fair value is outlined below.

Exchange-traded equity securities are valued based on quoted prices from the exchange. To the extent these securities are actively traded, valuation adjustments are not applied and they are categorized in Level 1 of the fair value hierarchy.

Mutual funds are open-ended Securities and Exchange Commission (SEC) registered investment funds with a daily net asset value (NAV). The mutual funds allow investors to sell their interests to the fund at the published daily NAV, with no restrictions on redemptions. These mutual funds are categorized in Level 1 of the fair value hierarchy.

The fair value of corporate debt securities is estimated using recently executed transactions, market price quotations (where observable) or bond spreads. If the spread data does not reference the issuer, then data that reference a comparable issuer are used. Corporate debt securities are generally categorized in Level 2 of the fair value hierarchy.

U.S. government agency securities consist of two categories of agency issued debt. Non-callable agency issued debt securities are generally valued using dealer quotes. Callable agency issued debt securities are valued by benchmarking model-derived prices to quoted market prices and trade data for identical or comparable securities. Agency issued debt securities are categorized in Level 2 of the fair value hierarchy.

U.S. government securities are valued using quoted prices provided by a vendor or broker-dealer. These securities are categorized in Level 2 of the fair value hierarchy, as it is difficult for the custodian to accurately assess at a security level whether a quoted trade on a bond represents an active market.

Foreign and U.S. state government securities are valued using quoted prices in active markets when available. To the extent quoted prices are not available, fair value is determined based on interest rate yield curves, cross-currency basis index spreads, and country credit spreads for structures similar to the bond in terms of issuer, maturity, and seniority. These investments are generally categorized in Level 2 of the fair value hierarchy.

Investments also include investments in a diversified closed end private equity fund with a focus on buyout and secondary market opportunities in the United States and the European Union, as well as an investment in a venture capital fund focused on companies developing promising health care technologies that can be commercialized into revolutionary products and services that improve the practice of medicine and the delivery and management of health care. The investments are not redeemable and distributions are received through liquidation of the underlying assets of the funds. It is estimated that the underlying assets will be liquidated over the next four to ten years. The fair value estimates of these investments are based on NAV as provided by the investment managers. Unfunded commitments as of December 31, 2023, and 2022 totaled \$81.1 million and \$80.1 million, respectively.

The AMA manages its investments in accordance with Board-approved investment policies that establish investment objectives of real inflation-adjusted growth over the investment time horizon, with diversification to provide a balance between long-term growth objectives and potential liquidity needs.

The following table presents information about the AMA's investments measured at fair value as of December 31. In accordance with ASC Subtopic 820-10, investments that are measured at fair value using the NAV per share (or its equivalent) practical expedient have not been classified in the fair value hierarchy. The fair value amounts presented in this table are intended to permit reconciliation of the fair value hierarchy to the amounts presented in the consolidated statements of financial position.

	2023	2022
Level 1 – Quoted prices in active market for identical securities		
Equity securities	\$ 544.3	\$ 419.9
Fixed-income mutual funds	19.4	27.1
	563.7	447.0
Level 2 – Significant other observable inputs		
Debt securities		
Corporate	126.0	106.7
U.S. government and federal agency	254.3	264.8
Foreign government	28.3	24.7
U.S. state government	0.1	0.1
	408.7	396.3
Other investments measured at NAV – Private equity and venture capital funds		
Investments	\$ 1,088.4	\$ 933.2

Interest and dividends are included in investment income as operating revenue while realized and unrealized gains and losses are included as a component of non-operating items.

Investment income consists of:

	2023	2022
Investment dividend and interest income	\$ 25.0	\$ 18.3
Management fees	(3.7)	(3.2)
	\$ 21.3	\$ 15.1

Investment non-operating items include:

	2023	2022
Realized gains on investments, net	\$ 15.2	\$ 6.4
Unrealized gains (losses) on investments, net	89.8	(121.5)
	\$ 105.0	\$ (115.1)

5. Other assets

Other assets include investments in mutual funds maintained in separate accounts designated for various nonqualified benefit plans that are not available for operations. Mutual funds are open-ended SEC registered investment funds with a daily NAV. The mutual funds allow investors to sell their interests to the fund at the published daily NAV, with no restrictions on redemptions. These mutual funds are categorized in Level 1 of the fair value hierarchy. The investments totaled \$9.8 million and \$8.2 million as of December 31, 2023 and 2022, respectively.

6. Property and equipment

Property and equipment at December 31 consists of:

	2023	2022
Leasehold improvements	\$ 36.2	\$ 39.0
Furniture and office equipment	17.5	19.9
Information technology		
Hardware	11.6	12.9
Software	96.6	94.4
	161.9	166.2
Accumulated depreciation and amortization	(134.6)	(132.9)
Property and equipment, net	\$ 27.3	\$ 33.3

7. Retirement savings plan

The AMA has a 401(k) retirement and savings plan, which allows eligible employees to contribute up to 75 percent of their compensation annually, subject to Internal Revenue Service (IRS) limits. The AMA matches 100 percent of the first three percent and 50 percent of the next two percent of employee contributions. The AMA may, at its discretion, make additional contributions for any year in an amount up to two percent of the compensation for each eligible employee. Compensation is subject to IRS limits and excludes bonuses and severance pay. AMA matching and discretionary contribution expense totaled \$9.2 million and \$8.3 million in 2023 and 2022, respectively.

8. Postretirement health care benefits

The AMA provides health care benefits to retired employees who were employed on or prior to December 31, 2010. After that date, no individual can become a participant in the plan. Generally, qualified employees become eligible for these benefits if they retire in accordance with the plan provisions and are participating in the AMA medical plan at the time of their retirement. The AMA shares the cost of the retiree health care payments with retirees, paying approximately 60 to 80 percent of the expected benefit payments. The AMA has the right to modify or terminate the postretirement benefit plan at any time. Other employers participate in this plan and liabilities are allocated between the AMA and the other employers.

The AMA has applied for and received the federal subsidy to sponsors of retiree health care benefit plans that provides a prescription drug benefit that is actuarially equivalent to Medicare Part D under the *Medicare Prescription Drug, Improvement and Modernization Act of 2003*. In accordance with *ASC Topic 958-715, Compensation-Retirement Benefits*, the AMA initially accounted for the subsidy as an actuarial experience gain to the accumulated postretirement benefit obligation.

The postretirement health care plan is unfunded. In accordance with *ASC Topic 958-715*, the AMA recognizes this liability in its consolidated statements of financial position.

The following reconciles the change in accumulated benefit obligation and the amounts included in the consolidated statements of financial position at December 31:

	2023	2022
Benefit obligation at beginning of year	\$ 88.1	\$ 117.5
Service cost	0.5	1.1
Interest cost	4.4	3.1
Benefits paid	(4.4)	(4.1)
Participant contributions	1.2	1.2
Federal subsidy	0.2	0.2
Actuarial loss (gain)	17.8	(30.9)
Accrued postretirement benefit costs	\$ 107.8	\$ 88.1

The postretirement health care plan accumulated gains or losses not yet recognized as a component of periodic postretirement health care expense, but included as an accumulated charge or credit to equity as of December 31 are:

	2023	2022
Actuarial losses (gains)	\$ 8.6	\$ (9.7)

Actuarial assumptions used in determining the accumulated benefit obligation at December 31 are:

	2023	2022
Discount rate	5.0%	5.2%
Initial health care cost trend	8.5%	7.0%
Ultimate health care cost trend	4.0%	4.0%
Year that the rate reaches the ultimate trend rate	2047	2046

The change in the initial health care cost trend from 7.0% to 8.5% and claims cost experience were the major drivers of the \$17.8 million actuarial loss in 2023. The change in the discount rate from 2.8% at the end of 2021 to 5.2% in 2022 was the major driver of the \$30.9 million actuarial gain in 2022.

AMA recognizes postretirement health care expense in its consolidated statements of activities. The service cost component is included as part of compensation and benefits expense and the other components of expense are recognized as a non-operating item:

	2023	2022
Service cost	\$ 0.5	\$ 1.1
Non-service costs		
Interest cost	4.4	3.1
Amortization of actuarial (gain) loss	(0.5)	0.4
Total non-service costs	3.9	3.5
	\$ 4.4	\$ 4.6

Postretirement health care-related changes, other than periodic expense, that have been included as a charge or credit to unrestricted equity consist of:

	2023	2022
Actuarial (loss) gain arising during period	\$ (17.8)	\$ 30.9
Reclassification adjustment for recognition of actuarial (gain) loss	(0.5)	0.4
Change in association equity	\$ (18.3)	\$ 31.3

Actuarial assumptions used in determining postretirement health care expense are the same assumptions noted in the table above for determining the accumulated benefit obligation, except as follows:

	2023	2022
Discount rate	5.2%	2.8%
Initial health care cost trend	7.0%	6.1%

The following postretirement health care benefit payments are expected to be paid by the AMA, net of contributions by retirees and federal subsidies:

2024	\$ 3.7
2025	4.1
2026	4.5
2027	4.8
2028	5.1
2029 – 2033	30.1

9. Income taxes

The provision for income taxes includes:

	2023	2022
Operating		
Current	\$ 4.4	\$ 4.3
Deferred	(4.6)	(21.4)
Valuation allowance	5.3	21.5
	5.1	4.4
Tax (benefit) expense related to credits or charges to equity		
Deferred	(1.0)	1.9
	\$ 4.1	\$ 6.3

As prescribed under ASC Topic 740, *Income Taxes*, the AMA determines its provision for income taxes using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for future tax effects of temporary differences between the consolidated financial statement carrying amounts of existing assets and liabilities and their respective tax basis.

The deferred tax benefit or expense from credits or charges to equity represents the estimated tax benefit from recording unrecognized actuarial losses and prior service credits for the postretirement health care plan, pursuant to ASC Topic 958-715.

Valuation allowances are provided to reduce deferred tax assets to an amount that is more likely than not to be realized. The AMA evaluates the likelihood of realizing its deferred tax assets by estimating sources of future taxable income and assessing whether or not it is likely that future taxable income will be adequate for the AMA to realize the deferred tax asset. The valuation allowance reflects the fact that deferred tax assets include future expected benefits, largely related to retiree health care payments, that may not be deductible due to a projected lack of taxable advertising income in future years as well as net operating or capital losses where recoverability will not occur until future taxable income is generated. Increases or decreases in deferred tax assets, where future benefits are considered unlikely, will result in an equal and offsetting change in the valuation reserve. If the AMA were to make a determination in future years that these deferred tax assets would be realized, the related valuation allowance would be reduced and a benefit to earnings recorded.

Deferred tax assets recognized in the consolidated statements of financial position at December 31 are:

	2023	2022
Net operating and capital loss carryforward	\$ 26.5	\$ 21.4
Benefit plans and compensation	5.9	5.2
Other	(0.1)	0.1
	32.3	26.7
Valuation allowance	(29.3)	(24.0)
	\$ 3.0	\$ 2.7

Cash payments for income taxes were \$4.4 million and \$4 million in 2023 and 2022, respectively, net of refunds.

AMA's federal taxes are open to examination by taxing authorities from 2020 through 2023. AMA's state taxes are open to examination for various years depending on the jurisdiction.

10. Leases

AMA leases office space at a number of locations and the initial terms of the office leases range from four years to 15 years. Most office space leases have options to renew at then prevailing market rates, or, in one circumstance, early terminate or contract with appropriate notice and termination payments. As any renewal, termination, or contraction is at the sole discretion of AMA, and at this date is not certain, renewal and termination options are not included in the right-of-use asset (ROU asset) or lease liability. AMA also leases copiers and printers in several locations, with initial terms generally of four years.

The lease agreements do not contain variable lease payments, residual value guarantees or material restrictive covenants. All leases are classified as operating leases.

AMA leases do not provide an implicit interest rate and as such, AMA calculates the lease liability at lease commencement or remeasurement date as the present value of unpaid lease payments using an estimated incremental borrowing rate. The incremental borrowing rate represents the rate of interest that AMA estimates it would have to pay to borrow an amount equal to the lease payments on a collateralized basis over a similar term, based on information available at the time of commencement or remeasurement.

During 2023, AMA extended the term of the main headquarters lease for an additional seven years in return for certain concessions. The ROU asset and lease liability were remeasured as of the modification date and the impact of the extension is a \$17.7 million increase in the ROU asset and corresponding lease liability. In addition, AMA exercised early termination options of two small satellite office leases, with a termination penalty. The impact of the early terminations was not material.

During 2022, AMA exercised a contraction option that reduced the square footage at the main headquarters by approximately 10%, with a contraction penalty. The ROU asset and lease liability were remeasured as of the lease modification date and the impact of the contraction was reflected in the ROU asset and lease liability as of December 31, 2022. ROU assets decreased \$1.3 million, lease liabilities decreased \$2.3 million, with the resulting net gain of \$1 million included as a reduction to other operating expense in 2022.

Operating lease costs totaled \$8.9 million in 2023 and \$9.7 million in 2022. Cash paid for amounts included in the measurement of lease liabilities totaled \$15.3 million in 2023 and \$13.2 million in 2022.

The remaining weighted-average lease term is 11.1 years and 6.3 years as of December 31, 2023 and 2022, respectively. The weighted-average discount rate used for operating leases is 7.2% and 5% for 2023 and 2022, respectively.

The maturity of lease liabilities as of December 31, 2023:

2024	11.5
2025	8.2
2026	1.9
2027	1.9
2028	5.6
2029 and beyond	80.4
Total lease payments	109.5
Less imputed interest	(38.4)
Present value of lease obligations	\$ 71.1

In addition to the above, as of December 31, 2023, AMA entered into a lease for a satellite office that will commence in 2024 with aggregate future lease payments totaling \$4 million.

11. Financial asset availability and liquidity

AMA has a formal reserve policy that defines the reserve investment portfolios as pools of liquid net assets that can be accessed to mitigate the impact of undesirable financial events or to pursue opportunities of strategic importance that may arise, as well as provide a source of capital appreciation. The policy establishes minimum required dollar levels required to be held in the portfolios (defined as an amount equal to one-year's general and administrative operating expenses plus long-term liabilities). The policy also covers the use of dividend and interest income, establishes criteria for use of the funds and outlines the handling of excess operating funds on an annual basis.

Dividend and interest income generated from the reserve portfolios are transferred to operating funds monthly and used to fund operations. The formal reserve policy contemplates use of reserve portfolio funds for board approved time- or dollar-limited strategic outlays, to the extent that the reserve portfolio balances exceed the minimum amount established by policy. All surplus funds generated from operations annually (defined as operating cash plus other current assets minus current liabilities and deferred revenue at year-end) are transferred to the reserve portfolios after year-end. The reserve policy does not cover the for-profit subsidiaries' activities.

AMA invests cash in excess of projected weekly requirements in short-term investments and money market funds. AMA does not maintain any credit facilities as the reserve portfolios provide ample protection against any liquidity needs.

The following reflects AMA's financial assets as of December 31 reduced by amounts not available for general use that have been set aside for long-term investing in the reserve investment portfolios or funds subject to donor restrictions. AMA's financial assets include cash, cash equivalents and donor restricted cash, short-term investments and long-term investments in the reserve portfolios.

	2023	2022
Financial assets	\$ 1,124.5	\$ 966.7
Less assets unavailable for general expenditures:		
Restricted by governing body primarily for long-term investing or for governing body approved outlays	(1,021.2)	(841.4)
Financial assets available to meet cash needs for general expenditures within one year	\$ 103.3	\$ 125.3

In addition to financial assets available to meet general expenditures over the next 12 months, the AMA operates under a policy that requires an annual budget surplus, excluding time- or dollar-limited strategic expenditures approved by the board, and anticipates generating sufficient revenue to cover general ongoing expenditures on an annual basis.

12. Contingencies

In the opinion of management, there are no pending legal actions for which the ultimate liability will have a material effect on the equity of the AMA.

13. Subsequent events

ASC Topic 855, *Subsequent Events*, establishes general standards of accounting for and disclosure of events that occur after the consolidated balance sheet date but before consolidated financial statements are issued or are available to be issued.

For the year ended December 31, 2023, the AMA has evaluated all subsequent events through February 9, 2024, which is the date the consolidated financial statements were available to be issued, and concluded no additional subsequent events have occurred that would require recognition or disclosure in these consolidated financial statements that have not already been accounted for.

14. Functional expenses

The costs of providing program and other activities have been summarized on a functional basis in the consolidated statements of activities. Certain costs have been allocated among the Strategic Arcs and Core Mission Activities, Publishing, Health Solutions and Insurance, Membership and other supporting services.

The expenses that are allocated and the method of allocation include the following: fringe benefits based on percentage of compensation and occupancy based on square footage. All other expenses are direct expenses of each functional area.

	Membership	Publishing, Health Solutions and Insurance	Investments (AMA only)	Strategic Arcs and Core Mission Activities	Governance, Administration and Operations	Health2047 and Subsidiaries	Total
Cost of products sold and selling expense	\$ -	\$ 27.8	\$ -	\$ -	\$ -	\$ -	\$ 27.8
Compensation and benefits	6.7	65.5	-	87.7	93.6	8.5	262.0
Occupancy	0.5	5.5	-	7.0	7.3	0.9	21.2
Travel and meetings	0.1	3.4	-	7.9	8.0	0.5	19.9
Technology costs	1.1	12.1	-	8.4	12.2	0.1	33.9
Marketing and promotion	10.5	1.2	-	8.3	-	0.7	20.7
Professional services	0.2	4.2	0.3	18.5	3.4	3.1	29.7
Other operating expense	0.9	5.0	0.4	12.2	3.8	2.8	25.1

INDEPENDENT AUDITOR'S REPORT

The Board of Trustees of American Medical Association

Opinion

We have audited the consolidated financial statements of American Medical Association (the "AMA") and subsidiaries, which comprise the consolidated statements of financial position as of December 31, 2023 and 2022, and the related consolidated statements of activities and cash flows for the years then ended, and the related notes to the consolidated financial statements (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the AMA as of December 31, 2023 and 2022, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the AMA and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the AMA's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable

assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the AMA's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the AMA's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Deloitte & Touche LLP
Chicago, Illinois
February 9, 2024

WRITTEN STATEMENT OF CERTIFICATION OF CHIEF EXECUTIVE OFFICER AND CHIEF FINANCIAL OFFICER

The undersigned hereby certify that the information contained in the consolidated financial statements of the American Medical Association for the years ended December 31, 2023 and 2022 fairly present, in all material respects, the financial condition and the results of operations of the American Medical Association.

James L. Madara, MD
Executive Vice President and Chief Executive Officer

Denise M. Hagerty
Senior Vice President and Chief Financial Officer

REPORT OF THE BOARD OF TRUSTEES

B of T Report 04-A-24

Subject: AMA 2025 Dues

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee F

1
2 Our American Medical Association (AMA) last raised its dues in 1994. The AMA continues to
3 invest in improving the value of membership. As our AMA’s membership benefits portfolio is
4 modified and enhanced, management will continuously evaluate dues pricing to ensure
5 optimization of the membership value proposition.

6
7 RECOMMENDATION

8
9 2025 Membership Year

10
11 The Board of Trustees recommends no change to the dues levels for 2024, that the following be
12 adopted and that the remainder of this report be filed:

13

14	Regular Members	\$ 420
15	Physicians in Their Fourth Year of Practice	\$ 315
16	Physicians in Their Third year of Practice	\$ 210
17	Physicians in Their Second Year of Practice	\$ 105
18	Physicians in Their First Year of Practice	\$ 60
19	Physicians in Military Service	\$ 280
20	Semi-Retired Physicians	\$ 210
21	Fully Retired Physicians	\$ 84
22	Physicians in Residency/Fellow Training	\$ 45
23	Medical Students	\$ 20

24
25 (Directive to Take Action)

Fiscal Note: No significant fiscal impact.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 21-A-24

Subject: American Medical Association Meeting Venues and Accessibility
(Board of Trustees Report 12-I-23, RES 602-I-22)

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee F

1 At the 2023 Interim Meeting, Board of Trustees Report 12 American Medical Association Meeting
2 Venues and Accessibility responded to Resolution 602-I-22 and proposed amendments to Policy
3 G-630.140 which would have expanded options for meeting venues selection. The Report was
4 referred to the 2024 Annual meeting. Policy G-630.140 (4) states:

5
6 4. It is the policy of our AMA not to hold meetings organized and/or primarily sponsored by
7 our AMA, in cities, counties, or states, or pay member, officer or employee dues in any club,
8 restaurant, or other institution, that has exclusionary policies, including, but not limited to,
9 policies based on, race, color, religion, national origin, ethnic origin, language, creed, sex,
10 sexual orientation, gender, gender identity and gender expression, disability, or age unless
11 intended or existing contracts or special circumstances justify an exception to this policy.
12

13 This report responds to referred Board of Trustees Report 12, specifically addressing concerns
14 about assurances and guarantees for personal safety and medical care in an emergency.
15

16 DISCUSSION

17
18 The Board has heard member concerns and recommends that current policy remain in place and be
19 strictly enforced at all AMA meetings of the AMA. It is at the discretion of the House of Delegates
20 to change current policy.
21

22 CONCLUSION

23
24 This principled approach reflects the AMA's ongoing commitment to advocating for policies that
25 safeguard reproductive rights and combat discrimination. The organization remains steadfast in
26 promoting an inclusive and supportive environment for all members and attendees.
27

28 RECOMMENDATION

29
30 The Board therefore recommends Policy G-630.140 be reaffirmed and is strictly enforced as a
31 resolute stance against all forms of discrimination, and support of evidenced-based medicine,
32 underscoring our commitment to fostering an inclusive and safe environment for all attendees. This
33 strategic recommendation places a primary emphasis on prioritizing attendee safety, reflecting the
34 values and principles upheld by the AMA.

1 **Relevant AMA Policy**

2

3 **Policy G-630.140 Lodging, Meeting Venues, and Social Functions**

4 1. Our AMA supports choosing hotels for its meetings, conferences, and conventions based on size,
5 service, location, cost, and similar factors.

6 2. Our AMA shall attempt, when allocating meeting space, to locate the Section Assembly
7 Meetings in the House of Delegates Meeting hotel or in a hotel in close proximity.

8 3. All meetings and conferences organized and/or primarily sponsored by our AMA will be held in
9 a town, city, county, or state that has enacted comprehensive legislation requiring smoke-free
10 worksites and public places (including restaurants and bars), unless intended or existing contracts
11 or special circumstances justify an exception to this policy, and our AMA encourages state and
12 local medical societies, national medical specialty societies, and other health organizations to adopt
13 a similar policy.

14 4. It is the policy of our AMA not to hold meetings organized and/or primarily sponsored by our
15 AMA, in cities, counties, or states, or pay member, officer or employee dues in any club,
16 restaurant, or other institution, that has exclusionary policies, including, but not limited to, policies
17 based on, race, color, religion, national origin, ethnic origin, language, creed, sex, sexual
18 orientation, gender, gender identity and gender expression, disability, or age unless intended or
19 existing contracts or special circumstances justify an exception to this policy.

20 5. Our AMA staff will work with facilities where AMA meetings are held to designate an area for
21 breastfeeding and breast pumping.

22 6. All future AMA meetings will be structured to provide accommodations for members and
23 invited attendees who are able to physically attend, but who need assistance in order to
24 meaningfully participate.

Fiscal Note: Minimal

REPORT OF THE BOARD OF TRUSTEES

B of T Report 23-A-24

Subject: United States Professional Association for Transgender Health Observer Status in the House of Delegates

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee F

1 The Board of Trustees has received a request from the United States Professional Association for
2 Transgender Health (USPATH) to be considered for Official Observer status in the House of
3 Delegates (HOD). The USPATH’s request has been thoroughly considered using the criteria below
4 (Policy G-600.025, “Official Observers in Our AMA House”):
5

- 6 1. The organization and the AMA should already have established an informal relationship
7 and have worked together for the mutual benefit of both;
- 8 2. The organization should be national in scope and have similar goals and concerns about
9 health care issues;
- 10 3. The organization is expected to add a unique perspective or bring expertise to the
11 deliberations of the HOD; and
- 12 4. The organization does not represent narrow religious, social, cultural, economic, or
13 regional interests so that formal ties with the AMA would be welcomed universally by
14 AMA members.
15

16 The Board has discussed the USPATH’s request and presents the following report.

17
18 DISCUSSION

19
20 As part of its request, USPATH submitted information on how it has met the criteria for Official
21 Observer status, which is summarized below.
22

23 *Criterion 1. The organization and the AMA should already have established an informal*
24 *relationship and have worked together for the mutual benefit of both.*
25

26 USPATH has established informal relationships with the AMA through member and board
27 member involvement in the AMA Advisory Committee on LGBTQ Issues as well as the business
28 of the AMA HOD. Given their national scope, USPATH shares similar goals and concerns as the
29 AMA in ensuring appropriate access to and practice of evidence-based medicine and the
30 elimination of barriers to care placed between physicians and their patients.
31

32 *Criterion 2. The organization should be national in scope and have similar goals and concerns*
33 *about health care issues.*
34

35 USPATH is regional affiliate organization of the World Professional Association for Transgender
36 Health (WPATH), which is an interdisciplinary professional and educational organization devoted

1 to transgender health. USPATH professional, supporting, and student members engage in clinical
2 and academic research to develop evidence-based medicine and strive to promote a high quality of
3 care for transgender and gender-nonconforming individuals within the US.

4
5 As a national interdisciplinary, professional organization, USPATH works to further the
6 understanding and treatment of gender dysphoria by professionals in medicine, psychology, law,
7 social work, counseling, psychotherapy, family studies, sociology, anthropology, sexology, speech
8 and voice therapy, and additional related fields. USPATH provides opportunities for professionals
9 from various sub-specialties to communicate with each other in the context of research and
10 treatment of gender dysphoria including sponsoring biennial scientific symposia. USPATH is a
11 regional affiliate of WPATH, which publishes the Standards of Care for the Health of Transgender
12 and Gender Diverse People, Version 8, which articulate a professional consensus about the
13 psychiatric, psychological, medical, and surgical management of gender dysphoria and help
14 professionals understand the parameters within which they may aid those with these conditions.
15 The Standards of Care are frequently cited to support current AMA policy regarding gender-
16 affirming care.

17
18 *Criterion 3. The organization is expected to add a unique perspective or bring expertise to the*
19 *deliberations of the HOD.*

20
21 Given their multi-disciplinary membership and focus on a particular area of health care, USPATH
22 will add a unique perspective and bring expertise to the deliberations of the AMA HOD.

23
24 *Criterion 4. The organization does not represent narrow religious, social, cultural, economic, or*
25 *regional interests so that formal ties with the AMA would be welcomed universally by AMA*
26 *members.*

27
28 The USPATH does not represent narrow religious, social, cultural, economic, or regional interests
29 and has already been welcomed to participate in previous AMA activities.

30
31 The Board of Trustees appreciates the previous involvement of USPATH with the AMA Advisory
32 Committee on LGBTQ Issues and believes that the USPATH should be recognized as an Official
33 Observer and welcomed to the House in that capacity.

34
35 RECOMMENDATION

36
37 The Board of Trustees recommends that the United States Professional Association for
38 Transgender Health be admitted as an Official Observer in the House of Delegates, and that the
39 remainder of this report be filed.

Fiscal Note: Under \$500

REPORT OF THE BOARD OF TRUSTEES

B of T Report 25-A-24

Subject: Environmental Sustainability of AMA National Meetings. Supporting Carbon Offset Programs for Travel for AMA Conferences (RES 603-A-23 and 608-A-23)

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee F

1 At the 2023 Annual Meeting, Resolutions 603- Environmental Sustainability of AMA National
2 Meetings and 608 - Supporting Carbon Offset Programs for travel for AMA Conferences were
3 introduced. Both resolutions received testimony in favor of referral. Testimony also suggested that
4 our American Medical Association (AMA) lead the health care profession by example and that a
5 strategic plan to address environmental sustainability be developed with attention to fiscal impact.
6 This report is in direct response to the two referred resolutions addressing AMA’s commitment to
7 sustainability of AMA National Meetings and exploring supporting carbon offset programs for
8 travel for AMA Conferences
9

10 DISCUSSION

11
12 The AMA recognizes the imperative to lead by example and play a proactive role in promoting
13 environmental stewardship within the health care community. Resolutions 603 and 608 calls for the
14 AMA to commit to reducing carbon emissions and fostering a more sustainable future. Resolution
15 603 calls for the AMA to commit to reaching net-zero emissions for its business operations by
16 2030, and advocates for the reduction of emissions within the broader health care system.
17

18 Resolution 608 focuses on the importance of mitigating carbon emissions related to AMA events
19 and calls for exploring opportunities for attendees to offset their environmental impact. While these
20 resolutions highlight AMA’s dedication to sustainability, it is also crucial to develop a
21 comprehensive plan, considering all related implications and ensuring effective implementation.
22 After initial research and consultation with relevant stakeholders, we are sharing an update on
23 AMA’s progress towards achieving carbon neutrality within our AMA and encouraging similar
24 efforts within the broader health care system. Below is a summary of our findings and the next
25 steps.
26

27 *Net Zero Emissions for Business Operations by 2030*

28
29 AMA is committed to progressing towards reaching net zero emissions for business operations by
30 2030, by continuing to execute against the current initiatives and expanding upon them. Our team
31 has already begun implementing measures to reduce our carbon footprint, including but not limited
32 to:
33

34 Renegotiating the Chicago headquarters’ lease with a LEED-Gold certified building and
35 advocating for sustainable practices with our corporate partner vendors.

1 Making multiple energy efficient upgrades within our facilities:

2
3 New HVAC systems (including Merv-13 filtration) were added on each floor, resulting in a 35
4 percent energy reduction.

5
6 Lighting retrofits, including adding LEDs and a daylight harvesting feature in the lobby to
7 automatically dim the lights according to the amount of sunlight entering the building), produced a
8 savings of two million kilowatt-hours per year, or 70 percent less energy.

9
10 Water conservation programs:

- 11 • A restroom retrofit to incorporate low-flow fixtures (e.g., toilets that use 1.60 gallons
12 of water per minute (gpm), urinals at 1 gpm and faucet aerators at 0.5 gpm).
- 13 • A 20 percent energy savings by re-landscaping with low-water plants like native
14 perennials and sedum.
- 15 • Adding meters on all hoses, and a green-roof water supply to monitor usage and detect
16 leaks.
- 17 • 50 percent of AMA Plaza's roof houses a green vegetable garden, which not only
18 reduces carbon dioxide emissions but also slows the amount of rainfall runoff that goes
19 to Chicago's sewer system. The roof at AMA Plaza is also home to a vegetable garden
20 and bee program, which harvests honey twice a year.

21
22 AMA utilizes a shuttlebus service, bike area, on-site Zipcars and scooter and hybrid vehicle
23 parking: all of which contribute to nine metric tons of carbon emissions reduction (the shuttlebuses
24 alone save an average of 65,000 pounds in carbon dioxide emissions per month).

25
26 AMA's HQ café sources local food and participates in the building's compost program, which
27 collects 70 percent of its waste; AMA staff and visiting members/meeting attendees can charge
28 their electronics using solar-powered benches in AMA plaza.

29
30 AMA reduced its waste generation (paper and otherwise) and implemented enhanced recycling
31 programs.

32
33 Leadership has encouraged telecommuting and virtual meetings to minimize travel emissions.

34 35 *Evaluating Feasibility of Carbon Offsets and Sustainable Meeting Practices*

36
37 Investing in projects to increase AMA's energy efficiency can contribute to reducing AMA's
38 carbon emissions at a relatively low cost. Partnering with vendors that use renewable energy
39 sources can also offer a cost-effective way to offset carbon emissions, and we continue to explore
40 new vendors who generate clean energy, displacing the need for fossil fuel-based electricity and
41 effectively reducing overall carbon emissions.

42
43 Leadership in Energy and Environmental Design (LEED) is the world's most widely used green
44 building rating system, providing a framework for healthy, efficient, cost-effective buildings
45 offering environmental, social, and other benefits. The AMA has tenancy in three locations
46 (Chicago, DC, and Greenville) that have implemented varying sustainability best practices
47 including LEED Green Certification, light sensors, recycling, etc. within their building guidelines.
48 The AMA also instituted a requirement to contract exclusively with LEED-certified conference
49 centers for Annual and Interim meetings in 2030. The Annual and Interim meetings have been
50 contracted through 2029 with Hyatt and Marriott: AMA has committed to Hyatt Regency Chicago,
51 a LEED-certified building, for AMA's Annual meeting through 2029; Hyatt's World of Care

1 program is committed to advancing environmental action. AMA has contracted with Marriott
2 properties through 2029 for Interim meetings; Marriott is integrating sustainability across their
3 properties and is committed to mitigating climate-related risk, reducing environmental impact,
4 building and operating sustainable hotels and sourcing responsibly (Gaylord National Resort and
5 Convention Center in National Harbor, Maryland, recently announced a partnership with Unison
6 Energy to commission a six-megawatt combined heat and power system to reduce its carbon
7 footprint).

8
9 AMA is also pleased to announce that the forthcoming 2027 and 2029 Interim Meetings will be
10 held at the prestigious Gaylord Pacific, currently under construction. Gaylord Pacific is being
11 meticulously designed to adhere to California's stringent energy code Title 24, surpassing even the
12 standards set by LEED certified buildings. The project incorporates all coastal development
13 mandates, positioning it as one of the most sustainable hotel and resort destinations in the United
14 States; this commitment to environmental sustainability aligns seamlessly with the AMA's values
15 and underscores our dedication to hosting events that prioritize sustainability and environmental
16 stewardship.

17 18 CONCLUSION

19
20 In conclusion, the AMA is committed to continuing to execute against our current initiatives, and
21 expanding upon them, to achieve environmental sustainability. These resolutions reflect our
22 proactive stance in reducing carbon emissions and championing sustainability initiatives within our
23 organization and the broader health care sector. Through our efforts, we demonstrate our dedication
24 to mitigating the environmental impact of our business operations. Additionally, our commitment
25 to limiting carbon emissions generated by AMA events and researching opportunities for attendees
26 to offset their environmental impact, highlights our holistic approach to sustainability. Through
27 these initiatives, the AMA reaffirms its commitment to environmental stewardship and welcomes
28 the opportunity to drive meaningful change within the health care ecosystem and beyond.

29
30 RECOMMENDATION: The Board of Trustees recommends that the following be adopted in lieu
31 of Resolutions 603-A-23 and 608-A-23, and the remainder of the report be filed:

- 32
33 1. Our AMA is committed to progression to net zero emissions for its business operations by
34 2030, by continuing and expanding energy efficiency upgrades, waste reduction initiatives, and
35 the transition to renewable energy sources (New HOD Policy).
36
37 2. Our AMA will prioritize sustainable organizational practices to reduce emissions over
38 purchasing carbon offsets (New HOD Policy).
39
40 3. Our AMA will continue to prioritize collaboration within the health care community by sharing
41 the learnings from our sustainability initiative to inspire our peer organizations to follow suit
42 and adopt similar environmentally conscious practices (Directive-to-Take-Action).

Fiscal Note: \$20,000

REPORT OF THE BOARD OF TRUSTEES

B of T Report 26-A-24

Subject: Equity and Justice Initiatives for International Medical Graduates

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee F

1 BACKGROUND

2

3 At the 2023 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD),
4 Resolution 605-A-23, “Equity and Justice Initiatives for International Medical Graduatesⁱ,” sponsored by
5 the International Medical Graduates Section, was referred to the Board of Trustees. Resolution 605-A-23
6 requested:

7

8 1. That our American Medical Association, via the Center for Health Equity, create a yearly session
9 (during the Interim or Annual Meeting) as a part of the equity forum that will be dedicated to
10 international medical graduates (Directive to Take Action); and

11

12 2. That our AMA, via the Center of Health Equity, create an amendment to the health equity plan
13 that will address the issues of equity and justice for international medical graduates. (Directive to
14 Take Action)

15

16 DISCUSSION

17

18 This report seeks to provide clarity to two questions: (1) Whether the AMA should, via the Center for
19 Health Equity, create a yearly session (during the Interim or Annual Meeting) as part of the equity forum
20 that will be dedicated to international medical graduates; and (2) Whether the AMA should, via the
21 Center for Health Equity, create an amendment to the health equity plan that will address the issues of
22 equity and justice for international medical graduates.

23

24 *AMA Health Equity Open Forum*

25

26 In 2022, at the Annual Meeting, the HOD adopted new policy titled “Continuing Equity Education G-
27 600.960”, which instructed AMA to establish an Open Forum on Health Equity, to be held at least
28 annually at a House of Delegates Meeting, for members to directly engage in educational discourse and
29 strengthen organizational capacity to advance and operationalize equity.

30

31 Prior to its adoption, Resolution 611-A-22, as it was known at the time, was discussed openly during the
32 Reference Committee F Hearing. The resulting committee report provided:

33

34 Reference Committee heard supportive testimony acknowledging the importance of
35 prioritizing equity through forums, education sessions, and other programming. Testimony
36 supported changing the frequency of educational opportunities to each House of Delegates
37 meeting, noting that it will increase education and awareness of the effects of bias,
38 prejudice, and racism in medicine. During testimony, it was mentioned that a call for

1 education sessions is made prior to each House of Delegates meeting. For the June 2022
2 meeting, the Center for Health Equity opted to host education sessions in lieu of an open
3 forum. Format and timing of educational sessions at the House of Delegates is at the
4 discretion of the Speakers in consultation with subject matter experts. In addition, the
5 proffered language allows for the potential of additional sessions offered online,
6 asynchronous to the House of Delegates meeting, or even at other AMA sponsored
7 meetings.ⁱⁱ
8

9 The report provides many details, but it appears that delegates and attendees did not discuss specific
10 subject matter to be presented at each open forum, subsequently leaving the policy open to interpretation.
11 This is not an uncommon practice, if one were to skim through AMA policy, they would find that many
12 organizational policies have been adopted in the same manner relying on staff experts to take the lead on
13 executing requested actions.
14

15 If we can infer anything from the HOD's decision to adopt the policy on Continuing Equity Education
16 with its current language, it would be that the HOD reserved the task of making equity-based decisions on
17 content development for the open forum for AMA staff. Since the policy was adopted at the 2022 Annual
18 Meeting, the Center for Health Equity has taken the lead on planning and has successfully hosted two
19 forums. During the planning and development stages, staff consistently prioritizes equity by ensuring
20 diverse perspectives are represented; considering the unique needs and experiences of all potential
21 attendees to create inclusive content that resonates with a wide audience; focusing on time-sensitive
22 topics to operationalize equity; and regularly assessing and adjusting their approach to address any
23 disparities and promote fairness in the planning and development process. To permanently designate a
24 particular topic or group over others would be counterproductive to the ideals of fairness and equity and
25 risks the possibility of harm, creating an atmosphere of resentment and discouragement among those who
26 may feel excluded or unfairly treated. Instead, AMA staff has employed an equitable content planning
27 and development process that balances the consideration of competing recommendations. Since policy
28 does require an equity forum at least once a year, each meeting presents an additional opportunity to
29 educate the House on a variety of equity-based topics, which can include, but is not limited to, issues
30 related to IMGs.
31

32 *AMA Strategic Plan to Embed Racial Justice and Advance Health Equity* 33

34 In 2021, the Center for Health Equity published the AMA Strategic Plan to Embed Racial Justice and
35 Advance Health Equity. The 86-page document is a comprehensive initiative aimed at addressing
36 systemic inequities in healthcare. Rooted in the recognition of historical injustices and social drivers of
37 health, the plan outlines strategic actions to promote equity, diversity, and inclusion within the medical
38 community. It emphasizes the need for culturally competent care, increased representation of minoritized
39 and marginalized individuals in healthcare leadership, and the dismantling of barriers that perpetuate
40 racial and ethnic disparities. The Strategic Plan has sought to accomplish many goals, but the document
41 was also scheduled to sunset in 2023. To continue the work that the first Strategic Plan initiated, the
42 AMA has pushed forward with the development of the next iteration of the Plan. Following the goals
43 outlined in the first Strategic Plan, the second plan will go further by highlighting IMGs specifically, their
44 potential for advancing health equity amid significant challenges in training and working within the U.S.
45 It will also include details related to recent policy developments, accomplishments, and a call to action for
46 AMA. Prior to its release, authors of the Plan have worked closely with AMA IMG Section leadership to
47 thoroughly review and ensure that IMG perspectives are prominent in the document. At the 2024 Annual
48 Meeting, the Health Equity Open Forum will be an overview of the 2024-2025 Strategic Plan with
49 designated time to focus on IMG issues and perspectives. Our AMA will continue to support IMGs by
50 advocating for fair and transparent processes in licensing, protection of all rights and privileges, and
51 recognizing the valuable contributions IMGs make to the U.S. health care system.

1 RECOMMENDATION

2

3 The Board of Trustees recommends that Resolution 605-A-23 not be adopted and that the remainder of
4 this report be filed.

Fiscal Note: None.

ⁱ Resolution 605-A-23, "Equity and Justice Initiatives for International Medical Graduates." <https://www.ama-assn.org/system/files/a23-605.pdf>

ⁱⁱ 2022 Annual Meeting Reference Committee F Report. <https://www.ama-assn.org/system/files/a22-reference-committee-reports.pdf>

EXECUTIVE SUMMARY

At the 2023 Annual Meeting of the House of Delegates (HOD), Resolution 609-A-23, “Encouraging Collaboration Between Physicians and Industry in Augmented Intelligence (AI) Development”, was referred. The directives of the referred resolution ask the American Medical Association (AMA) to address physician-centered innovation, specifically in the field of AI and, enhance physician access to the Physician Innovation Network (PIN) community through matchmaking and an advisor network. The following Board of Trustees Report provides detailed information about the AMA’s efforts to ensure the physician voice is front and center in the design, development and use of technology and innovation, including AI, across healthcare, and outlines various ways the AMA is supporting physicians in the implementation and use of these tools. The AMA’s work includes numerous activities in the following areas:

- Engagement between physicians and the AI industry facilitated by the Physician Innovation Network (PIN);
- Advocacy for legislative oversight of health care AI and the development of principles to guide such advocacy;
- Formation of programs and collaborative partnerships with other medical and professional societies, in addition to other stakeholders in the health care AI space;
- Development of educational tools and resources;
- Publication of reports and research; and
- Adoption of multiple related AMA policies

REPORT OF THE BOARD OF TRUSTEES

B of T Report 28-A-24

Subject: Encouraging Collaboration Between Physicians and Industry in AI Development

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee F

1 INTRODUCTION

2
3 At the 2023 Annual Meeting, the House of Delegates (HOD) referred Resolution 609-A-23,
4 “Encouraging Collaboration Between Physicians and Industry in Augmented Intelligence (AI)
5 Development”, for report back at the 2024 Annual Meeting. This resolution was introduced by the
6 Medical Student Section and asked that our American Medical Association (AMA):
7

- 8 1. Augment the existing Physician Innovation Network (PIN) through the creation of advisors
9 to specifically link physician members of AMA and its associated specialty societies with
10 companies or individuals working on AI research and development, focusing on:
11
 - 12 a. Expanding recruitment among AMA physician members,
 - 13 b. Advising AMA physician members who are interested in healthcare innovation/AI
14 without knowledge of proper channels to pursue their ideas,
 - 15 c. Increasing outreach from AMA to industry leaders and companies to both further
16 promote the PIN and to understand the needs of specific companies,
 - 17 d. Facilitating communication between companies and physicians with similar
18 interests,
 - 19 e. Matching physicians to projects early in their design and testing stages,
 - 20 f. Decreasing the time and workload spent by individual physicians on finding
21 projects themselves,
 - 22 g. Above all, boosting physician-centered innovation in the field of AI research and
23 development (Directive to Take Action); and
24
- 25 2. Support selection of PIN advisors through an application process where candidates are
26 screened by PIN leadership for interpersonal skills, problem solving, networking abilities,
27 objective decision making and familiarity with industry (New HOD Policy).
28

29 BACKGROUND

30
31 Artificial intelligence focuses on developing smart machines that can perform tasks that otherwise
32 require human intelligence. Augmented intelligence (AI), a subsection of artificial intelligence,
33 depends on machine learning (ML) techniques to extract large amounts of data to assist humans in
34 solving problems.^{1,2} It has been used within a wide array of fields and is responsible for innovations
35 such as web search, targeted content and product recommendations and autonomous vehicles.¹ In
36 2016, AI projects within medicine attracted more investment than AI projects within any other
37 sector of the global economy.³ AI applications within medicine include diagnostics, drug discovery

1 and development, medical documentation and remote treatment. Several recent strides have been
2 made in this area. For instance, Google developed and trained an AI model to classify images as
3 diabetic retinopathy and macular edema for adult patients with diabetes, producing implications for
4 improved detection, diagnosis and treatment of diabetic retinopathy. Additionally, companies have
5 used ML algorithms to identify drugs that treat neurological diseases.¹

6
7 The purpose of AI application to medicine is to supplement—not supplant—the work of health
8 care practitioners and a misunderstanding of this concept is a major deterrent to the adoption of AI
9 innovations by clinicians and health systems.⁴ It is essential that physicians and members of their
10 care teams are included across all stages of the development of AI innovations in health care so
11 such designs best reflect what they find valuable for treating their patients and reducing
12 administrative and other burdens. The integral role physicians play in the development of health
13 care AI enables the refinement of clinical algorithms, testing of new clinical tools and research
14 designed to improve disease management and outcomes.⁵ However, research shows that current AI
15 applications in health care may not sufficiently reflect that they’ve been designed with health care
16 practitioners at the forefront. Despite physicians’ desire to be consulted on tech decisions, many of
17 them lack any significant influence on these decisions.⁶

18
19 It is especially important that efforts to include physicians in the development of health care AI are
20 diverse and comprise marginalized and minoritized physicians so bias that underlies existing data is
21 not further entrenched into AI solutions and health inequities are not exacerbated. Further,
22 equitable inclusion of physicians in the research and development of AI is imperative to its success,
23 as evidenced by literature on racial concordance in medicine. For example, a 2018 Stanford study
24 illustrated how Black physicians were more likely to engage with Black men—a patient group with
25 a historically lower life expectancy—and even collect consent to provide preventive services like
26 cardiovascular screenings and immunizations.⁷ Additionally, research found that a 10% increase in
27 Black primary care physicians was associated with a 30.61-day increase in life expectancy and a
28 decrease in all-cause mortality by 12.71 deaths per 100,000 among Black individuals.⁸ Despite
29 such statistics, only 5.7% of physicians in 2023 identified as Black.⁹ AI can either improve the
30 system by filling these gaps or inadvertently worsen current health inequities by reproducing and
31 normalizing what exists. While increased application of AI in healthcare is expected to reduce bias
32 and promote health equity by improving evidence-based interventions for marginalized and
33 minoritized communities, the voices of these physicians must be integrated early and more often
34 within the development of these tools to truly improve health outcomes for all patients.¹⁰

35 36 DISCUSSION

37
38 The AMA is committed to ensuring that AI can meet its full potential to advance clinical care and
39 improve clinician well-being. As the number of AI-enabled health care tools continue to grow, it is
40 critical they are designed, developed and deployed in a manner that is ethical, equitable and
41 responsible. The use of AI in health care must be transparent to both physicians and patients, and
42 positioning the physician voice front and center is critical.

43 44 *AMA Physician Innovation Network (PIN)*

45
46 To address concerns around the lack of the physician voice in health care innovation, the AMA
47 launched the [Physician Innovation Network](#) (PIN) in 2016. Since then, the network has grown to
48 over 18,000 users and continues to bring together physicians and health tech companies through its
49 various offerings.

1 The PIN platform is available for all physicians to join and connect with other stakeholders across
2 the innovation ecosystem including responding to opportunities posted by digital health and
3 technology companies seeking feedback from subject matter experts. AMA's [PIN "In Real Life"](#)
4 (IRL) events launched in 2022 with the purpose of bringing the online platform to life, encouraging
5 companies to be transparent about their design challenges and hosting diverse physician voices to
6 create an engaging, live PIN experience. Health tech conferences are not usually the events that
7 most practicing physicians attend to advance their professional development. However, such a
8 structure allows physicians to connect with companies live, share clinical problems and expertise
9 and provide feedback on solutions being developed across the health care industry. The PIN IRL
10 events will evolve this structure in an iterative fashion as we continue to evaluate physicians' needs
11 in the changing technological landscape. Further, PIN Community Office Hours occur bi-weekly
12 and provide an opportunity for subject matter experts across the PIN community to connect with
13 digital health solutions focused on optimizing patient experience and minimizing physician
14 burnout.

15
16 The AMA is engaging PIN Physicians to gather feedback and continue iterating on how to help
17 bring better solutions to market together. All AMA members are invited to join PIN and should be
18 ambassadors to their organizations about the platform's ability to link subject matter experts and
19 solution designers. Companies developing health care solutions enabled by AI and ML are
20 interacting on PIN. However, it is the individual physician member's decision how they would like
21 to interact with each company. Some companies post paid opportunities while others are so early in
22 their development that they only have volunteer opportunities posted. Additionally, the AMA is in
23 conversations with the World Medical Association to expand the PIN to a global audience.
24 Applying for PIN IRL engagements is one of the best ways to be involved. As we examine the
25 successes of PIN and the current clinical technology needs of physicians, the PIN strategy is
26 continuously re-evaluated to ensure the program's impact is maximized.

27
28 *Advocacy*

29
30 AI has been an area of focus for AMA advocacy for several years with the first set of advocacy
31 principles developed in 2018. In addition to interfacing with medical devices, AI is increasingly
32 used in health care administration and to reduce physician burden, and policy and guidance for
33 both device and non-device use of health care AI is necessary. Recognizing this, the AMA
34 developed an updated set of advocacy principles that builds on current AI policy. These [new](#)
35 [principles](#) address the development, deployment and use of health care AI, with particular emphasis
36 on:

- 37
38
- 39 • Health care AI oversight;
 - 40 • When and what to disclose to advance AI transparency;
 - 41 • Generative AI policies and governance;
 - 42 • Physician liability for use of AI-enabled technologies;
 - 43 • AI data privacy and cybersecurity; and
 - 44 • Payor use of AI and automated decision-making systems.¹¹

45 The AMA also continues to keep track of AI-related legislation and policy coming from both the
46 congressional bodies, as well as the federal government.

47
48 Additionally, the AMA plans to research state-based AI policies to better understand local
49 approaches to policy and regulation for the use of AI across health care stakeholders, including
50 health care practices, health systems and payers. *AMA research, programs and other resources*

1
2 The AMA is committed to researching the AI landscape in health care and developing resources to
3 support physicians in getting involved in the design, development and deployment of these tools
4 across the industry. In 2023, the AMA completed a [survey](#) to better understand physician
5 sentiments around AI, including opportunities, current use cases and needs around education and
6 support for the implementation and use of AI. Of the 1,081 physicians surveyed, 41% responded
7 that they were both equally excited and concerned about AI. It was also confirmed that physicians
8 are seeking more information in digestible formats that can help them successfully evaluate and use
9 these tools in their clinical environments.⁶

10
11 In February 2024, the AMA released a foundational AI landscape report as part of its Future of
12 Health work titled, [“The Emerging Landscape of Augmented Intelligence in Health Care”](#). The
13 report aims to create a common lexicon for augmented intelligence in health care, explore the risks,
14 identify current and future use cases and provide guidance for physicians looking to leverage these
15 tools in practice. As part of this research, the AMA completed the previously mentioned survey
16 designed to capture physician sentiments around AI, held a set of one-on-one interviews with key
17 stakeholders from across the industry and hosted a specialty society workshop to align on key
18 priorities across specialties. The report lays the foundation for the development of additional
19 educational content into specific areas of AI to further support the implementation and use of AI in
20 practice including, but not limited to:

- 21
- 22 • Practical case studies of where AI is working in practice today.
 - 23 • Issue briefs aimed at deciphering AI policy. For instance, the AMA released a [guide](#) in
24 2023, providing advice for physicians when considering ChatGPT.
 - 25 • Research on areas where AI is impacting clinician well-being (i.e. documentation burden
26 reduction, etc.).
 - 27 • Step-by-step educational materials on creating governance structures that support the
28 successful selection and deployment of AI solutions.
- 29

30 The AMA ChangeMedEd initiative works with partners across the medical education continuum to
31 help produce a physician workforce that meets the needs of patients today and in the future. As part
32 of these efforts, an [Artificial Intelligence in Health Care](#) learning series was recently published on
33 the AMA EdHub. These modules are geared towards medical students and physician learners, and
34 introduce key concepts related to artificial intelligence and ML in health care. These are developed
35 in collaboration with medical education partners from across the nation.

36
37 Further, the AMA and Accreditation Council for Graduate Medical Education (ACGME) have a
38 shared interest in fostering the use of AI to improve education across a physician’s career. The
39 ACGME is aware of the AMA’s conceptual model of Precision Education and has participated in
40 the AMA Accelerating Change in Medical Education Consortium’s National Advisory Panel
41 around planning the next major initiative. Awardees of AMA grant funding also presented their
42 work on leveraging AI to improve residency selection and education at the 2024 ACGME Annual
43 Education Conference.

44
45 Additionally, the AMA is engaged with the American Board of Medical Specialties, National
46 Board of Medical Examiners, Association of American Medical Colleges, Association for Hospital
47 Medical Education, International Association of Medical Science Educators, as well as several
48 specialty societies, medical schools and academic health systems around advancing AI in medical
49 education. AMA staff will also serve on the planning committee for the Macy Foundation’s next
50 conference which will focus on AI in medical education. These conferences are designed to

1 generate national recommendations which are typically published in the journal, *Academic*
2 *Medicine*.

3
4 The AMA has also crafted a [framework](#) to promote the development and use of responsible,
5 evidence-based, unbiased and equitable health care AI. This ethics-evidence-equity framework
6 envisions the use of AI to advance the quadruple aim (enhancing patient care, improving
7 population health and clinician work-life and reducing costs) and defines the responsibilities of
8 developers, health care organizations (deployers) and physicians to put the framework into action.
9 For instance, the framework outlines the responsibility of all three groups to (1) develop a protocol
10 to identify and correct for potential bias, as well as (2) ensure protocols exist for enforcement and
11 accountability, including a system to ensure equitable implementation. Physicians can use the
12 framework to assess if an AI innovation meets the qualifications for ethics, evidence and equity
13 and can therefore be trusted.¹² This framework has also been leveraged to create a companion
14 resource that considers educational applications of AI and addresses the use of AI to facilitate the
15 process of training health professionals.

16
17 Further, the AMA is in the process of creating a physician development curriculum that will cover
18 topics across physician leadership and the business of medicine. The goal of these materials is to
19 empower and support physicians throughout their professional lives by amplifying AMA-wide
20 resources on the health care landscape, leadership and the business of medicine and develop new
21 resources where gaps exist. These materials will be made available for both individual physicians
22 and member organizations.

23
24 Additionally, the AMA developed the [CPT® Developer Program](#) to assist developers in translating
25 ideas into innovations. The program is dedicated to developers' needs and provides them with
26 access to high-quality AMA CPT content and resources.

27
28 As interest grows in the use of AI solutions and tools that address administrative burden and
29 support physicians in their daily tasks, the AMA is committed to ensuring that the evolution of AI
30 in medicine equitably benefits patients, physicians and other health care stakeholders. The AMA
31 intends to continue developing AI principles for the use of AI in health care, advocate for state and
32 federal policies that ensure appropriate oversight and continued innovation in AI, partner with
33 health and technology leaders to ensure physicians have a leading voice in shaping the ethical use
34 of AI in medicine, promote training in AI across the continuum of medical education and provide
35 high-value insights and actionable resources for physicians.

36 37 *Stakeholder engagement*

38
39 The AMA is a convener around many topics important to physicians including AI. As a follow up
40 to the Specialty Society workshop in 2023, the AMA has created an AI Specialty Collaborative
41 with over 15 specialty associations committed to participating. The goal of the collaborative is to
42 ensure the physician voice is leading in a united way as AI in health care continues to expand.
43 Additionally, this group will collectively identify priorities and collaboratively develop resources
44 to advance AI in health care starting in the second quarter of 2024.

45
46 The AMA also continues to stay abreast of the latest developments in AI across the industry
47 through participation in external industry collaboratives. For example, the AMA is currently a non-
48 profit member organization of [VALID AI](#), an execution accelerator dedicated to bridging the gap in
49 coordinated efforts around generative AI while rapidly advancing validation and governance
50 implementation.

1 Furthermore, as a member of the [Health AI Partnership](#)—a collaboration among 14 health care
2 organizations and ecosystem partners—the AMA is encouraging the collaborative development
3 and dissemination of AI best practices. The AMA will continue to work with this partnership and
4 others to develop resources, including a case-based AI ethics training program that will delve into
5 real-world, contemporary challenges that physicians and health care delivery organizations face
6 when using AI.

7
8 The [In Full Health Learning & Action Community to Advance Equitable Health Innovation](#)
9 initiative seeks to advance equitable opportunities in health innovation investment, solution
10 development and purchasing. The AMA has partnered with founding collaborator organizations to
11 support this community with content, tools, resources and opportunities to connect, engage and
12 learn with and from each other to advance equitable health innovation.

13
14 The AMA also has long standing relationship with the innovation accelerator, MATTER. As part
15 of this sponsorship, AMA employees and physician members have access to the MATTER space
16 and programming. AMA physician members can also reach out to [AMA staff contacts](#) to learn
17 more about getting involved with MATTER and other innovation accelerator programs.

18
19 Further, the AMA participated in a joint clinician panel with the Office of the National Coordinator
20 for Health Information Technology in 2020 titled, [“Artificial Intelligence in Health IT- The Good,
21 The Bad, The Ugly”](#) and continues to engage in additional conferences such as HLTH and ViVE,
22 where AMA representatives engage in a variety of topics around health care technology including
23 AI.

24
25 In addition to the efforts outlined above, the AMA has several internal cross-business unit
26 workgroups in place to ensure alignment across the work in innovation and specifically, AI. There
27 is a Future of Health workgroup meeting that occurs monthly to stay aligned on the latest policy,
28 projects and collaborations in progress around innovation and digital health. Additionally, the
29 Advocacy business unit convenes two monthly meetings specifically focused on aligning AI
30 initiatives across the AMA.

31 32 AMA POLICY

33
34 As a leader in American medicine, the AMA has a unique opportunity to ensure that the evolution
35 of AI in medicine benefits patients, physicians and the health care community. The AMA has
36 several policies in place around ensuring the physician voice is reflected in the design and
37 development of AI innovations in health care.

38
39 The AMA will seek to:

- 40
- 41 1. Leverage its ongoing engagement in digital health and other priority areas for improving
42 patient outcomes and physicians’ professional satisfaction to help set priorities for health
43 care AI.
 - 44 2. Identify opportunities to integrate the perspective of practicing physicians into the
45 development, design, validation, and implementation of health care AI.
 - 46 3. Promote development of thoughtfully designed, high-quality, clinically validated health
47 care AI that:
 - 48 a. is designed and evaluated in keeping with best practices in user-centered design,
49 particularly for physicians and other members of the health care team;
 - 50 b. is transparent;
 - 51 c. conforms to leading standards for reproducibility;

- 1 d. identifies and takes steps to address bias and avoids introducing or exacerbating
- 2 health care disparities including when testing or deploying new AI tools on
- 3 vulnerable populations; and
- 4 e. safeguards patients' and other individuals' privacy interests and preserves the
- 5 security and integrity of personal information.
- 6 4. Encourage education for patients, physicians, medical students, other health care
- 7 professionals, and health administrators to promote greater understanding of the promise
- 8 and limitations of health care AI.
- 9 5. Explore the legal implications of health care AI, such as issues of liability or intellectual
- 10 property, and advocate for appropriate professional and governmental oversight for safe,
- 11 effective, and equitable use of and access to health care AI ([Policy H-480.940](#),
- 12 ["Augmented Intelligence in Health Care"](#)).
- 13

14 The AMA also supports the use and payment of AI systems that advance the quadruple aim. AI
15 systems should enhance the patient experience of care and outcomes, improve population health,
16 reduce overall costs for the health care system while increasing value and support the professional
17 satisfaction of physicians and the health care team. To that end our AMA will advocate that:

- 18
- 19 1. Oversight and regulation of health care AI systems must be based on risk of harm and
- 20 benefit accounting for a host of factors, including but not limited to: intended and
- 21 reasonably expected use(s); evidence of safety, efficacy and equity including addressing
- 22 bias; AI system methods; level of automation; transparency; and conditions of deployment.
- 23 2. Payment and coverage for all health care AI systems must be conditioned on complying
- 24 with all appropriate federal and state laws and regulations, including, but not limited to
- 25 those governing patient safety, efficacy, equity, truthful claims, privacy and security as
- 26 well as state medical practice and licensure laws.
- 27 3. Payment and coverage for health care AI systems intended for clinical care must be
- 28 conditioned on (a) clinical validation; (b) alignment with clinical decision-making that is
- 29 familiar to physicians; and (c) high-quality clinical evidence.
- 30 4. Payment and coverage for health care AI systems must (a) be informed by real world
- 31 workflow and human-centered design principles; (b) enable physicians to prepare for and
- 32 transition to new care delivery models; (c) support effective communication and
- 33 engagement between patients, physicians, and the health care team; (d) seamlessly
- 34 integrate clinical, administrative, and population health management functions into
- 35 workflow; and (e) seek end-user feedback to support iterative product improvement.
- 36 5. Payment and coverage policies must advance affordability and access to AI systems that
- 37 are designed for small physician practices and patients and not limited to large practices
- 38 and institutions. Government-conferred exclusivities and intellectual property laws are
- 39 meant to foster innovation, but constitute interventions into the free market, and therefore,
- 40 should be appropriately balanced with the need for competition, access and affordability.
- 41 6. Physicians should not be penalized if they do not use AI systems while regulatory
- 42 oversight, standards, clinical validation, clinical usefulness and standards of care are in
- 43 flux. Furthermore, our AMA opposes:
- 44 a. Policies by payers, hospitals, health systems or governmental entities that mandate
- 45 use of health care AI systems as a condition of licensure, participation, payment, or
- 46 coverage.
- 47 b. The imposition of costs associated with acquisition, implementation, and
- 48 maintenance of healthcare AI systems on physicians without sufficient payment.
- 49 7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best
- 50 positioned to know the AI system risks and best positioned to avert or mitigate harm do so

- 1 through design, development, validation and implementation. Our AMA will further
2 advocate:
- 3 a. Where a mandated use of AI systems prevents mitigation of risk and harm, the
4 individual or entity issuing the mandate must be assigned all applicable liability.
 - 5 b. Developers of autonomous AI systems with clinical applications (screening,
6 diagnosis, treatment) are in the best position to manage issues of liability arising
7 directly from system failure or misdiagnosis and must accept this liability with
8 measures such as maintaining appropriate medical liability insurance and in their
9 agreements with users.
 - 10 c. Health care AI systems that are subject to non-disclosure agreements concerning
11 flaws, malfunctions, or patient harm (referred to as gag clauses) must not be
12 covered or paid and the party initiating or enforcing the gag clause assumes
13 liability for any harm.
- 14 8. The AMA, national medical specialty societies, and state medical associations—
- 15 a. Identify areas of medical practice where AI systems would advance the quadruple
16 aim;
 - 17 b. Leverage existing expertise to ensure clinical validation and clinical assessment of
18 clinical applications of AI systems by medical experts;
 - 19 c. Outline new professional roles and capacities required to aid and guide health care
20 AI systems; and
 - 21 d. Develop practice guidelines for clinical applications of AI systems.
- 22 9. There should be federal and state interagency collaboration with participation of the
23 physician community and other stakeholders in order to advance the broader infrastructural
24 capabilities and requirements necessary for AI solutions in health care to be sufficiently
25 inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD
26 Policy)
- 27 10. AI is designed to enhance human intelligence and the patient-physician relationship rather
28 than replace it ([Policy H-480.939, “Augmented Intelligence in Health Care”](#)).

29
30 CONCLUSION

31
32 The AMA has various existing initiatives, research, policy, advocacy efforts, educational material
33 and other resources that are aligned with the desire to boost physician-centered innovation in the
34 field of AI research and development. As such, much of the work that Resolution 609-A-23 asks
35 the AMA to conduct is already ongoing.

36
37 The PIN serves as one source of connecting physicians with innovative companies, specifically
38 those working in the AI space. With that said, as noted, the PIN is undergoing a strategic review
39 and updates to maximize its impact to physicians in decreasing the burden of clinical technology.
40 As we continue to evaluate PIN, we will consider the significance of factors such as AI and other
41 evolving technologies to the practice of medicine and incorporate them into our approach to PIN.
42 At this time, the timing and approach are not aligned to create any specific workgroup linked to
43 PIN.

44
45 The costs associated with identifying, establishing and convening a formal advisory board to
46 facilitate relationships between physicians and the AI industry are significant. Additionally, the
47 existing engagement and collaboration the AMA has across initiatives from physicians, specialty
48 and state society and association stakeholders and industry allows AMA to obtain more diverse
49 perspectives and experiences than a formal advisory board. The AMA continues to ensure the
50 AMA is inclusive and equitable in its approach to research, advocacy and education.

1 RECOMMENDATIONS

2

3 The Board of Trustees recommends that Resolution 609-A-23 not be adopted and that this report be
4 filed.

Fiscal Note: Minimal

REPORT OF THE BOARD OF TRUSTEES

B of T Report 33-A-24

Subject: Employed Physicians

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

Referred to: Reference Committee F

1 BACKGROUND

2
3 At its November 2021 Special Meeting, the House of Delegates (HOD) referred Resolution 615,
4 which asked AMA to take a variety of actions to ensure that the voice of employed physicians is
5 heard within the organization.

6
7 BOT Report 9-I-22 subsequently argued that creation of an employed physician caucus, already in
8 the works at that time via efforts of the Organized Medical Staff Section (OMSS), would be the
9 most appropriate mechanism for giving voice to employed physicians in the HOD. The report
10 concluded that while it is beyond the scope of the Board to establish caucuses, the Board fully
11 supported the creation of an employed physician caucus in lieu of the asks of original Resolution
12 615.

13
14 As directed by BOT Report 9, this follow-up report provides an update on the caucus and
15 representation of employed physicians within our AMA.

16
17 DISCUSSION

18
19 The inaugural meeting of the OMSS-convened employed physician caucus was held at the 2022
20 Interim Meeting. Since then, the caucus has met in conjunction with each Annual and Interim
21 meeting, and between meetings as the need has arisen. Attendance at these meetings has ranged
22 from 15 to 20 participants per meeting, engaging not only OMSS members but also members from
23 most of the other AMA sections as well as members of the HOD who are not actively involved in
24 any section.

25
26 Facilitated by OMSS leadership, caucus meetings have focused on (1) discussion of resolutions and
27 reports under consideration by the HOD that are especially relevant to employed physicians, and
28 (2) general discussion of issues facing employed physicians and how AMA might address them,
29 whether through the policymaking process or otherwise. Through these actions, the group has
30 directly lent its expertise to the HOD, with one key example being the contributions of the caucus
31 to the development of OMSS-sponsored Resolution 017-A-23, which established AMA's definition
32 of "employed physician." Additionally, the group has served as a resource for AMA staff
33 addressing employment matters – for example, providing input on recent revisions to the *AMA*
34 *Physicians' Guide to Hospital Employment Contracts* and allowing for observation of the caucus
35 by AMA staff to garner ideas for a series of news articles on physician employment.

1 In 2024, the OMSS-convened employed physician caucus will focus on formalizing its structure
2 and processes, developing a charter that outlines caucus membership requirements, how caucus
3 leadership is selected, and the process by which the caucus determines positions it will voice on
4 items of business under consideration in the HOD. The caucus will next meet on Saturday, June 8,
5 from 9:30 to 10:30 a.m. at the Hyatt Regency Chicago (see Speakers' Letter for room location),
6 and all AMA members are invited to attend. The Board of Trustees looks forward to the continued
7 evolution of the caucus and its success in representing the interests of employed physicians within
8 our AMA.

9

10 RECOMMENDATION

11

12 The Board of Trustees recommends that the following be adopted and the remainder of the report
13 be filed:

14

- 15 1. That AMA policy D-405.969 be rescinded as having been accomplished by this report
16 (Rescind HOD Policy).

Fiscal Note: No significant fiscal impact.

JOINT REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS AND THE
COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT

CCB/CLRPD Report 1-A-24

Subject: Joint Council Sunset Review of 2014 House Policies

Presented by: Mark Bair, MD, Chair, Council on Constitution and Bylaws
Gary Thal, MD, Chair, Council on Long Range Planning and Development

Referred to: Reference Committee F

1 Policy G-600.110, “Sunset Mechanism for AMA Policy,” calls for the decennial review of
2 American Medical Association (AMA) policies to ensure that our AMA’s policy database is
3 current, coherent, and relevant. Policy G-600.110 reads as follows, laying out the parameters for
4 review and specifying the procedures to follow:
5

6 1. As the House of Delegates (House) adopts policies, a maximum ten-year time horizon shall
7 exist. A policy will typically sunset after ten years unless action is taken by the House to retain
8 it. Any action of our AMA House that reaffirms or amends an existing policy position shall
9 reset the sunset “clock,” making the reaffirmed or amended policy viable for another 10 years.
10

11 2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the
12 following procedures shall be followed: (a) Each year, the Speakers shall provide a list of
13 policies that are subject to review under the policy sunset mechanism; (b) Such policies shall
14 be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been
15 asked to review policies shall develop and submit a report to the House identifying policies
16 that are scheduled to sunset; (d) For each policy under review, the reviewing council can
17 recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain
18 part of the policy; or (iv) reconcile the policy with more recent and like policy (per Policy G-
19 600.111(4), The consolidation process permits editorial amendments for the sake of clarity, so
20 long as the proposed changes are transparent to the House and do not change the meaning); (e)
21 For each recommendation that it makes to retain a policy in any fashion, the reviewing council
22 shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way
23 for the House of Delegates to handle the sunset reports.
24

25 3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier
26 than its 10-year horizon if it is no longer relevant, has been superseded by a more current
27 policy, or has been accomplished.
28

29 4. The AMA councils and the House of Delegates should conform to the following guidelines for
30 sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has
31 been accomplished; or (c) when the policy or directive is part of an established AMA practice
32 that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA
33 House of Delegates Reference Manual: Procedures, Policies and Practices.
34

35 5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

1 6. Sunset policies will be retained in the AMA historical archives.

2

3 RECOMMENDATION

4

5 The Councils on Constitution and Bylaws and Long Range Planning and Development
6 recommend that the House policies that are listed in the appendix to this report be acted upon in
7 the manner indicated and the remainder of this report be filed.

APPENDIX – Recommended Actions

Policy Number	Title	Text	Recommendation
D-478.980	Anonymous Cyberspace Evaluations of Physicians	<p>Our AMA will: (1) work with appropriate entities to encourage the adoption of guidelines and standards consistent with AMA policy governing the public release and accurate use of physician data; (2) continue pursuing initiatives to identify and offer tools to physicians that allow them to manage their online profile and presence; (3) seek legislation that supports the creation of laws to better protect physicians from cyber-libel, cyber-slander, cyber-bullying and the dissemination of Internet misinformation and provides for civil remedies and criminal sanctions for the violation of such laws; and (4) work to secure legislation that would require that the Web sites purporting to offer evaluations of physicians state prominently on their Web sites whether or not they are officially endorsed, approved or sanctioned by any medical regulatory agency or authority or organized medical association including a state medical licensing agency, state Department of Health or Medical Board, and whether or not they are a for-profit independent business and have or have not substantiated the authenticity of individuals completing their surveys.</p>	<p>Consolidate D-445.997 and D-478.980 as editorially amended (by insertion and deletion) and Retain.</p> <p>D-445.997, Online Physician Reputation and Rating: Our AMA will: (1) encourages physicians to take an active role in managing their online reputation in ways that can help them improve practice efficiency and patient care; (2) encourages physician practices and health care organizations to establish policies and procedures to address negative online complaints directly with patients that do not run afoul of federal and state privacy laws; (3) will develop and publish educational material to help guide physicians and their practices in managing their online reputation, including recommendations for responding to negative patient reviews and clarification about how federal privacy laws apply to online reviews; and (4) will work with appropriate stakeholders to (a) consider an outlet for physicians to share their experiences and (b) potentially consider a mechanism for recourse for physicians whose practices have been affected by negative online reviews, consistent with federal and state privacy laws; D-478.980 Our AMA</p>

Policy Number	Title	Text	Recommendation
			<p>will: (1)(5) work with appropriate entities to encourage the adoption of guidelines and standards consistent with AMA policy governing the public release and accurate use of physician data; (2)(6) continue to pursuing initiatives to identify and offer tools to physicians that allow them to manage their online profile and presence; (3)(7) seek legislation that supports the creation of laws to better protect physicians from cyber-libel, cyber-slander, cyber-bullying and the dissemination of Internet misinformation and provides for civil remedies and criminal sanctions for the violation of such laws; and (4)(8) work to secure legislation that would require that the Web sites purporting to offer evaluations of physicians state prominently on their Web sites whether or not they are officially endorsed, approved or sanctioned by any medical regulatory agency or authority or organized medical association including a state medical licensing agency, state Department of Health or Medical Board, and whether or not they are a for-profit independent business and have or have not substantiated the authenticity of individuals completing their surveys.</p>
D-90.999	Interpreters For Physician Visits	Our AMA continues to monitor enforcement of those provisions of the ADA to assure that physician offices are not subjected to undue	Sunset; More recent and comprehensive policies exist.

Policy Number	Title	Text	Recommendation
		<p>burdens in their efforts to assure effective communication with hearing disabled patients.</p>	<p>Policies include: H-385.929, Availability and Payment for Medical Interpreters Services in medical Practices; D-385.957, Certified Translation and Interpreter Services; H-385.928, Patient Interpreters; D-385.946, Physician Reimbursement for Interpreter Services; and D-385.978, Language Interpreters.</p>
<p>D-165.938</p>	<p>Redefining AMA's Position on ACA and Healthcare Reform</p>	<p>1. Our AMA will develop a policy statement clearly stating this organization's policies on the following aspects of the Affordable Care Act (ACA) and healthcare reform: A. Opposition to all P4P or VBP that fail to comply with the AMA's Principles and Guidelines; B. Repeal and appropriate replacement of the SGR; C. Repeal and replace the Independent Payment Advisory Board (IPAB) with a payment mechanism that complies with AMA principles and guidelines; D. Support for Medical Savings Accounts, Flexible Spending Accounts, and the Medicare Patient Empowerment Act ("private contracting"); E. Support steps that will likely produce reduced health care costs, lower health insurance premiums, provide for a sustainable expansion of healthcare coverage, and protect Medicare for future generations; F. Repeal the non-physician provider non-discrimination provisions of the ACA. 2. Our AMA will immediately direct sufficient funds toward a multi-pronged campaign to accomplish these goals. 3. There will be a report back at each meeting of the AMA HOD.</p>	<p>Sunset; No longer necessary.</p> <p><i>Authors' note: While AMA Councils currently collaborate where appropriate on technology-related projects, such AMA initiatives are often enterprise-wide, with the expertise of relevant Councils utilized during project development and implementation. More details about AMA's technology initiatives hcan be found online.</i></p>
<p>G-620.045</p>	<p>Medical Malpractice Discount Rates</p>	<p>Our AMA encourages member organizations of the Federation to offer access to discounted medical liability insurance premiums where legally permissible.</p>	<p>Retain; Still relevant.</p> <p>Nearly every state medical association or society actively endorses a medical liability product with most offering some sort of discount and AMA Insurance's Medical Liability Insurance Plan offers</p>

Policy Number	Title	Text	Recommendation
			<p>competitively priced medical liability insurance coverage (discounted rates for AMA members). However, a recent AMA study, Prevalence of Medical Liability Premium Increases Unseen Since 2000s Continues for Fourth Year in a Row, found that at least in some states medical liability premiums are increasing.</p>
G-635.015	Member Recognition	<p>Our AMA will study ways to provide recognition to member physicians in local communities, to give them and the community a greater personal sense of connection with our AMA.</p>	<p>Sunset; No longer necessary.</p> <p>AMA has a number of recognition and award programs: Women in Medicine Month (September); Senior Physicians Recognition Month (May) and IMG Recognition Week (October); AMA Award for Citizenship and Community Service; AMA Medal of Valor; the President’s Citation for Service to the Public; the Distinguished Service Award; and the AMA Physician's Recognition Award (PRA). The AMA Foundation offers multiple awards (including the AMA Foundation Award for Health Education, Excellence in Medicine Awards, and the Joan F. Giambalvo Fund for the Advancement of Women). Nominees for the AMA and AMA Foundation Awards are solicited from the House</p>

Policy Number	Title	Text	Recommendation
			of Delegates, AMA sections, and the Federation.
G-640.025	Encourage Physicians as Legislative Candidates	Our AMA continues to identify, encourage, and support physicians to run as state and national legislative candidates.	<p>Consolidate with G-640.015 as editorially amended (by insertion and deletion) and Retain.</p> <p>Our AMA <u>will</u> continue to identify, encourage, and support physicians to run as state and national legislative candidates. G-640.015. Our AMA will not use AMA corporate treasury funds to engage in partisan political activity.</p> <p><i>Authors' note: AAMPAC, AMA's bipartisan political action committee, strives to help more physicians get personally involved in politics, and holds workshops each year to educate physicians about the intricacies of politics and political campaigns. AMPAC also publishes political research on public perceptions of physicians as candidates, the latest being a 2022 Research Exploring Voters Perceptions about Physicians as Candidates Running for Elected Office.</i></p>
G-640.045	Helping to Better Inform Legislators on Medical Matters	Our AMA will inform members of Congress and their staff that AMA Morning Rounds is available through our website to the public without charge.	<p>Sunset; No longer necessary.</p> <p>AMA periodically sends faxes to the attention of health staff at Congressional offices encouraging them to subscribe to</p>

Policy Number	Title	Text	Recommendation
			<p>AMA Morning Rounds. Morning Rounds remains available to AMA members, nonmembers and the public.</p>
H-160.905	<p>Non-Physician Practitioners Certifying Medicare Patients' Need for Therapeutic Shoes and Inserts</p>	<p>Our AMA supports authorization of physician assistants, and nurse practitioners who practice in physician-led teams to certify Medicare beneficiaries' need for therapeutic shoes and/or inserts.</p>	<p>Consolidate with H-425.979 (as editorially amended by insertion and deletion) and Retain.</p> <p>H-160.905. (1) Our AMA supports authorization of physician assistants, and nurse practitioners who practice in physician-led teams to certify Medicare beneficiaries' need for therapeutic shoes and/or inserts.</p> <p>H.425.979(2) Our AMA: (4) recommends that public and private health insurance programs provide appropriate therapeutic shoes to patients with peripheral neuropathy who meet the eligibility criteria defined in the Medicare Benefit Policy Manual; and (2) strongly urges public and private health insurance programs to provide appropriate therapeutic shoes to patients with peripheral neuropathy who meeting the following criterion: they are currently being treated under a comprehensive treatment plan and have one of the following: (a) peripheral neuropathy with evidence of callus formation; (b) history of pre-ulcerative calluses; (c) history of previous</p>

Policy Number	Title	Text	Recommendation
			ulceration; (d) foot deformity; (e) previous amputation of the foot or part of the foot; or (f) poor circulation.
H-180.973	The "Hassle Factor"	Our AMA will greatly intensify its efforts (including support of HR 2695) to reduce the burden of government and third-party regulation on medical practice and its intrusion into the physician-patient relationship and doctor-patient time.	Editorially amend (by deletion) and Retain. Our AMA will greatly intensify its efforts (including support of HR 2695) to reduce the burden of government and third-party regulation on medical practice and its intrusion into the physician-patient relationship and doctor-patient time.
H-185.934	Emergency Department Insurance Linking	Our AMA supports the establishment of insurance-linking programs in the emergency department in a manner that does not interfere with providing timely emergency medical services.	Sunset; superseded by more current and comprehensive Policy H-130.970 .
H-225.948	Hospital Policies on Interactions with Industry	<p>1. Our AMA encourages all hospitals to adopt policies governing the interaction of hospital personnel--including both employed physicians and independent members of the medical staff, as well as other hospital staff--with pharmaceutical, medical device, and other industry representatives within the hospital setting. Such policies should:</p> <p>(a) be developed through a collaborative effort of the hospital's organized medical staff, administration, and governing body, and approved by the organized medical staff; and (b) be consistent with applicable AMA policy and ethical opinions on the subject of medicine-industry interaction, including but not limited to:</p> <p>E-1.001 Principles of Medical Ethics E-5.0591 Patient Privacy and Outside Observers to the Clinical Encounter E-8.03 Conflicts of Interest: Guidelines E-8.031 Conflicts of Interest: Biomedical Research E-8.0315 Managing Conflicts of Interest in the Conduct of Clinical Trials E-8.047 Industry Representatives in Clinical Settings E-8.06 Prescribing and Dispensing Drugs and Devices E-8.061 Gifts to Physicians from Industry E-9.0115 Financial Relationships with Industry in Continuing Medical Education</p>	<p>Editorially Amend 1(b) (by deletion) and Retain.</p> <p>*** and 1(b) be consistent with applicable AMA policy and ethical opinions on the subject of medicine-industry interaction; including but not limited to:</p> <p>E-1.001 Principles of Medical Ethics E-5.0591 Patient Privacy and Outside Observers to the Clinical Encounter E-8.03 Conflicts of Interest: Guidelines E-8.031 Conflicts of Interest: Biomedical Research E-8.0315 Managing Conflicts of Interest in the Conduct of Clinical Trials</p>

Policy Number	Title	Text	Recommendation
		<p>H-460.981 University-Industry Cooperative Research Ventures.</p> <p>2. Our AMA will inform the American Hospital Association of the AMA's position on hospital policies governing the interaction of hospital personnel with pharmaceutical, medical device, and other industry representatives within the hospital setting.</p>	<p>E-8.047 Industry Representatives in Clinical Settings E-8.06 Prescribing and Dispensing Drugs and Devices E-8.061 Gifts to Physicians from Industry E-9.015 Financial Relationships with Industry in Continuing Medical Education H-460.981 University-Industry Cooperative Research Ventures.</p> <p><i>Authors' note: When the AMA Code of Medical Ethics was modernized, many like policies were consolidated—see E-10.6, Industry Representatives in Clinical Settings]</i></p>
H-225.959	Medical Staff Testing	<p>Our AMA: (1) establish policy that, in the absence of statutory and/or regulatory requirements, hospital medical staffs should determine those tests and/or immunization that are required for medical staff members, and delineate under what circumstances such tests or immunizations should be administered; (2) encourages medical staffs to regularly review and update their bylaws and workplace policies to ensure that they reflect current laws, regulations, health care policy, and evidence-based medicine; and (3) encourages appropriate stakeholders to develop, promulgate, and adopt a uniform immunization form for medical students seeking to do rotations at hospitals away from their home institutions.</p>	Retain; Still relevant.
H-235.981	Qualifications, Selection, and Role of Medical Directors, Chief Medical Officers, Vice Presidents for Medical Affairs, and Others Employed by or Under Contract with Hospitals/Health Systems to Provide Medical	<p>1. Our AMA supports the following guidelines regarding the qualifications and selection of individuals employed by or under contract with a hospital/health system to provide medical management services, such as medical directors, chief medical officers, and vice presidents for medical affairs: a. The hospital governing body, management, and medical staff should jointly: (i) determine if there is a need to employ or contract with one or more individuals to provide medical management services; (ii) establish the purpose, duties, and responsibilities of these positions; (iii) establish the qualifications for these positions; and (iv) establish and sustain a mechanism for input</p>	<p>Editorially amend 1.c (by insertion and deletion) and Retain.</p> <p>Physicians providing medical management services at a single hospital should be licensed to practice medicine in the same state as the hospital for which they he or she provide such services. Additionally, he or she</p>

Policy Number	Title	Text	Recommendation
	Management Services	<p>from and participation by elected leaders of the medical staff in the selection, evaluation, and termination of individuals holding these positions.</p> <p>b. An individual employed by or under contract with a hospital or health system to provide medical management services should be a physician (MD/DO). c. A physician providing medical management services at a single hospital should be licensed to practice medicine in the same state as the hospital for which he or she provides such services. Additionally, he or she should be a member in good standing of the organized medical staff of the hospital for which he or she provides medical management services. d. Where feasible, a physician providing medical management services at the system level for a multi-hospital health system should be licensed to practice medicine in each of the states in which the health system has a hospital that will be influenced by the physician's work. At a minimum, the physician should be licensed in at least one state in which the health system has a hospital over which the physician will exert influence, and in as many other states as may be required by state licensing law. e. Where feasible, a physician providing medical management services at the system level for a multi-hospital health system should be a member in good standing of the medical staff of each of the hospitals that will be influenced by the physician's work. At a minimum, the physician should: (i) be a member in good standing of at least one of the medical staffs of the hospitals that will be influenced by the physician's work; and (ii) work in collaboration with elected medical staff leaders throughout the system and with any individuals who provide medical management services at the hospital level.</p> <p>2. Our AMA supports the following guidelines regarding the role of the organized medical staff vis-a-vis individuals employed by or under contract with hospitals/health systems to provide medical management services: a. The purpose, duties, and responsibilities of individuals employed by or under contract with the hospital/health system to provide medical management services should be included in the medical staff bylaws and in the hospital/health system corporate bylaws. b. The organized medical staff should maintain overall responsibility for the quality of care provided to patients by the hospital, including the quality of the professional services provided by individuals with clinical privileges, and should have the responsibility of reporting to the governing body. c. The chief elected officer of the medical staff should represent the medical staff to the administration, governing body, and external</p>	<p><u>they</u> should be a member in good standing of the organized medical staff of the hospital for which he or she <u>they</u> provide medical management services.</p>

Policy Number	Title	Text	Recommendation
		agencies. d. Government regulations that would mandate that any individual not elected or appointed by the medical staff would have authority over the medical staff should be opposed.	
H-315.980	Preservation of Medical Records	It is the policy of the AMA that medical considerations are the primary basis for deciding how long to retain medical records. For example, operative notes, chemotherapy records, and records documenting permanent structural alteration to the patients should always be part of the patient's chart.	Retain; Still relevant. <i>The Authors note that the AMA Code of Medical Ethics 3.3.1 provides extensive guidance related to medical records.</i>
H-35.967	Treatment of Persons with Hearing Disorders	<p>1. Our AMA believes that physicians should remain the primary entry point for care of patients with hearing impairment and continue to supervise and treat hearing, speech, and equilibratory disorders.</p> <p>2. Our AMA expressly opposes statements that the practice of audiology includes the diagnosis and treatment of hearing disorders; affirms that it is in the public interest that a medical assessment of any hearing or balance malfunction be made by a physician knowledgeable in diseases of the ear; reasserts that audiologists are individuals who perform non-medical testing, evaluating, counseling, instruction and rehabilitation of individuals whose communication disorders center in whole or in part in hearing function; and affirms its respect for the contribution which audiologists have made and continue to make to patient welfare and quality health care in their assistance in the treatment of hearing disorders.</p> <p>3. Should there be ambiguities in the statutory language of any state which defines audiology, state, and/or specialty medical societies should take steps to seek a legislative amendment to that statute to secure language that describes appropriately the practice of audiology. Misrepresentation by audiologists of their skills and/or the scope of their practice should be reported to appropriate state authorities.</p>	Retain; Still relevant.
H-365.999	Physician's Role in Returning Patients to Their Jobs	Our AMA encourages physicians everywhere to advise their patients to return to work at the earliest date compatible with health and safety and recognizes that physicians can, through their care, facilitate patients' return to work.	Consolidate with H-365.981 and H-365.976 (as editorially amended by insertion and deletion) and Retain. H-365.981, Workers' Compensation. Our AMA: (1) will promote the development of practice parameters, when appropriate, for use in the treatment of

Policy Number	Title	Text	Recommendation
			<p>injured workers and encourages those experienced in the care of injured workers to participate in such development.</p> <p>(2) will investigate support for appropriate utilization review guidelines for referrals, appropriate procedures and tests, and ancillary services as a method of containing costs and curbing overutilization and fraud in the workers' compensation system. Any such utilization review should be based on open and consistent review criteria that are acceptable to and have been developed in concert with the medical profession. Physicians with background appropriate to the care under review should have the ultimate responsibility for determining quality and necessity of care.</p> <p>(3) encourages the use of the Guides to the Evaluation of Permanent Impairment. The correct use of the Guides can facilitate prompt dispute resolution by providing a single, scientifically developed, uniform, and objective means of evaluating medical impairment.</p> <p>(4) encourages physicians to participate in the development of workplace health and safety programs.</p> <p>Physician input into</p>

			<u>provide fair and consistent impairment evaluations for patients and claimants including injured workers.</u>
H-85.954	Importance of Autopsies	<p>1. Our AMA supports seeking the cooperation of the National Advisory Council on Aging of the National Institutes of Health in recommending to physicians, hospitals, institutes of scientific learning, universities, and most importantly the American people the necessity of autopsy for pathological correlation of the results of the immeasurable scientific advancements which have occurred in recent years. Our AMA believes that the information garnered from such stringent scientific advancements and correlation, as well as coalitions, should be used in the most advantageous fashion; and that the conclusions obtained from such investigations should be widely shared with the medical and research community and should be interpreted by these groups with the utmost scrutiny and objectivity.</p> <p>2. Our AMA: (a) supports the efforts of the Institute of Medicine and other national organizations in formulating national policies to modernize and promote the use of autopsy to meet present and future needs of society; (b) promotes the use of updated autopsy protocols for medical research, particularly in the areas of cancer, cardiovascular, occupational, and infectious diseases; (c) promotes the revision of standards of accreditation for medical undergraduate and graduate education programs to more fully integrate autopsy into the curriculum and require postmortems as part of medical educational programs; (d) encourages the use of a national computerized autopsy data bank to validate technological methods of diagnosis for medical research and to validate death certificates for public health and the benefit of the nation; (e) requests The Joint Commission to consider amending the Accreditation Manual for Hospitals to require that the complete autopsy report be made part of the medical record within 30 days after the postmortem; (f) supports the formalization of methods of reimbursement for autopsy in order to identify postmortem examinations as medical prerogatives and necessary medical procedures; (g) promotes programs of education for physicians to inform them of the value of autopsy for medical legal purposes and claims processing, to learn the likelihood of effects of disease on other family members, to establish the cause of death when death is unexplained or poorly understood, to</p>	Retain; Still relevant.

Policy Number	Title	Text	Recommendation
		<p>establish the protective action of necropsy in litigation, and to inform the bereaved families of the benefits of autopsy; and (h) promotes the incorporation of updated postmortem examinations into risk management and quality assurance programs in hospitals.</p> <p>3. Our AMA reaffirms the fundamental importance of the autopsy in any effective hospital quality assurance program and urges physicians and hospitals to increase the utilization of the autopsy so as to further advance the cause of medical education, research and quality assurance.</p> <p>4. Our AMA representatives to the Liaison Committee on Medical Education ask that autopsy rates and student participation in autopsies continue to be monitored periodically and that the reasons that schools do or do not require attendance be collected. Our AMA will continue to work with other interested groups to increase the rate of autopsy attendance.</p> <p>5. Our AMA requests that the National Committee on Quality Assurance (NCQA) and other accrediting bodies encourage the performance of autopsies to yield benchmark information for all managed care entities seeking accreditation.</p> <p>6. Our AMA calls upon all third-party payers, including CMS, to provide adequate payment directly for autopsies, and encourages adequate reimbursement by all third party payers for autopsies.</p> <p>7. It is the policy of our AMA: (a) that the performance of autopsies constitutes the practice of medicine; and (b) in conjunction with the pathology associations represented in the AMA House, to continue to implement all the recommendations regarding the effects of decreased utilization of autopsy on medical education and research, quality assurance programs, insurance claims processing, and cost containment.</p> <p>8. Our AMA affirms the importance of autopsies and opposes the use of any financial incentives for physicians who acquire autopsy clearance.</p>	

REPORT OF THE COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT

CLRPD Report 1-A-24

Subject: Establishment of a LGBTQ+ Section

Presented by: Gary Thal, MD, Chair

Referred to: Reference Committee F

1 In May 2023, the American Medical Association (AMA) Council on Long Range Planning and
2 Development (CLRPD) received a Letter of Application from the Advisory Committee (AC) on
3 Lesbian, Gay, Bisexual, Transgender and Queer (LGBTQ+) Issues requesting a change in status to
4 the LGBTQ+ Section. AMA bylaws on Sections (§7.00) define the mission of AMA sections and
5 identify each section as fixed or delineated. This report presents to the AMA House of Delegates
6 (HOD) CLRPD’s evaluation of the proposal for a LGBTQ+ Section using criteria identified by
7 Policy G-615.001, “[Establishment and Functions of Sections](#)” in consideration of requests for new
8 sections or changing the status of member component groups.
9

10 APPLICATION OF CRITERIA

11
12 Following an initial review and discussion of the AC’s proposal for section status, the CLRPD met
13 with the leadership of the AC to obtain clarification on some of the information presented in the
14 letter of application. This part of the report presents criterion followed by material excerpted from
15 the letter of application and the AC’s response to CLRPD’s request for additional information. The
16 assessment section conveys the Council’s evaluation of the proposal for delineated section status.
17

18 *1. Issue of Concern - Focus will relate to concerns that are distinctive to the subset within the*
19 *broader, general issues that face medicine. A demonstrated need exists to deal with these matters,*
20 *as they are not currently being addressed through an existing AMA group.*
21

22 Currently, the AC serves as the experts on LGBTQ+ issues. Transitioning the group to a section
23 would serve as an entry point to the HOD for most AMA resolutions seeking to advance LGBTQ+
24 physician and medical student needs and the practice of LGBTQ+ medicine. In this sense, the
25 LGBTQ+ Section would provide the opportunity for underrepresented members of the AMA to
26 introduce issues of concern and to participate in the AMA policymaking process.
27

28 The goals and objectives of the LGBTQ+ Section shall include, but not be limited, to:

- 29
- 30 • Provide a dedicated forum for involvement, mentoring, and networking for LGBTQ+
31 physicians and medical students.
- 32 • Increase the membership, participation, and representation of LGBTQ+ physicians and
33 students in the AMA.
- 34 • Advocate for practices at AMA meetings to be inclusive to the needs of LGBTQ+
35 physicians, residents, medical students, and guests in attendance (e.g., gender neutral
36 bathrooms, availability of gender pronouns ribbons for name badges).

- 1 • Enhance AMA policy, advocacy, and education on LGBTQ+ health and professional
2 issues.
- 3 • Advocate for best practices with AMA membership to foster camaraderie and safely
4 identify as LGBTQ+ physicians and trainees.
- 5 • Increase and foster further collaboration with Health Professionals Advancing LGBTQ
6 Equity (GLMA) and additional professional societies, associations, and across AMA
7 business units and sections on mutual interests and goals.
- 8 • Reduce inequities faced by LGBTQ+ students, physicians, and patients and build support
9 systems through representation in membership, LGBTQ+ focused programming, and
10 mentorship opportunities.

11

12 *2. Consistency - Objectives and activities of the group are consistent with those of the AMA.*
13 *Activities make good use of available resources and are not duplicative.*

14

15 Members of the LGBTQ+ Section would advocate for physicians and medical students by focusing
16 on strategies, programs, and policies to better serve AMA members, potential members, and
17 patients who identify as LGBTQ+. In 2022, the AC held an impromptu meeting with the Chair of
18 the AMA Board of Trustees (BOT) to discuss the AMA's messaging on Mpox, previously known
19 as Monkeypox or MPV. This meeting was to ensure that no groups affected by this public health
20 crises were further stigmatized, and to address the vaccine shortage so that distribution was
21 performed in an equitable and effective manner to prevent further spread.

22

23 The Committee holds a liaison position that serves on the AMA Foundation (AMAF) Fellowship
24 Commission on LGBTQ+ Health, which determines institutional grants to support the
25 advancement of LGBTQ+ Health and Equity initiatives. Additionally, the AC funds and selects
26 annual awardees for the AMAF LGBTQ+ Award for Excellence. These awards and grants are
27 establishing the pathway for physicians who identify as LGBTQ+ to become involved in the AMA,
28 gain peer recognition, and advance evidence-based practices of health equity standards for
29 LGBTQ+ patients. Given that the AC has been in existence since 2005, and that the strategic plan
30 and work of the Committee has demonstrated its continued need, the section would continue to be
31 essential, with neither change to staffing, nor duplicative efforts arising from the transition.

32

33 In November 2023, the AC sponsored a session with leading experts in the field of LGBTQ+ health
34 policy and legislation who discussed important and timely legislative efforts at the state and federal
35 levels impacting LGBTQ+ health care access and treatment, such as the current landscape of
36 legislation and bills that were passed recently affecting LGBTQ+ health care and access; current
37 court cases that resulted from enacted anti-LGBTQ+ legislation; newer bills, such as Shield laws,
38 that are being passed in an effort to protect access to LGBTQ+ health care services in some states,
39 and the sponsors and organizations backing anti-LGBTQ+ legislation and some of their strategies.

40

41 *3. Appropriateness - The structure of the group will be consistent with its objectives and activities.*

42

43 Due to its protected class nature and voluntary membership, the LGBTQ+ Section would not enroll
44 members based on sexual orientation, gender identity and expression (SOGIE) data. Instead,
45 members would need to opt in as members of the section. All AMA members may receive the
46 monthly LGBTQ+ newsletter, attend webinars, and AMA Interim and Annual meeting educational
47 programming.

48

49 The current AC leadership consists of a Chair, Vice Chair, GLMA Representative, Medical Student
50 Section (MSS) Representative, Young Physician Section (YPS) Representative, Resident Fellow
Section (RFS) Representative and two Members at-Large. As the LGBTQ+ Section, the governing

1 council (GC) would oversee the elections process for the delegate and alternate delegate positions
2 and allow any member of the section to apply for these positions. Section membership would then
3 vote to elect these positions. Terms of service for GC members will be addressed in the section's
4 internal operating procedure (IOP). The GC, including the delegates, would meet prior to the HOD
5 meetings and at other times throughout the year with elections taking place prior to the Annual
6 Meeting of the HOD. The Chair and Chair-elect positions would be elected positions from
7 members of the GC with the Chair-elect (now Vice Chair under current AC format) ascending to
8 Chair. Voting would be conducted in accordance with the section's IOP and call for a majority
9 consensus.

10
11 *4. Representation Threshold - Members of the formal group would be based on identifiable*
12 *segments of the physician population and AMA membership. A substantial number of members*
13 *would be represented by this formal group. At minimum, this group would be able to represent*
14 *1,000 AMA members. It is important to note this threshold will not be used to determine*
15 *representation, as each new section will be allocated only one delegate and one alternate delegate*
16 *in the AMA HOD.*

17
18 The percentage of U.S. adults who self-identify as gay, lesbian, bisexual, transgender, or something
19 other than heterosexual has increased to a new high of 7.2 percent, which is double the percentage
20 when Gallup first measured it a decade ago. Based on this estimate, there are approximately 23
21 million people who identify as transgender or non-binary, meaning those individuals whose gender
22 identity differs from cultural expectations based on the sex assigned at birth and/or falls outside
23 binary gender categories of “man” or “woman.”^{1 2}

24
25 The Association of American Medical Colleges Graduation Questionnaire notes that over one
26 percent of graduating medical students identify as a different gender than their sex assigned at
27 birth, and nearly 12 percent identify as gay, lesbian, bisexual, or another sexual identity besides
28 heterosexual.³ Of the 250,000 AMA members, nearly seven percent identify as LGBTQ+ based on
29 those who provided SOGIE information. The “prefer not to say” category in SOGIE data, is around
30 two percent, which is consistent with the 2022 Gallup census information. The AC has identified
31 another possible five percent of AMA membership as allies; so, as many as 12,500 active members
32 in the AMA would consider themselves allies to the LGBTQ+ Section.

33
34 With increased visibility as a section and additional opportunities for engagement and
35 collaboration, the section may be able to further reduce stigma within and outside the AMA.
36 Currently, the AC listserv engages a total of 1,703 individuals. Half of those are AMA members
37 (804) and the other half are not (899). As a section, it is anticipated that more LGBTQ+ members
38 will recruit friends and colleagues to be actively engaged members of the section. Groups where
39 the section may find opportunities to recruit new AMA members include GLMA, Medical Student
40 Pride Alliance (MSPA), LGBTQ+ members of specialty societies, and others.

¹ Gallup. US LGBT identification steady at 7.2%. Accessed August 6, 2023. <https://news.gallup.com/poll/470708/lgbt-identification-steady.aspx>.

² UCLA SCHOOL OF LAW WILLIAMS INSTITUTE. HOW MANY ADULTS AND YOUTH IDENTIFY AS TRANSGENDER IN THE UNITED STATES? ACCESSED MAY 19, 2023. <HTTPS://WILLIAMSINSTITUTE.LAW.UCLA.EDU/PUBLICATIONS/TRANS-ADULTS-UNITED-STATES/>.

³ AAMC. 2024 Medical School Graduation Questionnaire. Accessed May 19, 2004. <https://www.aamc.org/data-reports/students-residents/report/graduation-questionnaire-gq>.

1 *5. Stability - The group has a demonstrated history of continuity. This segment can demonstrate*
2 *an ongoing and viable group of physicians, who will be represented by this section. Both the*
3 *segment and the AMA will benefit from an increased voice within the policymaking body.*
4

5 The AC participates in several efforts aimed at growing AMA membership and engagement.
6 While attending outside organizations meetings and events, such as Howard Brown Health LGBTQ
7 Midwest Symposium, MSPA annual meeting, Building the Next Generation of Academic
8 Physicians (BNGAP) LGBT Workforce Conference, and GLMA's annual meeting, AC members
9 provide awareness and greater understanding of the benefits to working with and joining the AMA.
10 The current AC includes physicians from several stakeholder institutions such as Howard Brown
11 Health, MSPA and GLMA. AC members also collaborate and engage with students at the BNGAP
12 meeting and through the MSS representative for outreach to MSPA to engage interested students
13 with the AC and its work. As a section, the group plans on further educational outreach to MSS,
14 RFS and YPS within the AMA and LGBTQ+ groups outside the AMA.
15

16 The AC has convened meetings during Annual and Interim Meetings of the HOD. Attendance at
17 assembly meetings ranges between 80 to 150 members with 20-30 new members attending
18 meetings. The monthly newsletter listserv, which reaches approximately 1,700 individuals, remains
19 vital and connects AC membership between and during meetings. Committee members are very
20 well informed on the socio-economic facets of medicine and the group's leadership has remained
21 stable and consistent, with continuous growth in applicants for open positions. Engagement in the
22 Committee's newsletter continues to be among the highest open and click through rates across the
23 sections. For 2022, the monthly newsletter email was opened by 10,662 individuals with an open
24 percentage rate of 48.92.
25

26 Annually, the AC undergoes a strategic planning process where the top strategic initiatives are
27 identified and supporting tactics and measures are established. AC leadership performs quarterly
28 check-ins to assess how the Committee is progressing on these goals. The AC established its 2022-
29 2023 strategic priorities to:
30

- 31 • Facilitate member involvement, mentoring, leadership development, and networking for
32 LGBTQ+ physicians, medical students, and allies.
- 33 • Improve health equity for LGBTQ+ patients and communities and increase LGBTQ+
34 representation in the physician workforce.
- 35 • Engage internal and external stakeholders in amplifying AMA policy and enhancing
36 education and awareness efforts on LGBTQ+ health and well-being.
37

38 In addition to the strategic objectives, the Committee identified the following items as additional
39 priorities and areas of focus:
40

- 41 1. Promote physician safety from threats and violence, especially when providing medically
42 necessary, evidence-based care.
- 43 2. Mpox eradication including equitable vaccine and treatment distribution.
44

45 The AC has always been focused on establishing goals and priorities that support the mission and
46 continued growth and capacity to reach more LGBTQ+ physicians and medical students, and
47 understands the necessity to remain nimble and open to accommodating issues that inevitably arise
48 and require attention and support from the AC and AMA leadership, such as laws and regulations
49 that seek to deny access to health care, and penalize/criminalize the provision of medically
50 necessary and appropriate care.

1 For the June 2022 meeting, the LGBTQ+ Caucus had 146 registrants, which was nearly seven
2 percent of the total number of registered attendees for section caucus events. Compared to previous
3 caucus events, there has been consistent growth in registered attendees. In 2019, the AC had 83
4 registrants, and for 2021 there were 169 (no data for June 2020 as that meeting was cancelled).
5 Registration for the I-22 Meeting had 115 registered attendees, which is a marked increase from
6 November 2021, where 106 registrations were received for the virtual event and 40 attended in
7 person. This is also a marked increase from the virtual November 2020 meeting, when 30
8 participants attended the Caucus event. At the November 2019 Interim meeting there were 101
9 registered participants for the LGBTQ+ Caucus event.

10
11 In 2022, the AC hosted educational events with high attendance and registration rates and
12 supported the AMA's commitment to embedding health equity. The topics and speakers selected at
13 both the 2022 Annual and Interim meetings were non-profit providers who support marginalized
14 LGBTQ+ communities. At the June meeting, the AIDS Foundation of Chicago (AFC) presented,
15 "Policy, Housing, Health Equity." The session relayed AFC's impact on reducing HIV-related
16 health disparities among Black, Indigenous, and people of color and LGBTQ+ communities
17 through housing, case management, policy and advocacy, and community engagement. For the
18 November Interim education session, Hawaii Health and Harm Reduction Center presented
19 "Knowing Your Place." Attendees of this session gained an increased understanding of western
20 concepts of LGBTQ+ identities; increased knowledge about the culture, history, and role of native
21 Hawaiian Mahu and of the impacts of colonialism on the native Hawaiian Mahu community; and
22 gained increased confidence to provide culturally appropriate health services to Native Hawaiian
23 LGBTQ+ communities.

24
25 *6. Accessibility - Provides opportunity for members of the constituency, who are otherwise under-*
26 *represented, to introduce issues of concern and to be able to participate in the policymaking*
27 *process within the HOD.*
28

29 Since its formation, the AC has been well-organized and engaged in the AMA, has a collegial and
30 supportive relationship with the BOT and is recognized as the forum for physicians and medical
31 students who identify as LGBTQ+ within the AMA. The Committee conducts their meetings and
32 policy discussions in alignment with the HOD as do the sections, which the AC engages with, e.g.,
33 the Integrated Physician Practice Section, MSS, RFS, Minority Affairs Section, Women Physicians
34 Section and more on a regular and consistent basis. The AC has engaged with AMA staff to
35 support the AMA business efforts addressing the needs of physicians and health care of the
36 LGBTQ+ community. While many AC members are delegates or alternates who are familiar with
37 the activities and policymaking processes of the House, it is common that reference committee
38 members, section leaders, various delegations or BOT members may ask the unofficial opinion of
39 the AC on items of business at the HOD, despite the AC having no official standing at the House.
40 However, Committee members have not had a consistently visible identified voice in the HOD.
41 Members of the AC believe all of this has prepared the AC to transition quickly and efficiently to
42 become a highly functioning and effective section and that the time has come to transition to
43 section status with a delegate who can voice the official opinion of an LGBTQ+ Section.

44
45 The LGBTQ+ Section would serve as an entry point to the HOD for most AMA resolutions
46 seeking to support physicians, medical students, and patient health of the LGBTQ+ community.
47 This section can help ensure resolutions brought to the HOD provide opportunities for LGBTQ+
48 members to engage in the AMA policymaking process. Section members will be notified prior to
49 meetings of resolution submission guidelines and deadlines. Members would submit resolutions to
50 the GC for consideration that would then review the submission and assist the author(s) with
51 modifications, if needed. Section members could submit comments or testimony to revise the

1 original resolution. The GC would discuss resolutions and reports that are germane to the section
2 during their meetings. Section membership would vote to support, oppose, or recommend other
3 directives for the resolutions and reports, and would also solicit and discuss timely issues for future
4 policymaking activities. The LGBTQ+ Section could provide a friendly forum for under-
5 represented LGBTQ+ physicians and medical students who have often felt marginalized to
6 introduce issues of concern and to participate in the AMA policymaking process.

7
8 CLRPD ASSESSMENT

9
10 Within the AMA, there are no component groups solely devoted to advocacy and education related
11 to issues that are specific to LGBTQ+ individuals. Given the limited opportunity of the AC to
12 present issues of concern specific to this group, the CLRPD believes it would be appropriate to
13 afford LGBTQ+ physicians and medical students with an opportunity for a focused voice. The
14 proposed LGBTQ+ Section would be dedicated to advocacy on policy issues, provide leadership
15 development and educational opportunities for medical students and physicians, and monitor trends
16 and issues that affect physicians, medical students and patients who identify as LGBTQ+.

17
18 The LGBTQ+ Section would generate projects relevant to physicians and physicians in training
19 who have an interest in LGBTQ+ issues. Improving outreach and creating new opportunities for
20 participation among physicians and trainees may incentivize non-members of this demographic to
21 become AMA members. The structure of the proposed LGBTQ+ Section is conducive to sharing
22 key concerns and identifying meaningful opportunities for physicians, which supports the
23 objectives of this group. In accordance with the AMA bylaws, sections are required to have an
24 elected GC from the voting members of the section and establish a business meeting that would be
25 open to its members. The AC presently has an established online forum, which could create an
26 avenue for a voting body to elect GC members.

27
28 LGBTQ+ physicians and medical students remain a substantial market segment for our AMA and
29 this section would represent over 1,000 AMA members. Since its inception, the AC has taken steps
30 to align its structure with the activities of the AMA. AC leadership has built a solid foundation for
31 the group, which would benefit from a delegate's voice to address LGBTQ+ issues in the HOD.
32 The AMA's policymaking process could be strengthened by ensuring that the perspectives of these
33 physicians, medical students and patients are represented.

34
35 The CLRPD finds that the application meets all six criteria as defined in bylaws.

36
37 RECOMMENDATIONS

38
39 The Council on Long Range Planning and Development recommends that the following
40 recommendations be adopted and the remainder of the report be filed:

- 41
42 1. That our American Medical Association transition the Advisory Committee on Lesbian, Gay,
43 Bisexual, Transgender and Queer (LGBTQ+) Issues to the LGBTQ+ Section as a delineated
44 section. (Directive to Take Action)
45
46 2. That our AMA develop bylaw language to recognize the LGBTQ+ Section. (Directive to Take
47 Action)

Fiscal Note: The Advisory Committee on LGBTQ+ Issues submitted a detailed fiscal note that projected incremental expenditures of \$16,000 per annum for the proposed section.

REPORT OF THE HOUSE OF DELEGATES COMMITTEE
ON THE COMPENSATION OF THE OFFICERS

Compensation Committee Report, June 2024

Subject: REPORT OF THE HOUSE OF DELEGATES COMMITTEE ON THE
COMPENSATION OF THE OFFICERS

Presented by: Claudette Dalton, MD, Chair

Referred to: Reference Committee F

1 BACKGROUND

2
3 At the 1998 Interim Meeting, the House of Delegates (HOD) established a House Committee on
4 Trustee Compensation, currently named the Committee on Compensation of the Officers, (the
5 “Committee”). The Officers, defined in the American Medical Association’s (AMA) Constitution
6 and Bylaws, consist of all 21 members of the Board of Trustees, including the President, President-
7 Elect, Immediate Past President, Secretary, and Speaker and Vice Speaker of the HOD, and are
8 collectively referred to in this report as Officers. The composition, appointment, tenure, vacancy
9 process and reporting requirements for the Committee are covered under the AMA Bylaws. Bylaw
10 2.13.4.5 provides:

11
12 The committee shall present an annual report to the House of Delegates recommending the
13 level of total compensation for the Officers for the following year. The recommendations of
14 the report may be adopted, not adopted, or referred back to the committee, and may be
15 amended for clarification only with the concurrence of the committee.

16
17 At A-00, the Committee and the Board jointly adopted the American Compensation Association’s
18 definition of “Total Compensation” which was added to the Glossary of the AMA Constitution and
19 Bylaws. Total Compensation is defined as the complete reward/recognition package awarded to an
20 individual for work performance, including: (a) all forms of money or cash compensation; (b)
21 benefits; (c) perquisites; (d) services; and (e) in-kind payments.

22
23 Since the inception of this Committee, its reports have documented the process the Committee
24 follows to ensure that current or recommended Officer compensation is based on sound, fair, cost-
25 effective compensation practices as derived from research and use of independent external
26 consultants, expert in Board compensation. Reports beginning in December 2002 documented the
27 principles the Committee followed in creating its recommendations for Officer compensation.

28
29 METHODOLOGY

30
31 The Committee recently commissioned Willis Towers Watson (WTW), a major compensation
32 consulting firm with expertise in board compensation to review secretarial expense reimbursement
33 for not-for-profit board members. This review was requested so that we can ensure our AMA
34 board members have access to necessary secretarial services to assist them in representing the
35 AMA. The current \$750 secretarial allowance, in effect for at least the past 10 years, is a calendar

1 year annual maximum reimbursement, and it is included in the respective board member's taxable
2 income per IRS regulations.

3

4 FINDINGS

5

6 WTW reviewed external data on practices related to secretarial expense reimbursement of not-for-
7 profit boards. While the data showed that secretarial expense reimbursement was a minority
8 practice, it was noted that our board members have a significantly larger time commitment than
9 what is required by other not-for-profit boards. Given the work of the board members and the time
10 commitment, the secretarial needs of the board are different than a traditional not-for-profit that
11 supports providing board members with this benefit. The data also showed that when the
12 reimbursement was provided, practices are split between the reimbursement being capped or
13 uncapped with uncapped being slightly more common. Considering that trend, combined with the
14 fact that it has been 10 years since the reimbursement maximum was reviewed, this Committee
15 recommends increasing the maximum reimbursement to \$1,125 effective January 1, 2025.

16

17 RECOMMENDATIONS

18

19 The Committee on Compensation of the Officers recommends the following recommendations be
20 adopted and the remainder of this report be filed:

21

22 1. That the secretarial reimbursement be increased to \$1,125 effective January 1, 2025.

23

24 2. That there be no changes to Officers' compensation for the period beginning July 1, 2024
25 through June 30, 2025.

26

27 3. That the remainder of the report be filed.

28

29 Fiscal Note: \$4,500 if all non-leadership board members were reimbursed to the secretarial
30 reimbursement maximum.

1 APPENDIX

Definition of Governance Honorarium Effective July 1, 2017:

The purpose of this payment is to compensate Officers for all Chair-assigned internal AMA work and related travel. This payment is intended to cover all currently scheduled Board meetings, special Board or Board Committee meetings, task forces, subcommittees, Board orientation, development and media training, Board calls, sections, councils, or other internal representation meetings or calls, and any associated review or preparatory work, and all travel days related to all meetings as noted up to eleven (11) Internal Representation days.

Definition of Per Diem for Representation effective July 1, 2017:

The purpose of this payment is to compensate for Board Chair-assigned representation day(s) and related travel. Representation is either external to the AMA, or for participation in a group or organization with which the AMA has a key role in creating/partnering/facilitating, achievement of the respective organization goals such as the AMA Foundation, PCPI, etc. or for Internal Representation days above eleven (11). The Board Chair may also approve a per diem for special circumstances that cannot be anticipated such as weather-related travel delays. Per Diem for Chair-assigned representation and related travel is \$1,400 per day.

Definition of Telephone Per Diem for External Representation effective July 1, 2017:

Officers, excluding the Board Chair and the President(s) who are assigned as the AMA representative to outside groups as one of their specific Board assignments or assigned Internal Representation days above eleven (11), receive a per diem for teleconference meetings when the total of all teleconference meetings of 30 minutes or longer during a calendar day equal 2 or more hours. Payment for those meetings would require the approval of the Chair of the Board. The amount of the Telephonic Per Diem will be $\frac{1}{2}$ of the full Per Diem which is \$700.

REPORT OF THE SPEAKERS

Speakers' Report 01-A-24

Subject: Report of the Resolution Modernization Task Force Update

Presented by: Lisa Bohman Egbert, MD, Speaker, and John H. Armstrong, MD, Vice Speaker

Referred to: Reference Committee F

1 BACKGROUND

2
3 At the 2023 Annual Meeting, resolution 604 was adopted. Resolution 604 states:

4
5 RESOLVED, That our American Medical Association form a Speakers Task Force on the
6 Resolution Process to review the entire process of handling resolutions for our AMA
7 House of Delegates, including but not limited to definitions of on time resolutions,
8 emergency resolutions, and late resolutions, deadlines for submission of resolutions by all
9 sections, processing and review of reference committee reports, and use of virtual meetings
10 so that all on time resolutions can be submitted by the same deadline (Directive to Take
11 Action); and be it further

12
13 RESOLVED, That our AMA Speakers Task Force on the Resolution Process report back
14 to our AMA House of Delegates by the 2024 Annual Meeting with recommendations
15 regarding the resolution process. (Directive to Take Action)

16
17 Pursuant to this policy, the Resolution Modernization Task Force (RMTF) was appointed by the
18 Speaker with a broad representation in the House. The RMTF includes following nine members:

- 19
20
- 21 ● David Henkes, MD, Chair, Texas
 - 22 ● Sarah Candler, MD, American College of Physicians
 - 23 ● Ronnie Dowling, MD, Arizona Medical Association
 - 24 ● Rachel Ekaireb, MD, Resident/Fellow Section, California
 - 25 ● Michael Hanak, MD, American Academy of Family Physicians
 - 26 ● Susan Hubbell, MD, American Academy of Physical Medicine and Rehabilitation
 - 27 ● Gary Pushkin, MD, The Maryland State Medical Society
 - 28 ● Kaylee Scarnati, Medical Student Section, Ohio
 - 29 ● Rachel Kylo, MD, American Society for Dermatologic Surgery
 - 30 ● Lisa Bohman Egbert, MD, Speaker, Ohio
 - 31 ● John H. Armstrong, MD, Vice Speaker, American College of Surgeons

32 The RMTF held their initial meeting on August 27, 2023, and developed an informational report,
33 Speakers' Report 01-I-23, which delineated issues with the resolutions process. This report was
34 used to guide the RMTF Open Forum which was held at the 2023 Interim Meeting to solicit input
35 from House of Delegates (HOD) and other AMA members attending the meeting. In addition, an
36 RMTF email box was established and announced during the open forum to enable members to
37 continue to submit comments after I-23 adjourned. There was robust discussion during the open

1 forum and many comments were received into the RMTF email box. The discussion topics at the
2 open forum included:

- 3
- 4 ● Unequal time for delegates to evaluate items for HOD business
- 5 ● Avoiding Redundancy with Existing Policy
- 6 ● Reference Committee Process
- 7 ● Reference Committee Hearings
- 8

9 The RMTF met again in early January 2024 to review comments received. As was stated at their
10 initial meeting, the task force, "...seeks to develop efficient processes that allow for all business
11 before the House to be equally reviewed by all delegates with the ultimate goal of the best policy
12 being developed for our AMA," and that remained their guiding principle in developing this report
13 and its recommendations.

14 15 DISCUSSION

16
17 Based on comments heard at the open forum, there was general consensus that the resolution
18 process is outdated, inefficient and requires modernization. The task force notes that the resolution
19 submission process and policies have not been changed since 2012; however, the HOD office has
20 begun significant technical improvements to PolicyFinder and to the procedures for submission and
21 processing of resolutions. Because these technical improvements are ongoing, the RMTF focused
22 on changes that would allow the consideration of HOD business to be more efficient, more
23 inclusive to members, and more equitable so that all items of business receive adequate and
24 equivalent consideration by the House. Therefore, the proposed recommendations address
25 resolution deadlines, the online forum, reference committee reports, and reaffirmation.

26 27 *Resolution Deadlines*

28
29 The resolution submission deadlines as stated in AMA Bylaws are as follows:

30
31 2.11.3.1 Resolutions. To be considered as regular business, each resolution must be
32 introduced by a delegate or organization represented in the House of Delegates and must
33 have been submitted to the AMA not later than 30 days prior to the commencement of the
34 meeting at which it is to be considered, with the following exceptions.

35
36 2.11.3.1.1 Exempted Resolutions. If any member organization's house of delegates
37 or primary policy making body, as defined by the organization, adjourns during the
38 5-week period preceding commencement of an AMA House of Delegates meeting,
39 the organization is allowed 7 days after the close of its meeting to submit
40 resolutions to the AMA. All such resolutions must be received by noon of the day
41 before the commencement of the AMA House of Delegates meeting. The presiding
42 officer of the organization shall certify that the resolution was adopted at its just
43 concluded meeting and that the body directed that the resolution be submitted to
44 the AMA House of Delegates.

45
46 2.11.3.1.2 AMA Sections. Resolutions presented from the business meetings of the
47 AMA Sections may be presented for consideration by the House of Delegates no
48 later than the recess of the House of Delegates opening session to be accepted as
49 regular business. Resolutions presented after the recess of the opening session of
50 the House of Delegates will be accepted in accordance with Bylaw 2.11.3.1.4.

1 2.11.3.1.3 Late Resolutions. Late resolutions may be presented by a delegate prior
2 to the recess of the opening session of the House of Delegates, and will be
3 accepted as business of the House of Delegates only upon two-thirds vote of
4 delegates present and voting.

5
6 2.11.3.1.4 Emergency Resolutions. Resolutions of an emergency nature may be
7 presented by a delegate any time after the opening session of the House of
8 Delegates is recessed. Emergency resolutions will be accepted as business only
9 upon a three-fourths vote of delegates present and voting, and if accepted shall be
10 presented to the House of Delegates without consideration by a reference
11 committee. A simple majority vote of the delegates present and voting shall be
12 required for adoption.

13
14 Currently, it is difficult for staff, delegations and members to review and fully vet all items of
15 business before the House due to the multiple exceptions to the "on-time" deadline as defined
16 above. These multiple exceptions mean that business is being processed in an ongoing fashion and
17 results in a fairly significant amount of "on-time" business being submitted after the 30-day
18 deadline through the closing of the HOD Opening Session. Although exempted resolutions are
19 posted on the website as soon as they are processed, they are not able to be included in the HOD
20 Delegate Handbook or the Online Member Forums (forums) and are often not seen by delegations
21 until the release of the "meeting tote" prior to the HOD Second Opening Session. These items of
22 business are not available to undergo the same consideration as those submitted before the 30-day
23 deadline. The inability to adequately review these late arriving "on-time" resolutions has been
24 identified as a major frustration by delegations. The short timeframe for review also limits
25 opportunities for collaboration and consensus building among delegations. Many suggestions to
26 rectify this problem were offered at the open forum and by email. The majority favored having one
27 set "on-time" deadline. Some delegates voiced concern for the Sections who meet and pass
28 resolutions just prior to the meeting. However, representatives from the MSS and RFS stated that
29 they have a very robust process for vetting their resolutions; by default, resolutions are deferred to
30 the following HOD meeting, and only those of an urgent nature are immediately forwarded. Given
31 that late resolutions are specifically reviewed for their timeliness and urgency, these resolutions
32 would be well positioned to be recommended for consideration if submitted as such.

33
34 Therefore, the RMTF recommends that the "on-time" deadline for resolutions be set at 45 days
35 prior to the commencement of the meeting at which it is to be considered. This recommendation
36 discontinues the exemptions for late society meetings and AMA Sections. Resolutions will be
37 considered "late" when received after the 45-day deadline and prior to the beginning of the HOD
38 Opening Session. Late resolutions will continue to be under the purview of the Rules and
39 Credentials Committee and the criteria for which late resolutions would be recommended for
40 consideration will continue to include the resolution's timeliness and the urgency of the topic.
41 Recommendations for consideration of late resolutions will continue to be included as a consent
42 calendar on the Rules and Credentials Report presented at the Second Opening Session and require
43 a two-thirds vote for consideration. The emergency resolution process would remain unchanged;
44 however, any resolution submitted after the HOD Opening Session begins will be treated as an
45 emergency resolution.

46
47 In summary, resolutions will fall into one of three categories: on time (45 days prior to the
48 meeting), late (after the on-time deadline and before the Opening Session begins), or emergency
49 (after the Opening Session begins). The Sections and organizations that hold their policy-making
50 meetings after the on-time deadline would be encouraged to review their resolutions for timeliness
51 and urgency and hold those not meeting this criteria for the next coming AMA meeting. Those

1 resolutions deemed timely and urgent could be submitted as late resolutions which will require a
2 two-thirds vote for consideration. These adjusted deadlines would allow staff to more easily
3 process items of business, prepare and post the HOD Delegate Handbook in its entirety, and post
4 the entire handbook on the Online Member Forums. In turn, this should allow delegations more
5 time to consider items of business without the scramble and frustration that the current process
6 produces. Overall, these changes will level the playing field so that all resolutions will be able to be
7 reviewed equally.

8
9 *Reference Committees Hearings and Reports*

10
11 The Online Member Forums were identified as an area ripe for improvement. Many commenters
12 noted experience from their own organizations in which a more robust virtual preliminary reference
13 committee process led to a more efficient in-person process and ultimately to policy that has been
14 more thoughtfully crafted and more thoroughly vetted. Additionally, Res. 606-I-21, established
15 policy D-600.956 which called for a two-year trial requiring that reference committees, prior to the
16 in-person reference committee hearing, produce a preliminary reference committee document
17 based on the written online testimony. An evaluation to determine if this procedure should be
18 continued is a directive of this policy. The RMTF was asked to conduct this evaluation as part of
19 their overall review to modernize the HOD.

20
21 Assessing the success of the trial of the Online Member Forums is difficult. As noted above, the
22 vast majority of the comments submitted to the RMTF suggested that these online forums should
23 be utilized in a much more robust and productive way to move the business of the HOD forward.
24 Polling of HOD delegates over a course of three meetings (A-22, I-22 and A-23), found that
25 consistently around 70% of delegates had viewed at least a few items on the forums. The
26 preliminary documents were found to be at least "somewhat helpful" by around 65% of those
27 responding. This would suggest that, although delegates find the forums to be a useful tool to
28 review items of business, they are currently being underutilized.

29
30 In their current state, the comments received on the forums are viewed by many to not carry the
31 same importance as in person testimony which is multifactorial in origin. A significant factor, as
32 discussed above, is that many "on-time" resolutions are not even posted on the forums. In addition,
33 the current process for developing a preliminary document, as defined in policy D-600.956, gives
34 very little insight into the direction of the reference committee's actions. By explicitly treating this
35 as an official reference committee hearing with a report, the RMTF believes this will drive greater
36 utilization of this valuable tool by elevating the importance of contributing to the online discussion.
37 This change would thus give equal weight to the testimony gathered online. In addition, there are
38 multiple advantages to online testimony which include:

- 39
40
- 41 ● The ability to submit amendments and/or supporting documentation with unlimited text
42 which allows for consideration and comment by other delegations.
 - 43 ● More time and opportunity for delegates and delegations to collaborate to improve
44 proposed resolutions.
 - 45 ● The opportunity for the entire AMA membership to submit comments, offering a wider
46 voice in the development of AMA policy.
 - 47 ● Increased inclusivity by allowing those unable or who prefer not to travel to meetings the
48 opportunity to participate.
 - 49 ● The opportunity for small delegations to provide input on all items of business by avoiding
the inherent difficulty of presenting at concurrent in-person reference committee hearings.

1 Therefore, the RMTF recommends that the Online Member Forums be renamed the Online
2 Reference Committee Hearings. These online ref coms will open 10 days following the 45-day
3 resolution submission deadline and be open for 21 days. As noted above, this 10-day window will
4 allow adequate time for staff processing of resolutions, the development of the HOD Handbook,
5 the review of the Resolution Committee for Interim, and the posting of resolutions on the Online
6 Reference Committees which currently is a lengthy process. This also extends the online ref coms
7 by one week beyond the current two-week window. For these reasons, the RMTF chose 45 days for
8 the "on-time" deadline. All items of business received by the resolution deadline will be included
9 in the Online Reference Committee Hearings.

10
11 The RMTF recommends that reference committees convene virtually after the online ref com 21-
12 day window closes, to develop a Preliminary Reference Committee Report. The task force further
13 recommends that the bylaws be amended so that the term for all committees of the House shall
14 commence upon their formation and shall continue throughout the meeting for which they were
15 appointed unless otherwise directed by the HOD, such as Reference Committee F.

16
17 The Preliminary Reference Committee Report will follow the same format as the reference
18 committee reports which are produced following the in-person hearings with the exception that
19 they shall not be consent calendars. The reports would include recommended actions by the
20 reference committee with items grouped by action, a summary of testimony to date, and a rationale
21 for the action recommended. The reports would be posted to the HOD website at least four days
22 prior to the opening of the HOD meeting for which they were submitted.

23
24 The in-person reference committee hearings will continue to hear testimony on each item before
25 the reference committee with the exception that the order of business would follow the order listed
26 on the Preliminary Reference Committee Report. Therefore, those items recommended for
27 adoption would go first followed by those recommended for adoption as amended and so forth,
28 with items for reaffirmation in lieu of being heard last. Although the preliminary reports will offer
29 recommendations for action for each item, this does not preclude discussion of the original item
30 and/or alternate actions or the submission of supporting documentation for the reference committee
31 to consider. Following the in-person hearing, the reference committees will convene to review the
32 in-person testimony and make necessary adjustments to their reports taking both online ref com
33 and in-person testimony into consideration. The final reference committee report to be considered
34 at the HOD will then be posted in the usual fashion.

35
36 In prior discussions of preliminary reports, concerns included that recommendations contained in
37 the report would be based on insufficient input or include recommendations that bias the outcome
38 of an item of business. However, those with experience with such a preliminary report with
39 recommendations noted that the inclusion of recommendations actually led to more robust online
40 discussions and thus more accurate initial recommendations. Additionally, as previously stated, the
41 recommendations included in the preliminary report are based on initial testimony only and would
42 be updated to reflect the totality of testimony from both the online and in-person testimony and that
43 stating a preliminary action does not preclude discussion of the original item or alternative actions
44 at the in-person hearing. Reference committee members should be trusted to incorporate in-person
45 testimony and change recommendations as warranted.

46
47 The task force believes this iterative process affords delegates and delegations the time to
48 collaborate on language and to fully review topics that are more complicated in nature and provides
49 the opportunity to perfect reference committee recommendations for their final report. Ultimately,
50 reference committee reports are not definitive until the House acts, and this process provides ample

1 opportunity to discuss each item of business to achieve the goal of developing the best possible
2 policy of our AMA.

3
4 *Reaffirmation*

5
6 The reaffirmation process was universally identified as a significant problem to be addressed and
7 was generally described as “broken.” This was highlighted at I-23 when all of the items placed on
8 the consent calendar were subsequently removed from it. In their discussions, the task force
9 identified some of the sources of items recommended for reaffirmation which include:

- 10
11 ● Policy exists but the authors are either not aware of the policy or current AMA activity to
12 achieve the goals of the existing policy.
13 ● Some delegations have a directive to their delegation from their parent organization to
14 submit all resolutions earmarked to go to the AMA for consideration, even when they are
15 aware that there is current existing policy.
16 ● There is current AMA policy on the subject, but authors are not satisfied with AMA
17 activity as a result of the existing policy.

18
19 The task force noted that many members consider reaffirmation a “defeat” of their resolution. On
20 the contrary the task force believes that reaffirmation should be seen as a “win” as it resets the
21 sunset clock and brings the issue back to the attention of our leadership and management team.

22
23 The RMTF spent significant time discussing the current process and potential improvements for it.
24 Ultimately, the task force decided that the current process of having resolutions placed on a
25 reaffirmation calendar should be discontinued and that the recommended firm on-time deadline
26 along with the implementation of the online ref coms with subsequent preliminary reports, would
27 be the best method to handle the identification of items for reaffirmation. As envisioned, the
28 process would be as follows: AMA content experts would continue to review submitted
29 resolutions and identify relevant current policy which is included as background information.
30 These policies would also be posted on the online reference committee hearing and, when
31 appropriate, a notation would be added that an identified policy may be reaffirmed in lieu of the
32 resolution. Online comments regarding these so identified items could then proceed regarding the
33 merits of reaffirmation along with the merits of the item itself. The reference committee will then
34 have the option to recommend “reaffirmation in lieu of” for these or any other item it deems
35 appropriate on its preliminary reference committee report. Further discussion of the handling of
36 these items will then be entertained at the in-person hearing.

37
38 **CONCLUSION:**

39
40 The RMTF recommends the establishment of a firm deadline of 45 days prior to the start of a
41 meeting for on-time resolutions with all resolutions received after this deadline and prior to the
42 start of the meeting considered late. This strict deadline will allow for all on-time resolutions to be
43 included in the Online Reference Committee Hearings (renamed from the Online Member Forums)
44 and for these online ref coms to remain open for 21 days rather than the current 14. The online ref
45 coms will produce Preliminary Reference Committee Reports which will include preliminary
46 recommendations. Recommendations regarding reaffirmation in lieu of a resolution will be
47 included in the Preliminary Reference Committee Report rather than a reaffirmation calendar so
48 that comments regarding reaffirmation can be made in the online ref coms and discussed further at
49 the in-person hearings. Delegations and Sections that meet after the 45 day on-time deadline will
50 have the opportunity to present late resolutions which they deem timely and urgent to the Rules and
51 Credentials Committee which will in turn recommend for or against consideration based on these

1 criteria. These changes will allow for equal consideration of all on-time resolutions as well as equal
2 application of the timeliness and urgency considerations for all late resolutions. It will eliminate the
3 current "broken" reaffirmation process and allow for open discussion of the merits of reaffirmation
4 on any given item.

5
6 The objective of the task force was to increase the efficiency of the resolution process but also
7 paramount was to maintain member input and the voice of the minority. The task force tried to
8 individually look at each of the issues identified at the town hall meeting and the email box but
9 found that the issues and solutions were integrated. Your task force believes that all of the proposed
10 recommendations work together to provide the fairest, most effective, and efficient manner to
11 develop the best policy for our AMA. The RMTF expresses the need for caution in that changes in
12 one recommendation may reduce the effectiveness of others and urges the House to accept the
13 proposed recommendations in aggregate to achieve these goals.

14
15 RECOMMENDATIONS:

16
17 The Resolution Modification Task Force recommends that the following be adopted to be
18 implemented for Interim 2024 and the remainder of the report be filed:

- 19
20 1. The bylaws be amended so that the resolution submission deadline be 45 days prior to the
21 opening session of the House of Delegates. (Directive to take Action)
22
- 23 2. The bylaws be amended so that the definition of a late resolution shall be all resolutions
24 submitted after the resolution submission deadline and prior to the beginning of the
25 Opening Session of the House of Delegates. (Directive to take Action)
26
- 27 3. The bylaws be amended so that the definition of an emergency resolution shall be all
28 resolutions submitted after the beginning of the Opening Session of the House of
29 Delegates. (Directive to take Action)
30
- 31 4. The bylaws be amended so that the term of committees of the House of Delegates shall
32 commence upon their formation and shall conclude at the end of the meeting for which
33 they were appointed, unless otherwise directed by the House of Delegates. (Directive to
34 take Action)
35
- 36 5. That our AMA will convene Online Reference Committee Hearings prior to each House of
37 Delegates meeting. These hearings shall open 10 days following the resolution submission
38 deadline and remain open for 21 days. This shall be accomplished in lieu of Policy G-
39 600.045. (New HOD Policy)
40
- 41 6. Prior to House of Delegates meetings, reference committees will convene after the close of
42 the Online Reference Committee Hearings to develop a Preliminary Reference Committee
43 Report. These reports shall include preliminary recommendations and will serve as the
44 agenda for the in-person reference committee hearing. This shall be accomplished in lieu of
45 Policy G-600.060(8). (New HOD Policy)
46
- 47 7. That Policy D-600.956 be rescinded. (Rescind HOD Policy)

1 **Relevant AMA Policy:**

2
3 **Increasing the Effectiveness of Online Reference Committee Testimony Policy D-600.956**

- 4 1. Our AMA will conduct a trial of two-years during which all reference committees, prior to the
5 in-person reference committee hearing, produce a preliminary reference committee document
6 based on the written online testimony.
7 2. The preliminary reference committee document will be used to inform the discussion at the in-
8 person reference committee.
9 3. There be an evaluation to determine if this procedure should continue.
10 4. The period for online testimony will be no longer than 14 days.
11 5. The trial established by Policy D-600.956 be continued through Annual 2024.
12

13 **Online Member Forums in the House of Delegates G-600.045**

- 14 1. Online member forums should be incorporated into every House of Delegates policymaking
15 meeting, using the following parameters: a. Each reference committee should participate in the
16 online member forum process; b. Each online member forum should cover as many items of
17 business as possible, including, at minimum, those items that appear in the initial compilation of
18 the Delegate Handbook; c. Comments submitted to an online member forum should be used to
19 prepare a summary report that reflects the comments received up to that point; d. Full, free and
20 complete testimony should be allowed in the onsite hearings; and e. The Speakers should
21 experiment with alternative procedures to enhance and improve the overall online member forum
22 process.
23 2. Our American Medical Association will form a Speakers Task Force on the Resolution Process
24 to review the entire process of handling resolutions for our AMA House of Delegates, including
25 but not limited to definitions of on time resolutions, emergency resolutions, and late resolutions,
26 deadlines for submission of resolutions by all sections, processing and review of reference
27 committee reports, and use of virtual meetings so that all on time resolutions can be submitted by
28 the same deadline.
29 3. Our AMA Speakers Task Force on the Resolution Process will report back to our AMA House
30 of Delegates by the 2024 Annual Meeting with recommendations regarding the resolution process.
31

32 **Introducing Business to the AMA House G-600.060**

33 AMA policy on introducing business to our AMA House includes the following:

- 34 1. Delegates submitting resolutions have a responsibility to review the Resolution checklist and
35 verify that the resolution is in compliance. The Resolution checklist shall be distributed to all
36 delegates and organizations in the HOD prior to each meeting, as well as be posted on the HOD
37 website.
38 2. An Information Statement can be used to bring an issue to the awareness of the HOD or the
39 public, draw attention to existing policy for purposes of emphasis, or simply make a statement.
40 Such items will be included in the section of the HOD Handbook for informational items and
41 include appropriate attribution but will not go through the reference committee process, be voted
42 on in the HOD or be incorporated into the Proceedings. If an information statement is extracted,
43 however, it will be managed by the Speaker in an appropriate manner, which may include a simple
44 editorial correction up to and including withdrawal of the information statement.
45 3. Required information on the budget will be provided to the HOD at a time and format more
46 relevant to the AMA budget process.
47 4. At the time the resolution is submitted, delegates introducing an item of business for
48 consideration of the House of Delegates must declare any commercial or financial conflict of
49 interest they have as individuals and any such conflict of interest must be noted on the resolution at
50 the time of its distribution.

- 1 5. The submission of resolutions calling for similar action to what is already existing AMA policy
2 is discouraged. Organizations represented in the House of Delegates are responsible to search for
3 alternative ways to obtain AMA action on established AMA policy, especially by communicating
4 with the Executive Vice President. The EVP will submit a report to the House detailing the items
5 of business received from organizations represented in the House which he or she considers
6 significant or when requested to do so by the organization, and the actions taken in response to
7 such contacts.
- 8 6. Our AMA will continue to safeguard the democratic process in our AMA House of Delegates
9 and ensure that individual delegates are not barred from submitting a resolution directly to the
10 House of Delegates.
- 11 7. Our AMA encourages organizations and Sections of the House of Delegates to exercise restraint
12 in submitting items on the day preceding the opening of the House.
- 13 8. Resolutions will be placed on the Reaffirmation Consent Calendar when they are identical or
14 substantially identical to existing AMA policy. For resolutions placed on the Reaffirmation
15 Consent Calendar, the pertinent existing policy will be clearly identified by reference to the Policy
16 Database identification number. When practical, the Reaffirmation Consent Calendar should also
17 include a listing of the actions that have been taken on the current AMA policies that are equivalent
18 to the resolutions listed. For resolutions on the Reaffirmation Consent Calendar which are not
19 extracted, the existing, pertinent AMA policy will be deemed to be reaffirmed in lieu of the
20 submitted resolution which resets the sunset clock for ten years.
- 21 9. Updates on referred resolutions are included in the chart entitled "Implementation of
22 Resolutions," which is made available to the House.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 601
(A-24)

Introduced by: Medical Student Section

Subject: Annual Holocaust Remembrance Event

Referred to: Reference Committee F

1 Whereas, physicians played leading roles in the Holocaust and were a driving force behind
2 some of the worst atrocities perpetrated on Jewish and other marginalized communities,
3 demonstrating the negative impact physicians can have during political turmoil^{1,2,3}; and
4

5 Whereas, heinous medical experimentation took place during the Holocaust despite Germany's
6 pre-existing Guidelines for Human Experimentation, which at the time was one of the only codes
7 for ethical human experimentation in the world and which called for unambiguous informed
8 consent, demonstrating the potential for codes of ethics to be ignored or subverted if they are
9 not protected and supported⁴; and
10

11 Whereas, even with a code of ethics, Nazi physicians believed they were operating under
12 scientifically and ethically sound beliefs due to their prioritization of the national effort and
13 government agenda^{2,3}; and
14

15 Whereas, medical involvement in the Holocaust has profoundly influenced contemporary
16 medical ethics, and current thinking on medical ethical issues can be understood better by
17 learning about and reflecting on the legacy of medical involvement in the Holocaust^{2,3}; and
18

19 Whereas, in addition to the well-known Nazi medical experiments, German physicians created
20 and led Nazi programs such as forced sterilizations, child "euthanasia," and the T4 program to
21 murder institutionalized adults, which are critical aspects of medical history (and some of which
22 were directly influenced by American medical and racial policies), but these are much less
23 widely studied by students in medical school^{3,4}; and
24

25 Whereas, learning about and reflecting on the implications of physician involvement in the
26 Holocaust can not only help students understand contemporary medical ethics, but can also
27 help protect against future human rights abuses by physicians^{2,3,5}; and
28

29 Whereas, per the Liaison Committee for Medical Education (LCME) annual survey, only 16% of
30 US and Canadian medical schools devote any required curricular time to learning about the
31 roles of physicians in the Holocaust and contemporary implications^{5,6}; and
32

33 Whereas, abundant curricular resources on Holocaust education are available, relieving the
34 burden of medical schools having to create novel educational materials to support medical
35 student learning and reflection on this history and its contemporary relevance^{5,7}; and
36

37 Whereas, the AMA Code of Medical Ethics only mentions physicians' role in the Holocaust once
38 as an example of information obtained from unethical experiments (E-7.2.2); and

1 Whereas, the legacy of medical involvement in the Holocaust is increasingly recognized as
2 critical to understanding contemporary concerns around health equity and justice and the roles
3 of health professionals in either perpetuating or alleviating injustice^{5,8}; and
4

5 Whereas, experts in medical ethics education and professional identity formation are
6 increasingly calling for inclusion of these issues as part of the medical curriculum, including in
7 the *Lancet*, the *AMA Journal of Ethics*, and in a presentation held by the AAMC^{3,5,9}; and
8

9 Whereas, a single event on an annual basis, held on an internationally-recognized day of
10 remembrance, could present a valuable opportunity for student and faculty learning and
11 reflection about the legacy of health professional involvement in the Holocaust¹⁰, therefore be it
12

13 **RESOLVED**, that our American Medical Association host an annual event in support of
14 International Holocaust Remembrance Day (January 27) to provide education to medical
15 trainees about the role of physicians in the Holocaust. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

RELEVANT AMA Policy

H-295.961 Medicolegal, Political, Ethical and Economic Medical School Course

1. The AMA urge every medical school and residency program to teach the legal, political, ethical and economic issues which will affect physicians.
2. The AMA will work with state and county medical societies to identify and provide speakers, information sources, etc., to assist with the courses.
3. An assessment of professional and ethical behavior, such as exemplified in the AMA Principles of Medical Ethics, should be included in internal evaluations during medical school and residency training, and also in evaluations utilized for licensure and certification.
4. The Speaker of the HOD shall determine the most appropriate way for assembled physicians at the opening sessions of the AMA House of Delegates Annual and Interim Meetings to renew their commitment to the standards of conduct which define the essentials of honorable behavior for the physician, by reaffirming or reciting the seven Principles of Medical Ethics which constitute current AMA policy.
5. There should be attention to subject matter related to ethics and to the doctor-patient relationship at all levels of medical education: undergraduate, graduate, and continuing. Role modeling should be a key

element in helping medical students and resident physicians to develop and maintain professionalism and high ethical standards.

6. There should be exploration of the feasibility of improving an assessment of ethical qualities in the admissions process to medical school.

7. Our AMA pledges support to the concept that professional attitudes, values, and behaviors should form an integral part of medical education across the continuum of undergraduate, graduate, and continuing medical education. [Res. 189, A-90; Modified by CME Rep. 1, I-95; Appended: Res. 318, I-98; Reaffirmed: CME Rep. 2, A-08; Reaffirmed in lieu of Res. 902, I-13; Reaffirmation I-15]

E-7.2.2 Release of Data from Unethical Experiments

Research that violates the fundamental principle of respect for persons and basic standards of human dignity, such as Nazi experiments during World War II or from the US Public Health Service Tuskegee Syphilis Study, is unethical and of questionable scientific value. Data obtained from such cruel and inhumane experiments should virtually never be published. If data from unethical experiments can be replaced by data from ethically sound research and achieve the same ends, then such must be done. In the rare instances when ethically tainted data have been validated by rigorous scientific analysis, are the only data of such nature available, and human lives would certainly be lost without the knowledge obtained from the data, it may be permissible to use or publish findings from unethical experiments. Physicians who engage with data from unethical experiments as authors, peer reviewers, or editors of medical publications should:

(a) Disclose that the data derive from studies that do not meet contemporary standards for the ethical conduct of research.

(b) Clearly describe and acknowledge the unethical nature of the experiment(s) from which the data are derived.

(c) Provide ethically compelling reasons for which the data are being released or cited, such as the need to save human lives when no other relevant data are available.

(d) Pay respect to those who were the victims of the unethical experimentation. [Issued: 2016]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 602
(A-24)

Introduced by: Young Physicians Section

Subject: Ranked Choice Voting

Referred to: Reference Committee F

1 Whereas, American Medical Association elections require run-off elections to elect candidates
2 by majority; and
3

4 Whereas, ranked-choice voting elections can be run more efficiently without the need for runoff
5 elections, while still ensuring the outcome preferred by a majority of voters; therefore be it
6

7 RESOLVED, that our American Medical Association study ranked-choice voting for all elections
8 within the House of Delegates. (Directive to Take Action)
9

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/8/2024

RELEVANT AMA POLICY

Elections. B-3.4

3.4.1 Time of Election. Officers of the AMA, except the Secretary, the medical student trustee, and the public trustee, shall be elected by the House of Delegates at the Annual Meeting, except as provided in Bylaws 3.6 and 3.7. The public trustee may be elected at any meeting of the House of Delegates at which the Selection Committee for the Public Trustee submits a nomination for approval by the House of Delegates. On recommendation of the Committee on Rules and Credentials, the House of Delegates shall set the day and hour of such election. The Medical Student Section shall elect the medical student trustee in accordance with Bylaw 3.5.6.

3.4.2 Method of Election. Where there is no contest, a majority vote without ballot shall elect. All other elections shall be by ballot.

3.4.2.1 At-Large Trustees.

3.4.2.1.1 First Ballot. All nominees for the office of At-Large Trustee shall be listed alphabetically on a single ballot. Each elector shall have as many votes as the number of Trustees to be elected, and each vote must be cast for a different nominee. No ballot shall be counted if it contains fewer or more votes than the number of Trustees to be elected, or if the ballot contains more than one vote for any nominee. A nominee shall be elected if he or she has received a vote on a majority of the legal ballots cast and is one of the nominees receiving the largest number of votes within the number of Trustees to be elected.

3.4.2.1.2 Runoff Ballot. A runoff election shall be held to fill any vacancy not filled because of a tie vote.

3.4.2.1.3 Subsequent Ballots. If all vacancies for Trustees are not filled on the first ballot and 3 or more Trustees are still to be elected, the number of nominees on subsequent ballots shall be reduced to no more than twice the number of remaining vacancies less one. The nominees on subsequent ballots shall be determined by retaining those who received the greater number of votes on the preceding ballot and

eliminating the nominee(s) who received the fewest votes on the preceding ballot, except where there is a tie. When 2 or fewer Trustees are still to be elected, the number of nominees on subsequent ballots shall be no more than twice the number of remaining vacancies, with the nominees determined as indicated in the preceding sentence. In any subsequent ballot the electors shall cast as many votes as there are Trustees yet to be elected, and must cast each vote for different nominees. This procedure shall be repeated until all vacancies have been filled.

3.4.2.2 All Other Officers, except the Medical Student Trustee and the Public Trustee. All other officers, except the medical student trustee and the public trustee, shall be elected separately. A majority of the legal votes cast shall be necessary to elect. In case a nominee fails to receive a majority of the legal votes cast, the nominees on subsequent ballots shall be determined by retaining the 2 nominees who received the greater number of votes on the preceding ballot and eliminating the nominee(s) who received the fewest votes on the preceding ballot, except where there is a tie. This procedure shall be continued until one of the nominees receives a majority of the legal votes cast.

3.4.2.3 Medical Student Trustee. The medical student trustee is elected by the Medical Student Section in accordance with Bylaw 3.5.6.

3.4.2.4 Public Trustee. The public trustee shall be elected separately. The nomination for the public trustee shall be submitted to the House of Delegates by the Selection Committee for the Public Trustee. Nominations from the floor shall not be accepted. A majority vote of delegates present and voting shall be necessary to elect.

Election - Council on Constitution and Bylaws, Council on Medical Education, Council on Medical Service, and Council on Science and Public Health. B-6.8

6.8.1 Nomination and Election. Members of these Councils, except the medical student member, shall be elected by the House of Delegates. Nominations shall be made by the Board of Trustees and may also be made from the floor by a member of the House of Delegates.

6.8.1.1 Separate Election. The resident/fellow physician member of these Councils shall be elected separately. A majority of the legal votes cast shall be necessary to elect. In case a nominee fails to receive a majority of the legal votes cast, the nominees on subsequent ballots shall be determined by retaining the 2 nominees who received the greater number of votes on the preceding ballot and eliminating the nominee(s) who received the fewest votes on the preceding ballot, except where there is a tie. This procedure shall be continued until one of the nominees receives a majority of the legal votes cast.

6.8.1.2 Other Council Members. With reference to each such Council, all nominees for election shall be listed alphabetically on a single ballot. Each elector shall have as many votes as there are members to be elected, and each vote must be cast for a different nominee. No ballot shall be counted if it contains fewer votes or more votes than the number of members to be elected, or if the ballot contains more than one vote for any nominee. A nominee shall be elected if he or she has received a vote on a majority of the legal ballots cast and is one of the nominees receiving the largest number of votes within the number of members to be elected.

6.8.1.3 Run-Off Ballot. A run-off election shall be held to fill any vacancy that cannot be filled because of a tie vote.

6.8.1.4 Subsequent Ballots. If all vacancies are not filled on the first ballot and 3 or more members of the Council are still to be elected, the number of nominees on subsequent ballots shall be reduced to no more than twice the number of remaining vacancies less one. The nominees on subsequent ballots shall be determined by retaining those who received the greater number of votes on the preceding ballot and eliminating the nominee(s) who received the fewest number of votes on the preceding ballot, except where there is a tie. When 2 or fewer members of the Council are still to be elected, the number of nominees on subsequent ballots shall be no more than twice the number of remaining vacancies, with the nominees determined as indicated in the preceding sentence. In any subsequent ballot the electors shall cast as many votes as there are members of the Council yet to be elected, and must cast each vote for a

different nominee. This procedure shall be repeated until all vacancies have been filled.

6.8.2 Medical Student Member. Medical student members of these Councils shall be appointed by the Governing Council of the Medical Student Section with the concurrence of the Board of Trustees.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 603
(A-24)

Introduced by: Resident and Fellow Section, Medical Student Section, Minority Affairs
Section

Subject: End Attacks on Health and Human Rights in Israel and Palestine

Referred to: Reference Committee F

- 1 Whereas, the attack on October 7th resulted in the death of over 1,100 Israelis, including
2 around 700 civilians, and the displacement of over 200,000 individuals^{1,2}; and
3
4 Whereas, the resultant escalating crisis in the Gaza Strip, home to over 2.3 million individuals
5 with half being children, has led to the loss of civilian life surpassing that of any conflict in this
6 region in the past 17 years and the displacement of 1.7 million civilians to already severely
7 overcrowded refugee camps^{1,3,4}; and
8
9 Whereas, attacks have resulted in the death of over 33,000 civilians across Gaza, the West
10 Bank, and Jerusalem, including over 13,000 children, with a further 75,000 wounded and at
11 least 10,000 people missing and believed to be buried under rubble, with an estimated 17,000
12 children unaccompanied or separated; further, the conflict has spilled over into neighboring
13 nations resulting in deaths of over 300 people in Lebanon and over 200 people in Syria^{1,4-12}; and
14
15 Whereas, the Geneva Conventions protect journalists, refugees, children, pregnant women and
16 mothers with infants, civilians, patients, physicians, and other medical personnel during times of
17 conflict¹³; and
18
19 Whereas, United Nations (UN) officials proclaim there is “no safe place in Gaza,” as shelters,
20 refugee camps, hospitals, ambulances, homes, bakeries, places of worship, toy stores, and UN-
21 funded schools, clinics and shelters have faced airstrikes, shootings, and have been flooded
22 with poisonous white phosphorous gasses¹⁴⁻¹⁶; and
23
24 Whereas, Attacks on over 99 health facilities, including 30 of the 36 hospitals in the Gaza Strip,
25 have resulted in the deaths of over 685 healthcare personnel, injured another 900, and
26 damaged 54 ambulances, 99 health facilities, including 30 hospitals^{1,5,17}; and
27
28 Whereas, physicians and other medical personnel have been forced to perform surgeries in
29 corridors and waiting rooms, conserve supplies due to a lack of basic medical supplies,
30 anesthetics, or painkillers, and utilize vinegar in place of antibiotics on open wounds¹⁸⁻²¹; and
31
32 Whereas, restrictions on the passage of fuel supplies and clean water have led to shutdowns of
33 medical equipment across hospitals, leaving critically ill patients at especially high risk and
34 increasing infectious disease outbreaks^{13,22}; and
35
36 Whereas, the destruction of homes and vital infrastructure, targeting of hospitals and refugee
37 camps, and depletion of medical resources in the setting of a complete blockade have led to a
38 critical humanitarian crisis and collapse of the Gazan healthcare system, leading the World
39 Health Organization (WHO) to proclaim on April 5 that “the systematic dismantling of healthcare
40 must end” as access to healthcare “has now become totally inadequate” in Gaza^{17,23}; and

1 Whereas, in April 2024, famine was confirmed in parts of Gaza, and the WHO Integrated Food
2 Security Phase Classification partnership has raised the alarm that “over a million people are
3 expected to face catastrophic hunger” unless the situation is addressed^{24,25}; and
4

5 Whereas, between 12.4–16.5% of children aged 5 years or younger in Gaza are already
6 suffering from severe malnutrition^{24,26}; and
7

8 Whereas, if a ceasefire is not achieved, the war in Gaza is projected to cause a further 58,260
9 to 66,720 excess deaths by August 2024²⁷; and
10

11 Whereas, the UN General Assembly, in a 153-10 vote, called for an immediate ceasefire in
12 December 2023, while the UN Security Council called for an immediate ceasefire for the month
13 of Ramadan, leading to a lasting ceasefire in March 2024^{28,29}; and
14

15 Whereas, a ceasefire is defined as a long-term suspension of fighting in the entire geographic
16 area that is agreed upon by all involved parties and would allow for the continuous flow of
17 humanitarian aid^{30,31}; and
18

19 Whereas, numerous leading healthcare advocacy and humanitarian organizations, including
20 Doctors Without Borders, Amnesty International, Human Rights Watch, the World Health
21 Organization, the UN Security Council, and the UN High Commissioner on Human Rights, have
22 called for an immediate ceasefire, safe transit of aid and Gaza's civilian population, and
23 protection of civilian infrastructure^{2,8,28,32-38}; and
24

25 Whereas, many organizations are diligently recruiting volunteers to aid the civilian population in
26 Gaza but they are often unable to enter due to the increasingly unsafe conditions³⁸⁻⁴³; and
27

28 Whereas, healthcare professionals and organizations are responsible for upholding medical
29 neutrality and condemning violence against healthcare infrastructure, hospitals, first responders,
30 patients, children, refugees, and the blockade of essential health supplies, water, and fuel,
31 including in times of war and siege^{2,14,30,44-47}; and
32

33 Whereas, our AMA President issued a statement condemning the October 7th attack on Israel,
34 and the AMA has previously released statements vocalizing solidarity with Ukraine, passed a
35 policy calling for continuous support of organizations providing humanitarian missions to
36 Ukrainian refugees, and contributed \$100,000 in humanitarian aid through the AMA Foundation
37 to Ukraine^{48,49}; and
38

39 Whereas, on November 9, 2023, our AMA Board of Trustees released a statement on the
40 humanitarian crisis in Israel and Palestine but did not address the pivotal and life-saving issue of
41 ceasefire⁵⁰; therefore be it
42

43 RESOLVED, that our American Medical Association supports a ceasefire in Israel and Palestine
44 in order to protect civilian lives and healthcare personnel. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA POLICY

War Crimes as a Threat to Physicians' Humanitarian Responsibilities D-65.993

Our AMA will (1) implore all parties at all times to understand and minimize the health costs of war on civilian populations generally and the adverse effects of physician persecution in particular, (2) support the efforts of physicians around the world to practice medicine ethically in any and all circumstances, including during wartime, episodes of civil strife, or sanctions and condemn the military targeting of health care facilities and personnel and using denial of medical services as a weapon of war, by any party, wherever and whenever it occurs, and (3) advocate for the protection of physicians' rights to provide ethical care without fear of persecution. [BOT Action in response to referred for decision Res. 620, A-09 Modified: BOT Rep. 09, A-19 Modified: Res. 002, I-22]

Medical Neutrality H-520.998

Our AMA supports medical neutrality, under the principles of the Geneva Convention, for all health care workers and the sick and wounded in all countries. [Sub. Res. 72, I-81 Reaffirmed: CLRPD Rep. F, I-91 Reaffirmed: Sunset Report, I-01 Reaffirmed: CEJA Rep. 8, A-11 Reaffirmed in lieu of Res. 601, I-13 Reaffirmed: CEJA Rep. 05, A-23]

Humanitarian and Medical Aid Support to Ukraine D-65.984

Our AMA will advocate for: (1) continuous support of organizations providing humanitarian missions and medical care to Ukrainian refugees in Ukraine, at the Polish-Ukrainian border, in nearby countries, and/or in the US; (2) an early implementation of mental health measures, including suicide prevention efforts, and address war-related trauma and post-traumatic stress disorder when dealing with Ukrainian refugees with special attention to vulnerable populations including but not limited to young children, mothers, pregnant women, and the elderly; and (3) educational measures to enhance the understanding of war-related trauma in war survivors and promote broad protective factors (e.g., financial, employment, housing, and food stability) that can improve adjustment and outcomes for war-affected people, particularly when applied to vulnerable categories of people. [Res. 017, A-22]

Protecting Physicians and Other Healthcare Workers in Society H-515.950

Our AMA: (1) acknowledges and will act to reduce the incidence of antagonistic actions against physicians as well as other health care workers including first responders and public health officials, outside as well as within the workplace, including physical violence, intimidating actions of word or deed, and cyber-attacks, particularly those which appear motivated simply by their identification as health care workers; (2) will educate the general public on the prevalence of violence and personal harassment against physicians as well as other health care workers including first responders, and public health officials, outside as well as within the workplace; and (3) will work with all interested stakeholders to improve safety of health care workers including first responders and public health officials and prevent violence to health care professionals. [Res. 413, I-20]

A Declaration of Professional Responsibility H-140.900

Our AMA adopts the Declaration of Professional Responsibility

DECLARATION OF PROFESSIONAL RESPONSIBILITY: MEDICINE'S SOCIAL CONTRACT WITH HUMANITY**Preamble**

Never in the history of human civilization has the well being of each individual been so inextricably linked to that of every other. Plagues and pandemics respect no national borders in a world of global commerce and travel. Wars and acts of terrorism enlist innocents as combatants and mark civilians as targets. Advances in medical science and genetics, while promising to do great good, may also be harnessed as agents of evil. The unprecedented scope and immediacy of these universal challenges demand concerted action and response by all. As physicians, we are bound in our response by a common heritage of caring for the sick and the suffering. Through the centuries, individual physicians have fulfilled this obligation by applying their skills and knowledge competently, selflessly and at times heroically. Today, our profession must reaffirm its historical commitment to combat natural and man-made assaults on the health and well being of humankind. Only by acting together across geographic and ideological divides can we overcome such powerful threats. Humanity is our patient.

Declaration

We, the members of the world community of physicians, solemnly commit ourselves to: (1) Respect human life and the dignity of every individual.

(2) Refrain from supporting or committing crimes against humanity and condemn any such acts.

(3) Treat the sick and injured with competence and compassion and without prejudice.

(4) Apply our knowledge and skills when needed, though doing so may put us at risk.

(5) Protect the privacy and confidentiality of those for whom we care and breach that confidence only when keeping it would seriously threaten their health and safety or that of others.

(6) Work freely with colleagues to discover, develop, and promote advances in medicine and public health that ameliorate suffering and contribute to human well-being.

(7) Educate the public and polity about present and future threats to the health of humanity.

(8) Advocate for social, economic, educational, and political changes that ameliorate suffering and contribute to human well-being.

(9) Teach and mentor those who follow us for they are the future of our caring profession.

We make these promises solemnly, freely, and upon our personal and professional honor.

[CEJA Rep. 5, I-01 Reaffirmation A-07 Reaffirmed: CEJA Rep. 04, A-17 Reaffirmed: Res. 215, A-23]

Condemning the Use of Children as Instruments of War H-520.987

Our AMA: (1) condemns the use of children as instruments of war; and (2) encourages evaluation, treatment, and follow-up for children who have been used as instruments of war. [Res. 411, I-01 Reaffirmed: CEJA Rep. 8, A-11 Reaffirmed: CEJA Rep. 1, A-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 604
(A-24)

Introduced by: Senior Physicians Section

Subject: Confronting Ageism in Medicine

Referred to: Reference Committee F

1 Whereas, research has shown a strong link between ageism, in the form of negative
2 stereotypes, prejudice and discrimination, and risks for one's physical and mental health¹; and
3

4 Whereas, ageism refers to the stereotypes (how we think), prejudice (how we feel) and
5 discrimination (how we act) towards others or ourselves based on age. Structural ageism is the
6 way in which society and its institutions sustain ageist attitudes, actions or language in laws,
7 policies, practices or culture per the World Health Organization (WHO) and AGE Platform
8 Europe²; and
9

10 Whereas, ageism affects everyone by stereotyping and/or discriminating against, at both the
11 structural level (in which societal institutions reinforce systematic bias against older persons)
12 and individual level (in which older persons take in the negative views of aging of their culture)
13 especially when it exists in an environment of disproportionate power and privilege³; and
14

15 Whereas, ageism can be internalized by elders putting them at risk for diminished access to
16 physical and mental health care and/or suboptimal care; and
17

18 Whereas, ageism thereby negatively impacts health, longevity and well-being of elders while
19 having far-reaching economic consequences⁴; and
20

21 Whereas, the percentage of people worldwide aged 65 and over is projected to increase to
22 nearly 17 percent of the world's population by 2050⁵; and
23

24 Whereas, research has paid little attention to the intersectionality of aging and gender
25 influences whereby socio-economic inequalities can be vastly different for men versus women
26 over time⁶; and
27

28 Whereas, advocacy, beginning with education about and prevention of ageism by the AMA, can
29 help to prevent negative subconscious attitudes, i.e. stigmas, from developing or continuing;
30 therefore be it
31

32 RESOLVED, that our American Medical Association adopt the following definition of ageism
33 based on the World Health Organization (WHO) and AGE Platform Europe: "Ageism refers to
34 the stereotypes (how we think), prejudice (how we feel) and discrimination (how we act) towards
35 others or oneself based on age; structural ageism is the way in which society and its institutions
36 sustain ageist attitudes, actions or language in laws, policies, practices or culture" (New HOD
37 Policy); and be it further
38

39 RESOLVED, that our AMA establish a definition of "age equity," and consider adoption of the
40 AGE Platform Europe vision: "Age equity is an inclusive society, based on well-being for all,

1 solidarity between generations and full entitlement to enjoy life, participate in and contribute to
2 society. At the same time, each person's rights and responsibilities throughout their life course
3 have to be fully respected" (Directive to Take Action); and be it further
4

5 RESOLVED, that our AMA review all existing policy regarding discrimination, bias and
6 microaggressions, and add age or ageism if not already mentioned (Directive to Take Action);
7 and be it further
8

9 RESOLVED, that our AMA routinely incorporate intersectional approaches to ageism (Directive
10 to Take Action); and be it further
11

12 RESOLVED, that our AMA conduct ongoing (1) advocacy for hospital and regulatory policy
13 changes focused on individual physicians' care quality data rather than their age; and (2)
14 educational outreach to AMA members (i.e. starting with a Prioritizing Equity episode panel
15 discussion to be posted on Ed Hub™ for CME, as a video and podcast, and promoted through
16 the UCEP/GCEP channels) (Directive to Take Action); and be it further
17

18 RESOLVED, that our AMA work with the World Medical Association (WMA) and other interested
19 stakeholders to have AMA's work significantly inform the global health organization's work on
20 ageism. (Directive to Take Action)
21

Fiscal Note: \$47,934: Initial cost to review and report back on existing policy and develop
educational session for CME, plus annual costs for continued advocacy and education.

Received: 5/2/2024

RELEVANT AMA POLICY

H-65.951 Healthcare and Organizational Policies and Cultural Changes to Prevent and Address Racism, Discrimination, Bias and Microaggressions

Our AMA adopted the following guidelines for healthcare organizations and systems, including academic medical centers, to establish policies and an organizational culture to prevent and address systemic racism, explicit and implicit bias and microaggressions in the practice of medicine.

GUIDELINES TO PREVENT AND ADDRESS SYSTEMIC RACISM, EXPLICIT BIAS AND MICROAGGRESSIONS IN THE PRACTICE OF MEDICINE

Health care organizations and systems, including academic medical centers, should establish policies to prevent and address discrimination including systemic racism, explicit and implicit bias and microaggressions in their workplaces.

An effective healthcare anti-discrimination policy should:

- Clearly define discrimination, systemic racism, explicit and implicit bias and microaggressions in the healthcare setting.
- Ensure the policy is prominently displayed and easily accessible.
- Describe the management's commitment to providing a safe and healthy environment that

actively seeks to prevent and address systemic racism, explicit and implicit bias and microaggressions.

- Establish training requirements for systemic racism, explicit and implicit bias, and microaggressions for all members of the healthcare system.
- Prioritize safety in both reporting and corrective actions as they relate to discrimination, systemic racism, explicit and implicit bias and microaggressions.
- Create anti-discrimination policies that:
 - Specify to whom the policy applies (i.e., medical staff, students, trainees, administration, patients, employees, contractors, vendors, etc.).
 - Define expected and prohibited behavior.
 - Outline steps for individuals to take when they feel they have experienced discrimination, including racism, explicit and implicit bias and microaggressions.
 - Ensure privacy and confidentiality to the reporter.
 - Provide a confidential method for documenting and reporting incidents.
 - Outline policies and procedures for investigating and addressing complaints and determining necessary interventions or action.
- These policies should include:
 - Taking every complaint seriously.
 - Acting upon every complaint immediately.
 - Developing appropriate resources to resolve complaints.
 - Creating a procedure to ensure a healthy work environment is maintained for complainants and prohibit and penalize retaliation for reporting.
 - Communicating decisions and actions taken by the organization following a complaint to all affected parties.
 - Document training requirements to all the members of the healthcare system and establish clear expectations about the training objectives.

In addition to formal policies, organizations should promote a culture in which discrimination, including systemic racism, explicit and implicit bias and microaggressions are mitigated and prevented. Organized medical staff leaders should work with all stakeholders to ensure safe, discrimination-free work environments within their institutions.

Tactics to help create this type of organizational culture include:

- Surveying staff, trainees and medical students, anonymously and confidentially to assess:
 - Perceptions of the workplace culture and prevalence of discrimination, systemic racism, explicit and implicit bias and microaggressions.
 - Ideas about the impact of this behavior on themselves and patients.
- Integrating lessons learned from surveys into programs and policies.
- Encouraging safe, open discussions for staff and students to talk freely about problems and/or encounters with behavior that may constitute discrimination, including racism, bias or microaggressions.
- Establishing programs for staff, faculty, trainees and students, such as Employee Assistance programs, Faculty Assistance Programs, and Student Assistance Programs, that provide a place to confidentially address personal experiences of discrimination, systemic racism, explicit or implicit bias or microaggressions.
- Providing designated support person to confidentially accompany the person reporting an event through the process.

[Res. 003, A-21]

H-65.946 Towards Diversity and Inclusion: A Global Nondiscrimination Policy Statement and Benchmark for our AMA

Our AMA reaffirms its commitment to complying with all applicable laws, rules or regulations against discrimination on the basis of protected characteristics, including Title VII of the Civil Rights Act, The Age Discrimination in Employment Act, and the Americans with Disabilities Act, among other federal, state and local laws, and will provide updates on its comprehensive diversity and inclusion strategy as part of the annual Board report to the AMA House of Delegates on health equity.

[BOT Rep. 5, I-22]

H-65.965 Support of Human Rights and Freedom

Our AMA: (1) continues to support the dignity of the individual, human rights and the sanctity of human life, (2) reaffirms its long-standing policy that there is no basis for the denial to any human being of equal rights, privileges and responsibilities commensurate with his or her individual capabilities and ethical character because of an individual's sex, sexual orientation, gender, gender identity or transgender status, race, religion, disability, ethnic origin, national origin or age; (3) opposes any discrimination based on an individual's sex, sexual orientation, gender identity, race, appearance, religion, disability, ethnic origin, national origin or age and any other such reprehensible policies; (4) recognizes that hate crimes pose a significant threat to the public health and social welfare of the citizens of the United States, urges expedient passage for appropriate hate crimes prevention legislation in accordance with our AMA's policy through letters to members of Congress; and registers support for hate crimes prevention legislation, via letter, to the President of the United States.

[CCB/CLRPD Rep. 3, A-14; Reaffirmed in lieu of: Res. 001, I-16; Reaffirmation: A-17; Modified: Res. 013, A-22; Reaffirmed: BOT Rep. 5, I-22]

H-25.996 Retirement and Hiring Practices

It is urged that physicians, individually and through their constituent, component, and specialty medical societies, continue to stress the need to reappraise policies calling for compulsory retirement and age discrimination in hiring from the standpoint of health among older people, and that they participate actively and lend medical weight in the efforts of other groups to create a new climate of opportunity for the older worker.

[Committee on Aging Report, I-62; Reaffirmed: CLRPD Rep. C, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed CSAPH Rep. 2, A-08; Modified CCB Rep. 01, A-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 605
(A-24)

Introduced by: Senior Physicians Section
Subject: Walking the Walk of Climate Change
Referred to: Reference Committee F

- 1
2 Whereas, our American Medical Association has declared that climate change is an “urgent”
3 public health crisis per AMA Policy H-135.938, “Global Climate Change and Human Health”;
4 and
5
6 Whereas, our AMA “will protect patients by advocating for policies” that promote carbon
7 neutrality by the middle of this century in AMA Policy D-135.966, “Declaring Climate Change a
8 Public Health Crisis”; and
9
10 Whereas, our AMA has pledged to “incorporate principles of environmental sustainability within
11 its business operations” in AMA Policy, H-135.923, “AMA Advocacy for Environmental
12 Sustainability and Climate”; and
13
14 Whereas, there is considerable evidence that plant-based diets are more carbon friendly than
15 omnivorous or meat-heavy diets^{1,2}; and
16
17 Whereas, emissions from agriculture, made up largely of ruminant meat and dairy farming, will
18 still push the world past safe climate change targets even if fossil fuel emissions were
19 eliminated immediately, thereby creating a dietary pattern that reduces the risk of diet-related
20 disease is the same diet that mitigates climate change; and
21
22 Whereas, our AMA through its flagship journal, JAMA, has recently launched a series on
23 “Climate Change and Health” urging a commitment to actions that decrease greenhouse
24 emissions³; and
25
26 Whereas, BOT Report 17-A-23 discussed our AMA’s plan to address and mitigate the health
27 effects of climate change as well as its participation in the National Academy Action
28 Collaborative on Decarbonizing the U.S. Health Sector, it was silent on addressing these same
29 issues within the AMA itself; therefore be it
30
31 RESOLVED, that our American Medical Association Board of Trustees present to the House of
32 Delegates at Interim 2024 a detailed timeline as to when and how to achieve our organizational
33 carbon neutrality (Directive to Take Action); and be it further
34
35 RESOLVED, that our AMA staff study AMA-related corporate travel with respect to minimizing
36 carbon emissions and/or mitigating or off-setting such emissions (Directive to Take Action); and
37 be it further
38
39 RESOLVED, that our AMA adopt a policy for plant-based menus as the default option when
40 planning meeting venues with an opt-out alternative as appropriate. (Directive to Take Action)
41

Fiscal Note: Moderate - between \$5,000 - \$10,000

RELEVANT AMA POLICY

H-135.923 AMA Advocacy for Environmental Sustainability and Climate

Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities. [Citation: Res. 924, I-16; Reaffirmation:1-19]

H-135.938 Global Climate Change and Human Health

Our AMA: 1. Supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change.

2. Supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies.

3. (a) Recognizes the importance of physician involvement in policymaking at the state, national, and global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public; and (b) recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes.

4. Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability.

5. Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk.

6. Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change policy decisions related to health care and treatment.

7. Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training.

[CSAPH Rep. 3, I-08; Reaffirmation A-14; Reaffirmed CSAPH Rep.04, A-19; Reaffirmation: I-19; Modified: Res. 424, A-22; Modified: CSAPH Rep. 2, I-22]

D-135.966 Declaring Climate Change a Public Health Crisis

1. Our AMA declares climate change a public health crisis that threatens the health and well-being of all individuals. 2. Our AMA will protect patients by advocating for policies that: (a) limit global warming to no more than 1.5 degrees Celsius, (b) reduce US greenhouse gas emissions aimed at a 50 percent reduction in emissions by 2030 and carbon neutrality by 2050, and (c) support rapid implementation and incentivization of clean energy solutions and significant investments in climate resilience through a

climate justice lens. 3. Our AMA will consider signing on to the Department of Health and Human Services Health Care Pledge or making a similar commitment to lower its own greenhouse gas emissions. 4. Our AMA encourages the health sector to lead by example in committing to carbon neutrality by 2050. 5. Our AMA will develop a strategic plan for how we will enact our climate change policies including advocacy priorities and strategies to decarbonize physician practices and the health sector with report back to the House of Delegates at the 2023 Annual Meeting. [Res. 420, A-22; Appended: CSAPH Rep.02, I-22]

D-440.912 AMA Public Health Strategy

Our AMA will distribute evidence-based information on the relationship between climate change and human health through existing platforms and

communications channels, identify advocacy and leadership opportunities to elevate the voices of physicians on the public health crisis of climate change, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050.

2. Our AMA Board of Trustees will provide an update on loss of coverage and uninsurance rates following the return to regular Medicaid redeterminations and the end of the COVID-19 Public Health Emergency, the ensuing financial and administrative challenges experienced by physicians, physician practices, hospitals, and the healthcare system; and a report of actions taken by the AMA and recommendation for further action to address these issues at I-2023.

3. Our AMA Board of Trustees will provide a strategic plan or outline for the AMA's plan to address and combat the health effects of climate change at I-2023.

4. Our AMA Board of Trustees will provide an update on the efforts and initiatives of the AMA's gun violence task force at I-2023.

5. Our AMA will continue to support increased funding for public health infrastructure and workforce, which should include funding for preventative medicine related residency programs, to increase public health leadership in this country

[BOT Rep. 17, A-23; Modified: BOT Rep. 05, I-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 606
(A-24)

Introduced by: New England

Subject: Creation of an AMA Council with a Focus on Digital Health Technologies and AI

Referred to: Reference Committee F

1 Whereas, there is an unparalleled effort to apply emerging digital technologies to healthcare,
2 including but not limited to augmented/artificial intelligence (AI) systems¹⁻⁴, simulation and
3 virtual/augmented reality (VR/AR)^{5,6}, telehealth^{7,8}, and even quantum computing⁹; and
4

5 Whereas, emerging digital technologies including AI are being theorized (and even promoted)
6 as a disruptive threat to the practice, business, and teaching of medicine;¹⁰⁻¹³ and
7

8 Whereas, during the last major wave of digital health and informatics innovation, the AMA
9 lacked a policy-making body and expertise dedicated to such technology to help predict and
10 prevent the disruptions related to meaningful use, electronic medical record interoperability,
11 telehealth, etc.; and
12

13 Whereas, at the 2023 AMA Annual meeting, in addition to the resolutions in the Reference
14 Committee on Science & Technology (E), there were 8 resolutions involving innovative
15 technologies spread across various reference committees, with reports subsequently distributed
16 across multiple councils; and
17

18 Whereas, the rapid evolution of AI and digital technology within healthcare, as well as the
19 increasing volume of related House of Delegates (HOD) resolutions, reports, and advocacy
20 necessitates better coordination of HOD expertise and policymaking for the benefit of physicians
21 and patients alike; and
22

23 Whereas, our AMA has developed a variety of staff-driven responses to the proliferation of new
24 health technologies, such as the Office of Digital Health Innovation and Health2047, but there is
25 no dedicated body of the HOD focusing on this critical policy area; and
26

27 Whereas, policy regarding digital health technologies and AI requires relevant expertise in
28 multiple domains (practice, payment, liability, ethics, EHR integration, education, etc.)¹²⁻¹⁹ not
29 currently served by a single council, causing an inefficient distribution of these topics across
30 councils and severely limiting potential impact; and
31

32 Whereas, a new AMA council focused on digital health technologies, informatics, and AI would
33 benefit the HOD, Board of Trustees, and other Councils by organizing and cultivating precisely
34 this type of HOD staff expertise and physician leadership; therefore be it
35

36 RESOLVED, that our American Medical Association define and propose a new AMA council
37 focused on digital health, technology, informatics, and augmented/artificial intelligence, whose
38 members shall be elected by the House of Delegates, for presentation and constitution at the
39 2025 Annual Meeting. (Directive to Take Action)

Fiscal Note: To Be Determined

RELEVANT AMA POLICY**Responsibilities. B-6.0.1**

6.0.1.1 Information and Recommendations. All Councils have a continuing duty to provide information and to submit recommendations to the House of Delegates, through the Board of Trustees, on matters relating to the areas of responsibility assigned to them under the provisions of these Bylaws.

6.0.1.1.1 Method of Reporting. Councils, except the Council on Ethical and Judicial Affairs and the Council on Legislation shall submit their reports to the House of Delegates through the Board of Trustees. The Board of Trustees may make such non-binding recommendations regarding the reports to the Councils as it deems appropriate, prior to transmitting the reports to the House of Delegates without delay or modification by the Board. The Board may also submit written recommendations regarding the reports to the House of Delegates.

6.0.1.1.2 Method of Referral. Referrals from the House of Delegates to a Council shall be made through the Board of Trustees. The Board may, in addition, refer the matter to such other councils as it deems appropriate.

6.0.1.2 Strategic Planning. All Councils have a responsibility to participate in the strategic planning process with the Board of Trustees, other Councils, and other organizational units as may be appropriate.

6.0.1.3 Communications and Working Relationships. All Councils have a responsibility to communicate

and develop working relationships with the Board of Trustees, other Councils, the Sections, organizations represented within the House of Delegates and other organizational units as may be appropriate.

Medical Innovations H-480.978

It is the policy of the AMA to continue to publicly support adequate funding for the development and implementation of medical innovations, and that the reasoning behind this position be communicated to physicians, the public, and appropriate policymakers.

Sub. Res. 508, I-92 Reaffirmed: CSA Rep. 8, A-03 Modified: CSAPH Rep. 1, A-13 Reaffirmed: CSAPH Rep. 08, A-23

Evolving Impact of Telemedicine H-480.974

Our AMA:

- (1) will evaluate relevant federal legislation related to telemedicine;
- (2) urges CMS, AHRQ, and other concerned entities involved in telemedicine to fund demonstration projects to evaluate the effect of care delivered by physicians using telemedicine-related technology on costs, quality, and the physician-patient relationship;
- (3) urges professional organizations that serve medical specialties involved in telemedicine to develop appropriate practice parameters to address the various applications of telemedicine and to guide quality assessment and liability issues related to telemedicine;
- (4) encourages professional organizations that serve medical specialties involved in telemedicine to develop appropriate educational resources for physicians for telemedicine practice;
- (5) encourages development of a code change application for CPT codes or modifiers for telemedical services, to be submitted pursuant to CPT processes;
- (6) will work with CMS and other payers to develop and test, through these demonstration projects, appropriate reimbursement mechanisms;
- (7) will develop a means of providing appropriate continuing medical education credit, acceptable toward the Physician's Recognition Award, for educational consultations using telemedicine;
- (8) will work with the Federation of State Medical Boards and the state and territorial licensing boards to develop licensure guidelines for telemedicine practiced across state boundaries; and
- (9) will leverage existing expert guidance on telemedicine by collaborating with the American Telemedicine Association (www.americantelemed.org) to develop physician and patient specific content on the use of telemedicine services--encrypted and unencrypted.

Augmented Intelligence in Health Care H-480.940

As a leader in American medicine, our American Medical Association has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.

To that end our AMA will seek to:

1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians' professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
 - a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
 - b. is transparent;
 - c. conforms to leading standards for reproducibility;

- d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
 - e. safeguards patients' and other individuals' privacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
 5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.
- BOT Rep. 41, A-18

Technology and the Practice of Medicine G-615.035

Our AMA encourages the collaboration of existing AMA Councils and working groups on matters of new and developing technology, particularly electronic medical records (EMR) and telemedicine.
Res. 606, A-14

Health Information Technology Principles H-478.981

Our AMA will promote the development of effective electronic health records (EHRs) in accordance with the following health information technology (HIT) principles. Effective HIT should:

1. Enhance physicians' ability to provide high quality patient care;
2. Support team-based care;
3. Promote care coordination;
4. Offer product modularity and configurability;
5. Reduce cognitive workload;
6. Promote data liquidity;
7. Facilitate digital and mobile patient engagement; and
8. Expedite user input into product design and post-implementation feedback.

Our AMA will utilize HIT principles to:

1. Work with vendors to foster the development of usable EHRs;
2. Advocate to federal and state policymakers to develop effective HIT policy;
3. Collaborate with institutions and health care systems to develop effective institutional HIT policies;
4. Partner with researchers to advance our understanding of HIT usability;
5. Educate physicians about these priorities so they can lead in the development and use of future EHRs that can improve patient care; and
6. Promote the elimination of "Information Blocking."

Our AMA policy is that the cost of installing, maintaining, and upgrading information technology should be specifically acknowledged and addressed in reimbursement schedules.

BOT Rep. 19, A-18 Reaffirmation: A-19

Augmented Intelligence in Medical Education H-295.857

Our AMA encourages:

- (1) accrediting and licensing bodies to study how AI should be most appropriately addressed in accrediting and licensing standards;
- (2) medical specialty societies and boards to consider production of specialty-specific educational modules related to AI;
- (3) research regarding the effectiveness of AI instruction in medical education on learning and clinical outcomes;
- (4) institutions and programs to be deliberative in the determination of when AI-assisted technologies should be taught, including consideration of established evidence-based treatments, and including consideration regarding what other curricula may need to be eliminated in order to accommodate new

training modules;

(5) stakeholders to provide educational materials to help learners guard against inadvertent dissemination of bias that may be inherent in AI systems;

(6) the study of how differences in institutional access to AI may impact disparities in education for students at schools with fewer resources and less access to AI technologies;

(7) enhanced training across the continuum of medical education regarding assessment, understanding, and application of data in the care of patients;

(8) the study of how disparities in AI educational resources may impact health care disparities for patients in communities with fewer resources and less access to AI technologies;

(9) institutional leaders and academic deans to proactively accelerate the inclusion of nonclinicians, such as data scientists and engineers, onto their faculty rosters in order to assist learners in their understanding and use of AI; and

(10) close collaboration with and oversight by practicing physicians in the development of AI applications.
CME Rep. 04, A-19

National Agency for Technology Evaluations H-480.954

Our AMA advocates for active AMA input into any national agency whose role would be to evaluate technology for its value, to assist Medicare and other payors in making appropriate coverage decisions.
Res. 221, I-08Reaffirmed: CMS Rep. 01, A-18

Augmented Intelligence in Medical Education H-295.857

Our AMA encourages:

(1) accrediting and licensing bodies to study how AI should be most appropriately addressed in accrediting and licensing standards;

(2) medical specialty societies and boards to consider production of specialty-specific educational modules related to AI;

(3) research regarding the effectiveness of AI instruction in medical education on learning and clinical outcomes;

(4) institutions and programs to be deliberative in the determination of when AI-assisted technologies should be taught, including consideration of established evidence-based treatments, and including consideration regarding what other curricula may need to be eliminated in order to accommodate new training modules;

(5) stakeholders to provide educational materials to help learners guard against inadvertent dissemination of bias that may be inherent in AI systems;

(6) the study of how differences in institutional access to AI may impact disparities in education for students at schools with fewer resources and less access to AI technologies;

(8) the study of how disparities in AI educational resources may impact health care disparities for patients in communities with fewer resources and less access to AI technologies;

(9) institutional leaders and academic deans to proactively accelerate the inclusion of nonclinicians, such as data scientists and engineers, onto their faculty rosters in order to assist learners in their understanding and use of AI; and

(10) close collaboration with and oversight by practicing physicians in the development of AI applications.
CME Rep. 04, A-19

Update on the Uses of Simulation in Medical Education D-295.330

Our AMA will:

1. continue to advocate for additional funding for research in curriculum development, pedagogy, and outcomes to further assess the effectiveness of simulation and to implement effective approaches to the use of simulation in both teaching and assessment;

2. continue to work with and review, at five-year intervals, the accreditation requirements of the Liaison Committee on Medical Education (LCME), the Accreditation Council for Graduate Medical Education (ACGME), and the Accreditation Council for Continuing Medical Education (ACCME) to assure that program requirements reflect appropriate use and assessment of simulation in education programs;

3. encourage medical education institutions that do not have accessible resources for simulation-based teaching to use the resources available at off-site simulation centers, such as online simulated assessment tools and simulated program development assistance;

4. monitor the use of simulation in high-stakes examinations administered for licensure and certification as the use of new simulation technology expands;

5. further evaluate the appropriate use of simulation in interprofessional education and clinical team building; and

6. work with the LCME, the ACGME, and other stakeholder organizations and institutions to further identify appropriate uses for simulation resources in the medical curriculum.

CME Rep. 8, A-09Reaffirmed: CME Rep. 01, A-19

Redefine "Meaningful Use" of Electronic Health Records D-478.982

1. Our AMA will work with the federal government and the Department of Health and Human Services to: (A) set realistic targets for meaningful use of electronic health records such as percentage of computerized order entry, electronic prescribing, and percentage of inclusion of laboratory values; and (B) improve the electronic health records incentive program requirements to maximize physician participation.

2. Our AMA will continue to advocate that, within existing AMA policies, the Centers for Medicare & Medicaid Services suspend penalties to physicians and health care facilities for failure to meet Meaningful Use criteria.

Res. 222, A-10Reaffirmation I-10Reaffirmation A-14Appended: Res. 210, I-14Reaffirmed in lieu of Res. 203, I-15Reaffirmed in lieu of Res. 216, I-15Reaffirmed: Res. 211, I-16

Innovation to Improve Usability and Decrease Costs of Electronic Health Record Systems for Physicians D-478.976

1) Our AMA will: (A) advocate for CMS and the Office of the National Coordinator (ONC) to support collaboration between and among proprietary and open-source EHR developers to help drive innovation in the marketplace; (B) continue to advocate for research and physician education on EHR adoption and design best practices specifically concerning key features that can improve the quality, safety, and efficiency of health care regardless of proprietary or open-source status; and (C) through its partnership with AmericanEHR Partners, continue to survey physician use and issues with various EHRs--open source and proprietary--to create more transparency and support more informed decision making in the selection of EHRs.

2) Our AMA will, through partnership with AmericanEHR Partners, continue to survey physician use and issues with various EHRs--open source and proprietary--to create more transparency and formulate more formal decision making in the selection of EHRs.

3) Our AMA will work with AmericanEHR Partners to modify the current survey to better address the economics of EHR use by physicians including the impact of scribes.

4) Our AMA will make available the findings of the AmericanEHR Partners' survey and report back to the House of Delegates.

BOT Rep. 23, A-13BOT Rep. 24, A-13Reaffirmed: BOT Rep. 17, A-15Appended: Res. 603, I-16Modified: BOT Rep. 20, A-17

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 607
(A-24)

Introduced by: New Jersey

Subject: Appealing to our AMA to add clarity to its mission statement to better meet the need of physicians, the practice of medicine and the public health.

Referred to: Reference Committee F

1 Whereas, most leading national health organizations focus their mission statement on
2 empowering members to carry out the organizational mission; and

3
4 Whereas, physicians, while seeking to promote our AMA's mission, face significant challenges
5 such as loss of autonomy, scope creep or prior authorization that have contributed to poor
6 morale, high burn out rate, and an above average suicide rate among other professions; and

7
8 Whereas, despite our AMA's work to support physicians, most physicians fail to appreciate the
9 value of the AMA and less than 20 % of physicians are members of the AMA; and

10
11 Whereas, physicians are the primary stewards to carry out our AMA's mission statement; and,
12 the importance of a mission statement is to communicate an organization's values, priorities,
13 goals and serve as a moral compass that guides institutional decision making;
14 therefore be it

15
16 RESOLVED, that our American Medical Association amends its mission's statement from "to
17 promote the art and science of medicine and the betterment of public health" to "to empower
18 physicians to better care for their patients, advance the art and science of medicine, and
19 promote the betterment of physicians and the public health". (Directive to Take Action)

20
Fiscal Note: Minimal - less than \$1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 608
(A-24)

Introduced by: Minority Affairs Section

Subject: The American Medical Association Diversity Mentorship Program

Referred to: Reference Committee F

1 Whereas, members of our American Medical Association have expressed interest in serving as
2 volunteer mentors to medical students, residents, and fellows; and
3
4 Whereas, volunteer mentorship programs have proven to be successful and cost-effective
5 platforms for addressing physician diversity gaps;¹ and
6
7 Whereas, our AMA has recognized the importance of supporting racial and ethnic populations
8 that are underrepresented in the medical profession relative to their numbers in the general
9 population; and
10
11 Whereas, alarming representation gaps still exist in medicine for American Indian & Alaska
12 Native, Hispanic, and Black Americans;² and
13
14 Whereas, our AMA carries the membership strength of over 270,000 dues-paying members;
15 and
16
17 Whereas, volunteer mentorship programs can help recruit and retain members through active
18 and rewarding engagement; and
19
20 Whereas, our AMA has outwardly emphasized the importance of mentorship via both accepted
21 policy and advocacy efforts, but has not enacted a successful internal platform; and
22
23 Whereas, our AMA is uniquely positioned to construct a first-in-class national mentorship
24 program through our strategic partners and extensive network of over 120 national medical
25 specialties and other societies;³ and
26
27 Whereas, mentorship has the powerful capacity to bring people together, share perspectives,
28 and promote a culture of togetherness; therefore be it
29
30 RESOLVED, that our American Medical Association establish a diversity mentorship program to
31 connect volunteer mentors with residents, fellows, and medical student mentees who are
32 underrepresented in medicine. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 5/8/2024

RELEVANT AMA Policy

Strategies for Enhancing Diversity in the Physician Workforce H-200.951

Our AMA: (1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality; (2) commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes; (3) encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties; (4) encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine; (5) encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal; and (6) continue to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations. [CME Rep. 1, I-06; Reaffirmed: CME Rep. 7, A-08; Reaffirmed: CCB/CLRPD Rep. 4, A-13; Modified: CME Rep. 01, A-16; Reaffirmation A-16; Modified: Res. 009, A-21; Modified: CME Rep. 5, A-21]

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.

10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).

11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.

12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.

13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.[CME Rep. 1, I-06; Reaffirmation I-10Reaffirmation A-13; Modified: CCB/CLRPD Rep. 2, A-14; Reaffirmation: A-16; Appended: Res. 313, A-17; Appended: Res. 314, A-17; Modified: CME Rep. 01, A-18; Appended: Res. 207, I-18; Reaffirmation: A-19; Appended: Res. 304, A-19; Appended: Res. 319, A-19; Modified: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22; Modified: Res. 320, A-23]

Continued Support for Diversity in Medical Education D-295.963

Our AMA will: (1) publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population; (5) directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or funding in medical education; (6) advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement; (7) investigate the impacts of state legislation regarding DEI-related efforts on the education and careers of students, trainees, and faculty; (8) recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts; and (9) collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure. [Res. 325, A-03; Appended: CME Rep. 6, A-11; Modified: CME Rep. 3, A-13; Appended: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22; Appended: Res. 319, A-22; Modified: Res. 319, A-23]

Diversity of AMA Delegations G-600.030

1. Our AMA encourages: (a) medical societies to develop methods for selecting AMA delegates that provide an exclusive role for AMA members; (b) state medical societies to collaborate more closely with state chapters of medical specialty societies, and to include representatives of these organizations in their AMA delegations whenever feasible; (c) state and specialty medical societies to adopt election procedures through which only AMA members may cast ballots for the state/specialty society's delegates to our AMA; (d) state medical associations and national medical specialty societies to review the composition of their AMA delegations with regard to enhancing diversity; (e) specialty and state societies to develop training and/or mentorship programs for their student, resident and fellow and young physician section representatives, and current HOD delegates for their future activities and representation of the delegation; (f) specialty and state societies to include in their delegations physicians who meet the criteria for membership in the Young Physicians Section; and (g) delegates and alternates who may be entitled to a dues exemption, because of age and retirement status, to demonstrate their full commitment to our AMA through payment of dues.

2. It is also suggested that each delegation have at least one member involved in the governance of the sponsoring organization. [CCB/CLRPD Rep. 3, A-12; Modified: CCB/CLRPD Rep. 1, A-22]

Racial and Ethnic Disparities in Health Care H-350.974

1. Our AMA recognizes racial and ethnic health disparities as a major public health problem in the United States and as a barrier to effective medical diagnosis and treatment. The AMA maintains a position of zero tolerance toward racially or culturally based disparities in care; encourages individuals to report physicians to local medical societies where racial or ethnic discrimination is suspected; and will continue to support physician cultural awareness initiatives and related consumer education activities. The elimination of racial and ethnic disparities in health care an issue of highest priority for the American Medical Association.

2. The AMA emphasizes three approaches that it believes should be given high priority:

A. Greater access - the need for ensuring that black Americans without adequate health care insurance are given the means for access to necessary health care. In particular, it is urgent that Congress address the need for Medicaid reform.

B. Greater awareness - racial disparities may be occurring despite the lack of any intent or purposeful efforts to treat patients differently on the basis of race. The AMA encourages physicians to examine their own practices to ensure that inappropriate considerations do not affect their clinical judgment. In addition, the profession should help increase the awareness of its members of racial disparities in medical treatment decisions by engaging in open and broad discussions about the issue. Such discussions should take place in medical school curriculum, in medical journals, at professional conferences, and as part of professional peer review activities.

C. Practice parameters - the racial disparities in access to treatment indicate that inappropriate considerations may enter the decision making process. The efforts of the specialty societies, with the coordination and assistance of our AMA, to develop practice parameters, should include criteria that would preclude or diminish racial disparities

3. Our AMA encourages the development of evidence-based performance measures that adequately identify socioeconomic and racial/ethnic disparities in quality. Furthermore, our AMA supports the use of evidence-based guidelines to promote the consistency and equity of care for all persons.

4. Our AMA: (a) actively supports the development and implementation of training regarding implicit bias, diversity and inclusion in all medical schools and residency programs; (b) will identify and publicize effective strategies for educating residents in all specialties about disparities in their fields related to race, ethnicity, and all populations at increased risk, with particular regard to access to care and health outcomes, as well as effective strategies for educating residents about managing the implicit biases of patients and their caregivers; and (c) supports research to identify the most effective strategies for educating physicians on how to eliminate disparities in health outcomes in all at-risk populations. [CLRPD Rep. 3, I-98; Appended and Reaffirmed: CSA Rep.1, I-02; Reaffirmed: BOT Rep. 4, A-03; Reaffirmed in lieu of Res. 106, A-12; Appended: Res. 952, I-17; Reaffirmed: CMS Rep. 10, A-19; Reaffirmed: CMS Rep. 3, A-21; Reaffirmed: Joint CMS/CSAPH Rep. 1, I-21]

Enhancing the Cultural Competence of Physicians H-295.897

1. Our AMA continues to inform medical schools and residency program directors about activities and resources related to assisting physicians in providing culturally competent care to patients throughout their life span and encourage them to include the topic of culturally effective health care in their curricula.

2. Our AMA continues to support research into the need for and effectiveness of training in cultural competence and cultural humility, using existing mechanisms such as the annual medical education surveys.

3. Our AMA will assist physicians in obtaining information about and/or training in culturally effective health care through dissemination of currently available resources from the AMA and other relevant organizations.

4. Our AMA encourages training opportunities for students and residents, as members of the physician-led team, to learn cultural competency from community health workers, when this exposure can be integrated into existing rotation and service assignments.

5. Our AMA supports initiatives for medical schools to incorporate diversity in their Standardized Patient programs as a means of combining knowledge of health disparities and practice of cultural competence with clinical skills.

6. Our AMA will encourage the inclusion of peer-facilitated intergroup dialogue in medical education programs nationwide.

7. Our AMA supports the development of national standards for cultural humility training in the medical school curricula. [CME Rep. 5, A-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-11; Appended: Res.

304, I-16; Modified: CME Rep. 01, A-17; Appended: Res. 320, A-17; Reaffirmed: CMS Rep. 02, I-17; Appended: Res. 315, A-18; Modified: Res. 322, A-22]

Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession H-350.979

Our AMA supports increasing the representation of minorities in the physician population by: (1) Supporting efforts to increase the applicant pool of qualified minority students by: (a) Encouraging state and local governments to make quality elementary and secondary education opportunities available to all; (b) Urging medical schools to strengthen or initiate programs that offer special premedical and precollegiate experiences to underrepresented minority students; (c) urging medical schools and other health training institutions to develop new and innovative measures to recruit underrepresented minority students, and (d) Supporting legislation that provides targeted financial aid to financially disadvantaged students at both the collegiate and medical school levels.

(2) Encouraging all medical schools to reaffirm the goal of increasing representation of underrepresented minorities in their student bodies and faculties.

(3) Urging medical school and undergraduate admissions committees to proactively implement policies and procedures that operationalize race-conscious admission practices in admissions decisions, among other factors.

(4) Increasing the supply of minority health professionals.

(5) Continuing its efforts to increase the proportion of minorities in medical schools and medical school faculty.

(6) Facilitating communication between medical school admission committees and premedical counselors concerning the relative importance of requirements, including grade point average and Medical College Aptitude Test scores.

(7) Continuing to urge for state legislation that will provide funds for medical education both directly to medical schools and indirectly through financial support to students.

(8) Continuing to provide strong support for federal legislation that provides financial assistance for able students whose financial need is such that otherwise they would be unable to attend medical school.

(9) Recognizing the consideration of race in admissions is a necessary safeguard in creating a pipeline to an environment within medical education that will propagate the advancement of health equity through diversification of the physician workforce. [CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CME Rep. 01, A-18; Modified: Res. 320, A-23; Appended: Res. 320, A-23]

EXECUTIVE SUMMARY

At the 2023 Annual Meeting of the House of Delegates, Policy D-200.971, “Transparency and Accountability of Hospitals and Hospital Systems” was adopted. This policy directed the American Medical Association (AMA) to (1) identify options for developing and implementing processes – including increased transparency of physicians complaints made to the Equal Employment Opportunity Commission (EEOC) and The Joint Commission – for tracking and monitoring physicians complaints against hospitals and hospital systems and (2) report back with recommendations for implementing such processes, including potential revisions to the Health Care Quality Improvement Act (HCQIA) of 1986 to include monetary penalties for institutions performing bad-faith peer reviews (Directive to Take Action).

This report provides detailed information about multiple systems in place for physicians to report concerns about their health system or hospital employer. Barriers persist that prevent physicians from reporting patient care concerns or seeking recourse if a bad-faith peer review process has been initiated against them based on what they believe are unfounded, unfair allegations.

To our knowledge, no systems are in place to track and publicly report malpractice information or complaints against hospitals or health systems. It is the AMA’s position that malpractice payment information should not be made public. AMA policy requires state medical boards report disciplinary action to the AMA and Federation of State Medical Boards, but does not endorse the public reporting of such information. The AMA does not support efforts to require the AMA, FSMB, The Joint Commission or any state or federal entity to dedicate resources to providing this information to the public; however, the AMA does support transparency of physician complaints against hospitals and hospital systems through publicly accessible channels, such as the Joint Commission Quality Check reports.

Considering (1) that organizations found to have conducted bad-faith peer reviews are not granted immunity by the HCQIA, (2) the AMA has historically opposed attempts to amend the HCQIA and (3) monetary penalties at the state level have not resulted in increased reporting or reduced incident rates, the AMA does not recommend new attempts to amend the HCQIA for the purposes of adding such penalties for organizations involved in bad-faith peer reviews.

Finally, the AMA, despite having an abundance of policy on the matter, has not published many resources to help physicians navigate the tumultuous processes of reporting concerns or being the subject of a peer review. This report makes a recommendation for the AMA to enhance content offerings on this topic.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 29-A-24

Subject: Transparency and Accountability of Hospitals and Hospital Systems

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee G

1 INTRODUCTION

2
3 At the 2023 Annual Meeting, the House of Delegates (HOD) adopted Policy D-200.971,
4 “Transparency and Accountability of Hospitals and Hospital Systems.” This resolution asked that
5 our American Medical Association (AMA) (1) identify options for developing and implementing
6 processes – including increased transparency of physicians complaints made to the Equal
7 Employment Opportunity Commission (EEOC) and The Joint Commission – for tracking and
8 monitoring physician complaints against hospitals and hospital systems and (2) report back with
9 recommendations for implementing such processes, including potential revisions to the Health
10 Care Quality Improvement Act (HCQIA) of 1986 to include monetary penalties for institutions
11 performing bad-faith peer reviews.

12
13 BACKGROUND

14
15 Key issues raised by the resolution that resulted in Policy D-200.971 were (1) the perceived
16 limitations for physicians to safely, and without fear of retaliation, report patient care concerns due
17 to the large influence and market dominance many health systems have; (2) mistreatment of or
18 retaliation against physicians who report concerns, including through the conduct of bad-faith peer
19 reviews; (3) the lack of publicly available information about complaints against hospitals and
20 health systems; and (4) the potential amendment of the HCQIA to add monetary penalties for
21 entities found to have conducted bad-faith peer reviews. Testimony in the Reference Committee
22 hearing on this resolution also indicated that access to information about complaints filed on health
23 systems would be valuable to physicians considering new employment. This report will address
24 these items, in addition to brief background on peer reviews and the HCQIA, and make
25 recommendations for further HOD action.

26
27 DISCUSSION

28
29 *Whistleblower reports*

30
31 Physicians or other medical professionals may have the unfortunate experience of witnessing
32 unethical behavior, an incident where a patient was harmed or a colleague committing some type of
33 wrongdoing. Upholding the ethical standards of the profession is among the duties of all health
34 care professionals, and part of fulfilling that duty includes reporting concerns and issues when they
35 happen. Hospitals and health systems, who depend on high quality ratings and safety scores, as
36 well as low numbers of safety violations, do not always receive these reports well. Although

1 unlawful, since whistleblowers are protected by dozens of laws, people who report complaints or
2 concerns, or “whistleblowers,” may be ostracized, pressured to withdraw their report or threatened
3 with counter allegations. Worse, a hospital may turn against the complainant and punish them
4 through other means of retaliation such as a false or fabricated peer review. Given the potential
5 negative consequences, many health care workers may avoid reporting ethical or patient safety
6 concerns out of fear for their own livelihood, safety or reputation.¹

7
8 *Peer review*

9
10 When a patient-safety or ethical violation is investigated, peer reviews are often the mechanism for
11 evaluating the circumstances, conduct and outcomes of the incident. Peer review processes are
12 long-established within organized medicine, intended to ensure patient safety but also to scrutinize
13 professional conduct and protect hospitals from liability.² The responsibility to ensure quality care
14 through physician monitoring has been delegated to committees composed mainly of medical staff
15 that review physician credentials and applications for admission to the medical staff, as well as
16 determine the privileges physicians have at a hospital.³ Peer review is recognized and accepted as a
17 means of promoting professionalism and maintaining trust. The peer review process is intended to
18 balance physicians’ right to exercise medical judgment freely with the obligation to do so wisely
19 and temperately.²

20
21 The AMA defines peer review, in part, as: “... the task of self-monitoring and maintaining the
22 administration of patient safety and quality of care, consistent with optimal standards of
23 practice...” Peer review goes beyond individual review of instances or events; it is a mechanism
24 for assuring the quality, safety and appropriateness of hospital services. The duties of peer review
25 are addressing the standard of care, preventing patient harm, evaluating patient safety and quality
26 of care and ensuring that the design of systems or settings of care support safety and high quality
27 care ([Policy H-375.962, “Legal Protections for Peer Review”](#)).⁴

28
29 This policy continues to discuss a “good faith peer review”: a “peer review conducted with honest
30 intentions that assess appropriateness and medical necessity to assure safe, high-quality medical
31 care is good faith peer review. Misfeasance (i.e., abuse of authority during the peer review process
32 to achieve a desired result other than improved patient care), or misuse of the peer review process,
33 or peer review that is politically motivated, manipulated to achieve economic gains or due to
34 personal vendetta is not considered a good faith peer review”.⁴

35
36 *Health Care Quality Improvement Act of 1986*

37
38 The HCQIA of 1986 was introduced to provide protection from liability under federal and state
39 laws for members of a professional review body and their staffs, and establish a national repository
40 for reported information regarding medical malpractice payments and adverse actions involving
41 physicians.⁵ Since then, each state (and the District of Columbia) have passed their own laws
42 requiring the peer review process to improve health care quality.³

43
44 In addition to establishing the National Practitioner Data Bank (NPDB) to monitor hospital- and
45 state-level credentialing of physicians, the HCQIA also granted federal immunity protections to
46 physicians that participate in good faith evaluation of their peers. To qualify for immunity
47 protections under the Act, it is presumed that the actions of peer review committees meet four
48 standards, unless their actions are rebutted by a “preponderance of the evidence”, wherein the
49 burden of proof is on the physician undergoing review.^{3,6} First, there must be a reasonable belief
50 that peer review action was taken to ensure quality care. Second, peer review action should only be
51 taken after a reasonable effort to obtain the facts surrounding the case. Third, the physician

1 undergoing peer review must be afforded sufficient notice and hearing procedures or other fair
2 protocols relevant to the circumstances of the case. Last, after reasonable efforts to obtain the facts
3 of the case have been made, reasonable belief that peer review action was warranted by these facts
4 is then also required.³

5 6 *Bad-faith peer review*

7
8 Because peer review committees are typically not independent, and often comprise hospital-
9 employed physicians who have agreed to make decisions on behalf of the organization, judgments
10 made by these committees have the potential to be biased. A bad-faith, or “sham” peer review, may
11 be politically motivated, manipulated to achieve economic gains or to avoid financial risks,
12 conducted in a way that helps the organization avoid reputational damage or is facilitated to fulfill
13 a personal vendetta against an individual. The peer review process may also be exploited to deem
14 the whistleblower incompetent or disruptive, undermining the merits of their report. Such
15 inappropriate peer reviews were the subject of AMA Board of Trustees Report 24-A-08, titled
16 “Inappropriate Peer Reviews,” which described several cases of improperly motivated peer review,
17 including *Patrick v Burget* (1998), *Rosenblit v Superior Court* (1991), *Clark v Columbia/HCA*
18 *Information Services* (2001), and *Poliner vs Presbyterian Hospital of Dallas* (2006).⁷

19
20 Victims of bad-faith peer reviews often share similar characteristics that cause them to be
21 perceived as “easy targets.” Such characteristics include independent physicians that lack the social
22 and political support and other resources frequently enjoyed by physicians who are part of large
23 health systems, physicians who are new on staff and haven’t yet had the opportunity to develop
24 strong connections and physicians that perform “new” or “different” procedures.³

25 26 *Racial inequities in adverse action reports*

27
28 Anecdotal evidence from the media and health law bar have reported a rise in racial inequities in
29 adverse medical staff actions. This increase is believed to be due to racially motivated actions and
30 more physicians of color challenging such actions. One example of this involved a Black physician
31 who, over the course of 25 years, resided in a rural community, established a practice, and
32 maintained an honorable career in her specialty. After identifying an unmet need of a patient
33 population in her rural community that went unaddressed by local health systems, she established
34 an outpatient facility that thrived. After she brought forward quality of care concerns regarding the
35 danger to high-risk patients created by a gap in specialty coverage and quality nursing care at the
36 hospital, a medical staff investigation was initiated against her by the hospital’s peer review
37 committee in response to retaliatory nursing staff claims. To avoid a potentially career-ending
38 report to the NPDB, the physician was forced to invest time, money and energy toward
39 participation in the demoralizing, retaliatory medical staff investigation.⁶

40
41 Adverse medical staff actions that cite subjective reasons such as “disruptive” behavior,
42 competency concerns and/or unprofessional conduct have served to justify racism against Black
43 physicians and other minoritized physicians. Racially motivated bad-faith peer reviews threaten the
44 economic and mental well-being of physicians of color in addition to the health outcomes of the
45 diverse patient populations they care for.⁶

46
47 Some hospital- and health system-level recommendations that have been proposed to prevent racial
48 discrimination in the peer review process include hiring racially diverse leadership, as well as
49 representation on peer review committees and reviewing and revising peer review protocols
50 through an equity lens.⁶

1 *Perceived barriers to reporting patient care concerns*

2
3 The authors of AMA [Policy D-200.971](#) raised concerns about perceived barriers for physicians to
4 report patient care or other concerns without fear of retaliation due to the large influence and
5 market dominance many health systems have. AMA [Board of Trustees Report 5-I-17, “Effective
6 Peer Review”](#), discussed this issue, addressing physicians’ concerns with the waning influence or
7 control they have over their employment or patient care, as they are increasingly becoming
8 employed by or affiliated with large hospital systems or health care organizations.⁸ Despite BOT
9 Report 5-I-17 having been published more than six years ago, the issues addressed within it remain
10 relevant and thus appropriate to cite within this current report.

11
12 “In a large health system or hospital, peer review systems are integral to safeguarding patient safety
13 and care. Because peer review can involve close scrutiny of all aspects of patient care and safety,
14 both with respect to organization-wide patient care and safety issues and issues concerning
15 individual physicians and health care practitioners, the peer review process may bring to light
16 serious patient care and safety issues that are systemic to a hospital or other lay organization.
17 Exposure of such issues could damage the hospital’s or organization’s reputation in its community
18 or its other business interests. Consequently, a physician may be reluctant to participate in a peer
19 review proceeding for fear of retaliation if the physician believes that the hospital or lay
20 organization will take issue with the result of, or the physician’s role in, that proceeding. This fear
21 is exacerbated if the hospital or lay organization dominates the physician’s community. Thus, to
22 ensure effective peer review, physician peer review participants must be protected from the
23 possibility of retaliation”.⁸

24
25 Physician concerns about retaliation against physician peer review participants have grown as
26 hospitals employ more physicians and hospital markets become more concentrated. Many
27 communities in the United States are dominated by only a few hospitals, or even by a single
28 hospital. As more physicians have become employed by, or affiliated with, dominant hospitals or
29 other powerful lay organizations, some physicians increasingly fear retaliation for expressing
30 patient safety or care concerns during a peer review proceeding, or otherwise participating in a peer
31 review process, that the hospital or organization perceives as being contrary to its financial
32 interests.⁸

33
34 *Existing mechanisms for reporting complaints or concerns*

35
36 To understand the issue of the perceived limitations for physicians to safely report patient care
37 concerns due to the large influence and dominance of their health systems and/or seek recourse if
38 they believe a peer review process has been initiated against them based on unfounded, unfair
39 allegations, we evaluated the landscape of reporting mechanisms currently in place. Numerous
40 systems exist for physicians to report complaints about a peer, patient safety concerns within their
41 health system or other unethical or egregious practices they experience or observe within their
42 place of practice. These systems are in place at multiple levels to promote patient safety and
43 typically great efforts are made to ensure reports are confidential, so individuals feel safe and
44 confident in reporting concerns without fear of retaliation.

45
46 The most appropriate organization for a physician to file a complaint against a health care system
47 or hospital is their state medical board. Each state has at least one medical board that licenses
48 allopathic or osteopathic doctors, investigates complaints, disciplines physicians, and refers
49 physicians for evaluation and rehabilitation when appropriate.

1 Health care organizations should have in place reporting mechanisms through which physicians or
2 other professionals can confidentially submit concerns or complaints without fear of recourse or
3 retaliation. While this may be reasonable for expressing concerns about one's peer or colleague,
4 due to concerns about privacy or fear of consequences many physicians may not feel comfortable
5 bringing organization or system-level issues to their organization's leadership.

6
7 If physicians do not feel comfortable reporting concerns directly to their leadership or organization,
8 they may report concerns or complaints about their health system or hospital to The Joint
9 Commission if the organization is accredited or certified by The Joint Commission.⁹ The Joint
10 Commission's standards require leaders to provide and encourage the use of systems for blame-free
11 reporting of a system or process failure. The Joint Commission encourages practices to engage
12 frontline staff in internal reporting in a number of ways including (1) creating a nonpunitive
13 approach to patient safety event reporting, (2) educating staff on and encouraging them to identify
14 patient safety events that should be reported and (3) providing timely feedback regarding actions
15 taken on reported patient safety events.¹⁰

16
17 The U.S. Department of Health & Human Services (HHS) provides a mechanism for physicians
18 employed by HHS or one of its agencies, or whose employer receives HHS contract or grant
19 funding, to have their whistleblower retaliation complaints processed by HHS-Office of the
20 Inspector General. The actions of these physicians to expose unlawful activities such as abuse and
21 mismanagement within an HHS agency, (sub)contractor or (sub)grantee organization are protected
22 by HHS.¹¹ Individuals that submit a complaint can choose whether to provide identifying
23 information or remain anonymous.¹²

24
25 Also at the federal level, if a physician has been unfairly subjected to a peer review due to
26 underlying racial discrimination or denied compensation or benefits following a bad-faith peer
27 review, for example, they can report such violations to the U.S. Department of Labor (DOL). The
28 agency within the DOL that handles whistleblower retaliation allegations is the Occupational
29 Safety and Health Administration (OSHA). OSHA enforces the retaliation protections of more than
30 20 federal laws.¹³

31
32 If a physician believes they have been subjected to a bad-faith peer review in retaliation for making
33 complaints about discriminatory behavior, disclosing violations of the law, fraud, or abuse,
34 refusing to obey an order believed to be discriminatory or participating in discrimination or
35 whistleblower proceedings, one resource available to them for recourse is the EEOC.^{14,15} A
36 physician in this circumstance must provide evidence that (1) they participated in a protected
37 activity, (2) their employer took materially adverse action and (3) retaliation was the driving force
38 behind the employer's adverse action. Employer retaliatory action is any action that might deter a
39 reasonable person from engaging in protected activity.¹⁴

40
41 Two additional resources that may be beneficial to physicians harmed by a bad-faith peer review
42 are the Association of American Physicians and Surgeons (AAPS) Sham Peer Review Hotline and
43 the Center for Peer Review Justice. Physicians can call or email the AAPS hotline for an attorney
44 referral – a free resource for AAPS members.¹⁶ The Center for Peer Review Justice offers
45 complimentary second opinions, legal services, lectures and consultations regarding the NPDB.¹⁷

46
47 *Lack of publicly available information about complaints against hospitals and health systems*

48
49 There are no publicly available universal repositories that house information about U.S. physician
50 or hospital misconduct, sanctions, malpractice incidents or other complaints. Some entities collect
51 and track these elements, but none provide large-scale searchable tools for the public or for

1 physicians seeking information about health systems or hospitals. Most, if not all, states protect the
2 confidentiality of peer review information, meaning that peer review information, documents and
3 records cannot lawfully be disclosed to anyone except those conducting the peer review and any
4 other specific individuals or entities identified in the peer review statute.⁸ Here we describe the
5 available resources and their respective access levels.

6
7 The Joint Commission does not publish information about complaints, but its publicly available
8 Quality Check reports provide an indication of accreditation and quality performance. These
9 reports could be accessed by a physician looking to verify an organization's accreditation status
10 and quality reports before considering employment. The Quality Check reports published by The
11 Joint Commission could serve as a publicly accessible channel in which to publish final
12 determinations of physician complaints against hospitals and hospital systems.

13
14 Complaints to the EEOC are confidential and maintained for record-keeping purposes, as well as to
15 determine if the situation is covered by the EEOC, unless and until an individual files a
16 discrimination charge. After a charge is filed, the individual's name and basic information
17 surrounding the allegations are released to their employer. However, by law, this information is not
18 available to the public. Different protocols apply to federal employees.¹⁸

19
20 Individuals seeking information about a hospital or health system's involvement in malpractice
21 cases have the right to access public records through the federal, state or county court systems.
22 Typically, the public-facing systems provide basic information about cases, and do not disclose
23 information about proceedings or outcomes. More detailed court records may be accessible by the
24 public for a fee. These systems only demonstrate legal actions involving individuals or businesses,
25 however, and are not necessarily an indication of a hospital's quality or a physician's medical
26 competence. It is not recommended public court records be used as a basis for making employment
27 decisions.

28
29 State licensure and hospital credentialing entities require reporting of disciplinary investigations
30 and related actions on applications and renewal forms, which may include peer review committee
31 investigations. The NPDB collects and maintains information reported by the states and hospitals
32 including adverse licensure, professional review actions, clinical privileges actions, and medical
33 malpractice actions. It is the only federal database containing information about physician
34 malpractice, but the lack of contextual information about individual cases makes it an incomplete
35 and potentially misleading resource. The NPDB does not track and publish individual complaints
36 about health care organizations, health systems or other health care employers. The NPDB provides
37 access about individual practitioners only to authorized users, such as hospitals and medical boards,
38 but not the general public.¹⁹ Since its inception, there have been multiple attempts from members
39 of Congress and other stakeholders to make the NPDB public.²⁰⁻²²

40
41 Of note, the AMA has historically maintained opposition of attempts to make the NPDB available
42 to the public, instead supporting state-level efforts and the Federation of State Medical Boards
43 (FSMB) Physician Data Center ([Policy H-355.975, "Opposition to the National Practitioner Data
44 Bank"](#)).²³

45
46 The FSMB Physician Data Center collects information reported from state medical boards,
47 government regulatory entities, and international licensing authorities. Hospitals and health care
48 organizations, not the public, can search licensure history and past regulatory actions, including
49 revocations, suspensions, loss of license, probation restrictions and licensure denials, for actively
50 licensed physicians.²⁴

1 State medical boards provide the public with access to information about physician licensure status.
2 Many, if not most, also include general information about whether a physician has had disciplinary
3 action against them. These systems do not publish information about health care organizations.

4 *Amending the HCQIA to mandate monetary penalties for bad-faith peer reviews*

5
6 Policy H-200.971 recommends amendments to the HCQIA to impose monetary penalties for
7 institutions performing bad-faith peer reviews. Similarly, proposals for the imposition of monetary
8 penalties against hospitals that fail to report adverse actions to the NPDB have been attempted but
9 not adopted.²⁵ Some states impose financial penalties on hospitals for failure to report physician
10 misconduct, but they are reportedly difficult to enforce due to lack of resources for investigations
11 and a tendency for the state medical board to investigate the individual physician rather than the
12 entity that failed to report the incident.^{25,26}

13
14 Sham peer reviews are difficult to identify, prove, and track. The burden of proof lies with the
15 complainant, and it is challenging to acquire tangible proof that a hospital acted maliciously in
16 conducting a peer review. If an organization is found to have participated in or conducted a bad-
17 faith peer review, it is no longer protected by the immunity the HCQIA otherwise offers these
18 entities. It is thus subject to exposure to lawsuits, claims for damages and the risk of very costly
19 rulings.

20
21 Your Board of Trustees does not at this time recommend pursuing a HCQIA amendment strategy
22 because doing so could result in significant, negative unintended consequences, especially with
23 respect to the NPDB. Opening the law for amendment to mandate monetary penalties for health
24 care organizations could present opportunities for parties, whose interests are not aligned with
25 those of organized medicine, to reintroduce changes that have in the past been attempted. For
26 example, stakeholders outside organized medicine have strongly urged Congress to amend the
27 HCQIA so that the information in the NPDB would be publicly available. AMA opposes such
28 efforts. For example, AMA [Policy H-355.976, "National Practitioner Data Bank"](#) states in part:
29 "Our AMA: (a) opposes all efforts to open the National Practitioner Data Bank to public access; (b)
30 strongly opposes public access to medical malpractice payment information in the National
31 Practitioner Data Bank; and (c) opposes the implementation by the National Practitioner Data Bank
32 of a self-query user fee." The AMA has taken this position because information in the NPDB is
33 often incomplete and inaccurate, not organized in a way that patients will understand and is thus
34 highly likely to be misunderstood or misinterpreted by patients. For these reasons and those
35 previously mentioned, the Board does not recommend attempting to amend HCQIA.

36
37 **AMA POLICY**

38
39 The AMA has numerous policies affirming its position supporting retaliation protections, including
40 specifically in the context of peer review participation.

41
42 Our AMA: (1) opposes mandates from employers to supervise non-physician providers as a
43 condition for physician employment and in physician employment contracts; and (2) supports
44 whistleblower protections for physicians who report unsafe care provided by non-physicians to the
45 appropriate regulatory board ([Policy H-405.950, "Preserving the Practice of Medicine"](#)).

46
47 AMA policy states that physicians should be free to exercise their personal and professional
48 judgment in advocating on any matter regarding patient care interests and that employed physicians
49 should not be deemed in breach of their employment agreements, nor be retaliated against by their
50 employers for asserting these interests ([Policy H-225.950, "Principles for Physician Employment"](#));

1 [Policy H-225.952, “The Physician’s Right to Exercise Independent Judgement in All Organized](#)
2 [Medical Staff Affairs”](#)).
3

4 Further, the AMA condemns any action taken by administrators or governing bodies of hospitals or
5 other health care delivery systems who act in an administrative capacity to reduce or withdraw or
6 otherwise prevent a physician from exercising professional privileges because of medical staff
7 advocacy activities unrelated to professional competence, conduct or ethics ([Policy H-230.965,](#)
8 [“Immunity from Retaliation Against Medical Staff Representatives by Hospital Administrators”](#)).
9

10 Our AMA (1) supports whistleblower protections for health care professionals and parties who
11 raise questions that include, but are not limited to, issues of quality, safety and efficacy of health
12 care and are adversely treated by any health care organization or entity and (2) will advocate for
13 protection in medical staff bylaws to minimize negative repercussions for physicians who report
14 problems within their workplace ([Policy H-435.942, “Fair Process for Employed Physicians”](#)).
15

16 AMA policy also states that entities and participants engaged in good faith peer review activities
17 should be immune from civil damages, injunctive or equitable relief and criminal liability, and
18 should be afforded all available protections from any retaliatory actions that might be taken against
19 such entities or participants because of their involvement in peer review activities. This policy also
20 defines a “good faith peer review”, supports the confidentiality of peer review committee
21 proceedings and opposes efforts to make these proceedings or any resulting decisions public or
22 available via self-query ([Policy H-375.962, “Legal Protections for Peer Review”](#)).
23

24 Moreover, the AMA monitors legal and regulatory challenges to peer review immunity and non
25 discoverability of peer review records/proceedings and continues to advocate for adherence to
26 AMA policy, reporting challenges to peer review protections to the HOD ([Policy D-375.997, “Peer](#)
27 [Reviewer Immunity”](#)).
28

29 Additional AMA policies call for fair and unbiased peer review procedures that enable due process
30 for all participants.
31

32 In 2016, the AMA adopted policy directing it to study the current environment for effective peer
33 review in order to update current policy to include strategies for promoting effective peer review by
34 physicians and to consider a national strategy for protecting all physicians from retaliation as a
35 result from participating in effective peer review ([Policy D-375.987, “Effective Peer Review”](#)).
36

37 Additionally, the AMA published policy outlining appropriate peer review procedures that urge
38 state medical associations to determine if additional state agency supervision of peer review is
39 needed to meet the active state supervision requirement set forth by the Supreme Court, and that
40 peer review procedures should, at a minimum, meet the HCQIA standards for federal immunity
41 ([Policy H-375.983, “Appropriate Peer Review Procedures”](#)).
42

43 The AMA also adopted guidelines for obtaining outside reviewers when a fair review cannot be
44 conducted by hospital medical staff ([Policy H-375.960, “Protection Against External Peer Review](#)
45 [Abuses”](#)).
46

47 AMA policy encourages the use of physician data to benefit both patients and physicians and to
48 improve the quality of patient care and the efficient use of resources in the delivery of health care
49 services. The AMA supports this use of physician data when it is used in conjunction with
50 program(s) designed to improve or maintain the quality of, and access to, medical care for all

1 patients and is used to provide accurate physician performance assessments ([Policy H-406.991](#),
2 [“Work of the Task Force on the Release of Physician Data”](#)).

3 However, the AMA opposes the requirement that peer review organizations and private
4 accreditation entities report any negative action or finding to the NPDB ([Policy H-355.975](#),
5 [“Opposition to the National Practitioner Data Bank”](#)), advocates for amendments to the Freedom of
6 Information Act to exempt confidential peer review information from disclosure under the Act, and
7 supports appropriate efforts to prohibit discovery of information obtained in the course of peer
8 review proceedings ([Policy D-375.999](#), [“Confidentiality of Physician Peer Review”](#)).

9
10 Finally, the AMA Code of Medical Ethics includes opinions related to physicians’ right to report
11 concerns about their peers or organizations, the peer review process, and protections against
12 retaliation.

13
14 The AMA believes that physicians have mutual obligations to hold one another to the ethical
15 standards of their profession. Peer review, by the ethics committees of medical societies, hospital
16 credentials and utilization committees, or other bodies, has long been established by organized
17 medicine to scrutinize professional conduct. Peer review is recognized and accepted as a means of
18 promoting professionalism and maintaining trust. The peer review process is intended to balance
19 physicians’ right to exercise medical judgment freely with the obligation to do so wisely and
20 temperately ([Opinion 9.4.1 Peer Review & Due Process](#)).

21
22 The AMA also believes that physicians who become aware of or strongly suspect that conduct
23 threatens patient welfare or otherwise appears to violate ethical or legal standards should:

- 24
- 25 a) Report the conduct to appropriate clinical authorities in the first instance so that the
26 possible impact on patient welfare can be assessed and remedial action taken;
 - 27 b) Report directly to the state licensing board when the conduct in question poses an
28 immediate threat to the health and safety of patients or violates state licensing provisions.
 - 29 (c) Report to a higher authority if the conduct continues unchanged despite initial reporting.
 - 30 (d) Protect the privacy of any patients who may be involved to the greatest extent possible,
31 consistent with due process.
 - 32 (e) Report the suspected violation to appropriate authorities ([Opinion 9.4.2 Reporting](#)
33 [Incompetent or Unethical Behavior by Colleagues](#)).
- 34

35 AMA RESOURCES

36
37 The AMA, despite having an abundance of policy on the matter, has not published a significant
38 number of resources to help physicians navigate the tumultuous processes of reporting concerns or
39 being the subject of a peer review. Existing resources include the following.

40
41 The AMA’s [Principles for Physician Employment](#) include principles for peer review and
42 performance evaluations and state that employed physicians should be accorded due-process
43 protections, including a fair and objective hearing, in all peer review proceedings.
44 For medical staff leadership, the AMA Credentialing Services offers a webinar entitled, [“Medical](#)
45 [Group Peer Review: Legal Issues and Possible Protections”](#), that provides information about the
46 importance of ensuring fair peer review proceedings to mitigate liability.

47
48 Finally, physicians can submit concerns or complaints about another physician or health
49 professional to the AMA, although the AMA Code of Medical Ethics states that grievances against
50 a medical professional who is believed to be acting unethically or not providing a certain standard

1 of care should be directed to the state medical licensing board. The AMA will not investigate any
2 complaints of misconduct or unethical behavior by physicians or health care organizations, nor
3 does the AMA have legal authority or the proper resources to investigate individual cases.

4
5 CONCLUSION

6
7 The key issues underpinning Policy H-200.971 are the (1) perceived limitations for physicians to
8 safely, and without fear of retaliation, report patient care concerns due to the large influence and
9 market dominance many health systems have; (2) the conduct of bad-faith peer reviews or other
10 mistreatment or retaliation against physicians that have reported concerns; (3) lack of publicly
11 available information about complaints against hospitals and health systems; and (4) the potential
12 amendment of the HCQIA to add monetary penalties for entities found to have conducted bad-faith
13 peer reviews.

14
15 This report provides detailed information about multiple systems in place for physicians to report
16 concerns about their health system or hospital employer. Despite the attempts to make these
17 systems safe and confidential, and the fact that employed physicians are protected from retaliation
18 by state and federal laws, there are often still barriers that prevent physicians from reporting
19 concerns without fear of retaliation in some form and/or seeking adequate recourse if a bad-faith
20 peer review process is initiated against them.

21
22 Peer reviews in medicine will continue to be a mainstay in ensuring safe and ethical patient care is
23 provided by competent physicians. When conducted appropriately and according to acceptable
24 standards, peer reviews are a valuable tool for the health care system. The conduct of bad-faith peer
25 reviews, however, is morally, ethically and professionally abhorrent, and runs counter to
26 everything that physicians and the practice of medicine stand for.

27 Also highlighted in this report are several entities that collect and publish data on physician
28 licensure, malpractice payments, and disciplinary actions. None of the systems that house this data
29 make it available to the public. To our knowledge, no systems are in place to track and publicly
30 report malpractice information or complaints against hospitals or health systems. It has long been
31 the position of the AMA that malpractice payment information should not be made public. And
32 while AMA policy requires state medical boards report disciplinary action to the AMA and FSMB,
33 it does not call for or endorse the public reporting of such information. Physicians have numerous
34 other options for locating organization-related information when seeking new employment, and the
35 AMA does not support efforts to require the AMA, FSMB, The Joint Commission or any state or
36 federal entity to dedicate resources to providing this information to the public for the purposes of
37 aiding job seekers in their employment decisions. It is also the AMA's position that providing the
38 public with access to incomplete information devoid of context would invite more issues than it
39 would resolve. The AMA does, however, support transparent reporting of final determinations of
40 physician complaints against hospitals and health systems through publicly accessible channels
41 such as The Joint Commission Quality Check reports.

42
43 Finally, we address the request for the AMA to recommend amendments to the HCQIA to impose
44 monetary penalties on perpetrators of bad-faith peer reviews. The HCQIA provides protection for
45 hospitals and peer review committees, so long as their peer reviews are conducted in a manner
46 consistent with the law. They are no longer entitled to such immunity if it is found they participated
47 in or led a bad-faith peer review. In the U.S., the justice system is in the position to facilitate the
48 appropriate penalization of organizations faced with lawsuits and damages brought on by their
49 participation in bad-faith peer reviews. Considering (1) that protection under the HCQIA is not

1 provided to organizations failing to meet the HCQIA’s four standards of professional review; (2)
2 the AMA has historically opposed attempts to amend the HCQIA; and (3) monetary penalties at the
3 state level have not resulted in increased reporting or reduced incident rates, the AMA does not
4 recommend new attempts to amend the HCQIA for the purposes of adding such penalties for
5 organizations involved in bad-faith peer reviews.^{25,27,28}

6 RECOMMENDATIONS

7

8 The Board of Trustees recommends:

9

- 10 1. The following policies be reaffirmed:
- 11 a. Policy H-405.950, “Preserving the Practice of Medicine”
 - 12 b. Policy H-225.950, “Principles for Physician Employment”
 - 13 c. Policy H-225.952, “The Physician’s Right to Exercise Independent Judgement in
 - 14 All Organized Medical Staff Affairs”
 - 15 d. Policy H-230.965, “Immunity from Retaliation Against Medical Staff
 - 16 Representatives by Hospital Administrators”
 - 17 e. Policy H-435.942, “Fair Process for Employed Physicians”
 - 18 f. Policy H-375.962, “Legal Protections for Peer Review
 - 19 g. Policy D-375.987, “Effective Peer Review”
 - 20 h. Policy H-375.960, “Protection Against External Peer Review Abuses” (Reaffirm
 - 21 HOD policy); and
 - 22
- 23 2. That the following policy statement be adopted to supersede Policy H-200.971,
- 24 “Transparency and Accountability of Hospitals and Hospital Systems,”:
- 25 a. The AMA supports transparent reporting of final determinations of physician
 - 26 complaints against hospitals and health systems through publicly accessible
 - 27 channels such as the Joint Commission Quality Check reports (New HOD Policy).
 - 28 b. The AMA will develop educational materials on the peer review process, including
 - 29 information about what constitutes a bad-faith peer review and what options
 - 30 physicians may have in navigating the peer review process (Directive to Take
 - 31 Action).
 - 32
- 33 3. That the title of Policy H-200.971, “Transparency and Accountability of Hospitals and
- 34 Hospital Systems,” be changed to:
- 35 a. “Transparent Reporting of Physician Complaints Against Hospitals and Health
 - 36 Systems”
 - 37
- 38 4. That the remainder of this report be filed.

Fiscal note: Minimal

REPORT OF THE BOARD OF TRUSTEES

B of T Report 30-A-24

Subject: Proper Use of Overseas Virtual Assistants in Medical Practice

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee G

1 At the 2023 Annual Meeting of the House of Delegates (HOD), Policy H-200.947, “Proper Use of
2 Virtual Assistants in Medical Practice”, was adopted. This policy directed the American Medical
3 Association (AMA) to (1) support the concept that properly trained overseas virtual assistants are
4 an acceptable way to staff administrative roles in medical practice (New HOD Policy), and (2)
5 study and offer formal guidance for physicians on how best to utilize overseas virtual assistants in
6 such a way as to ensure protections for physicians, practices, patient outcomes, and overseas
7 medical staff (Directive to Take Action).

8
9 This report details guidance, considerations (e.g., equity, diversity and inclusion, business and
10 compliance), opportunities and challenges regarding the appropriate use of overseas virtual
11 assistants by medical practices. Additionally, relevant AMA policy is discussed. Based on this
12 information, AMA identified the need for the creation and publication of educational materials for
13 medical practices that provide guidance on how best to utilize overseas virtual assistants in a
14 manner that protects physicians, practices, patients, and overseas medical staff.

15
16 **BACKGROUND**

17
18 Over the last two decades, health care organizations have increasingly outsourced administrative
19 and certain clinical work – such as revenue cycle management, coding and billing, IT support and
20 prior authorization tasks – to entities or individuals that reside in different time zones. Outsourcing,
21 a business agreement in which an organization contracts out the procurement of products or
22 services to an external firm, became widely used in health care during the early 2000s.

23 Organizations pursue these arrangements with the goals of lowering administrative costs, raising
24 productivity, and addressing workforce shortages. In 2017 alone, health care industry outsourcing
25 grew by 36%.¹

26
27 In addition to outsourcing, health care organizations also began using remote employees for
28 administrative positions. Remote work is the practice of working from one’s home or another space
29 separate from the office. Medical practices adopted remote work for employees for several reasons,
30 including office closures during the COVID-19 pandemic, limited working space within the
31 medical practice, employee retention and satisfaction and decreased practice overhead costs.¹

32
33 In recent years, there has been an evolution from remote employees to virtual assistants. While
34 remote employees are employed by the practice directly, a virtual assistant is an independent
35 contractor who provides administrative services to clients while operating outside of the client’s
36 office. As such, the individual can be located anywhere in the world, broadening the candidate
37 options for companies. Virtual assistants can also include artificial intelligence in software used by

1 medical practices. As this resolution is specific to human virtual assistants, this report does not
2 consider artificial intelligence virtual assistants.¹

3
4 The primary benefit of using virtual assistants in medical practice is to offload administrative
5 duties to decrease physician workload and allow more time for patient care. Properly informed
6 medical practices can successfully utilize overseas or domestic virtual assistants for nonclinical,
7 administrative tasks, including but not limited to appointment scheduling and reminders, sending
8 and receiving patient medical records, visit note dictation, prior authorization requests, charge
9 entry, claim submission, claim control, and follow-up. Additionally, the use of overseas virtual
10 assistants can have economic benefits for medical practices. For instance, virtual assistants can be
11 hired for a set number of hours or tasks each week instead of hiring a full-time employee, lowering
12 staffing costs for the practice. They also typically have a lower hourly rate than those in the U.S.
13 largely due to a lower cost of living in the countries they live.²

14
15 Medical practices seeking virtual assistants outside of the U.S. can utilize online job boards
16 specific to the geographical area they would like to search. One example is [OnlineJobs.ph](https://www.onlinejobs.ph), a job
17 board that connects companies to virtual assistants located in the Philippines.³ These online job
18 boards facilitate the initial communication and interview process and provide employers with best
19 practices for training virtual assistants located within the U.S. or overseas.

20 21 *Business and Compliance Considerations*

22
23 There are several business and compliance considerations that medical practices should review
24 before hiring a virtual assistant, including employee classification, global labor protections, and
25 HIPAA compliance standards. Virtual assistants classified as independent contractors are required
26 to report their income for taxes and social contributions within their country on their own. In
27 contrast, remote direct hires are employed by the practice and may require additional tax liabilities,
28 withholdings and employee benefits depending on local labor laws where the individual lives.
29 Medical practices should consult an accountant for any reporting requirements the practice has for
30 virtual assistants classified as independent contractors.⁴

31
32 Securing private and confidential data is of the utmost importance, especially when working
33 remotely. To protect sensitive data, health care organizations and medical practices that utilize
34 virtual assistants should establish data protection protocols and obtain the appropriate consents
35 from users.⁵ The AMA has created several resources to guide medical practices through the process
36 of securing patient health information, including guidance on [Implementing a Work-From-Home
37 Program](#), a tip sheet for [Working from home during COVID-19 pandemic](#), a checklist for
38 [protecting office computers in medical practices against cyberattacks](#) and [technology
39 considerations for working remotely](#). However, medical practices employing virtual assistants
40 should still consult with their IT vendor to ensure the security of patient health information.

41 42 *Equity, Diversity, and Inclusion Considerations*

43
44 When considering using overseas virtual assistants, medical practices and health care organizations
45 should prioritize equity, diversity, and inclusion. For example, it is important that practices and
46 organizations verify the U.S. Dollar conversion to the currency used by the virtual assistant or
47 employee to ensure fair and reasonable compensation.

48
49 Other considerations include the virtual assistant work schedule if there is a large time difference
50 between in-office staff within the country the organization operates in and the country in which
51 overseas virtual assistants live. This is essential to promote a healthy work environment.¹ For

1 example, some medical practices and health care organizations outsource the entirety of their
2 customer service operations overseas and also supply these services for 24-hours. Time zone
3 compatibility between the medical practice and virtual assistant can impact employee health and
4 quality of life. Night shift workers experience an incompatibility with family leisure time and the
5 unavailability of services during nighttime hours.⁶ These workers are prevented from recovering
6 from a long day of work in the way that day shift workers can. Rather, when their shift ends, they
7 must still function in a world operating on a completely different schedule. Studies have examined
8 the social ramifications to this work. For instance, night shift workers have been demonstrated to
9 experience divorce rates as high as 30 percent.⁷ Health risks among night shift workers have also
10 been analyzed. In a study of night shift employees working at international call centers in the
11 National Capital Region (NCR) of Delhi, 77.6 percent of participants had some suspicion of
12 insomnia or suspected insomnia. In addition to sleep quality issues, 44.3 percent of participants
13 were cigarette smokers and 37 percent reported physical ailments.⁸ Further, a Circadian
14 Technologies study reported that night shift workers were 20 percent more likely to experience
15 severe accidents.⁷ Additionally, research shows that these workers may be at greater risk of
16 cardiovascular disease, gastrointestinal disease, psychological disorders, cancers, diabetes, obesity
17 and adverse reproductive outcomes.^{7,9}

18
19 However, instances also exist where time zone differences can benefit both U.S. and overseas staff.
20 For example, some organizations and practices outsource their operations overseas part-time so that
21 work is performed by overseas staff during their local day-time hours after which their workday
22 concludes and the work they performed is available to U.S. staff who then begin working their day-
23 time schedule.

24 25 *Training for Overseas Virtual Assistants in Medical Practice*

26
27 Medical practices would benefit from the adoption of in-house training programs for virtual
28 assistants that includes general knowledge of health care administration and compliance, as well as
29 processes and procedures specific to the practice. Training on the general knowledge of health care
30 administration is available for little or no cost from professional organizations, such as the AMA's
31 [Navigating Practice Series](#) and [AMA STEPS Forward® Private Practice playbook](#). Several
32 resources also exist from the Medical Group Management Association. Before implementing any
33 virtual assistant or employee, the medical practice or health care organization would benefit from a
34 clear strategic plan that outlines and addresses the risks previously mentioned.

35 36 AMA POLICY

37
38 The AMA has several policies related to the appropriate use of overseas virtual assistants for
39 administrative functions within medical practices.

40
41 The AMA will work towards its goal of health equity, defined as optimal health for all, by
42 advocating for health care access, research, and data collection; promoting equity in care;
43 increasing health workforce diversity; influencing determinants of health; and voicing and
44 modeling commitment to health equity ([Policy H-180.944, "Plan for Continued Progress Toward
45 Health Equity"](#)).

46
47 The AMA will also explore emerging technologies to automate the prior authorization process for
48 medical services and evaluate their efficiency and scalability, while advocating for reduction in the
49 overall volume of prior authorization requirements to ensure timely access to medically necessary
50 care for patients and reduce practice administrative burdens ([Policy D-320.982, "Prior
51 Authorization Reform"](#)).

1 Additionally, the AMA:

- 2
- 3 a. Supports the need for developing and implementing technologies to reduce glare from
4 vehicle headlamps and roadway lighting schemes, and developing lighting technologies at
5 home and at work that minimize circadian disruption, while maintaining visual efficiency.
- 6 b. Recognizes that exposure to excessive light at night, including extended use of various
7 electronic media, can disrupt sleep or exacerbate sleep disorders, especially in children and
8 adolescents. This effect can be minimized by using dim red lighting in the nighttime
9 bedroom environment.
- 10
- 11 c. Supports the need for further multidisciplinary research on the risks and benefits of
12 occupational and environmental exposure to light-at-night.
- 13
- 14 d. Encourages work environments that operate in a 24/7 hour fashion to have an employee
15 fatigue risk management plan in place ([Policy H-135.932, "Light Pollution: Adverse
16 Health Effects of Nighttime Lighting"](#)).
- 17

18 DISCUSSION

19 *Opportunities for Overseas Virtual Assistants in Medical Practice*

20 U.S. companies have struggled with staffing shortages since 2021, known as “The Great
21 Resignation”.¹⁰ Health care is no exception, and the industry has arguably struggled more with
22 staffing shortages due to higher levels of burnout post-COVID-19 pandemic, higher levels of
23 administrative burden, diminished reimbursement and a decline in overall annual revenue.¹¹⁻¹⁴

24 The ability to quickly find and hire experienced individuals is crucial for the success of medical
25 practices. When practices are short-staffed, physicians take on the extra workload, decreasing time
26 spent with patients and contributing to burnout. Overseas virtual assistants, when successfully
27 integrated into practice operations, can enable medical practices to expand their talent search
28 beyond U.S. borders to choose among an expansive talent pool to quickly hire an experienced
29 workforce at a much lower cost than those based in the U.S. Additionally, virtual assistants do not
30 require physical space to work in the office, thus lowering the physical infrastructure cost for
31 medical practices.

32 *Risks Associated with Utilizing Overseas Virtual Assistants in Medical Practice*

33 Despite expectations, studies show that outsourcing any health care role contains risks such as the
34 loss of control over work quality, exposure of patient health information and other secure data, the
35 lack of provision of anticipated financial benefits and jeopardization of the organization’s culture
36 and reputation.¹

37 CONCLUSION

38 Medical practices struggling to fill vacant positions may turn to virtual assistants within the U.S. or
39 overseas. While virtual assistants can offer cost-saving and efficiency benefits to medical practices,
40 it is imperative that practices have a clear strategic plan before hiring a virtual assistant. This plan
41 should include the security of patient information, in-house training/onboarding for the employee,
42 fair pay and working hours, and management of the virtual employee's work quality and
43 engagement with the rest of the practice. The creation of a strategic plan will allow the medical
44 practice to consider all variables and determine how best to utilize a virtual assistant within their

1 practice. With an informed approach, the use of properly trained overseas virtual assistants is an
2 option for medical practices.

3

4 RECOMMENDATIONS

5

6 The Board of Trustees recommends that the following be adopted, and the remainder of the report
7 be filed:

8

9 1. That our American Medical Association (AMA) reaffirm the following policies:

10

a. H-385.951- Remuneration for Physician Services

11

b. H-180.944 - Plan for Continued Progress Toward Health Equity

12

c. H-135.932 - Light Pollution: Adverse Health Effects of Nighttime Lighting;

13

(Reaffirm HOD Policy) and

14

15 2. That Policy H-200.947 be amended to read as follows: “Our AMA: (1) supports the
16 concept that properly trained ~~overseas~~ virtual assistants, in the U.S. or overseas, are an
17 acceptable way to staff administrative roles in medical practices; and (2) will ~~study and~~
18 ~~offer formal guidance for physicians on how best to utilize overseas virtual assistants to~~
19 ~~ensure protection of patients, physicians, practices, and equitable employment in~~
20 ~~communities served, in a manner consistent with appropriate compliance standards~~ create
21 and publish educational materials for medical practices that offer formal guidance on how
22 best to utilize virtual assistants to ensure protection of patients, physicians, virtual
23 assistants and practices.” (Modify Current HOD Policy).

Fiscal Note: Moderate

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 1-A-24

Subject: Council on Medical Service Sunset Review of 2014 House Policies

Presented by: Sheila Rege, MD, Chair

Referred to: Reference Committee G

-
- 1 Policy G-600.110, “Sunset Mechanism for AMA Policy,” calls for the decennial review of
2 American Medical Association (AMA) policies to ensure that our AMA’s policy database is
3 current, coherent, and relevant. Policy G-600.010 reads as follows, laying out the parameters for
4 review and specifying the procedures to follow:
5
- 6 1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A
7 policy will typically sunset after ten years unless action is taken by the House of Delegates to
8 retain it. Any action of our AMA House that reaffirms or amends an existing policy position
9 shall reset the sunset “clock,” making the reaffirmed or amended policy viable for another ten
10 years.
11
 - 12 2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the
13 following procedures shall be followed: (a) Each year, the Speakers shall provide a list of
14 policies that are subject to review under the policy sunset mechanism; (b) Such policies shall
15 be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been
16 asked to review policies shall develop and submit a report to the House of Delegates
17 identifying policies that are scheduled to sunset; (d) For each policy under review, the
18 reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset
19 the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like
20 policy; (e) For each recommendation that it makes to retain a policy in any fashion, the
21 reviewing council shall provide a succinct, but cogent justification; or (f) The Speakers shall
22 determine the best way for the House of Delegates to handle the sunset reports.
23
 - 24 3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier
25 than its 10-year horizon if it is no longer relevant, has been superseded by a more current
26 policy, or has been accomplished.
27
 - 28 4. The AMA councils and the House of Delegates should conform to the following guidelines for
29 sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has
30 been accomplished; or (c) when the policy or directive is part of an established AMA practice
31 that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA
32 House of Delegates Reference Manual: Procedures, Policies and Practices.
33
 - 34 5. The most recent policy shall be deemed to supersede contradictory past AMA policies.
35
 - 36 6. Sunset policies will be retained in the AMA historical archives.

1 RECOMMENDATION

2

3 The Council on Medical Service recommends that the House of Delegates policies that are
4 listed in the appendix to this report be acted upon in the manner indicated and the
5 remainder of this report be filed.

APPENDIX – Recommended Actions

APPENDIX – Recommended Actions

POLICY #	Title	Text	Recommendation
D-110.993	Reducing Prescription Drug Prices	Our AMA will (1) continue to meet with the Pharmaceutical Research and Manufacturers of America to engage in effective dialogue that urges the pharmaceutical industry to exercise reasonable restraint in the pricing of drugs; and (2) encourage state medical associations and others that are interested in pharmaceutical bulk purchasing alliances, pharmaceutical assistance and drug discount programs, and other related pharmaceutical pricing legislation, to contact the National Conference of State Legislatures, which maintains a comprehensive database on all such programs and legislation.	<p>Rescind. Superseded by Policy H-110.987.</p> <p>Pharmaceutical Costs H-110.987</p> <ol style="list-style-type: none"> 1. Our AMA encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives. 2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition. 3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry. 4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system. 5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies. 6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.

POLICY #	Title	Text	Recommendation
			<p>7. Our AMA supports legislation to shorten the exclusivity period for biologics.</p> <p>8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.</p> <p>9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.</p> <p>10. Our AMA supports: (a) drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by ten percent or more each year or per course of treatment and provide justification for the price increase; (b) legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and (c) the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of ten percent or more each year or per course of treatment.</p> <p>11. Our AMA advocates for policies that prohibit price gouging on prescription</p>

POLICY #	Title	Text	Recommendation
			<p>medications when there are no justifiable factors or data to support the price increase.</p> <p>12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.</p> <p>13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.</p> <p>14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation.</p>
D-120.943	Review of Straddle Drug Pricing Rules for Medicare Part D Participants	Our AMA: (1) urges the Centers for Medicare and Medicaid Services (CMS) to examine how Medicare Part D plans are applying the straddle drug pricing rules and determine whether costs are being inappropriately shifted to beneficiaries whose drug spending totals span multiple coverage phases; and (2) will prepare a report explaining the straddle drug pricing rules and their potential impact on patients, incorporating information that is available from CMS regarding implementation by Part D plans.	Retain.
D-160.929	Patient Education Regarding the Medicare Chronic Care Management Fee	Our AMA will create a model letter that its members may use to explain the Medicare chronic care management fee to their patients.	Retain.
D-160.931	CMS Two Midnight Policy	Our AMA encourages the Centers for Medicare & Medicaid Services to educate the public and develop tools for physicians and patients that outline the financial impact of the two midnight policy.	Retain.
D-160.932	Medicare's Two-Midnight Rule	Our AMA will petition the Centers for Medicare & Medicaid Services to repeal the August 19 rules	Retain.

POLICY #	Title	Text	Recommendation
		regarding Hospital Inpatient Admission Order and Certification.	
D-160.990	Identification of Health Care Providers	Our AMA will encourage all medical facilities to provide reliable identification of health care providers.	Retain.
D-165.937	Health System Reform Resources	Our AMA will continue to develop resources to help physician practices address the ongoing and emerging issues associated with expanding health insurance coverage under the Affordable Care Act.	Retain.
D-165.981	Transitional Issues in Moving Toward a System of Individually Selected and Owned Health Insurance	(1) Our AMA will inform individual physicians and group practice administrators why self-paying patients (e.g., those who have MSA-type coverage or are uninsured) may be at a significant price disadvantage in purchasing health care services.	Retain.
D-180.994	Rescinding Provisions Requiring Physicians to Have Hospital Admitting Privileges	Our AMA will work with the American Association of Health Plans, Health Insurance Association of America, and other appropriate organizations to rescind provisions requiring physicians to have hospital medical staff privileges in order to participate in health plans.	Retain.
D-185.995	Health Plan Coverage of Prescription Drugs	Our AMA will: (1) advocate AMA policies related to health plan coverage of prescription drugs to pharmacy benefit managers, as well as to public and private sector payers; and (2) advocate for the enactment of legislation consistent with AMA policies related to health plan coverage of prescription drugs.	Retain.
D-230.986	Opposition to Proposed Revision of CMS Conditions of Participation that Limit the Autonomy, Self Governance and Quality Oversight of the Organized Medical Staff	1. Our AMA through appropriate means, including but not limited to a formal response during the current comment period for the proposed regulation on conditions of participation (CoP) or necessary legal action, including injunctive relief, will actively oppose any Centers for Medicare & Medicaid Services (CMS) policy that would bypass or remove the clinical quality and safety oversight, and credentialing and privileging responsibilities of the physician	Retain.

POLICY #	Title	Text	Recommendation
		<p>members of the Organized Medical Staff, or that would allow a practitioner to practice at a hospital without being a member of the medical staff.</p> <p>2. Our AMA will actively educate our AMA physician members of the proposed revisions to the CoP by CMS, and the potential adverse effects of such proposals on the quality and safety of patient care, and encourage them to respond individually during the CMS comment period.</p> <p>3. In the name of quality care and patient safety, our AMA will vigorously engage its members, the public, and interested stakeholders to advocate against the proposed revisions to the Medicare CoPs that would bypass or remove the clinical quality and safety oversight, and credentialing and privileging responsibilities of the physician members of the Organized Medical Staff, or that would allow a practitioner to practice at a hospital without being a member of the medical staff.</p> <p>4. (a) Our AMA will update model hospital staff bylaws to address the problem of requiring board recertification to remain on staff; (b) once our AMA develops these model hospital staff bylaw changes with regards to board recertification, they shall be made public in our AMA publications so physicians will recognize this problem of losing staff privileges that may be upon us in the near future; and (c) our AMA representatives to The Joint Commission will convey AMA Policies H-230.986 and H-230.997, which address board certification/recertification and hospital/health plan network privileges, to The Joint Commission.</p>	
D-230.989	Reappointments to the Medical Staff	Our AMA will work with The Joint Commission to change the requirement for reappointments to medical staffs to every four years.	Retain.

POLICY #	Title	Text	Recommendation
D-240.993	Verbal Admission Order Signatures	Our AMA will work with the Centers for Medicare & Medicaid Services to allow authentication of verbal admission orders within 30 days, rather than prior to discharge.	Retain.
D-280.987	Analysis of Place-of-Service Code for Observation Services	Our AMA will advocate with the Centers for Medicare & Medicaid Services that the status of any observation patient who remains confined at a hospital for more than 24 hours be changed automatically to inpatient, and if they had spent a midnight in observation status, that midnight would be counted toward the three-day prior hospitalization requirement for Medicare coverage of skilled nursing facility care.	Retain.
D-280.989	Inclusion of Observation Status in Mandatory Three Day Inpatient Stay	<p>1. Our AMA will continue to monitor problems with patient readmissions to hospitals and skilled nursing facilities and recoding of inpatient admissions as observation care and advocate for appropriate regulatory and legislative action to address these problems.</p> <p>2. Our AMA will continue to advocate that the Centers for Medicare & Medicaid Services explore payment solutions to reduce the inappropriate use of hospital observation status.</p>	Retain.
D-285.977	Excessive Telephone Wait Times for Physician Appeals of Managed Care Decisions on Patient Care	Our AMA advocates that managed care organizations be required to staff physician contact phone numbers concerning appeals for denied care sufficiently to maintain no more than a five minute average wait time.	Retain.
D-330.911	Generic Changes in Medicare (Part D) Plans	<p>1. Our AMA will investigate the incidence and reasoning behind the conversion of one generic drug to another generic drug of the same class in Medicare Advantage drug plans.</p> <p>2. Our AMA will request the Centers for Medicare & Medicaid Services to ensure that pharmaceutical vendors, when they do ask for generic transitions of drugs, list the drugs they believe are more cost effective along with</p>	Retain-in-part. Rescind (1); accomplished with AMA participation in monthly CMS Medicare Part D Workgroup meetings.

POLICY #	Title	Text	Recommendation
		their tier price and alternative drug names.	
D-330.921	Hospital Systems' Practices of Reclassification of Place of Service, Opting Not to Bill Medicare for Hospital and Aggressive Denial of Hospital Days in Reaction to Recovery Audits	<p>1. Our American Medical Association will work with the Centers for Medicare & Medicaid Services, the Government Accountability Office, and other stakeholders to ensure that: (a) when hospitals make reclassifications based on screening criteria in proprietary databases, both the admitting physicians and the patient is immediately notified; (b) Recovery Audit Contractors, are precluded from making recoupments associated with “inappropriate admissions” and/or discrepancies between the hospital and physician's site of service; (c) physicians are intimately involved in the development of the data being used by proprietary databases; (d) a process is put in place whereby physicians can substitute their medical judgment for that of the software programs, and carriers and auditors will ensure that that judgment is considered and evaluated by physicians in the same state and specialty; and (e) the evidence underlying data programs and the processes being employed are completely transparent.</p> <p>2. Our AMA will work with CMS to remove the requirement of linkage of Part A and Part B place of service so that admission or consultation documents that were done prior to a determination or reclassification of a place of service be recognized and not result in a rejection in claim for services.</p>	Retain.
D-330.933	Restoring High Quality Care to the Medicare Part D Prescription Drug Program	<p>Our AMA will:</p> <p>a. work to eliminate prior authorizations under the Medicare Part D Prescription Drug Program which undermine a physician's best medical judgment;</p> <p>b. work with the Centers for Medicare and Medicaid Services (CMS) to enforce the Medicare Part D Prescription Drug Program statutory requirement that all Part</p>	Retain.

POLICY #	Title	Text	Recommendation
		<p>D plans include at least two drugs proven to be equally effective in each therapeutic category or pharmacologic class, if available, to be used by the physician in deciding the best treatment options for their patients;</p> <p>c. work with CMS to place reasonable copays in the Medicare Part D Prescription Drug Program;</p> <p>d. work with other interested parties to simplify the CMS prior authorization process such that a diagnosis or reason written on the prescription should be accepted as documentation for non-formulary request; and</p> <p>e. work with CMS to develop a one-page form for physicians and patients to utilize in appealing a prescription coverage denial.</p>	
D-330.964	Update to Ambulatory Surgery Procedure List	Our American Medical Association urge the Centers for Medicare and Medicaid Services to immediately update the ambulatory surgery center list of covered procedures.	Rescind. The list of approved ASC procedures is now updated annually .
D-35.988	The Joint Commission Primary Care Home Initiative	<p>1. Our AMA Commissioners to The Joint Commission will strongly advocate that the requirements for any primary care home or medical home initiative of The Joint Commission strictly meet the requirements of the <i>Joint Principles of the Patient-Centered Medical Home</i> and more specifically that (1) each patient has an ongoing relationship with a personal physician trained to provide first contact, continuous and comprehensive care and (2) that a personal physician lead a team of individuals at the practice level who collectively take responsibility for the ongoing care of patients. The <i>Joint Principles of the Patient-Centered Medical Home</i> were developed by the American Academy of Family Physicians, American Academy of Pediatrics, American College of Physicians, American Osteopathic Association and approved by the AMA.</p> <p>2. Our AMA will continue to support the concept of physician-</p>	<p>Rescind. Superseded by Policy H-160.919.</p> <p>Principles of the Patient-Centered Medical Home H-160.919</p> <p>1. Our AMA adopts the American Academy of Family Physicians, American Academy of Pediatrics, American College of Physicians and the American Osteopathic Association “Joint Principles of the Patient-Centered Medical Home” as follows:</p> <p>Principles</p> <p>Personal Physician - Each patient has an ongoing relationship with a personal physician trained to provide first contact, continuous and comprehensive care.</p> <p>Physician Directed Medical Practice - The personal physician leads a team of</p>

POLICY #	Title	Text	Recommendation
		<p>led teams within the patient centered medical home (PCMH) as outlined in the Joint Principles of the Patient-Centered Medical Home.</p> <p>3. Our AMA will respond to The Joint Commission's interpretation of its primary care medical home certification standards addressing non-physician-led PCMHs.</p> <p>4. Our AMA will oppose any interpretation by The Joint Commission, or any other entity, of primary care medical home or patient centered medical home (PCMH) as being anything other than MD/DO physician led.</p>	<p>individuals at the practice level who collectively take responsibility for the ongoing care of patients.</p> <p>Whole Person Orientation - The personal physician is responsible for providing for all the patient's health care needs or taking responsibility for appropriately arranging care with other qualified professionals. This includes care for all stages of life; acute care; chronic care; preventive services; and end of life care.</p> <p>Care is coordinated and/or integrated across all elements of the complex health care system (e.g., subspecialty care, hospitals, home health agencies, nursing homes) and the patient's community (e.g., family, public and private community-based services). Care is facilitated by registries, information technology, health information exchange and other means to assure that patients get the indicated care when and where they need and want it in a culturally and linguistically appropriate manner.</p> <p>Quality and safety are hallmarks of the medical home:</p> <p>Practices advocate for their patients to support the attainment of optimal, patient-centered outcomes that are defined by a care planning process driven by a compassionate, robust partnership between physicians, patients, and the patient's family.</p> <p>Evidence-based medicine and clinical decision-support tools guide decision making.</p>

POLICY #	Title	Text	Recommendation
			<p>Physicians in the practice accept accountability for continuous quality improvement through voluntary engagement in performance measurement and improvement.</p> <p>Patients actively participate in decision-making and feedback is sought to ensure patients' expectations are being met.</p> <p>Information technology is utilized appropriately to support optimal patient care, performance measurement, patient education, and enhanced communication.</p> <p>Practices go through a voluntary recognition process by an appropriate non-governmental entity to demonstrate that they have the capabilities to provide patient centered services consistent with the medical home model.</p> <p>Patients and families participate in quality improvement activities at the practice level.</p> <p>Enhanced access to care is available through systems such as open scheduling, expanded hours and new options for communication between patients, their personal physician, and practice staff.</p> <p>Payment appropriately recognizes the added value provided to patients who have a patient-centered medical home. The payment structure should be based on the following framework:</p> <p>It should reflect the value of physician and non-physician staff patient-centered care management work that falls outside of the face-to-face visit.</p>

POLICY #	Title	Text	Recommendation
			<p>It should pay for services associated with coordination of care both within a given practice and between consultants, ancillary providers, and community resources.</p> <p>It should support adoption and use of health information technology for quality improvement.</p> <p>It should support the provision of enhanced communication access such as secure e-mail and telephone consultation.</p> <p>It should recognize the value of physician work associated with remote monitoring of clinical data using technology.</p> <p>It should allow for separate fee-for-service payments for face-to-face visits. (Payments for care management services that fall outside of the face-to-face visit, as described above, should not result in a reduction in the payments for face-to-face visits).</p> <p>It should recognize case mix differences in the patient population being treated within the practice.</p> <p>It should allow physicians to share in savings from reduced hospitalizations associated with physician-guided care management in the office setting.</p> <p>It should allow for additional payments for achieving measurable and continuous quality improvements.</p> <p>2. Our AMA supports the patient-centered medical home (as defined in Policy H-160.919) as a way to provide care to</p>

POLICY #	Title	Text	Recommendation
			<p>patients without restricting access to specialty care.</p> <p>3. It is the policy of our AMA that medical home participation criteria allow any physician practice to qualify as a medical home, provided it can fulfill the principles of a patient-centered medical home.</p> <p>4. Our AMA will work with The Joint Commission (TJC) to examine the structures of TJC-accredited medical homes and determine whether differences exist in patient satisfaction, quality, value, and patient safety, as reflected by morbidity and mortality outcomes, between physician-led (MD/DO) and non-physician-led medical homes.</p> <p>5. Our AMA supports the physician-led patient-centered medical home and advocate for the public reporting/notification of the professional status (education, training, experience) of the primary care clinician who leads the primary care medical home.</p>
D-390.954	Hospital-Based Physicians and the Value-Based Payment Modifier	Our AMA will continue to advocate that the Value-Based Payment Modifier program be repealed or significantly modified.	Rescind. The Merit-based Incentive Payment System (MIPS) under the Quality Payment Program replaced the Physician Feedback/Value-Based Payment Modifier program on January 1, 2019.
D-390.981	Medicare Payment for Services to Skilled Nursing Facility Residents in Physicians' Offices	Our AMA will: (1) inform the Centers for Medicare and Medicaid Services of the problems physicians and their patients experience as a result of the inclusion of the technical component of physicians' office-based services in the consolidated billing protocol for Medicare Skilled Nursing Facility residents; (2) urge the Centers for Medicare and Medicaid Services (CMS) to provide greater oversight of Medicare Skilled Nursing Facilities	Retain.

POLICY #	Title	Text	Recommendation
		<p>(SNFs) in meeting their obligations to pay physicians for the technical component of services those physicians provide in their offices to Medicare SNF residents;</p> <p>(3) advocate to Congress that it exclude from Medicare's Skilled Nursing Facility (SNF) consolidated billing protocol the technical component of medical services provided in physicians' offices to Medicare SNF residents, because of concern with the negative impact on care that could potentially occur;</p> <p>(4) urge the Centers for Medicare and Medicaid Services to require SNFs to clearly identify those patients who fall under the Medicare SNF consolidated billing program, as opposed to non-skilled extended care facility (ECF) patients, prior to sending patients to physicians' offices for care; and</p> <p>(5) communicate to physicians that in order to assure payment whenever a SNF resident receives a service that is subject to SNF consolidated billing, the SNF and the physician are required to enter into an arrangement prior to providing services and the physician must look to the SNF for payment.</p>	
D-390.984	Payment by Health Insurance Plans of Medicare Deductibles and Copayments	<p>Our AMA will: (1) seek legislation to compel all insurers paying secondary to Medicare to be required to pay the deductibles and coinsurance owed after the Medicare payment is made; and (2) seek federal legislation to require that a secondary plan not manage the primary Medicare benefit by imposing limits as if it were primary.</p>	Retain.
D-40.991	Acceptance of TRICARE Health Insurance	<p>Our AMA:</p> <p>1. Encourages state medical associations and national medical specialty societies to educate their members regarding TRICARE, including changes and improvements made to its operation, contracting processes and mechanisms for dispute</p>	Retain.

POLICY #	Title	Text	Recommendation
		<p>resolution.</p> <p>2. Encourages the TRICARE Management Activity to improve its physician education programs, including those focused on non-network physicians, to facilitate increased civilian physician participation and improved coordination of care and transfer of clinical information in the program.</p> <p>3. Encourages the TRICARE Management Activity and its contractors to continue and strengthen their efforts to recruit and retain mental health and addiction service providers in TRICARE networks, which should include providing adequate reimbursement for mental health and addiction services.</p> <p>4. Strongly urges the TRICARE Management Activity to implement significant increases in physician payment rates to ensure all TRICARE beneficiaries, including service members and their families, have adequate access to and choice of physicians.</p> <p>5. Strongly urges the TRICARE Management Activity to alter its payment formula for vaccines for routine childhood immunizations, so that payments for vaccines reflect the published CDC retail list price for vaccines.</p> <p>6. Continues to encourage state medical associations and national medical specialty societies to respond to requests for information regarding potential TRICARE access issues so that this information can be shared with TRICARE representatives as they develop their annual access survey.</p> <p>7. Continues to advocate for changes in TRICARE payment policies that will remove barriers to physician participation and support new, more effective care delivery models, including: (a) establishing a process to allow midlevel providers to receive 100 percent of the TRICARE allowable cost for services rendered while practicing</p>	

POLICY #	Title	Text	Recommendation
		<p>as part of a physician-led health care team, consistent with state law; and (b) paying for transitional care management services, including payment of copays for services provided to TRICARE for Life beneficiaries receiving primary coverage through Medicare.</p> <p>8. Continues to advocate for improvements in the communication and implementation of TRICARE coverage policies to ensure continued patient access to necessary services, including: (a) consistently approving full payment for services rendered for the diagnosis and treatment of common mental health conditions, regardless of the specialty of the treating physician; and (b) clarifying policies with respect to coverage for age appropriate doses of vaccines that have been recommended and adopted by the Advisory Committee on Immunization Practices.</p>	
D-400.988	PLI-RVU Component of RBRVS Medicare Fee Schedule	Our AMA will: (1) continue its current activities to seek correction of the inadequate professional liability insurance component in the Resource-Based Relative Value Scale Formula; (2) continue its current activities to seek action from the Centers for Medicare & Medicaid Services to update the Professional Liability Insurance Relative Value Units (PLI-RVU) component of the RBRVS to correctly account for the current relative cost of professional liability insurance and its funding; and (3) support federal legislation to provide additional funds for this correction and update of the PLI-RVU component of the RBRVS, rather than simply making adjustments in a budget-neutral fashion.	Retain.
D-450.961	Hospital-Based Physicians and the Value-Based	Our AMA encourages national medical specialty societies to pursue the development of relevant performance measures that	Rescind. The Merit-based Incentive Payment System (MIPS) under the Quality Payment Program replaced the

POLICY #	Title	Text	Recommendation
	Payment Modifier	demonstrate improved quality and lower costs, and work with the Centers for Medicare & Medicaid Services to have those measures incorporated into the Value-Based Payment Modifier program and other quality measurement and improvement programs.	Physician Feedback/Value-Based Payment Modifier program on January 1, 2019.
D-465.999	Critical Access Hospital Necessary Provider Designation	Our AMA: (1) will call on the Centers for Medicare & Medicaid Services to support individual states in their development of rural health networks; (2) opposes the elimination of the state-designated Critical Access Hospital (CAH) “necessary provider” designation; and (3) will pursue steps to require the federal government to fully fund its obligations under the Medicare Rural Hospital Flexibility Program.	Retain.
D-480.991	Access to Medical Care	Our AMA shall work with the Centers for Medicare and Medicaid Services to maximize access to the devices and procedures available to Medicare patients by ensuring reimbursement at least covers the cost of said device or procedure.	Retain.
D-70.965	Membership on RVS Update Committee (RUC) and CPT Coding Committee	Our AMA will request that representative societies send delegates or alternate delegates to the American Medical Association/Specialty Society Relative Value Scale Update Committee and the AMA Current Procedural Terminology Editorial Panel and Physician Advisory Committee who are currently engaged for a substantial portion of their professional activities with the practice of medicine either in active patient care or closely related activities.	Retain.
H-130.990	Freestanding Emergency Medical Care	(1) The AMA is concerned that the use of the term “emergency” in the title or description of a medical practice or a hospital center without maintaining specific emergency capabilities is not in the public interest since needed critical emergency service may be delayed. (2) The AMA firmly believes that the optimal provision of emergency	Retain.

POLICY #	Title	Text	Recommendation
		<p>care requires prompt physical access to the immediate resources of the hospital and that a freestanding emergency center without such access may delay definitive care of critical emergencies. (3) The AMA endorses the following criteria to aid in determining if a full range of emergency services is being offered: hours of operation, staffing and medical direction, relationship to the local emergency medical services system, ancillary service and equipment, protocols, private physician referrals, medical records, and payment for services.</p>	
<p>H-160.944</p>	<p>Defining "Observation Care"</p>	<p>1. The AMA will work with third party payers to establish a uniform definition of "observation care," including the following: (a) The patient should be designated as under "observation care" if the physician's intent for hospital stay is less than 24 hours. If the physician's intent and expectation is for a hospital stay of greater than 24 hours, then the stay should be considered inpatient. The use of 24 hours as a threshold for observation is a guideline. It is not unusual for observation to extend to a few hours beyond 24 hours or for patients to be admitted to inpatient status before 24 hours. (b) Patients classified as under "observation care" require hospital level-of-care. (c) The patient should be registered as under "observation care" after initial physician evaluation of the patient's signs and symptoms and appropriate testing. Post day surgical patients should be registered as under "observation care" if, after a normal recovery period, they continue to require hospital level-of-care as determined by a physician.</p> <p>2. The AMA will establish policy on "observation care" and develop model legislation to ensure that: (a) After initial approval of inpatient admission by insurers, there should be no retrospective reassignment to</p>	<p>Retain.</p>

POLICY #	Title	Text	Recommendation
		<p>“observation care” status by insurers unless the original information given to insurers is incorrect. (b) Insurers should provide 60 days prior notice to providers of changes to “observation care” criteria or the application of those criteria with opportunity for comment. There should be no implementation of criteria or changes without first following these protocols. (c) Insurers’ “observation care” policies should include an administrative appeal process to deal with all utilization and technical denials within a 60-day time frame for final resolution. An expedited appeal process should be available for patients in the admission process, allowing for a decision within 24 hours. (d) Insurers and HMOs should provide clearly written educational materials on “observation care” to subscribers highlighting differences between inpatient and “observation care” benefits and patient appeal procedures.</p> <p>3. Our AMA will work with all appropriate governmental and non-governmental organizations to assure that both patients and physicians are treated fairly in the process of delineating the hospital admission status of patients, and to ensure that the process is transparent and administratively simple.</p>	
H-160.983	Satellite and Commercial Medical Clinics	<p>The AMA believes that (1) in principle, self-regulatory measures are preferable to mandatory state regulation as a mechanism to ensure quality of care in freestanding emergency and urgent care facilities; and (2) recently initiated self-regulatory programs applicable to freestanding facilities should be given ample opportunity to demonstrate their effectiveness in practice.</p>	Retain.
H-165.829	The Future of Employer-	<p>Our AMA: (1) supports requiring state and federally facilitated Small Business Health Options Program</p>	Retain.

POLICY #	Title	Text	Recommendation
	Sponsored Insurance	(SHOP) exchanges to maximize employee choice of health plan and allow employees to enroll in any plan offered through the SHOP; and (2) encourages the development of state waivers to develop and test different models for transforming employer-provided health insurance coverage, including giving employees a choice between employer-sponsored coverage and individual coverage offered through health insurance exchanges, and allowing employers to purchase or subsidize coverage for their employees on the individual exchanges.	
H-165.865	Principles for Structuring a Health Insurance Tax Credit	(1) AMA support for replacement of the present exclusion from employees' taxable income of employer-provided health insurance coverage with tax credits will be guided by the following principles: (a) Tax credits should be contingent on the purchase of health insurance, so that if insurance is not purchased the credit is not provided. (b) Tax credits should be refundable. (c) The size of tax credits should be inversely related to income. (d) The size of tax credits should be large enough to ensure that health insurance is affordable for most people. (e) The size of tax credits should be capped in any given year. (f) Tax credits should be fixed dollar amounts for a given income and family structure. (g) The size of tax credits should vary with family size to mirror the pricing structure of insurance premiums. (h) Tax credits for families should be contingent on each member of the family having health insurance. (i) Tax credits should be applicable only for the purchase of health insurance, including all components of a qualified Health Savings Account, and not for out-of-pocket health expenditures. (j) Tax credits should be advanceable for low-income persons who could	Retain.

POLICY #	Title	Text	Recommendation
		<p>not afford the monthly out-of-pocket premium costs.</p> <p>(2) It is the policy of our AMA that in order to qualify for a tax credit for the purchase of individual health insurance, the health insurance purchased must provide coverage for hospital care, surgical and medical care, and catastrophic coverage of medical expenses as defined by Title 26 Section 9832 of the United States Code.</p> <p>(3) Our AMA will support the use of tax credits, vouchers, premium subsidies or direct dollar subsidies, when designed in a manner consistent with AMA principles for structuring tax credits and when designed to enable individuals to purchase individually owned health insurance.</p>	
H-180.951	Tax Treatment of Health Insurance: Comparing Tax Credits and Tax Deductions	Our AMA supports the use of appropriately structured and adequately funded tax credits as the most effective mechanism for enabling uninsured individuals to obtain health insurance coverage.	Retain.
H-180.953	Decreased Insurance Premiums for Nonsmokers	<p>Our AMA:</p> <p>(1) encourages insurance companies to review and make public their current actuarial experience with respect to smokers and nonsmokers and to consider ways of making available to nonsmokers, at reduced rates, policies for accident, auto, life, homeowners, fire, and health insurance; and</p> <p>(2) supports the concept of health insurance contracts with lower premiums for nonsmokers, reflecting their decreased need for medical services and serving as a financial incentive for smokers (tobacco users) to discontinue this destructive habit.</p>	Retain.
H-185.933	Patient Access to Penile Prosthesis as Legitimate Treatment for Erectile Dysfunction	Our AMA will work in concert with national specialty and state medical societies to advocate for patient access to the full continuum of care of evidence-based erectile dysfunction treatment modalities including oral pharmacotherapy, penile vasoactive injection therapy,	Retain.

POLICY #	Title	Text	Recommendation
		vacuum erection device therapy and penile prosthetics.	
H-185.935	Reference Pricing	<p>Our AMA supports the appropriate use of reference pricing as a possible method of providing health insurance coverage of specific procedures, products or services, consistent with the following principles:</p> <ol style="list-style-type: none"> 1. Practicing physicians must be actively involved in the identification of services that are appropriate for a reference pricing system. 2. Appropriate reference pricing strategies may be considered for elective services or procedures for which there is evidence of a significant variation in cost that does not correspond to a variation in quality of care. Additional considerations include the relative complexity of the service, the potential for variation either across patients or during the course of a treatment, and the sufficient availability of providers in a geographic region. 3. Reference prices should be set at a level that reflects current market conditions and ensures that patients have access to a choice of providers. Prices should be reviewed annually and adjusted as necessary based on changes in market conditions. 4. Hospitals or facilities delivering services subject to reference pricing should avoid cost-shifting from one set of services to another. 5. Information about the services subject to reference pricing and the potential patient cost-sharing obligations must be fully transparent and easily accessible to patients and providers, both prior to and at the point of care. Educational materials should be made available to help patients and physicians understand the incentives and disincentives inherent in the reference pricing arrangement. 6. Insurance companies must notify 	Retain.

POLICY #	Title	Text	Recommendation
		<p>patients of all services subject to reference pricing at the time of health plan enrollment. Patients must be indemnified against any additional charges associated with changes to reference pricing policies for the balance of the contract period.</p> <p>7. Insurers that use reference pricing must develop and maintain systems that allow patients to effectively and appropriately compare prices among providers, including systems that help patients calculate their estimated costs for each provider prior to seeking care.</p> <p>8. Plan sponsors should continually monitor and evaluate the effect of reference pricing policies on access to high quality patient care and ensure that procedures are in place to make plan modifications as necessary.</p>	
H-185.941	Patient Cost-Sharing Requirements for Hospital Inpatient and Observation Services	Our AMA will advocate that patients be subject to the same cost-sharing requirements whether they are admitted to a hospital as an inpatient, or for observation services.	Retain.
H-185.975	Requiring Third Party Reimbursement Methodology be Published for Physicians	<p>Our AMA:</p> <p>(1) urges all third party payers and self-insured plans to publish their payment policies, rules, and fee schedules;</p> <p>(2) pursues all appropriate means to make publication of payment policies and fee schedules a requirement for third party payers and self-insured plans;</p> <p>(3) will develop model state and federal legislation that would require that all third party payers and self-insured plans publish all payment schedule updates, and changes at least 60 days before such changes in payment schedules are enacted, and that all participating physicians be notified of such changes at least 60 days before changes in payment schedules are enacted.</p> <p>(4) seeks legislation that would mandate that insurers make</p>	Retain.

POLICY #	Title	Text	Recommendation
		<p>available their complete payment schedules, coding policies and utilization review protocols to physicians prior to signing a contract and at least 60 days prior to any changes being made in these policies;</p> <p>(5) works with the National Association of Insurance Commissioners, develop model state legislation, as well developing national legislation affecting those entities that are subject to ERISA rules; and explore the possibility of adding payer publication of payment policies and fee schedules to the Patient Protection Act; and</p> <p>(6) supports the following requirements: (a) that all payers make available a copy of the executed contract to physicians within three business days of the request; (b) that all health plan EOBs contain documentation regarding the precise contract used for determining the reimbursement rate; (c) that once a year, all contracts must be made available for physician review at no cost; (d) that no contract may be changed without the physician's prior written authorization; and (e) that when a contract is terminated pursuant to the terms of the contract, the contract may not be used by any other payer.</p>	
H-185.997	Insurance Coverage for Complete Maternity Care	<p>Our AMA (1) reaffirms its policy of encouraging health insurance coverage for care of the newborn from the moment of birth;</p> <p>(2) urges the health insurance industry and government to include in their plans, which provide maternity benefits, coverage for normal obstetrical care, and all obstetrical complications including necessary intrauterine evaluation and care of the unborn infant;</p> <p>(3) urges the health insurance industry to offer such plans on the broadest possible basis;</p> <p>(4) urges the health insurance industry to make available, on an optional basis, coverage for</p>	Retain.

POLICY #	Title	Text	Recommendation
		<p>treatment associated with voluntary control of reproduction;</p> <p>(5) will advocate for expanding coverage of maternity care to dependent women under the age of 26 on their parents' large group plans; and</p> <p>(6) will advocate that individual, small and large group health plans provide 60 days of newborn coverage for all newborns born to participants in the plan.</p>	
H-190.965	Claims Denial and Payment Delays	<p>Our AMA policy is that insurers should not deny payment on lost claims discovered beyond the required filing date when the physician has proof that the electronic or paper claim was filed in a timely manner.</p>	Retain.
H-190.970	Status Report on the National Uniform Claim Committee and Electronic Data Interchange	<p>The AMA advocates the following principles to improve the accuracy of claims and encounter-based measurement systems:</p> <p>(1) the development and implementation of uniform core data content standards (e.g., National Uniform Claim Committee (NUCC) data set);</p> <p>(2) the use of standards that are continually modified and uniformly implemented;</p> <p>(3) the development of measures and techniques that are universal and applied to the entire health care system;</p> <p>(4) the use of standardized terminology and code sets (e.g., CPT) for the collection of data for administrative, clinical, and research purposes; and</p> <p>(5) the development and integration of strategies for collecting and blending claims data with other data sources (e.g., measuring the performance of physicians on a variety of parameters in a way that permits comparison with a peer group).</p>	Retain.
H-190.972	Strategy for Eliminating Delayed Payments to Physicians by	<p>It is the policy of our AMA that delayed payments to physicians and hospitals without justification by third party payers should be prohibited by law.</p>	Retain.

POLICY #	Title	Text	Recommendation
	Third Party Payers		
H-190.975	Universality of CMS 1500 Form	The AMA will undertake the task of asking individual carriers and/or their representative organizations to maintain the universal contents and acceptance of specific data in the CMS 1500 Form so that it will remain as a truly universal form for the patient-doctor claim form.	Retain.
H-190.979	Insurance Company Filing Deadlines	Our AMA will work with the insurance industry so that where there is a specified filing deadline for services, this deadline is reset when insurance companies contend that they have either not received a filed claim or require additional supporting documentation.	Retain.
H-190.981	Required Timely Reimbursements by all Health Insurers	Our AMA will prepare and/or seek sponsorship of legislation calling for all health insurance entities and third-party payers--inclusive of not-for-profit organizations and health maintenance organizations--to pay for "clean" claims when filed electronically within 14 days and paper claims within 30 days, with interest accruing thereafter. These time periods should be considered ceilings, not floors or fixed differentials between paper and electronic claims.	Retain.
H-220.939	Activities of The Joint Commission	1. Our AMA supports continued active AMA participation as a corporate member of The Joint Commission. 2. Pursuant to Policy 220.949 (AMA Policy Database), our AMA: (a) Advocates accountability through voluntary, professionally directed quality assurance mechanisms as part of every system of health care delivery; (b) Monitors the effects of The Joint Commission standards, surveys, and other activities on the quality, cost, and outcomes of care; (c) Retains its current role in The Joint Commission and continue to evaluate that role on a regular basis; and (d) Continues to investigate additional methods to facilitate participation in voluntary accreditation mechanisms. 3. Our	Retain.

POLICY #	Title	Text	Recommendation
		<p>AMA establishes the following goals for AMA participation in The Joint Commission: (a) To assist The Joint Commission to define its mission, long-term goals, and role in the accreditation arena; (b) To assure continued physician involvement in medical decision-making by advocating a requirement for integrated medical delivery systems to have organized medical staffs; (c) To advocate the improvement of the quality and consistency of The Joint Commission accreditation process, surveyors, and survey reports; (d) To urge consideration of cost implications when revising The Joint Commission standards, developing and implementing other activities, and increasing the costs of surveys; (e) To work toward minimal revision of The Joint Commission standards, unless there is a clear need to change them to improve patient care or outcome, once the proposed medical staff standards for the 1996 AMH are finalized; (f) To urge The Joint Commission to focus on its accreditation activities and to provide accountability to the public for health services through private sector accreditation activities; and (g) To work toward The Joint Commission recognition as an accreditation body for integrated health care networks.</p>	
H-220.946	Unreasonable Burden of The Joint Commission Standards and Surveys	<p>The AMA requests The Joint Commission to study and consider the ability of small hospitals, particularly in rural areas, to bear the burden of the increasing demands on staff and financial resources in the implementation of the current and proposed standards; and urges The Joint Commission to eliminate standards that increase health care costs without demonstrably improving the quality of care.</p>	Retain.
H-220.959	Compliance with The Joint Commission	<p>The AMA Commissioners to The Joint Commission oppose the accreditation of hospitals that do</p>	Retain.

POLICY #	Title	Text	Recommendation
	Accreditation Standards	not adhere to The Joint Commission standards prohibiting unilateral amendment of medical staff bylaws by either the governing body or the medical staff.	
H-220.983	The Joint Commission Standard IV Should Not Tie Clinical Privilege Termination to Contract	The AMA does not believe The Joint Commission standards should dictate specific provisions of individual contracts between physicians and hospitals that are mutually agreeable to the parties.	Retain.
H-225.989	AMA Opposes Forcing Medical Staffs to Repay Hill-Burton Obligations of Free Medical Care	The AMA (1) opposes attempts to create new and arbitrary requirements for hospital compliance with the Hill-Burton Act by shifting responsibility for these requirements to hospital medical staffs; (2) believes that a hospital's Hill-Burton Act obligations should be satisfied in a manner that does not interfere with the professional rights of its medical staff; and (3) endorses exploration of means to assure equal access to medical care for the people of the U.S.	Retain.
H-225.991	Communication and Cooperation Between Hospital Management and Medical Staff	The AMA encourages hospitals to make known to physicians the diagnostic codes which are recorded by medical records and business departments so the accuracy of these diagnoses can be confirmed.	Retain.
H-230.970	Proper Notification of a Physician Regarding Possible Loss of Medical Staff Membership or Privileges	Except in the instance of summary suspension, hospital notification of possible loss of medical staff membership and/or privileges must be sent by certified mail, return receipt requested, or its equivalent.	Retain.
H-235.971	Amending Medical Staff Bylaws	The AMA provides the assistance of its legal staff to hospital medical staffs and county and state medical associations when a hospital board of directors unilaterally changes, amends, or substitutes medical staff bylaws, or denies seats to duly elected medical staff officers.	Retain.
H-235.976	Medical Staff Bylaws and	Our AMA reaffirms that (1) medical staff bylaws are a contract	Retain.

POLICY #	Title	Text	Recommendation
	Medical Staff Autonomy	between the organized medical staff and the hospital; and (2) application for medical staff appointment and clinical privileges should provide that each member of the medical staff, as well as the hospital, is bound by the terms of the medical staff bylaws, and the terms of the medical staff bylaws should be incorporated by reference into the application.	
H-235.987	Right of Committees of Medical Staffs to Meet in Executive Sessions	The AMA (1) supports the right of any hospital medical staff committee to meet in executive session, with only voting members of the medical staff present, in order to permit open and free discussion of issues such as peer review and to maintain confidentiality; and (2) encourages individual medical staffs to incorporate provisions in their bylaws to affirm this right.	Retain.
H-235.988	Non-Physicians Voting on the Medical Staff	The AMA opposes any regulation that would mandate voting privileges for non-physician members of medical staffs.	Retain.
H-240.961	Definition of a Hospital Day	Our AMA defines a Hospital Day as a 24-hour period that begins at the hour of admission.	Retain.
H-240.998	Preferential Hospital Rates	Our AMA (1) opposes hospital charge/cost arrangements granting unwarranted advantage to any group of patients; and (2) urges all health care payers, government and private, to pay their equitable share of costs incurred by hospitals and other facilities consistent with a reasonable definition of full financial requirements.	Retain.
H-260.980	Clinical Laboratory Improvement Act of 1988	1. It is the policy of the AMA to (a) continue and intensify its efforts to seek appropriate and reasonable modifications in the proposed rules for implementation of the Clinical Laboratory Improvement Amendments (CLIA) 88; (b) communicate to Congress and to the Centers for Medicare & Medicaid Services (CMS) the positive contribution of physician office laboratory testing to high quality, cost effective care so that through administrative revision of	Retain-in-part. Rescind (2); accomplished by October 2015 sign-on letter to Congress.

POLICY #	Title	Text	Recommendation
		<p>the regulations, clarification of Congressional intent and, if necessary, additional legislation, the negative impact of these proposed regulations on patient care and access can be eliminated; (c) continue to work with Congress, CMS, the Commission on Laboratory Assessment, and other medical and laboratory groups for the purposes of making the regulations for physicians' office laboratories reasonable, based on scientific data, and responsive to the goal of improving access to quality services to patients; (d) protest the reported high costs being considered for certification of laboratories and the limited number of laboratory categories proposed; (e) encourage all components of the federation to express to CMS and members of Congress their concerns about the effect of the proposed rules on access and cost of laboratory services; and (f) protest the very limited list of waived tests.</p> <p>2. Our AMA will send a letter to CMS stating that CLIA requirements regarding provider-performed microscopy procedures and annual competency assessments are overly burdensome for physicians and their practices.</p>	
H-280.964	Medicare Certified Beds in Nursing Facilities	The AMA will work with CMS to eliminate any unnecessary requirements for designating by location Medicare Certified beds within a nursing facility, thus allowing each facility to flexibly apply the certified status to any appropriate bed within the facility.	Retain.
H-285.917	Stop Trial by Health Insurers	1. Our AMA opposes (a) any health insurer's efforts to make determinations regarding whether or not a physician has made a medical mistake; and (b) the practice of health plans using adverse event reporting data for purposes other than quality improvement and learning, as it could shift the focus of such reporting from improving patient	Retain.

POLICY #	Title	Text	Recommendation
		<p>safety to fostering a punitive environment.</p> <p>2. Our AMA will (a) inform all health insurance companies that they are not the appropriate entity for determining medical mistakes; and (b) encourage physicians to be aware of contractual provisions that would allow insurers to deny payment in the event of a medical mistake.</p>	
H-285.918	Mandatory Subspecialty Consultation	<p>Our AMA: (1) opposes the unilateral actions of hospitals and health care organizations to mandate specialty consultation for a patient with a specific disease state, when the mandate specifically denies the physician providing care the ability to determine medical necessity of the consultation and/or the consultation is not requested by the patient, and (2) discourages physicians from requesting hospital medical staff oversight committees, health plans and managed care organizations to mandate specialty consultations when the physician or physician group would gain financially from the mandatory consultation due to increased revenues from consultation billing, unless the consultation is required by law or regulation.</p>	Retain.
H-285.943	Payment for Managed Care Administrative Services	<p>Our AMA: (1) opposes managed care contract provisions that prohibit physician payment for the provision of administrative services; (2) encourages physicians entering into: (a) capitated arrangements with managed care plans to seek the inclusion of a separate capitation rate (per member per month payment) for the provision of administrative services, and (b) fee-for-service arrangements with managed care plans to seek a separate case management fee or higher level of payment to account for the provision of administrative services; and (3) supports the concept of a time-based charge for administrative duties (such as</p>	Retain.

POLICY #	Title	Text	Recommendation
		phone precertification, utilization review activities, formulary review, etc.), to be assessed to the various insurers.	
H-285.974	Residents Working with Managed Care Programs	The AMA encourages managed care plans to allow residents to care for patients under faculty supervision in the inpatient and outpatient setting.	Retain.
H-285.975	Consensus Opinions	Policy of the AMA is that all managed care programs must provide, or offer reimbursement for acquisition of, sufficient opinions necessary to reach a conclusion regarding the management of a given medical condition.	Rescind. Superseded by Policy H-390.917 . Consultation Follow-Up and Concurrent Care of Referral for Principal Care H-390.917 (1) It is the policy of the AMA that: (a) the completion of a consultation may require multiple encounters after the initial consultative evaluation; and (b) after completion of the consultation, the consultant may be excused from responsibility of the care of the patient or may share with the primary care physician in concurrent care; he/she may also have the patient referred for care and thus become the principal care physician. (2) The AMA communicate the appropriate use of consultation, evaluation and management, and office medical services codes to third party payers and advocate the appropriate reimbursement for these services in order to encourage high quality, comprehensive and appropriate consultations for patients.
H-290.969	Medicaid Waivers and Maintenance of Effort Requirements	Our AMA opposes any efforts to repeal the Medicaid maintenance of effort requirements in the ACA and American Recovery and Reinvestment Act (ARRA), which mandate that states maintain eligibility levels for all existing adult Medicaid beneficiaries until 2014 and for all children in Medicaid and the Children's Health Insurance Program (CHIP) until 2019.	Rescind. No longer relevant.
H-290.984	Mandatory Enrollment of	The AMA, in keeping with its support for free market competition	Retain.

POLICY #	Title	Text	Recommendation
	Medicare-Medicaid Patients in Managed Care Plans	among all modes of health care delivery and financing, strongly opposes mandatory enrollment of Medicare and/or Medicaid patients in managed care plans.	
H-290.987	Medicaid Waivers for Managed Care Demonstration Projects	<p>(1) Our AMA adopts the position that the Secretary of Health and Human Services should determine as a condition for granting waivers for demonstration projects under Section 1115(a) of the Medicaid Act that the proposed project: (i) assist in promoting the Medicaid Act's objective of improving access to quality medical care, (ii) has been preceded by a fair and open process for receiving public comment on the program, (iii) is properly funded, (iv) has sufficient provider reimbursement levels to secure adequate access to providers, (v) does not include provisions designed to coerce physicians and other providers into participation, such as those that link participation in private health plans with participation in Medicaid, and (vi) maintains adequate funding for graduate medical education. (2) Our AMA advocates that CMS establish a procedure which state Medicaid agencies can implement to monitor managed care plans to ensure that (a) they are aware of their responsibilities under EPSDT, (b) they inform patients of entitlement to these services, and (c) they institute internal review mechanisms to ensure that children have access to medically necessary services not specified in the plan's benefit package.</p>	Retain.
H-315.968	Privacy Issues Regarding Insurance Company Explanation of Benefits	<p>1. Our AMA advocates that electronic medical record (EMR) vendors be required to create user-triggered mechanisms that alert health care professionals of confidential medical information that should be safeguarded.</p> <p>2. Our AMA encourages physicians to clearly identify health care information on both paper and electronic records that the patient has requested to be kept private.</p>	Retain.

POLICY #	Title	Text	Recommendation
		<p>3. Our AMA encourages physicians to develop individualized treatment plans for minors aged 12-17, in collaboration with parents or guardians, that outline expectations for the services provided and transitions toward increased privacy as the minor ages into adulthood.</p> <p>4. Our AMA encourages physicians to inform their patients that they can request confidential communications from their office and health insurer by alternate means or locations than the policy holder's contact information, and to provide their patients with a Health Insurance Portability and Accountability Act (HIPAA) Privacy Rights Request Form.</p> <p>5. Our AMA advocates that health insurers be required to develop a method of listing health care services on Explanation of Benefits statements that would preserve confidentiality for all insured individuals.</p> <p>6. Our AMA advocates that health insurers be required to communicate clear procedures to all insured dependents on how to request confidential communications.</p> <p>7. Our AMA advocates that health insurers be required to create privacy protections for all insured individuals on information that is contained on their Internet websites.</p>	
H-315.992	Copying Records for Audits	Our AMA supports taking appropriate action to ensure that the financial responsibility for producing or copying patient records at the request of any regulatory agency having the authority to do so shall be borne entirely by the requesting agency and the request for said records shall be made at least 30 days in advance of any deadline.	Retain
H-320.956	Advance Directives and Utilization Review	The policy of the AMA is that: (1) the prior existence of advance directives (expressions of intent to forgo resuscitative, extraordinary,	Retain.

POLICY #	Title	Text	Recommendation
		<p>unwanted or other care highly unlikely to improve or stabilize health status) should not jeopardize the provision of medically appropriate care, if the care is consistent with agreed upon limits; (2) individual physicians should not be reprimanded by reviewing bodies for abiding by the wishes of patients when providing appropriate care to individuals who have exercised advance directives.</p>	
H-320.965	Responsibility for Hospital Admissions	<p>It is the policy of the AMA that the determination of the medical necessity for hospital admission should be made only by a Doctor of Medicine, or a doctor of osteopathy licensed in the same jurisdiction as the treating physician.</p>	Retain.
H-330.944	New Durable Medical Equipment Requirements	<p>The AMA will work with CMS to develop and implement an exemption policy for low-cost DME supplies that are dispensed by physicians through their offices, based on such factors as current Medicare payment amounts, whether the item is usually disposable, linkage to a particular physician treatment, and specialty society recommendations. Claim for such supplies under these circumstances would not be subject to CMS's DME regulatory requirements and would be submitted to the local Medicare carrier.</p>	Retain.
H-335.973	Reimbursement Violations	<p>Our AMA will urge physicians who experience problems with their Medicare carrier's application of Medicare review criteria to report those problems, issues or concerns to their state medical association and state "Medicare Carrier Advisory Committee" for discussion and resolution.</p>	Retain
H-385.927	Additional Prompt Payment Advocacy	<p>Our AMA continues to support state medical association and national medical specialty society efforts and work independently with federal and state legislators and agencies to provide for a percentage of the financial penalty and/or accrued interest to be paid directly to the physician in the</p>	Retain.

POLICY #	Title	Text	Recommendation
		cases where payers do not make payment within the specified time frame.	
H-385.948	Reasonable Charge for Preauthorization	The AMA strongly supports and advocates fair compensation for a physician's administrative costs when providing service to managed care patients.	Retain.
H-385.956	Payment for Ethics Consultations	The policy of the AMA is that physician provision of clinical ethics consultations for the guidance of individual patients or physicians, apart from and beyond their duties as members of hospital ethics committees, is an appropriately compensable medical service. Payment for these services should be made when they are reported with the appropriate existing CPT consultation codes (and prolonged physician service codes, if appropriate). The AMA recognizes that this does not address any aspect of payment for ethics consultations by non-physicians.	Retain.
H-385.959	Primary and Consultative Care	The AMA will promulgate policies to recognize the services of internists, pediatricians, family physicians and obstetrician/gynecologists as capable of providing both primary care and consultative care.	Retain.
H-390.867	Medical Rehabilitation Services	The AMA believes: (1) Rehabilitation criteria for reimbursement should be defined by medical needs of patients for rehabilitative care that includes functional, cognitive, social considerations, and cognitive status, specifically the so called "three-hour rule" is not a valid exclusion criterion for entry into a rehabilitation unit nor can it be the basis for denial of ongoing coverage in such a unit. (2) The severity of medical conditions, regardless of settings, must be accounted for, including a case-mix approach adjusted for regional variances to meet individual patient needs for high quality, cost effective medical, rehabilitation services.	Retain.

POLICY #	Title	Text	Recommendation
<p>H-390.976</p>	<p>Delayed Payment of Medical Insurance Claims</p>	<p>Our AMA (1) expresses its concern and displeasure about CMS’s practice of slowing payment of Medicare claims, which places an unwarranted financial burden upon the elderly and the practitioners and facilities which serve senior citizens; (2) supports model state legislation to establish incentives and/or penalties among private and public third party payers to rectify the problem of delayed insurance reimbursements; and (3) believes that reasonable interest should begin on uncontroverted claims not later than 30 days following receipt of a claim by the payer.</p>	<p>Rescind. Superseded by Policies H-190.959 and H-190.981 and AMA Model State Legislation.</p> <p>Physician Reimbursement by Health Insurance and Managed Care Companies H-190.959</p> <p>1. Our AMA shall make it a top priority to seek regulatory and legislative relief to ensure that all health insurance and managed care companies pay for clean claims submitted electronically within fourteen days.</p> <p>2. When electronic claims are deemed to be lacking information to make the claim complete, the health insurance and managed care companies will be required to notify the health care provider within five business days to allow prompt resubmission of a clean claim.</p> <p>3. Our AMA shall advocate for heavy penalties to be imposed on health insurance and managed care companies, including their employees, that do not comply with laws and regulations establishing guidelines for claims payment.</p> <p>4. Our AMA will continue to encourage regulators to enforce existing prompt pay requirements.</p> <p>Required Timely Reimbursements by all Health Insurers H-190.981</p> <p>Our AMA will prepare and/or seek sponsorship of legislation calling for all health insurance entities and third-party payers--inclusive of not-for-profit organizations and health maintenance organizations--to pay for “clean” claims when filed electronically within 14 days and paper claims within 30 days, with interest accruing thereafter. These time periods should be considered ceilings,</p>

POLICY #	Title	Text	Recommendation
			not floors or fixed differentials between paper and electronic claims.
H-390.985	CMS Consultation with Physicians	The AMA encourages CMS to consult with clinically experienced practicing physicians on all determinations affecting medical practice and patient care.	Retain.
H-390.987	Medicare Assignments and Laboratory Reimbursements	The AMA supports educational efforts to assist physicians in differentiating between procedural billing and professional billing, particularly as they relate to billing for the drawing of a specimen and billing for interpreting the laboratory test results.	Retain.
H-450.932	Public Reporting of Quality and Outcomes for Physician-Led Team-Based Care	<p>1. Our AMA will advocate that internal reporting of quality and outcomes of team-based care should be done at both the team and individual physician level.</p> <p>2. Our AMA will advocate that public reporting of quality and outcomes data for team-based care should be done at the group/system/facility level, and not at the level of the individual physician.</p> <p>3. Our AMA reaffirms the intent of the codified mandate in the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA 2008) that public reporting of quality and outcomes data for team-based care should be done at the group/system level, and not at the level of the individual physician.</p> <p>4. Our AMA will advocate that the current regulatory framework of public reporting for Meaningful Use also provide “group-level reporting” for medical groups/organized systems of care as an option in lieu of requiring MU reporting only on an individual physician basis.</p>	Retain.
H-450.946	Ensuring Quality in Health System Reform	Our AMA: (1) will discuss quality of care in each of its presentations on health system reform; (2) will advocate for effective quality management programs in health system reform that: (a) incorporate substantial input by actively	Rescind. H-450.997	Quality Assurance and Peer Review for Hospital Sponsored Programs	The AMA urges hospital medical staffs to make certain that all hospital sponsored, initiated, or affiliated medical services have appropriate peer review and quality assurance programs.	Retain.

REPORT 5 OF THE COUNCIL ON MEDICAL SERVICE (A-24)
Patient Medical Debt
(Resolution 710-A-23 and Resolution 712-A-23)
(Reference Committee G)

EXECUTIVE SUMMARY

At the 2023 Annual Meeting, the House of Delegates referred Resolutions 710 and 712. Resolution 710-A-23 asked the American Medical Association (AMA) to work with the appropriate national organizations to address the medical debt crisis by advocating for robust policies at the federal and state levels that prevent medical debt, help consumers avoid court involvement, and ensure that court involved cases do not result in devastating consequences to patient's employment, physical health, mental wellbeing, housing, and economic stability. Resolution 712-A-23 asked the AMA to study the causes of medical bankruptcy in the United States and draft a report for presentation at the 2024 Annual House of Delegates meeting, with such a report to include recommendations to the House of Delegates to severely reduce the problem of medical debt.

An estimated 100 million people in the United States (41 percent of adults) have debt related to unpaid medical bills, totaling between \$195-220 billion. A 2021 Census Bureau analysis estimated that 15 percent of households in the United States owed medical debt. Medical debt is the leading cause of bankruptcy in the United States and can take many forms, including past due payments owed directly to a physician or hospital, ongoing payment plans, money owed to a bank or collections that has been assigned or sold the debt, credit card debt, and/or money borrowed from family or friends. Medical debt occurs widely across all demographic groups. Insurance coverage does not protect patients from incurring medical debt and debt is accrued both for patients with chronic medical conditions and as a result of unexpected acute events. Across the United States, approximately 50 million people are on a financing plan to pay off a medical or dental bill and about 25 percent of these individuals are paying interest. A portion of the interest collected may be kept by financing companies who often contract with physicians and hospitals to collect outstanding debt.

Medical financing products, such as medical credit cards and installment plans, can be offered to patients through hospitals or physicians' offices, but they are often serviced through third-party financial services companies. Historically, uninsured and low-income patients have been provided installment plans with zero or low interest rates directly from hospitals or physicians' offices where they received their care. Notably, as more physicians become employed, there is less control and awareness of the debt collection practices of their employers. In recent years, some hospitals and physicians' offices have partnered with financial service or private equity companies to offer more structured loan arrangements, which tend to charge market-level or higher interest rates.

In July 2023, the Biden Administration, the Consumer Financial Protection Bureau, the Department of Health and Human Services, and the Treasury Department issued a Request for Information on medical credit cards and other high-cost specialty financial products to understand their prevalence, patients' experience with them, and incentives driving physicians and other non-physician providers to offer these products.

The Council offers a series of recommendations to reduce patient medical debt.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 5-A-24

Subject: Patient Medical Debt
(Resolution 710-A-23 and Resolution 712-A-23)

Presented by: Sheila Rege, MD, Chair

Referred to: Reference Committee G

1 At the 2023 Annual Meeting, the House of Delegates referred Resolutions 710 and 712. Resolution
2 710-A-23, introduced by the Michigan delegation, asked the American Medical Association (AMA) to
3 work with the appropriate national organizations to address the medical debt crisis by advocating for
4 robust policies at the federal and state levels that prevent medical debt, help consumers avoid court
5 involvement, and ensure that court involved cases do not result in devastating consequences to patient's
6 employment, physical health, mental wellbeing, housing, and economic stability. Resolution 712-A-23,
7 introduced by the New Jersey delegation, asked the AMA to study the causes of medical bankruptcy in
8 the United States and draft a report for presentation at the 2024 Annual House of Delegates meeting, with
9 such a report to include recommendations to the House of Delegates to severely reduce the problem of
10 medical debt.

11 12 BACKGROUND

13
14 An estimated 100 million people in the United States (41 percent of adults) have debt related to unpaid
15 medical bills, totaling between \$195-220 billion.¹ Of this 100 million, approximately 20 million people
16 owe money directly to their physician, hospital, or other non-physician provider.² The remaining 80
17 million people reflect those that have other debts associated with their health care (i.e., credit card debt,
18 loans from family and friends, etc.) The Consumer Financial Protection Bureau (CFPB) estimates that
19 \$88 billion of total medical debt is reflected on Americans' credit reports.³ A 2021 Census Bureau
20 analysis estimated that 15 percent of households in the United States owed medical debt.⁴ Medical debt is
21 the leading cause of bankruptcy in the United States and can take many forms, including past due
22 payments owed directly to a physician or hospital, ongoing payment plans, money owed to a bank or
23 collections that has been assigned or sold the debt, credit card debt, and/or money borrowed from family
24 or friends.⁵ Medical debt can often be masked as other forms of debt when someone falls behind on other
25 expenses (i.e., food, housing, household goods) to pay down their medical bills.⁶ Those with unaffordable
26 medical bills are more likely to skip or delay needed care, cut back on basic household expenses, take
27 money out of retirement or college savings, or increase credit card debt.⁷

28
29 Medical debt occurs across demographic groups, but is more likely if a patient has disabilities, is in worse
30 health, is poor or near poor, is Black, lives in the South, lives in a non-Medicaid expansion state, or is
31 middle aged. Women are more likely to report having medical debt than men (11 percent vs. 8 percent),
32 which is likely due to childbirth-related expenses and lower average incomes.⁸

33
34 COVID-19 exacerbated several hardships associated with increased medical debt, including downstream
35 effects of contracting COVID-19, losing employer-sponsored health insurance, or losing income. The
36 Commonwealth Fund completed a study that found that half of all people ages 19-64 affected by

1 COVID-19 had medical debts or issues tangentially related to medical debt during the study period.
 2 COVID-19 hospitalizations and treatment also contributed to individuals' debt.⁹

3
 4 Besides negative financial impacts, other consequences patients face include being contacted by
 5 collectors or negative credit score impacts, which makes it difficult to buy a vehicle, get a job, or buy or
 6 rent a home. Additionally, there are consequences associated with care: one in seven adults with health
 7 care debt say they have been denied care due to unpaid medical bills.¹⁰

8
 9 *Causes of Medical Debt in the United States*

10
 11 According to a KFF study, 72 percent of patients with medical debt claim the bills were from an
 12 unexpected acute event while 27 percent of those with debt claim that the expenses built up over time
 13 from treatments for chronic conditions.¹¹ Conversely, the Commonwealth Fund reports that the source of
 14 debt for many people is chronic conditions and that about half of adults with debt said it was the result
 15 from treatment received for ongoing health problems.¹² The discrepancy in these findings indicates that
 16 medical debt clearly impacts both patients who experience a one-time acute care event and those with
 17 chronic medical conditions.

18
 19 Approximately 23 million people owe “significant” medical debt, which is considered to be anything
 20 \$250 or greater, according to both KFF and the Survey of Income and Program Participation.¹³ In 2020,
 21 the average amount of medical debt was \$429.¹⁴ Among single-person, privately insured households in
 22 2019, 32 percent did not have liquid assets over \$2,000 and among multi-person households, 20 percent
 23 did not have liquid assets over \$2,000. Sixteen percent of privately insured adults say they would need to
 24 take on credit card debt to meet an unexpected \$400 expense, while seven percent would need to borrow
 25 money from friends or family.¹⁵

26
 27 Adults who are uninsured for six months or more out of the year are more likely to report having
 28 significant medical debt. However, medical debt burden does not solely impact those without health
 29 insurance. Over 90 percent of Americans have some form of health insurance. Even those with private
 30 health insurance may have insufficient liquid assets to meet high deductibles or other cost-sharing
 31 expenses.¹⁶ Many working age adults surveyed by the Commonwealth Fund said it was very or somewhat
 32 difficult to afford their health care, including 43 percent of those with employer-sponsored coverage, 57
 33 percent with Affordable Care Act (ACA) Marketplace or individual plans, 45 percent with Medicaid, and
 34 51 percent with Medicare.¹⁷

35
 36 Insurance coverage does not shield individuals from taking on debt. A substantial portion of people with
 37 insurance still have medical debt including 30 percent of people with employer-sponsored coverage, 37
 38 percent enrolled in an ACA Marketplace or individual plan, 21 percent covered by Medicaid, and 33
 39 percent covered by Medicare.¹⁸ Among those in employer plans, those with low incomes especially
 40 struggled. Fifty-six percent of those with debt enrolled in employer-sponsored plans had incomes under
 41 200 percent of the federal poverty line (FPL) and reported difficulty in paying for their health care.¹⁹
 42 Additionally, those in employer-sponsored plans with incomes below 400 percent FPL reported much
 43 higher rates of delaying or forgoing needed care due to the cost. More than half of these individuals
 44 reported that their health problem had gotten worse as a result of skipping care.

45
 46 One concern with Medicaid specifically is estate recovery for those using Medicaid long-term care.
 47 Medicaid beneficiaries over the age of 55 that have used long-term services, such as a nursing home or
 48 home care, are subject to estate recovery after their death. State agencies will come after any assets,
 49 including the individual's home, in order to recoup the money spent on long-term care for the patient. In
 50 2019, states collected \$733 million in estate recovery, which is about 0.5 percent of Medicaid's total long-
 51 term care expenditures. Patient's families who do not have the assets to pay the expenses owed back to

1 Medicaid are often forced to sell the patient's home to cover the costs. These homes are often the last
2 assets a family has and can further exacerbate existing poverty.²⁰

3
4 Medical debt is a uniquely American problem as nearly half of all working-age Americans struggle with
5 health care costs.²¹ The Commonwealth Fund compared the performance of the United States' health
6 system to those of other high-income countries and ranked it last among 11 nations in several categories
7 including access, efficiency, equity, and health outcomes.²² Health expenditures per person in the United
8 States totaled \$12,555 in 2022, which was over \$4,000 more than any other high-income nation. The
9 average amount spent on health per person in comparable countries is about half of what the United States
10 spends per person (\$6,651).²³ Americans also tend to be unhealthier than those in other countries.
11 However, the comparison is limited due to the variance in health systems in each of the countries that
12 were compared. America's global counterparts either have government health plans (i.e., Britain and
13 Canada) or rely on subsidized private insurers (i.e., Germany and the Netherlands).²⁴ In addition, it would
14 be unfair to compare the health care costs between America and its global counterparts due to the
15 different tax burdens in each of these countries and how that impacts the total paid for health care. While
16 the discrepancies between how these various systems work and serve patients may be of interest, this
17 report specifically focuses on addressing American medical debt within the current health care system.

18 19 *Impact on Physicians*

20
21 An article in the *AMA Journal of Ethics* states that physicians have a responsibility to reduce debt,
22 especially given the impact of patients forgoing care if they are unable to pay. At a minimum, physicians
23 should be aware of their institution's charity care policy or reduced bill payment options.²⁵ However,
24 physicians cannot continue providing care to patients if they are not paid, especially those working in
25 small private practices. Asking patients to pay outstanding and overdue bills is increasingly difficult if
26 there are reduced financial consequences to patients who fail to pay. According to Medscape's 2022
27 Physician Compensation Report, physicians react in the following ways when patients do not pay their
28 outstanding bills: 43 percent continue to treat the patients and develop a payment plan; 13 percent send
29 outstanding bills to third-party collection agencies; 12 percent continue to provide care and write off the
30 balance; 25 percent choose other actions; and eight percent drop patients if they continue not to pay.²⁶

31
32 Physicians are encouraged to have an established payment policy, presented in writing to all patients.
33 These agreements should be clear and easy for all patients to understand. When possible, physicians
34 should try to collect payment at the time of service and provide transparent pricing to patients. This could
35 include explaining that costs for prescribed services (e.g., tests, imaging, medications) are often dictated
36 by the patient's insurance plan and out of the control of the prescribing physician. In the event that unpaid
37 accounts need to be turned over to a third-party collection agency, physicians should be mindful to select
38 agencies that charge reasonable fees, noting that some charge a fee that is 30 to 40 percent of the total
39 amount of debt they collect.

40
41 Physician responsibilities regarding patient medical debt and the cost of care are further codified in the
42 following AMA Code of Ethics opinions: [11.1.1](#), [11.1.4](#), [11.2.1](#), [11.2.2](#), [11.2.4](#), and [11.3.3](#).

43 44 *Patient Financing Programs*

45
46 Medical financing products, such as medical credit cards and installment plans, can be offered to patients
47 through hospitals or physicians' offices, but they are often serviced through third-party financial services
48 companies. Historically, uninsured and low-income patients have been provided installment plans with
49 zero or low interest rates directly from hospitals or physicians' offices where they received their care.
50 Notably, as more physicians become employed, there is less control and awareness of the debt collection
51 practices of their employers. In recent years, some hospitals and physicians' offices have partnered with

1 financial service or private equity companies to offer more structured loan arrangements, which tend to
2 charge market-level or higher interest rates. Some even target patients with low credit scores, while others
3 target specific services, such as fertility treatments.
4

5 Patient financing is a multi-billion-dollar business that includes private equity and banks buying patient
6 debt from hospitals, physicians, and non-physician providers. Hospitals, physicians, and other non-
7 physician providers, who have traditionally put patients in interest free payment plans, have embraced the
8 patient financing model and have entered into contracts with these lenders. Many of these financing plans
9 offer a promotional period where no interest is charged, but if a patient does not pay off the full amount
10 owed during this time, interest is then charged. These loans can deepen inequities. For example, lower
11 income patients without the means to make large monthly payments can face higher interest rates while
12 wealthier patients who are able to take on larger monthly payments can secure lower interest rates.
13 Additionally, patients with higher incomes can usually pay off the debt during the promotional period and
14 avoid accruing any interest.²⁷
15

16 Across the United States, approximately 50 million people are on a financing plan to pay off a medical or
17 dental bill and about 25 percent of these individuals are paying interest. A portion of the interest collected
18 may be kept by financing companies who contract with hospitals to collect outstanding debt. Many
19 hospitals are reluctant to share specific details on their agreements with these companies but have cited
20 the need to offset the cost of offering financing options to patients as a reason why they enter into these
21 partnerships.²⁸
22

23 If patients are unable to keep up with payments to the financing companies, their debt may be sent into
24 collections or returned to the hospital or physician's office where further action may be taken. For
25 example, one of these financing companies, AccessOne, returns patient accounts to the hospital if
26 payments are missed. The hospital can then sue the patient, report them to credit bureaus, or take other
27 collection action. Such actions could also include referring unpaid bills to the state revenue department,
28 which can garnish tax refunds.²⁹ Medical credit cards may also be offered to patients. These accounts tend
29 to charge patients interest rates higher than regular credit cards if patients are unable to pay their balances
30 during the promotional period. In addition, when a patient uses a medical credit card, a physician's office
31 may charge a fee at the time payment is disbursed. One such company, Alphaeon Credit, markets directly
32 to ophthalmology, plastic surgery, dermatology, and dental practices. As an example, in the fine print of
33 their offer to ophthalmology patients, Alphaeon Credit notes that "minimum payments are not guaranteed
34 to pay the promotional plan balance within the promotional period...you may have to pay more than the
35 minimum payment to avoid accrued interest charges." The annual percentage rate (APR) that a patient is
36 charged if they do not pay off their balance within the promotional period is 31.99 percent, well above the
37 average for a typical credit card.³⁰
38

39 *Hospital Charity Care*

40

41 Charity care is offered at most hospitals in the United States. Nonprofit hospitals must provide financial
42 aid as a condition of their tax-exempt status, which is something that saves the hospitals billions of dollars
43 each year. However, standards for aid vary widely across hospitals. Aid at some hospitals is limited to
44 patients below the FPL, while at other hospitals, patients with incomes that are five to six times the FPL
45 can receive assistance. Applying for aid can be complicated for patients, requiring lots of personal
46 financial information and documentation. A Kaiser Health News analysis of tax filings found that nearly
47 one half of nonprofit medical systems were billing patients with incomes low enough to qualify for
48 charity care.³¹

1 Problems associated with charity care are important and closely related to the broader issue of patient
2 medical debt. Notably, the Council will be preparing a report for the 2024 Interim Meeting specifically on
3 charity care and any associated recommendations will be included in the forthcoming report.
4

5 *Recent Federal and State Efforts*

6

7 In July 2023, the Biden Administration, CFPB, the Department of Health and Human Services (HHS),
8 and the Treasury Department issued a Request for Information (RFI) on medical credit cards and other
9 high-cost specialty financing products to understand their prevalence, patients' experience with them, and
10 incentives driving physicians and other non-physician providers to offer these products. In the RFI, the
11 agencies cite that hospitals and financial service companies might not be making reasonable efforts to
12 determine when a patient is eligible for financial assistance before offering a medical financing product.³²
13

14 Additionally, the RFI indicates that a typical APR for a medical credit card is 27 percent, while a typical
15 consumer credit card has an average APR of about 16 percent. With medical credit cards, if a patient is
16 unable to pay the balance within the no- or low-interest promotional period, the patient will then owe
17 interest on the entire amount, not just the remaining balance. As a result, patients incurred a total of about
18 \$1 billion in deferred interest on health care purchases between 2018-2020.³³
19

20 Although national credit reporting agencies agreed not to report medical debts that are less than a year old
21 or under \$500 on Americans' credit reports, using a medical financing product can impact patient credit
22 scores more directly through "[hard](#)" credit checks, increased credit line utilization, decreased account age,
23 or eventual account closure.³⁴ A benefit for hospitals, physicians, and non-physician providers utilizing
24 medical financing products is being paid within days of providing a service and not having to handle
25 disputes, billing, or other administrative work.
26

27 In addition to the RFI, in September 2023, CFPB released a notice that it is developing a rule to bar credit
28 reporting companies from including medical debt in consumer credit reports. CFPB is seeking to prohibit
29 lenders from using medical collections information when evaluating a borrower's application. The agency
30 plans to issue a Notice of Proposed Rulemaking in 2024,³⁵ which was not available at the time that this
31 report was written. As of November 2023, CFPB released a notice stating that it is taking steps to ensure
32 medical debt collectors follow the law, including the Fair Debt Collection Practices Act and the Fair
33 Credit Reporting Act. Specifically, these steps include supervision and enforcement efforts, reminding
34 entities about their obligations, support for state-level action, and education and outreach. Although the
35 Fair Debt Collection Practices Act limits how aggressive debt collectors can be by restricting the ways
36 and times they can contact debtors, it does not limit or prohibit the use of legal remedies like wage
37 garnishment or foreclosure.³⁶ Further, the Fair Debt Collection Practices Act currently only applies to
38 debt collectors and does not include hospitals or other health care entities.
39

40 In addition to recent federal efforts, several states have created policies to protect patients from the
41 consequences of having medical debt. A detailed overview, including maps of which states fall into each
42 category can be found [here](#).³⁷
43

44 A summary of recent state actions include:

- 45 • Charging interest on medical debt
 - 46 ○ Eight states have laws prohibiting or limiting interest on all medical debt.
 - 47 ○ Some states have set a ceiling for interest on all medical debt. Others prohibit charging
 - 48 interest to patients who are at or below 250 percent FPL and are ineligible for public
 - 49 insurance programs.

- 1 • Regulations on sending medical bills to collections
 - 2 ○ Thirty-seven states do not regulate when a hospital can send a bill to collections.
3 ○ However, unlike hospitals, debt collectors do not have a relationship with patients and
4 ○ can be more aggressive when collecting on the debt.
5 ○ Connecticut prohibits hospitals from sending bills of certain low-income patients to
6 ○ collections and Illinois requires hospitals to offer a reasonable payment plan first.7 ○ Maryland and Colorado require hospitals to report debt collection actions with
8 ○ demographic data and New Mexico and Colorado extended the requirements that are
9 ○ applicable to nonprofit hospitals to urgent care clinics, freestanding Emergency
10 ○ Departments, and outpatient clinics.³⁸
- 11 • Sale of medical debt
 - 12 ○ Maryland, New Mexico, and Vermont prohibit the sale of medical debt while California
13 ○ and Colorado regulate debt buyers instead. California prohibits debt buyers from
14 ○ charging interest and Colorado prohibits them from foreclosing on a patient's home.
15 ○ California also recently restricted when hospitals could sell patient debt or report patients
16 ○ to credit bureaus.³⁹ Debt collection is prohibited for 180 days, regardless of financial
17 ○ status.⁴⁰
- 18 • Liens and foreclosures
 - 19 ○ Thirty-three states do not limit hospitals, collection agencies, or debt buyers from placing
20 ○ a lien or foreclosing on a patient's home to recover unpaid medical bills. However,
21 ○ almost all states provide a homestead exemption, which protects some equity in a
22 ○ patient's home from being seized during bankruptcy.
23 ○ Eleven states prohibit or set limits on liens and foreclosures for medical debt.
- 24 ○ New York and Maryland fully prohibit both liens and foreclosures because of medical
-
- 25 ○ debt, while California and New Mexico only prohibit them for certain low-income
-
- 26 ○ populations.
- 27 • Wage garnishment
 - 28 ○ Under federal law, the amount of wages garnished each week may not exceed the lesser
29 ○ of 25 percent of the employee's disposable earnings or the amount by which an
30 ○ employee's disposable earnings are greater than 30 times the federal minimum wage.
31 ○ Twenty-one states exceed the federal ceiling for wage garnishment.
- 32 ○ New York fully prohibits wage garnishment to recover medical debt for all patients, yet
-
- 33 ○ California only extends protections for certain low-income populations.34 ○ New Hampshire does not prohibit wage garnishment, but it does require the creditor to
-
- 35 ○ keep going back to court every pay period to garnish wages, which significantly limits
-
- 36 ○ creditors' ability to garnish wages in practice.

37 38 AMA POLICY AND ADVOCACY

39
40 AMA policy is limited on the issue of patient medical debt directly. Tangentially related policies address
41 uncompensated care, controlling costs of care, price transparency, patient cost-sharing generally, and
42 expanding coverage and improving affordability of coverage.

43
44 Policy D-155.987 states that our AMA: 1) encourages physicians to communicate information about the
45 cost of their professional services to individual patients, taking into consideration the insurance status of
46 the patient or other relevant information where possible; 2) advocates that health plans provide plan
47 enrollees or their designees with complete information regarding plan benefits and real time cost-sharing
48 information associated with both in-network and out-of-network provider services or other plan designs
49 that may affect patient out-of-pocket costs; 3) will actively engage with health plans, public and private
50 entities, and other stakeholder groups in their efforts to facilitate price and quality transparency for

1 patients and physicians, and help ensure that entities promoting price transparency tools have processes in
 2 place to ensure the accuracy and relevance of the information they provide; 4) will work with states and
 3 the federal government to support and strengthen the development of all-payer claims databases; 5)
 4 encourages electronic health record vendors to include features that assist in facilitating price
 5 transparency for physicians and patients; 6) encourages efforts to educate patients in health economics
 6 literacy, including the development of resources that help patients understand the complexities of health
 7 care pricing and encourage them to seek information regarding the cost of health care services they
 8 receive or anticipate receiving; and 7) will request that the Centers for Medicare & Medicaid Services
 9 expand its Medicare Physician Fee Schedule Look-up Tool to include hospital outpatient payments.

10
 11 Policy H-165.846 states that our AMA supports the following principles to guide in the evaluation of the
 12 adequacy of health insurance coverage options: a) any insurance pool or similar structure designed to
 13 enable access to age-appropriate health insurance coverage must include a wide variety of coverage
 14 options from which to choose; b) existing federal guidelines regarding types of health insurance coverage
 15 (e.g., Title 26 of the US Tax Code and Federal Employees Health Benefits Program regulations) should
 16 be used as a reference when considering if a given plan would provide meaningful coverage; c) provisions
 17 must be made to assist individuals with low-incomes or unusually high medical costs in obtaining health
 18 insurance coverage and meeting cost-sharing obligations; and d) mechanisms must be in place to educate
 19 patients and assist them in making informed choices, including ensuring transparency among all health
 20 plans regarding covered services, cost-sharing obligations, out-of-pocket limits, and lifetime benefit caps,
 21 and excluded services. Policy H-165.846 also advocates that the Early and Periodic Screening,
 22 Diagnostic, and Treatment program be used as the model for any essential health benefits package for
 23 children and that the AMA: a) opposes the removal of categories from the essential health benefits (EHB)
 24 package and their associated protections against annual and lifetime limits, and out-of-pocket expenses;
 25 and b) opposes waivers of EHB requirements that lead to the elimination of EHB categories and their
 26 associated protections against annual and lifetime limits.

27
 28 Policy D-180.979, which comes from CMS Report 9-A-19, states that the AMA will: 1) support the
 29 development of sophisticated information technology systems to help enable physicians and patients to
 30 better understand financial obligations; 2) encourage states and other stakeholders to monitor the growth
 31 of high deductible health plans and other forms for cost-sharing in health plans to assess the impact of
 32 such plans on access to care, health outcomes, medical debt, and provider practice sustainability;
 33 3) advocate for the inclusion of health insurance contract provisions that permit network physicians to
 34 collect patient cost-sharing financial obligations (e.g., deductibles, co-payments, and co-insurance) at the
 35 time of service; and 4) monitor programs wherein health plans and insurers bear the responsibility of
 36 collecting patient co-payments and deductibles.

37
 38 Policy H-373.996 states that our AMA supports the principles contained in the Medical Debt Relief Act
 39 as drafted and passed by the US House of Representatives to provide relief to the American consumer
 40 from a complicated collections process and supports medical debt resolution being portrayed in a positive
 41 and productive manner.

42
 43 Policy H-160.923 states that our AMA: 1) supports the transitional redistribution of disproportionate
 44 share hospital payments for use in subsidizing private health insurance coverage for the uninsured; 2)
 45 supports the use of innovative federal- or state-based projects that are not budget neutral for the purpose
 46 of supporting physicians that treat large numbers of uninsured patients, as well as the Emergency Medical
 47 Treatment and Active Labor Act-directed care; and 2) encourages public and private sector researchers to
 48 utilize data collection methodologies that accurately reflect the amount of uncompensated care (including
 49 both bad debt and charity care) provided by physicians.

1 Policy H-165.838 states that the AMA is committed to working with Congress, the Administration, and
2 other stakeholders to achieve enactment of health system reforms that include the following seven critical
3 components: health insurance coverage for all Americans; insurance market reforms that expand choice
4 of affordable coverage and eliminate denials for pre-existing conditions or due to arbitrary caps;
5 assurance that health care decisions will remain in the hands of patients and their physicians, not
6 insurance companies or government officials; investments and incentives for quality improvement and
7 prevention and wellness initiatives; repeal of the Medicare physician payment formula that triggers steep
8 cuts and threaten seniors' access to care; implementation of medical liability reforms to reduce the cost of
9 defensive medicine; and streamline and standardize insurance claims processing requirements to
10 eliminate unnecessary costs and administrative burdens.

11 DISCUSSION

12
13
14 Medical debt is a huge burden on many Americans across all demographic groups. Patients face negative
15 outcomes associated with debt, including worse health outcomes, stress from being contacted by debt
16 collectors and negative credit score impacts, and the downstream effects of difficulty getting a job or
17 buying or renting a home.

18
19 Medical debt is accrued by patients with long-term, chronic conditions, as well as those with acute
20 conditions or those suffering from an accident. Insurance coverage does not automatically protect patients
21 from debt. Even with insurance coverage many patients struggle with high cost-sharing and deductibles
22 offered by their insurance plans. Improved patient education on the cost of care and plan details could
23 help patients better prepare for unexpected medical costs. Both insured and uninsured patients have
24 reported delaying or forgoing needed care due to costs, further exacerbating health concerns.

25
26 The growth of high-deductible health insurance plans, which are increasingly offered to patients, have
27 been shown to require deductibles too high for many Americans. In 2021, the average annual deductible
28 for a single worker with employer-based coverage was over \$1,400, which is almost four times greater
29 than it was in 2006. Family deductibles can exceed \$10,000.⁴¹ Out-of-pocket maximums also prove to be
30 too high for many Americans. For example, although the ACA caps out-of-pocket spending for those on
31 Marketplace plans, in 2024, the out-of-pocket maximum for those on a Marketplace plan is \$9,450 for an
32 individual and \$18,900 for a family.^{42,43}

33
34 Many patients are unaware of reduced cost options offered by their hospital or physician's office. These
35 plans should be easy for patients to access and should be discussed with patients at the time of payment.
36 This includes sharing details about interest rates, timelines for payment, and anything else that may
37 impact the patient financially. While physicians should be aware of the charity care policy in their office
38 or institution, it must be understood that physicians cannot continue providing care to patients if they are
39 not paid. This is made more difficult if penalties are reduced for patients who are unable or unwilling to
40 pay their bills. The Council believes that physicians have the opportunity to educate patients on the
41 charity care policy offered by their institution but should be mindful when partnering with third-party
42 collection agencies, especially those who place wage garnishments and property liens on low-wage
43 patients. If possible, physicians should try to handle debts with patients directly, by requiring payment
44 prior to providing services (for non-emergent care), offering flexible payment plans, or forgiveness of
45 debt altogether. Additionally, if a patient's medical bill is part of an ongoing dispute, hospitals and
46 physicians should try to refrain from sending this bill to collections or to a third-party collection agency
47 until the dispute is resolved.

48
49 The Council believes that recent efforts by the Biden Administration, CFPB, HHS, and Treasury
50 Department to explore the causes of and solutions to medical debt provide the AMA with an opportunity

1 to support amendments to laws, such as the Fair Debt Collection Practices Act, to strengthen standards
2 and provide additional clarity to patients about medical billing.
3

4 Several states, counties, and cities have taken a creative approach to managing medical debt for their
5 residents. For example, New York City and Cook County (Chicago) in Illinois have recently partnered
6 with RIP Medical Debt, a nonprofit organization that purchases and forgives medical debt from low-wage
7 individuals. At the time that this report was written, Cook County and RIP Medical Debt have used \$12
8 million of federal funds granted by the American Rescue Plan to forgive up to \$1 billion in medical debt
9 for residents.⁴⁴ New York City is also partnering with RIP Medical Debt and investing \$18 million to
10 purchase and forgive \$2 billion in medical debt for approximately half a million New York residents.⁴⁵ To
11 qualify for relief in both Cook County and New York, a resident must have an annual household income
12 below 400 percent FPL or have medical debt equal to five percent or more of their annual household
13 income. Other states and cities are exploring similar grants and partnerships. The AMA has an
14 opportunity to be further educated on these and other initiatives to reduce medical debt for patients and
15 explore ways to support the missions of these organizations.
16

17 Medical debt impacts many patients in the United States, causing negative health outcomes from delayed
18 or denied care to stress from financial pressures from unpaid bills. When possible, the Council believes
19 that physicians should support patient education on the cost of care, including potential downsides for
20 alternative options for paying down debt, such as high interest rates or penalties for missing payments
21 with third-party collection agencies. Understanding both the serious issue of medical debt for patients and
22 that physicians need to be paid to continue providing care, physicians should be thoughtful when
23 navigating this issue by encouraging patients to be informed about their insurance coverage and to take
24 advantage of charity care when they qualify to reduce the burden of the cost of their care.
25

26 RECOMMENDATIONS

27
28 The Council on Medical Service recommends that the following recommendations be adopted in lieu of
29 Resolution 710-A-23 and Resolution 712-A-23, and the remainder of the report be filed:
30

- 31 1) That our American Medical Association (AMA) encourage health care organizations to manage
32 medical debt with patients directly, considering several options including but not limited to
33 discounts, payment plans with flexibility and extensions as needed, or forgiveness of debt
34 altogether, before resorting to third-party debt collectors or any punitive actions. (New HOD
35 Policy)
36
- 37 2) That our AMA supports innovative efforts to address medical debt for patients, including public
38 and private efforts to eliminate medical debt. (New HOD Policy)
39
- 40 3) That our AMA support amending the Fair Debt Collection Practices Act to include hospitals and
41 strengthen standards within the Act to provide clarity to patients about whether their insurance
42 has been or will be billed, which would require itemized debt statements to be provided to
43 patients, thereby increasing transparency, and prohibiting misleading representation in connection
44 with debt collection. (New HOD Policy)
45
- 46 4) That our AMA opposes wage garnishments and property liens being placed on low-wage patients
47 due to outstanding medical debt at levels that would preclude payments for essential food and
48 housing. (New HOD Policy)
49
- 50 5) That our AMA support patient education on medical debt that addresses dimensions such as:

- 1 a. Patient financing programs that may be offered by hospitals, physicians offices, and other
- 2 non-physician provider offices;
- 3 b. The ramifications of high interest rates associated with financing programs that may be
- 4 offered by a hospital, physician’s office, or other non-physician provider’s office;
- 5 c. Potential financial aid available from a patient’s hospital and/or physician’s office; and
- 6 d. Methods to reduce high deductibles and cost-sharing. (New HOD Policy)

Fiscal Note: Less than \$500.

Relevant AMA Policy Patient Medical Debt

Price Transparency, D-155.987

1. Our AMA encourages physicians to communicate information about the cost of their professional services to individual patients, taking into consideration the insurance status (e.g., self-pay, in-network insured, out-of-network insured) of the patient or other relevant information where possible.
2. Our AMA advocates that health plans provide enrollees or their designees with complete information regarding plan benefits and real-time cost-sharing information associated with both in-network and out-of-network provider services or other plan designs that may affect patient out-of-pocket costs.
3. Our AMA will actively engage with health plans, public and private entities, and other stakeholder groups in their efforts to facilitate price and quality transparency for patients and physicians and help ensure that entities promoting price transparency tools have processes in place to ensure the accuracy and relevance of the information they provide.
4. Our AMA will work with states and the federal government to support and strengthen the development of all-payer claims databases.
5. Our AMA encourages electronic health records vendors to include features that assist in facilitating price transparency for physicians and patients.
6. Our AMA encourages efforts to educate patients in health economic literacy, including the development of resources that help patients understand the cost of health care services they receive or anticipate receiving.
7. Our AMA will request that the Centers for Medicare and Medicaid Services expand its Medicare Physician Fee Schedule Look-up Tool to include hospital outpatient payments.
(CMS Rep. 4, A-15; Reaffirmed in lieu of: Res. 121, A-16; Reaffirmed in lieu of: Res. 213, I-17; Reaffirmed: BOT Rep. 14, A-18; Reaffirmed in lieu of: Res. 112, A-19; Modified: Res. 213, I-19; Reaffirmation: A-23)

Adequacy of Health Insurance Coverage Options, H-165.846

1. Our AMA supports the following principles to guide in the evaluation of the adequacy of health insurance coverage options:
 - a. Any insurance pool or similar structure designed to enable access to age-appropriate health insurance coverage must include a wide variety of coverage options from which to choose.
 - b. Existing federal guidelines regarding types of health insurance coverage (e.g., Title 26 of the US Tax Code and Federal Employees Health Benefits Program [FEHBP] regulations) should be used as a reference when considering if a given plan would provide meaningful coverage.
 - c. Provisions must be made to assist individuals with low-incomes or unusually high medical costs in obtaining health insurance coverage and meeting cost-sharing obligations.
 - d. Mechanisms must be in place to educate patients and assist them in making informed choices, including ensuring transparency among all health plans regarding covered services, cost-sharing obligations, out-of-pocket limits and lifetime benefit caps, and excluded services.
2. Our AMA advocates that the Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) program be used as the model for any essential health benefits package for children.
3. Our AMA: (a) opposes the removal of categories from the essential health benefits (EHB) package and their associated protections against annual and lifetime limits, and out-of-pocket expenses; and (b) opposes waivers of EHB requirements that lead to the elimination of EHB categories and their associated protections against annual and lifetime limits, and out-of-pocket expenses.
(CMS Rep. 7, A-07; Reaffirmation: I-07; Reaffirmation: A-09; Reaffirmed: Res. 103, A-09; Reaffirmation: I-09; Reaffirmed: CMS Rep. 3, I-09; Reaffirmed: CMS Rep. 2, A-11; Appended: CMS Rep. 2, A-11; Reaffirmed in lieu of Res. 109, A-12; Reaffirmed: CMS Rep. 1, I-12; Reaffirmed: CMS Rep. 3, A-13; Reaffirmed in lieu of Res. 812, I-13; Reaffirmed: CMS Rep. 6, I-14; Reaffirmed: CMS Rep. 6, I-15; Appended: CMS Rep. 04, I-17; Reaffirmed in lieu of: Res. 101, A-19)

Health Plan Payment of Patient Cost-Sharing, D-180.979

Our AMA will: (1) support the development of sophisticated technology systems to help enable physicians and patients to better understand financial obligations; (2) encourage states and other stakeholders to monitor the growth of high deductible health plans and other forms of cost-sharing in health plans to assess the impact of such plans on access to care, health outcomes, medical debt, and provider practice sustainability; (3) advocate for the inclusion of health insurance contract provisions that permit network physicians to collect patient cost-sharing financial obligations (e.g., deductibles, co-payments, and co-insurance) at the time of service; and (4) monitor programs wherein health plans and insurers bear the responsibility of collecting patient co-payments and deductibles.
(CMS Rep. 09, A-19)

Exclusion of Medical Debt that Has Been Fully Paid or Settled, H-373.996

Our AMA supports the principles contained in The Medical Debt Relief Act as drafted and passed by the US House of Representatives to provide relief to the American consumer from a complicated collections process and supports medical debt resolution being portrayed in a positive and productive manner.
(Res. 226, I-10; Reaffirmed: BOT Rep. 04, A-20)

Offsetting the Costs of Providing Uncompensated Care, H-160.923

Our AMA: (1) supports the transitional redistribution of disproportionate share hospital (DSH) payments for use in subsidizing private health insurance coverage for the uninsured; (2) supports the use of innovative federal- or state-based projects that are not budget neutral for the purpose of supporting physicians that treat large numbers of uninsured patients, as well as EMTALA-directed care; and (3) encourages public and private sector researchers to utilize data collection methodologies that accurately reflect the amount of uncompensated care (including both bad debt and charity care) provided by physicians.
(CMS Rep. 8, A-05; Reaffirmation: A-07; Modified: CMS Rep. 01, A-17)

Health System Reform Legislation, H-165.838

1. Our American Medical Association is committed to working with Congress, the Administration, and other stakeholders to achieve enactment of health system reforms that include the following seven critical components of AMA policy:
 - a. Health insurance coverage for all Americans
 - b. Insurance market reforms that expand choice of affordable coverage and eliminate denials for pre-existing conditions or due to arbitrary caps
 - c. Assurance that health care decisions will remain in the hands of patients and their physicians, not insurance companies or government officials
 - d. Investments and incentives for quality improvement and prevention and wellness initiatives
 - e. Repeal of the Medicare physician payment formula that triggers steep cuts and threaten seniors' access to care
 - f. Implementation of medical liability reforms to reduce the cost of defensive medicine
 - g. Streamline and standardize insurance claims processing requirements to eliminate unnecessary costs and administrative burdens
2. Our American Medical Association advocates that elimination of denials due to pre-existing conditions is understood to include rescission of insurance coverage for reasons not related to fraudulent representation.
3. Our American Medical Association House of Delegates supports AMA leadership in their unwavering and bold efforts to promote AMA policies for health system reform in the United States.
4. Our American Medical Association supports health system reform alternatives that are consistent with AMA policies concerning pluralism, freedom of choice, freedom of practice, and universal access for patients.

5. AMA policy is that insurance coverage options offered in a health insurance exchange be self-supporting, have uniform solvency requirements; not receive special advantages from government subsidies; include payment rates established through meaningful negotiations and contracts; not require provider participation; and not restrict enrollees' access to out-of-network physicians.
 6. Our AMA will actively and publicly support the inclusion in health system reform legislation the right of patients and physicians to privately contract, without penalty to patient or physician.
 7. Our AMA will actively and publicly oppose the Independent Medicare Commission (or other similar construct), which would take Medicare payment policy out of the hands of Congress and place it under the control of a group of unelected individuals.
 8. Our AMA will actively and publicly oppose, in accordance with AMA policy, inclusion of the following provisions in health system reform legislation:
 - a. Reduced payments to physicians for failing to report quality data when there is evidence that widespread operational problems still have not been corrected by the Centers for Medicare and Medicaid Services
 - b. Medicare payment rate cuts mandated by a commission that would create a double-jeopardy situation for physicians who are already subject to an expenditure target and potential payment reductions under the Medicare physician payment system
 - c. Medicare payments cuts for higher utilization with no operational mechanism to assure that the Centers for Medicare and Medicaid Services can report accurate information that is properly attributed and risk-adjusted
 - d. Redistributed Medicare payments among providers based on outcomes, quality, and risk-adjustment measurements that are not scientifically valid, verifiable and accurate
 - e. Medicare payment cuts for all physician services to partially offset bonuses from one specialty to another
 - f. Arbitrary restrictions on physicians who refer Medicare patients to high quality facilities in which they have an ownership interest
 9. Our AMA will continue to actively engage grassroots physicians and physicians in training in collaboration with the state medical and national specialty societies to contact their Members of Congress, and that the grassroots message communicates our AMA's position based on AMA policy.
 10. Our AMA will use the most effective media event or campaign to outline what physicians and patients need from health system reform.
 11. AMA policy is that national health system reform must include replacing the sustainable growth rate (SGR) with a Medicare physician payment system that automatically keeps pace with the cost of running a practice and is backed by a fair, stable funding formula, and that the AMA initiate a "call to action" with the Federation to advance this goal.
 12. AMA policy is that creation of a new single payer, government-run health care system is not in the best interest of the country and must not be part of national health system reform.
 13. AMA policy is that effective medical liability reform that will significantly lower health care costs by reducing defensive medicine and eliminating unnecessary litigation from the system should be part of any national health system reform.
- (Sub. Res. 203, I-09; Reaffirmation A-10; Reaffirmed in lieu of Res. 102, A-10; Reaffirmed in lieu of Res. 228, A-10; Reaffirmed: CMS Rep. 2, I-10; Reaffirmed: Sub. Res. 222, I-10; Reaffirmed: CMS Rep. 9, A-11; Reaffirmation A-11; Reaffirmed: CMS Rep. 6, I-11; Reaffirmed in lieu of Res. 817, I-11; Reaffirmation I-11; Reaffirmation A-12; Reaffirmed in lieu of Res. 108, A-12; Reaffirmed: Res. 239, A-12; Reaffirmed: Sub. REPORT 6 OF THE COUNCIL ON MEDICAL SERVICE (A-24)
Economics of Prescription Medication Prior Authorization
(Resolution 725-A-23)
(Reference Committee G)

EXECUTIVE SUMMARY

At the 2023 Annual Meeting, the House of Delegates referred Resolution 725, which asked that the American Medical Association (AMA) work with the federal government and third-party payers and surrogates to include economic information on medications that are denied prior authorization.

The Council reviewed information regarding factors that contribute to the current state of prior authorization: formularies, rebates, and prescription drug pricing. Each of these factors contain layers of confusion and lack transparency. Not only are these factors opaque and complicated individually, but each interacts with the evolution of prior authorization. To better understand prior authorization denials, the Council examined information on the history of prior authorization and its current state. The Council found that denials are often issued by payers in a manner that is confusing and inconsistent for both physicians and patients. The Council also reviewed potential solutions to the problem, namely the utilization of real-time prescription benefit tools (RTBTs). These tools allow physicians to access patient coverage information at the time of prescribing, presenting an opportunity to improve the care delivery process and workflow. The current prior authorization system relies on communicating decisions after the prescription has been issued, often leading to care delays and adherence issues. Alternatively, RTBTs present coverage information prior to the prescription being written, allowing prescribers to identify care delivery hurdles earlier and avoiding unexpected prior authorization related delays.

Based on its review, the Council recommends the adoption of new AMA policy that outlines the basic requirements for prior authorization denial letters: a detailed explanation of denial reasoning, access to policies/rules cited as part of the denial, approved alternatives, and what is needed to approve the original prescription. Additionally, the Council recommends the amendment of current RTBT policy, to ensure alignment between patient and physician systems, that alternative prescriptions are offered, and that coverage information is honored by payers. Finally, the Council recommends the reaffirmation of a number of current policies to ensure that Pharmacy Benefit Managers (PBMs) are regulated, formulary data is available to physicians in real-time, that PBM actions do not erode the patient-physician relationship, and that prior authorization is not abused.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 6-A-24

Subject: Economics of Prescription Medication Prior Authorization
(Resolution 725-A-23)

Presented by: Sheila Rege, MD Chair

Referred to: Reference Committee G

1 At the 2023 Annual Meeting, the House of Delegates referred Resolution 725-A-23, The
2 Economics of Prior Authorization, which was sponsored by the Organized Medical Staff Section.
3 This resolution asked;

4
5 That our American Medical Association advocate to the federal government that third party
6 payers and surrogates include economic information on the net costs of medication denied
7 prior authorization and, where applicable, comparative net costs of alternative approved or
8 suggested medications for each rejected prior authorization.
9

10 In response to the resolution, this report provides an overview of prior authorization and factors
11 that contribute to prescription medication prior authorization specifically, including formularies,
12 rebates, and drug pricing. The Council also explores that real-time benefit tools (RTBT) have the
13 potential to help solve this issue. The Council presents policy recommendations consistent with the
14 intent of Resolution 725-A-23.
15

16 BACKGROUND

17
18 The Council commends the sponsors of Resolution 725-A-23 for bringing forward this important
19 topic and believes that the spirit of the resolution has the potential to positively impact both
20 physicians and patients. Prior authorization is a complex and often frustrating process that
21 physicians face on a regular basis. While additional information in denial letters is warranted, as
22 suggested in the original resolution, the Council emphasizes that resources like RTBTs have the
23 potential to improve the prior authorization process faced by patients and physicians. These tools
24 allow physicians to access detailed information about the coverage of a prescription medication
25 before the prescription is written, which could reduce the number of denial letters, increase the
26 information accessible to physicians, and allow physicians to focus on patient care instead of
27 appeals. To fully understand prior authorization, its economic impact, and how RTBTs could assist
28 care delivery and workflow, it is necessary to understand some of the factors that contribute to the
29 complexity, such as formularies, rebates, and the lack of prescription drug price transparency.
30

31 Formularies, or the list of prescription drugs covered by a payer, are created via consultation with
32 experts, often supported or directed by pharmacy benefit managers (PBMs) and typically based on
33 clinical outcomes and the relative costs.^{1,2} Formularies are premised on reducing costs and
34 ensuring the appropriate use of pharmaceuticals.³ However, they often have negative impacts on
35 patients and physicians. Specifically, research has demonstrated that among studied formularies at
36 least half of all patient health care utilization and economic outcomes were not beneficial to

1 patients.³ Drugs on a formulary are typically divided into different tiers based on the drug’s price
 2 and the formulary designer’s preference. A drug’s tier position depends on a multitude of factors
 3 and can differ significantly between payers; however, one of the primary factors influencing any
 4 drug’s tier placement is the financial arrangement between the payer and the drug manufacturer for
 5 that drug. Unfortunately, a drug’s efficacy or its appropriateness for a particular patient, and its
 6 cost-effectiveness are often secondary considerations compared to the financial implications of the
 7 drug.

8
 9 Manufacturers offer rebates that are typically negotiated between PBMs and the drug manufacturer
 10 and are typically based on the list price of the drug. Along with prior authorization, rebates are
 11 generally used to encourage a payer to include favorable placement or inclusion on a formulary.⁴
 12 Increased rebates are sometimes used to incentivize placement on a preferred formulary tier.⁵
 13 Rebates are relied on heavily by PBMs and other payers to negotiate more lucrative deals, and to
 14 protect these financial positions, it is critical to PBMs and payers that the specific details of these
 15 arrangements remain confidential. Without access to more detailed information about rebates and
 16 other financial incentives, it is impossible for physicians to fully understand how much a drug truly
 17 costs.

18
 19 Payers often use prior authorization as a tool to discourage physicians from prescribing
 20 medications that are not on the payer’s preferred formulary tier. If a payer prefers that a physician
 21 prescribe one drug over another within the same drug class, the payer can simply apply a prior
 22 authorization requirement to the non-preferred medication. By placing prior authorization on non-
 23 preferred drugs, payers can drive utilization in their desired direction. It is often challenging for
 24 physicians to determine whether a prior authorization is required at all, let alone what the specific
 25 requirements are. The prior authorization process is often so opaque that physicians may not be
 26 notified that a prior authorization is required until they receive a denial letter from the payer, or the
 27 patient is turned away at the pharmacy counter, which can lead to delays and significant
 28 interruptions in ongoing care as well as disruptions to patient adherence. Although these payer
 29 coverage determination delays and/or issues are rarely the physician’s fault, patients may blame the
 30 physician, undermining the patient’s trust in the physician and potentially impacting the patient-
 31 physician relationship long-term.

32
 33 Physicians are often prescribing without access to drug cost and coverage information at the point
 34 of prescribing, making it almost impossible to avoid prescribing a drug that may be unaffordable
 35 under that specific patient’s plan. This can cause the physician to unknowingly prescribe a more
 36 expensive medication when a lower-cost and equally beneficial medication is available and can
 37 cause significant harm to patient outcomes. Specifically, more expensive medications have been
 38 linked to lower treatment adherence, and, in extreme cases, increases in morbidity and/or
 39 mortality.⁶ While there have been efforts from federal regulators and legislators to mitigate some of
 40 the negative impacts from medication prior authorization, the process remains opaque and
 41 complicated and, as a result, patients may not be able to readily access lower-cost alternative
 42 medications. Additionally, there is very little transparency from PBMs and payers regarding
 43 rebates, formulary makeup, and drug costs.⁶ Rebate information is considered proprietary data and
 44 as such is not accessible for scrutiny, making it incredibly difficult for any regulating body to have
 45 accurate data leading to challenges in effective regulation.

46
 47 **PRIOR AUTHORIZATION DENIALS**

48
 49 The roots of prior authorization can be traced back to the original Medicare and Medicaid
 50 legislation from the 1960s which introduced utilization review, or the process of verifying the need
 51 for treatment, often hospital stays, for a confirmed diagnosis.⁷ Over time, this process has expanded

1 to include the coverage of prescription medications and to what is now recognized as prior
 2 authorization.⁷ When introduced, prior authorization was touted as a method to restrict significant
 3 increases in the cost of prescription drugs, however this process has become one that is
 4 burdensome for both patients and physicians.⁸ Prior authorization has resulted in several adverse
 5 consequences ranging from increased administrative burden to patient inability to access necessary
 6 medications.⁸ Additionally, the prior authorization process can undermine the patient-physician
 7 relationship. Physicians and patients frequently have limited knowledge if prior authorization will
 8 be required for a medication, hindering the ability for physicians to ensure affordable, timely
 9 access to the medication they deem the most appropriate.⁹

10
 11 Today, prior authorization has become pervasive throughout the health care system. A recent report
 12 found that 99 percent of Medicare Advantage (MA) plans require prior authorization for at least
 13 some services; most often for Part B drugs.¹⁰ Additionally, a study investigating MA plans found
 14 that prior authorizations are submitted, on average, 1.5 times for each enrollee, adding up to
 15 approximately 35 million requests in one year.¹¹ Of the submitted requests in MA plans this study
 16 found that six percent, or approximately 2 million, were denied. However, this denial rate ranged
 17 greatly among payers with some denial rates as high as double the average. Importantly, this study
 18 found that only 11 percent of denied prior authorizations were appealed by either the patient or
 19 provider. The vast majority of appeals were successful with 82 percent resulting in a full or partial
 20 overturning of the denial. Similar to rates of denials, some payers saw much higher rates of appeal,
 21 some reaching 20 percent of all denials. Further, for some payers, appeals were successful as much
 22 as 94 percent of the time.¹¹ While this study is helpful in beginning to understand the rates of prior
 23 authorization denials, the researchers did not have access to disaggregated data showing the service
 24 type of prior authorization requests and were unable to access reasoning for each denial or
 25 information on the timeliness of requests or appeals. Additionally, these statistics were only based
 26 on MA plans; private plans were not included. It is important to note that physicians who are
 27 forced to appeal prior authorization denials often face significant administrative costs. Physicians
 28 and their offices are often required to hire additional staff and/or spend personal time managing
 29 authorizations and appeals.

30
 31 Legislators and regulators have introduced rules and regulations that are designed to minimize the
 32 struggles that plague the prior authorization process. For example, a recent final regulation from
 33 the Centers for Medicare & Medicaid Services (CMS) requires that as of January 1, 2027, payers,
 34 including MA, Medicaid, Children’s Health Insurance Program, and Qualified Health Plans on the
 35 Federally Facilitated Exchange are required to maintain a prior authorization application
 36 programming interface (API). This API must include information on covered items and services,
 37 identification of documents required for prior authorization, be supportive of prior authorization
 38 requests and payer responses, and communicate approvals, denials, or requests for additional
 39 information.¹² Effective January 1, 2026, payers will be required to report metrics and follow a
 40 stricter response timeline.¹³ While this rule will improve the regulation of prior authorization, it
 41 does not extend to prescription drug prior authorization requests.

42
 43 One of the biggest issues with prior authorization is the opaque and extensive denial process. Not
 44 only is this a frustrating process for the patient looking to access treatment, but it is also
 45 exasperating for physicians who are attempting to support their patients. When a denial letter is
 46 sent out, it may not include effective information to understand and/or appeal the denial itself. For
 47 example, physicians and patients may simply be informed that a medication has not been approved
 48 without providing justification as to why the denial took place or an alternative treatment option.
 49 Without clear information regarding the clinical rationale for the denial, patients and physicians are
 50 often left to the frustrating process of guess work in attempting to find a treatment covered by the
 51 patient’s plan.

1 In order to improve the quantity and quality of information provided in denial letters, CMS has
2 implemented basic requirements for all Medicare health plans.¹⁴ These requirements, outlined in
3 CMS-10003-Notice of Denial of Medical Coverage or Payment form are in place for all medical
4 services and prescription drug denials. Specifically, in denial letters, plans must provide the
5 patient/physician with detailed information as to why the request was denied. Plans are required to
6 include a “specific and detailed” explanation for the denial, applicable coverage rules or plan
7 policies cited in the denial, and specific information as to what needs to be done to approve
8 coverage.¹⁴ These requirements ensure that the Medicare beneficiaries and their physicians are able
9 to have an understanding of the full scope of the denial via the notification letter.

10 11 REAL-TIME BENEFIT TOOL

12
13 To address the underlying concerns of Resolution 725-A-23, the Council worked to better
14 understand available data and what could feasibly be provided to physicians and patients. Not only
15 are there issues related to a lack of transparency due to prior authorization, at present, prior
16 authorization denial systems are not capable of producing specific net cost information on denials.
17 The Council believes that advocacy efforts supporting the betterment of alternative solutions, like
18 RTBTs, instead of the expansion of prior authorization systems better serve physicians and their
19 patients. One potential solution to the challenges faced due to prior authorization are RTBTs,
20 which allow patients and prescribers to access real-time information about coverage, including
21 formularies and benefit information at the point of prescribing.¹⁵ These tools simplify prescribing
22 with real-time information during an appointment. RTBTs allow prescribers to enter prescription
23 details, like type, amount, and intended pharmacy, and be informed, prior to writing the
24 prescription, of the cost and prior authorization requirements. RTBTs also allow physicians and
25 other prescribers to view alternative medications that may be lower cost to the patient and/or not
26 require prior authorization, thus allowing the prescriber to identify and prescribe the most
27 appropriate and accessible medication for a patient.¹⁶

28
29 RTBTs present an opportunity to improve the care delivery process by presenting prescribers with
30 critical prescription coverage and cost information at the point of prescribing. The current prior
31 authorization system relies heavily on relaying information to the patient/prescriber after a
32 prescription has been written and the patient has attempted to get that prescription filled. These
33 “post-prescription written denials,” usually delivered to prescribers via letters, often lead to
34 additional work for prescribers and their staff and result in immense administrative practice
35 burdens. In addition to increased work for physicians and their staff, the current prior authorization
36 process also often leads to patient care delays and adherence issues. RTBTs present all of the cost,
37 coverage, and other pertinent benefit information within the prescriber’s typical prescribing
38 workflow and allow the prescriber to not only identify prior authorization requirements prior to
39 writing the prescription, but also submit the prior authorization request directly to the payer sooner.

40
41 By providing information at the beginning of the prescribing process, RTBTs allow prescribers to
42 identify care delivery impediments earlier so they avoid any unexpected utilization management
43 delays. RTBTs have the potential to mitigate the impact of prior authorization denial letters by
44 informing prescribers of alternative, therapeutically equivalent medications that do not require
45 prior authorization at the point of care. RTBTs allow physicians to see which medications would be
46 covered and thus prior authorizations, and subsequent denial letters, should only be necessary if the
47 prescriber determines that the alternative, covered medication is not clinically appropriate. With
48 fewer denial letters, physicians can spend more time caring for patients and less time on appeals.
49

1 Current CMS regulation requires that all Medicare Part D plans provide at least one RTBT. In
2 practice, for physicians and qualified providers to have access to RTBT information for all patients,
3 they may need to support and integrate multiple RTBT and Electronic Health Records (EHR)
4 systems. This is burdensome and complicated for all physicians to implement, and nearly
5 impossible for smaller practices. Managing multiple systems is not only expensive and complex, it
6 also may lead to confusion on RTBTs. In response to the complications that arose with the need to
7 manage and support multiple RTBT and EHR systems, CMS has proposed a rule that would
8 require Part D plans to implement a standardized system.¹⁷ This standard, the National Council for
9 Prescription Drug Programs RTPB Standard Version 13 would allow for standardized formulary
10 and benefit data in a manner that is reliable, detailed, and effectively integrated into systems.¹⁸ The
11 AMA has been vocal in advocating for and supporting this proposed rule.¹⁹ Should the proposed
12 rule be implemented, starting January 2027, this standardized system would allow for increasingly
13 efficient physician access to clear information at the time of prescribing. Of note, this requirement
14 would not extend to private insurers, however the requirement of this standard system by CMS
15 could lead to future implementation in the private sector.

16

17 AMA ADVOCACY

18

19 The AMA's extensive advocacy efforts work to address each of the systemic factors cited by
20 Resolution 725-A-23, including prior authorization, formularies, rebates, prescription drug pricing
21 transparency, and RTBTs. Regarding prior authorization, the AMA has an ongoing grassroots
22 campaigns "[Fix Prior Auth](#)" to address the harm incurred by patients and physicians by prior
23 authorization,²⁰ and [TruthinRx](#), which aims to educate patients, physicians, providers, and
24 legislators about the issues that arise from the lack of price transparency.²¹ TruthinRx advocates for
25 transparency from PBMs, payers, and manufacturers around formularies and rebates. The goals of
26 these campaigns are to spread awareness, create legislative changes, and serve as an extensive
27 resource for patients, physicians, and employers on these high priority issues.

28

29 Additionally, the AMA conducts regular surveys to track and report the impact of prior
30 authorization on patients and physicians. The survey includes questions aimed at better
31 understanding the impact of prior authorization for generic medication. In addition to this work,
32 AMA advocacy has commented on prior authorization via letters and testimony to state legislators,
33 Congress, and federal agencies 35 times in 2023 alone and has already been active in advocating
34 for these issues in 2024.

35

36 AMA advocacy has commented on relevant transparency issues through 21 letters and testimonies
37 to state legislators, Congress, and federal agencies in 2023. Finally, to support the implementation
38 of RTBTs, AMA advocacy has sent 18 letters and testimonies in 2023 to Congress and federal
39 agencies. Efforts have already been made, and continue to be made, in 2024 to advocate on these
40 issues. Each of these factors contribute to the issues raised in Resolution 725-A-23 and are clearly
41 on the AMA advocacy's ongoing agenda.

42

43 AMA POLICY

44

45 Underscoring the extensive advocacy work on these issues is a robust body of AMA policy aimed
46 at ensuring that prior authorization is monitored and minimized, PBMs are monitored and
47 regulated, the process is transparent, and to support the implementation of adequate RTBT tools.

48

49 Policy H-125.991 outlines the standards that both formulary systems and Pharmacy and
50 Therapeutic Committees should meet. For example, this policy outlines that formulary systems
51 should include oversight from organized medical staff. This policy is reinforced by similar

1 guidelines in Policy H-285.965, which, among other things, outlines that both physicians and
2 patients should have access to clear information about a payer's formulary and that these
3 formularies should be created and maintained with the input of physicians. In addition to these
4 policies dealing directly with the creation and maintenance of formularies, Policy H-110.981
5 details advocacy efforts to ensure that PBMs and regulatory bodies make rebate and discount
6 reports available to the public, ideally, assisting in disentangling the influence rebates have on the
7 complex and opaque process that is formulary creation.

8
9 AMA policy also deals directly with efforts to ensure that PBMs are monitored and that there is an
10 increase in transparency regarding their operation. Specifically, Policy D-110.987 outlines the
11 advocacy efforts that the AMA continues to implement to ensure that PBMs are required to
12 increase transparency in their operating procedures and that they are adequately regulated on both a
13 state and federal level. Additionally, Policy H-125.986 encourages physician engagement in
14 reporting issues with PBMs and indicates efforts to increase PBM oversight and reduce PBM
15 overreach in medical practice. Policy H-110.963 expands the coverage of regulation and
16 monitoring to third-party PBMs. Each of these policies aim to implement adequate oversight of
17 PBMs. Finally, Policies H-125.986 and D-120.933 outline the AMA's support to ensure that
18 PBMs' actions do not impede or negatively impact the patient-physician relationship.

19
20 In addition to AMA policy on contributing factors to prior authorization, the AMA has extensive
21 policy on prior authorization and increasing physician access to real time prescribing information.
22 Policy H-125.979 specifies AMA efforts to work with appropriate parties to ensure that physicians
23 have access to real-time formulary data when prescribing a medication. Additionally, Policy
24 H-120.919 outlines AMA efforts to support the implementation of RTBT tools that are helpful to
25 prescribers and accurate at the time of prescribing. Finally, Policy H-320.945 outlines AMA
26 opposition to prior authorization abuses and outlines the requirement for payers to report accurate
27 statistics on approvals and denials.

28 29 DISCUSSION

30
31 Prior authorization is a tool that was initially introduced to save money and ensure that care given
32 to patients was medically necessary. However, in the years since its introduction it has been
33 overutilized and is now a burden for physicians as well as a barrier to patients accessing care. The
34 opaqueness of both rebates and formularies contribute greatly to the confusion and subsequent
35 frustration that results from denied prior authorization. The AMA continues to make significant
36 efforts on multiple fronts to address this issue and ensure that prior authorization is fixed for
37 patients and physicians.

38
39 Resolution 725-A-23 asked that the AMA work to encourage the inclusion of economic
40 information when prescription drugs are denied prior authorization. The Council believes that this
41 concept would be beneficial to physicians and that alternative solutions, like RTBT tools, should be
42 supported in order to mitigate the need for some prior authorizations. In the spirit of Resolution
43 725-A-23, and to address the confusion that can arise from prior authorization denial letters, the
44 Council recommends that a new policy be adopted to support working with appropriate parties to
45 ensure that denial letters include information that is helpful to physicians and patients in
46 understanding the full scope of denial. Such a policy will benefit ongoing and future AMA
47 advocacy letters and testimony.

48
49 The AMA has worked, and continues to work, extensively on ensuring that the burden of prior
50 authorization is lessened for both physicians and patients. One aspect of this ongoing work has
51 been rooted in policy outlining the AMA's support for RTBT tools. This work advocates for

1 physicians to be able to access systems that are effective, efficient, and accurate. Accordingly, the
2 Council suggests amending Policy H-120.919 to better align the standards and language with CMS
3 policy, and to ensure that these tools provide a justification for the prior authorization requirement,
4 offer alternative(s), and that coverage determinations from the RTBT are honored.

5
6 Finally, the Council recommends that Policies H-110.963; Third-Party Pharmacy Benefit
7 Administrators; H-125.979; Private Health Insurance Formulary Transparency; H-320.945; Abuse
8 of Preauthorization Procedures; H-125.986 Pharmaceutical Benefit Management Companies; and
9 D-120.933 Pharmacy Benefit Managers Impact on Patients be reaffirmed. These policies outline
10 the AMA's efforts to ensure that all PBMs are monitored, regulated, and do not harm the
11 physician-patient relationship, that health insurers are required to be transparent about the creation
12 and maintenance of formularies, and that prior authorization is not abused by payers.

13 14 RECOMMENDATIONS

15
16 The Council on Medical Service recommends that the following be adopted in lieu of Resolution
17 725-A-23, and the remainder of the report be filed:

- 18
19 1. That our American Medical Association (AMA) support working with payers and
20 interested parties to ensure that prior authorization denial letters include at a minimum (1) a
21 detailed explanation of the denial reasoning, (2) a copy of or publicly accessible link to any
22 plan policy or coverage rules cited or used as part of the denial, and (3) what rationale or
23 additional documentation would need to be provided to approve the original prescription
24 and alternative options to the denied medication. (New HOD Policy)

- 25
26 2. That our AMA amend Policy H-120.919 to read as follows:

27
28 That our AMA will: (1) continue to support efforts to ~~publish~~ implement a Real-Time
29 Prescription Benefit (RTPB) Real-Time Benefit Tool (RTBT) standard that meets the
30 needs of all physicians and other prescribers, utilizing any electronic health record (EHR),
31 and prescribing on behalf of any insured patient; (2) support efforts to ensure that provider-
32 facing and patient facing RTBT systems align; and (3) advocate that all payers (i.e., public
33 and private prescription drug plans) be required to implement and keep up to date an RTPB
34 RTBT standard tool that integrates with all EHR vendors, and that any changes that must
35 be made to accomplish RTPB RTBT tool integration be accomplished with minimal
36 disruption to EHR usability and cost to physicians and hospitals; (4) advocate that RTBT
37 systems provide a justification for why prior authorization is required and include
38 approved/covered alternative prescription medications; and (35) develop and disseminate
39 educational materials that will empower physicians to be prepared to optimally utilize
40 RTPB tools RTBT and other health information technology tools that can be used to
41 enhance communications between physicians and pharmacists to reduce the incidence of
42 prescription abandonment; (6) advocate that payers honor coverage information that is
43 based on a RTBT at the time of prescription and that prior authorization approvals should
44 be valid for the duration of the prescribed/ordered treatment; and (7) continue to advocate
45 for the accuracy and reliability of data provided by RTBTs and for vendor neutrality to
46 ensure that it is supportive to physician efforts. (Modify Current HOD Policy)

- 47
48 3. That our AMA reaffirm Policy H-110.963, which addresses the regulation and monitoring
49 of third-party Pharmacy Benefit Managers (PBMs) in an effort to control prescription drug
50 pricing. (Reaffirm HOD Policy)

- 1 4. That our AMA reaffirm Policy H-125.979, which outlines advocacy efforts to ensure that
2 physicians have access to real-time formulary data when prescribing. (Reaffirm HOD
3 Policy)
4
- 5 5. That our AMA reaffirm Policy H-320.945, which details opposition to the abuse of prior
6 authorization and the requirement for payers to accurately report denials and approvals.
7 (Reaffirm HOD Policy)
8
- 9 6. That our AMA reaffirm Policy H-125.986, which outlines the AMA's position that certain
10 actions from PBMs interfere with physician practice and may impact the patient-physician
11 relationship. (Reaffirm HOD Policy)
12
- 13 7. That our AMA reaffirm Policy D-120.933, which encourages the gathering of data to better
14 understand the impact that PBM actions may lead to an erosion of the patient-physician
15 relationship. (Reaffirm HOD Policy)

Fiscal Note: Less than \$500.

**CMS Report Economics of Prior Authorization
Relevant AMA Policy**

Drug Formularies and Therapeutic Interchange (H-125.991)

It is the policy of the AMA:

- (1) That the following terms be defined as indicated:
 - a) **Formulary:** a compilation of drugs or drug products in a drug inventory list; open (unrestricted) formularies place no limits on which drugs are included whereas closed (restrictive) formularies allow only certain drugs on the list;
 - b) **Formulary system:** a method whereby the medical staff of an institution, working through the pharmacy and therapeutics committee, evaluates, appraises, and selects from among the numerous available drug entities and drug products those that are considered most useful in patient care;
 - c) **Pharmacy & Therapeutics (P&T) Committee:** an advisory committee of the medical staff that represents the official, organizational line of communication and liaison between the medical staff and the pharmacy department; its recommendations are subject to medical staff approval;
 - d) **Therapeutic alternates:** drug products with different chemical structures but which are of the same pharmacological and/or therapeutic class, and usually can be expected to have similar therapeutic effects and adverse reaction profiles when administered to patients in therapeutically equivalent doses;
 - e) **Therapeutic interchange:** authorized exchange of therapeutic alternates in accordance with previously established and approved written guidelines or protocols within a formulary system; and
 - f) **Therapeutic substitution:** the act of dispensing a therapeutic alternate for the drug product prescribed without prior authorization of the prescriber.

- (2) That our AMA reaffirms its opposition to therapeutic substitution (dispensing a therapeutic alternate without prior authorization) in any patient care setting.

- (3) That drug formulary systems, including the practice of therapeutic interchange, are acceptable in inpatient hospital and other institutional settings that have an organized medical staff and a functioning Pharmacy and Therapeutics (P&T) Committee, provided they satisfy the following standards:
 - (a) The formulary system must:
 - (i) have the concurrence of the organized medical staff;
 - (ii) openly provide detailed methods and criteria for the selection and objective evaluation of all available pharmaceuticals;
 - (iii) have policies for the development, maintenance, approval, and dissemination of the drug formulary and for continuous and comprehensive review of formulary drugs;
 - (iv) provide protocols for the procurement, storage, distribution, and safe use of formulary and non-formulary drug products;
 - (v) provide active surveillance mechanisms to regularly monitor both compliance with these standards and clinical outcomes where substitution has occurred, and to intercede where indicated;
 - (vi) have enough qualified medical staff, pharmacists, and other professionals to carry out these activities;

- (vii) provide a mechanism to inform the prescriber in a timely manner of any substitutions, and that allows the prescriber to override the system when necessary for an individual patient without inappropriate administrative burden;
 - (viii) provide a mechanism to assure that patients/guardians are informed of any change from an existing outpatient prescription to a formulary substitute while hospitalized, and whether the prior medication or the substitute should be continued upon discharge from the hospital;
 - (ix) include policies that state that practitioners will not be penalized for prescribing non-formulary drug products that are medically necessary; and
 - (x) be in compliance with applicable state and federal statutes and/or state medical board requirements.
- (b) The P&T Committee must:
- (i) objectively evaluate the medical usefulness and cost of all available pharmaceuticals (reliance on practice guidelines developed by physician organizations is encouraged);
 - (ii) recommend for the formulary those drug products which are the most useful and cost-effective in patient care;
 - (iii) conduct drug utilization review (DUR) activities;
 - (iv) provide pharmaceutical information and education to the organization's (e.g., hospital) staff;
 - (v) analyze adverse results of drug therapy;
 - (vi) make recommendations to ensure safe drug use and storage; and
 - (vii) provide protocols for the timely procurement of non-formulary drug products when prescribed by a physician for the individualized care of a specific patient, when that decision is based on sound scientific evidence or expert medical judgment.
- (c) The P&T Committee's recommendations must be approved by the medical staff;
- (d) Within the drug formulary system, the P & T Committee shall recommend, and the medical staff must approve, all drugs that are subject to therapeutic interchange, as well as all processes or protocols for informing individual prescribing physicians; and
- (e) The act of providing a therapeutic alternate that has not been recommended by the P&T Committee and approved by the medical staff is considered unauthorized therapeutic substitution and requires immediate prior consent by the prescriber, (i.e., authorization for a new prescription).
- (4) That drug formulary systems in any outpatient setting shall operate under a P&T Committee whose recommendations must have the approval of the medical staff or equivalent body and must meet standards comparable to those listed above. In addition:
- (a) That our AMA continues to insist that managed care and other health plans identify participating physicians as their "medical staff" and that they use such staff to oversee and approve plan formularies, as well as to oversee and participate on properly elected P&T Committees that develop and maintain plan formularies;
 - (b) That our AMA continues to insist that managed care and other health plans have well-defined processes for physicians to prescribe non-formulary drugs when medically indicated, that this process impose minimal administrative burdens, and that it include access to a formal appeals process for physicians and their patients; and

- (c) That our AMA strongly recommends that the switching of therapeutic alternates in patients with chronic diseases who are stabilized on a drug therapy regimen be discouraged.

- (5) That our AMA encourages mechanisms, such as incentive-based formularies with tiered co-pays, to allow greater choice and economic responsibility in drug selection but urges managed care plans and other third-party payers to not excessively shift costs to patients so they cannot afford necessary drug therapies. (BOT Rep. 45, I-93; Reaffirmed by Sub. Res. 501, A-95; Appended: BOT Rep. 7, I-99; Modified: Sub. Res. 524 and Reaffirmed: Res. 123, A-00; Reaffirmed: Res. 515, I-00; Reaffirmed: CMS Rep. 8, A-02; Reaffirmed: Res. 533, A-03; Modified: CMS Rep. 6, A-03; Modified: CSA Rep. 2, A-04; Reaffirmation I-04; Reaffirmed in lieu of Res. 535, A-05; Reaffirmed: BOT Action in response to referred for decision Res. 503, A-05; Reaffirmed: CMS Rep. 2, I-05; Reaffirmation A-06; Reaffirmation A-08; Reaffirmed: CMS Rep. 2, A-10; Reaffirmed: CMS Rep. 01, A-20)

The Impact of Pharmacy Benefit Managers on Patients and Physicians (D-110.987)

- 1. Our AMA supports the active regulation of pharmacy benefit managers (PBMs) under state departments of insurance.
- 2. Our AMA will develop model state legislation addressing the state regulation of PBMs, which shall include provisions to maximize the number of PBMs under state regulatory oversight.
- 3. Our AMA supports requiring the application of manufacturer rebates and pharmacy price concessions, including direct and indirect remuneration (DIR) fees, to drug prices at the point-of-sale.
- 4. Our AMA supports efforts to ensure that PBMs are subject to state and federal laws that prevent discrimination against patients, including those related to discriminatory benefit design and mental health and substance use disorder parity.
- 5. Our AMA supports improved transparency of PBM operations, including disclosing:
 - Utilization information;
 - Rebate and discount information;
 - Financial incentive information;
 - Pharmacy and therapeutics (P&T) committee information, including records describing why a medication is chosen for or removed in the P&T committee's formulary, whether P&T committee members have a financial or other conflict of interest, and decisions related to tiering, prior authorization, and step therapy;
 - Formulary information, specifically information as to whether certain drugs are preferred over others and patient cost-sharing responsibilities, made available to patients and to prescribers at the point-of-care in electronic health records;
 - Methodology and sources utilized to determine drug classification and multiple source generic pricing; and
 - Percentage of sole source contracts awarded annually.
- 6. Our AMA encourages increased transparency in how DIR fees are determined and calculated. (CMS Rep. 05, A-19; Reaffirmed: CMS Rep. 6, I-20)

Pharmaceutical Benefits Management Companies (H-125.986)

Our AMA:

- (1) encourages physicians to report to the Food and Drug Administration's (FDA) MedWatch reporting program any instances of adverse consequences (including therapeutic failures and adverse drug reactions) that have resulted from the switching of therapeutic alternates;
- (2) encourages the Federal Trade Commission (FTC) and the FDA to continue monitoring the relationships between pharmaceutical manufacturers and PBMs, especially with regard to

- manufacturers' influences on PBM drug formularies and drug product switching programs, and to take enforcement actions as appropriate;
- (3) pursues congressional action to end the inappropriate and unethical use of confidential patient information by pharmacy benefits management companies;
 - (4) states that certain actions/activities by pharmacy benefit managers and others constitute the practice of medicine without a license and interfere with appropriate medical care to our patients;
 - (5) encourages physicians to routinely review their patient's treatment regimens for appropriateness to ensure that they are based on sound science and represent safe and cost-effective medical care;
 - (6) supports efforts to ensure that reimbursement policies established by PBMs are based on medical need; these policies include, but are not limited to, prior authorization, formularies, and tiers for compounded medications; and
 - (7) encourages the FTC and FDA to monitor PBMs' policies for potential conflicts of interests and anti-trust violations, and to take appropriate enforcement actions should those policies advantage pharmacies in which the PBM holds an economic interest. (BOT Rep. 9, I-97; Appended: Res. 224, I-98; Appended: Res. 529, A-02; Reaffirmed: Res. 533A-03; Reaffirmation I-08; Reaffirmation A-10; Reaffirmed: Alt. Res. 806, I-17; Modified: Res. 242, A-18; Reaffirmed: CMS Rep. 08, A-19)

Third-Party Pharmacy Benefit Administrators (H-110.963)

1. Our AMA recommends that third-party pharmacy benefit administrators that contract to manage the specialty pharmacy portion of drug formularies be included in existing pharmacy benefit manager (PBM) regulatory frameworks and statutes, and be subject to the same licensing, registration, and transparency reporting requirements.
2. Our AMA will advocate that third-party pharmacy benefit administrators be included in future PBM oversight efforts at the state and federal levels. (Res. 820, I-22)

Private Health Insurance Formulary Transparency (H-125.979)

1. Our AMA will work with pharmacy benefit managers, health insurers, and pharmacists to enable physicians to receive accurate, real-time formulary data at the point of prescribing.
2. Our AMA supports legislation or regulation that ensures that private health insurance carriers declare which medications are available on their formularies by October 1 of the preceding year, that formulary information be specific as to generic versus trade name and include copay responsibilities, and that drugs may not be removed from the formulary nor moved to a higher cost tier within the policy term.
3. Our AMA will develop model legislation (a) requiring insurance companies to declare which drugs on their formulary will be covered under trade names versus generic, (b) requiring insurance carriers to make this information available to consumers by October 1 of each year and, (c) forbidding insurance carriers from making formulary deletions within the policy term.
4. Our AMA will promote the following insurer-pharmacy benefits manager - pharmacy (IPBMP) to physician procedural policy: In the event that a specific drug is not or is no longer on the formulary when the prescription is presented, the IPBMP shall provide notice of covered formulary alternatives to the prescriber promptly so that appropriate medication can be provided to the patient within 72 hours.
5. Drugs requiring prior authorization, shall be adjudicated by the IPBMP within 72 hours of receipt of the prescription.
6. Our AMA (a) promotes the value of online access to up-to-date and accurate prescription drug formulary plans from all insurance providers nationwide, and (b) supports state medical societies in advocating for state legislation to ensure online access to up-to-date and accurate prescription drug formularies for all insurance plans.

7. Our AMA will continue its efforts with the National Association of Insurance Commissioners addressing the development and management of pharmacy benefits.
8. Our AMA will develop model state legislation on the development and management of pharmacy benefits. (Sub. Res. 724, A-14; Appended: Res. 701, A-16; Appended: Alt. Res. 806, I-17; Reaffirmed: CMS Rep. 07, A-18; Reaffirmed: BOT Rep. 20, A-19; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: CMS Rep. 2, A-21)

Access to Health Plan Information Regarding Lower-Cost Prescription Options (H-120.919)

Our AMA will: (1) continue to support efforts to publish a Real-Time Prescription Benefit (RTPB) standard that meets the needs of all physicians and other prescribers, utilizing any electronic health record (EHR), and prescribing on behalf of any insured patient; (2) advocate that all payers (i.e., public and private prescription drug plans) be required to implement and keep up to date an RTPB standard tool that integrates with all EHR vendors, and that any changes that must be made to accomplish RTPB tool integration be accomplished with minimal disruption to EHR usability and cost to physicians and hospitals; and (3) develop and disseminate educational materials that will empower physicians to be prepared to optimally utilize RTPB tools and other health information technology tools that can be used to enhance communications between physicians and pharmacists to reduce the incidence of prescription abandonment. (CMS Rep. 2, I-21)

Pharmaceutical Costs (H-110.987)

1. Our AMA encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.
2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.
3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.
4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
7. Our AMA supports legislation to shorten the exclusivity period for biologics.
8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
10. Our AMA supports: (a) drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by ten percent or more each year or per course of treatment and provide justification for the price increase; (b) legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and (c) the expedited review of generic drug applications and prioritizing review of such applications when there is a drug

- shortage, no available comparable generic drug, or a price increase of 10 percent or more each year or per course of treatment.
11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.
 12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.
 13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
 14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation. (CMS Rep. 2, I-15; Reaffirmed in lieu of: Res. 817, I-16; Appended: Res. 201, A-17; Reaffirmed in lieu of: Res. 207, A-17; Modified: Speakers Rep. 01, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Appended: BOT Rep. 14, A-19; Reaffirmed: Res. 105, A-19; Appended: Res. 113, I-21; Reaffirmed in lieu of: Res. 810, I-22)

Price of Medicine (H-110.991)

Our AMA: (1) advocates that pharmacies be required to list the full retail price of the prescription on the receipt along with the co-pay that is required in order to better inform our patients of the price of their medications; (2) will pursue legislation requiring pharmacies, pharmacy benefit managers and health plans to inform patients of the actual cash price as well as the formulary price of any medication prior to the purchase of the medication; (3) opposes provisions in pharmacies' contracts with pharmacy benefit managers that prohibit pharmacists from disclosing that a patient's co-pay is higher than the drug's cash price; (4) will disseminate model state legislation to promote drug price and cost transparency and to prohibit "clawbacks"; (5) supports physician education regarding drug price and cost transparency, manufacturers' pricing practices, and challenges patients may encounter at the pharmacy point-of-sale; and (6) work with relevant organizations to advocate for increased transparency through access to meaningful and relevant information about medication price and out-of-pocket costs for prescription medications sold at both retail and mail order/online pharmacies, including but not limited to Medicare's drug-pricing dashboard. (CMS Rep. 6, A-03; Appended: Res. 107, A-07; Reaffirmed in lieu of: Res. 207, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Reaffirmation: A-19; Appended: Res. 126, A-19)

Prescription Drug Price and Cost Transparency (D-110.988)

1. Our AMA will continue implementation of its TruthinRx grassroots campaign to expand drug pricing transparency among pharmaceutical manufacturers, pharmacy benefit managers and health plans, and to communicate the impact of each of these segments on drug prices and access to affordable treatment.
2. Our AMA will report back to the House of Delegates at the 2018 Interim Meeting on the progress and impact of the TruthinRx grassroots campaign. (Alt. Res. 806, I-17)

Abuse of Preauthorization Procedures (H-320.945)

Our AMA opposes the abuse of preauthorization by advocating the following positions:

- (1) Preauthorization should not be required where the medication or procedure prescribed is customary and properly indicated, or is a treatment for the clinical indication, as supported by peer-reviewed medical publications or for a patient currently managed with an established treatment regimen.
- (2) Third parties should be required to make preauthorization statistics available, including the percentages of approval or denial. These statistics should be provided by various categories,

e.g., specialty, medication or diagnostic test/procedure, indication offered, and reason for denial. (Sub. Res. 728, A-10; Reaffirmation I-10; Reaffirmation A-11; Reaffirmed: Res. 709, A-12; Reaffirmed: CMS Rep. 08, A-17; Reaffirmed: Res. 125, A-17; Reaffirmation: A-17 Reaffirmation: I-17; Reaffirmed: CMS Rep. 4, A-21; Reaffirmation: A-22)

Pharmacy Benefit Managers Impact on Patients (D-120.933)

Our AMA will: (1) gather more data on the erosion of physician-led medication therapy management in order to assess the impact pharmacy benefit manager (PBM) tactics may have on patient's timely access to medications, patient outcomes, and the physician-patient relationship; (2) examine issues with PBM-related clawbacks and direct and indirect remuneration (DIR) fees to better inform existing advocacy efforts; and (3) request from PBMs, and compile, data on the top twenty-five medication precertification requests and the percent of such requests approved after physician challenge. (Res. 225, A-18)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 701
(A-24)

Introduced by: Medical Student Section

Subject: Opposition to the Hospital Readmissions Reduction Program

Referred to: Reference Committee G

1 Whereas, the Hospital Readmissions Reduction Program (HRRP) was introduced in 2012 and
2 created mechanisms for the Centers for Medicare and Medicaid Services to evaluate and
3 penalize hospitals based on their readmission rates within 30 days for certain conditions such
4 as heart failure, heart attack, and pneumonia¹; and

5
6 Whereas, while the goal of HRRP was to save costs due to reduced readmissions and improve
7 the quality of post-acute care and care coordination services, HRRP disproportionately
8 penalizes resource-limited hospitals that primarily care for socioeconomically disadvantaged
9 patients, further diminishing funding for health and social services for these communities²⁻⁴; and

10
11 Whereas, HRRP historically imposed up to a 3% percent reduction in Medicare payments for
12 failure to meet ceiling readmission metrics relative to other hospitals, though hospitals were later
13 sorted into peer groups to adjust for socioeconomic conditions of patient populations⁵; and

14
15 Whereas, a 2019 study found that even after peer-group stratification, over 75% of hospitals
16 that predominantly care for socioeconomically disadvantaged patients were still penalized⁶; and

17
18 Whereas, multiple studies have found that HRRP was associated with increases in 30-day post-
19 discharge mortality for patients with congestive heart failure, chronic obstructive pulmonary
20 disease, and pneumonia, with thousands of excess deaths estimated⁷⁻⁹; and

21
22 Whereas, a 2019 retrospective cohort analysis found that post-discharge emergency
23 department revisits and observation stays increased over the 3.5 year study period (+0.016 and
24 +0.022 per 100 patient discharges, respectively), exceeding the decline in readmissions (-0.013
25 per 100 patient discharges)¹⁰; and

26
27 Whereas, a 2022 retrospective cohort analysis found that HRRP's purported reduction in
28 readmissions was actually almost entirely due to reclassifications of readmissions as
29 observation stays, and a 2019 analysis found that a significant portion of the reductions could
30 be explained by regression to the mean and not due to any success of HRRP¹¹⁻¹²; and

31
32 Whereas, in 2018 and 2019 the AMA expressed concern to CMS about the need to re-evaluate
33 HRRP "due to emerging evidence that the program and the associated measures may be
34 leading to negative unintended patient consequences"¹³⁻¹⁴; therefore be it

35
36 RESOLVED, that our American Medical Association oppose the Hospital Readmissions
37 Reduction Program. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/5/2024

RELEVANT AMA POLICY

H-450.944 Protecting Patients Rights

Our AMA opposes Medicare pay-for-performance initiatives (such as value-based purchasing programs) that do not meet our AMA's "Principles and Guidelines for Pay-for-Performance," which include the following five Principles: (1) ensure quality of care; (2) foster the patient/physician relationship; (3) offer voluntary physician participation; (4) use accurate data and fair reporting; and (5) provide fair and equitable program incentives. [Sub. Res. 902, I-05; Reaffirmation A-06; Reaffirmation I-06; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 702
(A-24)

Introduced by: Organized Medical Staff Section

Subject: The Corporate Practice of Medicine, Revisited

Referred to: Reference Committee G

1 Whereas, primary interests of our American Medical Association include sustaining and
2 improving public health, as well as the sustainability of medical autonomy in practice; and
3

4 Whereas, for decades, the AMA has maintained a policy that deems unprofessional any
5 contractual arrangement that interferes with physician practice and by so stating, bars
6 unlicensed lay entities from owning or controlling medical practices; and
7

8 Whereas, in the current evolution of the healthcare system, increasingly corporate entities
9 including public companies and private equity firms have entered into the arena of healthcare
10 provision with ownership interests; and
11

12 Whereas, those ownership interests have become controlling interests in the vast majority of
13 cases, despite most states maintaining laws against the corporate practice of medicine to one
14 degree or another^(1,2); and
15

16 Whereas, there are a number of subterfuges by which lay entities get around restrictions against
17 the corporate practice of medicine, including but not limited to intermediate organizations known
18 as medical service organizations (MSOs) as well as “friendly private corporation (PC) models,”
19 wherein there is dual participation by a licensed physician in both the practice and the medical
20 service organization^(1,2); and
21

22 Whereas, medical service organizations and other public entities include those of hospital care
23 based organizations, by virtue of medical management oversight, contracting intermediaries,
24 etc. have undue influence on the provision of healthcare by the physician to the patient,
25 essentially dictating type, amount and directions of care^(1,2); and
26

27 Whereas, the justification that consolidation of care and control over clinical operations will
28 improve quality and reduce cost of giving healthcare is not substantiated, even contradicted, by
29 academic research to date⁽¹⁻³⁾; and
30

31 Whereas, in some notable instances, private equity firms that focus on financial bottom line
32 outcomes increasingly resort to substitutions of physicians with nonphysician practitioners, as
33 well as creating environments where there is greater turnover even of physicians (sometimes
34 due to “moral burnout”), which has been shown to reduce the quality of healthcare¹; and
35

36 Whereas, our AMA Advocacy Resource Center posted an issue brief on the corporate practice
37 of medicine in 2015⁴; and
38

39 Whereas, our AMA recently established policy (H-215.981) to “provide guidance, consultation,
40 and model legislation regarding the corporate practice of medicine...[and]...continue to monitor

1 the evolving corporate practice of medicine” but did not establish a mechanism to gather and
2 disseminate that information; and
3

4 Whereas, there is renewed attention paid to the erosion of the firewall represented by the
5 original prohibition of the corporate practice of medicine in several recent studies and
6 articles^(1,2); therefore be it
7

8 RESOLVED, that our American Medical Association revisit the concept of restrictions on the
9 corporate practice of medicine, including private equities, hedge funds and similar entities,
10 review existing state laws and study needed revisions and qualifications of such restrictions
11 and/or allowances, in a new report to our House of Delegates by Annual 2025 that will inform
12 advocacy to protect the autonomy of physician-directed care, patient protections, medical staff
13 employment and contract conflicts, and access of the public to quality healthcare, while
14 containing healthcare costs. (Directive to Take Action)
15

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/17/2024

RELEVANT AMA POLICY

Corporate Practice of Medicine H-215.981

1. Our AMA vigorously opposes any effort to pass federal legislation preempting state laws prohibiting the corporate practice of medicine.
2. At the request of state medical associations, our AMA will provide guidance, consultation, and model legislation regarding the corporate practice of medicine, to ensure the autonomy of hospital medical staffs, employed physicians in non-hospital settings, and physicians contracting with corporately-owned management service organizations.
3. Our AMA will continue to monitor the evolving corporate practice of medicine with respect to its effect on the patient-physician relationship, financial conflicts of interest, patient-centered care and other relevant issues.

Citation: Res. 247, A-91; Reaffirmed; Sunset Report, I-09; Reaffirmed: CMS Rep. 7, A-11; Modified: CMS Rep. 6, I-13; Reaffirmed: CMS Rep. 07, A-17; Modified Res. 713, A-18; Reaffirmed: CMS Rep. 11, A-19; Reaffirmed: CME Rep. 01, I-22

Corporate Practice of Medicine H-160.887

Our AMA acknowledges that the corporate practice of medicine: (1) has the potential to erode the patient-physician relationship; and (2) may create a conflict of interest between profit and best practices in residency and fellowship training.

Citation: CMS Rep. 2, I-22

Corporate Investors H-160.891

1. Our AMA encourages physicians who are contemplating corporate investor partnerships to consider the following guidelines:

- a. Physicians should consider how the practice's current mission, vision, and long-term goals align with those of the corporate investor.
- b. Due diligence should be conducted that includes, at minimum, review of the corporate investor's business model, strategic plan, leadership and governance, and culture.
- c. External legal, accounting and/or business counsels should be obtained to advise during the exploration and negotiation of corporate investor transactions.
- d. Retaining negotiators to advocate for best interests of the practice and its employees should be considered.
- e. Physicians should consider whether and how corporate investor partnerships may require physicians to cede varying degrees of control over practice decision-making and day-to-day management.
- f. Physicians should consider the potential impact of corporate investor partnerships on physician and practice employee satisfaction and future physician recruitment.
- g. Physicians should have a clear understanding of compensation agreements, mechanisms for conflict resolution, processes for exiting corporate investor partnerships, and application of restrictive covenants.
- h. Physicians should consider corporate investor processes for medical staff representation on the board of directors and medical staff leadership selection.
- i. Physicians should retain responsibility for clinical governance, patient welfare and outcomes, physician clinical autonomy, and physician due process under corporate investor partnerships.
- j. Each individual physician should have the ultimate decision for medical judgment in patient care and medical care processes, including supervision of non-physician practitioners.
- k. Physicians should retain primary and final responsibility for structured medical education inclusive of undergraduate medical education including the structure of the program, program curriculum, selection of faculty and trainees, as well as education and disciplinary issues related to these programs.

2. Our AMA supports improved transparency regarding corporate investment in physician practices and subsequent changes in health care prices.

3. Our AMA encourages national medical specialty societies to research and develop tools and resources on the impact of corporate investor partnerships on patients and the physicians in practicing in that specialty.

4. Our AMA supports consideration of options for gathering information on the impact of private equity and corporate investors on the practice of medicine.

Citation: CMS Rep. 11, A-19; Appended: CMS Rep. 2, I-22; Reaffirmed: BOT Rep. 14, A-23

Physician-Owned Hospitals D-215.983

1. Our American Medical Association will advocate for policies that remove restrictions upon physicians from owning, constructing, and/or expanding any hospital facility type.

2. Our AMA will study and research the impact of the repeal of the ban on physician-owned hospitals on the access to, cost, and quality of, patient care, and the impact on competition in highly concentrated hospital markets.

3. Our AMA will collaborate with other stakeholders to develop and promote policies that support physician ownership of hospitals.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 703
(A-24)

Introduced by: Resident and Fellow Section

Subject: Upholding Physician Autonomy in Evidence-Based Off-Label Prescribing
and Condemning Pharmaceutical Price Manipulation

Referred to: Reference Committee G

- 1 Whereas, the practice of off-label prescribing, the use of pharmaceutical drugs for an
2 unapproved indication or in an unapproved age group, dosage, or route of administration, is a
3 legal and often necessary aspect of medical practice¹⁻³; and
4
5 Whereas, off-label prescribing is common, accounting for up to one third of all prescriptions and
6 being more common for certain groups including in the treatment of mental health conditions
7 and treatment of the elderly, children, and pregnant people⁴; and
8
9 Whereas, the vast discrepancy in prescription drug pricing places an unreasonable financial
10 burden on underinsured patients, for example, \$25 per month co-pay with some insurers
11 compared to approximately \$1,200 per month without coverage for some GLP-1 medications^{5,6};
12 and
13
14 Whereas, pharmaceutical companies are threatening physicians who prescribe certain
15 medications off-label for medically necessary indications, potentially jeopardizing medical
16 licensure and restricting clinical decision-making^{5,7}; and
17
18 Whereas, such threats interfere with physicians' ability to make appropriate medical judgments
19 for their patients; and
20
21 Whereas, timely action is needed to protect physicians' ability to prescribe off-label based on
22 medical necessity without repercussions, ensuring access for vulnerable patient populations,
23 and protecting these vulnerable patient populations from using potentially hazardous fake
24 compounded versions; and
25
26 Whereas, differential pricing and restricted off-label use of medications can exacerbate
27 healthcare disparities by limiting treatment access for underserved populations; therefore be it
28
29 RESOLVED, that our American Medical Association advocates for transparency, accountability,
30 and fair pricing practices in pharmaceutical pricing, opposing differential pricing of medications
31 manufactured by the same company with the same active ingredient, without clear clinical
32 necessity (Directive to Take Action); and be it further
33
34 RESOLVED, that our AMA condemns interference with a physician's ability to prescribe one
35 medication over another with the same active ingredient, without risk of harassment,
36 prosecution, or loss of their medical license, and calls on regulatory authorities to investigate
37 and take appropriate action against such practices. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA POLICY:

Patient Access to Treatments Prescribed by Their Physicians H-120.988

1. Our AMA confirms its strong support for the autonomous clinical decision-making authority of a physician and that a physician may lawfully use an FDA approved drug product or medical device for an off-label indication when such use is based upon sound scientific evidence or sound medical opinion; and affirms the position that, when the prescription of a drug or use of a device represents safe and effective therapy, third party payers, including Medicare, should consider the intervention as clinically appropriate medical care, irrespective of labeling, should fulfill their obligation to their beneficiaries by covering such therapy, and be required to cover appropriate 'off-label' uses of drugs on their formulary.
2. Our AMA strongly supports the important need for physicians to have access to accurate and unbiased information about off-label uses of drugs and devices, while ensuring that manufacturer-sponsored promotions remain under FDA regulation.
3. Our AMA supports the dissemination of generally available information about off-label uses by manufacturers to physicians. Such information should be independently derived, peer reviewed, scientifically sound, and truthful and not misleading. The information should be provided in its entirety, not be edited or altered by the manufacturer, and be clearly distinguished and not appended to manufacturer-sponsored materials. Such information may comprise journal articles, books, book chapters, or clinical practice guidelines. Books or book chapters should not focus on any particular drug. Dissemination of information by manufacturers to physicians about off-label uses should be accompanied by the approved product labeling and disclosures regarding the lack of FDA approval for such uses, and disclosure of the source of any financial support or author financial conflicts.
4. Physicians have the responsibility to interpret and put into context information received from any source, including pharmaceutical manufacturers, before making clinical decisions (e.g., prescribing a drug for an off-label use).
5. Our AMA strongly supports the addition to FDA-approved labeling those uses of drugs for which safety and efficacy have been demonstrated.
6. Our AMA supports the continued authorization, implementation, and coordination of the Best Pharmaceuticals for Children Act and the Pediatric Research Equity Act. [Res. 30, A-88; Reaffirmed: BOT Rep. 53, A-94; Reaffirmed and Modified by CSA Rep. 3, A-97; Reaffirmed and Modified by Res. 528, A-99; Reaffirmed: CMS Rep. 8, A-02; Reaffirmed: CMS Rep. 6, A-03; Modified: Res. 517, A-04; Reaffirmation I-07; Reaffirmed: Res. 819, I-07; Reaffirmation A-09; Reaffirmation I-10; Modified: BOT Rep. 5, I-14; Reaffirmed: Res. 505, A-15; Reaffirmed: CMS Rep. 6, I-20; Reaffirmed: Res. 509, I-20; Reaffirmation: I-22; Reaffirmed: CSAPH Rep. 01, A-23; Reaffirmed: CSAPH Rep. 02, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 704
(A-24)

Introduced by: American Academy of Pediatrics

Subject: Pediatric Readiness in Emergency Departments

Referred to: Reference Committee G

1 Whereas, there are over 130 million emergency department (ED) visits in the United States
2 annually with nearly 25% of these visits being for infants, children and adolescents¹; and
3

4 Whereas, over 70% of U.S. emergency departments care for less than 10 children per day with
5 over 80% of these visits occurring in a non-children's hospital setting, highlighting the need for
6 emergency care teams to maintain the knowledge, skills, and appropriate resources for
7 immediate assessment and stabilization of children¹; and
8

9 Whereas, the National Pediatric Readiness Project (NPRP) is a multiphase, multidisciplinary,
10 longitudinal quality initiative to improve readiness of US EDs to care for children and is
11 supported by the Health Resources and Services Administration/ Emergency Medical Services
12 for Children Program and cosponsored by the American Academy of Pediatrics, the American
13 College of Emergency Physicians, and the Emergency Nurses Association, with original
14 Institute of Medicine guidelines initially published in 2006 and twice revised through NPRP joint
15 policy statements in 2009 and 2018; and
16

17 Whereas, these joint policy statements, endorsed by our AMA and 22 other national
18 organizations and stakeholders, outline essential policies and procedures, patient safety, staff
19 competencies, quality improvement, medications, equipment, and supplies to safely care for
20 children, with comprehensive open access educational resources, policy templates, tools, and
21 other resources are available as part of the National Pediatric Readiness Project
22 (www.pediatricreadiness.org); and
23

24 Whereas, pediatric readiness of an emergency department is associated with a 60% and 76%
25 reduction in mortality risk for injured and critically ill children, respectively, with a three-fold
26 reduction in disparities for mortality¹; therefore be it
27

28 RESOLVED, that our American Medical Association reaffirm H-130.939 acknowledging the
29 importance of pediatric readiness in all emergency departments with awareness of the
30 guidelines for Pediatric Readiness in the Emergency Department and stand ready to care for
31 children of all ages (Reaffirm HOD Policy); and be it further
32

33 RESOLVED, that our AMA work with appropriate state and national organizations to advocate
34 for the development and implementation of regional and/or state pediatric-ready facility
35 recognition programs. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/23/2024

REFERENCES

1. *Remick et al; National Assessment of Pediatric Readiness of US Emergency Departments During COVID-19 Pandemic; JAMA Open Network, 7/7/2023.*

RELEVANT AMA POLICY

H-130.939 Emergency Department Readiness to Care for Children

Our American Medical Association affirms the importance that all emergency departments stand ready to care for children of all ages, and advocates for hospital administrators, emergency department medical directors and emergency department nurse managers to be aware of the guidelines for Pediatric Readiness in the Emergency Department.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 705
(A-24)

Introduced by: Illinois
Subject: 20 Minute Primary Care Visits
Referred to: Reference Committee G

- 1 Whereas, the 20 minute primary care visit has been shown to lead to poor outcomes for patient
2 care and is causing burnout of primary care physicians; therefore be it
3
4 RESOLVED, that our American Medical Association ask that the appropriate AMA Council
5 conduct a study of the adverse effects of direct patient care time limitations on the quality of care
6 provided, as well as on patient and physician dissatisfaction, with a report back at the next AMA
7 Annual Meeting. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

RELEVANT AMA POLICY

Limitation of Use of Time Component of Current Procedural Terminology (CPT-4) Coding H-70.976

Our AMA (1) adopts as policy that the time element in the new Evaluation and Management codes in the CPT-4 manual may be used to assist physicians and their staffs in determining appropriate levels of coding; (2) opposes the use of the time elements to (a) judge how many of any given type of visit may be performed in any one hour; and (b) deny or downgrade services submitted based on a cumulative time; (3) adopts as policy that there shall be no list of diagnoses used by third party payers to compare against the Evaluation and Management codes in such a fashion as to deny, downgrade, or in any other way seek to limit the submission of any CPT-4 code visit; (4) will monitor attempts by the third party payers to institute such time limits and diagnosis limits; and (5) will work with third party payers to prevent them from attempting to adopt and institute policies that would impose such time and diagnosis criteria.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 706
(A-24)

Introduced by: Association for Clinical Oncology

Subject: Automatic Pharmacy-Generated Prescription Requests

Referred to: Reference Committee G

1 Whereas, while some studies have found that pharmacy-based automatic refill increases
2 medication adherence without additional waste, these studies examine drugs for chronic
3 diseases, and they do not examine settings where a treatment plan may be continually refined;
4 and

5
6 Whereas, individual states have recognized the potential harms of automatic refill programs,
7 including wasted drugs, incorrect dosing, and patient receipt of discontinued prescriptions,
8 among other harms; and

9
10 Whereas, 27 state Medicaid programs have policy prohibiting the auto-refill process that occurs
11 at the point of sale (i.e. the program must obtain the beneficiary's consent prior to enrolling in
12 the auto-refill program); and

13
14 Whereas, automatic pharmacy-generated refills are not necessarily linked to requests from
15 either the patient or the physician and can lead to confusion for both; therefore be it

16
17 RESOLVED, that our American Medical Association advocates that pharmacy-generated
18 requests for changes to a prescription (quantity dispensed, refills, or substitutions) clarify
19 whether these requests are generated by the patient or patient's surrogates, or automatically by
20 the pharmacy. (Directive to Take Action)

21
Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

RELEVANT AMA POLICY

American Pharmacists Association H-120.987

The AMA advocates (1) continued surveillance of mail-order prescriptions; (2) notification by the American Pharmacists Association (APhA) of its members that prescriptions should be refilled only on the physician's order; and (3) that the APhA advise its members to discontinue the practice of assuming a prescription may be refilled unless a form is returned stating that the prescription may not be refilled.

Streamlining the Process for Prescription Refills D-120.984

Our AMA will work with the American Pharmacists Association, the National Community Pharmacists Association, and the National Association of Chain Drug Stores to streamline the process for prescription refills in order to reduce administrative burdens on physicians and pharmacists and to improve patient safety.

Safe and Efficient E-Prescribing H-120.921

Our AMA encourages health care stakeholders to improve electronic prescribing practices in meaningful ways that will result in increased patient safety, reduced medication error, improved care quality, and reduced administrative burden associated with e-prescribing processes and requirements. Specifically, the AMA encourages:

- A. E-prescribing system implementation teams to conduct an annual audit to evaluate the number, frequency and user acknowledgment/dismissal patterns of e-prescribing system alerts and provide an audit report to the software vendors for their consideration in future releases.
- B. Health care organizations and implementation teams to improve prescriber end-user training and on-going education.
- C. Implementation teams to prioritize the adoption of features like structured and codified Sig formats that can help address quality issues, allowing for free text when necessary.
- D. Implementation teams to enable functionality of pharmacy directories and preferred pharmacy options.
- E. Organizational leadership to encourage the practice of inputting a patient's preferred pharmacy at registration, and re-confirming it upon check-in at all subsequent visits.
- F. Implementation teams to establish interoperability between the e-prescribing system and the EHR to allow prescribers to easily confirm continued need for e-prescription refills and to allow for ready access to pharmacy choice and selection during the refill process.
- G. Implementation teams to enhance EHR and e-prescribing system functions to require residents assign an authorizing attending physician when required by state law.
- H. Organizational leadership to implement e-prescribing systems that feature more robust clinical decision support, and ensure prescriber preferences are tested and seriously considered in implementation decisions.
- I. Organizational leadership to designate e-prescribing as the default prescription method.
- J. The DEA to allow for lower-cost, high-performing biometric devices (e.g., fingerprint readers on laptop computers and mobile phones) to be leveraged in two-factor authentication.
- K. States to allow integration of PDMP data into EHR systems.
- L. Health insurers, pharmacies and e-prescribing software vendors to enable real-time benefit check applications that enable more up to date prescription coverage information and allow notification when a patient changes health plans or a health insurer has changed a pharmacy's network status.
- M. Functionality supporting the electronic transfer and cancellation of prescriptions.

Patient Privacy and Confidentiality H-315.983

20. Our AMA supports privacy standards that would prohibit pharmacies from using prescription refill reminders or disease management programs as an opportunity for marketing purposes.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 707
(A-24)

Introduced by: Association for Clinical Oncology, American College of Rheumatology

Subject: Alternative Funding Programs

Referred to: Reference Committee G

- 1 Whereas, alternative funding programs (AFPs) are run by third-party, for-profit vendors that
- 2 target self-funded plans; and
- 3
- 4 Whereas, AFPs claim to help companies reduce their healthcare costs by offloading health
- 5 plans' responsibility for covering most or all specialty drugs; and
- 6
- 7 Whereas, AFPs exclude or automatically deny prior authorization for specialty medications and
- 8 instead promise to help patients or providers access those medications through pharmaceutical
- 9 manufacturers' patient assistance programs (PAPs) or other charitable programs; and
- 10
- 11 Whereas, patients are required to work with the AFP vendor or be left paying 100% of the cost
- 12 of their specialty medication; and
- 13
- 14 Whereas, a 2022 study found that 10% of employers with at least 5,000 employees were using
- 15 AFPs and 27% were considering AFPs; and
- 16
- 17 Whereas, PAPs are safety-net programs designed to provide free drugs to uninsured and
- 18 underinsured individuals; and
- 19
- 20 Whereas, AFP vendors require patients to provide proof of income and a limited power of
- 21 attorney to enable the AFP vendor to act on their behalf and apply for manufacturer PAPs; and
- 22
- 23 Whereas, a patient's application for a PAP may be denied because of high income; and
- 24
- 25 Whereas, if a patient's PAP application is denied, the patient's employer could, but is not
- 26 required to, override the denial as a medical necessity or approve the previously denied prior
- 27 authorization; and
- 28
- 29 Whereas, an AFP may attempt to seek financial assistance from a charitable foundation on
- 30 behalf of the patient as an interim measure while awaiting PAP determination; and
- 31
- 32 Whereas, if an AFP cannot get a drug covered by a PAP, the patient may end up owing the full
- 33 amount of the drug cost; and
- 34
- 35 Whereas, regardless of whether the patient is approved for a PAP, the potentially lengthy
- 36 application process can delay access to necessary care; and
- 37
- 38 Whereas, if a patient is approved for a PAP, then PAP funds available for the prescribed
- 39 medication may provide only cover a partial course of treatment; and

1 Whereas, AFPs divert funds intended for individuals who are uninsured or underinsured with
2 limited or no access to medications; and

3
4 Whereas, an ad hoc patient advocacy coalition has sent a letter to the Department of Labor
5 (DOL) expressing concerns about AFPs; and

6
7 Whereas, AFPs steer charitable and other patient-assisting funds away from uninsured and
8 underinsured patients; and

9
10 Whereas, AFPs hinder patient access to specialty drugs; therefore be it

11
12 RESOLVED, that our American Medical Association will educate employers, benefits
13 administrators, and patients on alternative funding programs (AFPs) and their negative impacts
14 on patient access to treatment and will advocate for legislative and regulatory policies that
15 would address negative impacts of AFPs. (Directive to Take Action)

16
Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 4/24/2024

RELEVANT AMA POLICY

Third-Party Pharmacy Benefit Administrators H-110.963

1. Our AMA recommends that third-party pharmacy benefit administrators that contract to manage the specialty pharmacy portion of drug formularies be included in existing pharmacy benefit manager (PBM) regulatory frameworks and statutes, and be subject to the same licensing, registration, and transparency reporting requirements.
2. Our AMA will advocate that third-party pharmacy benefit administrators be included in future PBM oversight efforts at the state and federal levels.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 708
(A-24)

Introduced by: National Association of Medical Examiners, American Society for Clinical Pathology, American Society of Cytopathology, College of American Pathologists

Subject: Medicolegal Death Investigations

Referred to: Reference Committee G

- 1 Whereas, forensic pathology is the practice of medicine; and
2
3 Whereas, the practice of forensic pathology in medicolegal death investigations is critical for
4 many aspects of public health, practice, and research, including death certification, surveillance,
5 epidemiology, and injury prevention in areas such as unexpected child deaths, suicide, violence,
6 and substance use; and
7
8 Whereas, the findings noted at a forensic autopsy, as well as the results of ancillary studies,
9 must be interpreted in the context of the medicolegal death investigation to correctly determine
10 the cause and manner of death; and
11
12 Whereas, protecting physicians practicing forensic pathology from undue influence is necessary
13 to ensure the independence of medicolegal death investigations, safeguard medical integrity,
14 preserve public trust and confidence; and
15
16 Whereas, state and local governments must ensure strong institutional and workplace
17 protections to bolster the independence of physicians practicing forensic pathology in the course
18 of medicolegal death investigations; and
19
20 Whereas, state laws and regulations on causes and manner of deaths should not deny or limit
21 physician authority to exercise necessary and appropriate medical judgment in the performance
22 of the forensic autopsy; therefore be it
23
24 RESOLVED, that our American Medical Association supports the independent authority of
25 physicians practicing forensic pathology to provide accurate and transparent postmortem
26 assessments and death investigation reporting in a manner free from undue influence (New
27 HOD Policy); and be it further
28
29 RESOLVED, that our AMA advocate with state and federal governments to ensure laws and
30 regulations do not compromise a physician's ability to use their medical judgement in the
31 reporting of postmortem assessments and medicolegal death investigations. (Directive to Take
32 Action)
33

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 709
(A-24)

Introduced by: American College of Emergency Physicians

Subject: Improvements to Patient Flow in the U.S. Healthcare System

Referred to: Reference Committee G

1 Whereas, delays in patient care result in increased morbidity and mortality^{1 2 3}; and

2
3 Whereas, misaligned healthcare economics pressure hospitals to maintain high inpatient
4 census levels, often preferencing high-margin patients, leading to delays that compromise
5 emergency department, operative, and inpatient surge capacity⁴; and

6
7 Whereas, lack of surge capacity may compromise our nation's emergency preparedness⁵; and

8
9 Whereas, delayed patient flow through multiple care environments affects many portions of the
10 U.S. healthcare system, including access to post-acute care, emergency department care,
11 hospital-based care, surgical care, and primary care; therefore be it

12
13 RESOLVED, that our American Medical Association work with relevant stakeholders and
14 propose recommendations to appropriate entities to improve patient flow and access to care
15 throughout multiple environments in the U.S. healthcare system. (Directive to Take Action)

16
Fiscal Note: Moderate - between \$5,000 - \$10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 710
(A-24)

Introduced by: American College of Emergency Physicians

Subject: The Regulation of Private Equity in the Healthcare Sector

Referred to: Reference Committee G

1 Whereas, healthcare systems controlled by private equity interest failed, putting access to care
2 for patients at risk; and
3
4 Whereas, these failures also put the livelihoods of healthcare workers, including physicians, at
5 risk; and
6
7 Whereas, in these cases, private equity has frequently saddled healthcare systems with
8 significant debts that cannot be easily repaid; and
9
10 Whereas, these healthcare systems have attempted to cut costs by laying off personnel and not
11 purchasing equipment necessary for patient care¹; and
12
13 Whereas, the lack of appropriate resources to care for patients puts significant stress on
14 healthcare workers and can lead to moral injury as well; and
15
16 Whereas, these practices have now caught the attention of the United States Congress, and
17 several investigations have been opened; and
18
19 Whereas, the FTC has indicated that corporate consolidation of healthcare entities frequently
20 results in increased costs of healthcare without commensurate increases in quality; therefore be
21 it
22
23 RESOLVED, that our American Medical Association propose appropriate guidelines for the use
24 of private equity in healthcare, ensuring that physician autonomy in clinical care is preserved
25 and protected (Directive to Take Action); and be it further
26
27 RESOLVED, that our AMA modify policy H-215.981, Corporate Practice of Medicine, by
28 addition:
29 4. Our AMA will work with the federal government and other interested parties to develop and
30 advocate for regulations pertaining to the use of private equity in the healthcare sector such that
31 physician autonomy in clinical care is preserved and protected. (Modify Current HOD Policy)
32
Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

RELEVANT AMA POLICY

Medical Decision-Making Autonomy of the Attending Physician D-373.994

Our AMA will continue to strongly oppose any encroachment of administrators upon the medical decision making of attending physicians that is not in the best interest of patients. (I-23)

Physician Employment Trends and Principles H-225.947

1. Our AMA encourages physicians who seek employment as their mode of practice to strive for employment arrangements consistent with the following principles: A. Physician clinical autonomy is preserved. B. Physicians are included and actively involved in integrated leadership opportunities. C. Physicians are encouraged and guaranteed the ability to organize under a formal self-governance and management structure. D. Physicians are encouraged and expected to work with others to deliver effective, efficient and appropriate care. E. A mechanism is provided for the open and transparent sharing of clinical and business information by all parties to improve care. F A clinical information system infrastructure exists that allows capture and reporting of key clinical quality and efficiency performance data for all participants and accountability across the system to those measures.

2. Our AMA encourages continued research on the effects of integrated health care delivery models (that employ physicians) on patients and the medical profession. (I-15, last reaff A-19)

Physician Independence and Self-Governance D-225.977

Our AMA will: (1) continue to assess the needs of employed physicians, ensuring autonomy in clinical decision-making and self-governance; and (2) promote physician collaboration, teamwork, partnership, and leadership in emerging health care organizational structures, including but not limited to hospitals, health care systems, medical groups, insurance company networks and accountable care organizations, in order to assure and be accountable for the delivery of quality health care. (last reaff A-22)

Corporate Investors H-160.891

1. Our AMA encourages physicians who are contemplating corporate investor partnerships to consider the following guidelines:

- Physicians should consider how the practice's current mission, vision, and long-term goals align with those of the corporate investor.
- Due diligence should be conducted that includes, at minimum, review of the corporate investor's business model, strategic plan, leadership and governance, and culture.
- External legal, accounting and/or business counsels should be obtained to advise during the exploration and negotiation of corporate investor transactions.
- Retaining negotiators to advocate for best interests of the practice and its employees should be considered.
- Physicians should consider whether and how corporate investor partnerships may require physicians to cede varying degrees of control over practice decision-making and day-to-day management.
- Physicians should consider the potential impact of corporate investor partnerships on physician and practice employee satisfaction and future physician recruitment.
- Physicians should have a clear understanding of compensation agreements, mechanisms for conflict resolution, processes for exiting corporate investor partnerships, and application of restrictive covenants.
- Physicians should consider corporate investor processes for medical staff representation on the board of directors and medical staff leadership selection.
- Physicians should retain responsibility for clinical governance, patient welfare and outcomes, physician clinical autonomy, and physician due process under corporate investor partnerships.
- Each individual physician should have the ultimate decision for medical judgment in patient care and medical care processes, including supervision of non-physician practitioners.
- Physicians should retain primary and final responsibility for structured medical education inclusive of undergraduate medical education including the structure of the program, program curriculum, selection of faculty and trainees, as well as education and disciplinary issues related to these programs.

2. Our AMA supports improved transparency regarding corporate investment in physician practices and subsequent changes in health care prices.
3. Our AMA encourages national medical specialty societies to research and develop tools and resources on the impact of corporate investor partnerships on patients and the physicians in practicing in that specialty.
4. Our AMA supports consideration of options for gathering information on the impact of private equity and corporate investors on the practice of medicine.

Corporate Practice of Medicine H-215.981

1. Our AMA vigorously opposes any effort to pass federal legislation preempting state laws prohibiting the corporate practice of medicine.
2. At the request of state medical associations, our AMA will provide guidance, consultation, and model legislation regarding the corporate practice of medicine, to ensure the autonomy of hospital medical staffs, employed physicians in non-hospital settings, and physicians contracting with corporately-owned management service organizations.
3. Our AMA will continue to monitor the evolving corporate practice of medicine with respect to its effect on the patient-physician relationship, financial conflicts of interest, patient-centered care and other relevant issues.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 711
(A-24)

Introduced by: Ohio

Subject: Insurer Accountability When Prior Authorization Harms Patients

Referred to: Reference Committee G

1 Whereas, prior authorization (PA) is an advanced approval process that insurers and other
2 payers use as a healthcare utilization management tool to deny payment for covered benefits
3 when the payer deems the benefit clinically unnecessary¹; and
4

5 Whereas, prior authorization requirements are rapidly increasing each year, which leads to not
6 only increased administrative duties for physicians and their practice staff but also delayed care
7 for patients²; and
8

9 Whereas, a 2022 study by our AMA on PA demonstrated that 88% of physicians experience
10 high or extremely high administrative burdens due to prior authorization requirements and that
11 94% of physicians believe prior authorizations delay patient access to necessary care³; and
12

13 Whereas, the process of PA reviews, which health plans are frequently known to delegate to
14 third-party contractors, causes significant delays in appropriate patient care that can lead to
15 prolonged suffering and unnecessary deaths⁴; and
16

17 Whereas, the 2022 physician survey by our AMA found that 89% of physicians believe PA
18 requirements have a negative impact on clinical outcomes for patients, with 33% of physicians
19 reporting that PAs have led to their patients experiencing serious adverse health outcomes,
20 including hospitalization, life-threatening events, or disability⁵; and
21

22 Whereas, other surveys by the American Society of Clinical Oncologists (ASCO), the American
23 Cancer Society Cancer Action Network (ACS CAN), and the American Society for Radiation
24 Oncology (ASRO) have reported similar findings, with nearly all oncologists in the 2023 ASCO
25 reporting a patient experienced harms due to PA, including 35% who specifically attributed a
26 patient's loss of life to prior authorization requirements⁵⁻⁸; and
27

28 Whereas, the data strongly suggests that insurers are denying justified healthcare, with the
29 2022 AMA physician survey reporting that only 1% of physicians believe that PA criteria are
30 always based on evidence-based medicine or specialty society guidelines³; and
31

32 Whereas, capitated payment models like Medicaid Managed Care and Medicare Advantage
33 Organizations (MAOs), in which private companies are paid fixed amounts per enrollee based
34 on expected costs regardless of whether the actual cost was higher or lower, create an
35 incentive to minimize enrollee services and maximize PA denials⁹; and
36

37 Whereas, reporting by the Office of Inspector General (OIG) for the United States Department of
38 Health and Human Services has frequently shown that many denials were inappropriate, with a
39 2022 report finding that 13% of PA denials met Medicare coverage requirements and 18% of
40 payment denials met Medicare coverage rules and internal reimbursement guidelines⁹; and

1 Whereas, a 2023 Kaiser Family Foundation (KFF) study as well as two separate OIG reports
2 found that, although just 11% of PA denials by MAOs are appealed, the vast majority of appeals
3 were either completely or partially overturned¹⁰⁻¹²; and
4

5 Whereas, the KFF study and OIG reports noted that their findings were particularly concerning
6 because the appeals process was largely underutilized by beneficiaries and providers with only
7 1% to 27% of initial denials ever being appealed, meaning insurers are incentivized to deny
8 coverage knowing only a small portion of PA decisions will be formally appealed¹⁰⁻¹²; and
9

10 Whereas, despite increasing evidence of inappropriate PA denials by insurers, there currently is
11 no consensus on how to hold insurers liable for denials that result in preventable injury to
12 patients, with largely unsuccessful litigation strategies ranging from bad faith breach of contract
13 to negligent breach of duty, and at least one effort in Texas preempted by the Employment
14 Income & Retirement Act of 1974 (ERISA)^{4,13-14}; and
15

16 Whereas, even when state statute or case law permits a bad faith claim against an insurance
17 company for a wrongful coverage denial and the claim is not preempted by ERISA, it's often
18 impossible to recover punitive damages, which may require proving that the insurance company
19 acted with a higher degree of intent than that required for compensatory damages¹⁵; and
20

21 Whereas, in a recent New York case in which a delayed PA approval resulted in the
22 preventable, rapid progression of a woman's cancer, the U.S. District Court for the Southern
23 District of New York ruled against the woman when it held that existing New York law does not
24 impose a duty of reasonable care on insurance companies that engage in PA review,
25 highlighting the need for aggressive state legislative reform to increase liability for state-
26 regulated insurers¹⁶; and
27

28 Whereas, efforts to hold insurers liable for PA denials that result in preventable injury have been
29 slowed by the increasing use of mandatory arbitration clauses in beneficiary contracts, which
30 require beneficiaries to settle disputes out of court by an impartial third party rather than before
31 a jury or judge and often include waivers that prevent beneficiaries from bringing class action
32 suits¹⁷⁻¹⁸; and
33

34 Whereas, a 2019 review of arbitration clauses used by Fortune 100 companies found that many
35 of the nation's largest health insurance companies, including UnitedHealth Group, Anthem,
36 Aetna, and Cigna, impose mandatory arbitration clauses with class waivers on consumers¹⁸;
37 and
38

39 Whereas, mandatory arbitration clauses are particularly insidious in health insurance contracts
40 given the wide gap in bargaining power between the insurance company and beneficiary and
41 limited selection of alternate insurers as a result of increasing consolidation in insurance
42 markets¹⁹⁻²⁰; and
43

44 Whereas, while arbitration may be preferred by some individuals, data suggests it is generally
45 bad for consumers, as the median award for medical malpractice claims in Kaiser Permanente's
46 arbitration program is nearly \$400,000 less than median awards for medical malpractice jury
47 trials in California²¹; and
48

49 Whereas, in addition to the federal Improving Seniors' Timely Access to Care Act (H.R.3173),
50 nearly 90 prior authorization reform bills have been proposed in current state legislatures, many
51 of which draw on our AMA's model legislation, but none of these proposed bills that have

1 received AMA support address insurers' legal liability when patients are harmed by prior
2 authorizations²²⁻²⁶; therefore be it

3

4 RESOLVED, that our American Medical Association advocate for increased legal accountability
5 of insurers and other payers when delay or denial of prior authorization leads to patient harm,
6 including but not limited to the prohibition of mandatory pre-dispute arbitration and limitation on
7 class action clauses in beneficiary contracts. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

RELEVANT AMA POLICY

H-320.939 Prior Authorization and Utilization Management Reform

1. Our AMA will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation, Prior Authorization Physician Survey and other PA research, and the AMA Prior Authorization Toolkit, which is aimed at reducing PA administrative burdens and improving patient access to care.
2. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician.
3. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes, including the extent to which these processes contribute to patient harm.
4. Our AMA will advocate for health plans to minimize the burden on patients, physicians, and medical centers when updates must be made to previously approved and/or pending prior authorization requests. [CMS Rep. 08, A-17; Reaffirmation: I-17; Reaffirmed: Res. 711, A-18; Appended: Res. 812, I-18; Reaffirmed in lieu of: Res. 713, A-19; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: Res. 811, I-19; Reaffirmed: CMS Rep. 4, A-21; Appended: CMS Rep. 5, A-21; Reaffirmation: A-22]

D-320.978 Fair Reimbursement for Administrative Burdens

Our AMA will: (1) continue its strong state and federal legislative advocacy efforts to promote legislation that streamlines the prior authorization process and reduces the overall volume of prior authorizations for physician practices; (2) continue partnering with patient advocacy groups in prior authorization reform efforts to reduce patient harms, including care delays, treatment abandonment, and negative clinical outcomes; (3) oppose inappropriate payer policies and procedures that deny or delay medically necessary drugs and medical services; and (4) advocate for fair reimbursement of established and future CPT codes for administrative burdens related to (a) the prior authorization process or (b) appeals or denials of services (visits, tests, procedures, medications, devices, and claims), whether pre- or post-service denials. [Res. 701, A-22]

D-285.960 Promoting Accountability in Prior Authorization

Our AMA will: (1) advocate that peer-to-peer (P2P) prior authorization (PA) determinations must be made and actionable at the end of the P2P discussion notwithstanding mitigating circumstances, which would allow for a determination within 24 hours of the P2P discussion; (2) advocate that the reviewing P2P physician must have the clinical expertise to treat the medical condition or disease under review and have knowledge of the current, evidence-based clinical guidelines and novel treatments; (3) advocate that P2P PA reviewers follow evidence-based guidelines consistent with national medical specialty society guidelines where available and applicable; (4) continue to advocate for a reduction in the overall volume of health plans' PA requirements and urge temporary suspension of all PA requirements and the extension of existing approvals during a declared public health emergency; (5) advocate that health plans must undertake every effort to accommodate the physician's schedule when requiring peer-to-peer prior authorization conversations; and (6) advocate that health plans must not require prior authorization on any medically necessary surgical or other invasive procedure related or incidental to the original procedure if it is furnished during the course of an operation or procedure that was already approved or did not require prior authorization. [CMS Rep. 4, A-21]

D-320.979 Processing Prior Authorization Decisions

Our AMA will advocate that all insurance companies and benefit managers that require prior authorization have staff available to process approvals 24 hours a day, every day of the year, including holidays and weekends. [Res. 712, I-20; Reaffirmation: A-22]

H-185.936 Lung Cancer Screening to be Considered Standard Care

Our AMA: (1) recommends that coverage of screening low-dose CT (LDCT) scans for patients at high risk for lung cancer by Medicare, Medicaid, and private insurance be a required covered benefit; (2) will empower the American public with knowledge through an education campaign to raise awareness of lung cancer screening with low-dose CT scans in high-risk patients to improve screening rates and decrease the leading cause of cancer death in the United States; and (3) will work with interested national medical specialty societies and state medical associations to urge the Centers for Medicare & Medicaid Services and state Medicaid programs to increase access to low-dose CT screening for Medicaid patients at high risk for lung cancer by including it as a covered benefit, without cost-sharing or prior authorization requirements, and increasing funding for research and education to improve awareness and utilization of the screening among eligible enrollees. [Sub. Res. 114, A-14; Appended: Res. 418, A-22; Appended: Res. 112, A-23]

American Medical Association House of Delegate

Resolution:712
(A-24)

Introduced by: New York
Subject: Full Transparency - Explanation of Benefits
Referred to: Reference Committee G

1 Whereas, HIPAA Administrative Simplification Requirements mandate a national standard for the
2 X12 835 electronic remittance advice (ERA), paper explanations of benefits (EOB) suffer from
3 vague, incomplete, and often misleading information; and
4
5 Whereas, EOBs often show vague descriptions of services, which precludes transparency and
6 makes it difficult for the patient to determine if the charges are legitimate; therefore be it
7
8 RESOLVED, that our American Medical Association will advocate legislation and regulations that
9 mandate that explanation of benefits, whether sent to the patient or the physician practice,
10 including the actual CPT codes billed, DRG-codes, CPT descriptions, and optional consumer-
11 friendly descriptions; and EOB must list the actual allowed amount, patient responsibilities (copay,
12 deductible, coinsurance), non-covered and denied amounts with specific X12 reason codes in
13 consumer-friendly explanations, what criteria is used for coverage and non-coverage, and
14 includes detailed explanation on how to appeal, including contact information for plan
15 administrator, applicable laws governing the plan benefits, and contact information to submit
16 external complaints. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

RELEVANT AMA POLICY

Requiring Third Party Reimbursement Methodology be Published for Physicians H-185.975

Our AMA:

- (1) urges all third party payers and self-insured plans to publish their payment policies, rules, and fee schedules;
- (2) pursues all appropriate means to make publication of payment policies and fee schedules a requirement for third party payers and self-insured plans;
- (3) will develop model state and federal legislation that would require that all third party payers and self-insured plans publish all payment schedule updates, and changes at least 60 days before such changes in payment schedules are enacted, and that all participating physicians be notified of such changes at least 60 days before changes in payment schedules are enacted.
- (4) seeks legislation that would mandate that insurers make available their complete payment schedules, coding policies and utilization review protocols to physicians prior to signing a contract and at least 60 days prior to any changes being made in these policies;
- (5) works with the National Association of Insurance Commissioners, develop model state legislation, as well developing national legislation affecting those entities that are subject to ERISA rules; and explore the possibility of adding payer publication of payment policies and fee schedules to the Patient Protection Act; and

(6) supports the following requirements: (a) that all payers make available a copy of the executed contract to physicians within three business days of the request; (b) that all health plan EOBs contain documentation regarding the precise contract used for determining the reimbursement rate; (c) that once a year, all contracts must be made available for physician review at no cost; (d) that no contract may be changed without the physician's prior written authorization; and (e) that when a contract is terminated pursuant to the terms of the contract, the contract may not be used by any other payer.

American Medical Association House of Delegates

Resolution: 713
(A-24)

Introduced by: New York

Subject: Transparency – Non-Payment for Services to patients with ACA
Exchange Plans with Unpaid Premiums

Referred to: Reference Committee G

1 Whereas, patients can sign up for health insurance without paying for up to 2 months, during
2 which eligibility verification shows active coverage. Yet, health plans have a right to deny payment
3 to physicians if a patient fails to pay premiums, which leaves physicians with uncollectible debt for
4 physician professional services as well as expensive physician-administered and prior-authorized
5 medications that cost thousands of dollars; and
6

7 Whereas, X12 is designated by CMS as a national standards organization that sets national
8 standards for electronic eligibility transaction X12 270/271; therefore be it

9
10 RESOLVED, that our American Medical Association will advocate for legislation to require that
11 health plans inform healthcare providers whether the plan premium has been paid and whether
12 the account is late on payment as part of benefit verification, whether by phone, fax, or electronic
13 transaction, including but not limited to X12 270/271 (Directive to Take Action); and be it further
14

15 RESOLVED, that our AMA will advocate for legislation or regulation to require that health plans
16 inform healthcare providers whether the plan premium has been paid and whether the account
17 is late on payment as part of benefit verification, whether by phone, fax, electronic transaction
18 including but not limited to X12 270/271 (Directive to Take Action); and be it further
19

20 RESOLVED, that our AMA will advocate that X12 includes plan premium payment status as part
21 of X12 270/271 standard transaction code updates (Directive to Take Action); and be it further
22

23 RESOLVED, that our AMA will report on the status of this resolution at the 2025 Annual Meeting.
24 (Directive to Take Action)

REPORT OF THE BOARD OF TRUSTEES

B of T Report 05-A-24

Subject: Update on Corporate Relationships

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

1 PURPOSE

2

3 The purpose of this informational report is to update the House of Delegates (HOD) on the results
4 of the Corporate Review process from January 1 through December 31, 2023. Corporate activities
5 that associate the American Medical Association (AMA) name or logo with a company, non-
6 Federation association or foundation, or include commercial support, currently undergo review and
7 recommendations by the Corporate Review Team (CRT) (Appendix A).

8

9 BACKGROUND

10

11 At the 2002 Annual Meeting, the HOD approved revised principles to govern the AMA’s corporate
12 relationships, HOD Policy G-630.040 “Principles on Corporate Relationships.” These guidelines
13 for American Medical Association corporate relationships were incorporated into the corporate
14 review process, are reviewed regularly, and were reaffirmed at the 2012 and 2022 Annual Meeting.
15 AMA managers are responsible for reviewing AMA projects to ensure they fit within these
16 guidelines.

17

18 YEAR 2023 RESULTS

19

20 In 2023, 109 activities were considered and approved through the Corporate Review process. Of
21 the 109 projects recommended for approval, 54 were conferences or events, 11 were educational
22 content or grants, 32 were collaborations or affiliations, six were member programs, five were
23 business arrangements/licensing programs and one was an American Medical Association
24 Foundation (AMAF) program. See Appendix B for details.

25

26 CONCLUSION

27

28 The Board of Trustees (BOT) continues to evaluate the CRT review process to balance risk
29 assessment with the need for external collaborations that advance the AMA’s strategic focus.

Appendix A

CORPORATE REVIEW PROCESS OVERVIEW

The Corporate Review Team (CRT) includes senior managers from the following areas: Strategy, Finance, Health Solutions (HS), Advocacy, Office of the General Counsel, Medical Education, Publishing, Enterprise Communications (EC), Marketing and Member Experience (MMX), Center for Health Equity (CHE), and Health, Science and Ethics.

The CRT evaluates each project submitted to determine fit or conflict with AMA Corporate Guidelines, covering:

- Type, purpose, and duration of the activity;
- Audience;
- Company, association, foundation, or academic institution involved (due diligence reviewed);
- Source of external funding;
- Use of the AMA name and logo;
- Editorial control/copyright;
- Exclusive or non-exclusive nature of the arrangement;
- Status of single and multiple supporters; and
- Risk assessment for AMA.

The CRT reviews and makes recommendations regarding the following types of activities that utilize AMA name and logo:

- Industry-supported web, print, or conference projects directed to physicians or patients that do not adhere to Accreditation Council for Continuing Medical Education (ACCME) Standards and Essentials.
- AMA sponsorship of external events.
- Independent and company-sponsored foundation supported projects.
- AMA licensing and publishing programs. (These corporate arrangements involve licensing AMA products or information to corporate or non-profit entities in exchange for a royalty and involve the use of AMA's name, logo, and trademarks. This does not include database or Current Procedural Terminology (CPT ®) licensing.)
- Member programs such as new affinity or insurance programs and member benefits.
- Third-party relationships such as joint ventures, business partnerships, or co-branding programs directed to members.
- Non-profit association collaborations outside the Federation. The CRT reviews all non-profit association projects (Federation or non-Federation) that involve corporate sponsorship.
- Collaboration with academic institutions in cases where there is corporate sponsorship.

For the above specified activities, if the CRT recommends approval, the project proceeds. In addition to CRT review, the Executive Committee of the Board must review and approve CRT recommendations for the following AMA activities:

- Any activity directed to the public with external funding.

- Single-sponsor activities that do not meet ACCME Standards and Essentials.
- Activities involving risk of substantial financial penalties for cancellation.
- Upon request of a dissenting member of the CRT.
- Any other activity upon request of the CRT.

All Corporate Review recommendations are summarized annually for information to the Board of Trustees (BOT). The BOT informs the HOD of all corporate arrangements at the Annual Meeting.

Appendix B

SUMMARY OF CORPORATE REVIEW
RECOMMENDATIONS FOR 2023

CONFERENCES/EVENTS

REPORT OF THE BOARD OF TRUSTEES

B of T Report 06-A-24

Subject: Redefining AMA’s Position on ACA and Health Care Reform

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

1 INTRODUCTION

2
3 At the 2013 Annual Meeting of the House of Delegates (HOD), the HOD adopted Policy
4 D-165.938, “Redefining AMA’s Position on ACA and Health Care Reform,” which calls on our
5 American Medical Association (AMA) to “develop a policy statement clearly outlining this
6 organization’s policies” on several specific issues related to the Affordable Care Act (ACA) as well
7 as repealing the Sustainable Growth Rate (SGR) and the Independent Payment Advisory Board
8 (IPAB). The adopted policy also calls for our AMA to report back at each meeting of the HOD.
9 Board of Trustees Report 6-I-13, “Redefining AMA’s Position on ACA and Health Care Reform,”
10 accomplished the original intent of the policy. This report serves as an update on the issues and
11 related developments occurring since the most recent meeting of the HOD.
12

13 IMPROVING THE AFFORDABLE CARE ACT

14
15 The AMA continues to engage policymakers and advocate for meaningful, affordable health care
16 for all Americans to improve the health of our nation. The AMA remains committed to the goal of
17 universal coverage, which includes protecting coverage for the now more than 20 million
18 Americans who have acquired it through the ACA. The AMA has been working to fix the current
19 system by advancing solutions that make coverage more affordable and expanding the system’s
20 reach to Americans who fall within its gaps. The AMA also remains committed to improving
21 health care access so that patients receive timely, high-quality care, preventive services,
22 medications, and other necessary treatments.
23

24 The AMA continues to advocate for policies that would allow patients and physicians to be able to
25 choose from a range of public and private coverage options with the goal of providing coverage to
26 all Americans. Specifically, the AMA has been working with Congress, the Administration, and
27 states to advance the AMA plan to cover the uninsured and improve affordability as included in the
28 “2022 and Beyond: AMA’s Plan to Cover the Uninsured.” The COVID-19 pandemic initially led
29 to many people losing their employer-based health insurance. This only increased the need for
30 significant improvements to the ACA. Subsequent data indicated that the uninsured rate eventually
31 decreased during the COVID-19 pandemic, due to the temporary ACA improvements included in
32 the American Rescue Plan Act, continuous Medicaid enrollment, and state Medicaid expansions.
33

34 The AMA also continues to examine the pros and cons of a broad array of approaches to achieve
35 universal coverage as the policy debate evolves.
36

37 *The AMA has been advocating for the following policy provisions:*

38
39 Cover Uninsured Eligible for ACA’s Premium Tax Credits

- 1 • The AMA advocates for increasing the generosity of premium tax credits to improve
2 premium affordability and incentivize tax credit eligible individuals to get covered.
3 Currently, eligible individuals and families with incomes between 100 and 400 percent
4 federal poverty level (FPL) (133 and 400 percent in Medicaid expansion states) are being
5 provided with refundable and advanceable premium tax credits to purchase coverage on
6 health insurance exchanges.
- 7 • The AMA has been advocating for enhanced premium tax credits for young adults. In
8 order to improve insurance take-up rates among young adults and help balance the
9 individual health insurance market risk pool, young adults ages 19 to 30 who are eligible
10 for advance premium tax credits could be provided with “enhanced” premium tax credits—
11 such as an additional \$50 per month—while maintaining the current premium tax credit
12 structure that is inversely related to income, as well as the current 3:1 age rating ratio.
- 13 • The AMA is also advocating for an expansion of the eligibility for and increasing the size
14 of cost-sharing reductions. Currently, individuals and families with incomes between 100
15 and 250 percent FPL (between 133 and 250 percent FPL in Medicaid expansion states)
16 also qualify for cost-sharing subsidies if they select a silver plan, which leads to lower
17 deductibles, out-of-pocket maximums, copayments, and other cost-sharing amounts.
18 Extending eligibility for cost-sharing reductions beyond 250 percent FPL, and increasing
19 the size of cost-sharing reductions, would lessen the cost-sharing burdens many individuals
20 face, which impact their ability to access and afford the care they need.

21 Cover Uninsured Eligible for Medicaid or Children’s Health Insurance Program

22 Before the COVID-19 pandemic, in 2018, 6.7 million of the nonelderly uninsured were eligible for
23 Medicaid or the Children’s Health Insurance Program (CHIP). Reasons for this population
24 remaining uninsured include lack of awareness of eligibility or assistance in enrollment.
25

- 26 • The AMA has been advocating for increasing and improving Medicaid/CHIP outreach and
27 enrollment, including auto enrollment.
- 28 • The AMA has been opposing efforts to establish Medicaid work requirements. The AMA
29 believes that Medicaid work requirements would negatively affect access to care and lead
30 to significant negative consequences for individuals’ health and well-being.
31

32 Make Coverage More Affordable for People Not Eligible for ACA’s Premium Tax Credits

33 Before the COVID-19 pandemic, in 2018, 5.7 million of the nonelderly uninsured were ineligible
34 for financial assistance under the ACA, either due to their income, or because they have an offer of
35 “affordable” employer-sponsored health insurance coverage. Without the assistance provided by
36 ACA’s premium tax credits, this population can continue to face unaffordable premiums and
37 remain uninsured.
38

- 39 • The AMA advocates for eliminating the subsidy “cliff,” thereby expanding eligibility for
40 premium tax credits beyond 400 percent FPL.
 - 41 • The AMA has been advocating for the establishment of a permanent federal reinsurance
42 program, and the use of Section 1332 waivers for state reinsurance programs. Reinsurance
43 plays a role in stabilizing premiums by reducing the incentive for insurers to charge higher
44 premiums across the board in anticipation of higher-risk people enrolling in coverage.
45 Section 1332 waivers have also been approved to provide funding for state reinsurance
46 programs.
47
- 48
- 49

- 1 • The AMA also is advocating for lowering the threshold that determines whether an
2 employee’s premium contribution is “affordable,” allowing more employees to become
3 eligible for premium tax credits to purchase marketplace coverage.
- 4 • The AMA strongly advocated for the Internal Revenue Service regulation that was
5 proposed on April 7, 2022 to fix the so-called “family glitch” under the ACA, whereby
6 families of workers remain ineligible for subsidized ACA marketplace coverage even
7 though they face unaffordable premiums for health insurance coverage offered through
8 employers. The Biden Administration finalized the proposed rule on October 13, 2022. The
9 regulation resolved the family glitch by extending eligibility for ACA financial assistance
10 to only the family members of workers who are not offered affordable job-based family
11 coverage.

12 13 EXPAND MEDICAID TO COVER MORE PEOPLE

14
15 Before the COVID-19 pandemic, in 2018, 2.3 million of the nonelderly uninsured found
16 themselves in the coverage gap—not eligible for Medicaid, and not eligible for tax credits because
17 they reside in states that did not expand Medicaid. Without access to Medicaid, these individuals
18 do not have a pathway to affordable coverage.

19 The AMA has been encouraging all states to expand Medicaid eligibility to 133 percent FPL.

20
21 Policy adopted by the AMA HOD during the November 2021 Special Meeting seeks to assist more
22 than two million nonelderly uninsured individuals who fall into the “coverage gap” in states that
23 have not expanded Medicaid—those with incomes above Medicaid eligibility limits but below the
24 FPL, which is the lower limit for premium tax credit eligibility. The new AMA policy maintains
25 that coverage should be extended to these individuals at little or no cost, and further specifies that
26 states that have already expanded Medicaid coverage should receive additional incentives to
27 maintain that status going forward.

28 29 30 AMERICAN RESCUE PLAN OF 2021

31
32 On March 11, 2021, President Biden signed into law the American Rescue Plan (ARPA) of 2021.
33 This legislation included the following ACA-related provisions that:

- 34
35 • Provided a temporary (two-year) five percent increase in the Federal Medical Assistance
36 Percentage (FMAP) for Medicaid to states that enact the Affordable Care Act’s Medicaid
37 expansion and covered the new enrollment period per requirements of the ACA.
- 38 • Invested nearly \$35 billion in premium subsidy increases for those who buy coverage on
39 the ACA marketplace.
- 40 • Expanded the availability of ACA advanced premium tax credits (APTCs) to individuals
41 whose income is above 400 percent of the FPL for 2021 and 2022.
- 42 • Gave an option for states to provide 12-month postpartum coverage under State Medicaid
43 and CHIP.

44
45 ARPA represents the largest coverage expansion since the ACA. Under the ACA, eligible
46 individuals, and families with incomes between 100 and 400 percent of the FPL (between 133 and
47 400 percent FPL in Medicaid expansion states) have been provided with refundable and
48 advanceable premium credits that are inversely related to income to purchase coverage on health
49 insurance exchanges. However, consistent with Policy H-165.824, “Improving Affordability in the
50 Health Insurance Exchanges,” ARPA eliminated ACA’s subsidy “cliff” for 2021 and 2022. As a

1 result, individuals and families with incomes above 400 percent FPL (\$51,520 for an individual
2 and \$106,000 for a family of four based on 2021 federal poverty guidelines) are eligible for
3 premium tax credit assistance. Individuals eligible for premium tax credits include individuals who
4 are offered an employer plan that does not have an actuarial value of at least 60 percent or if the
5 employee share of the premium exceeds 9.83 percent of income in 2021.

6
7 Consistent with Policy H-165.824, ARPA also increased the generosity of premium tax credits for
8 two years, lowering the cap on the percentage of income individuals are required to pay for
9 premiums of the benchmark (second lowest-cost silver) plan. Premiums of the second lowest-cost
10 silver plan for individuals with incomes at and above 400 percent FPL are capped at 8.5 percent of
11 their income. Notably, resulting from the changes, eligible individuals and families with incomes
12 between 100 and 150 percent of the FPL (133 percent and 150 percent FPL in Medicaid expansion
13 states) qualified for zero-premium silver plans, effective until the end of 2022.

14
15 In addition, individuals and families with incomes between 100 and 250 percent FPL (between 133
16 and 250 percent FPL in Medicaid expansion states) also qualify for cost-sharing subsidies if they
17 select a silver plan, which reduces their deductibles, out-of-pocket maximums, copayments, and
18 other cost-sharing amounts.

19 20 LEGISLATIVE EXTENSION OF ARPA PROVISIONS

21
22 On August 16, 2022, President Biden signed into law the Inflation Reduction Act of 2022 through
23 the highly partisan budget reconciliation process, which allows both the House and Senate to pass
24 the bill with limits on procedural delays. Most significantly, reconciliation allows the Senate to
25 bypass the filibuster and pass legislation with a 50-vote threshold so long as it meets a series of
26 budgetary requirements. The Inflation Reduction Act included provisions that extended for three
27 years to 2025 the aforementioned ACA premium subsidies authorized in ARPA.

28
29 The Inflation Reduction Act did not include provisions to close the Medicaid “coverage gap” in the
30 states that have not chosen to expand.

31 32 ACA ENROLLMENT

33
34 According to the U.S. Department of Health and Human Services (HHS), 21.3 million people
35 selected an Affordable Care Act Health Insurance Marketplace plan during the 2024 Open
36 Enrollment Period. Total plan selections include more than five million people—about a fourth—
37 who are new to the Marketplaces and 16 million people who renewed their coverage.

38 39 CONTINUOUS MEDICAID ENROLLMENT

40
41 During the COVID-19 pandemic, the Families First Coronavirus Response Act required states to
42 provide continuous coverage to nearly all Medicaid/CHIP enrollees as a condition of receiving a
43 temporary federal medical assistance percentage (FMAP) increase. With disenrollments frozen,
44 churn out of the program effectively ceased and enrollment increased nationally by 35 percent,
45 from 70,875,069 in February 2020 to 93,876,834 in March 2023, after which the continuous
46 enrollment requirement was lifted. Most of this growth was in the Medicaid program, which
47 increased by 22,634,781 individuals (35.3 percent), while CHIP enrollment increased during this
48 period by 366,984 individuals (5.4 percent). The Consolidated Appropriations Act of 2023 (CAA),
49 which was signed into law in December 2022, established March 31, 2023, as the end date for the
50 Medicaid continuous enrollment requirement and phased down the enhanced FMAP amount
51 through December 2023.

1 The CAA established new requirements that states must meet to receive the phased-down FMAP
2 increase and gave CMS authority to require states to submit monthly unwinding data, such as the
3 number of people whose coverage was terminated, the number of those terminated based on
4 eligibility criteria versus for procedural reasons, plus call center volume and wait times. The CAA
5 also authorized several enforcement mechanisms including corrective action plans, financial
6 penalties, and requiring states to temporarily pause terminations.

7
8 The AMA continues to advocate that CMS ensure that states are maintaining Medicaid rate
9 structures at levels that ensure sufficient physician participation, so that Medicaid patients can
10 access appropriate, necessary care, including specialty and behavioral health services, in a timely
11 manner and within a reasonable distance to where they live.

12 13 SGR REPEAL

14
15 The Medicare Access and CHIP Reauthorization Act (MACRA) of 2015 repealing and replacing
16 the SGR was signed into law by President Obama on April 16, 2015.

17
18 The AMA is now working on unrelated new Medicare payment reduction threats and is currently
19 advocating for a sustainable, inflation-based, automatic positive update system for physicians.

20 21 INDEPENDENT PAYMENT ADVISORY BOARD REPEAL

22
23 The Bipartisan Budget Act of 2018 signed into law by President Trump on February 9, 2018,
24 included provisions repealing the Independent Payment Advisory Board (IPAB). Currently, there
25 are not any legislative efforts in Congress to replace the IPAB.

26 27 CONCLUSION

28
29 Our AMA will remain engaged in efforts to improve the health care system through policies
30 outlined in Policy D-165.938 and other directives of the HOD. Given that most of the ACA fixes
31 that led to calls in 2013 for this report at every HOD meeting have been accomplished, our primary
32 goal now related to health care reform is stabilization of the broken Medicare physician payment
33 system, including the need for inflation-based positive annual updates and reform of budget
34 neutrality rules.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 07-A-24

Subject: AMA Performance, Activities, and Status in 2023

Presented by: Willie Underwood III, MSc, MPH, MD, Chair

1 Policy G-605.050, “Annual Reporting Responsibilities of the AMA Board of Trustees,” calls for
2 the Board of Trustees to submit a report at the American Medical Association (AMA) Annual
3 Meeting each year summarizing AMA performance, activities, and status for the prior year.
4

5 INTRODUCTION 6

7 The AMA’s mission is to promote the art and science of medicine and the betterment of public
8 health. As the physician organization whose reach and depth extend across all physicians, as well
9 as policymakers, medical schools, and health care leaders, the AMA uniquely can deliver results
10 and initiatives that enable physicians to improve the health of the nation.
11

12 *Representing physicians with a unified voice* 13

14 If the last few years have taught us anything it is that threats to the practice of medicine can come
15 unexpectedly and from many fronts. In 2023 the AMA vigorously defended physicians and
16 medicine in state and federal courts on a variety of issues threatening physicians and their patients.
17 The AMA, in partnership with state medical associations and national medical specialty societies,
18 won more than 100 state-level scope of practice cases.
19

20 Through research, advocacy and education, the AMA continued to defend the practice of medicine
21 against scope of practice expansions that threaten patient safety. We promoted physician-led care
22 and helped defeat legislation across the country that would have allowed:
23

- 24 • Physician assistants to practice independently without physician oversight
- 25 • Pharmacists to prescribe medications
- 26 • Optometrists to perform surgery
- 27 • Scope of practice expansion for nurse practitioners and other APRNs
28

29 The AMA facilitated 226,000+ contacts to Congress from patients and physicians as part of our
30 FixMedicareNow.org grassroots campaign. To ensure more transparency in health care, the AMA
31 worked with multiple state medical associations to introduce new or strengthen existing “Truth in
32 Advertising” laws so that patients know if the person providing care to them is a physician—or not.
33 Georgia and North Dakota enacted laws in 2023.
34

35 AMA’s critical voice was represented in federal and state courts around the country on a broad
36 range of issues, including in several cases before the U.S. Supreme Court. The AMA filed
37 amicus briefs in: *Braidwood Management v. Becerra*, *Alliance for Hippocratic Medicine v. FDA*,
38 and *Murthy v. Missouri*. Working with state and federal policymakers, the AMA continued to
39 oppose legislation and laws that interfere with the practice of medicine, including in cases where
40 physicians face criminal, civil, or administrative penalties for providing necessary care. In cases

1 ranging from surprise billing, to firearm regulations to scope of practice, the AMA has aggressively
2 fought back to protect physicians.

3
4 The AMA elevated the voice of physician leadership on critical issues of public health, securing
5 more than 100 press releases, 125 billion media impressions representing nearly \$1.2 billion in
6 estimated ad value, achieving a commanding voice among healthcare entities in the media.

7
8 *Removing obstacles that interfere with patient care*

9
10 Physician burnout remains an ongoing epidemic in the U.S. and the AMA is fiercely committed to
11 understanding the challenges physicians face and to restoring their well-being and optimism. We
12 know that reducing burnout and promoting physician well-being are inextricably linked to the
13 delivery of high-quality patient care and health system sustainability.

14
15 The AMA pushed forward in tackling the causes of burnout and in developing effective research
16 and resources needed to help physicians achieve improved satisfaction and joy in their work. AMA
17 published more than 25 peer-reviewed studies and over 2,000,000 users accessed the AMA STEPS
18 Forward® program to prevent burnout and improve patient care and practice efficiency. AMA
19 provided over 100 new or updated AMA STEPS Forward® resources – including toolkits,
20 webinars, podcast episodes, and the new Wellness-Centered Leadership Playbook. AMA co-
21 sponsored the 2023 American Conference on Physician Health with Stanford Medicine and Mayo
22 Clinic in Palm Desert, California for over 600 attendees.

23
24 The AMA continued to expand its work in promoting physician wellness through its Joy in
25 Medicine™ Health System Recognition Program. This program is committed to advancing the
26 science of physician burnout and recognizes those systems that are dedicated to organizational
27 well-being. In 2023 the AMA recognized 72 health systems – bringing the total number of
28 recognized organizations to 96.

29
30 In 2023 the AMA worked with state medical associations across the country to enact prior
31 authorization reform using AMA model legislation, data, testimony, and other resources that
32 resulted in more than 30 states introducing legislation - and at least nine new states enacting prior
33 authorization laws including AK, DC, IN, LA, MT, ND, NJ, RI, TN, and WA.

34
35 The AMA successfully piloted VeriCre, a cross-industry collaboration to improve the complex
36 credentialing process for physicians, healthcare institutions, and health plans alike. VeriCre
37 addresses inefficiencies in credentialing by providing centralized, trusted, and authoritative data
38 that can be used to pre-populate applications. VeriCre is designed to be integrated into vendor
39 software solutions within healthcare organizations.

40
41 The AMA worked to remove the barriers and end the stigma that all too frequently deters
42 physicians from getting the mental health care they need. Our work with 15 state medical boards,
43 health systems and credentialing bodies resulted in the removal of stigmatizing questions about
44 mental illness from their applications.

45
46 *Driving the future of medicine*

47
48 The AMA achieved passage of legislation to extend Medicare telehealth coverage through 2024.
49 The 2024 Medicare payment rule preserves key telehealth policies, ensuring Medicare patients
50 from all areas of the country (not only rural) will continue to receive access to telehealth.

1 The AMA advanced a conceptual model for precision medical education: a system that can
2 leverage technology and data to improve education personalization and learning efficiency across
3 the continuum, in support of students, residents, fellows, physicians, and ultimately the
4 needs of patients. Innovation Grants were awarded to 13 sites applying precision education
5 approaches in medical school, residency and continuing professional development.

6
7 The AMA ChangeMedEd® initiative and the University of Michigan developed a seven-part
8 online learning module series introducing learners to foundational principles in artificial
9 intelligence and machine-learning. The first of the series, Introduction to Artificial Intelligence
10 (AI) in Health Care, launched on October 31 and was highlighted in a plenary session at the
11 Association of American Medical Colleges Learn Serve Lead annual conference, spurring over
12 1600 page views and 65 course completions within the month of November alone.

13
14 AMA's influence continues through the Health Systems Science Scholars Program and the
15 Coaching Implementation Workshop, with each program now having trained over 200 faculty
16 members from across the US to advance these innovations in medical schools and residency
17 programs.

18
19 AMA Ed Hub™ continued to expand its educational offering by signing on 14 new partners in
20 2023 - bringing the total number of partners to 50. The new partners include: American
21 Association for Physician Leadership; American College of Occupational and Environmental
22 Medicine; American College of Osteopathic Family Physicians; American Thoracic Surgery;
23 Boston University; Docs with Disabilities; Endocrine Society; Mary Ann Liebert Publishers;
24 Michigan State University; Parkinson's Foundation; Society of Critical Care Medicine; Radiology
25 Health Equity Coalition; University of California, San Francisco, and Altarum Institute - National
26 Coalition for Sexual Health.

27
28 AMA Ed Hub™, in collaboration with Advocacy and Health Science & Ethics, rapidly delivered
29 an educational offering to help physicians and clinicians meet new DEA requirements on substance
30 use disorders and addiction. Including education from the AMA and their partners, this offering
31 was deployed within 24 hours of the new regulation issuance and significantly contributed to
32 increased AMA Ed Hub™ engagement.

33
34 To better meet the needs of academic researchers, *JAMA*® optimized the publication pathway by
35 promising to move accepted manuscripts to publication within four weeks of submission for select
36 manuscripts of high importance. *JAMA*® also launched a new video and podcast series on "AI and
37 Clinical Practice" to keep physicians informed on AI's promise to transform treatment, training,
38 research and publishing. *JAMA*® hosted its first JAMA Summit™ that brought together 60 experts
39 from across the country and world to talk about why there is a big gap between the generation of
40 evidence and what physicians do in clinical practice including what could we do to make it better.

41
42 The AMA's Center for Health Equity continues to strengthen physician and health system
43 understanding and engagement around advancing equity. We launched the National Health Equity
44 Grand Rounds, engaging almost 11,000 viewers around a variety of important topics and strategies
45 to advance health equity and published 43 social justice education modules in the AMA Ed Hub™.

46
47 *Leading the charge to confront public health crises*

48
49 The AMA successfully advocated to make naloxone available over the counter and continued to
50 advocate for responsible pricing and insurance coverage for this life-saving medication. We also
51 successfully advocated for revisions to the Center for Disease Control's (CDC) opioid prescribing

1 guidelines that resulted in the CDC removing its dose and quantity thresholds for treating patients
2 with pain.

3
4 The AMA collaborated with three partners to increase access to AMA MAP™ metrics to improve
5 the quality-of-care physicians provide to their patients with hypertension. Access to the metrics
6 helps identify gaps, track progress, and support quality improvement efforts to reach approximately
7 5.5 million additional patients across 683 organizations inclusive of health systems, Federally
8 Qualified Health Centers, community health centers and medical groups.

9
10 To help close a gap in blood pressure measurement training that exists within medical schools, the
11 AMA awarded financial grants to eight academic institutions representing 18 total training
12 programs for healthcare professionals allowing them to meaningfully engage in AMA's eLearning
13 series, BP Measurement Essential: Student Edition.

14
15 The AMA's Enterprise Social Responsibility (ESR) program has strategically integrated and
16 aligned to the health equity strategic framework with the goal to reduce health inequities in
17 partnership with communities. The ESR program hosted over 30 events, supported nearly 70
18 organizations, and donated almost \$100,000 to community partners. AMA employees, representing
19 every business unit and office location, achieved 32 percent employee volunteer participation, far
20 exceeding the industry average of 20 percent, to build healthy, thriving, equitable communities.

21 *AMA Task Forces*

22
23
24 The task force to Preserve the Patient-Physician Relationship was formed and has convened. The
25 Board will submit an Informational Report at the 2024 Interim Meeting that will summarize the
26 activities of this task force that have taken place to date.

27
28 The TRHT (Truth, Racial Healing, Transformation) task force was formed and has convened. The
29 TRHT task force is on track to submit its recommendations to the AMA Board of Trustees by June
30 2025.

31
32 The Firearm Injury Prevention task force is convening and updates on its work are summarized in
33 Board of Trustees Report 22-A-24.

34
35 The Substance Use and Pain Care task force is convening and updates on its work are summarized
36 in Board of Trustees Report 22-A-24.

37
38 The Cannabis task force is convening and its work is focused on developing evidence-based
39 education for physicians.

40 *Membership*

41
42
43 Overall, the organization's advocacy efforts and mission activities were supported by another
44 strong year of financial performance. In 2023 the AMA experienced a 3.4% increase in overall
45 dues-paying membership.

46 *EVP Compensation*

47
48
49 During 2023, pursuant to his employment agreement, total cash compensation paid to James L.
50 Madara, MD, as AMA Executive Vice President was \$1,346,453 in salary and \$1,117,107 in
51 incentive compensation, reduced by \$2,680 in pre-tax deductions. Other taxable amounts per the

1 contract are as follows: \$23,484 imputed costs for life insurance, \$24,720 imputed costs for
2 executive life insurance, and \$4,000 paid for an executive physical, and \$3,000 paid for parking
3 and other. An \$81,000 contribution to a deferred compensation account was also made by the
4 AMA. This will not be taxable until vested and paid pursuant to provisions in the deferred
5 compensation agreement.

6

7 For additional information about AMA activities and accomplishments, please see the “AMA 2023
8 Annual Report.”

REPORT OF THE BOARD OF TRUSTEES

B of T Report 08-A-24

Subject: Annual Update on Activities and Progress in Tobacco Control: March 2023 through February 2024

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

1 This report summarizes trends and news on tobacco usage, policies, and tobacco control advocacy
2 activities from March 2023 through February 2024. The report is written pursuant to American
3 Medical Association (AMA) Policy D-490.983, “Annual Tobacco Report.”

4
5 TOBACCO USE AT A GLANCE

6
7 In the 1960s the adult smoking rate was at its highest at 42 percent.¹ Today that rate has been cut
8 by more than half to an all-time low in 2022 of 11 percent. Despite this decline, tobacco use
9 remains the leading cause of preventable disease, disability, and death in the United States.
10 According to the Centers for Disease Control and Prevention (CDC) cigarette smoking accounts for
11 more than 480,000 deaths every year, or about 1 in 5 deaths. More than 16 million Americans live
12 with a smoking-related disease.²

13
14 An annual review of tobacco use among adults, published in the May 5, 2023, Morbidity and
15 Mortality Weekly Report (MMWR), summarizes National Health Interview Survey (NHIS) data to
16 assess recent national estimates of commercial tobacco use among U.S. persons aged ≥18 years.
17 NHIS is an annual, nationally representative household survey of the noninstitutionalized U.S.
18 civilian population. Current smokers are defined as people who reported smoking at least 100
19 cigarettes during their lifetime and who, at the time they participated in a survey about this topic,
20 reported smoking every day or some days. This analysis found an estimated 46 million U.S. adults
21 (18.7 percent) reported currently using any tobacco product, including cigarettes (11.5 percent), e-
22 cigarettes (4.5 percent), cigars (3.5 percent), smokeless tobacco (2.1 percent), and pipes (including
23 hookah) (0.9 percent). Although cigarette smoking decreased, e-cigarette use increased, from 3.7
24 percent in 2020 to 4.5 percent in 2021, largely driven by higher prevalence in use among persons
25 aged 18–24 years.³

26
27 Nearly one in five adults who currently used tobacco products used two or more products, with
28 nearly one third of these individuals (31.4 percent) reporting use of cigarettes and e-cigarettes.
29 Dual use of tobacco products may have overlapping adverse health effects. While smoking and
30 vaping may share similar harmful cardiovascular effects, each appears to cause some potentially
31 damaging effects that the other does not. This suggests that dual product use may be more harmful
32 than using either product alone.^{3,4}

33
34 The CDC and FDA analyzed data from the 2023 National Youth Tobacco Survey (NYTS) to assess
35 tobacco product use patterns among U.S. middle school (grades 6–8) and high school (grades 9–
36 12) students. This analysis was published in the November 3, 2023, MMWR.⁵ The NYTS is a
37 cross-sectional, school-based, self-administered web-based survey of U.S. middle and high school
38 students. A stratified, three-stage cluster sampling procedure was used to generate a nationally
39 representative sample of U.S. students attending private or public middle (grades 6–8) and high

1 (grades 9–12) schools. In 2023, data were collected during March 9–June 16; a total of 22,069
2 students from 179 schools participated, with an overall response rate of 30.5 percent.

3
4 Current use of any use of any tobacco product by high school students declined by an estimated
5 540,000, from 2.51 million in 2022 to 1.97 million in 2023. Declines were also reported for current
6 e-cigarette use among high school students during that same period from 14.1 percent to 10.0
7 percent. While these declines demonstrate the effectiveness of tobacco control legislation and
8 regulations, there is still cause for concern. E-cigarette products were the most used tobacco
9 product of middle and high school students with 7.7 percent reporting current e-cigarette use
10 followed by cigarettes at 1.6 percent. Among students who had ever used an e-cigarette, 46.7
11 percent reported current use and 89.4 percent of them used flavored products and 25.2 percent used
12 an e-cigarette daily. Given the number of middle and high school students that use tobacco
13 products, sustained efforts to prevent initiation of tobacco product use among young persons and
14 strategies to help young tobacco users quit are critical to reducing U.S. youth tobacco product
15 use.**Error! Bookmark not defined.**

16 17 *Sales Use of E-Cigarettes Dominated by Flavored Products*

18
19 E-cigarette unit sales increased by 46.6 percent during January 2020–December 2022 according to
20 a study released by the truth initiative®. The study E-cigarette Unit Sales by Product and Flavor
21 Type, and Top-Selling Brands, United States, 2020–2022 was published in the June 23, 2023,
22 MMWR.⁶ From January 26, 2020, to December 25, 2022, unit shares of tobacco-flavored and
23 mint-flavored products decreased (from 28.4 percent to 20.1 percent and from 10.1 percent to 5.9
24 percent, respectively), whereas shares of other flavor sales increased (from 29.2 percent to 41.3
25 percent).⁶

26
27 The study authors also looked at types of e-cigarettes. Disposable e-cigarettes are the preferred
28 delivery device for vaped tobacco. Sales of fruit- and mint-flavored disposable products saw a
29 significant rise compared to refillable cartridge devices. During the study period, January 2020–
30 December 2022, sales of prefilled cartridges decreased from 75.2 percent to 48.0 percent, and
31 disposable e-cigarette sales increased from 24.7 percent to 51.8 percent. The authors attributed this
32 to an announcement in January 2020 by the U.S. Food and Drug Administration (FDA) that the
33 agency would prioritize enforcement against prefilled e-cigarettes in flavors other than tobacco and
34 menthol based on the prevalence of use of these products by youth.

35
36 In the United States, the prevalence of e-cigarette use is markedly higher among youths and young
37 adults than it is among adults overall. In 2021, 4.5 percent of all adults aged ≥ 18 years (an
38 estimated 11.1 million) and 11.0 percent of young adults aged 18–24 years (an estimated 3.1
39 million) currently (≥ 1 day during the previous 30 days) used e-cigarettes; during 2022, 14.1 percent
40 of high school students (an estimated 2.14 million) currently used e-cigarettes. The unit share of
41 menthol-flavored product sales remained relatively stable, while non-menthol flavor unit shares
42 changed.⁶

43 44 EFFORTS TO ADDRESS TOBACCO CONTROL

45 46 *AMA Litigation Center joins with public health groups to protect tobacco regulation*

47
48 In the courts, the AMA has continued to be very active in supporting efforts to further regulate and
49 limit tobacco products and electronic nicotine delivery systems (ENDS). The AMA has joined
50 numerous amicus briefs around the country in cases involving the federal government’s efforts to
51 regulate and remove flavored ENDS from the market, which have contributed to favorable

1 outcomes in several federal circuit courts. In addition, the AMA has supported state and local
2 governments with friend-of-the-court briefs after their laws banning flavored tobacco products and
3 ENDS have been challenged by the tobacco and vaping industry. Finally, the AMA continues to
4 monitor the federal government's efforts to eliminate the manufacture and sale of tobacco products
5 with characterizing flavors, including menthol, as the AMA was one of the named plaintiffs in a
6 lawsuit requiring the FDA to take long-overdue action on this issue.

7
8 The AMA Litigation Center joined amicus briefs in Oregon supporting the ability of two counties
9 to regulate flavored tobacco products beyond the state-level restrictions. The court cases centered
10 on whether a county ordinance banning the sale of flavored tobacco products conflicts with a state
11 law regulating the sale of tobacco and nicotine. One of the counties received a favorable ruling, and
12 the other matter remains pending.

13
14 The Litigation Center also joined an amicus brief supporting the use of graphic warnings on
15 tobacco products. The issue in *R.J. Reynolds v. FDA* is whether an FDA rule regarding graphic
16 warnings on cigarettes is lawful. That case remains pending.

17
18 *AMA urged the FDA to investigate violations of federal law in California*

19
20 In December 2022 California's law prohibiting the sales of menthol cigarettes and other flavored
21 tobacco products prevailed despite legal challenges. California became the largest state in the
22 country banning these products and became the target for release of new products designed to
23 circumvent the law. R.J. Reynolds announced two new brands, Camel Crisp Non-Menthol and
24 Camel Crush Oasis Non-Menthol Capsule.

25
26 The Tobacco Control Act, which gives the FDA authority to regulate the tobacco industry prohibits
27 the introduction of new products that have not undergone remarket review by the FDA. The
28 introduction and marketing of the R.J. Reynolds products and others as "substitutes" for menthol
29 cigarettes rather than "new" products suggests that the industry believes it has found a loophole.

30
31 In March 2023 the AMA joined by other medical, public health and community organizations
32 urged the FDA to use its authority and begin an investigation.

33
34 *Helping Tobacco Users Quit Act would expand and ensure cessation coverage*

35
36 In July 2023 Congresswoman Lisa Blunt Rochester (D-Del.) and Congressman Brian Fitzpatrick
37 (R-Penn.) introduced the Helping Tobacco Users Quit Act. This bi-partisan bill, supported by the
38 AMA, calls for expanded comprehensive Medicaid tobacco cessation coverage in every state with
39 no cost-sharing or access barriers for beneficiaries. The bill would also help states conduct outreach
40 campaigns to educate providers and beneficiaries about Medicaid's coverage of cessation services.

41
42 The bill was referred to the House Energy and Commerce Subcommittee on Health waiting for a
43 hearing and further consideration. Medicaid enrollees smoke at twice the rate of those with private
44 insurance, meaning that expanding cessation coverage in Medicaid would improve health outcomes
45 while lowering government spending.⁷

46
47 *American Lung Association Releases its 2024 State of Tobacco Report*

48
49 The American Lung Association's 2024 "State of Tobacco Control" report reveals the continued
50 impact of tobacco use, including menthol cigarettes, on individuals and families across the country,
51 and underscores the urgent need for the White House to finalize the rules to end the sale of menthol

1 cigarettes and flavored cigars to save lives.⁸ The report highlighted the tobacco industry and its
2 allies' influence to successfully convince the White House to delay finalizing the menthol
3 cigarettes and flavored cigars rules.

4 Since the 1950s, Black individuals have been successfully targeted by aggressive marketing
5 campaigns. According to a study in the 2023 April issue of *Nicotine & Tobacco Research*, an
6 estimated 80 percent of Black individuals in the U.S. who smoke prefer menthol cigarettes. The
7 authors also noted that target marketing was having an impact on Hispanic adults. During the study
8 period the use of menthol went from 34 percent in 2008 to 51 percent in 2020.⁹

9
10 At the local level, Chicago, IL and Milwaukee, WI were highlighted in the report for actions taken
11 to restrict where new tobacco retailers can locate. This legislative action takes aim at the increased
12 concentration of tobacco product retailers in low-income neighborhoods.

REPORT 10 OF THE BOARD OF TRUSTEES (A-24)
American Medical Association Health Equity Annual Report
(Informational)

EXECUTIVE SUMMARY

Background: At the 2018 Annual Meeting, the House of Delegates adopted the recommendations of Policy D-180.981 directing our AMA to “develop an organizational unit, e.g., a Center or its equivalent, to facilitate, coordinate, initiate, and track AMA health equity activities” and instructing the “Board to provide an annual report to the House of Delegates regarding AMA’s health equity activities and achievements.” The HOD provided additional guidance via Policy H-180.944: “Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity.” HOD policy was followed by creation of the AMA Center for Health Equity (“Center”) in April 2019, the AMA’s Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity for 2021-2023 (“Plan”) in May 2021, and the successor 2024-2025 Plan in June 2024. In 2022, updated Policy H-65.946 specified that this report will also include “updates on [the AMA’s] comprehensive diversity and inclusion strategy.”

Discussion: The AMA has steadfastly enhanced efforts over recent years to further embed equity in our work. The Plan serves as a guide for this work. This report outlines the activities conducted by our AMA during calendar year 2023, divided into the five (5) strategic approaches detailed in the Plan: (1) Embed Equity; (2) Build Alliances and Share Power; (3) Ensure Equity in Innovation; (4) Push Upstream; and (5) Foster Truth, Reconciliation, and Racial Healing. The diversity and inclusion strategy updates are included within the Embed Equity section.

Conclusion: This report captures only a fraction of the work accomplished and lessons learned in 2023. AMA staff have devoted time and resources to collaboratively advancing equity within and outside the organization. AMA continues in its quest to advance health equity and embed racial and social justice, making significant progress towards fulfilling its commitments outlined in its Strategic Plan.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 10-A-24

Subject: American Medical Association Health Equity Annual Report

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

1 BACKGROUND

2

3 At the 2018 Annual Meeting, the House of Delegates adopted Policy D-180.981, directing our American
4 Medical Association (AMA) to “develop an organizational unit, e.g., a Center or its equivalent, to
5 facilitate, coordinate, initiate, and track AMA health equity activities” and instructing the “Board to
6 provide an annual report to the House of Delegates regarding AMA’s health equity activities and
7 achievements.” The HOD provided additional guidance via Policy H-180.944: “Health equity, defined as
8 optimal health for all, is a goal toward which our AMA will work by advocating for health care access,
9 research, and data collection; promoting equity in care; increasing health workforce diversity; influencing
10 determinants of health; and voicing and modeling commitment to health equity.” HOD policy was
11 followed by creation of the AMA Center for Health Equity (“Center”) in April 2019, the AMA’s
12 Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity for 2021-2023
13 (“Plan”) in May 2021, and the successor 2024-2025 Plan in June 2024. In 2022, updated Policy H-65.946
14 specified that this report will also include “updates on [the AMA’s] comprehensive diversity and
15 inclusion strategy.”

16

17 DISCUSSION

18

19 Our AMA has committed itself to advancing health equity, advocating for racial and social justice, and
20 embedding equity across the organization and beyond. In 2023, the Center continued to collect enterprise-
21 wide equity related work and track progress toward the five strategic approaches detailed in the AMA’s
22 Plan. This report outlines the activities conducted by our AMA during calendar year 2023, divided into
23 five strategic approaches detailed in the Plan: (1) Embed Equity; (2) Build Alliances and Share Power; (3)
24 Ensure Equity in Innovation; (4) Push Upstream; and (5) Foster Truth, Reconciliation, and Racial
25 Healing. Updates on diversity and inclusion strategy updates are included within the Embed Equity
26 section.

27

28 *Embed Equity*

29

30 Ensuring a lasting commitment to health equity by our AMA involves embedding equity using anti-
31 racism, structural competency, and trauma-informed lenses as a foundation for transforming the AMA’s
32 staff and broader culture, systems, policies, and practices, including training, tools, recruitment and
33 retention, contracts, budgeting, communications, publishing, and regular assessment of organizational
34 change. The following are some of the relevant accomplishments during 2023:

35

- 36 • At the 2023 Annual and Interim House of Delegates Meetings, there were various equity-focused
37 reports, resolutions, and educational sessions. The adopted Council on Ethical & Judicial Affairs
38 (CEJA) Report on “[Responsibilities to Promote Equitable Care](#)” will be added to the AMA *Code*
39 *of Medical Ethics*. Other notable reports included: [Ensuring Equity in Interview Processes for](#)

1 [Entry to Undergraduate and Graduate Medical Education](#), [Decreasing Bias in Assessments of](#)
 2 [Medical Student Clinical Clerkship](#), [Support Removal of BMI as a Standard Measure in](#)
 3 [Medicine](#), [Leave Policies for Medical Students, Residents, Fellows, and Physicians](#), [Financial](#)
 4 [Burdens and Exam Fees for International Medical Graduates](#), [Challenges to Primary Source](#)
 5 [Verification of International Medical Graduates Resulting from International Conflict](#), [Federally](#)
 6 [Qualified Health Centers and Rural Health Care](#), and [Medicaid Unwinding Update](#). The Council
 7 on Science and Public Health (CSAPH) and National Academy of Medicine (NAM) co-hosted an
 8 educational session at the Interim Meeting on climate crisis and health care decarbonization.
 9 Health Equity Open Fora were held at the Annual Meeting, highlighting the [Rise to Health](#)
 10 [Coalition](#), [LGBTQ leadership](#), and [truth and reconciliation](#), and the Interim Meeting, focused on
 11 the [Health Equity in Organized Medicine survey report](#) and the next Equity Strategic Plan. Each
 12 forum had over 300 individuals in attendance.

- 13 • AMA strives toward the enterprise’s goal to raise its visibility in health equity and demonstrate its
 14 commitment to institutional and community partners. Website traffic related to health equity
 15 search was roughly 730,000 users. AMA published 127 news articles with health equity focus,
 16 representing 15 percent of its total production from the news team. Membership from users
 17 consuming health equity content increased 25 percent and referrals to health equity modules on
 18 Ed Hub from the AMA website increased 24 percent compared to the previous year. AMA update
 19 podcast downloads featuring health equity discussions increased 50 percent compared to the
 20 previous year, including more than 1,200 downloads. Approximately 15,000 learners completed
 21 AMA health equity courses for graduate and undergraduate medical education competency
 22 education programs (GCEP and UCEP). Major 2023 health equity announcements included the
 23 [Rise to Health Coalition](#) and the launch of the AMA’s Truth, Reconciliation, Healing and
 24 Transformation (TRHT) taskforce initiative.
 - 25 ○ The Council of Science and Public Health (CSAPH) presented a report on equity in
 26 precision medicine, with a four-episode podcast series in development for release in
 27 2024.
 - 28 ○ To support reimagining the future of health equity and racial justice in medical education
 29 and improving the diversity of the health workforce, as directed by the [Council on](#)
 30 [Medical Education's Report 5](#) from June 2021, our AMA externally commissioned a
 31 diverse group of subject matter experts as editors who announced a call for authors,
 32 receiving over 150 submissions. Over 60 abstracts were published by the AMA in the
 33 compendium *MedEd’s horizon: Just, merciful, diverse and equitable*. The final forward-
 34 looking study with recommendations for action will be a book with approximately 18
 35 chapters entitled *Reimagining Medical Education*, to be published by Elsevier in 2024,
 36 and intended for medical school and health system leaders, medical educators in
 37 undergraduate and graduate medical education (UME and GME), policy makers, change
 38 agents, and advocates.
 - 39 ○ *AMA Journal of Ethics* published [four health equity-centered issues in 2023](#): Segregation
 40 in Health Care, Patient-Centered Transgender Surgical Care, How We Over Rely on BMI
 41 and Palliative Psychiatry, with the first issue including an article led by AMA staff:
 42 [Training to Build Antiracist, Equitable Health Care Systems](#).
 - 43 ○ To help embed equity within public health, the AMA published, in collaboration with the
 44 U.S. Centers for Disease Control and Prevention’s (CDC) Project Firstline, 12 episodes
 45 of the [Stories of Care](#) podcast about health care equity and infection control, including:
 46 [Race, Research, and Health Care Associated Infections](#), [Fighting Ableism: What Do You](#)
 47 [Need?](#), and [Fighting Stigmas Associated With Infectious Diseases](#). Through October
 48 2023, the Stories of Care podcast had a total of 1,311 downloads and 701 continuing
 49 medical education (CME) completions.
 - 50 ○ The AMA continues to partner with the CDC and the Ad Council to encourage the
 51 public, with an emphasis on Black and Latinx/Hispanic audiences, to get vaccinated

1 against influenza (flu). The donated media value for the most recent flu season was about
2 \$4.8 million. The public service announcement (as of October 2023) reached 53 percent
3 among Black and 48 percent among Hispanic respondents. We held two media tours in
4 2023, both in English and Spanish, with spokespeople from AMA and CDC securing
5 nearly 400 placements across TV, radio, and digital.

- 6 ○ The AMA published playbooks and other educational resources for physicians, practices,
7 physician provider organizations, and health systems: as part of STEPS Forward,
8 [Wellness-Centered Leadership](#) with a chapter on Racial and Health Equity; and with
9 America's Health Insurance Plans (AHIP) and National Association of Accountable Care
10 Organizations [The Future of Sustainable Value-Based Payment: Voluntary Best Practices](#)
11 [to Advance Data Sharing](#), incorporating the promotion of health equity as a key cross-
12 cutting issue (particularly related to health-related social needs) and establishing a
13 specific “best practice category” focused on health equity (“Improve Data Collection and
14 Use to Advance Health Equity”). Additionally, AMA STEPS Forward published a
15 toolkit, [Collective Trauma: Respond Effectively as an Organization](#), and four podcasts
16 focused on social determinants of health and racial and health equity.
- 17 ○ AMA STEPS Forward® hosted the first-ever free in-person Saving Time Boot Camp,
18 intended for Federally Qualified Health Centers (FQHC) staff, offering evidence-based
19 time management strategies to provide quality patient care.
- 20 ○ Private Practice Simple Solutions (PPSS) learning collaboratives were created in support
21 of practices in communities that may lack financial resources to engage with consultants
22 or other external partners.
- 23 ○ The AMA produced six Prioritizing Equity episodes, including: [Examining Physician](#)
24 [Gender Inequity in Medicine](#), [The SCOTUS Affirmative Action ruling: The Cost to the](#)
25 [Physician Workforce and Historically Marginalized Communities](#), and [Advocating for](#)
26 [Change in Native Health Policy](#).

- 27
- 28 ● The AMA provided a detailed internal report to all staff on the first year of cross-enterprise and
29 Business Unit (BU)-specific Equity Action Plans, including some 200 goals across BUs.
30 Leadership approved moving forward with an Embedding Equity dashboard in 2024 starting with
31 the 2020 Employee Equity and Engagement Survey data, moving forward with the next
32 Employee Equity and Engagement Survey (slated to deploy in 2025), and implementing in 2024
33 the first enterprise-wide equity goals to be included in every BU’s goals, focused on workforce
34 and learning.
- 35 ● The annual update to the Current Procedural Terminology (CPT) code set for 2024 included
36 Spanish language consumer-friendly descriptors for the first time, which will help CPT users
37 better engage and assist the Latinx community.
- 38 ● For more than 50 years of the CPT Professional book being published and in circulation, every
39 medical illustration that showed skin tone depicted a white person. In 2023, to address the past
40 exclusion of images that represent the full diversity and identities of the people in our society, the
41 book updated 19 illustrations, including changes to skin tone, facial features, hair, and sex. The
42 2024 edition updated and diversified 11 illustrations as well as reworked and made additional
43 improvements to three illustrations from 2023. A large diverse group of internal and external
44 reviewers provided feedback prior to publication. There is a three-year plan to update 75-100
45 more illustrations to depict authentic and diverse illustrations in the over 200,000 copies sold
46 each year.

47

48 The AMA’s employee life cycle and internal diversity, equity, and inclusion (DEI) framework help to
49 operationalize DEI initiatives across the enterprise. Within the embedding equity strategic approach,
50 updates on the AMA’s diversity and inclusion strategy included a number of efforts and initiatives:
51

- 1 • Across AMA, hundreds of staff in 2023 engaged in training and educational opportunities with
2 over 60 percent reporting an increase in knowledge, attitudes, skills, or behaviors. Training
3 included the two-day Racial Equity Institute (REI) Phase 1, the Interaction Institute for Social
4 Change (IISC) Facilitative Leadership for Social Change, the Equity & Results Antiracist
5 Results-Based Accountability series, four new skills-based inclusion modules designed,
6 developed, piloted, implemented and evaluated, and Business Unit-specific offerings led by their
7 Health Equity Action Team.
- 8 • Individual Business Units have, with the leadership of their respective Health Equity Action
9 Teams, pursued a variety of strategies to operationalize equity: had every team member commit
10 to one of four committees and one goal from their Equity Action Plan, meeting at least monthly;
11 designed and implemented internal monthly reporting to support transparency, dialogue, and
12 decision-making; launched an internal monthly digest to educate colleagues; defined and shared a
13 safe-space framework, rules, and expectations for town hall meetings and issues that arise;
14 implemented community agreements across meetings and incorporated them into a project
15 management playbook (with 79% finding the brave space community agreement beneficial);
16 piloted Racial Healing Circles as a tool for team building across cultural divides; weaved meeting
17 with the Health Equity Action Team about their Equity Action Plan and its progress into the new
18 hire onboarding process; helped clients to consider embedding equity principles throughout
19 projects (e.g., what language is being used, whether the team is diverse, is there a consideration of
20 the project's impact on minoritized or marginalized communities, and other essential questions);
21 and developed a process to ensure research proposals are evaluated for design bias and equity
22 impact.
- 23 • The AMA is analyzing existing IT documentation in shared repositories for identification and
24 removal of racially demeaning terms.
- 25 • Starting in 2023, several JAMA Network journals revamped and expanded their editorial
26 fellowship programs to be part-time and fully remote to increase accessibility and inclusivity. The
27 JAMA Network Equity Action Team (JNEAT) established guidelines for staff at every level to
28 understand how to meet individual goals for improving Diversity, Equity, Inclusion, and
29 Belonging – from supporting hiring managers in seeking a diverse candidate base for job
30 openings to providing educational opportunities for staff. JAMA Network DEI editors continued
31 quarterly discussions within their individual journals. The team will be publishing results of an
32 inter-departmental survey of editors and editorial boards that highlight staff demographics,
33 including self-identified gender, race, and ethnicity.
- 34 • The AMA made its offices more equitable, installing privacy strips in the restrooms, stocking
35 menstrual supplies in all restrooms, facilitating hybrid meetings with necessary accommodations,
36 and installing or ordering sit/stand desks and other ergonomic office equipment. The organization
37 continues to work towards ensuring AMA offices are accessible for differently abled individuals.

38 Build Alliances and Share Power

39
40 Building strategic alliances and partnerships and sharing power with historically marginalized
41 and minoritized physicians and other stakeholders is essential to advancing health equity. This
42 work centers previously excluded people, expertise and knowledge, builds advocacy coalitions,
43 participates in national networks, and establishes the foundation for true accountability and
44 collaboration. The following are some of the relevant accomplishments during 2023:

- 45 • AMA's sponsorship plan reflected outreach to diverse audiences, including The National
46 LGBTQ+ Journalists Association (NLGJA) and Asian American Journalists Association (AAJA)
47 Journalists conferences.
48

- 1 • Three new health equity-oriented content partners were signed to AMA’s Ed Hub: Docs with
2 Disabilities, Radiology Health Equity Coalition (RHEC), and UCSF Center for Climate Health
3 Equity. The AMA collaborated with HealthBegins to launch six modules of [Upstream Training
4 and Education](#).
- 5 • To further leverage existing resources and partnerships, AMA participated in four meetings with
6 the Association of American Medical Colleges (AAMC) and the Accreditation Council for
7 Graduation Medical Education (ACGME) about diversifying the physician workforce; attended
8 three ACGME Diversity Officers Forums; delivered two webinars (Removing barriers and
9 facilitating access: Supporting trainees with disabilities across the medical education continuum
10 and Enhancing Diversity Among Academic Physicians: Recruitment, Retention and
11 Advancement), two presentations to Academic Physicians Section on equity, diversity and
12 belonging focused on medical education and minoritized physician burnout and wellbeing, and
13 three presentations on the implications of the Supreme Court (SCOTUS) decision of Students for
14 Fair Admissions v. Harvard University and the University of North Carolina at Chapel Hill; and
15 completed a review of configurative mapping on diversity in medical education.
- 16 • Continuing its work around physician workforce data, the AMA is collaborating with the AAMC
17 and the ACGME to establish a common understanding for the categorization, reporting, and
18 sharing of sociodemographic data, beginning with race and ethnicity. This collaborative
19 completed a study and is finalizing a guide on the addition of the Middle Eastern North African
20 (MENA) category, identifying best practices in aggregation and reporting. Categorization has
21 been provided by the AMA to the American Board of Medical Specialties, Federation of State
22 Medical Boards, Council for Affordable Quality Healthcare, Massachusetts Medical Society, and
23 Workgroup for Electronic Data Interchange health equity work group. MedBiquitous, a standards
24 development organization in the academic medicine space, has expressed interest in adopting the
25 categorization being developed by the collaborative in lieu of creating their own.
- 26 • The AMA, alongside AHIP, the Alliance of Community Health Plans, the American Hospital
27 Association, and Kaiser Permanente, launched the Common Health Coalition: Together for
28 Public Health. The coalition is focused on translating the hard-won lessons and successes of the
29 COVID-19 pandemic response into actionable strategies that will strengthen the partnership
30 between our health care and public health systems. In 2024, the coalition will publish
31 recommendations informed by technical advisory groups of subject matter experts and an
32 advisory council of public health leaders, focused on four initial priority areas: spearheading
33 greater coordination between the public health and health care systems; building shared, well-
34 maintained emergency preparedness plans; establishing national standards for health care data
35 that help identify health disparities; and modernizing infectious disease detection.
- 36 • AMA continues to work in partnership with the March of Dimes (MOD) and has contracted with
37 MOD and Sinai Urban Health Institute to identify the impact of facility closures and loss of
38 services on the South and West side of Chicago, with the goal of producing a final report in 2024.
39 AMA aims to continue its engagement with and participation in the MOD workgroups
40 (Dismantle Racism, Increasing Access to Care, and Engage Communities).
- 41 • AMA staff continue to volunteer locally and build meaningful relationships with community
42 organizations. The Enterprise Social Responsibility (ESR) team has aligned with the health equity
43 strategic framework by valuing and uplifting the variety and diversity of work and careers that
44 address social determinants of health and contributes to wellness. ESR piloted a co-design
45 process with three community partners to develop a signature service model to address emerging
46 community needs while aligning with AMA’s mission and equity goals. ESR identified and
47 hosted about 35 community engagement opportunities to build healthy, thriving, equitable
48 communities, including My Block, My Hood, My City; Gardeneers; and the Erie House.
- 49 • The second cohort of the Medical Justice in Advocacy Fellowship, an educational initiative in
50 collaboration with Morehouse School of Medicine’s Satcher Health Leadership Institute,

1 culminated at the Interim meeting of the House of Delegates, where 11 physician leaders were
2 celebrated and presented their health equity project concepts.

- 3 • The AMA launched its inaugural Summer Health Law Internship, an eight-week paid summer
4 internship program for a third year or master's law student to learn more about health equity and
5 health law; continued working with The Urban Alliance by hosting a summer internship program
6 that exposes Chicago students to medical publication to provide career exposure; hired a summer
7 intern from Chicago Public Schools in Finance; and partnered with University of Chicago's Youth
8 Internship Program, hosting an onsite a panel discussion with 23 IT-interested high school
9 students, and are exploring further IT mentoring opportunities.
- 10 • The AMA completed a total of 32 burnout assessments with FQHCs and/or community health
11 centers, all organizations serving patients from predominantly historically marginalized
12 communities. Twenty of the 32 assessments were conducted for the organizations in the Arizona
13 Alliance, a consortium of FQHCs, as well as several virtual workshops and reporting sessions to
14 provide insight into interventions to reduce medical staff burnout. Several participating FQHCs
15 were recognized through the AMA's [Joy in Medicine™ Health System Recognition Program](#).
- 16 • Minority and/or woman owned businesses were identified and recommended for several projects,
17 including one with an estimated value in excess of \$250,000. Additionally, three West Side
18 United (WSU) vendors were recommended for requests for proposals with more than \$700,000
19 spent with Local Vendors reported in monthly WSU Anchor Partner meetings. The AMA
20 released a DEI survey to professional services vendors with material levels of spending in 2023 to
21 collect information about the vendors and their policies regarding marginalized populations and
22 DEI.
- 23 • The AMA set a five-year goal to scale and improve programs to five million patients diagnosed
24 with hypertension (HTN) to achieve a 10 mm Hg drop in systolic blood pressure (SBP) or reach
25 BP goal, and one million patients identifying as Black, Latina/e/o/x/Hispanic, Asian, Indigenous,
26 and other historically marginalized groups. As of the end of 2023, approximately 71,723 patients
27 had been impacted, with 51percent from historically marginalized populations. This number
28 includes patients from two large health care organizations located in the West Side of Chicago.
29 Additionally, the AMA initiated projects to embed and advance equity within its AMA MAP
30 HTN™ program to better understand the impact of the program on historically marginalized
31 populations and identify opportunities to reduce inequities.

32 Push Upstream

33
34
35 Pushing upstream requires looking beyond cultural, behavioral, or genetic reasons to understand structural
36 and social drivers of health and inequities, dismantle systems of oppression, and build health equity into
37 health care and broader society. The following are some of the relevant accomplishments during 2023:
38

- 39 • AMA continues to embed equity in its state and federal advocacy work and continues to elevate
40 this and other equity-related work accomplished among AMA members and Federation Societies.
41 Equity-related policy priorities can be seen throughout the AMA's engagement with Congress,
42 the Administration, state legislatures, and other policymakers, in the form of advocacy letters,
43 presentations and testimony to state legislatures, national and medical organizations, and
44 countless additional opportunities that engaged organized medicine and policymakers. In 2023,
45 the AMA continued to actively voice support for:
 - 46 ○ International medical graduates (IMGs);
 - 47 ○ Deferred Action for Childhood Arrivals (DACA) recipients;
 - 48 ○ Migration and refugee population health and safety;
 - 49 ○ Nutrition programs expansion and culturally respectful dietary guidelines;
 - 50 ○ Medicaid coverage expansion;

- Medicaid and Children’s Health Insurance Program (CHIP) coverage extension;
- Maternal and child health programs;
- Protecting reproductive health;
- Advancing data privacy principles and protecting the abuse/misuse of sensitive health data;
- [Enhanced revisions to the federal race and ethnicity data standards](#);
- Mental health and substance use disorder parity laws;
- Removing racial and gender inequities for treatment of substance use disorders;
- Protections for physicians who seek care for wellness and burnout;
- Evidence-based gender affirming care;
- Prohibition of the so-called conversion therapy;
- Fair student loan efforts;
- Increased funding for graduate medical education;
- Elimination of harmful race-based clinical algorithms;
- Telehealth flexibilities in Medicare;
- Reducing the prior authorization burden on patients; and
- Addressing quality and administrative barriers in Medicare Advantage and other insurance plans.

- In late May, in partnership with Institute for Healthcare Improvement (IHI), and in collaboration with Race Forward, HealthBegins, Groundwater Institute, and a variety of other organizations, the AMA [formally announced the launch](#) of Rise to Health: A National Coalition for Equity in Health Care. The goal of the Rise to Health Coalition is to bring together individuals and organizations across five key audiences (pillars) including: individual practitioners, health care organizations, professional societies, payers, and pharma, research, biotech organizations, to advance health equity by identifying shared solutions, common frameworks, and best practices for spread and scale.
- The AMA continues to publish highly engaging health equity content on the AMA Ed Hub site with 176 activities published in 2023. Uptake of equity content in 2023 far exceeded 2022, with 213,982 engagements (compared to 161,189) and 53,117 course completions (compared to 32,453). Four [National Health Equity Grand Rounds](#) sessions were held, which brought 10,189 registrations (8,254 new registrants) to the Ed Hub site: [The History of Racism in US Health Care](#); [Follow the Money](#); [Breaking Down the Ivory Tower](#); and [Creating Accountability Through Data](#). Each session was designed to maximize accessibility for viewers.
- The AMA is a founding member of The Gravity Project, a Health Level 7 Fast Healthcare Interoperability Resources Accelerator focusing on social determinants of health (SDOH) data interoperability. The AMA contributes funding and staff time, for leadership and co-development of the SDOH terminology and data exchange standards. The newly released White House “[US Playbook to Address Social Determinants of Health](#)” for federal initiatives recognized the Gravity Project throughout the document. The AMA provided education to physicians on the utility of CPT codes to document and provide services based upon identified SDOH.

Ensure Equity in Innovation

The AMA is committed to ensuring equitable health innovation by embedding equity in innovation, centering historically marginalized and minoritized people and communities in development and investment, and collaborating across sectors. The following are some of the relevant accomplishments during 2023:

- The AMA continues to strive toward the adoption, optimization, and sustainability of responsible, impact and equitable digitally enabled innovations. This includes highlighting organizations that

1 are championing and implementing health equity on the Physician Innovation Network (PIN) and
2 providing a place for the Principles of Equitable Innovation to engage in important conversations
3 through PIN. The AMA connected stakeholders and fostered collaboration to improve the
4 development, evidence base, and quality of digital health solutions.

- 5 • The AMA's In Full Health initiative, in collaboration with The New Voices Foundation, provided
6 five microgrants to Black healthcare/health tech entrepreneurs to attend The New Voices
7 Foundation Health Innovator Hub at ESSENCE Festival 2023. The Black health innovators
8 created solutions through tech, community partnerships, and medicine – building businesses that
9 meet critical needs in the Black community and advance health equity. The healthcare/health tech
10 entrepreneurs exhibit at the Innovator Hub at the ESSENCE Festival, which is visited by over
11 500,000 people each year.
- 12 • At the May CPT Editorial Panel Meeting, they approved adding eight questions to the CPT Code
13 Change Application to help the Panel make informed decisions about AI CPT applications and
14 apply the AI Taxonomy (Appendix S in the CPT Code Set) consistently. One question asks the
15 applicant to explain how bias factors into the algorithm data.

16 17 Foster Truth, Racial Healing, Reconciliation, and Transformation

18
19 The AMA recognizes the importance of acknowledging and rectifying past injustices in advancing health
20 equity for the health and well-being of both physicians and patients. Truth, racial healing, reconciliation,
21 and transformation is a process and an outcome, documenting past harms, amplifying and integrating
22 narratives previously made invisible, and creating collaborative spaces, pathways, and plans. The
23 following are some of the relevant accomplishments during 2023:

- 24
25 • The AMA launched the Truth, Reconciliation, Healing and Transformation (TRHT) Taskforce,
26 comprised of 19 people: AMA Board of Trustees liaisons, members of the AMA House of
27 Delegates, physicians from historically marginalized communities, and external subject-matter
28 experts from key fields such as medical history and education, policy, ethics, philanthropy, and
29 economics. Facilitated dialogues took place in New Mexico and on Chicago's West Side ([at the](#)
30 [Hatchery](#)), with educational sessions at the 2023 [Annual](#) and Interim Meetings of House of
31 Delegates (HOD). The Hatchery and HOD sessions are being made available on Ed Hub in 2024.

32 33 Challenges and Opportunities

34
35 Commonly noted challenges to advancing health equity, in order of most frequently cited to least,
36 include: 1) limited staff time and capacity for content engagement and external collaborations, 2)
37 competing operational and scheduling priorities, 3) budgetary limitations for sustainability and scaling up,
38 4) lack of guidance and standardization across enterprise, and 5) uncertainty around implementation and
39 evaluation of processes and projects. Additional progress has been made this year to promote diversity
40 within the AMA, and continuation and scaling of these efforts are vital to advancement of equitable work
41 and workplace.

42
43 Many of AMA's BUs reported exploring initiatives to foster space and engagement around diversity,
44 inclusivity, transparency, and accountability among their unit. Other BUs reported relying on their Health
45 Equity Action Team ("HEAT") staff leaders to lead and advance their respective unit's equity efforts, and
46 while these leaders' expertise have made great strides toward spearheading initiatives and setting
47 structures for equitable work, staff are faced with limited time, capacity, resources on top of competing
48 priorities with tight deadlines. Some BUs have identified these issues, and a few have created
49 opportunities for cross unit engagements to foster collaboration and reignite responsibility toward AMA's

1 equity goals. As an organization, there is a keen interest in solidifying an enterprise-wide equitable
2 workplace foundation and investing efforts toward strategic operationalizing of AMA's equity goals.

3
4 CONCLUSION

5
6 The highlighted accomplishments in this report capture only a fraction of the work accomplished and
7 lessons learned within 2023. AMA staff have devoted countless hours to not only learning how they can
8 work together to advance health equity but also to applying what they have learned within and outside the
9 organization. AMA continues to push forward in its quest to advance health equity and embed racial and
10 social justice, making significant progress towards fulfilling its commitments outlined in its 2021-2023
11 Strategic Plan.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 12-A-24

Subject: AMA Efforts on Medicare Payment Reform

Presented by: Willie Underwood, III, MD, MSc, MPH, MD, Chair

1 BACKGROUND

2

3 At the 2023 American Medical Association (AMA) Annual Meeting of the House of Delegates
4 (HOD), the HOD adopted Policy – D-385.945, “Advocacy and Action for a Sustainable Medical
5 Care System” and amended Policy D-390.922, “Physician Payment Reform and Equity.” Together,
6 they declare Medicare physician payment reform as an urgent advocacy and legislative priority, call
7 on the AMA to implement a comprehensive advocacy campaign, and for the Board of Trustees (the
8 Board) to report back to the HOD at each Annual and Interim meeting highlighting the progress of
9 our AMA in achieving Medicare payment reform until predictable, sustainable, fair physician
10 payment is achieved. The Board has prepared the following report to provide an update on AMA
11 activities for the year to date. (Note: This report was prepared in mid-March based on approval
12 deadlines, so more recent developments may not be reflected in it.)

13

14 AMA ACTIVITIES ON MEDICARE PHYSICIAN PAYMENT REFORM

15

16 The AMA’s Medicare physician payment reform efforts were initiated early in 2022, following the
17 development of a set of principles outlining the “Characteristics of a Rational Medicare Payment
18 System” that was endorsed by 124 state medical associations and national medical specialty
19 societies. These principles identified strategies and goals to: (1) ensure financial stability and
20 predictability for physician practices; (2) promote value-based care; and (3) safeguard access to high
21 quality care.

22

23 Subsequently, the AMA worked with Federation organizations to identify four general strategies to
24 reform the Medicare payment system, including:

25

- 26 • Automatic annual payment updates based on the Medicare Economic Index (MEI);
- 27 • Updated policies governing when and how budget neutrality adjustments are made;
- 28 • Simplified and clinically relevant policies under the Merit-based Incentive Payment System
29 (MIPS); and
- 30 • Greater opportunities for physician practices wanting to transition to advanced alternative
31 payment models (APMs).

32

33 At the heart of the AMA’s unwavering commitment to reforming the Medicare physician payment
34 system lie four central pillars that underscore our strategic approach: legislative advocacy,
35 regulatory advocacy, federation engagement, and grassroots, media, and outreach initiatives.
36 Grounded in principles endorsed by a unified medical community, our legislative efforts drive the
37 advancement of policies that foster payment stability and promote value-based care. We actively
38 champion reform through regulatory channels, tirelessly engaging with crucial agencies such as the
39 Centers for Medicare & Medicaid Services (CMS) and the White House to address impending
40 challenges and ensure fair payment policies. Our federation engagement fosters unity and consensus

1 within the broader medical community, pooling resources and strategies to amplify our collective
2 voice. Lastly, our continued grassroots, media, and outreach efforts bridge the gap between
3 policymakers and the public, ensuring our mission is well-understood and supported from all
4 quarters. Together, these pillars fortify our endeavors to achieve a more rational Medicare physician
5 payment system that truly benefits all.

6
7 *Legislative Advocacy*

8
9 As a result of the continued advocacy efforts of the AMA and larger physician community and
10 direct engagement with Congress, a collection of influential Dear Colleague letters and
11 commonsense legislative reforms have been introduced that build upon “Characteristics of a
12 Rational Medicare Physician Payment System” including:

13
14 H.R. 2474, the Strengthening Medicare for Patients and Providers Act, introduced on April 14, 2023
15 by Reps. Raul Ruiz, MD (D-Calif.), Larry Bucshon, MD (R-Ind.), Ami Bera, MD (D-Calif.) and
16 Mariannette Miller-Meeke, MD (R-Iowa), would automatically update the Medicare physician
17 payment schedule each year by Medicare’s annual estimate of practice cost inflation, the MEI. H.R.
18 2474 currently has 126 bipartisan cosponsors.

19
20 On July 28, 2023, a bipartisan group of 101 U.S. House of Representatives members sent a letter to
21 House leadership on the need to prioritize Medicare physician payment reform, following extensive
22 grassroots support from the AMA and members of the Federation.

23
24 H.R. 6371, the Provider Reimbursement Stability Act, introduced on November 13, 2023 by Rep.
25 Greg Murphy, MD (R-N.C.) and 14 original cosponsors, would reform the Medicare Physician Fee
26 Schedule (MPFS) budget neutrality policies by: (1) requiring CMS to reconcile inaccurate
27 utilization projections based on actual claims and prospectively revise the conversion factor (CF)
28 accordingly; (2) raise the threshold that triggers a budget neutrality adjustment from \$20 million to
29 \$53 million and increase it every five years by the cumulative increase in the MEI; (3) require the
30 direct inputs for practice expense relative value unit (i.e., clinical wages, prices of medical supplies
31 and prices of equipment) to be reviewed concurrently and no less often than every five years; and
32 (4) require CMS to limit positive or negative budget neutrality adjustments to the CF to 2.5 percent
33 each year. In November of 2023, the House Committee on Energy and Commerce advanced select
34 provisions of H.R. 6371 to reform fee schedule budget neutrality policies.

35
36 H.R. 5013/S. 3503, the Value in Health Care (VALUE) Act, introduced on July 28, 2023 by Reps.
37 Darin LaHood (R-Ill.) and Suzan DelBene (D-Wash.) in the House and Senators Whitehouse (D-
38 R.I.) and Barrasso (R-Wyo.) in the Senate on December 13, 2023, would extend the 5 percent APM
39 bonus and maintain the 50 percent revenue threshold for two years.

40
41 In November of 2023, the Senate Committee on Finance and the House Committee on Energy and
42 Commerce advanced legislation to offset a portion (1.25 percent) of the 2024 CF cuts as well as to
43 partially extend the APM bonus and maintain the current revenue threshold required for the
44 bonuses. During these markups, members of both committees discussed the need for Medicare
45 payment reform at length and secured pledges from the chairs to address the issue in earnest in
46 2024.

47
48 H.R. 6683, the Preserving Seniors’ Access to Physicians Act, introduced on December 8, 2023 by
49 Reps. Greg Murphy, MD (R-N.C.), Danny Davis (D-Ill.), Brad Wenstrup (R-Ohio), Michael
50 Burgess, MD (R-Texas), Jimmy Panetta (D-Calif.) and Larry Bucshon, MD (R-Ind.), would provide

1 full, short-term relief from the 3.37 percent cut imposed in 2024 due to the budget neutrality policies
2 medicine is seeking to reform.

3
4 Nearly 200 bipartisan members of Congress cosigned a Dec. 13 [letter](#) led by Representatives
5 Mariannette Miller-Meeks, MD (R-IA), Ami Bera, MD (D-CA), Larry Bucshon, MD (R-IN) and
6 Kim Schrier, MD (D-WA) urging House and Senate leadership to expeditiously pass legislation to
7 address looming 2024 Medicare payment cuts. Absent congressional intervention, Medicare
8 physician payments will be reduced by 3.37 percent on Jan. 1, 2024, due to budget neutrality
9 requirements within the Calendar Year 2024 MPFS Final Rule.

10
11 On Feb. 9, Senators Cortez Masto (D-NV), Blackburn (R-TN), Thune (R-SD), Barrasso (R-WY),
12 Stabenow (D-MI) and Warner (D-VA) announced the formation of a bipartisan Medicare payment
13 reform working group. The primary goal of this working group is to explore the current problems
14 with the MPFS, propose long-term solutions and make the necessary updates to the Medicare
15 Access and Chip Reauthorization Act (MACRA), which sets physician payment policies in the
16 Medicare program. The AMA will serve as a resource to the Senate working group.

17
18 On February 23, 2024, Senators John Boozman (R-AR) and Peter Welch (D-VT) along with 30
19 Senators colleagues sent a Dear Colleague [letter](#) calling on Senate leadership to advance a
20 legislative solution to create stability in the Medicare program by addressing the 2024 cut to
21 Medicare payments and ensure that physicians and clinicians have the necessary financial support to
22 care for the nation's seniors.

23
24 The Consolidated Appropriations Act, 2024, H.R. 4366, which passed the House of Representatives
25 and the Senate and was signed into law by President Biden on March 8, included provisions
26 reducing by about half —1.68 percent —of the 3.37 percent across-the-board Medicare physician
27 pay cut that took effect on January 1. The new pay rate took effect on March 9.

28
29 The legislation also included an extension of incentive payments for participation in eligible
30 alternative payment models at a reduced rate of 1.88 percent and maintained the threshold
31 requirements to qualify for such payments.

32
33 The AMA issued a statement expressing extreme disappointment that about half of the 2024
34 Medicare physician payment cuts required by the Medicare Fee Schedule will be allowed to
35 continue. The AMA conveyed that failure to reverse these cuts will impact access to high quality
36 care and physicians will find it more difficult to accept new Medicare patients.

37
38 The AMA will continue to work with Congress and the administration to build bipartisan support in
39 Congress for a proposal that will put an end to the annual cycle of Medicare cuts that threaten
40 seniors' access to care. Bipartisan support for the aforementioned legislative proposals continues to
41 grow among rank-and-file Members of Congress. However, the need for further advocacy remains
42 to push the relevant Committees and Congressional leadership to make Medicare physician payment
43 reform a top priority.

44
45 The AMA is also in the process of finalizing legislative language that would: (1) simplify MIPS
46 reporting and improve its clinical relevance; (2) reduce the potential severity of penalties (currently
47 as much as -nine percent) for those scoring poorly under MIPS; (3) provide support to smaller
48 practices that tend to score lower under the program; and (4) provide timely and meaningful
49 performance feedback to physicians and expand the use of clinical data registries.

1 In addition to regular interactions with members of Congress and their staff by Advocacy staff, the
2 AMA has sent a number of letters and statements to Capitol Hill, including the following:

- 3
- 4 • 1/2/23 - signed on a physician/allied health professions [letter](#) to Congressional committees
- 5 requesting MACRA oversight hearings;
- 6 • 2/13/23 - signed on a coalition [letter](#) to committees on value-based care;
- 7 • 3/15/23 - a sign on [letter](#) developed by the AMA was sent to Congress regarding the
- 8 Medicare Payment Advisory Committee (MedPAC) recommendation for an inflation-based
- 9 update;
- 10 • 3/20/23 - an AMA [statement](#) was filed for the Senate Health, Education, Labor and Pensions
- 11 Committee’s health care workforce hearing, highlighting the impact of declining Medicare
- 12 payments on the physician workforce;
- 13 • 4/19/23 - a sign on [letter](#) developed by the AMA was sent to the House expressing support
- 14 for H.R. 2474;
- 15 • 5/3/23 - signed on a physician/allied health professions [letter](#) to Congress in support of H.R.
- 16 2474;
- 17 • 6/21/23 - the AMA submitted a [letter](#) for the record for a hearing by the House Energy &
- 18 Commerce Oversight & Investigations Subcommittee on MACRA;
- 19 • 10/5/23 - the AMA [responded](#) to the Ways & Means Committee’s Request for Information
- 20 on ways to improve health care in rural and underserved areas;
- 21 • 10/19/23 - the AMA submitted a [statement](#) for the Record to the U.S. House of
- 22 Representatives Committee on Energy and Commerce Subcommittee on Health as part of
- 23 the hearing entitled “What’s the Prognosis? Examining Medicare Proposals to Improve
- 24 Patient Access to Care & Minimize Red Tape for Doctors.”
- 25 • 12/11/23 - the AMA [wrote](#) in strong support of H.R. 6683, the “Preserving Seniors’ Access
- 26 to Physicians Act,” bipartisan legislation that blocks another round of damaging Medicare
- 27 payment cuts;
- 28 • 1/17/24 - the AMA organized national medical organizations and state medical societies to
- 29 write a [letter](#) strongly urging Congress to quickly pass legislation to reverse the 3.37 percent
- 30 Medicare physician payment cuts that took effect on January 1, 2024.

31
32 *Regulatory Advocacy*

33
34 In anticipation of a new round of budget neutrality adjustments expected in 2024 due to
35 implementation of the G2211 code for complex office visits, the AMA had a multitude of meetings
36 with officials at CMS, the Department of Health and Human Services (HHS), and the White House
37 to discuss options for reducing the severity of the adjustment—and to argue whether any adjustment
38 is needed at all.

39
40 The proposed rule on the 2024 Medicare physician fee schedule that was released on July 13 revised
41 the utilization estimate for G2211 that they used to calculate the budget neutrality adjustment from
42 the 90 percent previously announced in 2021 to 38 percent, significantly reducing the impact on
43 payments.

44
45 The AMA also secured another hardship exemption that physicians can claim under MIPS to avoid
46 up to -nine percent in performance penalties in 2025.

47
48 On November 2, 2023, the CMS released the 2024 Medicare Physician Payment Schedule final rule
49 reducing the 2024 Medicare CF by 3.37 percent. These cuts result from a -1.25 percent reduction in
50 the temporary update to the CF under current law and a negative budget neutrality adjustment
51 stemming in large part from the adoption of the new G2211 office visit add-on code. Unfortunately,

1 these cuts coincide with ongoing growth in the cost to practice medicine as CMS projects a 4.6
2 percent Medicare Economic Index (MEI) increase for 2024.

3
4 Despite comments from the AMA and others that the G2211 add-on code is ambiguous and there is
5 uncertainty about when to report it, CMS did not further reduce the utilization estimate or the
6 associated budget neutrality impact. Specifically, CMS maintained its estimate from the proposed
7 rule that the add-on code will be reported with 38 percent of office visits in 2024.

8
9 Notably, in response to organized medicine’s advocacy, CMS maintained the performance threshold
10 to avoid a penalty in the Merit-based Incentive Payment System (MIPS) at 75 points in 2024. As a
11 result, 78 percent of eligible clinicians are expected to avoid a MIPS penalty in 2026, a significant
12 improvement from CMS’ earlier projection that just over half of eligible clinicians would avoid a
13 penalty in the proposed rule.

14 15 *Federation Engagement*

16
17 A Medicare Reform Workgroup comprised of staff from national medical specialty societies and
18 state medical associations was organized in 2022 and has continued to meet to develop consensus on
19 medicine’s reform proposals and advocacy strategies. The AMA also participates in a second
20 coalition, organized by the American College of Radiology, which involves non-physician clinicians
21 who bill under the Medicare fee schedule to expand our reach and minimize potential for divergent
22 proposals and strategies.

23
24 Periodic telephone conference calls are held with staff for Federation organizations to keep them
25 apprised of developments in Washington and to elicit their support for grassroots efforts.

26 27 *Grassroots, Media, and Outreach*

28
29 The AMA has maintained a continuous drumbeat of grassroots contacts through its Physicians
30 Grassroots Network, Patients Advocacy Network, and its Very Influential Physicians program. Op
31 eds have been placed in various publications from AMA leaders, as well as from “grasstops”
32 contacts in local newspapers. Digital advertisements are running, targeted specifically to
33 publications read on Capitol Hill, and media releases have been issued to highlight significant
34 developments.

35
36 The AMA relaunched a dedicated Medicare payment reform web site, www.FixMedicareNow.org,
37 which includes a range of AMA-developed advocacy resource material, updated payment graphics
38 and a new “Medicare basics” series of papers describing in plain language specific challenges
39 presented by current Medicare payment policies and recommendations for reform.

1 Message testing of arguments made in support and opposition to Medicare payment reform was
2 completed in late 2023. Focus groups of U.S. voters were conducted in June, and a national poll was
3 launched in late July. The results of this message testing have been utilized to refine language used
4 in earned and paid media, as well as patient grassroots outreach.

5
6 CONCLUSION

7
8 As we forge ahead in continued partnership with the Federation to advance organized medicine's
9 collective goals in our strategic mission to reshape the Medicare physician payment system, the
10 AMA remains unwavering in its commitment to successfully pursuing the four pillars discussed in
11 this report. Our steadfast dedication ensures that our members' voices are heard, and that we
12 advocate for a system that is fair, sustainable, and reflective of the value physicians bring to patient
13 care.

14
15 Facing a nearly 10 percent reduction in Medicare payments over the past four years, physicians are
16 at a breaking point and are struggling to maintain access to care for the Medicare beneficiaries they
17 treat. Rising practice costs, workforce shortages, and financial uncertainty coupled with the
18 continued lack of positive Medicare payment updates is threatening the viability of physician
19 practices. This is unsustainable and unacceptable.

20
21 While there has been some progress so far in 2024, significant advocacy work remains in the year
22 ahead and beyond to achieve our vision of Medicare physician payment reform.

23
24 Please follow Advocacy Update, join the Physicians Grassroots Network, visit
25 www.FixMedicareNow often for updated material and alerts, and follow other AMA
26 communications vehicles to stay up to date and engaged on this topic.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 20-A-24

Subject: Criminalization of Providing Medical Care
(Res. 015-A-23)

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

1 At the 2023 Annual Meeting of the House of Delegates (HOD), the HOD adopted Resolution 015 -
2 A-23 entitled, “Report Regarding the Criminalization of Providing Medical Care,” which instructed
3 the American Medical Association (AMA) to:

4
5 [S]tudy the changing environment in which some medical practices have been
6 criminalized including the degree to which such criminalization is based or not
7 based upon valid scientific findings, the degree to which this is altering the actual
8 practice of medicine due to physician concerns and personal risk assessment, and
9 the degree to which hospitals and health care systems are responding to this rapidly
10 changing environment, with report back to the HOD no later than the November
11 2023 Interim meeting.

12
13 This report is submitted for the information of the HOD.

14
15 BACKGROUND

16
17 *Abortion*

18
19 On June 24, 2022, the U.S. Supreme Court issued its landmark decision in *Dobbs v. Jackson*
20 *Women’s Health Organization*, holding that the U.S. Constitution does not confer a constitutional
21 right to abortion and returned the authority to regulate abortion to the states. As of the writing of
22 this report in March 2024, 14 states (Alabama, Arkansas, Idaho, Indiana, Kentucky, Louisiana,
23 Mississippi, Missouri, North Dakota, Oklahoma, South Dakota, Tennessee, Texas, and West
24 Virginia) prohibit the provision of nearly all abortions, two states (Georgia and South Carolina)
25 prohibit abortion after fetal cardiac activity is detected around six weeks of pregnancy, and nine
26 states (Arizona, Florida, Iowa, Kansas, Nebraska, North Carolina, Ohio, Utah, and Wisconsin)
27 prohibit abortion later in pregnancy, but before the point at which a fetus is generally considered
28 viable. Many of those latter nine states have passed laws prohibiting abortion earlier in pregnancy
29 that have been blocked in court. Importantly, the status of state abortion laws is fluid. Legal
30 challenges are ongoing in nearly two dozen states and the legality of abortion in those states is
31 subject to change.

32
33 At the time the *Dobbs* decision was published, 13 states had abortion prohibitions that predated the
34 *Roe v. Wade* decision or so-called “trigger laws” that became effective upon the overruling of *Roe*,
35 including several that were enacted in 2022 just prior to the *Dobbs* decision. In August 2022, the
36 Indiana legislature became the first in the country to pass a post-*Dobbs* abortion ban. West Virginia
37 followed in September 2022, and in 2023, seven states enacted new abortion bans. North Dakota
38 and Wyoming enacted near-total bans; Florida, Iowa, and South Carolina enacted six-week bans;

1 and Nebraska and North Carolina enacted 12-week bans. Not all the newly enacted laws are in
2 effect.

3
4 Some, but not all, state abortion bans are punishable with criminal penalties. In other states,
5 violations are subject to professional discipline up to mandatory revocation of the health care
6 professional's license. Some also authorize civil enforcement of abortion bans by private citizens,
7 though courts have declined to authorize those suits.

8
9 Each state abortion ban contains an exception or affirmative defense, under specified conditions,
10 when abortion is necessary to preserve the life of pregnant women and other pregnant patients.
11 Most, but not all of the states' laws, also contain exceptions or affirmative defenses when abortion
12 is necessary to prevent serious health consequences (e.g., "serious and irreversible impairment of a
13 major bodily function"). Some laws also contain exceptions or affirmative defenses in cases where
14 the pregnancy was due to rape or incest or when the fetus is diagnosed with a serious condition
15 incompatible with life.

16
17 These exceptions, however, are not crafted in a way that aligns with the complexity of medical
18 practice and have led to significant confusion about how to practice medicine when pregnancy
19 complications arise. As a result, physicians report significant uncertainty in navigating the new
20 restrictions and describe a chilling effect on the practice of medicine that extends beyond obstetrics
21 and gynecology into a range of specialties including emergency medicine, oncology, rheumatology,
22 cardiology, psychiatry, and others. The AMA is not aware of data that can reliably quantify the
23 degree to which medical practice has been altered in response to abortion restrictions but
24 understands the impact on physicians, their practice, and their patients to be immense. Media
25 reports have profiled numerous patients who describe harrowing experiences in which they
26 suffered preventable medical complications because legal restrictions prevented medical
27 professionals from providing recommended treatment. Similarly, in a lawsuit seeking to clarify the
28 scope of Texas' medical emergency exception, 22 women describe being denied medically
29 necessary and potentially lifesaving treatment when they were experiencing medical emergencies
30 during their pregnancies.¹ To better track these cases, researchers at the University of California in
31 San Francisco have undertaken a study, "*The Care Post-Roe Study*," to collect stories from
32 clinicians about how abortion laws have altered the usual standard of care. In May 2023,
33 preliminary findings described 50 cases in which abortion laws resulted in delays, worsened health
34 outcomes, and increased the cost and logistic complexity of care.² Additionally, qualitative research
35 published in January 2024 reported on obstetrician-gynecologists' perceived impacts of abortion
36 bans.³ The 54 research participants described delays in medical care, institutional restrictions on
37 referrals and patient counseling, and inability to provide appropriate medical care. The research
38 also reported high rates of moral distress and other personal impacts among the participants.

39
40 Risk-averse hospitals and institutional policies are also likely to contribute to changes in medical
41 practice. In May 2023, the Centers for Medicare & Medicaid Services announced investigations
42 into two Missouri hospitals that allegedly withheld necessary stabilizing care to a pregnant patient
43 experiencing preterm premature rupture of membranes in violation of the Emergency Medical
44 Treatment and Labor Act.⁴ The government's announcement stated that, in one situation, although
45 the patient's doctors advised her that her pregnancy was no longer viable and her condition could
46 rapidly deteriorate, they could not provide her with the care that would prevent infection,
47 hemorrhage, and potentially death due to hospital policies. Physicians have described other similar
48 hospital policies in which non-clinicians determine whether and at what point abortion care may be
49 provided.

1 Though abortion bans may be altering the treatment of pregnancy complications, available data
2 indicate that abortion bans have not reduced the total number of abortions provided but have
3 shifted the geographic distribution of abortion care. The #WeCount initiative led by the Society for
4 Family Planning reported that from July 2022 to June 2023 the number of clinician-provided
5 abortions increased modestly, with a monthly average of 82,115 abortions before the *Dobbs*
6 decision and a monthly average of 82,298 in the 12 months after the *Dobbs* decision.⁵ As
7 anticipated, states with abortion bans reported significant declines in the number of abortions
8 provided after *Dobbs*, with 14 states experiencing a 100 percent decrease. Accordingly, the number
9 of live births has risen in places that ban abortion. Research published in November 2024 estimated
10 that, in the first six months of 2023, births rose by an average of 2.3 percent in ban states compared
11 to states where abortion remained legal.⁶ The authors estimated that roughly one-fifth to one-fourth
12 of people seeking abortions did not receive them due to bans. Another study from the Johns
13 Hopkins Bloomberg School of Public Health estimated that nearly 9,800 additional live births
14 occurred in Texas in the year after the state's abortion ban took effect.⁷

15
16 Conversely, health care professionals in states that do not severely restrict access to abortion have
17 reported an increase in demand for abortion care from out-of-state patients, as well as greater
18 complexity of cases and abortion care, sought later in pregnancy. The #WeCount initiative reported
19 in October 2023 that the increase in abortions provided in these states was greater than the decrease
20 of abortion provided in restrictive states and notes that much of the increase has been in states that
21 border restrictive states.

22
23 Abortion bans are also likely to impact the physician workforce. Though data is not available, there
24 have been anecdotal reports of individual physicians opting to leave states with restrictive laws.
25 Similarly, two hospitals in Idaho closed their labor and delivery units, citing difficulties in
26 recruiting staff and the hostile legal environment.⁸ The American Association of Medical Colleges
27 (AAMC) also reported that obstetrics and gynecology residency applications declined significantly
28 in states that have banned abortion.⁹ AAMC posits that restrictive abortion laws may deter
29 applicants from applying to programs in those jurisdictions.

30
31 The AMA is not aware of any investigation, criminal prosecution, or medical board disciplinary
32 action taken against a physician for the illegal provision of abortion in a state with a strict
33 prohibition. The lack of enforcement action coupled with the data described above from restrictive
34 states suggests that physicians are complying with the laws and have ceased providing prohibited
35 abortion care except when a legally recognized exception applies.

36 37 *Gender-affirming Care for Minor Patients*

38
39 As of the writing of this report in March 2024, 23 states have enacted bans on gender-affirming
40 care for minor patients. Twenty-one states (Alabama, Arkansas, Florida, Georgia, Iowa, Idaho,
41 Indiana, Kentucky, Louisiana, Mississippi, Montana, Missouri, North Carolina, North Dakota,
42 Ohio, Oklahoma, South Dakota, Tennessee, Texas, Utah, and West Virginia) broadly prohibit the
43 provision of gender-affirming care to minor patients, including medications to delay puberty,
44 hormonal therapy, and surgeries. Two states (Arizona and Nebraska) prohibit surgical interventions
45 on patients younger than 18 years of age but do not ban non-surgical interventions. Legislative
46 prohibitions on gender-affirming care have been relatively recent developments. The Arkansas
47 legislature enacted the first such law in 2021, followed in 2022 with legislation in Alabama and
48 Arizona and administrative action in Florida and Texas. Twenty-two states then enacted bans in
49 2023 and 2024.

1 Among the 23 states that prohibit providing gender-affirming care to minors, some, but not all,
2 impose criminal penalties for violations. In other states, violations are subject to professional
3 discipline, including, in some places, mandatory revocation of the health care professional's
4 license. Several state laws also authorize patients and their families to bring civil suits against
5 health care professionals for decades after the care was provided.

6
7 Some laws have been successfully challenged in court. Arkansas's law has been permanently
8 enjoined, and laws in Florida, Idaho, and Montana have been temporarily enjoined in whole or part.
9 Like abortion laws, the status of laws regulating the provision of gender-affirming care is subject to
10 change as legal challenges progress.

11
12 At the start of 2023, no law was in effect that broadly prohibited gender-affirming care for minors,
13 though some clinicians and institutions, including in Texas and Tennessee, paused care for minors
14 in response to political pressure.¹⁰ Many laws have since gone into effect, but the full impact is not
15 yet known. It is reasonable to expect that physicians will cease to provide gender-affirming care to
16 their minor patients in compliance with state law. It is also expected that the impact may extend to
17 services provided to transgender adults, as well. For instance, the University of Mississippi
18 Medical Center, which also treated adults, recently closed its gender clinic in response to legislative
19 activity.¹¹ Conversely, health care professionals in states that protect gender-affirming care may
20 experience increased demand for services. In contrast to abortion services, however, gender-
21 affirming care generally requires ongoing treatment and monitoring, which could complicate
22 patients' ability to travel to distant locations for care. Additionally, while the impact of state laws
23 on patients and the LGBTQ+ community is immense, those patient outcomes are beyond the scope
24 of this report.

25 *Treatment of Patients with Pain and those with a Substance Use Disorder*

26
27
28 The nation's overdose and death epidemic was—and continues to be—driven by a complex set of
29 factors, including the current dominance of illicitly manufactured fentanyl; illicit use of drugs such
30 as heroin, cocaine, and methamphetamine; new toxic adulterants such as xylazine and nitazenes;
31 and a lack of access to evidence-based care for pain or a substance use disorder. The history of the
32 epidemic also includes actions of physicians and other health care professionals essentially
33 engaging in drug dealing through what is colloquially termed, “pill mills.”¹² As part of its
34 enforcement efforts, several years ago, the U.S. Department of Justice Criminal Division launched
35 a “Prescription Strike Force,” which targets “Medicare Part-D fraud and other schemes involving
36 false or fraudulent representations related to prescription medications, in addition to the illegal
37 prescribing, distribution, and diversion of pharmaceutical-grade controlled substances.”¹³ The U.S.
38 Drug Enforcement Administration (DEA) regularly issues news releases highlighting convictions
39 and other actions against physicians, nurse practitioners and pharmacists for crimes related to
40 “illegally prescribing opioids.”¹⁴

41
42 The AMA continues to be concerned about how the actions of the DEA and others in law
43 enforcement have led to what has been referred to as a “chilling effect” in treating patients with
44 pain. In a qualitative review of interviews with 20 West Virginia physicians, the review authors
45 found that physicians' feared discipline even as opioid prescribing was decreasing. Specifically,
46 physicians “felt that taking on patients who legitimately required opioids could jeopardize their
47 career.”¹⁵ Stories of patient harm and physician fear are abundant and disturbing to read.¹⁶ But it is
48 important to note that government intrusion into the practice of treating patients with pain or with a
49 substance use disorder has existed for more than 100 years.¹⁷ The Board of Trustees feels strongly
50 that the AMA must continue its decades-long tradition of strongly advocating against third-party

1 intrusion, which includes but is not limited to government intrusion, into the patient-physician
2 relationship.

3
4 Notably, ensuring access to evidence-based care for patients with pain or with a substance use
5 disorder remains top priorities for the work of the AMA and the AMA Substance Use and Pain Care
6 Task Force (SUPCTF). AMA advocacy was vital to securing revisions to the 2016 Centers for
7 Disease Control and Prevention (CDC) opioid prescribing guideline. AMA advocacy remains
8 critical in advocating against misapplication of the 2016 CDC opioid prescribing guideline by
9 payers, states, pharmacy chains, pharmacy benefit managers, and others. AMA advocacy also
10 continues to work to remove all barriers to treatment for substance use disorders. This includes
11 helping to lead the national discussion that unequivocally advocates for the understanding that
12 substance use disorders are medical diseases and not moral failings. The Board of Trustees is
13 grateful to the organizations in the SUPCTF for their partnership in furthering these efforts.

14
15 Ultimately, it is difficult to specifically quantify the degree to which fear of law enforcement in
16 treating pain or substance use disorders has altered the actual practice of medicine. There is ample
17 anecdotal evidence, but limited research about physician concerns and personal risk assessment.
18 The fear is real, and our colleagues and patients have suffered as a result. In response, AMA will
19 continue to advance its policy opposing third-party/government intrusion into individualized
20 patient care decisions.

21 22 DISCUSSION

23
24 Opposing third-party intrusion into the practice of medicine (including but not limited to
25 governmental intrusion) has long been a core priority for the AMA. The AMA continues to execute
26 a multifaceted strategy, including engagement with policymakers at the state and federal levels,
27 judicial advocacy, and more, to counter the deleterious impact of legislative efforts to criminalize
28 the practice of medicine. The AMA Advocacy Resource Center continues to work extensively with
29 state medical associations and national medical specialty societies, both publicly and behind-the-
30 scenes, to oppose state laws and regulations targeting the practice of medicine.

31
32 Additionally, development of the AMA Task Force to Preserve the Patient-Physician Relationship
33 When Evidence-Based, Appropriate Care Is Banned or Restricted (Task Force), established by the
34 HOD during the 2022 Annual Meeting, is in progress and the Task Force will update the HOD on
35 its activities, as instructed in Policy D-5.998, "Support for Physicians Practicing Evidence-Based
36 Medicine in a Post Dobbs Era." The Task Force is well-suited to address the issues raised in this
37 report and will help guide organized medicine's response to the criminalization of medical practice,
38 as well as identify and create implementation-focused practice and advocacy resources on the
39 issues identified in Policy G-605.009, "Establishing A Task Force to Preserve the Patient-Physician
40 Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted," including but not
41 limited to:

- 42
43 1. Health equity impact, including monitoring and evaluating the consequences of abortion
44 bans and restrictions for public health and the physician workforce and including making
45 actionable recommendations to mitigate harm, with a focus on the disproportionate impact
46 on under-resourced, marginalized, and minoritized communities;
- 47
48 2. Practice management, including developing recommendations and educational materials
49 for addressing reimbursement, uncompensated care, interstate licensure, and provision of
50 care, including telehealth and care provided across state lines;

- 1 3. Training, including collaborating with interested medical schools, residency and fellowship
2 programs, academic centers, and clinicians to mitigate radically diminished training
3 opportunities;
4
- 5 4. Privacy protections, including best practice support for maintaining medical records
6 privacy and confidentiality, including under HIPAA, for strengthening physician, patient,
7 and clinic security measures, and countering law enforcement reporting requirements;
8
- 9 5. Patient triage and care coordination, including identifying and publicizing resources for
10 physicians and patients to connect with referrals, practical support, and legal assistance;
11
- 12 6. Coordinating implementation of pertinent AMA policies, including any actions to protect
13 against civil, criminal, and professional liability and retaliation, including criminalizing
14 and penalizing physicians for referring patients to the care they need;
15
- 16 7. Anticipation and preparation, including assessing information and resource gaps and
17 creating a blueprint for preventing or mitigating bans on other appropriate health care, such
18 as gender affirming care, contraceptive care, sterilization, infertility care, and management
19 of ectopic pregnancy and spontaneous pregnancy loss and pregnancy complications; and
20
- 21 8. Making recommendations including policies, strategies, and resources for physicians who
22 are required by medical judgment and ethical standards of care to act against state and
23 federal laws.
24

25 CONCLUSION

26
27 The Board of Trustees reiterates its support and gratitude for physicians and all health care
28 professionals who confront the reality of law enforcement or other government intrusion into
29 the practice of medicine. These intrusions have sometimes caused irreparable harms to
30 physicians and patients across the United States. The AMA recognizes that law enforcement
31 plays an important role in our society, but it should not in the exam room, operating suite, or
32 any other patient-physician encounter. Whether it is through the Task Force to Preserve the
33 Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or
34 Restricted to protect access to reproductive rights and gender-affirming care, the Substance Use
35 and Pain Care Task Force to enhance evidence-based care for patients with pain or a substance
36 use disorder; or other areas that must confront the criminalization of health care, the AMA will
37 continue to fight to protect and preserve the sacred nature of the patient-physician relationship.

EXECUTIVE SUMMARY

BACKGROUND: Policy D-440.922, “Full Commitment by our AMA to the Betterment and Strengthening of Public Health Systems,” adopted by House of Delegates at I-21 directed our American Medical Association (AMA) to develop an organization-wide strategy on public health including ways in which the AMA can strengthen the health and public health system infrastructure and report back regularly on progress. Policy D-145.992, “Further Action to Respond to the Gun Violence Public Health Crisis” has called for the AMA to report annually to the House of Delegates on our AMA’s efforts relating to legislation, regulation, and litigation at the federal, state, and local levels to prevent gun violence. This informational report is an effort to provide regular updates on the status of the AMA’s mission critical public health work to the HOD. Note that updates on the AMA’s work on climate change, firearm violence, and the mental health crisis were provided at I-23.

DISCUSSION

The AMA’s current priorities around public health are as follows:

1. Promote evidence-based clinical and community preventive services.
2. Respond to public health crises impacting physicians, patients, and the public. This includes addressing the threat of climate change, preventing firearm injuries and deaths, being prepared for emerging and remerging infectious disease threats, and ending the nation’s drug overdose epidemic.
3. Strengthen the health system through improved collaboration between medicine and public health.
4. Combat the spread of misinformation and disinformation.

CONCLUSION

The AMA continues to advance its mission, to promote the art and science of medicine and the betterment of public health. The highlighted accomplishments in this report capture a fraction of the work accomplished from March of 2023 – March of 2024 related to the AMA’s public health strategy.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 22-A-24

Subject: AMA Public Health Strategy: Update

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

1 BACKGROUND

2
3 Policy D-440.922, “Full Commitment by our AMA to the Betterment and Strengthening of Public
4 Health Systems” adopted by House of Delegates (HOD) at I-21 directed our American Medical
5 Association (AMA) to:

6
7 develop an organization-wide strategy on public health including ways in which the AMA can
8 strengthen the health and public health system infrastructure and report back regularly on
9 progress.

10
11 Policy D-145.992, “Further Action to Respond to the Gun Violence Public Health Crisis” has also
12 called for the AMA to report annually to the House of Delegates on our AMA’s efforts relating to
13 legislation, regulation, and litigation at the federal, state, and local levels to prevent gun violence.

14
15 This informational report is an effort to provide regular updates on the status of the AMA’s mission
16 critical public health work to the HOD. Note that updates on the AMA’s work on climate change,
17 firearm violence, and the mental health crisis were provided at I-23.

18
19 DISCUSSION

20
21 *What is Public Health?*

22
23 Since its founding in 1847, the AMA’s mission has been “to promote the art and science of
24 medicine and the betterment of public health.” According to the Centers for Disease Control and
25 Prevention (CDC), public health is “the science and art of preventing disease, prolonging life, and
26 promoting health through the organized efforts and informed choices of society, organizations,
27 public and private communities, and individuals.”¹ Public health promotes and protects the health
28 of people and the communities where they live, learn, work and play.² Public health practice is a
29 different field than clinical medicine with different motivating values, responsibilities, and goals.³
30 While a doctor treats people who are sick, those working in public health try to prevent people
31 from getting sick or injured in the first place. A public health professional’s duty is to the
32 community rather than an individual patient.

33
34 *Connection with Health Equity*

35
36 It is important to acknowledge that health equity is a central concept in public health and is
37 essential to improving the health of populations. The AMA’s health equity strategy recognizes that
38 structural and social drivers of health inequities shape a person’s and community’s capacity to
39 make healthy choices, noting that downstream opportunities provided by the health care system

1 and individual-level factors are estimated to only contribute 20 percent to an individual’s overall
2 health and well-being, while upstream opportunities of public health and its structural and social
3 drivers account for 80 percent of impact on health outcomes.⁴ The AMA develops an annual report
4 on health equity activities. Progress towards the health equity strategy is reported in the BOT’s
5 annual health equity report. (See BOT Report 10, “Center for Health Equity Annual Report.”)
6

7 AMA PUBLIC HEALTH AND PREVENTION ACTIVITIES

8 9 **1. Promote evidence-based clinical and community preventive services.**

10
11 *A. Serve as a liaison to the U.S. Preventive Services Task Force (USPSTF), the Advisory*
12 *Committee on Immunization Practices (ACIP), and the Community Preventive Services Task Force*
13 *(CPSTF) and support the dissemination of recommendations to physicians.*
14

15 In addition to representing the AMA at meetings of these committees and task forces over the last
16 year, the AMA continues to disseminate information on evidence-based preventive services.

17 Examples include:

- 18
- 19 • The Journal of the American Medical Association (JAMA) publishes the recommendations
- 20 of the U.S. Preventive Services Task Force. These recommendations are also featured in
- 21 the AMA Morning Rounds newsletter.
- 22 • On March 6, 2024, Michael Barry, MD, Chair of the USPSTF, joined AMA Update to talk
- 23 about the most impactful final recommendations (new topic to the portfolio, a change in
- 24 grade, or topics that address the prevention of leading causes of death, and garnered
- 25 significant attention) and published between January 1, 2023, and December 31, 2023.
- 26 • Sandra Fryhofer, MD, the AMA’s ACIP Liaison joined the AMA Update podcast
- 27 throughout the year to provide updates to physicians.
 - 28 ○ On June 27, 2023, she shared what physicians need to know about the new
 - 29 recommendations from CDC’s ACIP for RSV vaccines for adults 60 years of age
 - 30 or older.
 - 31 ○ On August 10, 2023, she discussed the details of the new monoclonal antibody
 - 32 immunization recommended to protect babies from RSV. She discussed the details
 - 33 of the immunization including who should get it and what the side effects are.
 - 34 ○ On September 18, 2023, she discussed the ACIP’s recommendation that everyone
 - 35 six months and older receive a dose of the new updated COVID vaccine, the
 - 36 XBB.1.5 monovalent version is the 2023-2024 COVID vaccine.
 - 37 ○ On September 28, 2023, she reviewed the ACIP’s recommendation on RSV
 - 38 vaccine for pregnant people that would protect infants against the respiratory virus.
 - 39 The vaccine is recommended for use in weeks 32 through 36 of pregnancy, using
 - 40 seasonal administration during September through January.
 - 41 ○ On January 16, 2024, she reviewed the new adult vaccine schedule for 2024.
 - 42 ○ On March 8, 2024, she discussed ACIP’s new recommendation in favor of an
 - 43 additional dose of the updated COVID vaccine for all adults 65 and older.
- 44 • On November 6, 2023, Jesse Ehrenfeld, MD, MPH participated in a media event with CDC
- 45 Director, Mandy Cohen, MD, MPH in Chicago to speak with the media about the
- 46 upcoming respiratory virus season and the immunizations available this year to protect
- 47 people from COVID, RSV and flu.
- 48 • The AMA has also submitted amicus briefs in the case of *Braidwood Management v.*
- 49 *Becerra*, a case that challenges the Affordable Care Act’s requirement for private health
- 50 plans to provide people access to free preventive services. Our AMA advocates for (1)

1 health care reform that includes evidence-based prevention insurance coverage for all; (2)
2 evidence-based prevention in all appropriate venues, such as primary care practices,
3 specialty practices, workplaces, and the community.
4

5 *B. Help prevent chronic diseases, with a focus on cardiovascular disease, by addressing major risk*
6 *factors (AMA Strategic Priority led by the Improving Health Outcomes Group)*
7

8 The AMA is committed to improving the health of the nation and reducing the burden of chronic
9 diseases. Our primary focus is preventing cardiovascular disease (CVD), the leading cause of death
10 in the U.S., accounting for 1 in 4 deaths among adults.⁵⁻⁷ Two major risk factors for CVD are
11 hypertension and type 2 diabetes. An estimated 122 million adults have hypertension; 98 million
12 have prediabetes and are at increased risk for developing type 2 diabetes.^{7,8}
13

14 CVD risk factors and associated morbidity and mortality inequitably impact Black,
15 Hispanic/Latinx, Indigenous, Asian/Pacific Islanders, and other people of color. Black adults are
16 more than twice as likely to die of CVD relative to white adults.⁹ Black adults have higher
17 prevalence rates for diabetes compared to Hispanic (22 percent compared to 19 percent).¹⁰ While
18 specific causes of the inequities vary by each respective group; structural and societal barriers are
19 attributed as primary reasons.
20

21 To prevent CVD and address related health inequities, the AMA is developing and disseminating
22 CVD prevention solutions in collaboration with health care and public health leaders. These
23 solutions educate clinical care teams and patients, guide health care organizations (HCOs) in
24 clinical quality improvement and promote policy changes to remove barriers to care. The AMA
25 disseminates these solutions through strategic alliances with various organizations including the
26 CDC, the American Heart Association (AHA), and West Side United in Chicago.
27

28 The AMA MAP™ Hypertension clinical quality improvement program was designed to improve
29 hypertension management and control. The program has been provided to 46 HCOs across 20
30 states since 2019. Among those HCOs, 38 percent were in systems that provide free or low-cost
31 care to historically marginalized populations. The AMA MAP™ set of solutions is expanding to
32 include management for other cardiovascular disease risk factors, including cholesterol,
33 prediabetes, and post-partum hypertension.
34

35 Additionally, in response to the high prevalence of uncontrolled blood pressure and to support
36 physicians in managing their patients' high blood pressure, the AMA, in collaboration with AHA,
37 developed Target: BP™, a national initiative offering a series of online resources, using the latest
38 evidence-based information. Target: BP™ recognizes organizations that have achieved milestones
39 in their commitments to improving blood pressure control. In 2023, Target: BP™ 1,709 HCOs
40 participated in the Target: BP™ Achievement Awards including 868 HCOs that reported control
41 rates greater than or equal to 70 percent and/or 1,493 HCOs that attested to evidence-based blood
42 pressure measurement practices, like using the US Validated Blood Pressure Device Listing
43 (VDL™). Participants came from 47 states or U.S. territories and served about 33 million patients,
44 including 8.6 million people with hypertension.
45

46 AMA Prevent Diabetes houses a suite of tools and resources designed to help organizations build
47 and integrate diabetes prevention strategies into their organizations. AMA has worked with more
48 than 80 health care organizations across the country to increase identification and management of
49 patients with prediabetes. This suite of tools and resources and AMA's related expertise served as
50 the basis for the Bright Spot Model, which provided structure for local initiatives in Philadelphia
51 and North Carolina to advance diabetes prevention. AMA has since transitioned the Bright Spot

1 model to the CDC who is now expanding the reach of the model by funding four organizations
2 with \$10 million for implementation. As part of this implementation, CDC is requiring funded
3 organizations to work with HCOs to implement the AMA Prediabetes Quality Measures. AMA
4 will continue to make our suite of tools and resources available to support this effort.

5
6 In 2023, the AMA in its partnership with the AHA, closed Medicaid coverage gaps to ensure that
7 beneficiaries could receive home blood pressure devices and have their condition monitored by
8 physician-led care teams. The AMA was also successful in closing a Medicare coverage gap;
9 hemoglobin A1c lab tests are now a covered screening test which could result in more high-risk
10 individuals getting screened, diagnosed, and referred to a preventive intervention.

11
12 Another CVD risk is obesity which is associated with cardiovascular disease mortality independent
13 of other cardiovascular risk factors.¹¹ The AMA is working with Federation members including the
14 American College of Physicians and Obesity Medicine Association to identify opportunities to
15 improve access to evidence-based obesity treatments.

16
17 *C. Collaborate with CDC to improve the implementation of routine screening for HIV, STI, Viral*
18 *Hepatitis and latent tuberculosis (LTBI).*

19
20 Through funding from the CDC, the AMA has been engaged in a project entitled, “Promoting HIV,
21 Viral Hepatitis, STDs and LTBI Screening in Hospitals, Health Systems and Other Healthcare
22 Settings.” The scope of this project includes developing, piloting and launching a toolkit that
23 outlines ways to increase routine screening for HIV, STIs, viral hepatitis and LTBI. The toolkit
24 consists of a series of webpages on the AMA’s website. Information and strategies are organized
25 along the screening and testing continuum and offer helpful resources and best practices from the
26 AMA, CDC and other organizations. The toolkit contains two different sets of strategies – one
27 targeted to community health centers and a second to emergency departments.

28
29 On October 1, 2023, the AMA launched a pilot with four emergency departments, after completing
30 a community health center pilot earlier in the year. The emergency department pilot cohort
31 includes: Harris Health Ben Taub Hospital (staffed by Baylor College of Medicine physicians and
32 residents), Mayo Clinic, University of Colorado and Valleywise Health. Each pilot site selected 2-3
33 quality improvement strategies outlined in the routine screening toolkit to implement in their
34 emergency department. Sites also provided tangible feedback to the AMA on the effectiveness of
35 these strategies and ease of implementation in addition to providing input on the overall toolkit
36 itself. The AMA held a series of telementoring sessions for the pilot sites, which were moderated
37 by Megan Srinivas, MD, MPH and Marc Mendelsohn, MD. The pilot sites will conclude their
38 implementation work and post-pilot assessment activities by the end of April 2024.

39
40 Upon addressing critical feedback we received on the toolkit during a mid-point usability study
41 with the emergency department pilot sites, we launched the toolkit to the public with a press release
42 on March 6, 2024.¹² In conjunction with the launch of the toolkit, we are hosting a three-part
43 webinar series that highlights key strategies to improve routine screening. The series will be hosted
44 by AMA President Jesse Ehrenfeld, MD, MPH. The first episode in the series will feature Jonathon
45 Mermin, MD, MPH, director, National Center for HIV, STIs, Viral Hepatitis and LTBI at the
46 CDC.¹³

47
48 *D. Promote evidence-based preventive services to the public in collaboration with the Ad Council*
49 *and other health partners.*

1 While the AMA's primary audience is physicians, there are limited instances where the AMA has
2 partnered on public information campaigns on select priority issues. This work has been made
3 possible through partnerships with other health-related organizations and the Ad Council. The
4 AMA will explore opportunities for future campaigns on an ongoing basis, with recognition that
5 we must prioritize our efforts and engaging in these campaigns alone is not feasible due to cost.
6

7 Get My Flu Shot. The Ad Council, AMA, CDC and the CDC Foundation have partnered since the
8 2020-2021 flu season through an annual campaign to motivate more people to get vaccinated
9 against seasonal influenza (flu) to protect themselves and their loved ones. During a severe season,
10 flu has resulted in as many as 41 million illnesses and 710,000 hospitalizations among the U.S.
11 population. The Get My Flu Shot campaign PSAs are launched nationwide to reach people with the
12 message that a flu shot can help you stay healthy, reduce risk of severe outcomes, such as
13 hospitalization and death, and avoid missing work, school, or special moments with family and
14 friends. PSAs are available to run in English and Spanish across all platforms, in donated time and
15 space throughout flu season. The campaign ads direct audiences to [GetMyFluShot.org](https://www.getmyflushot.org) for more
16 information, including where to get a flu vaccine in their area. Some highlights from the 2023-24
17 flu campaign are as follows:
18

- 19 • The donated media value for the current Flu season reached nearly \$8.8M. The most
20 support has come from out of home (OOH - \$4,500,471), closely followed by TV support
21 (\$3,794,079).
- 22 • A media tour was held on September 19, 2023, in English and Spanish, featuring
23 spokespeople from the AMA, including Willie Underwood, MD, MSc, MPH and Madelyn
24 Butler, MD, and representatives from the CDC. Nearly 300 placements were secured
25 across TV, radio, and digital, with a reach of 2 million viewers (18 years of age or older),
26 53.8 million digital impressions, and 2.3 million broadcast impressions.
- 27 • A second media tour was held on December 12, 2023, in English and Spanish, with
28 spokespeople from the AMA, including Willie Underwood, MD, MSc, MPH and the CDC.
29 Nearly 100 placements across TV, radio, and digital were secured with a reach of 3.2
30 million viewers (18 years of age or older), 191.1 million digital impressions, and 3.5
31 million broadcast impressions.
- 32 • We partnered with Influential and Black Girl Digital for our trusted messenger activation
33 on social media. There was a total of 11M impressions, an estimated reach of 2.5M, 65k
34 engagements, and 9k link clicks. There was an overall positive sentiment (81 percent)
35 towards the posts.
- 36 • PSA awareness is now 56 percent in Black and Hispanic respondents based off our most
37 recent December 2023 tracking study.
38

39 **2. Responding to public health crises impacting physicians, patients, and the public.**

40

41 The AMA's public health work has also been focused around responding to public health crises.
42 These crises are often associated with significant health risk for patients, raising concerns among
43 physicians. However, these crises are unlikely to be solved in a clinical setting alone. The AMA's
44 response to public health crises are typically focused on (1) ensuring physicians and trainees have
45 the data and resources needed; (2) identifying evidence-based policies and interventions; (3)
46 elevating the voices of physician leaders through AMA channels and platforms; and (4) convening
47 and collaborating with stakeholders to advance priority policies and interventions.
48

49 *A. Address the public health crisis of climate change.*

1 At the 2022 Annual Meeting of the House of Delegates, policy was adopted declaring “climate
2 change a public health crisis that threatens the health and well-being of all individuals.” Since the
3 A-23 meeting, AMA has accomplished the following activities and is developing a formal strategy
4 to address climate change and health (anticipated release is the AMA I-24 meeting):
5

- 6 • The AMA has made climate change education available via the Ed Hub™ from a variety of
7 sources including the AMA Journal of Ethics (JOE), the Journal of the American Medical
8 Association (JAMA), and the American Public Health Association (APHA).
- 9 • AMA's Chief Health & Science Officer, Frederick Chen, MD, MPH, joined the August 24,
10 2023, PermanenteDocs Chat podcast on heat waves and health, with a focus on how
11 physicians can adjust to prepare to care for heat-related conditions brought on by climate
12 change.
- 13 • JAMA announced the introduction of its new climate change and health series.¹⁴ The new
14 series is intended to inform readers about the associations between climate change and
15 health and “to stimulate improved knowledge and understanding of the health effects of
16 climate change to help foster commitment to timely action to prevent adverse health events
17 from climate change.”
- 18 • The AMA is in the process of developing a new CME module for physicians and trainees
19 on climate change and health which is anticipated to be available in summer 2024. The
20 focus of the module is to bring awareness to physicians about the impact of climate change
21 on the nation’s health and to empower physicians to begin conversations with their patients
22 about how climate change is affecting their health and what they can do about it.
- 23 • The AMA created a new webpage on AMA’s website, *Advocacy in action: Combating*
24 *health effects of climate change*, to highlight AMA’s position on this issue, how it is
25 engaged, and resources for physicians.¹⁵
- 26 • On November 2, 2023, AMA Update featured Victor Dzau, MD, President of the National
27 Academy of Medicine (NAM), to discuss how their Action Collaborative on
28 Decarbonizing the U.S. Health Sector is bringing together organizations across health care
29 to take action on climate change.¹⁶
- 30 • At the Interim 2023 meeting, the Health, Science, and Ethics business unit, in collaboration
31 with NAM, hosted an educational session entitled *The Climate Crisis: Pathways to*
32 *Decarbonizing the U.S. Health Sector*. The session featured four speakers who spoke to
33 ways that health care professionals can lead meaningful and measurable changes in
34 combating climate change, identified common barriers to decarbonization, and provided
35 available resources to support action towards decarbonization. Although overall attendance
36 was not counted, 48 individuals claimed CME credit for attending the event and the
37 average quality rating was 4.8/5.0.
- 38 • In early spring 2024, the AMA STEPS Forward® Podcast featured Jerry Abraham, MD,
39 MPH, who discussed the intersections between the social determinants of health and
40 climate change impacts.
- 41 • The AMA submitted an abstract to the American Public Health Association (APHA)
42 annual conference to be held in October 2024 to present on the findings from the listening
43 sessions held with physicians in May 2023 on climate change and health.
- 44 • The AMA continues to engage in the Medical Society Consortium on Climate and Health
45 (Consortium), which brings together associations representing over 600,000 clinical
46 practitioners.¹⁷ The AMA sits on the executive committee of this group, represented by Ilse
47 Levin, DO, MPH & TM. Additionally, the AMA was a sponsor of the MSCCH Annual
48 Meeting held in February 2024 in Washington, DC. Dr. Levin and AMA staff attended the
49 meeting.

- 1 • The AMA is also a member of the NAM Action Collaborative on Decarbonizing the
2 Health Sector as a member of the Steering Committee and co-lead of the Health Care
3 Delivery Workgroup.
 - 4 ○ The first phase (2021-2023) of the Action Collaborative's work has been focused
5 on identifying key opportunities and challenges to climate action, decarbonization,
6 and building resiliency across the health sector and developing resources and tools
7 to meet those needs. The collaborative, through the work of the members have
8 completed over thirty resources to accelerate climate action across the health
9 sector.
 - 10 ○ The second phase (2024-2025) will consist of accelerating a national climate and
11 health movement, as well as advancing the successes of the existing working
12 groups and launching an accelerator pilot program.
- 13 • The AMA is represented on the APHA Center for Climate, Health, and Equity Advisory
14 Board. In February 2024, the Advisory Board organized a roundtable of public health
15 experts to discuss the health, climate and equity priorities for consideration of the
16 reauthorization of the federal transportation bill, which is scheduled to be renewed in 2025.
- 17 • The AMA was also represented at APHA's first Climate, Health and Equity Summit in late
18 February 2024, which brought together professionals from across multiple disciplines to
19 explore the intersectionality of climate, health and equity and strategize how professionals
20 can advance public health and climate justice.

21

22 In terms of advocacy, the AMA participates in the American Lung Association's Healthy Air
23 Partners campaign, which is a coalition of 40 national public health, medical, nursing and health
24 care organizations engaged in healthy air advocacy efforts.¹⁸ The Coalition is united in its calling
25 for strong federal laws and policies to slash air pollution and address climate change, recognizing
26 climate change can affect air quality, and certain air pollutants can affect climate change. Since
27 June 2023, the AMA has joined partners on the following letters:

- 28 • A letter to Environmental Protection Agency (EPA) on their proposed ruling regarding
29 Pollutant Emissions Standards for Model Years 2027 and Later Light- Duty and Medium-
30 Duty Vehicles, urging them to pass the most stringent emission standards possible with
31 existing technologies.
- 32 • A letter to EPA on their proposed ruling regarding National Emission Standards for
33 Hazardous Air Pollutants: Coal- and Oil-Fired Electric Utility Steam Generating Units
34 Review of the Residual Risk and Technology Review.
- 35 • A letter to EPA on their proposed ruling in the Reconsideration of the National Ambient
36 Air Quality Standards for Particulate Matter, calling for the most protective standards to
37 protect the health of the most vulnerable populations. To note, EPA finalized their
38 particulate matter rule on February 7, 2024.¹⁹ While the new rule did not set particulate
39 matter at the more protective standard as advocated for by the Healthy Air Partners group,
40 the revised rule did address several of our comments and the new standards will result in
41 significantly reduced particular matter pollution in the future.
- 42 • A letter to EPA on their draft Revised Technical Guidance for Assessing Environmental
43 Justice in Regulatory Analysis, which included the addition of climate change as a factor of
44 vulnerability when conducting environmental justice analysis.

45

46 *B. Prevent firearm injuries and deaths.*

47

48 In the 1980's the AMA recognized firearms as a serious threat to the public's health as weapons are
49 one of the main causes of intentional and unintentional injuries and deaths. At the 2016 Annual
50 Meeting, following the Pulse nightclub shooting, policy was adopted declaring that "gun violence

1 represents a public health crisis which requires a comprehensive public health response and
2 solution." Since that time firearm injuries and deaths have increased and disparities have
3 widened.²⁰

- 4
- 5 • The AMA is participating in the Health Professional Education and Advocacy/Policy
6 committees of the Healthcare Coalition for Firearm Injury Prevention, which is being led
7 by American Academy of Pediatrics (AAP), American College of Emergency Physicians
8 (ACEP), American College of Physicians (ACP), American College of Surgeons (ACS),
9 and the Council of Medical Specialty Societies (CMSS).²¹
- 10 • On October 25–26, 2023, Alexander Ding, MD, MS, MBA, represented the AMA at the
11 Milken Institute’s Innovation Forum on Preventing Gun Violence in San Francisco. This
12 first-of-its-kind convening explored how technologies, expanded community collaboration,
13 and innovative models could unlock real progress to prevent gun violence and address its
14 societal repercussions.
- 15 • On December 14, 2023, the AMA convened the Firearm Injury Prevention task force for
16 an in-person meeting held at AMA Headquarters in Chicago. Willie Underwood, MD,
17 MSc, MPH, Chair of the AMA Board of Trustees and the task force led the meeting along
18 with task force Co-Vice Chairs Toluwalasé (Lasé) Ajayi, MD, and Alexander Ding, MD,
19 MS, MBA. Representatives to the task force discussed their organization priorities on
20 firearm injury prevention, examined the possibility of creating a resource center on firearm
21 injury prevention for physicians that would include information for patients and resources
22 on evidence-based interventions, and discussed the development of a toolkit for physicians
23 on extreme risk protection orders.
- 24 • On February 7, 2024, the AMA was represented by Willie Underwood, MD, MSc, MPH,
25 at the Northwell Health’s Gun Violence Prevention Forum in New York City.
- 26 • On March 4, 2024, the AMA convened a virtual meeting of the Firearm Injury Prevention
27 task force, where the members had the opportunity to hear from the Ad Council both about
28 their ongoing gun violence work as well as their new campaign, funded by members of the
29 National Health Care CEO Council on Gun Violence Prevention and Safety. The new
30 campaign seeks to elevate the issue of gun violence in America and its impact on youth,
31 shifting away from divisive, politically charged conversations to those focused on public
32 health approaches that have proven effective in combating this epidemic.
- 33

34 In terms of advocacy, the AMA has advocated for Congress to appropriate increased funding for
35 research to prevent firearm violence. The AMA is working with medical specialties, including the
36 AAP, to support funding for the CDC and the National Institutes of Health (NIH), and the National
37 Institute of Justice (NIJ) to conduct public health research on firearm morbidity and mortality
38 prevention.

- 39 • On April 19, 2023, the AMA joined more than 400 national, state, and local medical,
40 public health, and research organizations in a letter to the leadership of the House and
41 Senate Committees on Appropriations asking that for Fiscal Year (FY) 2024 they
42 appropriate \$35 million for the CDC, \$25 million for the NIH, and \$1 million for the NIJ to
43 conduct public health research into firearm morbidity and mortality prevention.
- 44

45 On the state level, the AMA wrote a letter to the leadership of the Maine Health and Human
46 Services and Judiciary Committees on March 4, 2024, expressing our support for legislation that
47 will address the epidemic of firearm violence in Maine and across the country, this includes:

- 48 • Legislative Document (LD) 2237 - An Act to Strengthen Public Safety, Health and Well-
49 being by Expanding Services and Coordinating Violence Prevention Resources. AMA
50 policy supports many of the initiatives in this comprehensive legislation, and applauds the

1 investment in violence prevention strategies, access to behavior health services, suicide
2 prevention, and crisis intervention programs. (Policies H-145.975, D-345.972, H-345.972,
3 and H-60.937)

- 4 • LD 2086 - An Act to Amend the Law Governing the Disposition of Forfeited Firearms.
5 The AMA supports removal of firearms from prohibited persons. (Policy H-145.972)
- 6 • LD 2224 - An Act to Strengthen Public Safety by Improving Maine's Firearm Laws and
7 Mental Health System. AMA Policy advocates for a waiting period and background check
8 for all firearm purchasers and policies that prevent transfer of firearms without adhering to
9 background checks. The AMA also applauds efforts to expand access to mental health and
10 substance use disorder treatment. (Policies H-145.996 and H-145.975)
- 11 • LD 2238 - An Act to Address Gun Violence in Maine by Requiring a Waiting Period for
12 Certain Firearm Purchase. AMA Policy supports legislation that enforces a waiting period
13 and background check for all firearm purchasers. (Policy H-145.996)

14
15 Through the AMA's litigation center, we work to represent the interests of the medical profession
16 on this issue in the courts by providing support or becoming actively involved in litigation of
17 importance to physicians.

- 18
19 • On August 21, 2023, the AMA was joined by the AAP, the ACS, the AP HA and the Texas
20 Medical Association in submitting an amicus brief in the case of *U.S. vs. Rahimi*, which
21 was argued on November 7, 2023, before the U.S. Supreme Court. The case challenges a
22 1994 law adopted by Congress to keep firearms out of the hands of people who are the
23 subject of a domestic violence restraining order (DVRO). The brief shares firsthand
24 accounts from 17 physicians who have witnessed the devastating injuries and deaths
25 caused by domestic abusers with firearms, as well as the often-lifelong psychological terror
26 inflicted upon victims, their children, and others.
- 27 • On December 26, 2023, the AMA was joined by the AAP, ACP, and ACS in submitting an
28 amicus brief in the case of *Garland v. Cargill*. The case involves firearms, namely whether
29 a bump stock device is a machinegun under federal law, as it allows users to convert a
30 semiautomatic firearm into a weapon that fires continuously with a single trigger pull. The
31 brief presents the firsthand experiences of physicians who treat victims of firearm violence
32 and explains why semi-automatic weapons with bump stocks are a critical public health
33 hazard, and prohibiting bump stocks saves lives.

34
35 The AMA has created a website broadly outlining the organization's advocacy efforts on gun
36 violence prevention.²²

37
38 *C. Respond to emerging and remerging infectious disease threats and prepare for future*
39 *pandemics.*

40
41 Infectious diseases continue to evolve and advance throughout the U.S. Pathogens that were once
42 geographically limited are now advancing beyond those traditional borders. Blastomycosis,
43 Histoplasmosis and Coccidioidomycosis are all fungal infections that have pushed past expected
44 boundaries. In addition to organisms known to be found in the U.S., tropical diseases like malaria,
45 dengue and Leishmaniasis have all been found in the U.S. in nontravelers. Re-emerging pathogens
46 like measles continue to find footholds across the country. While it's unclear what the next
47 infectious diseases outbreak will bring, the U.S. health system must be ready. Because the AMA is
48 relied upon as a source of information by physicians and patients, the AMA must maintain the
49 ability to respond and share information and advocate for physicians, patients, and the public in
50 line with AMA policies.

1 The AMA is a collaborator in Project Firstline, the CDC's National Training Collaborative for
2 Healthcare Infection Control. Project Firstline offers educational resources in a variety of formats
3 to meet the diverse learning needs and preferences of the health care workforce.²³

- 4 • Over the last year, AMA has developed 10 *Stories of Care* podcast episodes exploring
5 inequalities in infection prevention and control (IPC). The podcast series is hosted by
6 Megan Srinivas, MD, MPH, and has featured episodes on IPC Challenges in Rural Health
7 Care; Race, Research, and Health Care Associated Infections; TB or Not TB: Caring for a
8 Special Population; Fighting Ableism: What Do You Need?; The Hidden Inequities of
9 Dialysis-Related Infections; and Partners in Care: Environmental Services on the Front
10 Line.
- 11 • The AMA provided funding to 7 state and specialty medical societies to develop training
12 and IPC content for the membership and disseminate Project Firstline content.
- 13 • The AMA has partnered with the CDC on webinars addressing re-emerging pathogens and
14 the end of the COVID-19 public health emergency.
- 15 • On December 12, 2023, Sandra Fryhofer, MD, hosted a fireside chat to discuss
16 vaccinations and other tools that can keep everyone safer against influenza, COVID-19,
17 and respiratory syncytial virus (RSV) this respiratory virus season. Participants included
18 CDC Director Mandy Cohen, MD, MPH and Demetre Daskalakis, MD, MPH.
- 19 • The AMA hosted a five-part webinar series with the CDC on its Hospital Sepsis Program
20 Core Elements, which offer guidance to help clinicians, hospitals and health systems
21 implement, monitor and optimize their sepsis programs and outcomes. The series included
22 real-life examples, strategies and best practices and offers continuing education credit.
- 23 • A tele-mentoring series will kick off in April of 2024 that will explore the nuances of
24 infection prevention in facility types outside of the acute care hospital. Settings will
25 include acute rehabilitation hospitals, ambulatory surgery centers, behavioral health units,
26 post-acute long-term care facilities, dialysis facilities, and pediatric units.
- 27 • A CME module is under development that will present patient cases outlining
28 transmission-based precautions so that physicians and other health care professionals can
29 recognize how to protect themselves in any situation.

30
31 *D. End the nation's drug overdose epidemic.*

32
33 Ending the nation's drug overdose epidemic will require increased physician leadership, a greater
34 emphasis on overdose prevention and treatment, and better coordination and amplification of the
35 efforts and best practices already occurring across the country.

36
37 The AMA makes education available to physicians on this topic via the AMA Ed Hub™ to help
38 physicians gain critical knowledge around acute and chronic pain management, substance use
39 treatment, overdose prevention, and pain treatment to meet the regulatory requirements. Courses
40 are developed by AMA as well as by other partners. The AMA is also a member of the Providers
41 Clinical Support System (PCSS), which is made up of a coalition of major health care
42 organizations all dedicated to addressing this health care crisis and is led by the American
43 Academy of Addiction Psychiatry. PCSS provides evidence-based training and resources to give
44 health care providers the skills and knowledge they need to treat patients with opioid use disorders
45 and chronic pain.²⁴

- 46
47 • In 2023 the AMA worked to update content and resources for the physician education
48 series of module *Practical Guidance on Pain Management*. This content was made
49 available to help physicians meet the DEA's MATE Act requirements.

- The AMA continues to convene the Substance Use and Pain Care Task Force, which supports and guides the development of the annual Overdose Epidemic Report on the overdose epidemic outlining current data, policy, updates, clinical accomplishments and what still needs to be done.²⁵
 - In 2023, the AMA developed physician education podcast series on *The Opioid Overdose Epidemic*. Hosted by Bobby Mukkamala, MD, Chair of the Substance Use and Pain Care Task Force, episodes feature experts who shared relevant research, insights, and experience to help physicians of all specialties in addressing the opioid overdose epidemic. As of November 2023, the podcast episode course completions have shown a high interest in the topics, which include: *Opioid Prescribing and Appropriate Pain Management, Opioid Overdose Prevention, and Opioid Use Disorder Treatment*.
 - The AMA is planning additional episodes as a part of this series for 2024, which will consist of four episodes including: *Opioid Use Disorder and Pregnancy, Opioid Utilization in Hospice and Palliative Care, Disparities in Access to Medication for Opioid Use Disorder, and Opioid Use a Prevention Approach*.
 - The AMA continues to participate as a member of the NAM Action Collaborative on Countering the U.S. Opioid Epidemic. The Action Collaborative uses a systems approach to convene and catalyze public, private, and non-profit stakeholders to develop, curate, and disseminate multi-sector solutions designed to reduce opioid misuse, and improve outcomes for individuals, families, and communities affected by the opioid crisis.

22

23

24

3. Strengthen the health system through improved collaboration between medicine and public health.

25

26

27

The AMA is collaborating with leading health care organizations to strengthen the interface between public health and health care.

- 48
- 49
- 50
- In November 2023, AMA and health care partners announced the Common Health Coalition: Together for Public Health, a partnership between AMA and four other leading healthcare organizations, including: AHIP (formerly America’s Health Insurance Plans), Alliance of Community Health Plans (ACHP), American Hospital Association (AHA), and Kaiser Permanente (KP).²⁶ The Common Health Coalition is focused on translating the hard-won lessons and successes of the COVID-19 pandemic response into actionable strategies that will strengthen the partnership between our health care and public health systems.
 - On March 13, 2023, the Common Health Coalition announced a set of commitments that will better equip U.S. health care organizations to collaborate with public health systems in preparing for the next public health emergency. Dave Chokshi, MD, MPH, Chair of the Coalition announced the commitments at the Politico Health Summit. The Coalition's founding members, including the AMA, committed to action in four priority areas:
 - Coordination between health care and public health
 - Always-on emergency preparedness
 - Real-time disease detection
 - Exchange of actionable data, particularly to advance equity
 - The Coalition’s founding members have called on health care and public health organizations across the country to consider joining this effort. Interested organizations can learn more, connect with us, and take steps to join us by going to our website, <https://commonhealthcoalition.org/>.
 - On April 11, 2024, the AMA was represented on a panel at the KP Health Summit in Washington, D.C., focused on *Building a Strong Public Health Ecosystem*. This session

1 explained the commitments the Coalition has made and actions each organization will take
2 to create a strong public health system and healthier future for all.
3

4 **4. Combat the spread of misinformation and disinformation.**
5

6 The AMA remains engaged in external collaborations to address mis- and disinformation, such as
7 the Coalition for Trust in Health & Science and the recently rebranded physician-focused coalition,
8 Mitigating Medical Misinformation Workgroup.
9

- 10 • The Coalition for Trust in Health & Science’s vision is for all people to have equitable
11 access to accurate, understandable, and relevant information to make personally
12 appropriate health choices and decisions. The AMA is an active member, engaging with
13 leadership and participating in programming.
- 14 • The AMA is also an active participant in the Mitigating Medical Misinformation
15 Workgroup and supported its recent research that found primary care physicians were
16 viewed as the most trusted source for medical information. The AMA will work with this
17 group to disseminate these findings to a broader audience in 2024 and will continue to
18 coordinate efforts internally to ensure alignment.
- 19 • The AMA filed an amicus brief with the U.S. Supreme Court in the case of *Murthy v.*
20 *Missouri*. The brief focuses on how disinformation diminished uptake of COVID-19
21 vaccines, which then limited the vaccines’ ability to save lives by controlling the spread of
22 disease—thereby creating a compelling interest for the government to act. The high court
23 will hear oral arguments in the case on March 18, 2024.
24

25 **CONCLUSION**
26

27 The AMA continues to advance its mission, to promote the art and science of medicine and the
28 betterment of public health. The highlighted accomplishments in this report capture a fraction of
29 the work accomplished from March of 2023 – March of 2024 related to the AMA’s public health
30 strategy.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 24-A-24

Subject: Report on the Preservation of Independent Medical Practice

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

1 BACKGROUND

2

3 At its 2022 Annual Meeting, the House of Delegates (HOD) adopted Resolution 602, “Report on
4 the Preservation of Independent Medical Practice,” which directed the American Medical
5 Association (AMA) to issue a report every two years communicating AMA efforts to support
6 independent medical practices.

7

8 Resolution 602 appended AMA policy D-405.988, The Preservation of the Private Practice of
9 Medicine, which among other things affirmed the Association’s support for the preservation of
10 private practice and the acknowledgement of its value to the practice of medicine and its benefit to
11 patients.

12

13 This report serves as the first instance of a biennial accounting of the activities the AMA has
14 engaged in since 2022 to support independent practices.

15

16 DISCUSSION

17

18 The AMA’s efforts to promote and advocate for independent practice physicians can be
19 summarized in three key strategic efforts:

20

21

22

23

24

25

26 The AMA’s newest section, the Private Practice Physicians Section (PPPS), was officially
27 established at the November 2020 Special Meeting of the HOD and held its first meeting in
28 conjunction with the June 2021 Special Meeting of the HOD. Though certainly not the only unit
29 within the Association working on behalf of independent practices, the PPPS is the primary vehicle
30 for addressing the concerns of private practice physicians within the HOD, thus helping to ensure
31 that independent practice concerns are considered when determining policy.

32

33

34

35

36

37

38

The PPPS maintains a roster of 367 certified members. Membership is open to any AMA member who is in a practice consisting of 50 or fewer physicians and in which the physicians maintain a controlling interest in the practice. Physicians must independently elect to join the section; they are not at this time proactively asked if they want to join, though they are made aware of the Section’s existence. Membership in the PPPS has grown significantly since 2022, with the Section adding 53 new members in 2022 (+20%), and 44 new members in 2023 (+14%).

1 The Section has held formal Business Meetings at all AMA Annual and Interim meetings since
2 June of 2021. Attendance has been strong, fluctuating between approximately 40 and 60 members
3 attending each meeting. The PPPS has advanced 18 resolutions to the House of Delegates since the
4 2022 Annual Meeting on topics such as reexamining laws around physician self-referrals, limiting
5 corporate ownership of private practices, improving Medicare reimbursement, and developing
6 guidelines for the use of virtual and overseas administrative assistants, among many others.

7
8 The AMA has championed issues important to private practice in its advocacy efforts, particularly
9 at the federal level. Key among these issues is reforming Medicare payment rates to ensure
10 practices can continue to thrive. The AMA believes the need to stop the annual cycle of pay cuts
11 and patches and enact permanent Medicare payment reforms could not be clearer. The AMA was
12 successful in getting Congress to introduce H.R. 2474, the Strengthening Medicare for Patients and
13 Provider Act, which would provide automatic, annual payment updates to account for inflation as
14 reflected in the Medicare Economic Index (MEI). The AMA and our Physician Grassroots
15 Network and Patient Advocacy Network consider the passage of H.R. 2474 to be among its highest
16 priorities.

17
18 The AMA is also engaging directly with federal decision-makers on fixing prior authorization,
19 limiting scope creep, supporting telehealth, surprise billing, and protecting against government
20 intrusion in areas such as abortion care and gender-affirming care. The AMA has submitted
21 comments on the Federal Trade Commission’s proposed rule on noncompete agreements and
22 Department of Justice antitrust merger guidelines. The AMA also advocates before Congress and
23 the Centers for Medicare and Medicaid Services that the Stark exemption for physician-owned
24 hospitals needs to be restored.

25
26 The cyber security attack on Change Healthcare in March 2024 has left many independent
27 physician practices struggling to stay on top of their operations. The AMA is working closely with
28 members who have experienced disruptions to share instructions for getting federal emergency
29 funds, guides for managing impact, and connecting physicians’ experiences directly to the United
30 States Department of Justice.

31 32 *Outreach to Independent Physicians*

33
34 For the past three years, the PPPS has hosted a virtual Private Practice Townhall each March or
35 April, serving as an open forum for independent physician members to raise issues they may be
36 experiencing in their practices and share ideas for addressing them. The Townhall not only
37 provides valuable real-world intelligence about the issues private practices are experiencing to the
38 leadership of the PPPS, but it also affords an opportunity for physicians to connect as peers to share
39 tips and best practices. Additionally, the Townhall typically inspires ideas for education sessions at
40 PPPS Business Meetings as well as generates new policy proposals.

41
42 The PPPS has also collaborated with the AMA’s Professional Satisfaction and Practice
43 Sustainability (PS2) team. The two are currently planning a private practice “bootcamp” to be held
44 in advance of the 2024 Annual Meeting. The “bootcamp” will be a multi-hour training session on
45 the business of private practice, giving attendees opportunities to better understand how to
46 effectively manage their business while continuing to provide care to patients. The program stems
47 from ideas raised in previous PPPS Townhalls as well as open discussions at PPPS Business
48 Meetings and other AMA events.

1 *Promoting Resources for the Advancement of Independent Practices*

2
3 The AMA's STEPS Forward® initiative, part of its Innovation Academy, has made a suite of
4 interactive open-access resources tailored for independent practices available through the AMA
5 EdHub™, many of which are available for continuing medical education credit. These include
6 podcasts, toolkits, and webinars available online to members and non-members.

7
8 Specifically, STEPS Forward® has crafted a series of tools and materials designed to help
9 physicians who are either new to private practice or who simply seek to better operationalize their
10 practice. Key examples include:

- 11
- 12 • 7 STEPS to Starting a Private Practice visual guide
- 13
- 14 • Private Practice Playbook – a repository of sample forms including a model new patient
15 packet, routine patient documents such as medical release and patient payment plans,
16 administrative documents such as refund requests and medication logs, employee
17 documents for job descriptions and expense reimbursement, and new hire documents such
18 as model confidentiality agreements and drug screen consent forms.
- 19

20 Independent physicians who are AMA members also have access to a range of experiential
21 sessions in the form of webinars to help physicians better capitalize on their practices' regular
22 financial and operational tasks. This programming is offered through the AMA's Private Practice
23 Simple Solutions sessions, of which 17 programs have been offered since 2022. Key examples of
24 programming for independent practices include sessions on practice marketing, conducting market
25 research to better understand the needs of the community, public relations and establishing
26 community trust, and maximizing referral strategies. These programs are operated and promoted by
27 the AMA's PS2 team.

28
29 The PPPS has offered additional educational programming at its Annual and Interim meetings.
30 Designed and curated to address issues that PPPS members most frequently raise as key issues for
31 their practice, the Section routinely works with internal and external subject matter experts to share
32 strategies and information to attendees. Recent examples of educational sessions offered at PPPS
33 meetings include a legal analysis of employment contracting from the perspective of both the
34 employer and employee, an unpacking of innovative business model strategies from three different
35 independent physician practices, a strategic assessment of methods for transitioning a practice, and
36 a breakdown of best practices for branding and marketing.

37
38 **CONCLUSION**

39
40 The AMA continues to be mindful of the rate of change in the physician practice setting with
41 greater numbers of physicians opting to leave private practice each year. The strategies and
42 initiatives outlined here represent the foundations the AMA will build upon to continue to ensure
43 that independent physician practices have the support they need to thrive. The AMA will continue
44 to promote the resources it has while expanding its menu of services and tools geared toward
45 physicians in private practice.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 27-A-24

Subject: AMA Reimbursement of Necessary HOD Business Meeting Expenses for Delegates and Alternates (Resolution 606-A-23)

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

1 At the 2023 Annual Meeting of the American Medical Association (AMA) House of Delegates
2 (HOD) Resolution 606, “AMA Reimbursement of Necessary HOD Business Meeting Expenses for
3 Delegates and Alternates” was referred to the Board of Trustees for a report back to the HOD. The
4 reference committee heard mixed testimony, including compelling testimony from the Board of
5 Trustees regarding their fiduciary responsibility to our AMA and the need to allow sufficient time
6 to identify and fully assess the impact on our AMA.

7
8 Resolution 606 asked:

9
10 That our American Medical Association develop a reimbursement policy consistent with
11 established AMA travel policies for reasonable travel expenses that any state or national
12 specialty society is eligible to receive reimbursement for its delegate’s and alternate delegate’s
13 actual expenses directly related to the necessary business functions required of its AMA
14 delegates and alternate delegates in service to the AMA at HOD meetings, including travel,
15 lodging, and meals; and

16
17 That each state or national specialty society requesting such reimbursement for its delegate’s
18 and alternate delegate’s reasonable travel expenses will submit its own aggregated
19 documentation to the AMA in whatever form is requested by the AMA.

20
21 BACKGROUND

22
23 Resolution 606 highlighted the significance of the AMA HOD as a policy making body with
24 diverse voices being represented through the delegations. The resolution focuses on the costs that
25 are incurred by the organizations sending delegates and alternates to the meetings without
26 discussing the costs of the meeting to the AMA. The resolution pointed out that several state and
27 specialty medical societies are facing financial hardships due to several factors, including declining
28 membership. As these organizations are looking to cut costs, not sending the full delegations or
29 alternate delegates to the AMA HOD meetings could be seen as a savings. In some instances,
30 delegates pay their own expenses at AMA HOD meetings so they can be a part of the robust policy
31 making process. In addition, medical students and residents expressed issues with obtaining
32 funding and are seeking inclusion in the development of an AMA reimbursement policy.

33
34 *Costs*

35
36 A fiscal note of \$8.1 million was the estimate of the ongoing additional annual costs that would be
37 incurred by the AMA if this resolution were adopted. This would be in addition to the \$12 million
38 the AMA is spending already to hold HOD meetings and provide staff support for councils,

1 sections and special groups. That does not include costs related to responding to and implementing
2 resolutions from the HOD.

3
4 While our AMA has experienced above normal operating income over the last several years due to
5 a reduction in expenses during the pandemic office closures and a record number of open positions
6 due to tight labor markets, it is expected that the Association will return to full employment and
7 regular operations by 2024, with a reversion to normal budgeted income.

8
9 *AMA Budget and Reserve Policies*

10
11 In the early 2000's, AMA's financial picture was very poor evidenced by questions raised at the
12 HOD about the long-term viability of the organization. The AMA Board took action in 2000 to
13 implement financial policies that would provide for ongoing sustainable operations and
14 programmatic activities for both the short-and long-term. The goal was two-fold: 1) ensure that
15 AMA would be able to withstand short-term volatility in revenue without requiring elimination of
16 programs or personal that would be harmful to AMA's reputation and 2) create reserve assets that
17 could serve as a quasi-endowment fund to help ensure long-term fiscal stability of the organization.
18 The annual budget policy was in answer to the first goal and that policy requires that AMA budget
19 a surplus equal to the inflationary impact on two- to three-year's operating expenses. The reserve
20 policy prohibits the use of reserves for ongoing operating expenses in order to avoid drawing down
21 the reserves on an annual basis and thus impairing the ability to maintain and grow reserves for the
22 long-term stability of the organization, i.e., AMA's quasi-endowment fund.

23
24 The two policies cited above mean that any expenditures above the current budget levels will
25 require reducing expenses from other areas of the annual budget, i.e., other programmatic
26 activities. If this resolution were adopted, that would result in an ongoing annual \$8 million cost
27 reduction in other programs, which at the current rate of inflation would cost almost \$100 million
28 over the next ten years. In addition, the size of the HOD continues to increase and this will drive
29 total costs of delegates and alternate delegates attending in-person meetings higher than levels cited
30 above, regardless of whether it is paid by AMA or the societies.

31
32 Financial and Tax Implications

33
34 AMA's tax-exempt status and the regulations under which it operates to maintain that status is a
35 key consideration when determining if or how to provide benefits or contributions to individuals or
36 organizations. As an example, AMA's tax counsel has advised that generally the IRS has found
37 that the provision of financial benefits to members in certain situations will constitute private
38 inurement which will result in the loss of tax-exempt status. Counsel did advise that the IRS has
39 consistently viewed paying the reasonable travel expenses of volunteers, particularly those who
40 participate in governance, as being acceptable and not treated as compensation which in this case
41 would cover delegates and alternate delegates and thus led to the language of the resolution
42 submitted to the HOD.

43
44 Additional discussions with tax counsel have resulted in another potential alternative, i.e.,
45 providing travel grants to societies in the HOD to cover or partially cover direct out-of-pocket
46 expenses for delegates and alternate delegates based on financial need. Under this alternative,
47 counsel recommended the following criteria: 1) the travel grants be limited to societies that
48 demonstrate financial need; 2) the travel grants should be specifically identified as grants to cover
49 travel reimbursement only for voting delegates and alternate delegates who participate in the HOD
50 meetings, enabling delegates to participate in discussions regarding important issues affecting
51 AMA and the medical profession; 3) the grant agreement between AMA and the society should

1 require that the funds are for reimbursement of incurred travel expenses in a manner that is
2 consistent with 501(c)(6) purposes; and 4) that AMA should establish a cap on the amount that any
3 one society can receive for reimbursement of travel expenses.

4

5 Based on the above alternative, AMA performed an analysis of the financial status of those
6 societies seated in the HOD. The 2022 Form 990's submitted to the Internal Revenue Services
7 were obtained for 178 constituent and specialty societies. Form 990's were not available for seven
8 societies.

9

10 In 2022, the combined revenues and assets of the 178 societies total \$3.2 billion and \$7 billion
11 respectively, and although there is wide disparity in the resources of these societies, is substantially
12 more than AMA's revenue or assets. The estimated average cost of a delegate and alternate
13 delegate attending the AMA meetings is approximately \$11,400. At revenue levels of \$2.5 million
14 and above, the total average cost for delegates and alternates would range from 0.04% to 2.1% of
15 annual revenue. In comparison, AMA currently spends 2.6% of its total annual revenue on HOD
16 activities.

17

18 The AMA realizes the importance of representation and participation in the policy-making process
19 and the strength of organized medicine, are the organizations who send representatives to our HOD
20 meetings to participate in the policy making process. Your Board of Trustees presents this report as
21 informational as we continue to study options for strengthening the participation of the Federation
22 in House of Delegates meetings. Your Board will submit a report at the 2025 Annual Meeting.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 32-A-24

Subject: Independent Medical Evaluation

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

1 At the 2023 Annual Meeting, the House of Delegates referred Resolution 007, “Independent
2 Medical Evaluation,” to the Board of Trustees. Resolution 007 specifically asked:

3
4 That our American Medical Association study and report back at the 2024 Annual Meeting on
5 the Independent Medical Evaluation (IME) process and recommend standards and safeguards
6 to protect injured and disabled patients. (Directive to Take Action)

7
8 The resolution was referred to the Board of Trustees for decision in September 2023. At that
9 meeting, the Board of Trustees reviewed the Management report and decided to complete the
10 study, as outlined in the report.

11
12 The following study, presented as an informational report, examines IME standards, processes and
13 procedures that impact the rights of examinees and physicians throughout the IME process, as set
14 forth in the resolution. Topics discussed include professional qualifications, ethics, objectivity,
15 safety, and access.

16
17 Despite their widespread use, IME processes and approaches can significantly vary across different
18 jurisdictions, which may impact the rights and responsibilities of examinees and physicians.
19 Examining specific jurisdictional regulation protocols such as codes of ethics, educational
20 requirements and licensure protocols are beyond the purview of this report.

21 22 PURPOSE AND DEFINITION OF INDEPENDENT MEDICAL EVALUATIONS (IME)

23
24 In general, an IME is “a usually one-time evaluation performed by an independent medical
25 examiner who is not treating the patient or claimant, to answer questions posed by the party
26 requesting the IME”.¹ The most common purpose of an IME is to provide a timely, impartial, and
27 objective assessment of an examinee’s medical condition to determine appropriate diagnoses,
28 causality, the extent of injuries or disabilities, and need for accommodation. This is often required
29 in the context of legal or insurance matters. Unless a limited scope IME is stipulated by the
30 requesting party or refused by the examinee, an IME includes the essential element of a medical
31 assessment, specific to the defined scope of the requested evaluation, including history,
32 examination, and review of relevant records and diagnostic studies.³

33
34 The goal of the IME physician is to provide an unbiased, evidence-based assessment regarding the
35 individual's medical status, including the nature and extent of injuries or disabilities. During an
36 IME, the examinee’s relevant medical history, current condition, test results, functional status, and
37 any relevant medical records are assessed. The *AMA Guides to the Evaluation of Permanent*
38 *Impairment* (AMA Guides) provide a reliable measurement framework for assessing permanent
39 impairment and are required in many jurisdictions.^{1,2} An impairment rating may be a component of

1 the IME, which is defined as a “consensus-derived percentage estimate of loss of activity, which
2 reflects severity of impairment for a given health condition, and the degree of associated limitations
3 in term of Activities of Daily Living (ADLs)”.¹ The AMA Guides Editorial Panel ensures the AMA
4 Guides are up to date with the latest evidence-based medicine and science.

5
6 While IMEs and corresponding processes vary among different contexts and jurisdictions, one
7 commonality is that there is no patient-physician relationship, and many jurisdictions avoid using
8 the term “patient” in the context of IMEs because this can be construed to establish a patient-
9 physician relationship. Instead, the term “examinee” is used.^{1,3,4}

10 11 *Common Scenarios for IMEs*

12
13 The applications and requirements of an IME can differ significantly based on different scenarios.
14 For example, in workers' compensation, IMEs commonly evaluate the nature and extent of
15 occupational-related injuries, care-related issues and authorizations, physical work capabilities, and
16 causality. For insurance claims, particularly those involving personal injury, bodily injury, and
17 automobile accidents, IMEs can verify the legitimacy and extent of the alleged injuries and medical
18 status. In many jurisdictions, an injured party’s failure to comply with insurer requests for an IME
19 or a claim investigation to support a claims determination may be grounds for a denial of the claim
20 and benefits. Additionally, IMEs are utilized in legal disputes or tort litigation involving alleged
21 bodily, physical, mental, or other injury claims. Petitioner filings, court or other findings may result
22 in an IME order to obtain an objective assessment of injuries, disabilities, and/or other issues.

23 24 PROFESSIONAL QUALIFICATIONS FOR INDEPENDENT MEDICAL EVALUATORS

25
26 The selection of the medical professional with the appropriate qualifications is a fundamental
27 aspect that can determine the examination's thoroughness and impact the outcome of claims,
28 benefits, and legal disputes. Judges or juries critically assess the qualifications and expertise of the
29 physician to ensure that their evaluation is reliable and based on sound medical judgment. The
30 presence of established standards and resources for IME training and certification underscores the
31 importance of having skilled, ethical, and unbiased medical professionals conduct these
32 examinations within their scope of practice.

33
34 Jurisdictional regulations or protocols may include specific criteria for physician qualifications.
35 The following qualifications are commonly recommended across most jurisdictions:

- 36
37
- 38 • Unrestricted license to practice medicine in the jurisdiction.
 - 39 • Relevant board-certification in a specialty recognized by the American Board of Medical
40 Specialties.
 - 41 • Competency in report-writing and the ability to provide deposition and expert testimony
42 are essential. These skills ensure that the physician can effectively communicate their
43 medical findings and rationale in legal or insurance contexts.
 - 44 • Professional history should be free from adverse events that could compromise their
45 credibility or impartiality in performing an IME.

46 Specialized credentials or certification may be required on a jurisdictional-specific basis.

47 48 *Objectivity and Bias*

49
50 The IME process should be objective, independent and unbiased with the substantiation of findings
51 and recommendations based upon available information and evidence.^{3,4} Physician transparency in

1 reporting and testimony can reinforce impartiality. Having IMEs performed in a timely manner in
2 an appropriately situated and appointed environment is in the best interest of the examinee and
3 involved parties. However, there may be conflicts of interest to consider.

4
5 The *AMA Code of Ethics*^{5,6} addresses the ethical considerations for physicians employed by
6 businesses or insurance companies, as well as independent medical examiners assessing health or
7 disability. The IME physician may obtain personal information about patients outside an ongoing
8 patient-physician relationship, such as assessments for employers or insurers. It is also important to
9 obtain written consent, as required by law, to provide disclosure to third parties.⁶

10
11 While practicing in these roles, physicians have dual responsibilities to both the patient and the
12 employer or third party. However, there is also the additional duty to uphold the obligations of a
13 medical professional. Therefore, the following should be considered:⁵

- 14
- 15 • Disclose the nature of the relationship with the employer or third party before gathering
- 16 health information from the patient.
- 17 • Explain that the goal is to assess the patient's health or disability independently and
- 18 objectively, distinguishing it from the traditional fiduciary role of a physician.
- 19 • Protect patients' personal health information according to professional confidentiality
- 20 standards.
- 21 • Inform the patient about significant findings during the examination, suggesting follow-up
- 22 care from a qualified physician when appropriate.
- 23

24 PROTECTIONS FOR THE EXAMINEE

25 *Informed Consent*

26
27
28 It is important for examinees to understand their jurisdictionally specific rights and the potential
29 implications of the examination's findings on their claims or legal cases. This information should
30 be communicated to the examinee via the informed consent process. The examiner must explain
31 that there is no physician-patient relationship involved and the evaluation is not a traditional
32 medical evaluation conducted by their treating physician.^{3,4} Additionally, the examinee must advise
33 the examiner immediately if any problems are encountered during the evaluation and a report will
34 be provided to the requesting client.

35
36 Additional best practices for the informed consent process are as follows:⁴

- 37
- 38 • Discuss the importance of the examinee's reading and signing of a written informed
- 39 consent with the examinee prior to the evaluation.
- 40 • Establish the ground rules for the performance of the service.
- 41 • Provide the opportunity for the examinee to understand the rationale for the IME, who is
- 42 requesting the evaluation, and where the report will be sent.
- 43 • Ensure the examinee understands what the IME provider can and cannot do.
- 44 • Acknowledge that the examinee understands that there will be no physician-patient
- 45 relationship established.
- 46 • Confirm that there will not be a discussion regarding diagnoses nor any recommendations
- 47 for treatment.
- 48 • Indicate that the examinee is consenting to having their history taken and that an
- 49 examination will occur.
- 50 • Clearly state that the IME physician is independent and that any opinions developed are
- 51 given irrespective of anyone else involved in the claim (a third-party evaluation).

- 1 • State that there is an understanding that the results of the evaluation (the report) will only
2 be given to the requesting party (unless there is a jurisdictional rule that requires something
3 else).
- 4 • Spend an appropriate amount of time on the informed consent process to ensure that the
5 IME physician can answer questions or clarify points that are not well understood.

6 7 *IME Report Access*

8
9 An examinee may have the right to access their IME report, but the process and ease of access can
10 vary based on jurisdiction, the specific policies of the requesting entity (such as an insurance
11 company or employer), and the purpose of the IME. There might be a specific timeframe within
12 which the IME report must be requested or provided.

13
14 Examinees should be encouraged to inquire about the request process or seek assistance from their
15 legal representative to understand their rights and the best approach to obtain the IME report. These
16 rights are often outlined in health information privacy laws or regulations concerning workers'
17 compensation and personal injury cases. For IMEs conducted as part of an insurance claim or
18 workers' compensation case, the report is typically part of the claim file. In the context of legal
19 disputes, IME reports may become part of the discovery process, allowing the examinee or their
20 attorney to access the report as part of the case proceedings.

21 22 *Third-Party Observation*

23
24 Some jurisdictions may have specific regulations or guidelines that address whether third-party
25 observers are allowed during IMEs. Examinees and their representatives should clarify the rules
26 and policies regarding third-party observers in advance. This might involve consulting with legal
27 counsel, reviewing the request for the IME, and directly communicating with the requesting
28 organization, insurance company, or physician coordinating the examination.

29
30 The presence of a third-party observer raises issues of patient privacy, confidentiality, and integrity
31 of the examination process, and research shows that it will bias the evaluation to the extent that in
32 most cases, the results are invalid.^{4,7} If a third party is allowed because of jurisdictional rule, the
33 individual undergoing the IME and the third party should agree to confidentiality terms. Any
34 observer will need to agree to not interfere with the examination.

35 36 PROTECTIONS FOR PHYSICIANS

37
38 The IME physician may be asked to render an opinion based upon incomplete information,
39 inadequate records, a limited in person evaluation, or an examinee who is uncooperative or
40 misrepresenting their true status for potential secondary gain. The examiner may be requested to
41 report on the nature and extent of alleged, documented or observed injuries, and function based
42 upon the available information and findings, within a reasonable degree of certainty.

43
44 Despite challenges that may arise during an IME, the evaluating physician's goal remains to
45 provide an unbiased, objective opinion regarding the examinee's medical and/or physical status.
46 When possible, physicians should identify and request additional records and information if needed
47 to objectively provide their report. Indicating that conclusive findings cannot be rendered with the
48 available information may be necessary in some circumstances.

49
50 In addition to examinee rights, the following list outlines best practices for minimizing professional
51 risks for physicians conducting IMEs:

1
2
3
4
5
6
7
8
9
10
11
12
13
14
15
16
17
18
19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45

- Detailed record-keeping of the IME process, findings, and the basis for conclusions to safeguard against potential disputes or allegations of misconduct. Documentation should be clear, factual, and free of any speculation.
- Safeguarding all IME-related documents and records, including during transport.
- Clear, professional communication with all parties involved. This includes the ability to explain medical terms and findings in layman's terms, which can reduce misunderstandings and conflicts.
- Only performing IMEs in their respective area of specialty and board certification. If an examination or interpretation of findings falls outside expertise, consult with other specialists.
- Having appropriate professional liability insurance that covers IMEs to provide financial and legal protection in case legal claims arise.
- Staying informed about the latest developments and any changes in laws or guidelines related to IMEs to avoid practices may cause exposure to liability.
- Seeking advice, when in doubt, on complex issues related to IMEs from legal professionals or a professional association.
- Identifying, disclosing and avoiding conflicts of interest, such as evaluating family members.
- Taking precautions disclosing information to third parties, limiting it to the minimum necessary for the intended purpose and remove individually identifying information before releasing aggregate data or statistical health information.⁶

STRUCTURAL BARRIERS IMPACTNG PHYSICIANS AND EXAMINEES

There is a national shortage of qualified physicians to meet the market demands for IMEs and associated timely report submissions. The shortage impacts timely decision making and authorization of care and subsequent appeals, creating an extra burden on examinees. The shift towards health care delivery consolidation and away from independent practice further contributes to the difficulty of scheduling and administering IMEs. Interstate and compact licensing affording physicians the right to perform IMEs beyond the boundaries of their jurisdiction could increase the pool of available qualified physicians to perform IMEs and promote access to care.

CONCLUSION

It is important for physicians to implement standards and safeguards when performing IMEs to protect examinees, themselves, and all other involved parties. Regulations, professional requirements, and protocols for IMEs differ both by jurisdiction and context in which the IME is being sought. However, despite myriad differences across jurisdictions, this report outlines numerous best practices for conducting IMEs that can enhance the quality of the examinee experience, as well as the scientific and evaluative rigor of the evaluating physician within this vital process. Additionally, critical elements like a thorough informed consent process, clear communication with the patient, and practicing within one's clinical expertise are some of the methods that can be deployed to protect both the IME physician and the examinee.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 34-A-24

Subject: Demographic Report of the House of Delegates and AMA Membership

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

1 INTRODUCTION

2

3 This informational report, “Demographic Report of the House of Delegates and AMA
4 Membership,” is prepared pursuant to Policy G-600.035, “House of Delegates Demographic
5 Report,” which states:

6

7 A report on the demographics of our AMA House of Delegates will be issued annually and
8 include information regarding age, gender, race/ethnicity, education, life stage, present
9 employment, and self-designated specialty.

10

11 In addition, this report includes information pursuant to Policy G-635.125, “AMA Membership
12 Demographics,” which states:

13

14 Stratified demographics of our AMA membership will be reported annually and include
15 information regarding age, gender, race/ethnicity, education, life stage, present employment,
16 and self-designated specialty.

17

18 This document compares the House of Delegates (HOD) with the entire American Medical
19 Association (AMA) membership and with the overall United States physician and medical student
20 population. Medical students are included in all references to the total physician population
21 throughout this report to remain consistent with the bi-annual Council on Long Range Planning and
22 Development report. In addition, residents and fellows endorsed by their states to serve as sectional
23 delegates and alternate delegates are included in the appropriate comparisons for the state and
24 specialty societies. For the purposes of this report, AMA-HOD includes both delegates and
25 alternate delegates.

26

27 DATA SOURCES

28

29 Lists of delegates and alternate delegates are maintained in the Office of House of Delegates
30 Affairs and are based on official rosters provided by the relevant society. The lists used in this
31 report reflect 2023 year-end delegation rosters.

32

33 Data on individual demographic characteristics are taken from the AMA Physician Professional
34 Data, which provides comprehensive demographic, medical education, and other information on all
35 United States and international medical graduates (IMGs) who have undertaken residency training
36 in the United States. Data on AMA membership and the total physician and medical student
37 population are taken from the Masterfile and are based on 2023 year-end information.

38

39 Some key considerations must be kept in mind regarding the information captured in this report.
40 Vacancies in delegation rosters mean that the total number of delegates is less than the 705 allotted

1 at the November 2023 Interim Meeting, and the number of alternate delegates is nearly always less
 2 than the full allotment. As such, the total number of delegates and alternate delegates is 1091 rather
 3 than the 1410 allotted. Race and ethnicity information, which is provided directly by physicians, is
 4 missing for approximately 15 percent of AMA members and approximately 19 percent of the total
 5 United States physician and medical student population, limiting the ability to draw firm
 6 conclusions. Efforts to improve AMA data on race and ethnicity are part of Policy D-630.972.
 7 Improvements have been made in collecting data on race and ethnicity, resulting in a decline in
 8 reporting race/ethnicity as unknown in the HOD and the overall AMA membership.

9
 10 **CHARACTERISTICS OF AMA MEMBERSHIP AND DELEGATES**

11
 12 Table 1 presents basic demographic characteristics of AMA membership and delegates along with
 13 corresponding figures for the entire physician and medical student population.

14
 15 Data on physicians’ and students’ current activities appear in Table 2. This includes life stage as
 16 well as present employment and self-designated specialty.

Table 1. Basic Demographic Characteristics of AMA Members & Delegates, December 2023

2023	AMA Members	All Physicians and Medical Students	AMA Delegates & Alternate Delegates 1,2
Total	282,952	1,514,092	1,091
Mean Age (Years)	46.7	52.8	54.2
Age			
Under Age 40	52.9%	30.5%	19.1%
40-49 Years	11.1%	17.2%	18.1%
50-59 Years	9.5%	15.8%	20.2%
60-69 Years	9.0%	15.6%	25.8%
70 or More	17.5%	20.8%	16.9%
Gender			
Male	58.9%	61.9%	60.8%
Female	40.5%	37.2%	39.0%
Unknown	0.6%	0.9%	0.2%
Race/Ethnicity			
American Indian or Alaskan Native	0.17%	0.17%	0.2%
Asian	17.5%	16.7%	14.8%
Black or African American	5.3%	4.5%	5.8%
Hispanic	4.1%	4.5%	3.3%
Mixed Race/Ethnicity	5.8%	4.0%	3.1%
Native Hawaiian or Other Pacific Islander	0.05%	0.04%	0.0%
White	50.4%	49.9%	62.9%
Unknown	14.9%	18.5%	8.3%
Other	1.8%	1.7%	1.6%
Education			
US or Canada	81.3%	77.2%	90.6%
IMG	18.7%	22.8%	9.4%

¹ There were 319 vacancies as of year’s end.

² Numbers include medical students and residents endorsed by their states for delegate and alternate delegate positions.

³ Age as of December 31. Mean age is the arithmetic average.

⁴ Includes other self-reported racial and ethnic groups.

Table 2. Life Stage, Present Employment and Self-Designated Specialty⁵, December 2021

2023	AMA Members	All Physicians and Medical Students	AMA Delegates & Alternate Delegates 1,2
Life Stage			
Student	18.2%	7.7%	6.1%
Resident	29.0%	11.5%	6.9%
Young (under 40 or first 8 years in practice)	10.0%	15.3%	6.5%
Established (40-64)	20.8%	36.7%	49.9%
Senior (65+)	22.0%	28.7%	30.6%
Present Employment			
Self-Employed Solo Practice	5.8%	7.2%	10.5%
Two physician practice	1.3%	1.7%	1.6%
Group practice	23.5%	38.9%	38.5%
HMO	0.2%	0.1%	0.8%
Medical School	0.8%	1.3%	3.4%
Non-government hospital	3.0%	4.2%	8.2%
State or local government hospital	3.4%	5.6%	10.4%
US government	0.8%	1.5%	2.5%
Locum Tenes	0.1%	0.2%	0.3%
Retired/Inactive	11.0%	12.8%	7.3%
Resident/Intern/Fellow	29.1%	11.6%	6.9%
Student	18.3%	7.8%	6.1%
Other/Unknown	2.8%	7.1%	3.6%
Specialty			
Family Medicine	7.9%	10.3%	10.8%
Internal Medicine	21.0%	22.8%	20.3%
Surgery	12.8%	12.8%	20.0%
Pediatrics	5.5%	8.6%	4.0%
Obstetrics & Gynecology	4.9%	4.4%	6.8%
Radiology	3.4%	4.3%	4.9%
Psychiatry	4.4%	5.1%	4.5%
Anesthesiology	3.5%	4.4%	3.4%
Pathology	1.7%	2.2%	2.1%
Other Specialty	16.6%	17.4%	17.0%
Students	18.2%	7.7%	6.1%

⁵ See Appendix for a listing of specialty classifications.

⁶ Students and residents are categorized without regard to age.

Appendix

Specialty classification using physician's self-designated specialties.

Major Specialty Classification	AMA Physician Masterfile Classification
Family Practice	General Practice, Family Practice
Internal Medicine	Internal Medicine, Allergy, Allergy and Immunology, Cardiovascular Diseases, Diabetes, Diagnostic Laboratory Immunology, Endocrinology, Gastroenterology, Geriatrics, Hematology, Immunology, Infectious Diseases, Nephrology, Nutrition, Medical Oncology, Pulmonary Disease, Rheumatology
Surgery	General Surgery, Otolaryngology, Ophthalmology, Neurological Surgery, Orthopedic Surgery, Plastic Surgery, Colon and Rectal Surgery, Thoracic Surgery, Urological Surgery
Pediatrics	Pediatrics, Pediatric Allergy, Pediatric Cardiology
Obstetrics/Gynecology	Obstetrics and Gynecology
Radiology	Diagnostic Radiology, Radiology, Radiation Oncology
Psychiatry	Psychiatry, Child Psychiatry
Anesthesiology	Anesthesiology
Pathology	Forensic Pathology, Pathology

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

CEJA Report 6-A-24

Subject: Judicial Function of the Council on Ethical and Judicial Affairs – Annual Report

Presented by: David A. Fleming, MD, Chair

1 At the 2003 Annual Meeting, the Council on Ethical and Judicial Affairs (CEJA) presented a
2 detailed explanation of its judicial function. This undertaking was motivated in part by the
3 considerable attention professionalism has received in many areas of medicine, including the
4 concept of professional self-regulation.

5
6 CEJA has authority under the Bylaws of the American Medical Association (AMA) to disapprove
7 a membership application or to take action against a member. The disciplinary process begins when
8 a possible violation of the Principles of Medical Ethics or illegal or other unethical conduct by an
9 applicant or member is reported to the AMA. This information most often comes from statements
10 made in the membership application form, a report of disciplinary action taken by state licensing
11 authorities or other membership organizations, or a report of action taken by a government tribunal.

12
13 The Council rarely re-examines determinations of liability or sanctions imposed by other entities.
14 However, it also does not impose its own sanctions without first offering a hearing to the physician.
15 CEJA can impose the following sanctions: applicants can be accepted into membership without any
16 condition, placed under monitoring, or placed on probation. They also may be accepted, but be the
17 object of an admonishment, a reprimand, or censure. In some cases, their application can be
18 rejected. Existing members similarly may be placed under monitoring or on probation, and can be
19 admonished, reprimanded or censured. Additionally, their membership may be suspended or they
20 may be expelled. Updated rules for review of membership can be found at [https://www.ama-](https://www.ama-assn.org/governing-rules)
21 [assn.org/governing-rules](https://www.ama-assn.org/governing-rules).

22
23 Beginning with the 2003 report, the Council has provided an annual tabulation of its judicial
24 activities to the House of Delegates. In the appendix to this report, a tabulation of CEJA's activities
25 during the most recent reporting period is presented.

APPENDIX

CEJA
*Judicial Function
 Statistics*

APRIL 1, 2023 – MARCH 31, 2024

Physicians Reviewed	<u>SUMMARY OF CEJA ACTIVITIES</u>
14	Determinations of no probable cause
22	Determinations following a plenary hearing
18	Determinations after a finding of probable cause, based only on the written record, after the physician waived the plenary hearing

Physicians Reviewed	<i>FINAL DETERMINATIONS FOLLOWING INITIAL REVIEWS</i>
14	No sanction or other type of action
3	Monitoring
17	Probation
4	Revocation
5	Suspension
1	Denied
1	Suspension lifted
0	Censure
7	Reprimand
3	Admonish

Physicians Reviewed	<u>PROBATION/MONITORING STATUS</u>
20	Members placed on Probation/Monitoring during reporting interval
15	Members placed on Probation without reporting to Data Bank
10	Probation/Monitoring concluded satisfactorily during reporting interval
0	Memberships suspended due to non-compliance with the terms of probation
10	Physicians on Probation/Monitoring at any time during reporting interval who paid their AMA membership dues
7	Physicians on Probation/Monitoring at any time during reporting interval who did not pay their AMA membership dues

REPORT 2 OF THE COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT (A-24)
Scenarios on Collective Action and Physician Unions

EXECUTIVE SUMMARY

The AMA estimated in 1998 that between 14,000 and 20,000 physicians were union members. By 2014, that number grew to 46,689 (5.7 percent) of 820,152 actively practicing physicians in the United States; in 2019, there were 67,673 physician union members, 7.2 percent of the 938,156 physicians actively practicing in the United States and an approximate 26 percent increase from 2014 in the percentage of physicians belonging to unions. Additionally, in April 2022, In Piedmont Health Services, Inc. and Piedmont Health Services Medical Providers United, Case No. 10-RC-286648, Region 10 of the National Labor Relations Board (Region) issued a Decision and Direction of Election (DDE) in which it held that physicians are not supervisors under the National Labor Relations Act (NLRA) simply by virtue of their position in the health care institution and thus are eligible for union representation.

As more physicians and physicians in training enter large systems, employment and unions, their needs from professional organizations and trusted voices will change. For the AMA to continue most effectively in its role as the largest advocate for physicians in the United States, it will be essential to adapt to the changing practice environment and consider how to provide its constituents with timely and useful education and support.

To that end, the Council on Long Range Planning and Development (CLRPD) conducted a scenario-building exercise to consider how changes in the macro environment in which health care is delivered may impact the capabilities and goals of physician collective bargaining. The focal question considered by the Council was: How can our AMA support the empowerment of physicians and physicians in training through collective bargaining to provide the best possible care for patients?

This informational report presents the findings of that exercise, which focused on four critical uncertainties in the macro environment that were likely to impact physician needs: the overall strength of the U.S. economy, patient perception of quality of care, consequences/ethics of work stoppages, and working conditions.

The goals of this exercise were multifaceted. It allowed the Council to consider an extremely complex issue through the lenses of specific factors rather than generalities. It allowed the Council to consider how the capabilities and goals of collective bargaining would be likely to change based on overarching factors affecting the United States and health care environments. Finally, it allowed for dynamic consideration of how the needs of physicians and physicians in training, as well as the role of the AMA would necessarily change based on the shifting environments in which physicians will practice medicine.

REPORT OF THE COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT

CLRPD Report 2-A-24

Subject: Scenarios on Collective Action and Physician Unions

Presented by: Gary Thal, MD, Chair

1 BACKGROUND

2
3 The AMA estimated in 1998 that between 14,000 and 20,000 physicians were union members. By
4 2014, that number grew to 46,689 (5.7 percent) of 820,152 actively practicing physicians in the
5 United States; in 2019, there were 67,673 physician union members, 7.2 percent of the 938,156
6 physicians actively practicing in the United States and an approximate 26 percent increase from
7 2014 in the percentage of physicians belonging to unions.¹ Over the same time period (1998-2019),
8 the percentage of all U.S. workers in unions fell from 13.9 percent to 10.3 percent;² the proportion
9 of physicians, residents and fellows in unions is increasing against the national trend of all workers.

10
11 Additionally, in April 2022, In *Piedmont Health Services, Inc. and Piedmont Health Services*
12 *Medical Providers United*, Case No. 10-RC-286648, Region 10 of the National Labor Relations
13 Board (Region) issued a Decision and Direction of Election (DDE) in which it held that physicians
14 are not supervisors under the National Labor Relations Act (NLRA) simply by virtue of their
15 position in the health care institution and thus are eligible for union representation.³

16
17 In its reasoning, the Region focused on the fact that the physician’s primary role is to provide
18 health care to patients, not participate in the administrative and personnel functions reserved for
19 other lead medical providers (who were excluded from the petitioned-for unit). The Region found
20 that the physicians are not held responsible for the performance of other employees and provide
21 only sporadic supervision. The Region specifically disputed the fact that some of the petitioned-for
22 physicians were found to be the “supervising physician” of another credentialed provider, as
23 required by North Carolina’s professional licensing law. The Region based this finding on a prior
24 NLRB decision, which held that a governmental requirement that a health care provider be
25 supervised by a physician does not necessarily establish the physician as a supervisor under the
26 NLRA. This DDE confirmed that physicians will not automatically be considered supervisors
27 under the NLRA and may seek union representation. Piedmont’s physicians and providers
28 subsequently voted in favor of union representation. Prior to this decision, unionization among
29 physicians had largely been confined to medical residents and public-sector physicians.⁴

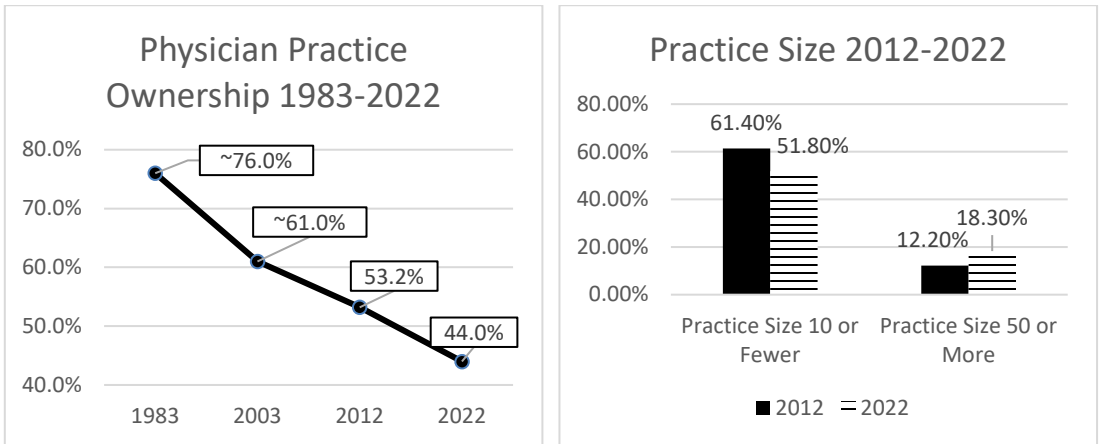

30
31 Since that decision, frequent occurrences of unionizing among physicians, residents, and fellows
32 have been observed:

- 33
34 • Roughly 400 primary and urgent-care providers across more than 50 clinics operated by
35 the Allina Health System in Minnesota and Wisconsin voted to unionize in October 2023,
36 appearing at the time to be the largest group of unionized private-sector physicians in the
37 United States. More than 150 nurse practitioners and physician assistants at the clinics
38 were also eligible to vote and became members of the union.⁵ Further appeals by Allina
39 were unsuccessful.⁶

- 1 • Physicians at six Legacy Health hospitals in Oregon and Washington voted to unionize; the
2 vote was certified by the National Labor Relations Board November 17, 2023. The
3 hospitalists’ decision to unionize had the stated goals of improving local health care and
4 giving frontline physicians a voice in the decisions that impact their patients’ care,
5 communities’ health and hospital working conditions. Approximately 200 hospitalists
6 employed by Legacy Health joined the approximately 700 Oregon Nurses Association
7 nurses and mental and behavioral health professionals already employed by the system,
8 making it one of the largest hospitalist union groups in the country.⁷
9
- 10 • In January 2024, residents and fellows at Northwestern University's McGaw Medical
11 Center voted to unionize, citing concerns with a lack of information around pay increases
12 and benefits from the health system. More than 1,300 residents and fellows were set to join
13 the Committee of Interns and Residents/Service Employees International Union after
14 nearly 800 voted in favor of the move. The Committee of Interns and Residents (CIR) is
15 the largest housestaff union in the United States, representing over 32,000 resident
16 physicians and fellows as of March 2024.^{8,9}
17

18 The most recently available list of hospital residency programs that have joined CIR has been
19 included as an appendix. This list does not represent all unionized residency programs, and the
20 number of unionized residency programs has continued to grow.
21

22 Among the most significant drivers of increased unionization among physicians and physicians in
23 training are undoubtedly the dramatic decrease in physician practice ownership, the related increase
24 in the number of employed physicians, and the shift away from small practices. While current
25 estimates on the number of employed physicians vary, with one recent study finding 73.9 percent
26 of physicians to be employed by hospitals, health systems, or corporate entities,¹⁰ an AMA Policy
27 Research Perspective published in July 2023 found that, in 2022, 49.7 percent of physicians were
28 employees, 44.0 percent were owners, and 6.4 percent were independent contractors. This
29 represented a significant contrast to 2012 when 53.2 percent of physicians were owners, to the
30 early and mid-2000s, when around approximately 61 percent of physicians were owners
31 (Wassenaar and Thran 2003; Kane 2009), and the early 1980s when the ownership share was
32 around 76 percent (Kletke, Emmons, and Gillis 1996). Practice size continued a redistribution of
33 physicians from small practices to large ones. The percentage of physicians in practices with 10 or
34 fewer physicians fell from 61.4 percent in 2012 to 51.8 percent in 2022. In comparison, the
35 percentage in practices with 50 or more physicians grew from 12.2 percent to 18.3 percent.¹¹

Source: Kane C. Recent Changes in Physician Practice Arrangements: Shifts Away from Private Practice and Towards Larger Practice Size Continue Through 2022. American Medical Association.

1 The analysis also found that in 2012, 44.3 percent of physicians under the age of 45 were owners.
2 By 2022, only 31.7 percent of physicians under the age of 45 were owners. This suggests that a
3 smaller percentage of each successive class of physicians has started their post-residency career in
4 an ownership position. Furthermore, the employment status of young physicians is different than
5 that of older physicians. In 2022, 51.3 percent of physicians aged 55 and over compared to 31.7
6 percent of physicians under age 45 were owners. This indicates that when physicians retire, owners
7 are not replaced in the workforce on a one-to-one basis; they are more likely to be replaced by
8 physicians who are employees.¹²

9
10 The moves away from practice ownership and into employment, and away from small practices
11 and into large ones, seem likely to continue, if not accelerate, in the foreseeable future. As such, so
12 too will the prevalence of physicians, residents and fellows who may consider unionization.

13 14 SCENARIO DEVELOPMENT

15
16 As more physicians and physicians in training enter large systems, employment and unions, their
17 needs from professional organizations and trusted voices will change. For the AMA to continue
18 most effectively in its role as the largest advocate for physicians in the United States, it will be
19 essential to adapt to the changing practice environment and consider how to provide its constituents
20 with timely and useful education and support.

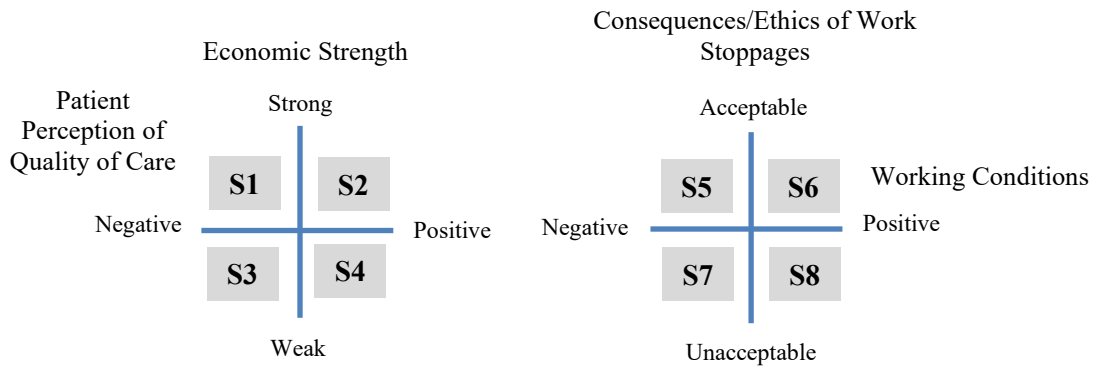

21
22 To that end, CLRPD conducted a scenario-building exercise to extrapolate on how changes in the
23 macro environment in which health care is delivered may impact the capabilities of physician
24 collective bargaining. The Council identified the following focal question for this exercise:

25
26 *How can our AMA support the empowerment of physicians and physicians in training*
27 *through collective bargaining to provide the best possible care for patients?*

28
29 Based on this question, the Council identified a list of driving forces and factors in the overall
30 environment that would influence the needs of physicians in different environmental scenarios.
31 From this list, members were asked to rank each driver based on two metrics: (1) how important
32 each one was to the focal question and (2) how uncertain the outcome of each driver was. The goal
33 of this step was to identify both the most important and most uncertain driving forces (“critical
34 uncertainties”). The Council identified the following critical uncertainties:

- 35
36
- Overall strength of the U.S. economy
 - Patient perception of quality of care
 - Consequences/ethics of work stoppages
 - Working conditions
- 37
38
39
40

41 These driving forces were subsequently combined into two matrices, from which were created
42 eight distinct scenario spaces (S1-S8):

1 The Council considered what the implications of each scenario space would be for physicians and
 2 patient care, and, subsequently, what role the AMA could play in supporting physicians in each
 3 scenario. The goals of this exercise were multifaceted. It allowed the Council to consider an
 4 extremely complex issue through the lenses of specific factors rather than generalities. It allowed
 5 the Council to consider how the capabilities and goals of collective bargaining would be likely to
 6 change based on overarching factors affecting the United States and health care environments.
 7 Finally, it allowed for dynamic consideration of how the needs of physicians and physicians in
 8 training, as well as the role of the AMA would necessarily change based on the shifting
 9 environments in which physicians will practice medicine.

10
 11 In the following section, the Council contemplated the world of each scenario space including the
 12 connections between the two driving forces; how the interplay between those forces would affect
 13 patients, physicians, and the health care environment; what the needs of physicians might be to
 14 support the delivery of the best possible patient care; and how the AMA might be best positioned to
 15 support those needs.

16
 17 **SCENARIO SPACES**

18
 19 **Scenario 1 – Strong Economy & Negative Patient Perception of Quality of Care**

20 In a scenario in which the economy is strong, but patients have a negative perception of quality of
 21 care, the Council identified several challenges and opportunities. In terms of opportunities, the
 22 Council noted that in times of economic prosperity, the position of unions, and the overall position
 23 from which physicians could collectively bargain would be enhanced. Most obviously, employers
 24 in such a scenario would have opportunities to make payment concessions. This could be of
 25 particular benefit to residents and fellows, to whom payment and quality of life relative to working
 26 hours is an ongoing concern. More directly related to the negative perception of quality of care,
 27 physicians in such a scenario would likely be able to advocate and negotiate toward changes in
 28 health systems and care delivery that would enhance patient satisfaction. For instance, physicians
 29 negotiations could work toward allowing physicians to spend more time with individual patients,
 30 which can lead to increased patient satisfaction.¹³ Furthermore, improvements in how a clinic is
 31 run, e.g., adequate staffing, setting and managing expectations, facilitating streamlined and
 32 personalized communication between physicians, staff and patients might all be negotiated for in a
 33 strong economic environment, which could have the twofold benefit of improving patient
 34 satisfaction and improving working conditions in the future. CLRPD identified study,
 35 communication, and messaging as primary roles of the AMA in such a scenario. It would be
 36 essential to understand the drivers of the poor perception of quality of care and communicate those
 37 to physician groups as bases for negotiations. Additionally, identifying and sharing practices that
 38 lead to improved patient satisfaction could help unions and other physicians engaged in

1 negotiations to self-assess and pinpoint potential points of action that have been proven to improve
2 the patient experience. On a high level, the AMA’s most valuable roles in such an environment
3 would be to help physicians understand the patient experience, identify solutions that have been
4 shown to improve those experiences, and communicate those solutions to aid in collective
5 bargaining during a time when physicians would be expected to be in a stronger position to make
6 appreciable gains through negotiation.

7 8 **Scenario 2 – Strong Economy & Positive Patient Perception of Quality of Care**

9 The Council noted that when organizations hit weak economic times, physicians are often overseen
10 and restricted in greater ways. Health systems with strong finances, however, tend to allow
11 physicians greater autonomy. Autonomy, raises, and improved working conditions were identified
12 as the primary objectives in Scenario 2. If a health system is in a strong financial situation, and
13 patients are satisfied with the quality of care they receive, physicians will be in the strongest
14 position possible to demonstrate their successes and leverage those successes into personal gains
15 and health system improvements that acknowledge and reward their expertise and achievements. In
16 such a scenario, physicians in negotiation would likely work to demonstrate the positive outcomes
17 of their work and use those data points to leverage their employers to make decisions that increase
18 patient and physician satisfaction. The AMA-RAND study, “Factors Affecting Physician
19 Professional Satisfaction and Their Implications for Patient Care, Health Systems, and Health
20 Policy,” noted that drivers of physician satisfaction include providing high-quality care or working
21 at practices that facilitate the delivery of such care; income stability; payment arrangements that
22 were perceived as fair, transparent, and aligned with good patient care; and reducing the
23 cumulative burden of rules and regulations.¹⁴ The AMA’s work on physician satisfaction and
24 practice sustainability could prove a major asset in such a scenario by providing data points to both
25 physicians and health systems to demonstrate how satisfied physicians improve patient care and
26 perception of care, the hidden costs of physician burnout, and the value of system and working
27 condition improvements. It was also noted that in recent times, physicians often see pay reductions
28 and pay increases are much more infrequent. In a scenario when measurables demonstrate high
29 patient satisfaction, and the overall economy is strong, physicians would be in a strong position to
30 collectively bargain for pay increases.

31 32 **Scenario 3 – Weak Economy & Negative Perception of Patient Care**

33 The converse of Scenario 2, this scenario imagined an environment in which the economy is weak,
34 and patients have a poor perception of the quality of care they receive. In such a scenario, it was
35 noted that everyone would be struggling, i.e., patients, physicians, and employers. This could be
36 described as a “stop the bleeding” scenario in which negotiations would focus on preventing the
37 weakening of the position of physicians. Among the focal points the Council identified as
38 particularly significant in such a scenario were scope of practice and burnout. Health systems in
39 weak financial situations will look for opportunities to reduce costs, which may include increasing
40 the use of non-physician providers. It would be essential in such a scenario for physician unions
41 and physician negotiators to push back against scope creep through collective bargaining. In health
42 systems where patient care was already being delivered by mid-level providers, poorly perceived
43 quality of care could act as an argument against scope creep. Conversely, health systems in which
44 patient care was predominantly being delivered by physicians may attempt to leverage patient
45 dissatisfaction to push for increased utilization of mid-level providers. Physicians would need data
46 demonstrating the true effects of scope creep as it relates to both cost and quality. Other tendencies
47 in such an environment would likely be to push physicians, residents and fellows into working
48 longer hours, shorter and higher quantities of patient visits, and cost cutting measures, all factors
49 likely to lead to even further reduced quality of care, poorer quality of life and worse educational
50 environments for physicians in training, and increased burnout. The AMA’s work on burnout could

1 be of value in this environment, providing support to struggling physicians and demonstrating to
2 employers the mechanisms to and the value of reducing burnout.

3 4 **Scenario 4 – Weak Economy & Positive Patient Perception of Quality of Care**

5 The Council noted that in this scenario, most of the issues related to a poor economy would still be
6 relevant, as employers in a weak economy would still likely attempt to cut costs and get more for
7 less. In theory, physicians in this scenario should be better positioned to negotiate against cost-
8 cutting measures such as scope creep, as high patient perception of quality of care should be a
9 focus of collective bargaining and a strong argument against such measures. However, several
10 complicating scenarios were noted, including the possibility that in such an environment,
11 employers may be more willing to take risks in care delivery, viewing the positive patient
12 perception of quality as a backstop against possible declines. Additionally, the Council noted the
13 distinction between patient perception of quality and quality care itself, and that some patients
14 receiving direct care from mid-level providers may have a higher perception of the quality of care
15 they receive (for instance, if mid-level providers spend more time with their patients than
16 physicians can). It was also noted that by replacing one physician with two mid-level providers,
17 health systems could charge more, thereby increasing revenue at the expense of both physicians
18 and quality of care. Still, in an environment in which patient perception of quality is positive, the
19 AMA could examine the causes of that positive perception, identify best practices to reduce costs
20 while preserving quality of care, and communicate those best practices to health systems and
21 physicians.

22 23 **Scenario 5 – Negative Working Conditions & An Acceptable View of Work Stoppages**

24 A complicating scenario related to physician unionization is the idea of work stoppages and the
25 potential impacts of work stoppages on the health of patients. Section 1.2.10 in the Code of
26 Medical Ethics states that physicians who participate in advocacy should “[a]void using disruptive
27 means to press for reform. Strikes and other collection actions may reduce access to care, eliminate
28 or delay needed care, and interfere with continuity of care and should not be used as a bargaining
29 tactic. In rare circumstances, briefly limiting personal availability may be appropriate as a means of
30 calling attention to the need for changes in patient care.”¹⁵ As unionization becomes more prevalent
31 among physicians, unions will explore all possible tactics to increase leverage during collective
32 bargaining. In January 2024, thousands of junior physicians in the United Kingdom (UK) engaged
33 in a six-day strike over low wages leading to the postponement of more than 110,000
34 appointments.¹⁶ Senior doctors and other medical professionals were available to cover emergency
35 services, critical care, and maternity services. This represented the longest strike in the history of
36 the UK’s National Health Service (NHS).¹⁷ The NHS national medical director said it would take
37 hospitals “weeks and months” to recover from the stoppage.¹⁸ Despite the obvious impacts
38 physician work stoppages have on health care delivery, it is impossible to ignore the possibility that
39 they may become a reality in the United States in an environment with a more highly unionized
40 physician workforce. There are obvious parallels to be drawn between junior physicians in the
41 United Kingdom and residents and fellows in the United States, who earn significantly less than
42 their more senior colleagues, while working potentially more hours per week.

43
44 Scenario 5 imagines a situation in which physician working conditions are poor and the
45 consequences of work stoppages are viewed as an acceptable tactic in collective bargaining. While
46 what is “acceptable” will always vary between groups, individuals, organizations, etc., this scenario
47 is one where the opportunity for work stoppage or the threat of work stoppage and other forms of
48 collective action is most realistic. The Council noted that in such a scenario, it would be essential
49 for the AMA to provide a backstop of support demonstrating the moral and ethical duty of
50 physicians to act in the best interest of patient care and communicate that work stoppages are not
51 and should not be about money, but about physicians doing what they can to fulfill their duty to

1 their oath and to their patients. Members also noted that work stoppages can take a variety of
2 forms, such as—like in the case of the NHS strike—predetermined and preannounced periods of
3 unavailability by physicians in an effort to highlight system inadequacies (rather than, for instance,
4 a strike of indeterminable duration) and that this types of collective action could more easily be
5 viewed as action toward improving patient care and not harming it. On a high level, this scenario
6 made apparent the likelihood of a future in which physician work stoppages of some form, and the
7 downstream consequences of those stoppages, would become a reality, and the AMA’s most
8 effective means of supporting physicians in such an environment will need to be considered,
9 particularly as it relates to potential conflict with AMA policy and the Code of Medical Ethics. In
10 response to policy adopted at the 2023 Annual Meeting of the House of Delegates (H-405.946,
11 “Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization)
12 the Council on Ethical and Judicial Affairs (CEJA) is developing a report for the 2024 Interim
13 Meeting “to review the advisory restricting collective action in section 1.2.10 of its Code of
14 Medical Ethics to allow for more flexibility on the part of physicians who have exhausted other
15 non-disruptive methods for reform.” Current AMA policy on unions and collective bargaining has
16 been appended to this memo.

17

18 **Scenario 6 – Positive Working Conditions & An Acceptable View of Work Stoppages**

19 The Council viewed Scenario 6 as an ideal time for the AMA to engage in organizing, preparation
20 and analysis. While work stoppages in such a scenario would be less likely to be necessary, laying
21 the groundwork to preserve desirable working conditions and keeping them heading in the right
22 direction can occur during this time, as well as can the preparation for a future in which work
23 stoppages may become a necessary/useful tool. Such a scenario would present the AMA with an
24 opportunity to analyze progress that has been made and by what mechanisms and communicate
25 those successes to other physician groups attempting to improve their own conditions. This
26 scenario could also present an opportunity to analyze the overall status of unionization and
27 collective bargaining and successful organizational structures and negotiation tactics with the hope
28 of working toward scenarios where improvements continue without the need for work stoppages or
29 the threats of work stoppages. As one member put it, this scenario is “time to get to work.”

30

31 **Scenario 7 – Negative Working Conditions & An Unacceptable View of Work Stoppages**

32 In Scenario 7 it becomes essential to identify solutions and collective bargaining strategies to push
33 toward improved conditions without the threat of work stoppage. If the public and/or physicians
34 themselves determine that any level of disruption to care delivery cannot occur, unions will
35 necessarily find themselves in a weakened position for negotiation. The AMA could aid physicians
36 in such a scenario by identifying, or proliferating already identified, successes that have occurred
37 without the need for work stoppages. The Council also noted that in a scenario in which working
38 conditions are deteriorating, but work stoppages are not an option, physicians may simply choose
39 to quit, leading to a worsening physician shortage and poorer access to quality care. The Council
40 noted that this scenario space is not unlike what physicians encountered during the worst of the
41 COVID-19 pandemic, during which working conditions were as bad as they could have been, but
42 no physician group would have been willing to threaten a strike even if they were already in a
43 union or looking to join one. That situation led to early retirements and physicians considering
44 alternative career paths, along with rises in physician mental health issues and suicides. Non-
45 compete clauses also present a significant challenge in such an environment, as physicians dealing
46 with declining working conditions who have signed such clauses cannot simply change systems but
47 must either relocate or remain and suffer. Providing support and resources to physicians in
48 challenging situations represents another area where the AMA could make a significant impact.

Scenario 8 – Positive Working Conditions & An Unacceptable View of Work Stoppages

Not unlike Scenario 6, unions in Scenario 8 would likely be focused on attempting to “lock in” the progress being made. Such a scenario may present opportunities to establish metrics to better quantify improvements in working conditions. The Council observed that more opportunities may exist for medical associations including the AMA to engage in benchmarking and best practice research and sharing. In this scenario, techniques other than the threat of work stoppages have clearly been effective, evidenced by improving working conditions. However, it was noted that it is unlikely that conditions would be improving among all physicians and across all employers, so this would be a time to work through unions and organizations to identify and implement best practices as widely as possible and to include experienced physicians, residents, and fellows. It was also noted that both the overall quality of working conditions, as well as the trend in working conditions (i.e., improving or declining) are relevant; good working conditions can decline just as poor working conditions can improve, making the establishment of benchmarks even more useful in allowing physicians and systems to assess the overall state of conditions as well as making changes easier to assess.

DISCUSSION

As part of its deliberations, the Council considered not only how the needs of physicians and physicians in training will change in an increasingly employed and unionized workforce, but how those changes in workforce trends would impact the AMA, its membership and its mission, i.e., what does unionization mean for the AMA and other medical associations? The goals and capabilities of these organizations remain consistent—regardless of how physicians work and organize—and include advocating for physicians and trainees, communicating on their behalf, convening groups to facilitate collaboration, providing timely educational resources, and identifying and sharing best practices to help physicians achieve their practice and career goals. Organized medicine provides value to all physicians, whether or not they join a specific association or a union. As has been observed with the move away from private practice and towards employment, the challenges physicians and trainees face as practice models evolve do not become apparent immediately, but often do so suddenly and urgently; organizations working on their behalf must remain nimble and responsive to their evolving needs to provide effective support and membership value. On the rapidly developing issue of physician collective bargaining and unionization, it will be essential to monitor changes in the space, maintain awareness of difficulties and successes as they occur, and identify the most effective roles of the AMA in the context of the changing workforce and macro environment.

The Council believes that an open forum at an upcoming HOD meeting through which physicians, residents and fellows who have encountered unionization directly could share their experiences would be extremely useful in expanding the Association’s understanding of the impacts such efforts have on grassroots members and facilitate discussion and idea sharing among those currently involved in these initiatives. It will also be essential for stakeholders throughout AMA membership and staff who are either involved in or likely to be impacted by the growing trend of unionization to find opportunities for collaboration to maximize understanding and impact.

This analysis assumes a future in which a greater proportion of physicians and physicians in training choose employed practice models and join unions. While the exercise focused on specific factors in the overall environment to assess how the needs of physicians and physicians in training would be impacted, and how the AMA could aid negotiating physicians in such environments, the needs and wishes of physicians are relatively consistent regardless of work setting and include providing high-quality care; working environments that facilitate high-quality care; stable, fair, and transparent pay arrangements; and reduced regulatory burdens. However, the mechanisms available

1 to work toward these goals will change along with environmental factors and changing models of
2 care delivery and organizational structures. The Council will continue to monitor this evolving
3 area.

Appendix 2 – AMA Policies Related to Unionization and Collective Bargaining

Code of Medical Ethics Opinion 1.2.10 Political Action by Physicians

Like all Americans, physicians enjoy the right to advocate for change in law and policy, in the public arena, and within their institutions. Indeed, physicians have an ethical responsibility to seek change when they believe the requirements of law or policy are contrary to the best interests of patients. However, they have a responsibility to do so in ways that are not disruptive to patient care.

Physicians who participate in advocacy activities should:

- (a) Ensure that the health of patients is not jeopardized and that patient care is not compromised.
- (b) Avoid using disruptive means to press for reform. Strikes and other collection actions may reduce access to care, eliminate or delay needed care, and interfere with continuity of care and should not be used as a bargaining tactic. In rare circumstances, briefly limiting personal availability may be appropriate as a means of calling attention to the need for changes in patient care. Physicians should be aware that some actions may put them or their organizations at risk of violating antitrust laws or laws pertaining to medical licensure or malpractice.
- (c) Avoid forming workplace alliances, such as unions, with workers who do not share physicians' primary and overriding commitment to patients.
- (d) Refrain from using undue influence or pressure colleagues to participate in advocacy activities and should not punish colleagues, overtly or covertly, for deciding not to participate.

Investigation into Residents, Fellows and Physician Unions D-383.977

Our AMA will study the risks and benefits of collective bargaining for physicians and physicians-in-training in today's health care environment.

Implementation

Our AMA continues to study the risks and benefits of collective bargaining for physicians and physicians-in-training and works closely with state and national medical specialty societies interested in the issues raised in this Resolution.

Our AMA developed an advocacy issue brief that studies the risks and benefits of collective bargaining for physicians and physicians-in-training and shared this document with all state and national medical specialty societies. Our AMA will continue to work closely with state and national medical specialty societies interested in the issues raised in this Resolution.

Employee Associations and Collective Bargaining for Physicians D-383.981

Our AMA will study and report back on physician unionization in the United States.

Collective Bargaining: Antitrust Immunity D-383.983

Our AMA will: (1) continue to pursue an antitrust advocacy strategy, in collaboration with the medical specialty stakeholders in the Antitrust Steering Committee, to urge the Department of Justice and Federal Trade Commission to amend the "Statements of Antitrust Enforcement Policy in Health Care" (or tacitly approve expansion of the Statements) and adopt new policy statements

regarding market concentration that are consistent with AMA policy; and (2) execute a federal legislative strategy.

Collective Bargaining and the Definition of Supervisors D-383.988

Our AMA will support legislative efforts by other organizations and entities that would overturn the Supreme Court's ruling in *National Labor Relations Board v. Kentucky River Community Care, Inc., et al.*

Update

2022: In *Piedmont Health Services, Inc. and Piedmont Health Services Medical Providers United*, Case No. 10-RC-286648, Region 10 of the National Labor Relations Board (Region) issued a Decision and Direction of Election (DDE) in which it held that physicians are not supervisors under the National Labor Relations Act (the Act) simply by virtue of their position in the healthcare institution.

This DDE is notable, as it confirms that physicians will not automatically be considered supervisors under the Act and may seek union representation. Indeed, Piedmont's physicians and providers ultimately voted in favor of union representation. Healthcare employers should consider reviewing their physicians' job descriptions and job duties to determine whether they potentially can be considered supervisors under the Act.

Antitrust Relief as a Priority of the AMA H-380.987

Our AMA will continue its aggressive efforts to achieve appropriate negotiations rights and opportunities and necessary antitrust relief for physicians, by whatever means. Achieving this important goal will remain a top priority for the Association.

Physicians' Ability to Negotiate and Undergo Practice Consolidation H-383.988

Our AMA will: (1) pursue the elimination of or physician exemption from anti-trust provisions that serve as a barrier to negotiating adequate physician payment; (2) work to establish tools to enable physicians to consolidate in a manner to insure a viable governance structure and equitable distribution of equity, as well as pursuing the elimination of anti-trust provisions that inhibited collective bargaining; and (3) find and improve business models for physicians to improve their ability to maintain a viable economic environment to support community access to high quality comprehensive healthcare.

Antitrust Relief for Physicians Through Federal Legislation H-383.990

Our AMA:

(1) encourages state medical associations and national medical specialty societies to support federal antitrust reform bills, such as H.R. 1409, as originally introduced in the 112th Congress, and consider sending in letters of support for such antitrust reform legislation to their respective Congressional delegations and select Congressional leaders;

(2) supports the intent of antitrust reform bills, such as H.R. 1409, as originally introduced in the 112th Congress, that put access to quality patient medical care and patient rights ahead of health insurer profits;

(3) continues to advocate for the principles that support that any health care professional, including a physician or a physician group, which is engaged in negotiations with a health plan regarding the terms of any contract under which the professional provides health care items or services for which benefits are provided shall, in connections with such negotiations, be exempt from federal antitrust laws;

(4) continues to advocate for the concepts and limitations incorporated in H.R. 1409, as originally introduced in the 112th Congress, including: no new rights for collective cessation of service to patients, no amendments to the National Labor Relations Act; and no application of H.R. 1409, as originally introduced in the 112th Congress, to the Medicare program under Title XVIII, the Medicaid program under Title IX, the SCHIP program under Title XXI of the Social Security Act; or programs related to medical services for members of the uniformed service, veterans, federal employees health benefit program or Indian Health Services;

(5) will send a letter of support to Congress of the principles contained in H.R. 1409 as originally introduced in the 112th Congress; and

(6) will work with members of Congress to promote antitrust reform in light of Accountable Care Organization (ACO) development.

Antitrust Relief H-383.992

Our AMA will: (1) redouble efforts to make physician antitrust relief a top legislative priority, providing the necessary foundation for fair contract negotiations designed to preserve clinical autonomy and patient interest and to redirect medical decision making to patients and physicians; and (2) affirm its commitment to undertake all appropriate efforts to seek legislative and regulatory reform of state and federal law, including federal antitrust law, to enable physicians to negotiate effectively with health insurers.

Resident Physicians, Unions and Organized Labor H-383.998

Our AMA strongly advocates for the separation of academic issues from terms of employment in determining negotiable items for labor organizations representing resident physicians and that those organizations should adhere to the AMA's Principles of Medical Ethics which prohibits such organizations or any of its members from engaging in any strike by the withholding of essential medical services from patients.

Collective Bargaining for Physicians H-385.946

The AMA will seek means to remove restrictions for physicians to form collective bargaining units in order to negotiate reasonable payments for medical services and to compete in the current managed care environment; and will include the drafting of appropriate legislation.

Physician Collective Bargaining H-385.976

Our AMA's present view on the issue of physician collective negotiation is as follows:

(1) There is more that physicians can do within existing antitrust laws to enhance their collective bargaining ability, and medical associations can play an active role in that bargaining. Education and instruction of physicians is a critical need. The AMA supports taking a leadership role in this process through an expanded program of assistance to independent and employed physicians.

(2) Our AMA supports continued intervention in the courts and meetings with the Justice Department and FTC to enhance their understanding of the unique nature of medical practice and to seek interpretations of the antitrust laws which reflect that unique nature.

(3) Our AMA supports continued advocacy for changes in the application of federal labor laws to expand the number of physicians who can bargain collectively.

(4) Our AMA vigorously opposes any legislation that would further restrict the freedom of physicians to independently contract with Medicare patients.

(5) Our AMA supports obtaining for the profession the ability to fully negotiate with the government about important issues involving reimbursement and patient care.

Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization H-405.946

1. Our American Medical Association will: (1) reevaluate the various efforts to achieve collective actions and/or unionization for physicians nationally; and (2) request CEJA to review the advisory restricting collective action in section 1.2.10 of its Code of Medical Ethics to allow for more flexibility on the part of physicians who have exhausted other non-disruptive methods for reform.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 4-A-24

Subject: Health System Consolidation

Presented by: Sheila Rege, MD, Chair

1 At the 2023 Annual Meeting, the House of Delegates adopted Policy D-160.907, Health System
2 Consolidation, which directed the American Medical Association (AMA) to: 1) assess and report
3 annually on nationwide health system and hospital consolidation, as well as payer consolidation, to
4 assist policymakers and the federal government; 2) that the annual report on nationwide hospital
5 consolidation be modeled after the “Competition in Health Insurance: A comprehensive study of
6 U.S. Markets” in its comprehensiveness to include for example data and analyses as: a) a review of
7 the current level of hospital and/or health system consolidation at the level of all metropolitan
8 statistical areas, state, and national markets; b) a list of all mergers and acquisition transactions
9 valued above a set threshold amount resulting in hospital and/or health system consolidation;
10 c) analyses of how each transaction has changed or is expected to change the level of competition
11 in the affected service and geographic markets; and d) analyses of how health care costs and price
12 have changed in affected markets after large consolidation transaction has taken place; 3) that the
13 AMA report the initial findings of this study to the House of Delegates by the 2024 Annual
14 Meeting; and 4) that the AMA report the findings of this study to its members and stakeholders,
15 including policymakers and legislators, to inform future health care policy.

16
17 The Board of Trustees assigned only the third Resolve clause of Policy D-160.907 to the Council
18 for a report back at the 2024 Annual Meeting. The balance of the directive was assigned to AMA
19 staff to implement (i.e., the AMA’s Division of Economic and Health Policy Research). Data were
20 used primarily from the American Hospital Association (AHA) to assess competition in hospital
21 markets. As directed by Policy D-160.907, the requested analysis was modeled after the AMA’s
22 Competition in Health Insurance study.

23
24 This informational Council report serves as notice to the House of Delegates regarding the report
25 from the AMA’s Division of Economic and Health Policy Research. Here we share topline findings
26 from the Policy Research Perspective titled: “[Competition in Hospital Markets, 2013-2021](#)” and
27 encourage interested members to reference the full analysis for a more robust discussion of the
28 findings.

29
30 **BACKGROUND**

31
32 The economic study was conducted using the AHA’s 2013, 2017, and 2021 Annual Survey
33 Databases. These databases were used to calculate shares and concentration levels in markets
34 across the United States. The Herfindahl-Hirschman Index (HHI) indicates the level of market
35 concentration and was calculated for each Metropolitan Statistical Area (MSA). The HHI is
36 calculated as a sum of the squared market shares for all firms found within a market. A higher HHI
37 indicates higher concentration. For example, if a market consisted of four firms and each firm held
38 a 25 percent share, the HHI for that market would be 2,500:

39
40
$$25^2 + 25^2 + 25^2 + 25^2 = 2,500$$

1 If the number of firms in a market increased, the HHI would generally decrease, and vice versa.

2
3 Appendices A1 and A2 show that in the majority of MSA-level markets, hospitals (or systems)
4 have large market shares. In 97 percent of markets, at least one hospital (system) had a market
5 share of 30 percent or greater in 2021, and 77 percent of markets had one hospital (system) with a
6 share of 50 percent or more in 2021 – up from 70 percent or more in 2013. In 43 percent of
7 markets, a single hospital (system) had a market share of 70 percent or more in 2021 – an increase
8 from 37 percent in 2013. The fraction of hospitals that are a part of a system has also been
9 increasing over time, increasing from 70 percent in 2013 to 76 percent in 2017 to 78 percent in
10 2021.

11
12 Appendix B shows that, on average, hospital markets are highly concentrated and market
13 concentration has been increasing over time. Virtually all hospital markets (99 percent) are highly
14 concentrated.

15
16 A complete list of the two largest hospitals' (or systems') market shares and the HHIs by MSA can
17 be found in the full analysis.

18 19 AMA POLICY

20
21 The AMA has several policies, and the Council has presented several recent reports to the House of
22 Delegates on hospital consolidation and health care mergers and acquisitions.

23
24 CMS Report 8-A-23, Impact of Integration and Consolidation on Patients and Physicians,
25 recommended that the AMA: 1) continue to monitor the impact of hospital-physician practice and
26 hospital-hospital mergers and acquisitions on health care prices and spending, patient access to
27 care, potential changes in patient quality outcomes, and physician wages and labor; 2) continue to
28 monitor how provider mix may change following mergers and acquisitions and how non-compete
29 clauses may impact patients and physicians; 3) broadly support efforts to collect relevant
30 information regarding hospital-physician practice and hospital-hospital mergers and acquisitions in
31 states or regions that may fall below the Federal Trade Commission (FTC)/Department of Justice
32 review threshold; 4) encourage state and local medical associations, state specialty societies, and
33 physicians to contact their state's attorney general with concerns of anticompetitive behavior; and
34 encourage physicians to share their experiences with mergers and acquisitions, such as those
35 between hospitals and/or those between hospitals and physician practices, with the FTC via their
36 online submission form.

37
38 CMS 2-I-22, Corporate Practice of Medicine, recommended that the AMA: 1) acknowledge that
39 the corporate practice of medicine has the potential to erode the patient-physician relationship;
40 2) acknowledge that the corporate practice of medicine may create a conflict of interest between
41 profit and best practices in residency and fellowship training; and 3) amend Policy H-160.891 by
42 addition of two new clauses stating that each individual physician should have the ultimate
43 decision for medical judgment in patient care and medical care processes, including the supervision
44 of non-physician practitioners and physicians should retain primary and final responsibility for
45 structured medical education inclusive of undergraduate and graduate medical education including
46 the structure of the program, program curriculum, selection of faculty and trainees, as well as
47 educational and disciplinary issues related to these programs.

48
49 CMS 3-I-22, Health System Consolidation, was an informational report and the first in a series the
50 Council has on this and related topics. CMS 3-I-22 shared background information on vertical and
51 horizontal mergers and acquisitions and highlighted notable transactions from 2020. The Council

1 will continue its work on this issue and provide additional reports for the consideration of the
2 House of Delegates when appropriate.

3
4 Policy D-160.907, established by the adoption of Resolution 727-A-23 as amended, states that the
5 AMA will: assess and report annually on nationwide health system and hospital consolidation as
6 well as payer consolidation, to assist policymakers and the federal government; model this report
7 on nationwide hospital consolidation after the “Competition in Health Insurance” study in its
8 comprehensiveness to include for example, data and analyses such as: a) a review of the current
9 level of hospital and/or health system consolidation at the level of all metropolitan statistical areas,
10 state, and national markets; a list of all mergers and acquisition transactions valued above a set
11 threshold amount resulting in hospital and/or health system consolidation; analyses of how each
12 transaction has changed or is expected to change the level of competition in the affected service
13 and geographic markets; analyses of how health care costs and prices have changed in affected
14 markets after a large consolidation transaction has taken place.

15
16 Policy H-160.884 states that the AMA opposes not-for-profit firm immunity from FTC competition
17 policy enforcement in the health care sector, supports appropriate transaction value thresholds,
18 including cumulative transaction values, for merger reporting in health care sectors to ensure that
19 vertical acquisitions in health care do not evade antitrust scrutiny, and supports health care-specific
20 advocacy efforts that will strengthen antitrust enforcement in the health care sector through
21 multiple mechanisms.

22
23 Policy H-215.960 states that the AMA: affirms that a) health care entity mergers should be
24 examined individually, taking into account case-specific variables of market power and patient
25 needs; b) the AMA strongly supports and encourages competition in all health care markets; c) the
26 AMA supports rigorous review and scrutiny of proposed mergers to determine their effects on
27 patients and providers; and d) antitrust relief for physicians remains a top AMA priority. The AMA
28 will continue to support actions that promote competition and choice, including (a) eliminating
29 state certificate of need laws; (b) repealing the ban on physician-owned hospitals; (c) reducing
30 administrative burdens that make it difficult for physician practices to compete; and (d) achieving
31 meaningful price transparency; and (3) will work with interested state medical associations to
32 monitor hospital markets, including rural, state, and regional markets, and review the impact of
33 horizontal and vertical health system integration on patients, physicians, and hospital prices.

34
35 Policy H-215.969 states that it is the policy of the AMA that, in the event of a hospital merger,
36 acquisition, consolidation, or affiliation, a joint committee with merging medical staffs should be
37 established to resolve at least the following issues: a) medical staff representation on the board of
38 directors; b) clinical services to be offered by the institutions; c) process for approving and
39 amending medical staff bylaws; d) selection of the medical staff officers, medical executive
40 committee, and clinical department chairs; e) credentialing and recredentialing of physicians and
41 limited licensed providers; f) quality improvement; g) utilization and peer review activities;
42 h) presence of exclusive contracts for physician services and their impact on physicians’ clinical
43 privileges; i) conflict resolution mechanisms; j) the role, if any, of medical directors and physicians
44 in joint ventures; k) control of medical staff funds; l) successor-in-interest rights; m) that the
45 medical staff bylaws be viewed as binding contracts between the medical staffs and the hospitals;
46 and that the AMA will work to ensure, through appropriate state oversight agencies, that where
47 hospital mergers and acquisitions may lead to restrictions on reproductive health care services, the
48 merging entity shall be responsible for ensuring continuing community access to these services.

49
50 Policy D-215.984 states that the AMA will study nationwide health system and hospital
51 consolidation in order to assist policymakers and the federal government in assessing health care

1 consolidation for the benefit of patients and physicians who face an existential threat from health
2 care consolidation and regularly review and report back on these issues to keep the House of
3 Delegates apprised on relevant changes that may impact the practice of medicine, with the first
4 report no later than the 2023 Annual meeting.

5
6 Policy D-225.995 states that the AMA will continue to monitor and report on current numbers of
7 mergers and break-ups of mergers of hospitals in this country. Policy D-383.980 states that the
8 AMA will study the potential effects of monopolistic activity by health care entities that may have
9 a majority of market share in a region on the patient-doctor relationship and develop an action plan
10 for legislative and regulatory advocacy to achieve more vigorous application of antitrust laws to
11 protect physician practices which are confronted with potentially monopolistic activity by health
12 care entities.

13
14 DISCUSSION

15
16 As expected, the majority of markets in the United States are characterized by hospitals with large
17 market shares. Virtually all hospital markets are highly concentrated, and, on average, this
18 concentration has been increasing over time.

Number of markets	363	387	389

1. Source: Author's calculations of data from the 2013, 2017 and 2021 American Hospital Association Annual Surveys.
2. This paper defines geographic markets as metropolitan statistical areas (MSAs). For MSAs that are very large (e.g. New York, Chicago), markets are defined as smaller parts of those MSAs called metropolitan divisions.
3. A "hospital" in the first three rows of this Exhibit relating to market shares can either refer to a hospital or a hospital system. Some hospitals belong to systems, while others do not. If there is more than 1 one hospital belonging to the same system in an MSA, the admissions are aggregated up to the system level. Market shares are calculated from system-wide admissions in an MSA. In those cases, the "hospital's" market share here refers to the system's share.

Appendix A2 Hospital Market Shares, 2013-2021

1. Source: Author's calculations of data from the 2013, 2017 and 2021 American Hospital Association Annual Surveys.

3. A "hospital" in the first three rows of this Exhibit relating to market shares can either refer to a hospital or a hospital system. Some hospitals belong to systems, while others do not. If there is more than one hospital belonging to the same system in an MSA, the admissions are aggregated up to the system level. Market shares are calculated from system-wide admissions in an MSA. In those cases, the "hospital's" market share here refers to the system's share.

Appendix B
Hospital Market Concentration, 2013-2021

Variable	2013	2017	2021
Weighted average HHI	3722	3853	4062
% of Markets that are highly concentrated	97%	98%	99%
Number of markets	363	387	389

1. Source: Author's calculations of data from the 2013, 2017 and 2021 American Hospital Association Annual Surveys.
2. This paper defines geographic markets as metropolitan statistical areas (MSAs). For MSAs that are very large (e.g. New York, Chicago), markets are defined as smaller parts of those MSAs called metropolitan divisions.
3. HHI is the Herfindahl-Hirschmann Index, which is a measure of market concentration. The average HHI is weighted by metropolitan-area population.

Relevant AMA Policy Health System Consolidation

Health System Consolidation, D-160.907

1. Our American Medical Association (AMA) will assess and report annually on nationwide health system and hospital consolidation, as well as payer consolidation, to assist policymakers and the federal government.
2. Our AMA annual report on nationwide hospital consolidation will be modeled after the “Competition in Health Insurance: A Comprehensive Study of U.S. Markets” in its comprehensiveness to include for example data and analyses as:
 - a) A review of the current level of hospital and/or health system consolidation at the level of all metropolitan statistical areas, state, and national markets;
 - b) A list of all mergers and acquisition transactions valued above a set threshold amount resulting in hospital and/or health system consolidation;
 - c) Analyses of how each transaction has changed or is expected to change the level of competition in the affected service and geographic markets;
 - d) Analyses of health care costs and prices have changed in affected markets after a large consolidation transaction has taken place.
3. Our AMA will report the initial findings of this study to the House of Delegates by Annual 2024.
4. Our AMA will report the findings of this study to its members and stakeholders, including policymakers and legislators, to inform future health care policy.
(Res. 727, A-23)

Strengthening Efforts Against Horizontal & Vertical Consolidation, H-160.884

1. Our AMA opposes not-for-profit firm immunity from FTC competition policy enforcement in the health care sector.
2. Our AMA supports appropriate transaction value thresholds, including cumulative transaction values, for merger reporting in health care sectors to ensure that vertical acquisitions in health care do not evade antitrust scrutiny.
3. Our AMA supports health care-specific advocacy efforts that will strengthen antitrust enforcement in the health care sector through multiple mechanisms.
(Res. 813, I-23)

Hospital Consolidation, H-215.960

Our AMA: (1) affirms that: (a) health care entity mergers should be examined individually, taking into account case-specific variables of market power and patient needs; (b) the AMA strongly supports and encourages competition in all health care markets; (c) the AMA supports rigorous review and scrutiny of proposed mergers to determine their effects on patients and providers; and (d) antitrust relief for physicians remains a top AMA priority; (2) will continue to support actions that promote competition and choice, including: (a) eliminating state certificate of need laws; (b) repealing the ban on physician-owned hospitals; (c) reducing administrative burdens that make it difficult for physician practices to compete; and (d) achieving meaningful price transparency; and (3) will work with interested state medical associations to monitor hospital markets, including rural, state, and regional markets, and review the impact of horizontal and vertical health system integration on patients, physicians, and hospital prices.
(CMS Rep. 07, A-19; Reaffirmation, I-22)

Hospital Merger Study, H-215.969

1. It is the policy of the AMA that, in the event of a hospital merger, acquisition, consolidation, or affiliation, a joint committee with merging medical staffs should be established to resolve at least the following issues:
 - (A) medical staff representation on the board of directors;

- (B) clinical services to be offered by the institutions;
 - (C) process for approving and amending medical staff bylaws;
 - (D) selection of the medical staff officers, medical executive committee, and clinical department chairs;
 - (E) credentialing and recredentialing of physicians and limited licensed providers;
 - (F) quality improvement;
 - (G) utilization and peer review activities;
 - (H) presence of exclusive contracts for physician services and their impact on physicians' clinical privileges;
 - (I) conflict resolution mechanisms;
 - (J) the role, if any, of medical directors and physicians in joint ventures;
 - (K) control of medical staff funds;
 - (L) successor-in-interest rights;
 - (M) that the medical staff bylaws be viewed as binding contracts between the medical staffs and the hospitals; and
2. Our AMA will work to ensure, through appropriate state oversight agencies, that where hospital mergers and acquisitions may lead to restrictions on reproductive health care services, the merging entity shall be responsible for ensuring continuing community access to these services.
(CMS Rep. 4, I-01; Reaffirmed: CMS Rep. 7, A-11; Appended: Res. 3, I-13; Reaffirmed: CMS Rep. 07, A-19)

Health System Consolidation, D-215.984

Our AMA will: (1) study nationwide health system and hospital consolidation in order to assist policymakers and the federal government in assessing health care consolidation for the benefit of patients and physicians who face an existential threat from health care consolidation; and (2) regularly review and report back on these issues to keep the House of Delegates apprised on relevant changes that may impact the practice of medicine, with the first report no later than the 2023 Annual meeting.
(Res. 702, A-22)

Hospital Merger Study, D-225.995

Our AMA will: (1) urge its AMA Commissioners to the Joint Commission to seek the inclusion of a standard in The Joint Commission hospital accreditation program requiring a medical staff successor-in-interest standard in the hospital medical staff bylaws; (2) seek inclusion of medical staff bylaw successor-in-interest provisions in the Medicare Conditions of Participation and in the rules and regulations of other public and private hospital accreditation agencies; and (3) continue to monitor and report on current numbers of mergers and break-ups of mergers of hospitals in this country.
(CMS Rep. 7, I-00; Modified: CMS Rep. 6, A-10; Reaffirmed: CMS Rep. 01, A-20)

Health Care Entity Consolidation, D-383.980

Our AMA will (1) study the potential effects of monopolistic activity by health care entities that may have a majority of market share in a region on the patient-doctor relationship; and (2) develop an action plan for legislative and regulatory advocacy to achieve more vigorous application of antitrust laws to protect physician practices which are confronted with potentially monopolistic activity by health care entities. (BOT Rep. 8, I-15)

REPORT OF THE SPEAKERS

Speakers' Report 2-A-24

Subject: Report of the Election Task Force 2

Presented by: Lisa Bohman Egbert, MD, Speaker; and John A. Armstrong, MD, Vice Speaker

1 BACKGROUND

2

3 At the 2023 Interim Meeting, the Election Task Force 2 (ETF2) submitted Speakers' Report 3-I-23
4 which included multiple recommendations, many of which were ultimately referred back. The
5 ETF2 subsequently met February 10, 2024, to review these items and testimony heard at I-23. The
6 task force will hold an open forum on Sunday, June 9, 2024, at 3:00 pm CT to gather additional
7 feedback on these items and will then develop a report with final recommendations to be presented
8 at Interim 2024. The topics of consideration listed on this report will be the basis for discussion at
9 the open forum.

10

11 ITEMS FOR DISCUSSION

12

13 The ETF 2 noted that there was a general lack of clear definitions related to items surrounding
14 AMA elections. Therefore, they developed the definitions in the Glossary shown below. In
15 addition, the ETF 2 reviewed all items that were referred back for further consideration and
16 suggested changes shown as additions and deletions and the rationale for these suggestions in the
17 grid that follows. The ETF 2 asks that delegations review and make comments on the Glossary and
18 Proposed Changes at the Open Forum.

19

20 The final topic for consideration at the open forum will be a consideration of endorsements. This
21 will be an open topic and all input is encouraged.

22

23 **Glossary**

24

25 Active campaign window – period of time after the speaker's notice of the opening of active
26 campaigning until the Election Session during the House of Delegates meeting at which elections
27 are being held

28

29 Active campaigning – Outreach by candidates or their surrogate(s), including but not limited to
30 members of their campaign team, to members of the House of Delegates with the goal of being
31 elected by the AMA House of Delegates

32

33 Announced candidate – person who has indicated their intention to run for elected position;
34 announcement can be made only by sending an electronic announcement card to the Speakers via
35 the HOD office by email to hod@ama-assn.org

36 Campaign manager(s) – person(s) identified by the candidate to the HOD Office as the person(s)
37 responsible for running the campaign

- 1 Campaign team – campaign manager(s) and/or staff identified by the candidate to the HOD Office
- 2
- 3 Campaign-related – any content that includes reference to an announced candidate in the context of
- 4 their candidacy for an elected position within the AMA
- 5
- 6 Digital – relating to, using, or storing data or information in the form of digital signals; involving or
- 7 relating to the use of computer technology; this includes but is not limited to social media and
- 8 communication platforms
- 9
- 10 Elected position(s) – Council or Officer position within the AMA elected by the House of
- 11 Delegates of the AMA
- 12
- 13 Featured – identification of a candidate at an event by the host or organizer of the event including
- 14 but not limited to written or verbal announcement of the candidate or their candidacy

ETF 2 Proposed Language <i>(Proposed changes to current policy or items from ETF 2 I-23 report shown in red)</i>	Rationale
<p><i>Proposed changes to current policy:</i></p> <p>Campaign stickers, pins, buttons and similar campaign materials are disallowed. This rule will not apply for pins for AMPAC, <u>AMA</u>, the AMA Foundation, specialty societies, state and regional delegations and health related causes that do not include any candidate identifier. These pins should be small, not worn on the badge and distributed only to members of the designated group. General distribution of any pin, button or sticker is disallowed.</p>	<p>ETF2 considered the testimony from the delegates during the I-23 meeting. In order to confine to the security requirements for the meeting badges, no buttons, pins or stickers can be affixed to the badge itself. AMA, AMPAC, AMA-Foundation, specialty society, state or regional delegations pins, buttons, stickers, etc. are not directly connected to the election campaign and thus can be worn on one's self except on the badge. This proposal is intended to avoid uneven general exposure to a particular candidate and will provide an even playing field for all candidates.</p>
<p><i>New language referred at I-23 with proposed changes.</i></p> <p>Only a<u>A</u>n announced candidate in a currently contested election may discuss their candidacy on an individual basis in private conversations from announcement of candidacy until the active campaigning period begins. Prior to the active campaigning period, no other individual may discuss the candidacy including members of campaign teams, delegations or caucuses, and "friends." <u>This rule does not prohibit any candidate from discussions for the purpose of forming a campaign team nor from a campaign team discussing a candidate or campaign strategy. This rule also does not prohibit persons not associated with a campaign from discussing candidates in private conversations.</u></p>	<p>The intent here is to minimize campaign discussions prior to active campaigning. However, the ETF2 was aware of concerns that this rule would prohibit candidates from asking others to join their campaign team as well as prohibiting a designated campaign team from discussing campaign strategy. This clarifies that both are expected and permitted.</p>

ETF 2 Proposed Language <i>(Proposed changes to current policy or items from ETF 2 I-23 report shown in red)</i>	Rationale
<p><i>Proposed changes to current policy:</i></p> <p><u>Printed and digital</u> Ccampaign materials may not be distributed <u>to members of the House other than by the HOD office candidate email and on the Candidate Web Pages, by postal mail or its equivalent.</u> The AMA Office of House of Delegates Affairs will not longer furnish a file containing the names and mailing addresses of members of the AMA-HOD. Printed campaign materials will not be included in the "Not for Official Business" bag and may not be distributed in the House of Delegates. Candidates are encouraged to eliminate printed campaign materials.</p>	<p>In order for candidates to have equal access to HOD members, the route of access to them is limited to the official AMA channels noted here. This will discourage additional printed mailings and digital communications and disallow distribution at the HOD meetings.</p>
<p><i>Proposed changes to current policy:</i></p> <p><u>Active campaigning via mass outreach to delegates by candidates or on behalf of a candidate by any method is prohibited.</u> A reduction in the volume of campaign-related telephone calls and <u>personal</u> electronic communication from candidates and on behalf of candidates is encouraged. <u>No part of this rule shall be interpreted to limit communication among members of a campaign team. The Office of House of Delegates Affairs does not provide email addresses for any purpose. The use of e</u>Electronic messages to contact electors should be minimized, and if used must include a simple mechanism to allow recipients to opt out of receiving future messages.</p>	<p>The ETF2 seeks to clarify guidelines for communication by candidates to other delegates. New language has been added to specifically prohibit mass outreach to candidates. However, this recommendation also clarifies that personal communication is allowed, while simultaneously honoring the desire of many delegates to reduce overall volume of communication. A clarification was added to ensure freedom of communication amongst campaign teams. Language was also revised to reflect the frequency of electronic communication while still maintaining the option to opt out.</p>

ETF 2 Proposed Language <i>(Proposed changes to current policy or items from ETF 2 I-23 report shown in red)</i>	Rationale
<p><i>Proposed changes to current policy:</i></p> <p>Groups conducting interviews with <u>announced</u> candidates for a given office must offer an interview to all individuals that have officially announced their candidacy at the time the group's interview schedule is finalized <u>announced candidates</u> at the time the group's interview schedule is finalized.</p> <p>a. A group may meet with an <u>announced</u> candidate who is a member of their group <u>during the active campaign window</u> without interviewing other candidates for the same office.</p> <p>b. Interviewing groups may, but are not required to, interview late announcing candidates persons who become announced candidates during the active campaign window. Should an interview be offered to a late candidate, all other announced candidates for the same office (even those previously interviewed) must be afforded the same opportunity and medium.</p> <p>c. Any appearance by a candidate before an organized meeting of a caucus or delegation, other than their own, will be considered an interview and fall under the rules for interviews. Any <u>appearance campaign-related presentation</u> to an assembly by an announced candidate, with or without being followed by a discussion, question and answer session, or a vote of the assembly regarding the candidate, is an interview and subject to the rules on in-person interviews. No portion of this rule shall be interpreted to mean that a candidate acting in a formal capacity would be unable to present or discuss matters pertaining to that formal capacity with any group.</p>	<p>The Election Task Force heard concerns about definitions of timelines, candidacy, and potential election violations that would be incurred by delegations meeting with their own members who happened to be candidates. The proposed language here seeks to clarify that there is no restriction on a delegation's ability to hold meetings where all of their members may be in attendance. Further, the Election Task Force wanted to clarify the mechanism for candidates that do not announce until after the active campaign window opens may be offered interviews, and what this means for all other candidates for that same office. Finally, there were questions about what constitutes an interview and how candidates holding an official AMA position while running for office could execute their duties without being considered participating in an interview. This section provides clarity about this definition and the separation of a candidate campaigning and a member performing in their official capacity.</p>
<p><i>New language referred at I-23 with proposed changes.</i></p> <p>Candidates may not produce a personal <u>campaign-related</u> website <u>or other digital campaign-related content</u> or direct to personal or professional websites <u>that contain campaign materials</u> other than the AMA Candidates' Page.</p>	<p>The language in this section provides clarity that explicitly defines that the only authorized campaign or digitally related websites, pages, or other campaign related materials for candidates is a web page provided by the AMA. This allows all candidates to be on equal footing during the election process.</p>

ETF 2 Proposed Language <i>(Proposed changes to current policy or items from ETF 2 I-23 report shown in red)</i>	Rationale
<p><i>Proposed changes to current policy:</i></p> <p>Active campaigning for AMA elective office an elected position may not begin until the <u>active campaign window opens as announced by the Speaker Board of Trustees, after its April meeting, announces the candidates for council seats. Active campaigning includes mass outreach activities directed to all or a significant portion of the members of the House of Delegates and communicated by or on behalf of the candidate. If in the judgment of the Speaker of the House of Delegates circumstances warrant an earlier date by which campaigns may formally begin, the Speaker shall communicate the earlier date to all known candidates.</u></p>	<p>The Election Task Force heard questions concerning timelines for active campaigning in the course of an Election cycle. Active Campaigning is defined as outreach by candidates or their surrogate(s), including but not limited to members of their campaign team, to members of the House of Delegates, with the goal of being elected by the AMA House of Delegates. Active Campaigning activities typically may not occur until after the April meeting of the Board of Trustees, when candidates for Council Seats are announced. The specific dates of the Active Campaigning Window will be announced by the Speaker. The Active Campaigning Window is defined as the period of time after the Speaker's notice of the opening of active campaigning until the Election Session during the House of Delegates meeting at which elections are being held.</p>
<p><i>New language referred at I-23 with proposed changes.</i></p> <p>Candidates and their identified members of campaign teams will be provided a copy of the current election rules and will be required to attest to abiding by them. <u>Candidates are responsible for any and all action or inaction undertaken on their behalf that is campaign related. Campaign managers will also be provided a copy of the current election rules and will be required to attest to abiding by them.</u></p>	<p>While all HOD members should be aware of the current election rules, candidates are ultimately responsible for abiding by these rules and for all campaign related actions taken on their behalf. Therefore, candidates and their campaign managers will be asked to attest to abiding by these rules.</p>
<p><i>New item referred at I-23 (shown below) with proposed new language:</i></p> <p>All meeting attendees will agree to be interviewed by the Speakers or members of the Election Committee for the purpose of investigating a submitted, formal complaint of election rule infractions. Members of the Election Committee, including the Speakers, will identify themselves and the reason for the interview request.</p> <p><i>[Referred language: Candidates, members of their campaign teams, including Federation staff, and HOD members will agree to be interviewed by the Speakers or members of the Election Committee who will identify themselves and the reason for the request.]</i></p>	<p>As part of any investigation, including a simple inquiry as to whether a formally filed complaint has merit to warrant a more complete evaluation, it is important that all attendees (including delegation leadership and staff) assist by complying with a request for an interview with the Speakers or member(s) of the Election Committee, as well as that interviewers clearly identify themselves and the reason for any interview. Cooperation of all attendees would be expected and beneficial to our HOD. This recommendation arises out of prior experience by the Election Committee in trying to evaluate complaints.</p>

REPORT OF THE SPEAKERS

Speakers' Report 03-A-24

Subject: Updated Parliamentary Authority

Presented by: Lisa Bohman Egbert, MD, Speaker, and John H. Armstrong, MD, Vice Speaker

1 Recently, the American Institute of Parliamentarians Standard Code of Parliamentary Procedure,
2 was updated and is now referenced as AIPSC (2nd ed.), with changes taking effect in January of
3 2024. AMA Bylaw 11.1, Parliamentary Procedures, last amended in 2015, states that “In the
4 absence of any provisions to the contrary in the Constitution and these Bylaws, all general
5 meetings of the AMA and all meetings of the House of Delegates, of the Board of Trustees, of
6 Sections and of councils and committees shall be governed by the parliamentary rules and usages
7 contained in the then current edition of The American Institute of Parliamentarians Standard Code
8 of Parliamentary Procedure.”
9

10 When the AMA House of Delegates (HOD) adopted AIPSC as its parliamentary authority in 2015,
11 there were only minor differences between it and AMA’s past parliamentary practices and
12 traditions as embodied in the *HOD Reference Manual*. These were discussed in detail in Speakers
13 Report 1-A-16, which was adopted by the HOD. Adoption allowed the HOD to retain some
14 historical parliamentary practices and traditions, including requiring debate on both sides prior to
15 closing debate on a subject, separate motions of refer for report and refer for decision (AIPSC uses
16 a single motion of refer), the motion to table, and AMA’s historical practice of considering all
17 matters acted upon at a meeting to be final, meaning that items from one meeting are not subject to
18 a motion to recall from committees, a motion to reconsider or any other motion at a subsequent
19 meeting. Adoption also created the motion to Object to Consideration requiring a 3/4 majority vote.
20 Specific AMA bylaws focusing on withdrawal of resolutions, also remained in place: 2.11.3.1.5
21 allows a sponsor to withdraw a resolution at any time prior to its acceptance as business by the
22 HOD, and 2.13.1.7.4, which provides that if, in the judgment of the sponsor and of the reference
23 committee, it appears that withdrawal is preferable to presentation for action, the reference
24 committee may recommend withdrawal to the HOD in its report, with the Proceedings noting only
25 that the resolution was withdrawn. Adoption of Speakers Report 1-A-16 also led to subsequently
26 amended and adopted bylaws related to late and emergency resolutions.
27

28 The Speakers, in concert with the Council on Constitution and Bylaws, have reviewed the AIPSC
29 (2nd ed.) and compared the rules therein to usual practice in the House of Delegates and in the
30 *House of Delegates Reference Manual: Procedures, Policies and Practices*. The *HOD Reference*
31 *Manual* delineates the HOD’s Standing Rules, and is presented in a Rules Report that is adopted
32 by the HOD at each meeting by majority vote, with the Rules Report stating that the *HOD*
33 *Reference Manual* shall be the official method of procedure in handling and conducting the
34 business of the AMA House of Delegates. [The AIPSC (2nd ed.) is available for purchase on
35 Amazon in Kindle and print versions.]

1 AIPSC (2nd ed.) identified the following as among the substantive changes:
2

- 3 • Replacing the concept of restricted debate with a requirement that debate be germane to the
4 motion at hand. (No change required as this is current AMA practice. Note, this would also
5 be inclusive of motions to refer, reconsider and postpone debate.);
6
- 7 • Making Close Debate and Vote Immediately amendable as to the motions to which it
8 applies. **(Rather than making the motion amendable, your Speakers have elected to
9 continue our current AMA practice in which the maker of the motion may specify to
10 which items they wish to apply the motion with the caveat that both sides must have
11 been heard on each item);**
12
- 13 • Removing the debatability of motions that limit debate. **(The motions Object to
14 Consideration* and Limit or Extend Debate will no longer be debatable);**
15
**The motion Object to Consideration requires a 3/4 vote and is unique to the AMA. This was adopted
16 by the HOD at A-16. However, as it limits debate, it will no longer be debatable.*
17
18
- 19 • Removing the concept of a substitute amendment. (No change required as current AMA
20 practice treats substitute amendments as motions to adopt in lieu of);
21
- 22 • Establishing that after debate has been closed, Factual Inquiries are not permitted, although
23 a Parliamentary Inquiry may be. **(This rule will be implemented);**
24
- 25 • Clarifying the methodology and motions used to create a continued meeting. (No change
26 required as AMA items of business are not held over for future meeting);
27
- 28 • Some Main Motions have been retitled as Specific-Purpose Main Motions. (Retitled
29 appropriately on the HOD Reference Manual's Parliamentary Quick Tips Chart, which is
30 appended to this report);
31
- 32 • Special Orders were renamed Scheduled Orders. (Not applicable);
33
- 34 • Standing Rules are now designated as "Standing Rules of Order" or "Temporary Rules.
35 **(The House of Delegates Reference Manual constitutes our Standing Rules of Order.
36 These are highlighted in the Rules Report along with any Temporary Rules for that
37 meeting.);**
38
- 39 • Clarifying rules related to the Credentials Committees, whereby the initial Credentials
40 Committee lists the names of members entitled to vote. (Not applicable as the current
41 AMA practice is to identify credentialed delegates in "The Official Call" with the
42 Committee on Rules and Credentials reporting each day only the number of credentialed
43 delegates in attendance and whether a quorum has been met. The HOD Proceedings reflect
44 the final listing of members of the HOD.)
45

46 The nuances of these changes are addressed in the *HOD Reference Manual* and incorporated into
47 the "Parliamentary Quick Tips" chart that appears as an appendix in the HOD Reference Manual
48 and which is attached to this report also. The Rules Report, to be presented at A-24, will once again
49 ask the HOD to adopt the *HOD Reference Manual* as the official method of procedure in handling
50 and conducting the business of the AMA House of Delegates.

1 There also are several other changes that require additional action: AIPSC (2nd ed.) establishes
2 electronic notice (of a meeting) as the default notification and there are several bylaw provisions
3 (2.12.2, 2.12.3.1, 5.2.4, 5.2.4.1 and 12.3) that specify notification by mail or in writing. The
4 Council has submitted amended bylaw language via CCB Report 4-A-24, AMA Bylaw
5 Amendments Pursuant to AIPSC (2nd ed.).

RELEVANT AMA BYLAWS

2.12.2 Special Meetings of the House of Delegates. Special Meetings of the House of Delegates shall be called by the Speaker on written or electronic request by one third of the members of the House of Delegates, or on request of a majority of the Board of Trustees. When a special meeting is called, the Executive Vice President of the AMA shall mail a notice to the last known address of each member of the House of Delegates at least 20 days before the special meeting is to be held. The notice shall specify the time and place of meeting and the purpose for which it is called, and the House of Delegates shall consider no business except that for which the meeting is called.

2.12.3.1 Invitation from Constituent Association. A constituent association desiring a meeting within its borders shall submit an invitation in writing, together with significant data, to the Board of Trustees. The dates and the city selected may be changed by action of the Board of Trustees at any time, but not later than 60 days prior to the dates selected for that meeting.

5.2.4 Notice of Meeting. Notice is given if delivered in person, by telephone, mail, or any means of electronic communication approved by the Board of Trustees. Notice shall be deemed to be received upon delivery to the Trustee's contact information then appearing on the records of the AMA.

5.2.4.1 Waiver of Notice. Notice of any meeting need not be given if waived in writing before, during or after such meeting. Attendance at any meeting shall constitute a waiver of notice of such meeting, except where such attendance is for the express purpose of objecting to the transacting of any business because of a question as to the legality of the calling or convening of the meeting.

12.3 Articles of Incorporation. The Articles of Incorporation of the AMA may be amended at any regular or special meeting of the House of Delegates by the approval of two-thirds of the voting members of the House of Delegates registered at the meeting, provided that the Board of Trustees shall have approved the amendment and submitted it in writing to each member of the House of Delegates at least 5 days, but not more than 60 days, prior to the meeting of the House of Delegates at which the amendment is to be considered.

Procedures

Types of motions are listed in order of precedence from highest to lowest. A second motion cannot be accepted unless it has a higher precedence than the motion already before the group.

Type of Motion		May Interrupt Speaker?	Requires a Second?	Is motion debatable?	May be Amended?	Vote Needed?
Privileged	Adjourn the meeting	No	Yes	No	Yes	Majority
	Recess the meeting	No	Yes	No	Yes	Majority
	Question of privilege ¹	Yes	No	No	No	None
Subsidiary	Object to consideration ²	No	Yes	No	No	Three-fourths
	Table**	No	Yes	No	No	Two-thirds
	Close debate and vote immediately	No	Yes	No	No	Two-thirds
	Limit or extend debate	No	Yes	No	Yes	Two-thirds
	Postpone to a certain time	No	Yes	Yes	Yes	Majority
	Referred for decision ³	No	Yes	Yes	Yes	Majority
	Referred for report	No	Yes	Yes	Yes	Majority
	Amend	No	Yes	Yes	Yes	Majority
Main	a. The main motion (introduce)	No	Yes	Yes	Yes	Majority
	b. Specific-purpose main motions:					
	Adopt in lieu of	No	Yes	Yes	Yes	***
	Reconsider	Yes*	Yes	Yes	No	Majority
Incidental	Motions					
	Appeal a decision by the Speaker	Yes	Yes	Yes	No	Majority
	Suspend the Rules	No	Yes	No	No	Two-thirds
	Requests					
	Point of order ⁴	Yes	No	No	No	None
	Inquiries ⁵	Yes	No	No	No	None
	Division of question	No	No	No	No	None
	Division of House	Yes	No	No	No	None

Definitions:

- ¹ Question of privilege: Raising a question of privilege allows a single member to request immediate action affecting safety, health, security, comfort, or integrity, including the rights and privileges of a member or members or of the HOD generally.
- ² Object to consideration: Per HOD action at A-16, this motion is unique to the AMA and is used when a delegate objects to HOD consideration of an item. It cannot interrupt a speaker, requires a second, cannot be amended and takes precedence over all subsidiary motions and cannot be renewed. It requires a ¾ vote. However, per AIPSC (2nd ed.) as it limits debate, it will no longer be debatable.
- ³ Refer for decision: Per HOD action at A-16, this motion is used when a delegate wants the Board to determine the appropriate course of action and proceed, and report back on its decision and the action taken. It is one step higher in precedence than the Motion to Refer.
- ⁴ Point of order: A point of order calls to the attention of the Speaker and the HOD an alleged violation of the rules, an omission, a mistake, or an error in procedure and secures a ruling on the question raised.
- ⁵ Inquiries: An inquiry allows a member (1) to ask the Speaker a question relating to procedure in connection with the pending motion or with a motion the delegate may wish to bring immediately before the HOD (Parliamentary Inquiry); or (2) to request substantive information or facts about the pending motion or for information on the meaning or effect of the pending question from the Speaker or a delegate (Factual Inquiry)

* May interrupt the proceedings but not another speaker

** In order only after item is referred to reference committee and until the House takes final action on the item

***Same vote as required for original item. For example, if the motion related to a bylaw change that required a two-thirds vote, the motion to adopt in lieu of would require the same.
