MEMORANDUM FROM THE SPEAKER OF THE HOUSE OF DELEGATES

- All Delegates, Alternate Delegates and others receiving this material are reminded that it refers only to items to be considered by the House.
- No action has been taken on anything herein contained, and it is informational only.
- Only those items that have been acted on finally by the House can be considered official.
- **REMINDER:** *Only the Resolve portions of the resolutions are considered by the House of Delegates. The Whereas portions or preambles are informational and explanatory only.*

UNDERSTANDING THE RECORDING OF AMERICAN MEDICAL ASSOCIATION POLICY

Current American Medical Association (AMA) policy is catalogued in PolicyFinder, an electronic database that is updated after each AMA House of Delegates (HOD) meeting and available online. Each policy is assigned to a topical or subject category. Those category headings are alphabetical, starting with “abortion” and running to “women”; the former topic was assigned the number 5, and “women” was assigned 525. Within a category, policies are assigned a 3 digit number, descending from 999, meaning that older policies will *generally* have higher numbers within a category (eg, 35.999 was initially adopted before 35.984). A policy number is not affected when it is modified, however, so a higher number may have been altered more recently than a lower number. Numbers are deleted and not reused when policies are rescinded.

AMA policy is further categorized into one of four types, indicated by a prefix:

- “H” – for statements that one would consider positional or philosophical on an issue
- “D” – for statements that direct some specific activity or action. There can be considerable overlap between H and D statements, with the assignment made on the basis of the core nature of the statement.
- “G” – for statements related to AMA governance
- “E” – for ethical opinions, which are the recommendations put forward in reports prepared by the Council on Ethical and Judicial Affairs and adopted by the AMA-HOD

AMA policy can be accessed at ama-assn.org/go/policyfinder.

The actions of the AMA-HOD in developing policy are recorded in the *Proceedings*, which are available [online](#) as well. Annotations at the end of each policy statement trace its development, from initial adoption through any changes. If based on a report, the annotation includes the following abbreviations:

BOT – Board of Trustees	CME – Council on Medical Education
CCB – Council on Constitution and Bylaws	CMS – Council on Medical Service
CEJA – Council on Ethical and Judicial Affairs	CSAPH – Council on Science and Public Health
CLRPD – Council on Long Range Planning and Development	

If a resolution was involved, “Res” is indicated. The number of the report or resolution and meeting (A for Annual; I for Interim) and year (two digits) are also included (eg, BOT Rep. 1, A-14 or Res. 319, I-12).

AMA policy is recorded in the following categories, and any particular policy is recorded in only a single category.

5.000 Abortion	10.000 Accident Prevention/Unintentional Injuries
15.000 Accident Prevention: Motor Vehicles	20.000 Acquired Immunodeficiency Syndrome
25.000 Aging	30.000 Alcohol and Alcoholism
35.000 Allied Health Professions	40.000 Armed Forces
45.000 Aviation Medicine	50.000 Blood
55.000 Cancer	60.000 Children and Youth
65.000 Civil and Human Rights	70.000 Coding and Nomenclature
75.000 Contraception	80.000 Crime
85.000 Death and Vital Records	90.000 Disabled
95.000 Drug Abuse	100.000 Drugs
105.000 Drugs: Advertising	110.000 Drugs: Cost
115.000 Drugs: Labeling and Packaging	120.000 Drugs: Prescribing and Dispensing
125.000 Drugs: Substitution	130.000 Emergency Medical Services
135.000 Environmental Health	140.000 Ethics
145.000 Firearms: Safety and Regulation	150.000 Foods and Nutrition

155.000 Health Care Costs	160.000 Health Care Delivery
165.000 Health Care/System Reform	170.000 Health Education
175.000 Health Fraud	180.000 Health Insurance
185.000 Health Insurance: Benefits and Coverage	190.000 Health Insurance: Claim Forms and Claims Processing
195.000 Health Maintenance Organizations	200.000 Health Workforce
205.000 Health Planning	210.000 Home Health Services
215.000 Hospitals	220.000 Hospitals: Accreditation Standards
225.000 Hospitals: Medical Staff	230.000 Hospitals: Medical Staff - Credentialing and Privileges
235.000 Hospitals: Medical Staff - Organization	240.000 Hospitals: Reimbursement
245.000 Infant Health	250.000 International Health
255.000 International Medical Graduates	260.000 Laboratories
265.000 Legal Medicine	270.000 Legislation and Regulation
275.000 Licensure and Discipline	280.000 Long-Term Care
285.000 Managed Care	290.000 Medicaid and State Children's Health Insurance Programs
295.000 Medical Education	300.000 Medical Education: Continuing
305.000 Medical Education: Financing and Support	310.000 Medical Education: Graduate
315.000 Medical Records and Patient Privacy	320.000 Medical Review
330.000 Medicare	335.000 Medicare: Carrier Review
340.000 Medicare: PRO	345.000 Mental Health
350.000 Minorities	355.000 National Practitioner Data Bank
360.000 Nurses and Nursing	365.000 Occupational Health
370.000 Organ Donation and Transplantation	373.000 Patients
375.000 Peer Review	380.000 Physician Fees
383.000 Physician Negotiation	385.000 Physician Payment
390.000 Physician Payment: Medicare	400.000 Physician Payment: Medicare - RBRVS
405.000 Physicians	406.000 Physician-Specific Health Care Data
410.000 Practice Parameters	415.000 Preferred Provider Arrangements
420.000 Pregnancy and Childbirth	425.000 Preventive Medicine
430.000 Prisons	435.000 Professional Liability
440.000 Public Health	445.000 Public Relations
450.000 Quality of Care	455.000 Radiation and Radiology
460.000 Research	465.000 Rural Health
470.000 Sports and Physical Fitness	475.000 Surgery
478.000 Technology - Computer	480.000 Technology - Medical
485.000 Television	490.000 Tobacco Use, Prevention and Cessation
495.000 Tobacco Products	500.000 Tobacco: AMA Corporate Policies and Activities
505.000 Tobacco: Federal and International Policies	510.000 Veterans Medical Care
515.000 Violence and Abuse	520.000 War
525.000 Women	600.000 Governance: AMA House of Delegates
605.000 Governance: AMA Board of Trustees and Officers	610.000 Governance: Nominations, Elections, and Appointments
615.000 Governance: AMA Councils, Sections, and Committees	620.000 Governance: Federation of Medicine
625.000 Governance: Strategic Planning	630.000 Governance: AMA Administration and Programs
635.000 Governance: Membership	640.000 Governance: Advocacy and Political Action

LIST OF MATERIALS INCLUDED IN THIS HANDBOOK (A-24)

Resolutions and reports have been collated by referral according to reference committee assignment. In the listing below, referral is indicated by letter in parenthesis following the title of the report. Resolutions have been numbered according to referrals (i.e., those referred to the Reference Committee on Amendments to Constitution and Bylaws begin with 001, Reference Committee B begins with 201, etc.).

The informational reports contain no recommendations and will be filed on Saturday, June 8, unless a request is received for referral and consideration by a Reference Committee (similar to the use of a consent calendar).

- 1. Memorandum from the Speaker**
- 2. Understanding the Recording of American Medical Association Policy**
- 3. Declaration of Professional Responsibility - Medicine's Social Contract with Humanity**
- 4. Delegate / Alternate Delegate Job Description, Roles, and Responsibilities**
- 5. Seating Allocation and Seating Chart for the House of Delegates**
- 6. Hotel Maps**
- 7. Official Call to the Officers and Members of the AMA**
 Officials of the Association and AMA Councils
 Ex Officio Members of the HOD
 SSS Representatives
 Listing of Delegates and Alternate Delegates
- 8. Reference Committee Schedule and Room Assignments**
- 9. Note on Order of Business**
- 10. Summary of Fiscal Notes**
- 11. List of Resolutions by Sponsor**

FOLLOWING COLLATED BY REFERRAL

12. Report(s) of the Board of Trustees - Willie Underwood, III, MD, MSc, MPH, Chair

01	Annual Report	F
02	New Specialty Organizations Representation in the House of Delegates	Amendments to C&B
03	2023 Grants and Donations	Info. Report

**DECLARATION OF PROFESSIONAL RESPONSIBILITY:
MEDICINE'S SOCIAL CONTRACT WITH HUMANITY**

Preamble

Never in the history of human civilization has the well-being of each individual been so inextricably linked to that of every other. Plagues and pandemics respect no national borders in a world of global commerce and travel. Wars and acts of terrorism enlist innocents as combatants and mark civilians as targets. Advances in medical science and genetics, while promising great good, may also be harnessed as agents of evil. The unprecedented scope and immediacy of these universal challenges demand concerted action and response by all.

As physicians, we are bound in our response by a common heritage of caring for the sick and the suffering. Through the centuries, individual physicians have fulfilled this obligation by applying their skills and knowledge competently, selflessly and at times heroically. Today, our profession must reaffirm its historical commitment to combat natural and man-made assaults on the health and well-being of humankind. Only by acting together across geographic and ideological divides can we overcome such powerful threats. Humanity is our patient.

Declaration

We, the members of the world community of physicians, solemnly commit ourselves to:

1. Respect human life and the dignity of every individual.
2. Refrain from supporting or committing crimes against humanity and condemn all such acts.
3. Treat the sick and injured with competence and compassion and without prejudice.
4. Apply our knowledge and skills when needed, though doing so may put us at risk.
5. Protect the privacy and confidentiality of those for whom we care and breach that confidence only when keeping it would seriously threaten their health and safety or that of others.
6. Work freely with colleagues to discover, develop, and promote advances in medicine and public health that ameliorate suffering and contribute to human well-being.
7. Educate the public and polity about present and future threats to the health of humanity.
8. Advocate for social, economic, educational, and political changes that ameliorate suffering and contribute to human well-being.
9. Teach and mentor those who follow us for they are the future of our caring profession.

We make these promises solemnly, freely, and upon our personal and professional honor.

Adopted by the House of Delegates of the American Medical Association
in San Francisco, California on December 4, 2001

Delegate/Alternate Delegate Job Description, Roles and Responsibilities

At the 1999 Interim Meeting, the House of Delegates adopted as amended Recommendation 16 of the final report of the Special Advisory Committee to the Speaker of the House of Delegates. This recommendation included a job description and roles and responsibilities for delegates and alternate delegates. The description and roles and responsibilities were modified at the 2002 Annual Meeting by Recommendation 3 of the Joint Report of the Board of Trustees and Council on Long Range Planning and Development. The modified job description, qualifications, and responsibilities are listed below.

Delegates and Alternate Delegates should meet the following job description and roles and responsibilities:

Job Description and Roles and Responsibilities of AMA Delegates/Alternate Delegates

Members of the AMA House of Delegates serve as an important communications, policy, and membership link between the AMA and grassroots physicians. The delegate/alternate delegate is a key source of information on activities, programs, and policies of the AMA. The delegate/alternate delegate is also a direct contact for the individual member to communicate with and contribute to the formulation of AMA policy positions, the identification of situations that might be addressed through policy implementation efforts, and the implementation of AMA policies. Delegates and alternate delegates to the AMA are expected to foster a positive and useful two-way relationship between grassroots physicians and the AMA leadership. To fulfill these roles, AMA delegates and alternate delegates are expected to make themselves readily accessible to individual members by providing the AMA with their addresses, telephone numbers, and e-mail addresses so that the AMA can make the information accessible to individual members through the AMA web site and through other communication mechanisms. The qualifications and responsibilities of this role are as follows:

A. Qualifications

- AMA member.
- Elected or selected by the principal governing body or the membership of the sponsoring organization.
- The AMA encourages that at least one member of each delegation be involved in the governance of their sponsoring organization.

B. Responsibilities

- Regularly communicate AMA policy, information, activities, and programs to constituents so he/she will be recognized as the representative of the AMA.
- Relate constituent views and suggestions, particularly those related to implementation of AMA policy positions, to the appropriate AMA leadership, governing body, or executive staff.
- Advocate constituent views within the House of Delegates or other governance unit, including the executive staff.
- Attend and report highlights of House of Delegates meetings to constituents, for example, at hospital medical staff, county, state, and specialty society meetings.
- Serve as an advocate for patients to improve the health of the public and the health care system.
- Cultivate promising leaders for all levels of organized medicine and help them gain leadership positions.
- Actively recruit new AMA members and help retain current members.
- Participate in the AMA Membership Outreach Program.

SEATING ALLOCATION – 2024 ANNUAL MEETING

ADDICTION MEDICINE – 3

American Society of Addiction Medicine (ASAM) – 3
Trustee (Levin) – 1
Delegates - 2

AMDA – 1

AMDA – The Society for Post-Acute and Long-Term Care
Medicine (AMDA) – 1

AMGA - 1

American Medical Group Association (AMGA) - 1

ANESTHESIOLOGY - 10

American Society of Anesthesiologists (ASA) - 8
American Society of Regional Anesthesia and Pain Medicine
(ASRAPM) - 2

ARS – 1

American Rhinologic Society (ARS) - 1

CARDIOLOGY - 15

American College of Cardiology (ACC) - 7
American Society of Echocardiography (ASE) - 2
American Society of Nuclear Cardiology (ASNC) – 1
Heart Rhythm Society (HRS) - 1
Society for Cardiovascular Angiography and Interventions

MEMBERS OF THE HOUSE OF DELEGATES SPECIAL MEETING - JUNE 2024

The following is a list of delegates and alternate delegates to the House of Delegates as reported to the Executive Vice President

Medical Association of the State of Alabama

Delegate(s)

B Jerry Harrison, Haleyville AL
John Meigs Jr, Brent AL
William Schneider, Huntsville AL
George C. Smith, Lineville AL

Alternate Delegate(s)

Alexis Mason, Tuscaloosa AL
Jane Weida, Tuscaloosa AL
Tom Weida, Tuscaloosa AL
Amanda Williams, Montgomery AL

Regional Medical Student Alternate Delegate(s)

Marc Erickson , Dothan AL
Rhea Nichani, Dothan AL

Arizona Medical Association

Delegate(s)

Veronica K. Dowling, Lakeside AZ
Gary R. Figge, Tucson AZ
Michael Hamant, Tucson AZ
M Zuhdi Jasser, Phoenix AZ
Marc Leib, Phoenix AZ

Alternate Delegate(s)

Ilana Addis, Tucson AZ
David Baltazer, Scottsdale AZ
Timothy Fagan, Tucson AZ
Jacquelyn Hoffman, Tucson AZ
Nadeem Kazi, Casa Grande AZ

Arkansas Medical Society

Delegate(s)

Stephen Magie, Conway AR
Eugene Shelby, Little Rock AR

Alternate Delegate(s)

Danny Wilkerson, Little Rock AR
Alan Wilson, Monticello AR

Regional Medical Student Delegate(s)

Clara I. Puente, Little Rock AR

California Medical Association

Delegate(s)

Jerry P Abraham, Los Angeles CA
Barbara J. Arnold, Sacramento CA
Patricia L. Austin, Alamo CA
Dirk Stephen Baumann, Burlingame CA
Jeffrey Brackett, Ventura CA
Peter N. Bretan, Novato CA
J Brennan Cassidy, Newport Beach CA
Maisha Draves, Fairfield CA
Suparna Dutta, Oakland CA
Kyle P. Edmonds, San Diego CA
Rachel Ekaireb, Sacramento CA
George Fouras, Los Angeles CA
Anjalee Galion, Santa Ana CA
Dev A. GnanaDev, Upland CA
Robert Hertzka, Rancho Santa Fe CA
Samuel Huang, Los Angeles CA
Jeff Klingman, Orinda CA
John Maa, San Francisco CA
Ramin Manshadi, Stockton CA

California Medical Association

Delegate(s)

Theodore Mazer, Fort Myers FL
Kelly McCue, Davis CA
Mihir Parikh, La Jolla CA
Stephen Parodi, Oakland CA
Albert Ray, San Diego CA
Ryan J. Ribeira, Mountain View CA
Katrina Saba, Oakland CA
Seema Sidhu, Fremont CA
Tatiana W. Spirtos, Redwood City CA
James J. Strebiger, Irvine CA
Illan Strygler, Commerce CA
Holly Yang, San Diego CA
Frank Zhou, Los Angeles CA

Alternate Delegate(s)

Ameena Ahmed, Oakland CA
Alpesh Amin, Anaheim CA
Jack Chou, Baldwin Park CA
Jade Cook, Los Angeles CA
James Cotter, Napa CA
Diana Dayal, Los Angeles CA
Michele Evans, Rocklin CA
Sergio Flores, San Diego CA
David Friscia, San Diego CA
Douglas Gibson, Folsom CA
Raminder Gill, Sacramento CA
Brian Grady, San Francisco CA
Catherine Gutfreund, Santa Rosa CA
Jennifer Hone, Santa Barbara CA
Janet Jacobson, Anaheim CA
Scott Richard Karlan, West Hollywood CA

California Medical Association

Alternate Delegate(s)

Mark H. Kogan, San Pablo CA
Sudeep Kukreja, Orange CA
Man Kit Leung, San Francisco CA
Stacey Ludwig, Los Angeles CA
Debbie Lupeika, Redding CA
Chang Na, Bakersfield CA
Bing Pao, Rcho Santa Fe CA
Smita Rouillard, Fresno CA
Sion Roy, Malibu CA
Raymond Tsai, Lost Hills CA
William Tseng, San Diego CA
Shannon Udovic-Constant, San Francisco CA
Valencia Walker, Los Angeles CA
Patricia Wang, Antioch CA
Barbara Weissman, Pacifica CA
Anna Yap, Carmichael CA

Resident and Fellow Sectional Delegate(s)

Pauline Huynh, Oakland CA
Helene Nepomuceno, Las Vegas NV

Resident and Fellow Sectional Alternate Delegate(s)

Christina Wang, San Francisco CA

Regional Medical Student Delegate(s)

Jesse D. Garcia Jr, Colusa CA
Nidhi K. Reddy, Stockton CA

Regional Medical Student Alternate Delegate(s)

Thomas S. Issa, Lancaster CA
Jessica Kim, San Jose CA
Elisabeth McCallum, Irvine CA
Kelly C Ngo, Orange CA

Colorado Medical Society

Delegate(s)

David Downs, Denver CO
Jan Kief, Merritt Island FL
A. "Lee" Morgan, Denver CO
Tamaan Osbourne-Roberts, Denver CO
Lynn Parry, Littleton CO

Alternate Delegate(s)

Carolynn Francavilla, Lakewood CO
Rachelle M. Klammer, Denver CO
Patrick Pevoto, Fruita CO
Brigitta J. Robinson, Centennial CO
Michael Volz, Englewood CO

Regional Medical Student Delegate(s)

Dakota R. Hitchcock, Denver CO

Connecticut State Medical Society

Delegate(s)

Katherine L. Harvey, Canton CT
Kathleen A. LaVorgna, Norwalk CT
Bollepalli Subbarao, Middletown CT
Steven C. Thornquist, Bethany CT

Alternate Delegate(s)

M. Natalie Achong, Unionville CT
Raymond Lorenzoni, Woodbridge CT
Stacy Taylor, New Hartford CT
Michael Virata, Woodbridge CT

Resident and Fellow Sectional Delegate(s)

Daniel Kerekes, New Hyde Park NY

Resident and Fellow Sectional Alternate Delegate(s)

Pawan Mathew, Winchester MA

Regional Medical Student Delegate(s)

Krishna Channa, Farmington CT

Connecticut State Medical Society

Regional Medical Student Delegate(s)

Amanda Kahn, Farmington CT
Julia Silverman, Farmington CT

Regional Medical Student Alternate Delegate(s)

Catriona Hong, Glastonbury CT
Vedika Karandikar, Farmington CT
Jessica Macintyre, Farmington CT
Lizzie Suschana, Farmington CT

Medical Society of Delaware

Delegate(s)

Janice Tildon-Burton, Newark DE

Alternate Delegate(s)

Matthew Burday, Wilmington DE

Medical Society of the District of Columbia

Delegate(s)

Peter E. Lavine, Washington DC
Raymond K. Tu, Washington DC

Alternate Delegate(s)

Neal D Barnard, Washington DC
Matthew Lecuyer, Washington DC

Resident and Fellow Sectional Alternate Delegate(s)

Zach Dunton, Washington DC

Florida Medical Association

Delegate(s)

Ankush Bansal, Westlake FL
Rebekah Bernard, Fort Myers FL
Andrew Cooke, Mount Dora FL
Lisa Cosgrove, Jacksonville FL
Eva Crooke, Tampa FL
Mark Dobbertien, Orange Park FL
Michelle Falcone, Miami FL

Florida Medical Association

Delegate(s)

Ronald Frederic Giffler, Davie FL
Jason Goldman, Coral Springs FL
Corey L. Howard, Naples FL
Rebecca Lynn Johnson, Tampa FL
Tra'Chella Johnson Foy, Jacksonville FL
John Montgomery, Fleming Island FL
Douglas Murphy, Ocala FL
Ralph Jacinto Nobo, Bartow FL
Michael L. Patete, Venice FL
Michael Andrew Zimmer, St Petersburg FL

Alternate Delegate(s)

Shawn Baca, Boca Raton FL
Michael Cromer, Tampa FL
Aaron Elkin, Hollywood FL
Vania Fernandez, Miami FL
Shelley C. Glover, Clermont FL
Raphael C. Haciski, Naples FL
Ryan Hall, Lake Mary FL
Karen Harris, Gainesville FL
Vicki Norton, Boca Raton FL
Arthur E. Palamara, Hollywood FL
Thomas G. Peters, Jacksonville FL
Alan B. Pillersdorf, Lake Worth FL
Sergio B. Seoane, Lakeland FL

Regional Medical Student Delegate(s)

Alex Tolbert, Tallahassee FL

Regional Medical Student Alternate Delegate(s)

Boyd W. Colbrunn, Miami FL
Sneha Kapil, St. Augustine FL

Medical Association of Georgia

Delegate(s)

John S. Antalis, Dalton GA
S William Clark III, Waycross GA
Billie Luke Jackson, Macon GA
Zachary Lopater, Macon GA
Ali R Rahimi, Atlanta GA
Charles Wilmer, Atlanta GA

Alternate Delegate(s)

Keisha Callins, Macon GA
Shamie Das, Atlanta GA
Chris McAdams, Atlanta GA
Fonda A. Mitchell, Atlanta GA

Hawaii Medical Association

Delegate(s)

Angela Pratt, Honolulu HI
Jerry Van Meter, Honolulu HI

Alternate Delegate(s)

Elizabeth A. Ignacio, Kahului HI

Idaho Medical Association

Delegate(s)

A. Patrice Burgess, Boise ID

Alternate Delegate(s)

Zachary Warnock, Pocatello ID

Illinois State Medical Society

Delegate(s)

Rodney Alford, Watseka IL
Thomas M. Anderson, Chicago IL
Howard Axe, Grayslake IL
Christine Bishof, Elmhurst IL
Howard Chodash, Springfield IL
Niva Lubin-Johnson, Chicago IL
James L. Milam, Grayslake IL

Illinois State Medical Society

Delegate(s)

Robert Panton, Elmwood Park IL
Adam Roussas, Chicago IL
Shastri Swaminathan, Westmont IL
Piyush Vyas, Lake Forest IL
Steven D. Williams, Bourbonnais IL

Alternate Delegate(s)

Aadil Ahmed, Forest Park IL
Smitha Arekapudi, Chicago IL
Nancy Church, Chicago IL
Scott A. Cooper, Chicago IL
Richard A. Geline, Glenview IL
Anne Langguth, Hindsdale IL
Megi Maci, Quincy MA
Martha Menchaca, Brookfield IL
Vikram B. Patel, South Barrington IL
Holly Rosencranz, Champaign IL
Judith G Savage, Tinley Park IL

Resident and Fellow Sectional Delegate(s)

Ian Brodka, Cheektowaga NY

Regional Medical Student Delegate(s)

Kayla Tran, North Chicago IL

Indiana State Medical Association

Delegate(s)

Heidi Dunniway, Evansville IN
Vidya S. Kora, Michigan City IN
William Mohr, Kokomo IN
Rhonda Sharp, Lagrange IN
David Welsh, Batesville IN

Alternate Delegate(s)

Deepak Azad, Floyds Knobs IN
Roberto Darroca, Muncie IN

Indiana State Medical Association

Alternate Delegate(s)

Lisa Hatcher, Columbia City IN
Thomas Vidic, Elkhart IN
Stacie Wenk, Evansville IN

Regional Medical Student Delegate(s)

Sydney Clark, W Lafayette IN

Iowa Medical Society

Delegate(s)

Thomas Evans, Johnston IA
Douglas Martin, Sioux City IA
Douglas Peters, W Burlington IA
Victoria Sharp, Iowa City IA

Alternate Delegate(s)

Brian Privett, Cedar Rapids IA

Regional Medical Student Alternate Delegate(s)

Adrienne Nguyen, Des Moines IA

Kansas Medical Society

Delegate(s)

Debra Doubek, Manhattan KS
Robert Gibbs, Parsons KS
Arthur D. Snow, Shawnee Mission KS

Alternate Delegate(s)

Gerhard A. Fast, Hesston KS
Kimberly Swan, Overland Park KS

Regional Medical Student Delegate(s)

Lauren St. Peter, Kansas City KS

Kentucky Medical Association

Delegate(s)

David J. Bensema, Lexington KY
J Gregory Cooper, Cynthiana KY
Shawn C. Jones, Paducah KY

Kentucky Medical Association

Delegate(s)

John L. Roberts, Louisville KY
Donald J. Swikert, Edgewood KY

Alternate Delegate(s)

Evelyn M. Jones, Paducah KY
Michael Kuduk, Lexington KY
Neal J. Moser, Taylor Mill KY
Monalisa Tailor, Louisville KY
R. Brent Wright, Glasgow KY

Louisiana State Medical Society

Delegate(s)

Luis M. Alvarado, Mandeville LA
Kamel Brakta, Shreveport LA
George Ellis, New Orleans LA
Deborah Fletcher, Shreveport LA
William Freeman, Prairieville LA
Donald Posner, Shreveport LA
Clayton Runfalo, Prairieville LA

Regional Medical Student Alternate Delegate(s)

Justin W. Magrath,

MedChi: The Maryland State Medical Society

Delegate(s)

Harbhajan Ajrawat, Potomac MD
Loralie Dawn Ma, Fulton MD
Shannon Pryor, Chevy Chase MD
Gary Pushkin, Baltimore MD
Stephen J. Rockower, Bethesda MD
Bruce M. Smoller, Potomac MD

Alternate Delegate(s)

Renee Bovelle, Silver Spring MD
Eunbin Choi, Cockeysville MD

MedChi: The Maryland State Medical Society

Alternate Delegate(s)

Padmini Ranasinghe, Baltimore MD
Whitney Sambhariya, Baltimore MD

Regional Medical Student Delegate(s)

Preetham Bachina, Baltimore MD

Massachusetts Medical Society

Delegate(s)

Maryanne C. Bombaugh, Mashpee MA
Theodore A Calianos II, Mashpee MA
Alain A. Chaoui, Boxford MA
Emily Cleveland Manchanda, Andover MA
Henry Dorkin, Newton MA
Ronald Dunlap, Weymouth MA
Melody J. Eckardt, Milton MA
Michael Medlock, Lexington MA
David A. Rosman, Stoneham MA
Spiro Spanakis, Shrewsbury MA
Ellana Stinson, Boston MA
Lynda M. Young, Worcester MA

Alternate Delegate(s)

Elizabeth Conner, Boston MA
Eli Freiman, Watertown MA
Brittney Garcia, Boston MA
Mario E. Motta, Salem MA
Kenath Shamir, Fall River MA

Resident and Fellow Sectional Delegate(s)

Hussein Antar, Salem MA

Resident and Fellow Sectional Alternate Delegate(s)

Tiffany Bellomo, Boston MA

Regional Medical Student Delegate(s)

Nishanth Ganeshbabu, Boston MA

Massachusetts Medical Society

Regional Medical Student Alternate Delegate(s)

Priya Desai, Boston MA

Michigan State Medical Society

Delegate(s)

Paul D. Bozyk, Beverly Hills MI

T. Jann Caison-Sorey, Bloomfield Heights MI

Michael D. Chafty, Kalamazoo MI

Betty S. Chu, Detroit MI

Pino D. Colone, Howell MI

Kaitlyn Dobesh, Detroit MI

Amit Ghose, Okemos MI

Theodore Jones, Dearborn MI

Mark C. Komorowski, Essexville MI

Christie L. Morgan, Grosse Pointe Woods MI

Rose M. Ramirez, Belmont MI

Krishna K. Sawhney, Bloomfield Hills MI

David T. Walsworth, East Lansing MI

John A. Waters, Flint MI

Alternate Delegate(s)

Brooke M. Buckley, Wyandotte MI

Edward Bush, Grosse Ile MI

Louito C Edje, Cincinnati OH

Aliya Hines, Philadelphia PA

Courtland Keteyian, Ann Arbor MI

Patricia Kolowich, Northville MI

Aarti Patel, Northville MI

Michael J Redinger, Kalamazoo MI

M. Salim U Siddiqui, Canton MI

David Whalen, Grand Rapids MI

Resident and Fellow Sectional Delegate(s)

Mohammad Ibrahim, Flint MI

Michigan State Medical Society

Resident and Fellow Sectional Alternate Delegate(s)

Nicolas Fletcher, Grand Rapids MI

Mohamed Ibrahim, Flint MI

Regional Medical Student Delegate(s)

Sara Kazyak, Detroit MI

Regional Medical Student Alternate Delegate(s)

Alex Yorks, Detroit MI

Minnesota Medical Association

Delegate(s)

John Abenstein, Oronoco MN

Andrea Hillerud, Eagan MN

Dennis O'Hare, Minneapolis MN

Cindy F. Smith, Spicer MN

David Thorson, Mahtomedi MN

Alternate Delegate(s)

Lisa Mattson, Plymouth MN

George Morris, Saint Cloud MN

Ashok Patel, Rochester MN

Laurel Ries, Saint Paul MN

Mississippi State Medical Association

Resident and Fellow Sectional Delegate(s)

Avani Patel, Jackson MS

Regional Medical Student Alternate Delegate(s)

Joshua A. Hartley, Jackson MS

Missouri State Medical Association

Delegate(s)

Elie Azrak, Bridgeton MO

Peggy Barjenbruch, Mexico MO

Edmond Cabbabe, St Louis MO

Joseph Corrado, Mexico MO

Missouri State Medical Association

Delegate(s)

Charles W. Van Way, Fairway KS

Alternate Delegate(s)

Charles Adams, Kansas City MO

George Hruza, Chesterfield MO

Ravi S Johar, Chesterfield MO

Resident and Fellow Sectional Delegate(s)

Kelly Schmidt, Columbia MO

Regional Medical Student Delegate(s)

Sham Manoranjithan, Columbia MO

Montana Medical Association

Delegate(s)

Nicole C. Clark, Helena MT

Alternate Delegate(s)

Michael P Temporal, Billings MT

Nebraska Medical Association

Delegate(s)

Kelly J. Caverzagie, Omaha NE

Jordan Warchol, Omaha NE

Alternate Delegate(s)

Aman Mahal, Omaha NE

Robert Wergin, Seward NE

Regional Medical Student Alternate Delegate(s)

Samantha M. Thomas, Omaha NE

Nevada State Medical Association

Delegate(s)

Florence Jameson, Boulder City NV

Andrew Pasternak, Reno NV

Alternate Delegate(s)

Joseph A. Adashek, Las Vegas NV

Peter R. Fenwick, Reno NV

Nevada State Medical Association

Resident and Fellow Sectional Delegate(s)

Jacob Altholz, Las Vegas NV

Resident and Fellow Sectional Alternate Delegate(s)

Katrina Naik, Las Vegas NV

New Hampshire Medical Society

Delegate(s)

P. Travis Harker, Manchester NH

Alternate Delegate(s)

Alan C. Hartford, Lyme NH

Medical Society of New Jersey

Delegate(s)

Henika Kaura, Johnson City NY

Andrew Y. Kleinman, Rye Brook NY

Thomas T Lee, Tarrytown NY

Sandhya Malhotra, Forest Hills NY

Brian Murray, Albany NY

Charles Rothberg, Patchogue NY

Jane Simpson, Johnson City NY

Jocelyn Young, Vestal NY

Michael Ziegelbaum, Jericho NY

Regional Medical Student Delegate(s)

Anjlee Panjwani, Syracuse NY

North Carolina Medical Society

Delegate(s)

Mary Ann Contogiannis, Greensboro NC

E. Rebecca Hayes, Charlotte NC

Justin Hurie, Winston-Salem NC

Darlyne Menscer, Charlotte NC

North Carolina Medical Society

Delegate(s)

Karen Smith, Raeford NC

Royce Syracuse, Huntersville NC

Alternate Delegate(s)

Arthur Apolinario, Clinton NC

Tracy Eskra, Greenville NC

John Meier, Raleigh NC

Eileen Raynor, Durham NC

Regional Medical Student Delegate(s)

Alex Soltany, Winston Salem NC

North Dakota Medical Association

Delegate(s)

Misty Anderson, Valley City ND

David Schmitz, Grand Forks ND

Ohio State Medical Association

Delegate(s)

Anthony Armstrong, Toledo OH

Robyn F Chatman, Cincinnati OH

Lisa Bohman Egbert, Dayton OH

Charles J. Hickey, Mechanicsburg OH

Gary R. Katz, Dublin OH

Deepak Kumar, Dayton OH

Tani Malhotra, Parma OH

Andrew Rudawsky, Lakewood OH

William C. Sternfeld, Sylvania OH

Shannon Trotter, Columbus OH

Christopher Wee, Shaker Hts OH

Colette R. Willins, Avon OH

Alternate Delegate(s)

John Bastulli, Shaker Hts OH

Asheesh Bothra, Dayton OH

Ohio State Medical Association

Alternate Delegate(s)

Stephen House, Miamisburg OH

Elizabeth Muennich, Mason OH

Samip Parikh, Dayton OH

Resident and Fellow Sectional Delegate(s)

Brandon Francis, Cleveland OH

Regional Medical Student Delegate(s)

Kaylee Scarnati, Toledo OH

Regional Medical Student Alternate Delegate(s)

Michael C. Shukis, Cincinnati OH

Anusha Singh, Powell OH

Oklahoma State Medical Association

Delegate(s)

Sherri Baker, Edmond OK

Jay A. Gregory, Muskogee OK

Woody Jenkins, Stillwater OK

Bruce Storms, Chickasha OK

Alternate Delegate(s)

Geoffrey Chow, Tulsa OK

Mary Clarke, Stillwater OK

Julie Hager, Oklahoma City OK

Jean Hausheer, Lawton OK

Resident and Fellow Sectional Delegate(s)

Samantha Beck, Tulsa OK

Brady Iba, Edmond OK

Regional Medical Student Delegate(s)

Will Maher, Tulsa OK

Oregon Medical Association

Delegate(s)

Peter A. Bernardo, Salem OR

Robert Dannenhoffer, Roseburg OR

Oregon Medical Association

Delegate(s)

Kevin Ewanchyna, Corvallis OR

Reva Ricketts-Loriaux, Portland OR

Alternate Delegate(s)

Amy Kerfoot, Portland OR

Regional Medical Student Delegate(s)

Holley Carlson-Riddle, Lebanon OR

Pennsylvania Medical Society

Delegate(s)

Domenick Bucci, Southampton PA

Michael A. DellaVecchia, Berwyn PA

Richard Eisenstaedt, Abington PA

Bindukumar Kansupada, Yardley PA

Andrew Lutzkanin, Elizabethtown PA

Dale M. Mandel, Paoli PA

Narayana Murali, Old Forge PA

Jill M. Owens, Bradford PA

Lorraine Rosamilia, Port Matilda PA

Scott E. Shapiro, Lower Gwynedd PA

John W. Spurlock, Bethlehem PA

John Michael Vasudevan, Philadelphia PA

John P. Williams, Gibsonia PA

Alternate Delegate(s)

Donald Bourne, Pittsburgh PA

Theodore A. Christopher, Maple Glen PA

Victoria Cimino, Newtown PA

James A. Goodyear, North Wales PA

Nathan Hoff, Honesdale PA

Sean Li, Philadelphia PA

Rafay Nasir, Hershey PA

Neerav Sheth, West Chester PA

James W. Thomas, North Wales PA

Pennsylvania Medical Society

Alternate Delegate(s)

Martin D. Trichtinger, Hatboro PA

Resident and Fellow Sectional Delegate(s)

Megan Chiu, Cleveland OH

Regional Medical Student Alternate Delegate(s)

Anudeeta Gautam, Philadelphia PA

Rhode Island Medical Society

Delegate(s)

Sarah Fessler, Riverside RI

Peter A. Hollmann, Cranston RI

Alternate Delegate(s)

Thomas Bledsoe, Riverside RI

Heather Smith, Newport RI

Resident and Fellow Sectional Delegate(s)

Leanna "Leif" Knight, Providence RI

Nikita Sood, Providence RI

South Carolina Medical Association

Delegate(s)

Gary A. Delaney, Orangeburg SC

Alexander Ramsay, Charleston SC

Bruce A. Snyder, Greenville SC

Greg Tarasidis, Greenwood SC

Alternate Delegate(s)

Macdonald M Dubose, Sumter SC

Stefanie M. Putnam, Mauldin SC

Todd E Schlesinger, Charleston SC

Christopher A Yeakel, Elgin SC

Regional Medical Student Delegate(s)

Jared Buteau, Greenville SC

South Dakota State Medical Association

Delegate(s)

Robert L. Allison, Pierre SD

Mary Carpenter, Winner SD

Alternate Delegate(s)

Robert Summerer, Madison SD

Jennifer Tinguely, Sioux Falls SD

Tennessee Medical Association

Delegate(s)

VijayaLakshmi Appareddy, Chattanooga TN

O. Lee Berkenstock, Memphis TN

Richard J. DePersio, Knoxville TN

Wiley T. Robinson, Memphis TN

Nita Shumaker, Hixson TN

Christopher E. Young, Signal Mtn TN

Alternate Delegate(s)

Landon S. Combs, Gray TN

George R. Lee III , Nashville TN

Regional Medical Student Delegate(s)

Amber Shirley, New Tazewell TN

Texas Medical Association

Delegate(s)

Michelle A. Berger, Austin TX

REPORT OF THE BOARD OF TRUSTEES

B of T Report 02-A-24

Subject: New Specialty Organizations Representation in the House of Delegates

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 The Board of Trustees (BOT) and the Specialty and Service Society (SSS) considered the
2 applications of the Academy of Consultation-Liaison Psychiatry, American College of Lifestyle
3 Medicine, American Venous Forum, Association of Academic Psychiatrists, and Society for
4 Pediatric Dermatology for national medical specialty organization representation in the American
5 Medical Association (AMA) House of Delegates (HOD). The applications were first reviewed by
6 the AMA SSS Rules Committee and presented to the SSS Assembly for consideration.

7
8 The applications were considered using criteria developed by the Council on Long Range Planning
9 and Development and adopted by the HOD (Policy G-600.020). (Exhibit A)

10
11 Organizations seeking admission were asked to provide appropriate membership information to the
12 AMA. That information was analyzed to determine AMA membership, as required under criterion
13 three. A summary of this information is attached to this report as Exhibit B.

14
15 In addition, organizations must submit a letter of application in a designated format. This format
16 lists the above-mentioned guidelines followed by each organization's explanation of how it meets
17 each of the criteria.

18
19 Before a society is eligible for admission to the HOD, it must participate in the SSS for three years.
20 These organizations have actively participated in the SSS for more than three years.

21
22 Review of the materials and discussion during the SSS meeting at the November 2023 Interim
23 Meeting indicated that the Academy of Consultation-Liaison Psychiatry, American College of
24 Lifestyle Medicine, American Venous Forum, Association of Academic Psychiatrists, and Society
25 for Pediatric Dermatology meet the criteria for representation in the HOD.

26
27 **RECOMMENDATION**

28
29 Therefore, the Board of Trustees recommend that the Academy of Consultation-Liaison Psychiatry,
30 American College of Lifestyle Medicine, American Venous Forum, Association of Academic
31 Psychiatrists, and Society for Pediatric Dermatology be granted representation in the AMA House of
32 Delegates and that the remainder of the report be filed. (Directive to Take Action)

Fiscal Note: Less than \$500

APPENDIX
Exhibit A

**GUIDELINES FOR REPRESENTATION IN & ADMISSION TO
THE HOUSE OF DELEGATES:**

National Medical Specialty Societies

- 1) The organization must not be in conflict with the constitution and bylaws of the American Medical Association by discriminating in membership on the basis of race, religion, national origin, sex, or handicap.
- 2) The organization must (a) represent a field of medicine that has recognized scientific validity; and (b) not have board certification as its primary focus, and (c) not require membership in the specialty organization as a requisite for board certification.
- 3) The organization must meet one of the following criteria:
 - 1,000 or more AMA members;
 - At least 100 AMA members and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA; or
 - Have been represented in the House of Delegates at the 1990 Annual Meeting and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA.
- 4) The organization must be established and stable; therefore, it must have been in existence for at least 5 years prior to submitting its application.
- 5) Physicians should comprise the majority of the voting membership of the organization.
- 6) The organization must have a voluntary membership and must report as members only those who are current in payment of applicable dues are eligible to participate on committees and the governing body.
- 7) The organization must be active within its field of medicine and hold at least one meeting of its members per year.
- 8) The organization must be national in scope. It must not restrict its membership geographically and must have members from a majority of the states.
- 9) The organization must submit a resolution or other official statement to show that the request is approved by the governing body of the organization.
- 10) If international, the organization must have a US branch or chapter, and this chapter must be reviewed in terms of all of the above guidelines.

RESPONSIBILITIES OF NATIONAL MEDICAL SPECIALTY ORGANIZATIONS

1. To cooperate with the AMA in increasing its AMA membership.
2. To keep its delegate to the House of Delegates fully informed on the policy positions of the organizations so that the delegate can properly represent the organization in the House of Delegates.
3. To require its delegate to report to the organization on the actions taken by the House of Delegates at each meeting.
4. To disseminate to its membership information to the actions taken by the House of Delegates at each meeting.
5. To provide information and data to the AMA when requested.

Exhibit B - Summary Membership Information

Organization	AMA Membership of Organization's Total Eligible Membership
Academy of Consultation-Liaison Psychiatry	378 of 1,471 (26%)
American College of Lifestyle Medicine	974 of 3,937 (25%)
American Venous Forum	115 of 439 (26%)
Association of Academic Physiatrists	162 of 779 (21%)
Society for Pediatric Dermatology	154 of 564 (27%)

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 01-A-24

Subject: AMA Bylaws—Nomination of Officers and Council Members

Presented by: Mark Bair, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 At the 2023 Interim meeting, the House of Delegates adopted Recommendation 21 of Speakers
2 Report 3, Report of the Election Task Force 2 (Policy G-610.089). Policy G-610.089 directed that
3 Bylaw 6.8.1 be updated to clarify that nominations are made by the chair of the Board of Trustees
4 or by a member of the House of Delegates at the opening session of the meeting at which elections
5 take place. The Council found similar language in Bylaw 3.3. To maintain internal bylaw
6 consistency and to accurately describe the nomination process for Officers and Council members
7 the Council submits amended language for 3.3 and 6.8.1 for House action.

8 9 RECOMMENDATIONS

10
11 The Council on Constitution and Bylaws recommends that the following amendments to our AMA
12 Bylaws be adopted, that Policy G-610.989 be rescinded, and that the remainder of this report be
13 filed. Adoption requires the affirmative vote of two-thirds of the members of the House of
14 Delegates present and voting.

15 16 **3 Officers**

17 ***

18
19
20 **3.3 Nominations.** Nominations for President-Elect, Speaker and Vice Speaker, shall be
21 made ~~from the floor~~ by a member of the House of Delegates at the opening session of
22 the meeting at which elections take place. Nominations for all other officers, except for
23 Secretary, the medical student trustee, and the public trustee, shall be made ~~from the~~
24 ~~floor~~ by a member of the House of Delegates at the opening session of the meeting at
25 which elections take place ~~and may be announced by the Board of Trustees.~~

5 (Modify Bylaws)

Fiscal Note: No Significant Fiscal Impact

RELEVANT AMA POLICY

G-610.089, Directives on Nominations from Speakers Report 3. The language in Bylaw 6.8.1, “Nomination and Election” be updated to clarify that nominations are made by the chair of the Board of Trustees or by a member of the House of Delegates at the opening session of the meeting at which elections take place.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 02-A-24

Subject: AMA Bylaws—Run-Off and Tie Ballots
(Report of ETF 2 - Rec. #13)

Presented by: Mark Bair, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 At the 2023 Interim meeting of the American Medical Association (AMA) the House of Delegates
2 (HOD) considered Recommendation 13 from Speakers Report 3, Report of the Election Task Force
3 2, that asked that Bylaws 3.4.2.1.3, 3.4.2.2, and 6.8.1.4 be amended to change the rules for
4 elections of officers and councils with multiple nominees so that the lowest vote getter on each
5 ballot is dropped on the subsequent ballot, with the exception of a tie for lowest vote getter in
6 which case both would be dropped. While the Reference Committee recommended adoption of
7 Recommendation 13, the HOD ultimately referred the recommendation over concerns about
8 complex onsite bylaw language not being able to be considered at caucuses.

9
10 The AMA has a long-standing precedent of requiring that all office holders are elected by a
11 majority of those casting legal ballots. During Council on Constitution and Bylaws (the Council)
12 discussions of potential bylaw language, it became apparent that there are three very unlikely
13 scenarios in which a strict elimination of the nominee with the lowest vote tally as proposed in the
14 Speakers 3-I-23 would enable a nominee who had not received a majority of votes cast to be
15 elected:

- 16
17 • For example, if five nominees were running for four vacancies on the Board of Trustees (or
18 an elected Council), and only three receive a majority of votes, then, of the remaining two,
19 one would be eliminated, effectively installing a nominee who had not yet received a
20 majority of votes.
- 21 • Even more unlikely, albeit possible, is a situation whereby those two remaining candidates
22 tie, and subsequently would then both be eliminated if the Bylaws were strictly interpreted.
- 23 • A similar but even more unlikely event could occur in an election for an officer. For
24 example, if three nominees (A, B, and C) were running for Speaker in a House of 100
25 votes, then it is possible that A could receive 34 votes, and B and C could each receive 33.
26 Again, a strict interpretation of the rule would eliminate both B and C, effectively
27 installing a Speaker who had not received a majority of votes.
- 28 • The Council noted that a more common occurrence is a multi-vacancy, multi-nominee race
29 with one more nominee than there are vacancies. For such a race, a more likely outcome is
30 that two nominees do not attain a majority vote with only one vacancy remaining. and must
31 run against each other for the remaining vacancy.
- 32 • Lastly, the Council noted that were elections held at the I-23 meeting with a potential of
33 705 credentialed delegates, theoretically a contested race with three nominees could end in
34 a three-way tie (with each nominee receiving 235 votes).

1 Admittedly, these are highly unlikely scenarios, but for completeness, your Council on Constitution
2 and Bylaws felt they should be addressed to avoid controversy should they occur. Minor
3 conditional language has been added in order to prevent such scenarios.

4
5 RECOMMENDATIONS

6
7 The Council on Constitution and Bylaws recommends that the following amendments to our AMA
8 Bylaws be adopted and that the remainder of this report be filed. Adoption requires the affirmative
9 vote of two-thirds of the members of the House of Delegates present and voting.

10
11 **3 Officers**

12 ***

13 **3.4 Elections.**

14 ***

15 **3.4.2 Method of Election.** Where there is no contest, a majority vote without ballot shall
16 elect. All other elections shall be by ballot.

17
18 **3.4.2.1 At-Large Trustees.**

19
20 **3.4.2.1.1 First Ballot.** All nominees for the office of At-Large Trustee
21 shall be listed alphabetically on a single ballot. Each elector
22 shall have as many votes as the number of Trustees to be
23 elected, and each vote must be cast for a different nominee.
24 No ballot shall be counted if it contains fewer or more votes
25 than the number of Trustees to be elected, or if the ballot
26 contains more than one vote for any nominee. A nominee shall
27 be elected if they have received a vote on a majority of the
28 legal ballots cast and are one of the nominees receiving the
29 largest number of votes within the number of Trustees to be
30 elected.

31
32 ~~**3.4.2.1.2 Runoff Ballot.** A runoff election shall be held to fill any
33 vacancy not filled because of a tie vote.~~

34
35 ~~**3.4.2.1.2**~~ **3.4.2.1.2³ Subsequent Ballots.** If all vacancies for Trustees are not filled
36 on the first ballot, and there are more than two remaining
37 nominees, the nominee with the fewest votes shall be dropped
38 and the remaining nominees shall be placed on the subsequent
39 ballot. In the event of a tie for the fewest votes, both
40 nominees shall be dropped. If these actions would result in
41 fewer than two nominees, the nominee(s) with the fewest
42 votes shall not be dropped and all remaining nominees shall be
43 placed on the subsequent ballot. On any subsequent ballot, a
44 nominee shall be elected if they have received a vote on a
45 majority of the legal ballots cast and are one of the nominees
46 receiving the larger number of votes within the number of
47 Trustees to be elected or remaining to be elected, and 3 or
48 more Trustees are still to be elected, the number of nominees
49 on subsequent ballots shall be reduced to no more than twice

~~the number of remaining vacancies less one. The nominees on subsequent ballots shall be determined by retaining those who received the greater number of votes on the preceding ballot and eliminating the nominee(s) who received the fewest votes on the preceding ballot, except where there is a tie. When 2 or fewer Trustees are still to be elected, the number of nominees on subsequent ballots shall be no more than twice the number of remaining vacancies, with the nominees determined as indicated in the preceding sentence. In any subsequent ballot the electors shall cast as many votes as there are Trustees yet to be elected, and must cast each vote for different nominees. This procedure shall be repeated until all vacancies have been filled.~~

3.4.2.2 All Other Officers, except the Medical Student Trustee and the Public Trustee. All other officers, except the medical student trustee and the public trustee, shall be elected separately. A majority of the legal votes cast shall be necessary to elect. In case a nominee fails to receive a majority of the legal votes cast, the nominee with the fewest votes shall be dropped and the remaining nominees shall be placed on the subsequent ballot. In the event of a tie for the fewest votes, both nominees shall be dropped. If these actions would result in fewer than two nominees, the nominee(s) with the fewest votes shall not be dropped and all remaining nominees shall be placed on the subsequent ballot. ~~the nominees on subsequent ballots shall be determined by retaining the 2 nominees who received the greater number of votes on the preceding ballot and eliminating the nominee(s) who received the fewest votes on the preceding ballot, except where there is a tie. This procedure shall be continued until one of the nominees receives a majority of the legal votes cast.~~

6 Councils

6.8 Election – Council on Constitution and Bylaws, Council on Medical Education, Council on Medical Service, and Council on Science and Public Health

6.8.1.1 Separate Election. The resident/fellow physician member of these Councils shall be elected separately. A majority of the legal votes cast shall be necessary to elect. In case a nominee fails to receive a majority of the legal votes cast, the nominee with the fewest votes shall be dropped and the remaining nominees shall be placed on the subsequent ballot. In the event of a tie for the fewest votes, both nominees shall be dropped. If these actions result in fewer than two nominees, the nominees with the fewest votes shall not be dropped and all remaining nominees shall be placed on the subsequent ballot. ~~nominees on subsequent ballots shall be determined by retaining the 2 nominees who received the greater number of votes on the preceding ballot and eliminating the nominee(s) who received the fewest votes on the preceding ballot, except where there is a tie. This procedure~~

1 shall be continued until one of the nominees receives a majority of the
2 legal votes cast.

3
4 **6.8.1.2 Other Council Members.** With reference to each such Council, all
5 nominees for election shall be listed alphabetically on a single ballot.
6 Each elector shall have as many votes as there are members to be
7 elected, and each vote must be cast for a different nominee. No ballot
8 shall be counted if it contains fewer votes or more votes than the
9 number of members to be elected, or if the ballot contains more than
10 one vote for any nominee. A nominee shall be elected if they have
11 received a vote on a majority of the legal ballots cast and are one of the
12 nominees receiving the largest number of votes within the number of
13 members to be elected.

14
15 **6.8.1.3 ~~Run-Off Ballot.~~** ~~A run-off election shall be held to fill any vacancy~~
16 ~~that cannot be filled because of a tie vote.~~

17
18 **6.8.1.4 Subsequent Ballots.** If all vacancies are not filled on the first ballot,
19 and there are more than two remaining nominees, the nominee with
20 the fewest votes shall be dropped and the remaining nominees shall be
21 placed on the subsequent ballot. In the event of a tie for the fewest
22 votes, both nominees shall be dropped. If these actions would result in
23 fewer than two remaining nominees, the nominee(s) with the fewest
24 votes shall not be dropped and all remaining nominees shall be placed
25 on the subsequent ballot. On any subsequent ballot, a nominee shall be
26 elected if they have received a vote on a majority of the legal ballots
27 cast and are one of the nominees receiving the largest number of votes
28 within the number of council members to be elected or remaining to be
29 elected. and 3 or more members of the Council are still to be elected,
30 the number of nominees on subsequent ballots shall be reduced to no
31 more than twice the number of remaining vacancies less one. The
32 nominees on subsequent ballots shall be determined by retaining those
33 who received the greater number of votes on the preceding ballot and
34 eliminating the nominee(s) who received the fewest number of votes
35 on the preceding ballot, except where there is a tie. When 2 or fewer
36 members of the Council are still to be elected, the number of nominees
37 on subsequent ballots shall be no more than twice the number of
38 remaining vacancies, with the nominees determined as indicated in the
39 preceding sentence. In any subsequent ballot the electors shall cast as
40 many votes as there are members of the Council yet to be elected, and
41 must cast each vote for a different nominee. This procedure shall be
42 repeated until all vacancies have been filled.

(Modify Bylaws)

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 03-A-24

Subject: AMA Bylaws—Removal of Officers, Council Members, Committee Members
and Section Governing Council Members
(D-610.997)

Presented by: Mark Bair, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 At the 2023 Interim meeting of the American Medical Association (AMA), the House of Delegates
2 adopted as amended Recommendation 26 from Speakers Report 3: Report of the Election Task
3 Force 2 (D-610.997). Policy [D-610.997](#) asked that our AMA consider developing bylaw language
4 regarding the removal of elected individuals or candidates and the criteria by which such removal
5 would be accomplished and to report back at A-24.

6
7 The Council on Constitution and Bylaws (the Council) has developed this report specifically to
8 comprehensively address the removal of officers, council members, and section governing council
9 members. The report does not address candidates as the Council strongly believes this is more
10 appropriately addressed by the Election Committee. Successfully elected candidates would be
11 considered officers or council members and would be covered under the Council’s
12 recommendations in this report.

13
14 Recommendations are presented for consideration by the House of Delegates.

15 16 BACKGROUND

17
18 As part of its fact-finding mission, the Council reviewed applicable bylaws, policies and statutes
19 that address the removal of such parties from office:

20 21 Bylaws

- 22
- 23 • AMA Bylaw [3.2.1](#) specifies that AMA membership is a condition for holding office.
24 Nonrenewal of AMA membership would make a candidate or incumbent ineligible to hold
25 office.
 - 26 • AMA Bylaws for the Resident/Fellow Trustee [[3.5.5.1](#)] and the Medical Student Trustee
27 [[3.5.6.3](#)] have provisions specifying termination of their terms should they no longer
28 qualify as a resident/fellow or medical student (there also is a grace period if this occurs
29 within 90 days of the annual meeting). Similar bylaw provisions exist for residents and
30 medical student members of AMA councils [[6.11](#)].
 - 31 • Bylaw [1.5](#) states that the Council on Ethical and Judicial Affairs (CEJA) after due notice
32 and hearing, may censure, expel, or place on probation any member of the AMA for an

1 infraction of the Constitution or these Bylaws, for violation of the Principles of Medical
2 Ethics, or for unethical or illegal conduct.

- 3 • Bylaw [3.6.4](#) states that if an officer misses six consecutive regular meetings of the Board of
4 Trustees (Board), this matter shall be reported to the House of Delegates by the Board and
5 the office shall be considered vacant.
- 6 • AMA Bylaws provide a mechanism for filling vacancies for all Officers and for the elected
7 and appointed Councils.
- 8 • AMA Bylaws do not prohibit the resignation of any Board member or Council member for
9 any reason.
- 10 • AMA's Parliamentary Authority, as specified in Bylaw [11.1](#) is the current edition of The
11 American Institute of Parliamentarians Standard Code of Parliamentary Procedure
12 (AIPSC). AIPSC (2nd ed.) acknowledges in Section 3.15 the rights of an organization to
13 discipline, suspend and/or expel members, directors and officers in accordance with its
14 bylaws, the parliamentary authority, and within the law.

15
16 Policies

- 17
18 • The [AMA Principles of Medical Ethics](#) ("Principles") were last revised in June 2001 but
19 initially adopted as the AMA's Code of Conduct when AMA was formed in 1847. The
20 Principles are standards of conduct that define the essentials of honorable behavior for
21 physicians. Principles applicable to this report include:
 - 22 ○ II. A physician shall uphold the standards of professionalism, be honest in all
23 professional interactions, and strive to report physicians deficient in character or
24 competence, or engaging in fraud or deception, to appropriate entities.
 - 25 ○ III. A physician shall respect the law and also recognize a responsibility to seek
26 changes in those requirements which are contrary to the best interests of the
27 patient.
 - 28 ○ IV. A physician shall respect the rights of patients, colleagues, and other health
29 professionals, and shall safeguard patient confidences and privacy within the
30 constraints of the law.
- 31
32 • Policy [H-140.837](#), "Policy on Conduct at AMA Meetings and Events," includes language
33 to the effect that "The CCAM (Committee on Conduct at AMA Meetings and Events) will
34 review all incident reports, perform further investigation (if needed) and recommend to the
35 Office of General Counsel any additional commensurate disciplinary and/or corrective
36 action, which may include but is not limited to the following: prohibiting the violator from
37 attending future AMA events or activities; removing the violator from leadership or other
38 roles in AMA activities; prohibiting the violator from assuming a leadership or other role
39 in future AMA activities; notifying the violator's employer and/or sponsoring organization
40 of the actions taken by AMA; referral to the CEJA for further review and action; and
41 referral to law enforcement.

42
43 Law

- 44
45 • Our AMA is incorporated in the State of Illinois under the General Not For Profit
46 Corporation Act of 1986 (the "Act"). As such, the following provisions apply:
47
48 Sec. 108.35. Removal of directors.
49 (a) One or more of the directors may be removed, with or without cause. In the case of a
50 corporation having a board of directors which is classified in accordance with

1 subsection 108.10(e) of this Act, the articles of incorporation or bylaws may provide
2 that such directors may only be removed for cause.
3 (b) In the case of a corporation with no members or with no members entitled to vote on
4 directors, a director may be removed by the affirmative vote of a majority of the
5 directors then in office present and voting at a meeting of the board of directors at
6 which a quorum is present.
7 (c) In the case of a corporation with members entitled to vote for directors, no director may
8 be removed, except as follows:
9 (1) A director may be removed by the affirmative vote of two-thirds of the votes present
10 and voted, either in person or by proxy.
11 (2) No director shall be removed at a meeting of members entitled to vote unless the
12 written notice of such meeting is delivered to all members entitled to vote on removal of
13 directors. Such notice shall state that a purpose of the meeting is to vote upon the
14 removal of one or more directors named in the notice. Only the named director or
15 directors may be removed at such meeting.
16 (3) In the case of a corporation having cumulative voting, if less than the entire board is
17 to be removed, no director may be removed, with or without cause, if the votes cast
18 against his or her removal would be sufficient to elect him or her if then cumulatively
19 voted at an election of the entire board of directors.
20 (4) If a director is elected by a class of voting members entitled to vote, directors or
21 other electors, that director may be removed only by the same class of members entitled
22 to vote, directors or electors which elected the director.
23 (d) The provisions of subsections (a), (b) and (c) shall not preclude the Circuit Court from
24 removing a director of the corporation from office in a proceeding commenced either by
25 the corporation or by members entitled to vote holding at least 10 percent of the
26 outstanding votes of any class if the court finds (1) the director is engaged in fraudulent
27 or dishonest conduct or has grossly abused his or her position to the detriment of the
28 corporation, and (2) removal is in the best interest of the corporation. If the court
29 removes a director, it may bar the director from reelection for a period prescribed by the
30 court. If such a proceeding is commenced by a member entitled to vote, such member
31 shall make the corporation a party defendant.
32 (Source: P.A. 96-649, eff. 1-1-10.)
33

- 34 • While the AMA’s Office of the General Counsel (OGC) notes that the Act does not
35 directly apply to elected or appointed Council members or appointed committee members,
36 it should be noted that the Illinois statute is broad and vague. Thus, our AMA is fully
37 empowered and has the authority to provide that “all elected and/or appointed individuals”
38 would be required to be bound by the removal language in the statute if it so desired.
39 Lastly, OGC advised that whatever is the final determination of the House of Delegates
40 (the “House”), to the extent it conflicts with Illinois law, Illinois law will govern.
41

42 DISCUSSION

43
44 As part of its fact-finding, the Council read with interest an article from the American Hospital
45 Association’s Trustee Insights, entitled “When a Board Member Crosses the Line: Removing a
46 Trustee Midterm,¹ whereby organizations are urged to define the desired behaviors of its board
47 members, clarify behaviors that are clearly unacceptable and create a standard process to

¹ Orlikoff, J, When a Board Member Crosses the Line: Removing a Trustee Midterm: Addressing problem behaviors is key to a high performing board. AHA Trustee Insights, September 2023
[\[https://trustees.aha.org/when-board-member-crosses-line-removing-trustee-midterm\]](https://trustees.aha.org/when-board-member-crosses-line-removing-trustee-midterm)

1 immediately address them if exhibited by any board member. Board members are classified into
2 four categories: superstars, solid performers, nonperforming/deadweight members, and toxic
3 members. While nonperforming members are typically managed by an organization through peer
4 pressure, not being re-elected or appointed, or resignations due to personal or health reasons, the
5 article supports removal of a toxic member for reasons such as violating the conflict-of-interest
6 policy, including failure to disclose a conflict; attempting to use information obtained as a board
7 member in such a way as to derive personal, financial or other benefit; violating the confidentiality
8 policy; verbally abusing board members, staff or patients/families; any physical assault on board
9 members, staff or patients/families at any time, in any place; actively working to subvert stated
10 board policy or decisions; accusation or conviction of felony; speaking against the organization or
11 the board or the CEO or staff in public; or racist or sexist comments or behavior, failure to attend a
12 minimum of 50% (or other specified percentage) of board meetings; failing to attend three
13 consecutive board meetings; and sleeping during board or board committee meetings (two or more
14 instances).

15

16 The Council notes that the Standing Rules of the AMA Board of Trustees provide for the removal
17 of the chair-elect or chair, positions elected internally by Board members. The Council also
18 emphasizes that existing AMA bylaws, policies and Illinois law cover most but not all, of the other
19 behaviors defined as unacceptable.

20

21 In further discussing the issue, the Council noted that only AMA Trustees have a fiduciary
22 responsibility, and those who do not complete their responsibilities (through negligence or blatant
23 recklessness) could cause the AMA to incur unnecessary liability.

24

25 The Council also found that while the Speakers Report did not address the removal of individuals
26 who serve on appointed councils, the Council believes there should be a comparable process for
27 removal similar to those who serve on elected councils, with those procedures to be adopted by the
28 House. Similarly, while Section governing council members have no fiduciary responsibilities, the
29 bylaws also should incorporate a removal provision, with those Rules to be approved by the AMA
30 Board of Trustees. Several Section Internal Operating Procedures already provide for the removal
31 of a governing council member. The Council would work collaboratively with the Council on Long
32 Range Planning and Development, CEJA, OGC, and the House of Delegates to develop the
33 procedures to be employed.

34

35 In perusing other published literature, personal one-on-one intervention is often cited as a less
36 formal solution to managing problematic board, council or committee members. For example, if an
37 individual has failed to attend a specified number of meetings in a row, has a specified number of
38 unexcused absences or has become an impediment to the group's work, the most senior member
39 often meets informally with the individual in question. Additionally, offering or granting a leave of
40 absence is another option to make it possible for individuals to take a leave of absence from a
41 board, council or committee if they have health, work or other reasons why they cannot participate
42 fully during the current term. AMA Bylaws, Council Rules and Section Internal Operating
43 Procedures all provide a mechanism for filling vacancies. Lastly, term limits are cited as ways to
44 minimize less than effective performance, and there are already term limits for AMA Trustees,
45 Council members and Section governing council members in place.

46

47 The Council learned that the bylaws or governing documents of several other organizations
48 incorporated in Illinois, such as the American Dental Association, American Bar Association,
49 Illinois Association for Behavior Analysis, include provisions that allow for the removal of elected
50 trustees, council members or committee members, with varying language and detail:

- 1 • **American Dental Association:** ADA Bylaws state that “The House of Delegates may
2 remove a trustee for cause in accordance with procedures established by the House of
3 Delegates. The procedures shall provide for notice of the charges alleged and an
4 opportunity for the accused to be heard in their defense. A two-thirds (2/3) affirmative vote
5 of the delegates present and voting is required to remove a trustee from office.” The ADA
6 Governance Manual provides further details that include: The House of Delegates may
7 remove an elective officer for cause in accordance with procedures established by the
8 House of Delegates. The procedures shall provide for notice of the charges alleged and an
9 opportunity for the accused to be heard in his or her defense. A two-thirds (2/3) affirmative
10 vote of the delegates present and voting is required to remove a trustee from office.
11
- 12 • Similarly, the ADA Governance Manual includes language to address removal of elected
13 or appointed Council members: “Removal for Cause. The Board of Trustees may remove a
14 council member for cause in accordance with procedures established by the Board of
15 Trustees. Those procedures shall provide for notice of the charges, including allegations of
16 the conduct purported to constitute each violation and a decision in writing which shall
17 specify the findings of fact which substantiate any and all of the charges. Prior to issuance
18 of the decision by the Board of Trustees, no council member shall be excused from
19 attending any meeting of a council unless there is an opportunity to be heard or compelling
20 reasons exist which are specified in writing by the Board of Trustees.” Similar language
21 also exists for the removal of Commission members, “Removal for Cause. Any of the
22 commissions of this Association shall have the sole authority to remove any of its members
23 for cause pursuant to its Rules, with notice of such removal being given to the ADA Board
24 of Trustees.”
25
- 26 • **Illinois Association for Behavior Analysis -- Removal of Board Member.** An elected
27 Board Member may be removed from their positions on the Board without cause if such
28 removal is approved by a majority vote of the membership. An appointed Board Member
29 may be removed by a majority vote of the Board.
30
- 31 • **American Psychological Association --** If a standing board or committee believes that
32 there is reasonable cause to remove a member from said body, a vote may be taken by the
33 board or committee to petition the Board of Directors to remove said member. If, with the
34 exception of the individual in question, two-thirds of all members vote to remove said
35 member, then a petition requesting removal shall inform the Board of Directors of the basis
36 for, and the evidence supporting, said removal. The Board of Directors shall give said
37 member the opportunity to fully respond in writing to the petition. The Board of Directors,
38 by a two-thirds vote of all members, may remove said member if it determines that there is
39 reasonable cause for removal and that removal is in the best interest of the Association.
40
- 41 • **American Bar Association –** Bylaw 31.2 allows the President to replace any committee
42 member who does not participate in the activities of the committee.
43

44 In conclusion, the Council supports bylaw language that addresses removal of individuals currently
45 holding a position within the AMA in accordance with procedures approved by the House or the
46 Board of Trustees. While removal is already possible under Illinois statute, the Council would
47 support bylaw language for the sake of transparency.

1 RECOMMENDATIONS

2
3 The Council on Constitution and Bylaws recommends that the following recommendations be
4 adopted, that Policy D-610.997 be rescinded, and that the remainder of this report be filed.

- 5
6 1) That our AMA Bylaws be amended by insertion to add the following provisions. Adoption
7 requires the affirmative vote of two-thirds of the members of the House of Delegates
8 present and voting:
9

10 **3. Officers**

11 ***

12
13
14 **3.6 Vacancies.**

15 ***

16
17 **3.6.4 Absences.** If an officer misses 6 consecutive regular meetings of the Board,
18 this matter shall be reported to the House of Delegates by the Board of
19 Trustees and the office shall be considered vacant. The vacancy shall be filled
20 as provided in Bylaw 3.6.1 or Bylaw 3.6.3.

21
22 **3.6.5 Removal for Cause.** Any officer may be removed for cause in accordance
23 with procedures established by the House of Delegates.

24
25 **6. Councils**

26 ***

27
28
29 **6.0.1.4 Removal.** A Council member may be removed for cause in accordance with
30 procedures approved by the House of Delegates.

31
32 **7. Sections**

33 ***

34
35
36 **7.0.3.4 Removal.** A Governing Council member may be removed for cause in
37 accordance with procedures approved by the House of Delegates.

38
39 (Modify Bylaws)

- 40
41 2) That the Councils on Constitution and Bylaws, Long Range Planning and Development
42 and the Ethical and Judicial Affairs and the House develop the procedures to remove a
43 trustee, council member or governing council member for cause. (Directive to Take
44 Action)
45
46 3) That the Election Committee address the need for policy to remove candidates who are
47 found to violate AMA policy G-610.090, AMA Election Rules and Guiding Principles.
48 (Directive to Take Action)

Fiscal Note: No Significant Fiscal Impact

RELEVANT AMA POLICY

D-610.997, Criteria Regarding Removal of Elected Individuals or Candidates
Our American Medical Association will consider developing bylaw language regarding removal of elected individuals or candidates and the criteria by which this would be accomplished and to report back at A-24.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 04-A-24

Subject: AMA Bylaw Amendments Pursuant to AIPSC (2nd ed.)

Presented by: Mark Bair, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 American Medical Association (AMA) Bylaw 11.1 states that “In the absence of any provisions to
2 the contrary in the Constitution and these Bylaws, all general meetings of the AMA and all
3 meetings of the House of Delegates, of the Board of Trustees, of Sections and of councils and
4 committees shall be governed by the parliamentary rules and usages contained in the then current
5 edition of The American Institute of Parliamentarians Standard Code of Parliamentary Procedure.”
6 The most recent edition of the AIP Standard Code [herein referred to as AIPSC (2nd ed.)] became
7 effective as of January 2024.

8
9 As noted in informational Speakers Report 3, AIPSC (2nd ed.) establishes electronic notice as the
10 default notification and there are several AMA bylaw provisions that specify notification by mail
11 and/or in writing. The Council has prepared bylaw language to ensure that our Bylaws and AIPSC
12 (2nd ed.) are consistent.

13
14 **RECOMMENDATIONS**

15
16 The Council on Constitution and Bylaws recommends that the following recommendations be
17 adopted and that the remainder of this report be filed. Adoption requires the affirmative vote of
18 two-thirds of the members of the House of Delegates present and voting:

- 19
20 1) That our AMA Bylaws be amended by insertion and deletion as follows:

21
22 **2.12.2 Special Meetings of the House of Delegates.** Special Meetings of the House of
23 Delegates shall be called by the Speaker on ~~written or electronic~~ request by of one third of
24 the members of the House of Delegates, or on request of a majority of the Board of
25 Trustees. When a special meeting is called, the Executive Vice President of the AMA shall
26 notify ~~mail a notice to the last known address of~~ each member of the House of Delegates at
27 least 20 days before the special meeting is to be held. The notice shall specify the time and
28 place of meeting and the purpose for which it is called, and the House of Delegates shall
29 consider no business except that for which the meeting is called.

30
31 ***

32
33 **2.12.3.1 Invitation from Constituent Association.** A constituent association desiring a
34 meeting within its borders shall submit an invitation ~~in writing~~, together with significant
35 data, to the Board of Trustees. The dates and the city selected may be changed by action of

1 the Board of Trustees at any time, but not later than 60 days prior to the dates selected for
2 that meeting.

3 ****

4
5 **5.2.4 Notice of Meeting.** Notice is given if delivered in person, by telephone, ~~mail~~, or any
6 means of electronic communication approved by the Board of Trustees. Notice shall be
7 deemed to be received upon delivery to the Trustee's contact information then appearing
8 on the records of the AMA.

9
10 **5.2.4.1 Waiver of Notice.** ~~Notice of any meeting need not be given if waived in~~
11 ~~writing before, during or after such meeting.~~ Attendance at any meeting shall constitute
12 a waiver of notice of such meeting, except where such attendance is for the express
13 purpose of objecting to the transacting of any business because of a question as to the
14 legality of the calling or convening of the meeting.

15
16 ****

17
18 **12.3 Articles of Incorporation.** The Articles of Incorporation of the AMA may be
19 amended at any regular or special meeting of the House of Delegates by the approval of
20 two-thirds of the voting members of the House of Delegates registered at the meeting,
21 provided that the Board of Trustees shall have approved the amendment and provided it to
22 ~~submitted it in writing to~~ each member of the House of Delegates at least 5 days, but not
23 more than 60 days, prior to the meeting of the House of Delegates at which the amendment
24 is to be considered.

25
26 (Modify Bylaws)

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 1-A-24

Subject: Short-Term Global Health Clinical Encounters

Presented by: David A. Fleming, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Short-term global health clinical encounters deploy physicians and physicians in training from
2 wealthy communities to provide care in under-resourced settings for a period of days or weeks.
3 They have been promoted, in part, as a strategy for addressing global health inequities, and have
4 unquestionably benefitted thousands of individual patients. At the same time, these trips have a
5 problematic history and run the risk of causing harm to the patients and communities they intend to
6 benefit [1]. To minimize harm and ensure significant benefits, participants, sponsors, and hosts
7 must jointly prioritize activities to meet mutually agreed-on goals; navigate day-to-day
8 collaboration across differences of culture, language, and history; and fairly allocate host and team
9 resources.

10
11 Ethics guidance can neither redress historical wrongs nor solve the underlying structural issues that
12 drive medical need in under-resourced settings. However, by making explicit the conditions under
13 which short-term global health clinical encounters are ethically sound and articulating the
14 fundamental ethical responsibilities of those who participate in and sponsor such trips, ethics
15 guidance can promote immediate benefit to individuals and sustainable benefit for host
16 communities. In addition, ethics guidance can highlight the ways in which power imbalances and
17 neo-colonial assumptions can shape these practices and so may undermine their moral
18 acceptability. This report by the Council on Ethical and Judicial Affairs (CEJA) explores the
19 challenges of short-term global health clinical encounters and offers guidance for physicians,
20 physicians in training, and sponsors to help them address the ethical challenges of providing
21 clinical care in under-resourced settings. The encounters and perspective of host communities may
22 reveal concerns not specifically addressed in this report. However, the guidance provided
23 emphasizes the critical importance of ethical intent and collaboration with host communities, thus
24 encouraging ongoing conversations between visiting medical teams and host communities
25 regarding cultural, ethical, and practical concerns.

26 27 THE APPEAL OF SHORT-TERM GLOBAL HEALTH CLINICAL ENCOUNTERS

28
29 Just how many clinicians and trainees volunteer to provide medical care in under-resourced settings
30 is difficult to estimate, but the number is large. By one estimate, in the U.S. some 21% of the
31 nearly 3 billion dollars' worth of participant hours spent in international efforts in 2007 were
32 medically related [2]. For trainees, in January 2015 the Consortium of Universities for Global
33 Health identified more than 180 websites relating to global health opportunities [3]. The

* Reports of the Council on Ethical and Judicial Affairs are assigned to the reference committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

1 Association of American Medical Colleges found that among students who graduated in 2017–
2 2018 between 25% and 31% reported having had some “global health experience” during medical
3 school [4].
4

5 A variety of reasons motivate physicians and trainees to participate in these projects. For many,
6 compelling motivations include the opportunities to help address health inequities, improve their
7 diagnostic and technical skills as clinicians, or explore global health as a topic of study [2]. Global
8 health clinical encounters may also be pursued to serve the goals of building one’s resume,
9 improving one’s professional prospects, and gaining the esteem of peers and family [2].
10

11 A NOTE ON TERMINOLOGY

12

13 The literature is replete with different terms for the activity of traveling to an under-resourced
14 community to provide medical care on a volunteer basis, including “short-term medical
15 volunteerism” [5], “short-term medical missions” [6], “short-term medical service trips” [7,8],
16 “short-term experience in global health” [9,10], “global health field experience” [11], “global
17 health experience,” and “international health experience”[2].
18

19 The Council on Ethical and Judicial Affairs prefers “short-term global health clinical encounters.”
20 This identifier is generally accepted and encompasses both clinical and educational activities. It
21 also recognizes that such encounters are not exercises in pure altruism, but a mutually beneficial
22 collaboration between those planning and participating in these encounters and host communities.
23 The term also highlights the fact that these activities are limited in duration, which has implications
24 for the ethical obligations of participants and their impact on host communities.
25

26 MEDICAL CARE IN UNDER-RESOURCED SETTINGS

27

28 Traditionally, short-term global health clinical encounters focused on providing clinical care as a
29 charitable activity, not infrequently under the auspices of faith-based institutions, whose primary
30 goal was to address unmet medical needs [10]. Increasingly, such trips focus on the broader goal of
31 improving the health and well-being of host communities [9]. Many also offer training
32 opportunities for medical students, residents, and local healthcare professionals [9,10,11]. Ideally,
33 short-term global health clinical encounters are part of larger, long-term efforts to build capacity in
34 the health care systems being visited, and ultimately to reduce global health disparities [9,10].
35

36 The medical needs of host communities differ from those of participants’ home countries—
37 participants may encounter patients with medical conditions they have not seen before, or who
38 present at more advanced stages of disease, or are complicated by “conditions, such as severe
39 malnutrition, for which medical volunteers may have limited experience” [7]. At the same time,
40 available treatment options will often include medications, procedures or tools with which
41 participants are not familiar. As such, the practice of medicine in under-resourced communities
42 should be considered a unique area of expertise, requiring specific background and training in order
43 to be effective [12].
44

45 By definition, short-term global health clinical encounters typically take place in contexts of scarce
46 resources. The communities where these encounters take place often have limited access to health
47 care, often lack access to food, and often lack both economic and political power [7]. As a result,
48 they may feel unable to refuse assistance that is offered [10]. Moreover, short-term global health
49 clinical encounters take place under the long shadow of colonialism, including medicine’s role in
50 that [10], and have been critiqued as perpetuating the colonial legacy of racism, exploitation, and
51 dependency [1,10,13]. To avoid reproducing these injustices, participants and sponsors should

1 recognize that it is a privilege to practice and train in under-resourced communities, and that justice
2 requires reciprocity and equal respect among local and visiting staff, community members, and
3 patients in this context [9].
4

5 These realities define fundamental ethical responsibilities not only for those who volunteer, but
6 equally for the individuals and organizations that sponsor short-term global health clinical
7 encounters.
8

9 ETHICAL RESPONSIBILITIES IN SHORT-TERM GLOBAL HEALTH CLINICAL 10 ENCOUNTERS 11

12 Emerging guidelines identify the following ethical duties for participants of short-term global
13 health clinical encounters and organizations sponsoring them: (a) to produce good clinical
14 outcomes, (b) to promote justice and sustainability, (c) to minimize burdens on host communities,
15 and (d) to respect persons and local cultures [2,9,10,11].
16

17 Promoting Justice & Sustainability 18

19 If short-term global health clinical encounters are to achieve their goal of improving the health of
20 local host communities, they must commit not simply to addressing immediate, concrete needs, but
21 to helping the community build its own capacity to provide health care. To that end, the near and
22 longer-term goals of trips should be set in collaboration with the host community, not determined
23 in advance solely by the interests or intent of trip sponsors and participants [7,9]. Trips should seek
24 to balance community priorities with the training interests and abilities of participants [10], but in
25 the first instance benefits should be those desired by, and acceptable to, the host community [9].
26 Those involved with short-term global health clinical encounters have a responsibility to ask how
27 they can best use a trip's limited time and material resources to promote the long-term goal of
28 developing local capacity. Will the trip train local health care providers? Build local infrastructure?
29 [7]? Ideally, a short-term global health experience will be embedded in a longer-term strategy and
30 collaboratively planned with the host community [7,10].
31

32 Minimizing Harms & Burdens in Host Communities 33

34 Just as focusing on the overarching goal of promoting justice and sustainability is foundational to
35 ethically sound short-term global health clinical encounters, so too is identifying and minimizing
36 the burdens such trips place on the host communities.
37

38 Beyond lodging, food, and other direct costs of short-term global health clinical encounters, which
39 are usually reimbursed to host communities [9], such trips can place other, less visible burdens on
40 host communities. Physicians, trainees, and others who organize or participate in short-term global
41 health clinical encounters should be alert to possible unintended consequences that can undermine
42 the value of a trip. Trips should not detract from or place significant burdens on local clinicians and
43 resources, particularly in ways that negatively affect patients, jeopardize sustainability, or disrupt
44 relationships between trainees and their home institutions [9,11]. For example, the expectation that
45 local healthcare and support staff will be available to assist visiting clinicians in addition to (or in
46 place of) their usual duties can disrupt care for their existing patients. It should not be assumed that
47 host communities can absorb additional costs, even on a temporary basis [14]. Particular attention
48 should be paid to the follow-up care that burdens local practitioners and may result in harm to
49 patients in the aftermath of invasive procedures [15].

1 Sharing information beforehand as to how visiting health care professionals are expected to interact
2 with the host community, the team’s objectives, and the skill, and training they bring, can reveal
3 potential benefits and harms, thus allowing them to be discussed and addressed before the team
4 embarks on the experience. Likewise, selecting team members whose skills and experience map
5 onto the needs and expectations of the host community can help minimize disruptive effects on
6 local practice [11]. Advance preparation should include developing a plan to monitor and address
7 ongoing costs and benefits to patients, host communities and institutions, including local trainees
8 (when the trip includes providing training for the host community) [11].
9

10 Respecting Persons & Cultures

11
12 Physicians and trainees who participate in short-term global health clinical encounters face a host
13 of challenges. Some of them are practical, such as resource limitations, unfamiliar medical needs,
14 living conditions outside their experience, among many others. Others involve successfully
15 navigating language(s) and norms they may never have encountered before, or not encountered
16 with the same immediacy [1,2,9]. Striking a balance between Western medicine’s understanding of
17 professional ethics and the expectations of host communities rooted in other histories, traditions,
18 and social structures calls for a level of discernment, sensitivity, and humility that may more often
19 be seen as the skill set of an ethnographer than a clinician.
20

21 Individuals who travel to provide medical care in under-resourced settings should be aware that the
22 interactions they will have there will inevitably be cross-cultural. They should seek to become
23 broadly knowledgeable about the communities in which they will work, such as the primary
24 language(s) in which encounters will occur; predominant local understandings of health and illness;
25 local expectations for how health care professionals behave toward patients and toward one
26 another; and salient economic, political, and social dynamics. Participants should take advantage of
27 resources that can help them cultivate the cultural sensitivity they will need to provide safe,
28 respectful, patient-centered care in the context of the specific host community [7,10,11]. Further,
29 trip participants should be mindful that they bring with them their own unexamined cultural beliefs
30 and assumptions about under-resourced communities, some of which trace back to colonialist,
31 racialized attitudes. For instance, there is a widespread assumption that visiting physicians and
32 trainees possess universally applicable (and perhaps superior) skills and knowledge simply by
33 virtue of their association with Western medicine [19].
34

35 Individuals do not bear these responsibilities alone. Organizations and institutions that sponsor
36 short-term global health clinical encounters have a responsibility to make appropriate orientation
37 and training available to participants before they depart [11], in addition to working with host
38 communities to put in place appropriate services, such as interpreters or local mentors, to support
39 participants during the experience.
40

41 The ethical obligation to respect the individual patients they serve and their host communities’
42 cultural and social traditions does not obligate physicians and trainees “to violate fundamental
43 personal values, standards of medical care or ethical practice, or the law” [9]. Participants will
44 likely be challenged, rather, to negotiate compromises that preserve in some reasonable measure
45 the values of both parties whenever possible [16]. Participants should be allowed to decline to
46 participate in activities that violate deeply held personal beliefs, but they should reflect carefully
47 before reaching such a decision [17].

1 PREPARATION FOR THE EXPERIENCE

2
3 Fulfilling these fundamental ethical responsibilities requires meeting other obligations with respect
4 to organizing and carrying out short-term global health clinical encounters. Specifically, sponsoring
5 organizations and institutions have an obligation to ensure thoughtful, diligent preparation to
6 promote a trip's overall goals, including appropriately preparing participants for the experience.
7 Physicians and trainees, for their part, have an obligation to thoughtfully choose those programs
8 with which they affiliate themselves [1,2,9,11].
9

10 Prepare Diligently

11
12 Guidelines from the American College of Physicians recognize that “predeparture preparation is
13 itself an ethical obligation” even though this is far from a universal practice at present [9,cf. 2,12].
14 Collaborative planning can identify what material resources and clinical skills participants should
15 be expected to bring to the effort. For example, what activities participants should be assigned, or
16 whether local mentors are needed or desirable and how such relationships will be coordinated [11].
17

18 Supervision of trainees also needs to be explicitly arranged and followed up once they arrive in the
19 host community. Studies show that 20% of participants reported inadequate supervision during
20 their trips, and it is common for medical schools to allow “students to arrange encounters abroad
21 without faculty supervision and support” [18,12]. Allowing students to practice in under-resourced
22 settings without proper supervision is a clear violation of their fiduciary duty.
23

24 Thoughtful preparation includes determining what nonclinical skills and experience participants
25 should have to contribute to the overall success of the experience. For example, the goal of
26 supporting capacity building in the local community calls for participants who have “training
27 and/or familiarity with principles of international development, social determinants of health,
28 ...public health systems” and in some cases, health care administration [10,12]. Without this
29 background, interventions may result in “resource wasting and potentially poorer patient care”
30 [12].
31

32 Adequately preparing physicians and trainees for short-term global health clinical encounters
33 encompasses planning with respect to issues of personal safety, vaccinations, unique personal
34 health needs, travel, malpractice insurance, and local credentialing requirements [7]. Equally
35 important, to contribute effectively and minimize “culture shock” and distress, participants need a
36 basic understanding of the context in which they will be working [1,2,7]. Without expecting them
37 to become experts in local culture, participants should have access to resources that will orient
38 them to the language(s), traditions, norms, and expectations of the host community, not simply to
39 the resources and clinical challenges they are likely to face. Participants should have sufficient
40 knowledge to conduct themselves appropriately, whether that is in how they dress, how they
41 address or interact with different members of the community, or how they carry out their clinical
42 responsibilities [7]. They also need to know to whom they can turn for guidance. If at all possible,
43 this should be someone from outside the host community, since community members may be
44 reluctant to “push back” against the judgments and actions of participants [19].
45

46 Preparation should also include explicit attention to the possibility that participants will encounter
47 ethical dilemmas. Working in unfamiliar cultural settings and with limited resources introduces the
48 real possibility that physicians and trainees will encounter situations in which they “are unable to
49 act in ways that are consistent with ethics and their professional values” or “feel complicit in a
50 moral wrong” [9]. In particular, participants will be required to assess “how to balance risks and
51 benefits [for patients who have been economically marginalized and who are experiencing illnesses

1 with which they have little clinical experience] ... how to distribute limited medical resources, and
2 when non-intervention is the appropriate choice” [15]. In addition, participants may find that local
3 beliefs are inconsistent with their own ethical commitments. Having strategies in place to address
4 dilemmas when they arise and to debrief after the fact can help mitigate the impact of such
5 encounters. Physicians under stress due to difficult ethical situations experience emotional harm
6 and this may, in turn, affect the quality of patient care [12]. In cases of irreducible conflict with
7 local norms, participants may withdraw from care of an individual patient or from the project after
8 careful consideration of the effect withdrawing will have on patients, the medical team, and the
9 larger goals of the experience, in keeping with ethics guidance on the exercise of conscience. In
10 addition, participants should keep in mind that some care is not always better than no care, and
11 should ensure that they are able to provide safe, respectful, patient-centered care in the context of
12 the specific host community at all times. This context requires cultural respect and awareness on
13 the part of participants, as well as ongoing attention to the fact that certain treatment decisions may
14 become burdensome to the local medical community once the volunteers leave.

15 16 Choose Thoughtfully

17
18 Individual physicians and trainees who participate in short-term global health clinical encounters
19 are not typically in a position to directly influence how such programs are organized or carried out.
20 They can, however, choose to participate in activities carried out by organizations that fulfill the
21 ethical and professional responsibilities discussed above [9,10,11]. Participants can select
22 organizations and programs that demonstrate commitment to long-term, community-led efforts to
23 build and sustain local health care resources over programs that provide episodic, stop-gap medical
24 interventions [10]. Participants should strive to avoid working with “volunteer placement
25 organizations” that operate primarily for their own profit and/or lack adequate on-site supervision
26 for trainees [14]. Such organizations exploit the needs of host communities by offering them a
27 small sum per participant and then sending participants to them without support. Physicians and
28 trainees should also refrain from the “casual or opportunistic” treatment of patients that are not
29 coordinated with local health care systems in advance [20].

30 31 Measure & Share Meaningful Outcomes

32
33 Organizations that sponsor short-term global health clinical encounters have a responsibility to
34 monitor and evaluate the effectiveness of their programs, and to disseminate their findings in a
35 transparent manner [7,9,10]. The measures used to evaluate program outcomes should be
36 appropriate to the program’s goals as defined proactively in collaboration with the host community
37 [9]. Prospective participants should affiliate themselves with programs that demonstrate
38 effectiveness in providing outcomes meaningful to the population they serve, rather than simple
39 measures of process such as number of procedures performed [7]. Since the success of procedures
40 and programs cannot reasonably be verified if even their medium-term outcomes cannot be
41 monitored, participants should prefer programs that can track patient results over an extended
42 timeframe, even if their own contribution is made in a short time.

43 44 RECOMMENDATION

45
46 In light of these considerations, the Council on Ethical and Judicial Affairs recommends that the
47 following be adopted, and the remainder of this report be filed:

48
49 Short-term global health clinical encounters, which send physicians and physicians in training
50 from wealthier communities to provide care in under-resourced settings for a period of days or
51 weeks, have been promoted as a strategy to provide needed care to individual patients and,

1 increasingly, as a means to address global health inequities. To the extent that such encounters
2 also provide training and educational opportunities, they may offer benefit both to the host
3 communities and the medical professionals and trainees who volunteer their time and clinical
4 skills.

5
6 Short-term global health clinical encounters typically take place in contexts of scarce resources
7 and in the shadow of colonial histories. These realities define fundamental ethical
8 responsibilities for participants, sponsors, and hosts to jointly prioritize activities to meet
9 mutually agreed-on goals; navigate day-to-day collaboration across differences of culture,
10 language, and history; and fairly allocate resources. Participants and sponsors must focus not
11 only on enabling good health outcomes for individual patients, but on promoting justice and
12 sustainability, minimizing burdens on host communities, and respecting persons and local
13 cultures. Responsibly carrying out short-term global health clinical encounters requires diligent
14 preparation on the part of participants and sponsors in collaboration with host communities.

15
16 Physicians and trainees who are involved with short-term global health clinical encounters
17 should ensure that the trips with which they are associated:

- 18
19 (a) Focus prominently on promoting justice and sustainability by collaborating with the host
20 community to define project parameters, including identifying community needs, project
21 goals, and how the visiting medical team will integrate with local health care professionals
22 and the local health care system. In collaboration with the host community, short-term
23 global health clinical encounters should prioritize efforts to support the community in
24 building health care capacity. Trips that also serve secondary goals, such as providing
25 educational opportunities for trainees, should prioritize benefits as defined by the host
26 community over benefits to members of the visiting medical team or the sponsoring
27 organization.
- 28
29 (b) Seek to proactively identify and minimize burdens the trip places on the host community,
30 including not only direct, material costs of hosting participants, but also possible adverse
31 effects the presence of participants could have for beneficial local practices and local
32 practitioners. Sponsors and participants should ensure that team members practice only
33 within their skill sets and experience.
- 34
35 (c) Provide resources that help them become broadly knowledgeable about the communities in
36 which they will work and to cultivate the cultural sensitivity they will need to provide safe,
37 respectful, patient-centered care in the context of the specific host community. Members of
38 the visiting medical team are expected to uphold the ethics standards of their profession
39 and participants should insist that strategies are in place to address ethical dilemmas as
40 they arise. In cases of irreducible conflict with local norms, participants may withdraw
41 from care of an individual patient or from the project after careful consideration of the
42 effect that will have on the patient, the medical team, and the project overall, in keeping
43 with ethics guidance on the exercise of conscience. Participants should be clear that they
44 may be ethically required to decline requests for treatment that cannot be provided safely
45 and effectively due to resource constraints.
- 46
47 (d) Are organized by sponsors that embrace a mission to promote justice, patient-centered
48 care, community welfare, and professional integrity. Physicians, as influential members of
49 their health care systems, are well positioned to influence the selection, planning and
50 preparation for short term encounters in global health. In addition, they can take key roles
51 in mentoring learners and others on teams to be deployed. Physicians can also offer

1 guidance regarding the evaluation process of the experience, in an effort to enhance and
2 improve the outcomes of future encounters.

3
4 Sponsors of short-term global health clinical encounters should:(e) Ensure that resources
5 needed to meet the defined goals of the trip will be in place, particularly resources that cannot
6 be assured locally. This includes arranging for local mentors, translation services, and
7 participants' personal health needs. It should not be assumed that host communities can absorb
8 additional costs, even on a temporary basis.

9
10 (f) Proactively define appropriate roles and permissible range of practice for members of the
11 visiting medical team, so that they can provide safe, high-quality care in the host
12 community. Team members should practice only within the limits of their training and
13 skills in keeping with professional standards they would deem acceptable in their ordinary
14 clinical practice, even if the host community's standards are more flexible or less
15 rigorously enforced.

16
17 (g) Ensure appropriate supervision of trainees, consistent with their training in their home
18 communities, and make certain that they are only permitted to practice independently in
19 ways commensurate with their level of experience in under-resourced settings.

20
21 (h) Ensure a mechanism for meaningful data collection is in place, consistent with recognized
22 standards for the conduct of health services research and quality improvement activities in
23 the sponsor's country.

24
25 (New HOD/CEJA Policy)

Fiscal Note: Less than \$500

REPORT 2 OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS (A-24)
Research Handling of De-Identified Patient Data
(D-315.969)

EXECUTIVE SUMMARY

In adopting policy D-315.969, “Research Handling of De-Identified Patient Data,” the House of Delegates directed the Council on Ethical and Judicial Affairs (CEJA) to examine guidance related to the use of de-identified patient data and the risks of re-identification.

This report articulates a series of recommendations on how best to respond to the increasing collection, sale, and use of de-identified patient data and the associated risks. The report outlines how health data exist within digital information ecosystems, how such complex ecosystems pose challenges to data privacy, how de-identified data functions as a public good for clinical research, and how de-identified data derived within the context of health care institutions lead to certain ethical standards for and protections of that data.

Because CEJA recognizes both the promise of de-identified datasets for advancing health and the concerns surrounding the use of de-identified patient data including the risks of re-identification that extend from the level of individual physicians collecting clinical data to hospitals and other health care institutions as repositories and stewards of data, this report proposes a new Code of Medical Ethics opinion be adopted in conjunction with amendments to four existing opinions to provide ethics guidance in this rapidly evolving digital health ecosystem.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 2-A-24

Subject: Research Handling of De-Identified Patient Data
(D-315.969)

Presented by: David A. Fleming, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Policy [D-315.969](#), “Research Handling of De-Identified Patient Data,” adopted by the American
2 Medical Association (AMA) House of Delegates in November 2021, asked the Council on Ethical
3 and Judicial Affairs (CEJA) to examine guidance related to the use of de-identified patient data and
4 the risks of re-identification.

5
6 In its informational report on de-identified data [[CEJA 6-A-23](#)], CEJA examined a range of
7 challenges that health care professionals and institutions are now confronted with as technological
8 innovations rapidly evolve both within and outside of health care, blurring the boundary
9 distinctions between these spheres. CEJA’s exploration suggested that in this dynamic environment,
10 foundational ethical concepts of privacy and consent likely need to be revisited to better reflect that
11 personal health information today exists in digital environments where responsibilities are
12 distributed among multiple stakeholders.

13
14 This report expands on the previous work to articulate a series of recommendations on how best to
15 respond to the increasing collection, sale, and use of de-identified patient data and the associated
16 risks. The report outlines how health data exist within digital information ecosystems, how such
17 ecosystems pose challenges to data privacy, what the *Code* says about data privacy and informed
18 consent, how de-identified data functions as a public good for clinical research, how privacy
19 scholars are reconceptualizing privacy as contextual integrity, and how de-identified data derived
20 within the context of health care institutions lead to certain ethical standards for and protections of
21 that data.

22
23 Because CEJA recognizes both the promise of de-identified datasets for advancing health and the
24 concerns surrounding the use of de-identified patient data including the risks of re-identification
25 that extend from the level of individual physicians collecting clinical data to hospitals and other
26 health care institutions as repositories and stewards of data, this report proposes a new ethics
27 opinion in conjunction with amendments to four existing opinions to provide ethics guidance in
28 this rapidly evolving digital health ecosystem.

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

1 HEALTH DATA & DIGITAL ECOSYSTEMS

2
3 De-identified patient data are a subset of health data that exists within larger digital health
4 information ecosystems [1]. Such ecosystems are highly dynamic and distributed, with health
5 information often being combined from multiple datasets and distributed among multiple
6 stakeholders [1]. Traditionally, health data has referred to patient health information produced from
7 patient–physician interactions and stored by health care organizations [2]. This type of data is
8 typically recorded as identifiable patient data and entered into the patient’s electronic medical
9 record (EMR); from there, it can be de-identified and bundled together with other patient data to
10 form an aggregated dataset. In the age of Big Data, however, where large datasets can reveal
11 complex patterns and trends, diverse sets of information are increasingly brought together. Health
12 data now extends to all health-relevant data, including data collected anywhere from individuals
13 both passively and actively that can reveal information about health and health care use [2].
14

15 Within digital health ecosystems, health-related data can be generated by health care systems (e.g.,
16 EMRs, prescriptions, laboratory data, radiology), the consumer health and wellness industry (e.g.,
17 wearable fitness tracking devices, wearable medical devices such as insulin pumps, home DNA
18 tests), digital exhaust from daily digital activities (e.g., social media posts, internet search histories,
19 location and proximity data), as well as non-health sources of data (e.g., non-medical records of
20 race, gender, education level, residential zip code, credit history) [2]. The ethical challenges raised
21 by such widely distributed data ecosystems, with their vast array of data types and multiple
22 stakeholders, require a holistic approach to the moral issues caused by digital innovation. Digital
23 ethics has arisen as a theoretical framework to analyze these recent challenges and examine such
24 ethical concerns from multiple levels of abstraction. The digital ethics framework takes into
25 account the general environment in which ethical concerns arise and examines ethical dilemmas as
26 they relate to information and data, algorithms, practices and infrastructure, and their impact on the
27 digital world [3].
28

29 CHALLENGES TO DATA PRIVACY

30
31 In the U.S., the Health Insurance Portability and Accountability Act (HIPAA) imposes constraints
32 on the sharing of “protected health information,” including individually identifiable health
33 information contained in the EMR, by “covered entities,” including physicians, hospitals,
34 pharmacies, and third-party payers. HIPAA’s scope is narrow and does not cover other health-
35 relevant data, such as data generated voluntarily by patients themselves, for example, through the
36 use of commercial health-related apps or devices, or identifiable data individuals provide to
37 municipal authorities, utilities, retailers, or on social media. Furthermore, information that began in
38 the medical record can take on a new, independent life when linked with personal information
39 widely available through datasets generated outside of health care. As McGraw and Mandl explain,
40 “since HIPAA’s coverage is about ‘who’ holds the data, but not what type of data, much of the
41 health-relevant data collected today are collected by entities outside of HIPAA’s coverage bubble
42 and thus resides outside of HIPAA’s protections” [2]. HIPAA is thus limited in its ability to protect
43 patient data within digital health information ecosystems.
44

45 Complicating the matter is the fact that once patient health data has been de-identified, it is no
46 longer protected by HIPAA, and can be freely bought, sold, and combined with other datasets.
47 Hospitals now frequently sell de-identified datasets to researchers and industry. Recent
48 developments in AI and its use within health care have similarly created new difficulties.
49

50 Patients, and patient privacy advocates, are often concerned about who has access to their data. As
51 data ecosystems have grown larger and more distributed, this has become increasingly more

1 difficult to ascertain. In the age of Big Data, the global sale of data has become a multibillion-
2 dollar industry, with individuals' data viewed by industry as "new oil" [1]. The global health care
3 data monetization market alone was valued at just over \$0.4 billion in 2022 and is expected to grow
4 to \$1.3 billion by 2030 [4]. Industry often purchases hospital datasets to improve marketing and
5 sales, predict consumer behaviors, and to resell to other entities. Within health care and research
6 settings, the massive datasets collected from clinical data—used initially in the care and treatment
7 of individual patients—have created the potential for secondary use as a means for quality
8 improvement and innovation that can be used for the benefit of future patients and patient
9 populations [5].

10
11 The dynamic and distributed nature of today's digital health information ecosystems challenges the
12 prevailing procedural model for protecting patient privacy: informed consent and de-identification.
13 In a world where the secondary use of patient data within large datasets can easily enter into a
14 global marketplace, the intended use is almost impossible to discern. Patients cannot be honestly
15 and accurately informed about the specific terms of interactions between their collected data and
16 the data collector and any potential risks that may emerge [1,6]. Therefore, patients are unable to
17 truly give informed consent. Furthermore, whether de-identifying datasets truly prevents individual
18 data subjects from being re-identified has been increasingly called into question. Removing the 18
19 identifiers specified in HIPAA does not ensure that the data subject cannot be re-identified by
20 triangulation with identifying information from other readily available datasets [7]. Machine
21 learning and AI technologies have advanced to the point that virtually all de-identified datasets risk
22 re-identification, such that "even when individuals are not 'identifiable', they may still be
23 'reachable'" [6].

24
25 A final avenue to consider with respect to private health information and patient privacy is the risk
26 of health care data breaches. Raghupathi et al note, "[h]ealthcare is a lucrative target for hackers.
27 As a result, the healthcare industry is suffering from massive data breaches" [8]. The number of
28 health care data breaches continues to increase every year, exposing the private health information
29 of millions of Americans. Despite being heavily targeted by cybercriminals, health care providing
30 institutions are widely considered by cybersecurity experts to lack sufficient security safeguards
31 [8]. Raghupathi et al note, "healthcare entities gathering and storing individual health data have a
32 fiduciary and regulatory duty to protect such data and, therefore, need to be proactive in
33 understanding the nature and dimensions of health data breaches" [8].

34 35 CLINICAL DATA AND PRIVACY

36
37 Within the *Code*, [Opinion 3.1.1](#), "Privacy in Health Care," distinguishes four aspects of privacy:

38
39 personal space (physical privacy), personal data (informational privacy), personal choices
40 including cultural and religious affiliations (decisional privacy), and personal relationships with
41 family members and other intimates (associational privacy).

42
43 The *Code* does not explicitly examine whether personal medical or health information are ethically
44 distinct from other kinds of personal information (e.g., financial records) or in what way. Current
45 guidance treats the importance of protecting privacy in all its forms as self-evident, holding that
46 respecting privacy in all its aspects is of fundamental importance, "an expression of respect for
47 autonomy and a prerequisite for trust" [Opinion 3.1.1]. However, [Opinion 3.3.3](#), "Breach of
48 Security in Electronic Medical Records," directly acknowledges that data security breaches create
49 potential "physical, emotional, and dignity harms" to patients. Similarly, [Opinion 7.3.7](#),
50 "Safeguards in the Use of DNA Databanks," states that breaches of confidential patient information

1 “may result in discrimination or stigmatization and may carry implications for important personal
2 choices.”

3
4 Violations of privacy can result in both harm—tangible negative consequences, such as
5 discrimination in insurance or employment or identity theft—and in wrongs that occur from the
6 fact of personal information being known without the subject’s awareness, even if the subject
7 suffers no tangible harm [7]. Price and Cohen note that privacy issues can arise not only when data
8 are known, but when data mining enables others to “generate knowledge about individuals through
9 the process of inference rather than direct observation or access” [7].

10 11 CLINICAL DATA AND INFORMED CONSENT

12
13 With respect to [Opinion 2.1.1](#), “Informed Consent,” in the *Code*, successful communication is seen
14 as essential to fostering trust that is fundamental to the patient–physician relationship and to
15 supporting shared decision making. Opinion 2.1.1 states: “[t]he process of informed consent occurs
16 when communication between a patient and physician results in the patient’s authorization or
17 agreement to undergo a specific medical intervention.” In seeking a patient’s informed consent,
18 physicians are directed to include information about “the burdens, risks, and expected benefits of
19 all options, including forgoing treatment” [Opinion 2.1.1]. It should be noted, however, that no
20 direct mention of patient data is discussed in the opinion, other than that documentation of consent
21 should be recorded in the patient’s medical record.

22 23 CLINICAL DATA, DATASETS, AND THE PUBLIC GOOD

24
25 Because aggregated clinical data has the potential for secondary use that can benefit all of society,
26 it has been argued that such data should be treated as a form of public good [5]. When clinical data
27 are de-identified and aggregated, the potential use for societal benefits through research and
28 development is an emergent, secondary side effect of electronic health records that goes beyond
29 individual benefit. Larson et al argue that not only does the public possess an interest in
30 safeguarding and promoting clinical data for societal benefits, but all those who participate in
31 health care systems have an ethical responsibility to treat such data as a form of public good [5].
32 They propose:

33
34 all individuals and entities with access to clinical data inherently take on the same fiduciary
35 obligations as those of medical professionals, including for-profit entities. For example, those
36 who are granted access to the data must accept responsibility for safeguarding protected health
37 information [5].

38
39 This entails that any entity that purchases private health information, whether or not it has been de-
40 identified, has an ethical obligation to adhere to the ethical standards of health care where such data
41 were produced. Hospitals thus have an ethical responsibility to ensure that their contracts of sale
42 for datasets insist that all entities that gain access to the data adhere to the ethical standards and
43 values of the health care industry.

44
45 This is particularly important when we recall that the wide distribution of digital health information
46 ecosystems increasingly includes non-health-related parties from industry that may have market
47 interests that conflict with the ethical obligations that follow health data. Within this framework,
48 the fiduciary duty to protect patient privacy as well as to society to improve future health care
49 follows the data and thus applies to all entities that use that data, such that all entities granted
50 access to the data become data stewards, including for-profit parties [5]. This also includes patients,
51 such that they bear a responsibility to allow their data to be used for the future improvement of

1 health care for society, especially when we recognize that current health care has already benefited
2 from past data collection [5].

3
4 While the re-identification of aggregated patient data should generally be prohibited, there are rare
5 exceptions. There may be occasions when researchers wish to re-identify a dataset, such as
6 sometimes occurs in the study of rare diseases that rely on international registries; in such
7 situations, all individuals must be re-contacted, and their consent obtained in order to re-identify
8 their data since this would represent a significant change to the initial research protocols and
9 respective risks [9]. Re-identification of datasets for research is uncommon, however, because
10 obtaining re-consent can be difficult and can lead to flawed research if data is lost because patients
11 do not re-consent. The other situation in which it may be permissible, or even obligatory, to re-
12 identify aggregated patient data is when doing so would be in the interest of the health of individual
13 patients, such as might occur in the study of a rare genetic disorder. Even within these exceptions,
14 the risks associated with re-identification remain and re-identified data should thus never be
15 published. Re-identification of de-identified patient data for any other purposes, by anyone inside
16 or outside of health care, must be avoided.

17 18 AN ALTERNATIVE APPROACH: PRIVACY AS CONTEXTUAL INTEGRITY

19
20 Within today's digital health information ecosystems, physicians and hospitals face several
21 challenges to protecting patient privacy. Barocas and Nissenbaum contend that "even if [prevailing
22 forms of consent and anonymization] were achievable, they would be ineffective against the novel
23 threats to privacy posed by big data" [6]. A more effective option, Nissenbaum has argued, would
24 understand privacy protection as a function of "contextual integrity," i.e., that in a given social
25 domain, information flows conform to the context-specific informational norms of that domain.
26 Whether a transmission of information is appropriate depends on "the type of information in
27 question, about whom it is, by whom and to whom it is transmitted, and conditions or constraints
28 under which this transmission takes place" [10]. The view of privacy as contextual integrity—that
29 our conception of privacy is contextual and governed by various norms of information flow—
30 recognizes that there exist different norms regarding privacy within different spheres of any
31 distributed digital ecosystem [7,11]. The challenge within health care, as we have seen, is how to
32 balance these various norms when they conflict and how to ensure that health care's ethical
33 standards and values are maintained throughout the distributed use of de-identified private health
34 information.

35 36 THE CONTEXTUAL INTEGRITY OF DE-IDENTIFIED HEALTH DATA

37
38 In handling patient data, individual physicians strive to balance supporting and respecting patient
39 privacy while also upholding ethical obligations to the betterment of public health. Through their
40 own actions, as well as through their membership organizations and through their health care
41 organizations, physicians should: (1) ensure that data entered into electronic records are accurate
42 and reliable to the best of their ability; (2) be transparent with patients regarding the limited extent
43 to which their data can be safely protected, how their data may be used, and why the use of such
44 data is crucial for improving health care outcomes within society; and (3) ensure that proper
45 oversight and protections of data are in place, including contractual provisions that any data sold or
46 shared with outside entities stay in alignment with the ethical standards of the medical profession,
47 and that meaningful sanctions or penalties are in place and enforced against any actors that violate
48 those ethical standards. It is critical to recognize, as is outlined in the *Code*, that the patient-
49 physician relationship is built on trust, and that this trust relies heavily on transparency.

1 It is important for both patient care and research that clinical data entered into the EMR be as
2 accurate and complete as possible. Some data capture practices, such as copying-and-pasting daily
3 progress notes from previous encounters, which may contribute to efficiency, can lead to
4 documentation errors [12]. One avenue for improving EMR accuracy is that, under HIPAA,
5 patients have the right to access their data and request any perceived errors be amended. While
6 there is no one solution to improving accuracy of EMR data, further study into how to improve
7 EMR accuracy is important. One challenge to both EMR accuracy and completeness is the limited
8 interoperability of different EMR systems. Matching digital health records for the same patient
9 across and within health care facilities can be a challenge, further contributing to the potential for
10 EMR errors. Standardization of recording data elements, such as capturing patient address and last
11 name in a consistent format, may improve matching of patient records and thus improve the
12 accuracy of the EMR [13].

13
14 Another challenge to EMR data quality is the risk of bias, primarily due to implicit bias in EMR
15 design and underrepresentation of patients from historically marginalized groups, low
16 socioeconomic status, and rural areas [14,15]. Critically important for research involving data
17 collected from EMRs, available EMR data only reflects those with access to health care in the first
18 place. While certain study designs and tools have been developed to reduce these biases in
19 research, physicians and health care institutions should be looking into ways to reduce bias within
20 EMRs, such as features to optimize effective EMR use and to consistently capture patient data,
21 especially data on race/ethnicity and social determinants of health that are often inconsistently and
22 inaccurately captured in EMR systems [14,15,16].

23
24 Patients have a right to know how and why their data are being used. While physicians should be
25 able to answer questions regarding patient data as they relate to HIPAA protections, it is the
26 responsibility of health care institutions to provide more detailed information regarding
27 expectations of data privacy, how patient data may be used, and why such use is important to
28 improve the future of health care. Health care systems may consider fulfilling this ethical
29 obligation by creating a patient notification of data use built into the patient registration process
30 (using language similar to the National Institutes of Health's (NIH) Introduction-Description
31 component, meant to provide prospective research participants with an introduction to and
32 description of the planned storage and sharing of data and biospecimens [17]).

33
34 As stewards of health data, health care institutions have an ethical responsibility to protect data
35 privacy. This fiduciary duty to patient data should be seen as following the data even after they are
36 de-identified and leave the institution where they were initially captured [5,8]. While hospitals and
37 health care organizations increasingly come under cyberattack, they consistently lag behind other
38 industries in cybersecurity [18]. With regards to protecting the data they maintain, health care
39 institutions have a responsibility to make more significant investments in cybersecurity.

40
41 In order to ensure that the ethical standards of health care are maintained even after data leaves
42 health care institutions, McGraw and Mandl propose that companies collecting or using health-
43 relevant data could be required to establish independent data ethics review boards [2]. They write
44 that such boards could be similar to Institutional Review Boards but should focus more on privacy
45 than on participant risk, evaluating proposed data projects for legal and ethical implications as well
46 as their potential to improve health and/or the health care system [2]. In practice, ethics review
47 boards involved with industry face challenges to both independence and efficacy. Independence
48 can be compromised by influences such as conflicts of interest, while efficacy can be compromised
49 by the absence of authority, procedures, and systems to enact recommendations made by these
50 review bodies. To be effective, data ethics review boards must be independent and free of conflicts
51 of interest from the company or organization whose data research proposal(s) they are evaluating

1 and have systems in place for both transparency and implementation of feedback for remediations
2 of privacy and other quality and ethics concerns. Though not a comprehensive solution,
3 independent data ethics review boards could be an effective safeguard against industry conflicts of
4 interest and should be considered as a required part of contracts of sale of health data, with
5 contracts stipulating that any future resale of the data also undergo review by a data ethics review
6 board.

7
8 An additional safeguard is the implementation of regular data audits to assess the quality and use of
9 shared data [19]. These regulatory measures could be implemented as requirements outlined in
10 Data Use Agreements or Data Sharing Agreements (DSAs). Such agreements have the potential to
11 establish data governance policies and practices within health care institutions regarding “what data
12 can be shared, with whom, under what conditions, and for what purposes.” In developing DSAs,
13 hospital administrators should engage all relevant stakeholders, require a neutral entity be
14 designated as an independent custodian of shared data, limit the types and/or characteristics of
15 shared data to certain purposes, and apply additional safeguards to protect the data [20].

16
17 The need for more transparent disclosure to patients regarding their data use as well as the
18 importance of building the values of medical ethics into the contracts of sale of aggregate datasets
19 created by hospitals highlights the fact that the ethical responsibilities to respond to the risks of de-
20 identified data should not be borne by physicians alone. Respecting patient privacy and their
21 informed consent are responsibilities that physician member organizations and health care
22 institutions must take on because the risks to these rights that patients face within digital health
23 ecosystems radiate far beyond the patient–physician relationship to areas where individual
24 physicians have little influence.

25 26 RECOMMENDATIONS

27
28 In light of the challenges considered with regard to constructing a framework for holding
29 stakeholders accountable within digital health information ecosystems, the Council on Ethical and
30 Judicial Affairs recommends:

31 32 1. That the following be adopted:

33
34 Within health care systems, identifiable private health information, initially derived from and
35 used in the care and treatment of individual patients, has led to the creation of massive de-
36 identified datasets. As aggregate datasets, clinical data takes on a secondary promising use as a
37 means for quality improvement and innovation that can be used for the benefit of future
38 patients and patient populations. While de-identification of data is meant to protect the privacy
39 of patients, there remains a risk of re-identification, so while patient anonymity can be
40 safeguarded it cannot be guaranteed. In handling patient data, individual physicians thus strive
41 to balance supporting and respecting patient privacy while also upholding ethical obligations to
42 the betterment of public health.

43
44 When clinical data are de-identified and aggregated, their potential use for societal benefits
45 through research and development is an emergent, secondary use of electronic health records
46 that goes beyond individual benefit. Such data, due to their potential to benefit public health,
47 should thus be treated as a form of public good, and the ethical standards and values of health
48 care should follow the data and be upheld and maintained even if the data are sold to entities
49 outside of health care. The medical profession’s responsibility to protect patient privacy as well
50 as to society to improve future health care should be recognized as inherently tied to these

1 datasets, such that all entities granted access to the data become data stewards with a duty to
2 uphold the ethical values of health care in which the data were produced.

3
4 As individuals or members of health care institutions, physicians should:

- 5
6 (a) Follow existing and emerging regulatory safety measures to protect patient privacy;
7
8 (b) Practice good data intake, including collecting patient data equitably to reduce bias in
9 datasets;
10
11 (c) Answer any patient questions about data use in an honest and transparent manner to the
12 best of their ability in accordance with current federal and state legal standards.

13
14 Health care entities, in interacting with patients, should adopt policies and practices that
15 provide patients with transparent information regarding:

- 16
17 (d) The high value that health care institutions place on protecting patient data;
18
19 (e) The reality that no data can be guaranteed to be permanently anonymized, and that risk of
20 re-identification does exist;
21
22 (f) How patient data may be used;
23
24 (g) The importance of de-identified aggregated data for improving the care of future patients.

25
26 Health care entities managing de-identified datasets, as health data stewards, should:

- 27
28 (h) Ensure appropriate data collection methods and practices that meet industry standards to
29 support the creation of high-quality datasets;
30
31 (i) Ensure proper oversight of patient data is in place, including Data Use/Data Sharing
32 Agreements for the use of de-identified datasets that may be shared, sold, or resold;
33
34 (j) Develop models for the ethical use of de-identified datasets when such provisions do not
35 exist, such as establishing and contractually requiring independent data ethics review
36 boards free of conflicts of interest and verifiable data audits, to evaluate the use, sale, and
37 potential resale of clinically-derived datasets;
38
39 (k) Take appropriate cyber security measures to seek to ensure the highest level of protection is
40 provided to patients and patient data;
41
42 (l) Develop proactive post-compromise planning strategies for use in the event of a data
43 breach to minimize additional harm to patients;
44
45 (m) Advocate that health- and non-health entities using any health data adopt the strongest
46 protections and seek to uphold the ethical values of the medical profession.

47
48 There is an inherent tension between the potential benefits and burdens of de-identified
49 datasets as both sources for quality improvement to care as well as risks to patient privacy. Re-
50 identification of data may be permissible, or even obligatory, in rare circumstances when done
51 in the interest of the health of individual patients. Re-identification of aggregated patient data

1 for other purposes without obtaining patients' express consent, by anyone outside or inside of
2 health care, is impermissible. (New HOD/CEJA Policy); and
3

4 2. That Opinion 2.1.1, "Informed Consent"; Opinion 3.1.1, "Privacy in Health Care"; Opinion
5 3.2.4, "Access to Medical Records by Data Collection Companies"; and Opinion 3.3.2,
6 "Confidentiality and Electronic Medical Records" be amended by addition as follows:
7

8 a. Opinion 2.1.1, Informed Consent
9

10 Informed consent to medical treatment is fundamental in both ethics and law. Patients have the
11 right to receive information and ask questions about recommended treatments so that they can
12 make well-considered decisions about care. Successful communication in the patient-physician
13 relationship fosters trust and supports shared decision making. Transparency with patients
14 regarding all medically appropriate options of treatment is critical to fostering trust and should
15 extend to any discussions regarding who has access to patients' health data and how data may
16 be used.
17

18 The process of informed consent occurs when communication between a patient and physician
19 results in the patient's authorization or agreement to undergo a specific medical intervention. In
20 seeking a patient's informed consent (or the consent of the patient's surrogate if the patient
21 lacks decision-making capacity or declines to participate in making decisions), physicians
22 should:
23

- 24 (a) Assess the patient's ability to understand relevant medical information and the implications
25 of treatment alternatives and to make an independent, voluntary decision.
26
27 (b) Present relevant information accurately and sensitively, in keeping with the patient's
28 preferences for receiving medical information. The physician should include information
29 about:
30
31 (i) the diagnosis (when known);
32
33 (ii) the nature and purpose of recommended interventions;
34
35 (iii) the burdens, risks, and expected benefits of all options, including forgoing treatment.
36
37 (c) Document the informed consent conversation and the patient's (or surrogate's) decision in
38 the medical record in some manner. When the patient/surrogate has provided specific
39 written consent, the consent form should be included in the record.
40

41 In emergencies, when a decision must be made urgently, the patient is not able to participate in
42 decision making, and the patient's surrogate is not available, physicians may initiate treatment
43 without prior informed consent. In such situations, the physician should inform the
44 patient/surrogate at the earliest opportunity and obtain consent for ongoing treatment in
45 keeping with these guidelines. (Modify HOD/CEJA Policy)
46

47 b. Opinion 3.1.1, Privacy in Health Care
48

49 Protecting information gathered in association with the care of the patient is a core value in
50 health care. However, respecting patient privacy in other forms is also fundamental, as an
51 expression of respect for patient autonomy and a prerequisite for trust.

1 Patient privacy encompasses a number of aspects, including personal space (physical privacy),
2 personal data (informational privacy), personal choices including cultural and religious
3 affiliations (decisional privacy), and personal relationships with family members and other
4 intimates (associational privacy).

5
6 Physicians must seek to protect patient privacy in all settings to the greatest extent possible and
7 should:

- 8
9 (a) Minimize intrusion on privacy when the patient's privacy must be balanced against other
10 factors.
11
12 (b) Inform the patient when there has been a significant infringement on privacy of which the
13 patient would otherwise not be aware.
14
15 (c) Be mindful that individual patients may have special concerns about privacy in any or all
16 of these areas.
17
18 (d) Be transparent with any inquiry about existing privacy safeguards for patient data but
19 acknowledge that anonymity cannot be guaranteed and that breaches can occur
20 notwithstanding best data safety practices. (Modify HOD/CEJA Policy)
21

22 c. Opinion 3.2.4, Access to Medical Records by Data Collection Companies
23

24 Information contained in patients' medical records about physicians' prescribing practices or
25 other treatment decisions can serve many valuable purposes, such as improving quality of care.
26 However, ethical concerns arise when access to such information is sought for marketing
27 purposes on behalf of commercial entities that have financial interests in physicians' treatment
28 recommendations, such as pharmaceutical or medical device companies.

29
30 Information gathered and recorded in association with the care of a patient is confidential.
31 Patients are entitled to expect that the sensitive personal information they divulge will be used
32 solely to enable their physician to most effectively provide needed services. Disclosing
33 information to third parties for commercial purposes without consent undermines trust, violates
34 principles of informed consent and confidentiality, and may harm the integrity of the patient-
35 physician relationship.

36
37 Physicians who propose to permit third-party access to specific patient information for
38 commercial purposes should:

- 39
40 (a) Only provide data that has been de-identified.
41
42 (b) Fully inform each patient whose record would be involved (or the patient's authorized
43 surrogate when the individual lacks decision-making capacity) about the purpose(s) for
44 which access would be granted.
45

46 Physicians who propose to permit third parties to access the patient's full medical record
47 should:

- 48
49 (c) Obtain the consent of the patient (or authorized surrogate) to permit access to the patient's
50 medical record.

1 (d) Prohibit access to or decline to provide information from individual medical records for
2 which consent has not been given.

3
4 (e) Decline incentives that constitute ethically inappropriate gifts, in keeping with ethics
5 guidance.

6
7 Because de-identified datasets are derived from patient data as a secondary source of data for
8 the public good, health care professionals and/or institutions who propose to permit third-party
9 access to such information have a responsibility to establish that any use of data derived from
10 health care adhere to the ethical standards of the medical profession. (Modify HOD/CEJA
11 Policy)

12
13 d. Opinion 3.3.2, Confidentiality and Electronic Medical Records

14
15 Information gathered and recorded in association with the care of a patient is confidential,
16 regardless of the form in which it is collected or stored.

17
18 Physicians who collect or store patient information electronically, whether on stand-alone
19 systems in their own practice or through contracts with service providers, must:

20
21 (a) Choose a system that conforms to acceptable industry practices and standards with respect
22 to:

23
24 (i) restriction of data entry and access to authorized personnel;

25
26 (ii) capacity to routinely monitor/audit access to records;

27
28 (iii) measures to ensure data security and integrity; and

29
30 (iv) policies and practices to address record retrieval, data sharing, third-party access and
31 release of information, and disposition of records (when outdated or on termination of
32 the service relationship) in keeping with ethics guidance.

33
34 (b) Describe how the confidentiality and integrity of information is protected if the patient
35 requests.

36
37 (c) Release patient information only in keeping with ethics guidance for confidentiality and
38 privacy. (Modify HOD/CEJA Policy); and

39
40 3. That the remainder of this report be filed.

Fiscal Note: Less than \$500

REPORT 3 OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS (A-24)
Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices
(D-140.951)

EXECUTIVE SUMMARY

In adopting policy D-140.951, “Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices,” the House of Delegates directed the Council on Ethical and Judicial Affairs (CEJA) to “study and clarify the ethical challenges and considerations regarding physician professionalism raised by the advent and expansion of private equity ownership”.

Increasing investments by private equity firms in health care raise ethical concerns regarding dual loyalties of physicians and competing interests between profits and patients. While not inherently unethical, private equity firms’ incursion into health care warrants caution. To respond to these issues, CEJA recommends amending Opinion 11.2.3, “Contracts to Deliver Health Care Services” to more clearly encompass partnerships with private equity firms and the ethical concerns that they raise for both physicians seeking capital to support their private practice as well as physicians entering into employment contracts with private equity-owned hospitals.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 3-A-24

Subject: Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices
(D-140.951)

Presented by: David A. Fleming, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 In response to [Policy D-140.951](#), “Establishing Ethical Principles for Physicians Involved in
2 Private Equity Owned Practices,” which instructs our American Medical Association (AMA) to
3 “study and clarify the ethical challenges and considerations regarding physician professionalism
4 raised by the advent and expansion of private equity ownership”, your Council on Ethical and
5 Judicial Affairs (CEJA) presented Report 02-A-23, which offered recommendations on amending
6 [Code Opinion 11.2.3](#), “Contracts to Deliver Health Care Services.” Testimony at the 2023 Annual
7 Meeting of the House of Delegates was predominantly in opposition to the report; concerns were
8 raised regarding the profit motives of private equity and the ethical implications of such
9 businesses’ involvement in health care. Overall, testimony expressed a desire that a stronger stance
10 be taken against private equity’s involvement in health care, and the report was referred back to
11 CEJA.

12

13 BACKGROUND

14

15 The past several decades have seen an increase in the corporatization, financialization, and
16 commercialization of health care [1,2]. Since 2018, more physicians now work as employees of
17 hospitals or health care systems rather than serving in private practice [3,4]. Our AMA reports that
18 this trend is continuing: “[e]mployed physicians were 50.2% of all patient care physicians in 2020,
19 up from 47.4% in 2018 and 41.8% in 2012. In contrast, self-employed physicians were 44% of all
20 patient care physicians in 2020, down from 45.9% in 2018 and 53.2% in 2012” [4]. A major factor
21 in these trends has been the incursion of private equity into health care. It is estimated that private
22 equity capital investment between 2000 and 2018 grew from \$5 billion to \$100 billion [1].
23 Between 2016 and 2017 alone, the global value of private equity deals in health care increased
24 17%, with health care deals comprising 18% of all private equity deals in 2017 [5].
25

26

27 Private equity firms use capital from institutional investors to purchase private practices, typically
28 utilizing a leveraged buy-out model that finances the majority of the purchase through loans for
29 which the physician practice serves as security, with the goal of selling the investment within 3 to 7
30 years and yielding a return of 20-30% [1,5,6]. However, private equity investment broadly
31 encompasses many types of investors and strategies, including venture capital firms that primarily
invest in early-stage companies for a minority ownership, growth equity firms that tend to partner

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

1 with promising later-stage ventures, and traditional private equity firms that borrow money through
2 a leveraged buyout to take a controlling stake of mature companies [7].
3

4 When ownership shifts from physicians to private equity firms, the firms typically seek to invest
5 resources to expand market share, increase revenue, and decrease costs to make the practice more
6 profitable before selling it to a large health care system, insurance company, another private equity
7 firm (as a secondary buyout), or the public via an initial public offering (IPO) [8]. To expand
8 market share, private equity typically employs a “platform and add-on” or “roll-up” approach in
9 which smaller add-ons are acquired after the initial purchase of a large, established practice,
10 allowing private equity firms to gain market power in a specific health care segment or sub-
11 segment [1,9]. These practices by private equity appear to be driving mergers and acquisitions
12 within health care, significantly contributing to the consolidation of the health care industry that
13 has dramatically increased over the past decade [9].
14

15 Proponents of private equity investments in health care claim that private equity provides access to
16 capital infusions, which may facilitate practice innovation and aid in the adoption of new
17 technological infrastructure [6,8]. Proponents also advocate that private equity can bring “valuable
18 managerial expertise, reduce operational inefficiencies, leverage economies of scale, and increase
19 healthcare access by synergistically aligning profit incentives with high quality care provision”
20 [10].
21

22 Critics argue that private equity’s focus on generating large, short-term profits likely establishes an
23 emphasis on profitability over patient care, which creates dual loyalties for physicians working as
24 employees at private equity-owned practices [5,6]. Critics further assert that prioritizing profits
25 likely jeopardizes patient outcomes, overburdens health care companies with debt, leads to an over-
26 emphasis on profitable services, limits access to care for certain patient populations (such as
27 uninsured individuals or individuals with lower rates of reimbursement such as Medicaid or
28 Medicare patients), and fundamentally limits physician control over the practice and clinical
29 decision making [5,8,10].
30

31 Despite strong opinions regarding private equity’s incursion into medicine, empirical research on
32 the effects of private equity investments in health care, and the impacts on patient outcomes, is
33 currently limited [8]. Zhu and Polsky explain that this lack of research is primarily because
34 “[p]rivate equity firms aren’t required to publicly disclose acquisitions or sales, and the widespread
35 use of nondisclosure agreements further contributes to opacity about practice ownership and the
36 nature of transactions” [6]. Private equity firms are emerging to be major employers of physicians.
37 Currently, it is estimated that 8% of all private hospitals in the U.S. and 22% of all proprietary for-
38 profit hospitals are owned by private equity firms [11].
39

40 ETHICAL ISSUE

41

42 Private equity firms’ commitment to ensuring high returns on their investments creates a potential
43 ethical dilemma when investing in health care. Whether or not it may be ethically permissible for
44 physicians to sell their practices to private equity firms or for physicians to work as employees for
45 such acquisitions largely depends on how private equity investments impact patient care and
46 outcomes. This report will examine how private equity investments in health care may be ethical,
47 the circumstance and factors to be weighed, as well as how physicians may ethically navigate
48 private equity buyouts and employment.

1 RELEVANT PRACTICAL MATTERS FOR CLINICAL PRACTICE

2
3 A major concern of physicians regarding private equity investments in health care is the potential
4 loss of autonomy, which physicians worry could translate into hospital policies designed for
5 profitability and that limit physicians' decision-making and their ability to care for patients [9].
6 Loss of autonomy is also associated with increased physician burnout [12]. There are also valid
7 concerns that private equity ownership leads to increased patient volumes and more expensive and
8 potentially unnecessary procedures [9].
9

10 REVIEW OF RELEVANT LITERATURE

11
12 *Empirical Evidence in Medical Literature*

13
14 More research is needed on the effects of private equity investments in the health care sector, as
15 little empirical evidence exists on how private equity impacts utilization, spending, or patient
16 outcomes. There is widespread concern among physicians that private equity-controlled practices
17 result in worse patient outcomes.
18

19 The best evidence that private equity acquisition of hospitals harms patients is a recent difference-
20 in differences study by Kannan et al of hospital-acquired adverse events and hospitalization
21 outcomes associated with private equity acquisitions of U.S. hospitals [13]. Data from 100%
22 Medicare Part A claims at 51 private equity-acquired hospitals were compared with data from 259
23 matched control hospitals (not acquired by private equity) for hospital stays between 2009 and
24 2019. While there was no differential change in mortality 30 days after hospital discharge, the
25 researchers did find that after private equity acquisition, Medicare beneficiaries admitted to private
26 equity-owned hospitals experienced a 25.4% increase in hospital-acquired conditions compared
27 with those treated at control hospitals. This increase in hospital-acquired conditions, which are
28 established measures of inpatient quality and are considered preventable, was largely driven by a
29 27.3% increase in falls and a 37.7% increase in central line-associated bloodstream infections at
30 private equity-acquired hospitals [13]. The increase in central-line associated infections after
31 private equity acquisition occurred even as these hospitals saw a 16% reduction in percutaneous
32 central line placement. Kannan et al hypothesize that such increases in hospital-acquired infections
33 could result from decreases in staffing, as such adverse events have been shown to be correlated
34 with staffing ratios among nurses and that private equity often will reduce staffing and change the
35 clinician labor mix at acquired hospitals as a cost-cutting strategy [13].
36

37 In another difference-in-differences study of 578 private equity-acquired practices in dermatology,
38 gastroenterology, and ophthalmology matched with a control group of 2,874 non-private equity-
39 acquired practices, Singh et al found a mean increase of 20.2% in charges per claim and a
40 consistent increase in patient utilization over the first eight quarters after acquisition, with the
41 increase in patient utilization primarily driven by a 37.9% increase in visits by new patients [14].
42 Overall, the researchers found that "private equity acquisition was associated with increases in
43 health care spending and several measures of utilization, and some evidence of greater intensity of
44 care" [14]. They also found increased coding intensity, and posit that this finding could be due to
45 either changes in coding and billing practices that have more efficient charge capture or,
46 conversely, could reflect upcoding to increase revenues [14]. The motivating factors behind this
47 impact on coding deserves further study.
48

49 In a systematic review of 55 studies evaluating trends in private equity ownership in health care
50 and the impacts on outcomes, costs, and quality, Borsa et al found that private equity ownership
51 was associated with an increase in cost to patients or payers, primarily from increased charges and

1 rates for services as well as inconclusive, mixed results on how private equity impacts quality of
2 care [10]. The majority of the studies (n=47) evaluated private equity ownership of health care
3 operations in the US, but represented a range of settings, the most common of which were nursing
4 homes (n=17), hospitals (n=9), dermatology (n=9), and ophthalmology (n=7). Only eight studies
5 included health outcomes, with two finding beneficial impacts, three findings harmful impacts, and
6 three finding neutral impacts; the three that found harmful impacts were all studies of nursing
7 homes [10]. These results suggest that private equity may impact segments of the health care
8 industry differently.

9
10 In their analysis of 281 private equity acquisitions involving 610 unique target hospitals, Gao et al
11 found that over an eight-year window, acquisitions were associated with increased profitability, no
12 change in the rate of closures, no statistically significant changes in mortality or readmission rates,
13 and that the percentage of Medicare and Medicaid patients stayed relatively the same [15]. Over
14 the eight year window, private equity-acquired hospitals increased their operating income by 7.4%.
15 Compared to their matched control groups, private equity-acquired hospitals were equally or more
16 likely to survive, contrary to the prevailing narrative. Private equity-acquired hospitals initially
17 experienced a 14% decrease in the number of core workers (medical workers that include
18 physicians, nurses, and pharmacists) over the first four years but over the next four years this
19 difference dissipates to only 2% and is not statistically significant. In contrast, the decline in
20 administrative workers is significant and persistent, with a reduction of 18% within the first four
21 years of acquisition and a 22% reduction by the end of eight years. This reduction in administrative
22 workers was most profound at nonprofit hospitals. Core workers' wages were not found to change,
23 while administrative workers' wages declined by 7%. No changes to patient mortality rates or
24 readmission were found, except for a 0.9% increase in readmission following pneumonia. In
25 looking at rates of stroke, complications and infections during hospitalization as measure of patient
26 outcomes, no statistically significant differences were found between private equity-acquired
27 hospitals, the control group, or non-private equity acquired hospitals. Private equity-acquired
28 hospitals appear to treat a higher number of resource-intensive patients and decrease their
29 outpatient ratio. Gao et al conclude: “[o]verall, our evidence suggests that PE acquirers improve the
30 operating efficiency of target hospitals without a compromise in healthcare quality” [15].

31 32 *Normative and Substantive Views in Ethics and Medical Literature*

33
34 The debate over private equity's incursion into health care often regards private equity acquisitions
35 through a lens of exceptionalism—either negatively or positively. However, although private
36 equity owned hospitals are different in their ownership structure and oversight compared to other
37 traditional health care investors, private equity-acquired hospitals may not be substantively
38 different from other for profit and non-profit hospitals in terms of their stated goals of both
39 solvency and patient care. Zhu and Polsky argue that private equity is not inherently unethical and
40 that there are likely good and bad actors as is the case in many sectors [6]. They add: “physicians
41 should be aware that private equity's growth is emblematic of broader disruptions in the physician-
42 practice ecosystem and is a symptom of medicine's transformation into a corporate enterprise” [6].

43
44 The corporatization of medicine is not without ethical and professional risks, of course. In their
45 ethical analysis of orthopaedic surgery practices owned by non-physicians, Moses et al note that
46 the incentives and goals of surgeons might be misaligned with those of the investors, pitting patient
47 care against profits; profit maximization might also lead to wasteful overtreatment as well as a loss
48 of physician autonomy within the practice as well as patient autonomy if physicians are encouraged
49 to be more paternalistic to achieve financial goals [3].

1 Veatch notes that business ethics and medical ethics are not inherently at odds but admits that
2 differences do exist [16]. Veatch highlights that physicians are uncomfortable with any removal of
3 professional control that may accompany the increasing commercialization of the physician's role.
4 Veatch points out that paradoxically, despite being open to the profit motive in the practice of
5 medicine, the practice as a whole has shown strong resistance to the commercialization of medical
6 practice. For Veatch, the crux of the issue is whether people perceive health care as a fundamental
7 right or a commodity like any other, adding that the notion of health care as a right jeopardizes any
8 profit motive in health care including traditional private practitioner fee-for-service models [16].
9

10 Pellegrino offers a similar analysis, arguing that health care is not a commodity but rather a human
11 good that society has an obligation to provide in some measure to all citizens [17]. Pellegrino
12 argues that health care is substantively different from traditional market goods—it is not fungible,
13 cannot be proprietary because medical knowledge is possible only due to collective achievements,
14 is realized in part through the patient's own body, and requires an intensely personal relationship—
15 and thus cannot be a commodity. Pellegrino warns that the commodification of health and medicine
16 turns any interaction between the patient and physician into a commercial transaction subject to the
17 laws and ethics of business rather than to medical and professional ethics. "In this view,"
18 Pellegrino writes, "inequities are unfortunate but not unjust [...]. In this view of health care,
19 physicians and patients become commodities too" [17]. Rather than claiming that health care is a
20 fundamental right, Pellegrino takes a position of distributive justice to argue that health care is a
21 collective good. Because a good society is one in which each citizen is enabled to flourish, and
22 good health is a condition of human flourishing, society has a moral responsibility to provide
23 health care to all citizens. In this light, health care is both an individual and a social good.
24 Pellegrino also refers to this view as one of "beneficent justice" and explains, "[t]reating health
25 care as a common good implies a notion of solidarity of humanity, i.e., the linkage of humans to
26 each other as social beings" [17]. Pellegrino concludes:
27

28 Understanding health care to be a commodity takes one down one arm of a bifurcating
29 pathway to the ethic of the marketplace and instrumental resolution of injustices. Taking
30 health care as a human good takes us down a divergent pathway to the resolution of
31 injustice through a moral ordering of societal and individual priorities [17].
32

33 Whether health care is understood as a commodity or a human good is of course not always so
34 clear in policy and in practice. What is evident, however, is that as health care has become
35 increasingly commodified, the ethical risks to patients and physicians are being realized as
36 physicians find themselves increasingly working as employees and worrying about the impact that
37 commercial enterprises—such as private equity investments—may be having on patients.
38

39 Private equity represents the latest and most extreme form of health care commercialization that
40 has escalated over the past few decades. This is the very reason why private equity firms became
41 interested in health care in the first place—they recognized that health care as a market was already
42 ripe for investment and future profitability. Private equity firms use the same investment models in
43 health care that they do in other industries—invest in fragmented markets, acquire the most
44 promising targets as a platform, expand through add-on acquisitions, and exit the market once a
45 significant consolidation of market share can secure a sale, secondary buyout, or IPO [9]. Each
46 individual acquisition is typically too small to require review by anti-trust regulators at the Federal
47 Trade Commission (FTC); at the same time, however, this practice is driving the trend of mergers
48 and acquisitions in the health care sector [9].

1 Fuse Brown and Hall explain, “[private equity] functions as a divining rod for finding market
2 failures—where PE has penetrated, there is likely a profit motive ripe for exploitation” [1]. They
3 continue that private equity investments pose three primary risks:

4
5 First, PE investment spurs health care consolidation, which increases prices and potentially
6 reduces quality and access. Second, the pressure from PE investors to increase revenue can
7 lead to exploitation of billing loopholes, overutilization, upcoding, aggressive risk-coding,
8 harming patients through unnecessary care, excessive bills, and increasing overall health
9 spending. Third, physicians acquired by PE companies may be subject to onerous
10 employment terms and lose autonomy over clinical decisions [1].
11

12 While the profit motive of private equity firms may drive them to take part in less than scrupulous
13 practices, such as private equity’s exploitation of out-of-network surprise billing, there is also
14 potential for private equity to play a more positive role in transforming health care practices [1,18].
15 Powers et al write:

16
17 Ultimately, private equity—a financing mechanism—is not inherently good or bad.
18 Instead, it acts to amplify the response to extant financial incentives. Within a fee-for-
19 service construct, this is intrinsically problematic. But value-based payment models can
20 serve as an important guardrail, helping to ensure that financial return to private equity
21 investors are appropriately aligned with system goals of access, quality, equity, and
22 affordability [18].
23

24 Private equity firms could help accelerate changes in health care payment and delivery towards
25 value-based models. With such models, where financial performance is tied to quality and value,
26 private equity may be incentivized to invest in changes that support better health and lower costs
27 [18].
28

29 While more research is needed on the impacts of private equity investments in health care, private
30 equity firms’ involvement in health care does not appear to be exceptional within the current
31 corporate transformation of the profession and thus is inherently no more or less ethical than this
32 current trend that has penetrated health care and the practice of medicine far beyond interactions
33 with private equity. As Fuse Brown and Hall point out, “PE investment in health care is just the
34 latest manifestation of the long trend of increasing commercialization of medicine. And so long as
35 the U.S. treats health care as a market commodity, profit-seeking will persist” [1].
36

37 Ikrum et al provide a balanced view of the situation and offer some recommendations for
38 partnering with private equity in health care:

39
40 While PE involvement in health care delivery invokes inherent concerns, it has provided
41 much-needed capital for many primary care practices to mitigate the effects of the
42 pandemic and to potentially undertake care delivery innovations such as population health
43 management under value-based payment models. To make partnerships with private
44 investors work, providers need to select the right investors, establish strategies upfront to
45 address misaligned objectives, and define a successful partnership by setting goals for and
46 transparently reporting on indicators that reflect both financial and clinical performance.
47 Safeguards and regulations on sales may also protect patients and providers [7].

1 RELEVANT LAWS

2
3 Fuse Brown and Hall write that despite the market consolidation that results from private
4 equity acquisitions within health care, these acquisitions generally go unreported and
5 unreviewed since they do not exceed the mandatory reporting threshold under the Hart-Scott-
6 Rodino (HSR) Act and that there are currently no legal guidelines for assessing the collective
7 market effects of add-on acquisitions. However, they do note:

8
9 Under Section 7 of the Clayton Act, federal antitrust authorities—the Federal Trade
10 Commission (FTC) and the Department of Justice (DOJ)—can sue to block mergers
11 and acquisitions where the effect of the transaction may be “substantially to lessen
12 competition, or to tend to create a monopoly.” To determine whether a transaction may
13 threaten competition, antitrust agencies analyze whether the transaction will enhance
14 the market power of the transacting parties in a given geographic and product market.
15 [...] Typically, the FTC oversees health care acquisitions (other than insurance) [1].
16

17 To protect patients from harmful billing practices, the federal government has passed the No
18 Surprise Act, the False Claims Act, Anti-Kickback Statute, and Stark Law. Additionally, most
19 states have similar laws, such as those barring fee-splitting and self-referral, and several states
20 have passed laws regulating or restricting the use of gag clauses in physician contracts. The
21 FTC has also recently proposed a rule banning noncompete clauses in all employment
22 contracts [1].
23

24 The federal Emergency Medical Treatment and Labor Act (EMTALA) ensures that hospitals
25 with an emergency department provide all patients access to emergency services regardless of
26 their ability to pay. Similarly, federal law requires nonprofit hospitals, which account for 58%
27 of community hospitals, provide some level of charity care as a condition for their tax-exempt
28 status, which the Internal Revenue Service (IRS) defines as “free or discounted health services
29 provided to persons who meet the organization’s eligibility criteria for financial assistance and
30 are unable to pay for all or a portion of the services” [19].
31

32 RELEVANT AMA POLICY PROVISIONS

33
34 Council on Medical Service Report 11-A-10 reviewed the scope and impact of private equity and
35 venture capital investment in health care, and its recommendations were adopted as Policy [H-
36 160.891](#), “Corporate Investors.” This policy delineates 11 factors that physicians should consider
37 before entering into partnership with corporate investors, including alignment of mission, vision,
38 and goals; the degree to which corporate partners may require physicians to cede control over
39 practice decision making; process for staff representation on the board of directors and medical
40 leadership selection; and retaining medical authority in patient care and supervision of
41 nonphysician practitioners.
42

43 Our AMA further developed and published materials to assist physicians contemplating partnering
44 with private equity and venture capital firms:
45

- 46 • [Venture Capital and Private Equity: How to Evaluate Contractual Agreements](#)
- 47 • [Model Checklist: Venture Capital and Private Equity Investments](#)
- 48 • [Snapshot: Venture Capital and Private Equity Investments](#)

1 Policy [H-310.901](#), “The Impact of Private Equity on Medical Training,” encourages GME training
2 institutions and programs to “demonstrate transparency on mergers and closures, especially as it
3 relates to private equity acquisition” and asserts that our AMA will “[s]upport publicly funded
4 independent research on the impact that private equity has on graduate medical education.”

5
6 RELEVANT *CODE* PROVISIONS

7
8 The AMA *Code of Medical Ethics* [Opinion 11.2.1](#), “Professionalism in Health Care Systems,”
9 acknowledges that “[p]ayment models and financial incentives can create conflicts of interest
10 among patients, health care organizations, and physicians” and offers recommendations for
11 physicians within leadership positions regarding the ethical use of payment models that influence
12 where and by whom care is delivered. Key elements include the need for transparency, fairness, a
13 primary commitment to patient care, and avoiding overreliance on financial incentives that may
14 undermine physician professionalism.

15
16 [Opinion 11.2.2](#), “Conflicts of Interest in Patient Care,” clearly states: “[t]he primary objective of
17 the medical profession is to render service to humanity; reward or financial gain is a subordinate
18 consideration. [...] When the economic interests of the hospital, health care organization, or other
19 entity are in conflict with patient welfare, patient welfare takes priority.”

20
21 [Opinion 11.2.3](#), “Contracts to Deliver Health Care Services,” stipulates that physicians’
22 fundamental ethical obligation to patient welfare requires physicians to carefully consider any
23 contract to deliver health care services they may enter into to ensure they do not create untenable
24 conflicts of interest. The opinion states that physicians should negotiate or remove “any terms that
25 unduly compromise physicians’ ability to uphold ethical standards.” However, it should be
26 acknowledged that physicians have little leverage in changing entire payment structures or
27 reimbursement mechanisms when negotiating their contracts with hospitals. Similarly, physicians
28 in private practice often feel that they have little leverage in negotiating the sale of their practice;
29 they simply receive an offer and are told they can take it or leave it.

30
31 [Opinion 11.2.3.1](#), “Restrictive Covenants,” states: “[c]ovenants-not-to-compete restrict
32 competition, can disrupt patient care, and may limit access to care” and that physicians should not
33 enter into covenants that “[u]nreasonably restrict the right of a physician to practice medicine for a
34 specified period of time or in a specified geographic area on termination of a contractual
35 relationship”. However, many hospitals and hospital systems today now routinely include
36 noncompete clauses as part of their physician contracts. These clauses put physicians at risk of
37 violation of professional obligations and their widespread use has the potential to undermine the
38 integrity of the profession as a whole.

39
40 ETHICAL ANALYSIS

41
42 The ethical concerns raised by private equity investments in health care are not unique but instead
43 represent ethical dilemmas that exist due to the very nature of treating health care as a commodity.
44 While private equity firms may choose to pursue financial incentives that are counter to the
45 physicians’ ethical and professional responsibilities, private equity’s investment in health care is
46 not inherently unethical. However, caution is warranted so it is crucial that policy guidelines be
47 developed to ensure that private equity-acquired hospitals, hospital systems, and physician
48 practices continue to function in an ethical manner that prioritizes patients and patient care over
49 profits. Policies that require greater transparency and disclosure of data on private equity
50 ownership, greater state regulatory control over private equity acquisitions, closing payment and
51 billing loopholes, rules requiring an independent clinical director on the Board of private equity

1 firms engaged in health care, and means for physicians to help set goals and measure outcomes to
 2 ensure the alignment of corporate and clinical values should be considered [7].

3
 4 Though the current literature is conflicting, there are valid concerns that private equity investment
 5 in health care might negatively impact patient outcomes. Since serious potential risks and conflicts
 6 of interest do exist, it is essential for physicians considering entering into partnership with private
 7 equity firms to evaluate their contracts and require that the agreements are consistent with the
 8 norms of medical ethics. Likewise, physicians considering entering into a contractual relation as an
 9 employee of a private equity-owned hospital should ensure that their contract does not place them
 10 in an untenable conflict of interest or compromise their ability to fulfill their ethical and
 11 professional obligations to patients [8].

12
 13 It is the conclusion of the Council on Ethical and Judicial Affairs (CEJA) that new ethics guidance
 14 specifically addressing private equity investment in health care is not needed. There already exists
 15 rich House policy and AMA published materials addressing private equity investments in health
 16 care. Furthermore, the ethical issues that private equity involvement raise are not limited to that
 17 specific sphere of health care investment. In light of the fact that private equity is not unique in the
 18 ethical concerns it raises, the Council finds that existing guidance in [Opinion 11.2.2](#), “Conflicts of
 19 Interest in Patient Care,” and [Opinion 11.2.3](#), “Contracts to Deliver Health Care Services,” are
 20 sufficient at the present time to address the concerns raised by the increasing investment by private
 21 equity in health care; however, it may be appropriate to amend current guidance to more clearly
 22 encompass partnerships with private equity firms and the ethical concerns that they raise for both
 23 physicians seeking capital to support their private practice as well as physicians entering into
 24 employment contracts with private equity-owned hospitals.

25 26 RECOMMENDATIONS

27
 28 In view of these deliberations, the Council on Ethical and Judicial Affairs recommends that
 29 Opinion 11.2.3, “Contracts to Deliver Health Care Services,” be amended by addition and deletion
 30 as follows and the remainder of this report be filed:

31
 32 Physicians have a fundamental ethical obligation to put the welfare of patients ahead of other
 33 considerations, including personal financial interests. This obligation requires ~~them to that~~
 34 before entering into contracts to deliver health care services, physicians consider carefully the
 35 proposed contract to assure themselves that its terms and conditions of contracts to deliver
 36 health care services before entering into such contracts to ensure that those contracts do not
 37 create untenable conflicts of interest or compromise their ability to fulfill their ethical and
 38 professional obligations to patients.

39
 40 Ongoing evolution in the health care system continues to bring changes to medicine, including
 41 changes in reimbursement mechanisms, models for health care delivery, restrictions on referral
 42 and use of services, clinical practice guidelines, and limitations on benefits packages. While
 43 these changes are intended to enhance quality, efficiency, and safety in health care, they can
 44 also put at risk physicians’ ability to uphold professional ethical standards ~~of informed consent~~
 45 ~~and fidelity to patients~~ and can impede physicians’ freedom to exercise independent
 46 professional judgment and tailor care to meet the needs of individual patients.

47
 48 As physicians seek capital to support their practices or enter into various differently structured
 49 contracts to deliver health care services—with group practices, hospitals, health plans,
 50 investment firms, or other entities—they should be mindful that while ~~many some~~
 51 arrangements have the potential to promote desired improvements in care, some other

1 arrangements ~~also~~ have the potential to ~~impede~~ put patients' interests at risk and to interfere
2 with physician autonomy.

3
4 ~~When contracting-partnering with entities, or having a representative do so on their behalf, to~~
5 provide health care services, physicians should:

6
7 (a) Carefully review the terms of proposed contracts, preferably with the advice of legal and
8 ethics counsel, ~~or have a representative do so on their behalf~~ to assure themselves that the
9 arrangement:

10
11 (i) minimizes conflict of interest with respect to proposed reimbursement mechanisms,
12 financial or performance incentives, restrictions on care, or other mechanisms intended
13 to influence physicians' treatment recommendations or direct what care patients
14 receive, in keeping with ethics guidance;

15
16 (ii) does not compromise the physician's own financial well-being or ability to provide
17 high-quality care through unrealistic expectations regarding utilization of services or
18 terms that expose the physician to excessive financial risk;

19
20 (iii) ~~allows~~ ensures the physician can ~~to~~ appropriately exercise professional judgment;

21
22 (iv) includes a mechanism to address grievances and supports advocacy on behalf of
23 individual patients;

24
25 (v) is transparent and permits disclosure to patients.

26
27 (vi) enables physicians to have significant influence on, or preferably outright control of,
28 decisions that impact practice staffing.

29
30 (b) Negotiate modification or removal of any terms that unduly compromise physicians' ability
31 to uphold ethical or professional standards.

32
33 When entering into contracts as employees, preferably with the advice of legal and ethics
34 counsel, physicians must:

35
36 (c) Advocate for contract provisions to specifically address and uphold physician ethics and
37 professionalism.

38
39 (d) Advocate that contract provisions affecting practice align with the professional and ethical
40 obligations of physicians and negotiate to ensure that alignment.

41
42 (e) Advocate that contracts do not require the physician to practice beyond their professional
43 capacity and provide contractual avenues for addressing concerns related to good practice,
44 including burnout or related issues.

45
46
47 (Modify HOD/CEJA Policy)

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 4-A-24

Subject: Physicians' Use of Social Media for Product Promotion and Compensation
(Resolution 25, A-22)

Presented by: David A. Fleming, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 At the 2022 Annual Meeting, the House of Delegates referred Resolution 025-A-22 (Resolution
2 025), "Use of Social Media for Product Promotion and Compensation" which asked that the
3 American Medical Association (AMA) "study the ethical issues of medical students, residents,
4 fellows, and physicians endorsing non-health related products through social and mainstream
5 media for personal or financial gain."

6
7 This report by the Council on Ethical and Judicial Affairs (CEJA) explores ethical issues posed by
8 this use of social media and reviews existing guidance in the AMA *Code of Medical Ethics (Code)*.
9

10 BACKGROUND

11
12 Resolution 025 details the recent phenomenon of physicians' involvement in promotions and
13 endorsements on social media. While Resolution 025 is limited to the context of physicians
14 promoting non-health related products through social media, this report encompasses the issue
15 broadly in the contexts of promoting both non-health related and/or health related products. The
16 concept of social media has changed dramatically in the last couple of decades and has altered how
17 consumer goods and services are advertised, promoted, and sold. Social media now accounts for a
18 broad range of communication—e.g., Tik Tok, Instagram, Facebook, X (formerly Twitter),
19 YouTube—that can reach millions of people, and now often involves "influencing", where
20 individuals promote or sell goods and services or promote themselves (e.g. their personality or
21 lifestyle) as a financial venture.
22

23 ETHICAL CONCERNS

24
25 Physicians' and medical students' sale and promotion of products or services and use of social
26 media raises several ethical concerns. (1) These practices may damage the patient-physician
27 relationship. If patients feel pressured to purchase products or services, this may undermine the
28 trust that grounds patient-physician relationships, since it raises questions about whether physicians
29 are fulfilling their fiduciary duty to put patients' interests above their own financial interests. (2) If
30 inappropriate pressure is applied, then selling and promotion of products may result in the
31 exploitation of patient vulnerability. (3) If physicians lend their credibility as medical professionals
32 to products or services that are not supported by peer-reviewed evidence or are of questionable

* Reports of the Council on Ethical and Judicial Affairs are assigned to the reference committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

1 value, then they may put patient well-being and the integrity of the profession in jeopardy in the
2 interest of profit-making.

3 4 Welfare of the Patient and the Patient-Physician Relationship

5
6 The sale and promotion of goods and services by physicians has the potential to negatively affect
7 the welfare of patients. If a physician puts their financial interests above the interests of the
8 patients, then this undercuts the foundational ethical principle that physicians must regard their
9 “responsibility to the patient as paramount. [Principle VIII]. In addition, since patients are
10 “vulnerable and dependent on the doctor’s expertise” and there is an “asymmetry of knowledge”
11 between patients and physicians, there is a risk that patients may be exploited and this, in turn, can
12 “undermine a patient’s trust” [1]. Further, if patients find out about a physician’s financial
13 incentive to recommend certain products or services after the fact, they may feel that they have
14 been purposefully deceived, and so have reason to distrust both that individual physician and the
15 profession as a whole. It is therefore imperative that physicians conscientiously distinguish when
16 they are acting in their professional capacity by recommending products or services intended for
17 patient benefit or public health, and when they are acting as commercial agents independent of
18 their professional identity.

19 20 Integrity of the Profession

21
22 Physician sales and promotion of products and services may also damage the integrity of the
23 profession. Physicians have an ethical duty to uphold professional standards in their role as
24 physician in all areas of life. A key principle of professional integrity is that physicians should
25 recognize that they carry the authority of their professional role with them into other social spheres.
26 Physicians “engage in a number of roles” which include conveyors of information, advocates,
27 experts, and commentators on medically related issues [2]. For many physicians, “navigating
28 successfully among the potentially overlapping roles ...poses challenges.” [2] Physicians “carry
29 with them heightened expectations as trusted...representatives of the medical profession.” [2]
30 Physicians should be aware that these expectations cannot be entirely separated from their personal
31 identity either online or elsewhere and should take care to curate their social media presence
32 accordingly.

33 34 PROFESSIONALISM IN THE USE OF SOCIAL MEDIA

35
36 The concept of social media has changed since the technology’s first appearance and widespread
37 adoption. Today, social media platforms are broadly internet-enabled technologies that enable
38 individuals to have a presence online and ability to share opinions and self-generated media content
39 to a wide audience.

40
41 Opinion 2.3.2 “Professionalism in Social Media” reflects an outdated understanding of the types
42 and uses of social media, modeling its guidance on traditional sites such as Facebook, where the
43 primary purposes are social networking among friends and colleagues, and perhaps also
44 disseminating beneficial public health messages. While guidance that addresses these uses is still
45 necessary (and so should be retained), modifications are required to reflect the fact that social
46 media can now be used as a form of marketing intended to financially benefit individuals and
47 corporations. The ethical concerns that arise in this context mirror those that arise in other
48 situations where physicians are selling and promoting goods and services, that is, use of social
49 media by medical professionals can undermine trust and damage the integrity of patient-physician
50 relationships and the profession as a whole when physicians inappropriately use their social media
51 presence to promote personal interests.

1 CONCLUSION

2
3 Updating 2.3.2 “Professionalism in the Use of Social Media” so that it includes guidance on using
4 social media to sell and promote products makes it clear that the consolidated guidance clearly
5 applies to the concerns raised in Resolution 025. Revising this also provides an opportunity to
6 update language to reflect the current realities of technology and contemporary business practices.
7

8 RECOMMENDATION

9
10 In consideration of the foregoing, the Council on Ethical and Judicial Affairs recommends that:
11 Opinion 2.3.2, “Professionalism in the Use of Social Media” be amended by substitution to read as
12 follows and the remainder of this report be filed:
13

14 Social media—internet-enabled communication platforms—enable individual medical students
15 and physicians to have both a personal and a professional presence online. Social media can
16 foster collegiality and camaraderie within the profession as well as provide opportunities to
17 widely disseminate public health messages and other health communications. However, use of
18 social media by medical professionals can also undermine trust and damage the integrity of
19 patient-physician relationships and the profession as a whole, especially when medical students
20 and physicians use their social media presence to promote personal interests.
21

22 Physicians and medical students should be aware that they cannot realistically separate their
23 personal and professional personas entirely online and should curate their social media
24 presence accordingly. Physicians and medical students therefore should:
25

- 26 (a) When publishing any content, consider that even personal social media posts have the
27 potential to damage their professional reputation or even impugn the integrity of the
28 profession.
29
- 30 (b) Respect professional standards of patient privacy and confidentiality and refrain from
31 publishing patient information online without appropriate consent.
32
- 33 (c) Maintain appropriate boundaries of the patient-physician relationship in accordance with
34 ethics guidance if they interact with their patients through social media, just as they would
35 in any other context.
36
- 37 (d) Use privacy settings to safeguard personal information and content, but be aware that once
38 on the Internet, content is likely there permanently. They should routinely monitor their
39 social media presence to ensure that their personal and professional information and
40 content published about them by others is accurate and appropriate.
41
- 42 (e) Publicly disclose any financial interests related to their social media content, including, but
43 not limited to, paid partnerships and corporate sponsorships.
44
- 45 (f) When using social media platforms to disseminate medical health care information, ensure
46 that such information is useful and accurate based on professional medical judgment.
47

48 (Modify HOD/CEJA Policy)

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 5-A-24

Subject: CEJA’s Sunset Review of 2014 House Policies

Presented by: David A. Fleming, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Policy G-600.110, “Sunset Mechanism for AMA Policy,” calls for the decennial review of
2 American Medical Association (AMA) policies to ensure that our AMA’s policy database is
3 current, coherent, and relevant. This policy reads as follows, laying out the parameters for review
4 and specifying the needed procedures:

- 5
6 1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A
7 policy will typically sunset after ten years unless action is taken by the House of Delegates
8 to retain it. Any action of our AMA House that reaffirms or amends an existing policy
9 position shall reset the sunset “clock,” making the reaffirmed or amended policy viable for
10 another 10 years.
- 11
12 2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the
13 following procedures shall be followed: (a) Each year, the Speakers shall provide a list of
14 policies that are subject to review under the policy sunset mechanism; (b) Such policies
15 shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that
16 has been asked to review policies shall develop and submit a report to the House of
17 Delegates identifying policies that are scheduled to sunset; (d) For each policy under
18 review, the reviewing council can recommend one of the following actions: (i) retain the
19 policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with
20 more recent and like policy; (e) For each recommendation that it makes to retain a policy in
21 any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The
22 Speakers shall determine the best way for the House of Delegates to handle the sunset
23 reports.
- 24
25 3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy
26 earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more
27 current policy, or has been accomplished.
- 28
29 4. The AMA councils and the House of Delegates should conform to the following guidelines
30 for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or
31 directive has been accomplished; or (c) when the policy or directive is part of an
32 established AMA practice that is transparent to the House and codified elsewhere such as

* Reports of the Council on Ethical and Judicial Affairs are assigned to the reference committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

1 the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies
2 and Practices.

3

4 5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

5

6 6. Sunset policies will be retained in the AMA historical archives.

7

8 RECOMMENDATION

9

10 The Council on Ethical and Judicial Affairs recommends that the House of Delegates policies that
11 are listed in the Appendix to this report be acted upon in the manner indicated and the remainder of
12 this report be filed. (Directive to Take Action)

Fiscal Note: Less than \$500.

APPENDIX – RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
H-140.898	Medical Profession Opposition to Physician Participation in Execution	Our AMA strongly reaffirms its opposition to physician participation in execution.	Retain; remains relevant.
H-140.950	Physician Participation in Capital Punishment	<p>Evaluations of Prisoner Competence to be Executed; Treatment to Restore Competence to be Executed: Our AMA endorses the following:</p> <p>(1) Physician participation in evaluations of a prisoner's competence to be executed is ethical only when certain safeguards are in place. A physician can render a medical opinion regarding competency which should be merely one aspect of the information taken into account by the ultimate decision maker, a role that legally should be assumed by a judge or hearing officer. Prisoners' rights to due process at the competency hearings should be carefully observed.</p> <p>(2) When a condemned prisoner has been declared incompetent to be executed, physicians should not treat the prisoner to restore competence unless a commutation order is issued before treatment begins.</p> <p>(3) If the incompetent prisoner is undergoing extreme suffering as a result of psychosis or any other illness, medical intervention intended to mitigate the level of suffering is ethically permissible. It will not always be easy to distinguish these situations from treatment for the purpose of restoring the prisoner's competence, and in particular, to determine when treatment initiated to reduce suffering should be stopped. However, there is no alternative at this time other than to rely upon the treating physician to exercise judgment in deciding when and to what extent treatment is necessary to reduce extreme suffering. The cumulative experience of physicians applying these principles over time may lead to future refinements.</p> <p>Treatment should be provided in a properly-secured, general medical or psychiatric facility, not in a cell block. The task of re-evaluating the prisoner's competence to be executed should be performed by an independent physician examiner.</p> <p>(4) Given the ethical conflicts involved, no physician, even if employed by the state, should be compelled to participate in the process of establishing a prisoner's competence to be executed if such activity is contrary to the physician's personal beliefs. Similarly, physicians</p>	Retain; remains relevant.

		who would prefer not to be involved with treatment of an incompetent, condemned prisoner should be excused or permitted to transfer care of the prisoner to another physician.	
H-140.963	Secrecy and Physician Participation in State Executions	The AMA opposes any and all attempts either in state laws or in rules and regulations that seek to enable or require physician participation in legal executions and/or which protect from disclosure the identity of physicians participating or performing direct or ancillary functions in an execution.	Retain; remains relevant.
H-140.999	Our AMA and Bioethics	Our AMA requests official representation on any federal advisory committee or commission dealing with ethical issues of interest to medicine.	Retain; remains relevant.
H-140.963	Secrecy and Physician Participation in State Executions	The AMA opposes any and all attempts either in state laws or in rules and regulations that seek to enable or require physician participation in legal executions and/or which protect from disclosure the identity of physicians participating or performing direct or ancillary functions in an execution.	Retain; remains relevant.
H-265.992	Expert Witness Testimony	Our AMA: (1) encourages each state medical society to work with its state licensing board toward the development of effective disciplinary measures for physicians who provide fraudulent testimony; (2) provides legal and advocacy support to those medical and specialty organizations who seek to devise programs designed to discipline physicians for unprofessional conduct relative to expert witness testimony; (3) continues to study and work with interested organizations to address the inherent difficulties in conducting the peer review of physicians who provide expert witness testimony; (4) continues to educate physicians about ethical guidelines and professional responsibility regarding the provision of expert witness testimony; (5) encourages each state medical society to work with its state licensing board to grant any out-of-state expert witness physician a temporary license at a nominal fee or at no cost for the express purpose of expert testimony on a per case basis, such that the expert witness is subject to the peer review process. (6) encourages each state medical society to assist its state licensing board in the peer review process of expert witnesses by providing an expert witness committee program similar to the one in the state of Florida; (7) works with the Federation of State Medical Boards to address problems regarding out-of-state expert witnesses; and	Retain; remains relevant.

		(8) acts as a clearinghouse for advice and support as the state medical associations develop their own expert witness committee programs.	
H-270.961	Medical Care Must Stay Confidential	Our AMA will strongly oppose any federal legislation requiring physicians to establish the immigration status of their patients.	Retain; remains relevant.
H-405.958	Physician Right to Conscience	Our AMA supports high standards of civility and respect among physicians amidst differing political beliefs, aspects of conscience and ethical views because debate and expression of disagreement is healthy and essential to the improvement of medicine, and physicians should communicate any differences in a civil and professional manner.	Retain; remains relevant.
H-65.997	Human Rights	Our AMA endorses the World Medical Association's Declaration of Tokyo which are guidelines for medical doctors concerning torture and other cruel, inhuman or degrading treatment or punishment in relation to detention and imprisonment.	Retain; remains relevant.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 001
(A-24)

Introduced by: Integrated Physician Practice Section

Subject: Using Personal and Biological Data to Enhance Professional Wellbeing and Reduce Burnout

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, the significance and incidence of physician and healthcare workforce burnout and
2 workplace stress has increased dramatically; and
3

4 Whereas, burnout among healthcare professional has shown to negatively impact the quality of
5 care, patient safety, and healthcare system operations; and
6

7 Whereas, there are many individual, systemic, and collective factors that contribute to physical
8 and mental health and, therefore, a sense of wellbeing or lack thereof, which may increase the
9 likelihood of burnout; and
10

11 Whereas, there is ongoing research to identify and better understand workplace and individual
12 stresses that contribute to burnout and can diminish an individual's sense of wellbeing; and
13

14 Whereas, individual health history and biological data can provide valuable insights into physical
15 and mental health, and the collection and use of personal and biological data offer potential
16 avenues to support the wellbeing of healthcare professionals, including the early identification of
17 burnout and developing prevention strategies; and
18

19 Whereas, the use of such data must be done in a manner that respects individual privacy rights
20 and ethical considerations; and
21

22 Whereas, the healthcare community currently lacks comprehensive, standardized guidelines for
23 the ethical collection and use of this data in the context of workforce wellbeing; and
24

25 Whereas, the management of such sensitive data raises significant privacy, security, and ethical
26 issues that must be carefully addressed to ensure the rights and interests of individuals are
27 protected; therefore be it
28

29 RESOLVED, that our American Medical Association monitor and report on the research
30 regarding technology, measures, and effective use of personal and biological data which
31 supports professional workforce wellbeing and mitigates burnout (Directive to Take Action); and
32 be it further
33

34 RESOLVED, that our AMA develop ethical guidelines on the collection, use, and protection of
35 personal and biological data for the professional workforce (Directive to Take Action).
36

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/17/2024

RELEVANT AMA POLICY

9.3.1 Physician Health & Wellness

When physician health or wellness is compromised, so may the safety and effectiveness of the medical care provided. To preserve the quality of their performance, physicians have a responsibility to maintain their health and wellness, broadly construed as preventing or treating acute or chronic diseases, including mental illness, disabilities, and occupational stress.

To fulfill this responsibility individually, physicians should:

(a) Maintain their own health and wellness by:

(i) following healthy lifestyle habits;

(ii) ensuring that they have a personal physician whose objectivity is not compromised.

(b) Take appropriate action when their health or wellness is compromised, including:

(i) engaging in honest assessment of their ability to continue practicing safely;

(ii) taking measures to mitigate the problem;

(iii) taking appropriate measures to protect patients, including measures to minimize the risk of transmitting infectious disease commensurate with the seriousness of the disease;

(iv) seeking appropriate help as needed, including help in addressing substance abuse. Physicians should not practice if their ability to do so safely is impaired by use of a controlled substance, alcohol, other chemical agent or a health condition.

Collectively, physicians have an obligation to ensure that colleagues are able to provide safe and effective care, which includes promoting health and wellness among physicians.

[AMA Principles of Medical Ethics: I,II,IV](#)

Citation: Issued: 2016

Physician and Medical Student Burnout D-310.968

1. Our AMA recognizes that burnout, defined as emotional exhaustion, depersonalization, and a reduced sense of personal accomplishment or effectiveness, is a problem among residents, fellows, and medical students.

2. Our AMA will work with other interested groups to regularly inform the appropriate designated institutional officials, program directors, resident physicians, and attending faculty about resident, fellow, and medical student burnout (including recognition, treatment, and prevention of burnout) through appropriate media outlets.

3. Our AMA will encourage partnerships and collaborations with accrediting bodies (e.g., the Accreditation Council for Graduate Medical Education and the Liaison Committee on Medical Education) and other major medical organizations to address the recognition, treatment, and prevention of burnout among residents, fellows, and medical students and faculty.

4. Our AMA will encourage further studies and disseminate the results of studies on physician and medical student burnout to the medical education and physician community.

5. Our AMA will continue to monitor this issue and track its progress, including publication of peer-reviewed research and changes in accreditation requirements.

6. Our AMA encourages the utilization of mindfulness education as an effective intervention to address the problem of medical student and physician burnout.

7. Our AMA will encourage medical staffs and/or organizational leadership to anonymously survey physicians to identify local factors that may lead to physician demoralization.

8. Our AMA will continue to offer burnout assessment resources and develop guidance to help organizations and medical staffs implement organizational strategies that will help reduce the sources of physician demoralization and promote overall medical staff well-being.

9. Our AMA will continue to: (a) address the institutional causes of physician demoralization and burnout, such as the burden of documentation requirements, inefficient work flows and regulatory oversight; and (b) develop and promote mechanisms by which physicians in all practice settings can reduce the risk and effects of demoralization and burnout, including implementing targeted practice transformation interventions, validated assessment tools and promoting a culture of well-being.

Citation: CME Rep. 8, A-07; Modified: Res. 919, I-11; Modified: BOT Rep. 15, A-19; Reaffirmed: A-22

Factors Causing Burnout H-405.948

Our AMA recognizes that medical students, resident physicians, and fellows face unique challenges that contribute to burnout during medical school and residency training, such as debt burden, inequitable compensation, discrimination, limited organizational or institutional support, stress, depression, suicide, childcare needs, mistreatment, long work and study hours, among others, and that such factors be included as metrics when measuring physician well-being, particularly for this population of physicians.
Citation: Res. 208, I-22

Physician Health Programs H-405.961

1. Our AMA affirms the importance of physician health and the need for ongoing education of all physicians and medical students regarding physician health and wellness.
2. Our AMA encourages state medical societies to collaborate with the state medical boards to: (a) develop strategies to destigmatize physician burnout; and (b) encourage physicians to participate in the state's physician health program without fear of loss of license or employment.
Citation: CSAPH Rep. 2, A-11; Reaffirmed in lieu of: Res. 412, A-12; Reaffirmed: BOT action in response to referred for decision Res. 402, A-12; Modified: BOT Rep. 15, A-19

Physician Burnout D-405.972

Our AMA will work with: (1) Centers for Medicare and Medicaid Services (CMS), The Joint Commission, and other accrediting bodies and interested stakeholders to add an institutional focus on physician wellbeing as an accreditation standard for hospitals, focusing on system-wide interventions that do not add additional burden to physicians; and (2) hospitals and other stakeholders to determine areas of focus on physician wellbeing, to include the removal of intrusive questions regarding physician physical or mental health or related treatments on initial or renewal hospital credentialing applications.
Citation: Res. 723, A-22; Reaffirmed: I-22

Peer Support Groups for Second Victims D-405.980

Our AMA: (1) encourages institutional, local, and state physician wellness programs to consider developing voluntary, confidential, and non-discoverable peer support groups to address the "second victim phenomenon"; and (2) will work with other interested organizations to encourage that any future surveys of physician burnout should incorporate questions about the prevalence and potential impact of the "second victim phenomenon" on our physician workforce.
Citation: Res. 702, A-19

Programs on Managing Physician Stress and Burnout H-405.957

1. Our American Medical Association supports existing programs to assist physicians in early identification and management of stress and the programs supported by the AMA to assist physicians in early identification and management of stress will concentrate on the physical, emotional and psychological aspects of responding to and handling stress in physicians' professional and personal lives, and when to seek professional assistance for stress-related difficulties.
2. Our AMA will review relevant modules of the STEPs Forward Program and also identify validated student-focused, high quality resources for professional well-being, and will encourage the Medical Student Section and Academic Physicians Section to promote these resources to medical students.
Citation: Res. 15, A-15; Appended: Res. 608, A-16; Reaffirmed: BOT Rep. 15, A-19

Physicians and Family Caregivers: Shared Responsibility H-210.980

Our AMA: (1) specifically encourages medical schools and residency programs to prepare physicians to assess and manage caregiver stress and burden;
(2) continues to support health policies that facilitate and encourage health care in the home;
(3) reaffirm support for reimbursement for physician time spent in educating and counseling caregivers and/or home care personnel involved in patient care;
(4) supports research that identifies the types of education, support services, and professional caregiver roles needed to enhance the activities and reduce the burdens of family caregivers, including caregivers of patients with dementia, addiction and other chronic mental disorders; and

(5) (a) encourages partner organizations to develop resources to better prepare and support lay caregivers; and (b) will identify and disseminate resources to promote physician understanding of lay caregiver burnout and develop strategies to support lay caregivers and their patients.

Citation: Res. 308, I-98; Reaffirmed: A-02; Reaffirmed: CME Rep. 2, A-12; Appended: Res. 305, A-17

Inclusion of Medical Students and Residents in Medical Society Impaired Physician Programs H-295.993

Our AMA: (1) recognizes the need for appropriate mechanisms to include medical students and resident physicians in the monitoring and advocacy services of state physician health programs and wellness and other programs to prevent impairment and burnout; and (2) encourages medical school administration and students to work together to develop creative ways to inform students concerning available student assistance programs and other related services.

Citation: Sub. Res. 84, I-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed and Appended: CME Rep. 4, I-98; Reaffirmed: CME Rep. 2, A-08; Modified: CME Rep. 01, A-18

Study of Medical Student, Resident, and Physician Suicide D-345.983

Our AMA will: (1) explore the viability and cost-effectiveness of regularly collecting National Death Index (NDI) data and confidentially maintaining manner of death information for physicians, residents, and medical students listed as deceased in the AMA Physician Masterfile for long-term studies; (2) monitor progress by the Association of American Medical Colleges, the American Association of Colleges of Osteopathic Medicine, and the Accreditation Council for Graduate Medical Education (ACGME) to collect data on medical student and resident/fellow suicides to identify patterns that could predict such events; (3) support the education of faculty members, residents and medical students in the recognition of the signs and symptoms of burnout and depression and supports access to free, confidential, and immediately available stigma-free mental health and substance use disorder services; (4) collaborate with other stakeholders to study the incidence of and risk factors for depression, substance misuse and substance use disorders, and attempted and completed suicide among physicians, residents, and medical students; and (5) work with appropriate stakeholders to explore the viability of developing a standardized reporting mechanism for the collection of current wellness initiatives that institutions have in place to inform and promote meaningful mental health and wellness interventions in these populations.

Resident/Fellow Clinical and Educational Work Hours H-310.907

Our AMA adopts the following Principles of Resident/Fellow Clinical and Educational Work Hours, Patient Safety, and Quality of Physician Training:

1. Our AMA supports the 2017 Accreditation Council for Graduate Medical Education (ACGME) standards for clinical and educational work hours (previously referred to as "duty hours").

2. Our AMA will continue to monitor the enforcement and impact of clinical and educational work hour standards, in the context of the larger issues of patient safety and the optimal learning environment for residents.

3. Our AMA encourages publication and supports dissemination of studies in peer-reviewed publications and educational sessions about all aspects of clinical and educational work hours, to include such topics as extended work shifts, handoffs, in-house call and at-home call, level of supervision by attending physicians, workload and growing service demands, moonlighting, protected sleep periods, sleep deprivation and fatigue, patient safety, medical error, continuity of care, resident well-being and burnout, development of professionalism, resident learning outcomes, and preparation for independent practice.

4. Our AMA endorses the study of innovative models of clinical and educational work hour requirements and, pending the outcomes of ongoing and future research, should consider the evolution of specialty- and rotation-specific requirements that are evidence-based and will optimize patient safety and competency-based learning opportunities.

5. Our AMA encourages the ACGME to:

a) Decrease the barriers to reporting of both clinical and educational work hour violations and resident intimidation.

b) Ensure that readily accessible, timely and accurate information about clinical and educational work hours is not constrained by the cycle of ACGME survey visits.

c) Use, where possible, recommendations from respective specialty societies and evidence-based

approaches to any future revision or introduction of clinical and educational work hour rules.

d) Broadly disseminate aggregate data from the annual ACGME survey on the educational environment of resident physicians, encompassing all aspects of clinical and educational work hours.

6. Our AMA recognizes the ACGME for its work in ensuring an appropriate balance between resident education and patient safety, and encourages the ACGME to continue to:

a) Offer incentives to programs/institutions to ensure compliance with clinical and educational work hour standards.

b) Ensure that site visits include meetings with peer-selected or randomly selected residents and that residents who are not interviewed during site visits have the opportunity to provide information directly to the site visitor.

c) Collect data on at-home call from both program directors and resident/fellow physicians; release these aggregate data annually; and develop standards to ensure that appropriate education and supervision are maintained, whether the setting is in-house or at-home.

d) Ensure that resident/fellow physicians receive education on sleep deprivation and fatigue.

7. Our AMA supports the following statements related to clinical and educational work hours:

a) Total clinical and educational work hours must not exceed 80 hours per week, averaged over a four-week period (Note: "Total clinical and educational work hours" includes providing direct patient care or supervised patient care that contributes to meeting educational goals; participating in formal educational activities; providing administrative and patient care services of limited or no educational value; and time needed to transfer the care of patients).

b) Scheduled on-call assignments should not exceed 24 hours. Residents may remain on-duty for an additional 4 hours to complete the transfer of care, patient follow-up, and education; however, residents may not be assigned new patients, cross-coverage of other providers' patients, or continuity clinic during that time.

c) Time spent in the hospital by residents on at-home call must count towards the 80-hour maximum weekly hour limit, and on-call frequency must not exceed every third night averaged over four weeks. The frequency of at-home call is not subject to the every-third-night limitation, but must satisfy the requirement for one-day-in-seven free of duty, when averaged over four weeks.

d) At-home call must not be so frequent or taxing as to preclude rest or reasonable personal time for each resident.

e) Residents are permitted to return to the hospital while on at-home call to care for new or established patients. Each episode of this type of care, while it must be included in the 80-hour weekly maximum, will not initiate a new "off-duty period."

f) Given the different education and patient care needs of the various specialties and changes in resident responsibility as training progresses, clinical and educational work hour requirements should allow for flexibility for different disciplines and different training levels to ensure appropriate resident education and patient safety; for example, allowing exceptions for certain disciplines, as appropriate, or allowing a limited increase to the total number of clinical and educational work hours when need is demonstrated.

g) Resident physicians should be ensured a sufficient duty-free interval prior to returning to duty.

h) Clinical and educational work hour limits must not adversely impact resident physician participation in organized educational activities. Formal educational activities must be scheduled and available within total clinical and educational work hour limits for all resident physicians.

i) Scheduled time providing patient care services of limited or no educational value should be minimized.

j) Accurate, honest, and complete reporting of clinical and educational work hours is an essential element of medical professionalism and ethics.

k) The medical profession maintains the right and responsibility for self-regulation (one of the key tenets of professionalism) through the ACGME and its purview over graduate medical education, and categorically rejects involvement by the Centers for Medicare & Medicaid Services, The Joint Commission, Occupational Safety and Health Administration, and any other federal or state government bodies in the monitoring and enforcement of clinical and educational work hour regulations, and opposes any regulatory or legislative proposals to limit the work hours of practicing physicians.

l) Increased financial assistance for residents/fellows, such as subsidized child care, loan deferment, debt forgiveness, and tax credits, may help mitigate the need for moonlighting. At the same time, resident/fellow physicians in good standing with their programs should be afforded the opportunity for internal and external moonlighting that complies with ACGME policy.

m) Program directors should establish guidelines for scheduled work outside of the residency program, such as moonlighting, and must approve and monitor that work such that it does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.

n) The costs of clinical and educational work hour limits should be borne by all health care payers. Individual resident compensation and benefits must not be compromised or decreased as a result of changes in the graduate medical education system.

o) The general public should be made aware of the many contributions of resident/fellow physicians to high-quality patient care and the importance of trainees' realizing their limits (under proper supervision) so that they will be able to competently and independently practice under real-world medical situations.

8. Our AMA is in full support of the collaborative partnership between allopathic and osteopathic professional and accrediting bodies in developing a unified system of residency/fellowship accreditation for all residents and fellows, with the overall goal of ensuring patient safety.

9. Our AMA will actively participate in ongoing efforts to monitor the impact of clinical and educational work hour limitations to ensure that patient safety and physician well-being are not jeopardized by excessive demands on post-residency physicians, including program directors and attending physicians.

Physician and Medical Staff Member Bill of Rights H-225.942

Our AMA adopts and will distribute the following Medical Staff Rights and Responsibilities:

Preamble

The organized medical staff, hospital governing body, and administration are all integral to the provision of quality care, providing a safe environment for patients, staff, and visitors, and working continuously to improve patient care and outcomes. They operate in distinct, highly expert fields to fulfill common goals, and are each responsible for carrying out primary responsibilities that cannot be delegated.

The organized medical staff consists of practicing physicians who not only have medical expertise but also possess a specialized knowledge that can be acquired only through daily experiences at the frontline of patient care. These personal interactions between medical staff physicians and their patients lead to an accountability distinct from that of other stakeholders in the hospital. This accountability requires that physicians remain answerable first and foremost to their patients.

Medical staff self-governance is vital in protecting the ability of physicians to act in their patients' best interest. Only within the confines of the principles and processes of self-governance can physicians ultimately ensure that all treatment decisions remain insulated from interference motivated by commercial or other interests that may threaten high-quality patient care.

From this fundamental understanding flow the following Medical Staff Rights and Responsibilities:

I. Our AMA recognizes the following fundamental responsibilities of the medical staff:

- a. The responsibility to provide for the delivery of high-quality and safe patient care, the provision of which relies on mutual accountability and interdependence with the health care organization's governing body.
- b. The responsibility to provide leadership and work collaboratively with the health care organization's administration and governing body to continuously improve patient care and outcomes, both in collaboration with and independent of the organization's advocacy efforts with federal, state, and local government and other regulatory authorities.
- c. The responsibility to participate in the health care organization's operational and strategic planning to safeguard the interest of patients, the community, the health care organization, and the medical staff and its members.
- d. The responsibility to establish qualifications for membership and fairly evaluate all members and candidates without the use of economic criteria unrelated to quality, and to identify and manage potential conflicts that could result in unfair evaluation.
- e. The responsibility to establish standards and hold members individually and collectively accountable for quality, safety, and professional conduct.
- f. The responsibility to make appropriate recommendations to the health care organization's governing body regarding membership, privileging, patient care, and peer review.

II. Our AMA recognizes that the following fundamental rights of the medical staff are essential to the medical staff's ability to fulfill its responsibilities:

- a. The right to be self-governed, which includes but is not limited to (i) initiating, developing, and approving or disapproving of medical staff bylaws, rules and regulations, (ii) selecting and removing medical staff leaders, (iii) controlling the use of medical staff funds, (iv) being advised by independent legal counsel, and (v) establishing and defining, in accordance with applicable law, medical staff membership categories, including categories for non-physician members.
- b. The right to advocate for its members and their patients without fear of retaliation by the health care organization's administration or governing body, both in collaboration with and independent of the organization's advocacy efforts with federal, state, and local government and other regulatory authorities.
- c. The right to be provided with the resources necessary to continuously improve patient care and outcomes.
- d. The right to be well informed and share in the decision-making of the health care organization's operational and strategic planning, including involvement in decisions to grant exclusive contracts, close medical staff departments, or to transfer patients into, out of, or within the health care organization.
- e. The right to be represented and heard, with or without vote, at all meetings of the health care organization's governing body.
- f. The right to engage the health care organization's administration and governing body on professional matters involving their own interests.

III. Our AMA recognizes the following fundamental responsibilities of individual medical staff members, regardless of employment or contractual status:

- a. The responsibility to work collaboratively with other members and with the health care organizations administration to improve quality and safety.
- b. The responsibility to provide patient care that meets the professional standards established by the medical staff.
- c. The responsibility to conduct all professional activities in accordance with the bylaws, rules, and regulations of the medical staff.
- e. The responsibility to advocate for the best interest of patients, even when such interest may conflict with the interests of other members, the medical staff, or the health care organization, both in collaboration with and independent of the organization's advocacy efforts with federal, state, and local government and other regulatory authorities.
- f. The responsibility to participate and encourage others to play an active role in the governance and other activities of the medical staff.
- g. The responsibility to participate in peer review activities, including submitting to review, contributing as a reviewer, and supporting member improvement.
- h. The responsibility to utilize and advocate for clinically appropriate resources in a manner that reasonably includes the needs of the health care organization at large.

IV. Our AMA recognizes that the following fundamental rights apply to individual medical staff members, regardless of employment, contractual, or independent status, and are essential to each member's ability to fulfill the responsibilities owed to his or her patients, the medical staff, and the health care organization:

- a. The right to exercise fully the prerogatives of medical staff membership afforded by the medical staff bylaws.
- b. The right to make treatment decisions, including referrals, based on the best interest of the patient, subject to review only by peers.
- c. The right to exercise personal and professional judgment in voting, speaking, and advocating on any matter regarding patient care, medical staff matters, or personal safety, including the right to refuse to work in unsafe situations, without fear of retaliation by the medical staff or the health care organization's administration or governing body, including advocacy both in collaboration with and independent of the organization's advocacy efforts with federal, state, and local government and other regulatory authorities.
- e. The right to be evaluated fairly, without the use of economic criteria, by unbiased peers who are actively practicing physicians in the community and in the same specialty.
- f. The right to full due process before the medical staff or health care organization takes adverse action affecting membership or privileges, including any attempt to abridge membership or privileges through the granting of exclusive contracts or closing of medical staff departments.

g. The right to immunity from civil damages, injunctive or equitable relief, criminal liability, and protection from any retaliatory actions, when participating in good faith peer review activities.

h. The right of access to resources necessary to provide clinically appropriate patient care, including the right to participate in advocacy efforts for the purpose of procuring such resources both in collaboration with and independent of the organization's advocacy efforts, without fear of retaliation by the medical staff or the health care organization's administration or governing body.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 002
(A-24)

Introduced by: Medical Student Section and Resident & Fellow Section

Subject: Removal of the Interim Meeting Resolution Committee

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, AMA Bylaws 2.12.1.1 and 2.13.13 indicate that the Interim Meeting Resolution
2 Committee limits consideration of resolutions to those that pertain to “advocacy and legislation”
3 or “ethics” or that “requir[e] action prior to the following Annual Meeting”; and
4

5 Whereas, six months after the Board of Trustees recommended formation of the Resolution
6 Committee, the Report of the Executive Vice President at Interim 2002 (I-02) noted that “while I
7 appreciate the need to streamline, I strongly believe that everything the AMA does is advocacy,”
8 and elaborated that “this includes activities you might not initially view as advocacy, like the
9 public stands we take on issues of public health and science”¹; and
10

11 Whereas, over the course of 8 years between I-12 and I-19 (up till the implementation of Special
12 Meetings during COVID), the average number of resolutions historically not considered based
13 on Resolution Committee recommendations was less than 7²; and
14

15 Whereas, from I-12 to I-19, the small number of items historically not considered based on
16 Resolution Committee recommendations ranged from 2 to 10 (2 at I-19, 8 at I-18, 4 at I-17, 3 at
17 I-16, 9 at I-15, 8 at I-14, 10 at I-13, and 9 at I-12)²; and
18

19 Whereas, the low number of resolutions historically screened out by the Interim Meeting
20 Resolution Committee indicates that the House has successfully managed its volume of
21 business without significant benefit from the Resolution Committee; and
22

23 Whereas, despite perceptions of increased resolution volume, we have concluded business
24 early at all 4 HODs since returning from COVID, including a full day earlier at A-23; and
25

26 Whereas, the use of the Interim Meeting Resolution Committee functionally means that
27 resolutions relating to meeting operations, Bylaws, task forces, and other organizational
28 initiatives and resolutions requesting studies should be withheld until the Annual Meeting, as
29 they would be unlikely to meet Resolution Committee criteria, unnecessarily delaying regular
30 functions of our HOD and AMA until those resolutions can be introduced in June; and
31

32 Whereas, the Resolution Committee does not meet at all to deliberate, as each member
33 individually and privately simply checks off whether they approve a resolution; and
34

35 Whereas, no criteria exist for whether resolutions should be considered if they relate to reports
36 or to other resolutions approved for consideration, leading to unclear rationale for decisions; and
37

38 Whereas, even resolutions clearly related to advocacy, ethics, or urgency (including titles
39 mentioning “Policy Reform,” “Regulation,” names of specific legislation, or issues pending

1 imminent Congressional votes or executive agency decisions with time-limited comment
2 periods) are regularly screened out, leading to unclear rationale for decisions; and

3
4 Whereas, while a majority vote can consider a screened-out resolution, smaller and newer
5 delegations are at baseline disadvantaged in overturning a negative decision, which conflicts
6 with democratic principles of fairness and protection of minority rights and views, a central tenet
7 of our House's parliamentary procedure to ensure all voices are heard; and

8
9 Whereas, many delegations' advocacy priorities were negatively affected by the narrow
10 resolution criteria at I-23 and several, not just the MSS and RFS, attempted extractions; and

11
12 Whereas, the removal of the Resolution Committee could better balance the load between the
13 Interim and Annual Meetings, rather than the Annual Meeting seeing an increased load due to
14 resolution resubmissions, which also leads to increased report load at subsequent Annual
15 Meetings for resolutions that were referred a year prior; and

16
17 Whereas, while the Interim Meeting is a day shorter, we still concluded business early the last
18 two years, many screened-out resolutions would likely be handled agreeably by Reference
19 Committees without extraction, and our House already uses other ways to effectively self-
20 regulate volume of debate (e.g., calling the question, shortening testimony time); and

21
22 Whereas, better methods to manage a modest increase in Interim Meeting business, without
23 needing to extend the meeting, could include using the same number of Reference Committees
24 as the Annual Meeting, since the Interim Meeting currently only uses 6 and the Annual
25 Meeting's 8 Reference Committees more evenly distribute additional business across additional
26 sessions on both Saturday afternoon and Sunday morning; therefore be it

27
28 RESOLVED, that our American Medical Association remove the Resolution Committee from
29 Interim Meetings by amending AMA Bylaw B-2.13.3, "Resolution Committee," by deletion as
30 follows:

31
32 **Resolution Committee. B-2.13.3**

33 ~~The Resolution Committee is responsible for reviewing resolutions~~
34 ~~submitted for consideration at an Interim Meeting and determining~~
35 ~~compliance of the resolutions with the purpose of the Interim~~
36 ~~Meeting.~~

37 ~~2.13.3.1 Appointment. The Speaker shall appoint the members of~~
38 ~~the committee. Membership on this committee is restricted to~~
39 ~~delegates.~~

40 ~~2.13.3.2 Size. The committee shall consist of a maximum of 31~~
41 ~~members.~~

42 ~~2.13.3.3 Term. The committee shall serve only during the meeting~~
43 ~~at which it is appointed, unless otherwise directed by the House of~~
44 ~~Delegates.~~

45 ~~2.13.3.4 Quorum. A majority of the members of the committee shall~~
46 ~~constitute a quorum.~~

47 ~~2.13.3.5 Meetings. The committee shall not be required to hold~~
48 ~~meetings. Action may be taken by written or electronic~~
49 ~~communications.~~

50 ~~2.13.3.6 Procedure. A resolution shall be accepted for~~
51 ~~consideration at an Interim Meeting upon majority vote of committee~~
52 ~~members voting. The Speaker shall only vote in the case of a tie. If~~

1 a resolution is not accepted, it may be submitted for consideration
2 at the next Annual Meeting in accordance with the procedure in
3 Bylaw 2.11.3.1.

4 ~~2.13.3.7 Report. The committee shall report to the Speaker. A~~
5 ~~report of the committee shall be presented to the House of~~
6 ~~Delegates at the call of the Speaker. (Modify Bylaws); and be it~~
7 further
8

9 RESOLVED, that our AMA remove constraints on the scope of business at Interim Meetings,
10 which is regulated by the Resolution Committee, by amending AMA Bylaw B-2.12.1.1,
11 "Business of Interim Meeting," by deletion as follows:
12

13 **2.12.1.1 Business of Interim Meeting**

14 ~~The business of an Interim Meeting shall be focused on advocacy~~
15 ~~and legislation. Resolutions pertaining to ethics, and opinions and~~
16 ~~reports of the Council on Ethical and Judicial Affairs, may also be~~
17 ~~considered at an Interim Meeting. Other business requiring action~~
18 ~~prior to the following Annual Meeting may also be considered at an~~
19 ~~Interim Meeting. In addition, any other business may be considered~~
20 ~~at an Interim Meeting by majority vote of delegates present and~~
21 ~~voting. (Modify Bylaws)~~

Fiscal Note: Minimal - less than \$1,000

Received: 4/19/2024

RELEVANT AMA Policy

B-11.1 Parliamentary Procedure

In the absence of any provisions to the contrary in the Constitution and these Bylaws, all general meetings of the AMA and all meetings of the House of Delegates, of the Board of Trustees, of Sections and of councils and committees shall be governed by the parliamentary rules and usages contained in the then current edition of The American Institute of Parliamentarians Standard Code of Parliamentary Procedure.

G-600.054 Procedures of the House of Delegates

1. Our AMA reaffirms The American Institute of Parliamentarians Standard Code of Parliamentary Procedure as our parliamentary authority, including the use of the motion to table and the motion to adopt in-lieu-of, and treat amendments by substitution as first-order amendments.
2. The rules and procedures of the House of Delegates will be amended as follows:
 - A. The motion to table a report or resolution that has not yet been referred to a reference committee is not permitted and will be ruled out of order.
 - B. A new motion is added to the House of Delegates Reference Manual, Object to Consideration. If a Delegate objects to consideration of an item of business by our HOD, the correct motion is to Object to Consideration. The motion cannot interrupt a speaker, requires a second, cannot be amended, takes precedence over all subsidiary motions and cannot be renewed. The motion requires a 3/4 vote for passage. Debate is restricted to why the item should not be considered.

3. The procedures of our House of Delegates distinguish between a motion to refer, which is equivalent to a motion to refer for report, and a motion to refer for decision and that the motion to refer for decision be one step higher in precedence.
4. The procedures of our House of Delegates specify that both sides must have been heard before a motion to close debate is in order and that absent an express reference to "all pending matters" the motion applies only to the matter under debate.
5. The procedures of our House of Delegates clarify that adjournment of any House of Delegates meeting finalizes all matters considered at that meeting, meaning that items from one meeting are not subject to a motion to recall from committee, a motion to reconsider or any other motion at a succeeding meeting.
6. The Council on Constitution and Bylaws, in consultation with the speakers, will review the House of Delegates Reference Manual and revise it accordingly. [Report of the Speakers: Rep. 02, A-16; Modified: CCB Rep. 01, A-17]

G-600.060 Introducing Business to the AMA House

AMA policy on introducing business to our AMA House includes the following:

1. Delegates submitting resolutions have a responsibility to review the Resolution checklist and verify that the resolution is in compliance. The Resolution checklist shall be distributed to all delegates and organizations in the HOD prior to each meeting, as well as be posted on the HOD website.
2. An Information Statement can be used to bring an issue to the awareness of the HOD or the public, draw attention to existing policy for purposes of emphasis, or simply make a statement. Such items will be included in the section of the HOD Handbook for informational items and include appropriate attribution but will not go through the reference committee process, be voted on in the HOD or be incorporated into the Proceedings. If an information statement is extracted, however, it will be managed by the Speaker in an appropriate manner, which may include a simple editorial correction up to and including withdrawal of the information statement.
3. Required information on the budget will be provided to the HOD at a time and format more relevant to the AMA budget process.
4. At the time the resolution is submitted, delegates introducing an item of business for consideration of the House of Delegates must declare any commercial or financial conflict of interest they have as individuals and any such conflict of interest must be noted on the resolution at the time of its distribution.
5. The submission of resolutions calling for similar action to what is already existing AMA policy is discouraged. Organizations represented in the House of Delegates are responsible to search for alternative ways to obtain AMA action on established AMA policy, especially by communicating with the Executive Vice President. The EVP will submit a report to the House detailing the items of business received from organizations represented in the House which he or she considers significant or when requested to do so by the organization, and the actions taken in response to such contacts.
6. Our AMA will continue to safeguard the democratic process in our AMA House of Delegates and ensure that individual delegates are not barred from submitting a resolution directly to the House of Delegates.
7. Our AMA encourages organizations and Sections of the House of Delegates to exercise restraint in submitting items on the day preceding the opening of the House.
8. Resolutions will be placed on the Reaffirmation Consent Calendar when they are identical or substantially identical to existing AMA policy. For resolutions placed on the Reaffirmation Consent Calendar, the pertinent existing policy will be clearly identified by reference to the Policy Database identification number. When practical, the Reaffirmation Consent Calendar should also include a listing of the actions that have been taken on the current AMA policies that are equivalent to the resolutions listed. For resolutions on the Reaffirmation Consent Calendar which are not extracted, the existing, pertinent AMA policy will be deemed to be reaffirmed in lieu of the submitted resolution which resets the sunset clock for ten years.
9. Updates on referred resolutions are included in the chart entitled "Implementation of Resolutions," which is made available to the House. [Sub. Res. 120, A-84; BOT Rep. D and CLRPD Rep. C, I-91; CLRPD Rep. 3 - I-94; CLRPD Rep. 5, I-95; Res. 614, and Special Advisory Committee to the Speaker of the House of Delegates, I-99; Res. 604, I-00; Consolidated: CLRPD Rep. 3, I-01; Modified: CLRPD Rep. 2, A-03; Reaffirmed: BOT Rep. 19, A-04; CC&B Rep. 3, I-08; Modified: CCB/CLRPD Rep. 1, A-12]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 003
(A-24)

Introduced by: Medical Student Section

Subject: Amendments to AMA Bylaws to Enable Medical Student Leadership
Continuity

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, terms on the Medical Student Section (MSS) Governing Council, as the medical
2 student member on an AMA Council or the AMA Board of Trustees, or as the MSS
3 representative on the Minority Affairs Section or Women Physicians Section Governing Councils
4 are one year in length and commence after the Annual Meeting; and
5

6 Whereas, the AMA Bylaws defining cessation of eligibility for these positions state that if the
7 medical student leader “graduates from an educational program within 90 days prior to an
8 Annual Meeting,” they shall be permitted to continue to serve “until the completion of the Annual
9 Meeting”; and
10

11 Whereas, some students graduate off-cycle during the fall semester rather than the spring
12 semester, including some in November, over 180 days prior to the AMA Annual Meeting; and
13

14 Whereas, graduation off-cycle is more common for students with disabilities or chronic illness,
15 students who have taken leave of absence for personal or familial reasons, students who have
16 overcome medical or personal challenges, students from underrepresented backgrounds,
17 students who have pursued unique opportunities, and students who have faced obstacles
18 during their educational journey; and
19

20 Whereas, students who graduate off-cycle would technically be forced under the AMA Bylaws to
21 vacate their AMA national leadership position, leading to discontinuity of Medical Student
22 Section leadership, disrupting MSS internal operations and priorities, and curtailing these
23 students’ opportunity to grow as leaders; and
24

25 Whereas, the MSS Assembly has repeatedly unanimously expressed their desire that students
26 who graduate off-cycle should be able to complete their leadership terms; therefore be it
27

28 RESOLVED, that our American Medical Association amend AMA Bylaws 3.5.6.3, 6.11, 7.3.2,
29 7.7.3.1, and 7.10.3.1 to allow medical students to serve on the Medical Student Section
30 Governing Council, on the AMA Board of Trustees, on AMA Councils, and as Section
31 Representatives on other Governing Councils for up to 200 days after graduation. (Modify
32 Bylaws)
33

Fiscal Note: Minimal - less than \$1,000

Received: 4/5/2024

RELEVANT AMA POLICY

Medical Student Trustee - Cessation of Enrollment B-3.5.6.3

The term of the medical student trustee shall terminate and the position shall be declared vacant if the medical student trustee should cease to be eligible for medical student membership in the AMA by virtue of the termination of the trustee's enrollment in an educational program. If the medical student trustee graduates from an educational program within 90 days prior to an Annual Meeting, the trustee shall be permitted to continue to serve on the Board of Trustees until completion of the Annual Meeting.

Term of Resident/Fellow Physician or Medical Student Member B-6.11

A resident/fellow physician or medical student member of a Council who completes residency or fellowship or who graduates from an educational program within 90 days prior to an Annual Meeting shall be permitted to serve on the Council until the completion of the Annual Meeting. Service on a Council as a resident/fellow physician and/or medical student member shall not be counted in determining maximum Council tenure.

Medical Student Section - Cessation of Eligibility B-7.3.2

If any officer or Governing Council member ceases to meet the membership requirements of Bylaw 7.3.1 prior to the expiration of the term for which elected, the term of such officer or member shall terminate and the position shall be declared vacant. If the officer or member graduates from an educational program within 90 days prior to an Annual Meeting, the officer or member shall be permitted to continue to serve in office until the completion of the Annual Meeting.

Minority Affairs Section - Section Representatives on the Governing Council B-7.7.3.1

If a representative of the Medical Student Section, Resident and Fellow Section or Young Physicians Section ceases to meet the criteria for membership in the section from which elected within 90 days prior to the Annual Meeting, such member shall be permitted to serve in office until the conclusion of the Annual Meeting in the calendar year in which he or she ceases to meet the membership requirement of the respective section.

Women Physicians Section - Section Representatives on the Governing Council B-7.10.3.1

If a representative of the Medical Student Section, Resident and Fellow Section or Young Physicians Section ceases to meet the criteria for membership in the section from which elected within 90 days prior to the Annual Meeting, such member shall be permitted to serve in office until the conclusion of the Annual Meeting in the calendar year in which she or he ceases to meet the membership requirement of the respective section.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 004
(A-24)

Introduced by: Thomas W. Eppes, MD, Mark D. Townsend, MD MHCM, and Billie L. Jackson, MD.

Subject: The Rights of Newborns that Survive Abortion

Referred to: Reference Committee on Amendments to Constitution and Bylaws

- 1 Whereas, our American Medical Association recognizes healthcare as a human right; and
2
3 Whereas, the AMA has policy 2.2.4(d) Treatment Decisions for the Seriously Ill Newborn, which
4 states, "Initiate life sustaining and life enhancing treatment when the child's prognosis is largely
5 uncertain"; and
6
7 Whereas, AMA Code 2.2.1(I) calls on the physician to seek consultation when there is a
8 reversible life-threatening condition and the patient (If capable) or parents or guardian refuses
9 treatment the physician believes is clearly the patient's best interest (ii) there is disagreement
10 about what the patient's best interest is; and
11
12 Whereas, CDC data shows from 2003-14 at least 143 babies died after being born alive after an
13 abortion procedure, but did not count newborns that survived attempted abortions; and
14
15 Whereas, the number of children that live after an abortion procedure is only reported now by
16 anecdotal reports; and
17
18 Whereas, cited in the Annotations section of the Code of Ethics, "Children Not Meant to Be:
19 Protecting the Interests of the Child When Abortion Results in Live Birth", 6 Quinnipiac Health
20 states in conclusion that "in these situations, abortive parents and physicians should not solely
21 decide the child's best interests."; therefore be it
22
23 RESOLVED, that our American Medical Association amend the current policy right for an
24 abortion to "a woman's right to abortion as only the right to terminate the pregnancy" (Modify
25 Current HOD Policy); and be it further
26
27 RESOLVED, a newborn that survives an abortion procedure has a right to reasonable medical
28 care. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/23/2024

Relevant AMA Policy:

AMA Policy 2.2.4 Treatment Decisions for Seriously Ill Newborns

Making treatment decisions for seriously ill newborns is emotionally and ethically challenging for both parents and health care professionals. Decisions must take into account the newborn's medical needs; the interests, needs, and resources of the family; and available treatment options. Decision makers must also assess whether the choice made for the newborn will abrogate a choice the future individual would want to make for him- or herself, i.e., whether the choice will undermine the child's right to an "open future." Providing information and other resources to support parents or guardians when they must make decisions about their child's care and future is a key responsibility for physicians and other health care professionals.

Decisions not to initiate care or to discontinue an intervention can be emotionally wrenching in any circumstance, but may be particularly so for a seriously ill newborn. Physicians are in a position to help parents, families, and fellow professionals understand that there is no ethical difference between withholding and withdrawing treatment—when an intervention no longer helps to achieve the goals of care or promote the quality of life desired for the patient, it is ethically appropriate to withdraw it.

To help parents formulate goals for their newborn's care and make decisions about life-sustaining treatment on their child's behalf, physicians should:

- a. Inform the parents about available therapeutic options, the nature of available interventions, and their child's expected prognosis with and without treatment.
- b. Help the parents formulate goals for care that will promote their child's best interests in light of:
 - i. the chance that the intervention will achieve the intended clinical benefit;
 - ii. the risks involved with treatment and nontreatment;
 - iii. the degree to which treatment can be expected to extend life;
 - iv. the pain and discomfort associated with the intervention; and
 - v. the quality of life the child can be expected to have with and without treatment.
- c. Discuss the option of initiating an intervention with the intention of evaluating its clinical effectiveness after a given amount of time to determine whether the intervention has led to improvement. Confirm that if the intervention has not achieved agreed-on goals, it may be withdrawn. Physicians should recognize, and help parents appreciate, that it is not necessary to have prognostic certainty to withdraw life-sustaining treatment, since prognostic certainty is often unattainable and may unnecessarily prolong the infant's suffering.
- d. Initiate life-sustaining and life-enhancing treatment when the child's prognosis is largely uncertain.
- e. Adhere to good clinical practice for palliative care when life-sustaining treatment is withheld or withdrawn.
- f. Provide access to counseling services or other resources to facilitate decision making and to enable parents opportunity to talk with others who have had to make similar decisions.
- g. Seek consultation through an ethics committee or other institutional resource when disagreement about the appropriate course of action persists.

AMA Policy 2.2.1 Pediatric Decision Making

As the persons best positioned to understand their child's unique needs and interests, parents (or guardians) are asked to fill the dual responsibility of protecting their children and, at the same time, empowering them and promoting development of children's capacity to become independent decision makers. In giving or withholding permission for medical treatment for their children, parents/guardians are expected to safeguard their children's physical health and well-being and to nurture their children's developing personhood and autonomy.

But parents' authority as decision makers does not mean children should have no role in the decision-making process. Respect and shared decision making remain important in the context of decisions for minors. Thus, physicians should evaluate minor patients to determine if they can understand the risks and benefits of proposed treatment and tailor disclosure accordingly. The more mature a minor patient is, the better able to understand what a decision will mean, and the more clearly the child can communicate preferences, the stronger the ethical obligation to seek minor patients' assent to treatment. Except when immediate intervention is essential to preserve life or avert serious, irreversible harm, physicians and

parents/guardians should respect a child's refusal to assent, and when circumstances permit should explore the child's reason for dissent.

For health care decisions involving minor patients, physicians should:

- a. Provide compassionate, humane care to all pediatric patients.
- b. Negotiate with parents/guardians a shared understanding of the patient's medical and psychosocial needs and interests in the context of family relationships and resources.
- c. Develop an individualized plan of care that will best serve the patient, basing treatment recommendations on the best available evidence and in general preferring alternatives that will not foreclose important future choices by the adolescent and adult the patient will become. Where there are questions about the efficacy or long-term impact of treatment alternatives, physicians should encourage ongoing collection of data to help clarify value to patients of different approaches to care.
- d. Work with parents/guardians to simplify complex treatment regimens whenever possible and educate parents/guardians in ways to avoid behaviors that will put the child or others at risk.
- e. Provide a supportive environment and encourage parents/guardians to discuss the child's health status with the patient, offering to facilitate the parent-child conversation for reluctant parents. Physicians should offer education and support to minimize the psychosocial impact of socially or culturally sensitive care, including putting the patient and parents/guardians in contact with others who have dealt with similar decisions and have volunteered their support as peers.
- f. When decisions involve life-sustaining treatment for a terminally ill child, ensure that patients have an opportunity to be involved in decision making in keeping with their ability to understand decisions and their desire to participate. Physicians should ensure that the patient and parents/guardians understand the prognosis (with and without treatment). They should discuss the option of initiating therapy with the intention of evaluating its clinical effectiveness for the patient after a specified time to determine whether it has led to improvement and confirm that if the intervention has not achieved agreed-on goals it may be discontinued.
- g. When it is not clear whether a specific intervention promotes the patient's interests, respect the decision of the patient (if the patient has capacity and is able to express a preference) and parents/guardians.
- h. When there is ongoing disagreement about patient's best interest or treatment recommendations, seek consultation with an ethics committee or other institutional resource. (IV, VIII)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 005
(A-24)

Introduced by: Mississippi

Subject: AMA Executive Vice President

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, our American Medical Association (AMA) is the most powerful voice for physicians in
2 the nation; and
3
4 Whereas, the Executive Vice President (EVP) of the AMA is thus a position of extreme
5 importance to the physician community; and
6
7 Whereas, the tradition of our AMA has been to have a physician EVP; and
8
9 Whereas, our AMA should select the most qualified physician leader possible for the EVP
10 position; and
11
12 Whereas, at any given time that best physician leader may be serving or have recently served in
13 the AMA physician leadership; and
14
15 Whereas, physician leaders who are serving or recently served in AMA leadership are
16 sometimes the most knowledgeable and experienced in addressing the current issues facing
17 the House of Medicine; and
18
19 Whereas, many physician leaders serving in the AMA would be extremely qualified candidates
20 for the AMA EVP based on their AMA leadership experience and their own medical practice and
21 medical administration leadership experiences; and
22
23 Whereas, the Mississippi State Medical Association (MSMA) had a similar situation and was
24 able to hire a physician and past President and Chair of the Board of our MSMA as our
25 Executive Director during a difficult time for our organization; and
26
27 Whereas, the MSMA board wanted the ability to hire the best qualified candidate as Executive
28 Director without the restriction even if they had served or were currently serving in a leadership
29 role at MSMA; and
30
31 Whereas, physicians who may be serving or have recently served in the AMA physician
32 leadership as an officer or trustee are currently ineligible for consideration for the AMA EVP
33 position under AMA Code Section B-5.3.6.4 until three years after their AMA service; and
34
35 Whereas, no comparable physician or health care organization has such a strict limitation on
36 who can be considered for their EVP position; therefore be it
37
38 RESOLVED, that our American Medical Association delete the AMA Board of Trustees Duties
39 and Privileges Code B-5.3.6.4 as follows:

- 1 ~~No individual who has served as an AMA officer or trustee shall be selected or serve as~~
- 2 ~~Executive Vice President until three years following completion of the term of the AMA office.”~~
- 3 (Modify Bylaws)

Fiscal Note: Minimal - less than \$1,000

Received: 4/23/2024

RELEVANT AMA POLICY

Board of Trustees Duties and Privileges. B-5.3

In addition to the rights and duties conferred or imposed upon the Board of Trustees by law and custom and elsewhere in the Constitution and Bylaws, the Board of Trustees shall:

5.3.1 Management. Manage or direct the management of the property and conduct the affairs, work and activities of the AMA consistent with the policy actions and directives adopted by the House of Delegates, except as may be otherwise provided in the Constitution or these Bylaws.

5.3.1.1 The Board is the principal governing body of the AMA and it exercises broad oversight and guidance for the AMA with respect to the management systems and risk management program of the AMA through its oversight of the AMA's Executive Vice President.

5.3.1.2 Board of Trustee actions should be based on policies and directives approved by the House of Delegates. In the absence of specifically applicable House policies or directives and to the extent feasible, the Board shall determine AMA positions based on the tenor of past policy and other actions that may be related in subject matter.

5.3.2 Planning. Serve as the principal planning agent for the AMA.

5.3.2.1 Planning focuses on the AMA's goals and objectives and involves decision-making over allocation of resources and strategy development. Planning is a collaborative process involving all of the AMA's Councils, Sections, and other appropriate AMA components.

5.3.2.2 The House of Delegates and the Council on Long Range Planning and Development have key roles in identifying and making recommendations to the Board regarding important strategic issues and directions related to the AMA's vision, goals, and priorities.

5.3.3 Fulfillment of House of Delegates Charge. Review all resolutions and recommendations adopted by the House of Delegates to determine how to fulfill the charge from the House. Resolutions and recommendations pertaining to the expenditure of funds also shall be reviewed. If it is decided that the expenditure is inadvisable, the Board shall report, at its earliest convenience, to the House the reasons for its decisions.

5.3.3.1 In determining expenditure advisability, the Board will consider the scope of the proposed expenditure and whether it is consistent with the AMA's vision, goals, and priorities. Where the Board recommends that a proposed expenditure is not prudent and is inadvisable, the Board will present alternative actions, if feasible, in its report to the House.

5.3.4 Publication. Within the policies adopted by the House of Delegates, provide for the publication of The Journal of the American Medical Association and such specialty journals, periodicals, and other publications and electronic media information as it may deem to be desirable in the best interests of the public and the medical profession.

5.3.5 Election of Secretary. Select a Secretary from one of its members annually.

5.3.6 Selection of Executive Vice President. Select and evaluate an Executive Vice President.

5.3.6.1 The Executive Vice President is the chief executive officer of the AMA and as such is responsible for AMA management and performance in accordance with the vision, goals, and priorities of the AMA. The Executive Vice President is both a key leader for the organization and the bridge between AMA management and the Board of Trustees.

5.3.6.2 The Executive Vice President shall manage and direct the day-to-day duties of the AMA, including advocacy activities, and perform the duties commonly required of the chief executive officer of a corporation.

5.3.6.3 The Executive Vice President shall ensure that there is an active and effective risk management program.

5.3.6.4 No individual who has served as an AMA Officer or Trustee shall be selected or serve as Executive Vice President until 3 years following completion of the term of the AMA office.

5.3.7 Finances. Maintain the financial health of the AMA. The Board shall:

5.3.7.1 Oversee the development and approve the annual budget for the AMA, consistent with the AMA's vision, goals, and priorities.

5.3.7.2 Ensure that the AMA's resource allocations are aligned with the AMA's plan and budget.

5.3.7.3 Evaluate membership dues levels and make related recommendations to the House of Delegates.

5.3.7.4 Review and approve financial and business decisions that significantly affect the AMA's revenues and expenses.

5.3.7.5 Have the accounts of the AMA audited at least annually.

5.3.8 Financial Reporting. Make proper financial reports concerning AMA affairs to the House of Delegates at its Annual Meeting.

5.3.9 Appointment of Committees. Appoint such committees as necessary to carry out the purposes of the AMA.

5.3.9.1 An advisory committee will be constituted for purposes of education and advocacy.

5.3.9.1.1 It will have a governing council and a direct reporting relationship to the Board.

5.3.9.1.2 An advisory committee will not have representation in the House of Delegates.

5.3.9.1.3 An advisory committee will operate under a charter that will be subject to review and renewal by the Board at least every four years.

5.3.9.2 An ad hoc committee will be constituted as a special committee, workgroup or taskforce.

5.3.9.2.1 It will operate for a specific purpose and for a prescribed period of time.

5.3.10 Committee Vacancies. Fill vacancies in any committee where such authority is not delegated elsewhere by these Bylaws.

5.3.11 Litigation. Initiate, defend, settle, or otherwise dispose of litigation involving the interests of the AMA.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 006
(A-24)

Introduced by: Missouri

Subject: Treatment of Family Members

Referred to: Reference Committee on Amendments to Constitution and Bylaws

- 1 Whereas, the code of ethics of the American Medical Association (AMA) was written in the 19th
2 century AD; and
3
- 4 Whereas, the practice of medicine has taken giant steps since then in areas of diagnostic
5 testing, medical records recordings, patient safety measures, documentations, verifications,
6 consents, hospitals and outpatients credentialing of surgeons and procedurists, etc.; and
7
- 8 Whereas, concerns about appropriateness of care, indications, and proper training of physicians
9 performing a procedure, or a physician treating any patient has become a legal and ethical
10 process witnessed by office, hospital, and medical facilities' staff including medical and non-
11 medical personnel recording, and reviewing appropriateness of care besides the treating
12 physicians; and
13
- 14 Whereas, multiple documented surveys of specialists and PCPs showed that a large number of
15 these physicians admitted treating family members when they felt comfortable and confident
16 they can provide the best care for them; and
17
- 18 Whereas, a much larger percentages of plastic, head and neck surgeons, dermatologists, have
19 admitted treating their family members; and
20
- 21 Whereas, the current code of ethics, as it is currently written, sadly label these physicians acts
22 as unethical; and
23
- 24 Whereas, many hospitals, and surgery centers have "discovered" lately this part of the code of
25 ethics, and started enforcing it, therefore forcing the physicians to seek other venues to treat
26 family members; and
27
- 28 Whereas, rendering care or performing procedures outside approved facilities such as an
29 uncredited office procedure room or un-accredited other facilities endanger the life and well-
30 being of the patients; and
31
- 32 Whereas, physicians ultimate concern is their patient's safety and wellbeing whether the patient
33 is a family member, a staff person, a friend or none of these; therefore be it
34
- 35 RESOLVED, that our American Medical Association asks CEJA to review and revise the current
36 code of ethics as it relates to treating family members (Directive to Take Action); and be it
37 further
38
- 39 RESOLVED, that our AMA ask CEJA to report back to the HOD on this issue at the next interim
40 meeting I-24. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 007
(A-24)

Introduced by: American Association of Public Health Physicians

Subject: AMA Supports a Strategy for Eliminating Nuclear Weapons

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, AMA policies concerning weapons, which were modified last in 2015, voice clear
2 “opposition to nuclear war” (Ref 1) and support for “the elimination by all nations of nuclear
3 weapons and other weapons of mass and indiscriminate destruction” (Ref 2); and
4

5 Whereas, millions have been sickened or killed by nuclear weapons testing around the world
6 since 1945, yet the United Nation’s Comprehensive Nuclear Test Ban Treaty, adopted by the
7 UN General Assembly in 1996 and ratified by 178 countries as of March 2024, has failed to
8 enter into force because the United States and other nuclear weapons possessing countries
9 have not ratified it and because, ominously, Vladimir Putin’s government withdrew its ratification
10 in 2023 (Ref 3); and
11

12 Whereas, AMA policy supports a “comprehensive nuclear test ban” and encourages the US
13 Government to “to continue the process of bilateral and verifiable nuclear arms reduction”, (Ref
14 4 & 5) but that process has stalled; and
15

16 Whereas, seventy-six years after the 1945 bombs that killed hundreds of thousands of innocent
17 civilians in Japan, the United Nation’s Treaty of the Prohibition of Nuclear Weapons at last
18 became international law in 2021, though the Treaty is not ratified yet by any country that
19 possesses nuclear weapons, (Ref 6); and
20

21 Whereas, the US government plans to spend \$1.7-3 trillion over the next thirty years to update
22 its thousands of nuclear bombs and delivery systems, money that the concepts of intersectional
23 justice (Ref 7) dictate should be better spent on healthcare, education, housing and other
24 needs; and
25

26 Whereas, a strategy towards implementing the Treaty on the Prohibition of Nuclear Weapons
27 has been enunciated (Ref 8); and
28

29 Whereas, this strategy has been endorsed by hundreds of local governments, civil society
30 organizations, and medical organizations, including the Maine Medical Association, American
31 Public Health Association, Physicians for Social Responsibility, and Union of Concerned
32 Scientists, (Ref 9); and
33

34 Whereas, the ongoing conflicts in Ukraine, the Middle East, and the Indo-Pakistani region
35 involving nuclear weapons possessing countries are raising the risk of an intentional or
36 accidental nuclear war with devastating health consequences; therefore be it
37

38 RESOLVED, that our American Medical Association calls for the United States and the other
39 nuclear weapons states to sign and ratify the United Nations Treaty on the Prohibition of

1 Nuclear Weapons and to pursue good-faith negotiations on effective measures relating to the
2 cessation of the nuclear arms race (Directive to Take Action); and be it further

3
4 RESOLVED, that our AMA calls for the United States to renounce the option to be the first
5 country to use nuclear weapons (“first use”) during a conflict (Directive to Take Action); and be it
6 further

7
8 RESOLVED, that our AMA supports a process whereby multiple individuals, rather than solely
9 the President, are required to approve a nuclear attack, while still allowing a swift response
10 when needed (New HOD Policy); and be it further

11
12 RESOLVED, that our AMA calls on the US government to cancel plans to rebuild its entire
13 nuclear arsenal and instead to reassess its true strategic needs for the types and numbers of
14 nuclear weapons and delivery systems. (Directive to Take Action)

15
Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 008
(A-24)

Introduced by: Barbara L. McAneny, MD

Subject: Consolidated Health Care Market

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, the American Medical Association has long warned the nation about the problems
2 that can be associated with a consolidated health care market and has opposed insurance
3 company mergers; and
4

5 Whereas, Optum acquired Change Health over the objections of the Federal Trade
6 Commission; and
7

8 Whereas, on February 21, 2024, Optum and Change Health suffered a ransomware attack and
9 shut down all operations, including the electronic claims submission, electronic remittance, prior
10 authorization and documentation of patient eligibility; and
11

12 Whereas, across the country, medical practices, hospitals, pharmacies and many other health
13 care businesses had their revenue cycle disrupted, and cash flow interrupted, putting their
14 economic viability at risk; and
15

16 Whereas, Optum and its parent company United Health Group continued to collect premiums
17 and had the opportunity to retain significant amounts of money as no claims were being paid,
18 and therefore had the opportunity to collect interest and investment gains on money that should
19 have been paid to practices and other entities, raising the question of unjust enrichment; and
20

21 Whereas, Optum is the largest employer of physicians and has acquired practices when the
22 ransomware disruption made those practices unable to survive without acquisition; and
23

24 Whereas, even the practices that survive will have ongoing damages including but not limited to
25 denials related to giving therapy when it was impossible to obtain prior authorization, from using
26 lines of credit and having to pay interest, from having billing departments and others work
27 overtime to submit claims, to losing key employees from inability to make payroll; and
28

29 Whereas, oncology practices were particularly hard hit because of the need to purchase
30 chemotherapy without being able to be paid for the chemotherapy and are being charged late
31 payments for those purchases; and
32

33 Whereas, the AMA has a long history of defending practices against unfair business practices
34 by insurance companies and their subsidiaries; therefore be it
35

36 RESOLVED, that our American Medical Association investigate the possibility of filing a class
37 action lawsuit against Optum, United Health Group and Change Health to recoup the damages
38 from the disruption caused by the breach, and to distribute the unfair enrichment profits made
39 by Optum et al to the practices whose retained payments allowed them to generate interest and
40 investment profits (Directive to Take Action); and be it further

- 1 RESOLVED, that our AMA investigate the acquisition of practices by Optum in the aftermath of
- 2 the breach and determine if the independence of those practices can be resurrected, and if not,
- 3 if damages are due to the physician owners of the acquired practices. (Directive to Take Action)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 009
(A-24)

Introduced by: Resident and Fellow Section

Subject: Updating Language Regarding Families and Pregnant Persons

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, current AMA policy includes gendered language such as “mother” and “pregnant
2 woman” when discussing families and persons in need of obstetric and gynecologic care such
3 as in H-20.917, H-320.954, H-420.950, H-420.962, H-420.969, and more; and
4

5 Whereas, the Human Rights Campaign (HRC) definition of “family” when used in hospital
6 visitation policy is stated as: “‘Family’ means any person(s) who plays a significant role in an
7 individual’s life. This may include a person(s) not legally related to the individual. Members of
8 ‘family’ include spouses, domestic partners, and both different-sex and same-sex significant
9 others. ‘Family’ includes a minor patient’s parents, regardless of the gender of either parent.”¹;
10 and
11

12 Whereas, in 2022 the American College of Obstetricians and Gynecologists (ACOG) published
13 a policy statement stating “To be inclusive of women and all patients in need of obstetric and
14 gynecologic care, ACOG will move beyond the exclusive use of gendered language and
15 definitions”¹; and
16

17 Whereas, the World Professional Association for Transgender Health (WPATH)’s *Standards of*
18 *Care - version 8*, published in 2022, includes guideline 1.2 which states that “We recommend
19 health care professionals use language in health care settings that uphold the principles of
20 safety, dignity, and respect”³; and
21

22 Whereas, AMA policy H-65.942, adopted in June 2023, strongly encourages the use of gender-
23 neutral language supports the use of gender-neutral language in AMA policies and
24 communications, but as written this policy does not apply to other resources the AMA creates
25 and distributes; therefore be it
26

27 RESOLVED, that our American Medical Association review and update the language used in
28 AMA policy and other resources and communications to ensure that the language used to
29 describe families and persons in need of obstetric and gynecologic care is inclusive of all
30 genders and family structures. (Directive to Take Action)

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

Relevant AMA Policy:

HIV/AIDS and Substance Abuse H-20.903

Our AMA: (1) urges federal, state, and local governments to increase funding for drug treatment so that drug abusers have immediate access to appropriate care, regardless of ability to pay. Experts in the field agree that this is the most important step that can be taken to reduce the spread of HIV infection among intravenous drug abusers; (2) advocates development of regulations and incentives to encourage retention of HIV-positive and AIDS-symptomatic patients in drug treatment programs so long as such placement is clinically appropriate; (3) encourages the availability of opioid maintenance for persons addicted to opioids. Federal and state regulations governing opioid maintenance and treatment of drug dependent persons should be reevaluated to determine whether they meet the special needs of intravenous drug abusers, particularly those who are HIV infected or AIDS symptomatic. Federal and state regulations that are based on incomplete or inaccurate scientific and medical data that restrict or inhibit opioid maintenance therapy should be removed; and (4) urges development of educational, medical, and social support programs for intravenous drug abusers and their sexual or needle-sharing partners to reduce risk of HIV infection, as well as risk of other bloodborne and sexually transmissible diseases. Such efforts must target (a) pregnant intravenous drug abusers and those who may become pregnant to address the current and future health care needs of both mothers and newborns and (b) adolescent substance abusers, especially homeless, runaway, and detained adolescents who are seropositive or AIDS symptomatic and those whose lifestyles place them at risk for contracting HIV infection. [CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13]

Maternal HIV Screening and Treatment to Reduce the Risk of Perinatal HIV Transmission H-20.918

In view of the significance of the finding that treatment of HIV-infected pregnant women with appropriate antiretroviral therapy can reduce the risk of transmission of HIV to their infants, our AMA recommends the following statements:

- (1) Given the prevalence and distribution of HIV infection among women in the United States, the potential for effective early treatment of HIV infection in both women and their infants, and the significant reduction in perinatal HIV transmission with treatment of pregnant women with appropriate antiretroviral therapy, routine education about HIV infection and testing should be part of a comprehensive health care program for all women. The ideal would be for all women to know their HIV status before considering pregnancy.
- (2) Universal HIV testing of all pregnant women, with patient notification of the right of refusal, should be a routine component of perinatal care. Basic counseling on HIV prevention and treatment should also be provided to the patient, consistent with the principles of informed consent.
- (3) The final decision about accepting HIV testing is the responsibility of the woman. The decision to consent to or refuse an HIV test should be voluntary. When the choice is to reject testing, the patient's refusal should be recorded. Test results should be confidential within the limits of existing law and the need to provide appropriate medical care for the woman and her infant.
- (4) To assure that the intended results are being achieved, the proportion of pregnant women who have accepted or rejected HIV testing and follow-up care should be monitored and reviewed periodically at the appropriate practice, program or institutional level. Programs in which the proportion of women accepting HIV testing is low should evaluate their methods to determine how they can achieve greater success.

(5) Women who are not seen by a health care professional for prenatal care until late in pregnancy or after the onset of labor should be offered HIV testing at the earliest practical time, but not later than during the immediate postpartum period.

(6) When HIV infection is documented in a pregnant woman, proper post-test counseling should be provided. The patient should be given an appropriate medical evaluation of the stage of infection and full information about the recommended management plan for her own health. Information should be provided about the potential for reducing the risk of perinatal transmission of HIV infection to her infant through the use of antiretroviral therapy, and about the potential but unknown long-term risks to herself and her infant from the treatment course. The final decision to accept or reject antiretroviral treatment recommended for herself and her infant is the right and responsibility of the woman. When the woman's serostatus is either unknown or known to be positive, appropriate counseling should also be given regarding the risks associated with breastfeeding for both her own disease progression and disease transmission to the infant.

(7) Appropriate medical treatment for HIV-infected pregnant women should be determined on an individual basis using the latest published Centers for Disease Control and Prevention recommendations. The most appropriate care should be available regardless of the stage of HIV infection or the time during gestation at which the woman presents for prenatal or intrapartum care.

(8) To facilitate optimal medical care for women and their infants, HIV test results (both positive and negative) and associated management information should be available to the physicians taking care of both mother and infant. Ideally, this information will be included in the confidential medical records. Physicians providing care for a woman or her infant should obtain the appropriate consent and should notify the other involved physicians of the HIV status of and management information about the mother and infant, consistent with applicable state law.

(9) Continued research into new interventions is essential to further reduce the perinatal transmission of HIV, particularly the use of rapid HIV testing for women presenting in labor and for women presenting in the prenatal setting who may not return for test results. The long-term effects of antiretroviral therapy during pregnancy and the intrapartum period for both women and their infants also must be evaluated. For both infected and uninfected infants exposed to perinatal antiretroviral treatment, long-term follow-up studies are needed to assess potential complications such as organ system toxicity, neurodevelopmental problems, pubertal development problems, reproductive capacity, and development of neoplasms.

(10) Health care professionals should be educated about the benefits of universal HIV testing, with patient notification of the right of refusal, as a routine component of prenatal care, and barriers that may prevent implementation of universal HIV testing as a routine component of prenatal care should be addressed and removed. Federal funding for efforts to prevent perinatal HIV transmission, including both prenatal testing and appropriate care of HIV-infected women, should be maintained. [CSA Rep. 4, A-03; Reaffirmed: CEJA Rep. 3, A-10; Reaffirmed: CSAPH Rep. 01, A-20]

Lead Contamination in Municipal Water Systems as Exemplified by Flint, Michigan H-60.918

1. Our AMA will advocate for biologic (including hematological) and neurodevelopmental monitoring at established intervals for children exposed to lead contaminated water with resulting elevated blood lead levels (EBLL) so that they do not suffer delay in diagnosis of adverse consequences of their lead exposure.

2. Our AMA will urge existing federal and state-funded programs to evaluate at-risk children to expand services to provide automatic entry into early-intervention screening programs to assist in the neurodevelopmental monitoring of exposed children with EBLL.

3. Our AMA will advocate for appropriate nutritional support for all people exposed to lead contaminated water with resulting elevated blood lead levels, but especially exposed pregnant women, lactating mothers and exposed children. Support should include Vitamin C, green leafy vegetables and other calcium resources so that their bodies will not be forced to substitute lead for missing calcium as the children grow.

4. Our AMA promotes screening, diagnosis and acceptable treatment of lead exposure and iron deficiency in all people exposed to lead contaminated water. [Res. 428, A-16]

Reducing Lead Poisoning H-60.924

1. Our AMA: (a) supports regulations and policies designed to protect young children from exposure to lead; (b) urges the Centers for Disease Control and Prevention to give priority to examining the current

weight of scientific evidence regarding the range of adverse health effects associated with blood lead concentrations below the current "level of concern" in order to provide appropriate guidance for physicians and public health policy, and encourage the identification of exposure pathways for children who have low blood lead concentrations, as well as effective and innovative strategies to reduce overall childhood lead exposure; (c) encourages physicians and public health departments to screen children based on current recommendations and guidelines and to report all children with elevated blood levels to the appropriate health department in their state or community in order to fully assess the burden of lead exposure in children. In some cases this will be done by the physician, and in other communities by the laboratories; (d) promotes community awareness of the hazard of lead-based paints; and (e) urges paint removal product manufacturers to print precautions about the removal of lead paint to be included with their products where and when sold.

2. Our AMA will call on the United States government to establish national goals to: (a) ensure that no child has a blood lead level $>5 \mu\text{g/dL}$ ($>50 \text{ ppb}$) by 2021, and (b) eliminate lead exposures to pregnant women and children, so that by 2030, no child would have a blood lead level $>1 \mu\text{g/dL}$ (10 ppb).

3. Our AMA will call on the United States government in all its agencies to pursue the following strategies to achieve these goals: (a) adopt health-based standards and action levels for lead that rely on the most up-to-date scientific knowledge to prevent and reduce human exposure to lead, and assure prompt implementation of the strongest available measures to protect pregnant women and children from lead toxicity and neurodevelopmental impairment; (b) identify and remediate current and potential new sources of lead exposure (in dust, air, soil, water and consumer products) to protect children before they are exposed; (c) continue targeted screening of children to identify those who already have elevated blood lead levels for case management, as well as educational and other services; (d) eliminate new sources of lead introduced or released into the environment, which may entail banning or phasing out all remaining uses of lead in products (aviation gas, cosmetics, wheel weights, industrial paints, batteries, lubricants, and other sources), and the export of products containing lead, and setting more protective limits on emissions from battery recyclers and other sources of lead emissions; (e) provide a dedicated funding stream to enhance the resources available to identify and eliminate sources of lead exposure, and provide educational, social and clinical services to mitigate the harms of lead toxicity, particularly to protect and improve the lives of children in communities that are disproportionately exposed to lead; and (f) establish an independent expert advisory committee to develop a long-term national strategy, including recommendations for funding and implementation, to achieve the national goal of eliminating lead toxicity in pregnant women and children, defined as blood lead levels above $1 \mu\text{g/dL}$ (10 ppb).

4. Our AMA supports requiring an environmental assessment of dwellings, residential buildings, or child care facilities following the notification that a child occupant or frequent inhabitant has a confirmed elevated blood lead level, to determine the potential source of lead poisoning, including testing the water supply. [CCB/CLRPD Rep. 3, A-14; Appended: Res. 926, I-16; Appended: Res. 412, A-17]

Provision of Health Care and Parenting Classes to Adolescent Parents H-60.973

1. It is the policy of the AMA (A) to encourage state medical and specialty societies to seek to increase the number of adolescent parenting programs within school settings which provide health care for infant and mother, and child development classes in addition to current high school courses and (B) to support programs directed toward increasing high school graduation rates, improving parenting skills and decreasing future social service dependence of teenage parents.

2. Our AMA will actively provide information underscoring the increased risk of poverty after adolescent pregnancy without marriage when combined with failure to complete high school. [Res. 422, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Appended: Res. 422, A-13]

Humanitarian and Medical Aid Support to Ukraine D-65.984

Our AMA will advocate for: (1) continuous support of organizations providing humanitarian missions and medical care to Ukrainian refugees in Ukraine, at the Polish-Ukrainian border, in nearby countries, and/or in the US; (2) an early implementation of mental health measures, including suicide prevention efforts, and address war-related trauma and post-traumatic stress disorder when dealing with Ukrainian refugees with special attention to vulnerable populations including but not limited to young children, mothers, pregnant women, and the elderly; and (3) educational measures to enhance the understanding of war-related trauma in war survivors and promote broad protective factors (e.g., financial, employment, housing, and food stability) that can improve adjustment and outcomes for war-affected people, particularly when applied to vulnerable categories of people. [Res. 017, A-22]

Accuracy, Importance, and Application of Data from the US Vital Statistics System H-85.961

Our AMA encourages physicians to provide complete and accurate information on prenatal care and hospital patient records of the mother and infant, as this information is the basis for the health and medical information on birth certificates. [CSA Rep. 6, I-00; Reaffirmed: Sub. Res. 419, A-02; Modified: CSAPH Rep. 1, A-12; Reaffirmed: CSAPH Rep. 1, A-22]

Addiction and Unhealthy Substance Use H-95.976

Our AMA is committed to efforts that can help the national problem of addiction and unhealthy substance use from becoming a chronic burden. The AMA pledges its continuing involvement in programs to alert physicians and the public to the dimensions of the problem and the most promising solutions. The AMA, therefore:

- (1) supports cooperation in activities of organizations in fostering education, research, prevention, and treatment of addiction;
- (2) encourages the development of addiction treatment programs, complete with an evaluation component that is designed to meet the special needs of pregnant women and women with infant children through a comprehensive array of essential services;
- (3) urges physicians to routinely provide, at a minimum, a historical screen for all pregnant women, and those of childbearing age for substance abuse and to follow up positive screens with appropriate counseling, interventions and referrals;
- (4) supports pursuing the development of educational materials for physicians, physicians in training, other health care providers, and the public on prevention, diagnosis, and treatment of perinatal addiction. In this regard, the AMA encourages further collaboration in delivering appropriate messages to health professionals and the public on the risks and ramifications of perinatal drug and alcohol use;
- (5) urges the National Institute on Drug Abuse, the National Institute on Alcohol Abuse and Alcoholism, and the Substance Abuse and Mental Health Services Administration to continue to support research and demonstration projects around effective prevention and intervention strategies;
- (6) urges that public policy be predicated on the understanding that alcoholism and drug dependence, including tobacco use disorder as indicated by the Surgeon General's report, are diseases characterized by compulsive use in the face of adverse consequences;
- (7) affirms the concept that addiction is a disease and supports developing model legislation to appropriately address perinatal addiction as a disease, bearing in mind physicians' concern for the health of the mother, the fetus and resultant offspring; and
- (8) calls for better coordination of research, prevention, and intervention services for women and infants at risk for both HIV infection and perinatal addiction. [BOT Rep. Y, I-89; Reaffirmed: Sunset Report, A-00; Reaffirmation A-09; Modified: CSAPH Rep. 01, A-19]

Mercury and Fish Consumption: Medical and Public Health Issues H-150.947

AMA policy is that: (1) Women who might become pregnant, are pregnant, or who are nursing should follow federal, state or local advisories on fish consumption. Because some types of fish are known to have much lower than average levels of methylmercury and can be safely consumed more often and in larger amounts, women should also seek specific consumption recommendations from those authorities regarding locally caught or sold fish. (2) Physicians should (a) assist in educating patients about the relative mercury content of fish and shellfish products; (b) make patients aware of the advice contained in both national and regional consumer fish consumption advisories; and (c) have sample materials available, or direct patients to where they can access information on national and regional fish consumption advisories. (3) Testing of the mercury content of fish should be continued by appropriate agencies; results should be publicly accessible and reported in a consumer-friendly format. [CSA Rep. 13, A-04; Modified: Res. 538, A-05; Modified: CSAPH Rep. 1, A-15]

AMA Support for Breastfeeding H-245.982

1. Our AMA: (a) recognizes that breastfeeding is the optimal form of nutrition for most infants; (b) endorses the 2012 policy statement of American Academy of Pediatrics on Breastfeeding and the use of Human Milk, which delineates various ways in which physicians and hospitals can promote, protect, and support breastfeeding practices; (c) supports working with other interested organizations in actively seeking to promote increased breastfeeding by Supplemental Nutrition Program for Women, Infants, and Children (WIC Program) recipients, without reduction in other benefits; (d) supports the availability and appropriate use of breast pumps as a cost-effective tool to promote breast feeding; and (e) encourages

public facilities to provide designated areas for breastfeeding and breast pumping; mothers nursing babies should not be singled out and discouraged from nursing their infants in public places.

2. Our AMA: (a) promotes education on breastfeeding in undergraduate, graduate, and continuing medical education curricula; (b) encourages all medical schools and graduate medical education programs to support all residents, medical students and faculty who provide breast milk for their infants, including appropriate time and facilities to express and store breast milk during the working day; (c) encourages the education of patients during prenatal care on the benefits of breastfeeding; (d) supports breastfeeding in the health care system by encouraging hospitals to provide written breastfeeding policy that is communicated to health care staff; (e) encourages hospitals to train staff in the skills needed to implement written breastfeeding policy, to educate pregnant women about the benefits and management of breastfeeding, to attempt early initiation of breastfeeding, to practice "rooming-in," to educate mothers on how to breastfeed and maintain lactation, and to foster breastfeeding support groups and services; (f) supports curtailing formula promotional practices by encouraging perinatal care providers and hospitals to ensure that physicians or other appropriately trained medical personnel authorize distribution of infant formula as a medical sample only after appropriate infant feeding education, to specifically include education of parents about the medical benefits of breastfeeding and encouragement of its practice, and education of parents about formula and bottle-feeding options; and (g) supports the concept that the parent's decision to use infant formula, as well as the choice of which formula, should be preceded by consultation with a physician.

3. Our AMA: (a) supports the implementation of the WHO/UNICEF Ten Steps to Successful Breastfeeding at all birthing facilities; (b) endorses implementation of the Joint Commission Perinatal Care Core Measures Set for Exclusive Breast Milk Feeding for all maternity care facilities in the US as measures of breastfeeding initiation, exclusivity and continuation which should be continuously tracked by the nation, and social and demographic disparities should be addressed and eliminated; (c) recommends exclusive breastfeeding for about six months, followed by continued breastfeeding as complementary food are introduced, with continuation of breastfeeding for 1 year or longer as mutually desired by mother and infant; (d) recommends the adoption of employer programs which support breastfeeding mothers so that they may safely and privately express breast milk at work or take time to feed their infants; and (e) encourages employers in all fields of healthcare to serve as role models to improve the public health by supporting mothers providing breast milk to their infants beyond the postpartum period.

4. Our AMA supports the evaluation and grading of primary care interventions to support breastfeeding, as developed by the United States Preventive Services Task Force (USPSTF).

5. Our AMA's Opioid Task Force promotes educational resources for mothers who are breastfeeding on the benefits and risks of using opioids or medication-assisted therapy for opioid use disorder, based on the most recent guidelines. [CSA Rep. 2, A-05; Res. 325, A-05; Reaffirmation A-07; Reaffirmation A-12; Modified in lieu of Res. 409, A-12 and Res. 410, A-12; Appended: Res. 410, A-16; Appended: Res. 906, I-17; Reaffirmation: I-18]

Accommodating Lactating Mothers Taking Medical Examinations H-295.861

Our AMA: (1) urges all medical licensing, certification and board examination agencies, and all board proctoring centers, to grant special requests to give breastfeeding individuals additional break time and a suitable environment during examinations to express milk; and (2) encourages that such accommodations to breastfeeding individuals include necessary time per exam day, in addition to the standard pool of scheduled break time found in the specific exam, as well as access to a private, non-bathroom location on the testing center site with an electrical outlet for individuals to breast pump. [Sub. Res. 903, I-14; Modified: Res. 310, A-17]

Protecting Trainees' Breastfeeding Rights D-310.950

Our AMA will: (1) work with appropriate bodies, such as the Accreditation Council for Graduate Medical Education (ACGME) and the Liaison Committee on Medical Education (LCME), to include language in housestaff manuals or similar policy references of all training programs regarding protected times and locations for milk expression and secure storage of breast milk; and (2) work with appropriate bodies, such as the LCME, ACGME, and Association of American Medical Colleges (AAMC), to include language related to the learning and work environments for breastfeeding mothers in regular program reviews. [Res. 302, I-16]

Post-Partum Hospital Stay and Nurse Home Visits H-320.954

The AMA: (1) opposes the imposition by third party payers of mandatory constraints on hospital stays for vaginal deliveries and cesarean sections as arbitrary and as detrimental to the health of the mother and of

the newborn; and (2) urges that payers provide payment for appropriate follow-up care for the mother and newborn. [Sub. Res. 105, I-95; Reaffirmed by Rules & Credentials Cmt., A-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmed: CMS Rep. 01, A-16]

Substance Use Disorders During Pregnancy H-420.950

Our AMA will: (1) oppose any efforts to imply that the diagnosis of substance use disorder during pregnancy represents child abuse; (2) support legislative and other appropriate efforts for the expansion and improved access to evidence-based treatment for substance use disorders during pregnancy; (3) oppose the removal of infants from their mothers solely based on a single positive prenatal drug screen without appropriate evaluation; and (4) advocate for appropriate medical evaluation prior to the removal of a child, which takes into account (a) the desire to preserve the individual's family structure, (b) the patient's treatment status, and (c) current impairment status when substance use is suspected. [Res. 209, A-18; Modified: Res. 520, A-19]

Improving Mental Health Services for Pregnant and Postpartum Mothers H-420.953

Our AMA: (1) supports improvements in current mental health services for women during pregnancy and postpartum; (2) supports advocacy for inclusive insurance coverage of mental health services during gestation, and extension of postpartum mental health services coverage to one year postpartum; (3) supports appropriate organizations working to improve awareness and education among patients, families, and providers of the risks of mental illness during gestation and postpartum; and (4) will continue to advocate for funding programs that address perinatal and postpartum depression, anxiety and psychosis, and substance use disorder through research, public awareness, and support programs. [Res. 102, A-12; Modified: Res. 503, A-17]

Shackling of Pregnant Women in Labor H-420.957

1. Our AMA supports language recently adopted by the New Mexico legislature that "an adult or juvenile correctional facility, detention center or local jail shall use the least restrictive restraints necessary when the facility has actual or constructive knowledge that an inmate is in the 2nd or 3rd trimester of pregnancy. No restraints of any kind shall be used on an inmate who is in labor, delivering her baby or recuperating from the delivery unless there are compelling grounds to believe that the inmate presents:

- An immediate and serious threat of harm to herself, staff or others; or
- A substantial flight risk and cannot be reasonably contained by other means.

If an inmate who is in labor or who is delivering her baby is restrained, only the least restrictive restraints necessary to ensure safety and security shall be used."

2. Our AMA will develop model state legislation prohibiting the use of shackles on pregnant women unless flight or safety concerns exist. [Res. 203, A-10; Reaffirmed: BOT Rep. 04, A-20]

Perinatal Addiction - Issues in Care and Prevention H-420.962

Our AMA: (1) adopts the following statement: Transplacental drug transfer should not be subject to criminal sanctions or civil liability; (2) encourages the federal government to expand the proportion of funds allocated to drug treatment, prevention, and education. In particular, support is crucial for establishing and making broadly available specialized treatment programs for drug-addicted pregnant and breastfeeding women wherever possible; (3) urges the federal government to fund additional research to further knowledge about and effective treatment programs for drug-addicted pregnant and breastfeeding women, encourages also the support of research that provides long-term follow-up data on the developmental consequences of perinatal drug exposure, and identifies appropriate methodologies for early intervention with perinatally exposed children; (4) reaffirms the following statement: Pregnant and breastfeeding patients with substance use disorders should be provided with physician-led, team-based care that is evidence-based and offers the ancillary and supportive services that are necessary to support rehabilitation; and (5) through its communication vehicles, encourages all physicians to increase their knowledge regarding the effects of drug and alcohol use during pregnancy and breastfeeding and to routinely inquire about alcohol and drug use in the course of providing prenatal care. [CSA Rep. G, A-92; Reaffirmation A-99; Reaffirmation A-09; Modified and Reaffirmed: CSAPH Rep. 1, A-09; Modified: Alt. Res. 507, A-16; Modified: Res. 906, I-17; Reaffirmed: Res. 514, A-19]

Fetal Alcohol Syndrome Educational Program H-420.964

Our AMA supports informing physicians about Fetal Alcohol Syndrome and the referral and treatment of alcohol abuse by pregnant women or women at risk of becoming pregnant. [Res. 122, A-91; Reaffirmed: Sunset Report, I-01; Modified: CSAPH Rep. 1, A-11; Reaffirmed: CSAPH Rep. 1, A-21]

Universal Hepatitis B Virus (HBV) Antigen Screening for Pregnant Women H-420.968

It is the policy of the AMA to communicate the available guidelines for testing all pregnant women for HBV infection. [Res. 19, I-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20]

Legal Interventions During Pregnancy H-420.969

Court Ordered Medical Treatments And Legal Penalties For Potentially Harmful Behavior By Pregnant Women:

- (1) Judicial intervention is inappropriate when a woman has made an informed refusal of a medical treatment designed to benefit her fetus. If an exceptional circumstance could be found in which a medical treatment poses an insignificant or no health risk to the woman, entails a minimal invasion of her bodily integrity, and would clearly prevent substantial and irreversible harm to her fetus, it might be appropriate for a physician to seek judicial intervention. However, the fundamental principle against compelled medical procedures should control in all cases which do not present such exceptional circumstances.
- (2) The physician's duty is to provide appropriate information, such that the pregnant woman may make an informed and thoughtful decision, not to dictate the woman's decision.
- (3) A physician should not be liable for honoring a pregnant woman's informed refusal of medical treatment designed to benefit the fetus.
- (4) Criminal sanctions or civil liability for harmful behavior by the pregnant woman toward her fetus are inappropriate.
- (5) Pregnant substance abusers should be provided with rehabilitative treatment appropriate to their specific physiological and psychological needs.
- (6) To minimize the risk of legal action by a pregnant patient or an injured fetus, the physician should document medical recommendations made including the consequences of failure to comply with the physician's recommendation. [BOT Rep. OO, A-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CEJA Rep. 6, A-10; Reaffirmed: Res. 507, A-16; Reaffirmed: Res. 209, A-18]

AMA Statement on Family and Medical Leave H-420.979

Our AMA supports policies that provide employees with reasonable job security and continued availability of health plan benefits in the event leave by an employee becomes necessary due to documented medical conditions. Such policies should provide for reasonable periods of paid or unpaid:

- (1) medical leave for the employee, including pregnancy, abortion, and stillbirth;
- (2) maternity leave for the employee-mother;
- (3) leave if medically appropriate to care for a member of the employee's immediate family, i.e., a spouse or children; and
- (4) leave for adoption or for foster care leading to adoption. Such periods of leave may differ with respect to each of the foregoing classifications, and may vary with reasonable categories of employers. Such policies should encourage voluntary programs by employers and may provide for appropriate legislation (with or without financial assistance from government). Any legislative proposals will be reviewed through the Association's normal legislative process for appropriateness, taking into consideration all elements therein, including classifications of employees and employers, reasons for the leave, periods of leave recognized (whether paid or unpaid), obligations on return from leave, and other factors involved in order to achieve reasonable objectives recognizing the legitimate needs of employees and employers. [BOT Rep. A, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: CMS Rep. 03, A-16; Modified: Res. 302, I-22]

Research into Preterm Birth and Related Cardiovascular and Cerebrovascular Risks in Women D-420.992

Our AMA will advocate for more research on ways to identify risk factors linking preterm birth to cardiovascular or cerebrovascular disease in pregnant women. [Res. 504, A-17]

Bonding Programs for Women Prisoners and their Newborn Children H-430.990

Because there are insufficient data at this time to draw conclusions about the long-term effects of prison nursery programs on mothers and their children, the AMA supports and encourages further research on the impact of infant bonding programs on incarcerated women and their children. However, since there are established benefits of breast milk for infants and breast milk expression for mothers, the AMA advocates for policy and legislation that extends the right to breastfeed directly and/or privately pump and safely store breast milk to include incarcerated mothers. The AMA recognizes the prevalence of mental health and substance abuse problems among incarcerated women and continues to support access to appropriate services for women in prisons. The AMA recognizes that a large majority of incarcerated females who may not have developed appropriate parenting skills are mothers of children under the age of 18. The AMA encourages correctional facilities to provide parenting skills and breastfeeding/breast pumping training to all female inmates in preparation for their release from prison and return to their children. The AMA supports and encourages further investigation into the long-term effects of prison nurseries on mothers and their children. [CSA Rep. 3, I-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmed: CSAPH Rep. 01, A-17; Modified: Res. 431, A-22]

7.3.4 Maternal-Fetal Research

Maternal-fetal research, i.e., research intended to benefit pregnant women and/or their fetuses, must balance the health and safety of the woman who participates and the well-being of the fetus with the desire to develop new and innovative therapies. One challenge in such research is that pregnant women may face external pressure or expectations to enroll from partners, family members, or others that may compromise their ability to make a fully voluntary decision about whether to participate.

Physicians engaged in maternal-fetal research should demonstrate the same care and concern for the pregnant woman and fetus that they would in providing clinical care.

In addition to adhering to general guidelines for the ethical conduct of research and applicable law, physicians who are involved in maternal-fetal research should:

- (a) Base studies on scientifically sound clinical research with animals and nonpregnant human participants that has been carried out prior to conducting maternal-fetal research whenever possible.
- (b) Enroll a pregnant woman in maternal-fetal research only when there is no simpler, safer intervention available to promote the well-being of the woman or fetus.
- (c) Obtain the informed, voluntary consent of the pregnant woman.
- (d) Minimize risks to the fetus to the greatest extent possible, especially when the intervention under study is intended primarily to benefit the pregnant woman. [Issued: 2016]

Supporting the Use of Gender-Neutral Language H-65.942

Our American Medical Association will (1) Recognize the importance of using gender-neutral language such as gender neutral pronouns, terms, imagery, and symbols in respecting the spectrum of gender identity, (2) prospectively amend all current AMA policy, where appropriate, to include gender-neutral language by way of the reaffirmation and sunset processes, (3) utilize gender-neutral language in future policies¹ internal communications, and external communications where gendered language does not specifically need to be used, (4) encourage the use of gender-neutral language in public health and medical messaging, (5) encourage other professional societies to utilize gender-neutral language in their work, and (6) support the use of gender-neutral language in clinical spaces that may serve both cisgender and gender-diverse individuals. [Res. 602, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 012
(A-24)

Introduced by: Mississippi

Subject: Ethical Pricing Procedures that Protect Insured Patients

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, healthcare organizations that provide direct care (such as clinics, pharmacies,
2 hospitals, and the like) are operating on increasingly small profit margins and many are on the
3 brink of bankruptcy; and
4

5 Whereas, the health insurance industry as a whole is consistently posting significant profits; and
6

7 Whereas, many health insurance companies are publicly traded and, thusly, their directors hold
8 a fiduciary duty to their shareholders to make decisions based on the company's best financial
9 interests for the end of increased profit margins without sufficient regard to the beneficiaries (the
10 insureds) that pay for their services; and
11

12 Whereas, the process of pricing medications for consumers is increasingly complicated,
13 involving many middlemen and questionable practices that are not disclosed to the public under
14 the guise of "proprietary means"; and
15

16 Whereas, this complicated process has been manipulated by health insurance companies,
17 pharmaceutical manufacturers, pharmacy benefit managers, and other stakeholders to
18 negotiate terms that offer benefits for themselves without sufficient regard to the best interests
19 of their insured patients; and
20

21 Whereas, under the current system, insured patients pay a monthly premium in good faith
22 believing that their health insurer will arrange for medications to be bought by them (the
23 insureds) at a lower cost point than could otherwise be achieved without insurance or some
24 other non-paid service; and
25

26 Whereas, the current system has betrayed the aforementioned good faith of the insured patients
27 by utilizing a pricing process that results in higher prices to the patient for many medications
28 than could be achieved without insurance coverage (cash price) or with the aid of a free
29 "discount card" (such as GoodRX); and
30

31 Whereas, this betrayal of the insured patients' good faith represents a flaw of the system that is
32 woefully unethical and should be identified as such by insureds as well as their advocates (the
33 House of Medicine) and should be addressed by lawmakers for consumer and patient
34 protection; and
35

36 Whereas, physicians are a cornerstone in the House of Medicine and, by nature of their
37 profession, are fierce patient advocates, safeguarding the patient's best interests; and
38

39 Whereas, the American Medical Association (AMA) is the most prominent and powerful unified
40 voice of Physicians; therefore be it

1 RESOLVED, that our American Medical Association advocate for policies that limit the cost of a
2 medication to an insured patient with medication coverage to the lower range of prices that a
3 non-covered patient can achieve at cash price either before or after application of a non-
4 manufacturer's free discount card (such as GoodRx) (Directive to Take Action); and be it further
5

6 RESOLVED, that our AMA write a letter to lawmakers and other pertinent stakeholders
7 describing the ethical dilemma of the medication pricing process and how it adversely affects
8 insured patients. (Directive to Take Action)
9

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 013
(A-24)

Introduced by: American College of Obstetricians and Gynecologists
Subject: Ethical Impetus for Research in Pregnant and Lactating Individuals
Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, each year 3.6 million¹ individuals give birth in the United States and 3 million people
2 are lactating; and
3
4 Whereas, 70% of pregnant and lactating people² take some kind of medication when they are
5 pregnant or lactating; and
6
7 Whereas, pregnant and lactating people are generally excluded in clinical research³, there is a
8 dearth of data about the appropriate safety, dosage, and efficacy of most medical interventions
9 in pregnant and lactating individuals; and
10
11 Whereas, the lack of data results in patients and clinicians choosing to (a) forego an intervention
12 which may result in harm from an un(der) treated condition or (b) use an intervention which may
13 carry an uncertain risk of harm for an unknown potential benefit; and
14
15 Whereas, lack of access to research exacerbates health inequities in pregnant and lactating
16 individuals⁴; and
17
18 Whereas, the harm from excluding pregnant individuals from clinical research was very
19 apparent during the COVID-19 pandemic and contributed to vaccine hesitancy and resulted in
20 unnecessary and avoidable maternal and infant mortality and morbidity^{5,6,7}; and
21
22 Whereas, recent initiatives from the White House⁸, National Institutes of Health⁹, and the
23 National Academies of Science, Engineering, and Medicine¹⁰ have emphasized the need for
24 further research in pregnant and lactating individuals; and
25
26 Whereas, the American College of Obstetricians and Gynecologists¹¹, National Academies of
27 Science, Engineering, and Medicine¹⁰, and the U.S. Department of Health and Human Services
28 have moved from an overly protectionist ethic that prioritizes minimization of fetal risk to one
29 that recognizes the scientific, legal, and ethical complexities of research including the risks to
30 the pregnant/lactating individual, fetus, and/or neonate of NOT doing research; and
31
32 Whereas, the HHS Task Force on Research Specific to Pregnant Women and Lactating Women
33 released detailed recommendations, along with an implementation plan, to protect pregnant and
34 lactating individuals through research, rather than from research^{12,13}; and
35
36 Whereas, as this national policy discussion unfolds, the ethical guidance of our profession must
37 undergird this discussion; and

1 Whereas, the existing Code of Medical Ethics Opinion 7.3.4 Maternal-Fetal Research extracts
2 content from both the Code modernization process of 2016 with foundational original material
3 stemming from the “Medical applications of fetal tissue transplantation” opinion passed in 1989;
4 and

5
6 Whereas, much in women’s health, research infrastructure, ethical frameworks, and liability
7 landscape has changed since 1989 and the ethics of research in lactation is not discussed in
8 the Code; therefore be it

9
10 RESOLVED, that our American Medical Association Council on Ethical and Judicial Affairs
11 consider updating its ethical guidance on research in pregnant and lactating individuals.
12 (Directive to Take Action)

RELEVANT AMA POLICY

7.3.4 Maternal-Fetal Research

Maternal-fetal research, i.e., research intended to benefit pregnant women and/or their fetuses, must balance the health and safety of the woman who participates and the well-being of the fetus with the desire to develop new and innovative therapies. One challenge in such research is that pregnant women may face external pressure or expectations to enroll from partners, family members, or others that may compromise their ability to make a fully voluntary decision about whether to participate.

Physicians engaged in maternal-fetal research should demonstrate the same care and concern for the pregnant woman and fetus that they would in providing clinical care.

In addition to adhering to general guidelines for the ethical conduct of research and applicable law, physicians who are involved in maternal-fetal research should:

- (a) Base studies on scientifically sound clinical research with animals and nonpregnant human participants that has been carried out prior to conducting maternal-fetal research whenever possible.
- (b) Enroll a pregnant woman in maternal-fetal research only when there is no simpler, safer intervention available to promote the well-being of the woman or fetus.
- (c) Obtain the informed, voluntary consent of the pregnant woman.
- (d) Minimize risks to the fetus to the greatest extent possible, especially when the intervention under study is intended primarily to benefit the pregnant woman.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 014
(A-24)

Introduced by: New England

Subject: The Preservation of the Primary Care Relationship

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, large health systems are restricting access to specialty care unless patients change
2 their primary care physician to a physician, physician associate (PA), or nurse practitioner (NP)
3 employed by their system, resulting in the extreme disruption of well-established patient
4 physician relationships; and

5
6 Whereas, the Institute of Medicine has declared that continuity is foundational to the
7 effectiveness of the patient physician relationship in primary care, with decades of research
8 concluding that coordination of care is essential to building a trusting relationship¹; and

9
10 Whereas, the Commonwealth Fund and the Agency for Healthcare Research and Quality
11 underscore the critical role of high-quality primary care in enhancing health system
12 effectiveness, advocating for increased financial investment, shifting to hybrid or capitated
13 payment approaches, and emphasizing the adoption of patient-centered medical homes to
14 address existing challenges and ensure accessibility, efficiency, and quality in healthcare^{2,3}; and

15
16 Whereas, maintaining outpatient continuity with a primary care physician reduces emergency
17 department use and hospitalizations, lowers costs, and increases patient and physician
18 satisfaction, while discontinuity is linked to higher post discharge costs and readmission rates^{4,5};
19 and

20
21 Whereas, value-based care contracting financially incentivizes systems to “capture” large
22 numbers of patients which has led to the practice of large health systems coercing patients to
23 abandon their primary care physician of choice, establishing with one of their employed
24 physicians, NPs or PAs in order to access specialty care; and

25
26 Whereas, hospital consolidations have also been scrutinized for boosting costs, narrowing
27 access, and potentially impacting care quality, where these consolidations can lead to increased
28 prices and may not necessarily improve the quality of care patients receive⁶; and

29
30 Whereas, due to national and regional differences in access to both specialty and primary care,
31 in addition to variations in the expansiveness of large health care systems, there is a lack of
32 transparency and data on the impact of these restrictive practices and necessitates further
33 study⁷; and

34
35 Whereas, there is a current crisis in healthcare with limited access to primary care and certain
36 specialties, further, given this limited access, it is important that patients are able to obtain care
37 across networks, and limiting this access harms both the patients and the physicians; and

1 Whereas, CEJA Report 1-A-01, The Patient-Physician Relationship, states that “The medical
2 profession must strive to preserve the trust patients hold in their physicians. It cannot abandon
3 ethical standards to economic force”⁸; therefore be it
4

5 RESOLVED, that our American Medical Association opposes health systems requiring patients
6 to switch to primary care physicians within a health system in order to access specialty care
7 (New HOD Policy); and be it further
8

9 RESOLVED that our AMA requests the Council on Ethical and Judicial Affairs review the ethical
10 implications of health systems requiring patients to change to primary care clinicians employed
11 by their system to access specialists (Directive to Take Action); and be it further
12

13 RESOLVED, that our AMA advocates for policies that promote patient choice, ensure continuity
14 of care, and uphold the sanctity of the patient-physician relationship, irrespective of healthcare
15 system pressures or economic incentives. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

RELEVANT AMA POLICY

Preservation of Physician-Patient Relationships and Promotion of Continuity of Patient Care H-160.901

Our AMA supports: (1) policies that encourage the freedom of patients to choose the health care delivery system that best suits their needs and provides them with a choice of physicians; (2) the freedom of choice of physicians to refer their patients to the physician practice or hospital that they think is most able to provide the best medical care when appropriate care is not available within a limited network of providers; and (3) policies that encourage patients to return to their established primary care provider after emergency department visits, hospitalization or specialty consultation.

Disease Management and Demand Management H-285.944

The AMA strongly encourages health insurance plans and managed care organizations that provide disease management to involve the patient's current primary or principal care physician in the disease management process as much as possible, and to minimize arrangements that may impair the continuity of a patient's care across different settings.

1.1.1 Patient-physician relationships--background reports_0.pdf (ama-assn.org)

Relevant AMA Correspondences

RE: The Acquisition of Aetna, Inc. by CVS Health Corporation 2018, to the United States Department of Justice

We are writing to provide our views regarding the proposed merger of CVS Health Corporation (CVS), the largest retail pharmacy chain and specialty pharmacy in the U.S. and one of the two largest pharmacy benefit managers (PBM), and Aetna, Inc. (Aetna), the third largest U.S. health insurer. The AMA has studied this merger, an analysis that started almost as soon as the merger was officially announced. The AMA has sought the views of prominent health economists, health policy and antitrust experts—some of whom testified in a California Department of Insurance hearing on this merger. After very carefully considering this merger over the past months, the AMA has come to the conclusion that this merger would likely substantially lessen competition in many health care markets, to the detriment of patients. Accordingly, based on the mutually confirming analyses and conclusions presented by the nationally recognized experts and other experts, as well as extensive research, the AMA is now convinced that the proposed CVS-Aetna merger should be blocked.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 015
(A-24)

Introduced by: New England

Subject: Health and Racial Equity in Medical Education to Combat Workforce Disparities

Referred to: Reference Committee on Amendments to Constitution and Bylaws

- 1 Whereas, achieving health equity requires valuing everyone equally with focused and ongoing
2 societal efforts to address avoidable inequalities, historical and contemporary injustices, and
3 social determinants of health — to eliminate disparities in health and health care¹; and
4
- 5 Whereas, the road to achieving health equity requires a diverse and equitable workforce that is
6 essential to optimizing health care access and the quality of patient care; and
7
- 8 Whereas, many barriers remain and unique challenges persist for some diverse groups
9 attempting to enter the medical field and successfully matriculate through the profession of
10 medicine. This is strongly indicated in demographics of currently practicing physicians; and
11
- 12 Whereas, among active physicians, 56.2% identified as White, 17.1% identified as Asian, 5.8%
13 identified as Hispanic, and ~5.0% identified as Black or African American²; and
14
- 15 Whereas, in 2015, the percentage of matriculants from racial/ethnic groups underrepresented in
16 medicine remained low: Black at 6.5%, Hispanic, Latino, or Spanish at 6.4% and American
17 Indian at 0.3%. The data is especially concerning as the Hispanic population is expected to
18 increase by 26% by 2030^{3,4}; and
19
- 20 Whereas, black people account for roughly 13 percent of the US population, they make up only
21 5.5 percent of the physician workforce and 7.3 percent of medical students. In 1940, when
22 9.7% of the total population was Black, 2.8% of physicians at that time were Black. These
23 representational disparities have not changed appreciably in decades;^{3,4} and
24
- 25 Whereas, additional barriers exists for certain minority groups. Black trainees face higher rates
26 of remedial intervention and dismissal from their programs than their White counterparts, thus
27 leading to concerns of over-policing in medical education; and
28
- 29 Whereas, over-policing in education begins as early as primary school and continues through
30 high school, college, medical education, and into the workforce. In graduate medical
31 education, biased scrutiny begins with the use of metrics that disadvantage Black applicants in
32 the residency selection process;⁵ and
33
- 34 Whereas, black residents account for about 5% of all residents, yet they accounted for nearly
35 20% of those who were dismissed in 2015;⁷and
36
- 37 Whereas, increased scrutiny and expectations can lead to damaging effects such as symptoms
38 of depression and anxiety among minority students, residents and physicians. This often leads

1 to reducing practice hours or leaving medicine, creating even greater workforce
2 disparities;⁵ therefore be it

3
4 RESOLVED, that our American Medical Association further study and track the prevalence of
5 attending physicians' and trainees' dismissals and remedial interventions, based on race,
6 gender, and ethnicity as well as the disproportionate impacts this has on workforce disparities
7 (Directive to Take Action); and be it further

8
9 RESOLVED, that our AMA engage stakeholders to study and report back how to effectively
10 support underrepresented groups in medicine to level the playing field for those most affected
11 by bias and historical harms (Directive to Take Action); and be it further

12
13 RESOLVED, that our AMA work with stakeholders to make recommendations on a review and
14 appeals process that will enable physicians and trainees to receive a fair and equitable due
15 process in defense of alleged shortcomings. (Directive to Take Action)

16
Fiscal Note: Moderate - between \$5,000 - \$10,000

RELEVANT AMA POLICY

Strategies for Enhancing Diversity in the Physician Workforce H-200.951

Our AMA: (1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality; (2) commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes; (3) encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties; (4) encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine; (5) encourages medical schools, health care institutions, managed

care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal; and (6) continue to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.

CME Rep. 1, I-06 Reaffirmed: CME Rep. 7, A-08 Reaffirmed: CCB/CLRPD Rep. 4, A-13 Modified: CME Rep. 01, A-16 Reaffirmation A-16 Modified: Res. 009, A-21 Modified: CME Rep. 5, A-21

Continued Support for Diversity in Medical Education D-295.963

Our AMA will: (1) publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population; (5) directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or funding in medical education; (6) advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement; (7) investigate the impacts of state legislation regarding DEI-related efforts on the education and careers of students, trainees, and faculty; (8) recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts; and (9) collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure.

Res. 325, A-03 Appended: CME Rep. 6, A-11 Modified: CME Rep. 3, A-13 Appended: CME Rep. 5, A-21 Modified: CME Rep. 02, I-22 Appended: Res. 319, A-22 Modified: Res. 319, A-23

Diversity in the Physician Workforce and Access to Care D-200.982

Our AMA will: (1) continue to advocate for programs that promote diversity in the US medical workforce, such as pipeline programs to medical schools; (2) continue to advocate for adequate funding for federal and state programs that promote interest in practice in underserved areas, such as those under Title VII of the Public Health Service Act, scholarship and loan repayment programs under the National Health Services Corps and state programs, state Area Health Education Centers, and Conrad 30, and also encourage the development of a centralized database of scholarship and loan repayment programs; and (3) continue to study the factors that support and those that act against the choice to practice in an underserved area, and report the findings and solutions at the 2008 Interim Meeting.

CME Rep. 7, A-08 Reaffirmation A-13 Reaffirmation: A-16 Reaffirmed: CME Rep. 5, A-21

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.

2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area

Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.

3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.

4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.

5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.

6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.

7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.

8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.

9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.

10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).

11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.

12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.

13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

American Medical Association House of Delegates

Resolution: 016
(A-24)

Introduced by: New York

Subject: Guiding Principles for the Healthcare of Migrants

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, there has been a recent increase in migrants and asylum seekers in the United States
2 that has garnered New York City, New York State and National media attention ¹; and
3

4 Whereas, this recent increase in migrants and asylum seekers has overwhelmed multiple areas
5 of the United States, including southern border states such as Texas and Arizona, and has
6 resulted in their coordinated transportation to cities that have “right to shelter” laws, such as
7 New York City, Chicago, Denver and Washington D.C. ^{2,3}, and
8

9 Whereas, from April 2022 to December 2023, more than 150,000 migrants have arrived in New
10 York City;¹ and
11

12 Whereas, the Mayor of the City of New York declared an “Asylum Seeker State of Emergency”
13 on 10/7/22, calling for increased aid from State and Federal governments⁴; and
14

15 Whereas, the 2022-2023 New York City budgets did not account for this recent increase in
16 migrants and asylum seekers, yet New York City has attempted to divert adequate resources to
17 the New York City Health and Hospital System, which operates the Humanitarian Emergency
18 Response and Relief Centers (HERRCs) which process the intake, screening, shelter,
19 healthcare and other needs of migrants and asylum seekers ⁵; and
20

21 Whereas, the diversion of funds from the New York City budget to HERRCs and other
22 associated costs of the recent increase in migrants and asylum seekers has resulted in a
23 decreased funding of other New York City municipal services, such as public libraries, public
24 schools and law enforcement⁶; and
25

26 Whereas, New York State has declared a Disaster Emergency via Executive Order No. 28.7 in
27 response to the recent increase in migrants and asylum seekers in New York State ⁷, and
28

29 Whereas, despite a \$1 Billion addition to the New York State 2024 Budget allocated for
30 response for migrants and asylum seekers, as well as mobilization of 1,500 National Guard
31 Members and an Executive Order mobilizing additional resources, the New York State Governor
32 is requesting additional support and resources from the Federal Government, including FEMA,
33 the U.S. Department of Defense, and the National Parks Service ^{8, 9, 10}; and
34

35 Whereas, New York City has become so financially overwhelmed with the recent increase in
36 migrants and asylum seekers that it has requested discontinuation of its “right to shelter”
37 statutes, and has reverted to litigating bus transportation companies for costs associated with
38 the healthcare and housing of asylum seekers they have brought ^{11, 12}; and

1 Whereas, Federal legislators are considering massive overhauls to immigration policy, but only
2 at the expense of continued financial aid in the international conflict between Russia and
3 Ukraine ¹³; and
4

5 Whereas, having adequate policy regarding the guiding principles of the healthcare for migrants
6 and asylum seekers will allow organized medicine groups to adequately respond to future
7 legislation or executive actions regarding the present migration crisis and future migration
8 issues; and
9

10 Whereas, the First District Branch of MSSNY has “RESOLVED, that the First District Branch will
11 collaborate together to write a resolution ... to advocate for increased federal funding, and other
12 federal solutions, to address the public health needs of the recent 2023 increase in asylum-
13 seeking migrants.”, but has no other standing policy on migrants and asylum seekers; and
14

15 Whereas, the Medical Society of the State of New York does not have any present relevant
16 policy regarding providing healthcare for migrant and asylum seekers, and
17

18 Whereas, the American Medical Association policy D-350.975 “Immigration Status is a Public
19 Health Issue” does recognize “immigration status is a public health issue” and “will support the
20 development and implementation of public health policies and programs that aim to improve
21 access to healthcare and minimize systemic health barriers for immigrant communities”, and
22 AMA policy H-350.957 “Addressing Immigrant Health Disparities” addresses a limited scope of
23 issues related to the healthcare of migrants, without reference to many important principles and
24 priorities as identified by the World Health Organization ^{14, 15, 16, 17}; and
25

26 Whereas, while the current migrant crisis being faced in the United States is causing recent
27 local, state and national attention to this issue, other groups dedicated to the study and policy
28 development of the healthcare of migrants at the international level report that this is indeed a
29 part of a larger global migration trend, with the World Health Organization noting that from “2000
30 - 2017, the total number of international migrants rose from 173 million to 258 million, an
31 increase of 49%” ¹⁶; and
32

33 Whereas, migrants face many unique health challenges and vulnerabilities including but not
34 limited to; inadequate access to healthcare, increased need for mental health services,
35 inadequate disease prevention, inadequate provision of care, lack of financial protection,
36 discrimination, language and cultural barriers, increased risk of encountering communicable
37 diseases, poor access to vaccination, inadequate continuity of care, inadequate health record
38 portability, food insecurity, malnutrition, sexual and gender-based violence including abuse and
39 trafficking and unsafe work conditions ¹⁶, therefore be it
40

41 RESOLVED, that our American Medical Association advocate for the development of adequate
42 policies and / or legislation to address the healthcare needs of migrants and asylum seekers in
43 cooperation with relevant legislators and stakeholders based on the following guiding principles,
44 adapted from the High-level meeting of the Global Consultation on Migrant Health, i.e. the
45 “Colombo Statement” (Directive to Take Action); and be it further
46

47 RESOLVED, that our AMA recognizes that migration status is a social determinant of health
48 (New HOD Policy); and be it further

1 RESOLVED, that our AMA affirms the importance of multi-sectoral coordination and inter-
2 country engagement and partnership in enhancing the means of addressing health aspects of
3 migration (New HOD Policy); and be it further
4

5 RESOLVED, that our AMA recognizes that the enhancement of migrants' health status relies on
6 an equitable and non-discriminatory access to and coverage of health care and cross-border
7 continuity of care at an affordable cost avoiding severe financial consequences for migrants, as
8 well as for their families (New HOD Policy); and be it further
9

10 RESOLVED, that our AMA recognizes that investment in migrant health provides positive
11 dividends compared to public health costs due to exclusion and neglect, and therefore
12 underscore the need for financing mechanisms that mobilize different sectors of society,
13 innovation, identification and sharing of good practices in this regard, and be it further
14

15 RESOLVED, that our AMA recognizes that the promotion of the physical and mental health of
16 migrants as defined by the following select objectives from the World Health Organization's
17 72nd World Health Assembly, Global action plan on promoting the health of refugees and
18 migrants, 2019-2023, is accomplished by
19

- 20 1. Ensuring that essential components, such as vaccination of children and adults and the
21 provision of health promotion, disease prevention, timely diagnosis and treatment,
22 rehabilitation and palliative services for acute, chronic and infectious diseases, injuries,
23 mental and behavioral disorders, and sexual and reproductive health care for women,
24 are addressed.
25
- 26 2. Improving the quality, acceptability, availability and accessibility of health care services,
27 for instance by overcoming physical, financial, information, linguistic and other cultural
28 barriers, with particular attention to services for chronic conditions and mental health,
29 which are often inadequately addressed or followed up during the migration and
30 displacement process, and by working to prevent occupational and work-related
31 diseases and injuries among migrant workers and their families by improving the
32 coverage, accessibility and quality of occupational and primary health care services and
33 social protection systems.
34
- 35 3. Ensuring that the social determinants of migrants' health are addressed through joint,
36 coherent multisectoral actions in all public health policy responses, especially ensuring
37 promotion of well-being for all at all ages, and facilitating orderly, safe, and responsible
38 migration and mobility of people, including through implementation of planned and well-
39 managed migration policies, as defined in the Sustainable Development Goals of the
40 United Nations.
41
- 42 4. Ensuring that information and disaggregated data at global, regional and country levels
43 are generated and that adequate, standardized, comparable records on the health of
44 migrants are available to support policy-makers and decision-makers to develop more
45 evidence-based policies, plans and interventions.
46
- 47 5. Providing accurate information and dispelling fears and misperceptions among migrant
48 and host populations about the health impacts of migration and displacement on migrant
49 populations and on the health of local communities and health systems. (New HOD
50 Policy)

Fiscal Note: Moderate - between \$5,000 - \$10,000

American Medical Association House of Delegates

Resolution: 017
(A-24)

Introduced by: New York

Subject: Addressing the Historical Injustices of Anatomical Specimen Use

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, in the wake of the recent Harvard Anatomical Donation scandal, there is a clear need
2 to reform rules and regulations surrounding the use of anatomical specimens in medical
3 education, anthropological study, and related disciplines; and ^{1,2,3}
4

5 Whereas, America has a long and well-documented history of exploitation against American
6 Indians, Alaska Natives, people of color, immigrants, those with disabilities, incarcerated people,
7 non-Christian, and poor citizens, who historically have not been afforded the same rights as
8 white, able-bodied Americans; and ⁴⁻⁷
9

10 Whereas, preserved and skeletal anatomical specimens from as far back as the 1800s are still
11 held by medical schools and used for educational purposes today; and ⁸⁻¹²
12

13 Whereas, the need for anatomical specimens has long since outpaced supply now and even
14 more in the distant past; and ¹³
15

16 Whereas, in the 1800s the theft of the bodies of minority populations like that of indigenous,
17 enslaved, and free Black citizens was a common practice increasing supply of anatomical
18 specimens without attracting scrutiny from legal entities; and ¹⁴⁻¹⁶
19

20 Whereas, some institutions have begun decommissioning, cremating, or returning remains of
21 some slaves or minority populations; and ¹⁷⁻¹⁹
22

23 Whereas, other institutions have fought to hold on to remains like those of mother Bessie
24 Wilborn, who had Paget's disease, whose skeleton still hangs at the University of Georgia
25 against the wishes of her family; and ²⁰⁻²¹
26

27 Whereas, despite laws such as the Native American Graves and Repatriation Act, which
28 "requires federal agencies and institutions that receive federal funding to return Native American
29 "cultural items" to lineal descendants and culturally affiliated American Indian tribes, Alaska
30 Native villages, and Native Hawaiian organizations", museums and institutions of higher
31 learning have not complied with these laws; and ^{30, 31}
32

33 Whereas, Harvard holds human remains of 19 likely enslaved individuals and thousands of
34 Native Americans according to a recent report ²⁹⁻³⁰; and
35

36 Whereas, the Peabody Museum at Harvard stewards a collection of hair samples, and often
37 names, taken from Indigenous people including clippings of hair from approximately 700 Native
38 American children attending federal Indian Boarding Schools²⁹; and

1 Whereas, the final manifestation of medical racism is the use of patient's bodies without their
2 consent and the repatriation of these specimens is an important step toward healing minorities'
3 distrust in medicine²¹; and
4

5 Whereas, today many states have presumed consent laws that still allow for bodies that haven't
6 been claimed in as short as few days to be donated for dissection; and ^{27, 28}
7

8 Whereas, the majority of unclaimed bodies are non-white person, persons with mental health
9 issues, or are the bodies of low- income individuals; and ²⁶⁻²⁸
10

11 Whereas, the medical ethics community in America has expressed concern about presumed
12 consent in the case of organ donation due to potential for damage the relationship of trust
13 between clinicians caring for patients at the end of life and their families and loss of autonomy
14 especially amongst those least capable of registering objections; and ^{25, 26}
15

16 Whereas, AMA Code of Ethics 6.1.4. cautions against the practice of presumed consent for
17 deceased organ donation, but the AMA has no current policy on what constitutes ethical
18 consent processes for donation of cadavers or body parts following death for educational
19 purposes; and
20

21 Whereas, AMA Code of Ethics 6.1.3 provides guidelines on financial incentives for cadaveric
22 donations; however both opinions were developed in reports in 2002 and 2005 respectively, and
23 do not consider the issues from a lens of medical racism; and
24

25 Whereas, MSSNY recently passed comprehensive new policy at its 2024 HOD calling for
26 several actions to address the historical injustices of anatomical specimen use in NY State and
27 for forwarding proposed policy to the AMA; therefore be it
28

29 RESOLVED, that Our American Medical Association advocate to AAMC (Association of
30 American Medical Colleges) and other appropriate bodies for the return of human remains to
31 living family members, or, if none exist, the burial of anatomical specimens older than 2 years
32 where consent for permanent donation cannot be proven (Directive to Take Action); and be it
33 further
34

35 RESOLVED, that our AMA advocate that medical schools and teaching hospitals in the US
36 review their anatomical collections for remains of American Indian, Hawaiian Native, and Alaska
37 Native remains and immediately return remains and skeletal collections to tribal governments;
38 as required by laws such as the Native American Graves and Repatriation Act (Directive to
39 Take Action); and be it further
40

41 RESOLVED, that our AMA advocate that medical schools and teaching hospitals in the US
42 review their anatomical collections for remains of Black and Brown people and other minority
43 groups, and return remains and skeletal collections to living family members, or, if none exist,
44 then respectful burial of anatomical specimens or remains (Directive to Take Action); and be it
45 further
46

47 RESOLVED, that Our AMA seek legislation or regulation that requires the return of anatomic
48 specimens of American Indian, Hawaiian Natives, Alaskan Natives and other minority groups
49 (Directive to Take Action); and be it further

1 RESOLVED, that Our AMA support the creation of a national anatomical specimen database
2 that includes registry demographics (New HOD Policy); and be it further

3
4 RESOLVED, that our AMA study and develop recommendations regarding regulations for
5 ethical body donations including, but not limited to guidelines for informed and presumed
6 consent; care and use of cadavers, body parts, and tissue (Directive to Take Action); and be it
7 further

8
9 RESOLVED, that our AMA amend policy 6.1.4 Presumed Consent & Mandated Choice for
10 Organs from Deceased Donors should be amended as follows:

- 11 ○ Physicians who propose to develop or participate in pilot studies of presumed
12 consent or mandated choice should ensure that the study adheres to the
13 following guidelines:
 - 14 ■ (a) Is scientifically well designed and defines clear, measurable outcomes
15 in a written protocol.
 - 16 ■ (b) Has been developed in consultation with the population among whom
17 it is to be carried out.
 - 18 ■ (c) Has been reviewed and approved by an appropriate oversight body
19 and is carried out in keeping with guidelines for ethical research.
- 20 ○ ~~Unless there are data that suggest a positive effect on donation, n~~ Neither
21 presumed consent nor mandated choice for cadaveric organ donation should be
22 widely implemented.

23 (Modify Current HOD Policy); and be it further

24
25 RESOLVED, that our AMA believes that, for purpose of differentiation and clarity, anatomical
26 specimens, tissues and other human material that were collected and maintained for purposes
27 of diagnosis and compliance under Clinical Laboratory Improvement Act (CLIA) where informed
28 consent has been obtained are consistent with the goals of this resolution, and that
29 biospecimens donated for research, education, and transplantation with informed consents of
30 donors (or, if available, next of kin if deceased) are consistent with the goals of this resolution as
31 such materials can advance medical knowledge, improve the quality of healthcare and save
32 lives. (New HOD Policy)

Fiscal Note: To Be Determined

RELEVANT AMA POLICY

Improving Body Donation Regulation H-460.890

Our AMA recognizes the need for ethical, transparent, and consistent body and body part donation regulations.

Organ Donation and Honoring Organ Donor Wishes H-370.998

Our AMA:

- (1) continues to urge the citizenry to sign donor cards and supports continued efforts to educate the public on the desirability of, and the need for, organ donations, as well as the importance of discussing personal wishes regarding organ donation with appropriate family members
- (2) when a good faith effort has been made to contact the family, actively encourage Organ Procurement Organizations and physicians to adhere to provisions of the Uniform Anatomical Gift Act which allows for the procurement of organs when the family is absent and there is a signed organ donor card or advanced directive stating the decedent's desire to donate the organs.

Medical Ethics and Continuing Medical Education H-300.964

The AMA encourages accredited continuing medical education sponsors to plan and conduct programs and conferences emphasizing ethical principles in medical decision making.

Accelerating Change in Medical Education: Strategies for Medical Education Reform H-295.871

Our AMA continues to recognize the need for transformation of medical education across the continuum from premedical preparation through continuing physician professional development and the need to involve multiple stakeholders in the transformation process, while taking an appropriate leadership and coordinating role.

6.1.4 Presumed Consent & Mandated Choice for Organs from Deceased Donors

Physicians who propose to develop or participate in pilot studies of presumed consent or mandated choice should ensure that the study adheres to the following guidelines:

- (a) Is scientifically well designed and defines clear, measurable outcomes in a written protocol.
- (b) Has been developed in consultation with the population among whom it is to be carried out.
- (c) Has been reviewed and approved by an appropriate oversight body and is carried out in keeping with guidelines for ethical research.

Unless there are data that suggest a positive effect on donation, neither presumed consent nor mandated choice for cadaveric organ donation should be widely implemented.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 018
(A-24)

Introduced by: New York

Subject: Opposing Violence, Terrorism, Discrimination, and Hate Speech

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, the American Medical Association represents hundreds of thousands of physicians
2 across the United States; and
3
4 Whereas, the AMA is committed to promoting the health and well-being of all individuals and
5 communities; and
6
7 Whereas, the AMA recognizes the inherent dignity and worth of every person, regardless of
8 race, ethnicity, gender, disability, religious affiliation, cultural affiliation, sexual orientation, or
9 other factor; and
10
11 Whereas, the AMA condemns all forms of violence, terrorism, discrimination, and hate speech
12 perpetrated against any group or individual; and
13
14 Whereas, the AMA acknowledges the ongoing conflicts and persecution faced by numerous
15 groups around the world, including but not limited to:
16
17 • Ethnic minorities such as the Rohingya in Myanmar, the Uighurs in China, and the Kurds
18
19 • Religious communities such as Jews, Muslims, Christians, Yazidis, etc.
20
21 • Indigenous populations
22
23 • LGBTQ+ individuals
24
25 • Refugees and asylum seekers in many countries
26
27 Whereas, current events including but not limited to the conflicts in the Middle East and Ukraine-
28 Russia provide context for this resolution and demonstrate the AMA's awareness of global
29 issues; and
30
31 Whereas, it is imperative for the AMA to address issues of recognition and commemoration in a
32 manner that fosters unity, understanding, and healing among all communities; therefore be it
33
34 RESOLVED, that our American Medical Association strongly condemns all acts of violence,
35 terrorism, discrimination, and hate speech against any group or individual, regardless of race,
36 ethnicity, religious affiliation, cultural affiliation, gender, sexual orientation, disability, or other
37 factor (New HOD Policy); and be it further

1 RESOLVED, that our AMA affirms its commitment to promoting dialogue, empathy, and mutual
2 respect among diverse communities, recognizing the importance of fostering understanding and
3 reconciliation (New HOD Policy); and be it further

4
5 RESOLVED, that our AMA recognizes the importance of commemorating and honoring the
6 victims of tragedies throughout human history, in a manner that respects the dignity and
7 sensitivities of all affected communities (New HOD Policy); and be it further

8
9 RESOLVED, that our AMA encourages initiatives that promote education, awareness, and
10 solidarity to prevent future acts of violence and promote social cohesion (New HOD Policy); and
11 be it further

12
13 RESOLVED, that our AMA acknowledges the diverse perspectives and experiences within its
14 membership and commits to facilitating constructive dialogue and engagement on sensitive and
15 polarizing issues (New HOD Policy); and be it further

16
17 RESOLVED, that our AMA calls for continued collaboration and partnership with organizations
18 representing diverse communities. (Directive to Take Action)

19
Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/8/2024

AMERICAN MEDICAL ASSOCIATION MINORITY AFFAIRS SECTION

Resolution 019
(A-24)

Introduced by: Minority Affairs Section

Subject: Supporting the Health of Our Democracy

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, our American Medical Association “acknowledges voting is a social determinant of
2 health and significantly contributes to the analyses of other social determinants of health as a
3 key metric”; and
4

5 Whereas, our AMA “recognizes that gerrymandering which disenfranchises
6 individuals/communities limits access to health care, including but not limited to the expansion
7 of comprehensive medical insurance coverage, and negatively impacts health outcomes”; and
8

9 Whereas, our AMA “will collaborate with appropriate stakeholders and provide resources to
10 firmly establish a relationship between voter participation and health outcomes”; and
11

12 Whereas, the Association of American Medical Colleges (AAMC) supports medical schools and
13 teaching hospitals facilitating nonpartisan voter registration efforts¹; and
14

15 Whereas, a growing body of research demonstrates the relationship between the political
16 determinants of health (including voter rates, government participation, and policy engagement)
17 and other social determinants, including how votes lost to morbidity and mortality in
18 underrepresented populations impact electoral and policy outcomes²⁻⁴; and
19

20 Whereas, lower voter rates among elderly patients, patients with disabilities, patients who are
21 socially isolated, and low-income patients are associated with poor reported health, and
22 increased voter rates are associated with healthier lifestyle behaviors and improved mental
23 health, even when controlling for income inequality⁴⁻¹⁰; and
24

25 Whereas, health facilities’ nonpartisan voter registration efforts demonstrate improved civic
26 engagement and are protected by the National Voter Registration Act and IRS code¹¹⁻¹⁴; and
27

28 Whereas, emergency absentee ballot access for people experiencing or managing medical
29 emergencies is variable across states, with only 23 offering coverage for patients’ relatives and
30 only 17 extending protections to healthcare workers¹²; and
31

32 Whereas, physician voter rates are lower than the general public, often due to work conflicts,
33 although rates are higher in states with universal mail ballots¹⁵⁻¹⁶; and
34

35 Whereas, President Biden’s Executive Order on Promoting Access to Voting strongly
36 encourages federal agencies, including Veterans Health Administration (VHA) and Indian Health
37 Service sites to seek designation as voter registration sites¹⁷; and

1 Whereas, other federal health and social programs such as the VHA, Medicaid, and SNAP/WIC
2 offer voter registration services, and the Health Resources and Services Administration even
3 offers guidance for Federally Qualified Health Centers to organize such efforts^{12,18-19}; and
4

5 Whereas, civic engagement efforts are limited at Indian Health Service, Tribal, and Urban Indian
6 Health Programs, which are crucial interfaces with Native American patients and Tribal
7 governments²⁰⁻²¹; and
8

9 Whereas, gerrymandering disenfranchises voters, especially voters of color and low-income
10 voters, resulting in electoral outcomes that do not accurately reflect popular votes and
11 subsequent governments who often limit ballot access once in power²²⁻²⁴; and
12

13 Whereas, increased gerrymandering and barriers to ballot access are associated with lower life
14 expectancies, obstruction of Medicaid expansion, and perpetuation of systemic racial health
15 inequities, especially among Black, Latine, and Native American populations^{3,23-24}; and
16

17 Whereas, the primary solution to gerrymandering is the creation of independent, nonpartisan
18 redistricting commissions, so if our AMA recognizes that gerrymandering is a threat to health
19 outcomes, then we should support solutions to mitigate this problem²⁵; therefore be it
20

21 RESOLVED, that our American Medical Association support policies that ensure safe and
22 equitable access to voting and opposes the institutional barriers to both the process of voter
23 registration and the act of casting a vote (New HOD Policy); and be it further
24

25 RESOLVED, that our AMA encourage physicians and medical trainees to vote, oppose barriers
26 to their participation in the electoral process, and support their and other healthcare workers'
27 engagement in nonpartisan voter registration efforts in healthcare settings, including emergency
28 absentee ballot procedures for qualifying patients, visitors, and healthcare workers (New HOD
29 Policy); and be it further
30

31 RESOLVED, that our AMA support the use of independent, nonpartisan commissions to draw
32 districts for both federal and state elections. (New HOD Policy)

Fiscal Note: Modest - between \$1,000 - \$5,000

Date Received: 5/8/2024

RELEVANT AMA POLICY

Support for Safe and Equitable Access to Voting H-440.805

1. Our AMA supports measures to facilitate safe and equitable access to voting as a harm-reduction strategy to safeguard public health and mitigate unnecessary risk of infectious disease transmission by measures including but not limited to: (a) extending polling hours; (b) increasing the number of polling locations; (c) extending early voting periods; (d) mail-in ballot postage that is free or prepaid by the government; (e) adequate resourcing of the United States Postal Service and election operational procedures; (f) improved access to drop off locations for mail-in or early ballots; and (g) use of a P.O. box for voter registration.
2. Our AMA opposes requirements for voters to stipulate a reason in order to receive a ballot by mail and other constraints for eligible voters to vote-by-mail.
3. Our AMA: (a) acknowledges voting is a social determinant of health and significantly contributes to the analyses of other social determinants of health as a key metric; (b) recognizes that gerrymandering which disenfranchises individuals/communities limits access to health care, including but not limited to the expansion of comprehensive medical insurance coverage, and negatively impacts health outcomes; and (c) will collaborate with appropriate stakeholders and provide resources to firmly establish a relationship between voter participation and health outcomes.

Medical Student, Resident/Fellow, and Physician Voting in Federal, State and Local Elections D-65.982

Our AMA will: (1) study the rate of voter turnout in physicians, residents, fellows, and medical students in federal and state elections without regard to political party affiliation or voting record, as a step towards understanding political participation in the medical community; and (2) work with appropriate stakeholders to ensure that medical students, residents, fellows and physicians are allowed time to vote without penalty on Election Days.

AMERICAN MEDICAL ASSOCIATION MINORITY AFFAIRS SECTION

Resolution: 020
(A-24)

Introduced by: Minority Affairs Section

Subject: Voter Protections During and After Incarceration

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, our American Medical Association “acknowledges voting is a social determinant of
2 health and significantly contributes to the analyses of other social determinants of health as a
3 key metric”; and
4
5 Whereas, our AMA “recognizes that gerrymandering which disenfranchises
6 individuals/communities limits access to health care, including but not limited to the expansion
7 of comprehensive medical insurance coverage, and negatively impacts health outcomes”; and
8
9 Whereas, our AMA “will collaborate with appropriate stakeholders and provide resources to
10 firmly establish a relationship between voter participation and health outcomes”; and
11
12 Whereas, states that increase access to voting experience stronger public health outcomes and
13 better self-reported health status of individuals, while reduced access to voting has been linked
14 to poorer health outcomes and decreased health coverage¹⁻⁴; and
15
16 Whereas, barriers to voting in the United States have been associated with an increased
17 likelihood of not having access to health care coverage, thereby making the government less
18 accountable to the needs of its people⁵; and
19
20 Whereas, past expansion of suffrage resulted in improved maternal outcomes following
21 women’s suffrage in 1920 and reduced Black infant mortality correlated with the Voting Rights
22 Act of 1965, due to policies passed by legislators after the addition of these voters⁶; and
23
24 Whereas, 48 states currently restrict the right to vote of 4.6 million citizens convicted beyond a
25 misdemeanor, and many states permanently bar them from voting⁷⁻⁹; and
26
27 Whereas, the Fifth Circuit Court of Appeals ruled in August 2023 that a state violated the US
28 Constitution by inflicting cruel and unusual punishment by stripping the right to vote from
29 citizens who were convicted¹⁰; and
30
31 Whereas, since 2020, 7 states passed laws allowing citizens to vote while on parole⁷; and
32
33 Whereas, Black and Latine people are imprisoned 5 times and 1.3 times as much as white
34 people, respectively¹¹; and
35
36 Whereas, racial inequities in incarceration extend to voter rights for citizens who are
37 incarcerated as well, with 5.3% of Black incarcerated citizens banned compared to 1.5% of non-
38 Black incarcerated citizens⁹; and

1 Whereas, Black men comprise over one-third of the total disenfranchised population, are
 2 disproportionately impacted by policing and overrepresented in the carceral system, and could
 3 comprise as much as 40% in states that restrict incarcerated citizens' right to vote,
 4 demonstrating that restriction of voter rights in incarceration substantially contributes to the
 5 disenfranchisement of Black citizens¹²; therefore be it
 6

7 RESOLVED, that our American Medical Association support the continuation and restoration of
 8 voting rights for citizens currently or formerly incarcerated, support efforts ensuring their ability
 9 to exercise their vote during and after incarceration, and oppose efforts to restrict their voting
 10 rights (New HOD Policy); and be it further

11
 12 RESOLVED, that our AMA research the impact of disproportionate policing in and incarceration
 13 of minoritized communities on voter participation and health outcomes (Directive to Take
 14 Action); and be it further

15
 16 RESOLVED, that our AMA develop educational materials and programming to educate medical
 17 trainees and physicians on the impact of incarceration on voting and health outcomes. (Directive
 18 to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Date Received: 5/8/2024

RELEVANT AMA POLICY

Mental Illness and the Right to Vote H-65.971

Our AMA will advocate for the repeal of laws that deny persons with mental illness the right to vote based on membership in a class based on illness.

Support for Safe and Equitable Access to Voting H-440.805

1. Our AMA supports measures to facilitate safe and equitable access to voting as a harm-reduction strategy to safeguard public health and mitigate unnecessary risk of infectious disease transmission by measures including but not limited to: (a) extending polling hours; (b) increasing the number of polling locations; (c) extending early voting periods; (d) mail-in ballot postage that is free or prepaid by the government; (e) adequate resourcing of the United States Postal Service and election operational procedures; (f) improved access to drop off locations for mail-in or early ballots; and (g) use of a P.O. box for voter registration.
2. Our AMA opposes requirements for voters to stipulate a reason in order to receive a ballot by mail and other constraints for eligible voters to vote-by-mail.
3. Our AMA: (a) acknowledges voting is a social determinant of health and significantly contributes to the analyses of other social determinants of health as a key metric; (b) recognizes that gerrymandering which disenfranchises individuals/communities limits access to health care, including but not limited to the expansion of comprehensive medical insurance coverage, and negatively impacts health outcomes; and (c) will collaborate with appropriate stakeholders and provide resources to firmly establish a relationship between voter participation and health outcomes.

Support for Democracy H-65.947

Our AMA: (1) unequivocally supports the democratic process, wherein representatives are regularly chosen through free and fair elections, as essential for maximizing the health and well-being of all Americans; (2) will strongly oppose attempts to subvert the democratic process; and (3) asserts that every candidate for political office and every officeholder in the public trust must support the democratic process and never take steps or support steps by others to subvert it.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 021
(A-24)

Introduced by: Minority Affairs Section

Subject: Opposition to Capital Punishment

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, the principle of medicine “to help and do no harm” is related to beneficence, which
2 speaks to the obligation of the physician to act for the benefit of the patient and remove
3 conditions that will cause harm, and nonmaleficence, which is concerned with weighing the
4 benefits and burdens of medical interventions and proceeding with the best choice for the
5 patient that minimizes harm and suffering;¹ and
6

7 Whereas, capital punishment, or the death penalty, is defined by the United States Bureau of
8 Justice Statistics as “the process of sentencing convicted offenders to death for the most
9 serious crimes (capital crimes) and carrying out that sentence” where the specific offenses are
10 “defined by statute and are prescribed by Congress or any state legislature”;² and
11

12 Whereas, forms of capital punishment used in the United States include electrocution, lethal
13 injection, and firing squad;^{3,4} and
14

15 Whereas, 24 individuals in 5 states (Texas, Oklahoma, Missouri, Alabama, and Florida) executed
16 in 2023;^{2,5} and
17

18 Whereas, supporters of capital punishment argue that the practice saves on costs of
19 incarceration, but these arguments have also proven to be categorically false, as many states
20 actively spend millions of additional dollars annually to uphold these policies;⁶⁻¹⁰ and
21

22 Whereas, 23 states have abolished capital punishment without significant changes in crime or
23 murder rates, challenging the argument that it effectively deters serious crimes;¹¹⁻¹⁷ and
24

25 Whereas, in response to drug shortages, manufacturing changes, high cost, and manufacturer
26 reluctance to sell drugs for execution, prisons are introducing novel forms of capital punishment
27 including nitrogen hypoxia and midazolam (in lieu of phenobarbital), in addition to attempts to
28 procure drugs for lethal injection from illegal and untraceable sources;¹⁸⁻²⁰ and
29

30 Whereas, current methods of capital punishment used in the United States have been
31 associated with severe, distressful symptoms, in addition to the inherent harm caused by the act
32 of capital punishment itself;²¹⁻²³ and
33

34 Whereas, nitrogen hypoxia is opposed as a use of euthanasia by the American Veterinary
35 Medical Association due to its ability to cause distress in nonhuman animals;²⁴ and
36

37 Whereas, the threshold for an acceptable amount of suffering in humans is widely considered to
38 be lower than for suffering in nonhuman animals;²⁵ and
39

40 Whereas, the AMA’s amicus brief in the 2018 Supreme Court case *Bucklew v. Precythe* relating

1 to novel forms of capital punishment states “Society wants to delude itself into a belief that
2 capital punishment no longer represents a weighted moral choice, but is now somehow
3 scientific—nearly antiseptic. This delusion, however, cheapens life and makes its extinction
4 easier. The medical profession, whose ‘essential quality’ is an interest in humanity and which
5 reveres human life should have no part in this charade.”;²⁶ and
6

7 Whereas, AMA Code of Medical Ethics Opinion 9.7.3 Capital Punishment states clearly that “as
8 a member of a profession dedicated to preserving life when there is hope of doing so, a
9 physician must not participate in a legally authorized execution”; and
10

11 Whereas, AMA Code 9.7.3 only addresses physician participation in executions and does not
12 address the AMA’s advocacy stance on capital punishment, so an attempt to change the AMA’s
13 advocacy stance on this issue does not require an amendment to the Code; therefore be it
14

15 RESOLVED, that our American Medical Association amend H-140.896, “Moratorium on Capital
16 Punishment,” by addition and deletion as follows:
17

18 **Opposition to Moratorium on Capital Punishment H-140.896**

19 Our AMA: (1) opposes all forms of ~~does not take a position~~ on
20 capital punishment; and (2) urges appropriate legislative and legal
21 authorities to continue to implement changes in the system of
22 administration of capital punishment, if used at all, and to promote
23 its fair and impartial administration in accordance with basic
24 requirements of due process.

25 (Modify Current HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA Policy

H-140.896 Moratorium on Capital Punishment

Our AMA: (1) does not take a position on capital punishment; and (2) urges appropriate legislative and legal authorities to continue to implement changes in the system of administration of capital punishment, if used at all, and to promote its fair and impartial administration in accordance with basic requirements of due process. [Sub. Res. 8, A-01; Reaffirmation A-04; Reaffirmation A-07; Reaffirmed: CEJA Rep. 04, A-17]

Code of Medical Ethics 9.7.3 Capital Punishment

Debate over capital punishment has occurred for centuries and remains a volatile social, political, and legal issue. An individual's opinion on capital punishment is the personal moral decision of the individual. However, as a member of a profession dedicated to preserving life when there is hope of doing so, a physician must not participate in a legally authorized execution.

Physician participation in execution is defined as actions that fall into one or more of the following categories:

- (a) Would directly cause the death of the condemned.
- (b) Would assist, supervise, or contribute to the ability of another individual to directly cause the death of the condemned.
- (c) Could automatically cause an execution to be carried out on a condemned prisoner. These include, but are not limited to:
 - (d) Determining a prisoner's competence to be executed. A physician's medical opinion should be merely one aspect of the information taken into account by a legal decision maker, such as a judge or hearing officer.
 - (e) Treating a condemned prisoner who has been declared incompetent to be executed for the purpose of restoring competence, unless a commutation order is issued before treatment begins. The task of re-evaluating the prisoner should be performed by an independent medical examiner.
 - (f) Prescribing or administering tranquilizers and other psychotropic agents and medications that

are part of the execution procedure.

- (g) Monitoring vital signs on site or remotely (including monitoring electrocardiograms).
- (h) Attending or observing an execution as a physician.
- (i) Rendering of technical advice regarding execution.

and, when the method of execution is lethal injection:

- (j) Selecting injection sites.
- (k) Starting intravenous lines as a port for a lethal injection device.
- (l) Prescribing, preparing, administering, or supervising injection drugs or their doses or types.
- (m) Inspecting, testing, or maintaining lethal injection devices.
- (n) Consulting with or supervising lethal injection personnel. 20

The following actions do not constitute physician participation in execution:

- (o) Testifying as to the prisoner's medical history and diagnoses or mental state as they relate to competence to stand trial, testifying as to relevant medical evidence during trial, testifying as to medical aspects of aggravating or mitigating circumstances during the penalty phase of a capital case, or testifying as to medical diagnoses as they relate to the legal assessment of competence for execution.
- (p) Certifying death, provided that the condemned has been declared dead by another person.
- (q) Witnessing an execution in a totally nonprofessional capacity.
- (r) Witnessing an execution at the specific voluntary request of the condemned person, provided that the physician observes the execution in a nonprofessional capacity.
- (s) Relieving the acute suffering of a condemned person while awaiting execution, including providing tranquilizers at the specific voluntary request of the condemned person to help relieve pain or anxiety in anticipation of the execution.
- (t) Providing medical intervention to mitigate suffering when an incompetent prisoner is undergoing extreme suffering as a result of psychosis or any other illness.

No physician should be compelled to participate in the process of establishing a prisoner's competence or be involved with treatment of an incompetent, condemned prisoner if such activity is contrary to the physician's personal beliefs. Under those circumstances, physicians should be permitted to transfer care of the prisoner to another physician.

Organ donation by condemned prisoners is permissible only if:

- (u) The decision to donate was made before the prisoner's conviction.
- (v) The donated tissue is harvested after the prisoner has been pronounced dead and the body removed from the death chamber.
- (w) Physicians do not provide advice on modifying the method of execution for any individual to facilitate donation. [AMA Principles of Medical Ethics: I; Issued: 2016]

H-140.950 Physician Participation in Capital Punishment

Evaluations of Prisoner Competence to be Executed; Treatment to Restore Competence to be Executed: Our AMA endorses the following: (1) Physician participation in evaluations of a prisoner's competence to be executed is ethical only when certain safeguards are in place. A physician can render a medical opinion regarding competency which should be merely one aspect of the information taken into account by the ultimate decision maker, a role that legally should be assumed by a judge or hearing officer. Prisoners' rights to due process at the competency hearings should be carefully observed. (2) When a condemned prisoner has been declared incompetent to be executed, physicians should not treat the prisoner to restore competence unless a commutation order is issued before treatment begins. (3) If the incompetent prisoner is undergoing extreme suffering as a result of psychosis or any other illness, medical intervention intended to mitigate the level of suffering is ethically permissible. It will not always be easy to distinguish these situations from treatment for the purpose of restoring the prisoner's competence, and in particular, to determine when treatment initiated to reduce suffering should be stopped. However, there is no alternative at this time other than to rely upon the treating physician to exercise judgment in deciding when and to what extent treatment is necessary to reduce extreme suffering. The cumulative experience of physicians applying these principles over time may lead to future refinements. Treatment should be provided in a properly-secured, general medical or psychiatric facility, not

in a cell block. The task of re-evaluating the prisoner's competence to be executed should be performed by an independent physician examiner.

(4) Given the ethical conflicts involved, no physician, even if employed by the state, should be compelled to participate in the process of establishing a prisoner's competence to be executed if such activity is contrary to the physician's personal beliefs. Similarly, physicians who would prefer not to be involved with treatment of an incompetent, condemned prisoner should be excused or permitted to transfer care of the prisoner to another physician. [CEJA Rep. 6, A-95; Reaffirmation A-04; Reaffirmed: CEJA Rep. 8, A-14; Reaffirmed in lieu of Res. 7, A-14]

H-140.898 Medical Profession Opposition to Physician Participation in Execution

Our AMA strongly reaffirms its opposition to physician participation in execution. [Res. 10, A-02; Reaffirmation A-04; Reaffirmed: CEJA Rep. 8, A-14]

D-140.991 Continuing Efforts to Exclude Physicians from State Executions Protocols

Our AMA will remind all state medical societies to review their state execution statutes to ensure that physician participation is not required. [Res. 3, A-00; Reaffirmed: CEJA Rep. 6, A-10; Reaffirmed: CEJA Rep. 01, A-20]

H-140.963 Secrecy and Physician Participation in State Executions

The AMA opposes any and all attempts either in state laws or in rules and regulations that seek to enable or require physician participation in legal executions and/or which protect from disclosure the identity of physicians participating or performing direct or ancillary functions in an execution. [Res. 6, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmation A-04; Reaffirmed: CEJA Rep. 8, A-14]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 022
(A-24)

Introduced by: Minority Affairs Section

Subject: Health and Racial Equity in Medical Education to Combat Workforce Disparities

Referred to: Reference Committee on Amendments to Constitution and Bylaws

1 Whereas, achieving health equity requires valuing everyone equally with focused and ongoing
2 societal efforts to address avoidable inequalities, historical and contemporary injustices, and
3 social determinants of health — to eliminate disparities in health and health care¹; and
4

5 Whereas, the road to achieving health equity requires a diverse and equitable workforce that is
6 essential to optimizing health care access and the quality of patient care; and
7

8 Whereas, many barriers remain and unique challenges persist for some diverse groups
9 attempting to enter the medical field and successfully matriculate through the profession of
10 medicine. This is strongly indicated in demographics of currently practicing physicians; and
11

12 Whereas, among active physicians, 56.2% identified as White, 17.1% identified as Asian, 5.8%
13 identified as Hispanic, and ~5.0% identified as Black or African American²; and
14

15 Whereas, in 2015, the percentage of matriculants from racial/ethnic groups underrepresented in
16 medicine remained low: Black at 6.5%, Hispanic, Latino, or Spanish at 6.4% and American
17 Indian at 0.3%. The data is especially concerning as the Hispanic population is expected to
18 increase by 26% by 2030;^{3,4} and
19

20 Whereas, black people account for roughly 13 percent of the US population, they make up only
21 5.5 percent of the physician workforce and 7.3 percent of medical students. In 1940, when
22 9.7% of the total population was Black, 2.8% of physicians at that time were Black. These
23 representational disparities have not changed appreciably in decades;^{3,4} and
24

25 Whereas, additional barriers exists for certain minority groups. Black trainees face higher rates
26 of remedial intervention and dismissal from their programs than their White counterparts, thus
27 leading to concerns of over-policing in medical education; and
28

29 Whereas, over-policing in education begins as early as primary school and continues through
30 high school, college, medical education, and into the workforce. In graduate medical
31 education, biased scrutiny begins with the use of metrics that disadvantage Black applicants in
32 the residency selection process;⁵ and
33

34 Whereas, black residents account for about 5% of all residents, yet they accounted for nearly
35 20% of those who were dismissed in 2015;⁷and
36

37 Whereas, increased scrutiny and expectations can lead to damaging effects such as symptoms
38 of depression and anxiety among minority students, residents and physicians. This often leads

1 to reducing practice hours or leaving medicine, creating even greater workforce
2 disparities;⁵ therefore be it

3
4 RESOLVED, that our American Medical Association further study and track the prevalence of
5 attending physicians' and trainees' dismissals and remedial interventions, based on race,
6 gender, and ethnicity as well as the disproportionate impacts this has on workforce disparities
7 (Directive to Take Action); and be it further

8
9 RESOLVED, that our AMA engage stakeholders to study and report back how to effectively
10 support underrepresented groups in medicine to level the playing field for those most affected
11 by bias and historical harms (Directive to Take Action); and be it further

12
13 RESOLVED, that our AMA work with stakeholders to make recommendations on a review and
14 appeals process that will enable physicians and trainees to receive a fair and equitable due
15 process in defense of alleged shortcomings. (Directive to Take Action)

16
Fiscal Note: Modest - between \$1,000 - \$5,000

RELEVANT AMA POLICY

Strategies for Enhancing Diversity in the Physician Workforce H-200.951

Our AMA: (1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality; (2) commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes; (3) encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties; (4) encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine; (5) encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support

individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal; and (6) continue to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations. [CME Rep. 1, I-06 Reaffirmed: CME Rep. 7, A-08 Reaffirmed: CCB/CLRPD Rep. 4, A-13 Modified: CME Rep. 01, A-16 Reaffirmation A-16 Modified: Res. 009, A-21 Modified: CME Rep. 5, A-21]

Continued Support for Diversity in Medical Education D-295.963

Our AMA will: (1) publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population; (5) directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or funding in medical education; (6) advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement; (7) investigate the impacts of state legislation regarding DEI-related efforts on the education and careers of students, trainees, and faculty; (8) recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts; and (9) collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure. [Res. 325, A-03 Appended: CME Rep. 6, A-11 Modified: CME Rep. 3, A-13 Appended: CME Rep. 5, A-21 Modified: CME Rep. 02, I-22 Appended: Res. 319, A-22 Modified: Res. 319, A-23]

Diversity in the Physician Workforce and Access to Care D-200.982

Our AMA will: (1) continue to advocate for programs that promote diversity in the US medical workforce, such as pipeline programs to medical schools; (2) continue to advocate for adequate funding for federal and state programs that promote interest in practice in underserved areas, such as those under Title VII of the Public Health Service Act, scholarship and loan repayment programs under the National Health Services Corps and state programs, state Area Health Education Centers, and Conrad 30, and also encourage the development of a centralized database of scholarship and loan repayment programs; and (3) continue to study the factors that support and those that act against the choice to practice in an underserved area, and report the findings and solutions at the 2008 Interim Meeting. [CME Rep. 7, A-08 Reaffirmation A-13 Reaffirmation: A-16 Reaffirmed: CME Rep. 5, A-21]

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.

2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.

3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs. REPORT 2 OF THE COUNCIL ON MEDICAL SERVICE (A-24)
Improving Affordability of Employment-Based Health Coverage
(Resolution 103-A-23)
(Reference Committee A)

EXECUTIVE SUMMARY

To expand coverage to all Americans, the American Medical Association has long advocated for the promotion of individually selected and owned health insurance; the maintenance of the safety net that Medicaid and CHIP provide; and the preservation of employer-sponsored coverage to the extent the market demands it. As highlighted in this report, ESI remains the dominant source of health coverage in this country and most people seem satisfied with it. However, because of shortcomings inherent to the ESI system—namely equity and affordability concerns, and rising costs—it does not work well for everyone. Some workers, especially those with lower incomes, may be contributing more for an employer plan than they would pay for subsidized marketplace coverage because a provision in the Affordable Care Act (ACA), known as the firewall, prohibits workers with affordable ESI offers from receiving premium tax credits to purchase marketplace plans.

The Council's main concerns about eliminating the firewall abruptly and in full include the potential impacts on ESI stability, which may not be wholly understood, and potential costs to the federal government, since allowing all ESI enrollees access to ACA marketplace subsidies might prove to be prohibitively expensive. Instead, the Council supports incrementally reducing the affordability threshold so that it benefits workers most in need, and then monitoring the effects of this change over time. Accordingly, the Council recommends amending Policy H-165.828[1] to support lowering the threshold that determines whether an employee's premium contribution is affordable to the maximum percentage of income they would be required to pay, after accounting for subsidies, towards premiums for an ACA benchmark plan (second-lowest-cost silver plan).

Additional recommendations are intended to strengthen the quality and affordability of ESI. To help address the needs of ESI enrollees with lower incomes, who are more likely to report difficulties covering the costs of medical care and who may not know if they are firewalled, the Council recommends amending Policy H-165.843 to encourage employers to 1) implement programs that improve affordability of ESI premiums and/or cost-sharing; 2) provide employees with user-friendly information regarding their eligibility for subsidized ACA marketplace plans based on their offer of ESI; and 3) provide employees with information regarding available health plan options, including the plans' cost, network breadth, and prior authorization requirements, which will help them choose a plan that meets their needs. The Council also recommends supporting efforts to strengthen employer coverage offerings, such as by requiring a higher minimum actuarial value or more robust benefit standards.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 2-A-24

Subject: Improving Affordability of Employment-Based Health Coverage
(Resolution 103-A-23)

Presented by: Sheila Rege, MD, Chair

Referred to: Reference Committee A

1 At the June 2023 Annual Meeting, the House of Delegates referred Resolution 103, which was
2 sponsored by the Medical Student Section and asked the American Medical Association (AMA) to:
3 (1) recognize the inefficiencies and complexity of the employer-sponsored health insurance system
4 and the existence of alternative models that better align incentives to facilitate access to high
5 quality health care; (2) support movement toward a health care system that does not rely on
6 employer-sponsored health insurance and enables universal access to high quality health care; (3)
7 amend Policy H-165.828[1], “Health Insurance Affordability,” by addition and deletion to read as
8 follows:

9
10 Health Insurance Affordability H-165.828[1]

11 ~~1. Our AMA supports modifying the eligibility criteria for premium credits and cost sharing~~
12 ~~subsidies for those offered employer-sponsored coverage by lowering the threshold that determines~~
13 ~~whether an employee's premium contribution is affordable to that which applies to the exemption~~
14 ~~from the individual mandate of the Affordable Care Act (ACA). Our AMA advocates for the~~
15 ~~elimination of the employer-sponsored insurance firewall such that no individual would be~~
16 ~~ineligible for premium tax credits and cost-sharing assistance for marketplace coverage solely on~~
17 ~~the basis of having access to employer-sponsored health insurance.~~

18
19 and (4) amend Policy H-165.823[2] by deletion to read as follows:

20
21 Options to Maximize Coverage Under the AMA Proposal for Reform H-165.823[2]

22 2. Our AMA will advocate that any public option to expand health insurance coverage must meet
23 the following standards:

24 a. The primary goals of establishing a public option are to maximize patient choice of health plan
25 and maximize health plan marketplace competition.

26 ~~b. Eligibility for premium tax credit and cost-sharing assistance to purchase the public option is~~
27 ~~restricted to individuals without access to affordable employer-sponsored coverage that meets~~
28 ~~standards for minimum value of benefits.~~

29 ~~b~~e. Physician payments under the public option are established through meaningful negotiations
30 and contracts. Physician payments under the public option must be higher than prevailing Medicare
31 rates and at rates sufficient to sustain the costs of medical practice.

32 ~~c~~d. Physicians have the freedom to choose whether to participate in the public option. Public option
33 proposals should not require provider participation and/or tie participation in Medicare, Medicaid
34 and/or any commercial product to participation in the public option.

35 ~~d~~e. The public option is financially self-sustaining and has uniform solvency requirements.

1 ef. The public option does not receive advantageous government subsidies in comparison to those
 2 provided to other health plans.

3 fg. The public option shall be made available to uninsured individuals who fall into the “coverage
 4 gap” in states that do not expand Medicaid – having incomes above Medicaid eligibility limits but
 5 below the federal poverty level, which is the lower limit for premium tax credits – at no or nominal
 6 cost.

7
 8 The Board of Trustees assigned this item to the Council on Medical Service for a report back to the
 9 House of Delegates. This report discusses policy options for addressing employer-sponsored health
 10 insurance (ESI) affordability, summarizes relevant AMA policy, and presents recommendations.

11
 12 **BACKGROUND**

13
 14 Almost a decade and a half after enactment of the ACA, ESI continues to be the dominant source
 15 of health coverage for Americans under 65 years of age. In 2023, the Congressional Budget Office
 16 (CBO) estimated that 155 million people under age 65—or 57.3 percent of the nonelderly
 17 population—had health insurance coverage through their employer, a number the CBO predicts
 18 will remain steady through 2025 and increase in the years thereafter.¹ Although ESI is the most
 19 common type of health insurance, coverage varies significantly by income as well as race and
 20 ethnicity. While nearly all individuals with incomes at or above 400 percent of the federal poverty
 21 level (FPL) have ESI, it covers just over half of people with incomes between 150 to 400 percent
 22 FPL and fewer than one-quarter of individuals with incomes below 150 percent FPL.²
 23 Additionally, larger percentages of white and Asian people have ESI while individuals who are
 24 African American and Latino are less likely to have employer-based coverage, raising equity
 25 concerns.^{3,4}

26
 27 Overall, most Americans appear satisfied with employment-based coverage.⁵ According to KFF’s
 28 survey of consumer experiences with health insurance, in 2023, 80 percent of adults with ESI and
 29 73 percent of those with marketplace coverage rated their health coverage as “excellent” or “good”
 30 although people in poorer health gave more negative ratings across all plan types. Regardless of
 31 health status, enrollees in marketplace plans were most likely to rate their experiences with health
 32 insurance as fair or poor.⁶ Ninety-three percent of workers responding to a 2022 poll sponsored by
 33 the U.S. Chamber of Commerce expressed high rates of satisfaction with ESI, with a large majority
 34 (89 percent) expressing a preference for ESI over other types of coverage.⁷ Eighty percent of
 35 respondents to this survey ranked health insurance as the most important workplace benefit
 36 provided to them, and a majority cited “affordability” and “high quality” as ESI’s most critical
 37 features.⁸

38
 39 Although ESI is popular, it has become increasingly costly for employers and employees,
 40 especially small firms and lower-income workers. According to 2023 data from the KFF’s
 41 Employer Health Benefits Survey:

- 42
- 43 • Fifty-three percent of all firms offered health benefits, down slightly from five years ago (57
 - 44 percent). Almost all (98 percent) large employers (those with 200 or more workers) offered
 - 45 coverage to at least some workers while just over half (53 percent) of smaller firms (those with
 - 46 three to 199 workers) did so.
 - 47 • Seventy-five percent of eligible employees took up coverage when it was offered to them, a
 - 48 slight decrease from 2013 (80 percent) and a more sizeable decrease from 2003 (84 percent).⁹
 - 49 • Annual health insurance premiums averaged \$8,435 for individual coverage and \$23,968 for
 - 50 family coverage, a seven percent increase over 2022. Notably, premiums for family coverage

1 have increased on average 22 percent since 2018 and 47 percent since 2013. Workers pay, on
 2 average, \$6,575 annually toward the cost of family premiums.

- 3 • Most (77 percent) firms offered only one type of plan, and PPOs were the most common plan
 4 type offered. Large employers were more likely than smaller firms to offer more than one
 5 plan.¹⁰

6
 7 In addition to premium contributions, most workers with ESI are responsible for cost-sharing
 8 expenses, including plan deductibles, copayments, and coinsurance. According to KFF's 2023
 9 Employer Health Benefits Survey, the average annual deductible for employees with single
 10 coverage was \$1,735, a figure that has increased more than 50 percent over the course of 10
 11 years.¹¹ Overall, nearly a third of employees had plan deductibles of \$2,000 or more, including
 12 almost half (47 percent) of workers at small firms, whose average annual deductible was \$2,434
 13 compared to \$1,478 for employees of larger firms.¹²

14
 15 ESI Affordability

16
 17 KFF has also highlighted the lack of affordable family coverage options for workers at smaller
 18 firms employing fewer than 200 people. These employees pay on average \$8,334 towards family
 19 coverage premiums each year with a quarter paying at least \$12,000 annually, not including
 20 deductibles and other cost-sharing expenses.¹³ A KFF analysis of data from its 2023 survey of
 21 consumer experiences with health insurance found that adults with incomes below 200 percent FPL
 22 who have ESI were significantly more likely than higher-income peers to report difficulties paying
 23 for medical care; treatment delays and declines in health due to insurance problems, such as prior
 24 authorization; dissatisfaction with the availability and quality of health providers in their plan's
 25 network; and more difficulty comparing plans and signing up for coverage.¹⁴

26
 27 Several analyses have pointed out that workers with lower incomes are disproportionately
 28 burdened by ESI costs and usually pay a greater share of income toward employer plan premiums
 29 and other out-of-pocket expenses.^{15 16 17} KFF research from 2022 found that, on average, families
 30 with incomes below 200 percent FPL pay approximately 10.4 percent of income toward health care
 31 premiums and out-of-pocket expenses (7.7 percent for premiums) while those with incomes at or
 32 above 400 percent FPL pay about 3.5 percent toward premiums and medical expenses (2.3 percent
 33 for premiums).¹⁸ More workers (over 20 percent, according to a 2019 KFF survey)¹⁹ are covered
 34 by high-deductible plans, which can present additional challenges to lower-income employees even
 35 if a health savings account or health reimbursement account option is available to them. Though
 36 employers could utilize health benefit design strategies to address affordability issues facing lower-
 37 income workers, few seem to do so; in 2022, 10 percent of large firms reportedly had programs that
 38 lowered premium costs for lower-income employees while only five percent reported programs to
 39 lower their cost-sharing expenses.²⁰ COBRA coverage may also be too costly for some workers
 40 who are leaving a job.

41
 42 Though many workers mistakenly think otherwise, they—not the firms they work for—pay the
 43 majority of ESI costs, both directly through contributions and indirectly through wage adjustments
 44 made to cover employers' health care costs.²¹ Building on the literature linking growth in health
 45 insurance costs to stagnant wages, a 2023 *JAMA* analysis suggests a likely association between
 46 increased premium costs for workers with ESI family coverage and decreased earnings and
 47 increased income inequality.²² Because workers earning lower wages contribute a greater share of
 48 income toward ESI premiums, the analysis posits that making employer plans more affordable for
 49 lower-wage workers could help address earnings inequality. This study also identified large
 50 disparities in premium costs as a percentage of income by race (African American and Latino
 51 families paid higher percentages of earnings toward premium costs than white families), and found

1 that over 30 years, families with ESI may have cumulatively lost, on average, more than \$125,000
 2 in earnings due to increases in premium costs.²³

3 ACA Provisions on Affordability and Employer Shared Responsibility
 4

5 Under the ACA, individuals are not eligible for marketplace premium tax credits if they are eligible
 6 for “minimum essential coverage,” which is broadly defined to include Medicare, Medicaid, and
 7 other public programs as well as ESI. Accordingly, individuals with offers of coverage from an
 8 employer do not qualify for ACA marketplace subsidies unless their ESI offer is deemed either
 9 unaffordable or inadequate. In 2023, an employer plan was considered unaffordable if an
 10 employee’s premium contribution exceeded 9.12 percent of that person’s household income. This
 11 percentage threshold is adjusted annually for inflation and is 8.39 percent in 2024.²⁴ To be
 12 considered adequate, a plan must cover at least 60 percent of average costs (actuarial value);
 13 anything less is deemed inadequate.²⁵ The ACA provision making workers with affordable and
 14 adequate ESI offers ineligible to receive advance premium tax credits to purchase marketplace
 15 coverage is colloquially referred to as “the firewall.” This affordability threshold was established to
 16 address multiple concerns with the landmark legislation; namely, to prevent disruption to the ESI
 17 market and prevent prohibitive increases in federal spending (for marketplace subsidies) while
 18 preserving ESI’s position as the principal source of health coverage in this country.
 19

20 As explained in a [2014 Council on Medical Service Report](#) on the future of ESI, the ACA aimed to
 21 build upon the ESI framework and provide low-income, non-elderly individuals without access to
 22 ESI with either Medicaid coverage or subsidized private coverage offered through the nongroup
 23 marketplace. As such, provisions in the ACA statute included incentives and penalties intended to
 24 prevent disruption to the ESI market. For example, to incentivize employers to continue offering
 25 coverage, the ACA contained an “employer shared responsibility” provision, also called the
 26 “employer mandate,” which requires employers with 50 or more full-time employees to either offer
 27 affordable minimum essential coverage to full-time employees and their dependents or pay a
 28 penalty to the Internal Revenue Service (IRS).²⁶ Under this provision, employers face two potential
 29 penalties:²⁷
 30

- 31 • If an employer does not offer minimum essential coverage to at least 95 percent of its full-
 32 time employees and dependents, and at least one employee receives a premium tax credit
 33 for coverage offered through an ACA exchange, the employer faces a penalty that is based
 34 on all full-time employees (except 30), including those who have ESI or coverage from
 35 another source. In 2024, the penalty is \$2,970 per employee.²⁸
- 36 • If an employer offers coverage to at least 95 percent of its employees but at least one
 37 employee obtains a premium tax credit for ACA coverage due to the employer’s coverage
 38 not being “affordable” or “adequate,” the employer must pay a penalty for each employee
 39 who receives the premium tax credit. In 2024, the penalty is \$4,460 per employee.²⁹
 40

41 AMA Policy on the ACA Affordability Threshold
 42

43 In the early years of ACA implementation, a [2015 Council on Medical Service report](#) on health
 44 insurance affordability recommended making changes to how affordable coverage is defined under
 45 the law in order to provide more workers and their families with access to marketplace plans when
 46 those plans are more affordable than employer plans. This report established Policy H-165.828,
 47 which included several provisions calling for the ACA’s “family glitch” to be fixed and capping
 48 the tax exclusion for ESI as a funding stream to improve insurance affordability. Policy H-
 49 165.828[1] as originally written (prior to being amended in 2021) established AMA support for:
 50

1 ... modifying the eligibility criteria for premium credits and cost-sharing subsidies for those
 2 offered ESI by lowering the threshold that determines whether an employee’s premium
 3 contribution is affordable to that which applies to the exemption from the individual mandate
 4 of the ACA.

5
 6 In 2015 when this policy was adopted, individuals were deemed exempt from the ACA’s individual
 7 mandate—which was repealed in 2017—if the lowest-priced coverage available to them cost more
 8 than 8.05 percent of their household income. The same year, individuals with employer coverage
 9 offers were eligible for ACA marketplace plan premium tax credits if their ESI premium
 10 contributions exceeded 9.56 percent of income. The aforementioned Policy H-165.828[1] was
 11 crafted to align the definitions of affordability with respect to being exempt from the individual
 12 mandate (>8.05 percent) and premium tax credit eligibility for individuals with ESI offers (>9.56
 13 percent).

14
 15 Policy H-165.828[1] was amended via adoption of the recommendations in a [2021 Council on](#)
 16 [Medical Service report](#) to address new inconsistencies between the definition of affordability
 17 pertaining to premium tax credit eligibility and provisions in the American Rescue Plan Act of
 18 2021 (ARPA), which extended eligibility for premium subsidies to people with incomes greater
 19 than 400 percent FPL and capped premiums for those with the highest incomes at 8.5 percent of
 20 their income. ARPA increased the generosity of premium tax credits and lowered the cap on the
 21 percentage of income individuals are required to pay for premiums of the benchmark (second-
 22 lowest-cost silver) plan for everyone. At the time the report was written, in 2021, employer
 23 coverage with an employee share of the premium less than 9.83 percent of income was considered
 24 “affordable.” To open the door to premium tax credit eligibility to individuals with ESI premiums
 25 that were above the maximum affordability threshold applied to subsidized marketplace plans,
 26 Policy H-165.828[1] was amended to establish AMA support for:

27
 28 ... modifying the eligibility criteria for premium credits and cost-sharing subsidies for
 29 those offered ESI by lowering the threshold that determines whether an employee’s
 30 premium contribution is affordable to the level at which premiums are capped for
 31 individuals with the highest incomes eligible for subsidized ACA coverage.

32
 33 Federal Subsidies for ACA Premium Tax Credits/Cost-Sharing and ESI Tax Benefits

34
 35 In 2023, the federal government subsidized coverage obtained through the ACA marketplaces and
 36 the Basic Health Program (BHP) at a cost of \$92 billion.³⁰ This figure includes ARPA federal
 37 subsidy enhancements for premium tax credits and cost-sharing reductions that were extended
 38 through 2025 by the Inflation Reduction Act (IRA). Prior to ARPA, required premium contribution
 39 percentages ranged from about two percent of household income for people with poverty level
 40 income to nearly 10 percent of income for people with incomes between 300 to 400 percent FPL;
 41 people earning more than 400 percent FPL were not eligible for premium tax credits.³¹ This year,
 42 as shown in Table 1, required premium contribution percentages range from zero for people with
 43 less than 150 percent FPL to 8.5 percent for those making around 400 percent FPL or more.

44
 45 Table 1: Required Individual Contribution Percentage for 2024^{32,33}

<u>Household income percentage of Federal poverty line:</u>	<u>% at start of range</u>	<u>% at top of range</u>
Less than 150%	0.00%	0.00%
At least 150% but less than 200%	0.00%	2.00%
At least 200% but less than 250%	2.00%	4.00%
At least 250% but less than 300%	4.00%	6.00%

At least 300% but less than 400%	6.00%	8.50%
At least 400% and higher	8.50%	8.50%

1 Premium tax credits for ACA marketplace coverage are calculated by subtracting the required
 2 contribution from the actual cost of the “benchmark” plan, though the credit can be applied toward
 3 any marketplace plan except catastrophic coverage.³⁴ People with incomes below 250 percent FPL
 4 also receive subsidies for cost-sharing expenses that are based on income, so that people with
 5 incomes between 100 and 150 percent FPL receive the most generous subsidies.³⁵ These cost-
 6 sharing reductions are only available to those enrolled in silver plans. According to the CBO, in
 7 2023 the average federal subsidy per ACA marketplace/BHP enrollee was \$5,990.³⁶ The range of
 8 subsidy amounts is considerable, with small subsidy amounts provided to people with incomes
 9 around 400 or more percent of the FPL and subsidies worth around \$15,000 for families with the
 10 lowest incomes.

11
 12 The federal government subsidizes ESI via tax benefits provided to employers and employees that
 13 exclude premium contributions from federal income and payroll taxes. The amount of an
 14 individual’s subsidy depends on that person’s marginal tax rate that would be owed if employer-
 15 paid premiums were taxed as wages. Accordingly, people with greater incomes and higher
 16 marginal tax rates receive larger federal ESI subsidies than people with lower-incomes and lower
 17 tax rates.³⁷ According to the CBO, the average federal subsidy per ESI enrollee in 2023 was
 18 \$2,170.³⁸

19
 20 In part due to the enhanced subsidies for marketplace enrollees established by ARPA and extended
 21 by the IRA, several analysts have observed the growing disparity between federal subsidies that
 22 help defray ACA marketplace plan costs, and subsidies for ESI coverage. To illustrate this
 23 expanding gap, a 2024 American Enterprise Institute (AEI) paper calculated the value of subsidies
 24 that would be received by a family of four with \$75,000 in income, depending on whether they
 25 purchased ESI or marketplace coverage. According to AEI, if the family enrolled in an employer-
 26 based plan, their tax subsidy would be around \$4,100, compared to the more than \$15,000 in
 27 federal premium subsidies the family would be eligible for if enrolled in a marketplace plan.³⁹
 28 Other analyses have noted that workers with lower incomes may be contributing more for an
 29 employer-based plan than they would pay for coverage under a subsidized marketplace plan, and
 30 that it would be financially advantageous for these workers to move to the marketplace.⁴⁰

31
 32 Some employees who would be financially incentivized to enroll in a marketplace plan if the
 33 firewall is repealed might opt to retain ESI coverage if they are satisfied with their plan and able to
 34 see the physicians they want in a timely manner. The Centers for Medicare & Medicaid Services
 35 (CMS) has previously acknowledged the proliferation of narrow networks among ACA exchange
 36 plans, and several studies have demonstrated varying degrees of challenges facing marketplace
 37 enrollees attempting to access in-network providers, most commonly mental health specialists. A
 38 2020 *JAMA* study found that provider networks were broader in ESI plans and narrower in
 39 marketplace plans but that networks may also be limited in lower-quality employer plans.⁴¹ The
 40 Council has previously observed that, while marketplace plans may be attractive to some people
 41 because their premium prices are lower, purchasers may not be aware that a plan’s provider
 42 network could be narrower and that they may have trouble getting needed care from in-network
 43 physicians, hospitals, and other providers. Therefore, some workers with ESI coverage who would
 44 become newly eligible for marketplace subsidies if the firewall is repealed may decide to keep their
 45 employer plan to avoid possible care disruptions and to preserve relationships with their treating
 46 physicians. Depending on income and a range of other factors, this could be true for some
 47 employees who utilize more services and medications or who have a family member on their plan
 48 who has a health condition that requires timely access to specialty care.

1 POLICY OPTIONS ADDRESSING ESI AFFORDABILITY

2
 3 During the development of this report, the Council reviewed papers from a broad spectrum of
 4 organizations and also met with subject matter experts who suggested a range of approaches to
 5 improving affordability in ESI and nongroup markets. Review of the literature uncovered a handful
 6 of data analyses and a range of conflicting opinions on the best way forward. The studies generally
 7 agreed that lifting the firewall would increase access to lower cost insurance for people with low
 8 incomes. However, they differed in their assessment of the percent of the population that would
 9 move from ESI to the ACA marketplace, the impact of employer behavior, and their willingness to
 10 support increased federal health spending. These studies are summarized below in alphabetical
 11 order.

12
 13 *American Enterprise Institute (AEI)*: A 2020 paper published by AEI recognizes both the value of
 14 ESI to many Americans as well as its flaws, including rising costs for both employers and
 15 employees. AEI asserts that ESI is worth preserving and suggests tax reforms as the centerpiece of
 16 a framework for a more stable ESI system, including the provision of a tax benefit for employers
 17 that would be applied to employee premiums. According to AEI, such firm-level tax credits could
 18 provide greater support to lower-income employees but less support to those with higher
 19 incomes.⁴²

20
 21 *Bipartisan Policy Center (BPC)*: A 2022 BPC report recognizes that ESI is less affordable for
 22 lower-wage workers but suggests that fully eliminating the firewall would be quite costly for the
 23 federal government. Instead, BPC recommends that Congress adjust the affordability threshold to
 24 align with the percentage cap on premium contributions for marketplace plans.⁴³

25
 26 *Center on Budget and Policy Priorities (CBPP)*: A 2019 CBPP analysis acknowledged that
 27 eliminating the firewall would improve equity but concluded that a full repeal would be too costly
 28 to recommend. Instead, the CBPP suggested strengthening the standards for employer coverage
 29 offers, such as by raising the minimum value standard (from 60 to 70 percent) or establishing more
 30 robust benefit standards for ESI plans.⁴⁴

31
 32 *Commonwealth Fund*: A 2020 analysis found that, depending on marketplace subsidy amounts in
 33 place, between six and 13 percent of people with ESI would pay lower premium amounts if they
 34 were able to switch to marketplace plans. Importantly, the paper pointed out that people with the
 35 lowest incomes would benefit the most from lower marketplace premiums, as would African
 36 American, Latino, American Indian and Alaska Native individuals. According to the brief, much is
 37 unknown about potential employer responses to elimination of the firewall, including whether
 38 firms will incentivize sicker workers to move to exchange plans or stop offering coverage
 39 altogether.⁴⁵

40
 41 A 2024 Commonwealth Fund paper on automatic enrollment in health insurance posits that 1.2
 42 million people with incomes below 150 percent of FPL and 6.5 million people with income
 43 between 150 percent and 200 percent of FPL would become eligible for marketplace subsidies if
 44 the firewall were eliminated. The analysis states that “most” of these newly eligible individuals
 45 currently have ESI although some are paying full premiums for nongroup plans.⁴⁶

46
 47 *Congressional Budget Office (CBO)*: In 2020, the CBO estimated that approximately 25 percent of
 48 workers with ESI would become eligible for marketplace subsidies if the firewall was repealed. For
 49 20 percent of those newly eligible, post-subsidy premiums for marketplace plans would be lower
 50 than ESI premiums, thus making the nongroup market an attractive option. The CBO maintained

1 that, although firms would respond differently to a lifting of the firewall, most of the savings
 2 incurred would likely be passed on to employees and adverse selection would be minimized.⁴⁷
 3 *Urban Institute*: Data presented to the Council but not yet published at the time this report was
 4 written estimated that eliminating the firewall would decrease ESI coverage by two percent or less,
 5 increase federal spending by about \$20 billion, decrease the number of uninsured individuals,
 6 slightly increase provider revenue, and decrease employer spending and household spending.⁴⁸
 7

8 RELEVANT AMA POLICY
 9

10 Policy H-165.829 encourages the development of state waivers to develop and test different models
 11 for transforming employer-provided health insurance coverage, including giving employees a
 12 choice between employer-sponsored coverage and individual coverage offered through health
 13 insurance exchanges, and allowing employers to purchase or subsidize coverage for their
 14 employees on the individual exchanges. Among its many provisions, Policy H-165.920 supports:
 15

- 16 • A system where individually owned health insurance is the preferred option but employer-
 17 provided coverage is still available to the extent the market demands it;
- 18 • An individual’s right to select his/her health insurance plan and to receive the same tax
 19 treatment for individually purchased coverage, for contributions toward employer-provided
 20 coverage, and for completely employer-provided coverage; and
- 21 • A replacement of the present federal income tax exclusion from employee’s taxable
 22 income of employer-provided insurance coverage with tax credits for individuals and
 23 families.
 24

25 Under Policy H-165.851, the AMA supports incremental steps toward financing individual tax
 26 credits for the purchase of health insurance, including but not limited to capping the tax exclusion
 27 for employment-based health insurance. Policy H-165.843 encourages employers to promote
 28 greater individual choice and ownership of plans; enhance employee education regarding how to
 29 choose health plans that meet their needs; and support increased fairness and uniformity in the
 30 health insurance market. Policy H-165.881 advocates for equal-dollar contributions by employers
 31 irrespective of an employee’s health plan choice. Policy H-165.854 supports Health
 32 Reimbursement Arrangements (HRAs)—account-based health plans that employers can offer to
 33 reimburse employees for their medical expenses—as one mechanism for empowering patients to
 34 have greater control over health care decision-making.
 35

36 Policy H-165.824 supports improving affordability in health insurance exchanges by expanding
 37 eligibility for premium tax credits beyond 400 percent FPL; increasing the generosity of premium
 38 tax credits; expanding eligibility for cost-sharing reductions; and increasing the size of cost-sharing
 39 reductions. Policy H-165.828, which as previously noted addresses the affordability threshold
 40 (firewall), also supports capping the tax exclusion for employment-based health insurance as a
 41 funding stream to improve health insurance affordability.
 42

43 Policy H-165.823 supports a pluralistic health care system and advocates that eligibility for
 44 premium tax credit and cost-sharing assistance to purchase a public option be restricted to
 45 individuals without access to affordable employer-sponsored coverage that meets standards for
 46 minimum value of benefits. This policy sets additional standards for supporting a public option and
 47 states that it shall be made available to uninsured individuals who fall into the “coverage gap” in
 48 states that do not expand Medicaid at no or nominal cost.

1 DISCUSSION

2
3 The AMA has long supported health system reform alternatives that are consistent with AMA
4 policies concerning pluralism, freedom of choice, freedom of practice, and universal access for
5 patients. To expand coverage to all Americans, the AMA has advocated for the promotion of
6 individually selected and owned health insurance; the maintenance of the safety net that Medicaid
7 and CHIP provide; and the preservation of employer-sponsored coverage to the extent the market
8 demands it. As ESI continues to be the dominant source of health coverage for people under 65
9 years of age, most people who have employment-based coverage seem satisfied with it. Still, the
10 Council acknowledges that because of shortcomings inherent to the ESI system—including equity
11 and affordability concerns, and rising costs—it does not work well for everyone, especially
12 workers with lower incomes and those at smaller firms paying for costly family coverage.
13

14 As explained in this report, people with higher earnings receive larger federal ESI subsidies than
15 their lower-income peers and employees with lower incomes pay a greater share of earnings
16 towards ESI expenses. The Council recognizes that federal tax benefits available to ESI subscribers
17 most in need are not nearly as generous as the enhanced subsidies available to many low- and
18 moderate-income individuals enrolled in ACA marketplace plans. Because the disparity between
19 subsidy amounts for people with ESI and those with marketplace coverage has widened as
20 marketplace subsidies have increased and ESI costs have continued to grow, the Council agrees
21 that it is an appropriate time to revisit AMA policy on the firewall (Policy H-165.828[1]), which
22 supports lowering the affordability threshold to the level at which premiums are capped for
23 individuals with the highest incomes eligible for subsidized coverage (currently 8.5 percent).
24

25 During the development of this report, the Council reviewed the literature and heard from experts
26 holding an array of views on the potential impacts of fully eliminating the firewall, which is the
27 policy change requested by referred Resolution 103-A-23. Although the Council cannot estimate
28 with certainty how many people would switch from ESI to exchange plans over time if the firewall
29 was repealed, the impact on coverage patterns could be significant. Even less is known about
30 potential employer responses to a repeal, which cannot be predicted and will likely vary, with some
31 firms possibly shifting certain employees to the marketplace or ceasing to offer health coverage
32 altogether, and without assurances that employer savings would be passed along to workers. Still,
33 we understand that the firewall is problematic for some employees, including lower-income
34 workers who may be contributing more for an employer plan than they would pay for marketplace
35 coverage and those whose firms offer little to no choice of health plans. Even among employees
36 who would benefit financially from transitioning to the marketplace, some may opt to retain ESI
37 coverage if they are satisfied with that plan, concerned about the network breadth of exchange
38 plans, or interested in preserving relationships with their treating physicians.
39

40 The impact of eliminating the firewall on physician payment rates is also difficult to predict, since
41 payment rates in the nongroup market tend to vary, though they are generally lower than rates paid
42 in the ESI market. The Council's main concerns about eliminating the firewall abruptly and in full
43 include the potential impacts on ESI stability, which may not be wholly understood, and the
44 potential substantial costs that would be incurred by the federal government, which already spends
45 upwards of \$1.8 trillion on health insurance subsidies—across all coverage programs—each year.⁴⁹
46 Allowing all ESI enrollees access to ACA marketplace subsidies might prove to be prohibitively
47 expensive. We cannot estimate the exact costs of eliminating the firewall, which would depend on
48 how many workers ultimately move to exchange plans but the costs easily total tens of billions of
49 dollars or more per year, especially if enhanced federal marketplace subsidies remain in place after

1 2025. We believe that budgetary considerations may make the full repeal option unrealistic,
2 financially, and also politically since it would be unpopular with ESI proponents, including
3 employers using health coverage offers as recruiting tools. For these reasons, the Council supports
4 incrementally reducing the affordability threshold so that it benefits workers most in need, and then
5 monitoring the effects of this change on coverage patterns, federal and consumer health spending,
6 and employer behavior. Accordingly, the Council recommends amending Policy H-165.828[1] to
7 support lowering the threshold that determines whether an employee's premium contribution is
8 affordable to the maximum percentage of income they would be required to pay, after accounting
9 for subsidies, towards premiums for an ACA benchmark plan (second-lowest-cost silver plan). The
10 Council is optimistic that this change, if enacted, may also encourage some employers to offer
11 more affordable coverage in order to keep attracting workers.

12
13 The Council also suggests additional recommendations that are intended to strengthen the quality
14 and affordability of ESI. To help address the needs of ESI enrollees with lower incomes, who are
15 more likely to report difficulties covering the costs of medical care and who may not know if they
16 are firewalled, the Council recommends amending Policy H-165.843 to encourage employers to: 1)
17 implement programs that improve affordability of ESI premiums and/or cost-sharing; 2) provide
18 employees with user-friendly information regarding their eligibility for subsidized ACA
19 marketplace plans based on their offer of ESI; and 3) provide employees with information
20 regarding available health plan options, including the plans' cost, network breadth, and prior
21 authorization requirements, which will help them choose a plan that meets their needs. The Council
22 recognizes that employers are already required to provide employees with notice about the ACA
23 marketplace and that, depending on income and ESI offer, they may be eligible for lower-cost
24 coverage in the marketplace. However, it may be challenging for some employees to determine
25 whether they are eligible for marketplace subsidies without tools to help them do so.

26
27 The Council also notes that large employers are subject to a 60 percent actuarial value standard
28 compared to the 70 percent standard required of silver plans on the marketplace (an 80 percent
29 actuarial standard is required for gold plans; 60 percent for bronze). Notably, marketplace plans are
30 also subject to more rigorous essential health benefits standards. To address these disparities in
31 standards, the Council recommends general support for efforts to strengthen employer coverage
32 offerings, such as by requiring a higher minimum actuarial value or more robust benefit standards.
33 Finally, the Council recommends reaffirmation of AMA policies most relevant to this report:
34 Policy H-165.881, which directs the AMA to pursue strategies for expanding patient choice in the
35 private sector by advocating for greater choice of health plans by consumers, equal-dollar
36 contributions by employers irrespective of an employee's health plan choice, and expanded
37 individual selection and ownership of health insurance; and Policy H-165.920, which supports
38 principles related to individually purchased and owned health insurance coverage as the preferred
39 option, although employer-provided coverage is still available to the extent the market demands it.

40 41 RECOMMENDATIONS

42
43 The Council on Medical Service recommends that the following recommendations be adopted in
44 lieu of Resolution 103-A-23, and that the remainder of the report be filed.

- 45
46 1. That our American Medical Association (AMA) amend Policy H-165.828[1] by addition
47 and deletion to read:

48
49 Our AMA supports modifying the eligibility criteria for premium credits and cost-sharing
50 subsidies for those offered employer-sponsored coverage by lowering the threshold that
51 determines whether an employee's premium contribution is affordable to the level at which

1 ~~premiums are capped for individuals with the highest incomes eligible for subsidized~~
2 ~~coverage~~ maximum percentage of income they would be required to pay towards premiums
3 after accounting for subsidies in for an Affordable Care Act (ACA) marketplaces
4 benchmark plan. (Modify HOD Policy)

- 5
6 2. That our AMA amend Policy H-165.843 by addition and deletion to read:

7
8 Our AMA encourages employers to:

9 a) promote greater individual choice and ownership of plans;

10 b) implement plans to improve affordability of premiums and/or cost-sharing, especially
11 expenses for employees with lower incomes and those who may qualify for Affordable
12 Care Act marketplace plans based on affordability criteria;

13 ~~c) help employees determine if their employer coverage offer makes them ineligible or~~
14 ~~eligible for federal marketplace subsidies~~ provide employees with user-friendly
15 information regarding their eligibility for subsidized ACA marketplace plans based on their
16 offer of employer-sponsored insurance;

17 ~~bd) enhance employee education regarding available health plan options and how to choose~~
18 ~~health plans that meet their needs~~ provide employees with information regarding available
19 health plan options, including the plan's cost, network breadth, and prior authorization
20 requirements, which will help them choose a plan that meets their needs;

21 ee) offer information and decision-making tools to assist employees in developing and
22 managing their individual health care choices;

23 ~~df) support increased fairness and uniformity in the health insurance market; and~~

24 eg) promote mechanisms that encourage their employees to pre-fund future costs related to
25 retiree health care and long-term care. (Modify HOD Policy)

- 26
27 3. That our AMA support efforts to strengthen employer coverage offerings, such as by
28 requiring a higher minimum actuarial value or more robust benefit standards, like those
29 required of nongroup marketplace plans. (New HOD Policy)

- 30
31 4. That our AMA reaffirm Policy H-165.881, which directs the AMA to pursue strategies for
32 expanding patient choice in the private sector by advocating for greater choice of health
33 plans by consumers, equal-dollar contributions by employers irrespective of an employee's
34 health plan choice and expanded individual selection and ownership of health insurance.
35 (Reaffirm HOD Policy)

- 36
37 5. That our AMA reaffirm Policy H-165.920, which supports individually purchased and
38 owned health insurance coverage as the preferred option, although employer-provided
39 coverage is still available to the extent the market demands it, and other principles related
40 to health insurance. (Reaffirm HOD Policy)

Fiscal Note: Less than \$500.

Appendix

Policies Recommended for Amendment and Reaffirmation

Health Insurance Affordability H-165.828

1. Our AMA supports modifying the eligibility criteria for premium credits and cost-sharing subsidies for those offered employer-sponsored coverage by lowering the threshold that determines whether an employee's premium contribution is affordable to the level at which premiums are capped for individuals with the highest incomes eligible for subsidized coverage in Affordable Care Act (ACA) marketplaces.
2. Our AMA supports legislation or regulation, whichever is relevant, to fix the ACA's "family glitch," thus determining the eligibility of family members of workers for premium tax credits and cost-sharing reductions based on the affordability of family employer-sponsored coverage and household income.
3. Our AMA encourages the development of demonstration projects to allow individuals eligible for cost-sharing subsidies, who forego these subsidies by enrolling in a bronze plan, to have access to a health savings account (HSA) partially funded by an amount determined to be equivalent to the cost-sharing subsidy.
4. Our AMA supports capping the tax exclusion for employment-based health insurance as a funding stream to improve health insurance affordability, including for individuals impacted by the inconsistency in affordability definitions, individuals impacted by the "family glitch," and individuals who forego cost-sharing subsidies despite being eligible.
5. Our AMA supports additional education regarding deductibles and cost-sharing at the time of health plan enrollment, including through the use of online prompts and the provision of examples of patient cost-sharing responsibilities for common procedures and services.
6. Our AMA supports efforts to ensure clear and meaningful differences between plans offered on health insurance exchanges.
7. Our AMA supports clear labeling of exchange plans that are eligible to be paired with a Health Savings Account (HSA) with information on how to set up an HSA.
8. Our AMA supports the inclusion of pregnancy as a qualifying life event for special enrollment in the health insurance marketplace. (CMS Rep. 8, I-15 Reaffirmed in lieu of: Res. 121, A-16 Reaffirmation: A-17 Reaffirmed: CMS Rep. 09, A-19 Reaffirmed: CMS Rep. 02, A-19 Reaffirmed in lieu of: Res. 101, A-19 Reaffirmed: CMS Rep. 01, I-20 Reaffirmed: CMS Rep. 2, I-20 Modified: CMS Rep. 3, I-21 Appended: Res. 701, I-21)

Trends in Employer-Sponsored Health Insurance H-165.843

Our AMA encourages employers to:

- a) promote greater individual choice and ownership of plans;
- b) enhance employee education regarding how to choose health plans that meet their needs;
- c) offer information and decision-making tools to assist employees in developing and managing their individual health care choices;
- d) support increased fairness and uniformity in the health insurance market; and
- e) promote mechanisms that encourage their employees to pre-fund future costs related to retiree health care and long-term care. (CMS Rep. 4, I-07 Reaffirmed: CMS Rep. 01, A-17)

Expanding Choice in the Private Sector H-165.881

Our AMA will continue to actively pursue strategies for expanding patient choice in the private sector by advocating for greater choice of health plans by consumers, equal-dollar contributions by

employers irrespective of an employee's health plan choice and expanded individual selection and ownership of health insurance where plans are truly accountable to patients. (BOT Rep. 23, A-97 Reaffirmed BOT Rep. 6, A-98 Reaffirmation A-02 Reaffirmed: CMS Rep. 4, A-12 Reaffirmation: A-19)

Individual Health Insurance H-165.920

Our AMA:

- (1) affirms its support for pluralism of health care delivery systems and financing mechanisms in obtaining universal coverage and access to health care services;
- (2) recognizes incremental levels of coverage for different groups of the uninsured, consistent with finite resources, as a necessary interim step toward universal access;
- (3) actively supports the principle of the individual's right to select his/her health insurance plan and actively support ways in which the concept of individually selected and individually owned health insurance can be appropriately integrated, in a complementary position, into the Association's position on achieving universal coverage and access to health care services. To do this, our AMA will:
 - (a) Continue to support equal tax treatment for payment of health insurance coverage whether the employer provides the coverage for the employee or whether the employer provides a financial contribution to the employee to purchase individually selected and individually owned health insurance coverage, including the exemption of both employer and employee contributions toward the individually owned insurance from FICA (Social Security and Medicare) and federal and state unemployment taxes;
 - (b) Support the concept that the tax treatment would be the same as long as the employer's contribution toward the cost of the employee's health insurance is at least equivalent to the same dollar amount that the employer would pay when purchasing the employee's insurance directly;
 - (c) Study the viability of provisions that would allow individual employees to opt out of group plans without jeopardizing the ability of the group to continue their employer sponsored group coverage; and
 - (d) Work toward establishment of safeguards, such as a health care voucher system, to ensure that to the extent that employer direct contributions made to the employee for the purchase of individually selected and individually owned health insurance coverage continue, such contributions are used only for that purpose when the employer direct contributions are less than the cost of the specified minimum level of coverage. Any excess of the direct contribution over the cost of such coverage could be used by the individual for other purposes;
- (4) will identify any further means through which universal coverage and access can be achieved;
- (5) supports individually selected and individually-owned health insurance as the preferred method for people to obtain health insurance coverage; and supports and advocates a system where individually-purchased and owned health insurance coverage is the preferred option, but employer-provided coverage is still available to the extent the market demands it;
- (6) supports the individual's right to select his/her health insurance plan and to receive the same tax treatment for individually purchased coverage, for contributions toward employer-provided coverage, and for completely employer provided coverage;
- (7) supports immediate tax equity for health insurance costs of self-employed and unemployed persons;
- (8) supports legislation to remove paragraph (4) of Section 162(l) of the US tax code, which discriminates against the self-employed by requiring them to pay federal payroll (FICA) tax on health insurance premium expenditures;
- (9) supports legislation requiring a "maintenance of effort" period, such as one or two years, during which employers would be required to add to the employee's salary the cash value of any health insurance coverage they directly provide if they discontinue that coverage or if the employee opts out of the employer-provided plan;

- (10) encourages through all appropriate channels the development of educational programs to assist consumers in making informed choices as to sources of individual health insurance coverage;
- (11) encourages employers, unions, and other employee groups to consider the merits of risk-adjusting the amount of the employer direct contributions toward individually purchased coverage. Under such an approach, useful risk adjustment measures such as age, sex, and family status would be used to provide higher-risk employees with a larger contribution and lower-risk employees with a lesser one;
- (12) supports a replacement of the present federal income tax exclusion from employees' taxable income of employer-provided health insurance coverage with tax credits for individuals and families, while allowing all health insurance expenditures to be exempt from federal and state payroll taxes, including FICA (Social Security and Medicare) payroll tax, FUTA (federal unemployment tax act) payroll tax, and SUTA (state unemployment tax act) payroll tax;
- (13) advocates that, upon replacement, with tax credits, of the exclusion of employer-sponsored health insurance from employees' federal income tax, any states and municipalities conforming to this federal tax change be required to use the resulting increase in state and local tax revenues to finance health insurance tax credits, vouchers or other coverage subsidies; and
- (14) believes that refundable, advanceable tax credits inversely related to income are preferred over public sector expansions as a means of providing coverage to the uninsured.
- (15) Our AMA reaffirms our policies committed to our patients and their individual responsibility and freedoms consistent with our United States Constitution. (BOT Rep. 41, I-93 CMS Rep. 11, I-94 Reaffirmed by Sub. Res. 125 and Sub. Res. 109, A-95 Amended by CMS Rep. 2, I-96 Amended and Reaffirmed by CMS Rep. 7, A-97 Reaffirmation A-97 Reaffirmed: CMS Rep. 5, I-97 Res. 212, I-97 Appended and Amended by CMS Rep. 9, A-98 Reaffirmation I-98 Reaffirmation I-98 Res. 105 & 108, A-99 Reaffirmation A-99 Reaffirmed: CMS Rep. 5 and 7, I-99 Modified: CMS Rep. 4, CMS Rep. 5, and Appended by Res. 220, A-00 Reaffirmation I-00 Reaffirmed: CMS Rep. 2, I-01 Reaffirmed CMS Rep. 5, A-02 Reaffirmation A-03 Reaffirmed: CMS Rep. 1 and 3, A-02 Reaffirmed: CMS Rep. 3, I-02 Reaffirmed: CMS Rep. 3, A-03 Reaffirmation I-03 Reaffirmation A-04 Consolidated: CMS Rep. 7, I-05 Modified: CMS Rep. 3, A-06 Reaffirmed in lieu of Res. 105, A-06 Reaffirmation A-07 Appended and Modified: CMS Rep. 5, A-08 Modified: CMS Rep. 8, A-08 Reaffirmation A-10 Reaffirmed: CMS Rep. 9, A-11 Reaffirmation A-11 Reaffirmed: Res. 239, A-12 Appended: Res. 239, A-12 Reaffirmed: CMS Rep. 6, A-12 Reaffirmed: CMS Rep. 9, A-14 Reaffirmed in lieu of: Res. 805, I-17)

REPORT 3 OF THE COUNCIL ON MEDICAL SERVICE (A-24)
Review of Payment Options for Traditional Healing Services
(Resolution 106-A-23)
(Reference Committee A)

EXECUTIVE SUMMARY

At the 2023 Annual Meeting, the House of Delegates referred Resolution 106, which was sponsored by the Medical Student Section and asked for the American Medical Association to “study the impact of Medicaid waivers for managed care demonstration projects regarding implementation and reimbursement for traditional American Indian and Alaska Native healing practices provided in concert with physician-led healthcare teams.”

In 1883, the federal government established the Code of Indian Offenses to prosecute American Indians who participated in traditional ceremonies. The cultural identity of American Indian Tribes was restricted by such methods until 1978, when the American Indian Religious Freedom Act legalized traditional spirituality and ceremonies. As the cornerstone legal authority for the provision of health care to American Indians and Alaska Natives (AI/AN), the Indian Health Care Improvement Act (IHCA) was permanently authorized in 2010 to promote traditional health care practices, fulfill special trust responsibilities, and ensure the highest possible health status by providing all resources necessary to implement that policy.

Federal officials have called for Medicaid to improve its ability to provide culturally competent services to AI/AN beneficiaries and many Tribes have incorporated traditional healing services into their health care delivery. While Congress granted the Indian Health Service the ability to bill Medicaid, traditional healing services are not currently a Medicaid covered service. Accordingly, Section 1115 waivers provide a path forward. Currently, four states are pursuing Medicaid Section 1115 demonstration authority to cover traditional healing services furnished by Indian health providers to AI/AN Medicaid beneficiaries. The waiver requests seek the maximum amount of discretion to be given to Native and Indigenous communities to establish relevant programs for each community, while incorporating minimal federal requirements upon approval of the requests. The Council supports monitoring of Medicaid Section 1115 waivers that recognize the value of traditional AI/AN healing services as a mechanism for improving patient-centered care and health equity among AI/AN populations when coordinated with physician-led care.

For AI/AN communities, traditional healing practices are a fundamental element of Indian health care that helps individuals achieve wellness and restores emotional balance and one’s relationship with the environment. While traditional healing services are recognized by the IHCA, there is no statutory definition for traditional healing services, as they vary considerably among Tribes. The Council supports consultation with Tribes to facilitate the development of best practices and coordination of AI/AN traditional healing providers with the physician-led care team.

The value of traditional healing services is not easily quantified by a culture grounded in conventional medicine as it represents a spiritual tradition tied to lifestyle, community, sovereignty issues, and land and culture preservation. The history of AI/AN Tribes in the US involves dislocation and upheaval followed by sustained disregard for effective Indigenous practices based on a historic preference for conventional evidence-based medicine. As a result, barriers to traditional care services have been created by a lack of cultural competence among systems of care that fail to question how evidence has historically been defined.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 3-A-24

Subject: Review of Payment Options for Traditional Healing Services
(Resolution 106-A-23)

Presented by: Sheila Rege, MD, Chair

Referred to: Reference Committee A

1 At the 2023 Annual Meeting, the House of Delegates referred Resolution 106, which was
2 sponsored by the Medical Student Section. Resolution 106-A-23 asked for the American Medical
3 Association (AMA) to “study the impact of Medicaid waivers for managed care demonstration
4 projects regarding implementation and reimbursement for traditional American Indian and Alaska
5 Native (AI/AN) healing practices provided in concert with physician-led healthcare teams.”
6 Testimony was mixed for Resolution 106, with some recommending alternate language asking our
7 AMA to support Medicaid payment for traditional healing services and encourage involved
8 communities to adhere to a series of principles addressing traditional provider/facility
9 arrangements, covered services, and qualified providers. Others supported the resolution as written,
10 albeit with further study to recognize the need for cultural relevance while ensuring patient safety.
11 This report focuses on health equity and cultural competence in providing care for AI/AN
12 populations, examines coverage considerations, summarizes relevant Medicaid Section 1115
13 waiver requests, and presents new policy recommendations.

14 15 BACKGROUND

16
17 The [Office of Management and Budget](#) (OMB) defines an AI/AN individual as “a person having
18 origins in any of the original peoples of North and South America (including Central America) and
19 who maintains Tribal affiliation or community attachment.” American Indians and Alaska Natives
20 are a United States (US) census-defined racial group that also has a specific political and legal
21 classification. From 1778 to 1871, US relations with individual American Indian Nations
22 indigenous to what is now the US were established through the treaty-making process. The treaties
23 recognized unique sets of rights, benefits, and conditions for the Tribes who agreed to surrender
24 millions of acres to the U.S. in return for its protection. The US-American Indian treaties are
25 considered to be the foundation upon which federal Indian law and the [federal Indian trust
26 responsibility](#) is based. In *Seminole Nation v. United States (1942)*, the US “charged itself with
27 moral obligations of the highest responsibility and trust” toward Indian Tribes and accepted a
28 legally enforceable fiduciary obligation to protect Tribal treaty rights, lands, assets, and resources,
29 as well as a duty to carry out the mandates of federal law with respect to AI/AN Tribes and
30 villages.¹

31
32 In 1954, the [Transfer Act](#) moved responsibility for Indian health care from the Bureau of Indian
33 Affairs to the United States Public Health Service in the former Department of Health, Education,
34 and Welfare, currently known as the Department of Health and Human Services (HHS), creating
35 the Indian Health Service (IHS). The IHS was formed to provide federal health care services to

1 AI/AN populations based on the unique government-to-government relationship between the
 2 federal government and the Tribes established by treaties and codified in [Article I, Section 8 of the](#)
 3 [US Constitution](#). IHS funds and delivers health services through a network of programs and
 4 facilities, providing services free of charge to eligible individuals. IHS provides an array of direct
 5 health care services at its facilities and also refers beneficiaries to private providers for care through
 6 the Purchased/Referred Care Program when needed services are not available at IHS facilities.
 7 Eligibility is generally restricted to members of [federally recognized Tribes](#) and their descendants
 8 who live within the geographic service area of an IHS or Tribally operated facility, typically on or
 9 near a reservation or other trust land area.

10
 11 The [Snyder Act of 1921](#) provided explicit legislative authorization for federal health programs for
 12 AI/AN individuals by mandating the expenditure of funds for “the relief of distress and
 13 conservation of health...(and) for the employment of...physicians...for Indian Tribes.” The 1976
 14 [Indian Health Care Improvement Act](#) (IHCA) is the cornerstone legal authority for the provision
 15 of health care to AI/AN populations. It was permanently authorized in March 2010 as part of the
 16 Patient Protection and Affordable Care Act (ACA) with the goal to “promote traditional health care
 17 practices of the Indian Tribes served consistent with the Service standards for the provision of
 18 health care, health promotion, and disease prevention” and “fulfill special trust responsibilities and
 19 legal obligations to Indians...to ensure the highest possible health status for Indians and urban
 20 Indians and to provide all resources necessary to effect that policy.”² The ACA included many
 21 AI/AN-specific provisions, such as greater flexibility in health insurance enrollment in the
 22 individual marketplace exchanges, limited or elimination of cost-sharing for health plans based on
 23 income, improved payment to IHS hospitals through Medicare, and promotion of traditional
 24 healing services. The legislation additionally facilitated the expansion of Medicaid, to the benefit of
 25 many AI/AN individuals. The Snyder Act and the permanent authorization of the IHCA provide
 26 legislative authority for Congress to appropriate funds specifically for the health care of Indian
 27 people.

28
 29 Since Indian Tribes are political entities, they are considered sovereign nations participating in a
 30 government-to-government relationship with the US separate from the state regulatory structure.
 31 The federal government honors this unique relationship by adhering to 2021 [Executive Order](#)
 32 [13175](#), which requires federal agencies to engage in meaningful Tribal consultation. As a result of
 33 the Executive Order, HHS and the Centers for Medicare & Medicaid Services (CMS) each have a
 34 Tribal consultation policy. Depending on the nature of the policy at issue, states are subject to
 35 varying levels of Tribal consultation requirements. For example, [Section 5006 of the American](#)
 36 [Recovery and Reinvestment Act](#) requires that states must seek advice from designees of Indian
 37 health programs and urban Indian organizations in the state when Medicaid and Children’s Health
 38 Insurance Program (CHIP) matters have a direct effect on Indians, Indian health programs, or
 39 urban Indian programs. States are also required to describe the process for seeking advice from
 40 Indian health programs and urban Indian organizations in the Medicaid and CHIP state plans.

41
 42 IHS does not provide insurance coverage or offer a defined benefit package. Further, because it is
 43 not an entitlement program, IHS offers services to the extent permitted by its annual federal
 44 appropriation and a limited amount of revenue from other sources (e.g., payment from insurers
 45 such as Medicaid). While IHS was previously the only federal health program without advance
 46 appropriations, HHS successfully secured advance appropriations for IHS starting in 2024, which
 47 means that the majority of IHS-funded programs, including Tribal health programs and urban
 48 Indian organizations, will remain funded and operational in the event of an expiration of
 49 appropriations. The [Indian Health Manual](#) sets forth the policies, standards, and procedures for
 50 determining who falls within the scope of the IHS health care program. Generally, in order to
 51 receive IHS services, an individual must be a member of a federally recognized Tribe or an [Alaska](#)

1 [Native Claims Settlement Act](#) shareholder. Health care services unavailable at an
 2 IHS/Tribal/Urban facility can be provided by non-IHS health care facilities through the
 3 [Purchased/Referred Care \(PRC\) program](#). Since PRC payments are authorized based on clearly
 4 defined guidelines subject to availability of funds, services obtained under PRC must be prioritized,
 5 with life-threatening illnesses or injuries being given highest priority. Although there are no
 6 deductibles, coinsurance, or copayments for IHS services, insurance allows coverage for things
 7 such as specialty care, services without IHS PRC authorization, and care when away from home.

8
 9 AI/AN individuals who are eligible for health care through the IHS are also entitled to
 10 Medicaid/CHIP coverage if they meet the categorical and financial eligibility requirements of the
 11 Medicaid/CHIP program in the state in which they reside. When AI/AN individuals enroll in
 12 Medicaid/CHIP or a qualified health plan (QHP) available through the Marketplace, they can
 13 continue to receive services from their local Indian health care provider and can also access
 14 services from non-IHS providers that are participating providers in Medicaid/CHIP or the QHP
 15 provider network, respectively. [IHS and Tribal providers can generally bill QHP issuers or](#)
 16 [Medicaid/CHIP for services](#) provided to their patients, and these revenues can be used to pay for
 17 costs such as hiring health professionals, purchasing equipment, and meeting accreditation
 18 requirements. Medicaid plays a secondary but significant role in financing health services for the
 19 AI/AN population, as it provides health insurance coverage for many AI/AN people.³ In 2020, over
 20 1.8 million AI/AN individuals were enrolled in Medicaid, meaning almost one-fifth of the AI/AN
 21 population was covered by Medicaid.⁴ Services provided by IHS and Tribal physicians are also
 22 subject to a 100 percent Federal Medical Assistance Percentage. As such, Medicaid is an essential
 23 source of revenue for the facilities and programs that make up the IHS health care delivery system.

24
 25 AMERICAN INDIAN/ALASKA NATIVE TRADITIONAL HEALING SERVICES

26
 27 The value of AI/AN traditional healing services is often measured against modern medicine, or
 28 allopathy. Allopathy is the treatment of disease by conventional means and translates to “other than
 29 the disease.” Traditional healing is holistic and spiritual, with a focus on well-being and the
 30 promotion of health through ceremony-assisted treatments. Many modern medicines and treatments
 31 have Indigenous equivalents (e.g., aspirin is closely related to salicin found in willow bark) and
 32 studies have found that traditional healing is currently in wide-spread use,⁵ with documented
 33 effectiveness in diabetes mellitus populations.⁶

34
 35 A scoping review of the literature provides robust data regarding the utilization of AI/AN
 36 traditional healing services, integration of traditional and Western medicine systems, ceremonial
 37 practice for healing, and traditional healer perspectives.⁷ However, published systematic reviews
 38 appear limited to determining the effectiveness of AI/AN traditional healing in treating mental
 39 illness or substance use disorders. A 2016 systematic review searched four databases and reference
 40 lists for papers that explicitly measured the effectiveness of traditional healers on mental illness
 41 and psychological distress. While there was some evidence that traditional healers can provide an
 42 effective psychosocial intervention by helping to relieve distress and improve mild symptoms in
 43 common mental disorders such as depression and anxiety, they found little evidence to suggest that
 44 traditional healers change the course of severe mental illnesses such as bipolar and psychotic
 45 disorders.⁸ A 2023 systematic review assessed the feasibility of AI/AN traditional ceremonial
 46 practices to address substance use disorders in both reservation and urban settings. Between
 47 September 2021, and January 2022, culturally specific review protocols were applied to articles
 48 retrieved from over 160 electronic databases, with 10 studies meeting the criteria for inclusion in
 49 the review. While all 10 studies reported some type of quantitative data showing a reduction of
 50 substance use associated with traditional ceremonial practices, the fact that the current status of the
 51 literature is emerging did not allow for meta-analysis of existing studies.⁹

1 For AI/AN communities, traditional healing practices are a [fundamental element](#) of Indian health
2 care that helps individuals achieve wellness and restores emotional balance and one’s relationship
3 with the environment. While traditional healing services are recognized by the IHCIA, there is no
4 statutory definition for traditional healing services. Some Tribes believe that a health problem is an
5 imbalance between an individual and the community and there are seven natural ways of emotional
6 discharge and healing to address that imbalance: shaking, crying, laughing, sweating, voicing (i.e.,
7 talking, singing, hollering, yelling, screaming), kicking, and hitting, all of which must be done in a
8 constructive manner so as to not harm another spirit.¹⁰ Accordingly, Traditional AI/AN healing
9 services might include a range of services such as (but not limited to):

- 10
- 11 • Sweat lodges
- 12 • Healing hands
- 13 • Prayer
- 14 • Smudging and purification rituals
- 15 • Song and dance
- 16 • Use of herbal remedies
- 17 • Culturally sensitive and supportive counseling
- 18 • Shamanism
- 19

20 Traditional healers are often identified in their Tribal community by their innate gift of healing.
21 They typically work informally but may continue to uncover their unique gift through
22 apprenticeship and by observing more experienced healers. Many traditional healers do not charge
23 for their services but are given gifts as an expression of gratitude. Some healers will not accept
24 payment at all, especially when originating from a third-party.

25 HEALTH EQUITY CONSIDERATIONS

26
27 In 1883, the federal government established the [Code of Indian Offenses](#) to prosecute American
28 Indians who participated in traditional ceremonies in order to replace them with Christianity.¹¹
29 This was one of several methods utilized to restrict the cultural identity of American Indian Tribes
30 throughout US history. In 1978, the [American Indian Religious Freedom Act](#) (AIRFA) was a
31 pivotal turning point in addressing concerns regarding separation of church and state, legalizing
32 traditional spirituality and ceremonies, and overturning local and state regulations that had banned
33 AI/AN spiritual practices. In 1994, AIRFA was expanded to increase access to traditional healing
34 services such that “when an Indian Health Service patient requests assistance in obtaining the
35 services of a native practitioner, every effort will be made to comply...such efforts might include
36 contacting a native practitioner, providing space or privacy within a hospital room for a ceremony,
37 and/or the authorization of contract health care funds to pay for native healer consultation when
38 necessary.”
39

40
41 More recently, Congress recognized “provid[ing] the resources, processes, and structure that will
42 enable Indian Tribes and Tribal members to obtain the quantity and quality of health care services
43 and opportunities to eradicating health disparities between Indians and the general population of
44 the United States,” as a top national priority. After President Biden issued [Executive Order 13985](#)
45 in 2021 to establish equity as a cornerstone of Administration policy, the National Indian Health
46 Board (NIHB), supported by CMS and the CMS Tribal Technical Advisory Group (TTAG),
47 convened AI/AN leaders to consider what health equity means from a Tribal perspective. The
48 resulting [2022 NIHB report](#) similarly concluded that traditional healing is essential to advancing
49 health equity. The federal government issued a [second Executive Order](#) in 2023, to further build
50 equity into the business of government.

1 The 2022 NIHB report established that in pursuit of honoring Indigenous knowledge, traditional
 2 healing services should be paid utilizing paths to credentialing and billing that are Tribally led and
 3 approached with sensitivity and cultural humility. In [September 2023](#), the CMS TTAG wrote to the
 4 CMS Administrator urging the Biden-Harris Administration to develop CMS policy in support of
 5 funding and payment for traditional healing, which would “allow Tribes to use the additional third-
 6 party revenue to expand traditional healing services, coordinate the services within the facility, hire
 7 additional healers as appropriate, and create a space for ceremonial practices.”

8
 9 LESSONS LEARNED IN FOSTERING CULTURAL COMPETENCE

10
 11 In January 1952, two anthropologists and a physician from Cornell Medical College learned that
 12 tuberculosis raged untreated on the Navajo Reservation in Arizona. Recognizing a valuable
 13 opportunity for medical research, they designed and administered a ten-year demonstration to
 14 evaluate the efficacy of new antibiotics and test the power of modern medicine to improve the
 15 health conditions of a marginalized rural society. In 1970, they published a book detailing the
 16 demonstration and deeming the project a success, as it established a mechanism for effective,
 17 continued community control and elicited full participation by community members who expressed
 18 satisfaction with the care they received.¹² A 2002 analysis of the demonstration drew different
 19 conclusions, where “researchers exploited the opportunities made possible by the ill-health of a
 20 marginalized population...(and) erected an intrusive system of outpatient surveillance that failed to
 21 reduce the dominant causes of morbidity and mortality...(where) every act of treatment became an
 22 experiment (and) risked undermining the trust on which research and clinical care depended.”¹³
 23 However, the demonstration’s exploration of AI/AN traditional healing is perhaps the only
 24 semiquantitative approach to the subject and provides insights that remain useful today, as the
 25 demonstration recognized that “First, it must be realized that this is not a situation of compromising
 26 alternatives. Rather, there is belief on the part of patients that both systems have something to offer,
 27 they both ‘work.’”¹⁴

28
 29 Humility, which is at the core of AI/AN traditional healing, requires commitment to cultural
 30 connectedness, particularly when traditional healing services are provided in concert with
 31 allopathic/osteopathic care. While validated cultural connectedness measurement scales are
 32 available,¹⁵ there are tenets of traditional healing that can be successfully incorporated into any care
 33 coordination paradigm, such as providing multigenerational visits and home visits to reinforce the
 34 value of community-and family-based care or supporting a holistic approach to care through hands-
 35 on healing, physical body manipulation, and use of Indigenous diets to promote food as medicine.
 36 More AI/AN patients are embracing the opportunity to benefit from coordination between
 37 traditional healing and allopathic/osteopathic care. For example, in the Navajo Tribe, use of healers
 38 overlaps with use of medical providers for common medical conditions and patients rarely perceive
 39 conflict between the Native healer and conventional medicine.¹⁶ If traditional healing services are
 40 allied with the health system, care can be coordinated to accommodate individuals’ needs, leading
 41 to improved health outcomes.¹⁷ Furthermore, coordination, open communication, and transparency
 42 are critical to overcoming medical mistrust in modern medicine among AI/AN individuals.

43
 44 There are two areas where it is particularly important to further cultural sensitivity in the provision
 45 of traditional healing services:

- 46
 47 (1) Collecting data: While Indigenous Peoples need health data to help identify populations at risk
 48 and monitor the effectiveness of programs, health care centers and public health institutions
 49 [regularly overlook the AI/AN community when collecting data](#) and conducting research. Because
 50 some AI/AN patients are hesitant to allow the collection of their health care data by non-
 51 Indigenous individuals due to a lack of trust in how it might be used, this underrepresentation can

1 be magnified. Additionally, because Western research protocols do not prioritize providing benefits
 2 to the entire community, randomized clinical trials are often perceived as unacceptable and unfair
 3 as true randomization is difficult to apply when investigators have legacy relationships with certain
 4 individuals over others. The perception that control-group communities are receiving a lesser
 5 intervention, or none at all, can result in an ethical and cultural, and often stressful, struggle for
 6 both academic and community investigators.¹⁸

7
 8 (2) Credentialing traditional healers: As non-AI/AN protocols cannot be easily applied in
 9 determining necessary qualifications when it comes to traditional healing services, many Tribes
 10 have established distinct processes for credentialing traditional healers. A Tribal credentialing
 11 process might involve a multi-level training program where applications are reviewed by Tribal
 12 Elders, who then interview candidates before being considered by the Council of Elders. Given the
 13 wide variation among Tribes, many agree that it would be impractical to standardize the
 14 credentialing process. Furthermore, if traditional healing is governmentally regulated and licensed,
 15 then licensing boards will tell traditional healers what conditions they can and cannot treat, what
 16 methods are acceptable, and determine who is qualified, possibly challenging Tribal sovereignty.

17
 18 EFFORTS TO INTEGRATE TRADITIONAL HEALING SERVICES AND CONVENTIONAL
 19 MEDICINE

20
 21 Due to the fact that traditional healing services exist outside the paradigm of conventional medicine
 22 and vary across Tribes, they do not necessarily adhere to a conventional evidence-based standard of
 23 care. Ensuring patient safety and quality of care through the delivery of evidence-based medicine
 24 remains a top priority for the AMA. Accordingly, when it comes to traditional healing services or
 25 integrative medicine services, it is important to distinguish between welcoming the benefits of
 26 culturally competent/sensitive care as adjunctive or supportive and full acceptance of non-
 27 evidence-based medicine practices as substitutes for evidence-based medicine-derived treatments.
 28 In Canada and the US, there is a growing movement toward combining traditional healing services
 29 with conventional medicine. The “[wise practices](#)” model incorporates local knowledge, culture,
 30 language, and values into program design, implementation, and evaluation. This ensures that the
 31 local context is a formal component of determining program success, allowing for improved
 32 community engagement and increased community acceptance of programs. Wise practices allow
 33 Indigenous knowledge and principles to be incorporated into public health, academic, and policy
 34 settings.

35
 36 In 2020, the University of North Dakota launched the first of its kind [doctoral program in](#)
 37 [Indigenous health](#), offering students a deeper understanding of the unique health challenges faced
 38 by Indigenous communities. The training is focused on getting to know the community and its
 39 history to allow the provision of health care on reservations that is both evidence-based and
 40 culturally competent. That same year, [KFF](#) reported that IHS facilities were actively seeking job
 41 applicants for traditional healers toward rebuilding trust and recouping Indigenous expertise. In
 42 2022, a Federal Indian Health Insurance Plan was proposed in *Preventive Medicine Reports* that
 43 would offer a culturally competent, comprehensive health insurance product that would include
 44 payment for traditional healing services and eliminate premiums and all other forms of cost-sharing
 45 regardless of income.¹⁹ To-date, its legislative status is unknown.

46
 47 LEARNING FROM PAST CONSIDERATIONS OF ALTERNATIVE TREATMENT OPTIONS

48
 49 Developing an infrastructure to allow coverage for AI/AN traditional healing services could be
 50 informed by coverage considerations for other types of traditional healing services or integrative

1 medicine services, which have varying degrees of success in being covered by insurance and
2 differing evidence bases, many of which are still evolving as coverage expands.

3
4 Considerations surrounding coverage and payment for other types of alternative treatment include:

- 5
6
 - Patient safety/quality and outcomes oversight
 - 7 • Training, licensing, credentialing of providers
 - 8 • Benefit design and payment structure
 - 9 • Utilization uptake

10
11 Due to these and other considerations, insurance plans often have measures in place to ensure
12 patient safety and clinical effectiveness in exchange for payment. For example, many plans only
13 cover these services if prescribed by a physician or licensed practitioner as a demonstration of
14 clinical benefit to the patient. Most insurance plans utilize a team of clinical experts to review
15 which services meet their requirements for safety and effectiveness before offering coverage.

16
17 PURSUING PAYMENT FOR AI/AN TRADITIONAL HEALING SERVICES

18
19 Payment for the provision of AI/AN traditional healing services offers pathways for
20 complementary practices, improvements in safety of care coordination, and trust-building between
21 physicians and patients rooted in cultural sensitivity. Allowing payment for traditional healing
22 services will likely increase access for AI/AN patients. In situations where traditional healers are
23 unable to accept payment directly from patients, the payment can be given to the IHS facility,
24 which can utilize the funds to procure medical supplies, invest in capital (e.g., build a Navajo
25 Hogan), and pay the healers and other health care providers employed by the IHS.

26
27 During the August 2023 [Traditional Medicine Global Summit](#), the World Health Organization
28 (WHO) presented results from the third global survey on traditional medicine, which included
29 questions on financing of traditional medicine, health of Indigenous Peoples, evidence-based
30 traditional medicine, integration, and patient safety. In addition to informing the development of
31 [WHO's 2025-2034 traditional medicine strategy](#), these findings outline how standardization of
32 traditional medicine condition documentation and coding in routine health information systems is a
33 pre-requisite for effective implementation of traditional medicine in health care systems.

34
35 Payment for any health service usually requires establishing a coding infrastructure to allow
36 reporting in a standardized manner. The infrastructure includes both procedural and diagnosis
37 codes to answer the “what” and “why” of patient encounters, respectively. While there are
38 currently no procedure codes for AI/AN traditional healing services, in May 2023, Blue Cross Blue
39 Shield of Minnesota (BCBS MN) submitted an application for a [Healthcare Common Procedural
40 Coding System \(HCPCS\) Level II code](#) to allow AI/AN Medicaid and dual-eligible members to
41 receive and bill the health plan for traditional healing services. While approval of the code is
42 currently pending a decision by CMS, BCBS MN will plan to pilot it with four Native-led clinics
43 using an Indigenous evaluator to determine patient satisfaction, leaving it up to each clinic as to the
44 level of physician involvement. Each Native-led clinic will validate the traditional healing services
45 through its Elder in Residence, Elders Council, or Elders Advisory Board. The HCPCS Level II
46 code will be used to pay a capitated fee, viewed as administrative remuneration to offset the grant
47 amount. BCBS MN is currently required to use an unlisted Current Procedural Terminology
48 (CPT®) code to allow reporting of traditional healing services, which necessitates review of each
49 paper claim submission. The HCPCS Level II nomenclature includes code *S9900, Services by a
50 journal-listed Christian science practitioner for the purpose of healing, per diem*, which may serve
51 as a precedent to assist CMS in its decision. Another option could be a standard encounter fee, such

1 as the IHS [All Inclusive Rate](#) (AIR), which is the amount paid to IHS and Tribal facilities by CMS
 2 for Medicaid covered services per encounter (not per specific service). IHS reviews annual cost
 3 reports before submitting recommended rates to OMB for final approval through HHS. The
 4 approved AIRs are published in the *Federal Register* to allow annual updates to IHS systems. In
 5 lieu of a discrete HCPCS/CPT code, traditional healing services could be paid using an AIR.

6
 7 The WHO's *International Classification of Diseases, 11th Edition* (ICD-11) allows reporting of
 8 traditional medicine diagnoses, representing a formative step for the integration of traditional
 9 medicine conditions into a classification standard used in conventional medicine. As a tool for
 10 counting and comparing traditional medicine conditions, the ICD-11 [Traditional Medicine Chapter](#)
 11 can provide the means for doing research and evaluation to establish efficacy of traditional
 12 medicine and collect morbidity data (e.g., payment, patient safety, research).²⁰

13
 14 Additionally, the *International Classification of Diseases, 10th Edition, Clinical Modification*
 15 (ICD-10-CM), which is the Health Insurance Portability & Accountability Act diagnosis code set
 16 standard, includes social determinants of health (SDOH)-related Z codes (Z55-Z65). The Z codes
 17 can be reported when documentation specifies that a patient has an associated problem or risk
 18 factor that influences their health (e.g., housing insecurity or extreme poverty), thereby helping to
 19 improve equity in health care delivery and research by:

- 20
 21 • Empowering physicians to identify and address health disparities (e.g., care coordination
 22 and referrals)
 23 • Supporting planning and implementation of social needs interventions
 24 • Identifying community and population needs
 25 • Monitoring SDOH intervention effectiveness for patient outcomes
 26 • Utilizing data to advocate for updating and creating new policies

27
 28 Payment processes for traditional healing services should be culturally sensitive, to allow
 29 individuals to “recover one’s wholeness.” [The Anti-Deficiency Act](#) prevents the IHS from
 30 participating in risk-based contracts, as it prohibits expenditures in excess of amounts available in
 31 appropriations. Furthermore, a bundled payment model would not be logical as healers cannot be
 32 put at risk based on outcomes in an environment where collection of demographic-based outcome
 33 data is suspect. There are several possible options for a payment model, including:

- 34
 35 • Standard Encounter Fee: IHS, Tribal, or Urban Indian health facilities paid at the AIR per
 36 encounter rate available for Medicaid inpatient and outpatient hospital services for covered
 37 traditional healing services, with hospital services billed on a Uniform Billing Form (UB-
 38 04) at the OMB AIR using with the current rate published in the *Federal Register*.
 39 • Fee-for-Service: Payment based on traditional healing services provided to an individual
 40 AI/AN patient and reported by a HCPCS/CPT code(s) (e.g., BCBS MN pilot)
 41 • Member Benefit Allowance: Each eligible AI/AN patient receives an added value benefit
 42 to be spent on traditional healing services at their determination. This option could
 43 circumvent some Tribes’ inability to accept payment from a third party. The self-directed
 44 community benefit is currently utilized by the New Mexico Centennial Care 2.0 Medicaid
 45 Section 1115 waiver. Native American Healers is among the specialized therapies under
 46 the member-managed annual \$2,000 budget, allowing Tribal members to have access to an
 47 annual sum to use for traditional healing services.
 48 • Medicaid Section 1115 Waivers.

1 MEDICAID SECTION 1115 WAIVER REQUESTS

2
 3 Medicaid Section 1115 waivers may provide another path forward for payment of traditional
 4 healing services through conventional health care systems. While federal officials have called for
 5 state Medicaid programs to improve their ability to provide culturally competent services to AI/AN
 6 beneficiaries²¹ and Congress granted IHS the ability to bill Medicaid, traditional healing services
 7 are not currently a Medicaid nationally covered service. However, [Section 1115\(a\) of the Social](#)
 8 [Security Act](#) (SSA) authorizes the Secretary of HHS to waive provisions of Section 1902 of the
 9 SSA and grant expenditure authority to treat demonstration costs as federally matchable
 10 expenditures under Section 1903 of the SSA. The Secretary’s approval of experimental, pilot, or
 11 demonstration projects is discretionary and must be based on a finding that the demonstration is
 12 likely to assist in promoting the objectives of the Medicaid program.

13
 14 Medicaid Section 1115 waivers are initially approved for five years and renewable for three years
 15 at a time. The waivers are required to be budget-neutral, meaning that federal spending under the
 16 waiver cannot exceed what it would have been in absence of the waiver. Although not defined by
 17 federal statute or regulations, this requirement has been in practice for many years. Over time, CMS
 18 has allowed states to calculate budget neutrality in multiple ways, although [in 2018 it provided](#)
 19 [states with additional information](#) on agency policies regarding calculating budget neutrality.

20
 21 To date, four states (i.e., Arizona, California, New Mexico, and Oregon) have pursued Medicaid
 22 Section 1115 demonstration authority to cover traditional healing services furnished by Indian
 23 health providers to AI/AN Medicaid beneficiaries. In general, the waiver requests seek that the
 24 maximum amount of discretion be given to Native and Indigenous communities to establish
 25 relevant programs for each community, while allowing HHS to enact certain federal oversight
 26 requirements to ensure patient safety and program requirements are being met (e.g., background
 27 checks, verification of training, etc.) upon approval of the requests. The Center for Medicaid &
 28 CHIP Services (CMCS) is the agency charged with reviewing the state waiver requests with the
 29 goal of supporting cultural alignment of providers and patients toward reducing health disparities in
 30 the AI/AN community. CMCS has acknowledged the importance of incorporating Tribal
 31 leadership into the review process since traditional healing services vary across Tribes. Below is a
 32 summary of the current status of each state’s waiver application request.

33
 34 Arizona

35 It is expected that the Arizona waiver application will be considered by CMCS first – and then
 36 serve as the template for the other three states. The Arizona Health Care Cost Containment System
 37 (AHCCCS) initially submitted its [waiver request](#) in 2015 and then again in 2020, consulting with
 38 Tribal leadership prior to each submission. AHCCCS is requesting permission to pay for traditional
 39 healing services using [Title 19](#) dollars, maximizing individual Tribal communities’ discretion to
 40 define traditional healing services and qualifications for traditional healers. The request limits
 41 services to individuals served by the IHS and urban Indian facilities and proposes paying the AIR,
 42 which is annually established by the federal government. It also includes specific service
 43 parameters toward maximizing patient benefit and safety.

44
 45 California

46 The California Department of Health Care Services (DHCS) has requested authority to cover
 47 Traditional Healer and Natural Helper services under the Drug Medi-Cal Organized Delivery
 48 System (DMC-ODS) in 2017, 2020, and again in 2021. The most recent request includes
 49 Traditional Healer and Natural Helper services under the DMC-ODS as part of the comprehensive
 50 [California Advancing and Innovating Medi-Cal](#) initiative. The purpose of the request is to provide
 51 culturally appropriate options and improve access to substance use disorder (SUD) treatment for

1 AI/AN Medi-Cal members receiving SUD treatment services through Indian health care providers.
2 Meanwhile, DHCS provides funding and technical assistance resources to Tribal and urban Indian
3 health programs through the [Tribal MAT Project](#), including the [Tribal and Urban Indian](#)
4 [Community Defined Best Practices](#) program. Described by its lead entities as “a unified response to
5 the opioid crisis in California Indian Country,” the Tribal MAT Project was designed to meet the
6 specific opioid use disorder prevention, treatment, and recovery needs of California’s Tribal and
7 Urban Indian communities with special consideration for Tribal and urban Indian values, culture,
8 and treatments.

9
10 New Mexico

11 Since 2019, New Mexico’s [Centennial Care 2.0](#) Section 1115 demonstration has provided a self-
12 directed community budget for specialized therapies to members with a nursing-facility level of
13 care need (NF LOC) and who receive home and community-based services (HCBS). Native
14 American Healing is among the specialized therapies under the member-managed annual
15 \$2,000/member budget. All Tribal members with an NF LOC need are mandatorily enrolled in a
16 health plan. Tribal members ineligible for HCBS and who have enrolled in a health plan may have
17 access to an annual sum to use for traditional healing services; this arrangement is considered a
18 “value-added service”²² subject to the health plan to provide or place parameters on the benefit. In
19 2022, the New Mexico Human Services Department (HSD) submitted a waiver renewal application
20 seeking federal approval to renew and enhance the Centennial Care 2.0 waiver to expand the
21 availability of culturally competent, traditional healing benefits to AI/AN members enrolled in
22 managed care, up to \$500/member for traditional healing services to each Tribal member enrolled
23 in managed care and lacking an NF LOC need. HSD has hosted Tribal Listening Sessions to gather
24 feedback on the new Member-Directed Traditional Healing Benefits for Native Americans.

25
26 Oregon

27 In 2022, the [Oregon Health Plan](#) (OHP) submitted a Section 1115 waiver request to continue
28 foundational elements of the OHP with a substantial refocus on addressing health inequities,
29 including expanding benefits for AI/AN OHP members to include Tribal-based practices as a
30 covered service, and waive prior authorization criteria for Tribal members. The Oregon Health
31 Authority and the Oregon Tribes implemented a process by which [Tribal-based practices](#) are
32 developed and approved by the Tribal-Based Practice Review Panel, which is comprised of Tribal
33 representatives.

34
35 In reviewing the applications across the four states, CMCS’ goal is to identify commonality of
36 services that can be covered under Medicaid, provided by traditional healers who have been
37 credentialed within their communities. CMCS plans to pay for traditional healing services through
38 certified IHS facilities, who will then decide how the traditional healers are paid. It is not
39 anticipated that traditional healing will require a referral or prior authorization, as this limits access
40 to the service. CMCS is currently undergoing robust consultation with Tribes and IHS to identify
41 common traditional healing services, facilities where those services are being provided, and
42 providers who will provide them. Pending approval of the waivers, CMCS has expressed that it
43 would require each state to develop and report on benchmarks to demonstrate how it is improving
44 outcomes and reducing disparities, thereby requiring demonstration of value while allowing for
45 variation by state and by Tribe.

46
47 AMA POLICY

48
49 AMA Policy H-290.987 generally supports Section 1115 waivers that assist in promoting the goals
50 of the Medicaid program and have sufficient payment levels to secure adequate access to providers.

1 Policy H-350.949 encourages Medicaid managed care organizations to follow the CMS TTAG's
2 recommendations to improve care coordination and payment agreements with Indian health care
3 providers.
4

5 The AMA has several policies outlining the integral and culturally necessary role that traditional
6 healing services play in delivering health care to AI/AN individuals, including:
7

- 8 • Policy H-350.948, which advocates for increased funding to the IHS Purchased/Referred
9 Care Program and the Urban Indian Health Program to enable the programs to fully meet
10 the health care needs of AI/AN patients;
- 11 • Policy H-350.976, which recognizes the “medicine man” as an integral and culturally
12 necessary individual in delivering health care to American Indians and Alaska Natives; and
- 13 • Policy H-350.977, which supports expanding the role of the American Indian in their own
14 health care and increased involvement of private practitioners and facilities in American
15 Indian care.
16

17 The AMA has long-standing policy identifying, evaluating, and working to close health care
18 disparities, including:
19

- 20 • Policy D-350.995, which calls for a study of health system opportunities and barriers to
21 eliminating racial and ethnic disparities in health care;
- 22 • Policy D-350.996, which calls for the AMA to continue to identify and incorporate
23 strategies specific to the elimination of minority health care disparities in its ongoing
24 advocacy and public health efforts;
- 25 • Policy H-200.954, which supports efforts to quantify the geographic maldistribution of
26 physicians and encourages medical schools and residency programs to consider developing
27 admissions policies and practices and targeted educational efforts aimed at attracting
28 physicians to practice in underserved areas and to provide care to underserved populations;
29 and
- 30 • Policy H-350.974, which encourages the development of evidence-based performance
31 measures that adequately identify socioeconomic and racial/ethnic disparities in quality and
32 supports the use of evidence-based guidelines to promote the consistency and equity of
33 care for all persons.
34

35 Further, Policy H-480.973 encourages the National Center for Complementary and Integrative
36 Health to determine by objective and scientific evaluation the efficacy and safety of practices and
37 procedures of unconventional medicine.
38

39 DISCUSSION

40

41 Resolution 106-A-23 calls for the AMA to study the impact of using Medicaid Section 1115
42 waivers for demonstration projects regarding payment for AI/AN traditional healing services. The
43 Council recognizes the value of traditional healing services for AI/AN patients and understands the
44 need for state flexibility to design Medicaid programs that best respond to the health care needs of
45 their enrollees. The purpose of Section 1115 waivers, which give states additional flexibility to
46 design and improve their Medicaid programs, is to demonstrate and evaluate state-specific policy
47 approaches to better serving that state's unique population of Medicaid enrollees, including AI/AN
48 individuals. The Council acknowledges the importance of cultural competence, particularly with
49 regard to understanding traditional healing and its economic impact in the Section 1115 waiver
50 program, as it requires regular monitoring and independent evaluation of outcomes, which is

1 challenging to do while respecting Tribal data sovereignty. Additionally, it is uncertain how
2 generalizable outcomes might be given the vast differences among Tribes.

3 The Council understands the importance of distinguishing between culturally competent/sensitive
4 care as adjunctive or supportive and full acceptance of non-evidence-based medicine practices as
5 substitutes for evidence-based medicine-derived treatments. Further, with the Medicaid Section
6 1115 waiver demonstrations, we may find novel programs that are based on evidence. While
7 support of guidelines for coordinating traditional healing services as part of the physician-led
8 health care team was requested by Resolution 106-A-23 and is consistent with AMA policy,
9 decisions should be made in concert with Tribes in order to ensure inclusive and culturally relevant
10 care. Experts with whom the Council agrees have recommended that each Tribe be responsible for
11 verifying that valid traditional healing services have been performed by credentialed healers, taking
12 into account the “medical necessity” of the service along with the appropriate site of service (e.g.,
13 hogan versus hospital).

14
15 With many AI/AN patients utilizing traditional healing services,²³ patient safety will be maximized
16 if there is care coordination between Indigenous healers and physicians. The Council appreciates
17 the value of traditional healing services for AI/AN patients when provided in coordination with
18 evidence-based conventional medicine, and believes such coordination may allow the culturally
19 competent physician-led health care team to address Tribal social determinants of health while
20 building trust in conventional care systems among the AI/AN community. What cannot be
21 overlooked, however, is the substantial shortage of physicians [identifying as AI/AN](#). As of 2021,
22 fewer than 3,000 physicians – or 0.4 percent of total physicians – identified as American Indian or
23 Alaska Native, according to the latest statistics from the Association of American Medical Colleges
24 [Physician Specialty Data Report](#). The [US Government Accountability Office](#) published a report
25 outlining an average vacancy rate for IHS physicians, nurses, and other care providers of 25
26 percent. There would need to be more physicians who identify as AI/AN if the U.S. is to provide
27 culturally sensitive care implemented by a physician-led team utilizing a traditional healing model.
28

29 AI/AN traditional healing represents a spiritual tradition tied to lifestyle, community, sovereignty
30 issues, and land and culture preservation not easily explained by Western medicine. The history of
31 AI/AN Tribes in the US involves dislocation and upheaval followed by sustained disregard for
32 effective Indigenous practices based on a historic preference for conventional evidence-based
33 medicine. Barriers to care have been created by a lack of cultural competence among systems of
34 care that fail to question how evidence is defined.
35

36 It is critically important to remember that the US has a special responsibility to AI/AN populations
37 due to treaty obligations and sovereign nation status which differentiate AI/AN traditional healing
38 from other forms of traditional healing. The IHCIA and resulting creation of the IHS establish clear
39 federal law plus a mandate to ensure the highest possible health status and to provide all resources
40 necessary for AI/AN populations.
41

42 RECOMMENDATIONS

43
44 The Council on Medical Service recommends that the following be adopted in lieu of Resolution
45 106-A-23, and the remainder of the report be filed:

- 46
47 1. That our American Medical Association (AMA) amend Policy H-350.976 by addition and
48 deletion, and modify the title by addition, as follows:

49
50 Improving Health Care of American Indians and Alaska Natives H-350.976

- 1 (1) Our AMA recommends that: (1) All individuals, special interest groups, and levels of
2 government recognize the American Indian and Alaska Native people as full citizens of the
3 US, entitled to the same equal rights and privileges as other US citizens.
- 4 (2) The federal government provide sufficient funds to support needed health services for
5 American Indians and Alaska Natives.
- 6 (3) State and local governments give special attention to the health and health-related needs of
7 nonreservation American Indians and Alaska Natives in an effort to improve their quality of
8 life.
- 9 (4) American Indian and Alaska Native religious and cultural beliefs be recognized and
10 respected by those responsible for planning and providing services in Indian health programs.
- 11 (5) Our AMA recognize practitioners of Indigenous medicine as an integral and culturally
12 necessary individual in delivering health care to American Indians and Alaska Natives.
- 13 (6) Our AMA support monitoring of Medicaid Section 1115 waivers that recognize the value
14 of traditional American Indian and Alaska Native healing services as a mechanism for
15 improving patient-centered care and health equity among American Indian and Alaska Native
16 populations when coordinated with physician-led care.
- 17 (7) Our AMA support consultation with Tribes to facilitate the development of best practices,
18 including but not limited to culturally sensitive data collection, safety monitoring, the
19 development of payment methodologies, healer credentialing, and tracking of traditional
20 healing services utilization at Indian Health Service, Tribal, and Urban Indian Health
21 Programs.
- 22 ~~(68)~~ Strong emphasis be given to mental health programs for American Indians and Alaska
23 Natives in an effort to reduce the high incidence of alcoholism, homicide, suicide, and
24 accidents.
- 25 ~~(79)~~ A team approach drawing from traditional health providers supplemented by psychiatric
26 social workers, health aides, visiting nurses, and health educators be utilized in solving these
27 problems.
- 28 ~~(810)~~ Our AMA continue its liaison with the Indian Health Service and the National Indian
29 Health Board and establish a liaison with the Association of American Indian Physicians.
- 30 ~~(911)~~ State and county medical associations establish liaisons with intertribal health councils in
31 those states where American Indians and Alaska Natives reside.
- 32 ~~(1012)~~ Our AMA supports and encourages further development and use of innovative delivery
33 systems and staffing configurations to meet American Indian and Alaska Native health needs
34 but opposes overemphasis on research for the sake of research, particularly if needed federal
35 funds are diverted from direct services for American Indians and Alaska Natives.
- 36 ~~(1113)~~ Our AMA strongly supports those bills before Congressional committees that aim to
37 improve the health of and health-related services provided to American Indians and Alaska
38 Natives and further recommends that members of appropriate AMA councils and committees
39 provide testimony in favor of effective legislation and proposed regulations. (Modify HOD
40 Policy)
- 41
- 42 2. That our AMA reaffirm Policy D-350.996, which states that the AMA will continue to identify
43 and incorporate strategies specific to the elimination of minority health care disparities in its
44 ongoing advocacy and public health efforts. (Reaffirm HOD Policy)
- 45
- 46 3. That our AMA reaffirm Policy H-200.954, which supports efforts to quantify the geographic
47 maldistribution of physicians and encourages medical schools and residency programs to
48 consider developing admissions policies and practices and targeted educational efforts aimed at
49 attracting physicians to practice in underserved areas and to provide care to underserved
50 populations. (Reaffirm HOD Policy)

- 1 4. That our AMA reaffirm Policy H-350.949, which encourages state Medicaid agencies to follow
2 the Centers for Medicare & Medicaid Services Tribal Technical Advisory Group’s
3 recommendations to improve care coordination and payment agreements between Medicaid
4 managed care organizations and Indian health care providers. (Reaffirm HOD Policy)
5
- 6 5. That our AMA reaffirm Policy H-350.977, which supports expanding the American Indian role
7 in their own health care and increased involvement of private practitioners and facilities in
8 American Indian health care through such mechanisms as agreements with Tribal leaders or
9 Indian Health Service contracts, as well as normal private practice relationships. (Reaffirm
10 HOD Policy)

Fiscal Note: Less than \$500.

**Council on Medical Service Report 3-A-24
Review of Payment Options for Traditional Healing Services
Policy Appendix**

Strategies for Eliminating Minority Health Care Disparities D-350.996

Our American Medical Association (AMA) will continue to identify and incorporate strategies specific to the elimination of minority health care disparities in its ongoing advocacy and public health efforts, as appropriate.

Res. 731, I-02 Modified: CCB/CLRPD Rep. 4, A-12 Reaffirmed: CCB/CLRPD Rep. 1, A-22

US Physician Shortage H-200.954

Our AMA:

- (1) explicitly recognizes the existing shortage of physicians in many specialties and areas of the US;
- (2) supports efforts to quantify the geographic maldistribution and physician shortage in many specialties;
- (3) supports current programs to alleviate the shortages in many specialties and the maldistribution of physicians in the US;
- (4) encourages medical schools and residency programs to consider developing admissions policies and practices and targeted educational efforts aimed at attracting physicians to practice in underserved areas and to provide care to underserved populations;
- (5) encourages medical schools and residency programs to continue to provide courses, clerkships, and longitudinal experiences in rural and other underserved areas as a means to support educational program objectives and to influence choice of graduates' practice locations;
- (6) encourages medical schools to include criteria and processes in admission of medical students that are predictive of graduates' eventual practice in underserved areas and with underserved populations;
- (7) will continue to advocate for funding from public and private payers for educational programs that provide experiences for medical students in rural and other underserved areas;
- (8) will continue to advocate for funding from all payers (public and private sector) to increase the number of graduate medical education positions in specialties leading to first certification;
- (9) will work with other groups to explore additional innovative strategies for funding graduate medical education positions, including positions tied to geographic or specialty need;
- (10) continues to work with the Association of American Medical Colleges (AAMC) and other relevant groups to monitor the outcomes of the National Resident Matching Program; and
- (11) continues to work with the AAMC and other relevant groups to develop strategies to address the current and potential shortages in clinical training sites for medical students.
- (12) will: (a) promote greater awareness and implementation of the Project ECHO (Extension for Community Healthcare Outcomes) and Child Psychiatry Access Project models among academic health centers and community-based primary care physicians; (b) work with stakeholders to identify and mitigate barriers to broader implementation of these models in the United States; and (c) monitor whether health care payers offer additional payment or incentive payments for physicians who engage in clinical practice improvement activities as a result of their participation in programs such as Project ECHO and the Child Psychiatry Access Project; and if confirmed, promote awareness of these benefits among physicians.
- (13) will work to augment the impact of initiatives to address rural physician workforce shortages.

(14) supports opportunities to incentivize physicians to select specialties and practice settings which involve delivery of health services to populations experiencing a shortage of providers, such as women, LGBTQ+ patients, children, elder adults, and patients with disabilities, including populations of such patients who do not live in underserved geographic areas

Res. 807, I-03 Reaffirmation I-06 Reaffirmed: CME Rep. 7, A-08 Appended: CME Rep. 4, A-10 Appended: CME Rep. 16, A-10 Reaffirmation: I-12 Reaffirmation A-13 Appended: Res. 922, I-13 Modified: [CME Rep. 7, A-14 Reaffirmed: CME Rep. 03, A-16](#) Appended: Res. 323, A-19 Appended: [CME Rep. 3, I-21](#) Reaffirmation: I-22 Appended: Res. 105, A-23 Reaffirmed: BOT Rep. 11, A-23

Medicaid Waivers for Managed Care Demonstration Projects H-290.987

(1) Our AMA adopts the position that the Secretary of Health and Human Services should determine as a condition for granting waivers for demonstration projects under Section 1115(a) of the Medicaid Act that the proposed project: (i) assist in promoting the Medicaid Act's objective of improving access to quality medical care, (ii) has been preceded by a fair and open process for receiving public comment on the program, (iii) is properly funded, (iv) has sufficient provider reimbursement levels to secure adequate access to providers, (v) does not include provisions designed to coerce physicians and other providers into participation, such as those that link participation in private health plans with participation in Medicaid, and (vi) maintains adequate funding for graduate medical education. (2) Our AMA advocates that CMS establish a procedure which state Medicaid agencies can implement to monitor managed care plans to ensure that (a) they are aware of their responsibilities under EPSDT, (b) they inform patients of entitlement to these services, and (c) they institute internal review mechanisms to ensure that children have access to medically necessary services not specified in the plan's benefit package. (BOT Rep. 24, A-95; Reaffirmation A-99; Reaffirmation A-00; Reaffirmation I-04; Modified: CMS Rep. 1, A-14)

Medicaid Managed Care for Indian Health Care Providers H-350.949

Our AMA will: (1) support stronger federal enforcement of Indian Health Care Medicaid Managed Care Provisions and other relevant laws to ensure state Medicaid agencies and their Medicaid managed care organizations (MCO) are in compliance with their legal obligations to Indian health care providers; and (2) encourage state Medicaid agencies to follow the Centers for Medicare and Medicaid Services Tribal Technical Advisory Group's recommendations to improve care coordination and payment agreements between Medicaid managed care organizations and Indian health care providers.

Res. 208, A-23

Improving Health Care of American Indians H-350.976

Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the US, entitled to the same equal rights and privileges as other U.S. citizens.

(2) The federal government provide sufficient funds to support needed health services for American Indians.

(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.

(4) American Indian religious and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.

(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.

(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce

the high incidence of alcoholism, homicide, suicide, and accidents.

(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.

(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.

(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.

(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.

(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

CLRPD Rep. 3, I-98 Reaffirmed: Res. 221, A-07 Reaffirmation A-12 Reaffirmed: Res. 233, A-13 Reaffirmed: BOT Rep. 09, A-23

Indian Health Service H-350.977

The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.

(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.

(3) Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.

(4) Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.

(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

(6) Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.

(7) Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.

CLRPD Rep. 3, I-98 Reaffirmed: CLRPD Rep. 1, A-08 Reaffirmation A-12 Reaffirmed: Res. 233, A-13 Appended: Res. 305, A-23 Reaffirmed: BOT Rep. 09, A-23

REPORT 7 OF THE COUNCIL ON MEDICAL SERVICE (A-24)
Ensuring Privacy in Retail Health Care Settings
(Reference Committee A)

EXECUTIVE SUMMARY

At the 2023 Annual Meeting, the House of Delegates adopted [Policy H-315.960](#), which asks our American Medical Association to “study privacy protections, privacy consent practices, the potential for data breaches, and the use of health data for non-clinical purposes in retail health care settings.”

The growth in retail health care clinics makes them a significant player in the \$4 trillion US health care system. Retail health care is a term used to describe two discrete models of care: 1) walk-in clinics that provide treatment from employed non-physician practitioners; or 2) services that connect patients with participating online clinics. This distinction is important as it has implications in deciphering responsibilities of covered entities and business associates, respectively.

While the Health Insurance Portability and Accountability Act (HIPAA) has been in place since 1996, misconceptions have muddied the waters around what is and is not a covered entity or business associate, and what is or is not protected health information (PHI). Furthermore, there is confusion surrounding retail health care companies’ HIPAA status, as they require patients to read and comprehend several documents together in order to understand their rights. For these reasons, the Council has developed recommended guardrails surrounding retail health care companies’ handling of PHI.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 7-A-24

Subject: Ensuring Privacy in Retail Health Care Settings

Presented by: Sheila Rege, MD, Chair

Referred to: Reference Committee A

1 At the 2023 Annual Meeting, the House of Delegates adopted [Policy H-315.960](#), which asks our
2 American Medical Association (AMA) to “study privacy protections, privacy consent practices, the
3 potential for data breaches, and the use of health data for non-clinical purposes in retail health care
4 settings.” Testimony at the 2023 Annual Meeting regarding the resolution was unanimously
5 supportive, highlighting a strong commitment to patient privacy as well as expansion to include
6 health data for nonclinical purposes and all retail health care settings. This report focuses on
7 current privacy practices in retail health care settings, highlights AMA advocacy efforts and
8 essential policy, and presents new policy recommendations.

9 10 BACKGROUND

11
12 As of March 2023, there were 1,801 active retail health care clinics in 44 states, predominantly in
13 major metropolitan areas. While only two percent of retail health care clinics are in rural areas,
14 CVS Health owns half of those as well as 63 percent of all retail health care clinics. Kroger Health
15 is the second largest, at 12 percent market share, with more than 220 retail clinics in 35 states, and
16 Walgreens is the third largest at eight percent.¹ Other participants include Walmart, Amazon, Best
17 Buy, and Dollar General. Most retail clinics are in the Southeast and the Midwest, which account
18 for 62 percent of locations. Nearly half (49.1 percent) of all retail clinics are concentrated in seven
19 states: Texas, Florida, Ohio, California, Georgia, Illinois, and Tennessee, which can be attributed to
20 population density. Retail health care clinics have seen a 202 percent increase in utilization from
21 2021 to 2022,² which is a greater growth percentage than seen by urgent care centers, primary care
22 practices, and hospital emergency departments. While retail health care has been around since the
23 early 2000s, it is now a significant player in the \$4 trillion U.S. health care system.³ Retailers’
24 substantial financial resources and far reach allow them to push a customized consumer experience
25 focused on convenience and driven by digital health products, permitting them to get closer to
26 consumers as e-commerce erodes their traditional business. Companies such as CVS Health,
27 Walgreens, Costco, and Amazon continue to expand their services, pulling together different
28 technology-enabled services such as urgent, primary, home, and specialty care along with
29 pharmacy and, in some cases, full integration with an insurer, prompting anti-trust and privacy
30 concerns.

31
32 A [2022 AMA survey](#) found that while 92 percent of people believe that privacy of their health data
33 is a right, most are unclear about the rules relevant to their privacy. The AMA is concerned that
34 health data are increasingly vulnerable and has called for regulations for an individual’s right to
35 control, access, and delete personal data collected about them. The issue is further exacerbated by
36 the Supreme Court’s decision to overturn *Roe v. Wade*, which challenges the right to privacy by

1 potentially enabling law enforcement to gain access to health data related to abortion care and
2 pregnancy.⁴ As such, the [AMA has outlined five privacy principles for a national privacy](#)
3 [framework](#), including:

- 4
- 5 • Individual rights
- 6 • Equity
- 7 • Entity responsibility
- 8 • Applicability
- 9 • Enforcement

10 11 SNAPSHOT OF CURRENT RETAIL HEALTH CARE MARKET

12
13 Walmart is reportedly in negotiations with ChenMed, which touts itself as “family-owned, family-
14 oriented organization committed to bringing superior health care to moderate-to-low-income
15 seniors.” Walgreens recently announced that it is teaming up with technology company Pearl
16 Health, which has a platform to enable value-based care. The collaboration will merge Pearl’s
17 operating system capabilities with Walgreens’ care delivery assets, allowing Walgreens to function
18 as a management services organization for physicians and hospitals. Costco is partnering with the
19 online platform Sesame, which operates outside of insurance networks in order to cater to patients
20 with high-deductible health plans and to the uninsured. Costco will be able to offer same-day
21 telehealth primary care visits for \$29, as well as video prescription refills, mental health consults,
22 and in-person visits for urgent care, among other services. In 2018, Amazon acquired start-up
23 PillPack, which later became Amazon Pharmacy. In November 2022, the company launched
24 Amazon Clinic, a virtual health service that provides users with 24/7 access to physicians and nurse
25 practitioners on Amazon’s website and mobile application (app). In February 2023, Amazon
26 purchased One Medical, which is a membership-based, tech-integrated primary care platform.
27 Amazon is now piloting delivery of medications via drone, airlifting certain common medicines to
28 homes within 60 minutes.⁵ Most recently, Amazon introduced its [Health Conditions Programs](#), an
29 initiative that enables customers to discover digital health benefits to help manage chronic
30 conditions such as diabetes and hypertension. Customers answer questions to determine if their
31 insurance covers a program and if they are clinically eligible for that program, for which they gain
32 access to specific services (e.g., virtual health coaching) and devices (e.g., continuous glucose
33 monitors) covered by their plan. CVS Health owns Aetna, Oak Street Health, and Caremark. In
34 December 2017, CVS announced its merger with Aetna, representing the biggest health care
35 merger in US history, involving both a horizontal and a vertical merger. While the AMA led
36 advocacy efforts to block the union, it was eventually approved.

37 38 FEDERAL DATA PRIVACY LAWS

39
40 The [Health Insurance Portability and Accountability Act](#) (HIPAA) was enacted in 1996,
41 establishing a comprehensive set of standards for protecting sensitive patient health information.
42 The HIPAA [Privacy Rule](#) establishes national standards to protect individuals’ medical records and
43 other individually identifiable patient health information (collectively defined as “protected health
44 information” or PHI). It requires appropriate safeguards to protect the privacy of PHI and sets
45 limits and conditions on the uses and disclosures that may be made of such information without an
46 individual’s authorization.

47
48 PHI is any individually identifiable health information created, received, maintained, or transmitted
49 by a covered entity or business associate that:

- 1 • Relates to the past, present, or future physical or mental health or condition of an individual,
- 2 • The provision of health care to an individual, or
- 3 • The past, present, or future payment for the provision of health care to an individual.

4
5 The United States does not have a federal law that affirms who owns medical records. Under
6 HIPAA, patients have the right to access data medical information in their medical records. The
7 HIPAA Privacy Rule requires appropriate safeguards to protect the privacy of PHI and sets limits
8 and conditions on the uses and disclosures that may be made of such information without an
9 individual's authorization. The HIPAA Privacy Rule also gives individuals rights over their PHI,
10 including rights to examine and obtain a copy of their health records, to direct a covered entity to
11 transmit to a third-party an electronic copy of their protected health information in an electronic
12 health record, and to request corrections. It applies to all entities that fall within the definition of a
13 "[covered entity](#)," which includes health plans, health care clearinghouses, and those health care
14 providers that conduct certain health care transactions electronically. Third-party organizations that
15 provide a service for or on behalf of a covered entity are referred to as "business associates" when
16 the service they provide requires that the covered entity disclose PHI to them; common examples
17 of a business associate are a claims processing entity or appointment scheduling service. All
18 business associates are required to comply with HIPAA privacy protections to the same extent as
19 the covered entity for which the services are performed.

20
21 Retail health care is a term used to describe two discrete models of care: 1) walk-in clinics that
22 provide treatment from employed non-physician practitioners (e.g., CVS Minute Clinic); or 2)
23 services that connect patients with participating online clinics (e.g., Amazon Clinic). This
24 distinction is important as it has implications in deciphering responsibilities of covered entities
25 (e.g., CVS Affiliated Covered Entity, which designates itself as a single covered entity made up of
26 covered entities and health care providers owned or controlled by CVS) and business associates,
27 respectively. In order to help health care providers and organizations determine their HIPAA status,
28 the Centers for Medicare & Medicaid Services has developed a [Covered Entity Decision Tool](#).

29
30 While HIPAA has been in place since 1996, [misconceptions](#) persist regarding what is and is not a
31 covered entity or business associate, and what is or is not PHI. Fortunately, in this regard, the
32 HIPAA regulations have not changed in 10 years, since the 2013 HIPAA and Health Information
33 Technology for Economic Clinical Health Act (HITECH) Omnibus Rule. Therefore, the following
34 still hold true:

- 35
36 • A legally compliant business associate (BA) status can only be achieved by signing a BA
37 agreement (BAA) with a covered entity (CE).
- 38 • The minimum terms of each business association agreement (BAA) are mandated by
39 regulations, which have also not changed since 2013.
- 40 • The Privacy Rule provides that a BAA must require a BA to return all PHI to the CE or destroy
41 the PHI at the termination of the BAA where feasible.

42
43 Legally, the HIPAA Privacy Rule applies to covered entities and business associates. Covered
44 entities are also responsible for guaranteeing their business associates are safeguarding PHI under
45 contract. The contract between the covered entity and its business associate must be HIPAA
46 compliant. If a business associate breaches its contract, then it is up to the covered entity to correct
47 that breach or terminate the contract. In the event of a loss of PHI by a BA, a CE can be responsible
48 for their loss of data.

1 Health care data that are not created, received, maintained, or transmitted by a CE or BA are
 2 referred to as “health care adjacent data” and are not protected by the HIPAA Privacy Rule, nor
 3 subject to the safeguards of the HIPAA Security Rule. The HIPAA [Security Rule](#) requires CEs and
 4 BAs to maintain reasonable and appropriate administrative, technical, and physical safeguards for
 5 protecting electronically stored PHI (ePHI). However, health care entities that collect, use, store,
 6 and share personal health data from digital health platforms, apps, and other similar software
 7 programs (e.g., Fitbit) are not CEs or BAs and are, therefore, beyond the reach of HIPAA. These
 8 apps may be held legally accountable by federal regulators for inappropriate disclosures or data
 9 breaches by the Federal Trade Commission (FTC).

10
 11 RETAIL HEALTH CARE ORGANIZATIONS’ HIPAA STATUS

12
 13 In some cases, there is confusion regarding a retail health care company’s HIPAA status, requiring
 14 patients to read and comprehend several documents together in order to understand their rights.
 15 Determining which organizations HIPAA protections apply is a complex question, as HIPAA
 16 regulates not only the three types of covered entities (health plans, health care clearinghouses, and
 17 health care providers who transmit health information electronically in connection with a covered
 18 transaction), but also their business associates, which can be difficult for the layperson to identify.
 19 Additionally, while retail health companies often contend that they have stringent customer privacy
 20 policies, they may still require customers to sign away some data protection rights. For example,
 21 Amazon’s privacy page explains that the Clinic is not a health care provider – in other words, it is
 22 not a HIPAA covered entity. It goes on to explain that Amazon Clinic is a service provider to
 23 health care providers – thereby classifying it as a HIPAA business associate, retaining patient PHI
 24 in order to “coordinate health care services and update customer information to facilitate services
 25 from other providers.” However, the Amazon Clinic HIPAA Authorization webpage states that it is
 26 “in compliance with federal privacy laws, including HIPAA” and includes FAQs that reference its
 27 use of “HIPAA compliant technology.” The challenge is that the [Amazon Clinic HIPAA](#)
 28 [Authorization](#) needs to be read together with the intricate terms of several other Amazon legal
 29 policies, including its [Amazon Clinic Terms of Use](#), [Amazon.com Conditions of Use](#), and
 30 [Amazon.com Privacy Notice](#) in order for patients to understand all their privacy rights. While retail
 31 health companies contend that they have stringent customer privacy policies, there have been
 32 accounts of companies requiring customers to sign away some data protection rights. In May 2023,
 33 the [Washington Post](#) reported that [when enrolling for Amazon Clinic, users are required to provide](#)
 34 [consent to allow the use and disclosure of their PHI](#). The form that patients are asked to complete
 35 states that after providing consent, Amazon will be authorized to have access to the complete
 36 patient file, may re-disclose information contained in that file, and that the information disclosed
 37 will no longer be subject to HIPAA Rules.⁶ While the terms are voluntary, individuals have no
 38 option of using Amazon Clinic if they do not agree to the terms and conditions.⁷ The fundamental
 39 problem is that once patients agree to the Amazon Clinic authorization, they agree their health
 40 information may no longer be protected by HIPAA.⁸ How retail health care companies decide to
 41 manipulate data and use it may not become apparent for many years.

42
 43 CONSUMER PROTECTION & PRIVACY LAWS

44
 45 Retail health care organizations that electronically transmit standard transactions (e.g., payment,
 46 enrollment, eligibility) are covered entities subject to HIPAA. They are also subject to other
 47 consumer protection and privacy laws for non-HIPAA covered entities. Privacy rights are included
 48 in the FTC’s authority to protect consumers from deceptive or unfair business practices. The [FTC](#)
 49 [Health Breach Notification Rule](#) specifically applies to non-HIPAA covered entities who are
 50 required to notify their customers, the FTC, and, in some instances, the media if there is a breach of
 51 unsecured, individually identifiable health information.⁹

1 The State of Washington recently passed a privacy-focused law to protect PHI that falls outside
 2 HIPAA. The [My Health My Data Act](#) makes it illegal to sell or offer to sell PHI without first
 3 obtaining authorization from the consumer.¹⁰ Several other states (i.e., California, Colorado,
 4 Connecticut, Utah, and Virginia) have enacted general privacy laws with varying applicability to
 5 retail health care companies. The latter laws include various exemptions for PHI, HIPAA de-
 6 identified information, health care providers, HIPAA covered entities, HIPAA business associates,
 7 and non-profits. While all of the latter laws exempt PHI, retail health care companies may have
 8 obligations under these laws with respect to other personal information, such as website data.¹¹
 9

10 RETAIL HEALTH PRIVACY PROTECTIONS & CONSENT PRACTICES
 11

12 In a privacy notice, retail health care companies outline how HIPAA allows them to use and share
 13 PHI for treatment, payment, and health care operations. Their privacy notices also describe the
 14 circumstances where uses and disclosures of PHI do not require patient approval, including certain
 15 uses and disclosures by business associates (i.e., service providers to health care providers),
 16 designated patient caregivers, workers’ compensation claims, law enforcement, judicial or
 17 administrative proceedings, public health purposes, health oversight activities (e.g., audits),
 18 institutional review board-approved research, coroners, medical examiners and funeral directors,
 19 organ procurement organizations, correctional institutions, and military/national security activities.
 20 Retail health care companies are prohibited from disclosing PHI for purposes other than those
 21 described in their notices or for marketing purposes of any kind without written patient consent.
 22 Additionally, patients are notified that they may revoke their approval at any time, although most
 23 companies require submission of formal written notice, explaining that revocation cannot undo any
 24 use or sharing of PHI that has already happened based on previously granted permission.
 25

26 It is important to note that Amazon Clinic is not required to secure any additional waiver or
 27 “authorization” from prospective patients in order for Amazon Clinic to provide the services it
 28 promises to perform in regard to matching the patient with an available medical provider. This type
 29 of scheduling and care coordination is one aspect of “health care operations” under HIPAA, and
 30 falls within the Treatment, Payment, and Health Care Operations permissible disclosures under
 31 HIPAA, for which no patient authorization is required.* [Per Department of Health & Human
 32 Services-Office of Civil Rights \(OCR\) guidance](#), “A business associate agreement may authorize a
 33 business associate to make uses and disclosures of PHI the covered entity itself is permitted by the
 34 HIPAA Privacy Rule to make. See 45 C.F.R. § 164.504(e).” Patients are asked to sign a voluntary
 35 Amazon Clinic HIPAA authorization. The superfluous nature of Amazon’s HIPAA authorization
 36 form seems to be a tactic aimed at obtaining valuable PHI. This strategy not only allows Amazon
 37 access to use and disclose the PHI relevant to its patient matching services, it secures Amazon’s
 38 ability to collect, use, and disclose each patient’s “complete patient file” – far exceeding the
 39 amount of information needed to match a patient with a medical provider.

* See 45 C.F.R. §164.506(a) Standard: Permitted uses and disclosures. A covered entity may use or disclose protected health information for treatment, payment, or health care operations provided that such use or disclosure is consistent with other applicable requirements of this subpart. (emphasis in original). See also, “Health care operations are any of the following activities: (a) quality assessment and improvement activities, including case management and care coordination . . .” (emphasis in original) [https://www.hhs.gov/hipaa/for-professionals/privacy/laws-regulations/index.html#:~:text=Health%20care%20operations%20are%20any,c\)%20conducting%20or%20arranging%20for](https://www.hhs.gov/hipaa/for-professionals/privacy/laws-regulations/index.html#:~:text=Health%20care%20operations%20are%20any,c)%20conducting%20or%20arranging%20for). See finally, 45 C.F.R. §164.506 (c)(2): “A covered entity may disclose protected health information for treatment activities of a health care provider.” In the case of Amazon Clinic, Amazon discloses patient PHI to its participating providers to facilitate the patient’s treatment, in addition to care coordination.

1 The breadth of retail health care companies' coast-to-coast networks can amplify privacy concerns.
2 In December 2023, the [Senate Committee on Finance](#) found that eight of the nation's largest
3 pharmacy chains had routinely turned over customers' PHI to law enforcement agencies, even
4 without a warrant, concluding that, "these companies' privacy practices vary widely, in ways that
5 seriously impact patient privacy." None of the companies required a warrant before turning over
6 requested data, as HIPAA does not require law enforcement to obtain a warrant or judge-issued
7 subpoena before they make a lawful request for records containing PHI.

8 9 ETHICAL & COMPETITIVE CONSIDERATIONS

10
11 The investment banking industry utilizes a virtual information barrier between those who have
12 material, non-public information and those who do not, to prevent conflicts of interest, sometimes
13 referred to as an "ethical wall" or privacy wall. The legal services industry utilizes a similar
14 firewall to protect clients by restraining access to information in order to prevent conflicts of
15 interest among law firm attorneys who may have represented a now adverse party in their prior
16 legal work. Establishing a privacy wall between the health business and non-health business of
17 retail health care companies could eliminate sharing of identifiable PHI or re-identifiable PHI for
18 uses not directly related to patients' medical care.

19
20 Amazon's acquisition of One Medical is a cautionary example. The union allows Amazon to
21 collect a large cache of PHI to further cement its dominance as an online intermediary for goods
22 and services. Amazon's cross-industry reach allows it to use data to develop detailed insights about
23 individuals, without much risk of violating privacy laws. In order to protect the privacy of patients,
24 it will be important for Amazon to commit to having a privacy wall between its patient data and its
25 other areas. Amazon notes that it "will never share One Medical PHI outside of One Medical for
26 advertising or marketing purposes of other Amazon products and services without clear permission
27 from the customer."¹² However, [Amazon makes patients accept its conditions of use prior to
28 treatment, which signs away their PHI protections.](#)¹³ The combination of a vast product distributor
29 and marketer with sensitive PHI sets the stage for unfettered targeted advertising.

30
31 The implications of horizontal-vertical health care mergers, such as the one between CVS and
32 Aetna, cannot be overlooked. An [AMA evidence-based analysis](#) showed how the merger would
33 reduce competition in five key health care markets: Medicare Part D; health insurance; pharmacy
34 benefit management; retail pharmacy; and specialty pharmacy, leading to higher premiums and
35 lower-quality insurance products. Such mergers may lead to increased access to PHI, leveraging
36 data on individual biology, medical history, level of well-being, shopping habits, sleep hygiene,
37 nicotine consumption, and exercise routines to shape patients' digital health IDs. This can allow
38 health insurers to reduce their risks and, therefore, their costs by restricting access to health care
39 services for high-risk patients and vulnerable populations.

40 41 POTENTIAL FOR DATA BREACHES

42
43 On February 21, 2024, a cyberattack against UnitedHealth Group's Change Healthcare disrupted
44 operations for physicians, hospitals, insurers, and pharmacies. Change Healthcare uses Amazon
45 Web Services (AWS) to submit and process insurance claims, handling close to 14 billion
46 transactions a year. As of March 1, 2024, Change Healthcare reported that it was working with
47 Microsoft and AWS to perform an additional scan of its cloud environment. This breach highlights
48 the potential for cyberattacks to affect patient privacy in the retail health care setting.

49
50 The four most common reasons for data breaches include cyberattacks, unauthorized disclosure,
51 theft, and improper disposal of PHI.¹⁴ As retail health care companies expand their reach, the risk

1 of a data breach increases exponentially, especially if they fail to establish the technical controls,
2 training, and employee sanctions necessary to isolate retail health care business from other lines of
3 business. Legal and technical firewalls are essential in preventing retail health care data breaches
4 because they serve as the first line of defense in protecting ePHI from external threats such as
5 hacking, as well as unauthorized or unintended disclosures across business lines.

6
7 Once a covered entity knows or by reasonable diligence should have known (referred to as the
8 “date of discovery”) that a breach of PHI has occurred, the entity has an obligation to notify the
9 relevant parties “without unreasonable delay” or up to 60 calendar days following the date of
10 discovery, even if upon discovery the entity was unsure as to whether PHI had been compromised.
11 If the breach involves the unsecured PHI of more than 500 individuals, a covered entity must notify
12 a prominent media outlet serving the state or jurisdiction in which the breach occurred, in addition
13 to notifying the Department of Health & Human Services (HHS). For breaches involving fewer
14 than 500 individuals, covered entities are permitted to maintain a log of the relevant information
15 and notify HHS within 60 days after the end of the calendar year via the HHS website.
16 Additionally, covered entities may offer affected individuals free identity restoration services or
17 credit reports for a defined period of time. While such offerings are well intended, they do not
18 necessarily allow reparations commensurate with the degree of harm experienced by the affected
19 individuals.

20 21 USE OF HEALTH DATA FOR NON-CLINICAL PURPOSES

22
23 Secondary use of PHI includes activities such as analysis, research, quality and safety
24 measurement, public health, payment, physician accreditation, marketing, risk stratifying to limit
25 care to high-risk patients and vulnerable populations, and other business applications. As retail
26 health care companies continue to expand their reach, the potential for them to use PHI for non-
27 clinical purposes grows. The FTC sent a letter to Amazon in anticipation of its acquisition of One
28 Medical, reminding it of the obligation to protect sensitive health information and inquiring as to
29 how the integrated entity will use One Medical PHI for purposes beyond the provision of health
30 care. Amazon’s acquisition of One Medical was finalized in February 2023 without a regulatory
31 challenge. While the FTC could file a lawsuit to unwind the transaction in the future, experts agree
32 that if regulators had found a reason to block the deal, they already would have. Granting retail
33 health care companies enormous tranches of PHI is viewed by some as a mistake, given that
34 loopholes exist in every legal framework.

35 36 37 THE ROLE OF AUGMENTED INTELLIGENCE IN DATA PRIVACY

38
39 De-identifying PHI enables HIPAA covered entities to share health data for large-scale medical
40 research studies, policy assessments, comparative effectiveness studies, and other studies and
41 assessments without violating the privacy of patients or requiring authorizations to be obtained
42 from each patient prior to data being disclosed. Once PHI is de-identified and theoretically can no
43 longer be traced back to an individual, it is no longer protected by the HIPAA Privacy Rule.¹⁵
44 HIPAA-compliant de-identification of PHI is possible using one of two methods – [Safe Harbor or](#)
45 [Expert Determination](#). While neither method will remove all risk of re-identification of patients,
46 both can reduce risk. In essence, almost all de-identified PHI is re-identifiable.

47
48 A covered entity may assign a code or other means of record identification to allow information de-
49 identified to be re-identified by the covered entity. However, as long as the covered entity does not
50 use or disclose the code or other means of record identification for any other purpose or does not
51 disclose the mechanism for re-identification, they remain compliant with HIPAA.

1 The complexity and rise of data in health care means that augmented intelligence (AI) will
 2 increasingly be applied within the field. Several types of AI are already employed by payers, health
 3 plans, and life sciences companies. At the present time, the key categories of applications involve
 4 diagnosis and treatment recommendations, patient engagement and adherence, and administrative
 5 activities.¹⁶ Health care adjacent data, such as data collected by wearables and health care
 6 applications, are commonly transmitted to an AI-driven health care solution – for example, for the
 7 early diagnosis of a heart condition. Accordingly, there is rising concern about the ability of AI to
 8 facilitate the re-identification of PHI with relative ease. AI algorithms are sophisticated enough to
 9 “learn” new strategies from data, such as how to discern patterns in the data. Through this
 10 detection, an algorithm may be able to effect PHI re-identification. The HIPAA Privacy Rule
 11 outlines specific requirements to adhere to when de-identifying health data, but there is currently
 12 no standardized approach for using de-identified data or validating best practices. While current
 13 laws do not address the role AI might play in data privacy, regulators are continually enacting and
 14 revising their policies, such as the European Union’s General Data Protection Regulation (GDPR)
 15 and California’s Consumer Privacy Act (CCPA). Under the GDPR, there must be a legal basis for
 16 collecting personal data, while the CCPA requires that users have the ability to opt out of any
 17 personal information collection practices. At the federal level, [National Institute of Standards and](#)
 18 [Technology AI Standards](#) are currently under development, while the Government Accountability
 19 Office report, [Artificial Intelligence in Health Care](#) provides guidance for future legislation. In the
 20 interim, AI vendors and software developers are advised to follow the [Xcertia mHealth Guidelines](#),
 21 which align with many of HIPAA’s standards and are backed by the AMA, one of the founding
 22 members. The Joint Commission recently launched the [Responsible Use of Health Data](#)
 23 [Certification](#) (RUHD), a voluntary program aimed at providing health care entities with an
 24 objective evaluation of how well they maintain health data privacy best practices in their secondary
 25 use of data for endeavors such as operations improvement or AI development. The RUHD will
 26 evaluate whether an organization de-identifies data in accordance with HIPAA, whether it has
 27 established a governance structure for the use of de-identified data, and how the organization
 28 communicates with key stakeholders about the secondary use of de-identified data. The AMA has
 29 also recently created a set of [AI Principles](#) which identify and advocate for enhanced protections
 30 for de-identified data when used in conjunction with generative AI and large language models.

31
 32 **ROADBLOCKS TO PRIVACY PROTECTION**

33
 34 As HIPAA only covers CEs and BAs, concerns arise in the regulation of entities currently beyond
 35 the scope of HIPAA, such as digital health platforms, apps, and other similar software programs
 36 that collect, use, store, and share personal health data. Under federal law there is no floor – no
 37 minimum threshold at all – for an organization’s privacy policy. Thus, any health app or digital
 38 health platform can word their stated privacy policy in a weak, evasive, easy-to-comply-with
 39 manner that will sound reassuring to the consumers who choose to read it. Unfair and deceptive
 40 acts and practices affective commerce are a required basis of an FTC action. This is in stark
 41 contrast to the HIPAA Notice of Privacy Practices, which must include specific representations as
 42 to a CE’s privacy practices.

43
 44 Entities such as Amazon Clinic have taken a savvy approach by positioning themselves as BAs and
 45 thus subject to HIPAA, which reassures consumers. Amazon Clinic’s BA status appears to have
 46 been achieved by entering into a BAA with each of the medical providers (i.e., CEs) who
 47 participate with Amazon Clinic. Amazon Clinic collects data from consumers and matches them
 48 with the Clinic’s participating providers. Amazon is able to avoid most of the compliance burden
 49 and privacy protections that HIPAA requires of BAs, by requiring consumers to click through a
 50 screen whereby they effectively waive their HIPAA protections. Under HIPAA, a BA may not use
 51 or disclose PHI in a manner that would violate the Privacy Rule if done by the CE, but HIPAA

1 does allow patients to effectively waive their rights against disclosure by the CE by giving an
 2 authorization, which is [how Amazon characterizes its waiver/click-through screen](#). While
 3 amending HIPAA to provide that BAs may not get a waiver from consumers might be helpful,
 4 sophisticated companies such as Amazon would likely devise a strategy so the patient
 5 “authorization for disclosure” appears to come from the medical provider, and patient
 6 authorizations to disclose their PHI are a necessary feature of HIPAA. When patients sign up for
 7 treatment through Amazon Clinic, they also authorize all those involved (physicians, pharmacies,
 8 laboratories) to share their PHI with Amazon. Amazon then has the right to “retain, use, and
 9 disclose” PHI to facilitate services from “other providers.” It is unclear who these other providers
 10 are, leading some to believe it could include businesses looking to target patients with ads related
 11 to their condition. A substantial hurdle to privacy protection seems to be the willingness of
 12 consumers to click through screens.

13
 14 **CHALLENGING PRIVACY ROADBLOCKS**

15
 16 To ensure robust privacy protections, the Council believes that retail health care companies should
 17 be prohibited from utilizing “clickwrap” agreements, which are online agreements where the user
 18 indicates their acceptance by clicking a button or checking a box that states, “I agree.” While the
 19 purpose of a clickwrap agreement is to digitally capture acceptance of a contract, they permit
 20 patients to access a service without specific affirmative consent to data sharing. Common uses
 21 include asking website visitors to acknowledge that the website they are visiting uses cookies,
 22 installing a mobile app, or connecting to a wireless network.

23
 24 The Council also believes it is important that retail health care companies’ Terms of Use do not
 25 require data sharing for uses not directly related to patients’ medical care in order to receive care –
 26 unless required by law (e.g., reporting of infectious diseases). Operationally, this means that the
 27 Terms of Use should be distinct from the Notice of Privacy Practices, with clear indication that
 28 patients are not required to sign the latter in order to receive care. Retail health care companies
 29 should provide education on this concept to reduce patient vulnerability and achieve meaningful
 30 consent.

31
 32 There are [four types of consent](#): express consent, implied consent, opt-in consent and opt-out
 33 consent. Several retail health care companies utilize opt-out consent, which assumes user consent
 34 unless they act to withdraw it. Opt-out consent requires users to take action to indicate non-consent,
 35 placing the responsibility on users to actively protect their data. When opt-out consent is coupled
 36 with deceptive wording, it may lead patients to agree to something without meaningful consent.
 37 Meaningful consent requires a patient to be given sufficient and understandable knowledge to make
 38 a valid decision. Requiring retail health care companies to use a default opt-in consent plus plain
 39 language is essential toward protecting patients’ privacy and fostering health literacy. Once consent
 40 is given, it then becomes important to provide clear direction on how patients can withdraw
 41 consent. [Section 1798.105\(a\) of the California Consumer Privacy Act](#) grants consumers the right to
 42 request that a business delete any personal information about the consumer which the business has
 43 collected from the consumer. While the CCPA “right to be forgotten” has many exceptions that
 44 allow businesses to keep personal information, it could serve as a prototype for regulations in the
 45 retail health care arena.

46
 47 **RELEVANT AMA POLICY, ADVOCACY, & RESOURCES**

48
 49 The [AMA Privacy Principles](#), derived primarily from AMA House of Delegates policy, serve as
 50 the foundation for AMA advocacy on privacy extrinsic to HIPAA covered entities. In addition to
 51 shifting the responsibility for privacy from individuals to data holders, the principles implore that

1 individuals have the right to know whether their data will be used to develop and/or train AI
 2 algorithms and hold entities accountable toward making their de-identification processes and
 3 techniques publicly available. These Principles were developed based on an identified need to
 4 extend AMA advocacy efforts beyond protections for HIPAA covered entities to (1) provide
 5 individuals with rights and protections from discrimination; (2) shift the responsibility for privacy
 6 from individuals to data holders other than HIPAA covered entities; and (3) create principles for
 7 robust enforcement, individual rights, equity, applicability, and entity responsibility. The AMA
 8 Privacy Principles advocate for the expansion of FTC oversight to consumer data that is accessed,
 9 used, or exchanged by technology companies and vendors not classified as covered entities under
 10 HIPAA. The Principles contend that “health care data” is a subjective term and one that should be
 11 evaluated by a federal agency with broad expertise in data privacy. Accordingly, the AMA Privacy
 12 Principles’ use of the term “data” includes information that can be used to identify an individual,
 13 even if it is not descriptive on its face, such as IP addresses and advertising identifiers from mobile
 14 phones.

15
 16 While the AMA Privacy Principles recognize a role for the FTC, it is important to note why the
 17 OCR is absent from the discussion. The OCR administers and enforces HIPAA regulations with a
 18 focus on PHI, and, therefore, expanding OCR’s HIPAA legislative umbrella to include technology
 19 companies and vendors not classified as covered entities was a consideration. However, it was
 20 recognized that (1) OCR lacks the structure, resources, and expertise to regulate technology
 21 companies and vendors, who are themselves new entrants into the health care arena, and (2) an
 22 existing federal agency is better equipped to regulate health data that flows outside the traditional
 23 HIPAA covered entity arena. Furthermore, extending HIPAA protections for PHI to non-HIPAA
 24 covered technology companies and vendors could create a gap in needed privacy policies.

25
 26 Although the Office of the National Coordinator for Health Information Technology (ONC) is not
 27 mentioned in the AMA Privacy Principles, it has a role in ensuring that sensitive medical
 28 information regarding reproductive health, sexual orientation, gender identity, and substance use
 29 disorder is placed behind a firewall in the electronic health record as well as when it is requested
 30 and shared with others using national health information exchanges, such as under ONC’s Trusted
 31 Exchange Framework and Common Agreement. The [21st Century Cures Act](#) lifted limitations on
 32 the scope of ePHI, allowing information blocking regulations to go into full effect. Physicians who
 33 interfere with the access, exchange, or use of ePHI could be considered “information blockers” and
 34 subject to financial penalties, making it difficult for them to protect sensitive information.

35
 36 The AMA’s longstanding goal to support strong protections for patient privacy is reinforced by
 37 several policies, including those that:

- 38
 39 • Advocate for legislation that aligns mobile health apps and other digital health tools with the
 40 AMA Privacy Principles (Policy D-315.968);
 41 • Oppose the sale or transfer of medical history data and contact information for use in
 42 marketing or advertising (Policy D-315.973);
 43 • Engage with stakeholders to identify relevant guiding principles to promote a vibrant, useful,
 44 and trustworthy mHealth market (Policy D-480.972);
 45 • Advocate for narrowing the definition of “health care operations” to include only those
 46 activities that are routine and critical for general business operations and that cannot be
 47 reasonably undertaken with de-identified health information (Policy H-315.975);
 48 • Support strong protections for patient privacy and, in general, require that patient medical
 49 records be kept strictly confidential unless waived by the patient in a meaningful way, de-

1 identified, or in rare instances when strong countervailing interests in public health or safety
2 justify invasions of patient privacy or breaches of confidentiality (Policy H-315.983);

- 3 • Work to ensure that computer-based patient record systems and networks, and the legislation
4 and regulations governing their use, include adequate technical and legal safeguards for
5 protecting the confidentiality, integrity, and security of patient data (Policy H-315.989); and
- 6 • Support that mHealth apps and associated devices, trackers and sensors must abide by
7 applicable laws addressing the privacy and security of patients' medical information (Policy
8 • H-480.943).

9
10 AMA policy has been developed related to the potential complications introduced by the
11 intersection of AI and patient privacy, including those that:

- 12
13 • Re-examine existing guidance relevant to the confidentiality of patient information, striving to
14 preserve the benefits of widespread use of de-identified patient data for purposes of promoting
15 quality improvement, research, and public health while mitigating the risks of re-identification
16 of such data (Policy D-315.969);
- 17 • Support efforts to promote transparency in the use of de-identified patient data and to protect
18 patient privacy by developing methods of, and technologies for, de-identification of patient
19 information that reduce the risk of re-identification of such data (Policy H-315.962); and
- 20 • Promote development of thoughtfully designed, high-quality, clinically validated health care
21 AI that safeguards patients' privacy interests and preserves the security and integrity of
22 personal information (Policy H-480.940).

23
24 The AMA has written several comment letters addressing the issue of patient privacy, including a
25 [December 2018 letter to NIST](#) which references the tenets of Policy H-315.983, noting that when
26 breaches of confidentiality are compelled by concerns for public health and safety, those breaches
27 must be as narrow in scope and content as possible, must contain the least identifiable and sensitive
28 information possible, and must be disclosed to the fewest possible to achieve the necessary end. In
29 a [February 2019 letter to the Office for Civil Rights](#), the AMA offers suggestions on a Request for
30 Information about modifying HIPAA Rules to improve coordinated care, including how the
31 regulations can be revised to promote the goals of value-based care and care coordination while
32 preserving and protecting the privacy and security of a patient's health information. In May 2019,
33 the AMA submitted patient privacy comments to several recipients, including the [Office of the](#)
34 [National Coordinator for Health Information Technology](#) and the [Centers for Medicare & Medicaid](#)
35 [Services](#), and the [FTC](#). While slightly different audiences, the message for each was similar, with a
36 focus on the AMA approach to privacy. The AMA outlined how data segmentation is critical for
37 health information exchange, regardless of where the data resides, how it is used, or with whom it
38 is exchanged. Consistent with that approach, patient consent and privacy, data provenance,
39 governance, and state and federal law compliance must be inherent in the development of
40 technology. A June 2023 letter to the [National Governors Association](#) urged that comprehensive
41 state legislative privacy proposals provide adequate protections for consumer health data,
42 especially health data obtained by apps and other devices or organizations that do not fall within
43 HIPAA or state privacy laws. In August 2023, the AMA submitted [written comments to the FTC](#)
44 regarding the Health Breach Notification Rule, noting the deficiencies in regulation of health apps.
45 A September 2023 AMA letter to [Senator Bill Cassidy](#) in response to his request for information
46 outlines the distinction between PHI and health information outside of HIPAA, and the potential
47 for harm to individuals caused by confusion between the two.

48
49 In addition to advocacy, the AMA provides members with robust resources on the issue of patient
50 privacy. The [AMA health data privacy framework](#) surveyed patient perspectives to shed light on

1 fundamental data privacy issues that can impact individuals nationwide, while the [AMA patient](#)
2 [privacy webpage](#) provides resources to ensure that patients have meaningful controls over their
3 PHI. As part of the [AMA Patient Access Playbook](#), the AMA has developed a [case for privacy by](#)
4 [design in app development](#). The 2023 [AMA Principles for Augmented Intelligence Development,](#)
5 [Deployment, and Use](#) address privacy and cybersecurity as well as establish guardrails around
6 payer use of AI in automated denials.

7
8 DISCUSSION

9
10 While HIPAA was enacted in 1996, misconceptions have muddied the waters around what is and is
11 not a covered entity or business associate, and what is or is not PHI. Given that HIPAA only
12 governs covered entities and business associates, concerns arise in the regulation of entities
13 currently beyond the scope of HIPAA, such as digital health platforms, apps, and other similar
14 software programs that collect, use, store, and share personal health data. Under federal law there is
15 no floor – no minimum threshold – for an organization’s privacy policy other than it cannot be
16 unfair or deceptive. Thus, any health app or digital health platform can word their stated privacy
17 policy in a weak, evasive, easy-to-comply-with manner that will sound reassuring to the consumers
18 who choose to read it. Furthermore, there is confusion surrounding retail health care companies’
19 HIPAA status, as they require patients to read and comprehend several documents together in order
20 to understand their rights. Determining which organizations HIPAA applies to can be difficult for
21 the layperson.

22
23 The Council therefore recommends a series of principles to address retail health care companies’
24 handling of PHI. Any health care providing entity, or one that is facilitating the referral of patients
25 for care, regardless of whether it provides the care directly, must be held to the standard of a
26 HIPAA covered entity, complete with a privacy wall between the health and non-health lines of
27 business to eliminate sharing of PHI for uses not directly related to patients’ medical care. Retail
28 health care companies should be prohibited from utilizing “clickwrap” agreements, which permit
29 patients to use a service without affirmatively consenting to the data sharing. It is also important
30 that retail health care companies’ Terms of Use do not require data sharing for uses not directly
31 related to patients’ medical care in order to receive care unless required by law. Operationally, this
32 means that the Terms of Use should be distinct from the Notice of Privacy Practices, with clear
33 indication that patients are not required to sign the latter in order to receive care. Requiring retail
34 health care companies to use a default opt-in consent plus plain language is essential toward
35 protecting patients’ privacy and fostering health literacy. Opt-in user consent requires patients to
36 acknowledge the proposed data activity, understand the purposes for collection, and agree to have
37 their data collected, processed, and stored. Once consent is given, it then becomes important to
38 provide clear direction on how patients can withdraw consent.

39
40 The Council also recommends reaffirmation of policies that advocate for legislation that aligns
41 mobile health apps and other digital health tools with the AMA Privacy Principles, supports efforts
42 to promote transparency in the use of de-identified patient data, and promotes development of
43 thoughtfully designed, high-quality, clinically validated health care AI that safeguards patients’
44 privacy interests and preserves the security and integrity of personal information.

1 RECOMMENDATIONS

2
3 The Council on Medical Service recommends that the following be adopted, and the remainder of
4 the report be filed:

- 5
6 1. That our American Medical Association (AMA) will:
- 7 (a) support regulatory guidance to establish a privacy wall between the health business and
 - 8 non-health business of retail health care companies to eliminate sharing of protected health
 - 9 information, re-identifiable patient data, or data that could be reasonably be used to re-
 - 10 identify a patient when combined with other data for uses not directly related to patients’
 - 11 medical care;
 - 12 (b) support the prohibition of Terms of Use that require data sharing for uses not directly
 - 13 related to patients’ medical care in order to receive care, while still allowing data sharing
 - 14 where required by law (e.g., infectious disease reporting);
 - 15 (c) support the separation of consents required to receive care from any consents to share
 - 16 data for non-medical care reasons, with clear indication that patients do not need to sign the
 - 17 data-sharing agreements in order to receive care;
 - 18 (d) support the prohibition of “clickwrap” contracts for use of a health care service without
 - 19 affirmative patient consent to data sharing;
 - 20 (e) support the requirement that retail health care companies must use an active opt-in
 - 21 selection for obtaining meaningful consent for data use and disclosure, otherwise the
 - 22 default should be that the patient does not consent to disclosure;
 - 23 (f) support the requirement that retail health care companies clearly indicate how patients
 - 24 can withdraw consent and request deletion of data retained by the non-health care
 - 25 providing units, which should be by a means no more onerous than providing the initial
 - 26 consent. (New HOD Policy)
- 27
- 28 2. That our AMA reaffirm Policy D-315.968, which advocates for legislation that aligns
- 29 mobile health apps and other digital health tools with the AMA Privacy Principles.
- 30 (Reaffirm HOD Policy)
- 31
- 32 3. That our AMA reaffirm Policy H-315.962, which supports efforts to promote transparency
- 33 in the use of de-identified patient data and to protect patient privacy by developing
- 34 methods of, and technologies for, de-identification of patient information that reduce the
- 35 risk of re-identification of such data. (Reaffirm HOD Policy)
- 36
- 37 4. That our AMA reaffirm Policy H-480.940, which promotes development of thoughtfully
- 38 designed, high-quality, clinically validated health care AI that safeguards patients’ privacy
- 39 interests and preserves the security and integrity of personal information. (Reaffirm HOD
- 40 Policy)
- 41
- 42 5. Rescind Policy H-315.960, as having been completed with this report. (Rescind HOD
- 43 Policy)

Fiscal Note: Less than \$500.

**Council on Medical Service Report 7-A-24
Ensuring Privacy in Retail Health Care Settings
Policy Appendix**

Supporting Improvements to Patient Data Privacy D-315.968

Our AMA will (1) strengthen patient and physician data privacy protections by advocating for legislation that reflects the AMA's Privacy Principles with particular focus on mobile health apps and other digital health tools, in addition to non-health apps and software capable of generating patient data and (2) will work with appropriate stakeholders to oppose using any personally identifiable data to identify patients, potential patients who have yet to seek care, physicians, and any other health care providers who are providing or receiving health care that may be criminalized in a given jurisdiction.

Res. 227, A-22 Modified: Res. 230, I-22 Reaffirmation: A-23

Research Handling of De-Identified Patient Information D-315.969

The Council on Ethical and Judicial Affairs will consider re-examining existing guidance relevant to the confidentiality of patient information, striving to preserve the benefits of widespread use of de-identified patient data for purposes of promoting quality improvement, research, and public health while mitigating the risks of re-identification of such data.

BOT Rep. 16, I-21

Preventing Inappropriate Use of Patient Protected Medical Information in the Vaccination Process D-315.973

Our AMA will: (1) advocate to prohibit the use of patient/customer information collected by retail pharmacies for COVID-19 vaccination scheduling and/or the vaccine administration process for commercial marketing or future patient recruiting purposes, especially any targeting based on medical history or conditions; and (2) oppose the sale or transfer of medical history data and contact information accumulated through the scheduling or provision of government-funded vaccinations to third parties for use in marketing or advertising.

Res. 232, A-21

Guidelines for Mobile Medical Applications and Devices D-480.972

1. Our AMA will monitor market developments in mobile health (mHealth), including the development and uptake of mHealth apps, in order to identify developing consensus that provides opportunities for AMA involvement.
2. Our AMA will continue to engage with stakeholders to identify relevant guiding principles to promote a vibrant, useful and trustworthy mHealth market.
3. Our AMA will make an effort to educate physicians on mHealth apps that can be used to facilitate patient communication, advice, and clinical decision support, as well as resources that can assist physicians in becoming familiar with mHealth apps that are clinically useful and evidence based.
4. Our AMA will develop and publicly disseminate a list of best practices guiding the development and use of mobile medical applications.
5. Our AMA encourages further research integrating mobile devices into clinical care, particularly to address challenges of reducing work burden while maintaining clinical autonomy for residents and fellows.
6. Our AMA will collaborate with the Liaison Committee on Medical Education and Accreditation Council for Graduate Medical Education to develop germane policies, especially with

consideration of potential financial burden and personal privacy of trainees, to ensure more uniform regulation for use of mobile devices in medical education and clinical training.

7. Our AMA encourages medical schools and residency programs to educate all trainees on proper hygiene and professional guidelines for using personal mobile devices in clinical environments.

8. Our AMA encourages the development of mobile health applications that employ linguistically appropriate and culturally informed health content tailored to linguistically and/or culturally diverse backgrounds, with emphasis on underserved and low-income populations.

[CSAPH Rep. 5, A-14](#) Appended: Res. 201, A-15 Appended: Res. 305, I-16 Modified: Res. 903, I-19

Research Handling of De-Identified Patient Information H-315.962

Our AMA supports efforts to promote transparency in the use of de-identified patient data and to protect patient privacy by developing methods of, and technologies for, de-identification of patient information that reduce the risk of re-identification of such information.

BOT Rep. 16, I-21 Reaffirmation: A-22

Police, Payer, and Government Access to Patient Health Information H-315.975

(1) Our AMA advocates vigorously, with respect to the final privacy rule or other privacy legislation, to define “health care operations” narrowly to include only those activities and functions that are routine and critical for general business operations and that cannot reasonably be undertaken with de-identified information.

(2) Our AMA advocates vigorously, with respect to the final privacy rule or other privacy legislation, that the Centers for Medicare & Medicaid Services (CMS) and other payers shall have access to medical records and individually identifiable health information solely for billing and payment purposes, and routine and critical health care operations that cannot reasonably be undertaken with de-identified health information.

(3) Our AMA advocates vigorously, with respect to the final privacy rule or other privacy legislation, that CMS and other payers may access and use medical records and individually identifiable health information for non-billing, non-payment purposes and non-routine, non-critical health care operations that cannot reasonably be undertaken with de-identified health information, only with the express written consent of the patient or the patient's authorized representative, each and every time, separate and apart from blanket consent at time of enrollment.

(4) Our AMA advocates vigorously, with respect to the final privacy rule or other privacy legislation that no government agency, including law enforcement agencies, be permitted access to medical records or individually identifiable health information (except for any discretionary or mandatory disclosures made by physicians and other health care providers pursuant to ethical guidelines or to comply with applicable state or federal reporting laws) without the express written consent of the patient, or a court order or warrant permitting such access.

(5) Our AMA continues to strongly support and advocate a minimum necessary standard of disclosure of individually identifiable health information requested by payers, so that the information necessary to accomplish the intended purpose of the request be determined by physicians and other health care providers, as permitted under the final privacy rule.

Res. 246, A-01 Reaffirmation I-01 Reaffirmation A-02 Reaffirmed: BOT Rep. 19, I-06

Reaffirmation A-07 Reaffirmed: BOT Rep. 19, A-07 Reaffirmed: BOT Rep. 22, A-17 Reaffirmed: BOT Rep. 16, I-21

Patient Privacy and Confidentiality H-315.983

1. Our AMA affirms the following key principles that should be consistently implemented to evaluate any proposal regarding patient privacy and the confidentiality of medical information: (a)

That there exists a basic right of patients to privacy of their medical information and records, and that this right should be explicitly acknowledged; (b) That patients' privacy should be honored unless waived by the patient in a meaningful way or in rare instances when strong countervailing interests in public health or safety justify invasions of patient privacy or breaches of confidentiality, and then only when such invasions or breaches are subject to stringent safeguards enforced by appropriate standards of accountability; (c) That patients' privacy should be honored in the context of gathering and disclosing information for clinical research and quality improvement activities, and that any necessary departures from the preferred practices of obtaining patients' informed consent and of de-identifying all data be strictly controlled; (d) That any information disclosed should be limited to that information, portion of the medical record, or abstract necessary to fulfill the immediate and specific purpose of disclosure; and (e) That the Health Insurance Portability and Accountability Act of 1996 (HIPAA) be the minimal standard for protecting clinician-patient privilege, regardless of where care is received.

2. Our AMA affirms: (a) that physicians and medical students who are patients are entitled to the same right to privacy and confidentiality of personal medical information and medical records as other patients, (b) that when patients exercise their right to keep their personal medical histories confidential, such action should not be regarded as fraudulent or inappropriate concealment, and (c) that physicians and medical students should not be required to report any aspects of their patients' medical history to governmental agencies or other entities, beyond that which would be required by law.

3. Employers and insurers should be barred from unconsented access to identifiable medical information lest knowledge of sensitive facts form the basis of adverse decisions against individuals. (a) Release forms that authorize access should be explicit about to whom access is being granted and for what purpose and should be as narrowly tailored as possible. (b) Patients, physicians, and medical students should be educated about the consequences of signing overly-broad consent forms. (c) Employers and insurers should adopt explicit and public policies to assure the security and confidentiality of patients' medical information. (d) A patient's ability to join or a physician's participation in an insurance plan should not be contingent on signing a broad and indefinite consent for release and disclosure.

4. Whenever possible, medical records should be de-identified for purposes of use in connection with utilization review, panel credentialing, quality assurance, and peer review.

5. The fundamental values and duties that guide the safekeeping of medical information should remain constant in this era of computerization. Whether they are in computerized or paper form, it is critical that medical information be accurate, secure, and free from unauthorized access and improper use.

6. Our AMA recommends that the confidentiality of data collected by race and ethnicity as part of the medical record, be maintained.

7. Genetic information should be kept confidential and should not be disclosed to third parties without the explicit informed consent of the tested individual.

8. When breaches of confidentiality are compelled by concerns for public health and safety, those breaches must be as narrow in scope and content as possible, must contain the least identifiable and sensitive information possible, and must be disclosed to the fewest possible to achieve the necessary end.

9. Law enforcement agencies requesting private medical information should be given access to such information only through a court order. This court order for disclosure should be granted only if the law enforcement entity has shown, by clear and convincing evidence, that the information sought is necessary to a legitimate law enforcement inquiry; that the needs of the law enforcement authority cannot be satisfied by non-identifiable health information or by any other information; and that the law enforcement need for the information outweighs the privacy interest of the

individual to whom the information pertains. These records should be subject to stringent security measures.

10. Our AMA must guard against the imposition of unduly restrictive barriers to patient records that would impede or prevent access to data needed for medical or public health research or quality improvement and accreditation activities. Whenever possible, de-identified data should be used for these purposes. In those contexts where personal identification is essential for the collation of data, review of identifiable data should not take place without an institutional review board (IRB) approved justification for the retention of identifiers and the consent of the patient. In those cases where obtaining patient consent for disclosure is impracticable, our AMA endorses the oversight and accountability provided by an IRB.

11. Marketing and commercial uses of identifiable patients' medical information may violate principles of informed consent and patient confidentiality. Patients divulge information to their physicians only for purposes of diagnosis and treatment. If other uses are to be made of the information, patients must first give their uncoerced permission after being fully informed about the purpose of such disclosures

12. Our AMA, in collaboration with other professional organizations, patient advocacy groups and the public health community, should continue its advocacy for privacy and confidentiality regulations, including: (a) The establishment of rules allocating liability for disclosure of identifiable patient medical information between physicians and the health plans of which they are a part, and securing appropriate physicians' control over the disposition of information from their patients' medical records. (b) The establishment of rules to prevent disclosure of identifiable patient medical information for commercial and marketing purposes; and (c) The establishment of penalties for negligent or deliberate breach of confidentiality or violation of patient privacy rights.

13. Our AMA will pursue an aggressive agenda to educate patients, the public, physicians and policymakers at all levels of government about concerns and complexities of patient privacy and confidentiality in the variety of contexts mentioned.

14. Disclosure of personally identifiable patient information to public health physicians and departments is appropriate for the purpose of addressing public health emergencies or to comply with laws regarding public health reporting for the purpose of disease surveillance.

15. In the event of the sale or discontinuation of a medical practice, patients should be notified whenever possible and asked for authorization to transfer the medical record to a new physician or care provider. Only de-identified and/or aggregate data should be used for "business decisions," including sales, mergers, and similar business transactions when ownership or control of medical records changes hands.

16. The most appropriate jurisdiction for considering physician breaches of patient confidentiality is the relevant state medical practice act. Knowing and intentional breaches of patient confidentiality, particularly under false pretenses, for malicious harm, or for monetary gain, represents a violation of the professional practice of medicine.

17. Our AMA Board of Trustees will actively monitor and support legislation at the federal level that will afford patients protection against discrimination on the basis of genetic testing.

18. Our AMA supports privacy standards that would require pharmacies to obtain a prior written and signed consent from patients to use their personal data for marketing purposes.

19. Our AMA supports privacy standards that require pharmacies and drug store chains to disclose the source of financial support for drug mailings or phone calls.

20. Our AMA supports privacy standards that would prohibit pharmacies from using prescription refill reminders or disease management programs as an opportunity for marketing purposes.

21. Our AMA will draft model state legislation requiring consent of all parties to the recording of a physician-patient conversation.

Confidentiality of Computerized Patient Records H-315.989

The AMA will continue its leadership in protecting the confidentiality, integrity, and security of patient-specific data; and will continue working to ensure that computer-based patient record systems and networks, and the legislation and regulations governing their use, include adequate technical and legal safeguards for protecting the confidentiality, integrity, and security of patient data.

BOT Rep. F, A-93 Reaffirmation I-99 Reaffirmed: BOT Rep. 19, I-06 Reaffirmed: BOT Rep. 19, A-07 Reaffirmed in lieu of Res. 818, I-07 Reaffirmation I-08 Reaffirmation A-10 Reaffirmed: BOT Rep. 17, A-13

Augmented Intelligence in Health Care H-480.940

As a leader in American medicine, our AMA has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.

To that end our AMA will seek to:

1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians' professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
 - a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
 - b. is transparent;
 - c. conforms to leading standards for reproducibility;
 - d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
 - e. safeguards patients and other individuals privacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.

BOT Rep. 41, A-18

Integration of Mobile Health Applications and Devices into Practice H-480.943

1. Our AMA supports the establishment of coverage, payment and financial incentive mechanisms to support the use of mobile health applications (mHealth apps) and associated devices, trackers and sensors by patients, physicians and other providers that: (a) support the establishment or continuation of a valid patient-physician relationship; (b) have a high-quality clinical evidence base to support their use in order to ensure mHealth app safety and effectiveness; (c) follow evidence-based practice guidelines, especially those developed and produced by national medical specialty societies and based on systematic reviews, to ensure patient safety, quality of care and positive health outcomes; (d) support care delivery that is patient-centered, promotes care coordination and facilitates team-based communication; (e) support data portability and interoperability in order to promote care coordination through medical home and accountable care models; (f) abide by state licensure laws and state medical practice laws and requirements in the state in which the patient receives services facilitated by the app; (g) require that physicians and other health practitioners delivering services through the app be licensed in the state where the patient receives services, or be providing these services as otherwise authorized by that state's medical board; and (h) ensure that the delivery of any services via the app be consistent with state scope of practice laws.
2. Our AMA supports that mHealth apps and associated devices, trackers and sensors must abide by applicable laws addressing the privacy and security of patients' medical information.
3. Our AMA encourages the mobile app industry and other relevant stakeholders to conduct industry-wide outreach and provide necessary educational materials to patients to promote increased awareness of the varying levels of privacy and security of their information and data afforded by mHealth apps, and how their information and data can potentially be collected and used.
4. Our AMA encourages the mHealth app community to work with the AMA, national medical specialty societies, and other interested physician groups to develop app transparency principles, including the provision of a standard privacy notice to patients if apps collect, store and/or transmit protected health information.
5. Our AMA encourages physicians to consult with qualified legal counsel if unsure of whether an mHealth app meets Health Insurance Portability and Accountability Act standards and also inquire about any applicable state privacy and security laws.
6. Our AMA encourages physicians to alert patients to the potential privacy and security risks of any mHealth apps that he or she prescribes or recommends, and document the patient's understanding of such risks
7. Our AMA supports further development of research and evidence regarding the impact that mHealth apps have on quality, costs, patient safety and patient privacy.
8. Our AMA encourages national medical specialty societies to develop guidelines for the integration of mHealth apps and associated devices into care delivery.

[CMS Rep. 06, I-16](#) Reaffirmation: A-17 Reaffirmation: A-23

REPORT 8 OF THE COUNCIL ON MEDICAL SERVICE (A-24)
Sustainable Payment for Community Practices
(Resolution 108-A-23)
(Reference Committee A)

EXECUTIVE SUMMARY

At the 2023 Annual Meeting, the House of Delegates referred Resolution 108-A-23, which asked the American Medical Association (AMA) to assess the prevalence of insurance payments to small medical practices that are below Medicare rates and the impact of these payment levels on the ability of practices to provide care. The resolution also asked the AMA to consider the impact on small and medium-sized practices of being excluded from population health management, outcome evidence-based care, and value-based purchasing arrangements, as well as to consider model legislation to address payment rates below the cost of practicing. Council on Medical Service Report 7-I-23 was referred back to the Council to allow reconsideration of a) non-Medicare benchmarks for private payers; b) a minimum government rate, including Medicaid; and c) the impact that rates below these benchmarks have on small community practices.

Despite the current trend toward larger practices, more than half of physicians still work in small practices of 10 or fewer physicians, a percentage that has fallen continuously since 2012. While small practices have some advantages that cannot be matched by larger practices, they are not necessarily well equipped to succeed in value-based purchasing arrangements, which require financial investment and regulatory, technological, and analytic expertise. Given that the single most important factor in ensuring a sustainable level of payment for small practices is leverage, collaboration to form alliances may provide the scale needed to negotiate value-based contracts and to spread the risk across multiple practices. Strong network adequacy requirements and fair out-of-network rules are also essential for the sustainability of small practices.

While research shows that private insurance payment rates are, on average, higher than Medicare payment rates for the same medical services, it also indicates that Medicaid payment rates are substantially below Medicare payment rates. Small practices have a higher percentage of private health insurance patients than larger practices, which should benefit them. However, not all private insurance payments are reflective of the full cost of practice, the value of the care provided, or include inflation-based updates. These inadequate payment levels are exacerbated by the fact that in 2019, Medicaid fee-for-service payments for physician services were nearly 30 percent below Medicare payment levels, with an even larger differential for primary care physician services.

While AMA policy does not endorse a specific payment mechanism such as the Medicare Resource-Based Relative Value Scale (RBRVS), it does support payment at no less than 100 percent of RBRVS Medicare allowable as one option that could provide the basis for both public and private physician payment systems.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 8-A-24

Subject: Sustainable Payment for Community Practices
(Resolution 108-A-23)

Presented by: Sheila Rege, MD, Chair

Referred to: Reference Committee A

1 At the 2023 Annual Meeting, the House of Delegates (HOD) referred Resolution 108, which was
2 sponsored by the District of Columbia Delegation. Resolution 108-A-23 asked for the American
3 Medical Association (AMA) to:

4
5 “(1) study small medical practices to assess the prevalence of insurance payments to these
6 practices that are below Medicare rates and to assess the effects of these payment levels on
7 practices’ ability to provide care, and report back by the 2024 Annual Meeting; (2) study and
8 report back on remedies for such reimbursement rates for physician practices; (3) study the
9 impact on small and medium-sized physician practices of being excluded from population
10 health management, outcome evidence-based care, and value-based purchasing arrangements;
11 and study and report back to the House of Delegates options for model legislation for states and
12 municipalities seeking to correct reimbursement rates for medical practices that are below
13 those required to meet fixed costs.”
14

15 The Council on Medical Service developed Report 7-I-23, Sustainable Payment for Community
16 Practices, which was referred to allow reconsideration of a) non-Medicare benchmarks for private
17 payers; b) a minimum government rate, including Medicaid; and c) the impact that rates below
18 these benchmarks have on small community practices.
19

20 In this report, the Council expands on the discussion included in Council Report 7-I-23 to include
21 Medicaid payment schedules and how they compare to Medicare and private insurance payment
22 rates, while acknowledging the costs of providing care to the Medicaid population as well as the
23 challenges of tying payment schedules to a Medicare benchmark. Our focus is on non-hospital
24 owned small practices, which are typically not eligible for facility fees nor possess the market
25 power inherent in larger, hospital-owned practices. We compare Medicare, Medicaid, and private
26 insurance payment rates, outline collaborative and negotiating resources available to small
27 practices, highlight essential AMA policy and resources, and present new policy recommendations.
28

29 BACKGROUND

30
31 Despite the current trend toward larger practices, more than half of physicians (51.8 percent) still
32 work in small practices of 10 or fewer physicians, a percentage that has fallen continuously from
33 61.4 percent in 2012.¹ Contributing factors to the shift include mergers and acquisitions, practice
34 closures, physician job changes, and the different practice settings chosen by younger physicians
35 compared to those of retiring physicians. The “cohort effect”² demonstrates that younger

1 physicians appear to prefer larger practices for the more predictable income and work-life balance
2 they can offer.³ They also may be hesitant to assume the business and entrepreneurial
3 responsibilities demanded by smaller practices.⁴

4
5 However, small practices have some advantages that cannot be matched by larger practices, most
6 notably patients of small practices have lower rates of preventable readmissions than those in larger
7 practices.⁵ The autonomy of small practices and preservation of the traditional patient-physician
8 relationship provide reassurance to patients that the physician is acting in their best interests. It is
9 thought that the patient-physician bond generates trust, which leads to better adherence to a
10 treatment plan.⁶ As small practices become patient-centered medical homes, their decisions can
11 control downstream costs, highlighting the importance of trusted, engaged, and financially aligned
12 physicians in value-based payment systems. Although the medical home model suggests that
13 physicians in small practices are uniquely positioned to succeed in value-based purchasing
14 arrangements, they are not necessarily well equipped to do so given the financial investment and
15 regulatory, technological, and analytic expertise necessary to enter these arrangements. In addition
16 to these inherent limitations of small practices, extrinsic factors can play a role in creating an
17 uneven playing field, including the fact that independent primary care physicians more often fill
18 gaps in care in low-income, rural, and other underserved communities.⁷

19
20 Assessing the current level of sustainability for small community practices requires appreciating
21 the current limitations of governmental authority, understanding the impact of Medicare, Medicaid,
22 and private insurance payment rates, acknowledging relevant AMA policy and advocacy, and
23 exploring the resources available for small practices that want to engage more fully in an evolving
24 value-based health care system.

25 26 FAIR LABOR STANDARDS ACT OF 1938

27
28 The Fair Labor Standards Act of 1938 (FLSA) protects workers against unfair employment
29 practices. FLSA rules specify when workers are considered “on the clock” and when they should
30 be paid overtime, along with a minimum wage. Employees are deemed either exempt or
31 nonexempt under the FLSA.

32
33 Resolution 108-A-23 postulates that the FLSA confers governmental authority to establish
34 minimum levels of payment for medical practices. However, Section 13(a)(1) of the FLSA
35 provides an exemption from both minimum wage and overtime pay for employees employed as
36 “bona fide executive, administrative, professional, and outside sales employees.” Physicians are
37 exempted from FLSA protection since they are considered “Learned Professionals,” as their
38 primary duty requires advanced knowledge, defined as work that is predominantly intellectual in
39 character and that includes work requiring the consistent exercise of discretion and judgment, in a
40 field of science or learning; and customarily acquired by a prolonged course of specialized
41 intellectual instruction.⁸ As such, the FLSA cannot provide protection for small medical practices
42 regarding minimum levels of payment.

43 44 MEDICARE PHYSICIAN PAYMENT SCHEDULE

45
46 Medicare is a federal insurance program where coverage is generally offered to individuals who are
47 65 years or older, have certain disabilities, or suffer from end-stage renal disease or amyotrophic
48 lateral sclerosis. In 1992, the federal government established a standardized Medicare Physician
49 Payment Schedule (MPPS) based on a resource-based relative value scale (RBRVS). Prior to that,
50 the federal government paid physicians using a system of “customary, prevailing, and reasonable”
51 (CPR) charges, which was based on the “usual, customary, and reasonable” system used by many

1 private insurers. The Medicare CPR system allowed for wide variation in the amount paid for the
2 same service, resulting in unfounded discrepancies in Medicare payment levels among geographic
3 service areas and physician specialties.

4
5 In an RBRVS system, payments for services are determined by the standardized resource costs
6 needed to provide them, which are then adjusted to account for differences in work, practice
7 expense, and professional liability insurance costs across national geographic service areas. The
8 RBRVS publishes relative value units (RVUs) for each service, which are then converted to a
9 payment amount using geographical practice cost indices and an annually updated Medicare
10 Conversion Factor to establish the MPPS. The AMA/Specialty Society Relative Value Scale
11 Update Committee (RUC) identifies the resources required to provide physician services, which the
12 Centers for Medicare & Medicaid Services (CMS) then considers in developing RBRVS RVUs.
13 While, historically, 90 percent or more of RUC recommendations have been accepted,⁹ CMS
14 makes all final Medicare payment decisions.

15 16 MEDICAID PAYMENT SCHEDULES

17
18 The Department of Health and Human Services describes Medicare as an insurance program,
19 whereas Medicaid is an assistance program. Medicaid is a federal and state-sponsored program that
20 assists low-income individuals with paying for their health care costs. Each state defines who is
21 eligible for Medicaid coverage, but the program generally covers individuals who have limited
22 income, including:

- 23
- 24 • Individuals 65 years or older
- 25 • Children under 19 years old
- 26 • Pregnant women
- 27 • Individuals living with a disability
- 28 • Parents or adults caring for a child
- 29 • Adults without dependent children
- 30 • Eligible immigrants
- 31

32 States have the option to charge premiums and determine cost sharing requirements for Medicaid
33 beneficiaries. While maximum out-of-pocket costs are limited, states can impose higher charges for
34 targeted groups of somewhat higher income individuals. Certain vulnerable groups, such as
35 children and pregnant women, are exempt from most out-of-pocket costs and copayments and
36 coinsurance cannot be charged for some services. The federal government funds a percentage of
37 the operating costs for each state through the federal medical assistance percentage (FMAP). The
38 FMAP varies from state to state and is inversely related to state per capita income. The matching
39 rate for a state can range from 50 percent to 83 percent. On average, the federal government
40 nominally pays 57 percent of the cost of the program.¹⁰ Medicaid payment rates are determined by
41 the state for each service in accordance with its approved Medicaid state plan.

42 43 PRIVATE INSURANCE PAYMENT SCHEDULES

44
45 For small community practices, payment schedules are typically negotiated between the payer and
46 the practice as part of a network of preferred physicians. Practices agree to these payment
47 schedules to permit inclusion in the network, since being in-network is generally more appealing to
48 patients, allows access to in-network referrals, and reduces the chance of unexpectedly low
49 payment to the practice.

1 When negotiating payment schedules, it is important that the practice is aware of its fixed and
 2 variable costs for a given service so that the long-term break-even point can be determined. The
 3 smaller the practice, the more important it is to negotiate with as much data and defined value
 4 proposition as possible, because a smaller practice has less leverage. Given that private insurance
 5 payment schedules are negotiated between two parties, they can vary by state, region, payer,
 6 specialty, and/or practice. Thus, it is likely that most small practices accept multiple different
 7 payment schedules from different payers.

8
 9 Private insurance payments are variable across physician specialties. The Urban Institute conducted
 10 an analysis of [FAIR Health professional claims](#) from March 2019 to February 2020, comparing
 11 them to the MPPS for the same time period. The analysis included 17 physician specialties and
 12 approximately 20 services per specialty, which represented about 40 percent of total professional
 13 spending. The Urban Institute found significant variation in relative prices across specialties, with
 14 commercial-to-Medicare payment ratio across all selected services for the 17 specialties averaging
 15 1.6 using an expenditure-weighted approach.¹¹

16
 17 Areas where there is greater market concentration among physicians tend to have higher payment
 18 amounts from private insurance.¹² The Health Care Cost Institute's [Health Care Cost and](#)
 19 [Utilization Report](#) found that there was substantial variation in private insurance payments across
 20 states, with average commercial prices ranging from 98 percent to 188 percent of Medicare rates.
 21 Seven states had payments that were, on average, higher than 150 percent of Medicare rates while
 22 11 states had average payments within 10 percent of Medicare. The states with the highest private
 23 insurance payments relative to Medicare tended to be in the northwest of the country and along the
 24 Great Plains.¹³

25
 26 **MEDICARE VERSUS PRIVATE INSURANCE PAYMENT RATES**

27
 28 A 2020 KFF literature review discovered that private insurance paid 143 percent of Medicare rates
 29 for physician services, on average, ranging from 118 percent to 179 percent of Medicare rates
 30 across studies.¹⁴ Estimates from a more recent Milliman white paper closely align, finding that
 31 2022 commercial payment for professional medical services to be approximately 141 percent of
 32 Medicare fee-for-service rates.¹⁵ A [2022 Congressional Budget Office report](#) identified “rapid
 33 increases in the prices that commercial insurers pay for hospitals’ and physicians’ services,”¹⁶
 34 leading to further divergence between private and public insurance payment rates, a trend that has
 35 proven consistent over time. A 2003 Office of the Inspector General review determined that of 217
 36 procedures, 119 were valued lower by Medicare than by private insurers¹⁷ and a 2017 Health Care
 37 Cost Institute report found that commercial payments for the average professional service were 122
 38 percent of what would have been paid under Medicare.¹⁸ The 2022 AMA Physician Practice
 39 Benchmark Survey found that small practices of 1 to 15 physicians have a higher percentage of
 40 private health insurance patients than larger practices (45.9 percent vs 40.9 percent).¹⁹ Since
 41 research shows that private insurance payment rates are, on average, higher than Medicare payment
 42 rates for the same health services, this may benefit small practices.

43
 44 While the Council was unable to identify a survey focused on small practice Medicare to private
 45 insurance rate ratios, anecdotal reports indicate that some small practices are seeing private insurers
 46 offer payment below 100 percent of Medicare, which may be further depressed when insurers
 47 utilize a prior year Medicare rate. A Washington, DC two-physician clinic reported receiving
 48 private insurance payment rates ranging from 16-43 percent lower than Medicare, despite
 49 becoming a Patient-Centered Medical Home and entering into a local accountable care
 50 organization (ACO). Similarly, a solo endocrinologist who left a university-affiliated practice

1 reported being disadvantaged by no longer being able to collect facility fees to generate higher
2 billing, forcing him to opt out of all insurance plans due to inadequate payment.

3 4 MEDICAID PAYMENT COMPARISON AND HEALTH EQUITY IMPLICATIONS

5
6 In 2019, Medicaid fee-for-service payments for physician services were nearly 30 percent below
7 Medicare payment levels, with an even larger differential for primary care physician services.²⁰ A
8 2017 study found that total payments for physician office visits under Medicaid averaged 62.2
9 percent of payment amounts under private insurance and 73.7 percent of those under Medicare.²¹
10 As the largest public health insurance provider in the United States, Medicaid policy has significant
11 health equity implications. Low payment rates may limit access to quality care and contribute to
12 poor health outcomes for Medicaid beneficiaries. Research has found that increasing Medicaid
13 primary care rates by \$45 per service would reduce access-to-care inequities by at least 70
14 percent.²²

15
16 While Medicaid state flexibility is intended to preserve state operational autonomy and
17 programming, it has fostered wide variability and geographic inequities, particularly between
18 Medicaid expansion states and non-expansion states,²³ further enabling health disparities.
19 Substantial dependence on state revenues has led to low payment rates that effectively limit access,
20 as it disincentivizes providing care to the often minoritized populations the program serves. As
21 small practices must absorb costs required to provide care to the Medicaid population, such as
22 compliance with regulations and addressing Social Determinants of Health toward equitable care,
23 lower payment makes it almost impossible to recover those costs. Small practices experience
24 higher burdens for translation services in regions where Medicaid patients may have limited
25 English proficiency. Small practices also have challenges in assuring adequate patient follow-up
26 due to a lack of reliable communications (e.g., lack of working phone numbers or inability to reach
27 patients during the daytime while they are working, lack of access to a computer/internet) and
28 transportation challenges.

29 30 PAYMENT BENCHMARKS

31
32 An ideal payment benchmark will reflect the cost of providing care both in the short term and long
33 term while acknowledging risk, variable expenses, an appropriate allocation of fixed costs, and
34 physician work. It is essential that the benchmark reflect the full cost of practice and the value of
35 the care provided, as well as include inflation-based updates. The benchmark should disclose
36 payment amounts and the methodology used to calculate them, as these are fundamental to
37 establishing trust between physicians and insurers and promoting sound decision making by all
38 participants in the health care system. As the Medicare RBRVS [values](#) and [methodology](#) are fully
39 transparent, a payment benchmark uncoupled from the RBRVS must be accompanied by
40 commensurate transparency in payment methodology.

41
42 A general measurement of a payment schedule is its relative payment rate compared to the MPPS
43 or “benchmarking” to Medicare. Payment schedules that are less than the MPPS are considered
44 beneficial for the payer, whereas payment schedules that match or are greater than the MPPS are
45 considered beneficial for the practice. The percentage of MPPS rates is one of the most widely
46 accepted payment benchmarks when evaluating physician payment level and comparing contracts
47 in the health care industry. It can reflect the mix of services across physicians and plans while
48 removing impacts from billed charges that can vary widely across providers and regions.
49 Additionally, Medicare RBRVS values remain the foundation for many Alternative Payment
50 Models (APMs) as they can produce more or less value by influencing how physicians spend their
51 time and the mix of services provided to patients.

1 However, there are challenges presented by tying payment to a Medicare benchmark. Some payers
2 may adopt only a portion of the Medicare RBRVS (e.g., use RVU) but utilize a lower conversion
3 factor) or use an outdated RBRVS where the RVUs are no longer reflective of current resource
4 costs. Other payers may implement time-limited or temporary arrangements or apply the RBRVS
5 to only certain specialties, leading to disruption in care or difficulties with patient referrals. Most
6 importantly, continuing to tether payment to a Medicare payment rate that has been reduced by
7 almost 10 percent in four years presents an untenable situation for small practices. After adjusting
8 for inflation, [Medicare physician payment has effectively declined 29 percent](#) from 2001 to 2024.
9

10 Some have suggested the development of a “minimum government rate” as a payment benchmark.
11 However, it is challenging to identify a rate and methodology defensible across the six major
12 government health care programs:

- 13
- 14 1) Medicare
- 15 2) Medicaid
- 16 3) The Children’s Insurance Program (CHIP)
- 17 4) The Department of Defense TRICARE and TRICARE for Life Programs
- 18 5) The Veterans Health Administration program
- 19 6) The Indian Health Service
- 20

21 While these programs collectively provide health care services to one-third of Americans, they
22 differ extensively in terms of size, scope, financing, and program design, making it unfeasible to
23 establish an equitable minimum payment rate appropriate for all. Furthermore, it would be
24 impracticable to establish a minimum payment rate in the private physician market, which is
25 currently riding a consolidation wave, transforming health insurers into much larger and more
26 powerful conglomerates. Helping small practices escape the vice grip of unfair market rates from
27 consolidated insurers begs the need for strong antitrust reform. While reference prices and price
28 floors have been used in various sectors of the economy, they appear to have a low likelihood of
29 being adopted in health care, as demonstrated by the Economic Stabilization Program of the early
30 1970s.²⁴ Programs that provide for low income and rural patient populations already struggle to
31 obtain adequate funding. As demonstrated in the [oil](#) and [agricultural](#) sectors, policymakers are not
32 likely to set a payment floor unless they are granted influence over the distribution of health care
33 prices in return.
34

35 SUSTAINABLE PAYMENT FOR SMALL COMMUNITY PRACTICES

36

37 Small practices are disproportionately affected by payment rates that fall below an ideal
38 benchmark. One of the most notable changes has been the redistribution of physicians from small
39 to large practices. The share of physicians who worked in practices that had 10 or fewer physicians
40 decreased from 61.4 percent in 2012 to 51.8 percent in 2022, with the need to better negotiate
41 favorable (higher) payment rates with payers as one of the most important motivations for private
42 practices selling to hospitals or health systems.²⁵
43

44 The term “sustainable” denotes that something is bearable and capable of being continued at a
45 certain level over a period of time. For small community practices, sustainable payment reflects the
46 full cost of practice and the value of the care provided. Additionally, it includes annual inflation-
47 based payment updates, which are essential to measure practice cost inflation and account for
48 changes in physicians' operating costs. Annual updates enable small practices to better absorb other
49 payment redistributions triggered by budget neutrality rules and performance adjustments, as well
50 as periods of high inflation and rising staffing costs; they also help physicians invest in their
51 practices and implement new strategies to provide high-value care.

1 The single most influential factor in ensuring a sustainable level of payment for small practices is
2 leverage. Strong network adequacy requirements that expect all health plans to contract with
3 sufficient numbers and types of physicians bestow bargaining power by making it difficult for
4 insurers to dismiss negotiation on an in-network payment schedule. Alternatively, when small
5 practices are able to drop onerous insurance contracts and achieve out-of-network status, their
6 leverage is amplified, most markedly when underwritten by fair out-of-network rules that require
7 out-of-network physicians be eligible to be paid at rates higher than in-network physicians would
8 otherwise receive for those services.

9
10 Physicians have been moving to larger group practices in order to gain leverage as well as access to
11 more resources to effectively implement value-based care and risk-based payment models.²⁶ In this
12 era of consolidation, there is an expectation of progression from solo or small physician practices
13 to groups and multispecialty practices and, finally, to fully integrated delivery systems that employ
14 the physicians, own the hospitals, and use a single information system. In this limited view, the
15 earlier forms of practice organization are assumed to be incapable of implementing the supporting
16 systems needed for population health (e.g., registries, electronic medical records, care management,
17 team-based care) and are therefore unable to compete in value-based payment systems. A 2011
18 report of the Massachusetts Attorney General concluded that while bearing financial risk through
19 value-based payments encourages coordinated care, it also requires significant investment to
20 develop the capacity to effectively manage risk, which is more difficult for most physicians who
21 practice in small groups and have historically been paid less than larger practices.²⁷ The report also
22 found that physicians who transitioned to larger groups received professional payment that was
23 approximately 30 percent higher, which accelerated the number of physicians leaving small
24 practices and joining larger groups.

25
26 However, small practices are able to compete if they join forces to create profitable economies of
27 scale without forfeiting the advantages of being small.²⁸ When small practices collaborate, they
28 form a network of peers to learn from and to glean deeper insights from population health models.
29 Alliances can provide the scale needed to negotiate value-based contracts and to spread the risk
30 across multiple practices, so that a handful of unavoidable hospitalizations does not destroy a single
31 practice. Collaboration allows each practice access to the necessary technologies to draw actionable
32 insights from data and regulatory and coding expertise to maximize revenue, while laying the
33 groundwork for future savings.

34
35 Independent practice associations (IPAs), if structured in compliance with antitrust laws, allow
36 contracting between independent physicians and payers and can succeed in value-based purchasing
37 arrangements if they are able to achieve results equal to more highly capitalized and tightly
38 structured large medical groups and hospital-owned practices. Traditionally, most IPAs have been
39 networks of small practices organized for the purpose of negotiating fee-for-service contracts with
40 health insurers. While small practices considering participating in an IPA should be aware of the
41 potential risks, such as underfunded capitation revenue, IPAs can act as a platform for sharing
42 resources and negotiating risk-bearing medical services agreements on behalf of participating
43 practices. Many IPAs, especially those that are clinically integrated, have already converted to an
44 ACO, or provide the infrastructure for their members to organize as one. Because many of these
45 organizations have already operated as risk-bearing provider networks, IPAs are well positioned to
46 take leading roles in developing ACOs or acting as sustaining member organizations. Even if the
47 physician organization has operated in a fee-for-service environment, an IPA can bring expertise
48 regarding contracting, analytics, and management. For example, the Greater Rochester IPA
49 ([GRIPA](#)) has over 1,500 physician members who benefit from data analytics services to stratify
50 and manage patients, as well as care management support, pharmacists, visiting home nurses, and
51 diabetes educators. GRIPA has its own ACO, which distributed 83 percent of its 2020 shared

1 savings to participants. ACOs can also benefit from participation by small practices. A 2022 study
 2 found that small practices in ACOs reduced their beneficiaries’ spending more than large practices
 3 in ACOs, thereby generating higher savings for the ACOs consisting of small practices.²⁹

4
 5 CMS structures several of its initiatives in an effort to support small practices in value-based
 6 participation, such as the [Small, Underserved, and Rural Support initiative](#), which provides free,
 7 customized technical assistance to practices with 15 or fewer physicians. Small practices can
 8 contact selected organizations in their state to receive help with choosing quality measures,
 9 strategic planning, education and outreach, and health information technology optimization. CMS
 10 also includes several reporting flexibilities and rewards, specifically targeting solo and small
 11 practices under the [Quality Payment Program’s Merit-Based Incentive Payment System](#), most
 12 notably by varying submission methods and allowing special scoring consideration. The CMS
 13 [ACO Investment Model](#) built on the experience with the Alternative Payment Model (APM) to test
 14 the use of pre-paid shared savings to encourage new ACOs to form in rural and underserved areas
 15 and to encourage current Medicare Shared Savings Program ACOs to transition to arrangements
 16 with greater financial risk. It resulted in more physicians in rural and underserved communities
 17 signing on to participate in ACOs. These new ACOs invested in better care coordination, and
 18 savings have been attributed to fewer unnecessary acute hospitalizations, fewer emergency
 19 department visits, and fewer days in skilled nursing facilities among beneficiaries. The ACO
 20 Investment Model generated \$381.5 million in net Medicare savings between 2016 and 2018.³⁰ In
 21 June 2024, CMS will launch the [Making Care Primary](#) program to allow practices to build a value-
 22 based infrastructure by “improving care management and care coordination, equipping primary
 23 care clinicians with tools to form partnerships with health care specialists, and leveraging
 24 community-based connections to address patients’ health needs as well as their health-related
 25 social needs such as housing and nutrition.” The program will offer three progressive tracks to
 26 recognize participants’ varying experience in value-based care, including one reserved for practices
 27 with no prior value-based care experience.

28
 29 **RESOURCES FOR SMALL PRACTICES**

30
 31 There has been a recent emergence of payer-sponsored arrangements, such as the one sponsored by
 32 Acuitas Health. It is a partnership between a nonprofit health plan and a large multispecialty group
 33 that offers a range of services to small practices, including billing and coding assistance, practice
 34 transformation consulting, and patient aggregation, thereby allowing practices to achieve the scale
 35 needed for value-based contracts. Through its work with Acuitas, the NYC Population Health
 36 Improvement Program was able to “answer important questions about what skills small practices
 37 need in order to succeed in the new environment and how small practices might work together to
 38 share the services necessary to develop those skills...(as well as) break new ground by presenting a
 39 financial model for the cost of shared services and probing the legal and regulatory issues raised by
 40 such arrangements.”³¹ Other private companies have created shared service infrastructures to allow
 41 small, independent practices to participate in APMs, offering low-cost shared resources in return
 42 for a portion of downstream savings.

43
 44 Regardless of the payment rates, small practices can increase profit margins if they are able to keep
 45 their costs down. Group purchasing organizations (GPOs) and physician buying groups (PBGs) can
 46 offer independent practices a chance to access lower costs by using the power of many practices to
 47 benefit all. Some GPOs do not require purchases from a given supplier yet still offer leverage with
 48 other suppliers to grant small practices reduced rates. As most community-based practices offer
 49 vaccines, PBGs can play an important role in keeping costs down. Vaccines are one of the most
 50 costly and important investments a practice makes, and PBGs can offer practices lower contract
 51 pricing and rebates from the vaccine manufacturer. Practices can save five to 25 percent on the cost

1 of supplies by joining a GPO or PBG, most of which have no fee and often allow practices to join
 2 several organizations.³²

3
 4 Small practices typically sign “evergreen” contracts with payers, which continuously renew
 5 automatically until one party terminates the agreement. A payment schedule is part of the contract
 6 and will not be updated unless one party opens the contract for negotiation. In most cases, this must
 7 be the practice since it is not usually in the payer’s best financial interest to negotiate a new
 8 contract. As such, practices need to be prepared to contact the payer multiple times in order to
 9 actually get a contract negotiated – and then come to the table with as much data and population
 10 health metrics (e.g., A1C numbers for patients with diabetes) as possible. A practice able to
 11 successfully manage complex patients will have costs within a relatively narrow range without
 12 many outliers, thereby increasing negotiating leverage. Small practices can also gain a negotiating
 13 advantage if they have extended office hours, are considered the “only show in town,” provide
 14 specialized care for an underserved patient population, have obtained quality accreditation
 15 recognition (e.g., National Committee for Quality Assurance), or can share positive patient
 16 testimonials.

17
 18 The AMA has several resources dedicated to support physicians in private practice, such as the
 19 [AMA Private Practice Simple Solutions](#) series, which are “free, open access rapid learning cycles
 20 designed to provide opportunities to implement actionable changes that can immediately increase
 21 efficiency in private practices.” Session topics range from marketing to recruitment to reducing
 22 administrative burden. The AMA Practice Management Center developed the [Evaluating and
 23 Negotiating Emerging Payment Options](#) manual to assist members who are considering
 24 transitioning to risk-based payment, while the [AMA Value Based Care Toolkit](#) is being updated for
 25 2023 to provide a step-by-step guide to designing, adopting, and optimizing the value-based care
 26 model. The 2016 adoption of AMA Policy D-160.926, which calls for the development of a guide
 27 to provide information to physicians in or considering solo and small practice on how they can
 28 align through Independent Practice Associations, Accountable Care Organizations, Physician
 29 Hospital Organizations, and other models to help them with the imminent movement to risk-based
 30 contracting and value-based care, resulted in the development of the [Joining or Aligning with a
 31 Physician-Led Integrated Health System](#) guide, which was updated in June 2020. The AMA also
 32 offers a [Private Practice Group Membership Program](#) to drive sustainability and accelerate
 33 innovation for members in private practice, as well as a [Voluntary Best Practices to Advance Data
 34 Sharing Playbook](#) to address the future of sustainable value-based payment.

35
 36 **AMA POLICY**

37
 38 The AMA’s longstanding goal to promote the sustainability of solo, small, and primary care
 39 practices is reflected in numerous AMA policies, including those that:

- 40
 41 • Call for the development of a guide to provide information to physicians in or considering
 42 solo and small practice on how they can align through IPAs, ACOs, Physician Hospital
 43 Organizations, and other models to help them with the imminent movement to risk-based
 44 contracting and value-based care (Policy D-160.926);
 45 • Advocate in Congress to ensure adequate payment for services rendered by private
 46 practicing physicians, create and maintain a reference document establishing principles for
 47 entering into and sustaining a private practice, and issue a report in collaboration with the
 48 Private Practice Physicians Section at least every two years communicating efforts to
 49 support independent medical practices (Policy D-405.988);
 50 • Support development of administrative mechanisms to assist primary care physicians in the
 51 logistics of their practices to help ensure professional satisfaction and practice

- 1 sustainability, support increased financial incentives for physicians practicing primary care,
2 especially those in rural and urban underserved areas, and advocate for public and private
3 payers to develop physician payment systems to promote primary care and specialty
4 practices in progressive, community-based models of integrated care focused on quality
5 and outcomes (Policy H-200.949);
- 6 • Reinforce the freedom of physicians to choose their method of earning a living and the
7 right of physicians to charge their patients their usual fee that is fair, irrespective of
8 insurance/coverage arrangements between the patient and the insurers (Policy H-385.926);
 - 9 • Support insurance payment rates that are established through meaningful negotiations and
10 contracts (Policy H-165.838);
 - 11 • Call for a formal, legal review of ongoing grievous behaviors of the health insurance
12 industry (Policy D-385.949);
 - 13 • Advocate for payment rates that are sufficient to cover the full cost of sustainable medical
14 practice, continue to monitor health care delivery and physician payment reform activities,
15 and provide resources to help physicians understand and participate in payment reform
16 initiatives (Policy H-390.849);
 - 17 • Seek positive inflation-adjusted annual physician payment updates that keep pace with
18 rising practice costs to ensure payment rates cover the full cost of sustainable medical
19 practice (D-390.946); and
 - 20 • Support fair out-of-network payment rules coupled with strong network adequacy
21 requirements for all physicians (H-285.904).

22
23 The AMA has policy that addresses the challenges presented by the evolving value-based health
24 care system, such as those that:

- 25
- 26 • Provide guidance and support infrastructure that allows independent physicians to join with
27 other physicians in clinically integrated networks independent of any hospital system,
28 identify financially viable prospective payment models, and develop educational
29 opportunities for physicians to learn and collaborate on best practices for such payment
30 models for physician practice, including but not limited to independent private practice
31 (Policy H-385.904);
 - 32 • Support a pluralistic approach to third-party payment methodology, promoting flexibility
33 in payment arrangements (Policy H-385.989);
 - 34 • Reaffirm the AMA's support for a neutral public policy and fair market competition among
35 alternative health care delivery and financing systems (Policy H-385.990); and
 - 36 • Emphasize the AMA's dedication to seeking payment reform, supporting independent
37 physicians in joining clinically integrated networks, and refining relative values for
38 services based on valid and reliable data (Policy H-400.972).

39
40 AMA policy does not endorse a specific payment mechanism such as Medicare RBRVS, but
41 instead, states that use of RBRVS relative values is one option that could provide the basis for both
42 public and private physician payment systems. Among the most relevant policies are those that:

- 43
- 44 • Oppose any type of national mandatory fee schedule (Policy H-385.986);
 - 45 • Support uncoupling of commercial fee schedules from Medicare conversion factors and
46 seek legislation and/or regulation to prevent insurance companies from utilizing a
47 physician payment schedule below the updated Medicare professional fee schedule (Policy
48 D-400.990); and

- Support a pluralistic approach to third-party payment methodology under fee-for-service, and do not support a preference for usual and customary or reasonable or any other specific payment methodology (Policy H-385.989).

Finally, AMA policies establish a minimum physician payment of 100 percent of the RBRVS Medicare allowable for CHIP and Medicaid (Policy H-290.976) as well as for TRICARE and any other publicly funded insurance plan (Policy H-385.921).

DISCUSSION

Research has found that small community practices are able to deliver more personalized patient care and have lower rates of preventable hospital admissions. They are able to detect potential conditions before they result in hospital admissions and accordingly play a vital role in keeping patients healthier. However, small community practices may be challenged in implementing the support systems needed for participation in population health management and value-based purchasing arrangements. As such, the Council believes that bonuses for population-based programs must be accessible to small community practices, taking into consideration the size of the populations they manage and with a specific focus on improving care and payment for children, pregnant people, and people with mental health conditions, as these groups are often disproportionately covered by Medicaid.

Small practices are typically not eligible to collect facility fees or utilize various addresses or facility types to generate higher billing for similar procedures depending on contracts and incentives, thereby creating a revenue differential with larger practices. Most importantly, small practices lack the leverage retained by larger practices, putting them at a significant disadvantage when negotiating payment schedules. The single most influential factor in ensuring a sustainable level of payment for small practices is leverage. Strong network adequacy requirements that expect all health plans to contract with sufficient numbers and types of physicians bestow bargaining power by making it difficult for insurers to dismiss negotiation on an in-network payment schedule. Alternatively, when small practices are able to drop onerous insurance contracts and achieve out-of-network status, their leverage is amplified, most markedly when underwritten by fair out-of-network rules that require out-of-network physicians be eligible to be paid at rates higher than in-network physicians would otherwise receive for those services. There are resources available to help small practices succeed, most notably in underserved markets where average private professional service payments tend to be higher than those in more competitive physician markets.³³

Resolution 108-A-23 presumes that small practices experience private insurance payment rates well below Medicare payment rates. However, research shows that private insurance payment rates are, on average, higher than Medicare payment rates for the same health care services.³⁴ While there are limitations in the available data due to inclusion of larger practices and hospital-employed physicians, variability in private insurance payment schedules means that most small practices accept multiple different payment schedules from different payers, making it difficult for them to respond to questions about payment rates with accuracy. Accordingly, the Council believes a physician survey is not likely to illuminate payment variations in small practices between private insurance and Medicare payment rates. Small practices have a higher percentage of private health insurance patients than larger practices, which should benefit them. However, not all private insurance payments are reflective of the full cost of practice, the value of the care provided, or include inflation-based updates.

1 Research also indicates that Medicaid payment rates are substantially below Medicare payment
 2 rates. As the largest public health insurance provider in the United States, Medicaid policy has
 3 significant health equity implications. Low payment rates may limit access to quality care and
 4 contribute to poor health outcomes for Medicaid beneficiaries. While Medicaid state flexibility is
 5 intended to preserve state operational autonomy and programming, it has fostered wide variability
 6 and geographic inequities, particularly between Medicaid expansion states and non-expansion
 7 states, further enabling health disparities. Substantial dependence on state revenues has led to low
 8 payment rates that effectively limit access, as it disincentivizes providing care to the often
 9 minoritized populations the program serves. As small practices must absorb costs required to
 10 provide care to the Medicaid population, such as compliance with regulations and addressing
 11 Social Determinants of Health toward equitable care, lower payment makes it almost impossible to
 12 recover those costs.

13
 14 Although AMA policy does not endorse a specific payment mechanism such as the Medicare
 15 RBRVS and opposes any type of mandatory payment schedule, it does support payment at no less
 16 than 100 percent of RBRVS Medicare allowable as one option that could provide the basis for both
 17 public and private physician payment systems. However, consideration must be given to the
 18 challenges presented by tying payment to a Medicare benchmark, which can be manipulated by
 19 payers to provide them with a financial advantage. Some payers may adopt only a portion of the
 20 Medicare RBRVS or use an outdated RBRVS where the RVUs are no longer reflective of current
 21 resource costs. Other payers may implement time-limited or temporary arrangements or apply the
 22 RBRVS to only certain specialties, leading to disruption in care or difficulties with patient
 23 referrals. Most importantly, continuing to tether payment to a Medicare payment rate that has been
 24 reduced by almost 10 percent in four years presents an untenable situation for small practices. As
 25 such, uncoupling payment schedules from a Medicare benchmark may allow for a level of payment
 26 that reflects the full cost of practice, the value of the care provided, and includes inflation-based
 27 updates, thereby sustaining small practices.

28
 29 It is unfeasible to establish an equitable minimum government payment rate defensible across the
 30 six major government health care programs. Furthermore, it would be impracticable to establish a
 31 minimum payment rate in the private physician market, which is currently riding a consolidation
 32 wave, transforming health insurers into much larger and more powerful conglomerates. The
 33 Council believes that an ideal payment benchmark will reflect the cost of providing care both in the
 34 short term and long term while acknowledging risk, variable expenses, an appropriate allocation of
 35 fixed costs, and physician work. It is essential that the benchmark reflect the full cost of practice
 36 and the value of the care provided, as well as include inflation-based updates. The benchmark
 37 should disclose payment amounts and the methodology used to calculate them, as these are
 38 fundamental to establishing trust between physicians and insurers and promoting sound decision
 39 making by all participants in the health care system.

40
 41 For small community practices, sustainable payment reflects the full cost of practice and the value
 42 of the care provided. Additionally, it includes annual inflation-based payment updates, which are
 43 essential to measure practice cost inflation and account for changes in physicians' operating costs.
 44 Annual updates enable small practices to better absorb other payment redistributions triggered by
 45 budget neutrality rules and performance adjustments, as well as periods of high inflation and rising
 46 staffing costs; they also help physicians invest in their practices and implement new strategies to
 47 provide high-value care.

1 RECOMMENDATIONS

2
3 The Council on Medical Service recommends that the following be adopted in lieu of Resolution
4 108-A-23, and the remainder of the report be filed:

5
6 1. That our American Medical Association (AMA) support making bonuses for population-
7 based programs accessible to small community practices, taking into consideration the size
8 of the populations they manage and with a specific focus on improving care and payment
9 for children, pregnant people, and people with mental health conditions, as these groups
10 are often disproportionately covered by Medicaid. (New HOD Policy)

11
12 2. That our AMA amend Policy D-400.990 by addition and deletion, and modify the title by
13 addition and deletion, as follows:

14
15 ~~Uncoupling Commercial Fee Schedules from the Medicare Physician Payment Schedule~~
16 ~~Conversion Factors~~ D-400.990

17 Our AMA: (1) shall use every means available to convince health insurance companies and
18 managed care organizations to immediately uncouple fee schedules from ~~the Medicare~~
19 ~~Physician Payment Schedule conversion factors~~ and to maintain a ~~fair and appropriate~~
20 ~~level of payment reimbursement that is sustainable, reflects the full cost of practice, the~~
21 ~~value of the care provided, and includes an inflation-based update;~~ and (2) will seek
22 legislation and/or regulation to prevent managed care companies from utilizing a physician
23 payment schedule below the updated Medicare ~~Physician Payment professional fee~~
24 ~~Schedule~~. (Modify Current HOD Policy)

25
26 3. That our AMA amend Policy H-290.976 by addition and deletion, and modify the title by
27 addition and deletion, as follows:

28
29 ~~Enhanced SCHIP Enrollment, Outreach, and Payment Reimbursement~~ H-290.976

30 1. It is the policy of our AMA that prior to or concomitant with states' expansion of ~~State~~
31 ~~Children's Health Insurance Programs (SCHIP)~~ to adult coverage, our AMA urge all states
32 to maximize their efforts at outreach and enrollment of ~~SCHIP~~ eligible children, using all
33 available state and federal funds.

34 2. Our AMA affirms its commitment to advocating for ~~reasonable SCHIP and Medicaid~~
35 ~~payment that is sustainable, reflects the full cost of practice, the value of the care provided,~~
36 ~~and includes inflation-based updates, reimbursement for its medical providers, defined as~~
37 ~~at minimum and is no less than~~ 100 percent of RBRVS Medicare allowable. (Modify
38 Current HOD Policy)

39
40 4. That our AMA amend Policy H-385.921 by addition and deletion as follows:

41
42 ~~Health Care Access for Medicaid Patients~~ H-385.921

43 It is AMA policy that to increase and maintain access to health care for all, payment for
44 physician providers for Medicaid, TRICARE, and any other publicly funded insurance plan
45 must be ~~sustainable, reflect the full cost of practice, the value of the care provided, and~~
46 ~~include inflation-based updates, and is no less than at minimum~~ 100 percent of ~~the~~ RBRVS
47 Medicare allowable. (Modify Current HOD Policy)

48
49 5. That our AMA reaffirm Policy D-405.988, which calls for advocacy in Congress to ensure
50 adequate payment for services rendered by private practicing physicians, creating and
51 maintaining a reference document establishing principles for entering into and sustaining a

- 1 private practice, and issuing a report in collaboration with the Private Practice Physicians
2 Section at least every two years to communicate efforts to support independent medical
3 practices. (Reaffirm HOD Policy)
4
- 5 6. That our AMA reaffirm Policy H-200.949, which supports development of administrative
6 mechanisms to assist primary care physicians in the logistics of their practices to help
7 ensure professional satisfaction and practice sustainability, support increased financial
8 incentives for physicians practicing primary care, especially those in rural and urban
9 underserved areas, and advocate for public and private payers to develop physician
10 payment systems to promote primary care and specialty practices in progressive,
11 community-based models of integrated care focused on quality and outcomes. (Reaffirm
12 HOD Policy)
13
- 14 7. That our AMA reaffirm Policy H-285.904, which supports fair out-of-network payment
15 rules coupled with strong network adequacy requirements for all physicians. (Reaffirm
16 HOD Policy)
17
- 18 8. That our AMA reaffirm Policy H-385.986, which opposes any type of national mandatory
19 fee schedule. (Reaffirm HOD Policy)

Fiscal Note: Less than \$500.

**Council on Medical Service Report 8-A-24
Sustainable Payment for Community Practices
Policy Appendix**

Uncoupling Commercial Fee Schedules from Medicare Conversion Factors D-400.990

Our AMA: (1) shall use every means available to convince health insurance companies and managed care organizations to immediately uncouple fee schedules from Medicare conversion factors and to maintain a fair and appropriate level of reimbursement; and (2) will seek legislation and/or regulation to prevent managed care companies from utilizing a physician payment schedule below the updated Medicare professional fee schedule.

Res. 137, A-02 Reaffirmed: CCB/CLRPD Rep. 4, A-12 Appended: Res. 103, A-13 Reaffirmation: A-19

The Preservation of the Private Practice of Medicine D-405.988

Our AMA: (1) supports preserving the value of the private practice of medicine and its benefit to patients; (2) will utilize its resources to protect and support the continued existence of solo and small group medical practice, and to protect and support the ability of these practices to provide quality care; (3) will advocate in Congress to ensure adequate payment for services rendered by private practicing physicians; (4) will work through the appropriate channels to preserve choices and opportunities, including the private practice of medicine, for new physicians whose choices and opportunities may be limited due to their significant medical education debt; (5) will work through the appropriate channels to ensure that medical students and residents during their training are educated in all of medicine's career choices, including the private practice of medicine; (6) will create, maintain, and make accessible to medical students, residents and fellows, and physicians, resources to enhance satisfaction and practice sustainability for physicians in private practice; (7) will create and maintain a reference document establishing principles for entering into and sustaining a private practice, and encourage medical schools and residency programs to present physicians in training with information regarding private practice as a viable option; and (8) will issue a report in collaboration with the Private Practice Physicians Section at least every two years communicating their efforts to support independent medical practices.

Principles of and Actions to Address Primary Care Workforce H-200.949

1. Our patients require a sufficient, well-trained supply of primary care physicians--family physicians, general internists, general pediatricians, and obstetricians/gynecologists--to meet the nation's current and projected demand for health care services.
2. To help accomplish this critical goal, our American Medical Association (AMA) will work with a variety of key stakeholders, to include federal and state legislators and regulatory bodies; national and state specialty societies and medical associations, including those representing primary care fields; and accreditation, certification, licensing, and regulatory bodies from across the continuum of medical education (undergraduate, graduate, and continuing medical education).
3. Through its work with these stakeholders, our AMA will encourage development and dissemination of innovative models to recruit medical students interested in primary care, train primary care physicians, and enhance both the perception and the reality of primary care practice, to encompass the following components: a) Changes to medical school admissions and recruitment of medical students to primary care specialties, including counseling of medical students as they develop their career plans; b) Curriculum changes throughout the medical education continuum; c) Expanded financial aid and debt relief options; d) Financial and logistical support for primary care practice, including adequate reimbursement, and enhancements to the practice environment to

ensure professional satisfaction and practice sustainability; and e) Support for research and advocacy related to primary care.

4. Admissions and recruitment: The medical school admissions process should reflect the specific institution's mission. Those schools with missions that include primary care should consider those predictor variables among applicants that are associated with choice of these specialties.

5. Medical schools, through continued and expanded recruitment and outreach activities into secondary schools, colleges, and universities, should develop and increase the pool of applicants likely to practice primary care by seeking out those students whose profiles indicate a likelihood of practicing in primary care and underserved areas, while establishing strict guidelines to preclude discrimination.

6. Career counseling and exposure to primary care: Medical schools should provide to students career counseling related to the choice of a primary care specialty, and ensure that primary care physicians are well-represented as teachers, mentors, and role models to future physicians.

7. Financial assistance programs should be created to provide students with primary care experiences in ambulatory settings, especially in underserved areas. These could include funded preceptorships or summer work/study opportunities.

8. Curriculum: Voluntary efforts to develop and expand both undergraduate and graduate medical education programs to educate primary care physicians in increasing numbers should be continued. The establishment of appropriate administrative units for all primary care specialties should be encouraged.

9. Medical schools with an explicit commitment to primary care should structure the curriculum to support this objective. At the same time, all medical schools should be encouraged to continue to change their curriculum to put more emphasis on primary care.

10. All four years of the curriculum in every medical school should provide primary care experiences for all students, to feature increasing levels of student responsibility and use of ambulatory and community-based settings.

11. Federal funding, without coercive terms, should be available to institutions needing financial support to expand resources for both undergraduate and graduate medical education programs designed to increase the number of primary care physicians. Our AMA will advocate for public (federal and state) and private payers to a) develop enhanced funding and related incentives from all sources to provide education for medical students and resident/fellow physicians, respectively, in progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model) to enhance primary care as a career choice; b) fund and foster innovative pilot programs that change the current approaches to primary care in undergraduate and graduate medical education, especially in urban and rural underserved areas; and c) evaluate these efforts for their effectiveness in increasing the number of students choosing primary care careers and helping facilitate the elimination of geographic, racial, and other health care disparities.

12. Medical schools and teaching hospitals in underserved areas should promote medical student and resident/fellow physician rotations through local family health clinics for the underserved, with financial assistance to the clinics to compensate their teaching efforts.

13. The curriculum in primary care residency programs and training sites should be consistent with the objective of training generalist physicians. Our AMA will encourage the Accreditation Council for Graduate Medical Education to (a) support primary care residency programs, including community hospital-based programs, and (b) develop an accreditation environment and novel pathways that promote innovations in graduate medical education, using progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model).

14. The visibility of primary care faculty members should be enhanced within the medical school, and positive attitudes toward primary care among all faculty members should be encouraged.

15. Support for practicing primary care physicians: Administrative support mechanisms should be developed to assist primary care physicians in the logistics of their practices, along with enhanced efforts to reduce administrative activities unrelated to patient care, to help ensure professional satisfaction and practice sustainability.

16. There should be increased financial incentives for physicians practicing primary care, especially those in rural and urban underserved areas, to include scholarship or loan repayment programs, relief of professional liability burdens, and Medicaid case management programs, among others. Our AMA will advocate to state and federal legislative and regulatory bodies, among others, for development of public and/or private incentive programs, and expansion and increased funding for existing programs, to further encourage practice in underserved areas and decrease the debt load of primary care physicians. The imposition of specific outcome targets should be resisted, especially in the absence of additional support to the schools.

17. Our AMA will continue to advocate, in collaboration with relevant specialty societies, for the recommendations from the AMA/Specialty Society RVS Update Committee (RUC) related to reimbursement for E&M services and coverage of services related to care coordination, including patient education, counseling, team meetings and other functions; and work to ensure that private payers fully recognize the value of E&M services, incorporating the RUC-recommended increases adopted for the most current Medicare RBRVS.

18. Our AMA will advocate for public (federal and state) and private payers to develop physician reimbursement systems to promote primary care and specialty practices in progressive, community-based models of integrated care focused on quality and outcomes such as the patient-centered medical home and the chronic care model consistent with current AMA Policies H-160.918 and H-160.919.

19. There should be educational support systems for primary care physicians, especially those practicing in underserved areas.

20. Our AMA will urge urban hospitals, medical centers, state medical associations, and specialty societies to consider the expanded use of mobile health care capabilities.

21. Our AMA will encourage the Centers for Medicare & Medicaid Services to explore the use of telemedicine to improve access to and support for urban primary care practices in underserved settings.

22. Accredited continuing medical education providers should promote and establish continuing medical education courses in performing, prescribing, interpreting and reinforcing primary care services.

23. Practicing physicians in other specialties--particularly those practicing in underserved urban or rural areas--should be provided the opportunity to gain specific primary care competencies through short-term preceptorships or postgraduate fellowships offered by departments of family medicine, internal medicine, pediatrics, etc., at medical schools or teaching hospitals. In addition, part-time training should be encouraged, to allow physicians in these programs to practice concurrently, and further research into these concepts should be encouraged.

24. Our AMA supports continued funding of Public Health Service Act, Title VII, Section 747, and encourages advocacy in this regard by AMA members and the public.

25. Research: Analysis of state and federal financial assistance programs should be undertaken, to determine if these programs are having the desired workforce effects, particularly for students from disadvantaged groups and those that are underrepresented in medicine, and to gauge the impact of these programs on elimination of geographic, racial, and other health care disparities. Additional research should identify the factors that deter students and physicians from choosing and remaining in primary care disciplines. Further, our AMA should continue to monitor trends in the choice of a primary care specialty and the availability of primary care graduate medical education positions. The results of these and related research endeavors should support and further refine AMA policy to enhance primary care as a career choice.

Out-of-Network Care H-285.904

1. Our AMA adopts the following principles related to unanticipated out-of-network care:

A. Patients must not be financially penalized for receiving unanticipated care from an out-of-network provider.

B. Insurers must meet appropriate network adequacy standards that include adequate patient access to care, including access to hospital-based physician specialties. State regulators should enforce such standards through active regulation of health insurance company plans.

C. Insurers must be transparent and proactive in informing enrollees about all deductibles, copayments and other out-of-pocket costs that enrollees may incur.

D. Prior to scheduled procedures, insurers must provide enrollees with reasonable and timely access to in-network physicians.

E. Patients who are seeking emergency care should be protected under the “prudent layperson” legal standard as established in state and federal law, without regard to prior authorization or retrospective denial for services after emergency care is rendered.

F. Out-of-network payments must not be based on a contrived percentage of the Medicare rate or rates determined by the insurance company.

G. Minimum coverage standards for unanticipated out-of-network services should be identified. Minimum coverage standards should pay out-of-network providers at the usual and customary out-of-network charges for services, with the definition of usual and customary based upon a percentile of all out-of-network charges for the particular health care service performed by a provider in the same or similar specialty and provided in the same geographical area as reported by a benchmarking database. Such a benchmarking database must be independently recognized and verifiable, completely transparent, independent of the control of either payers or providers and maintained by a non-profit organization. The non-profit organization shall not be affiliated with an insurer, a municipal cooperative health benefit plan or health management organization.

H. Independent Dispute Resolution (IDR) should be allowed in all circumstances as an option or alternative to come to payment resolution between insurers and physicians.

2. Our AMA will advocate for the principles delineated in Policy H-285.904 for all health plans, including ERISA plans.

3. Our AMA will advocate that any legislation addressing surprise out-of-network medical bills use an independent, non-conflicted database of commercial charges.

Enhanced SCHIP Enrollment, Outreach, and Reimbursement H-290.976

1. It is the policy of our AMA that prior to or concomitant with states’ expansion of State Children’s Health Insurance Programs (SCHIP) to adult coverage, our AMA urge all states to maximize their efforts at outreach and enrollment of SCHIP eligible children, using all available state and federal funds.

2. Our AMA affirms its commitment to advocating for reasonable SCHIP and Medicaid reimbursement for its medical providers, defined as at minimum 100 percent of RBRVS Medicare allowable.

Health Care Access for Medicaid Patients H-385.921

It is AMA policy that to increase and maintain access to health care for all, payment for physician providers for Medicaid, TRICARE, and any other publicly funded insurance plan must be at minimum 100 percent of the RBRVS Medicare allowable.

Res. 103, A-07 Reaffirmed: CMS Rep. 2, I-08 Reaffirmation A-12 Reaffirmed: Res 132, A-14 Reaffirmed in lieu of Res. 808, I-14 Reaffirmation A-15 Reaffirmed in lieu of: Res. 807, I-18

National Mandatory Fee Schedule H-385.986

The AMA opposes any type of national mandatory fee schedule.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 101
(A-24)

Introduced by: Medical Student Section

Subject: Infertility Coverage

Referred to: Reference Committee A

1 Whereas, fertility assistance and preservation are commonly used by patients diagnosed with or
2 at risk for infertility (including iatrogenic infertility due to medical interventions, such as cancer
3 treatment or hormone replacement therapy), LGBTQ+ patients, military and veteran patients,
4 and patients who desire future pregnancy at advanced reproductive age¹⁻²; and

5
6 Whereas, cost for services such as in vitro fertilization or oocyte cryopreservation ranges from
7 \$10,000 to \$13,000, not including medications, further tests, multiple cycles, and cryostorage
8 fees³⁻⁵; and

9
10 Whereas, the average cost for semen analysis by emission is around \$750, with additional costs
11 for cryostorage⁶; and

12
13 Whereas, cost due to lack of insurance coverage and need for supplemental insurance is the
14 most common barrier for patients with infertility, often leading them to end treatment⁷⁻⁸; and

15
16 Whereas, in states where employer plans cover assisted reproductive technology, the cost of in
17 vitro fertilization (IVF) is 13% of average annual disposable income compared to 52% in other
18 states, indicating that coverage regulations drastically affect affordability⁹; and

19
20 Whereas, Medicaid covers fertility drugs in only one state, covers infertility diagnostics in only a
21 few states, and does not cover other fertility assistance or preservation services¹⁰; and

22
23 Whereas, TRICARE only covers infertility care that enables “natural conception,” and the VA
24 only covers care for infertility due to service-related injuries and only if donor eggs and sperm
25 are from a couple, excluding LGBTQ+ and unmarried individuals¹⁰; and

26
27 Whereas, 25 states and DC have various regulations at least partially restricting coverage of
28 some fertility diagnostics or services in at least a portion of employer plans offered, although sex
29 and gender-based restrictions, cost-sharing, age cutoffs, marital requirements, exemptions for
30 small and large employers, and other stipulations vary widely¹⁰⁻¹⁴; and

31
32 Whereas, states with private coverage for fertility services do not experience significant
33 premium increases, with estimates ranging from 0.5-1% (\$1-5), while demonstrating 150-300%
34 greater use of fertility services compared to states without^{10,15-17}; and

35
36 Whereas, Black women may have higher infertility rates but are less likely to use fertility
37 services, and Black, Hispanic, and Asian women all experience poorly understood lower
38 success rates for fertility services, alongside many financial and logistic barriers¹⁸⁻²⁰; and

1 Whereas, women of color also report hearing comments disregarding their fertility concerns or
2 perpetuating stereotypes (that they can become pregnant easily or that they should not become
3 pregnant at all)²⁰; and
4

5 Whereas, LGBTQ+ individuals and unmarried individuals are often excluded from conditions
6 and requirements for fertility services^{10,11,21,22}; and
7

8 Whereas, unlike the IHS, other federal health programs such as the Veterans Health
9 Administration and Federal Employees Health Benefit Program, provide a spectrum of coverage
10 for infertility diagnostics and treatment²³; and

11 Whereas, the prevalence of infertility and impaired fecundity (reproductive fitness) among
12 American Indian and Alaska Native (AI/AN) persons is 7.0% and 13.2%, respectively, which is
13 greater than that of the U.S. population (6.4% and 11.0%)²⁴; and
14

15 Whereas, positive pregnancy (PP) and ongoing pregnancy/delivery (OP/D) rates are estimated
16 to be 15% and 10% per IUI cycle in the general population, respectively, but AI/AN patients
17 have marked PP/OP/D disparities (5.10% PP and 3.3% OP/D)²⁵; and
18

19 Whereas, the IHS defines Level 5 (Excluded Services) as services and procedures considered
20 purely cosmetic in nature, experimental or investigational, or with no proven medical benefit and
21 includes IVF and related services in this category, preventing IHS, Tribal, and Urban Indian
22 Health Programs from paying for this care²⁶⁻²⁸; therefore be it
23

24 RESOLVED, that our American Medical Association amend Policy H-185.990, "Infertility and
25 Fertility Preservation Insurance Coverage" by addition and deletion to read as follows;
26

27 1. Our AMA ~~encourages third party payer health insurance carriers~~
28 ~~to make available insurance benefits~~ supports federal protections
29 that ensure insurance coverage by all payers for the diagnosis and
30 treatment of recognized ~~male and female~~ infertility.

31 2. Our AMA supports payment for fertility preservation therapy
32 services by all payers when iatrogenic infertility may be caused
33 directly or indirectly by necessary medical treatments as
34 determined by a licensed physician, and will lobby for appropriate
35 federal legislation requiring payment for fertility preservation
36 therapy services by all payers when iatrogenic infertility may be
37 caused directly or indirectly by necessary medical treatments as
38 determined by a licensed physician.

39 3. Our AMA will work with interested organizations to encourage the
40 Indian Health Service to cover infertility diagnostics and treatment
41 for patients seen by or referred through an Indian Health Service,
42 Tribal, or Urban Indian Health Program. (Modify Current HOD
43 Policy); and be it further
44

45 RESOLVED, that our AMA study the feasibility of insurance coverage for fertility preservation
46 for reasons other than iatrogenic infertility (Directive to Take Action); and be it further
47

48 RESOLVED, that our AMA support the review of services defined to be experimental or
49 excluded for payment by the Indian Health Service and for the appropriate bodies to make
50 evidence-based recommendations for updated health services coverage. (New HOD Policy)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/5/2024

RELEVANT AMA POLICY

H-185.990 Infertility and Fertility Preservation Insurance Coverage

1. Our AMA encourages third party payer health insurance carriers to make available insurance benefits for the diagnosis and treatment of recognized male and female infertility.
2. Our AMA supports payment for fertility preservation therapy services by all payers when iatrogenic infertility may be caused directly or indirectly by necessary medical treatments as determined by a licensed physician, and will lobby for appropriate federal legislation requiring payment for fertility preservation therapy services by all payers when iatrogenic infertility may be caused directly or indirectly by necessary medical treatments as determined by a licensed physician. [Res. 150, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CMS Rep. 4, A-08; Appended Res. 114, A-13; Modified: Res. 809, I-14]

H-65.956 Right for Gamete Preservation Therapies

1. Fertility preservation services are recognized by our AMA as an option for the members of the transgender and non-binary community who wish to preserve future fertility through gamete preservation prior to undergoing gender affirming medical or surgical therapies.
2. Our AMA supports the right of transgender or non-binary individuals to seek gamete preservation therapies. [Res. 005, A-19]

H-185.922 Right for Gamete Preservation Therapies

3. Our AMA supports insurance coverage for gamete preservation in any individual for whom a medical diagnosis or treatment modality is expected to result in the loss of fertility. [Res. 005, A-19]

H-510.984 Infertility Benefits for Veterans

1. Our AMA supports: (A) lifting the congressional ban on the Department of Veterans Affairs (VA) from covering in vitro fertilization (IVF) costs for veterans who have become infertile due to service-related injuries; and (B) efforts by the DOD and VA to offer service members comprehensive health care services to preserve their ability to conceive a child and provide treatment within the standard of care to address infertility due to service-related injuries; and (C) additional research to better understand whether higher rates of infertility in servicewomen may be linked to military service, and which approaches might reduce the burden of infertility among service women.
2. Our AMA encourages: (A) interested stakeholders to collaborate in lifting the congressional ban on the VA from covering IVF costs for veterans who have become infertile due to service-related injuries, and (B) the Department of Defense (DOD) to offer service members fertility counseling and information on relevant health care benefits provided through TRICARE and the VA at pre-deployment and during the medical discharge process. [CMS Rep. 01, I-16; Appended: Res. 513, A-19]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 102
(A-24)

Introduced by: Medical Student Section

Subject: Medicaid & CHIP Benefit Improvements

Referred to: Reference Committee A

- 1 Whereas, the Centers for Medicare and Services list hearing, vision, and dental care as optional
2 benefits in Medicaid, and states vary drastically in Medicaid coverage of these services; and
3
- 4 Whereas, Medicaid is not subject to Medicare's budgetary constraints, and much of the cost of
5 improved benefits is borne by existing federal agreements for Medicaid expansion funding; and
6
- 7 Whereas, only 28 states provide varying levels of hearing coverage based on hearing loss
8 severity, 18 states offer no coverage, and some only cover devices but not services;² and
9
- 10 Whereas, of the 28 states providing some Medicaid hearing coverage, a study rated only 6 as
11 "fair" (on a scale of poor, fair, good, excellent);² and
12
- 13 Whereas, Medicaid patients are more likely to report hearing problems compared to privately
14 insured patients, and lower-income patients are twice as likely to experience more difficulty
15 using hearing aids, in part due to the cost of required support services;^{3,4} and
16
- 17 Whereas, while FDA approval of over-the-counter hearing aids is expected to greatly increase
18 access, a pair can still cost \$1,000, a prohibitive cost for many Medicaid patients;⁵⁻⁶ and
19
- 20 Whereas, only 33 states offer some Medicaid vision coverage, with 28 limiting access based on
21 severity of vision impairment, pre-existing conditions, restrictions to only eyeglasses and not
22 contacts, number of visits allowed, and approval of coverage only every 2 to 4 years;⁷ and
23
- 24 Whereas, a *JAMA Ophthalmology* study found that Medicaid patients had significantly
25 decreased odds of securing an appointment compared to privately insured patients (OR=0.41);⁸
26 and
27
- 28 Whereas, a study in *Ophthalmology* (the journal of the American Academy of Ophthalmology)
29 found that Medicaid patients are over twice as likely to not receive follow-up care after glaucoma
30 diagnosis compared to privately insured patients;⁹ and
31
- 32 Whereas, no minimum requirements for Medicaid dental coverage exist, and in 2019, only 19
33 states offered comprehensive coverage while 31 offered limited/emergency coverage;¹⁰⁻¹³ and
34
- 35 Whereas, 18% of Medicaid patients under 65 report an unmet dental need due to cost, double
36 the rate of privately insured patients;⁴ and
37
- 38 Whereas, up to 25% of non-elderly adults forgo dental care due to cost, as the average yearly
39 cost of dental care for adults under the poverty level is \$523;¹⁴⁻¹⁵ and
40

1 Whereas, adults in poverty are three times as likely to develop dental caries, and 29% of low-
2 income adults report that appearance of their teeth affects their employment chances;¹⁶⁻¹⁷ and
3

4 Whereas, Medicaid patients with dental coverage are more likely to seek dental care due to
5 reduced out-of-pocket cost and receive dental caries treatment than those without;¹⁸ and
6

7 Whereas, our 2 million dental-related emergency room visits a year cost \$2 billion;¹⁹⁻²² and
8

9 Whereas, California and Massachusetts cut Medicaid dental benefits in 2010 and subsequently
10 saw 32% and 11% increases in dental-related ER visits respectively;²³⁻²⁴ and
11

12 Whereas, California and Massachusetts restored dental benefits in 2014, and Massachusetts
13 saw a 15% reduction in dental-related ER visits afterward;²³⁻²⁴ and
14

15 Whereas, from 2012 to 2014, states that did not expand Medicaid or expanded Medicaid without
16 dental coverage saw a 27% increase in dental-related ER visits, compared to a 14% reduction
17 in states that expanded Medicaid with dental coverage;²⁵ and
18

19 Whereas, AMA advocacy on Medicaid dental coverage does not conflict with the position of the
20 American Dental Association (ADA), which is active on this issue, and amendments to existing
21 AMA policy on working with the ADA on public payer dental benefits to include Medicaid
22 ensures that the AMA would collaborate with and not conflict with the ADA in this area;²⁶ and
23

24 Whereas, to increase savings on emergency and inpatient care costs and overall costs due to
25 lost productivity, reduced employment, and disability, the benefits of Medicaid expansion can be
26 better realized via comprehensive hearing, vision, and dental coverage; therefore be it
27

28 RESOLVED, that our American Medical Association amend H-185.929 Hearing Aid Coverage
29 by addition as follows; and be it further
30

31 Hearing Aid Coverage H-185.929

- 32 1) Our American Medical Association supports public and private
33 health insurance coverage that provides all hearing-impaired
34 infants and children access to appropriate physician-led teams
35 and hearing services and devices, including digital hearing aids.
- 36 2) Our AMA supports hearing aid coverage for children that, at
37 minimum, recognizes the need for replacement of hearing aids
38 due to maturation, change in hearing ability and normal wear
39 and tear.
- 40 3) Our AMA encourages private health plans to offer optional
41 riders that allow their members to add hearing benefits to
42 existing policies to offset the costs of hearing aid purchases,
43 hearing-related exams and related services.
- 44 4) Our AMA supports coverage of hearing tests administered by a
45 physician or physician-led team as part of Medicare's Benefit.
- 46 5) Our AMA supports policies that increase access to hearing aids
47 and other technologies and services that alleviate hearing loss
48 and its consequences for the elderly.
- 49 6) Our AMA encourages increased transparency and access for
50 hearing aid technologies through itemization of audiologic
51 service costs for hearing aids.

- 1 7) Our AMA supports the availability of over-the-counter hearing
- 2 aids for the treatment of mild-to-moderate hearing loss.
- 3 8) Our AMA supports physician and patient education on the
- 4 proper role of over the counter hearing aids, including the value
- 5 of physician-led assessment of hearing loss, and when they are
- 6 appropriate for patients and when there are possible cost-
- 7 savings.
- 8 9) Our AMA encourages the United States Preventive Services
- 9 Task Force to re-evaluate its determination not to recommend
- 10 preventive hearing services and screenings in asymptomatic
- 11 adults over age 65 in consideration of new evidence connecting
- 12 hearing loss to dementia.
- 13 10) Our AMA advocates that hearing exams, hearing aids, cochlear
- 14 implants, and aural rehabilitative services be covered in all
- 15 Medicaid and CHIP programs and any new public payers.

16 (Modify Current HOD Policy)

17
18 RESOLVED, that our AMA advocate that routine comprehensive vision exams and visual aids
19 (including eyeglasses and contact lenses) be covered in all Medicaid and CHIP programs and
20 by any new public payers (Directive to Take Action); and be it further

21
22 RESOLVED, that our AMA amend H-330.872, “Medicare Coverage for Dental Services” by
23 addition and deletion as follows.

24
25 Medicare Coverage for Dental Services H-330.872
26 Our AMA supports: (1) continued opportunities to work with the
27 American Dental Association and other interested national
28 organizations to improve access to dental care for Medicare,
29 Medicaid, CHIP, and other public payer beneficiaries; and (2)
30 initiatives to expand health services research on the effectiveness
31 of expanded dental coverage in improving health and preventing
32 disease among in the Medicare, Medicaid, CHIP, and other public
33 payer beneficiaries population, the optimal dental benefit plan
34 designs to cost-effectively improve health and prevent disease ~~in~~
35 ~~the~~ among Medicare, Medicaid, CHIP, and other public payer
36 beneficiaries population, and the impact of expanded dental
37 coverage on health care costs and utilization.

38 (Modify Current HOD Policy)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/19/2024

RELEVANT AMA Policy

H-185.929 Hearing Aid Coverage

- 1) Our American Medical Association supports public and private health insurance coverage that provides all hearing-impaired infants and children access to appropriate physician-led teams and hearing services and devices, including digital hearing aids.
- 2) Our AMA supports hearing aid coverage for children that, at minimum, recognizes the need for replacement of hearing aids due to maturation, change in hearing ability and normal wear and tear.
- 3) Our AMA encourages private health plans to offer optional riders that allow their members to add hearing benefits to existing policies to offset the costs of hearing aid purchases, hearing-related exams and related services.
- 4) Our AMA supports coverage of hearing tests administered by a physician or physician-led team as part of Medicare's Benefit.
- 5) Our AMA supports policies that increase access to hearing aids and other technologies and services that alleviate hearing loss and its consequences for the elderly.
- 6) Our AMA encourages increased transparency and access for hearing aid technologies through itemization of audiologic service costs for hearing aids.

- 7) Our AMA supports the availability of over-the-counter hearing aids for the treatment of mild-to-moderate hearing loss.
- 8) Our AMA supports physician and patient education on the proper role of over the counter hearing aids, including the value of physician-led assessment of hearing loss, and when they are appropriate for patients and when there are possible cost-savings.
- 9) Our AMA encourages the United States Preventive Services Task Force to re-evaluate its determination not to recommend preventive hearing services and screenings in asymptomatic adults over age 65 in consideration of new evidence connecting hearing loss to dementia. [CMS Rep. 6, I-15; Appended: Res. 124, A-19; Appended: CMS Rep. 02, A-23; Reaffirmed: CMS Rep. 02, A-23]

H-25.990 Eye Exams for the Elderly

1. Our American Medical Association encourages the development of programs and/or outreach efforts to support periodic eye examinations and access to affordable prescription eyeglasses for elderly patients.
2. Our AMA encourages physicians to work with their state medical associations and appropriate specialty societies to create statutes that uphold the interests of patients and communities and that safeguard physicians from liability when reporting in good faith the results of vision screenings. [Res. 813, I-05; Reaffirmed: CSAPH Rep. 1, A-15; Modified: CMS Rep. 02, A-23]

H-330.872 Medicare Coverage for Dental Services

Our AMA supports: (1) continued opportunities to work with the American Dental Association and other interested national organizations to improve access to dental care for Medicare beneficiaries; and (2) initiatives to expand health services research on the effectiveness of expanded dental coverage in improving health and preventing disease in the Medicare population, the optimal dental benefit plan designs to cost-effectively improve health and prevent disease in the Medicare population, and the impact of expanded dental coverage on health care costs and utilization. [CMS Rep. 03, A-19; Reaffirmed: CMS Rep. 02, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 103
(A-24)

Introduced by: Oklahoma
Subject: Medicare Advantage Plans
Referred to: Reference Committee A

1 Whereas, 52% of Medicare beneficiaries are now enrolled in Medicare Advantage (MA) plans,
2 with an anticipated growth to 70% within a years; and
3

4 Whereas, a former Center for Medicare and Medicaid Services (CMS) administrator stated
5 recently in a national publication that, "I think MA growth should be slowed or stopped, at least
6 until we end the extraordinarily high subsidies for MA plans, which are unfair to traditional
7 Medicare and burdensome to the treasury and many beneficiaries."¹; and
8

9 Whereas, it is anticipated that MA plans, in 2024 will receive \$88 billion more than what is spent
10 for the same number of patient in traditional Medicare; and
11

12 Whereas, it is anticipated that MA plans, in 2024 will receive \$88 billion more than what is spent
13 for the same number of patient in traditional Medicare; and
14

15 Whereas, the amount that an MA plan gets is adjusted for the number of codes for diagnoses
16 that a beneficiary has; and
17

18 Whereas, providers and physicians are rewarded in any MA plans for upcoming, or they receive
19 a percentage of the insurance premium the MA collects from CMS or, they are employed by the
20 MA; and
21

22 Whereas, this ends up being a transfer of funds out of the healthcare arena into the private
23 sector, which goes to profit for the MA, or for stock buybacks, or for higher compensation for the
24 MA executives, and activities that don't benefit beneficiaries; therefore be it
25

26 RESOLVED, that our American Medical Association urge the United States Congress and
27 Center for Medicare and Medicaid Services to take steps to end the upcoding for Medicare
28 Advantage plans that results in high subsidies which are unfair to traditional Medicare and
29 burdensome to the public treasury and many beneficiaries (New HOD Policy); and be it further
30

31 RESOLVED, that our AMA encourages Center for Medicare and Medicaid Services to improve
32 the attractiveness of traditional Medicare so that the option remains robust and available giving
33 beneficiaries greater traditional choices for this option and to seek better care for themselves.
34 (New HOD Policy)
35

Fiscal Note: Modest - between \$1,000 - \$5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 104
(A-24)

Introduced by: Medical Student Section

Subject: Medicaid Estate Recovery Reform

Referred to: Reference Committee A

1 Whereas, 70% of Medicare beneficiaries will require long-term supports and services (LTSS),
2 but since annual LTSS costs exceeds the median Medicare beneficiary's total savings, many
3 must deplete their savings and become destitute to receive Medicaid LTSS coverage;¹⁻⁹ and
4

5 Whereas, the Social Security Act requires states to recover all Medicaid costs from patients'
6 estates after their death, but states typically only recover 0-1%, resulting in insignificant effects
7 on state budgets but disproportionate detriment to patients' inheritors;^{4,10-12} and
8

9 Whereas, because the Social Security Act does not require recovery of nonprobate assets,
10 patients with greater wealth or access to legal and financial estate planning services can evade
11 estate recovery with careful planning and modern methods of wealth transfer;^{10,13-15} and
12

13 Whereas, states disproportionately recover costs from low-income patients, exacerbating racial
14 wealth gaps and preventing intergenerational wealth;¹³ and
15

16 Whereas, Black Medicaid patients die with a median net worth of \$800, compared to white
17 Medicaid patients with \$2100, so estate recovery more rapidly depletes Black wealth;¹² and
18

19 Whereas, 25 states use 1115 waivers to capitate Medicaid LTSS coverage and may therefore
20 recover capitation payments from estates, even if a patient never received LTSS;¹⁶⁻¹⁸ and
21

22 Whereas, alternative methods to reduce LTSS costs exist, such as clinical demonstration
23 projects that improve patient outcomes while saving \$12,000 per patient annually;¹⁹ and
24

25 Whereas, California dramatically limited estate recovery by excluding patients survived by a
26 spouse and homes of modest value, and the Stop Unfair Medicaid Recoveries Act in Congress
27 would end Medicaid estate recovery altogether;²⁰⁻²¹ therefore be it
28

29 RESOLVED, that our American Medical Association oppose federal or state efforts to impose
30 liens on or seek adjustment or recovery from the estate of individuals who received long-term
31 services or supports coverage under Medicaid. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA Policy

Policy Directions for the Financing of Long-Term Care H-280.991

Our American Medical Association believes that programs to finance long-term care should:

1. Assure access to needed services when personal resources are inadequate to finance care.
2. Protect personal autonomy and responsibility in the selection of LTC service providers.
3. Prevent impoverishment of the individual or family in the face of extended or catastrophic service costs.
4. Account for equity in order to assure affordability of long-term care for all Americans.
5. Cover needed services in a timely, coordinated manner in the least restrictive setting appropriate to the health care needs of the individual.

6. Coordinate benefits across different LTC financing program.
7. Provide coverage for the medical components of long-term care through Medicaid for all individuals with income below 100 percent of the poverty level.
8. Provide sliding scale subsidies for the purchase of LTC insurance coverage for individuals with income between 100-200 percent of the poverty level.
9. Encourage private sector LTC coverage through an asset protection program; equivalent to the amount of private LTC coverage purchased.
10. Create tax incentives to allow individuals to prospectively finance the cost of LTC coverage, encourage employers to offer such policies as a part of employee benefit packages and otherwise treat employer-provided coverage in the same fashion as health insurance coverage, and allow tax-free withdrawals from IRAs and Employee Trusts for payment of LTC insurance premiums and expenses.
11. Authorize a tax deduction or credit to encourage family care giving. Consumer information programs should be expanded to emphasize the need for prefunding anticipated costs for LTC and to describe the coverage limitations of Medicare, Medicaid, and traditional medigap policies. State medical associations should be encouraged to seek appropriate legislation or regulation in their jurisdictions to:
 - a. provide an environment within their states that permit innovative LTC financing and delivery arrangements, and
 - b. assure that private LTC financing and delivery systems, once developed, provide the appropriate safeguards for the delivery of high quality care.

Our AMA continues to evaluate and support additional health system reform legislative initiatives that could increase states' flexibility to design and implement long-term care delivery and financing programs. Our AMA will also encourage and support the legislative and funding changes needed to enable more accurate and disaggregated collection and reporting of data on health care spending by type of service, so as to enable more informed decisions as to those social components of long-term care that should not be covered by public or private health care financing mechanisms.

2. Our AMA will work with Centers for Medicare & Medicaid Services and other relevant stakeholders to formulate appropriate medical insurance plans to provide long-term care coverage for patients with Alzheimer's and other forms of dementia. [BOT Rep. O, A-88; BOT Rep. X, I-88; Reaffirmed: CMS Rep. 3, A-94; BOT Rep. S, I-87; Reaffirmed: CMS Rep. 3-A-94; CMS Rep. 11, I-95; Reaffirmation A-04; Modified: CMS Rep. 6, I-05; Reaffirmed: BOT Rep. 32, A-09; Reaffirmation A-11; Reaffirmed: CMS Rep. 05, A-18; Appended: Res. 110, A-23; Modified: Res. 815, I-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 105
(A-24)

Introduced by: Medical Student Section

Subject: Medigap Patient Protections

Referred to: Reference Committee A

1 Whereas, Medicare Supplement (Medigap) plans are used by 23% of Medicare beneficiaries
2 (14 million) to make Traditional Medicare more affordable and avoid the myriad problems with
3 Medicare Part C, including limited networks and prior authorizations¹⁻¹³; and
4

5 Whereas, when seniors enroll in Medicare Part B, they are offered a one-time 6-month
6 enrollment period for Medigap, during which they are protected by guaranteed issue and
7 community rating, preventing price discrimination based on health, age, or gender¹³⁻¹⁴; and
8

9 Whereas, after the initial 6-month Medigap enrollment period, protections for guaranteed issue
10 and community rating no longer apply, even though guaranteed issue and (modified) community
11 ratings are permanent and universal in the Affordable Care Act (ACA) marketplace¹³⁻¹⁶; and
12

13 Whereas, Medigap plans are required to be offered to all Medicare beneficiaries over 65, but not
14 to other Medicare beneficiaries under 65 on dialysis or with disabilities¹⁷⁻¹⁸; and
15

16 Whereas, several states have enacted Medigap protections for guaranteed issue, community
17 rating, and eligibility for Medicare beneficiaries under 65 and demonstrated reduced switching
18 from Traditional Medicare to Medicare Part C¹⁹⁻²⁵; and
19

20 Whereas, Congress is currently investigating deceptive tactics by private Medigap insurers,
21 presenting a timely opportunity for regulation of private health insurance companies' dubious
22 marketing tactics to steer consumers into purchasing more expensive Medigap plans,
23 representing a timely opportunity for regulatory reform^{24,26}; and
24

25 Whereas, at I-23, the AMA passed H-390.832, "Saving Traditional Medicare," "recognizing that
26 Traditional Medicare is a critical healthcare program while educating the public on the benefits
27 and threats of Medicare Part C expansion" and "acknowledg[ing] that the term "Medicare
28 Advantage" can be misleading, as it implies a superiority or enhanced value over traditional
29 Medicare, which may not accurately reflect the nature and challenges of these plans"; therefore
30 be it
31

32 RESOLVED, that our American Medical Association support annual open enrollment periods
33 and guaranteed lifetime enrollment eligibility for Medigap plans (New HOD Policy); and be it
34 further
35

36 RESOLVED, that our AMA advocate for extending modified community rating regulations to
37 Medigap supplemental insurance plans, similar to those enacted under the Affordable Care Act
38 for commercial insurance plans (Directive to Take Action); and be it further

1 RESOLVED, that our AMA support efforts to expand access to Medigap policies to all
2 individuals who qualify for Medicare benefits (New HOD Policy); and be it further

3

4 RESOLVED, that our AMA supports efforts to improve the affordability of Medigap supplemental
5 insurance for lower income Medicare beneficiaries. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

RELEVANT AMA Policy

Health Insurance Market Regulation H-165.856

Our AMA supports the following principles for health insurance market regulation:

- (1) There should be greater national uniformity of market regulation across health insurance markets, regardless of type of sub-market (e.g., large group, small group, individual), geographic location, or type of health plan.
- (2) State variation in market regulation is permissible so long as states demonstrate that departures from national regulations would not drive up the number of uninsured, and so long as variations do not unduly hamper the development of multi-state group purchasing alliances, or create adverse selection.
- (3) Risk-related subsidies such as subsidies for high-risk pools, reinsurance, and risk adjustment should be financed through general tax revenues rather than through strict community rating or premium surcharges.
- (4) Strict community rating should be replaced with modified community rating, risk bands, or risk corridors. Although some degree of age rating is acceptable, an individual's genetic information should not be used to determine his or her premium.
- (5) Insured individuals should be protected by guaranteed renewability.
- (6) Guaranteed renewability regulations and multi-year contracts may include provisions allowing insurers to single out individuals for rate changes or other incentives related to changes in controllable lifestyle choices.
- (7) Guaranteed issue regulations should be rescinded.
- (8) Health insurance coverage of pre-existing conditions with guaranteed issue within the context of an individual mandate, in addition to guaranteed renewability.
- (9) Insured individuals wishing to switch plans should be subject to a lesser degree of risk rating and pre-existing conditions limitations than individuals who are newly seeking coverage.
- (10) The regulatory environment should enable rather than impede private market innovation in product development and purchasing arrangements. Specifically: (a) legislative and regulatory barriers to the formation and operation of group purchasing alliances should, in general, be removed; (b) benefit mandates should be minimized to allow markets to determine benefit packages and permit a wide choice of coverage options; and (c) any legislative and regulatory barriers to the development of multi-year insurance contracts should be identified and removed.

Medicare Advantage Policies H-285.913

Our AMA will: 1. pursue legislation requiring that any Medicare Advantage policy sold to a Medicare patient must include a seven-day waiting period that allows for cancellation without penalty; 2. pursue legislation to require that Medicare Advantage policies carry a separate distinct page, which the patient must sign, including the statement, "THIS COVERAGE IS NOT TRADITIONAL MEDICARE. YOU HAVE CHOSEN TO CANCEL YOUR TRADITIONAL MEDICARE COVERAGE; NOT ALL PHYSICIANS, HOSPITALS AND LABORATORIES ACCEPT THIS NEW MEDICARE ADVANTAGE POLICY AND YOU MAY PERMANENTLY LOSE THE ABILITY TO PURCHASE MEDIGAP SECONDARY INSURANCE" (or

equivalent statement) and specifying the time period before they can resume their traditional Medicare coverage; and 3. petition the Centers for Medicare and Medicaid Services to implement the patient's signature page in a Medicare Advantage policy. [Res. 907, I-07; Reaffirmation A-08; Reaffirmed: CMS Rep. 01, A-18; Reaffirmation: I-18]

Deemed Participation and Misleading Marketing by Medicare Advantage Private Fee for Service Plans D-330.930

Our AMA will continue its efforts to educate physicians and the general public on the implications of participating in programs offered under Medicare Advantage and educate physicians and the public about the lack of secondary coverage (Medigap policies) with Medicare Advantage plans and how this may affect enrollees. [BOT Action in response to referred for decision Res. 711, I-06; Reaffirmation A-08; Modified: CMS Rep. 01, A-19]

Ensuring Marketplace Competition and Health Plan Choice H-165.825

Our AMA will: (1) support health plans offering coverage options for individuals and small groups competing on a level playing field, including providing coverage for pre-existing conditions and essential health benefits; (2) oppose the sale of health insurance plans in the individual and small group markets that do not guarantee: (a) pre-existing condition protections and (b) coverage of essential health benefits and their associated protections against annual and lifetime limits, and out-of-pocket expenses, except in the limited circumstance of short-term limited duration insurance offered for no more than three months; and (3) support requiring the largest two Federal Employees Health Benefits Program (FEHBP) insurers in counties that lack a marketplace plan to offer at least one silver-level marketplace plan as a condition of FEHBP participation. [CMS Rep. 03, A-18; Reaffirmed: CMS Rep. 01, I-20]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 106
(A-24)

Introduced by: American Society for Gastrointestinal Endoscopy, American College of Gastroenterology, American Gastroenterological Association

Subject: Incorporating Surveillance Colonoscopy into the Colorectal Cancer Screening Continuum

Referred to: Reference Committee A

- 1 Whereas, in 2024, an estimated 153,000 cases of colorectal cancer (CRC) will be diagnosed in
2 the United States, and a total of 53,010 people will die from this cancer¹; and
3
4 Whereas, while CRC incidence and mortality rates have been declining because, in part, of
5 screening uptake among adults ages 50 years and older, rates have increased by 1-2 percent
6 per year since the mid-1990s in those younger than 55 years of age²; and
7
8 Whereas, when detected and treated early, the five-year survival rate for CRC is 90 percent;
9 yet, early detection occurs in less than 40 percent of CRC cases³; and
10
11 Whereas, the Affordable Care Act (ACA) requires that several CRC screening modalities,
12 including colonoscopy, be covered without patient cost-sharing for eligible individuals by non-
13 grandfathered group health plans and non-grandfathered group or individual health insurance
14 coverage; and
15
16 Whereas, the Centers for Medicare and Medicaid Services recently reported 21.3 million
17 consumers signed up for 2024 individual health insurance coverage through the Marketplaces,⁴
18 with nearly 65 percent of individuals between 18-54 years of age⁵ — the same demographic
19 experiencing increased rates of CRC; and
20
21 Whereas, the U.S. Multi-Society Task Force on Colorectal Cancer recommends that
22 asymptomatic individuals undergoing screening colonoscopy seek follow-up colonoscopy
23 exams to evaluate for new polyps at specific intervals based on the findings of the exam,
24 ranging between one to 10 years⁶; and
25
26 Whereas, Medicare considers these additional, follow-up, or surveillance, colonoscopies as
27 screening exams; and
28
29 Whereas, commercial insurers regulated by the ACA routinely treat a follow-up colonoscopy
30 exam at an interval shorter than 10 years as a “diagnostic” service rather than screening or
31 surveillance, even if a patient is asymptomatic; and
32
33 Whereas, clinical evidence indicates screening colonoscopy exams, including surveillance
34 colonoscopies, and post-polypectomy follow-up play a critical role in reducing colorectal cancer
35 incidence and death; and

1 Whereas, the U.S. Department of Health and Human Services (HHS) has the authority to issue
2 written guidance that clarifies surveillance colonoscopy after an original screening colonoscopy
3 that required polyp removal is part of the screening continuum and should therefore be covered
4 without patient cost sharing as a preventive services benefit under the ACA; and
5

6 Whereas, more than 90 national and state medical societies and patient advocacy groups have
7 asked⁷ HHS to use its existing regulatory authority make this policy clarification. And, in early
8 2024, 45 members of the U.S. House of Representatives sent a similar letter⁸ to HHS, also
9 urging the same change; therefore be it

10
11 RESOLVED, that our American Medical Association Policy H-185.960, “Support for the
12 Inclusion of the Benefit for Screening for Colorectal Cancer in All Health Plans” be amended by
13 addition to read as follows:
14

- 15 1. Our AMA supports health plan coverage for the full range of colorectal cancer
16 screening tests.
17
- 18 2. Our AMA will seek to eliminate cost-sharing in all health plans for the full range of
19 colorectal cancer screening and all associated costs, including colonoscopy that
20 includes a “diagnostic” intervention (i.e. the removal of a polyp or biopsy of a mass),
21 as defined by Medicare. To further this goal, the AMA will develop a coding guide to
22 promote common understanding among health care providers, payers, health care
23 information technology vendors, and patients.
24
- 25 3. Our AMA will seek to eliminate cost-sharing in all health plans for “follow-on”
26 colonoscopies performed for colorectal cancer screening and all associated costs,
27 defined as when other alternative screening tests are found to be positive.
28
- 29 4. Our AMA will seek to classify follow-up, follow-on, or surveillance, colonoscopy after
30 an original screening colonoscopy that required polyp removal as a screening service
31 under the Affordable Care Act preventive services benefit and will seek to eliminate
32 patient cost sharing in all health plans under such circumstances.
33

34 (Modify Current HOD Policy)

Fiscal Note: TBD

Encourage Appropriate Colorectal Cancer Screening H-55.967

Our AMA, in conjunction with interested organizations and societies, supports educational and public awareness programs to assure that physicians actively encourage their patients to be screened for colon cancer and precursor lesions, and to improve patient awareness of appropriate guidelines, particularly within minority populations and for all high-risk groups.

CSAPH Rep. 8, A-23

Encourage Appropriate Colorectal Cancer Screening H-55.967

Our AMA, in conjunction with interested organizations and societies, supports educational and public awareness programs to assure that physicians actively encourage their patients to be screened for colon cancer and precursor lesions, and to improve patient awareness of appropriate guidelines, particularly within minority populations and for all high-risk groups.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 107
(A-24)

Introduced by: Mississippi

Subject: Requiring Government Agencies to Contract Only with Not-For-Profit Insurance Companies

Referred to: Reference Committee A

- 1 Whereas, the medical system in the United States involves a market-like environment with a
2 charity mission; and
3
4 Whereas, for profit insurance companies have taken over much of the health care system, with
5 most of their profits directed to private entities outside of our health system; and
6
7 Whereas, many of the tactics for making a profit include strategies which complicate the
8 provision of medical care for both the patient and the physician; and
9
10 Whereas, the Dutch health care system is recognized as a successful health care system using
11 a market-type multi-payer system which utilizes not-for-profit cooperatives whose profits are
12 allocated to reserves or returned in the form of lower premiums; and
13
14 Whereas, Medicare and Medicaid, which are government owned health insurance agencies,
15 contract with insurance companies to operate aspects of the medical care delivery; therefore be
16 it
17
18 RESOLVED, that our American Medical Association advocate that government-owned health
19 agencies such as Medicare and Medicaid be required to contract only with not-for-profit
20 insurance companies or cooperatives (Directive to Take Action); and be it further
21
22 RESOLVED, that our AMA support that those not-for-profit insurance companies or
23 cooperatives receiving public revenues must allocate profits to reserves, investments in
24 improving the quality of care in the system, or returned in the form of lower premiums for
25 patients or the health agency. (New HOD Policy).
26

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 108
(A-24)

Introduced by: Mississippi

Subject: Requiring Payments for Physician Signatures

Referred to: Reference Committee A

- 1 Whereas, insurance companies often require multiple physician signatures outside of a patient-
2 physician office, nursing home or hospital visit for bureaucratic reasons or to place hurdles to
3 obtaining testing, health services, medications, referrals, or medical equipment; and
4
5 Whereas, primary care physicians often have to sign dozens of signatures daily which are
6 outside of the clinical visit in caring for patients; and
7
8 Whereas, this duty is often a significant burden on physician time and staff time which is not
9 usually paid for; and
10
11 Whereas, physicians desire to care for their patients but often feel like these signatures are
12 deliberately placed by the insurance companies to complicate the provision of services needed;
13 and
14
15 Whereas, if insurance companies had to pay for a physician's time in signing forms, they might
16 reduce the administrative burdens currently imposed on physicians; therefore be it
17
18 RESOLVED, that our American Medical Association advocate that insurance companies be
19 required to pay a physician for any required physician signature and/or peer to peer review
20 which is requested or required outside of a patient visit. (Directive to Take Action)
21

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 109
(A-24)

Introduced by: Association for Clinical Oncology, American Society for Radiation
Oncology

Subject: Coverage for Dental Services Medically Necessary for Cancer Care

Referred to: Reference Committee A

1 Whereas, dental services may be required prior to or after cancer treatment and such services
2 are an integral part of successful cancer treatment; and
3

4 Whereas, dental care is linked to improved outcomes in patients with cancer and improved
5 quality of life; and
6

7 Whereas, the Centers for Medicare & Medicaid Services (CMS) recently expanded coverage for
8 certain cancer treatment-related oral and dental conditions, as well as for pre-treatment exams;
9 and
10

11 Whereas, all patients, regardless of insurance coverage, deserve equal access to these
12 medically necessary treatments; therefore be it
13

14 RESOLVED, that our American Medical Association supports that oral examination and dental
15 services prior to and following the administration of radiation, chemotherapy, chimeric antigen
16 receptor (CAR) T-cell therapy and high-dose bone-modifying agents for the treatment of cancer
17 are part of medically necessary care (New HOD Policy); and be it further
18

19 RESOLVED, that our AMA will advocate that all insurers cover medically necessary oral
20 examination and dental services prior to the administration of and resulting as a complication of
21 radiation, chemotherapy and/or surgery for all cancer of the head and neck region. (Directive to
22 Take Action)
23

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

RELEVANT AMA POLICY

Medicare Coverage for Dental Services H-330.872

Our AMA supports: (1) continued opportunities to work with the American Dental Association and other interested national organizations to improve access to dental care for Medicare beneficiaries; and (2) initiatives to expand health services research on the effectiveness of expanded dental coverage in improving health and preventing disease in the Medicare population, the optimal dental benefit plan designs to cost-effectively improve health and prevent disease in the Medicare population, and the impact of expanded dental coverage on health care costs and utilization.

Increasing Patient Access to Hearing, Dental and Vision Services D-185.972

Our AMA will: (1) promote awareness of hearing impairment as a potential contributor to the development of cognitive impairment or dementia in later life, to physicians as well as to the public; (2) promote, and encourage other stakeholders, including public, private, and professional organizations and relevant governmental agencies, to promote the conduct and acceleration of research into specific patterns and degrees of hearing loss to determine those most linked to cognitive impairment or dementia and amenable to correction; (3) work with interested national medical specialty societies and state medical associations to encourage and promote research into hearing loss as a contributor to cognitive impairment, and to increase patient access to hearing loss identification and remediation services; and (4) work with interested national medical specialty societies and state medical associations to encourage and promote research into vision and dental health and to increase patient access to vision and dental services.

Importance of Oral Health in Patient Care D-160.925

Our AMA: (1) recognizes the importance of (a) managing oral health and (b) access to dental care as a part of optimal patient care; and (2) will explore opportunities for collaboration with the American Dental Association on a comprehensive strategy for improving oral health care and education for clinicians.

Definitions of “Cosmetic” and “Reconstructive” Surgery H-475.992

(1) Our AMA supports the following definitions of "cosmetic" and "reconstructive" surgery: Cosmetic surgery is performed to reshape normal structures of the body in order to improve the patient's appearance and self-esteem. Reconstructive surgery is performed on abnormal structures of the body, including prosthodontic reconstruction (including dental implants) caused by congenital defects, developmental abnormalities, trauma, infection, tumors, or disease. It is generally performed to improve function, but may also be done to approximate a normal appearance. (2) Our AMA supports that reconstructive surgery be covered by all insurers and encourages third party payers to use these definitions in determining services eligible for coverage under the plans they offer or administer.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 110
(A-24)

Introduced by: American Academy of Physical Medicine and Rehabilitation, American Association of Neuromuscular & Electrodiagnostic Medicine, American Academy of Pediatrics

Subject: Coverage for Shoes and Shoe Modifications for Pediatrics Patients Who Require Lower Extremity Orthoses

Referred to: Reference Committee A

- 1 Whereas, pediatric patients with musculoskeletal and/or neuromuscular disorders frequently
2 require lower extremity orthoses to help with their mobility, maximize their function, and prevent
3 contractures; and
4
5 Whereas, an orthosis or orthotic device is defined by the International Standards Organization
6 as an externally applied device used to modify the structural and functional characteristics of the
7 neuromuscular and skeletal system; and
8
9 Whereas, shoes that work with lower extremity orthoses are an essential component of the
10 orthotic intervention; and
11
12 Whereas, one of the goals when choosing the orthoses is to optimize forces and moments
13 acting on bones, ligaments, and joints during standing and walking to allow for the most natural
14 gait; and
15
16 Whereas, the orthoses will not normalize the gait to the best potential without proper footwear;
17 and
18
19 Whereas, there are some shoe options on the market that are deep and roomy enough to
20 accommodate braces which eliminates the need for custom shoes for most patients; and
21
22 Whereas, the commercially available shoes may require external modifications, such as for leg
23 length discrepancy or plantar flexion contracture, which require foot elevation or an external
24 heel lift respectively; and
25
26 Whereas, patients with severe hypotonia, calcaneus feet, and severe crouch using solid ankle-
27 foot orthoses (AFOs) to ambulate require shoes with a stiff sole, custom rocker, and heel lever
28 to maintain consistent roll over to imitate the natural rocking motion of gait; and
29
30 Whereas, those shoe modifications are relatively inexpensive and in the skilled hands of an
31 orthotist are easy to accomplish; and
32
33 Whereas, insurance coverage for shoes to use with orthoses as well as shoe modifications is
34 limited or nonexistent; and
35
36 Whereas, this creates a burden on the patients and families and makes the providers more
37 hesitant to recommend the shoe modifications despite being medically indicated; therefore be it

- 1 RESOLVED, that our American Medical Association support coverage by all private and
2 government insurance companies for pediatric footwear suitable for use with lower extremity
3 orthoses and medically necessary shoe modifications. (New HOD Policy)
4

Fiscal Note: Minimal - less than \$1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 111
(A-24)

Introduced by: Ohio

Subject: Protections for "Guarantee Issue" of Medigap Insurance and Traditional Medicare

Referred to: Reference Committee A

1 Whereas, the Federal Medicare program has 4 parts A, B, C, and D, offering hospital, medical,
2 and pharmacy benefits; and
3
4 Whereas, Part C, known as Medicare Advantage, has become popular for its offerings of zero
5 premiums and additional benefits which are not available through traditional Medicare; and
6
7 Whereas, Medicare Advantage plans have various other limitations such as narrow networks,
8 limited drug coverage, and numerous preauthorization requirements; and
9
10 Whereas, traditional Medicare often requires supplementation through Medigap or
11 Supplemental Insurance policies to cover the remaining 20% of approved expenses not covered
12 by Medicare; and
13
14 Whereas, beneficiaries who switch from Medicare Advantage to traditional Medicare face
15 significant barriers in obtaining Medigap or Supplemental Insurance, often finding themselves
16 effectively locked into their Medicare Advantage plan even if it no longer meets their healthcare
17 needs; and
18
19 Whereas, only four states—Connecticut, Massachusetts, New York, and Maine—offer
20 "guaranteed issue" protections that allow access to Medigap or Supplemental Insurance policies
21 without restrictions after the initial enrollment period for Medicare beneficiaries; therefore be it
22
23 RESOLVED, that our American Medical Association pursue all necessary legislative and
24 administrative measures to ensure that Medicare beneficiaries have the freedom to switch back
25 to Traditional Medicare and obtain Medigap insurance under federal "guaranteed issue"
26 protections. (Directive to Take Action)
27

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 4/26/2024

RELEVANT AMA POLICY

H-285.913 Medicare Advantage Policies

Our AMA will:

1. pursue legislation requiring that any Medicare Advantage policy sold to a Medicare patient must include a seven-day waiting period that allows for cancellation without penalty;
2. pursue legislation to require that Medicare Advantage policies carry a separate distinct page, which the patient must sign, including the statement, "THIS COVERAGE IS NOT TRADITIONAL MEDICARE. YOU HAVE CHOSEN TO CANCEL YOUR TRADITIONAL MEDICARE COVERAGE; NOT ALL PHYSICIANS, HOSPITALS AND LABORATORIES ACCEPT THIS NEW MEDICARE ADVANTAGE POLICY AND YOU MAY PERMANENTLY LOSE THE ABILITY TO PURCHASE MEDIGAP SECONDARY INSURANCE" (or equivalent statement) and specifying the time period before they can resume their traditional Medicare coverage; and
3. petition the Centers for Medicare and Medicaid Services to implement the patient's signature page in a Medicare Advantage policy. [Res. 907, I-07; Reaffirmation A-08; Reaffirmed: CMS Rep. 01, A-18; Reaffirmation: I-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 112
(A-24)

Introduced by: American Academy of Physical Medicine and Rehabilitation

Subject: Private and Public Insurance Coverage for Adaptive Sports Equipment
including Prostheses and Orthoses

Referred to: Reference Committee A

- 1 Whereas, adults with lifelong disabilities are more likely to have chronic disease than adults with
2 no limitations¹; and
3
- 4 Whereas, increased physical activity and exercise are associated with reduced chronic disease
5 risk and most physiologic systems in the body benefit positively from physical activity and
6 exercise by primary and secondary disease prevention²; and
7
- 8 Whereas, the Centers for Disease Control (CDC) acknowledge the benefits of exercise to
9 prevent chronic disease in patients with disability³; and
10
- 11 Whereas, the CDC recommends that adults need a weekly 150 minutes of moderate-intensity
12 physical activity and 2 days of muscle strengthening activity for chronic disease prevention⁴; and
13
- 14 Whereas, people living with disabilities, including lower limb amputations, are 16-62% less likely
15 to meet physical activity guidelines⁴; and
16
- 17 Whereas, sports are a popular means of exercise and physical activity for children, adolescents,
18 and adults in the United States; and
19
- 20 Whereas, children with disabilities are 4.5 times less likely to engage in physical activity than
21 children without disabilities; and
22
- 23 Whereas, individuals with disabilities need specialized prostheses and orthoses for physical
24 activity and recreation to improve access and equity; and
25
- 26 Whereas, organizations like So Every BODY Can Move have helped introduce bills in 13 states
27 for insurance coverage of activity specific adaptive sports and exercise equipment and bills
28 have passed in 5 states; and
29
- 30 Whereas, Medicare part B already covers durable medical equipment including ambulatory
31 assistive devices to promote safe ambulation and increased independence for people with
32 disabilities; therefore be it
33
- 34 RESOLVED, that our American Medical Association recognizes activity-specific adaptive sports
35 and exercise equipment as assistive devices that are integral to the health maintenance of
36 persons with disabilities in accordance with national exercise guidelines (New HOD Policy); and
37 be it further

1 RESOLVED, that our AMA recognizes activity-specific adaptive sports and exercise equipment,
2 such as activity-specific prostheses and orthoses, as medical devices that facilitate
3 independence and community participation (New HOD Policy); and be it further
4

5 RESOLVED, that our AMA advocate for coverage by all private and public insurance plans for
6 activity-specific adaptive sports and exercise equipment for eligible beneficiaries with disabilities
7 in order to promote health maintenance and chronic disease prevention. (Directive to Take
8 Action)
9

RELEVANT AMA POLICY

H-470.990 Promotion of Exercise Within Medicine and Society

Our AMA supports (1) education of the profession on exercise, including instruction on the role of exercise prescription in medical practice in its continuing education courses and conferences, whenever feasible and appropriate; (2) medical student instruction on the prescription of exercise; (3) physical education instruction in the school system; and (4) education of the public on the benefits of exercise, through its public relations program. [Res. 56, I-78; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmation I-98; Reaffirmation A-07; Reaffirmed: BOT Rep. 21, A-12; Reaffirmed: CSAPH Rep. 1, A-22]

H-470.991 Promotion of Exercise

Our AMA: (A) supports the promotion of exercise, particularly exercise of significant cardiovascular benefit; and (B) encourages physicians to prescribe exercise to their patients and to shape programs to meet each patient's capabilities and level of interest. 2. Our AMA supports National Bike to Work Day and encourages active transportation whenever possible. [Res. 83, parts 1 and 2, I-77; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Appended: Res. 604, A-11; Reaffirmed: CSAPH Rep. 1, A-21]

H-25.995 Exercise Programs for the Elderly

The AMA recommends that physicians: (1) stress the importance of exercise for older patients and explain its physiological and psychological benefits; (2) obtain a complete medical history and perform a physical examination that includes exercise testing for quantification of cardiovascular and physical fitness as appropriate, prior to the specific exercise prescription; (3) provide appropriate follow-up of patients' exercise programs; and (4) encourage all patients to establish a lifetime commitment to an exercise program. [CSA Rep. C, I-83; Reaffirmed: CLRPD Rep. 1, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmed: CSAPH Rep. 1, A-15]

H-470.952 Government to Support Community Exercise Venues

Our AMA encourages: (1) towns, cities and counties across the country to make recreational exercise more available by utilizing existing or building walking paths, bicycle trails, swimming pools, beaches and community recreational fitness facilities; and (2) governmental incentives such as tax breaks and grants for the development of community recreational fitness facilities. [CSAPH Rep. 1, A-22]

H-470.997 Exercise and Physical Fitness

Our AMA encourages all physicians to utilize the health potentialities of exercise for their patients as a most important part of health promotion and rehabilitation, and urges state and local medical societies to emphasize through all available channels the need for physical activity for all age groups and both sexes. The AMA encourages other organizations and agencies to join with the Association in promoting physical fitness through all appropriate means. Our AMA will study evidence of the efficacy of physical activity interventions (e.g. group fitness, personal training, or physical therapy) on behavioral activation and outcomes on depressive and anxiety symptoms. [BOT Rep. K, A-66; Reaffirmed: CLRPD Rep. C, A-88; Reaffirmed: Sunset Report, I-98; Modified and Reaffirmed: CSAPH Rep. 2, A-08; Reaffirmed: BOT Rep. 10, A-14; Modified: Res. 421, A-23]

H-90.968 Medical Care of Persons with Disabilities

1. Our AMA encourages: (a) clinicians to learn and appreciate variable presentations of complex functioning profiles in all persons with disabilities including but not limited to physical, sensory, developmental, intellectual, learning, and psychiatric disabilities and chronic illnesses; (b) medical schools and graduate medical education programs to acknowledge the benefits of education on how aspects in the social model of disability (e.g. ableism) can impact the physical and mental health of persons with disabilities; (c) medical schools and graduate medical education programs to acknowledge the benefits of teaching about the nuances of uneven skill sets, often found in the functioning profiles of persons with developmental disabilities, to improve quality in clinical care; (d) education of physicians on how to provide and/or advocate for developmentally appropriate and accessible medical, social and living support for patients with disabilities so as to improve health outcomes; (e) medical schools and residency programs to encourage faculty and trainees to appreciate the opportunities for exploring diagnostic and therapeutic challenges while also accruing significant personal rewards when delivering care with professionalism to persons with profound disabilities and multiple co-morbid medical conditions in any setting; (f) medical schools and graduate medical education programs to establish and encourage enrollment in elective rotations for medical students and residents at health care facilities specializing in care for the disabled; and (g) cooperation among physicians, health & human services professionals, and a wide variety of adults with disabilities to implement priorities and quality improvements for the care of persons with disabilities.

2. Our AMA seeks: (a) legislation to increase the funds available for training physicians in the care of individuals with disabilities, and to increase the reimbursement for the health care of these individuals; and (b) insurance industry and government reimbursement that reflects the true cost of health care of individuals with disabilities.

3. Our AMA entreats health care professionals, parents, and others participating in decision-making to be guided by the following principles: (a) All people with disabilities, regardless of the degree of their disability, should have access to appropriate and affordable medical and dental care throughout their lives; and (b) An individual's medical condition and welfare must be the basis of any medical decision. Our AMA advocates for the highest quality medical care for persons with profound disabilities; encourages support for health care facilities whose primary mission is to meet the health care needs of persons with profound disabilities; and informs physicians that when they are presented with an opportunity to care for patients with profound disabilities, that there are resources available to them.

4. Our AMA will collaborate with appropriate stakeholders to create a model general curriculum/objective that (a) incorporates critical disability studies; and (b) includes people with disabilities as patient instructors in formal training sessions and preclinical and clinical instruction.

5. Our AMA recognizes the importance of managing the health of children and adults with developmental and intellectual disabilities as a part of overall patient care for the entire community.

6. Our AMA supports efforts to educate physicians on health management of children and adults with intellectual and developmental disabilities, as well as the consequences of poor health management on mental and physical health for people with intellectual and developmental disabilities.

7. Our AMA encourages the Liaison Committee on Medical Education, Commission of Osteopathic College Accreditation, and allopathic and osteopathic medical schools to develop and implement a

curriculum on the care and treatment of people with a range of disabilities.

8. Our AMA encourages the Accreditation Council for Graduate Medical Education and graduate medical education programs to develop and implement curriculum on providing appropriate and comprehensive health care to people with a range of disabilities.

9. Our AMA encourages the Accreditation Council for Continuing Medical Education, specialty boards, and other continuing medical education providers to develop and implement continuing programs that focus on the care and treatment of people with a range of disabilities.

10. Our AMA will advocate that the Health Resources and Services Administration include persons with disabilities as a medically underserved population.

11. Specific to people with developmental and intellectual disabilities, a uniquely underserved population, our AMA encourages: (a) medical schools and graduate medical education programs to acknowledge the benefits of teaching about the nuances of uneven skill sets, often found in the functioning profiles of persons with developmental and intellectual disabilities, to improve quality in clinical education; (b) medical schools and graduate medical education programs to establish and encourage enrollment in elective rotations for medical students and residents at health care facilities specializing in care for individuals with developmental and intellectual disabilities; and (c) cooperation among physicians, health and human services professionals, and a wide variety of adults with intellectual and developmental disabilities to implement priorities and quality improvements for the care of persons with intellectual and developmental disabilities. [CCB/CLRPD Rep. 3, A-14; Appended: Res. 306, A-14; Appended: Res. 315, A-17; Appended: Res. 304, A-18; Reaffirmed in lieu of the 1st Resolved: Res. 304, A-18; Modified: Res. 428, A-22]

D-330.961 Social Security Disability Medical Benefits

Our American Medical Association will continue to monitor future research and related developments on Medicare benefits for Social Security disability recipients, and will report and recommend further action to the House of Delegates as appropriate. [Sub. Res. 101, A-03; Reaffirmed: CMS Rep. 4, A-13; Reaffirmed: CMS Rep. 01, A-23]

H-425.970 Promoting Health Awareness and Preventive Screenings in Individuals with Disabilities

Our American Medical Association will work closely with relevant stakeholders to advocate for equitable access to health promotion and preventive screenings for individuals with disabilities. [Res. 911, I-13; Reaffirmed: BOT Rep. 09, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 113
(A-24)

Introduced by: New England
Subject: Support Prescription Medication Price Negotiation
Referred to: Reference Committee A

1 Whereas, the passage of the “Inflation reduction act” is now allowing for negotiation of 10 high
2 priced medications, and allowed for reasonable reduction of the price of insulin¹; and
3
4 Whereas, there are many more overpriced medications that our patients struggle to afford²; and
5
6 Whereas, high prices of medications lead to non-compliance, and worse clinical outcomes^{3, 4};
7 and
8
9 Whereas, medication prices in the US are far above any other country in the world, adversely
10 affecting our patient’s health⁵; and
11
12 Whereas, excessive pharmaceutical prices put a massive strain on our health care system, and
13 directly contribute to high insurance and Medicare premiums⁶; therefore be it
14
15 RESOLVED, that our American Medical Association support pharmaceutical price negotiation
16 for all prescription medications, both Medicare and private insurance (New HOD Policy); and be
17 it further
18
19 RESOLVED, that our AMA advocate for any medication price that is raised by a pharmaceutical
20 company more than the rate of inflation be immediately subject to price negotiation in the
21 following year’s negotiation schedule (Directive to Take Action); and be it further
22
23 RESOLVED, that our AMA support extending the cap on annual out of pocket prescription drug
24 spending in Medicare Part D plans to all insurance plans. (New HOD Policy)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/7/2024

22

American Medical Association House of Delegates

Resolution: 114
(A-24)

Introduced by: New York
Subject: Breast Cancer Screening/Clinical Breast Exam Coverage
Referred to: Reference Committee A

1 Whereas, Centers for Medicare and Medicaid Services, CMS, reimburses Internists and
2 Family Physicians for a single physical at the time of Medicare enrollment at the age of
3 65 with the Initial Preventive Physical Exam, IPPE; and
4
5 Whereas, CMS does not reimburse for any further annual physical exams for medicare
6 patients; and
7
8 Whereas, female patients no longer require annual cervical pap smears after the age of
9 65 if prior pap smears have been negative and they are not at higher risk for cervical
10 cancer, as is applicable for the majority of medicare female patients; and
11
12 Whereas, female patients therefore opt to no longer see their gynecologists after the
13 age of 65 as they no longer require a pap smear or have any active gynecological
14 issues; and
15
16 Whereas, these female patients need an annual or biennial clinical breast exam and this
17 should therefore be performed by their internist or family practitioner at their Annual
18 Wellness Visits (AWV) or Subsequent Annual Wellness Visits (SAWV) after their initial
19 IPPE; and
20
21 Whereas, an internist or family practitioner cannot bill for this clinical breast exam as
22 part of this AWV or SAWV visit, even though this exam is critical and a part of the
23 standard of care for breast cancer screening which includes both imaging and a clinical
24 breast exam; and
25
26 Whereas, this policy by CMS is inconsistent and gender biased since a digital rectal
27 exam for prostate cancer screening in men over 65 for Medicare patients is a covered
28 procedure at the time of their AWV or SAWV appointment with their internist or family
29 practitioner; therefore be it
30
31 RESOLVED, that our American Medical Association advocate for Medicare coverage of
32 clinical breast exams for all female and at-risk male patients during the Medicare Annual
33 Wellness Visit (AWV) and Subsequent Annual Wellness Visit (SAWV) appointments.
34 (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/8/2024

American Medical Association House of Delegates

Resolution: 115
(A-24)

Introduced by: New York
Subject: Payments by Medicare Secondary or Supplemental Plans
Referred to: Reference Committee A

- 1 Whereas, there are more than 50,000 health plans in the United States; and
2
3 Whereas, patients have paid for health insurance either as a supplemental Medicare plan or
4 through their job or union as an earned benefit prior to meeting eligibility for Medicare; and
5
6 Whereas, Medicare allowed amounts are not market based and fixed as an act of government
7 edict; secondary payer does not vary whether a Medicare participating physician is in-network
8 with the secondary payer; and
9
10 Whereas, secondary health plans and Medicare supplemental health plans engage in abusive,
11 predatory, and anticompetitive practices by tying payment as a Medicare secondary plan to
12 whether the Medicare-participating physician that provides care to Medicare patients is in-
13 network with the secondary health plan; and
14
15 Whereas, patients on Medicare are subjected to financial burdens when health plans fail to pay
16 the balance (Medicare deductible and 20% coinsurance) that rightfully belongs to a secondary
17 payer with adverse effects on their health and health equity; therefore be it
18
19 RESOLVED, that our American Medical Association advocate for legislation that would mandate
20 that all health plans cover Medicare secondary claims regardless of the provider participating in
21 the secondary health plan (Directive to Take Action); and be it further
22
23 RESOLVED, that our AMA will report on the status of this resolution and policies H-390.839 and
24 D-390.984 at the 2025 Annual Meeting. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 5/7/2024

RELEVANT AMA POLICY

Requiring Secondary and Supplemental Insurers to Medicare to Follow Medicare Payments H-390.839

Our AMA will support payment by secondary insurers of the balance of the approved Medicare payment in an amount bringing Medicare and secondary payments up to the full allowance of the secondary insurer for services covered by the secondary insurer. Res. 120, A-16

Managed Care Secondary Payers H-385.950

Our AMA:

- (1) will seek regulatory changes that require all payers of secondary Medicare insurance to reimburse the co-insurance and applicable deductible obligations of Medicare beneficiaries;
 - (2) will require that these co-insurance and deductible obligations cannot be waived contractually;
 - (3) will consider the development of draft federal legislation to require Medicare to recognize the total coinsurance and deductible amounts facing Medicare beneficiaries in instances where Medicare provides secondary insurance coverage;
 - (4) advocates that all patients covered by Medicare as their primary carrier and another health insurance plan (not a Medigap policy) as their secondary carrier should be entitled to receive payment in full from their secondary carriers for all Medicare patient deductible and copayments without regard to the amount of the Medicare payment for the service;
 - (5) advocates that all patients covered by Medicare as their primary carrier and another health insurance plan as secondary should be entitled to receive payment in full from their secondary plans for all Medicare patient deductibles and copayments without regard to any requirement that there be prior authorization by the secondary plan for medical care and treatment that is medically necessary under Medicare, by imposing limits on the amount, type or frequency of services covered, and by thereby seeking to "manage" the Medicare benefit, as if the secondary carrier were the primary carrier; and
 - (6) in its advocacy efforts, will address and seek to solve (by negotiation, regulation, or legislation) the problem wherein a secondary insurance company does not reimburse the patient for, nor pay the physician for, the remainder/balance of the allowable amount on the original claim filed with the patient's primary insurance carrier, regardless of the maximum allowed by the secondary insurance payer.]
- BOT Rep. 33, A-96 Appended: Res. 122, A-98 Reaffirmed: Res. 105, A-00 Sub. Res. 104, A-01 Reaffirmation I-01 Appended: Res. 105 and 106, A-03 Appended: Res. 821, I-11 Modified: BOT Rep. 7, A-21

Payment by Health Insurance Plans of Medicare Deductibles and Copayments D-390.984

Our AMA will: (1) seek legislation to compel all insurers paying secondary to Medicare to be required to pay the deductibles and coinsurance owed after the Medicare payment is made; and (2) seek federal legislation to require that a secondary plan not manage the primary Medicare benefit by imposing limits as if it were primary.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 09-A-24

Subject: Council on Legislation Sunset Review of 2014 House Policies

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

- 1 Policy G-600.110, “Sunset Mechanism for AMA Policy,” calls for the decennial review of
2 American Medical Association (AMA) policies to ensure that our AMA’s policy database is
3 current, coherent, and relevant. Policy G-600.010 reads as follows, laying out the parameters for
4 review and specifying the procedures to follow:
5
6 1. As the House of Delegates (HOD) adopts policies, a maximum ten-year time horizon shall
7 exist. A policy will typically sunset after 10 years unless action is taken by the HOD to retain
8 it. Any action of our AMA HOD that reaffirms or amends an existing policy position shall
9 reset the sunset “clock,” making the reaffirmed or amended policy viable for another 10 years.
10
11 2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the
12 following procedures shall be followed: (a) Each year, the Speakers shall provide a list of
13 policies that are subject to review under the policy sunset mechanism; (b) Such policies shall
14 be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been
15 asked to review policies shall develop and submit a report to the HOD identifying policies that
16 are scheduled to sunset; (d) For each policy under review, the reviewing council can
17 recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain
18 part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each
19 recommendation that it makes to retain a policy in any fashion, the reviewing council shall
20 provide a succinct, but cogent justification; or (f) The Speakers shall determine the best way
21 for the HOD to handle the sunset reports.
22
23 3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier
24 than its 10-year horizon if it is no longer relevant, has been superseded by a more current
25 policy, or has been accomplished.
26
27 4. The AMA councils and the HOD should conform to the following guidelines for sunset:
28 (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been
29 accomplished; or (c) when the policy or directive is part of an established AMA practice that is
30 transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA HOD
31 Reference Manual: Procedures, Policies and Practices.
32
33 5. The most recent policy shall be deemed to supersede contradictory past AMA policies.
34
35 6. Sunset policies will be retained in the AMA historical archives.

1 RECOMMENDATION

2

3 The Board of Trustees recommends that the House of Delegates policies that are listed in the
 4 appendix to this report be acted upon in the manner indicated and the remainder of this report be
 5 filed.

APPENDIX – Recommended Actions

Policy Number	Title	Text	Recommendation
D-105.996	Impact of Pharmaceutical Advertising on Women's Health	<p>1. Our AMA urges the US Food and Drug Administration (FDA) to assure that all direct-to-consumer advertising of pharmaceuticals includes information regarding differing effects and risks between the sexes.</p> <p>2. Our AMA urges the FDA to assure that advertising of pharmaceuticals to health care professionals includes specifics outlining whether testing of drugs prescribed to both sexes has included sufficient numbers of women to assure safe use in this population and whether such testing has identified needs to modify dosages based on sex.</p> <p>(Res. 509, A-14)</p>	Retain – this policy remains relevant.
D-115.988	Medication Non-Adherence and Errors	<p>Our AMA will recommend the Centers for Medicare & Medicaid Services conduct a cost/benefit analysis and an analysis of the ability of seniors and people with disabilities to use blister packs in order to determine the feasibility of expanding coverage for timed calendar blister packs for prescription medications beyond residents of long term care facilities.</p> <p>(BOT Rep. 11, A-14)</p>	<p>Sunset this policy.</p> <p>The recommendation was communicated to the Centers for Medicare & Medicaid Services.</p>
D-120.944	Improvement of Electronic Prescription Software	<p>Our AMA will: (1) advocate for changing the national standards for controlled substance prescriptions so that prescriptions for controlled substances can be transmitted electronically directly to the pharmacy in a secure manner; and (2) work with pharmacies, vendors, and other appropriate entities to encourage the use of standards that would allow the transmission of short messages regarding</p>	<p>Retain this policy in part.</p> <p>Delete clause (1). Drug Enforcement Administration regulations allow the option of writing prescriptions for controlled substances electronically. The regulations also permit</p>

Policy Number	Title	Text	Recommendation
		<p>prescriptions so that both physicians and pharmacists could communicate directly with each other within the secure health records systems that they are already using.</p> <p>(Res. 209, A-14)</p>	<p>pharmacies to receive, dispense, and archive these electronic prescriptions.</p>
D-120.980	Regulation of Media-Based Drug Sales Without Good Faith Medical Examination	<p>Our AMA will develop and promote model federal legislation to eliminate the sale, without a legitimate prescription, of prescription drugs over the Internet, if such bills to establish national standards in this area are not forthcoming.</p> <p>(Sub. Res. 520, A-04; Reaffirmed: BOT Rep. 19, A-14)</p>	<p>Sunset this policy.</p> <p>This policy has been superseded by more recent AMA policy (H-120.956, Internet Prescribing).</p>
D-130.971	The Future of Emergency and Trauma Care	<p>Our AMA will: (1) expand the dialogue among relevant specialty societies to gather data and identify best practices for the staffing, delivery, and financing of emergency/trauma services, including mechanisms for the effective regionalization of care and use of information technology, teleradiology and other advanced technologies to improve the efficiency of care; (2) with the advice of specific specialty societies, advocate for the creation and funding of additional residency training positions in specialties that provide emergency and trauma care and for financial incentive programs, such as loan repayment programs, to attract physicians to these specialties; (3) continue to advocate for the following: a. Insurer payment to physicians who have delivered EMTALA-mandated, emergency care, regardless of in-network or out-of-network patient status, b. Financial support for providing EMTALA-mandated care to uninsured patients, c. Bonus payments to physicians who provide emergency/trauma services to patients from physician shortage areas, regardless of the site of service, d. Federal and state liability protections for physicians providing EMTALA-mandated care; (4) disseminate these</p>	<p>Retain – this policy remains relevant.</p>

Policy Number	Title	Text	Recommendation
		<p>recommendations immediately to all stakeholders including but not limited to Graduate Medical Education Program Directors for appropriate action/implementation; (5) support demonstration programs to evaluate the expansion of liability protections under the Federal Tort Claims Act for EMTALA-related care; (6) support the extension of the Federal Tort Claims Act (FTCA) to all Emergency Medical Treatment and Labor Act (EMTALA) mandated care if an evaluation of a demonstration program, as called for in AMA Policy D-130.971(5), shows evidence that physicians would benefit by such extension; and (7) if an evaluation of a demonstration program, as called for in AMA Policy D-130.971(5), shows evidence that physicians would benefit by extension of the FTCA, our AMA will conduct a legislative campaign, coordinated with national specialty societies, targeted toward extending FTCA protections to all EMTALA-mandated care, and the AMA will assign high priority to this effort.</p> <p>(BOT Rep. 14, I-06; Reaffirmation A-07; Reaffirmation A-08; BOT action in response to referred for decision Res. 204, A-11; Appended: Res. 221, I-11; Modified: CCB/CLRPD Rep. 2, A-14)</p>	
D-130.976	Implications of the November 2003 Emergency Medical Treatment and Labor Act (EMTALA) Final Rule	<p>Our AMA will: (1) ask the EMTALA Technical Advisory Group (TAG) and the Centers for Medicare and Medicaid Services (CMS) for assistance in ameliorating the differential economic and staffing burdens on certain categories of facilities, including but not limited to academic health centers, trauma centers, critical access hospitals, and safety net hospitals, which are likely to receive high volumes of patients as a result of the EMTALA regulations; (2) work with the EMTALA TAG and CMS to ensure that physicians staffing emergency departments and on-call</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		<p>emergency services be appropriately compensated for providing EMTALA mandated services; (3) with input from all interested Federation members, coordinate an effort to educate the membership about emergency department coverage issues and the efforts to resolve them; (4) seek to require all insurers, both public and private, to pay promptly and fairly all claims for services mandated by EMTALA for all plans they offer, or face fines and penalties comparable to those imposed on providers; and (5) seek to have CMS require all states participating in Medicaid, as a condition of continued participation, establish and adequately fund state Emergency Medical Services funds which physicians providing EMTALA-mandated services may bill, and from which those physicians shall receive prompt and fair compensation.</p> <p>(CME Rep. 3, A-05; Reaffirmation A-07; Reaffirmed in lieu of Res. 605, I-08; Modified: CCB/CLRPD Rep. 2, A-14)</p>	
D-160.991	Licensure and Liability for Senior Physician Volunteers	<p>Our AMA (1) and its Senior Physician Group will inform physicians about federal and state-based charitable immunity laws that protect physicians wishing to volunteer their services in free medical clinics and other venues; and (2) will work with organizations representing free clinics to promote opportunities for physicians who wish to volunteer.</p> <p>(BOT Rep. 17, A-04; Reaffirmed: CCB/CLRPD Rep. 1, A-14)</p>	Retain – this policy remains relevant.
D-175.985	The CMS Electronic Medical Records Initiative Should Not Be Used To Detect Alleged Fraud by Physicians	<p>1. Our AMA will (A) communicate its concerns about the plan recently announced by the Centers for Medicare and Medicaid Services (CMS), in which CMS is to use data from the electronic medical record incentive program in the pursuit of fraud, waste and abuse; and (B) seek active involvement in the drafting of all program directives for CMS's electronic medical record</p>	<p>Retain this policy in part.</p> <p>Delete clauses (1) - (4) and modify clause (7). Our AMA communicated these concerns to the Centers for Medicare & Medicaid Services.</p>

Policy Number	Title	Text	Recommendation
		<p>initiative, including all directives about potential data capture and subsequent audit processes.</p> <p>2. Our AMA will lead an effort in concert with the Centers for Medicare and Medicaid Services to establish specific guidance to be utilized by entities that audit documentation generated by an electronic health record.</p> <p>3. Such guidance will provide specific protocols used by Medicare and Medicaid auditors to allege a service is not reasonable and necessary based on the generation of an electronic health record.</p> <p>4. Our AMA will inform state and specialty societies about available AMA resources to assist physicians with audits of electronic health records and prominently feature on their website information about methods, resources, and technologies related to appeals of electronic health record audits and Medicare and Medicaid overpayment recoveries as a members-only benefit.</p> <p>51. Our AMA believes that the use of time-saving features, such as cloning, templates, macros, "pull forward technology", auto-population and identical language in EMRs, by itself is not an indication of inaccurate documentation or incorrect coding.</p> <p>62. Our AMA believes that audit results that imply incorrect coding must specifically indicate which portion of the chart language either does not accurately reflect the office visit or reflects unnecessary care.</p> <p>73. Our AMA will: (1) develop guidelines in conjunction with the Centers for Medicare & Medicaid Services to provide clear and direct guidance to physicians concerning the permissible use for coding and billing of electronic health record (EHR) clinical documentation tools, such as templates, macros, cutting and pasting, and cloning; and (2) study the impact of EHR clinical documentation tools and shortcuts on</p>	

Policy Number	Title	Text	Recommendation
		<p>patient safety, quality of care and safe harbor laws.</p> <p>(Res. 212, A-10; Appended: Res. 206, I-11; Appended: Res. 715, A-13; Reaffirmed: BOT Rep. 20, A-14)</p>	
D-215.995	Specialty Hospitals and Impact on Health Care	<p>Our AMA will: (1) oppose efforts to either temporarily or permanently extend the 18-month moratorium on physician referrals to specialty hospitals in which they have an ownership interest; (2) support changes in the inpatient and outpatient Medicare prospective payment systems to eliminate the need for cross-subsidization by more accurately reflecting the relative costs of hospital care; (3) support federal legislation and/or regulations that would fix the flawed methodology for allocating Medicare and Medicaid Disproportionate Share Hospital (DSH) payments to help ensure the financial viability of safety-net hospitals so they can continue to provide adequate access to health care for indigent patients; (4) encourage physicians who contemplate formation of a specialty hospital to consider the best health interests of the community they serve. Physicians should explore the opportunities to enter into joint ventures with existing community hospitals before proceeding with the formation of a physician-owned specialty hospital; and (5) oppose the enactment of federal certificate of need (CON) legislation and support state medical associations in their advocacy efforts to repeal current CON statutes and to oppose the reinstatement of CON legislation or its expansion to physician-owned ambulatory health care facilities.</p> <p>(BOT Rep. 15, I-04; Reaffirmation A-09; Modified: CCB/CLRPD Rep. 2, A-14)</p>	Retain – this policy remains relevant.
D-255.985	Conrad 30 - J-1 Visa Waivers	<p>1. Our AMA will: (A) lobby for the reauthorization of the Conrad 30 J-1 Visa Waiver Program; (B) advocate that the J-1 Visa waiver slots be increased from 30 to 50 per state; (C) advocate for</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		<p>expansion of the J-1 Visa Waiver Program to allow IMGs to serve on the faculty of medical schools and residency programs in geographic areas or specialties with workforce shortages; (D) publish on its website J-1 visa waiver (Conrad 30) statistics and information provided by state Conrad 30 administrators along with a frequently asked questions (FAQs) document about the Conrad 30 program; (E) advocate for solutions to expand the J-1 Visa Waiver Program to increase the overall number of waiver positions in the US in order to increase the number of IMGs who are willing to work in underserved areas to alleviate the physician workforce shortage; (F) work with the Educational Commission for Foreign Medical Graduates and other stakeholders to facilitate better communication and information sharing among Conrad 30 administrators, IMGs, US Citizenship and Immigration Services and the State Department; and (G) continue to communicate with the Conrad 30 administrators and IMGs members to share information and best practices in order to fully utilize and expand the Conrad 30 program.</p> <p>2. Our AMA will continue to monitor legislation and provide support for improvements to the J-1 Visa Waiver program.</p> <p>3. Our AMA will continue to promote its educational or other relevant resources to IMGs participating or considering participating in J-1 Visa waiver programs.</p> <p>4. As a benefit of membership, our AMA will provide advice and information on Federation and other resources (but not legal opinions or representation), as appropriate to IMGs in matters pertaining to work-related abuses.</p> <p>5. Our AMA encourages IMGs to consult with their state medical society and consider requesting that their state society ask for assistance by the AMA</p>	

Policy Number	Title	Text	Recommendation
		<p>Litigation Center, if it meets the Litigation Center's established case selection criteria.</p> <p>(Res. 233, A-06; Appended: CME Rep. 10, A-11; Appended: Res. 303, A-11; Reaffirmation I-11; Modified: BOT Rep. 5, I-12; Appended: BOT Rep. 27, A-13; Reaffirmation A-14)</p>	
D-255.993	J-1 Visas and Waivers	<p>1. Our AMA shall encourage HHS and other interested government agencies to continue sponsorship of the J-1 visa waiver program.</p> <p>2. If the USDA does not continue in its role as an interested government agency (IGA), the AMA encourage HHS to expand its J-1 visa waiver program.</p> <p>3. Our AMA will work with federal agencies to ensure better coordination of federal, state, and local agencies in monitoring the placement and enforcement of physicians' service requirements through the J-1 waiver and Conrad-30 programs with a report back at A-03.</p> <p>4. Our AMA will work towards regulation and/or legislation to allow physicians on H-1B <u>waiver</u> visas for their J-1 visa waiver, who are limited to serving in medically underserved areas, to continue to care for their patients who require hospitalization in the closest appropriate medical facility which may not be in the underserved area.</p> <p>5. Our AMA will work with state medical societies to study and report back on the feasibility of having support a national data repository of J-1 Visa Waiver statistics so that J-1 Visa Waiver unoffered positions can be transferred to states as needed to treat underserved communities and to monitor the success of this program.</p> <p>(BOT Rep. 11, I-02; Appended: Res. 324, A-11; Appended: Res. 904, I-11; Reaffirmation A-14)</p>	<p>Retain this policy in part.</p> <p>Delete clause (2) and modify clauses (3) – (5). In 2002 the USDA decided to discontinue its role as an IGA on behalf of foreign research scientists or physicians desiring a recommendation of a J-1 Visa waiver. Moreover, HHS has already expanded its J-1 visa waiver program.</p>

Policy Number	Title	Text	Recommendation
D-260.994	Point of Care Availability for Blood Glucose Testing	<p>Our AMA will work with the Food and Drug Administration and the Centers for Medicare & Medicaid Services to maintain the Clinical Laboratory Improvement Act exempt status of point-of-care glucose testing.</p> <p>(Res. 727, A-14)</p>	<p>Sunset this policy.</p> <p>Our AMA communicated support to the U.S. Food and Drug Administration and the Centers for Medicare & Medicaid services for Clinical Laboratory Improvement Amendments exempt status of point of care blood glucose testing.</p>
D-315.984	Ownership of Claims Data	<p>Our AMA will: (1) encourage physicians to include language designed to buttress rights associated with claims data ownership and access when contracting with health plan payers and other third parties; (2) continue to educate physicians on providing public and private health plan payers the "minimum necessary," as defined in the Health Insurance Portability and Accountability Act (HIPAA) of 1996 and regulations thereunder, protected health information necessary to achieve the purpose of a disclosure; (3) assist physicians wishing to register a complaint against health plan payers that have used claims data to form a database, or that have permitted access to or sale of the database or its contents without explicit patient and/or physician authorization, beyond the scope permitted by HIPAA with the Department of Health and Human Services Office of Civil Rights; (4) advocate to the Department of Health and Human Services, Office of the National Coordinator of Health Information Technology and/or other appropriate agencies for rules and regulations ensuring appropriate physician ownership and access rights to claims data, and appropriate protection of claims data held by various parties; and (5) continue to monitor federal and state activities impacting the exchange of physician-generated health information, including claims data.</p>	<p>Retain – this policy remains relevant.</p>

Policy Number	Title	Text	Recommendation
		(BOT Rep. 19, I-06; Modified: CCB/CLRPD Rep. 2, A-14)	
D-35.994	Scope of Practice Participants in Health Plans	<p>Our AMA Advocacy Resource Center will work at the invitation of AMA component societies to oppose legislative mandates on health care plans that may lead to inappropriate scope of practice expansion of non-physician providers.</p> <p>(Res. 923, I-04; Reaffirmed: BOT Rep. 19, A-14)</p>	Retain – this policy remains relevant.
D-375.997	Peer Reviewer Immunity	<p>Our AMA will: (1) recommend medical staffs adopt/implement staff by laws that are consistent with HCQIA and AMA policy by communicating the guidelines from AMA policy H-375.983 widely through appropriate media to the relevant organizations and institutions, including a direct mailing to all medical staff presidents in the United States, indicating that compliance is required to conform to HCQIA and related court decisions; (2) monitor legal and regulatory challenges to peer review immunity and non discoverability of peer review records/proceedings and continue to advocate for adherence to AMA policy, reporting challenges to peer review protections to the House of Delegates and produce an additional report with recommendations that will protect patients and physicians in the event of misdirected or negligent peer review at the local level while retaining peer review immunity for the process; and (3) continue to work to provide peer review protection under federal law.</p> <p>(BOT Rep.8, I-01; Reaffirmation A-05; Modified: CCB/CLRPD Rep. 2, A-14)</p>	Retain – this policy remains relevant.
D-40.995	The Implications of Health Care Personnel Delivery System	<p>Our AMA will continue to monitor the Health Care Personnel Delivery System (HCPDS) and initiate communication with the Selective Service System and other relevant governmental bodies to address questions and concerns related to the implementation of the HCPDS.</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		(CME Rep. 2, I-04; Reaffirmed: CMS Rep. 1, A-14)	
D-400.984	Transparency, Participation, and Accountability in CMS' Payment Determination Process	<p>1. Our AMA will urgently advocate for the Centers for Medicare and Medicaid Services (CMS) to improve its rate-setting processes by first publishing modifications to Medicare physician fees that result from CMS' misvalued codes initiative in the Medicare Physician Fee Schedule proposed rule instead of the final rule to afford adequate time for providers, professional medical societies and other stakeholders to review and comment on such changes before they take effect.</p> <p>2. Our AMA will demand that CMS be transparent in its processes and methodologies for establishing physician work values and allow adequate opportunity for public comment on its methodologies before changes in physician work values take effect.</p> <p>(Res. 220, A-14)</p>	Retain – this policy remains relevant.
D-406.998	National Provider Identification	<p>Our AMA will work closely in consultation with the Centers for Medicare and Medicaid Services to introduce safeguards and penalties surrounding the use of National Provider Identification to protect physicians' privacy, integrity, autonomy, and ability to care for patients.</p> <p>(Res. 717, I-04; Reaffirmed: CMS Rep. 1, A-14)</p>	Retain – this policy remains relevant.
D-435.978	Loss of Medical Staff Privileges for Lack of "Tail Coverage"	<p>Our AMA will: (1) Advocate for better disclosures by professional medical liability insurance carriers to their policyholders about the continuing financial health of the carrier; and advocate that carriers create and maintain a listing of alternate professional liability insurance carriers in good financial health which can provide physicians replacement tail or other coverage if the carrier becomes insolvent; and (2) Support model medical staff bylaw language stating: "Where continuous professional liability</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		<p>insurance coverage is a condition of medical staff membership, a temporary loss of professional liability insurance coverage (whether or not limited to "tail" coverage) is not grounds for immediate termination of medical staff membership. The Medical Executive Committee shall determine the length and other conditions of an individual waiver of the coverage requirement."</p> <p>(BOT Action in response to referred for decision Res. 537, A-04; Modified: CMS Rep. 1, A-14)</p>	
D-435.985	Use of Countersuits to Discourage Frivolous Lawsuits	<p>Our AMA will advise members of the option for countersuits against plaintiffs and attorneys who have filed frivolous lawsuits against physicians.</p> <p>(Sub. Res. 914, I-04; Reaffirmed: BOT Rep. 19, A-14)</p>	Retain – this policy remains relevant.
D-440.933	VA ACES Travel Policy	<p>Our AMA will send a letter to the Secretary of the Department of Veterans Affairs (VA) and any other appropriate entities noting that the Attendance and Cost Estimation System (ACES) system has become a barrier to VA physician attendance at medical and scientific meetings, and encourage the Secretary to adopt ACES system reforms that will allow VA employed physicians to attend medical and scientific conferences.</p> <p>(Res. 614, A-14)</p>	<p>Sunset this policy.</p> <p>Our AMA submitted a letter to the Department of Veterans Affairs advocating for ACES reforms to lower the barriers and make it easier for VA-employed physicians and researchers to attend medical and scientific conferences.</p>
D-440.934	Onerous Restrictions on Travel of Government Scientists	<p>Our AMA will pursue legislative or regulatory action to achieve <u>supports</u> easing of travel restrictions for federally-employed scientists who are attending academic or scientific conferences that are consistent with current HHS policies and procedures, to include a simplified approval process.</p> <p>(Res. 608, A-14)</p>	<p>Retain this policy in part.</p> <p>Our AMA has communicated to the federal government about easing and simplifying restrictions related to federally employed scientists attending academic and scientific conferences.</p>
D-450.959	Improvements to the Value-Based Modifier	<p>Our AMA will: (1) seek a delay in the Value-Based Modifier (VBM) penalty for smaller practices; and (2) continue to encourage selection of VBM quality</p>	<p>Sunset this policy.</p> <p>The Value-Based Modifier program was replaced by</p>

Policy Number	Title	Text	Recommendation
		<p>measures that are physician-defined, clinically meaningful, specialty-appropriate, realistic, and within reasonable control of the physician.</p> <p>(Sub. Res. 218, A-14)</p>	<p>the Merit-based Incentive Payment System (MIPS) under the Quality Payment Program.</p>
D-450.981	Protecting Patients Rights	<p>Our AMA will: (1) continue to advocate for the repeal of the flawed sustainable growth rate formula without compromising our AMA's principles for pay-for-performance; and (2) develop a media campaign and public education materials to teach patients and other stakeholders about the potential risks and liabilities of pay-for-performance programs, especially those that are not consistent with AMA policies, principles, and guidelines.</p> <p>(Modified: CCB/CLRPD Rep. 2, A-14)</p>	<p>Sunset this policy.</p> <p>The sustainable growth rate was repealed by the Medicare Access and CHIP Reauthorization Act.</p>
D-450.987	Support of Patient Safety Aspects of The Joint Commission	<p>Our AMA will continue to work with The Joint Commission on the development of standards which improve patient safety; and our AMA and The Joint Commission will then present these changes to the Centers for Medicare & Medicaid Services to effect an update of good health care policy and to delete outdated wasteful health care policy.</p> <p>(Res. 530, A-04; Modified: CMS Rep. 1, A-14)</p>	<p>Retain – this policy remains relevant.</p>
D-480.973	President's Council on Science and Technology Report	<p>Our AMA will analyze the President's Council on Science and Technology Report entitled "Better Health Care and Lower Costs: Accelerating Improvement through Systems Engineering" and respond as appropriate.</p> <p>(Res. 523, A-14)</p>	<p>Sunset this policy.</p> <p>Our AMA thoroughly analyzed the May 2014 President's Council on Science and Technology Report (PCAST) and has taken steps to implement the recommendations through testimony to an Office the National Coordinator Federal Advisory Committee, public comment on ONC's proposed 10-year health IT roadmap, and comment letters to the</p>

Policy Number	Title	Text	Recommendation
			Administration in support of the health IT framework outlined in the November 2014 Report to the President: Better Health Care and Lower Costs: Accelerating Improvement Through Systems Engineering.
D-60.968	Ensuring Access to Health Care, Mental Health Care, Legal and Social Services for Unaccompanied Minors and Other Recently Immigrated Children and Youth	Our AMA will work with medical societies and all clinicians to (i) work together with other child-serving sectors to ensure that new immigrant children receive timely and age-appropriate services that support their health and well-being, and (ii) secure federal, state, and other funding sources to support those services. (Res. 8, I-14)	Retain – this policy remains relevant.
D-80.997	Identify Theft	1. Our AMA will request that the Internal Revenue Service (IRS) adopt policies to ensure greater security protection for electronically filed federal income tax returns, including the universal use of PINs, or personal identification numbers. 2. Our AMA will request that the IRS and the Centers for Medicare & Medicaid Services promulgate regulations to prohibit the use of Social Security numbers (SSN) by insurers, health care vendors, state agencies other than the state taxing authority and non-financial businesses. (Res. 613, A-14)	Retain this policy in part. Delete clause 2. In 2023, the Centers for Medicare & Medicaid Services removed SSN-based health insurance claim numbers from Medicare cards and is now using Medicare Beneficiary Identifiers (MBIs) for Medicare transactions like billing, eligibility status, and claim status.
H-110.998	Cost of New Prescription Drugs	Our AMA urges the pharmaceutical industry to exercise reasonable restraint in the pricing of drugs. (Res. 112, I-89; Reaffirmed: Res. 520, A-99; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed in lieu of Res. 229, I-14)	Sunset this policy. This policy has been superseded by more recent AMA policy (H-110.987, Pharmaceutical Costs ; H-110.988, Controlling the Skyrocketing Costs of Generic Prescription Drugs ;

Policy Number	Title	Text	Recommendation
			H-110.997, Cost of Prescription Drugs ; H-285.965, Managed Care Cost Containment Involving Prescription Drugs ; H-110.997, Cost of Prescription Drugs).
H-120.937	Methadone Should Not Be Designated as the Sole Preferred Analgesic	Our AMA recommends that methadone should not be designated as the sole preferred analgesic by any insurance payer, whether public or private. (Res. 117, A-14)	Sunset this policy. This policy has been superseded by more recent policy (H-185.931, Workforce and Coverage for Pain Management ; D-120.932, Inappropriate Use of CDC Guidelines for Prescribing Opioids).
H-120.948	Positive Verification of Contact Lens Prescriptions	Our AMA will support positive prescription verification for contact lenses and recommend that the federal government monitor the effects of the Fairness to Contact Lens Consumers Act (FCLCA) on the accuracy of prescriptions. (Res. 225, A-04; Reaffirmed: BOT Rep. 19, A-14)	Retain – this policy remains relevant.
H-160.907	Hospital Inpatient Admission Order and Certification	Our AMA: (1) supports the rescission of the requirement that a physician certify the estimated time the patient will need to remain in the hospital as a condition for payment for inpatient services; and (2) believes that upon admission of any patient to a hospital for inpatient services, the admitting/attending physician should have access to appropriate information--for example the Geometric Mean Length of Stay (GMLOS)--to help the physician plan appropriately for the services that will be required to care for that particular patient; and (3) will inform the Centers for Medicare & Medicaid Services as soon as possible of the AMA's policy calling for the rescission of the requirement that a physician certify the estimated time the patient will need to remain in the hospital, and take appropriate action to enact this policy.	Retain this policy in part. Delete clause (3). Our AMA communicated to the Centers for Medicare & Medicaid Services the AMA's policy calling for the rescission of the requirement that a physician certify the estimated time the patient will need to remain in the hospital.

Policy Number	Title	Text	Recommendation
		(Res. 227, I-13; BOT action in response to referred for decision Res. 227, I-13; Reaffirmation A-14)	
H-175.984	Health Care Fraud and Abuse Update	<p>AMA policy is that: (1) our AMA leadership intensify efforts to urge federal policy makers to apply traditional definitions of fraud and abuse which focus on intentional acts of misconduct and activities inconsistent with accepted medical practice;</p> <p>(2) our AMA continue to work with federal law enforcement officials to improve the ability to root out intentional schemes to defraud public programs;</p> <p>(3) our AMA work with federal policymakers to balance payment integrity objectives with reasonable documentation and other administrative requirements;</p> <p>(4) our AMA develop model compliance plans and educational materials to assist physicians in conforming to the latest laws and regulations; and</p> <p>(5) our AMA continue to work in a coalition of other health care organizations to lobby for restrictions on the use of the False Claims Act.</p> <p>(BOT Rep. 25, I-97; Reaffirmation A-99; Reaffirmation I-99; Reaffirmation I-00; Reaffirmed: BOT Rep. 6, A-10; Reaffirmed in lieu of Res. 223, A-14)</p>	Retain – this policy remains relevant.
H-185.949	Centers for Medicare and Medicaid Services Policy on Hospital Acquired Conditions - Present on Admission	<p>1. Our AMA will: (a) continue its strong opposition to non-payment for conditions outlined in the Hospital Acquired Condition -- Present on Admission (HAC-POA) policy that are not reasonably preventable through the application of evidence-based guidelines developed by appropriate medical specialty organizations based on non-biased, well-designed, prospective, randomized studies; (b) ask CMS or other appropriate bodies to monitor and evaluate practice changes made as a result of HAC-POA law, and associated outcomes, and report back on best practices; (c) educate physicians about</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		<p>the HAC-POA law and its implications for patient care, coding requirements and payment; (d) continue its education and advocacy of CMS, Members of Congress and the public about the unintended consequences of non-payment for hospital acquired conditions that may not in fact be preventable, and that adversely affect access to and quality of care; (e) oppose the use of payment and coverage decisions of governmental and commercial health insurance entities as determinative of the standard of care for medical practice and advocate that payment decisions by any third party payer not be considered in determining standards of care for medical practice; and (f) continue to study the effect of HAC-POA penalty programs on professional liability; potential institutional demands to control or micro-manage doctors' professional decision-making; and efforts to develop evidence-based information about which events may be truly preventable as opposed to those whose frequency can be reduced by appropriate intervention. 2. Our AMA will: (a) continue its efforts to advocate against expansion of the Hospital Acquired Conditions - Present on Admission policy to physicians; (b) communicate to the Administration how burdensome the HAC-POA policy is for physicians and the Medicare program; (c) work with federal agencies to further monitor the HAC-POA program evaluation, and offer constructive input on its content and design; and (d) maintain efforts with our hospital association colleagues, such as the American Hospital Association, to monitor HAC-POA policy and its impact.</p> <p>(BOT Rep. 17, A-08; Appended: BOT Rep. 2, I-10; Modified: CCB/CLRPD Rep. 2, A-14)</p>	

Policy Number	Title	Text	Recommendation
H-185.951	Home Anti-Coagulation Monitoring	<p>1. Our AMA encourages all third party payers to extend coverage and reimbursement for home monitors and supplies for home self-monitoring of anti-coagulation for all medically appropriate conditions.</p> <p>2. Our AMA (a) supports the appropriate use of home self-monitoring of oral anticoagulation therapy and (b) will continue to monitor safety and effectiveness data, in particular cost-effectiveness data, specific to the United States on home management of oral anticoagulation therapy.</p> <p>3. Our AMA will request a change in Centers for Medicare & Medicaid Services' regulations to allow a nurse, under physician supervision, to visit a patient who cannot travel, has no family who can reliably test, or is unable to test on his/her own to obtain and perform a protime/INR without restrictions.</p> <p>(Res. 825, I-05; Modified and Reaffirmed: CSAPH Rep. 9, A-07; Appended: Res. 709, A-14)</p>	Retain – this policy remains relevant.
H-225.995	Duplication in Hospital Liability and Physicians' Professional Liability Insurance	<p>Our AMA believes that (1) Each physician should be free to determine whether to carry liability coverage as well as the amount of such coverage. Likewise, it is the responsibility of the hospital governing board to determine the extent to which the hospital should protect its assets by purchasing liability insurance; and (2) Regardless of the type of insurance coverage or protection plan hospitals and physicians on the organized staff have, the AMA encourages medical staffs and hospitals to work toward the establishment of effective risk management programs.</p> <p>(Res. 60, A-80; Reaffirmed: CLRPD Rep. B, I-90; Reaffirmed: Sunset Report, I-00; Modified: Res. 813, I-02; Reaffirmation A-04; Modified: CMS Rep. 1, A-14)</p>	Retain – this policy remains relevant.
H-245.979	Opposition to Proposed Budget	The AMA opposes reductions in funding for WIC and Head Start and other	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
	Cuts in WIC and Head Start	<p>programs that significantly impact child and infant health and education.</p> <p>(Res. 246, I-94; Reaffirmed: BOT Rep. 29, A-04; Reaffirmed: BOT Rep. 19, A-14)</p>	
H-250.987	Duty-Free Medical Equipment and Supplies Donated to Foreign Countries	<p>Our AMA will seek, through the federal government, a process to allow for duty-free donations of medical equipment and supplies, which are intended to reach medically-underserved areas and not be used for profit, to foreign countries.</p> <p>(Res. 229, A-04; Reaffirmed: BOT Rep. 19, A-14)</p>	Retain – this policy remains relevant.
H-275.918	Pediatric Medical Orders Between States	<p>1. Our AMA supports legislation or regulation that allows physicians currently licensed and registered to practice medicine in any of the United States to duly execute conventional medical orders for their patients who are moving out of their state and into another state for use in any of the United States, for a transitional period of no more than sixty days. This would allow a child with special health care needs to attend early child care, daycare, nursery, preschool, and school safely in their new location while the family secures a new medical home, health insurance, and, when indicated, subspecialty care.</p> <p>2. Our AMA will work with interested states and specialties on legislation or regulations to allow temporary honoring of medical orders by an out-of-state physician, as long as the physician is registered and licensed to practice medicine in the United States.</p> <p>(BOT Rep. 16, A-14)</p>	Retain – this policy remains relevant.
H-330.974	Modification or Repeal of the Federal False Claims Act and Other Similar Statutes	<p>It is the policy of the AMA to expend those resources necessary to monitor situations where physicians are under investigation, to provide financial and legal assistance where it is determined these are necessary, and to lobby for modification or repeal of the Federal False Claims Act and similar federal statutes.</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		(Res. 152, A-90; Reaffirmation A-99; Reaffirmation I-99; Reaffirmation A-01; Reaffirmed: BOT Rep. 22, A-11; Reaffirmed in lieu of Res. 223, A-14)	
H-335.980	Payment For Copying Medical Records	<p>It is the policy of the AMA to seek legislation under which Medicare will be required to reimburse physicians and hospitals for the reasonable cost of copying medical records which are required for the purpose of postpayment audit. A reasonable charge will be paid by the patient or requesting entity for each copy (in any form) of the medical record provided.</p> <p>(Res. 161, I-90; Appended by Res. 819, A-98; Reaffirmation A-08; Reaffirmed in lieu of Res. 710, A-14)</p>	<p>Sunset this policy.</p> <p>This matter is covered under Code of Medical Ethics 3.3.1, Management of Medical Records, which allows for physicians to charge a reasonable fee for the cost of transferring a record.</p>
H-35.968	Averting a Collision Course Between New Federal Law and Existing State Scope of Practice Laws	<p>1. Our AMA will: (A) work to repeal new Public Health Service Act Section 2706, so-called provider "Non-Discrimination in Health Care," as enacted in PPACA, through active direct and grassroots lobbying of and formal AMA written communications and/or comment letters to the Secretary of Health and Human Services and Congressional leaders and the chairs and ranking members of the House Ways and Means and Energy and Commerce and Senate Finance Committees; and (B) promptly initiate a specific lobbying effort and grassroots campaign to repeal the provider portion of the Patient Protection and Affordable Care Act's "Non-Discrimination in Health Care" language, including direct collaboration with other interested components of organized medicine. 2. Our AMA will: (A) create and actively pursue legislative and regulatory opportunities to <u>advocate for the repeal of the so-called "Non-discrimination in Health Care" clause in Public Health Service Act Section 2706, as enacted in the Patient Protection and Affordable Care Act;</u> and (B) lead a specific lobbying effort and grassroots campaign in cooperation with members</p>	<p>Retain this policy in part.</p> <p>Delete part 1 and modify part 2. Our AMA has advocated for repeal of section 2706 of the Affordable Care Act and has successfully advocated to the Centers for Medicare & Medicaid Services to clarify, consistent with the statutory language in the ACA and with Medicare Advantage and Medicaid policies, that section 2706 does not go beyond existing Medicare or Medicaid rules regarding the scope of practice of particular types of non-physician practitioners, nor does it require health plans and issuers to contract with particular types of non-physician practitioners or cover all types of services.</p>

Policy Number	Title	Text	Recommendation
		<p>of the federation of medicine and other interested components of organized medicine to repeal the provider portion of PPACA's "Non-Discrimination in Health Care" language.</p> <p>(Res. 220, A-10; Appended: Res. 241, A-12; Appended: BOT Rep. 8, I-12; Modified: CCB/CLRPD Rep. 2, A-14)</p>	
H-350.962	Reauthorization of the Indian Health Care Improvement Act	<p>Our AMA supports reauthorization of the Indian Health Care Improvement Act.</p> <p>(Res. 221, A-07; Modified: CCB/CLRPD Rep. 2, A-14)</p>	<p>Sunset this policy.</p> <p>The Indian Health Care Improvement Act (IHCA) was made permanent in 2010 as part of the Patient Protection and Affordable Care Act.</p>
H-355.975	Opposition to the National Practitioner Data Bank	<ol style="list-style-type: none"> 1. Our AMA communicates to legislators the fundamental unfairness of the civil judicial system as it now exists, whereby a jury, rather than a forum of similarly educated peers, determines if a physician has violated the standards of care and such results are communicated to the National Practitioner Data Bank; and impresses on our national legislators that only when a physician has been disciplined by his/her state licensing agency should his/her name appear on the National Practitioner Data Bank. 2. Our AMA affirms its support for the Federation of State Medical Boards Action Data Bank and seeks to abolish the National Practitioner Data Bank. 3. Our AMA urges HHS to retain an independent consultant to (A) evaluate the utility and effectiveness of the National Practitioner Data Bank, (B) evaluate the confidentiality and security of the reporting, processing and distribution of Data Bank information, and (C) provide the findings and recommendations to the National Practitioner Data Bank Executive Committee and the General Accounting Office. 4. Our AMA will take appropriate steps to have Congress repeal Section 4752 (f) 	<p>Retain – this policy remains relevant.</p>

Policy Number	Title	Text	Recommendation
		<p>of OBRA 1990 requiring peer review organizations and private accreditation entities to report any negative action or finding to the Data Bank.</p> <p>5. Our AMA seeks to amend the Health Care Quality Improvement Act of 1986 to allow a physician, at the time the physician notifies the Data Bank of a dispute, to attach an explanation or statement to the disputed report;</p> <p>6. Our AMA opposes any legislative or administrative efforts to expand the Data Bank reporting requirements for physicians, such as the reporting of a physician who is dismissed from a malpractice suit without any payment made on his or her behalf, or to expand the entities permitted to query the Data Bank such as public and private third party payers for purposes of credentialing or reimbursement.</p> <p>7. Our AMA (A) urges HHS to work with the Federation of State Medical Boards to refine its National Practitioner Data Bank breakdown of drug violation reporting into several categories; (B) urges the HHS to analyze malpractice data gathered by the Physician Insurance Association of America and recommend to Congress that a threshold of at least \$30,000 for the reporting of malpractice payments be established as soon as possible; (C) will continue to work with HHS to allow physicians an expanded time period to verify the accuracy of information reported to the Data Bank prior to its release in response to queries; (D) will work with HHS and the Office of Management and Budget to reduce the amount of information required on the request for information disclosure form and to improve the design of the form to allow for more efficient processing of information; and (E) will continue to work with HHS to improve its mechanism to distribute revisions and clarifications of Data Bank policy and procedure.</p>	

Policy Number	Title	Text	Recommendation
		<p>8. Our AMA will review questions regarding reportability to the Data Bank and will provide periodic updates on this issue to the AMA House of Delegates.</p> <p>(CCB/CLRPD Rep. 3, A-14)</p>	
H-365.980	OSHA Regulations Pertaining to Physicians' Offices and Hospitals	<p>The AMA continues to review the data and rationale used to substantiate OSHA regulations pertaining to medical practice in physician offices and health care facilities. Where OSHA rules and regulations are found to be unnecessary or inappropriate, the AMA will work for their modification or repeal.</p> <p>(Sub. Res. 218, A-94; Reaffirmed: BOT Rep. 29, A-04; Reaffirmed: BOT Rep. 19, A-14)</p>	Retain – this policy remains relevant.
H-375.972	Lack of Federal Peer Review Confidentiality Protection	<p>Our AMA will seek to vigorously pursue enactment of federal legislation to prohibit discovery of records, information, and documents obtained during the course of professional review proceedings. Our AMA will immediately work with the Administration and Congress to enact legislation that is consistent with Policy H-375.972.</p> <p>(Res. 221, I-96; Reaffirmed: BOT Rep. 13, I-00; Reaffirmation A-01; Reaffirmed: BOT Rep. 8, I-01; Reaffirmed: CMS Rep. 6, I-02; Appended: Res. 925, I-03; Reaffirmation A-05; Reaffirmed: BOT Rep. 13, I-11; Modified: CCB/CLRPD Rep. 2, A-14)</p>	<p>Sunset this policy.</p> <p>This policy is superseded by more recent AMA policy (D-375.999, Confidentiality of Physician Peer Review; H-375.962, Legal Protections for Peer Review).</p>
H-40.967	Physician Participation in Department of Defense Reserve Components	<p>1. Our AMA endorses voluntary physician participation in the military reserve components' medical programs as a means of actively aiding national defense while preserving the right of the individual physician to practice his/her profession without interruption in peace time.</p> <p>2. Our AMA supports the U.S. Department of Defense by publicizing its needs for physicians in active duty military service and in the reserve components and guard, and encourages the active support and participation of</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		<p>physicians in active duty military service and in the reserves.</p> <p>3. Our AMA will (a) continue to work with all appropriate parties in developing and proposing a multi-faceted approach toward rejuvenation and improvement in recruitment and retention in the military reserves; (b) work to assure that retired military medical personnel become eligible for reserve status; (c) support enactment of federal laws to assist physicians in the transition from medical practice to active military service; (d) promote use of existing laws for selective service and retirement credits as models for development of practical equitable criteria to be applied; and (e) support improvements in professional utilization of military medical personnel during both active duty periods and "weekend drill."</p> <p>4. Our AMA supports the development of a statutory system of limitations on call-up, retention and recall of reservists in order to provide stability and predictability to reserve status and duty, with the basis for such a system to be defined statutorily using credits or "points" to prioritize options available to individual reservists as to call-up, retention, rotation and recall.</p> <p>(CCB/CLRPD Rep. 3, A-14)</p>	
H-406.989	Work of the Task Force on the Release of Physician Data	<p>1. Our AMA Council on Legislation will use the Release of Claims and Payment Data from Governmental Programs as a basis for draft model legislation. 2. Our AMA will create additional tools to assist physicians in dealing with the release of physician data. 3. Our AMA will continue to monitor the status of, and take appropriate action on, any legislative or regulatory opportunities regarding the appropriate release and use of physician data and its use in physician profiling programs. 4. Our AMA will monitor new and existing Web sites and programs that collect and use data on patient</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		<p>satisfaction and take appropriate action when safeguards are not in place to ensure the validity of the results. 5. Our AMA will continue and intensify its extensive efforts to educate employers, healthcare coalitions and the public about the potential risks and liabilities of pay-for-performance and public reporting programs that are not consistent with AMA policies, principles, and guidelines. 6. Our AMA: A) opposes the public reporting of individual physician performance data collected by certification and licensure boards for purposes of MOC and MOL; and B) supports the principle that individual physician performance data collected by certification and licensure boards should only be used for the purposes of helping physicians to improve their practice and patient care, unless specifically approved by the physician.</p> <p>(BOT Rep. 18, A-09; Reaffirmed: BOT action in response to referred for decision Res. 709, A-10, Res. 710, A-10, Res. 711, A-10 and BOT Rep. 17, A-10; Reaffirmed in lieu of Res. 808, I-10; Appended: Res. 327, A-11; Modified: CCB/CLRPD Rep. 2, A-14)</p>	
H-415.998	Preferred Provider Organizations	<p>The AMA: (1) opposes federal legislation that would preempt state regulation of PPOs; and (2) encourages state medical associations to support legislation that: (a) insures proper state regulation of PPOs, with particular attention to such practices as arbitrary determinations of medical necessity by carriers, "hold harmless" clauses, and predatory pricing concepts; and (b) requires independent, physician-directed peer review of the services provided by PPOs.</p> <p>(Sub. Res. 16, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: BOT Rep. 29, A-04; Reaffirmed: BOT Rep. 19, A-14)</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-435.957	Uniform and Consistent Tort Reform	<p>Our AMA will not pursue federal medical liability reform legislation that would divide or diminish the voice of the House of Medicine.</p> <p>(Sub. Res. 910, I-03; Reaffirmed in lieu of Res. 216, A-04; Reaffirmed: BOT Rep. 19, A-14)</p>	Retain – this policy remains relevant.
H-435.963	Professional Liability Claims Reporting	<p>The AMA opposes the need for reporting on medical staff and other non-licensing board applications, including insurance company credentialing applications, (excepting professional liability insurance applications) any threatened, pending, or closed professional liability claims where the claim did not result in payment on behalf of that physician.</p> <p>(Sub. Res. 818, A-95; Modified: BOT Rep. 18, A-03; Reaffirmed: Res. 806, I-03; Reaffirmation A-04; Reaffirmed: BOT Rep. 19, A-14)</p>	Retain – this policy remains relevant.
H-435.968	Enterprise Liability	<p>The AMA: (1) affirms its position that effective medical liability reform based on California's MICRA model is integral to health system reform, and must be included in any comprehensive health system reform proposal that hopes to be effective in containing costs, providing access to health care services and promoting the quality and safety of health care services; (2) opposes any proposal that would mandate or impose enterprise liability concepts. Federal funding to evaluate the comparative advantages and disadvantages of enterprise liability may be best spent studying the operation, effect on liability costs and patient safety/injury prevention results of liability channeling systems that already exist and function as close analogs to the enterprise liability model (BOT Rep. I-93-53); and (3) supports strong patient safety initiatives and the investigation of alternative dispute resolution models, appropriate uses of practice parameters in medical liability litigation and other reform ideas that have the potential to decrease defensive</p>	Retain – this policy remains relevant.

H-55.991	Use of Heroin in Terminally Ill Cancer Patients With Severe Chronic Pain	<p>Our AMA remains opposed to legislation or any other action that would reschedule heroin from Schedule 1 to Schedule 2 of the Controlled Substances Act.</p> <p>(BOT Rep. TT, A-87; Reaffirmed: Sunset Report, I-97; Modified and Reaffirmed: CSAPH Rep. 3, A-07; Modified: CCB/CLRPD Rep. 2, A-14)</p>	Retain - this policy remains relevant.
H-60.940	Partner Co-Adoption	<p>Our AMA will support legislative and other efforts to allow the adoption of a child by the non-married partner who functions as a second parent or co-parent to that child. (Res. 204, A-04)</p> <p>(Res. 204, A-04; Modified: CSAPH Rep. 1, A-14)</p>	Retain – this policy remains relevant.
H-75.998	Opposition to HHS Regulations on Contraceptive Services for Minors	<p>(1) Our AMA continues to oppose regulations that require parental notification when prescription contraceptives are provided to minors through federally funded programs, since they create a breach of confidentiality in the physician-patient relationship. (2) The Association encourages physicians to provide comparable services on a confidential basis where legally permissible.</p> <p>(Sub. Res. 65, I-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: BOT Rep. 28,</p>	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		A-03; Reaffirmed: Res. 825, I-04; Reaffirmed: CMS Rep. 1, A-14)	
H-95.941	Restricting Prescriptions to Medicare Beneficiaries	<p>1. Our AMA will work with the Centers for Medicare & Medicaid Services and state medical societies as needed to preserve access to care and eliminate the burden of provisions in the Patient Protection and Affordable Care Act that require physicians to enroll in Medicare, Medicaid and other governmentally sponsored health insurance programs as a condition of referring, ordering or prescribing for patients enrolled in these programs.</p> <p>2. Our AMA supports federal legislation to eliminate the burden of provisions in the Patient Protection and Affordable Care Act that require physicians to enroll in Medicare, Medicaid and other governmentally sponsored health insurance programs as a condition of referring, ordering or prescribing for patients enrolled in these programs.</p> <p>(BOT Rep. 22, A-14)</p>	Retain – this policy remains relevant.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 11-A-24

Subject: Safe and Effective Overdose Reversal Medications in Educational Settings

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2
3 At the 2023 Annual Meeting of the American Medical Association (AMA) House of Delegates
4 (HOD), Resolution 217 entitled, “Increase Access to Safe and Effective Overdose Reversal
5 Medications in Educational Settings,” was adopted. This resolution called on the AMA to:

- 6
7 • Encourage states, communities, and educational settings, to adopt legislative and
8 regulatory policies that allow schools to make safe and effective overdose reversal
9 medications naloxone readily accessible to staff and teachers to prevent opioid overdose
10 deaths in educational settings;
11 • Encourage states, communities, and educational settings to remove barriers to students
12 carrying safe and effective overdose reversal medications; and
13 • Study and report back on issues regarding student access to safe and effective overdose
14 reversal medications.
15

16 The HOD adopted the resolution, which has been codified at Policy H-95.908, “Increase Access to
17 Safe and Effective Overdose Reversal Medications in Educational Settings.” In response to the
18 third resolve of the HOD action, this report provides background information, a discussion on
19 naloxone access in schools and other educational settings, relevant AMA advocacy initiatives, and
20 other updates.

21 22 BACKGROUND

23
24 More than 2,200 adolescents (ages 10-19) died of a drug-related overdose between July 2019-
25 December 2021, with nearly 84 percent of these deaths involving illicitly manufactured fentanyl.
26 An opioid of any type was involved in more than 91 percent of deaths, according to the Centers for
27 Disease Control and Prevention (CDC).¹ Naloxone was administered only 30 percent of the time,
28 according to the CDC.² Unintentional drug overdose deaths among young people (ages 15-19)
29 continued to remain high in 2022, according to the National Institute on Drug Abuse (NIDA).³
30 Two-thirds of those who died did not have any history of prior opioid use.⁴

31
32 Naloxone was created in the 1960s and subsequently began being used in emergency departments
33 and other hospital settings.⁵ Naloxone distribution in the community became more prevalent in the
34 1990s through harm reduction organizations.⁶ Naloxone is most commonly administered via
35 intramuscular injection or intranasal spray, and user preference may vary depending on familiarity
36 with a product and how to use it.⁷ With respect to availability in schools and other educational
37 settings, the nasal spray formulation is most commonly cited in school educational resources and

1 guidelines. It is important to emphasize, however, that the AMA does not endorse any specific
2 brand or generic formulation of naloxone or other U.S. Food and Drug Administration (FDA)-
3 approved opioid overdose reversal agents. While it is beyond the scope of this report to review the
4 several decades of life-saving benefits of naloxone, it is notable that AMA policy supports
5 continued development of and access to additional medications to reverse opioid-related overdoses.
6

7 Access to naloxone in the community has increased considerably in the past decade. From
8 2012-2017, naloxone prescriptions dispensed in the United States grew from 1,061 prescriptions to
9 nearly 270,000 prescriptions.⁸ Naloxone prescriptions dispensed increased to nearly 1.7 million
10 prescriptions in 2022. Based on our strong policy, the AMA continues to urge all physicians to
11 prescribe naloxone or other overdose reversal medications to patients at risk of overdose—and to
12 friends and family of those who might be in a position to save a life from overdose. The AMA also
13 continues to encourage physicians and physician offices to educate patients about the availability of
14 naloxone and other overdose reversal agents available over the counter, from pharmacists via a
15 standing order, or reversal agents that may be available through public health agencies. The
16 National Association of Counties details multiple strategies and examples to increase state- and
17 community-level distribution of naloxone.⁹
18

19 In addition to physicians' increasing efforts in prescribing naloxone, the AMA also recognizes the
20 longstanding role that harm reduction organizations have played in saving lives from overdose.
21 Harm reduction and other community-based organizations distributed more than 3.7 million doses
22 of naloxone between 2017–2020.¹⁰ From August 2021 to July 2023, national harm reduction
23 organization, Remedy Alliance For The People, sent 1,639,542 doses of generic injectable
24 naloxone to 196 harm reduction projects in 44 US states, DC, and Puerto Rico, of which
25 206,371 doses were provided at no-cost to 138 under-resourced harm reduction projects.¹¹
26 Naloxone has saved hundreds of thousands of lives in the United States, and the Board of Trustees
27 continues to strongly support all efforts to increase access to naloxone and other opioid overdose
28 reversal agents.
29

30 DISCUSSION

31

32 Increasing access to naloxone was one of the first recommendations of the AMA Substance Use
33 and Pain Care Task Force (Task Force),¹² which was first convened in 2014 and remains a vital
34 part of ensuring that organized medicine communicates emerging issues and policies to improve
35 outcomes and save lives. The Task Force's work, including providing input on and development of
36 AMA model state legislation¹³ to increase access to naloxone, has been part of every state now
37 having broad naloxone access laws.¹⁴
38

39 AMA model legislation also includes broad authority and immunities for high schools, universities,
40 and other educational settings to possess, distribute and administer naloxone to teachers, staff, and
41 students. As a result of AMA and other organizations' advocacy, approximately 30 states authorize
42 educational settings to administer naloxone, and it varies by state regarding whether that includes
43 elementary schools, high schools, or schools of higher education.¹⁵
44

45 Multiple school districts and universities already provide naloxone and overdose prevention and
46 education opportunities. While the total number continues to grow, representative examples can be
47 found in Southwest Virginia, where nearly all schools carry naloxone,¹⁶ and the state itself has
48 amended its laws to authorize the ability for schools and school employees to carry, administer, and
49 distribute naloxone.¹⁷ All schools in the Miami-Dade public school system carry naloxone,
50 although it is most commonly held by school public safety officials.¹⁸ One student remarked that
51 she carries naloxone in her purse because, "Our friends do not know that those pills are more than

1 likely to be fake [or] have enough fentanyl in it to kill you. And that is scary. I carry Narcan in my
2 school bag. If I am going to a party, I will put it in my purse. It is just a layer of protection. You
3 wear your seatbelt not because you are going get in a car accident. It is to keep yourself safe.”
4

5 Additional examples of schools, universities and other educational settings carrying naloxone:
6

- 7 • University of Pennsylvania Perelman School of Medicine—medical students are taught
8 how to recognize signs of overdose and administer naloxone on their first day of medical
9 school.¹⁹
- 10 • University of Southern California—a group of pharmacy students found that once they
11 started a naloxone education and distribution program, demand outpaced expectations.²⁰
- 12 • Vanderbilt University—makes naloxone and other harm reduction supplies available for
13 individuals as well as at public locations throughout campus.²¹
- 14 • Akron (Ohio) School District—voted to approve naloxone availability in schools in 2017.²²
- 15 • Columbia (NY) University—students who carry naloxone have saved lives from overdose
16 in the community²³ and in schools. Naloxone education events have occurred since 2018
17 and resulted in “more than 2,500 students, faculty, staff and community members on how
18 to recognize an overdose and administer treatment.”²⁴
- 19 • University of South Carolina—naloxone is accessible at the university fitness center,
20 school pharmacy and other locations.²⁵
- 21 • Montana—authorizing naloxone distribution and use in schools has been one part of the
22 state’s naloxone efforts, which distributed more than 26,000 naloxone kits to first
23 responders, law enforcement, schools, and others.²⁶
- 24 • Texas—schools now are required to carry naloxone, which has been administered multiple
25 times to save the life of a young person, according to news reports.²⁷
26

27 This short list above of high schools, universities, and other settings is a very brief snapshot
28 showcasing the fact that school districts recognize the value of having naloxone in educational
29 settings. Given the rapid adoption of efforts to increase access to naloxone in school-based settings,
30 data on the total number of educational settings with naloxone is not currently available. The Board
31 of Trustees strongly encourages these trends to continue.
32

33 The Board of Trustees also wants to continue to dispel myths about naloxone. The Board is aware
34 of ongoing myths that naloxone may increase risky drug use behaviors. Much like debunked and
35 dangerous myths of how use of seatbelts encourages risky driving; that the presence of fire
36 hydrants encourages arson; or “that HPV vaccination increases promiscuity or increases risky
37 sexual behavior,”²⁸ the presence and availability of naloxone has consistently been found to not
38 increase use of drugs or increase risk of overdose. For example, a 2023 study found that “Naloxone
39 access laws and pharmacy naloxone distribution were more consistently associated with decreases
40 rather than increases in lifetime heroin and [injection drug use] among adolescents.”²⁹ The study
41 authors make clear that “Our findings therefore do not support concerns that naloxone access
42 promotes high-risk adolescent substance use behaviors.” A smaller study of heroin users found “no
43 evidence of compensatory drug use following naloxone/overdose training.”³⁰ And a report from
44 2010 looking at multiple myths cited multiple studies disproving the link between naloxone
45 availability and increased drug use.³¹ The Board of Trustees further emphasizes that while the
46 Board does not support illicit drug use, it unequivocally supports efforts to save lives from
47 unintentional drug-related overdose, including dispelling myths and supporting widespread
48 availability of naloxone and other opioid overdose reversal agents. The limitations of naloxone,
49 however, should be recognized. NIDA advises that “People with physical dependence on opioids
50 may have withdrawal symptoms within minutes after they are given naloxone. Withdrawal

1 symptoms might include headaches, changes in blood pressure, rapid heart rate, sweating, nausea,
2 vomiting, and tremors.”³² NIDA aptly points out, however, that “The risk of death for someone
3 overdosing on opioids is worse than the risk of having a bad reaction to naloxone.” The Board of
4 Trustees agrees that death is a greater harm than withdrawal symptoms.

5
6 As noted in the 2023 AMA Overdose Epidemic Report, overdose and death related to illicitly
7 manufactured fentanyl, methamphetamine and cocaine increase; and xylazine and other toxic
8 synthetic adulterants present new challenges. Naloxone does not reverse an overdose related to
9 methamphetamine, cocaine or other toxic substances. Naloxone also does not work to counteract
10 overdose related to alcohol, benzodiazepines or xylazine, which may increase the sedative effects
11 of opioids, making the antagonist effects of naloxone appear not as rapid or sustaining.³³
12 Polysubstance use, moreover, may be intentional or unintentional as illicit substances may contain
13 multiple toxic adulterants, including illicitly manufactured fentanyl.³⁴ The CDC, SAMHSA, NIDA
14 and many other leading public health organizations, including the AMA, continue to counsel that in
15 addition to immediately calling 911, it is still advised to administer naloxone because it is likely an
16 opioid is present, and naloxone will not harm an individual. The Board of Trustees agrees and
17 further points out that if an individual’s overdose is related to multiple substances, administering
18 naloxone could help reduce respiratory depression. Again, the benefits of naloxone outweigh the
19 limitations.

20
21 The presence of fentanyl in the nation’s illicit drug supply also has raised the question of whether
22 additional doses of naloxone are necessary, greater dose strengths, or different opioid overdose
23 reversal medication (OORM) work more effectively than another. According to SAMHSA, the
24 evidence shows that:

- 25
- 26 • Giving more than one dose of naloxone and using higher dose products may not be
27 necessary when responding to a known fentanyl overdose.
 - 28 • An overdose may appear to need additional doses if other sedating drugs are present in the
29 person’s body, such as alcohol, benzodiazepines, or xylazine; however, rapidly giving
30 more naloxone or using a stronger, more concentrated OORM will not necessarily speed
31 up the reversal process.
- 32

33 In fact, SAMHSA reports that “Multiple studies have found that despite the presence of fentanyl,
34 more doses were not associated with improved outcomes.”³⁵ The Board of Trustees further
35 emphasizes that there are multiple OORM that have been approved by the FDA. The AMA does
36 not take a position on which OORM is more effective than another and—for the purposes of this
37 report—encourages states, communities, and educational settings, to adopt legislative and
38 regulatory policies that allow schools to make safe and effective overdose reversal medications
39 such as naloxone readily accessible to staff and teachers to prevent opioid overdose deaths in
40 educational settings. The Board of Trustees further encourages states, communities, and
41 educational settings to remove barriers to students carrying safe and effective overdose reversal
42 medications. The Board of Trustees wants to make clear that even when naloxone or other OORM
43 saves a life from overdose, it is essential to seek immediate medical attention.

44 AMA POLICY

45
46
47 The two most relevant AMA policies covering the areas of this report are (1) “Increasing
48 Availability of Naloxone and Other Safe and Effective Overdose Reversal Medications”
49 (Policy H-95.932); and (2) “Prevention of Drug-Related Overdose” (Policy D-95.987).
50 Adoption of H-95.932 has helped the AMA to support a broad array of naloxone access initiatives
51 for nearly a decade. As identified in H-95.932, these initiatives include:

1
2 ...legislative, regulatory, and national advocacy efforts to increase access to
3 affordable naloxone and other safe and effective overdose reversal medications,
4 including but not limited to collaborative practice agreements with pharmacists and
5 standing orders for pharmacies and, where permitted by law, community-based
6 organizations, law enforcement agencies, correctional settings, schools, and other
7 locations that do not restrict the route of administration for naloxone and other safe
8 and effective overdose reversal medications delivery.
9

10 Moreover, in accordance with AMA policy, specifically “Increasing Availability of Naloxone and
11 Other Safe and Effective Overdose Reversal Medications” (Policy H-95.932), AMA advocacy has
12 helped states enact broad liability protections “for physicians and other healthcare professionals
13 and others who are authorized to prescribe, dispense and/or administer naloxone and other safe and
14 effective overdose reversal medications pursuant to state law.” As part of our advocacy to support
15 broad access, in accordance with AMA policy entitled, “Increasing Availability of Naloxone and
16 Other Safe and Effective Overdose Reversal Medications” (Policy H-95.932), AMA continues “to
17 encourage individuals who are authorized to administer naloxone and other safe and effective
18 overdose reversal medications to receive appropriate education to enable them to do so
19 effectively.”
20

21 As noted briefly above, existing AMA policy entitled, “Increasing Availability of Naloxone and
22 Other Safe and Effective Overdose Reversal Medications” (Policy H-95.932), also allows for broad
23 support for “the widespread implementation of easily accessible naloxone and other safe and
24 effective overdose reversal medications rescue stations,” as well as “access to and use
25 of naloxone and other safe and effective overdose reversal medications in all public spaces
26 regardless of whether the individual holds a prescription.” This includes public schools and other
27 educational settings.
28

29 Given the broad nature of our existing AMA policy, which is amply reflected in the positive
30 developments to implement these policies throughout the United States, the Board of Trustees
31 concludes that AMA policy is sufficient and that additional new policy is not necessary. This report
32 also accomplishes the task set to the Board of Trustees to study and report back on issues regarding
33 student access to safe and effective overdose reversal medications.
34

35 RECOMMENDATIONS

36

37 The Board of Trustees recommends that the following be adopted, and that the remainder of the
38 report be filed:
39

- 40 1. Existing American Medical Association (AMA) policy entitled, “Increasing Availability of
41 Naloxone and Other Safe and Effective Overdose Reversal Medications” (Policy H-
42 95.932), be reaffirmed, and (Reaffirm HOD Policy)
43
- 44 2. The third resolve of Policy H-95.908, “Increase Access to Safe and Effective Overdose
45 Reversal Medications in Educational Settings” be rescinded and that the policy be updated
46 as noted. (Modify Current HOD Policy)

47 1. Our AMA will encourage states, communities, and educational settings to adopt
48 legislative and regulatory policies that allow schools to make safe and effective overdose
49 reversal medications readily accessible to staff and teachers to prevent opioid overdose
50 deaths in educational settings.

- 1 2. Our AMA will encourage states, communities, and educational settings to remove
- 2 barriers to students carrying safe and effective overdose reversal medications.
- 3 ~~3. Our AMA will study and report back on issues regarding student access to safe and~~
- 4 ~~effective overdose reversal medications.~~

Fiscal Note: Less than \$500.

- ¹² The first set of recommendations were issued in 2015 and revised at several intervals. See, for example, the 2017 update here: <https://end-overdose-epidemic.org/wp-content/uploads/2020/06/AMA-Task-Force-to-Reduce-Opioid-Abuse-Overview-updated-June-2017.pdf>
- ¹³ The AMA Board of Trustees first approved model state legislation recommend by the AMA Council on Legislation in 2013. The model bill has been amended multiple times since then to strengthen access to naloxone and other forms of opioid-overdose reversal agents. In addition to the protections for school personnel, the model bill provides for liability protections to health care professionals prescribing naloxone as well as authorizing third-party prescriptions and standing orders to allow persons without a prescription to obtain naloxone from a pharmacy. It also includes broad Good Samaritan protections that provide extensive protections for civil and criminal penalties, including parole violations. Medical societies interested in broadening their state laws should contact the AMA Advocacy Resource Center.

Reference Committee B

EXECUTIVE SUMMARY

At the 2023 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted Resolution 237 entitled, “Prohibiting Covenants Not-to-Compete in Physician Contracts.” Resolution 237 was introduced by California, American Academy of Family Physicians, American Association of Neurological Surgeons, American College of Surgeons, Congress of Neurological Surgeons, and The Society of Thoracic Surgeons.

Resolve 3 of Resolution 237 (Resolve 3) directs that our AMA study and report back on current physician employment contract terms and trends with recommendations to address balancing legitimate business interests of physician employers while also protecting physician employment mobility and advancement, competition, and patient access to care – such recommendations to include the appropriate regulation or restriction of (1) covenants not to compete in physician contracts with independent physician groups that include time, scope, and geographic restrictions; and (2) de facto non-compete restrictions that allow employers to recoup recruiting incentives upon contract termination.

The term “non-compete” in the report refers to an agreement between an employer and an employed physician that prohibits the physician from working within a certain geographic area and for a period of time after the physician’s employment ends.

This report discusses physicians’ recurring concerns about the effect that non-competes have on both physicians and patients. The report also highlights the reasons why an independent physician group may think it necessary to use a reasonable non-compete to protect legitimate business interests (LBIs).

As directed by Resolve 3, this report describes many ways that non-competes can be regulated, restricted, or modified to achieve the purposes of Resolve 3. The report ends with a recommendation that would be new HOD policy. The recommendation calls on the AMA to continue assisting interested state medical associations in developing fair and reasonable strategies regarding restrictive covenants between physician employers and physician employees including regularly updating the AMA’s state restrictive covenant legislative template.

Following the instructions of the HOD, this report addresses only Resolve 3. As such, this report does not consider non-competes generally, nor does it adjust any AMA policy positions regarding the pros and cons of non-competes as they may exist between physician practices and physician employees.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 13-A-24

Subject: Prohibiting Covenants Not-to-Compete
(Resolution 237-A-23, Resolve 3)

Presented by: Willie Underwood III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2
3 At the 2023 Annual Meeting, the American Medical Association (AMA) House of Delegates
4 (HOD) adopted Resolution 237 entitled, “Prohibiting Covenants Not-to-Compete in Physician
5 Contracts.” Resolution 237 was introduced by California, American Academy of Family
6 Physicians, American Association of Neurological Surgeons, American College of Surgeons,
7 Congress of Neurological Surgeons, and The Society of Thoracic Surgeons. Resolution 237 stated
8 the following:
9

10 RESOLVED, That our American Medical Association support policies,
11 regulations, and legislation that prohibits covenants not-to-compete for all
12 physicians in clinical practice who hold employment contracts with for-profit or
13 non-profit hospital, hospital system, or staffing company employers (New HOD
14 Policy); and be it further
15

16 RESOLVED, That our AMA oppose the use of restrictive covenants not-to-
17 compete as a contingency of employment for any physician-in-training, regardless
18 of the ACGME accreditation status of the residency/fellowship training program
19 (New HOD Policy); and be it further
20

21 RESOLVED, That our AMA study and report back on current physician
22 employment contract terms and trends with recommendations to address balancing
23 legitimate business interests of physician employers while also protecting
24 physician employment mobility and advancement, competition, and patient access
25 to care - such recommendations to include the appropriate regulation or restriction
26 of 1) Covenants not to compete in physician contracts with independent physician
27 groups that include time, scope, and geographic restrictions; and 2) De facto non-
28 compete restrictions that allow employers to recoup recruiting incentives upon
29 contract termination. (Directive to Take Action)
30

31 As directed by the HOD, this report addresses only Resolve 3 of Resolution 237 (Resolve 3). As
32 such, this report does not consider non-competes generally, nor does it adjust any AMA policy
33 positions regarding the pros and cons of non-competes as they may exist between physician
34 practices and physician employees.
35

36 In this report, “non-compete” is defined as “a contractual term between a physician employer, e.g.,
37 a hospital, and a physician employee that prohibits the employee from working within a certain

1 geographic area and period of time after the physician’s employment ends.” For example, a
2 restrictive covenant may prohibit the physician from practicing medicine within 10 miles of the
3 location where he or she treated patients for two years after employment has ended.

4
5 BACKGROUND

6
7 Adoption of Resolution 237 made a significant change to the AMA’s policy on non-compete
8 clauses (a/k/a covenants not-to-compete or non-competes). Prior to Resolution 237, the AMA was
9 primarily guided by *Ethical Opinion 11.2.3.1, Restrictive Covenants (Ethical Opinion 11.2.3.1)*,
10 which states that physicians should not enter into unreasonable non-competes.¹

11
12 Pursuant to Resolution 237, AMA policy now requires the AMA to “support policies, regulations,
13 and legislation that prohibits covenants not-to-compete for all physicians in clinical practice who
14 hold employment contracts with for-profit or non-profit hospital, hospital system, or staffing
15 company employers.” Resolution 237 does not supplant *Ethical Opinion 11.2.3.1*, which opposes
16 the use of unreasonable physician non-competes. Thus, while Resolution 237 prohibits covenants
17 not-to-compete for all physicians in clinical practice who hold employment contracts with for-
18 profit or non-profit hospital, hospital system, or staffing company employers, *Ethical Opinion*
19 *11.2.3.1* applies in other contexts, and thus opposes the use of unreasonable non-competes between
20 physician employers and physician employees.

21
22 Resolve 3 appears to recognize the negative impact that non-competes – even those used by
23 physician employers – may have on physicians and patients. Specifically, Resolve 3 asks the AMA
24 to make recommendations concerning the appropriate regulation or restriction of non-competes in
25 physician contracts with independent physician groups that include time, scope, and geographic
26 restrictions. What follows is a brief discussion regarding how non-competes may harm patients and
27 physicians.

28
29 *Non-competes Harm Patients*

30
31 Enforcement of non-competes often harms patients by ending patient-physician relationships, e.g.,
32 if a non-compete forces a physician out of a community or otherwise makes the physician
33 geographically inaccessible to patients. Patients may be particularly at risk when the non-compete
34 severs long-standing patient-physician relationships where the physician has been taking care of
35 patients with chronic illnesses. Similarly, a non-compete can thwart a patient’s choice of physician.

36
37 Non-competes may hinder patients’ ability to timely access care. For example, depending on the
38 geographic area, there may be a few physicians, general practitioners, or specialists available to
39 serve the patient population. Even if several physicians practice in the community, forcing a
40 physician to leave the area may reduce the number of available physicians. Although a replacement
41 physician may ultimately be recruited to the area, recruitment can be a lengthy process. In the
42 meantime, the absence of the physician subject to the non-compete may frustrate timely patient
43 access to physician services – assuming the community’s remaining physicians have the capacity to
44 take on new patients.

45
46 Non-competes may also harm patients by compromising physician autonomy. For example, most
47 physician employment agreements allow the employer (and the physician) to end the agreement at
48 any time, so long as the other party is given advance notice. (This is typically referred to as
49 “without cause” termination). A physician who knows that an employer can end their employment
50 at any time, which will in turn trigger a non-compete, may be very reluctant to engage in patient
51 advocacy, and speak up about matters negatively affecting patient care, clinical decision-making,

1 etc.

2
3 *Non-competes Harm Physicians*
4

5 Non-competes can also harm employed physicians by locking them into untenable working
6 conditions or responsibilities that are detrimental to physicians' mental and/or physical health,
7 thereby contributing to the physician burnout epidemic. A physician who is practicing medicine in
8 demoralizing working conditions may feel an urgent need to find a job with a better working
9 environment and where the employer listens to its physicians' concerns and fosters a workplace
10 that is more conducive to the practice of medicine. If a competing employer in the community
11 offers the physician such an opportunity, a non-compete would bar the physician from accepting
12 the new position. The physician might solve this issue if he or she were willing to work for an
13 employer outside the non-compete's geographic restrictions. Doing so, however, could not only
14 force the physician to leave the area, but require the physician to uproot his or her family from a
15 community where the family has established significant roots. As a practical matter, working
16 outside of the non-compete's geographic restriction may then be completely out of the question.
17 Thus, the physician will simply have no option but to stay in a demoralizing employment situation
18 that continues to put the physician's mental and physical health at risk and increasingly subjects the
19 physician to burnout.
20

21 Based on all of the above, we understand that employed physicians have a strong case for wanting
22 the AMA to adopt policy calling for a complete ban on non-competes. However, while Resolve 3
23 requires the AMA to support a ban on non-competes in employment contracts with for-profit or
24 non-profit hospitals, hospital systems, or staffing company employers, Resolve 3 does not call on
25 the AMA to do the same with respect to non-competes between independent physician groups and
26 their physicians. Rather, Resolve 3 asks the AMA to study and report back with recommendations
27 to address balancing legitimate business interests (LBIs) of physician employers while also
28 protecting physician employment mobility and advancement, competition, and patient access to
29 care. Thus Resolve 3 appears to recognize that physician employers may feel the need to use
30 reasonable non-competes to protect LBIs. The next paragraph discusses those interests.
31

32 *Employer's Reasons for Requiring Restrictive Covenants*
33

34 Physician employers may feel that reasonable non-competes are essential to protect LBIs, which
35 may take several forms. For example, an independent physician group may train the physician,
36 make referral sources and contacts available to the physician, give the physician access to patients
37 and patient lists, market the physician in the community, and provide the physician with
38 proprietary practice information to help the physician build up his or her practice. Physician
39 employers may want to use non-competes to prohibit a physician from leaving and then opening up
40 their own practice "down the hall," in the same building, or even across the street – after receiving
41 the benefit of information, training, patient contacts, and other resources provided by the
42 independent physician group. Non-competes may give the physician employer the freedom and
43 security to invest significant resources in the employed physician's success, without the employer
44 having to worry that the physician will later leave after the physician has developed a significant
45 patient base, taking those patients with him or her.
46

47 DISCUSSION
48

49 There are two recent, major developments or trends relating to physician employment contract
50 terms relating to the potential balancing of the physician employer and their employed physicians
51 and patient access. These developments are: (1) the Federal Trade Commission's (FTC) proposed

1 rule on non-competes and (2) the ongoing enactment of state legislation dealing with non-
 2 competes. Because the FTC’s proposed rule bans physician non-competes, except with respect to
 3 501(c)(3) organizations under the U.S. Internal Revenue Code (which includes at least some
 4 hospitals and health systems), the proposed rule is not a source of recommendations about how
 5 physician contracting, regulation, or restrictions to non-competes might modify non-competes
 6 themselves to achieve the balance described in Resolve 3. The proposed rule does not prohibit the
 7 use of reasonable confidentiality provisions to protect trade secrets and other confidential
 8 information or repayment agreements. These types of provisions might, if taken together, be a
 9 possible means of achieving the kind of balance described by Resolve 3.

10
 11 *Recommendations Concerning Possible Modifications to Traditional Non-competes*

12
 13 State legislatures continue to consider bills that address non-competes, and most states have
 14 enacted statutes that are applicable to non-competes between physician employers and physician
 15 employees. These laws, as well as court decisions, provide the basis of how non-competes between
 16 physician employers and physician employees might be regulated. In states where one or more of
 17 these laws do not apply, the following recommendations could also be considered in contract
 18 negotiations between physician employers and their employees as a means of trying to achieve the
 19 balance described in Resolve 3.

- 20
 21 • **Bases of termination.** Rather than having the non-compete apply regardless of the reason for
 22 employment termination, the non-compete might be modified so that it is enforceable only if:
 23 (1) the physician terminated his or her employment without cause; (2) the physician’s license
 24 to practice medicine, or prescribe or dispense controlled substances, is currently revoked; or (3)
 25 the physician is currently excluded from participating in Medicare, Medicaid, or any other
 26 governmental program providing compensation for services rendered to patients.
 27
- 28 • **Duration.** A non-compete could be drafted so that it has a short duration. It is not unusual for
 29 physician non-competes to last two years. But, following the direction of several state laws, the
 30 duration could be reduced to one year, or even six months. For example, Connecticut limits the
 31 duration of a physician non-compete to no more than one year.² In a frequently cited Arizona
 32 Supreme Court case, the court affirmed a lower court’s ruling that six months, rather than three
 33 years, was sufficient to protect the legitimate business interests of a physician practice with
 34 respect to competition from a formerly employed pulmonologist.³
 35
- 36 • **Scope of services.** A non-compete should apply only to services that the employed physician
 37 provided to the physician employer, and not, for example, broadly restrict the physician from
 38 “practicing medicine.” For example, a Louisiana court ruled that a non-compete was too broad
 39 because it prohibited the physician employee from engaging in the practice of medicine, rather
 40 than being limited to the pain management services that he provided.⁴ On the other hand, the
 41 Illinois Supreme Court upheld a ruling holding that a non-compete prohibiting a physician
 42 from practicing medicine was not too broad.⁵
 43
- 44 • **Working for competitors.** A non-compete could be structured so that it prohibits the departing
 45 physician from working for a competitor, rather than prohibiting the physician from working
 46 for any employer in the relevant geographic area.⁶
 47
- 48 • **Tying the geographic scope of the non-compete to a single location.** A non-compete should
 49 be written so that it is tied to the specific location where the physician provided the majority of
 50 his or her services, sometimes referred to in state law as the “primary practice site.” A non-

1 compete should not include any geographic area where the physician employer has offices—
2 since the employer may have several offices in a state or states.⁷

- 3
- 4 • **Reasonable buy-out provision.** A non-compete could be drafted so that the departing
5 physician could buy his or her way out of the non-compete.⁸ The amount of the buyout should
6 be reasonable based on a predetermined formula to eliminate ambiguity concerning how the
7 buyout amount will be calculated. However, in some cases, even if there is no dispute
8 concerning the buyout’s reasonableness, a departing physician may not be able to buy his or
9 her way out of a non-compete because the amount of the buyout is more than the physician can
10 pay.
 - 11
 - 12 • **Carve out for specific types of patients.** Some state statutes that do permit the use of non-
13 competes allow the departing physician to continue to see patients with specific types of
14 conditions. For example, the Texas statute permits the physician to still treat patients with an
15 acute illness.⁹ The Colorado statute may also serve as an example here. Although the Colorado
16 law prohibits non-competes in physician employment agreements, it does permit punitive
17 damages related to competition. However, punitive damages are not recoverable if the formerly
18 employed physician is treating a patient with a rare disorder.¹⁰

19

20 *Use of Contractual Provisions that are not Non-competes*

21

22 There are other kinds of post-employment restrictions that may represent other ways of attempting
23 to achieve the balance described in Resolve 3. A physician employer may, however, be concerned
24 that these alternatives do not sufficiently protect its LBI. This section describes some of these other
25 options, which may be used in combination with one another.

26

27 Trade Secrets

28

29 A contract clause obligating the departing physician not to disclose the employer’s trade secrets is
30 one way that the physician employer could protect its LBI. All states have laws protecting trade
31 secrets and most states have adopted the Uniform Trade Secrets Act¹¹ (UTSA) in various forms.
32 The UTSA defines “trade secret” as information, including a formula, pattern, compilation,
33 program, device, method, technique, or process, that: (1) derives independent economic value,
34 actual or potential, from not being generally known to, and not being readily ascertainable by
35 proper means by, other persons who can obtain economic value from its disclosure or use and
36 (2) is the subject of efforts that are reasonable under the circumstances to maintain its secrecy.

37

38 The UTSA includes a civil cause of action for trade secret misappropriation, which refers to
39 disclosure or use of a trade secret by a former employee without express or implied consent.
40 Moreover, the courts have held that trade secrets include patient lists, medical records, and
41 superbills containing patient addresses, medical diagnoses and treatment codes, and patient
42 insurance information.¹² AMA policy states, however, that billing records and associated medical
43 records should not be treated as proprietary or as trade secrets.¹³

44

45 Confidentiality Clauses

46

47 Physician employers may also use confidentiality agreements to protect legitimate business
48 interests. Confidential information includes, but is not limited to, trade secrets. Some state laws
49 define “confidential information.” For example, the Georgia non-compete statute defines
50 “confidential information” in part to mean data and information:

1 Relating to the business of the employer, regardless of whether the data or
2 information constitutes a trade secret...disclosed to the employee, that has value to
3 the employer; is not generally known to the employer's competitors; competitors
4 of the employer; and includes trade secrets, methods of operation, names of
5 customers, price lists, financial information and projections, route books, personnel
6 data, and similar information...¹⁴
7

8 The employer should require that, upon termination of the physician's employment, that the
9 departing physician promptly return any confidential information in the physician's possession or
10 control to the physician employer, including but not limited to, information on electronic devices.
11 Further, the physician employer should consider requiring the employee to agree to a provision
12 prohibiting a physician from taking any property, patient lists, or records of the employer with him
13 or her upon the termination or expiration of the employment agreement.¹⁵
14

15 Protecting Trade Secrets and Confidential Information Through Non-disclosure Agreements

16

17 A physician employer can take steps to protect both confidential and trade secrets information by
18 requiring the employee to sign a non-disclosure agreement (NDA) that applies after the physician
19 leaves the employer. An NDA needs to be (1) clear about the information that is protected and (2)
20 specifically tailored to protect that information. Courts may refuse to enforce NDAs that are too
21 broad, e.g., they apply to information that is not considered to be confidential.
22

23 In some circumstances an NDA may be so broad that it can function as a de facto non-compete.
24 One example of an NDA functioning as a de facto non-compete is found in *Brown v. TGS Mgmt.*
25 *Co., LLC*. In this case, "confidential information" included any information that was "usable in" or
26 "relates to" the securities industry. A California court refused to enforce the NDA because it
27 defined confidential information "so broadly as to prevent [the employee] from ever working again
28 in securities trading" and thus, operated as a de facto non-compete. As a result, the court concluded
29 that it could not be enforced under California law.¹⁶
30

31 While NDAs do not restrict the mobility of physician employees as much as non-competes,
32 physician employers may be concerned that an NDA is not sufficient to protect its trade secrets and
33 other confidential information. It may be challenging for the physician employer to detect a breach
34 of an NDA in comparison with a non-compete. Further, there can be significant litigation
35 concerning just what damage the breach has caused the employer. Issues with detection and
36 establishing damage amounts are likely to make enforcement of NDAs more expensive than
37 enforcement of non-competes. However, in lieu of having to prove damage amounts, the physician
38 employer might, to the extent permitted by state law, be able to include in the employment contract
39 a clause entitling the employer to liquidated damages if the physician breaches an NDA, although
40 the amount of liquidated damages could itself be subject to litigation.
41

42 Non-solicitation Agreements

43

44 Most states that prohibit non-competes do not disallow the use of non-solicitation agreements
45 (NSA). For example, the Minnesota non-compete statute does not prohibit an NDA, an agreement
46 designed to protect trade secrets or confidential information, an NSA, or an agreement restricting
47 the ability to use client or contact lists or solicit customers of the employer.¹⁷ NSAs can apply to
48 the physician employer's patients, employees, or both. An NSA should, however, entitle the
49 physician to notify patients whom they have seen and who wish to continue care with them of their
50 new location and be advised they may sign a records release to have their records transferred to
51 their physician of choice.

1 As in the case of NDA, it is likely that an employer will find it more difficult, and thus more
2 expensive, to detect the breach of an NSA and prove damages, as opposed to a non-compete.
3 Proving a breach of an NSA may be particularly challenging because employees may want to work
4 for, and patients may decide to continue their relationship with, the departing physician on their
5 own initiative without any solicitation from the physician. Again, as in the case of breach of an
6 NDA, the physician employer might, to the extent permitted by state law, include a liquidated
7 damages provision in its employment agreement with the physician to remedy a breach of an NSA,
8 which, as noted above, may also be the subject of litigation.

9 10 Repayment Agreements

11
12 Using a repayment agreement can be another way to attempt to achieve the balance described in
13 Resolve 3. The main concern here most likely has to do with what costs are covered by the
14 agreement. Fortunately, some state non-compete statutes address this issue. For example, the New
15 Mexico non-compete law, which bans non-competes in physician employee contracts, states that
16 during an initial employment period of less than three years, the physician employer can require
17 the departing physician to repay all or a portion of: (1) a loan; (2) relocation expenses; (3) a
18 signing bonus or other remuneration to induce the health care practitioner to relocate or establish a
19 health care practice in a specified geographic area; or (4) recruiting, education, and training
20 expenses.¹⁸ The West Virginia non-compete statute, on the other hand, states that a physician
21 employer may require an employed physician to repay all or a portion of: (1) a loan; (2) location
22 expenses; (3) a signing bonus; (4) remuneration to induce the physician to relocate or establish a
23 physician practice in a specific geographic area; or (5) recruiting, education, and training expenses.
24 (The West Virginia statute does permit the use of physician non-competes lasting no more than
25 one year). Unlike the New Mexico statute, the repayment obligation appears to have no time
26 limit.¹⁹

27
28 A physician employer must take care that the repayment agreement is fair and is not inflated by
29 costs that do not reflect actual financial benefits conferred on the employed physician. Notably, the
30 FTC's proposed non-compete rule states that a repayment agreement may function as a de facto
31 non-compete if the repayment obligation is not reasonably related to the costs the employer
32 incurred for training the worker.²⁰ The abuse of repayment agreements has come under fire from
33 other quarters as a means of preventing employees from leaving their jobs through debt, and are
34 being used as a work-around in states where non-competes are banned.²¹ If a physician employer is
35 considering how to structure a repayment agreement and what types of costs ought to be covered,
36 the cost categories listed in the New Mexico and the West Virginia laws may be useful guides,
37 keeping in mind that the cost amounts must also be reasonable.

38 39 *AMA Educational and Advocacy Resources*

40
41 The AMA has many educational and advocacy resources concerning non-competes. For example,
42 the Advocacy Resource Center (ARC) has, pursuant to prior AMA policy, developed a
43 comprehensive analysis of all state non-compete laws that apply to physicians entitled "Legislative
44 Template: Covenants not-to-Compete in Physician Contracts." Those interested in this advocacy
45 resource may obtain it by contacting the ARC at [https://www.ama-assn.org/system/files/rc-](https://www.ama-assn.org/system/files/rc-legislative-template.pdf)
46 [legislative-template.pdf](https://www.ama-assn.org/system/files/rc-legislative-template.pdf). The AMA Career Planning Resource webpage also has a wealth of
47 information discussing physician employment issues, which includes information and tips regarding
48 restrictive covenants. The AMA Career Planning Resource webpage may be accessed at
49 [https://www.ama-assn.org/residents-students/career-planning-resource/understanding-employment-](https://www.ama-assn.org/residents-students/career-planning-resource/understanding-employment-contracts)
50 [contracts](https://www.ama-assn.org/residents-students/career-planning-resource/understanding-employment-contracts).

1 RELEVANT AMA POLICY

2
3 The following AMA policy is relevant to this Board Report:

4
5 • **Code of Medical Ethics 11.2.3.1 Restrictive Covenants**

6
7 Competition among physicians is ethically justifiable when it is based on such factors as
8 quality of services, skill, experience, conveniences offered to patients, fees, or credit terms.

9
10 Covenants-not-to-compete restrict competition, can disrupt continuity of care, and may limit
11 access to care.

12
13 Physicians should not enter into covenants that:

14
15 (a) Unreasonably restrict the right of a physician to practice medicine for a specified period of
16 time or in a specified geographic area on termination of a contractual relationship; and

17
18 (b) Do not make reasonable accommodation for patients' choice of physician.

19
20 Physicians in training should not be asked to sign covenants not to compete as a condition of
21 entry into any residency or fellowship program.

22
23 AMA Principles of Medical Ethics: III, IV, VI, VII

24
25 • **Restrictive Covenants of Large Health Care Systems D-383.978**

26
27 Our AMA, through its Organized Medical Staff Section, will educate medical students,
28 physicians-in-training, and physicians entering into employment contracts with large health
29 care system employers on the dangers of aggressive restrictive covenants, including but not
30 limited to the impact on patient choice and access to care.

31
32 • **Restrictive Covenants in Physician Contracts H-383.987**

33
34 Our AMA will provide guidance, consultation, and model legislation concerning the
35 application of restrictive covenants to physicians upon request of state medical associations and
36 national medical specialty societies.

37
38 • **Prohibiting Covenants Not-To-Compete in Physician Contracts H-265.988**

39
40 (1) Our American Medical Association support policies, regulations, and legislation that
41 prohibits covenants not-to-compete for all physicians in clinical practice who hold employment
42 contracts with for-profit or non-profit hospital, hospital system, or staffing company
43 employers.

44
45 (2) Our AMA will oppose the use of restrictive covenants not-to-compete as a contingency of
46 employment for any physician-in-training, regardless of the ACGME accreditation status of the
47 residency/fellowship training program.

48
49 (3) Our AMA will study and report back on current physician employment contract terms and
50 trends with recommendations to address balancing legitimate business interests of physician

1 employers while also protecting physician employment mobility and advancement,
2 competition, and patient access to care - such recommendations to include the appropriate
3 regulation or restriction of a) Covenants not to compete in physician contracts with
4 independent physician groups that include time, scope, and geographic restrictions; and b) De
5 facto non-compete restrictions that allow employers to recoup recruiting incentives upon
6 contract termination.

7
8 • **Covenants Not to Compete D-265.988**
9

10 Our AMA will create a state restrictive covenant legislative template to assist state medical
11 associations, national medical specialty societies and physician members as they navigate the
12 intricacies of restrictive covenant policy at the state level.

13
14 **RECOMMENDATIONS**
15

16 The Board of Trustees recommends that the following policy be adopted, and the remainder of the
17 report be filed:

- 18
19 1. That the American Medical Association (AMA) continue to assist interested state
20 medical associations in developing fair and reasonable strategies regarding restrictive
21 covenants between physician employers and physician employees including regularly
22 updating the AMA's state restrictive covenant legislative template. (New HOD Policy)

Fiscal Note: Less than \$500

EXECUTIVE SUMMARY

While physicians receive extensive training in a chosen specialty during their medical residency, nurse practitioners and physician assistants do not specialize in a comparable way. Both nurse practitioners and physician assistants must graduate from an accredited program and pass a certification examination for licensure in most states. While didactic education and clinical training differs between the two professions, the education of both nurse practitioners and physician assistants is broadly focused, especially compared to that of a physician. Any focus on a specific specialty in formal training is limited. While some nurse practitioners and physician assistants may “specialize” by gaining certifications in a certain area, these additional certifications are earned by acquiring experience “on-the-job,” are optional upon completion of their formal training, and are separate from the initial certifications typically attained upon graduation.

Nurse practitioner programs do prepare students to provide care to a particular population as determined by the population focus selected by the students. Students choose one of six population foci—for example, family/individual, pediatrics, or psychiatric/mental health—to emphasize in their training. The chosen population focus typically determines the certification a nurse practitioner attains following graduation. As such, nurse practitioner programs vary based on the nurse practitioner’s chosen population foci and the primary certification they plan to attain. Importantly, however, the education around the population focus does not rise to the level of specialty training. Specialty training represents a “much more focused area of preparation and practice than does the APRN role/population focus level.”¹¹

On the other hand, physician assistant programs intentionally train physician assistants as “generalists,” not specialists. The physician assistant curriculum is largely the same for all physician assistant students. However, physician assistants can obtain Certificates of Added Qualifications (CAQs) post-graduation in certain specialties such as cardiovascular and thoracic surgery or emergency medicine. These CAQs are optional and require physician assistants to acquire work hours in the relevant specialty. Of note, CAQs are separate from the PA-C certification, which is the single certification offered to physician assistants who have graduated from an accredited program and passed the Physician Assistant National Certifying Examination.

A nurse practitioner or physician assistant’s certification is not always aligned with the specialty or setting in which they practice during their career. In fact, both can move between specialties throughout their career often with little to no additional education or training. Available data shows that an increasing number of nurse practitioners and physician assistants are practicing in specialties outside of primary care. However, there is no publicly available data on how often nurse practitioners change specialties and very little such data on physician assistants. Nevertheless, the flexibility to move between specialties is often touted as a “selling point” for prospective students.

This Board Report provides a summary of the underlying education and training of nurse practitioners and physician assistants, as well as an overview of initial certifications and optional specialty certifications available to each profession. The report also examines existing workforce studies and data on specialties and practice settings of nurse practitioners and physician assistants and the alignment of such to the certification of the respective nurse practitioner or physician assistant.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 14-A-24

Subject: Physician Assistant and Nurse Practitioner Movement Between Specialties

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2

3 At the 2023 Annual Meeting, the American Medical Association (AMA) House of Delegates
4 (HOD) adopted Resolution 239 entitled, “Physician Assistant and Nurse Practitioner Movement
5 Between Specialties.” This resolution asked the AMA to study the movement of nonphysician
6 health care professionals between specialties.

7

8 *Procedural History*

9

10 Resolution 239 was introduced by the Arizona delegation and asked:

11

12 That our American Medical Association Board of Trustees study and report back
13 at the 2023 Interim meeting on the economic impact to primary care and other
14 lower tier income medical specialties of specialty switching by Advanced
15 Practice Providers (Directive to Take Action); and

16

17 That our AMA Board of Trustees study and report back at the 2023 Interim
18 meeting about possible options on how APP’s can best be obligated to stay in a
19 specialty tract that is tied to the specialty area of their supervising physician in
20 much the same way their supervisory physicians are tied to their own specialty,
21 with an intent for the study to look at how the house of medicine can create
22 functional barriers that begin to make specialty switching by Advanced Practice
23 Providers appropriately demanding. (Directive to Take Action)

24

25 Similar in intent, Resolution 262 was introduced by the Private Practice Physicians Section and
26 asked:

27

28 That our American Medical Association create a national task force that will
29 make recommendations for the best process for advanced practice providers
30 (APPs) to develop specialty designations or an associated apprenticeship process
31 that is parallel to the specialties of the physicians that supervise them (Directive
32 to Take Action);

33

34 That our American Medical Association study and report back at Interim 2023 on
35 the economic impact to medical practices of specialty switching by advanced
36 practice providers (Directive to Take Action); and

1 That our American Medical Association study and report back at the 2023
2 Interim Meeting about possible options on how advanced practice providers can
3 best be obligated to stay in a specialty tract (Directive to Take Action).
4

5 Testimony on both of these Resolutions was limited. The Reference Committee heard that the
6 AMA does not have the authority or purview over post-graduate clinical training requirements of
7 nonphysicians and that the AMA has extensive resources detailing the education and training of
8 nurse practitioners and physician assistants. However, the Reference Committee also heard
9 testimony indicating that a growing number of nonphysicians are moving between specialties, and
10 that this is a concern for physicians.
11

12 Seeking to meet the underlying concerns raised in Resolutions 239 and 262, the Reference
13 Committee recommended that Resolution 239 be adopted with an amendment, and that the
14 amended Resolution 239 be adopted in lieu of Resolution 262. The HOD agreed and ultimately
15 adopted amended Resolution 239, which reads as follows:
16

17 That our American Medical Association study the movement of nonphysician
18 health care professionals such as physician assistants and nurse practitioners
19 between specialties.
20

21 This Board of Trustees Report aims to address this directive. It examines the educational
22 preparation of nurse practitioners and physician assistants and evaluates their ability to move
23 between specialties.
24

25 BACKGROUND

26

27 The implications of specialty switching by nurse practitioners and physician assistants are best
28 understood when one considers the underlying education, training, and certification of each
29 profession.
30

31 *Nurse Practitioner Education and Training*

32

33 Nurse practitioners are one type of Advanced Practice Registered Nurse (APRN). While the focus
34 of this board report is on nurse practitioner and physician assistant certification, the foundational
35 documents for nurse practitioner education include APRNs in four types of “roles:” nurse
36 practitioners, clinical nurse specialists, certified nurse midwives, and certified registered nurse
37 anesthetists (CRNAs). Each type of APRN has its own accreditation and certifying bodies. For
38 example, CRNA programs are accredited by the Council on Accreditation of Nurse Anesthesia
39 Education Programs (COA) and CRNAs can obtain certification from the National Board of
40 Certification and Recertification for Nurse Anesthetists (NBCRNA). By contrast, the Commission
41 on Collegiate Nursing Education (CCNE) and the Accreditation Commission for Education in
42 Nursing (ACEN) both accredit nurse practitioner programs, and nurse practitioners may be
43 certified by one of several different certifying bodies.
44

45 APRN education and training is based on foundational documents that were drafted and agreed to
46 by leaders in the nursing profession:
47

- 48 • Two American Association of Colleges of Nursing (AACN) “Essentials” documents: *The*
49 *Essentials of Master’s Education in Nursing (2011)* and *The Essentials of Doctoral*
50 *Education for Advanced Nursing Practice (2006)* (together, the *AACN Essentials*).

- 1 • The National Task Force on Quality Nurse Practitioner Education’s *2016 Criteria for*
2 *Evaluation of Nurse Practitioner Programs (NTF Standards)*.
- 3 • The Consensus Model for APRN Regulation: Licensure, Accreditation, Certification &
4 Education (APRN Consensus Model).

5
6 Taken together, these documents provide the framework for the curriculum and accreditation of
7 nurse practitioner graduate education programs.

8
9 What is referred to as the “APRN Consensus Model” also provides a model for APRN regulation
10 and certification. The APRN Consensus Model is the basis for the four distinct roles of APRNs and
11 the six-population foci that are foundational to APRN education and training:

- 12
- 13 • Family/individual across the lifespan;
- 14 • Adult-gerontology;
- 15 • Pediatrics;
- 16 • Neonatal;
- 17 • Women’s health/gender-related; and
- 18 • Psychiatric/mental health.

19
20 A nurse practitioner’s specific educational experience will depend on their chosen population
21 focus, and so will their certification. The APRN Consensus Model states that, “[e]ducation,
22 certification, and licensure of an individual must be congruent in terms of role and population
23 foci.”ⁱⁱ As such, distinct certifications—which are generally required for licensure—were created
24 for each population focus, and in some cases for primary care as distinct from acute care. Each
25 certification is aligned with a different educational track. In short, it is expected that a nurse
26 practitioner’s education and training will be based on the certification they plan to attain after
27 graduation. Consequentially, nurse practitioner programs vary slightly based on the nurse
28 practitioner’s chosen population foci and the certification they plan to attain. Each certification has
29 a somewhat different educational pathway, but all nurse practitioners must meet the same core
30 academic requirements. The APRN Consensus Model provides the required “APRN core” courses
31 included in the curriculum for all nurse practitioners (and all APRNs):

- 32
- 33 • Physiology/pathophysiology;
- 34 • Health assessment; and
- 35 • Pharmacology.ⁱⁱⁱ

36
37 Specialty training, by contrast, represents a “much more focused area of preparation and practice
38 than does the APRN role/population focus level.”^{iv}

39
40 Across all population foci, nurse practitioner clinical training requirements are largely not
41 standardized, in sharp contrast to physician clerkships and residencies. Nurse practitioners only
42 undergo 500-750 hours of clinical training. This results in evident experience gaps. For example,
43 even though some of the nurse practitioner certifications broadly span patient populations,
44 including across the lifespan from children to geriatric patients, studies on nurse practitioner
45 education have documented that family nurse practitioners (FNPs) often receive minimal training
46 across patient populations.

47
48 Notably, a study in the *Journal of Nursing Regulation* surveyed recent FNP graduates on how often
49 they performed basic tasks like prescribing medications, obtaining a health history, ordering

1 diagnostic tests, and developing differential diagnoses during their entire training.^v The survey also
2 examined these tasks across patient populations, providing a window into how the FNP education
3 and training prepares students for practice. The results were shocking. For example, only
4 61.5 percent of FNPs reported they prescribed medications to an adult patient more than 10 times,
5 15 percent said they only prescribed medications to an adult patient one to two times.^{vi} The
6 numbers were even lower for pediatric and geriatric patients. Only 44.6 percent and 56.3 percent of
7 FNP students surveyed said they prescribed medications more than 10 times to a pediatric patient
8 and geriatric patient respectively, with 5.5 percent and 4.0 percent of FNP students indicating they
9 *never* prescribed medications to pediatric or geriatric patients respectively during their clinical
10 training.^{vii} This study demonstrates the lack of standardization in nurse practitioner training
11 programs. Yet, FNPs often practice across patient populations and increasingly in specialties
12 outside primary care.

13

14 *Nurse Practitioner Certification*

15

16 For initial certification of nurse practitioners, two major certifying bodies exist: the American
17 Academy of Nurse Practitioners Certification Board (AANPCB) and the American Nurses
18 Credentialing Center (ANCC).^{viii} Each certifying body administers their own examination and
19 offers their own certifications. Both AANPCB and ANCC require nurse practitioners to renew their
20 certification every five years. Most states require certification for licensure as a nurse practitioner,
21 and certification exams are generally aligned with population foci.

22

23 The AANPCB offers three initial certifications: Family Nurse Practitioner (FNP), Adult-
24 Gerontology Primary Care Nurse Practitioner (A-GNP), and Psychiatric Mental Health Nurse
25 Practitioner (PMHNP).^{ix} AANPCB's FNP examination is an online examination with 150 multiple
26 choice questions, which must be completed in three-hours. In 2021 the pass rate was 84 percent.
27 AANPCB has retired a couple of certifications, including the Adult Nurse Practitioner (retired in
28 2017) and Gerontology Nurse Practitioner (retired in 2012). Nurse practitioners who obtained these
29 retired certifications can maintain the credential as long as they continue to renew their certification
30 by completing the required clinical practice hours and continuing education.

31

32 ANCC offers four certifications for nurse practitioners: Family Nurse Practitioner (FNP-BC),
33 Adult-Gerontology Primary Care Nurse Practitioner (AGPCNP-BC), Adult-Gerontology Acute
34 Care Nurse Practitioner (AGACNP-BC), and Psychiatric Mental Health Nurse Practitioner
35 (PMHNP-BC). ANCC's FNP-BC certifying examination includes 150-200 questions that vary in
36 format from multiple choice, drop and drag, and multiple response. The average pass rate in
37 2021 was 87 percent. ANCC also offers certifications for registered nurses, as well as micro-
38 credentials in certain sub-specialties. ANCC has also retired several certifications, including Acute
39 Care Nurse Practitioner, Adult Nurse Practitioner, Adult-Psychiatric Mental Health Nurse
40 Practitioner, Emergency Nurse Practitioner, Gerontological Nurse Practitioner, Pediatric Primary
41 Care Nurse Practitioner, and School Nurse Practitioner. Like the retired certifications offered by
42 AANPCB, nurse practitioners may renew these ANCC retired certifications to maintain their
43 credential.^x

	American Academy of Nurse Practitioners Certification Board (AANPCB)	American Nurses Credentialing Center (ANCC)
Current certifications	Family Nurse Practitioner (FNP) Adult-Gerontology Primary Care Nurse Practitioner (A-GNP) Psychiatric Mental Health Nurse Practitioner (PMHNP)	Family Nurse Practitioner (FNP-BC) Adult-Gerontology Primary Care Nurse Practitioner (AGPCNP-BC) Adult-Gerontology Acute Care Nurse Practitioner (AGACNP-BC) Psychiatric Mental Health Nurse Practitioner (PMHNP-BC)
Retired certifications	Adult NP (retired) Gerontology NP (retired)	Acute Care NP (retired) Adult NP (retired) Adult-Psychiatric Mental Health NP (retired) Emergency NP (retired) Gerontological NP (retired) Pediatric Primary Care NP (retired) School NP (retired)

1 While AANPCB and ANCC are the largest certifying bodies for nurse practitioners, other smaller
 2 certification bodies exist, including the American Association of Critical-Care Nurses (AACN),
 3 National Certification Corporation (NCC), Pediatric Certification Board (PNCB), Certification
 4 Board for Urological Nurses & Associates (CBUNA), and Hospice & Palliative Credentialing
 5 Center (HPCC).

6

7 *Nurse Practitioner Specialties*

8

9 Under the APRN Consensus Model, advanced practice registered nurses are licensed at the level of
 10 the population focus—not at the specialty level.^{xi} Advanced practice registered nurses cannot be
 11 licensed solely within a specialty area.^{xii} Regarding specialties, the APRN Consensus Model notes
 12 that specialties are optional but must be congruent with and build on the individual’s established
 13 role and population foci.

14

15 Nurse practitioners may pursue optional certification in various specialties/subspecialties after
 16 initial certification in their role and population focus. An array of certifying boards issue
 17 “specialty” certifications for nurse practitioners—typically these certifications are based on hours
 18 of practice experience in a specialty and passage of an exam. Customarily, the certifying boards are
 19 specific to nursing and specific to a single specialty. For example, the Orthopaedic Nurses
 20 Certification Board certifies nurse practitioners in the orthopaedic specialty (ONP-C) and the
 21 Dermatology Nurses Association certifies dermatology nurse practitioners (DCNPs). However,
 22 AANPCB offers an Emergency Nurse Practitioner (ENP) certification for certified FNPs with
 23 specialty education and practice in emergency care.

24

25 Note that specialty certification is generally not required for practice within a given specialty—
 26 indeed, work within a specific specialty is required to earn specialty certification.

27

28 *Nurse Practitioner Workforce*

29

30 Nurse practitioners are not required to practice within the specialty in which they are certified, and
 31 so there is great misalignment between nurse practitioner certification and the setting or specialty
 32 in which they practice. The APRN Consensus Model attempts to align the nurse practitioner
 33 curriculum with the certification a nurse practitioner can attain after graduation, however, a nurse

1 practitioner’s certification is not always congruent with the specialty or setting in which the nurse
 2 practitioner practices during their career. Myriad data sources confirm this misalignment. For
 3 example, the American Association of Nurse Practitioners (AANP) claims that 88 percent of nurse
 4 practitioners are certified in primary care, but also reports that only 70.3 percent of nurse
 5 practitioners deliver primary care. The most recent Health Resources and Services Administration
 6 (HRSA) workforce data suggests a greater disparity, reflecting that only 24 percent of nurse
 7 practitioners deliver primary care.^{xiii}

8
 9 HRSA’s findings are consistent with several state-level workforce studies, including the following:

- 10
 11 • A study from the Oregon Center for Nursing examined the number of nurse practitioners
 12 practicing in primary compared to specialty care in Oregon. Looking at practice setting and
 13 area of practice, data from the survey revealed that only one-third of nurse practitioners
 14 practice in primary care and about 22 percent provided a combination of primary and
 15 specialty care. Of those nurse practitioners providing both primary and specialty care,
 16 about 62 percent spent less than half of their time focusing on primary care.^{xiv} The study
 17 found that the gap between nurse practitioners providing primary care versus specialty care
 18 is widening over time, with a greater number of nurse practitioners providing specialty care
 19 and fewer nurse practitioners providing primary care. It concluded that certification alone
 20 is not enough to determine one’s area of practice.
- 21 • Adding to this body of evidence is *A Profile of New York State Nurse Practitioners, 2017*,
 22 a workforce report in which only about *one-third* of actively practicing nurse practitioners
 23 were considered primary care nurse practitioners based on their specialty certification and
 24 practice setting, even though a vast majority of nurse practitioners in the state report a
 25 primary care specialty certification. To indicate, 87 percent of nurse practitioners reported
 26 a certification in primary care (36.8 percent in family health, 23.2 percent in adult health,
 27 8.1 percent in pediatrics).^{xv}
- 28 • A *2023 South Dakota Workforce Study* had similar findings.^{xvi} Based on data gathered
 29 from nurse license renewal applications, including nurses who renewed their license,
 30 reactivated an inactive license, or reinstated a lapsed license, 80.9 percent indicated they
 31 were licensed and certified as family nurse practitioners yet only 24.9 percent identified
 32 “family health” as their primary area of specialty, 5.1 percent chose “primary care”, and
 33 6 percent chose adult health.^{xvii} Other notable specialties selected include “other”
 34 (11.6 percent), psychiatric/mental health/substance abuse (8.2 percent), acute/critical care
 35 (7.3 percent), cardiology (4.2 percent), and emergency/trauma (3.5 percent).^{xviii}

36
 37 Studies also elucidate lack of congruence between nurse practitioners’ certification and their
 38 practice in acute care settings.^{xix} As noted earlier, some certifications distinguish between primary
 39 and acute care—and this distinction is ostensibly reflected in the nurse practitioner’s educational
 40 track. Yet, many nurse practitioners are certified in primary care work in an acute care practice
 41 specialty or setting.

42
 43 A study published in *Nursing Outlook* using data from HRSA’s 2018 National Sample Survey of
 44 Registered Nurses found that among nurse practitioners working in acute care settings, only
 45 44.5 percent held a certification in acute care, while 55.5 percent held only a primary care
 46 certification (13.7 percent held both acute care and primary care certifications). Notably, only about
 47 half of nurse practitioners working in acute care reported that they feel prepared to be an
 48 independent practitioner.^{xx}

1 Below are findings by clinical specialty area in which the respondents worked:

	Acute Care Certified (N = 8,256)	Primary Care Certified (N = 10,297)
Total	44.5%	55.5%
Clinical Specialty		
General medical surgical	27.5%	37.6%
Critical care	23.5%	25.3%
Chronic Care	30.0%	10.6%
Neurological	6.4%	7.0%
Oncology	5.0%	9.2%
Other	7.6%	10.3%

*from Nursing Outlook $p < .01$

2 These findings were consistent with other studies examining the misalignment between nurse
 3 practitioners’ credentials and their practice setting. For example, using data from the AANP
 4 National Nurse Practitioner Sample Survey, researchers found that of the 366 nurse practitioners
 5 who responded they were a hospitalist caring for adult patients (i.e., in an acute care setting),
 6 74.7 percent were certified in primary care—with a full 75 percent indicating “on-the-job training”
 7 as their qualification to be a nurse practitioner hospitalist.^{xxi}

8
 9 Similarly, while emergency departments are for acute-life or limb threatening emergencies and
 10 providing care to critically ill patients, most nurse practitioners working in emergency departments
 11 are certified as an FNP. In fact, while there is a separate specialty certification for emergency nurse
 12 practitioners (ENPs), only FNPs are eligible for such certification—not acute care nurse
 13 practitioners, even though emergency departments are acute care settings. Moreover, 90 percent of
 14 nurse practitioners practicing in emergency departments do not have the ENP additional specialty
 15 certification.^{xxii}

16
 17 Altogether, education and certification are not determinative of where a nurse practitioner will
 18 practice—workforce studies show that nurse practitioners commonly practice in clinical settings or
 19 specialties that are misaligned with, their education, training, and credentials.

20
 21 *Specialty Switching by Nurse Practitioners*
 22

23 Nurse practitioners may switch specialties throughout their career with few limitations, with the
 24 primary limitation being that, per the APRN Consensus Model, a nurse practitioner’s specialty
 25 must align with the population focus of the nurse practitioner’s training, as well as their
 26 certification. For some nurse practitioners this provides broad latitude in mid-career changes. For
 27 example, FNPs are trained to provide primary care across the lifespan and so would qualify for a
 28 broad range of specialties. By contrast, an adult-gerontology primary care nurse practitioner (AG-
 29 PCNP) might be more limited. For example, an AG-PCNP would likely have to complete
 30 additional training to care for children, or to care for adult or geriatric patients outside primary
 31 care.^{xxiii}

32
 33 *Physician Assistant Education and Training*
 34

35 Physician assistant programs are accredited by the Accreditation Review Commission on
 36 Education for the Physician Assistant (ARC-PA) and are two-to-three years in length. Physician

1 assistant programs provide a generalist education rather than focus on a particular specialty.^{xxiv} Per
2 the standards, program curriculum must include, “applied medical, behavioral and social sciences;
3 patient assessment and clinical medicine; *supervised clinical practice*; and health policy and
4 professional practice issues.”^{xxv} Upon completion of the program graduates are awarded a master’s
5 degree and become eligible to sit for the physician assistant certification examination.

6 7 *Physician Assistant Certification*

8
9 A single body certifies physician assistants: the National Commission on Certification of Physician
10 Assistants (NCCPA). Certification is available to physician assistants who graduate from an ARC-
11 PA accredited program and pass the Physician Assistant National Certifying Examination.
12 Physician assistants are eligible to take the examination up to six-years after graduation and those
13 who pass are awarded the PA-C credential. To maintain certification, physician assistants must
14 complete a minimum number of hours of continuing medical education (CME) and pass the
15 Physician Assistant National Recertifying Examination (PANRE) every 10 years. Most states
16 require completion of a minimum number of hours of CME, current certification by NCCPA, or
17 both as a condition of licensure or for licensure renewal.

18
19 The single certification for physician assistants is consistent with the approach for physician
20 assistant education and training—to provide a generalist education without a focus on specialty.
21 This is evident in both the didactic curriculum and clinical training of physician assistants. For
22 example, the 2,000 hours of clinical practice required of physician assistants includes rotations in
23 various specialties, including emergency medicine, obstetrics and gynecology, psychiatry, family
24 medicine, and internal medicine. Standards also include requirements that these clinical rotations
25 must include specific types of encounters. For example, physician assistant students must treat
26 patients requiring chronic, acute, emergent, and preventive care and must also provide care in a
27 variety of settings, including the emergency department, outpatient, and inpatient facilities. There
28 is no path for specialized focus in the physician assistant educational program.

29
30 In addition to the PA-C certification, NCCPA also offers optional specialty Certificates of Added
31 Qualification (CAQs) to physician assistants in 10 specialties, including:

- 32
33
- 34 • Cardiovascular & Thoracic Surgery;
 - 35 • Dermatology;
 - 36 • Emergency Medicine;
 - 37 • Hospital Medicine;
 - 38 • Nephrology;
 - 39 • Obstetrics and Gynecology;
 - 40 • Orthopaedic Surgery;
 - 41 • Palliative Medicine and Hospice Care;
 - 42 • Pediatrics; and
 - 43 • Psychiatry.^{xxvi}

44 A physician assistant who has acquired a CAQ is considered “board certified.” The specific
45 requirements vary by specialty but generally require the following: (1) completion of specialty-
46 specific CME, (2) attestation that the physician assistant has completed a certain number of hours
47 of experience in the specialty, (3) attestation that the physician assistant has the knowledge and
48 skills relevant to practice in the specialty, including the knowledge and skills to perform the
49 procedures relevant to the specialty, and/or that the physician assistant understands how and when

1 the knowledge and skills should be applied for appropriate patient management or how and when
2 the procedures should be performed, and (4) achieve a passing score on a specialty examination
3 (online or in person).

4
5 CAQs often rely heavily on attestations and may not actually require the physician assistant to
6 complete relevant procedures. Consider as an example the requirements to attain a CAQ in
7 emergency medicine:

- 8
- 9 • Self-attest to completing 75 credits of Category 1 CME focused on emergency medicine;
10 25 of which must be earned within two-years of the date of the application for the specialty
11 examination and the remaining earned within six years before this date.
 - 12 • Complete a comprehensive emergency medicine course that reflects the guidelines set forth
13 in the most current version of Model of the Clinical Practice of Emergency Medicine, and
14 complete the following courses:
 - 15 ○ Pediatric Advanced Life Support or Advanced Pediatric Life Support
 - 16 ○ Advanced Trauma Life Support
 - 17 ○ Airway course
 - 18 • Self-attest to completing 3,000 hours of experience working as a physician assistant in
19 emergency medicine within at least six-years.
 - 20 • Obtain attestation from a physician, lead/senior physician assistant, or physician/physician
21 assistant post graduate program director who works in emergency medicine and is familiar
22 with the physician assistant's practice and experience. The attestation must affirm that the
23 physician assistant, "*has performed* the procedures and patient management relevant to the
24 practice setting and/or *understands* how and when the procedures *should* be
25 performed...the PA may not have experience with each procedure, but he or she must be
26 knowledgeable of the basics of the procedures, in what situation the procedures should be
27 done, and the associated management of patients."^{xxvii}
 - 28 • Pass an examination which consists of 120 multiple choice questions, which can be taken
29 at a test center or online.
- 30

31 CAQs are wholly optional for physician assistants and are generally not required for physician
32 assistants to practice. Indeed, before earning and in order to earn a CAQ in the first instance, a
33 physician assistant must practice in a chosen specialty.

34 *Physician Assistant Workforce*

35
36
37 According to the NCCPA 2022 statistical profile of board-certified physician assistants, only 23.1
38 percent of physician assistants work in primary care, which includes "family medicine/general
39 practice, internal medicine general, and pediatrics general." When asked to identify their primary
40 area of practice, the most physician assistants reported working in the five specialties:

- 41
- 42 • Surgical subspecialties (18.6 percent);
 - 43 • Family medicine/general practice (17.1 percent);
 - 44 • Emergency medicine (11.2 percent);
 - 45 • Other (10.6 percent; *note that the most frequent responses include: urgent care,
46 interventional radiology, sleep medicine, aesthetics, trauma surgery, wound care, and
47 transplant surgery); and
 - 48 • Internal medicine subspecialties (9.9 percent).

1 Most physician assistants practice in hospital settings (41.7 percent) with office-based private
2 practice a close second (37.1 percent). Urgent care (5.6 percent) and federal government
3 facility/hospital/unit (4.7 percent) are a distant fourth and fifth.

4
5 While most physician assistants hold one clinical position (84.9 percent), 11.3 percent of physician
6 assistants hold two or more clinical positions, with emergency medicine (25.6 percent) being the
7 most common secondary specialty area of these physician assistants.

8 9 *Specialty Switching by Physician Assistants*

10
11 Since physician assistants are trained as “generalists,” they face very few barriers to specialty
12 switching. Indeed, more than half have changed specialties at least once during their career with
13 over 20 percent indicating they have changed specialties two to three times.^{xxviii} This can be done
14 without any additional education, formal training, or certification.

15 16 AMA POLICY

17
18 The AMA has extensive policy supporting physician-led team-based care, including policy on
19 appropriate physician supervision of nurse practitioners and physician assistants:

- 20
21
- 22 • Policy H-160.949, “Practicing Medicine by Non-Physicians;”
 - 23 • Policy H-160-906, “Models /Guidelines for Medical Health Care Teams;”
 - 24 • Policy H-160.950, “Guidelines for Integrated Practice of Physician and Nurse
25 Practitioner;”
 - 26 • Policy H-360.987, “Principles Guiding AMA Policy Regarding Supervision of Medical
27 Care Delivered by Advanced Practice Nurses in Integrated Practice;”
 - 28 • Policy H-35.989, “Physician Assistants;” and
 - 29 • Policy D-35.985 “Support for Physician Led, Team Based Care.”

30 The AMA also has policy directing our AMA to educate the public on the difference in the
31 education and training of physicians and non-physicians. Specifically:

- 32
- 33 • Policy H-160.949, “Practicing Medicine by Non-Physicians;”
 - 34 • Policy H-450.955, “Education of the General Public on the Role of Physician and Non-
35 Physician Health Care Providers;” and
 - 36 • Policy H-275.943, “Public Education about Physician Qualifications.”

37 38 DISCUSSION

39
40 The nurse practitioner and physician assistant professions both began with an emphasis on
41 providing primary care to patients to help address the primary care workforce shortages. Over time,
42 however, both nurse practitioners and physician assistants are increasingly choosing to practice in
43 specialties instead of primary care and may switch specialties multiple times during their career.
44 The idea of specialty switching by nurse practitioners and physician assistants is not a new
45 phenomenon and such flexibility in specialization is often touted by both professions as a positive
46 attribute to prospective students.

47
48 The underlying education and clinical training of both nurse practitioners and physician assistants
49 is founded upon a generalist approach. With limited exceptions, there is no focus on specialty care.

1 While state licensure requires graduation from an accredited program and certification by a
2 designated body, physician assistant certification and most nurse practitioner certifications are
3 extremely broad, allowing wide latitude in the patient population, specialty or setting in which they
4 can practice.

5
6 Moreover, there are little-to-no guardrails limiting the specialties in which nurse practitioners and
7 physician assistants may work. In fact, many studies show a misalignment between nurse
8 practitioner education, training, and certification and the specialty or setting in which they practice,
9 such that some nurse practitioners find themselves in the position of caring for a patient population
10 or level of acuity in which they have received no formal education or training. For both
11 professions, on-the-job training post-graduation is a common means to gain the requisite
12 knowledge in the specialty and practice setting in which they practice. This reinforces the
13 importance of physician-led team-based care.

14
15 While studies demonstrate the increased number of nurse practitioners and physician assistants
16 practicing in specialties as opposed to primary care, there is no publicly available data on specialty
17 switching by nurse practitioners. There are also no studies on the impact of specialty switching on
18 the cost and quality of care provided by nurse practitioners and physician assistants. Moreover,
19 there are no studies on the additional workload placed on physicians and other health care
20 professionals who must provide on-the-job training to nurse practitioners or physician assistants
21 who have switched specialties and/or are practicing in a specialty in which they have no formal
22 education, training, or certification. Moreover, there are no studies looking at the impact of
23 specialty switching in these professions on physician burnout, nor are there studies that look at the
24 impact on physician's time away from providing direct patient care. These gaps in literature are
25 ripe for analysis, particularly by those conducting research on the health care workforce. State
26 nursing and medical boards could also capture this information as part of a survey conducted at the
27 time of licensure renewals by nurse practitioners and physician assistants.

28 29 RECOMMENDATIONS

30
31 The Board of Trustees recommends that the following policy be adopted, and the remainder of the
32 report be filed:

- 33
34 1. That the American Medical Association (AMA) support workforce research, including
35 surveys by state medical and nursing boards, that specifically focus on gathering
36 information on nurse practitioners and physician assistants practicing in specialty care,
37 their certification(s), alignment of their certification to their specialty, and whether they
38 have switched specialties during their career. (New HOD Policy)
- 39 2. That the AMA support research that evaluates the impact of specialty switching by nurse
40 practitioners and physician assistants on the cost and quality of patient care. (New HOD
41 Policy)
- 42 3. That the AMA encourage hospitals and other health care entities employing nurse
43 practitioners to ensure that the nurse practitioner's certification aligns with the specialty in
44 which they will practice. (New HOD Policy)
- 45 4. That the AMA continue educating policymakers and lawmakers on the education, training,
46 and certification of nurse practitioners and physician assistants, including the concept of
47 specialty switching. (New HOD Policy)

Fiscal Note: Less than \$500.

REPORT 15 OF THE BOARD OF TRUSTEES (A-24)
Augmented Intelligence Development, Deployment, and Use in Health Care
(Resolution 247-A-23) (Resolution 206-I-23)
(Reference Committee B)

EXECUTIVE SUMMARY

At the June 2023 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted policy [H-480-935](#), “Assessing the Potentially Dangerous Intersection Between AI and Misinformation.” This policy calls on the AMA to “study and develop recommendations on the benefits and unforeseen consequences to the medical profession of large language models (LLM) such as, generative pretrained transformers (GPTs), and other augmented intelligence-generated medical advice or content, and that our AMA propose appropriate state and federal regulations with a report back at A-24.” This policy reflects the intense interest and activity in augmented intelligence (AI) prompted by the arrival of OpenAI’s ChatGPT and other LLMs/generative AI.

Additionally, at the November 2023 Interim Meeting, the AMA HOD referred Resolution 206-I-23, “The Influence of Large Language Models (LLMs) on Health Policy Formation and Scope of Practice.” Resolution 206-I-23 asked, “that our American Medical Association encourage physicians to educate our patients, the public, and policymakers about the benefits and risks of facing LLMs including GPTs for advice on health policy, information on health care issues influencing the legislative and regulatory process, and for information on scope of practice that may influence decisions by patients and policymakers.”

Generative AI is a type of AI that can recognize, summarize, translate, predict, and generate text and other content based on knowledge gained from large datasets. There has been increasing discussion about clinical applications of generative AI, including use as clinical decision support to provide differential diagnoses, early detection and intervention, and to assist in treatment planning. Generative AI tools are also being developed to assist with administrative functions, such as generating office notes, responding to documentation requests, and generating patient messages. While generative AI tools show tremendous promise to make a significant contribution to health care, there are a number of risks and limitations to consider when using these tools in a clinical setting or for direct patient care.

As the number of AI-enabled health care tools and systems continues to grow, these technologies must be designed, developed, and deployed in a manner that is ethical, equitable, responsible, and transparent. With a lagging effort towards adoption of national governance policies or oversight of AI, it is critical that the AMA and the physician community engage in the development of policies to help inform patient and physician education, help guide development of these tools in a way that best meets both patient and physician needs, and advocate for governance policies to help ensure that risks arising from AI are mitigated to the greatest extent possible.

This report highlights the AMA’s recognition of the issues raised at both the A-23 and I-23 HOD meetings, introduces and explains major themes of the report’s recommendations, and provides background information on the evolution of AI policy in health care and the direction that policy appears to be headed.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 15-A-24

Subject: Augmented Intelligence Development, Deployment, and Use in Health Care
(Res. 247-A-23) Assessing the Potentially Dangerous Intersection Between AI
and Misinformation
(Res. 206-I-23) The Influence of Large Language Models (LLMs) on Health
Policy Formation and Scope of Practice

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2
3 At the 2023 Annual Meeting, the American Medical Association (AMA) House of Delegates
4 (HOD) adopted policy [H-480-935](#), “Assessing the Potentially Dangerous Intersection Between AI
5 and Misinformation.” This policy calls on the AMA to “study and develop recommendations on
6 the benefits and unforeseen consequences to the medical profession of large language models
7 (LLM) such as, generative pretrained transformers (GPTs), and other augmented intelligence-
8 generated medical advice or content, and that our AMA propose appropriate state and federal
9 regulations with a report back at A-24.” This policy reflects the intense interest and activity in
10 augmented intelligence (AI) prompted by the arrival of OpenAI’s ChatGPT and other
11 LLMs/generative AI.

12
13 Additionally, at the 2023 Interim Meeting, the AMA HOD referred Resolution 206-I-23, “The
14 Influence of Large Language Models (LLMs) on Health Policy Formation and Scope of
15 Practice.” Resolution 206-I-23 asked, “that our American Medical Association encourage
16 physicians to educate our patients, the public, and policymakers about the benefits and risks of
17 facing LLMs including GPTs for advice on health policy, information on health care issues
18 influencing the legislative and regulatory process, and for information on scope of practice that
19 may influence decisions by patients and policymakers.”

20
21 Testimony on Resolution 206-I-23 highlighted the importance of physician understanding of
22 LLMs and the ability to weigh the benefits and risks of these tools as the excitement and
23 eagerness to implement them in everyday practice increases. Testimony emphasized that our
24 AMA is currently in the process of fulfilling the directive in Policy H-480-935 (adopted at A-23)
25 that directs our AMA to study and develop recommendations on the benefits and unforeseen
26 consequences to the medical profession of LLMs, such as GPTs, and other augmented
27 intelligence-generated medical advice or content. The HOD referred Resolution 206 so that the
28 issues raised in this resolution could be considered along with the issues in Policy H-480.935.

29
30 BACKGROUND

31
32 The issue of AI first presented itself as an area of potential interest to AMA physicians and
33 medical students that necessitated creation of AMA policy in 2018. At that time, physicians and
34 medical students primarily considered AI-enabled technologies within the context of medical

1 device and clinical decision support (CDS), although administrative applications of AI began to
2 grow exponentially and started to gain traction in the hospital, health system, and insurer space.
3 Since the development of the AMA’s foundational AI policy in 2018 and subsequent policy on
4 coverage and payment for AI in 2019, the number of AI-enabled medical devices approved by the
5 U.S. Food and Drug Administration (FDA) has grown to nearly 700. In 2022, the concept of
6 “generative AI” and what it can do became better understood to the public. Generative AI is a
7 broad term used to describe any type of artificial intelligence that can be used to create new text,
8 images, video, audio, code, or synthetic data. Generative AI and LLMs have rapidly transformed
9 the use cases and policy considerations for AI within health care, necessitating updated AMA
10 policy that reflects the rapidly evolving state of the technologies.

11
12 AMA policy adopted in [2018](#) and [2019](#) enabled the AMA to be a strong advocate on behalf of
13 patients and physicians and has been the bedrock of AMA’s advocacy on AI in the form of
14 lobbying key congressional committees, participating in expert panel discussions, creating
15 educational resources, and working with our Federation colleagues at the federal and state levels.
16 However, as AI has rapidly developed beyond AI-enabled medical devices and into
17 LLMs/generative AI, new policy and guidance are needed to ensure that they are designed,
18 developed, and deployed in a manner that is ethical, equitable, responsible, and transparent.

19
20 As an initial step, in November 2023, the AMA Board of Trustees approved a set of [advocacy](#)
21 [principles](#) developed by the Council on Legislation (COL) that serve as the framework of this
22 Board report. The main topics addressed in the principles include AI oversight, disclosure
23 requirements, liability, data privacy and security, and payor use of AI. In addition to the COL,
24 these principles have been vetted among multiple AMA business units, and AMA staff has
25 worked with several medical specialty societies that have an expertise in AI and has received
26 additional guidance and input from outside experts that have further refined these principles.
27 These principles build upon and are supplemental to the AMA’s existing AI policy, especially
28 Policy [H-480.940](#), “Augmented Intelligence in Health Care,” Policy [H-480.939](#), “Augmented
29 Intelligence in Health Care,” and Policy [D-480.956](#), “Use of Augmented Intelligence for Prior
30 Authorization,” as well as the [AMA’s Privacy Principles](#). The Board recommends adoption of
31 these principles as AMA policy to guide our AMA’s advocacy and educational efforts on
32 LLM/generative AI issues.

33
34 This report highlights the AMA’s recognition of the issues raised at both the A-23 and I-23 HOD
35 meetings, introduces and explains major themes of the report’s recommendations, and provides
36 background information on the evolution of AI policy in health care and the direction that policy
37 appears to be headed.

38 39 CURRENT STATUS OF OVERSIGHT OF AUGMENTED INTELLIGENCE-ENABLED 40 TECHNOLOGIES

41
42 There is currently no whole-of-government strategy for oversight and regulation of AI. The U.S.
43 Department of Health and Human Services (HHS) did establish an AI Office in March 2021 and
44 developed a general strategy to promote the use of trustworthy AI, but has not produced a
45 department-wide plan for the oversight of AI. While many other federal departments and agencies
46 also have some authority to regulate health care AI, many regulatory gaps exist. To address the
47 lack of a national strategy and national governance policies directing the development and
48 deployment of AI, the federal government has largely defaulted to public “agreements”
49 representing promises by large AI developers and technology companies to be good actors in
50 their development of AI-enabled technologies.

1 In December 2023, the Biden Administration released a reasonably comprehensive [executive](#)
2 [order](#) on the “Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence.”
3 While the executive order does not create new statutory or regulatory requirements, it does serve
4 to direct federal departments and agencies to take action to provide guidance, complete studies,
5 identify opportunities, etc. on AI across several sectors, including HHS. The AMA was pleased to
6 see close alignment between the executive order’s direction and AMA principles. However,
7 executive orders do not represent binding policy, so the regulatory status quo remains unchanged
8 at present.

9
10 The Biden Administration had also previously released a “[Blueprint for an AI Bill of Rights](#)”
11 setting forth five principles that should guide the design, use, and deployment of AI. Those
12 include recommendations for creating safe and effective systems; algorithmic discrimination
13 protections; data privacy; notice and explanation; and human alternatives, considerations, and
14 fallback. Like executive orders, this blueprint does not create new or binding policy and it does
15 not appear there have been new efforts by federal departments and agencies to take action to
16 ensure that AI aligns with these principles.

17
18 There have been few, but notable, additional actions by federal agencies that may serve to impact
19 patient and physician interaction with AI-enabled technologies. In 2022, the Centers for Medicare
20 & Medicaid Services (CMS) and HHS Office for Civil Rights (OCR) introduced a sweeping
21 liability proposal within its Section 1557 Non-Discrimination in Health Programs and Activities
22 proposed rule. The proposal, if finalized, would create liability for physicians if they “rely” on a
23 clinical algorithm that results in discriminatory harm to a patient. In the proposal, “clinical
24 algorithm” is defined to include AI. The AMA submitted detailed [comments](#) opposing this
25 section of the proposed rule. CMS and OCR have yet to finalize the rule.

26
27 In addition, the Office of the National Coordinator for Health Information Technology (ONC)
28 proposed and finalized, with some modifications, policies that will require electronic health record
29 (EHR) technology developers to make certain information about AI used in EHRs available to
30 physicians and other users. ONC refers to these AI tools as Predictive Decision Support
31 Interventions (Predictive DSI). Starting in 2025, EHR developers that supply Predictive DSIs as
32 part of the developer’s EHR offering must disclose specific attributes and inform users if patient
33 demographic, social determinants of health, or health assessment data are used in the Predictive
34 DSI. EHRs will be subject to regulatory requirements regarding the design, development,
35 training, and evaluation of Predictive DSIs along with mandated risk management practices.
36 ONC’s stated goal is to ensure that physicians understand how these tools work, how data are
37 used, the potential for bias, and any known limitations.

38 39 FDA APPROVED AI-ENABLED MEDICAL DEVICES

40
41 The FDA continues to rapidly approve AI-enabled medical devices. While FDA approval and
42 clearance of algorithmic-based devices dates back to 1995, clearance and approval of these
43 devices has rapidly accelerated in the last several years. As of October 2023, 692 devices that
44 FDA classifies as Artificial Intelligence/Machine Learning (AI/ML) devices have been approved
45 for marketing. The overwhelming number of these devices are classified as radiology devices and
46 this category of devices has seen the steadiest increases in the number of applications for FDA
47 approval. However, the number of applications is increasing in several specialties, including
48 cardiology, neurology, hematology, gastroenterology, urology, anesthesiology, otolaryngology,
49 ophthalmology, and pathology. A significant number of cleared or approved devices are
50 considered diagnostic in nature and many currently support screening or triage functions.

1 In 2017, the FDA announced that they were evaluating a potentially new regulatory approach
2 towards Software as a Medical Device, which would include AI/ML technologies. The so-called
3 Pre-Certification program, or “Pre-Cert,” progressed to an initial pilot program involving nine
4 manufacturer applicants. The program proposed to pre-certify manufacturers of software-based
5 medical devices. Devices developed by pre-certified manufacturers would be subject to varying
6 levels of FDA review based on risk to patients, including potentially being exempt from review if
7 the risk is low. However, the Pre-Cert program has been tabled and the pilot dismantled for the
8 time being, leaving FDA to utilize traditional review pathways for AI-enabled medical devices. In
9 the absence of new regulatory strategies tailored to SaMD and AI/ML, FDA has issued some
10 proposed guidance for developers of these devices but has not yet moved forward with additional
11 guidance for important, physician-facing topics, such as transparency and labeling requirements.
12 While transparency was listed as one of five major FDA priorities in this area, the Agency does
13 not have current plans to move forward on additional guidance at this time. This leaves a critical
14 gap in the oversight of AI-enabled medical devices.

15 *Data Privacy and Cybersecurity Considerations in Health Care AI*

16
17
18 The integration of AI into health care signifies a transformative era, greatly enhancing patient
19 care and operational efficiency. However, this advancement also introduces considerable
20 challenges, particularly in data privacy and cybersecurity. As health care facilities, technology
21 vendors, clinicians, and users increasingly adopt AI, it is vital to focus on protecting patient and
22 user data and securing AI systems against cyber threats. Handling vast amounts of sensitive data
23 raises critical questions about privacy and security. Survey data has shown that 9 out of 10
24 patients believe privacy is a right and nearly 75 percent of people are concerned about protecting
25 the privacy of their health data.ⁱ Addressing these concerns necessitates a multifaceted approach
26 that includes advanced data privacy techniques, data use transparency, robust cybersecurity
27 strategies, and compliance with regulatory standards.

28
29 Ensuring the protection of patient data in the context of AI requires sophisticated privacy
30 techniques. Key methods such as anonymization and pseudonymization can remove or replace
31 personal identifiers in data sets and significantly reduce the risk of re-identification. Additionally,
32 implementing a robust data management system empowers patients by providing clear ways to
33 grant, deny, or revoke consent for the use of their data, enhancing patient trust and ensuring
34 compliance with global data protection regulations such as the General Data Protection
35 Regulation and the Health Insurance Portability and Accountability Act (HIPAA). Moreover, the
36 collection of data should be kept to a minimum. By collecting only the data necessary for the
37 intended purpose, AI systems can mitigate the risks associated with data breaches and misuse.

38
39 Cybersecurity plays a crucial role in health care, especially in the context of the increasing
40 digitalization of medical records, patient data, and health care services. The health care sector is a
41 prime target for cyber-attacks due to the sensitivity and value of the data it handles, including
42 personal health information (PHI), financial data, and intellectual property related to medical
43 research. The integration of technology in health care has undoubtedly brought significant
44 benefits such as improved patient care, streamlined operations, and enhanced data analytics.
45 However, it also introduces vulnerabilities. These include potential unauthorized access, data
46 breaches, and disruptions to health care services, which can have dire consequences for patient
47 privacy and safety. In 2017, 83 percent of surveyed physicians had already experienced a
48 cyberattack and 85 percent stated that they want to share electronic PHI but were concerned about
49 the data security necessary to protect it.ⁱⁱ This risk is amplified by the recent increased use of
50 interconnected devices and systems, such as EHRs, telemedicine platforms, and mobile health
51 applications.

1 The attack on Change Healthcare in February 2024 is a stark reminder of the critical importance
2 of cybersecurity in health care. Change Healthcare, a division of UnitedHealth Group, was struck
3 by a ransomware attack that significantly disrupted the largest health care payment and operations
4 system in the United States. This incident led to widespread disruptions, affecting thousands of
5 medical practices, hospitals, pharmacies, and others. The attack was attributed to ransomware.
6 Despite efforts to recover from this attack, the impact on health care operations was profound,
7 including the disruption of claims processing, payments, and electronic prescriptions leading to
8 financial strain on physicians and delays in patient care. The health care sector's reliance on
9 interconnected digital systems for patient records, billing, and payments, means that the impact of
10 a cyberattack can be both immediate and widespread, affecting patient care and operational
11 continuity.

12
13 The implications of cybersecurity in health care AI are multifaceted. AI in health care,
14 encompassing machine learning algorithms, predictive analytics, and robotic process automation,
15 hold immense potential for diagnostic accuracy, personalized medicine, and operational
16 efficiency. However, the deployment of AI in health care settings creates unique cybersecurity
17 challenges. AI systems require large datasets to train and operate effectively, increasing the risk
18 of large-scale data breaches. Additionally, the complexity of AI algorithms can make them
19 opaque and vulnerable to manipulation, such as adversarial attacks that can lead to misdiagnoses
20 or inappropriate treatment recommendations. AI-driven health care solutions often rely on
21 continuous data exchange across networks, escalating the risk of cyber-attacks that can
22 compromise both the integrity and availability of critical health care services.

23
24 Model stealing attack represents a significant cybersecurity threat in the realm of AI, where a
25 malicious actor systematically queries an AI system to understand its behavior and subsequently
26 replicates its functionality. This form of intellectual property theft is particularly alarming due to
27 the substantial resources and time required to develop sophisticated AI models. An example of
28 this issue involves a health care organization that has invested heavily in an AI model designed to
29 predict patient health outcomes based on a wide range of variables. If a malicious entity were to
30 engage in model stealing by extensively querying this predictive model, it could essentially
31 duplicate the original model's predictive capabilities along with capitalizing on sensitive health
32 care information and physicians, users, or the entity's intellectual property. Absent strong
33 protections against input manipulation and malicious attacks, AI can become a new conduit for
34 bad actors to compromise health care organizations and harm patients. This not only undermines
35 the original investment but also poses a direct threat to the competitive advantage of the
36 innovating organization.

37
38 Moreover, the risk extends beyond intellectual property theft to encompass serious privacy
39 concerns. This is exemplified by incidents where generative AI models, trained on vast datasets,
40 inadvertently reveal sensitive information contained within their training data in response to
41 certain prompts. In the health care sector, where models are often trained on highly sensitive
42 patient data, including personally identifiable information, the unauthorized extraction of this data
43 can lead to significant breaches of patient confidentiality. The dual threat of intellectual property
44 theft and data privacy breaches underscores the critical need for robust cybersecurity measures in
45 safeguarding AI models, particularly those developed and utilized within the health care industry,
46 to maintain the integrity of both their intellectual property and the confidentiality of the sensitive
47 data they handle.

48
49 While there are new federal policies to increase data transparency when AI is used in conjunction
50 with health information technology, such as those issued by ONC, these new policies only cover

1 the certified EHR developer and stop short of holding AI developers accountable for robust data
2 governance or data security and privacy practices.ⁱⁱⁱ

3 4 GENERATIVE AI

5
6 The broad introduction of generative AI into the public sphere in 2022 saw a paradigm shift in
7 how physicians contemplated AI. Open-source LLM Chat GPT presented a new, easily accessible
8 AI-enabled technology with significant capabilities to generate new content and provide readily
9 available access to information from a huge number of sources. Generative AI tools have
10 significant potential to relieve physician administrative burdens by helping to address actions
11 such as in-box management, patient messages and prior authorization requests. They also show
12 promise in providing clinical decision support. These generative AI tools, however, can also pose
13 significant risk, particularly for clinical applications. They are largely unregulated, as there is no
14 current regulatory structure for generative AI clinical decision support tools unless they meet the
15 definition of a medical device regulated by the FDA. The U.S. Federal Trade Commission (FTC)
16 has limited authority to regulate data privacy issues that may be associated with generative AI
17 tools. The FTC can also regulate activities considered to be an unfair, deceptive, or abusive
18 business practice and can enforce laws for consumer protection. CMS has some authority to
19 regulate use of AI by entities receiving funds from Medicare and Medicaid, including use by
20 Medicare Advantage plans. OCR has some additional authorities to regulate data privacy and
21 nondiscrimination. CMS and OCR have already put forth a very concerning proposal regarding
22 physician liability for clinical algorithms, which the AMA has vigorously opposed.

23
24 While some federal agencies may have oversight and authorities to regulate some aspects of AI,
25 there are many regulatory gaps. These regulatory gaps are particularly significant when
26 considering generative AI, as tools like ChatGPT and others currently fall well outside the
27 definition of a regulated medical device. While generative AI use for clinical applications is
28 relatively limited right now, it is expected to grow and patients and physicians will need
29 assurances that it is providing safe, correct, non-discriminatory answers to the full extent possible,
30 whether through regulation or generally accepted standards for design, development, and
31 deployment.

32 33 USE OF AI BY PAYORS

34
35 There have been numerous reports recently regarding the use of what has been termed
36 “automated decision-making tools” by payors to process claims. However, numerous reports
37 regarding the use of these tools show a growing tendency toward inappropriate denials of care or
38 other limitations on coverage. Reporting by ProPublica claims that tools used by Cigna denied
39 300,000 claims in two months, with claims receiving an average of 1.2 seconds of review.^{iv} Two
40 class action lawsuits were filed during 2023, charging both United Health Care and Humana with
41 inappropriate claims denials resulting from use of the nHPredict AI model, a product of United
42 Health Care subsidiary NaviHealth. Plaintiffs in those suits claim the AI model wrongfully denied
43 care to elderly and disabled patients enrolled in Medicare Advantage (MA) plans with both
44 companies. Plaintiffs also claim that payors used the model despite knowing that 90 percent of
45 the tool’s denials were faulty.

46
47 There is growing concern among patients and physicians about what they perceive as increasing
48 and inappropriate denials of care resulting from the use of these automated decision-making tools.
49 In his recent Executive Order on AI, President Biden addressed this issue as an area of concern,
50 directing the HHS to identify guidance and resources for the use of predictive and generative AI

1 in many areas, including benefits administration, stating that it must take into account
2 considerations such as appropriate human oversight of the application of the output from AI.

3
4 There are currently no statutory and only limited regulatory requirements addressing the use of AI
5 and other automated decision-making tools by payors. States are beginning to look more closely
6 at this issue given the significant negative reporting in recent months and are a likely place for
7 near-term action on this issue. Congress has also shown increasing concern and has convened
8 hearings for testimony on the issue; however, there has been no further Congressional action or
9 legislation to pursue further limitations on use of these algorithms. Additionally, CMS has not
10 taken broad regulatory action to limit the use of these algorithms by entities administering
11 Medicare and Medicaid benefits.

12 13 AMA POLICY

14
15 The AMA has existing policies, [H-480.940](#) and [H-480.939](#) both titled “Augmented Intelligence in
16 Health Care,” which stem from a 2018 and 2019 Board report and cover an array of areas related
17 to the consequences and benefits of AI use in the physician’s practice. In pertinent part to this
18 discussion, AMA Policy H-480.940 seeks to “promote development of thoughtfully designed,
19 high-quality, clinically validated health care AI, encourage education for patients, physicians,
20 medical students, other health care professionals, and health administrators to promote greater
21 understanding of the promise and limitations of health care AI, and explore the legal implications
22 of health care AI, such as issues of liability or intellectual property, and advocate for appropriate
23 professional and governmental oversight for safe, effective, and equitable use of and access to
24 health care AI.” This policy reflects not only the significance of attribution on the part of the
25 developer, but furthermore emphasizes that physicians and other end users also play a role in
26 understanding the technology and the risks involved with its use.

27
28 AMA Policy H.480.939 also addresses key aspects of accountability and liability by stating that
29 “oversight and regulation of health care AI systems must be based on risk of harm and benefit
30 accounting for a host of factors, including but not limited to: intended and reasonably expected
31 use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods;
32 level of automation; transparency; and, conditions of deployment.” Furthermore, this policy
33 asserts that “liability and incentives should be aligned so that the individual(s) or entity(ies) best
34 positioned to know the AI system risks and best positioned to avert or mitigate harm do so
35 through design, development, validation, and implementation. Specifically, developers of
36 autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best
37 position to manage issues of liability arising directly from system failure or misdiagnosis and
38 must accept this liability with measures such as maintaining appropriate medical liability
39 insurance and in their agreements with users.”

40
41 AMA Policy [D-480.956](#) supports “greater regulatory oversight of the use of augmented
42 intelligence for review of patient claims and prior authorization requests, including whether
43 insurers are using a thorough and fair process that: (1) is based on accurate and up-to-date clinical
44 criteria derived from national medical specialty society guidelines and peer reviewed clinical
45 literature; (2) includes reviews by doctors and other health care professionals who are not
46 incentivized to deny care and with expertise for the service under review; and (3) requires such
47 reviews include human examination of patient records prior to a care denial.”

1 DISCUSSION

2
3 As the number of AI-enabled health care tools and systems continues to grow, these technologies
4 must be designed, developed, and deployed in a manner that is ethical, equitable, responsible, and
5 transparent. With a lagging effort towards adoption of national governance policies or oversight
6 of AI, it is critical that the physician community engage in development of policies to help drive
7 advocacy, inform patient and physician education, and guide engagement with these new
8 technologies. It is also important that the physician community help guide development of these
9 tools in a way that best meets both patient and physician needs, and help define their own
10 organization's risk tolerance, particularly where AI impacts direct patient care. AI has significant
11 potential to advance clinical care, reduce administrative burdens, and improve clinician well-
12 being. This may only be accomplished by ensuring that physicians engage only with AI that
13 satisfies rigorous, clearly defined standards to meet the goals of the quadruple aim:^v advance
14 health equity, prioritize patient safety, and limit risks to both patients and physicians.

15
16 *Oversight of Health Care Augmented Intelligence*

17
18 There is currently no national policy or governance structure in place to guide the development
19 and adoption of non-device AI. As discussed above, the FDA regulates AI-enabled medical
20 devices, but many types of AI-enabled technologies fall outside the scope of FDA oversight^{vi}.
21 This potentially includes AI that may have clinical applications, such as some generative AI
22 technologies serving clinical decision support functions. While the FTC and OCR have oversight
23 over some aspects of AI, their authorities are limited and not adequate to ensure appropriate
24 development and deployment of AI generally, and specifically in the health care space. Likewise,
25 ONC's enforcement is limited and focused on EHR developers' use and integration of AI within
26 their federally certified EHRs. While this is a major first step in requiring AI transparency, it is
27 still the EHR developer that is regulated with few requirements on the AI developer itself.
28 Encouragement of a whole-of-government approach to implement governance policies will help
29 to ensure that risks to consumers and patients arising from AI are mitigated to the greatest extent
30 possible.

31
32 In addition to the government, health care institutions, practices, and professional societies share
33 some responsibility for appropriate oversight and governance of AI-enabled systems and
34 technologies. Beyond government oversight or regulation, purchasers and users of these
35 technologies should have appropriate and sufficient policies in place to ensure they are acting in
36 accordance with the current standard of care. Similarly, clinical experts are best positioned to
37 determine whether AI applications are high quality, appropriate, and whether the AI tools are
38 valid from a clinical perspective. Clinical experts can best validate the clinical knowledge,
39 clinical pathways, and standards of care used in the design of AI-enabled tools and can monitor
40 the technology for clinical validity as it evolves over time.

41
42 *Transparency in Use of Augmented Intelligence-Enabled Systems and Technologies*

43
44 As implementation of AI-enabled tools and systems increases, it is essential that use of AI in
45 health care be transparent to both patients and physicians. Transparency requirements should be
46 tailored in a way that best suits the needs of the end users. Care must be taken to preserve the
47 integrity of data sets used in health care such that individual choice and data privacy are balanced
48 with preserving algorithms that remain as pristine as possible to avoid exacerbating health care
49 inequities. Disclosure should contribute to patient and physician knowledge without increasing
50 administrative burden. When AI is utilized in health care decision-making, that use should be
51 disclosed and documented to limit risks to, and mitigate inequities for, both patients and

1 physicians, and to allow each to understand how decisions impacting patient care or access to
2 care are made. While transparency does not necessarily ensure AI-enabled tools are accurate,
3 secure, or fair, it is difficult to establish trust if certain characteristics are hidden.
4

5 Heightened attention to transparency and additional transparency requirements serve several
6 purposes. They help to both ensure that the best possible decisions are made about a patient's
7 health care and help patients and physicians identify critical decision points and possible points of
8 error. They can also serve as mechanisms to help shield physicians from liability so that potential
9 issues related to use of AI-enabled technologies can be isolated and accountability apportioned
10 appropriately.
11

12 There are currently few federal requirements for transparency regarding AI. The FDA requires
13 product labeling to provide certain information to physicians and other users, but requirements for
14 device labeling are generally considered to be less stringent and have more leeway than drug
15 product labeling. While FDA has stated that transparency is a key priority for the agency to
16 address, they have not taken any additional action to update the labeling requirements for AI-
17 enabled medical devices or put into place additional transparency requirements for AI-enabled
18 devices. As discussed above, ONC also has new transparency requirements applicable to the use
19 of AI within EHRs; however, again, those requirements are limited to AI within an EHR or other
20 applications integrated and made available through the EHR. They will not apply to AI-enabled
21 tools accessible through the Internet, cellular phones, etc. It is clear that there is an urgent need
22 for additional federal action to ensure AI transparency.
23

24 *Required Disclosures by Health Care Augmented Intelligence-Enabled Systems and Technologies* 25

26 Along with significant opportunity to improve patient care, all new technologies in health care
27 will likely present certain risks and limitations that physicians must carefully navigate during the
28 early stages of clinical implementation of these new systems and tools. AI-enabled tools are no
29 different and are perhaps more challenging than other advances as they present novel and
30 complex questions and risks. To best mitigate these risks, it is critical that physicians understand
31 AI-driven technologies and have access to certain information about the AI tool or system being
32 considered, including how it was trained and validated, so that they can assess the quality,
33 performance, equity, and utility of the tool to the best of their ability. This information may also
34 establish a set of baseline metrics for comparing AI tools. Transparency and explainability
35 regarding the design, development, and deployment processes should be mandated by law where
36 feasible, including potential sources of inequity in problem formulation, inputs, and
37 implementation. Additionally, sufficient detail should be disclosed to allow physicians to
38 determine whether a given AI-enabled tool would reasonably apply to the individual patient they
39 are treating.
40

41 Physicians should be aware and understand that, where they utilize AI-enabled tools and systems
42 without transparency provided by the AI developer, their risks of liability for reliance on that AI
43 will likely increase. The need for full transparency is greatest where AI-enabled systems have
44 greater impact on direct patient care, such as by AI-enabled medical devices, clinical decision
45 support, and interaction with AI-driven chatbots. Transparency needs may be somewhat lower
46 where AI is utilized for primarily administrative, practice-management functions.
47 While some of this information may be provided in labeling for FDA cleared and approved
48 medical devices, the labeling requirements for such devices have not been specifically tailored to
49 clearly convey information about these new types of devices. Updated guidance for FDA-
50 regulated medical devices is needed to provide this critical information. Congress should consider
51 actions to ensure appropriate authorities exist to require appropriate information to be provided to

1 users of AI so that they can best evaluate the technology to determine reported performance,
2 intended use, intended population, and appropriateness for the task. Developers and vendors
3 should consider voluntarily providing this information about their products, and physicians and
4 other purchasers should consider this information when selecting the AI tools they use.

5 6 *Generative AI*

7
8 Generative AI is a type of AI that can recognize, summarize, translate, predict, and generate text
9 and other content based on knowledge gained from large datasets. Generative AI tools are finding
10 an increasing number of uses in health care, including assistance with administrative functions,
11 such as generating office notes, responding to documentation requests, and generating patient
12 messages. Additionally, there has been increasing discussion about clinical applications of
13 generative AI, including use as clinical decision support to provide differential diagnoses, early
14 detection and intervention, and to assist in treatment planning. While generative AI tools show
15 tremendous promise to make a significant contribution to health care, there are a number of risks
16 and limitations to consider when using these tools in a clinical setting or for direct patient care.
17 These risks are especially important to consider for clinical applications that may impact clinical
18 decision-making and treatment planning where risks to patients are higher.

19
20 Given that there are no regulations or generally accepted standards or frameworks to govern the
21 design, development, and deployment of generative AI, consideration and mitigation of the
22 significant risks is paramount. To manage risk, health care organizations should develop and
23 adopt appropriate policies that anticipate and minimize negative impacts. Physicians who consider
24 utilizing a generative AI-based tool in their practice should ensure that all practice staff are
25 educated on the risks and limitations, including patient privacy concerns, and should have
26 appropriate governance policies in place for its use prior to adoption. Also, as raised in
27 Resolution 206-I-23, physicians should be encouraged to educate their patients about the benefits
28 and risks of using AI-based tools, such as LLMs, for information about health care conditions,
29 treatment options, or the type of health care professionals who have the education, training, and
30 qualifications to treat a particular condition. Patients and physicians should be aware that chatbots
31 powered by LLMs/generative AI could provide inaccurate, misleading, or unreliable information
32 and recommendations. This principle is incorporated in the recommendations in this report and
33 current AMA Policy [H-480.940](#), “Augmented Intelligence in Health Care.”

34 35 *Liability*

36
37 The question of physician liability for use of AI-enabled technologies presents novel and complex
38 legal questions and poses risks to the successful clinical integration of AI-enabled technologies. It
39 is also one of the most serious concerns for physicians when considering integration of AI into
40 their practice. Concerns also arise for employed physicians who feel they may have no choice but
41 to utilize the AI, should hospitals or health systems mandate its use or utilize an EHR system that
42 incorporates AI-based applications as standard.

43
44 The challenge for physicians regarding questions of liability for use of AI is that there is not yet
45 any clear legal standard for determining liability. While there are clear standards for general
46 medical malpractice and for medical device liability, AI presents novel and potentially complex
47 legal questions. When AI has suggested a diagnosis, the question of how appropriate it is for a
48 physician to rely on that result is yet to be determined and will likely continue to evolve as AI
49 improves. Ultimately the “standard of care” will help guide physician liability. It is expected that,
50 as it improves over time, AI will be incorporated into what is likely to be specialty-specific
51 standards of care. However, until that occurs, AI-transparency is of critical importance and

1 physicians will need to be diligent in ensuring that they engage with AI tools where performance
2 has been validated in their practice setting.

3
4 As AI continues to evolve, there may ultimately be questions regarding liability when physicians
5 fail to use AI and rely only on their professional judgment. Again, this question may ultimately
6 turn on what evolves to be considered the standard of care.

7
8 It should be noted that, when using AI, physicians will still be subject to general legal theories
9 regarding medical liability. Negligent selection of an AI tool, including using tools outside their
10 intended use or intended population, or choosing a tool where there is no evidence of clinical
11 validation, could be decisions that expose a physician to a liability claim.

12 13 *Data Privacy and Augmented Intelligence*

14
15 Data privacy is highly relevant to AI development, implementation, and use. The AMA is deeply
16 invested in ensuring individual patient rights and protections from discrimination remain intact,
17 that these assurances are guaranteed, and that the responsibility rests with the data holders. AI
18 development, training, and use requires assembling large collections of health data. AI machine
19 learning is data hungry; it requires massive amounts of data to function properly. Increasingly,
20 more electronic health records are interoperable across the health care system and, therefore, are
21 accessible by AI trained or deployed in medical settings. AI developers may enter into legal
22 arrangements (e.g., business associate agreements) that bring them under the Health Insurance
23 Portability and Accountability Act (HIPAA) Privacy and Security Rules. While some uses of AI
24 in health care, such as research, are not allowed by HIPAA absent patient authorization, the
25 applicability of other HIPAA privacy protections to AI use is not as clear and HIPAA cannot
26 protect patients from the “black box” nature of AI which makes the use of data opaque. AI system
27 outputs may also include inferences that reveal personal data or previously confidential details
28 about individuals. This can result in a lack of accountability and trust and exacerbate data privacy
29 concerns. Often, AI developers and implementers are themselves unaware of exactly how their
30 products use information to make recommendations.

31
32 It is unlikely that physicians or patients will have any clear insight into a generative AI tool’s
33 conformance to state or federal data privacy laws. LLMs are trained on data scraped from the web
34 and other digital sources, including one well-documented instance where HIPAA privacy
35 protections were violated.^{vii} Few, if any, controls are available to help users protect the data they
36 voluntarily enter in a chatbot query. For instance, there are often no mechanisms in place for
37 users to request data deletion or ensure that their inputs are not stored or used for future model
38 training. While tools designed for medical use should align with HIPAA, many “HIPAA-
39 compliant” generative tools rely on antiquated notions of deidentification, i.e., stripping data of
40 personal information. With today’s advances in computing power, data can easily be reidentified.
41 Rather than aiming to make LLMs compliant with HIPAA, all health care AI-powered generative
42 tools should be designed from the ground up with data privacy in mind.

43
44 [The AMA’s Privacy Principles](#) were designed to provide individuals with rights and protections
45 and shift the responsibility for privacy to third-party data holders. While the Principles are
46 broadly applicable to all AI developers, e.g., entities should only collect the minimum amount of
47 information needed for a particular purpose, the unique nature of LLMs and generative AI
48 warrant special emphasis on entity responsibility and user education.

1 *Augmented Intelligence Cybersecurity*

2
3 Data privacy relies on strong data security measures. There is growing concern that cyber
4 criminals will use AI to attack health care organizations. AI poses new threats to health IT
5 operations. AI-operated ransomware and AI-operated malware can be targeted to infiltrate health
6 IT systems and automatically exploit vulnerabilities. Attackers using ChatGPT can craft
7 convincing or authentic emails and use phishing techniques that entice people to click on links—
8 giving them access to the entire electronic health record system.

9
10 AI is particularly sensitive to the quality of data. Data poisoning is the introduction of “bad” data
11 into an AI training set, affecting the model’s output. AI requires large sets of data to build logic
12 and patterns used in clinical decision-making. Protecting this source data is critical. Threat actors
13 could also introduce input data that compromises the overall function of the AI tool. Failure to
14 secure and validate these inputs, and corresponding data, can contaminate AI models—resulting
15 in patient harm.

16
17 Because stringent privacy protections and higher data quality standards might slow model
18 development, there could be a tendency to forgo essential data privacy and security precautions.
19 However, strengthening AI systems against cybersecurity threats is crucial to their reliability,
20 resiliency, and safety.

21
22 *Payor Use of Augmented Intelligence in Automated Decision-Making*

23
24 Payors and health plans are increasingly using AI and algorithm-based decision-making in an
25 automated fashion to determine coverage limits, make claim determinations, and engage in
26 benefit design. Payors should leverage automated decision-making systems that improve or
27 enhance efficiencies in coverage and payment automation, facilitate administrative simplification,
28 and reduce workflow burdens. While the use of these systems can create efficiencies such as
29 speeding up prior authorization and cutting down on paperwork, there is concern these systems
30 are not being designed or supervised effectively—creating access barriers for patients and
31 limiting essential benefits.

32
33 Increasingly, evidence indicates that payors are using automated decision-making systems to
34 deny care more rapidly, often with little or no human review. This manifests in the form of
35 increased denials, stricter coverage limitations, and constrained benefit offerings. For example, a
36 payor allowed an automated system to cut off insurance payments for Medicare Advantage
37 patients struggling to recover from severe diseases, forcing them to forgo care or pay out of
38 pocket. In some instances, payors instantly reject claims on medical grounds without opening or
39 reviewing the patient’s medical record. There is also a lack of transparency in the development of
40 automated decision-making systems. Rather than payors making determinations based on
41 individualized patient care needs, reports show that decisions are based on algorithms developed
42 using average or “similar patients” pulled from a database. Models that rely on generalized,
43 historical data can also perpetuate biases leading to discriminatory practices or less inclusive
44 coverage.^{viii,ix,x,xi}

45
46 While AI can be used inappropriately by payors with severe detrimental outcomes to patients, it
47 can also serve to reduce administrative burdens on physicians, providing the ability to more easily
48 submit prior authorization and documentation requests in standardized forms that require less
49 physician and staff time. Given the significant burden placed on physicians and administrative
50 staff by prior authorization requests, AI could provide much needed relief and help to increase
51 professional satisfaction among health care professionals. With clear guidelines, AI-enabled

1 decision-making systems may also be appropriate for use in some lower-risk, less complex care
2 decisions.

3
4 While payor use of AI in well-defined situations with clear guidelines has the potential to reduce
5 burdens and benefit physician practices, new regulatory or legislative action is necessary to
6 ensure that automated decision-making systems do not reduce needed care, nor systematically
7 withhold care from specific groups. Steps should be taken to ensure that these systems do not
8 override clinical judgment. Patients and physicians should be informed and empowered to
9 question a payor's automated decision-making. There should be stronger regulatory oversight,
10 transparency, and audits when payors use these systems for coverage, claim determinations, and
11 benefit design. [See Policy [D-480.956](#), "Use of Augmented Intelligence for Prior Authorization;"
12 Policy [H-320.939](#), "Prior Authorization and Utilization Management Reform"]

13 14 CONCLUSION

15
16 As the number of AI-enabled health care tools and systems continue to grow, these technologies
17 must be designed, developed, and deployed in a manner that is ethical, equitable, responsible, and
18 transparent. In line with AMA Policy [H-480-935](#) and Resolution 206-I-23, this report highlights
19 some of the potential benefits and risks to the medical profession and patients of LLMs (e.g.,
20 GPTs) and other AI-generated medical decision-making tools, and recommends adoption of
21 policy to help inform patient and physician education and guide engagement with this new
22 technology, as well as position the AMA to advocate for governance policies that help to ensure
23 that risks arising from AI are mitigated to the greatest extent possible.

24 25 RECOMMENDATION

26
27 The Board of Trustees recommends that the following be adopted in lieu of Resolution 206-I-23
28 and that the remainder of the report be filed:

29 30 **AUGMENTED INTELLIGENCE DEVELOPMENT, DEPLOYMENT, AND USE IN** 31 **HEALTH CARE**

32 33 General Governance

- 34
- 35 • Health care AI must be designed, developed, and deployed in a manner which is ethical,
36 equitable, responsible, and transparent.
 - 37 • Use of AI in health care delivery requires clear national governance policies to regulate
38 its adoption and utilization, ensuring patient safety, and mitigating inequities.
39 Development of national governance policies should include interdepartmental and
40 interagency collaboration.
 - 41 • Compliance with national governance policies is necessary to develop AI in an ethical
42 and responsible manner to ensure patient safety, quality, and continued access to care.
43 Voluntary agreements or voluntary compliance is not sufficient.
 - 44 • Health care AI requires a risk-based approach where the level of scrutiny, validation, and
45 oversight should be proportionate to the potential overall of disparate harm and
46 consequences the AI system might introduce. [See also Augmented Intelligence in Health
47 Care [H-480.939](#) at (1)]
 - 48 • Clinical decisions influenced by AI must be made with specified human intervention
49 points during the decision-making process. As the potential for patient harm increases,
50 the point in time when a physician should utilize their clinical judgment to interpret or act
51 on an AI recommendation should occur earlier in the care plan.

- 1 • Health care practices and institutions should not utilize AI systems or technologies that
2 introduce overall or disparate risk that is beyond their capabilities to mitigate.
3 Implementation and utilization of AI should avoid exacerbating clinician burden and
4 should be designed and deployed in harmony with the clinical workflow.
- 5 • Medical specialty societies, clinical experts, and informaticists are best positioned and
6 should identify the most appropriate uses of AI-enabled technologies relevant to their
7 clinical expertise and set the standards for AI use in their specific domain. [See
8 Augmented Intelligence in Health Care [H-480.940](#) at (2)]
9

10 When to Disclose: Transparency in Use of Augmented Intelligence-Enabled Systems and 11 Technologies 12

- 13 • When AI is used in a manner which directly impacts patient care, access to care, or
14 medical decision making, that use of AI should be disclosed and documented to both
15 physicians and/or patients in a culturally and linguistically appropriate manner. The
16 opportunity for a patient or their caregiver to request additional review from a licensed
17 clinician should be made available upon request.
- 18 • When AI is used in a manner which directly impacts patient care, access to care, medical
19 decision making, or the medical record, that use of AI should be documented in the
20 medical record.
- 21 • AI tools or systems cannot augment, create, or otherwise generate records,
22 communications, or other content on behalf of a physician without that physician's
23 consent and final review.
- 24 • When health care content is generated by generative AI, including by large language
25 models, it should be clearly disclosed within the content that was generated by an AI-
26 enabled technology.
- 27 • When AI or other algorithmic-based systems or programs are utilized in ways that impact
28 patient access to care, such as by payors to make claims determinations or set coverage
29 limitations, use of those systems or programs must be disclosed to impacted parties.
- 30 • The use of AI-enabled technologies by hospitals, health systems, physician practices, or
31 other entities, where patients engage directly with AI should be clearly disclosed to
32 patients at the beginning of the encounter or interaction with the AI-enabled technology.
33

34 What to Disclose: Required Disclosures by Health Care Augmented Intelligence-Enabled 35 Systems and Technologies 36

- 37 • When AI-enabled systems and technologies are utilized in health care, the following
38 information should be disclosed by the AI developer to allow the purchaser and/or user
39 (physician) to appropriately evaluate the system or technology prior to purchase or
40 utilization:
 - 41 ○ Regulatory approval status
 - 42 ○ Applicable consensus standards and clinical guidelines utilized in design,
43 development, deployment, and continued use of the technology
 - 44 ○ Clear description of problem formulation and intended use accompanied by clear
45 and detailed instructions for use
 - 46 ○ Intended population and intended practice setting
 - 47 ○ Clear description of any limitations or risks for use, including possible disparate
48 impact
 - 49 ○ Description of how impacted populations were engaged during the AI lifecycle
 - 50 ○ Detailed information regarding data used to train the model:
 - 51 ■ Data provenance

- 1 ▪ Data size and completeness
- 2 ▪ Data timeframes
- 3 ▪ Data diversity
- 4 ▪ Data labeling accuracy
- 5 ○ Validation Data/Information and evidence of:
- 6 ▪ Clinical expert validation in intended population and practice setting and
- 7 intended clinical outcomes
- 8 ▪ Constraint to evidence-based outcomes and mitigation of “hallucination”
- 9 or other output error
- 10 ▪ Algorithmic validation
- 11 ▪ External validation processes for ongoing evaluation of the model
- 12 performance, e.g., accounting for AI model drift and degradation
- 13 ▪ Comprehensiveness of data and steps taken to mitigate biased outcomes
- 14 ▪ Other relevant performance characteristics, including but not limited to
- 15 performance characteristics at peer institutions/similar practice settings
- 16 ▪ Post-market surveillance activities aimed at ensuring continued safety,
- 17 performance, and equity
- 18 ○ Data Use Policy
- 19 ▪ Privacy
- 20 ▪ Security
- 21 ▪ Special considerations for protected populations or groups put at
- 22 increased risk
- 23 ○ Information regarding maintenance of the algorithm, including any use of active
- 24 patient data for ongoing training
- 25 ○ Disclosures regarding the composition of design and development team,
- 26 including diversity and conflicts of interest, and points of physician involvement
- 27 and review
- 28
- 29 • Purchasers and/or users (physicians) should carefully consider whether or not to engage
- 30 with AI-enabled health care technologies if this information is not disclosed by the
- 31 developer. As the risk of AI being incorrect increases risks to patients (such as with
- 32 clinical applications of AI that impact medical decision making), disclosure of this
- 33 information becomes increasingly important. [See also Augmented Intelligence in Health
- 34 Care [H-480.939](#)]
- 35

36 Generative Augmented Intelligence

- 37
- 38 • Generative AI should: (a) only be used where appropriate policies are in place within the
- 39 practice or other health care organization to govern its use and help mitigate associated
- 40 risks; and (b) follow applicable state and federal laws and regulations (e.g., HIPAA-
- 41 compliant Business Associate Agreement).
- 42 • Appropriate governance policies should be developed by health care organizations and
- 43 account for and mitigate risks of:
- 44 ○ Incorrect or falsified responses; lack of ability to readily verify the accuracy of
- 45 responses or the sources used to generate the response
- 46 ○ Training data set limitations that could result in responses that are out of date or
- 47 otherwise incomplete or inaccurate for all patients or specific populations
- 48 ○ Lack of regulatory or clinical oversight to ensure performance of the tool
- 49 ○ Bias, discrimination, promotion of stereotypes, and disparate impacts on access
- 50 or outcomes
- 51 ○ Data privacy

- 1 ○ Cybersecurity
- 2 ○ Physician liability associated with the use of generative AI tools
- 3 • Health care organizations should work with their AI and other health information
- 4 technology (health IT) system developers to implement rigorous data validation and
- 5 verification protocols to ensure that only accurate, comprehensive, and bias managed
- 6 datasets inform generative AI models, thereby safeguarding equitable patient care and
- 7 medical outcomes. [See Augmented Intelligence in Health Care [H-480.940](#) at (3)(d)]
- 8 • Use of generative AI should incorporate physician and staff education about the
- 9 appropriate use, risks, and benefits of engaging with generative AI. Additionally,
- 10 physicians should engage with generative AI tools only when adequate information
- 11 regarding the product is provided to physicians and other users by the developers of those
- 12 tools.
- 13 • Clinicians should be aware of the risks of patients engaging with generative AI products
- 14 that produce inaccurate or harmful medical information (e.g., patients asking chatbots
- 15 about symptoms) and should be prepared to counsel patients on the limitations of AI-
- 16 driven medical advice.
- 17 • Governance policies should prohibit the use of confidential, regulated, or proprietary
- 18 information as prompts for generative AI to generate content.
- 19 • Data and prompts contributed by users should primarily be used by developers to
- 20 improve the user experience and AI tool quality and not simply increase the AI tool's
- 21 market value or revenue generating potential.
- 22

23 Physician Liability for Use of Augmented Intelligence-Enabled Technologies

- 24
- 25 • Current AMA policy states that liability and incentives should be aligned so that the
- 26 individual(s) or entity(ies) best positioned to know the AI system risks and best
- 27 positioned to avert or mitigate harm do so through design, development, validation, and
- 28 implementation. [See Augmented Intelligence in Health Care [H-480.939](#)]
- 29 ○ Where a mandated use of AI systems prevents mitigation of risk and harm, the
- 30 individual or entity issuing the mandate must be assigned all applicable liability.
- 31 ○ Developers of autonomous AI systems with clinical applications (screening,
- 32 diagnosis, treatment) are in the best position to manage issues of liability arising
- 33 directly from system failure or misdiagnosis and must accept this liability with
- 34 measures such as maintaining appropriate medical liability insurance and in their
- 35 agreements with users.
- 36 ○ Health care AI systems that are subject to non-disclosure agreements concerning
- 37 flaws, malfunctions, or patient harm (referred to as gag clauses) must not be
- 38 covered or paid and the party initiating or enforcing the gag clause assumes
- 39 liability for any harm.
- 40 • When physicians do not know or have reason to know that there are concerns about the
- 41 quality and safety of an AI-enabled technology, they should not be held liable for the
- 42 performance of the technology in question.
- 43

44 Data Privacy and Augmented Intelligence

- 45
- 46 • Entity Responsibility:
- 47 ○ Entities should make information available about the intended use of generative
- 48 AI in health care and identify the purpose of its use. Individuals should know
- 49 how their data will be used or reused, and the potential risks and benefits.

- 1 ○ Individuals should have the right to opt-out, update, or forget use of their data in
2 generative AI tools. These rights should encompass AI training data and
3 disclosure to other users of the tool.
- 4 ○ Generative AI tools should not reverse engineer, reconstruct, or reidentify an
5 individual’s originally identifiable data or use identifiable data for nonpermitted
6 uses, e.g., when data are permitted to conduct quality and safety evaluations.
7 Preventive measures should include both legal frameworks and data model
8 protections, e.g., secure enclaves, federated learning, and differential privacy.
9
- 10 • User Education:
 - 11 ○ Users should be provided with training specifically on generative AI. Education
12 should address:
 - 13 ▪ legal, ethical, and equity considerations;
 - 14 ▪ risks such as data breaches and re-identification;
 - 15 ▪ potential pitfalls of inputting sensitive and personal data; and
 - 16 ▪ the importance of transparency with patients regarding the use of
17 generative AI and their data.

18 [See [H-480.940](#), Augmented Intelligence in Health Care, at (4) and (5)]

20 Augmented Intelligence Cybersecurity

- 22 • AI systems must have strong protections against input manipulation and malicious
23 attacks.
- 24 • Entities developing or deploying health care AI should regularly monitor for anomalies or
25 performance deviations, comparing AI outputs against known and normal behavior.
- 26 • Independent of an entity’s legal responsibility to notify a health care provider or
27 organization of a data breach, that entity should also act diligently in identifying and
28 notifying the individuals themselves of breaches that impact their personal information.
- 29 • Users should be provided education on AI cybersecurity fundamentals, including specific
30 cybersecurity risks that AI systems can face, evolving tactics of AI cyber attackers, and
31 the user’s role in mitigating threats and reporting suspicious AI behavior or outputs.
32

33 Payor Use of Augmented Intelligence and Automated Decision-Making Systems

- 35 • Use of automated decision-making systems that determine coverage limits, make claim
36 determinations, and engage in benefit design should be publicly reported, based on easily
37 accessible evidence-based clinical guidelines (as opposed to proprietary payor criteria),
38 and disclosed to both patients and their physician in a way that is easy to understand.
- 39 • Payors should only use automated decision-making systems to improve or enhance
40 efficiencies in coverage and payment automation, facilitate administrative simplification,
41 and reduce workflow burdens. Automated decision-making systems should never create
42 or exacerbate overall or disparate access barriers to needed benefits by increasing denials,
43 coverage limitations, or limiting benefit offerings. Use of automated decision-making
44 systems should not replace the individualized assessment of a patient’s specific medical
45 and social circumstances and payors’ use of such systems should allow for flexibility to
46 override automated decisions. Payors should always make determinations based on
47 particular patient care needs and not base decisions on algorithms developed on “similar”
48 or “like” patients.
- 49 • Payors using automated decision-making systems should disclose information about any
50 algorithm training and reference data, including where data were sourced and attributes
51 about individuals contained within the training data set (e.g., age, race, gender). Payors

- 1 should provide clear evidence that their systems do not discriminate, increase inequities,
2 and that protections are in place to mitigate bias.
- 3 • Payors using automated decision-making systems should identify and cite peer-reviewed
4 studies assessing the system’s accuracy measured against the outcomes of patients and
5 the validity of the system’s predictions.
 - 6 • Any automated decision-making system recommendation that indicates limitations or
7 denials of care, at both the initial review and appeal levels, should be automatically
8 referred for review to a physician (a) possessing a current and valid non-restricted license
9 to practice medicine in the state in which the proposed services would be provided if
10 authorized and (b) be of the same specialty as the physician who typically manages the
11 medical condition or disease or provides the health care service involved in the request
12 prior to issuance of any final determination. Prior to issuing an adverse determination, the
13 treating physician must have the opportunity to discuss the medical necessity of the care
14 directly with the physician who will be responsible for determining if the care is
15 authorized.
 - 16 • Individuals impacted by a payor’s automated decision-making system, including patients
17 and their physicians, must have access to all relevant information (including the coverage
18 criteria, results that led to the coverage determination, and clinical guidelines used).
 - 19 • Payors using automated decision-making systems should be required to engage in regular
20 system audits to ensure use of the system is not increasing overall or disparate claims
21 denials or coverage limitations, or otherwise decreasing access to care. Payors using
22 automated decision-making systems should make statistics regarding systems’ approval,
23 denial, and appeal rates available on their website (or another publicly available website)
24 in a readily accessible format with patient population demographics to report and
25 contextualize equity implications of automated decisions. Insurance regulators should
26 consider requiring reporting of payor use of automated decision-making systems so that
27 they can be monitored for negative and disparate impacts on access to care. Payor use of
28 automated decision-making systems must conform to all relevant state and federal laws.
29 (New HOD Policy)

Fiscal Note: Less than \$500.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 16-A-24

Subject: Support for Mental Health Courts

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2
3 At the 2023 Annual Meeting of the American Medical Association (AMA) House of Delegates
4 (HOD), Resolution 202 entitled, “Support for Mental Health Courts,” was introduced by the
5 Medical Student Section and called on the AMA to amend existing policy – Policy H-100.955
6 entitled, “Support for Drug Courts” – as follows:

7
8 Our AMA: (1) supports the establishment and use of mental health drug courts,
9 including drug courts and sobriety courts, as an effective method of intervention within
10 a comprehensive system of community-based supports and services for individuals
11 with mental illness involved in the justice system ~~addictive disease who are convicted~~
12 ~~of nonviolent crimes~~; (2) encourages legislators to establish mental health drug courts
13 at the state and local level in the United States; and (3) encourages mental health drug
14 courts to rely upon evidence-based models of care for those who the judge or court
15 determine would benefit from intervention rather than incarceration.

16
17 There was robust discussion of this resolution, including widespread support for increasing access
18 to evidence-based care for individuals with a mental illness or substance use disorder (SUD) who
19 were involved with the justice system. Multiple questions were raised, however, regarding terms
20 of art that may be in use in legal settings compared to medical settings; the potential of unintended
21 consequences; and the different uses of such courts. Ultimately, the HOD referred this resolution
22 to the Board of Trustees for study. In response, this report provides background information;
23 discusses the different courts; presents AMA policy; and makes recommendations.

24
25 BACKGROUND

26
27 There are more than 4,000 courts in the United States that provide some measure of alternative to
28 incarceration when there is evidence of a mental illness, SUD, or other health condition impacting
29 an individual and/or family.¹ There are at least 39 states with a diversion program that addresses
30 substance use, and at least 24 that directly address mental health and illness needs.² A fact sheet
31 from the Obama Administration noted that, “Since 1989, drug courts have been established or are
32 being planned in all 50 States, the District of Columbia, the Northern Mariana Islands, Puerto Rico,
33 Guam, and in nearly 90 Tribal locations.”³ The AMA has long been a supporter of these programs.⁴

34
35 These programs go by many names, including “treatment court,” “adult drug court,” “DWI court,”
36 “family treatment court,” “juvenile treatment court,” “tribal healing to wellness court,” or “veterans
37 treatment court.” Other names used to describe programs that seek alternatives to incarceration are
38 “opioid intervention court,” “opiate treatment court,” “heroin court,” “treatment pathway

1 program,” “overdose avoidance and recovery program,” and “heroin overdose prevention and
2 education initiative.”⁵ The U.S. Department of Justice (DOJ) broadly describes these programs as
3 “pretrial diversion programs” to which the U.S. Attorney has discretion to “divert” if there are
4 “substance abuse or mental health challenges.”⁶

5
6 Given the many different types of programs that are designed to provide mental health or SUD
7 services as an alternative to incarceration, for the purposes of this report, any program that
8 addresses substance use or mental health in a justice-involved or justice-related setting or program
9 will be denoted as a “diversion program.” A recent issue brief from the National Conference of
10 State Legislatures (NCSL)⁷ further explains that “Pretrial diversion programs are post-arrest
11 interventions that occur at some point prior to final entry of judgment. Programs can take place
12 before charges are filed, before first appearance or before adjudication.”

13
14 Public health and public justice and law enforcement officials generally agree on the considerable
15 need to treat mental illness and SUDs. Data reported by the U.S. Substance Abuse and Mental
16 Health Services Administration (SAMHSA) show much greater prevalence of mental illness and
17 SUDs in jails and prisons compared to the general population. It is estimated that:⁸

- 18
- 19 • 18 percent of the general population has a mental illness; 44 percent of those in jail and
20 37 percent of those in prison have a mental illness;
- 21 • 11 percent of 18–25-year-olds, and 6 percent of those over 25 years old have a SUD; and
- 22 • 63 percent of people in jail and 58 percent in prison have a SUD.

23
24 In terms of sheer numbers, “1.2 million individuals living with mental illness sit in jail and prison
25 each year.”⁹ Making matters more challenging, more than 60 percent of individuals with a history
26 of mental illness do not receive treatment while incarcerated, and more than 50 percent of
27 individuals receiving medication for mental health conditions stop taking them upon being
28 incarcerated.¹⁰ The National Institutes on Drug Abuse says that estimates for SUD prevalence in
29 jails and prisons have been as high as 65 percent.¹¹

30 31 DISCUSSION

32 33 *Are Diversion Programs an Effective Method of Intervention for Individuals with Mental Illness or* 34 *Substance Use Disorder Involved with the Justice System?*

35
36 The first issue to address is whether diversion programs are an effective method of intervention for
37 individuals with a mental illness or SUD involved with the justice system. If so, what elements of a
38 diversion program demonstrate efficacy? For the purposes of this report, at least two metrics for
39 “efficacy” can be viewed as to whether individuals receive and continue to engage in treatment, as
40 well as whether they become re-incarcerated. While it is beyond the scope of this report to evaluate
41 the 4,000+ programs in existence in the United States, there are innumerable examples of programs
42 reporting that individuals enrolled in diversion programs not only start and continue treatment but
43 are also less likely to return to jail or prison or be re-arrested. Proponents of diversion programs
44 cite multiple economic and other benefits, including that they can connect hundreds of thousands of
45 individuals to medications for opioid use disorder (OUD).

46
47 A sample of meta-analyses also show general positivity, but identify challenges that come with
48 evaluating such programs:

- 1 • A 2012 meta-analysis found that adult drug courts are effective “in reducing
2 recidivism...[and] The evidence assessing DWI courts’ effectiveness is very promising but
3 more experimental evaluations are needed. Juvenile drug courts typically produce small
4 reductions in recidivism.”¹²
- 5 • A 2013 meta-review broadly found benefits of juvenile justice diversion programs.¹³
- 6 • A 2016 review of juvenile justice programs found, “There is no evidence that juvenile drug
7 courts are more or less effective than traditional court processing in terms of reducing
8 juveniles’ recidivism and drug use, but there is also no evidence of harm. The quality of
9 the body of evidence is very low, however, so we have little confidence in these null
10 findings.”¹⁴
- 11 • A 2016 guide from the National Drug Court Institute cited multiple studies showing that,
12 “Use of all three [MOUD] medications is associated with significantly reduced use of
13 unauthorized opioids among probationers, parolees, and other persons with opioid use
14 disorders involved in the criminal justice system.”¹⁵
- 15 • A 2017 review of mental health courts (MHC) found that, “Overall, a small effect of MHC
16 participation on recidivism was noted, compared with traditional criminal processing.
17 Findings suggest the need for research to identify additional sources of variability in the
18 effectiveness of MHCs.”¹⁶
- 19 • A 2019 systematic review of drug courts found that, “Treatment accessed via community-
20 based diversion is effective at reducing drug use in Class A drug-using offenders. Evidence
21 of a reduction in offending amongst this group as a result of diversion is uncertain. Poor
22 methodological quality and data largely limited to US methamphetamine users limits
23 available evidence.”¹⁷
- 24 • A 2020 literature review of mental health courts found that, while research generally
25 supports MHCs’ positive effects to reduce recidivism, there are inconsistencies with
26 overall study designs, data collection, lack of adequate controls and other methodological
27 faults.¹⁸
- 28 • Another 2020 meta-analysis found that, “diversion programs for low-level drug offenders
29 are likely to be cost-effective, generating savings in the criminal justice system while only
30 moderately increasing healthcare costs. Such programs can reduce incarceration and its
31 associated costs and avert overdose deaths and improve quality of life for PWID [people
32 who inject drugs], PWUD [people who use drugs], and the broader population (through
33 reduced HIV and HCV transmission).”¹⁹

34
35 Considering individual programs reporting broad benefits²⁰ and meta-analyses showing benefits as
36 well as raising questions about how broad those benefits might be, it seems prudent to call for
37 additional research as well as mechanisms to identify best practices. For example, some programs
38 to treat OUD might prohibit use of medications for opioid use disorder (MOUD) or rely on non-
39 evidence-based approaches. The Board of Trustees notes, however, that what works in one
40 jurisdiction may not work in another—and given the evidence that points to the overall benefits and
41 lack of harm, we believe that the AMA should continue to support these programs. To guide
42 programs, we highlight that professional medical organizations have published multiple guidelines
43 and treatment considerations for diversion programs and care for individuals involved with the
44 justice system, including the American Society of Addiction Medicine,²¹ American Psychiatric
45 Association,²² and Providers Clinical Support System.²³

46
47 There are many potential elements of “a comprehensive system of community-based supports and
48 services.” This includes benefits provided by “wraparound services,” such as community-based
49 interagency cooperation, care coordination, child and/or family teams, unified plans of care,
50 evidence-based systems of care, and other areas.²⁴ Additional guidance can be found in recent

1 SAMHSA grants for diversion programs in three jurisdictions.²⁵ These grants identify multiple
2 types of services that may be useful in a diversion program, including motivational interviewing;
3 crisis intervention training; psychiatric/psychosocial rehabilitation; dialectical behavior therapy;
4 community-based treatment; case management; comprehensive psychiatric services, including
5 psychotherapy and supportive counseling; substance use and detoxification treatment; housing and
6 employment support, including skills training; screening, assessment, referral, and treatment to
7 individuals at risk of entering the criminal justice system; and links between individuals and other
8 community resources. While not all diversion programs will have all these elements, the Board of
9 Trustees believes that the AMA should support development of diversion programs that include
10 broad-based community support that include these types of resources.

11
12 *Should Diversion Programs be Available to Both Nonviolent and Violent Offenders?*

13
14 The second issue is whether diversion programs should be available to both nonviolent and violent
15 offenders. It is first important to distinguish that *access to a diversion program* is related to—but
16 different from than *access to evidence-based treatment* for a mental illness or SUD within the
17 justice system. In 2022, the DOJ issued guidance making it clear that the Americans with
18 Disabilities Act (ADA) protects individuals with an OUD to continue treatment for an OUD while
19 incarcerated, including protecting continuity of care with MOUD.²⁶ The AMA has advocated in
20 multiple legal, legislative, and other forums that individuals involved with the justice system have a
21 medical—and constitutional right—to continue OUD while incarcerated. This advocacy is
22 highlighted in seminal cases: *Smith v. Aroostook County*²⁷ and *Pesce v. Coppinger*.²⁸ By extension,
23 an individual also likely has statutory and constitutional rights to MOUD—or other evidence-based
24 care—in a diversion program, but as the DOJ points out, there may be nuances if “the individual is
25 currently engaged in illegal drug use.”²⁹ The National Institute on Drug Abuse (NIDA) explains
26 that:

27
28 The chronic nature of addiction means that for some people relapse, or a return to
29 drug use after an attempt to stop, can be part of the process, but newer treatments
30 are designed to help with relapse prevention. Relapse rates for drug use are similar
31 to rates for other chronic medical illnesses. If people stop following their medical
32 treatment plan, they are likely to relapse.³⁰

33
34 The Board of Trustees believes that AMA support for individuals being able to stay in treatment
35 even if they engaged in illegal drug use is a natural extension of existing AMA policy to not punish
36 people because they have a SUD.

37
38 With respect to whether diversion programs should be available to non-violent and violent
39 offenders, given the evidence showing benefits of these programs—even if limited in some cases—
40 the AMA should continue to support access to evidence-based care, including MOUD, for non-
41 violent offenders. Notably, no change in policy is needed to meet this result. Whether to support
42 and advocate for diversion programs to be available to individuals charged or convicted of violent
43 offenses, however, raises multiple issues.

44
45 The first issue is whether those charged or convicted of a violent offense are legally eligible for a
46 diversion program. The U.S. Government Accountability Office (GAO) reports that, “adult drug
47 courts funded by DOJ grants are prohibited by law from using grant funding to include individuals
48 with prior or current violent offenses in their programs.”³¹ The GAO pointed out, however, that, “a
49 few adult drug courts told us that they admit violent offenders, by ensuring that they do not use
50 federal funding to serve these clients.” The GAO, which interviewed representatives from 44 adult
51 drug courts from a mix of rural, suburban, urban, and tribal adult drug courts, highlighted that some

1 violent offenders and those convicted of drug-related crimes would benefit from drug court
2 services. State law also commonly excludes individuals charged or convicted of a violent offense—
3 or having been convicted within a certain time period in the past.

4
5 The National Association of Drug Court Professionals counsels that, “Evidence does not support
6 blanket disqualification from treatment court for persons with a history of violent crimes. Instead,
7 persons charged with offenses involving violence, or who have a history of such offenses, should
8 be evaluated on a case-by-case basis to determine if they can be safely supervised in treatment
9 court.”³² The Board of Trustees agrees. Just as AMA policy does not discriminate against an
10 individual’s right to receive treatment based on external factors, the AMA should not discriminate
11 against access to evidence-based care for SUD and mental illness based on carceral status or
12 judicial supervision. As noted above, the provision of evidence-based care for mental illness and
13 SUDs has strong constitutional protections. And as discussed below, current AMA policy strongly
14 supports evidence-based care for individuals with a mental illness or SUD in jails and prisons.

15
16 Saying that the AMA should not oppose participation in a diversion program does not mean,
17 however, that there should not be comprehensive considerations about which individuals would
18 benefit most from participation in a diversion program. Such considerations, moreover, should
19 include whether an individual’s participation constitutes a threat to public safety. Thankfully, there
20 are robust eligibility criteria to help judicial and health care professionals make those
21 determinations. This guidance can help ensure “equitable access, services, and outcomes for all
22 sociodemographic and sociocultural groups,” including “guidance for treatment courts to monitor
23 and rectify unwarranted cultural disparities.”³³ The eligibility guidance, moreover, can help
24 diversion programs remove inappropriate restrictions and exclusions, ensure evidence-based care,
25 connect individuals to complementary services, as well as avoid conflicts of interest. And just as
26 important, the Board of Trustees agrees that:

27
28 All persons meeting evidence-based eligibility criteria for treatment court receive
29 the same opportunity to participate and succeed in the program regardless of their
30 sociodemographic characteristics or sociocultural identity, including but not
31 limited to their race, ethnicity, sex, gender identity, sexual orientation, age,
32 socioeconomic status, national origin, native language, religion, cultural practices,
33 and physical, medical, or other conditions.³⁴

34 35 AMA POLICY

36
37 A bedrock of AMA advocacy is found in Policy H-430-987, “Medications for Opioid Use Disorder
38 in Correctional Facilities,” which provides, “Our AMA endorses: (a) the medical treatment model
39 of employing medications for opioid use disorder (OUD) as the standard of care for persons with
40 OUD who are incarcerated.” This policy also calls for the AMA to advocate for

41
42 . . . legislation, standards, policies, and funding that require correctional facilities
43 to increase access to evidence-based treatment of OUD, including initiation and
44 continuation of medications for OUD, in conjunction with psychosocial treatment
45 when desired by the person with OUD, in correctional facilities within the United
46 States and that this apply to all individuals who are incarcerated, including
47 individuals who are pregnant, postpartum, or parenting.

1 The Board of Trustees recommends that diversion programs be held to the same standards.

2
3 The AMA also supports “veterans courts” as “a method of intervention for veterans who commit
4 criminal offenses that may be related to a neurological or psychiatric disorder.” (Policy H-510-979,
5 “Support for Veterans Courts”). If AMA policy supports broad access to veterans’ courts as a
6 matter of policy, the Board of Trustees does not see any reason why such policy should not also
7 apply to other types of diversion programs. Similarly, AMA policy calling to support “justice
8 reinvestment initiatives ... and assessing individuals for substance use disorders and mental health
9 issues, expanding jail diversion and jail alternative programs, and increasing access to reentry and
10 treatment programs,” does not distinguish between nonviolent and violent offenses.
11 (Policy H-94-931, “AMA Support for Justice Reinvestment Initiatives”).
12

13 Finally, AMA Ethics Policy recognizes that, “Although convicted criminals have fewer rights and
14 protections than other citizens, being convicted of a crime does not deprive an offender of all
15 protections under the law.” (Policy E-9.7.2, “Court-Initiated Medical Treatment in Criminal
16 Cases”). This policy also counsels for physicians to, “Treat patients based on sound medical
17 diagnoses, not court-defined behaviors. While a court has the authority to identify criminal
18 behavior, a court does not have the ability to make a medical diagnosis or to determine the type of
19 treatment that will be administered.” (Policy E-9.7.2, “Court-Initiated Medical Treatment in
20 Criminal Cases”). Thus, while the justice system may have guidance about which individuals are
21 eligible for a diversion program, the physician’s role is not to raise barriers to such care.
22

23 RECOMMENDATIONS

24
25 The Board of Trustees recommends that existing policy – Policy H-100.955, entitled, “Support for
26 Drug Courts” – be amended by addition and deletion in lieu of Resolution 202 as follows:
27

28 Support for Diversion Programs, Including Drug Courts, Mental Health Courts, Veterans 29 Courts, Sobriety Courts, and Similar Programs

30
31 Our AMA:

32
33 (1) supports the establishment and use of diversion and treatment programs ~~drug~~
34 ~~courts, including drug courts, mental health courts, veterans courts, sobriety courts,~~
35 and other types of similar programs, as an effective method of intervention within a
36 comprehensive system of community-based supports and services for individuals
37 with a mental illness or substance use disorder involved in the justice system
38 ~~addictive disease who are convicted of nonviolent crimes;~~

39 (2) encourages legislators and court systems to establish diversion and treatment
40 programs ~~drug courts~~ at the state and local level in the United States; ~~and~~

41 (3) encourages diversion and treatment programs ~~drug courts~~ to rely upon evidence-based
42 models of care, including medications for opioid use disorder, for those who the judge or
43 court determine would benefit from intervention, including treatment, rather than
44 incarceration; and

45 (4) supports individuals enrolled in diversion or treatment programs not be removed from a
46 program solely because of evidence showing that an individual used illegal drugs while
47 enrolled. (Modify HOD Policy)

Fiscal Note: Less than \$500.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 17-A-24

Subject: Drug Policy Reform

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2
3 At the 2023 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD),
4 Resolution 203 entitled, “Drug Policy Reform,” was introduced by the Medical Student Section and
5 called on the AMA to:

- 6
7 • Advocate for federal and state reclassification of drug possession offenses as civil
8 infractions and the corresponding reduction of sentences and penalties for individuals
9 currently incarcerated, monitored, or penalized for previous drug-related felonies;
- 10 • Support federal and state efforts to expunge criminal records for drug possession
11 upon completion of a sentence or penalty at no cost to the individual; and
- 12 • Support federal and state efforts to eliminate incarceration-based penalties for
13 persons under parole, probation, pre-trial, or other criminal supervision for drug
14 possession.

15
16 Ultimately, Resolution 203 was referred to the Board of Trustees for study. Some of the primary reasons
17 for referral included the need for more background information on criminal penalties for drug possession;
18 the need to review the role of expungement for those convicted of drug-related crimes for drug
19 possession; and the need to identify the AMA’s unique role concerning other issues relating to drug
20 possession. This report also provides background information; discusses relevant policy and public health
21 considerations; presents AMA policy; and makes recommendations.

22 23 BACKGROUND

24
25 The National Center for Drug Abuse Statistics (NCDAS) reports that, “1.16 million Americans are
26 arrested annually for drug related offenses” and that, “227,655 Americans are arrested annually for the
27 possession of heroin, cocaine, and derivative products.” At the same time, NCDAS reports that, “40,446
28 Americans are arrested annually for the possession of synthetic drugs.”¹ A 2022 report from the Pew
29 Charitable Trusts found that between 2009-2019, “87 percent [of] drug arrests were for possession; the
30 rest were for sale or manufacturing.”² In the federal prison system, more than 44 percent of individuals
31 were incarcerated because of a drug-related offense.³

32
33 Incarceration rates for drug-related offenses, however, are decreasing. While the figures vary by state,
34 between 2009-2019, “The prison population in the 39 states with available data dropped by approximately
35 117,000 individuals from 2009 to 2019. The decrease in the number of people in prison for drug offenses
36 accounted for 61% of this total decline. Similarly, prison admissions fell by more than 131,000 from
37 2009 to 2019, with the drop in drug-related admissions accounting for 38 percent of the total.”⁴
38 There are significant racial disparities for those incarcerated for a drug-related offense. While use and
39 dependence rates between groups only vary by 1-2 percent, Black people are far more likely to be arrested

1 and incarcerated.⁵ These disparities have existed for decades,⁶ and they unfortunately continue. Research
2 from 2000 showed that Black individuals made up more than 60 percent of those sent to state prisons for
3 a drug-related offense⁷. The same study reported that, “Nationwide, black men are sent to state prison on
4 drug charges at 13 times the rate of white men.” More recent data show that, “prison admissions for Black
5 individuals for drug offenses decreased by 59 percent between 2009 and 2019, accounting for a quarter
6 (26 percent) of the total drop in admissions over that span.”⁸ Despite these decreases, disparities remain.
7 According to the Pew Charitable Trusts, “Black people made up 28 percent of admissions and 36 percent
8 of the population in prison for drug convictions in 2019, which are two and three times, respectively, their
9 share of the general population.”

10
11 The data also show differences in the prison population when race and gender are both considered.
12 Between 2009-2019, there was a “4 percent increase in admissions of White individuals for drug
13 offenses...[and] a 32 percent increase in the number of White females entering prison with drug
14 convictions. By comparison, admissions for drug offenses fell 71 percent for Black females and 4 percent
15 for White males.”⁹

16
17 Regarding youth-related drug offenses, between 2011-2020, there were an estimated 42,280 juvenile
18 arrests.¹⁰ Juvenile arrests for drug offenses decreased 72 percent between 2016-2020.¹¹ According to the
19 U.S. Office of Juvenile Justice and Delinquency Prevention, “the peak year for juvenile drug abuse
20 violation arrest rates was 1997 ... [and] overall from 1980 to 2020, the drug abuse violation arrest rate for
21 youth ages 15-17 decreased 64 percent , compared with a 21 percent decrease for young adults ages
22 18-20 and a 7 percent increase for young adults ages 21-24.”¹²

23 24 *Civil Infractions, Misdemeanors, and Felonies*

25
26 It is beyond the scope of this report to go into extensive detail about the wide variability and extensive
27 nuances in federal or state criminal codes concerning drug possession.¹³ A brief overview, however, may
28 be useful to underscore that the AMA’s unique role for this report is to focus on public health rather than
29 criminal law.

30
31 In general, a misdemeanor means any crime that does not amount to a felony.¹⁴ Misdemeanors generally
32 are those criminal offenses that carry punishments by incarceration of a year or less.¹⁵ A felony typically
33 denotes a crime more serious than a misdemeanor that subjects an individual to incarceration.¹⁶
34 Punishments for a felony typically are incarceration for periods of one year or more.¹⁷ An “infraction” can
35 have different meanings depending on the state, but it generally refers to a criminal act that is less serious
36 and carries less severe penalties than a misdemeanor, such a speeding ticket or parking meter violation.¹⁸
37 Criminal codes also distinguish “simple possession”¹⁹ from possession with intent to sell or distribute.²⁰

38
39 To prove a statutory crime, it is required to show both that an individual committed a criminal act, and in
40 so doing, acted with the state of mind requisite to constitute the crime in question.²¹ For simple drug
41 possession, the prosecutor must prove, generally, that the illicit substance was knowingly and/or
42 intentionally in the accused individual’s possession. Simple possession crimes differ from those with
43 intent to sell, manufacture or deliver in that simple possession typically is limited to personal use or
44 control whereas the crime of possession with intent to sell, manufacture or deliver requires proving both
45 possession/control of an illicit substance and that the individual had the intent to sell, manufacture or
46 deliver the substance. To prove intent to sell, manufacture or deliver, additional facts would be required,
47 which could come from undercover law enforcement or other witness testimony, exchange of money,
48 possession of manufacturing equipment, video surveillance, customer lists or other factual elements that
49 show more than just an intent limited to personal use or control.

50 There are a limited number of states that have decriminalized certain drug-related offenses. In 2020,
51 Oregon voters passed Ballot Measure 110, which among other things, effectively decriminalized
52 possession of certain amounts of Schedule I Controlled Substances, including cocaine, heroin, psilocybin,

1 and methamphetamine. Possession of amounts greater than the law authorized, as well as possession for
2 non-prescribed Schedule II-IV Controlled Substances, would subject an individual to a “Class E”
3 violation. Violators would be subject to a fine or agree to undertake a screening in lieu of a fine.²² Since
4 the measure went into effect, more than 7,600 individuals have received a Class E violation with
5 methamphetamine (55 percent) and Schedule II Controlled Substances (26 percent) the top reasons for
6 violations.²³ In response to multiple factors, including considerable public concern about reported
7 increases in public drug use, mortality and crime, the Oregon Legislature effectively ended
8 decriminalization of illegal drugs for personal use with passage of House Bill 4002, which the governor
9 said she will sign.²⁴ HB 4002 passed with wide, bipartisan margins in both the Oregon House and
10 Senate.²⁵

11
12 Additional state actions have occurred regarding psychedelics and other substances. For example,
13 legislative efforts surrounding Schedule I psychedelics are increasing. More than two dozen states have
14 considered or enacted measures to further study psychedelics, regulate their use, and establish pilot
15 treatment programs. For example, certain psychedelics were decriminalized in Washington, D.C. in
16 2021²⁶ and Colorado in 2022.²⁷ In 2021, drug possession was decriminalized in Washington state as a
17 result of a state supreme court decision in *State v. Blake*, which found the state’s drug possession statute
18 unconstitutional because it lacked an intent requirement.²⁸ The Washington Legislature re-criminalized
19 drug possession (as a misdemeanor) several months later in a special session.²⁹ The Washington law also
20 included provisions for diversion programs as an alternative to incarceration. The 2024 state legislative
21 sessions are actively considering many similar proposals.³⁰

22 23 *Expungement*

24
25 The Board of Trustees explained in [Board of Trustees Report 17-A-22](#) that it is important to recognize
26 that expungement, destruction, and sealing are legal processes.³¹ An expungement process may involve
27 multiple steps where the result is to remove a record of arrest and/or conviction from the official state or
28 federal record. The idea is that post-expungement, the record never existed. While an expungement may
29 “erase” a record, “sealing” hides the record from public view. More specifically, when “sealed,” the
30 record can be accessed under certain circumstances.³² Finally, “destruction” of a record generally means
31 to physically destroy it. When a record is “destroyed,” there is no record remaining whatsoever.³³ It is
32 important to note that specific definitions may vary by state.

33
34 Under federal law, the record of a conviction for drug possession may be able to be expunged depending
35 on the circumstances. An individual must qualify for expungement and undertake the process to formally
36 seek expungement. There are different requirements for those 21 years of age and older and those
37 younger than 21. The record of the underlying expungement also offers protection against future adverse
38 use, but it is retained by the U.S. Department of Justice.³⁴

39
40 At the state level, eligibility, and procedures for expungement of drug possession crimes vary
41 considerably.³⁵ State laws often are non-specific to controlled substances. In other words, eligibility and
42 procedures would be dependent on multiple factors, including whether a drug possession crime was a
43 misdemeanor or felony, and whether there were additional circumstances, including whether there were
44 other crimes committed and whether they were violent or nonviolent. Other states have waiting periods
45 after a sentence has been served, but these also are dependent on other factors that may be present,
46 including whether the drug possession crime was a first offense. States typically have different processes
47 and qualifications for minors.³⁶ In contrast, 24 states have specific procedures when the state has
48 decriminalized cannabis for medical and/or adult use.³⁷

1 DISCUSSION

2
3 *Reclassification of Drug Possession Offenses as Civil Infractions*
4

5 Proponents of decriminalizing drug possession cite multiple potential benefits, including saving money
6 from incarceration, focusing resources on treatment and social services, and other benefits such as
7 reducing the stigma surrounding drug use and having a substance use disorder.³⁸ Being incarcerated does
8 not often lead to treatment for a substance use disorder. The Pew Charitable Trusts reported data showing
9 that “1.1 million people with past-year illicit drug dependence or misuse reported being arrested and
10 booked in the past year...[but] 1 in 13—85,199—reported receiving drug treatment while in jail or prison.
11 Further, the drug- or alcohol-related mortality rate in jails increased from 9 in 100,000 in 2009 to 26 in
12 100,000 in 2019.”³⁹ Proponents also point to collateral consequences of having a criminal record for drug
13 possession, including denial of public benefits, losing custody of children, loss of voting rights, inability
14 to secure loans or financial aid, to name a few negative effects.⁴⁰ A meta-analysis of drug
15 decriminalization policies in 2020 focused on “evaluating effects of drug decriminalization or legal
16 regulation on drug availability, use or related health and social harms globally.”⁴¹ The analysis concluded
17 there was “a need for a broadening of the metrics used to assess the impacts of drug decriminalization and
18 legal regulation.”
19

20 Except for cannabis, there are few tangible examples in the United States on which to evaluate the
21 potential public health and collateral benefits of reclassifying drug possession offenses as civil infractions.
22 The Board of Trustees notes that our AMA Council on Science and Public Health has issued two previous
23 reports detailing the continued public health dangers associated with cannabis. Oregon, Colorado, and
24 Washington, D.C. are the only states to specifically decriminalize illicit substances, while multiple others
25 have enacted measures to direct law enforcement to treat possession of, for example, certain psychedelics,
26 as a “low priority.”⁴² In Oregon, the language of Ballot Measure 110 based part of its argument on the
27 premise that, “People suffering from addiction are more effectively treated with health care services than
28 with criminal punishments. A health care approach includes a health assessment to figure out the needs of
29 people who are suffering from addiction, and it includes connecting them to the services they need.” The
30 reality of Ballot Measure 110’s effects, however, demonstrate widespread challenges with connecting
31 individuals to screening, treatment, or recovery.
32

33 Three main studies of the effects of Oregon Ballot Measure 110 show that it generally failed to reduce
34 overdose-related fatality, and that it did not connect individuals to screening, treatment, or recovery. One
35 study found that Ballot Measure 110 “caused 182 additional unintentional drug overdose deaths to occur
36 in Oregon in 2021. This represents a 23 percent increase over the number of unintentional drug overdose
37 deaths predicted if Oregon had not decriminalized drugs.”⁴³ A separate study, however, found that there
38 was no significant change in death rates.⁴⁴ Perhaps most concerning is that Ballot Measure 110’s promise
39 of increased connections to treatment and increased access to evidence-based care has not been realized.
40 A state audit of Ballot Measure 110 discussed the widespread hopes for the ballot measure to improve
41 access to care for substance use disorders, reduce health inequities, and other laudable goals. The reality,
42 unfortunately, has been hampered by widespread challenges, including inefficient “program governance,”
43 “silos and fragmentation in the delivery of mental health and substance use disorder treatment,” poor
44 “stakeholder collaboration,” poor data collection and reporting structures, and a lack of coordination
45 between public health, public safety, and other agencies.⁴⁵
46

47 The Board of Trustees understands that the original intent of Oregon Ballot Measure 110 included an
48 effort to increase access to treatment, but there is a clear lack of evidence demonstrating public health
49 benefits or increases in access to evidence-based mental health or substance use disorder services in the
50 state. The available research, furthermore, does not clearly demonstrate tangible benefits on a wider scale.
51 The Board of Trustees observes that drug-related overdoses in Oregon have increased from 1,147 deaths
52 reported for the 12-month period between October 2020 and October 2021 to 1,683 deaths reported for

1 the 12-month period between October 2022 and October 2023.⁴⁶ The Board of Trustees believes that it is
2 premature to recommend decriminalizing drug possession offenses as a public health benefit in the
3 absence of evidence demonstrating public health benefits.

4
5 *Expungement of Criminal Records for Drug Possession upon Completion of a Sentence*

6
7 As noted above, there are ongoing collateral consequences experienced by individuals convicted of drug
8 possession (or other) crimes. The Board of Trustees emphasized these consequences as part of Board of
9 Trustees Report 17-A-22, “Expungement, Destruction, And Sealing Of Criminal Records For Legal
10 Offenses Related To Cannabis Use Or Possession.” That report recommended support for expungement
11 of cannabis-related offenses when those offenses were no longer illegal (because of newly enacted state
12 laws). As the Board stated in BOT Report 17-A-22,

13
14 Even if a record is expunged or sealed, however, that may not address collateral
15 consequences of the arrest or conviction, e.g., potential professional licensing sanctions,
16 adverse employment actions, and qualification for government benefits, including loans
17 and housing. These collateral consequences can also suppress the local tax base by
18 locking people into unemployment or lower paying jobs and increase taxpayer costs due
19 to increasing likelihood of further involvement in the criminal legal system.⁴⁷

20
21 The Board of Trustees supports reducing barriers to address these social determinants of health, including
22 supporting federal and state efforts to expunge criminal records for drug possession upon completion of a
23 sentence or penalty. Given that individuals released from jail or prison may have limited financial means,
24 we also support that the expungement process consider an individual’s financial hardship.

25
26 *Incarceration-based Penalties for Persons under Parole, Probation, Pre-trial, or other Criminal*
27 *Supervision for Drug Possession.*

28
29 As with different state laws and policies concerning what constitutes a drug possession felony or
30 misdemeanor, there is likely even greater state variation in what constitutes a violation of parole,
31 probation, pre-trial, or other supervisory agreement with an individual charged or convicted of drug
32 possession. While drug possession while on parole might trigger an automatic revocation in some
33 jurisdictions, in others there would be discretion. This is why some commentators argue for the “need to
34 critically examine the revocation process for probationers and parolees who transgress the terms and
35 conditions of their community supervision.”⁴⁸ Other commentators cite drug use or drug possession as a
36 common reason for parole, probation or other supervisory violations.⁴⁹ The Board of Trustees notes that
37 AMA advocacy and policy focus primarily on helping ensure individuals involved with the justice system
38 have access to evidence-based care. We certainly encourage discretion by court officers but do not believe
39 that the AMA has the unique expertise or experience to make categorical determinations about judicial
40 discretion.

41
42 Your Board – in a separate board report under consideration at this meeting, Board of Trustees Report 16
43 – explains why diversion programs should not automatically exclude individuals because they may have
44 previously used illicit substances. Similarly, we argue that individuals should not be removed from a
45 diversion program solely because they used an illicit substance. The National Institute of Drug Abuse
46 explains that “The chronic nature of addiction means that for some people relapse, or a return to drug use
47 after an attempt to stop, can be part of the process, but newer treatments are designed to help with relapse
48 prevention. Relapse rates for drug use are similar to rates for other chronic medical illnesses. If people
49 stop following their medical treatment plan, they are likely to relapse.”⁵⁰ AMA support for individuals
50 being able to continue parole or probation even if they engaged in illegal drug use is a natural extension
51 of AMA policy to not punish people because they have a substance use disorder.

1 AMA POLICY

2
3 AMA policy includes “support [for] legislation that promotes the use of non-financial release options for
4 individuals charged with nonviolent crimes.” (Policy H-80-993, “Ending Money Bail to Decrease Burden
5 on Lower Income Communities”). AMA policy also supports a broad range of elements for individuals
6 who are incarcerated, including, “...(a) linkage of those incarcerated to community clinics upon release in
7 order to accelerate access to comprehensive health care, including mental health and substance use
8 disorder services, and improve health outcomes among this vulnerable patient population, as well as
9 adequate funding; (b) the collaboration of correctional health workers and community health care
10 providers for those transitioning from a correctional institution to the community; (c) the provision of
11 longitudinal care from state supported social workers, to perform foundational check-ins that not only
12 assess mental health but also develop lifestyle plans with newly released people; and (d) collaboration
13 with community-based organizations and integrated models of care that support formerly incarcerated
14 people with regard to their health care, safety, and social determinant of health needs, including
15 employment, education, and housing.” (Policy H-430-986, “Health Care While Incarcerated”). Whether
16 these elements could be achieved through decriminalization of drug possession crimes is not clear,
17 however, which is why your Board supports additional research to inform future decision making.

18
19 AMA policy also supports “automatic expungement, sealing, and similar efforts regarding an arrest or
20 conviction for a cannabis-related offense for use or possession that would be legal or decriminalized
21 under subsequent state legalization or decriminalization of adult use or medicinal cannabis.”
22 (Policy H-95.910, “Expungement, Destruction, and Sealing of Criminal Records for Legal Offenses
23 Related to Cannabis Use or Possession”). AMA’s cannabis-related expungement policy also extends to
24 protections for minors and for “ending conditions such as parole, probation, or other court-required
25 supervision because of a cannabis-related offense for use or possession that would be legal or
26 decriminalized under subsequent state legalization or decriminalization of adult use or medicinal
27 cannabis.” (Policy H-430.986, “Health Care While Incarcerated”). Finally, AMA policy also calls for
28 “fairness in the expungement and sealing of records.” (Policy H-60.916, “Youth Incarceration in Adult
29 Facilities”). These policies highlight issues of fairness with respect to expungement as well as support for
30 the principle that drug use or possession—by itself—should not be a cause for additional criminal
31 penalty.

32
33 RECOMMENDATIONS

34
35 The Board of Trustees recommends that the following recommendations be adopted in lieu of Resolution
36 203 and the remainder of the report be filed:

- 37
38 1. That the American Medical Association (AMA) will continue to monitor the legal and public
39 health effects of state and federal policies to reclassify criminal offenses for drug possession for
40 personal use; (New HOD Policy)
- 41 2. That the AMA will support federal and state efforts to expunge, at no cost to the individual,
42 criminal records for drug possession for personal use upon completion of a sentence or penalty;
43 (New HOD Policy) and
- 44 3. That the AMA support programs that provide comprehensive substance use disorder treatment
45 and social support to people who use or possess illicit drugs for personal use as an alternative to
46 incarceration-based penalties for persons under parole, probation, pre-trial, or other civic,
47 criminal, or judicial supervision. (New HOD Policy)

Fiscal Note: Less than \$500.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 18-A-24

Subject: Supporting Harm Reduction

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2
3 At the June 2023 Annual Meeting, the American Medical Association (AMA) House of Delegates
4 (HOD), Resolution 204 entitled, “Supporting Harm Reduction,” was introduced by the Medical Student
5 Section and called on the AMA to:

- 6
7 • Advocate for the removal of buprenorphine from the misdemeanor crime of
8 possession of a narcotic;
9 • Support any efforts to decriminalize the possession of non-prescribed
10 buprenorphine; and
11 • Amend the 4th and 6th resolves of Policy D-95.987 by addition and deletion to
12 read as follows:

13 4. Our AMA will advocate for and encourage state and county medical
14 societies to advocate for harm reduction policies that provide civil and
15 criminal immunity for the possession, distribution, and use of “drug
16 paraphernalia” designed for harm reduction from drug use, including but
17 not limited to drug contamination testing, safer smoking, and injection
18 drug preparation, use and disposal supplies.

19
20 6. Our AMA will advocate for ~~supports efforts to~~ increased access to and
21 decriminalization of fentanyl test strip, and other drug checking supplies,
22 and safer smoking kits for purposes of harm reduction.

23
24 The HOD discussed the strong evidence base supporting buprenorphine as a treatment for opioid use
25 disorder (OUD), the uncertainty surrounding the facts of buprenorphine “diversion,” and the significant
26 concerns about the meaning and practice of “safer smoking.” Ultimately, the HOD referred the resolution
27 to the Board of Trustees for study. In response, this board report provides background information;
28 discusses the different issues raised by the resolution; presents AMA policy; and makes policy
29 recommendations.

30
31 BACKGROUND

32
33 *Buprenorphine*

34
35 Buprenorphine is a Schedule III Controlled Substance that the U.S. Drug Enforcement Administration
36 (DEA) defines as a narcotic for purposes of drug scheduling.¹ The U.S. Food and Drug Administration
37 (FDA) first approved buprenorphine-containing products in 2002 for the treatment of OUD.

1 Buprenorphine for OUD may be prescribed as a “mono-product,” and some manufacturers combine it
2 with naloxone (“combination product”) to treat OUD. It may be available as a tablet, sublingual film,
3 transdermal film, or injection.
4

5 There is widespread evidence that supports buprenorphine as an evidence-based medication to treat
6 OUD.² Researchers and clinicians commonly promote statements such as, “opioid agonist therapy (OAT)
7 with methadone or buprenorphine is the gold-standard treatment for OUD.”³ The U.S. Substance Abuse
8 and Mental Health Services Administration (SAMHSA) provides multiple resources about
9 buprenorphine, including clinical and safety information, treating pregnant and postpartum individuals,
10 potential for misuse, and safety considerations.⁴ Because of its evidence-base, AMA advocacy has for
11 years called for removing all barriers to buprenorphine for the treatment of OUD—including prior
12 authorization reforms,⁵ the x-waiver,⁶ telehealth restrictions,⁷ and dosage caps.⁸
13

14 While prescriptions dispensed for medications to treat opioid use disorder (MOUD) have marginally
15 increased in the past five years from 14.54 million to 16.05 million,⁹ there remain millions of Americans
16 who misuse illicit substances, prescription opioids and/or have untreated substance use disorder.¹⁰ More
17 than 78 million illicit fentanyl-containing pills and 12,000 pounds of fentanyl powder were seized by the
18 U.S. Drug Enforcement Administration (DEA) in 2023.¹¹ The U.S. Centers for Disease Control and
19 Prevention (CDC) advise that, “Powdered fentanyl looks just like many other drugs. It is commonly
20 mixed with drugs like heroin, cocaine, and methamphetamine and made into pills that are made to
21 resemble other prescription opioids.”¹²
22

23 *“Safer Smoking”* 24

25 As a threshold matter, and discussed briefly below, the AMA does not support the concept of “safer
26 smoking.” The issue of “safer smoking” in relation to the nation’s drug-related overdose and death
27 epidemic, however, is a harm reduction concept that seeks to reduce the spread of infectious disease as
28 well as support changes to injection drug use. The types of safer smoking supplies are often, “specific for
29 each type of drug used, but generally includes a heat resistant pipe or foil, protective mouthpiece, tamp,
30 screen, and lip protectant, all of which reduce heat-related injuries and infection risk.”¹³ In addition to
31 reducing injection drug use, proponents of safer smoking supplies also point to, “Smoking supplies
32 distributed by harm reduction programs [that] are clean and safer than improvised items like aluminum
33 cans, plastic tubes, steel wool, and light bulbs that can break easily or release toxic fumes.”¹⁴ These
34 supplies are typically considered illicit drug paraphernalia, and “Nearly all states penalize the possession
35 and distribution of glass pipes and other devices used for smoking or inhaling illegal drugs.”¹⁵
36

37 In addition to state law prohibitions against safer smoking supplies, federal law defines a wide variety of
38 materials as illegal drug paraphernalia, including,
39

- 40 (1) metal, wooden, acrylic, glass, stone, plastic, or ceramic pipes with or without screens,
- 41 permanent screens, hashish heads, or punctured metal bowls; (2) water pipes; (3)
- 42 carburetion tubes and devices; (4) smoking and carburetion masks; (5) roach clips:
- 43 meaning objects used to hold burning material, such as a marijuana cigarette, that has
- 44 become too small or too short to be held in the hand; (6) miniature spoons with level
- 45 capacities of one-tenth cubic centimeter or less; (7) chamber pipes; (8) carburetor pipes;
- 46 (9) electric pipes; (10) air-driven pipes; (11) chillums; (12) bongs; (13) ice pipes or
- 47 chillers; (14) wired cigarette papers; or (15) cocaine freebase kits.¹⁶
48

49 Every state—except Alaska—has a drug paraphernalia law.¹⁷ While state laws vary considerably, one
50 distinction is that needles and syringes may still be considered drug paraphernalia, but they are allowed

1 for personal use in most states. Penalties for individuals convicted of possession or use of other drug
2 paraphernalia can range from misdemeanors to felonies.¹⁸

3 4 DISCUSSION

5 6 *Decriminalization of Non-prescribed Possession and Use of Buprenorphine*

7
8 While penalties vary, possession of non-prescribed buprenorphine—like other non-prescribed controlled
9 substances—is generally considered a violation of state and/or federal law and can subject an individual
10 to monetary penalties and/or imprisonment depending on the circumstances.¹⁹ One of the key questions
11 for this board report, however, is whether the benefits of using non-prescribed buprenorphine in certain
12 circumstances outweigh the risks. The National Institute on Drug Abuse (NIDA) reports that, “most data
13 suggest that the majority of buprenorphine and methadone misuse (use without a prescription) is for the
14 purpose of controlling withdrawal and cravings for other opioids and not to get high.”²⁰ NIDA also points
15 out low rates of diversion risk, illicit use, and emergency department visits related to buprenorphine.
16 Research comparing buprenorphine-involved deaths compared to opioid-involved deaths during the
17 COVID-19 pandemic found that, “actions to facilitate access to buprenorphine-based treatment for opioid
18 use disorder during the COVID-19 pandemic were not associated with an increased proportion of
19 overdose deaths involving buprenorphine; efforts are needed to expand more equitable and culturally
20 competent access to and provision of buprenorphine-based treatment.”²¹ The AMA has argued that
21 individuals’ lack of access to buprenorphine is due to multiple factors, including stigma, and inadequate
22 networks of addiction medicine physicians, psychiatrists, primary care and other physicians willing to
23 prescribe buprenorphine. Access to buprenorphine is particularly problematic for racial and ethnic
24 minorities.²² The AMA and the AMA Substance Use and Pain Care Task Force has long urged that all
25 efforts be taken to increase access to buprenorphine and other medications for opioid use disorder
26 (MOUD). Decriminalization, however, is an issue of first impression for the AMA.

27
28 Decriminalization of possession of non-prescribed buprenorphine for personal use already is occurring in
29 the United States. Vermont became the first state in 2021 to specifically decriminalize possession of
30 224 milligrams of non-prescribed buprenorphine for personal use.²³ Initially enacted as a two-year pilot,
31 after positive reviews that the bill helped increase access to buprenorphine among people who use drugs
32 (PWUD) and also increase access to other forms of treatment, the Vermont Legislature made the
33 exemption permanent in 2023.²⁴ Rhode Island also decriminalized buprenorphine in 2021 by amending its
34 criminal code.²⁵ Another state example is when Oregon, in 2020, effectively decriminalized a wide range
35 of drugs for personal use, including Schedule III Controlled Substances.²⁶ It is not clear whether this has
36 increased access to buprenorphine in Oregon, but a report from the Oregon Judicial Department did not
37 cite “buprenorphine” for any of the new “Class E” violations.²⁷

38
39 Multiple studies have found the mortality risk of buprenorphine is low. This includes retrospective
40 mortality reviews showing how buprenorphine-involved mortality was commonly part of polysubstance
41 use.²⁸ In a study of Medicare beneficiaries, “Buprenorphine treatment after nonfatal opioid-involved
42 overdose was associated with a 62% reduction in the risk of opioid-involved overdose death.”²⁹ A review
43 of COVID-19-era opioid-involved overdose deaths found that “buprenorphine was involved in
44 2.6 percent of opioid-involved overdose deaths during July 2019 to June 2021”—a rate that “did not
45 increase” even as rates of overdose overall increased.³⁰ Commentators suggest that while there are some
46 risks to using non-prescribed buprenorphine, there are many benefits, including overcoming barriers that,
47 “extend across socioeconomic, bureaucratic, and stigmatizing lines and include unemployment, insurance
48 status, buprenorphine waiting lists, and most importantly, knowledge and physical access to providers
49 who can and want to prescribe buprenorphine.”³¹ The Board of Trustees acknowledges that use of
50 nonprescribed buprenorphine carries risks, but views the available evidence as mitigating in support of

1 doing all that is necessary to reduce health inequities and save lives from an opioid-related overdose,
2 including decriminalizing the personal possession and use of nonprescribed buprenorphine.

3
4 *“Safer Smoking” as a Harm Reduction Measure*

5
6 The AMA has supported a broad range of what are generally considered “harm reduction” measures. This
7 includes support for laws and other policies encouraging prescribing, distribution, and use of naloxone
8 and other opioid-overdose reversal agents. The AMA also supports broad Good Samaritan protections to
9 provide civil and criminal protections for individuals at the scene of an overdose event. The AMA further
10 supports the same protections for individuals who overdose. AMA policy also supports harm reduction
11 centers (also called overdose prevention sites), as well as the ability for syringe services programs (SSPs)
12 to provide sterile needles and syringes to help stem the spread of blood borne infectious disease. While
13 there will always be detractors and stigma, these harm reduction measures have been well-studied and
14 have been shown to help reduce mortality and improve health outcomes. It is beyond the scope of this
15 report to detail all the research for these measures, but it is important to highlight that each (to different
16 degrees) has largely overcome stigma in the medical community. The Board of Trustees acknowledges
17 that stigma remains a considerable barrier for SSPs and harm reduction centers.

18
19 Injection drug use continues to be a major public health issue. A Centers for Disease Control and
20 Prevention (CDC) study found that nearly 3.7 million people in the United States injected drugs in
21 2018—a 5-fold increase from 2011.³² The study also found that more than 42 percent of overdose deaths
22 were from injections. Another CDC report found that, “During 2013–2017, reported methamphetamine,
23 injection drug, and heroin use increased substantially among women and heterosexual men with [primary
24 and secondary] syphilis.”³³ Injection drug use may also result in the spread of skin and groin infections,
25 Hepatitis C, bacterial endocarditis, osteomyelitis, and other preventable health conditions.³⁴ Prevention of
26 the spread of blood-borne infectious disease is one of many reasons the AMA strongly supports broad
27 access to sterile needle and SSPs.

28
29 AMA support for SSPs, however, has been based on the strong evidence-base for SSPs. We raise the
30 question, therefore, whether the evidence supports increased use of safer smoking supplies (as defined
31 above), including decriminalization of such supplies. A 2023 descriptive review of 550 PWUDs found
32 that there was limited access but high interest in obtaining safer smoking supplies for heroin, crack
33 cocaine, and methamphetamine.³⁵ The authors were clear about the study limitations but highlighted other
34 research suggesting that obtaining safer smoking supplies could reduce injection drug use. A recently
35 published meta-review of global practices reported that, “Ten studies found that when people who use
36 drugs were provided with safer smoking materials, they engaged in fewer risky drug use behaviors (e.g.,
37 pipe sharing, using broken pipes) and showed improved health outcomes.”³⁶ The authors concluded that,
38 “safer smoking practices are essential forms of harm reduction,” but that “Additional research is also
39 needed to evaluate the efficacy of and access to safer smoking services, particularly in the U.S. and other
40 similar countries, where such practices are being implemented but have not been empirically studied in
41 the literature.” We agree that more research is necessary.

42
43 It is also important to emphasize that additional research into the potential benefits of any harm reduction
44 measure in no way condones or supports the use of illicit drugs or other substances whether through
45 injection, inhalation, or other routes of administration. The Board of Trustees notes that while reductions
46 in injection drug use should be considered positive, it is deeply concerning that it may be accompanied by
47 increases in smoking illicit fentanyl.³⁷ We agree with comments from addiction psychiatrists such as, “I
48 do not know that we are at a place where we can say, ‘Hey, maybe you should smoke it instead,’” and “It
49 would be hard for me to feel confident in recommending that to somebody.”³⁸ Further, it must be stressed
50 that there is no such thing as “safer smoking” of fentanyl, cannabis, tobacco or illicit substances, and also
51 stressed that smoking fentanyl carries significant risks, including overdose and death.³⁹ Similarly, the

1 Board of Trustees believes that while there may be some evidence showing reduced harms associated
2 with smoking fentanyl and certain safer smoking supplies as compared to injection use, there is a clear
3 need for much more research before the AMA spends its resources and puts its public health and science
4 credibility on the line.

5
6 *Decriminalization of Fentanyl Test Strips*
7

8 This resolution also calls for the AMA to support the decriminalization of fentanyl test strips. It is critical
9 to note that this ask is redundant as AMA policy already effectively accomplishes this. Specifically, our
10 policy states that, “Our AMA will: advocate for the removal of fentanyl test strips (FTS) and other testing
11 strips, devices or testing equipment used in identifying or analyzing whether a substance contains fentanyl
12 or other adulterants from the legal definition of drug paraphernalia.” (Policy D-95.987, “Prevention of
13 Drug-Related Overdose”) The AMA has advocated for this at the state and federal levels⁴⁰ and
14 encourages all medical societies to support legislation to implement this important policy. In this regard,
15 we appreciate the opportunity to highlight AMA advocacy and conclude that existing policy (and
16 subsequent advocacy measures) already meet the intent and purpose of the resolution.
17

18 **AMA POLICY**
19

20 Extending AMA policy to support decriminalization of non-prescribed buprenorphine for personal use
21 would become part of a broad and growing policy base supporting increased access to buprenorphine and
22 other MOUD. Policies in this family include:
23

- 24 • Policy H-420.970, “Treatment Versus Criminalization - Physician Role in Drug Addiction During
25 Pregnancy;”
- 26 • Policy H-95.956, “Harm Reduction Through Addiction Treatment;”
- 27 • Policy H-430.987, “Medications for Opioid Use Disorder in Correctional Facilities;”
- 28 • Policy H-290.962, “Medicaid Substance Use Disorder Coverage;”
- 29 • Policy H-320.941, “Eliminate Fail First Policy in Addiction Treatment;”
- 30 • Policy H-95.944, “Third-Party Payer Policies on Opioid Use Disorder Pharmacotherapy;”
- 31 • Policy D-95.955, “Improving Access to Post-Acute Medical Care for Patients with Substance Use
32 Disorder (SUD);” and
- 33 • Policy D-95.972, “Expanding Access to Buprenorphine for the Treatment of Opioid Use
34 Disorder.”
35

36 It bears repeating that the Board of Trustees strongly supports the provision of MOUD to occur within a
37 medically supervised and physician-led environment. We also recognize that given the innumerable
38 barriers to such care, combined with the clear benefits of increasing access to buprenorphine, calling for
39 decriminalization of non-prescribed buprenorphine for personal use is necessary to help reduce harms,
40 including overdose and death.
41

42 AMA policy already supports efforts to increase access to a broad range of harm reduction initiatives:
43

44 Our AMA will advocate for and encourage state and county medical societies to advocate
45 for harm reduction policies that provide civil and criminal immunity for the possession,
46 distribution, and use of “drug paraphernalia” designed for harm reduction from drug use,
47 including but not limited to drug contamination testing and injection drug preparation,
48 use, and disposal supplies. (Policy D-95.987, “Prevention of Drug-Related Overdose”)
49

50 It is reasonable to conclude, therefore, that this policy helps inform AMA support for SSPs, public

1 availability of sharps disposal units, and other areas. For example, AMA support for SSPs can be found
2 here:

3
4 . . . encourages the extensive application of needle and syringe exchange and distribution
5 programs and the modification of restrictive laws and regulations concerning the sale and
6 possession of needles and syringes to maximize the availability of sterile syringes and
7 needles, while ensuring continued reimbursement for medically necessary needles and
8 syringes. strongly supports the ability of physicians to prescribe syringes and needles to
9 patients who inject drugs in conjunction with addiction counseling to help prevent the
10 transmission of contagious diseases. (Policy H-95.954, “The Reduction of Medical and
11 Public Health Consequences of Drug Use”)
12

13 Finally, as discussed above, the evidence base for SSPs has been demonstrated. In contrast, the evidence
14 base in support of safer smoking supplies has not. The Board, therefore, urges increased research as it
15 relates to the latter.
16

17 RECOMMENDATIONS

18

19 The Board of Trustees recommends that the following new policy be adopted in lieu of Resolution 204,
20 and that the remainder of the report be filed.
21

- 22 1. That the American Medical Association (AMA) support efforts to decriminalize the possession
23 of non-prescribed buprenorphine for personal use by individuals who lack access to a physician
24 for the treatment of opioid use disorder; (New HOD Policy)
- 25 2. That the AMA oppose the concept, promotion, or practice of “safe smoking” with respect to
26 inhalation of tobacco, cannabis or any illicit substance; (New HOD Policy)
- 27 3. That the AMA encourage additional study whether “safer smoking supplies” may be a potential
28 harm reduction measure to reduce harms from the nation’s overdose and death epidemic; and
29 (New HOD Policy)
- 30 4. That the AMA reaffirm Policy D-95.987, “Prevention of Drug-Related Overdose.” (Reaffirm
31 AMA Policy)

Fiscal Note: Less than \$500.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 19-A-24

Subject: Attorneys’ Retention of Confidential Medical Records and Controlled Medical Expert’s Tax Returns After Case Adjudication (Resolution 240-A-23)

Presented by: Willie Underwood, III, MD, MSc, MPH, Chair

Referred to: Reference Committee B

1 INTRODUCTION

2
3 Resolution 240-A-23, introduced by the Illinois State Medical Society, consisted of the following
4 proposals:

5
6 RESOLVED, That our American Medical Association advocate that attorney requests for
7 controlled medical expert personal tax returns should be limited to 1099-MISC forms
8 (miscellaneous income) and that entire personal tax returns (including spouse’s) should not be
9 forced by the court to be disclosed (Directive to Take Action); and be it further

10
11 RESOLVED, That our AMA advocate through legislative or other relevant means the proper
12 destruction by attorneys of medical records (as suggested by *Haage v. Zavala*, 2021 IL
13 125918)¹ and medical expert’s personal tax returns within sixty days of the close of the case.
14 (Directive to Take Action).

15
16 FIRST RESOLVED

17
18 In cases requiring physicians as medical expert witnesses, their testimony is critical to the
19 resolution of the case. They provide an invaluable service. At the same time, it is the right of the
20 opposing party’s attorney to request discovery that allows the attorney to cross-examine the witness
21 to show potential bias. *See United States v. Abel*, 469 U.S. 45, 49-52 (1984). This discovery often
22 involves the expert’s financial history. Still, discovery must be balanced with the expert’s privacy
23 rights and the burden imposed. *See Grant v. Rancour*, 157 N.E.3d 1083, 1094-95 (Ill. 2020).
24 (“[W]hile cross-examination is permissible to show bias, partisanship, or financial interest, there is
25 a point at which such inquiries trample on the legitimate bounds of cross-examination and unduly
26 harass or unnecessarily invade the privacy of the witness.”).

27
28 There is no general rule or universal leaning that courts take when it comes to an expert’s personal
29 tax returns. Personal tax returns may be relevant to show an expert’s potential biases – how often
30 they have testified, how much they have earned for that testimony, what sources are paying for that
31 testimony, etc. Courts decide whether personal tax returns should be allowable discovery on a case-

¹ The form of citation quoted in the First Resolved refers to an Illinois-specific publication, one that might not be available to those outside of Illinois. For ease of reference and accessibility, the Board will use the citation of the case as published in the North Eastern Reporter, a widely available publication. The citation is *Haage v. Zavala*, 183 N.E.3d 830 (Ill. 2021).

1 by-case basis, depending on the specific facts of the case. *See, e.g., Olson v. State Farm Fire &*
2 *Cas. Co.*, No. C14-0786RSM, 2015 WL 753501, at *3 (W.D. Wash. Feb. 23, 2015) (“there is no
3 need for the expert to have to produce his or her tax returns, if the party seeking the discovery has
4 accurate information regarding the percentage of income earned as an expert”); *but see Noffke v.*
5 *Perez*, 178 P.3d 1141, 1150 (Alaska 2008) (“trial court determined that the income tax returns were
6 relevant and that production of the returns would help clarify any stake the witness might have in
7 the outcome of the case”). As with most discovery disputes, the resolution is within the court’s
8 discretion. “Courts must use their discretion to oversee the process and ensure that it is fair to both
9 sides.” *Grant*, 157 N.E.3d at 1095.

10
11 With this background, the Board agrees that seeking a medical expert’s entire personal income tax
12 returns is, in most instances, overly broad and unnecessarily invades the expert’s privacy. The
13 Board also agrees that limiting personal tax return discovery of a medical expert to miscellaneous
14 income (1099-MISC forms) strikes a reasonable balance between allowing the probing for
15 potential bias and protecting the expert’s privacy and burdens. Miscellaneous income discovery
16 would encompass the income that is received from serving as an expert, and the source of that
17 income. In most cases, this should shed sufficient light on potential bias.

18
19 This position is also in line with current AMA policy, which states, “(c) The AMA supports the
20 right to cross examine physician expert witnesses on the following issues: (i) the amount of
21 compensation received for the expert’s consultation and testimony; (ii) the frequency of the
22 physician’s expert witness activities; (iii) the proportion of the physician’s professional time
23 devoted to and income derived from such activities; and (iv) the frequency with which he or she
24 testified for either plaintiffs or defendants.” *Expert Witness Testimony*, H-265.994.

25
26 On the other hand, the Board believes the phrase “and that entire personal tax returns (including
27 spouse’s) should not be forced by the court to be disclosed” should be removed from the First
28 Resolved. It would be an overreach for the AMA to tell courts how to use their discretion in
29 managing discovery, which as discussed, varies on a case-by-case basis. In any event, the first part
30 of the Resolved makes this latter part largely unnecessary. Advocating for the limitation of tax
31 return discovery to miscellaneous income means that the discovery of entire personal tax returns is
32 generally unnecessary and inappropriate. Along those lines, we suggest that the word “usually” be
33 inserted between “should” and “be.”

34
35 As such, the Board believes the First Resolved should be rewritten as follows:

36
37 RESOLVED, That our American Medical Association advocate that attorneys’ discovery
38 requests for the personal tax returns of a medical expert for the opposing party should usually
39 be limited to 1099-MISC forms (miscellaneous income).

40
41 SECOND RESOLVED

42
43 The Second Resolved likely lumps together two different categories of documents: 1) client
44 medical records, and 2) tax returns of medical experts. The first category is personal health
45 information (“PHI”), likely protected under the Health Insurance Portability and Accountability
46 Act of 1996 (“HIPAA”). The second category is financial information that has nothing to do with
47 HIPAA. Yet the Second Resolved advocates for the destruction of both types of documents within
48 60 days of the conclusion of a case, using *Haage v. Zavala*, 183 N.E.3d 830 (Ill. 2021) as an
49 example.

50

1 In *Haage*, a personal injury matter, the trial court issued HIPAA qualified protective orders
2 (“QPOs”) expressly requiring the destruction of PHI within 60 days after the conclusion of the
3 litigation. The insurance company objected to the QPOs, arguing that the orders prevented insurers
4 from performing functions related to fraud detection and deterrence. The appellate court disagreed
5 and enforced the QPOs, finding that no law or regulations required the insurance company to use or
6 disclose plaintiffs’ PHI after the conclusion of the litigation. *See Haage*, 183 N.E.3d at 853.

7
8 Thus, *Haage* may be relevant to the return or destruction of PHI under a HIPAA QPO, but it is
9 irrelevant to the return or destruction of an expert’s tax return information. Thus, the Second
10 Resolved does not need to mention *Haage*.

11
12 Regarding the return of client records, the American Bar Association’s (“ABA”) Rules of
13 Professional Conduct state: “Upon termination of representation, a lawyer shall take steps to the
14 extent reasonably practicable to protect a client’s interests, such as . . . surrendering papers and
15 property to which the client is entitled[.] The lawyer may retain papers relating to the client to the
16 extent permitted by other law.” ABA Rule 1.6(d). The ABA rules do not address exactly *when*
17 attorneys are to return or destroy their client’s records.

18
19 As a general matter, the Board agrees with the intent of the Second Resolved – that certain
20 documents contain clients’ or experts’ sensitive and confidential information, and it is logical that
21 those individuals do not want that sensitive information used or available for longer than absolutely
22 necessary. Sixty days after the conclusion of litigation also seems like a reasonable time period for
23 the return or destruction of those documents. At the same time, the Board notes that reaching this
24 goal will likely be an uphill battle, as it would likely entail specific changes to the ABA’s Model
25 Rules of Professional Conduct, and could require changes to state and federal laws. Nonetheless,
26 advocating for this goal seems like a worthwhile effort.

27
28 As such, the Board believes the Second Resolved should be rewritten as follows:

29
30 RESOLVED, That our AMA support through legislative or other relevant means the proper
31 return or destruction of client medical records and medical expert’s personal tax returns by
32 attorneys within sixty days of the conclusion of the litigation.

33
34 RECOMMENDATION

35
36 The Board of Trustees recommends that the following be adopted in lieu of Resolution 240-A-23
37 and the remainder of this report be filed:

- 38
39 1. That our American Medical Association advocate that attorneys’ discovery requests for the
40 personal tax returns of a medical expert for the opposing party should usually be limited to
41 1099-MISC forms (miscellaneous income) (New HOD Policy); and
42
43 2. RESOLVED, That our AMA support through legislative or other relevant means the
44 proper return or destruction of client medical records and medical expert’s personal tax
45 returns by attorneys within sixty days of the conclusion of the litigation (New HOD
46 Policy).

Fiscal Note: TBD

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 201
(A-24)

Introduced by: American Academy of Ophthalmology

Subject: Research Correcting Political Misinformation and Disinformation on Scope of Practice

Referred to: Reference Committee B

Whereas, state and federal policymakers are regularly exposed to political misinformation and disinformation about the benefits and safety of scope of practice expansion from non-physician practitioners; and

Whereas, members of our American Medical Association spend valuable time and resources attempting to counter this political misinformation and disinformation with varying success; and

Whereas, recent research has explored various psychological and communication strategies to correct political misinformation and disinformation^{1,2,3,4,5,6}; and

Whereas, there may be differences between strategies that work to correct political misinformation and disinformation in different contexts, amongst different audiences, and on different issues; and

Whereas, members of our AMA may lack information about these strategies and how they might apply to correcting political misinformation and disinformation on scope of practice; therefore be it

RESOLVED, that our American Medical Association perform a comprehensive literature review on current research on correcting political misinformation and disinformation and conduct field research on ways to correct political misinformation and disinformation amongst policymakers as it pertains to scope of practice (Directive to Take Action); and be it further

RESOLVED, that our AMA Board of Trustees report its findings and recommendations by the I-24 meeting to the HOD on correcting political misinformation and disinformation and that our AMA incorporate these findings to the extent possible into our AMA's advocacy efforts on scope of practice. (Directive to Take Action)

Fiscal Note: \$330,526: Perform comprehensive literature review on current research on correcting political misinformation and disinformation. Conduct field research through focus groups and surveys on ways to correct political misinformation and disinformation.

Relevant AMA Policy

G-640.050 Preserving the AMA's Grassroots Legislative and Political Mission

Our AMA will ensure that all Washington activities, including lobbying, political education, grassroots communications and membership activities be staffed and funded so that all reasonable legislative missions and requests by AMA members and constituent organizations for political action and training can be met in a timely and effective manner. (Res. 619, A-00; Reaffirmed: BOT Rep. 6, A-10; CCB/CLRPD Rep. 3, A-12; Reaffirmed: CCB/CLRPD Rep. 1, A-22)

G-620.021 Communications and Collaboration with the Federation

Our AMA: (1) when confronted with attempts by non-physicians to expand scope of practice via state legislation, shall work at the invitation of its component societies to develop strategies to most effectively promote and protect the best interest of our patients; (2) shall continue to work with national medical specialty societies to assist them in working with and coordinating activities with state medical associations and that the AMA, when requested by either a state medical association or a national specialty society, provide a mechanism to attempt to resolve any dispute between such organizations; (3) shall become actively involved in lobbying and/or communicating with state officials at the request of the state medical associations. (4) Prior to placing targeted advertising, our AMA will contact the relevant state medical associations and/or specialty societies for the purpose of enhancing communication about AMA's planned activities. (CCB/CLRPD Rep. 3, A-12; Reaffirmed: CCB/CLRPD Rep. 1, A-22)

2.3.4 Political Communications

Physicians enjoy the rights and privileges of free speech shared by all Americans. It is laudable for physicians to run for political office; to lobby for political positions, parties, or candidates; and in every other way to exercise the full scope of their political rights as citizens. Physicians may exercise these rights individually or through involvement with professional societies and political action committees or other organizations.

When physicians wish to express their personal political views to a patient or a patient's family, the physician must be sensitive to the imbalance of power in the patient- physician relationship, as well as to the patient's vulnerability and desire for privacy. Physicians should refrain from initiating political conversations during the clinical encounter.

Physicians must not allow differences with the patient or family about political matters to interfere with the delivery of professional care.

When expressing political views to a patient or a patient's family, physicians should:

- (a) Judge both the intrusiveness of the discussion and the patient's level of comfort before initiating such a discussion.
 - (b) Discuss political matters only in contexts where conversation with the patient or family about social, civic, or recreational matters is acceptable.
 - (c) Refrain from conversation about political matters when the patient or family is emotionally pressured by significant medical circumstances.
 - (d) Work towards and advocate for the reform and proper administration of laws related to health care.
- Physicians should stay well informed of current political questions regarding needed and proposed reforms.

(e) Stay well informed about needed or proposed policies concerning health care access and quality, medical research, and promoting public health so as to be able to advocate for patients' needs. (AMA Principles of Medical Ethics: I,VII, Issued 2016)

H-160.947 Physician Assistants and Nurse Practitioners

Our AMA will develop a plan to assist the state and local medical societies in identifying and lobbying against laws that allow advanced practice nurses to provide medical care without the supervision of a physician. BOT Rep. 6, A-95Reaffirmed: Res 240 and Reaffirmation A-00Reaffirmed: (Res. 213, A-02; Modified: CLRPD Rep. 1, A-03; Reaffirmed: BOT Rep. 9, I-11; Reaffirmed: Joint CME-CMS Rep., I-12; Reaffirmed: BOT Rep. 16, A-13; Reaffirmed: Res. 206, I-22; Reaffirmed: CMS Rep. 09, A-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 202
(A-24)

Introduced by: American Association of Clinical Urologists

Subject: Use of Artificial Intelligence and Advanced Technology by Third Party Payors
to Deny Health Insurance Claims

Referred to: Reference Committee B

- 1 Whereas, insurers use of Artificial Intelligence (AI) and advanced technology to analyze Health
2 Insurance Claims is very frequent; and
3
- 4 Whereas, Humana, Cigna and UnitedHealthcare are facing class actions from consumers and
5 their estates for allegedly deploying advanced technology to deny claims; and
6
- 7 Whereas, health plans use of AI or algorithm software managed by firms such as naviHealth
8 and CareCentrix assist in coverage decisions; and
9
- 10 Whereas, insurers are using AI and algorithms to improve their bottom line under the guise of
11 delivering better service to their policy holders; and
12
- 13 Whereas, doctors, diagnostic companies and others are not able to deliver appropriate medical
14 care when insurance coverage is arbitrarily denied; and
- 15 Whereas, President Biden signed an executive order to establish AI standards in October 2023
16 which includes the responsible use of AI in Healthcare. This also requires the Department of
17 Health and Human Services (HHS) to set up a safety program to take in reports of harm or
18 unsafe health practices involving AI; and
- 19 Whereas, the HHS office of the National Coordinator for Health Information Technology issued
20 a rule in December 2023 requiring more transparency around AI; and
- 21 Whereas, the Center for Medicare and Medicaid Services (CMS) finalized rules requiring
22 Medicare Advantage Plans in 2024 to ensure they are making medical necessity determinations
23 based on the circumstances of a specific individual rather than an algorithm or software that
24 does not account for individual circumstances. Additionally, coverage denials based on medical
25 necessity determinations must be reviewed by a physician or other health care professional;
26 therefore be it
- 27 **RESOLVED**, that our American Medical Association adopt as policy that Commercial third-party
28 payors, Medicare, Medicaid, Workers Compensation, Medicare Advantage and other health
29 plans ensure they are making medical necessity determinations based on the circumstances of
30 the specific patient rather than by using an algorithm, software, or Artificial Intelligence (AI) that
31 does not account for an individual's circumstances (New HOD Policy); and be it further

- 1 RESOLVED, that our AMA adopt as policy that coverage denials based on a medical necessity
- 2 determination must be reviewed by a physician in the same specialty or by another appropriate
- 3 health care professional for non-physician health care providers. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 203
(A-24)

Introduced by: Florida

Subject: Medicaid Patient Accountability

Referred to: Reference Committee B

- 1 Whereas, most Medicaid managed care plans assign patients who do not select their own
2 primary care physician (PCP) randomly to a physician of the plan's choosing; and
3
4 Whereas, despite their best efforts, physicians at times are unable to persuade these Medicaid
5 patients to come into the office for wellness visits, immunization updates, or their childhood
6 check-up visit; and
7
8 Whereas, parents in many states have the ability to opt out of vaccines and other treatments for
9 pediatric patients through state approved religious or medical exemptions; and
10
11 Whereas, physicians are responsible for their assigned patients completing visits to record
12 Healthcare Effectiveness Data and Information Set (HEDIS) measures; and
13
14 Whereas, physicians may be given bonuses/incentives or be penalized based on their HEDIS
15 star rating score; therefore be it
16
17 RESOLVED, that our American Medical Association advocate that physicians' Healthcare
18 Effectiveness Data and Information Set and other quality scores and ratings not be affected by
19 non-compliant patients or patients whose parents exercise state exemptions from
20 recommended treatment. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Relevant AMA Policy

Retroactive Assignment of Patients by Managed Care Entities H-285.947

Our AMA opposes the practice of "retroactive or late assignment" of patients by managed care entities, noting that "retroactive or last assignment" includes: (a) the practice of failing to require enrollees in a capitated plan to select a responsible physician(s) at the time of enrollment; (b) the practice of failing to inform the responsible physician(s) of the enrollment of the patient and the assignment of responsibility until the patient has sought care; and (c) the practice of failing to pay the responsible physician the capitated rate until after the patient has sought care.

Sub. Res. 719, A-97Reaffirmation I-01Modified: CMS Rep. 7, A-11Reaffirmation: A-19

Physician Payment Reform H-390.849

1. Our AMA will advocate for the development and adoption of physician payment reforms that adhere to the following principles:

- a) promote improved patient access to high-quality, cost-effective care;
- b) be designed with input from the physician community;
- c) ensure that physicians have an appropriate level of decision-making authority over bonus or shared-savings distributions;
- d) not require budget neutrality within Medicare Part B;
- e) be based on payment rates that are sufficient to cover the full cost of sustainable medical practice;
- f) ensure reasonable implementation timeframes, with adequate support available to assist physicians with the implementation process;
- g) make participation options available for varying practice sizes, patient mixes, specialties, and locales;
- h) use adequate risk adjustment methodologies;
- i) incorporate incentives large enough to merit additional investments by physicians;
- j) provide patients with information and incentives to encourage appropriate utilization of medical care, including the use of preventive services and self-management protocols;
- k) provide a mechanism to ensure that budget baselines are reevaluated at regular intervals and are reflective of trends in service utilization;
- l) attribution processes should emphasize voluntary agreements between patients and physicians, minimize the use of algorithms or formulas, provide attribution information to physicians in a timely manner, and include formal mechanisms to allow physicians to verify and correct attribution data as necessary; and
- m) include ongoing evaluation processes to monitor the success of the reforms in achieving the goals of improving patient care and increasing the value of health care services.

2. Our AMA opposes bundling of payments in ways that limit medically necessary care, including institutional post-acute care, or otherwise interfere with a physician's ability to provide high quality care to patients.

3. Our AMA supports payment methodologies that redistribute Medicare payments among providers based on outcomes (including functional improvements, if appropriate), quality and risk-adjustment measures only if measures are scientifically valid, reliable, and consistent with national medical specialty society- developed clinical guidelines/standards.

4. Our AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.

5. Our AMA supports the development of a public-private partnership for the purpose of validating statistical models used for risk adjustment.

Work of the Task Force on the Release of Physician Data H-406.991

Principles for the Public Release and Accurate Use of Physician Data

The AMA encourages the use of physician data to benefit both patients and physicians and to improve the quality of patient care and the efficient use of resources in the delivery of health care services. The AMA supports this use of physician data when it is used in conjunction with program(s) designed to improve or maintain the quality of, and access to, medical care for all patients and is used to provide accurate physician performance assessments in concert with the following Principles:

1. Patient Privacy Safeguards

- All entities involved in the collection, use and release of claims data comply with the HIPAA Privacy and Security Rules (H-315.972, H-315.973, H-315.983, H-315.984, H-315.989, H-450.947).
- Disclosures made without patient authorization are generally limited to claims data, as that is generally the only information necessary to accomplish the intended purpose of the task (H-315.973, H-315.975, H-315.983).

2. Data Accuracy and Security Safeguards

- Effective safeguards are established to protect against the dissemination of inconsistent, incomplete, invalid or inaccurate physician-specific medical practice data (H-406.996, H-450.947, H-450.961).
- Reliable administrative, technical, and physical safeguards provide security to prevent the unauthorized use or disclosure of patient or physician-specific health care data and physician profiles (H-406.996, H-450.947, H-450.961).
- Physician-specific medical practice data, and all analyses, proceedings, records and minutes from quality review activities are not subject to discovery or admittance into evidence in any judicial or administrative proceeding without the physician's consent (H-406.996, H-450.947, H-450.961).

3. Transparency Requirements

- When data are collected and analyzed for the purpose of creating physician profiles, the methodologies used to create the profiles and report the results are developed in conjunction with relevant physician organizations and practicing physicians and are disclosed in sufficient detail to allow each physician or medical group to re-analyze the validity of the reported results prior to more general disclosure (H-315.973, H-406.993, H-406.994, H-406.998, H-450.947, H-450.961).
- The limitations of the data sources used to create physician profiles are clearly identified and acknowledged in terms understandable to consumers (H-406.994, H-450.947).
- The capabilities and limitations of the methodologies and reporting systems applied to the data to profile and rank physicians are publicly revealed in understandable terms to consumers (H-315.973, H-406.994, H-406.997, H-450.947, H-450.961).
- Case-matched, risk-adjusted resource use data are provided to physicians to assist them in determining their relative utilization of resources in providing care to their patients (H-285.931).

4. Review and Appeal Requirements

- Physicians are provided with an adequate and timely opportunity to review, respond and appeal the results derived from the analysis of physician-specific medical practice data to ensure accuracy prior to their use, publication or release (H-315.973, H-406.996, H-406.998, H-450.941, H-450.947, H-450.961).
- When the physician and the rater cannot reach agreement, physician comments are appended to the report at the physician's request (H-450.947).

5. Physician Profiling Requirements

- The data and methodologies used in profiling physicians, including the use of representative and statistically valid sample sizes, statistically valid risk-adjustment methodologies and statistically valid attribution rules produce verifiably accurate results that reflect the quality and cost of care provided by the physicians (H-406.994, H-406.997, H-450.947, H-450.961).
- Data reporting programs only use accurate and balanced data sources to create physician profiles and do not use these profiles to create tiered or narrow network programs that are used to steer patients towards certain physicians primarily on cost of care factors (H-450.951).

- When a single set of claims data includes a sample of patients that are skewed or not representative of the physicians' entire patient population, multiple sources of claims data are used.
- Physician efficiency of care ratings use physician data for services, procedures, tests and prescriptions that are based on physicians' patient utilization of resources so that the focus is on comparative physicians' patient utilization and not on the actual charges for services.
- Physician-profiling programs may rank individual physician members of a medical group but do not use those individual rankings for placement in a network or for reimbursement purposes.

6. Quality Measurement Requirements

- The data are used to profile physicians based on quality of care provided - never on utilization of resources alone -- and the degree to which profiling is based on utilization of resources is clearly identified (H-450.947).
- Data are measured against evidence-based quality of care measures, created by physicians across appropriate specialties, such as the Physician Consortium for Performance Improvement. (H-406.994, H-406.998, H-450.947, H-450.961).
- These evidence-based measures are endorsed by the National Quality Forum (NQF) and/or the AQA and HQA, when available. When unavailable, scientifically valid measures developed in conjunction with appropriate medical specialty societies and practicing physicians are used to evaluate the data.

7. Patient Satisfaction Measurement Requirements

- Until the relationship between patient satisfaction and other outcomes is better understood, data collected on patient satisfaction is best used by physicians to better meet patient needs particularly as they relate to favorable patient outcomes and other criteria of high quality care (H-450.982).
- Because of the difficulty in determining whether responses to patient satisfaction surveys are a result of the performance of a physician or physician office, or the result of the demands or restrictions of health insurers or other factors out of the control of the physician, the use of patient satisfaction data is not appropriate for incentive or tiering mechanisms.
- As in physician profiling programs, it is important that programs that publicly rate physicians on patient satisfaction notify physicians of their rating and provide a chance for the physician to appeal that rating prior to its publication.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 204
(A-24)

Introduced by: Florida
Subject: Staffing Ratios in the Emergency Department
Referred to: Reference Committee B

1 Whereas, the Emergency Department is the medical safety net for the nation and provides care
2 to vulnerable patients who may not otherwise have access to primary or specialty medical care;
3 and

4
5 Whereas, in many states, physicians are the only health professionals authorized to practice
6 medicine in the Emergency Department without limitation; and

7
8 Whereas, every patient presenting to an Emergency Department should be under the direct,
9 real-time care of a licensed physician, including the on-site and real-time supervision of non-
10 physician practitioners (NPPs); and

11
12 Whereas, state laws vary on the number of nurse practitioners and physician assistants that a
13 physician can supervise, with some states having no limits at all; and

14
15 Whereas, a 2022 NBER paper using data from the VA shows that nurse practitioners working
16 without supervision in the Emergency Department resulted in increased lengths of stay,
17 increased costs, increased 30-day re-admissions, and increased mortality rates among the
18 higher acuity patients. Nursing literature also supports that NPs should not be working
19 unsupervised in the ED; and

20
21 Whereas, in an increasing number of states, most Emergency Physicians are employed by
22 corporate staffing groups with private equity backing seeking to maximize profit through
23 understaffing physicians and replacing them with non-physician practitioners (NPPs); and

24
25 Whereas, the staffing ratio of NPPs to physicians at any given time in the Emergency
26 Department determines whether a physician has time to adequately supervise and see the
27 patients being cared for by the NPPs; therefore be it

28
29 RESOLVED, that our American Medical Association seek federal legislation or regulation
30 prohibiting staffing ratios that do not allow for proper supervision of NPPs in the Emergency
31 Department (Directive to Take Action); and be it further

32
33 RESOLVED, that our AMA seek federal legislation or regulation that would require all
34 Emergency Departments to be staffed 24-7 by a qualified physician. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/9/2024

Relevant AMA Policy

Promoting Supervision of Emergency Care Services in Emergency Departments by Physicians D-35.976

Our AMA will advocate for the establishment and enforcement of legislation and/or regulations that ensure only physicians supervise the provision of emergency care services in an emergency department. [Res. 218, A-23]

Principles for Strengthening the Physician-Hospital Relationship H-225.957

The following twelve principles are AMA policy:

PRINCIPLES FOR STRENGTHENING THE PHYSICIAN-HOSPITAL RELATIONSHIP

1. The organized medical staff and the hospital governing body are responsible for the provision of quality care, providing a safe environment for patients, staff and visitors, and working continuously to improve patient care and outcomes, with the primary responsibility for the quality of care rendered and for patient safety vested with the organized medical staff. These activities depend on mutual accountability, interdependence, and responsibility of the organized medical staff and the hospital governing body for the proper performance of their respective obligations.
2. The organized medical staff, a self-governing organization of professionals, possessing special expertise, knowledge and training, discharges certain inherent professional responsibilities by virtue of its authority to regulate the professional practice and standards of its members, and assumes primary responsibility for many functions, including but not limited to: the determination of organized medical staff membership; performance of credentialing, privileging and other peer review; and timely oversight of clinical quality and patient safety.
3. The leaders of the organized medical staff, with input from the hospital governing body and senior hospital managers, develop goals to address the healthcare needs of the community and are involved in hospital strategic planning as described in the medical staff bylaws.
4. Ongoing, timely and effective communication, by and between the hospital governing body and the organized medical staff, is critical to a constructive working relationship between the organized medical staff and the hospital governing body.
5. The organized medical staff bylaws are a binding, mutually enforceable agreement between the organized medical staff and the hospital governing body. The organized medical staff and hospital bylaws, rules and regulations should be aligned, current with all applicable law and accreditation body requirements and not conflict with one another. The hospital bylaws, policies and other governing documents do not conflict with the organized medical staff bylaws, rules, regulations and policies, nor with the organized medical staff's autonomy and authority to self govern, as that authority is set forth in the governing documents of the organized medical staff. The organized medical staff, and the hospital governing body/administration, shall, respectively, comply with the bylaws, rules, regulations, policies and procedures of one another. Neither party is authorized to, nor shall unilaterally amend the bylaws, rules, regulations, policies or procedures of the other.
6. The organized medical staff has inherent rights of self governance, which include but are not limited to:

- a) Initiating, developing and adopting organized medical staff bylaws, rules and regulations, and amendments thereto, subject to the approval of the hospital governing body, which approval shall not be unreasonably withheld. The organized medical staff bylaws shall be adopted or amended only by a vote of the voting membership of the medical staff.
- b) Identifying in the medical staff bylaws those categories of medical staff members that have voting rights.
- c) Identifying the indications for automatic or summary suspension, or termination or reduction of privileges or membership in the organized medical staff bylaws, restricting the use of summary suspension strictly for patient safety and never for purposes of punishment, retaliation or strategic advantage in a peer review matter. No summary suspension, termination or reduction of privileges can be imposed without organized medical staff action as authorized in the medical staff bylaws and under the law.
- d) Identifying a fair hearing and appeals process, including that hearing committees shall be composed of peers, and identifying the composition of an impartial appeals committee. These processes, contained within the organized medical staff bylaws, are adopted by the organized medical staff and approved by the hospital governing board, which approval cannot be unreasonably withheld nor unilaterally amended or altered by the hospital governing board or administration. The voting members of the organized medical staff decide any proposed changes.
- e) Establishing within the medical staff bylaws: 1) the qualifications for holding office, 2) the procedures for electing and removing its organized medical staff officers and all organized medical staff members elected to serve as voting members of the Medical Executive Committee, and 3) the qualifications for election and/or appointment to committees, department and other leadership positions.
- f) Assessing and maintaining sole control over the access and use of organized medical staff dues and assessments, and utilizing organized medical staff funds as appropriate for the purposes of the organized medical staff.
- g) Retaining and being represented by legal counsel at the option and expense of the organized medical staff.
- h) Establishing in the organized medical staff bylaws, the structure of the organized medical staff, the duties and prerogatives of organized medical staff categories, and criteria and standards for organized medical staff membership application, reapplication credentialing and criteria and processing for privileging. The standards and criteria for membership, credentialing and privileging shall be based only on quality of care criteria related to clinical qualifications and professional responsibilities, and not on economic credentialing, conflicts of interest or other non-clinical credentialing factors.
- i) Establishing in the organized medical staff bylaws, rules and regulations, clinical criteria and standards to oversee and manage quality assurance, utilization review and other organized medical staff activities, and engaging in all activities necessary and proper to implement those bylaw provisions including, but not limited to, periodic meetings of the organized medical staff and its committees and departments and review and analysis of patient medical records.
- j) The right to define and delegate clearly specific authority to an elected Medical Executive Committee to act on behalf of the organized medical staff. In addition, the organized medical staff defines indications and mechanisms for delegation of authority to the Medical Executive Committee and the removal of this authority. These matters are specified in the organized medical staff bylaws.
- k) Identifying within the organized medical staff bylaws a process for election and removal of elected Medical Executive Committee members.
- l) Defining within the organized medical staff bylaws the election process and the qualifications, roles and responsibilities of clinical department chairs. The Medical Executive Committee must appoint any clinical chair that is not otherwise elected by the vote of the general medical staff.
- m) Enforcing the organized medical staff bylaws, regulations and policies and procedures.
- n) Establishing in medical staff bylaws, medical staff involvement in contracting relationships, including exclusive contracting, medical directorships and all hospital-based physician contracts, that affect the functioning of the medical staff.

7. Organized medical staff bylaws are a binding, mutually enforceable agreement between the organized medical staff and the hospital governing body, as well as between those two entities and the individual members of the organized medical staff.
8. The self-governing organized medical staff determines the resources and financial support it requires to effectively discharge its responsibilities. The organized medical staff works with the hospital governing board to develop a budget to satisfy those requirements and related administrative activities, which the hospital shall fund, based upon the financial resources available to the hospital.
9. The organized medical staff has elected appropriate medical staff member representation to attend hospital governing board meetings, with rights of voice and vote, to ensure appropriate organized medical staff input into hospital governance. These members should be elected only after full disclosure to the medical staff of any personal and financial interests that may have a bearing on their representation of the medical staff at such meetings. The members of the organized medical staff define the process of election and removal of these representatives.
10. Individual members of the organized medical staff, if they meet the established criteria that are applicable to hospital governing body members, are eligible for full membership on the hospital governing body. Conflict of interest policies developed for members of the organized medical staff who serve on the hospital's governing body are to apply equally to all individuals serving on the hospital governing body.
11. Well-defined disclosure and conflict of interest policies are developed by the organized medical staff which relate exclusively to their functions as officers of the organized medical staff, as members and chairs of any medical staff committee, as chairs of departments and services, and as members who participate in conducting peer review or who serve in any other positions of leadership of the medical staff.
12. Areas of dispute and concern, arising between the organized medical staff and the hospital governing body, are addressed by well-defined processes in which the organized medical staff and hospital governing body are equally represented. These processes are determined by agreement between the organized medical staff and the hospital governing body. [Res. 828, I-07 Reaffirmed in lieu of Res. 730, A-09 Modified: Res. 820, I-09 Reaffirmed: Res. 725, A-10 Reaffirmation A-12 Reaffirmed: CMS Rep. 6, I-13 Reaffirmed: CMS Rep. 5, A-21]

Supervision and Proctoring by Facility Medical Staff H-375.967

Our AMA advocates that the conduct of medical staff supervision be included in medical staff bylaws and be guided by the following principles:

- (1) Physicians serving as medical staff supervisors should be indemnified at the facility's expense from malpractice claims and other litigation arising out of the supervision function.
- (2) Physicians being supervised should be indemnified at the facility's expense for any damages that might occur as a result of implementing interventions recommended by medical staff supervisors.
- (3) AMA principles of peer review as found in Policies H-320.968 [2,d], H-285.998 [5], and H-320.982 [2c,d] should be adhered to in the conduct of medical staff supervision.
- (4) The medical staff member serving as supervisor should be determined through a formal process by the department chair or medical staff executive committee.
- (5) The scope of the medical staff supervision should be limited to the provision of services that have been restricted, are clearly questionable, or are under question, as determined by the department chair or medical staff executive committee.
- (6) The duration of the medical staff supervision should be limited to the amount of time necessary to adequately assess the degree of clinical competence in the area of skill being assessed.
- (7) Medical staff supervision should include a sufficient volume of procedures or admissions for meaningful assessment.
- (8) Medical staff supervisors should provide periodic performance reports on each patient to the appropriate designated medical staff committee. The reports should be transcribed or transcribed by the medical staff office to assure confidentiality. The confidentiality of medical staff supervision reports must be strictly maintained.
- (9) Physicians whose performance is supervised should have access to the performance reports submitted by medical staff supervisors and should be given the opportunity to comment on the contents of the reports. [CMS Rep. 3, A-99 Reaffirmed: CLRPD Rep. 1, A-09 Reaffirmed: CMS Rep. 01, A-19]

Medical Staff Development Plans H-225.961

All hospitals/health systems incorporate the following principles for the development of medical staff development plans: (a) The medical staff and hospital/health system leaders have a mutual responsibility to: cooperate and work together to meet the overall health and medical needs of the community and preserve quality patient care; acknowledge the constraints imposed on the two by limited financial resources; recognize the need to preserve the hospital/health system's economic viability; and respect the autonomy, practice prerogatives, and professional responsibilities of physicians. (b) The medical staff and its elected leaders must be involved in the hospital/health system's leadership function, including: the process to develop a mission that is reflected in the long-range, strategic, and operational plans; service design; resource allocation; and organizational policies. (c) Medical staffs must ensure that quality patient care is not harmed by economic motivations. (d) The medical staff should review and approve and make recommendations to the governing body prior to any decision being made to close the medical staff and/or a clinical department. (e) The best interests of patients should be the predominant consideration in granting staff membership and clinical privileges. (f) The medical staff must be responsible for professional/quality criteria related to appointment/reappointment to the medical staff and granting/renewing clinical privileges. The professional/quality criteria should be based on objective standards and the standards should be disclosed. (g) The medical staff should be consulted in establishing and implementing institutional/community criteria. Institutional/community criteria should not be used inappropriately to prevent a particular practitioner or group of practitioners from gaining access to staff membership. (h) Staff privileges for physicians should be based on training, experience, demonstrated competence, and adherence to medical staff bylaws. No aspect of medical staff membership or particular clinical privileges shall be denied on the basis of sex, race, age, creed, color, national origin, religion, disability, ethnic origin sexual orientation, gender identity or physical or mental impairment that does not pose a threat to the quality of patient care. (i) Physician profiling must be adjusted to recognize case mix, severity of illness, age of patients and other aspects of the physician's practice that may account for higher or lower than expected costs. Profiles of physicians must be made available to the physicians at regular intervals. [BOT Rep. 14, A-98Modified: BOT Rep. 11, A-07Reaffirmation A-10Modified: CMS Rep. 01, A-20]

Credentialing and the Quality of Care H-225.971

It is the policy of the AMA: (1) that the hospital medical staff be recognized within the hospital as the entity with the overall responsibility for the quality of medical care; (2) that hospital medical staff bylaws reaffirm The Joint Commission standard that medical staffs have "overall responsibility for the quality of the professional services provided by individuals with clinical privileges"; (3) that each hospital's quality assurance, quality improvement, and other quality-related activities be coordinated with the hospital medical staff's overall responsibility for quality of medical care; (4) that the hospital governing body, management, and medical staff should jointly establish the purpose, duties, and responsibilities of the hospital administrative personnel involved in quality assurance and other quality-related activities; establish the qualifications for these positions; and provide a mechanism for medical staff participation in the selection, evaluation, and credentialing of these individuals; (5) that the hospital administrative personnel performing quality assurance and other quality activities related to patient care report to and be accountable to the medical staff committee responsible for quality improvement activities; (6) that the purpose, duties, responsibilities, and reporting relationships of the hospital administrative personnel performing quality assurance and other quality-related activities be included in the medical staff and hospital corporate bylaws; (7) that the general processes and policies related to patient care and used in a hospital quality assurance system and other quality-related activities should be developed, approved, and controlled by the hospital medical staff; and (8) that any physician hired or retained by a hospital to be involved solely in medical staff quality of care issues be credentialed by the medical staff prior to employment in the hospital. [BOT Rep. T, I-92Reaffirmed: CMS Rep. 10, A-03Modified: CMS Rep. 4, A-13 Reaffirmed: CMS Rep. 5, A-21]

On-Call Physicians H-130.948

Our AMA:

- (1) strongly encourages physicians and hospitals to work collaboratively to develop solutions based on adequate compensation or other appropriate incentives as the preferred method of ensuring on-call coverage and will monitor and oppose any state legislative or regulatory efforts mandating emergency room on-call coverage as a requirement for medical staff privileges and state licensure that are not supported by the state medical association;
- (2) advocates that physician on-call coverage for emergency departments be guided by the following principles:
 - (a) The hospital and physicians should jointly share the responsibility for the provision of care of emergency department patients.
 - (b) Every hospital that provides emergency services should maintain policies to ensure appropriate on-call coverage of the emergency department by medical staff specialists that are available for consultation and treatment of patients.
 - (c) The organization and function of on-call services should be determined through hospital policy and medical staff by-laws, and include methods for monitoring and assuring appropriate on-call performance.
 - (d) Physicians should be provided adequate compensation for being available and providing on-call and emergency services.
 - (e) Hospital medical staff by-laws and emergency department policies regarding on-call physicians' responsibilities must be consistent with Emergency Medical Treatment and Active Labor Act (EMTALA) requirements.
 - (f) Medical staffs should determine and adopt protocols for appropriate, fair, and responsible medical staff on-call coverage.
 - (g) Hospitals with specialized emergency care capabilities need to have a means to ensure medical staff responsibility for patient transfer acceptance and care.
 - (h) Hospitals that lack the staff to provide on-call coverage for a particular specialty should have a plan that specifies how such care will be obtained.
 - (i) The decision to operate or close an emergency department should be made jointly by the hospital and medical staff;
- (3) supports the enforcement of existing laws and regulations that require physicians under contract with health plans to be adequately compensated for emergency services provided to the health plans' enrollees; and
- (4) supports the enactment of legislation that would require health plans to adequately compensate out-of-plan physicians for emergency services provided to the health plans' enrollees or be subject to significant fines similar to the civil monetary penalties that can be imposed on hospitals and physicians for violation of EMTALA. [CMS Rep. 3, I-99 Reaffirmation A-00Modified: Sub. Res. 217, I-00 Reaffirmation I-01Reaffirmation A-07Appended and Reaffirmed: CMS Rep. 1, I-09 Modified: Res. 818, I-17]

Professional Nurse Staffing in Hospitals H-360.986

- The AMA: (1) encourages medical and nursing staffs in each facility to closely monitor the quality of medical care to help guide hospital administrations toward the best use of resources for patients;
- (2) encourages medical and nursing staffs to work together to develop and implement in-service education programs and promote compliance with established or pending guidelines for unlicensed assistive personnel and technicians that will help assure the highest and safest standards of patient care;
 - (3) encourages medical and nursing staffs to use identification mechanisms, e.g. badges, that provide the name, credentials, and/or title of the physicians, nurses, allied health personnel, and unlicensed assistive personnel in facilities to enable patients to easily note the level of personnel providing their care;
 - (4) encourages medical and nursing staffs to develop, promote, and implement educational guidelines for the training of all unlicensed personnel working in critical care units, according to the needs at each facility; and
 - (5) encourages medical and nursing staffs to work with hospital administrations to assure that patient care and safety are not compromised when a hospital's environment and staffing are restructured. [BOT Rep. 11, I-96Reaffirmed: CMS Rep. 8, A-06Reaffirmed: CMS Rep. 01, A-16]

Supervision of Non-Physician Practitioners by Physicians D-35.978

Our AMA will advocate: (1) to ensure physicians on staff receive written notification when their license is being used to document supervision of non-physician practitioners; (2) that physician supervision should be explicitly defined and mutually agreed upon; (3) for advanced notice and disclosure to the physician before they are hired or as soon as practicably known by provider organizations and institutions that anticipate physician supervision of non-physician practitioners as a condition for physician employment; (4) that organizations, institutions, and medical staffs that have physicians who participate in supervisory duties for non-physician practitioners have processes and procedures in place that have been developed with appropriate clinical physician input; and (5) that physicians be able to report professional concerns about care provided by the non-physician practitioners to the appropriate leadership with protections against retaliation. [Res. 017, I-22]

Emergency Department Boarding and Crowding H-130.940

Our AMA:

1. congratulates the American College of Emergency Physicians for developing and promulgating solutions to the problem of emergency department boarding and crowding;
2. supports collaboration between organized medical staff and emergency department staff to reduce emergency department boarding and crowding;
3. supports dissemination of best practices in reducing emergency department boarding and crowding;
4. continues to encourage entities engaged in measuring emergency department performance (e.g., payers, licensing bodies, health systems) to use evidence-based, clinical performance measures that enable clinical quality improvement and capture variation such as those developed by the profession through the Physician Consortium for Performance Improvement;
5. continues to support physician and hospital use and reporting of emergency medicine performance measures developed by the Physician Consortium for Performance Improvement; and
6. continues to support the harmonization of individual physician, team-based, and facility emergency medicine performance metrics so there is consistency in evaluation, methodology, and limited burden associated with measurement. [CMS Rep. 3, A-09Reaffirmed: CMS Rep. 01, A-19Reaffirmed: BOT Rep. 16, A-19]

Managed Care Organizations' Use of Physicians to Provide Second Opinions to Physicians Providing Emergency Services H-285.950

The AMA adopts the following principles to guide the use by managed care plans of physicians employed or contracted with to specifically provide second opinions to physicians providing emergency services. The AMA encourages managed care plans to follow these guidelines when employing or contracting with physicians to provide second opinions to physicians providing emergency services.

- (1) All managed care plans shall disclose to their enrollees and prospective enrollees any plan requirements or the existence of contractual arrangements whereby physicians are required to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities.
- (2) The required use of physicians to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities shall not impede the immediate diagnosis and therapy of acute cardiac, trauma, and other critical patient situations for which delay may result in death or an increase in severity of illness.
- (3) Any physician with a contractual arrangement to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities shall be licensed to practice medicine and actively practicing emergency medicine in the same state in which the second opinion is provided.
- (4) Any physician with a contractual arrangement to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities shall have active staff privileges in any facility in which the second opinion is provided.
- (5) To the degree possible, patients presenting at an emergency department or facility should be involved in the decisions regarding the treatment, referral, and follow-up care for their condition.

(6) In the event of disagreements over second opinions, final decisions regarding the treatment, referral, and follow-up care provided to patients presenting at emergency departments or facilities shall be made by the attending emergency physician or other appropriate physicians on staff at the facility. [CMS Rep. 1, I-96Reaffirmed: CMS Rep. 8, A-06Reaffirmed: CMS Rep. 01, A-16]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 205
(A-24)

Introduced by: Medical Student Section, American Association of Public Health Physicians

Subject: Medical-Legal Partnerships & Legal Aid Services

Referred to: Reference Committee B

Whereas, medical-legal partnerships (MLPs) address social determinants of health relating to civil law, such as family violence, child support and custody, workplace conditions, employment conflicts, financial exploitation, post-incarceration rehabilitation, housing, utility shutoffs, disability access, debt relief, and veteran benefits, by integrating lawyers in clinical settings team to meet patient's legal needs¹⁻⁶; and

Whereas, 70% of low-income households experience civil legal problems, with 40% experiencing at least 5, 20% experiencing at least 10, and the average low-income individual managing 2 to 3 legal issues at a time⁷⁻⁸; and

Whereas, unmet civil legal needs may lead to or exacerbate both physical and mental illness, as seen with inadequate housing, eviction, and even threat of eviction being connected to anxiety, depression, bodily injury, asthma, and respiratory infection⁹⁻¹¹; and

Whereas, MLPs demonstrate success in access to retroactive benefits, improved asthma control and neonatal preventive care use, and decreased length of hospitalization, readmission rates, and emergency department visits⁷; and

Whereas, while MLPs are found at only 26% of medical schools, studies indicate that MLPs can help educate physicians and medical students on screening for social determinants and legal needs, addressing issues impacting health through legal advocacy, and referring patients to reliable legal resources^{1,12-15}; and

Whereas, civil legal aid often includes free or low-cost direct legal services by lawyers as well as legal education to help low- and middle-income people navigate social systems¹⁶; and

Whereas, the high cost of civil legal aid is a significant barrier to access, with low-income Americans reporting only seek aid for 1 out of 4 civil legal problems and receiving inadequate legal aid for 92% of their needs^{8,17}; and

Whereas, civil legal aid services in the US are chronically underfunded, turning away an average of 50% of eligible individuals who seek services due to inadequate funds¹⁶; and

Whereas, the Association of American Medical Colleges and the American Bar Association both conduct initiatives relating to MLPs, including creation of models and directories¹⁸⁻¹⁹; therefore be it

RESOLVED, that our American Medical Association support the establishment and funding of medical-legal partnerships and civil legal aid services to meet patients' legal needs. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA POLICY

H-165.822 Health Plan Initiatives Addressing Social Determinants of Health

Our AMA:

1. recognizing that social determinants of health encompass more than health care, encourages new and continued partnerships among all levels of government, the private sector, philanthropic organizations, and community- and faith-based organizations to address non-medical, yet critical health needs and the underlying social determinants of health;
2. supports continued efforts by public and private health plans to address social determinants of health in health insurance benefit designs;
3. encourages public and private health plans to examine implicit bias and the role of racism and social determinants of health, including through such mechanisms as professional development and other training;
4. supports mechanisms, including the establishment of incentives, to improve the acquisition of data related to social determinants of health, while minimizing burdens on patients and physicians;
5. supports research to determine how best to integrate and finance non-medical services as part of health insurance benefit design, and the impact of covering non-medical benefits on health care and societal costs; and
6. encourages coverage pilots to test the impacts of addressing certain non-medical, yet critical health needs, for which sufficient data and evidence are not available, on health outcomes and health care costs. [CMS Rep. 7, I-20Reaffirmed: CMS Rep. 5, I-21Reaffirmed: CMS Rep. 5, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 206
(A-24)

Introduced by: Medical Student Section

Subject: Indian Health Service Youth Regional Treatment Centers

Referred to: Reference Committee B

1 Whereas, nearly 13% of AI/AN youth ages 12-24 experienced a depressive episode or related
2 mental illness in 2018, and an estimated 20% require treatment due to early alcohol use¹⁻²; and
3

4 Whereas, the Indian Health Service (IHS) uses Youth Regional Treatment Centers (YRTCs) for
5 acute behavioral healthcare for AI/AN adolescents, but national capacity only meets 4% of the
6 need²⁻³; and
7

8 Whereas, YRTCs help adolescents develop independent living skills, provide schooling attuned
9 to individual needs, create post-discharge sobriety plans, and coordinate prison diversion
10 programs⁴⁻⁵; and
11

12 Whereas, while 61% of arrested AI/AN youth are eligible for YRTC diversion programs, only
13 14% ultimately receive care at YRTCs²; and
14

15 Whereas, the IHS, in consultation with Tribal leaders and key parties, has voiced concerns
16 regarding AI/AN youth traveling across state lines to seek care at non-IHS treatment centers⁶;
17 and
18

19 Whereas, non-IHS treatment centers are not equipped to address the complex effects of
20 intergenerational trauma, systematic discrimination, and displacement on AI/AN youth mental
21 health⁷⁻⁹; therefore be it
22

23 RESOLVED, that our American Medical Association support the expansion of Indian Health
24 Service Youth Regional Treatment Centers, recognizing them as a model for culturally-rooted,
25 evidence-based behavioral health treatment, and prompt referral of eligible AI/AN youth to Youth
26 Regional Treatment Centers (YRTCs) for community-directed care. (New HOD Policy)

RELEVANT AMA POLICY

H-160.963 Community-Based Treatment Centers

Our AMA supports the use of community-based treatment centers for substance use disorders, mental health disorders and developmental disabilities. [BOT Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Modified: CSAPH Rep. 1, A-11; Modified: CSAPH Rep. 1, A-21]

D-350.988 American Indian / Alaska Native Adolescent Suicide

Our AMA will: 1) provide active testimony in Congress for suicide prevention and intervention resources to be directed towards American Indian/Alaska Native communities; 2) encourage significant funding to be allocated to research the causes, prevention, and intervention regarding American Indian/Alaska Native adolescent suicide and make these findings widely available; and 3) lobby the Senate Committee on Indian Affairs on the important issue of American Indian/Alaska Native adolescent suicide. [Sub Res. 404, A-11; Reaffirmed: BOT Rep. 7, A-21]

H-345.974 Culturally, Linguistically Competent Mental Health Care and Outreach for At-Risk Communities

Our AMA supports adequate attention and funds being directed towards culturally and linguistically competent mental health direct services for the diverse, multi-ethnic communities at greatest risk, and encourages greater cultural and linguistic-competent outreach to ethnic communities including partnerships with ethnic community organizations, health care advocates, and respected media outlets. [Res. 917, I-13; Reaffirmed: Res. 426, A-16]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 207
(A-24)

Introduced by: Medical Student Section

Subject: Biosimilar Use Rates and Prevention of Pharmacy Benefit Manager Abuse

Referred to: Reference Committee B

- 1 Whereas, biologics account for only 2% of prescriptions but 40% of US pharmaceutical
2 spending and 90% of the net pharmaceutical spending growth over the past decade¹⁻⁶; and
3
4 Whereas, biologics are often significantly more expensive than small-molecule drugs, costing on
5 average \$10,000 to \$40,000 per patient annually with some prices up to \$500,000¹⁻⁶; and
6
7 Whereas, biosimilars exhibit no clinically meaningful differences in safety, purity, and potency
8 compared to their corresponding “brand-name” (originator, or reference product) biologic⁷; and
9
10 Whereas, the US has only approved 50% of the biosimilars approved in other industrialized
11 nations, with an average uptake rate of 20% compared to over 80%⁸⁻¹⁶; and
12
13 Whereas, average US price decreases due to biosimilar entry are only 15 to 40% compared to
14 70% in other industrialized nations⁸⁻¹⁶; and
15
16 Whereas, other industrialized nations improve biosimilar uptake through lucrative financial
17 incentives for physicians to maintain robust reimbursement while saving on medication costs,
18 including rewards for biosimilar usage targets and shared savings programs¹⁷⁻²³; and
19
20 Whereas, “brand-name” biologics manufacturers have blocked biosimilar uptake in the US via
21 long-term exclusivity agreements with pharmacy benefit managers (PBMs) for preferential
22 coverage in insurance plans, such as Johnson & Johnson with Remicade (infliximab) and
23 AbbVie with Humira (adalimumab)²⁴⁻²⁵; and
24
25 Whereas, biologics manufacturers’ efforts to prevent biosimilar coverage by insurers interfere
26 with physician’s prescriptive authority, conflict with analogous AMA policy supporting physicians’
27 right to prescribe generic drugs, and maintain exorbitant pharmaceutical costs; and
28
29 Whereas, the Federal Trade Commission (FTC) and Department of Justice (DOJ) have the
30 authority to investigate and block exclusive distribution clauses as antitrust violations, and AMA
31 advocacy can help ensure that PBM exclusivity agreements are an antitrust priority²⁵⁻²⁷;
32 therefore be it
33
34 RESOLVED, that our American Medical Association support economic incentives to increase
35 physician use of less expensive biosimilars instead of their reference biologics (New HOD
36 Policy); and be it further
37
38 RESOLVED, that our AMA encourage the Federal Trade Commission (FTC) and Department of
39 Justice (DOJ) Antitrust Division to closely scrutinize long-term exclusive contracts signed

- 1 between biologics originators and PBMs to ensure they do not impede biosimilar development
- 2 and uptake. (New HOD Policy)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/5/2024

RELEVANT AMA POLICY

H-125.980 Abbreviated Pathway for Biosimilar Approval

Our AMA supports FDA implementation of the Biologics Price Competition and Innovation Act of 2009 in a manner that 1) places appropriate emphasis on promoting patient access, protecting patient safety, and preserving market competition and innovation; 2) includes planning by the FDA and the allocation of sufficient resources to ensure that physicians understand the distinctions between biosimilar products that are considered highly similar, and those that are deemed interchangeable. Focused educational activities must precede and accompany the entry of biosimilars into the U.S. market, both for physicians and patients; and 3) includes compiling and maintaining an official compendium of biosimilar products, biologic reference products, and their related interchangeable biosimilars as they are developed and approved for marketing by the FDA.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 208
(A-24)

Introduced by: Medical Student Section and American College of Physicians

Subject: Improving Supplemental Nutrition Programs

Referred to: Reference Committee B

1 Whereas, food insecurity is a public health crisis, especially among American Indian and Alaska
2 Native (AI/AN) persons, who were relocated and gave up 98% of their lands and ability to survive
3 under coercion and threats of violence by state and federal actors^{3,4}; and
4

5 Whereas, the burden of chronic diseases such as obesity and diabetes on AI/AN communities is
6 directly attributable to settler colonialism and interruption of AI/AN knowledge systems^{5,6}; and
7

8 Whereas, AI/AN persons experience food insecurity at twice the rate of whites, with 25% being
9 consistently food insecure⁴; and
10

11 Whereas, climate change uniquely affects AI/AN communities, including disproportionate
12 exposure of Alaska Native Villages to marine foods polluted by plastic and poor nutritional
13 offerings with significant price markups at grocery and convenience stores⁷; and
14

15 Whereas, US nutrition programs for AI/AN persons, including the Food Distribution Program on
16 Indian Reservations (FDPIR) and the recently launched Indian Health Service (IHS) Produce
17 Prescription Pilot Program, differ from other nutrition programs by including staple foods and
18 ingredients commonly used in pre-contact AI/AN societies and food systems⁸⁻⁹; and
19

20 Whereas, federally-recognized AI/AN Tribes and Villages without a reservation or land base and
21 the 2.8 million AI/AN persons in urban areas (greater than the population on Tribal lands) are all
22 ineligible for federal nutrition assistance programs for AI/AN persons⁸⁻¹³; and
23

24 Whereas, AI/AN persons in urban areas were 1.4 times as likely to experience food insecurity as
25 other AI/AN persons, with rates exacerbated by COVID^{4,14}; and
26

27 Whereas, the reduction of AI/AN food insecurity (by increasing AI/AN food choices, availability,
28 and household purchasing power and intervening preventively via early education and farm-to-
29 school programs) can decrease risk of gestational diabetes, sleep apnea, and metabolic
30 syndrome, promote AI/AN self-determination and self-governance, and improve AI/AN youth
31 health behavior¹⁵⁻¹⁸; therefore be it
32

33 RESOLVED, that our American Medical Association support regulatory and legal reforms to
34 extend multieligibility for USDA Food Assistance to enrolled members of federally-recognized
35 American Indian and Alaska Native Tribes and Villages to all federal feeding programs, such as,
36 but not limited to, Supplemental Nutrition Assistance Program (SNAP) and Food Distribution
37 Program on Indian Reservations (FDPIR). (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/19/2024

RELEVANT AMA Policy

H-150.925 Food Environments and Challenges Accessing Healthy Food

Our AMA (1) encourages the U.S. Department of Agriculture and appropriate stakeholders to study the national prevalence, impact, and solutions to challenges accessing healthy affordable food, including, but not limited to, food environments like food mirages, food swamps, and food deserts; (2) recognizes that food access inequalities are a major contributor to health inequities, disproportionately affecting marginalized communities and people of color; (3) supports policy promoting community-based initiatives that empower resident businesses, create economic opportunities, and support sustainable local food supply chains to increase access to affordable healthy food; and (4) will advocate for CMS and other relevant agencies to develop, test, and then implement evidence-based innovative models to address food insecurity, such as food delivery and transportation services to supermarkets, food banks and pantries, and local farmers markets for healthy food options. [Res. 921, I-18; Modified: Res. 417, A-21; Appended: Res. 117, A-22]

H-150.937 Improvements to Supplemental Nutrition Programs

1. Our AMA supports: (a) improvements to the Supplemental Nutrition Assistance Program (SNAP) and Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) that are designed to promote adequate nutrient intake and reduce food insecurity and obesity; (b) efforts to decrease the price gap between calorie-dense, nutrition-poor foods and naturally nutrition-dense foods to improve health in economically disadvantaged populations by encouraging the expansion, through increased funds and increased enrollment, of existing programs that seek to improve nutrition and reduce obesity, such as the Farmer's Market Nutrition Program as a part of the Women, Infants, and Children program; and (c) the novel application of the Farmer's Market Nutrition Program to existing programs such as the Supplemental Nutrition Assistance Program (SNAP), and apply program models that incentivize the consumption of naturally nutrition-dense foods in wider food distribution venues than solely farmer's markets as part of the Women, Infants, and Children program.

2. Our AMA will request that the federal government support SNAP initiatives to (a) incentivize healthful foods and disincentivize or eliminate unhealthy foods and (b) harmonize SNAP food offerings with those of WIC.

3. Our AMA will actively lobby Congress to preserve and protect the Supplemental Nutrition Assistance Program through the reauthorization of the 2018 Farm Bill in order for Americans to live healthy and productive lives. [Res. 414, A-10; Reaffirmation A-12; Reaffirmation A-13; Appended: CSAPH Rep. 1, I-13; Reaffirmation A-14; Reaffirmation I-14; Reaffirmation A-15; Appended: Res. 407, A-17; Appended: Res. 233, A-18; Reaffirmed: Res. 259, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 209
(A-24)

Introduced by: Medical Student Section

Subject: Native American Voting Rights

Referred to: Reference Committee B

1 Whereas, our American Medical Association “acknowledges voting is a social determinant of
2 health and significantly contributes to the analyses of other social determinants of health as a
3 key metric”; and be it further
4

5 Whereas, the Association of American Medical Colleges (AAMC) supports medical schools and
6 teaching hospitals facilitating nonpartisan voter registration efforts¹; and
7

8 Whereas, health facilities’ nonpartisan voter registration efforts demonstrate improved civic
9 engagement and are protected by the National Voter Registration Act and IRS code²⁻⁵; and
10

11 Whereas, 1.2 million Native Americans (34%) are not registered to vote due to vast differences
12 in experiences and opportunities, especially for voters on reservations who experience
13 discrimination and unique challenges with voter identification laws (e.g., no addresses on
14 reservations, inability to use tribal-federal membership cards)⁶⁻¹¹; and
15

16 Whereas, the distinct political and dual citizenship status of Native Americans as members of
17 sovereign Tribal nations underscores the importance of their voter participation, as federal and
18 state elected officials are responsible for working with their Tribal governments to enact laws
19 governing Tribal authority and treaty rights⁸; and
20

21 Whereas, as Native Americans comprise over 10% of the electorate in many states, Congress
22 has repeatedly introduced the Native American Voting Rights Act, which would in part establish
23 a Native American voting task force grant program to increase turnout⁸; and
24

25 Whereas, President Biden’s Executive Order on Promoting Access to Voting strongly
26 encourages federal agencies, including Veterans Health Administration (VHA) and Indian Health
27 Service sites to seek designation as voter registration sites¹²; and
28

29 Whereas, other federal health and social programs such as the VHA, Medicaid, and SNAP/WIC
30 offer voter registration services, and the Health Resources and Services Administration even
31 offers guidance for Federally Qualified Health Centers to organize such efforts^{3,13-14}; and
32

33 Whereas, civic engagement efforts are limited at Indian Health Service, Tribal, and Urban Indian
34 Health Programs, which are crucial interfaces with Native American patients and Tribal
35 governments¹⁵⁻¹⁶; therefore be it
36

37 RESOLVED, that our American Medical Association support Indian Health Service, Tribal, and
38 Urban Indian Health Programs becoming designated voter registration sites to promote
39 nonpartisan civic engagement among the American Indian and Alaska Native population. (New
40 HOD Policy)

Fiscal Note: Minimal - less than \$1,000

RELEVANT AMA Policy

Support for Safe and Equitable Access to Voting H-440.805

1. Our AMA supports measures to facilitate safe and equitable access to voting as a harm-reduction strategy to safeguard public health and mitigate unnecessary risk of infectious disease transmission by measures including but not limited to: (a) extending polling hours; (b) increasing the number of polling locations; (c) extending early voting periods; (d) mail-in ballot postage that is free or prepaid by the government; (e) adequate resourcing of the United States Postal Service and election operational procedures; (f) improved access to drop off locations for mail-in or early ballots; and (g) use of a P.O. box for voter registration.
2. Our AMA opposes requirements for voters to stipulate a reason in order to receive a ballot by mail and other constraints for eligible voters to vote-by-mail.
3. Our AMA: (a) acknowledges voting is a social determinant of health and significantly contributes to the analyses of other social determinants of health as a key metric; (b) recognizes that gerrymandering which disenfranchises individuals/communities limits access to health care, including but not limited to the expansion of comprehensive medical insurance coverage, and negatively impacts health outcomes; and (c) will collaborate with appropriate stakeholders and provide resources to firmly establish a relationship between voter participation and health outcomes. [Res. 18, I-21; Appended: Res. 422, A-22]

AMERICAN MEDICAL ASSOCIATION HOOUSE OF DELEGATES

Resolution: 210
(A-24)

Introduced by: Oregon, American College of Physicians

Subject: Support for Physicians Pursuing Collective Bargaining and Unionization

Referred to: Reference Committee B

1 Whereas, the American Medical Association (AMA) supports the right of physicians to engage in
2 collective bargaining, and it is AMA policy to work for expansion of the numbers of physicians
3 eligible for that right under federal law; and
4

5 Whereas, while AMA policy supports expanding rights for physicians rights and abilities to
6 collectively bargain, the last study of this policy area last occurred pre-pandemic as the
7 paradigm shift of physician as employee continues to expand, particularly for younger
8 generations of physicians who would be more likely to leverage and seek unionization; and
9

10 Whereas, the AMA points out that bargaining units composed entirely of physicians are
11 presumed appropriate, a recommendation that makes sense in recognition of physicians' unique
12 skills and ethical and professional obligations; and
13

14 Whereas, in 1999 the AMA provided financial support for the establishment of a national labor
15 organization - Physicians for Responsible Negotiation (PRN) - under the National Labor
16 Relations Board (NLRA) to support the development and operation of local physician
17 negotiating units as an option for employed physicians and physicians in-training, but ultimately
18 withdrew support in 2004 as few physicians signed up; and
19

20 Whereas, the numbers of physicians who are union members is estimated to have grown
21 significantly since then with a 26% increase from 2014 to 2019 when 67,673 physicians were
22 members of a union; and
23

24 Whereas, the percentage of physicians now employed by hospitals, health systems, or
25 corporate entities has increased significant, most recently reported up to 73.9% as of January,
26 2022 (up from 47.4% in 2018), and the number of physician practices acquired by hospitals and
27 corporate entities between 2019-2022 also accelerated during the pandemic; and
28

29 Whereas, dominant hospitals, healthcare systems, and other corporate entities employing
30 physicians may present limited alternatives to physicians working in a market largely controlled
31 by their employer or where covenants-not-to-compete may further contribute to the employer's
32 bargaining advantage; and
33

34 Whereas, the transition from independent professional physician workforce to employed
35 physician workforce fundamentally alters the dynamics between hospitals, health systems,
36 corporate entities and physicians, with a risk of negatively affecting the conditions of care
37 delivery and quality of care provided; and

1 Whereas, the corporatization of medicine, including involvement of private equity in healthcare,
2 raises questions about incentive alignment, costs, and downstream effects on patients; and
3

4 Whereas, recent years have seen an increase in physician burnout, which accelerated during
5 the COVID-19 pandemic, directly related to time spent on electronic health record
6 documentation, bureaucratic administrative tasks, and moral injury related to an incongruence
7 between what physicians care about and what they are incentivized to do by the health care
8 system; and
9

10 Whereas, physicians face a dominant power when negotiating with hospital employers and may
11 not have countervailing influence without collective bargaining; and
12

13 Whereas, collective bargaining is an effective tool for protecting patient care safety standards,
14 improving work conditions, ensuring pay and job security, and a providing a process for
15 grievances; and
16

17 Whereas, the National Labor Relations Board determined in 2022 that employed physicians are
18 not in a supervisory role and are therefore eligible to unionize; and
19

20 Whereas, interest in exploring collective bargaining for residents and practicing physician
21 groups has increased in some parts of the country including in Oregon, likely driven by
22 dynamics seen in the profession's shift to "employed status" for the majority of physicians;
23 therefore be it
24

25 RESOLVED, that our American Medical Association convenes an updated study of
26 opportunities for the AMA or physician associations to support physicians initiating a collective
27 bargaining process, including but not limited to unionization. (Directive to Take Action)
28

Fiscal Note: \$43,308; Consult experts and coordinate with medical societies to identify and
communicate ways to aid physicians in collective bargaining efforts.

Received: 4/5/2024

RELEVANT AMA POLICY

Collective Bargaining for Physicians H-385.946

The AMA will seek means to remove restrictions for physicians to form collective bargaining units in order to negotiate reasonable payments for medical services and to compete in the current managed care environment; and will include the drafting of appropriate legislation.

Citation: Res. 239, A-97Reaffirmation I-98Reaffirmation A-01Reaffirmation A-05Reaffirmation A-06Reaffirmation A-08Reaffirmation I-10

Physician Collective Bargaining H-385.976

Our AMA's present view on the issue of physician collective negotiation is as follows: (1) There is more that physicians can do within existing antitrust laws to enhance their collective bargaining ability, and medical associations can play an active role in that bargaining. Education and instruction of physicians is a critical need. The AMA supports taking a leadership role in this process through an expanded program of assistance to independent and employed physicians.

(2) Our AMA supports continued intervention in the courts and meetings with the Justice Department and FTC to enhance their understanding of the unique nature of medical practice and to seek interpretations of the antitrust laws which reflect that unique nature.

(3) Our AMA supports continued advocacy for changes in the application of federal labor laws to expand the number of physicians who can bargain collectively.

(4) Our AMA vigorously opposes any legislation that would further restrict the freedom of physicians to independently contract with Medicare patients.

(5) Our AMA supports obtaining for the profession the ability to fully negotiate with the government about important issues involving reimbursement and patient care.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 211
(A-24)

Introduced by: Organized Medical Staff Section

Subject: Deceptive Hospital Badging 2.0

Referred to: Reference Committee B

1 Whereas, the public is wholly unaware of the false labeling for care personnel in the hospital,
2 with the increasing introduction of lesser trained people appearing to be equivalent caregivers;
3 and
4
5 Whereas, the most recent addition to this group of non-physicians are certified registered nurse
6 anesthetists (CRNAs), increasingly replacing anesthesiologists; and
7
8 Whereas, this has crept into the cardiac suites of our operating rooms with increasing fallout as
9 surgeons are being tasked with assuming responsibility and therefore enhanced liability for
10 these non-physician personnel; and
11
12 Whereas, anesthesia was also overing perfusion, which will now fall to surgeons who may not
13 be up to speed to perform these additional tasks; and
14
15 Whereas, this is unquestionably a quality of care issue as well as safety related, along with a
16 public relations, cost, and billing problem; and
17
18 Whereas, we were able to correct the previous deception at our hospital with a push by the
19 organized medical staff taking action, along with the support of the AMA; therefore be it
20
21 RESOLVED, that our American Medical Association promote and prioritize public awareness of
22 the difference and importance of having the proper level of training and clear identification and
23 labeling of caregivers as that relates to quality and safety of healthcare (Directive to Take
24 Action); and be it further
25
26 RESOLVED, that our AMA work with state and county medical societies to highlight to
27 physicians the growing practice of creating false equivalencies between physicians and non-
28 physicians in the healthcare team and encourage action in local institutions to assure the quality
29 and safety of patient care. (Directive to Take Action)
30

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/17/2024

RELEVANT AMA POLICY

Clarification of the Title "Doctor" in the Hospital Environment D-405.991

1. Our AMA Commissioners will, for the purpose of patient safety, request that The Joint Commission develop and implement standards for an identification system for all hospital facility staff who have direct contact with patients which would require that an identification badge be worn which indicates the individual's name and credentials as appropriate (i.e., MD, DO, RN, LPN, DC, DPM, DDS, etc), to differentiate between those who have achieved a Doctorate, and those with other types of credentials.
2. Our AMA Commissioners will, for the purpose of patient safety, request that The Joint Commission develop and implement new standards that require anyone in a hospital environment who has direct contact with a patient who presents himself or herself to the patient as a "doctor," and who is not a "physician" according to the AMA definition (H-405.969, ?that a physician is an individual who has received a "Doctor of Medicine" or a "Doctor of Osteopathic Medicine" degree or an equivalent degree following successful completion of a prescribed course of study from a school of medicine or osteopathic medicine?) must specifically and simultaneously declare themselves a "non-physician" and define the nature of their doctorate degree.
3. Our AMA will request the American Osteopathic Association (AOA) to (1) expand their standards to include proper identification of all medical staff and hospital personnel with their applicable credential (i.e., MD, DO, RN, LPN, DC, DPM, DDS, etc), and (2) Require anyone in a hospital environment who has direct contact with a patient presenting himself or herself to the patient as a "doctor", who is not a "Physician" according to the AMA definition (AMA Policy H-405.969 .. that a physician is an individual who has received a "Doctor of Medicine" or a "Doctor of Osteopathic Medicine" degree or an equivalent degree following successful completion of a prescribed course of study from a school of medicine or osteopathic medicine) must specifically and simultaneously declare themselves a "non-physician" and define the nature of their doctorate degree.

Citation: Res. 846, I-08; Modified: BOT Rep. 9, I-09; Reaffirmed: CCB/CLRPD Rep. 01, A-23

Need to Expose and Counter Nurse Doctoral Programs (NDP) Misrepresentation D-35.992

Our AMA will: (1) work jointly with state attorneys general to identify and prosecute those individuals who misrepresent themselves as physicians to their patients and mislead program applicants as to their future scope of practice; (2) pursue all other appropriate legislative, regulatory and legal actions through the Scope of Practice Partnership, as well as actions within hospital staff organizations, to counter misrepresentation by nurse doctoral programs and their students and graduates, particularly in clinical settings; and (3) work with all appropriate entities to ensure that all persons engaged in patient contact be clearly identified either verbally, or by name badge or similar identifier, with regard to their professional licensure in order that patients are aware of the professional educational background of that person.

Citation: Res. 211, A-06; Reaffirmed: BOT Rep. 6, A-16

Professional Nurse Staffing in Hospitals H-360.986

The AMA: (1) encourages medical and nursing staffs in each facility to closely monitor the quality of medical care to help guide hospital administrations toward the best use of resources for patients; (2) encourages medical and nursing staffs to work together to develop and implement in-service education programs and promote compliance with established or pending guidelines for unlicensed assistive personnel and technicians that will help assure the highest and safest standards of patient care; (3) encourages medical and nursing staffs to use identification mechanisms, e.g. badges, that provide the name, credentials, and/or title of the physicians, nurses, allied health personnel, and unlicensed assistive personnel in facilities to enable patients to easily note the level of personnel providing their care; (4) encourages medical and nursing staffs to develop, promote, and implement educational guidelines for the training of all unlicensed personnel working in critical care units, according to the needs at each facility; and

(5) encourages medical and nursing staffs to work with hospital administrations to assure that patient care and safety are not compromised when a hospital's environment and staffing are restructured.

Citation: BOT Rep. 11, I-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmed: CMS Rep. 01, A-16

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 212
(A-24)

Introduced by: Organized Medical Staff Section

Subject: Advocacy Education Towards a Sustainable Medical Care System

Referred to: Reference Committee B

- 1 Whereas, extensive AMA policy and actions address the education of medical students and
2 physicians on advocacy techniques and their involvement in AMA advocacy efforts; and
3
4 Whereas, our AMA believes that “better-informed and more active citizens will result in better
5 legislators, better government, and better health care” (AMA Policy G-640.020); and
6
7 Whereas, the AMA currently facilitates some patient education and engagement in advocacy
8 efforts via is Patient Action Network (PAN); and
9
10 Whereas, greater involvement of the public in AMA advocacy efforts potentially could make the
11 AMA more effective in its advocacy on behalf of patients and the profession; and
12
13 Whereas, any attempt to engage the public must consider the potential difficulties that can arise
14 from blending the perspectives of physicians and patients; therefore be it
15
16 RESOLVED, that our American Medical Association explore innovative opportunities for
17 engaging the public in advocacy on behalf of an improved healthcare environment. (Directive to
18 Take Action)
19

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/17/2024

RELEVANT AMA POLICY

Medical Student, Resident and Fellow Legislative Awareness H-295.953

1. The AMA strongly encourages the state medical associations to work in conjunction with medical schools to implement programs to educate medical students concerning legislative issues facing physicians and medical students.
2. Our AMA will advocate that political science classes which facilitate understanding of the legislative process be offered as an elective option in the medical school curriculum.
3. Our AMA will establish health policy and advocacy elective rotations based in Washington, DC for medical students, residents, and fellows.
4. Our AMA will support and encourage institutional, state, and specialty organizations to offer health policy and advocacy opportunities for medical students, residents, and fellows.

Improving Medical Student, Resident/Fellow and Academic Physician Engagement in Organized Medicine and Legislative Advocacy G-615.103

Our AMA will: (1) study the participation of academic and teaching physicians, residents, fellows, and medical students in organized medicine and legislative advocacy; (2) study the participation of community-based faculty members of medical schools and graduate medical education programs in organized medicine and legislative advocacy; (3) identify successful, innovative and best practices to engage academic physicians (including community-based physicians), residents/fellows, and medical students in organized medicine and legislative advocacy; and (4) study mechanisms to mitigate costs incurred by medical students, residents and fellows who participate at national, in person AMA conferences.

Political Action Committees and Contributions G-640.020

Our AMA: (1) believes that better-informed and more active citizens will result in better legislators, better government, and better health care; (2) encourages AMA members to participate personally in the campaign of their choice and strongly supports physician/family leadership in the campaign process; (3) opposes legislative initiatives that improperly limit individual and collective participation in the democratic process; (4) supports AMPAC's policy to adhere to a no Rigid Litmus Test policy in its assessment and support of political candidates; (5) encourages AMPAC to continue to consider the legislative agenda of our AMA and the recommendations of state medical PACs in its decisions; (6) urges members of the House to reaffirm their commitment to the growth of AMPAC and the state medical PACs; (7) will continue to work through its constituent societies to achieve a 100 percent rate of contribution to AMPAC by members; (8) calls upon all candidates for public office to refuse contributions from tobacco companies and their subsidiaries; and (9) calls upon all candidates for public office to refuse contributions from any organization that opposes evidence-based public health measures to reduce firearm violence.

Physician Health Policy Opportunity G-640.035

Our AMA encourages and supports efforts to educate interested medical students, residents, fellows, and practicing physicians about health policy and assist them in starting or transitioning to careers that involve health policy.

Our AMA: (a) recognizes, encourages, and supports the primary health policy training found in the physician specialties of Public Health / General Preventive Medicine, Occupational and Environmental Medicine, and Aerospace Medicine; (b) will significantly increase its collaborative efforts with the National Academy of Medicine (NAM) to make physicians aware of existing health policy training opportunities and help them to apply for and participate in them; (c) will engage with alumni of health policy training programs and joint degree programs and provide opportunities for them to share their health policy experiences with medical students, residents, fellows, and practicing physicians; (d) will include health policy content in its educational resources for members; (e) will work with the Office of the U.S. Surgeon General to disseminate information to medical students, residents, fellows, and practicing physicians about opportunities to join the Commissioned Corps of the U.S. Public Health Service; and (f) will consider options for funding a 1-year educational training program for practicing physicians who wish to transition from clinical practice to employment within the health policy sector.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 213
(A-24)

Introduced by: Private Practice Physicians Section

Subject: Access to Covered Benefits with an Out of Network Ordering Physician

Referred to: Reference Committee B

1 Whereas, physicians have not had inflationary increases like other service providers have for
2 decades in the Medicare program; and

3
4 Whereas, physicians' ability to continue to serve patients independent of hospital systems,
5 private equity, vertically and/or horizontally consolidated systems has narrowed under current
6 reimbursement settings⁶; and

7
8 Whereas, between 2019 and 2020, 48,400 physicians left independent practice according to a
9 2021 Physicians Advocacy Institute study¹; and

10
11 Whereas, as a result there is a growing number of private practice physicians using the Direct
12 Primary Care (DPC) model not accepting insurance or otherwise treating patients in models that
13 are not in-network with health maintenance organizations (HMOs), Medicare Advantage, or
14 other health plans^{2,3}; and

15
16 Whereas, there are 2,060 direct primary care practices spanning 48 states⁴; and

17
18 Whereas, patients with catastrophic insurance plans with high deductibles are well-served by
19 having access to direct primary care physicians⁵; and

20
21 Whereas, physicians who care for patients under the direct primary care model or other out-of-
22 network models are not compensated by insurers for physician services rendered to patients
23 with these plans; and

24
25 Whereas, many of the patients served in direct primary care or out-of-network models have
26 HMOs, Medicare Advantage or other health plans for their primary insurance while using a
27 direct-pay physician for their medical care; and

28
29 Whereas, these health plans often will not cover laboratory studies, radiology studies, referral or
30 even prescription medications when ordered by one of these out-of-network physicians; and

31
32 Whereas, non-coverage of valid orders for health plan benefits for the insured leads to delays in
33 case, increased cost to patients and redundancy and inefficiency in the healthcare system;
34 therefore be it

35
36 RESOLVED, that our American Medical Association develop model legislation to protect
37 patients in direct primary care plans and non-network plans thus furthering the ability of direct
38 primary care physicians and other out-of-network physicians to provide covered services,
39 including imaging, laboratory testing, referrals, medications, and other medically-necessary

1 services for patients under their commercial insurance, even if it is an HMO or point of service
2 plan (Directive to Take Action); and be it further

3
4 RESOLVED, that our AMA develop resources, tool kits, education, and internal experts to
5 support direct primary care and other out-of-network models. (Directive to Take Action)
6

Fiscal Note: Resolved 1, Modest - between \$1,000 - \$5,000. Resolved 2, \$22,980. Develop a comprehensive portfolio of education, experts, and toolkits

Received: 4/17/2024

7. Health Services Research 2020 Aug;55(4) 491-495.

RELEVANT AMA POLICY

Direct Primary Care H-385.912

1. Our AMA supports: (a) inclusion of Direct Primary Care as a qualified medical expense by the Internal Revenue Service; and (b) efforts to ensure that patients in Direct Primary Care practices have access to specialty care, including efforts to oppose payer policies that prevent referrals to in-network specialists.
2. AMA policy is that the use of a health savings account (HSA) to access direct primary care providers and/or to receive care from a direct primary care medical home constitutes a bona fide medical expense, and that particular sections of the IRS code related to qualified medical expenses should be amended to recognize the use of HSA funds for direct primary care and direct primary care medical home models as a qualified medical expense.
3. Our AMA will seek federal legislation or regulation, as necessary, to amend appropriate sections of the IRS code to specify that direct primary care access or direct primary care medical homes are not health "plans" and that the use of HSA funds to pay for direct primary care provider services in such settings constitutes a qualified medical expense, enabling patients to use HSAs to help pay for Direct Primary Care and to enter DPC periodic-fee agreements without IRS interference or penalty.

Subacute Care Standards for Physicians H-160.945

AMA guidelines for physicians' responsibilities in subacute care include:

- (1) Physicians are responsible to their patients for delivery of care in all subacute care settings, 24 hours a day, 7 days a week.
- (2) Patients who might benefit from subacute care should be admitted to and discharged under the orders of the physician who is responsible for the continuous medical management needed to meet the patient's needs and safety and maintaining quality of care.
- (3) Physicians are responsible for coordinating care for their patients with other physicians including medical directors, primary care physicians, and appropriate specialists, to optimize the quality of care in subacute settings.
- (4) Physicians are responsible for supervision and coordination of the medical care for their patients and providing leadership for all other health care providers in subacute care.
- (5) Physicians should guide procedures for their patients performed within integrated practices and direct other health care providers, consistent with federal and state regulations.

(6) Physicians are responsible for: (a) Fulfilling their roles and identifying the medical skills needed to deliver care in subacute facilities and for creating and developing continuing medical education to meet the special needs of patients in subacute care. (b) Identifying and appropriately utilizing subacute care facilities in their communities. (c) Oversight of physician credentialing in subacute settings (d) Promoting medical staff organization and by-laws that may be needed to support peer evaluations. (e) Planning care of their patients with acute and chronic conditions in subacute care, as well as pursuing efforts to restore and maintain functions for quality of life.

(7) Subacute units and/or programs need physician medical directors to assure quality of medical care, provide peer group liaisons, and coordinate and supervise patients and families input and needs.

(8) Physicians provide a plan of care for medically necessary visits after completing an initial assessment within 24 hours of admission that identifies the medical services expected during subacute care.

(9) Attending physicians should: (a) make an on-site visit to review the interdisciplinary care plan within seventy two hours of admission. (b) Determine the number of medically necessary follow up visits; these may occur daily but never less often than weekly. (c) Document active involvement of physicians in interdisciplinary care and all major components of the patient care plan including completing a progress note for each patient visit.

(10) Physicians should implement these guidelines through organized medical staff by-laws in subacute settings to assure quality patient care.

Out-of-Network Care H-285.904

1. Our AMA adopts the following principles related to unanticipated out-of-network care:

A. Patients must not be financially penalized for receiving unanticipated care from an out-of-network provider.

B. Insurers must meet appropriate network adequacy standards that include adequate patient access to care, including access to hospital-based physician specialties. State regulators should enforce such standards through active regulation of health insurance company plans.

C. Insurers must be transparent and proactive in informing enrollees about all deductibles, copayments and other out-of-pocket costs that enrollees may incur.

D. Prior to scheduled procedures, insurers must provide enrollees with reasonable and timely access to in-network physicians.

E. Patients who are seeking emergency care should be protected under the "prudent layperson" legal standard as established in state and federal law, without regard to prior authorization or retrospective denial for services after emergency care is rendered.

F. Out-of-network payments must not be based on a contrived percentage of the Medicare rate or rates determined by the insurance company.

G. Minimum coverage standards for unanticipated out-of-network services should be identified. Minimum coverage standards should pay out-of-network providers at the usual and customary out-of-network charges for services, with the definition of usual and customary based upon a percentile of all out-of-network charges for the particular health care service performed by a provider in the same or similar specialty and provided in the same geographical area as reported by a benchmarking database. Such a benchmarking database must be independently recognized and verifiable, completely transparent, independent of the control of either payers or providers and maintained by a non-profit organization. The non-profit organization shall not be affiliated with an insurer, a municipal cooperative health benefit plan or health management organization.

H. Independent Dispute Resolution (IDR) should be allowed in all circumstances as an option or alternative to come to payment resolution between insurers and physicians.

2. Our AMA will advocate for the principles delineated in Policy H-285.904 for all health plans, including ERISA plans.

3. Our AMA will advocate that any legislation addressing surprise out of network medical bills use an independent, non-conflicted database of commercial charges.

Citation: Res. 108, A-17; Reaffirmed: A-19; Appended: Res. 104, A-18; Reaffirmed in lieu of: Res. 225, A-18; Reaffirmed: A-19; Reaffirmed: Res. 210, A-19; Appended Res. 211, A-19; Reaffirmed: CMS Rep. 5, A-21; Modified: Res. 236, A-22

Out-of-Network Care D-285.962

Our AMA will develop model state legislation addressing the coverage of and payment for unanticipated out-of-network care.

Citation: Res. 108, A-17

Physician Penalties for Out-of-Network Services H-180.952

Our AMA vehemently opposes any penalties implemented by insurance companies against physicians when patients independently choose to obtain out-of-network services.

Citation: Res. 702, A-07; Reaffirmed: CMS Rep. 01, A-17

Out of Network Restrictions of Physicians H-285.907

Our American Medical Association opposes the denial of payment for a medically necessary prescription of a drug or service covered by the policy based solely on the network participation of the duly licensed physician ordering it.

Citation: Res. 126, A-15

Out of Network Coverage Denials for Physician Prescriptions and Ordered Services D-285.963

Our American Medical Association will pursue regulation or legislation to prohibit any insurer from writing individual or group policies which deny or unreasonably delay coverage of medically necessary prescription drugs or services based on network distinctions of the licensed health care provider ordering the drug or service.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 214
(A-24)

Introduced by: Medical Student Section

Subject: Support for Paid Sick Leave

Referred to: Reference Committee B

1 Whereas, sick leave can be used by employees to recover from illness, attend medical
2 appointments, care for sick relatives, and seek assistance for domestic violence, and access
3 disproportionately impacts women who take on caregiver responsibilities¹⁻⁴; and
4

5 Whereas, all but 10 countries feasibly fund paid sick leave via governments and/or employers,
6 but the US' Family and Medical Leave Act (FMLA) only ensures unpaid leave⁵⁻⁷; and
7

8 Whereas, 75% of voters support a national paid leave policy, but currently 25% of private sector
9 workers do not receive paid sick leave, including 62% of those in the lowest income decile, 45%
10 of those in the lowest income quartile, 54% of Latine workers, 47% of Indigenous workers, and
11 38% of Black workers⁸⁻¹¹; and
12

13 Whereas, multiple studies demonstrate that paid sick leave increases primary care use and
14 reduces occupational injuries and infectious spread, with one estimating over \$1 billion in
15 annual savings from over 1 million prevented ED visits¹²⁻²²; and
16

17 Whereas, paid sick leave is guaranteed in 15 states including DC, 4 counties, and 17 cities, with
18 early adopters showing sustainable success for over a decade^{2,23-24}; and
19

20 Whereas, the Healthy Families Act would guarantee paid sick leave and is currently being
21 considered in both the House and Senate²⁵; therefore be it
22

23 RESOLVED, that our American Medical Association amend Policy H-440.823, "Paid Sick
24 Leave," as follows:
25

26 Paid Sick Leave H-440.823

27 Our AMA: (1) recognizes the public health benefits of paid sick
28 leave and other discretionary paid time off; (2) supports employer
29 policies that allow employees to accrue paid time off and to use
30 such time to care for themselves or a family member; ~~and~~ (3)
31 supports employer policies that provide employees with paid sick
32 days to use to care for themselves or a family member where
33 providing paid leave is overly burdensome; and (4) advocates for
34 federal and state policies that guarantee employee access to
35 protected paid sick leave. (Modify Current HOD Policy)
36

Fiscal Note: Minimal - less than \$1,000

Received: 4/5/2024

RELEVANT AMA POLICY**H-420.979 AMA Statement on Family, Medical, and Safe Leave**

Our AMA supports policies that provide employees with reasonable job security and continued availability of health plan benefits in the event leave by an employee becomes necessary due to documented medical conditions. Such policies should provide for reasonable periods of paid or unpaid:

1) Medical leave for the employee, including pregnancy, abortion, and stillbirth; 2) Maternity leave for the employee-mother; 3) Leave if medically appropriate to care for a member of the employee's immediate family, i.e., a spouse or children; 4) Leave for adoption or for foster care leading to adoption; and 5) Safe leave provisions for those experiencing any instances of violence, including but not limited to intimate partner violence, sexual violence or coercion, and stalking.

Such periods of leave may differ with respect to each of the foregoing classifications and may vary with reasonable categories of employers. Such policies should encourage voluntary programs by employers and may provide for appropriate legislation (with or without financial assistance from government). Any legislative proposals will be reviewed through the Association's normal legislative process for appropriateness, taking into consideration all elements therein, including classifications of employees and employers, reasons for the leave, periods of leave recognized (whether paid or unpaid), obligations on return from leave, and other factors involved in order to achieve reasonable objectives recognizing the legitimate needs of employees and employers.

Our AMA recognizes the positive impact of paid safe leave on public health outcomes and supports legislation that offers safe leave.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 215
(A-24)

Introduced by: Medical Student Section

Subject: American Indian and Alaska Native Language Revitalization and Elder Care

Referred to: Reference Committee B

- 1 Whereas, American Indian and Alaska Native (AI/AN) elders ages 65 and over are expected to
2 increase from 13% of the AI/AN population in 2012 to 20% by 2030¹; and
3
- 4 Whereas, AI/AN elders are considered essential to community identity, as extended family and
5 clanship leaders are valued as protectors, mentors, teachers, and intergenerational transmitters
6 of cultural knowledge, a well-recognized protective health factor for AI/AN youth²⁻⁵; and
7
- 8 Whereas, AI/AN elders experience significant health and socioeconomic disparities including
9 the lowest life expectancy of all racial/ethnic groups in the US, a 25% uninsured rate, and a 25%
10 rate of having at least one documented disability¹; and
11
- 12 Whereas, a study in Canada of AI/AN elders found that Indigenous-led health service
13 partnerships improve holistic health outcomes, as well as access to care, prevention uptake and
14 adherence to care plans for First Nations⁶; and
15
- 16 Whereas, a survey with southwestern Tribal Nations found that AI/AN elders consistently shared
17 themes of healthcare insecurity due to failed systems and IHS underfunding⁷; and
18
- 19 Whereas, while AI/AN elders receive primary care through the IHS, underfunding and
20 understaffing has forced IHS to rely on non-IHS facilities for more specialized elder care,
21 including hospice and respite care, forcing AI/AN elders to navigate unknown health systems
22 not respective of their cultural values and traditions⁸; and
23
- 24 Whereas, despite the well-documented comorbidities AI/AN people carry into elderhood, AI/AN
25 elders are less likely to create end-of-life care plans compared to non-Hispanic Whites and
26 remain one of the least studied populations regarding their use of advance care planning⁷⁻⁹; and
27
- 28 Whereas, terminally ill AI/AN elders are less likely to receive hospice and palliative care than
29 other racial/ethnic groups, with fewer than a third receiving these services compared to over
30 45% of the non-Hispanic white population¹⁰; and
31
- 32 Whereas, according to data collected by the Mayo Clinic Spirit of Eagles program, Tribal Health
33 Directors reported pain management, advanced care planning, hospice contracts, care for the
34 dying, and bereavement support as their most pressing needs, with 60% reporting limited
35 access to end-of-life care¹¹; and
36
- 37 Whereas, by 2060, the number of AI/AN elders with memory loss is expected to increase by
38 400%, requiring additional resources for the IHS to provide dementia services¹²; and

1 Whereas, language and cultural barriers severely restrict AI/AN elder access to federal and
2 state programs, such as Social Security, Medicare, and Medicaid¹³⁻¹⁴; and
3

4 Whereas, over 20% of AI/AN elders mostly speak their native language, and in several counties
5 on the Navajo Nation, over 40% speak their native language as their primary language¹⁵; and
6

7 Whereas, the National Indian Council on Aging considers Native languages as key for improving
8 health and social services and well-being for AI/AN elders¹⁶; and
9

10 Whereas, the White House Office of Science and Technology Policy (OSTP) has directed the
11 Department of Health and Human Services, Centers for Medicare and Medicaid Services, IHS,
12 and other federal agencies to value and prioritize Indigenous knowledge, including languages
13 and knowledge holders, in federal grantmaking and other funding opportunities¹⁷; and
14

15 Whereas, the Biden-Harris Administration's 2024 budget request for Indian Affairs programs
16 makes significant investments in Tribal native language revitalization¹⁸; therefore be it
17

18 RESOLVED, that our American Medical Association recognize that access to language
19 concordant services for AI/AN patients will require targeted investment as Indigenous languages
20 in North America are threatened due to a complex history of removal and assimilation by state
21 and federal actors (New HOD Policy); and be it further
22

23 RESOLVED, that our AMA support federal-tribal funding opportunities for American Indian and
24 Alaska Native language revitalization efforts, especially those that increase health information
25 resources and access to language-concordant health care services for American Indian and
26 Alaska Native elders living on or near tribal lands (New HOD Policy); and be it further
27

28 RESOLVED, that our AMA collaborate with stakeholders, including but not limited to the
29 National Indian Council on Aging and Association of American Indian Physicians, to identify best
30 practices for AI/AN elder care to ensure this group is provided culturally-competent healthcare
31 outside of the umbrella of the Indian Health Service. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

RELEVANT AMA POLICY

H-295.897 Enhancing the Cultural Competence of Physicians

1. Our AMA continues to inform medical schools and residency program directors about activities and resources related to assisting physicians in providing culturally competent care to patients throughout their life span and encourage them to include the topic of culturally effective health care in their curricula.
2. Our AMA continues to support research into the need for and effectiveness of training in cultural competence and cultural humility, using existing mechanisms such as the annual medical education surveys.
3. Our AMA will assist physicians in obtaining information about and/or training in culturally effective health care through dissemination of currently available resources from the AMA and other relevant organizations.
4. Our AMA encourages training opportunities for students and residents, as members of the physician-led team, to learn cultural competency from community health workers, when this exposure can be integrated into existing rotation and service assignments.
5. Our AMA supports initiatives for medical schools to incorporate diversity in their Standardized Patient programs as a means of combining knowledge of health disparities and practice of cultural competence with clinical skills.
6. Our AMA will encourage the inclusion of peer-facilitated intergroup dialogue in medical education programs nationwide.
7. Our AMA supports the development of national standards for cultural humility training in the medical school curricula.

[CME Rep. 5, A-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-11; Appended: Res. 304, I-16; Modified: CME Rep. 01, A-17; Appended: Res. 320, A-17; Reaffirmed: CMS Rep. 02, I-17; Appended: Res. 315, A-18; Modified: Res. 322, A-22]

H-350.976 Improving Health Care of American Indians

- Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.
- (2) The federal government provide sufficient funds to support needed health services for American Indians.
 - (3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.
 - (4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
 - (5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.
 - (6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
 - (7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.

(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.

(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.

(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.

(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

[CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13; Reaffirmed: BOT Rep. 09, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 216
(A-24)

Introduced by: American College of Legal Medicine

Subject: The AMA Supports H.R. 7225, the Bipartisan “Administrative Law Judges Competitive Service Restoration Act”

Referred to: Reference Committee B

- 1 Whereas, Medicare and Medicaid beneficiaries and providers must appeal their
2 coverage and payment disputes to the Health and Human Services Administrative Law
3 Judges (ALJs); and
4
- 5 Whereas, from 1946 until 2018, attorney candidates who wanted to become federal
6 ALJs were required:
- 7 a. to pass an examination on administrative law given by the U.S. Department of
8 Personnel Management, and only the top three scoring candidates were
9 offered positions as federal ALJs; and
 - 10 b. to have at least seven years of experience in an area of law relevant to
11 administrative proceedings; and
 - 12 c. to prove they had the ability to write clear and understandable decisions
13 following an administrative proceeding; and
14
- 15 Whereas, following the Supreme Court decision in *Lucia v. SEC*¹, Executive Order
16 (E.O.) 13,843 was signed²; and
17
- 18 Whereas, E.O. 13,843 removed federal ALJs from the competitive civil service; and
19
- 20 Whereas, the only current requirements for a new federal ALJ are a license to practice
21 law somewhere in the United States and an appointment made by a temporary,
22 politically appointed agency head; and
23
- 24 Whereas, E.O. 13,843 politicized the federal ALJ service, potentially resulting in the
25 appointment of questionably competent ALJs³; and
26
- 27 Whereas, Medicare and Medicaid coverage and payment disputes are more likely to be
28 correctly decided by informed, competent, and truly neutral ALJs; and
29
- 30 Whereas, the bipartisan “Administrative Law Judges Competitive Service Restoration
31 Act,” H.R.7225, was introduced on February 4, 2024, by Congressman Gerry Connolly
32 (D-VA-11) and is co-sponsored by Congressman Brian Fitzpatrick (R-PA-1) and
33 Congressman Michael Lawler (R-NY-17) and is endorsed by the American College of
34 Legal Medicine (ACLM), the Association of Administrative Law Judges (AALJ), and the

1 International Federation of Professional and Technical Engineers (IFPTE); therefore be
2 it
3
4 RESOLVED, that our American Medical Association support H.R. 7225, the bipartisan
5 “Administrative Law Judges Competitive Service Restoration Act” that supports the
6 merit-based process for the selection of all Medicare/Medicaid Administrative Law
7 Judges. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 217
(A-24)

Introduced by: American Society for Reproductive Medicine, American College of
Obstetricians and Gynecologists, The Endocrine Society

Subject: Protecting Access to IVF Treatment

Referred to: Reference Committee B

1 Whereas, on Friday 2/16/24, the Alabama Supreme Court¹ ruled that

2 (a) “an embryo created through in vitro fertilization (IVF) is a child protected by
3 Alabama’s wrongful death act and the Alabama Constitution;” and that

4 (b) “a human frozen embryo is a ‘child’ which is an unborn or recently born [child];” and
5 that

6 (c) “the Constitution ... commands the judge to ... upholding the sanctity of unborn life,
7 including unborn life that exists outside the womb;” and that

8 (d) “the Court would not create an exception in the statute for these IVF embryo children
9 just because they were located outside the womb;” and

10
11 Whereas, in current IVF practice in the United States, over half of embryo transfers will *not*
12 result in live birth, as many embryos after transfer will either (a) not result in a pregnancy, or (b)
13 result in a miscarriage, or (c) result in a non-viable ectopic or molar pregnancy; and

14
15 Whereas, cryopreserved embryos also do *not* have a 100% thaw-survival rate, and a small
16 percentage of embryos will not survive freeze-thaw; such that if embryos in the IVF lab have the
17 same legal status as children, then an embryology laboratory that fails to have a 100% thaw-
18 survival rate may also have some potential liability; and

19
20 Whereas, not all IVF patients (a) can afford the long-term storage fees to cryopreserve embryos
21 for future use or (b) wish to donate those embryos; and

22
23 Whereas, defining all embryos as “children” promotes the dangerous notion that all embryos
24 should somehow be transferred in an IVF cycle (instead of cryopreserving extra embryos of
25 adequate quality), which could potentially increase the rate of dangerous higher-order multiple
26 gestation pregnancies (triplets, quadruplets, etc); and

27
28 Whereas, defining all embryos as “children” may promote the dangerous and misguided notion
29 that an ectopic pregnancy could somehow be safely implanted into the uterus (as is erroneously
30 reported on various “Personhood” websites⁹); and

31
32 Whereas, the American Society for Reproductive Medicine (ASRM) Position Statement on
33 Personhood Measures states that

- 34 - “The ASRM is strongly opposed to measures granting constitutional rights or protections
35 and “personhood” status to fertilized reproductive tissues.
36 - In a growing number of states, vaguely worded and often misleading measures are...
37 defining when life begins and granting legal “personhood” status to embryos at varying
38 stages of development.

- 39 - ..., these broadly worded measures will have significant effects on a number of medical
40 treatments available to women of reproductive age.
41 o Personhood measures would make illegal some commonly used birth control
42 methods.
43 o Personhood measures would make illegal a physician's ability to provide
44 medically appropriate care to women experiencing life-threatening complications
45 due to a tubal pregnancy.
46 o Personhood measures would consign infertility patients to less effective, less
47 safe treatments for their disease.
48 o Personhood measures would unduly restrict infertile patients' right to make
49 decisions about their own medical treatments, including determining the fate of
50 any embryos created as part of the IVF process.
51 - ASRM will oppose any personhood measure;" and
52

53 Whereas, partly in response to a movement to allow the establishment of college savings
54 accounts for undelivered pregnancies; our AMA established policy H-140.835 which states that:
55 "our AMA opposes any policies that interfere with the patient-physician relationship by
56 giving probate, inheritance, a social security number, or other legal rights to
57 an undelivered pregnancy, or imposing legislative barriers to medical decision-making by
58 changes in tax codes or in definitions of beneficiaries." therefore, be it
59

60 RESOLVED, that our American Medical Association oppose any legislation or ballot measures
61 that could criminalize in-vitro fertilization (New HOD Policy); and be it further
62

63 RESOLVED, that our AMA work with other interested organizations to oppose any legislation or
64 ballot measures or court rulings that equate gametes (oocytes and sperm) or embryos with
65 children (New HOD Policy); and be it further
66

67 RESOLVED, that our AMA report back at A-25, on the status of, and AMA's activities
68 surrounding, ballot measures, court rulings, and legislation that equate embryos with children.
69 (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

RELEVANT AMA POLICY

D-5.999 “Preserving Access to Reproductive Health Services”

Our AMA: (1) recognizes that healthcare, including reproductive health services like contraception and abortion, is a human right; (2) opposes limitations on access to evidence-based reproductive health services, including fertility treatments, contraception, and abortion; (3) will work with interested state medical societies and medical specialty societies to vigorously advocate for broad, equitable access to reproductive health services, including fertility treatments, fertility preservation, contraception, and abortion; (4) supports shared decision-making between patients and their physicians regarding reproductive healthcare; (5) opposes any effort to undermine the basic medical principle that clinical assessments, such as viability of the pregnancy and safety of the pregnant person, are determinations to be made only by healthcare professionals with their patients; (6) opposes the imposition of criminal and civil penalties or other retaliatory efforts, including adverse medical licensing actions and the termination of medical liability coverage or clinical privileges against patients, patient advocates, physicians, other healthcare workers, and health systems for receiving, assisting in, referring patients to, or providing reproductive health services; (7) will advocate for legal protections for patients who cross state lines to receive reproductive health services, including contraception and abortion, or who receive medications for contraception and abortion from across state lines, and legal protections for those that provide, support, or refer patients to these services; and (8) will advocate for legal protections for medical students and physicians who cross state lines to receive education in or deliver reproductive health services, including contraception and abortion.

(Res 028, A-22; Reaffirmed: Res 224, I-22; Modified: BOT Rep. 4, I-22; Appended: Res 317, I-22; Reaffirmation: A-23, Appended: Res 711, A-23)

G-605.009 “Establishing a Task Force to Preserve the Patient-Physician Relationship when Evidence-Based Appropriate Care is Banned or Restricted”

1. Our AMA will convene a task force of appropriate AMA councils and interested state and medical specialty societies, in conjunction with the AMA Center for Health Equity, and in consultation with relevant organizations, practices, government bodies, and impacted communities for the purpose of preserving the patient-physician relationship.

2. This task force, which will serve at the direction of our AMA Board of Trustees, will inform the Board to help guide organized medicine’s response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources on issues including but not limited to:

- a. Health equity impact, including monitoring and evaluating the consequences of abortion bans and restrictions for public health and the physician workforce and including making actionable recommendations to mitigate harm, with a focus on the disproportionate impact on under-resourced, marginalized, and minoritized communities;
- b. Practice management, including developing recommendations and educational materials for addressing reimbursement, uncompensated care, interstate licensure, and provision of care, including telehealth and care provided across state lines;
- c. Training, including collaborating with interested medical schools, residency and fellowship programs, academic centers, and clinicians to mitigate radically diminished training opportunities;
- d. Privacy protections, including best practice support for maintaining medical records privacy and confidentiality, including under HIPAA, for strengthening physician, patient, and clinic security measures, and countering law enforcement reporting requirements;
- e. Patient triage and care coordination, including identifying and publicizing resources for physicians and patients to connect with referrals, practical support, and legal assistance;
- f. Coordinating implementation of pertinent AMA policies, including any actions to protect against civil, criminal, and professional liability and retaliation, including criminalizing and penalizing physicians for referring patients to the care they need; and
- g. Anticipation and preparation, including assessing information and resource gaps and creating a blueprint for preventing or mitigating bans on other appropriate health care, such as gender

affirming care, contraceptive care, sterilization, infertility care, and management of ectopic pregnancy and spontaneous pregnancy loss and pregnancy complications.

3. Our American Medical Association will appoint an ad hoc committee or task force, composed of physicians from specialties who routinely provide gender-affirming care, payers, community advocates, and state Medicaid directors and/or insurance commissioners, to identify issues with physician payment and reimbursement for gender-affirming care and recommend solutions to address these barriers to care.

(Res 621, A-22; Appended: Res 816, I-23)

H-160.954 Criminalization of Medical Judgment

(1) Our AMA continues to take all reasonable and necessary steps to insure that medical decision-making exercised in good faith, does not become a violation of criminal law. (2) Henceforth our AMA opposes any future legislation which gives the federal government the responsibility to define appropriate medical practice and regulate such practice through the use of criminal penalties.

(Sub. Res. 223, I-93; Reaffirmed: Res. 227, I-98; Reaffirmed: Res. 237, A-99; Reaffirmed and Appended: Sub. Res. 215, I-99; Reaffirmation A-09; Reaffirmed: CEJA Rep. 8, A-09)

H-160.946 The Criminalization of Health Care Decision-making

The AMA opposes the attempted criminalization of health care decision-making especially as represented by the current trend toward criminalization of malpractice; it interferes with appropriate decision making and is a disservice to the American public; and will develop model state legislation properly defining criminal conduct and prohibiting the criminalization of health care decision-making, including cases involving allegations of medical malpractice, and implement an appropriate action plan for all components of the Federation to educate opinion leaders, elected officials and the media regarding the detrimental effects on health care resulting from the criminalization of health care decision-making.

(Sub. Res. 202, A-95; Reaffirmed: Res. 227, I-98; Reaffirmed: BOT Rep. 2, A-07; Reaffirmation A-09)

D-160.999 Opposition to Criminalizing Health Care Decisions

Our AMA will educate physicians regarding the continuing threat posed by the criminalization of healthcare decision-making and the existence of our model legislation "An Act to Prohibit the Criminalization of Healthcare Decision-Making."

(Res. 228, I-98; Reaffirmed: BOT Rep. 5, A-08)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 218
(A-24)

Introduced by: Michigan
Subject: Designation of Descendants of Enslaved Africans in America
Referred To: Reference Committee B

1 Whereas, the designation of African American and Black has been expanded to include any
2 person who immigrated from Africa or Caribbean countries and obtained American citizenship at
3 any point in recent history; and
4
5 Whereas, since 2003 the United States Supreme Court, ruled the definition of "Black" included
6 every person who identifies as Black on a census form including people who check the box for
7 Black and any other racial or ethnic category such as white, Asian, and Hispanic or Latino, which
8 the federal government considers to be an ethnicity that can be of any race; and
9
10 Whereas, anyone Black or White who was born in Africa, immigrated to the United States, and
11 legally becomes an American citizen is considered an African American (i.e., Elon Musk); and
12
13 Whereas, the number of immigrants entering the United States legally rose from 3.3 million in the
14 1960s to a record 7.3 million in the 1980s; and during the 1990s, some 900,000 Black immigrants
15 came from the Caribbean; another 400,000 came from Africa; still many others came from Europe,
16 Pacific Rim, Arab and Asian countries; and
17
18 Whereas, today, nearly one in ten Black Americans is an immigrant or the child of an immigrant in
19 the United States; and
20
21 Whereas, the "Intelligent" survey found 34 percent of white students who applied to colleges and
22 universities falsely claimed they were a racial minority on their application; 81 percent of students
23 who faked minority status did so to improve their chances of getting accepted and 50 percent did it
24 to get minority-focused financial aid; and
25
26 Whereas, the "Intelligent" survey found that 3 in 4, or 77 percent, of white applicants who faked
27 minority status on their applications were accepted to those colleges; and
28
29 Whereas, Descendants of Enslaved Africans in America are the only people in U.S. history
30 classified as nonhuman and property, to undergo chattel slavery, and to be deemed by the U.S.
31 constitution 3/5 of a human, according to the 13th, 14th, and 15th amendments; and
32
33 Whereas, the Descendants of Enslaved Africans in America are the only people for whom it was
34 illegal to attend school or learn how to read and write in the United States; and
35
36 Whereas, it is important to disaggregate data to make sure everyone is recognized and that the
37 data influencing policies, programs, and solutions is accurate; therefore be it
38
39 RESOLVED, that our American Medical Association work with appropriate organizations including,
40 but not limited to, the Association of American Medical Colleges to adopt and define the term
41 Descendants of Enslaved Africans in America and separate it from the generic terms African
42 American and Black in glossaries and on medical school applications. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 4/23/2024

Definition of African American(s)

1. African Americans are an ethnic group consisting of Americans with partial or total ancestry from sub-Saharan Africa. The term "African American" generally denotes descendants of enslaved Africans who are from the United States (Ref)
2. The glossary that is available on the AAMC FACTS website, as well as the FACTS tables that display the full race/ethnicity response options does not include DOESAA: FACTS Glossary: <https://www.aamc.org/data-reports/students-residents/interactive-data/facts-glossary> Example FACTS Table with response options: <https://www.aamc.org/media/6046/download?attachment>
3. AAMC DATA FACTS TABLE 12-A of the freshman class acceptees for medical schools in the United States in 2021: 456 African Americans, who are not distinguished as immigrant or non-immigrant; 203 individuals indicating more than 1 Black or African American response, which implies an immigrant status or admixture; 33 "other Black or African American" which implies immigrant status.

RELEVANT AMA POLICY

Racism as a Public Health Threat H-65.952

1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.

3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.

4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.

5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 219
(A-24)

Introduced by: American College of Obstetricians and Gynecologists

Subject: Bundling for Maternity Care Services

Referred to: Reference Committee B

1 Whereas, maternal mortality in the US continues to rise, up from 861 deaths in 2020 to 1,205
2 deaths in 2021¹; and
3
4 Whereas, rates of severe maternal morbidity (SMM) continues to climb and of particular
5 significance, the increasing gap in SMM between the national average (88.2/10,000 in 2020)
6 and among Black mothers (139.0/10,000)²; and
7
8 Whereas, access to maternity care continues to decline, with 35.6 percent of counties classified
9 as “maternity care deserts” and only 45.4 percent of counties classified as having “full access”
10 to maternity care and 56 counties losing obstetric providers³; and
11
12 Whereas, state Medicaid programs and private commercial plans are developing Alternative
13 Payment Models and that inappropriately bundle community and wrap-around services under
14 the physician payment^{4,5}; and
15
16 Whereas, insurers are not recognizing separate billing for services such as immediate
17 postpartum long-acting reversible contraception, care coordination, transfers during labor,
18 increased time in delivery, screening, counseling and treatment for health-related social needs
19 or co-morbid conditions that increase pregnancy risk, postpartum care, and many other
20 services^{6,7}; and
21
22 Whereas, the American Medical Association opposes the incorrect use of CPT by insurers and
23 others (Improper Use of AMA-CPT by Carriers/Software Programs (H-70.954); and
24
25 Whereas, the AMA has several policies that call for advocacy to third party payers for
26 inappropriate bundling of services (D-70.983, H-70.983); and
27
28 Whereas, the AMA CPT instructions for use of the maternity global codes includes “services
29 normally provided in uncomplicated maternity cases include antepartum care, delivery, and
30 postpartum care” and that services for high-risk pregnancies and hospital stays more than 24
31 hours before delivery should be reported separately; therefore be it
32
33 RESOLVED, that our American Medical Association advocates for the separate payment of
34 services not accounted for in the valuation of the maternity global codes and opposes the
35 inappropriate bundling of related services. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/23/2024

RELEVANT AMA POLICY

H-70.954 Improper Use of AMA-CPT by Carriers/Software Programs

Our AMA: (1) continues to seek endorsement of Current Procedural Terminology (CPT) as the national coding standard for physician services; in collaboration with state and specialty societies, will urge the Secretary of HHS and CMS and all other payers to adopt CPT as the single uniform coding standard for physician services in all practice settings; and will oppose the incorrect use of CPT by insurers and others, taking necessary actions to insure compliance with licensing agreements, which include provisions for termination of the agreement;

(2) will work with the American Academy of Pediatrics and other specialty societies to support state and federal legislation requiring insurers to follow the coding as defined in the Current Procedural Terminology Manual and interpreted by the CPT Assistant for all contracts in both the public and private sectors, as long as the CPT process is simple, user friendly, and does not undergo frequent changes; and

(3) seeks legislation and/or regulation to ensure that all insurance companies and group payers recognize all published CPT codes including modifiers.

D-70.983 Inappropriate Bundling of Medical Services by Third Party Payers

Our AMA will: (1) continue to promote its Private Sector Advocacy activities and initiatives associated with the collection of information on third party payer modifier acceptance and inappropriate bundling practices;

(2) use the data collected as part of its Private Sector Advocacy information clearinghouse to work, in a legally appropriate manner, with interested state medical associations and national medical specialty societies to identify and address inappropriate third party payer coding and reimbursement practices, including inappropriate bundling of services, rejection of CPT modifiers, and denial and delay of payment;

(3) continue to monitor the class action lawsuits of state medical associations, and provide supportive legal and technical resources, as appropriate;

4) develop model state legislation to prohibit third party payers from bundling services inappropriately by encompassing individually coded services under other separately coded services unless specifically addressed in CPT guidelines, or unless a physician has been specifically advised of such bundling practices at the time of entering into a contractual agreement with the physician;

(5) urge state medical associations to advocate the introduction and enactment of AMA model state legislation on claims bundling by their state legislatures; and.

(6) highlight its Private Sector Advocacy document on bundling and downcoding, the related section of the AMA Model Managed Care Contract, and its advocacy initiatives on its web site and other communications measures to assure that physicians are aware of the AMA's advocacy on this issue.

H-70.937 Bundling and Downcoding of CPT Codes

Our AMA: (1) vigorously opposes the practice of unilateral, arbitrary recoding and/or bundling by all payers;

(2) makes it a priority to establish national standards for the appropriate use of CPT codes, guidelines, and modifiers and to advocate the adoption of these standards;

(3) formulates a national policy for intervention with carriers or payers who use unreasonable business practices to unilaterally recode or inappropriately bundle physician services, and support legislation to accomplish this; and

(4) along with medical specialty societies, calls on its members to identify to our AMA specific CPT code bundling problems by payers in their area and that our AMA develop a mechanism for assisting our members in dealing with these problems with payers.

H-70.949 Bundling of Codes for Physician Services

Our AMA: (1) advocates and will take steps to ensure that public and private payers do not bundle services inappropriately by encompassing individually coded services under other separately coded services unless specifically addressed in CPT guidelines; and (2) will enhance and fully coordinate its activities to prevent the inappropriate bundling of CPT codes (and other coding systems for supplies, injections, etc) used for payment by both public and private payers.

H-70.962 Changes in the Bundling of Medical Services by Managed Care Plans

Our AMA will introduce or support legislation or regulation that would require that managed care plans be monitored and prohibited from the arbitrary and inappropriate bundling of services to reduce payment to participating physicians; and that the medically indicated patient services such as consultations and diagnostic procedures provided by physicians on the same day be paid on a separate basis in conformity with the AMA Current Procedural Terminology (CPT) coding policy and not inappropriately bundled as they currently are by managed care plans.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 220
(A-24)

Introduced by: California

Subject: Restorative Justice for the Treatment of Substance Use Disorders

Referred to: Reference Committee B

1 Whereas, Restorative Justice (RJ) is a correctional model featuring relationship building,
2 rehabilitation, and community empowerment. Examples of Restorative Justice models include
3 Restorative Community Conferencing (RCC) and Drug Treatment Courts, which have reduced
4 recidivism, cut costs (one RCC estimates a cost savings of \$18,500 per case per year), and
5 promoted familial connectedness, particularly among people of color; and
6

7 Whereas, police brutality, racist sentencing practices, and implicit biases that created health
8 inequities have contributed to the US having the highest incarceration rate in the world, with one
9 in three black men currently incarcerated; and
10

11 Whereas, the “war on drugs” prioritized punishment over treatment for non-violent drug
12 offenses, leading to an eight-fold increase in incarceration to 400,000 people by 1997. The Anti-
13 Drug Abuse Act diverted \$1.7 billion away from education, drug treatment, and research
14 towards law enforcement and now the U.S. spends \$12 billion annually on the war on drugs;
15 and
16

17 Whereas, during the crack cocaine epidemic of the mid 1980s where there were an estimated
18 1.6 million users, the black community was devastated because of an inequitable response by
19 law enforcement and mass incarceration due to racist sentencing practices, such as unequal
20 mandatory minimum sentences for crack cocaine - as 80% of crack users were black (due to its
21 affordability) as compared to more expensive powdered cocaine used preferentially by white
22 users; and
23

24 Whereas, injected powdered cocaine delivers a fast, intense high similar to crack, and has been
25 found to have the highest risk of overdose and death; and
26

27 Whereas, the U.S. Sentencing Commission reported in 1995 that 52% of all crack users were
28 white and 38% were black. However, only 4.1% of those sentenced for crack offenses were
29 White and 88% were Black. Prisoners have a higher rate of suicide, self harm, violence, HIV,
30 and other infectious diseases and public health experts recommend that substance abuse
31 impacts are best addressed through community resources such as family counseling, and
32 mental health programs; and
33

34 Whereas, black patients are less likely to receive pain medication and decreasing opiate
35 prescriptions increases the use of fentanyl and heroin. Conversely, increasing services such as
36 medication-assisted addiction treatment, needle exchange, naloxone availability, and
37 psychosocial treatment improve outcomes; and
38

39 Whereas, the U.S. Office of National Drug Control Policy estimated that in 1996, 3.6 million
40 people required medical treatment for their addiction, but only one million were receiving

1 treatment because 19% of the \$13.5 billion budget was dedicated to drug treatment as
2 compared to 58% for criminal justice and thus, the crack cocaine epidemic caused a multitude
3 of negative health outcomes including a four-fold increase in emergency room visits, as well as
4 a significant increase in Sexually Transmitted Diseases; and
5

6 Whereas, some minor steps in line with “Restorative Justice” have been taken, such as The Fair
7 Sentencing Act of 2010 and The First Step Act of 2018 which applied the Fair Sentencing Act
8 retroactively, and reduced the sentencing disparity from 100:1 to 18:1; and
9

10 Whereas, by contrast, the opioid epidemic, which has predominantly affected white individuals,
11 has been combatted using a “Disease Model” featuring a reduction in stigmatizing language, the
12 expenditure of \$59 million by the U.S. Department of Justice for community health interventions,
13 and sentencing individuals to rehabilitation as opposed to incarceration; and
14

15 Whereas, in 2019 alone, the Centers for Disease Control and Prevention (CDC) granted \$475
16 million for opioid overdose prevention and has (1) funded research to identify effective
17 strategies for combating the epidemic, (2) worked with health departments and community-
18 based organizations to implement evidence-based prevention strategies, (3) created an
19 evidence-based “CDC Guideline for Prescribing Opioids for Chronic Pain” and implemented
20 quality-improvement measures, (4) created the “Rx Awareness” campaign to educate users on
21 the risks of opioid use, and (5) partnered with first responders, including police, with an
22 emphasis on saving lives through naloxone administration rather than incarceration; and
23 Whereas, approaches, such as the CDC models for the opioid epidemic, are examples of the
24 application of the Restorative Justice model and can be applied retroactively to those negatively
25 impacted by the crack cocaine epidemic; therefore be it
26

27 RESOLVED, that our American Medical Association (1) continues to support the right of
28 incarcerated individuals to receive appropriate care for substance use disorders, (2) supports
29 providing incentives for incarcerated individuals to overcome substance use disorders, such as
30 participation in treatment as a condition for early release, and (3) supports providing access to
31 social services and family therapy during and after incarceration (New HOD Policy); and be it
32 further
33

34 RESOLVED, that our AMA (1) recognizes that criminalization of substance use
35 disproportionately impacts minoritized and disadvantaged communities due to structural racism
36 and implicit bias, (2) acknowledges inequitable sentencing structures, such as towards crack
37 cocaine versus opioids, have contributed to unjust imprisonments, and (3) supports implicit bias
38 and antiracism training for medical professionals working in correctional facilities. (New HOD
39 Policy)
40

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/23/2024

RELEVANT AMA POLICY

H-95.931 AMA Support for Justice Reinvestment Initiatives

Our American Medical Association supports justice reinvestment initiatives aimed at improving risk assessment tools for screening and assessing individuals for substance use disorders and mental health issues, expanding jail diversion and jail alternative programs, and increasing access to reentry and treatment programs. [Reaffirmed: CSAPH Rep. 4, I-23, Res. 205, A-16.]

H-430.986 Health Care While Incarcerated

1. Our American Medical Association advocates for adequate payment to health care providers, including primary care and mental health, and addiction treatment professionals, to encourage improved access to comprehensive physical and behavioral health care services to juveniles and adults throughout the incarceration process from intake to re-entry into the community.
2. Our AMA advocates and requires a smooth transition including partnerships and information sharing between correctional systems, community health systems and state insurance programs to provide access to a continuum of health care services for juveniles and adults in the correctional system, including correctional settings having sufficient resources to assist incarcerated persons' timely access to mental health, drug and residential rehabilitation facilities upon release.
3. Our AMA encourages state Medicaid agencies to accept and process Medicaid applications from juveniles and adults who are incarcerated.
4. Our AMA encourages state Medicaid agencies to work with their local departments of corrections, prisons, and jails to assist incarcerated juveniles and adults who may not have been enrolled in Medicaid at the time of their incarceration to apply and receive an eligibility determination for Medicaid.
5. Our AMA advocates for states to suspend rather than terminate Medicaid eligibility of juveniles and adults upon intake into the criminal legal system and throughout the incarceration process, and to reinstate coverage when the individual transitions back into the community.
6. Our AMA advocates for Congress to repeal the "inmate exclusion" of the 1965 Social Security Act that bars the use of federal Medicaid matching funds from covering healthcare services in jails and prisons.
7. Our AMA advocates for Congress and the Centers for Medicare & Medicaid Services (CMS) to revise the Medicare statute and rescind related regulations that prevent payment for medical care furnished to a Medicare beneficiary who is incarcerated or in custody at the time the services are delivered.
8. Our AMA advocates for necessary programs and staff training to address the distinctive health care needs of women and adolescent females who are incarcerated, including gynecological care and obstetrics care for individuals who are pregnant or postpartum.
9. Our AMA will collaborate with state medical societies, relevant medical specialty societies, and federal regulators to emphasize the importance of hygiene and health literacy information sessions, as well as information sessions on the science of addiction, evidence-based addiction treatment including medications, and related stigma reduction, for both individuals who are incarcerated and staff in correctional facilities.
10. Our AMA supports:
 - a. linkage of those incarcerated to community clinics upon release in order to accelerate access to comprehensive health care, including mental health and substance use disorder services, and improve health outcomes among this vulnerable patient population, as well as adequate funding;
 - b. the collaboration of correctional health workers and community health care providers for those transitioning from a correctional institution to the community;
 - c. the provision of longitudinal care from state supported social workers, to perform foundational check-ins that not only assess mental health but also develop lifestyle plans with newly released people; and
 - d. collaboration with community-based organizations and integrated models of care that support formerly incarcerated people with regard to their health care, safety, and social determinant of health needs, including employment, education, and housing.

11. Our AMA advocates for the continuation of federal funding for health insurance benefits, including Medicaid, Medicare, and the Children's Health Insurance Program, for otherwise eligible individuals in pre-trial detention.
12. Our AMA advocates for the prohibition of the use of co-payments to access healthcare services in correctional facilities.
13. Our AMA encourages the following qualifications for the Director and Assistant Director of the Health Services Division within the Federal Bureau of Prisons:
 - a. MD or DO, or an international equivalent degree with at least five years of clinical experience at a Bureau of Prisons medical facility or a community clinical setting;
 - b. knowledge of health disparities among Black, American Indian and Alaska Native, and people of color, including the pathophysiological basis of the disease process and the social determinants of health that affect disparities; and
 - c. knowledge of the health disparities among individuals who are involved with the criminal justice system.
14. Our AMA will collaborate with interested parties to promote the highest quality of health care and oversight for those who are involved in the criminal justice system by advocating for health administrators and executive staff to possess credentials and experience comparable to individuals in the community in similar professional roles

[Appended: Res. 429, A-23; Appended: Res. 244, A-23; Modified: Res. 127, A-22; Reaffirmed: Res. 229, A-21; Modified: Res. 503, A-21; Modified: Res. 216, I-19; Appended: Res 420, A-19; Appended: Res. 417, A-19; CMS Rep. 02, I-16.]

H-430.997 Standards of Care for Inmates of Correctional Facilities

Our AMA believes that correctional and detention facilities should provide medical, psychiatric, and substance use disorder care that meets prevailing community standards, including appropriate referrals for ongoing care upon release from the correctional facility in order to prevent recidivism.
[Modified: CSAPH Rep. 1, A-22; Reaffirmation: I-12; Modified in lieu of Res. 502, A-12; Reaffirmation I-09; Reaffirmed: CEJA Rep. 8, A-09; Amended: Res. 416, I-99; Reaffirmed by CLRPD Rep. 3 – I-94; Res 60, A-84.]

H-95.922 Substance Use and Substance Use Disorders

Our AMA: (1) will continue to seek and participate in partnerships designed to foster awareness and to promote screening, diagnosis, and appropriate treatment of substance misuse and substance use disorders;

(2) will renew efforts to: (a) have substance use disorders addressed across the continuum of medical education; (b) provide tools to assist physicians in screening, diagnosing, intervening, and/or referring patients with substance use disorders so that they have access to treatment; (c) develop partnerships with other organizations to promote national policies to prevent and treat these illnesses, particularly in adolescents and young adults; and (d) assist physicians in becoming valuable resources for the general public, in order to reduce the stigma and enhance knowledge about substance use disorders and to communicate the fact that substance use disorder is a treatable disease; and

(3) will support appropriate federal and state legislation that would enhance the prevention, diagnosis, and treatment of substance use disorders.

[Reaffirmed: CSAPH Rep. 01, A-23; Reaffirmed: BOT Rep. 14, I-20; CSAPH Rep. 01, A-18]

H-95.975 Substance Use Disorders as a Public Health Hazard

Our AMA: (1) recognizes that substance use disorders are a major public health problem in the United States today and that its solution requires a multifaceted approach;

(2) declares substance use disorders are a public health priority;

(3) supports taking a positive stance as the leader in matters concerning substance use disorders, including addiction;

(4) supports studying innovative approaches to the elimination of substance use disorders and their resultant street crime, including approaches which have been used in other nations; and
(5) opposes the manufacture, distribution, and sale of substances created by chemical alteration of illicit substances, herbal remedies, and over-the-counter drugs with the intent of circumventing laws prohibiting possession or use of such substances.

[Reaffirmed: CSAPH Rep. 01, A-19; Modified and Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: Sunset Rep., I-99; Appended: Sub. Res. 401; Res. 7, I-89.]

D-95.962 Enhanced Funding for and Access to Outpatient Addiction Rehabilitation

Our AMA will advocate for: (1) the expansion of federal grants in support of treatment for a substance use disorder to states that are conditioned on that state's adoption of law and/or regulation that prohibit drug courts, recovery homes, sober houses, correctional settings, and other similar programs from denying entry or ongoing care if a patient is receiving medication for an opioid use disorder or other chronic medical condition; and (2) sustained funding to states in support of evidence-based treatment for patients with a substance use disorder and/or co-occurring mental disorder, such as that put forward by the American Society of Addiction Medicine, American Academy of Addiction Psychiatry, American Psychiatric Association, American Academy of Child and Adolescent Psychiatry and other professional medical organizations. [BOT Rep. 14, I-20]

H-430.987 Medications for Opioid Use Disorder in Correctional Facilities

1. Our AMA endorses: (a) the medical treatment model of employing medications for opioid use disorder (OUD) as the standard of care for persons with OUD who are incarcerated; and (b) medications for persons with OUD who are incarcerated, an endorsement in collaboration with relevant organizations including but not limited to the American Society of Addiction Medicine and the American Academy of Addiction Psychiatry.
2. Our AMA advocates for legislation, standards, policies and funding that require correctional facilities to increase access to evidence-based treatment of OUD, including initiation and continuation of medications for OUD, in conjunction with psychosocial treatment when desired by the person with OUD, in correctional facilities within the United States and that this apply to all individuals who are incarcerated, including individuals who are pregnant, postpartum, or parenting.
3. Our AMA advocates for legislation, standards, policies, and funding that require correctional facilities within the United States to work in ongoing collaboration with addiction treatment physician-led teams, case managers, social workers, and pharmacies in the communities where patients, including individuals who are pregnant, postpartum, or parenting, are released to offer post-incarceration treatment plans for OUD, including education, medication for addiction treatment and counseling, and medication for preventing overdose deaths, including naloxone (or any other medication that is approved by the United States Food and Drug Administration for the treatment of an opioid overdose), and help ensure post-incarceration medical coverage and accessibility to mental health and substance use disorder treatments, that include medication and behavioral health and social supports for addiction treatment.
4. Our AMA advocates for all correctional facilities to use a validated screening tool to identify opioid withdrawal and take steps to determine potential need for treatment for OUD and opioid withdrawal syndrome for all persons upon entry.

[Modified: Res. 503, A-21; Appended: Res. 223, I-17; Reaffirmed: CSAPH Rep. 1, A-15; Res. 443, A-05.]

D-405.970 Racism - A Threat to Public Health

Our American Medical Association advocates for the creation of an International Classification of Diseases (ICD) code for patients presenting with conditions related to experiencing racism (including systemic racism and unconscious bias), a code that will provide physicians with a tool to document the clinical impact of racism, and capture the data needed to help provide more effective patient care.

[Modified: Res. 503, A-21; Appended: Res. 223, I-17; Reaffirmed: CSAPH Rep. 1, A-15; Res. 443, A-05]

H-65.952 Racism as a Public Health Threat

1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.

3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.

4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.

5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.

[Modified: Speakers Rep., A-22; Reaffirmed: Res. 013, A-22; Res. 5, I-20]

H-65.943 Redressing the Harms of Misusing Race in Medicine

1. Our American Medical Association recognizes the exacerbation of health and economic inequities due to race-based algorithms as a manifestation of racism within the medical field.

2. Our AMA will revise the AMA Guides to the Evaluation of Permanent Impairment, in accordance with existing AMA policy on race as a social construct and national standards of care, to modify recommendations that perpetuate racial essentialism or race-based medicine.

3. Our AMA advocates for and promotes racism-conscious, reparative, community engaged interventions at the health system, organized medical society, local, and federal levels which seek to identify, evaluate, and address the health, economic, and other consequences of structural racism in medicine.

[Modified: Speakers Rep., A-22, Reaffirmed: Res. 013, A-22, Res. 5, I-20.]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 221
(A-24)

Introduced by: California

Subject: Reforming Medicare Part B Drug Reimbursement to Promote Patient
Affordability and Physician Practice Sustainability

Referred to: Reference Committee B

1 Whereas, the skyrocketing cost of drugs is a key driver of U.S. healthcare costs; In 2021,
2 Medicare spent \$215B and \$33B on Part D and Part B drugs respectively, with Part B clinically-
3 administered drugs costs rising at an average rate of 9.2% annually from 2008-2021;^{1,2} and
4

5 Whereas, Medicare Part B reimburses for Part B drugs under the “Buy and Bill” method, in
6 which healthcare systems or physicians purchase, stock, maintain inventory for and administer
7 drugs, and are reimbursed at an amount equal to the Average Sales Price (ASP) of the drug
8 plus 6% of the ASP;^{3,4} and
9

10 Whereas, multiple factors contribute to the high cost of Part B drugs, including longer patent
11 exclusivity periods, lack of market competition and generic alternatives, and historical prohibition
12 of Medicare in negotiating drug prices; and
13

14 Whereas, the “Buy and Bill” reimbursement structure which ties reimbursement directly to drug
15 prices disincentivizes healthcare systems or physicians to choose the lowest-cost drugs;⁵ and
16

17 Whereas, Part B drugs have high levels of patient cost-sharing, as patients are charged a
18 coinsurance of 20% of the cost of the drug rather than a fixed copay;⁶ and
19

20 Whereas, more than half of patients with a chronic illness are in medical debt, and 25% of
21 cancer patients experience eviction, home foreclosure or bankruptcy;⁷ and
22

23 Whereas, The Inflation Reduction Act authorized Medicare to begin drug price negotiations for
24 Part B drugs in 2026, with these prices taking effect in 2028;⁸ and
25

26 Whereas, while lower drug prices will undoubtedly improve affordability for patients, as noted in
27 an AMA Letter to CMS in 2018⁹, tying reimbursement to the ASP over time as prices drop “may
28 no longer be sufficient to cover the administrative costs to the practice”, threatening practice
29 viability and therefore patient access to care; and
30

31 Whereas, ASP-based Medicare reimbursement for physicians has a six-month lag period,
32 contributing to the financial vulnerability of small/medium-sized physician practices, practices in
33 rural and/or underserved areas, and practices serving a significant proportion of Medicare
34 patients;¹⁰ and
35

36 Whereas, While the administration of Part B drugs is most prevalent in the fields of oncology,
37 rheumatology, ophthalmology, dermatology and gastroenterology, this issue affects all
38 physicians serving Medicare patients, as the anticipated billions saved annually through drug
39 price negotiations could be reappropriated towards improving physician reimbursement across-
40 the-board; therefore be it

- 1 RESOLVED, that our American Medical Association support the creation of a new
2 reimbursement model for Part B drugs that 1) Disentangles reimbursement from the drug price,
3 or any weighted market average of the drug price, by reimbursing physicians for the actual cost
4 of the drug, and 2) Ensures adequate compensation for the cost of acquisition, inventory,
5 storage, and administration of clinically-administered drugs that is based on physician costs, not
6 a percent of the drug price (New HOD Policy); and be it further
7
8 RESOLVED, that our AMA maintain the principles that any revised Part B reimbursement
9 models should promote practice viability, especially for small physician practices, practices in
10 rural and/or underserved areas, and practices with a significant proportion of Medicare patients,
11 to promote continued treatment access for patients. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/23/2024

10. Polite B, Conti RM, Ward JC. Reform of the Buy-and-Bill System for Outpatient Chemotherapy Care Is Inevitable: Perspectives from an Economist, a Realpolitik, and an Oncologist. *Am Soc Clin Oncol Educ Book*. 2015;e75-e80. doi:10.14694/EdBook_AM.2015.35.e75

RELEVANT AMA POLICY

H-330.888 Exempt Physician-Administered Drugs from Medicare Sequestration

Our AMA supports passage of federal legislation 1) exempting payments for biologics and other drugs provided under Medicare Part B from sequestration cuts, and 2) reimbursing providers for reductions in payments for biologics and other drugs furnished under Medicare Part B on or after April 1, 2013. [Reaffirmed: Res. 212, I-21; Reaffirmation A-15; Res. 235, A-13]

D-330.960 Cuts in Medicare Outpatient Infusion Services

1. Our AMA will actively support efforts to seek legislation to ensure that Medicare payments for drugs fully cover the physician's acquisition, inventory and carrying cost and that Medicare payments for drug administration and related services are adequate to ensure continued patient access to outpatient infusion services.

2. Our AMA will continue strong advocacy efforts working with relevant national medical specialty societies to ensure adequate physician payment for Part B drugs and patient access to biologic and pharmacologic agents.

[Reaffirmation: I-18; Reaffirmed: CMS Rep. 10, A-16; Reaffirmation A-15; Reaffirmed and Modified: CMS Rep. 3, I-08; Res. 926, I-03]

D-330.904 Opposition to the CMS Medicare Part B Drug Payment Model

1. Our AMA will request that the Centers for Medicare & Medicaid Services (CMS) withdraw the proposed Part B Drug Payment Model.

2. Our AMA will support and actively work to advance Congressional action to block the proposed Part B Drug Payment Model if CMS proceeds with the proposal.

3. Our AMA will advocate against policies that are likely to undermine access to the best course of treatment for individual patients and oppose demonstration programs that could lead to lower quality of care and do not contain mechanisms for safeguarding patients.

4. Our AMA will advocate for ensuring that CMS solicits and takes into consideration feedback from patients, physicians, advocates, or other stakeholders in a way that allows for meaningful input on any Medicare coverage or reimbursement policy that impacts patient access to medical therapies, including policies on coverage and reimbursement.

[Res. 241, A-16]

H-110.983 Medicare Part B Competitive Acquisition Program (CAP)

Our AMA will advocate that any revised Medicare Part B Competitive Acquisition Program meet the following standards to improve the value of the program by lowering the cost of drugs without undermining quality of care:

(1) it must be genuinely voluntary and not penalize practices that choose not to participate;

(2) it should provide supplemental payments to reimburse for costs associated with special handling and storage for Part B drugs;

(3) it must not reduce reimbursement for services related to provision/administration of Part B drugs, and reimbursement should be indexed to an appropriate healthcare inflation rate;

(4) it should permit flexibility such as allowing for variation in orders that may occur on the day of treatment, and allow for the use of CAP-acquired drugs at multiple office locations;

(5) it should allow practices to choose from multiple vendors to ensure competition, and should also ensure that vendors meet appropriate safety and quality standards;

(6) it should include robust and comprehensive patient protections which include preventing delays in treatment, helping patients find assistance or alternative payment arrangements if they cannot meet the cost-sharing responsibility, and vendors should bear the risk of non-payment of patient copayments in a way that does not penalize the physician;

(7) it should not allow vendors to restrict patient access using utilization management policies such as step therapy; and

(8) it should not force disruption of current systems which have evolved to ensure patient access to necessary medications.

[Reaffirmed: CMS Rep. 4, A-22; Reaffirmed: CMS Rep. 4, I-19; Res. 216, I-18]

H-110.987 Pharmaceutical Costs

1. Our AMA encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.

2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.

3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.

4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
 5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
 6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
 7. Our AMA supports legislation to shorten the exclusivity period for biologics.
 8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
 9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
 10. Our AMA supports: (a) drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by 10% or more each year or per course of treatment and provide justification for the price increase; (b) legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and (c) the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of 10% or more each year or per course of treatment.
 11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.
 12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.
 13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
 14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation.

Res. 806, I-17; Modified: Speakers Rep. 01, A-17; Reaffirmed in lieu of Res. 107, A-17; Appended: Res. 201 A-17; Reaffirmed in lieu of: Res. 817, I-16; CMS Rep. 2, I-15]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 222
(A-24)

Introduced by: Resident and Fellow Section

Subject: Studying Avenues for Parity in Mental Health & Substance Use Coverage

Referred to: Reference Committee B

1 Whereas, the Mental Health Parity Act passed in 1996 and was the first law to impose any sort
2 of parity between mental and physical health care, with an imposition on the annual or lifetime
3 dollar limits on mental health benefits being any less favorable than those imposed on
4 medical/surgical benefits¹; and

5
6 Whereas, the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act
7 of 2008 took this concept further by preventing group health plans and health insurance insurers
8 from imposing less favorable benefit limitations for mental health or substance use disorder
9 benefits than on medical/surgical benefits¹; and

10
11 Whereas, prior to and since the inception of these federal laws, our AMA has been advocating
12 for parity in insurance benefits for those receiving mental health and substance use care (H-
13 185.974, H-168.888); and

14
15 Whereas, despite violations being found in every investigation of insurance companies, as well
16 as multiple AMA policies supporting parity and calling for compliance with parity laws (D-
17 180.998, H-185.916, H-185.974), parity still does not exist and health plans are not remotely
18 close to following parity laws regarding mental health/substance use benefits^{2,3}; and

19
20 Whereas, both the 2022 DOL/HHS/IRS Report to Congress & July 2023 MHPAEA Comparative
21 Analysis Report to Congress showed widespread violations and repeated failure of health plans
22 to provide sufficient, accurate information to regulators to perform the comparative analyses
23 required by law^{2,3}; and

24
25 Whereas, a 2023 Robert Wood Johnson Foundation Report found that cost-sharing was
26 decreased for mental health when compared to primary care visits, such that 17% of plans
27 required that a deductible be satisfied for mental health visits but not primary care visits, and
28 that despite reporting these deficits year after year, they remain unchanged^{4,5}; and

29
30 Whereas, in Georgia, 24 health plans provided no information to the state Department of
31 Insurance (DOI) to perform its statutorily-required comparative analyses and of the 28 plans that
32 did submit information, none submitted sufficient information for the DOI to perform the
33 comparative analyses⁶; and

34
35 Whereas, lack of compliance occurs at both the federal and the state level, without significant
36 consequences including continuing to allow insurer participation in state-delivered insurance
37 plans⁶; therefore be it

38
39 RESOLVED, that our American Medical Association study potential penalties to insurers for not
40 complying with mental health and substance use parity laws. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

RELEVANT AMA POLICY:

Expanding Parity Protections and Coverage of Mental Health and Substance Use Disorder Care H-185.916

Our AMA supports requirements of all health insurance plans to implement a compliance program to demonstrate compliance with state and federal mental health parity laws. [Res. 216, I-22]

Parity for Mental Health and Substance Use Disorders in Health Insurance Programs H-185.974

1. Our AMA supports parity of coverage for mental, health, and substance use disorders.
2. Our AMA supports federal legislation, standards, policies, and funding that enforce and expand the parity and non-discrimination protections of the Paul Wellstone and Peter Domenici Mental Health Parity and Addiction Equity Act of 2008 to Medicare (Parts A, B, C and D).
3. Our AMA supports federal legislation, standards, policies, and funding that require Medicare coverage (Parts A, B, C, and D) of all levels of mental health and substance use disorder care, consistent with nationally recognized medical professional organization level of care criteria for mental health or substance use disorders. [Res. 212, A-96, Reaffirmation A-97, Reaffirmed: Res. 215, I-98, Reaffirmation A-99, Reaffirmed: BOT Action in response to referred for decision Res. 612, I-99, Reaffirmation A-00, Reaffirmed: CMS Rep. 9, A-01, Reaffirmation A-02, Reaffirmation I-03, Modified: CMS Rep. 2, A-08, Reaffirmed: CMS Rep. 5, I-12, Reaffirmed in lieu of Res. 804, I-13, Reaffirmation A-15, Modified: Res. 113, A-16, Modified: Res. 216, I-22]

Insurance Parity for Mental Health and Psychiatry D-180.998

Our AMA in conjunction with the American Psychiatric Association and other interested organizations will develop model state legislation for the use of state medical associations and specialty societies to promote legislative changes assuring parity for the coverage of mental illness, alcoholism, and substance abuse. [Res. 215, I-98, Reaffirmation I-03, Reaffirmed in lieu of Res. 910, I-06, Reaffirmation A-15]

Maintaining Mental Health Services by States H-345.975

Our AMA:

1. supports maintaining essential mental health services at the state level, to include maintaining state inpatient and outpatient mental hospitals, community mental health centers, addiction treatment centers, and other state-supported psychiatric services;
2. supports state responsibility to develop programs that rapidly identify and refer individuals with

significant mental illness for treatment, to avoid repeated psychiatric hospitalizations and repeated interactions with the law, primarily as a result of untreated mental conditions;

3. supports increased funding for state Mobile Crisis Teams to locate and treat homeless individuals with mental illness;

4. supports enforcement of the Mental Health Parity Act at the federal and state level; and

5. will take these resolves into consideration when developing policy on essential benefit services.

[Res. 116, A-12, Reaffirmation A-15, Reaffirmed: Res. 414, A-22]

Evaluating Health System Reform Proposals H-165.888

1. Our AMA will continue its efforts to ensure that health system reform proposals adhere to the following principles:

A. Physicians maintain primary ethical responsibility to advocate for their patients' interests and needs.

B. Unfair concentration of market power of payers is detrimental to patients and physicians, if patient freedom of choice or physician ability to select mode of practice is limited or denied. Single-payer systems clearly fall within such a definition and, consequently, should continue to be opposed by the AMA. Reform proposals should balance fairly the market power between payers and physicians or be opposed.

C. All health system reform proposals should include a valid estimate of implementation cost, based on all health care expenditures to be included in the reform; and supports the concept that all health system reform proposals should identify specifically what means of funding (including employer-mandated funding, general taxation, payroll or value-added taxation) will be used to pay for the reform proposal and what the impact will be.

D. All physicians participating in managed care plans and medical delivery systems must be able without threat of punitive action to comment on and present their positions on the plan's policies and procedures for medical review, quality assurance, grievance procedures, credentialing criteria, and other financial and administrative matters, including physician representation on the governing board and key committees of the plan.

E. Any national legislation for health system reform should include sufficient and continuing financial support for inner-city and rural hospitals, community health centers, clinics, special programs for special populations and other essential public health facilities that serve underserved populations that otherwise lack the financial means to pay for their health care.

F. Health system reform proposals and ultimate legislation should result in adequate resources to enable medical schools and residency programs to produce an adequate supply and appropriate generalist/specialist mix of physicians to deliver patient care in a reformed health care system.

G. All civilian federal government employees, including Congress and the Administration, should be covered by any health care delivery system passed by Congress and signed by the President.

H. True health reform is impossible without true tort reform.

2. Our AMA supports health care reform that meets the needs of all Americans including people with injuries, congenital or acquired disabilities, and chronic conditions, and as such values function and its improvement as key outcomes to be specifically included in national health care reform legislation.

3. Our AMA supports health care reform that meets the needs of all Americans including people with mental illness and substance use / addiction disorders and will advocate for the inclusion of full parity for the treatment of mental illness and substance use / addiction disorders in all national health care reform legislation.

4. Our AMA supports health system reform alternatives that are consistent with AMA principles of pluralism, freedom of choice, freedom of practice, and universal access for patients.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 223
(A-24)

Introduced by: American Academy of Pediatrics, American College of Obstetricians and Gynecologists

Subject: Increase in Children's Hospital Graduate Medical Education Funding

Referred to: Reference Committee B

1 Whereas, the Children's Hospitals Graduate Medical Education (CHGME) program has been a
2 vital component of supporting pediatric residency training programs in the United States since
3 its inception in the 1990s^{1,4} and was established to address the unique funding challenges faced
4 by children's hospitals in providing quality graduate medical education, recognizing the
5 importance of specialized pediatric training^{1,3} for pediatricians and other specialties who care for
6 children; and
7

8 Whereas, since the 1990s, the funding for the CHGME program has not kept pace with the
9 evolving needs of pediatric residency programs, leading to a widening gap between the funding
10 provided and the increasing demands on pediatric healthcare^{2,3,6-7}; and
11

12 Whereas, the lack of adequate adjustments to CHGME funding over the years has created
13 financial strains on children's hospitals and pediatric residency programs, limiting their ability to
14 expand training capacities and adequately respond to the growing healthcare needs of
15 children^{4,7}; and
16

17 Whereas, investing in pediatric medical education contributes to the overall improvement of
18 child health outcomes and strengthens the healthcare system as a whole⁵; and
19

20 Whereas, the American Medical Association has a longstanding commitment to advocating for
21 policies that enhance medical education and improve the healthcare workforce; therefore be it
22

23 RESOLVED, that our American Medical Association collaborate with other relevant medical
24 organizations to support and advocate for increased funding for the Children's Hospitals
25 Graduate Medical Education program, recognizing the vital role it plays in shaping the future of
26 pediatric healthcare in the United States. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/23/2024

RELEVANT AMA POLICY

Increasing Coverage for Children H-165.877

Our AMA: (1) supports appropriate legislation that will provide health coverage for the greatest number of children, adolescents, and pregnant women; (2) recognizes incremental levels of coverage for different groups of the uninsured, consistent with finite resources, as a necessary interim step toward universal access; (3) places particular emphasis on advocating policies and proposals designed to expand the extent of health expense coverage protection for presently uninsured children and recommends that the funding for this coverage should preferably be used to allow these children, by their parents or legal guardians, to select private insurance rather than being placed in Medicaid programs; (4) supports, and encourages state medical associations to support, a requirement by all states that all insurers in that jurisdiction make available for purchase individual and group health expense coverage solely for children up to age 18; (5) encourages state medical associations to support study by their states of the need to extend coverage under such children's policies to the age of 23; (6) seeks to have introduced or support federal legislation prohibiting employers from conditioning their provision of group coverage including children on the availability of individual coverage for this age group for direct purchase by families; (7) advocates that, in order to be eligible for any federal or state premium subsidies or assistance, the private children's coverage offered in each state should be no less than the benefits provided under Medicaid in that state and allow states flexibility in the basic benefits package; (8) advocates that state and/or federal legislative proposals to provide premium assistance for private children's coverage provide for an appropriately graduated subsidy of premium costs for insurance benefits; (9) supports an increase in the federal and/or state sales tax on tobacco products, with the increased revenue earmarked for an income-related premium subsidy for purchase of private children's coverage; (10) advocates consideration by Congress, and encourage consideration by states, of other sources of financing premium subsidies for children's private coverage; (11) supports and encourages state medical associations and local medical societies to support, the use of school districts as one possible risk pooling mechanism for purchase of children's health insurance coverage, with inclusion of children from birth through school age in the insured group; (12) supports and encourages state medical associations to support, study by states of the actuarial feasibility of requiring pure community rating in the geographic areas or insurance markets in which policies are made available for children; and (13) encourages state medical associations, county medical societies, hospitals, emergency departments, clinics and individual physicians to assist in identifying and encouraging enrollment in Medicaid of the estimated three million children currently eligible for but not covered under this program.

The Preservation, Stability and Expansion of Full Funding for Graduate Medical Education D-305.967

1. Our AMA will actively collaborate with appropriate stakeholder organizations, (including Association of American Medical Colleges, American Hospital Association, state medical societies, medical specialty societies/associations) to advocate for the preservation, stability and expansion of full funding for the direct and indirect costs of graduate medical education (GME) positions from all existing sources (e.g. Medicare, Medicaid, Veterans Administration, CDC and others).
2. Our AMA will actively advocate for the stable provision of matching federal funds for state Medicaid programs that fund GME positions.
3. Our AMA will actively seek congressional action to remove the caps on Medicare funding of GME positions for resident physicians that were imposed by the Balanced Budget Amendment of 1997 (BBA-1997).

4. Our AMA will strenuously advocate for increasing the number of GME positions to address the future physician workforce needs of the nation.
5. Our AMA will oppose efforts to move federal funding of GME positions to the annual appropriations process that is subject to instability and uncertainty.
6. Our AMA will oppose regulatory and legislative efforts that reduce funding for GME from the full scope of resident educational activities that are designated by residency programs for accreditation and the board certification of their graduates (e.g. didactic teaching, community service, off-site ambulatory rotations, etc.).
7. Our AMA will actively explore additional sources of GME funding and their potential impact on the quality of residency training and on patient care.
8. Our AMA will vigorously advocate for the continued and expanded contribution by all payers for health care (including the federal government, the states, and local and private sources) to fund both the direct and indirect costs of GME.
9. Our AMA will work, in collaboration with other stakeholders, to improve the awareness of the general public that GME is a public good that provides essential services as part of the training process and serves as a necessary component of physician preparation to provide patient care that is safe, effective and of high quality.
10. Our AMA staff and governance will continuously monitor federal, state and private proposals for health care reform for their potential impact on the preservation, stability and expansion of full funding for the direct and indirect costs of GME.
11. Our AMA: (a) recognizes that funding for and distribution of positions for GME are in crisis in the United States and that meaningful and comprehensive reform is urgently needed; (b) will immediately work with Congress to expand medical residencies in a balanced fashion based on expected specialty needs throughout our nation to produce a geographically distributed and appropriately sized physician workforce; and to make increasing support and funding for GME programs and residencies a top priority of the AMA in its national political agenda; and (c) will continue to work closely with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, American Osteopathic Association, and other key stakeholders to raise awareness among policymakers and the public about the importance of expanded GME funding to meet the nation's current and anticipated medical workforce needs.
12. Our AMA will collaborate with other organizations to explore evidence-based approaches to quality and accountability in residency education to support enhanced funding of GME.
13. Our AMA will continue to strongly advocate that Congress fund additional graduate medical education (GME) positions for the most critical workforce needs, especially considering the current and worsening maldistribution of physicians.
14. Our AMA will advocate that the Centers for Medicare and Medicaid Services allow for rural and other underserved rotations in Accreditation Council for Graduate Medical Education (ACGME)-accredited residency programs, in disciplines of particular local/regional need, to occur in the offices of physicians who meet the qualifications for adjunct faculty of the residency program's sponsoring institution.
15. Our AMA encourages the ACGME to reduce barriers to rural and other underserved community experiences for graduate medical education programs that choose to provide such training, by adjusting as needed its program requirements, such as continuity requirements or limitations on time spent away from the primary residency site.
16. Our AMA encourages the ACGME and the American Osteopathic Association (AOA) to continue to develop and disseminate innovative methods of training physicians efficiently that foster the skills and inclinations to practice in a health care system that rewards team-based care and social accountability.
17. Our AMA will work with interested state and national medical specialty societies and other appropriate stakeholders to share and support legislation to increase GME funding, enabling a state to accomplish one or more of the following: (a) train more physicians to meet state and regional workforce needs; (b) train physicians who will practice in physician shortage/underserved areas; or (c) train physicians in undersupplied specialties and subspecialties in the state/region.
18. Our AMA supports the ongoing efforts by states to identify and address changing physician workforce needs within the GME landscape and continue to broadly advocate for innovative pilot programs that will increase the number of positions and create enhanced accountability of GME programs for quality outcomes.
19. Our AMA will continue to work with stakeholders such as Association of American Medical Colleges (AAMC), ACGME, AOA, American Academy of Family Physicians, American College of Physicians, and

other specialty organizations to analyze the changing landscape of future physician workforce needs as well as the number and variety of GME positions necessary to provide that workforce.

20. Our AMA will explore innovative funding models for incremental increases in funded residency positions related to quality of resident education and provision of patient care as evaluated by appropriate medical education organizations such as the Accreditation Council for Graduate Medical Education.

21. Our AMA will utilize its resources to share its content expertise with policymakers and the public to ensure greater awareness of the significant societal value of graduate medical education (GME) in terms of patient care, particularly for underserved and at-risk populations, as well as global health, research and education.

22. Our AMA will advocate for the appropriation of Congressional funding in support of the National Healthcare Workforce Commission, established under section 5101 of the Affordable Care Act, to provide data and healthcare workforce policy and advice to the nation and provide data that support the value of GME to the nation.

23. Our AMA supports recommendations to increase the accountability for and transparency of GME funding and continue to monitor data and peer-reviewed studies that contribute to further assess the value of GME.

24. Our AMA will explore various models of all-payer funding for GME, especially as the Institute of Medicine (now a program unit of the National Academy of Medicine) did not examine those options in its 2014 report on GME governance and financing.

25. Our AMA encourages organizations with successful existing models to publicize and share strategies, outcomes and costs.

26. Our AMA encourages insurance payers and foundations to enter into partnerships with state and local agencies as well as academic medical centers and community hospitals seeking to expand GME.

27. Our AMA will develop, along with other interested stakeholders, a national campaign to educate the public on the definition and importance of graduate medical education, student debt and the state of the medical profession today and in the future.

28. Our AMA will collaborate with other stakeholder organizations to evaluate and work to establish consensus regarding the appropriate economic value of resident and fellow services.

29. Our AMA will monitor ongoing pilots and demonstration projects, and explore the feasibility of broader implementation of proposals that show promise as alternative means for funding physician education and training while providing appropriate compensation for residents and fellows.

30. Our AMA will monitor the status of the House Energy and Commerce Committee's response to public comments solicited regarding the 2014 IOM report, Graduate Medical Education That Meets the Nation's Health Needs, as well as results of ongoing studies, including that requested of the GAO, in order to formulate new advocacy strategy for GME funding, and will report back to the House of Delegates regularly on important changes in the landscape of GME funding.

31. Our AMA will advocate to the Centers for Medicare & Medicaid Services to adopt the concept of "Cap-Flexibility" and allow new and current Graduate Medical Education teaching institutions to extend their cap-building window for up to an additional five years beyond the current window (for a total of up to ten years), giving priority to new residency programs in underserved areas and/or economically depressed areas.

32. Our AMA will: (a) encourage all existing and planned allopathic and osteopathic medical schools to thoroughly research match statistics and other career placement metrics when developing career guidance plans; (b) strongly advocate for and work with legislators, private sector partnerships, and existing and planned osteopathic and allopathic medical schools to create and fund graduate medical education (GME) programs that can accommodate the equivalent number of additional medical school graduates consistent with the workforce needs of our nation; and (c) encourage the Liaison Committee on Medical Education (LCME), the Commission on Osteopathic College Accreditation (COCA), and other accrediting bodies, as part of accreditation of allopathic and osteopathic medical schools, to prospectively and retrospectively monitor medical school graduates' rates of placement into GME as well as GME completion.

33. Our AMA encourages the Secretary of the U.S. Department of Health and Human Services to coordinate with federal agencies that fund GME training to identify and collect information needed to effectively evaluate how hospitals, health systems, and health centers with residency programs are utilizing these financial resources to meet the nation's health care workforce needs. This includes information on payment amounts by the type of training programs supported, resident training costs and revenue generation, output or outcomes related to health workforce planning (i.e., percentage of primary

care residents that went on to practice in rural or medically underserved areas), and measures related to resident competency and educational quality offered by GME training programs.

34. Our AMA will publicize best practice examples of state-funded Graduate Medical Education positions and develop model state legislation where appropriate.

Securing Funding for Graduate Medical Education H-310.917

Our American Medical Association: (1) continues to be vigilant while monitoring pending legislation that may change the financing of medical services (health system reform) and advocate for expanded and broad-based funding for graduate medical education (from federal, state, and commercial entities); (2) continues to advocate for graduate medical education funding that reflects the physician workforce needs of the nation; (3) encourages all funders of GME to adhere to the Accreditation Council for Graduate Medical Education's requirements on restrictive covenants and its principles guiding the relationship between GME, industry and other funding sources, as well as the AMA's Opinion 8.061, and other AMA policy that protects residents and fellows from exploitation, including physicians training in non-ACGME-accredited programs; and (4) encourages entities planning to expand or start GME programs to develop a clear statement of the benefits of their GME activities to facilitate potential funding from appropriate sources given the goals of their programs.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 224
(A-24)

Introduced by: Medical Student Section

Subject: Antidiscrimination Protections for LGBTQ+ Youth in Foster Care

Referred to: Reference Committee B

- 1 Whereas, 30% of youth in foster care are LGBTQ+, triple the rate of those not in care¹⁻⁴; and
2
3 Whereas, in the foster care system, LGBTQ+ identifying youth encounter unique and significant
4 threats associated with their identity including rejection, harassment, violence, and discrimination
5 from social workers, foster parents, residential staff, and peers in addition to poorer health
6 outcomes compared to their non-LGBTQ+ counterparts including worse physical, mental, and
7 sexual health alongside higher prevalence of trauma, substance use, survival sex, sexual
8 victimization, and unintended pregnancy¹⁻¹⁹; and
9
10 Whereas, studies demonstrate LGBTQ+ youth are twice as likely to enter foster care, more likely
11 to spend longer time in care, be removed from placements due to hostility based on LGBTQ+
12 identity, and to age out of care without adequate preparation for higher education, employment,
13 and housing^{6,7,20-26}; and
14
15 Whereas, in 2016, the United States Children’s Bureau confidentially collected data on foster
16 youth’s sexual orientation as well as family conflicts related to a child’s gender identity, sexual
17 orientation, and or gender expression, demonstrating the ability of the system to obtain
18 demographic information confidentially to improve the system for LGBTQ+ youth²⁷; and
19
20 Whereas, in 2020, the United States Children’s Bureau eliminated requirements for collection of
21 demographics on sexual orientation in the Foster Care Analysis and Reporting System, which
22 limited child welfare agencies’ ability to analyze LGBTQ+ youth in foster care and increase
23 programs, laws, and funds protecting LGBTQ+ foster youth²⁷⁻³⁰; and
24
25 Whereas, social care professionals at religiously-affiliated foster care facilities in the United States
26 were found to propagate negative stereotypes about same-sex relationships³¹; and
27
28 Whereas, in recent years, New Jersey child welfare officials successfully recruited and licensed
29 120 new foster homes that affirm and support LGBTQ+ youth, demonstrating through local
30 LGBTQ+ community organization, home studies, and training sessions that child services can
31 successfully recruit inclusive families for the foster care system³²; and
32
33 Whereas, the Children’s Bureau and Child Welfare League of America provide fact sheets and
34 brochures with passive guidance on supporting LGBTQ+ youth in foster care as an accessible
35 and feasible means of improving care for LGBTQ+ youth³³⁻³⁸; and
36
37 Whereas, implementation of the *RISE Care Coordination Team Program* in Los Angeles helped
38 LGBTQ+ youth in the Los Angeles foster care system feel supported in their identities and
39 demonstrated an accessible model by which other programs can support LGBTQ+ youth³⁹; and

1 Whereas, the Civil Rights Act of 1964 does not protect against discrimination of LGBTQ+
2 individuals in federally-funded programs, including adoption and foster care, with recent attempts
3 to expand nondiscrimination protections failing to pass⁴⁰⁻⁴⁶; and
4

5 Whereas, the lack of inclusive protections for LGBTQ+ individuals in federal legislation, such as
6 the Civil Rights Act of 1964, the Fair Housing Act, and the Affordable Care Act, has enabled rule
7 changes and proposals that permit discrimination against LGBTQ+ individuals⁴⁷⁻⁴⁹; and
8

9 Whereas, only 28 states and the District of Columbia have specific laws and policies in place to
10 protect LGBTQ+ foster youth from discrimination based on both sexual orientation and gender
11 identity, six other states include sexual orientation but not gender identity as a protected class in
12 child welfare, and some states have no protections at all^{21,33,50}; and
13

14 Whereas, only four states had regulatory guidance regarding placement of transgender youth in
15 out-of-home care in alignment with gender identity as of 2016, and child welfare agency officials
16 from three states reported placing transgender youth in gender-segregated residential facilities
17 by their sex assigned at birth rather than their gender identity^{32,51}; and
18

19 Whereas, the relationship between LGBTQ+ protections and availability of foster families is
20 unclear, but court cases in states challenging those protections are pending^{52,53}; and
21

22 Whereas, because youth may begin to identify as LGBTQ+ after being placed with a family not
23 supportive of those identities, screening for unsupportive families is necessary to reduce harm
24 toward LGBTQ+ youth⁵⁴⁻⁵⁶; and
25

26 Whereas, though AMA policies H-60.910 and H-160.991 separately address the healthcare needs
27 of youth in foster care and of LGBTQ+ individuals, the AMA has only written one letter to the
28 Department of Housing and Urban Development opposing the removal of protections for housing
29 allocation based on gender identity⁵⁷; therefore be it
30

31 RESOLVED, that our American Medical Association collaborate with state medical societies and
32 other appropriate stakeholders to support policies on the federal and state levels that establish
33 nondiscrimination protections within the foster care system on the basis of sexual orientation and
34 gender identity (New HOD Policy); and be it further
35

36 RESOLVED, that our AMA support efforts by the Department of Health and Human Services and
37 other appropriate stakeholders to establish a reporting mechanism for the collection of
38 anonymized and aggregated sexual orientation and gender identity data in the Foster Care
39 Analysis and Reporting System only when strong privacy protections exist (New HOD Policy);
40 and be it further
41

42 RESOLVED, that our AMA encourage child welfare agencies to implement practices, policies,
43 and regulations that: (a) provide training to child welfare professionals, social workers, and foster
44 caregivers on how to establish safe, stable, and affirming care placements for LGBTQ+ youth; (b)
45 adopt programs to prevent and reduce violence against LGBTQ+ youth in foster care; (c) improve
46 recruitment of foster families that are affirming of LGBTQ+ youth; and (d) allow gender diverse
47 youth to be placed in residential foster homes that are willing to accept their gender identity.
48 (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

RELEVANT AMA Policy

Addressing Healthcare Needs of Children in Foster Care, H-60.910

Our AMA advocates for comprehensive and evidence-based care that addresses the specific health care needs of children in foster care. [Res. 907, I-17]

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations, H-160.991

1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.

2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.

3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.

4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people. [CSA Rep. C, I-81; Reaffirmed: CLRPD Rep. F, I-91; CSA Rep. 8, I-94; Appended: Res. 506, A-00; Modified and Reaffirmed: Res. 501, A-07; Modified: CSAPH Rep. 9, A-08; Reaffirmation A-12; Modified: Res. 08, A-16; Modified: Res. 903, I-17; Modified: Res. 904, I-17; Res. 16, A-18; Reaffirmed: CSAPH Rep. 01, I-18]

Reducing Suicide Risk Among Lesbian, Gay, Bisexual, Transgender, and Questioning Youth Through Collaboration with Allied Organizations, H-60.927

Our AMA will partner with public and private organizations dedicated to public health and public policy to reduce lesbian, gay, bisexual, transgender, and questioning (LGBTQ) youth suicide and improve health among LGBTQ youth. [Res. 402, A-12; Reaffirmed: CSAPH Rep. 1, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 225
(A-24)

Introduced by: Medical Student Section

Subject: Humanitarian Efforts to Resettle Refugees

Referred to: Reference Committee B

1 Whereas, “refugee” is defined in the Immigration and Nationality Act as an individual
2 experiencing persecution or a well-founded fear of persecution on account of their race, religion,
3 nationality, membership in a particular social group, or political opinion¹⁻³; and
4

5 Whereas, refugees in the US undergo an extensive and complex admission process involving
6 evaluation and referral by UNHCR (the UN’s refugee agency) to the US State Department’s
7 Refugee Admissions Program (USRAP), and are a distinct population from asylum seekers or
8 migrants crossing at the US’ southern border, who follow a completely separate process¹; and
9

10 Whereas, the US consistently admits fewer refugees than its cap, leading to 5,000 to 40,000
11 unallocated refugees⁴; and
12

13 Whereas, 29 million refugees are estimated in 2023, including 14 million children⁵⁻⁶; and
14

15 Whereas, over a 20-year period, refugees in the US ages 18 to 45 pay on average \$21,000-
16 \$43,707 more in taxes than they receive in benefits⁷⁻¹⁰; and
17

18 Whereas, refugees in general contribute \$21 billion in taxes annually, including to Social
19 Security and Medicare, offsetting the costs our aging population¹³; and
20

21 Whereas, analyses from Ohio, Michigan, and Minnesota demonstrate how refugees produce
22 billions of dollars in economic activity annually and create thousands of jobs^{9,11}; and
23

24 Whereas, 77% of refugees are working age, as opposed to the 39.7% of the US-born population
25 and male refugees participate in the labor force at higher rates than US males^{7,12,14}; and
26

27 Whereas, under 3% of refugees return to their country of origin, and 84% of long-term refugees
28 make the US their home by taking steps to become citizens^{6,10,15}; and
29

30 Whereas, when annual refugee admissions decreased 86% between 2016-2020, the 295,000
31 person gap actually harmed the US economy by nearly \$10 billion annually⁸; and
32

33 Whereas, decreased resettlement caps and worsening backlogs delay family reunification and
34 leave people displaced for decades, remaining indefinitely in refugee camps¹⁶; and
35

36 Whereas, forced displacement and restrictions on refugee admissions result in distinct chronic
37 physical and mental phenomena and generational trauma¹⁶⁻¹⁸; therefore be it
38

39 RESOLVED, that our American Medical Association support increases and oppose decreases
40 to the annual refugee admissions cap in the United States. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

RELEVANT AMA Policy

D-65.984 Humanitarian and Medical Aid Support to Ukraine

Our AMA will advocate for: (1) continuous support of organizations providing humanitarian missions and medical care to Ukrainian refugees in Ukraine, at the Polish-Ukrainian border, in nearby countries, and/or in the US; (2) an early implementation of mental health measures, including suicide prevention efforts, and address war-related trauma and post-traumatic stress disorder when dealing with Ukrainian refugees with special attention to vulnerable populations including but not limited to young children, mothers, pregnant women, and the elderly; and (3) educational measures to enhance the understanding of war-related trauma in war survivors and promote broad protective factors (e.g., financial, employment, housing, and food stability) that can improve adjustment and outcomes for war-affected people, particularly when applied to vulnerable categories of people. [Res. 017, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 226
(A-24)

Introduced by: Missouri

Subject: Protecting Access to IVF Treatment

Referred to: Reference Committee B

1 Whereas, on Friday, 2/16/24, the Alabama Supreme Court ruled that “an embryo created
2 through in vitro fertilization (IVF) is a child protected by Alabama’s wrongful death act and the
3 Alabama Constitution;” and that “a human frozen embryo is a ‘child’ which is an unborn or
4 recently born children;” and that “the Constitution ... commands the judge to ... upholding the
5 sanctity of unborn life, including unborn life that exists outside the womb;” and that “the Court
6 would not create an exception in the statute for these IVF embryo children just because they
7 were located outside the womb; and

8
9 Whereas, historically, multiple states have already rejected attempts through legislation,
10 constitutional amendments or ballot measures to establish and expand the definition of
11 personhood and associated rights:

12 1. In 2008 and 2010, Colorado voters rejected ballot measures, to give constitutional
13 rights to individuals “at the beginning of biological development;” and

14 2. In 2011, Mississippi considered Proposition 26: "Should the term ‘person’ be defined
15 to include every human being from the moment of fertilization, cloning, or the equivalent
16 thereof?" which was voted down; and

17 3. In 2012, the Virginia House of Delegates passed House Bill 1 that was subsequently
18 tabled by the state Senate until 2013, which if passed would “construe the word ‘person’ under
19 Virginia Law ... to include unborn children” and enact that “the life of each human being begins
20 at conception;” and

21 4. Similar “Personhood” bills have also been passed by a single legislative chamber in
22 North Dakota, Oklahoma, and Mississippi; and

23
24 Whereas, these “Personhood” bills and ballot measures define a person as being a legal
25 entity from the moment of conception, and thus define fertilized eggs and embryos, as persons
26 with constitutional rights; and

27
28 Whereas, giving constitutional rights to a fertilized oocyte or embryo would interfere with the
29 physician-patient relationship in the provision of in vitro fertilization (IVF) services; and

30
31 Whereas, in current IVF practice in the United States, over half of embryo transfers will *not*
32 result in live birth, as many embryos after transfer will either (a) not result in a pregnancy, (b)
33 result in a miscarriage, or (c) result in a non-viable ectopic or molar pregnancy; and

34
35 Whereas, cryopreserved embryos also do *not* have a 100% thaw-survival rate, and a small
36 percentage of embryos will not survive freeze-thaw; and if embryos in the IVF lab have the
37 same legal status as children, then an embryology laboratory that fails to have a 100% thaw-
38 survival rate may also have some potential liability; and

1 Whereas, not all IVF patients can afford the long-term storage fees to cryopreserve embryos for
2 future use or to donate those embryos to others; and
3

4 Whereas, defining all embryos as “children” promotes the dangerous notion that all embryos
5 should somehow be transferred in an IVF cycle (instead of cryopreserving extra embryos of
6 adequate quality), which could potentially increase the rate of dangerous higher-order multiple
7 gestation pregnancies (triplets, quadruplets, etc.); and
8

9 Whereas, defining all embryos as “children” may promote the dangerous and misguided notion
10 that an ectopic pregnancy could somehow be safely implanted into the uterus (as is erroneously
11 reported on various “Personhood” websites); and
12

13 Whereas, considering embryos to be “children” also raises potential legal complications, such
14 as how inheritance and probate laws would apply to embryos; and
15

16 Whereas, defining all embryos as “children” may promote the dangerous and misguided notion
17 that a molar pregnancy can somehow be “rescued” instead of being a potential cancer; and
18

19 Whereas, considering abandoned embryos to be “children” raises questions about whether
20 states would then be liable to provide support for cryopreserved embryos and long-term storage
21 costs, such as under Medicaid as if they were “wards” of the state; and
22

23 Whereas, giving “rights” to embryos in the IVF lab will potentially complicate the practice of IVF
24 by inappropriately pressuring physicians to transfer abnormally-growing and arrested embryos;
25 and
26

27 Whereas, the American Society for Reproductive Medicine (ASRM) Position Statement on
28 Personhood Measures states that:

29 1. The ASRM is strongly opposed to measures granting constitutional rights or
30 protections and “personhood” status to fertilized reproductive tissues.

31 2. In a growing number of states, vaguely worded and often misleading measures are
32 appearing either in legislation or as proposed constitutional amendments, defining when life
33 begins and granting legal “personhood” status to embryos at varying stages of development. If
34 approved, these measures will have profound consequences for women and their families.

35 3. ..., these broadly worded measures will have significant effects on a number of
36 medical treatments available to women of reproductive age.

37 a. Personhood measures would make illegal some commonly used birth control
38 methods.

39 b. Personhood measures would make illegal a physician's ability to provide medically
40 appropriate care to women experiencing life-threatening complications due to a tubal
41 pregnancy.

42 c. Personhood measures would consign infertility patients to less effective, less safe
43 treatments for their disease.

44 d. Personhood measures would unduly restrict infertile patients' right to make decisions
45 about their own medical treatments, including determining the fate of any embryos created as
46 part of the IVF process.

47 4. ASRM will oppose any personhood measure that is unclear, confusing, ambiguous, or
48 not based on sound scientific or medical knowledge, and which threatens the safety and
49 effective treatment of patients; therefore be it
50

51 RESOLVED, that our American Medical Association oppose any legislation that could
52 criminalize in-vitro fertilization (New HOD Policy); and be it further

1 RESOLVED, that our AMA work with other interested organizations to oppose Court rulings that
2 equate gametes (oocytes and sperm) or embryos with children. (Directive to Take Action)
3

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/16/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 227
(A-24)

Introduced by: Missouri

Subject: Medicare Reimbursement for Telemedicine

Referred to: Reference Committee B

1 Whereas, during the COVID-19 pandemic, Medicare billing rules were revised to enable and
2 facilitate reimbursement to clinicians for services rendered by telemedicine links to their
3 patients; and
4

5 Whereas, these rules were adopted during the COVID-19 pandemic, and did not differentiate
6 reimbursement rates for office-based vs telemedicine-based patient care; and
7

8 Whereas, commercial insurers have generally adopted Medicare’s methodology for
9 reimbursement; and
10

11 Whereas, reimbursement for telemedicine services has had two salutatory effects: 1) greater
12 convenience for patients, and 2) decreased need to utilize petroleum-powered vehicles for
13 patients’ and doctors’ transit from their homes to physicians’ offices; and
14

15 Whereas, for mobility-challenged patients telemedicine links offer an increased level of
16 convenience; and
17

18 Whereas, American Medical Association Policy D-135.966, “Declaring Climate Change a Public
19 Health Crisis”, states that a goal for America’s health care sector is to decrease its greenhouse
20 gas emissions by 50% by 2030, and to achieve “carbon neutrality” by 2050; and
21

22 Whereas, under Medicare, through December 31, 2024, Medicare will reimburse physicians for
23 charges that accrue for the provision of medical care to patients via telehealth services; and
24

25 Whereas, the remission of the COVID pandemic has enabled much medical care to again be
26 provided in “brick and mortar” offices, which makes it imperative that reimbursement rates for
27 office-based care should be greater than reimbursement rates for telemedicine-based care, due
28 to the greater overhead expenses associated with office-based care; and
29

30 Whereas, to extend indefinitely the policy of reimbursement to physicians for services provided via
31 telemedicine links (at rates lower than provided for office-based care) would be salutatory toward
32 patient convenience and toward reducing the greenhouse gas emissions attributable to the
33 healthcare sector, a previously-established goal of our AMA via its Policy D-135.9661; therefore
34 be it
35

36 RESOLVED, that our American Medical Association support removal of the December 31, 2024
37 “sunset” date currently set for Medicare to cease reimbursement for services provided via
38 telemedicine, such that reimbursement of medical services provided by telemedicine be
39 continued indefinitely into the future, consistent with what would be determined by the Relative
40 Value Update Committee (“RUC”). (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/16/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 228
(A-24)

Introduced by: Missouri
Subject: Waiver of Due Process Clauses
Referred to: Reference Committee B

1 Whereas, the right to and access to due process protections is a fundamental right enjoyed by all
2 employed Americans, unless specifically waived by the employee; and
3
4 Whereas, approximately half of all physicians are employed by employers that are not local,
5 physician-owned groups; and
6
7 Whereas, many employment agreements offered to such employed physicians contain “Waiver
8 of Due Process” clauses, which the non-physician employer has inserted to nullify the physician-
9 employee’s due process rights; and
10
11 Whereas, by working at the patient care interface, physicians are uniquely situated to detect
12 threats to patients’ health and well-being that have not been recognized or acknowledged by
13 members of hospitals’ administrations; and
14
15 Whereas, hospital administrators have occasionally retaliated against physicians who have
16 reported threats to patient or hospital worker safety in a manner that adversely impacts the
17 physician’s employment security, income stream and access to ongoing opportunities to provide
18 patient care, especially after within-organization reporting has failed to result in the employer
19 addressing or resolving those threats; and
20
21 Whereas, due process protections are thus essential for physicians, because they are duty-
22 bound to advocate for the best interest of patients and co-workers, without fear of adverse job
23 actions on the part of their employer; and
24
25 Whereas, federal legislation proposing to ban waiver of due process provisions in the
26 employment contracts of some physicians was introduced in the 116th Congress of the United
27 States of America, the “ER Hero and Patient Safety Act”, also known as HR 69102, a proposed
28 law that was not enacted; and
29
30 Whereas, the AMA House of Delegates adopted Resolution I-205-2022, advocating that our
31 AMA work for the abolition of waiver of due process clauses in physicians’ employment
32 agreements; and
33
34 Whereas, the AMA has since developed model state legislation on this topic, yet has not
35 developed model federal legislation regarding this matter as had been envisioned within the “ER
36 Hero and Patient Safety Act”; therefore be it
37
38 RESOLVED, that our American Medical Association advocate that waiver of due process
39 clauses be eliminated from all employment agreements between employed physicians and their
40 non-physician employers, and be declared unenforceable in physicians’ previously-executed

1 employment agreements between physicians and their non-physician employers that currently
2 exist (Directive to Take Action); and be it further

3

4 RESOLVED, that our AMA will engage in advocacy for adoption of such legislation at the
5 federal level. (Directive to Take Action)

6

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/16/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 229
(A-24)

Introduced by: Illinois

Subject: Opposition to Legalization of Psilocybin

Referred to: Reference Committee B

1 Whereas, the effects of psilocybin, psilocin, baeocystin, norbaeocystin, and indole alkaloids
2 similar to LSD (d-lysergic acid) are primarily central (hallucinogenic) but there are some
3 peripheral effects, probably through the serotonin-norepinephrine pathways similar to
4 bufotenine; and

5
6 Whereas, according to the Drug Enforcement Administration (DEA), "The physical effects
7 include: nausea, vomiting, muscle weakness, and lack of coordination. The psychological
8 consequences of psilocybin use include hallucinations and an inability to discern fantasy from
9 reality. Panic reactions and a psychotic-like episode also may occur, particularly if a user
10 ingests a high dose." (<https://www.dea.gov/factsheets/psilocybin>); and

11
12 Whereas, mild to moderate effects of hallucinogenic mushrooms include dilated pupils
13 (develops in over 90% of cases), confusion, vertigo, drowsiness, nausea, vomiting, tachycardia,
14 and mild hypertension. Psychotropic effects include sense of exhilaration, hallucinations
15 including vivid bright colors and shapes, euphoria, distortion of sense of time, dysesthesias,
16 anxiety, perceptual distortions (may result in either a pleasant or apprehensive mood; "good" or
17 "bad" trip), and impaired judgement. Although hallucinations usually do not persist after 4 to 5
18 hours, prolonged hallucinations persisting for up to 4 days have rarely been reported. Flashback
19 phenomena have occurred from 2 weeks to 8 months after ingestion; and

20
21 Whereas, severe toxic physical effects include: muscular weakness, increased deep tendon
22 reflexes, fever (particularly in children), flushing (primarily face and upper trunk), tachycardia,
23 hypertension, ataxia, paresthesias, seizures (more common in children), rhabdomyolysis (very
24 rarely), renal failure, or cardiopulmonary arrest. Intravenous injection of mushroom extract can
25 cause fever, hypoxia, or mild methemoglobinemia. Severe psychotropic effects include: mood
26 alterations, acute psychosis, panic reactions, and powerful distortions of space and time; and

27
28 Whereas, psilocybin can induce complex changes at various levels of the brain which lead to
29 altered states of consciousness; and

30
31 Whereas, there is little correlation between the quantity ingested and clinical effects. One to four
32 large Psilocybes (10 to 30 grams fresh weight) may yield 5 to 15 mg of psilocybin, and produce
33 hallucinations. A dose of 12 mg or more of psilocybin can produce vivid hallucinations; and

34
35 Whereas, Psilocybin or it's related substances should not be used in any safety sensitive
36 position in that impairment is likely to occur; and

37
38 Whereas, quality control (for dose confirmation and contaminant detection) is difficult to obtain
39 for a fungal based product; and

- 1 Whereas, Psilocybin is not detected with usual toxicological screening methods and blood/urine
2 concentrations of the active ingredient (Psilocin or 4-hydroxy-dimethyltryptamine; 4-OH-DMT) is
3 not possible for the clinical application (requiring at least one-week turnaround from most
4 reference labs (<https://www.nmslabs.com/tests?test=psilocybin>); and
5
6 Whereas, therapeutic drug monitoring, dose titration to effects and prediction of toxic sequelae
7 is not possible with Psilocybin; therefore be it
8
9 RESOLVED, that our American Medical Association oppose any legislative efforts relatable to
10 legalization of Psilocybin/Psilocin or its related substances use. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 230
(A-24)

Introduced by: American Academy of Dermatology, American Society for Dermatologic Surgery Association, American Contact Dermatitis Society and American College of Mohs Surgery

Subject: Protecting Patients from Inappropriate Dentist and Dental Hygienist Scope of Practice Expansion

Referred to: Reference Committee B

1 Whereas, procedures performed by any means, methods, devices, or instruments that can alter
2 or cause biologic change or damage the skin and subcutaneous tissue constitute the practice of
3 medicine and surgery; and
4

5 Whereas, there are increased legislative and regulatory efforts to allow dentists and dental
6 hygienists to administer neurotoxins and dermal fillers for therapeutic or cosmetic purposes
7 without physician supervision; and
8

9 Whereas, in order to ensure patient safety, administration of neurotoxins and dermal fillers
10 requires supervision by a trained physician, education, training, specific knowledge of facial
11 anatomy (particularly in the periocular region), and the ability to manage complications that may
12 arise; and
13

14 Whereas, the focus of dental education is on oral health, rather than the skin and facial tissue;
15 and
16

17 Whereas, dentists and dental hygienists are not required to demonstrate competency in
18 procedures that augment skin and soft tissues using products that can alter or damage such
19 living tissue; and
20

21 Whereas, the American Dental Association and the American Dental Hygienist Association are
22 silent on the issue of dentists and dental hygienists performing medical procedures related to
23 fillers and neurotoxins; and
24

25 Whereas, in 2023 the Food and Drug Administration (FDA) updated consumer guidance to state
26 that anyone considering a neurotoxin or dermal filler should consult with a licensed health care
27 provider who has experience in the fields of dermatology or plastic surgery, who is experienced
28 in injecting dermal fillers, who is knowledgeable about fillers, anatomy and managing
29 complications, and who knows the risks and benefits of treatment³; and
30

31 Whereas, preventing and treating adverse events of injectable fillers requires the development
32 of evidence-based clinical practice guidelines to support decision-making in daily practice and
33 knowledge of vascular anatomy is *crucial* for all filler injections⁴; and
34

35 Whereas, intravascular injection is possible at any location on the face, but certain locations
36 carry a higher risk of filler embolization, necrosis, visual abnormalities, blindness and stroke⁵;
37 and

1 Whereas, allowing dentists and dental hygienists to administer neurotoxins and dermal fillers for
2 therapeutic or cosmetic purposes jeopardizes patient safety and disregards what is considered
3 adequate and appropriate medical education and training; therefore be it
4

5 RESOLVED, that our American Medical Association advocacy efforts recognize the threat
6 posed to patient safety when dentists and dental hygienists are authorized to practice medicine
7 and administer procedures outside their level of education and training (New HOD Policy); and
8 be it further
9

10 RESOLVED, that our AMA actively oppose regulatory and legislative efforts authorizing dentists
11 and dental hygienists to practice outside their level of education and training. (Directive to Take
12 Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

RELEVANT AMA POLICY

D-35.983 Addressing Safety and Regulation in Medical Spas

Our AMA will: (1) advocate for state regulation to ensure that cosmetic medical procedures, whether performed in medical spas or in more traditional medical settings, have the same safeguards as "medically necessary" procedures, including those which require appropriate training, supervision and oversight; (2) advocate that cosmetic medical procedures, such as botulinum toxin injections, dermal filler injections, and laser and intense pulsed light procedures, be considered the practice of medicine; (3) take steps to increase the public awareness about the dangers of those medical spas which do not adhere to patient safety standards by encouraging the creation of formal complaint procedures and accountability measures in order to increase transparency; and (4) continue to evaluate the evolving issues related to medical spas, in conjunction with interested state and medical specialty societies. (Res. 209, I-11; Reaffirmed: BOT Rep. 7, A-21)

D-160.995 Physician and Nonphysician Licensure and Scope of Practice

1. Our AMA will: (a) continue to support the activities of the Advocacy Resource Center in providing advice and assistance to specialty and state medical societies concerning scope of practice issues to include the collection, summarization and wide dissemination of data on the training and the scope of practice of physicians (MDs and DOs) and nonphysician groups and that our AMA make these issues a legislative/advocacy priority; (b) endorse current and future funding of research to identify the most cost effective, high-quality methods to deliver care to patients, including methods of multidisciplinary care; and (c) review and report to the House of Delegates on a periodic basis on such data that may become available in the future on the quality of care provided by physician and nonphysician groups.
2. Our AMA will: (a) continue to work with relevant stakeholders to recognize physician training and education and patient safety concerns, and produce advocacy tools and materials for state level advocates to use in scope of practice discussions with legislatures, including but not limited to infographics, interactive maps, scientific overviews, geographic comparisons, and educational experience; (b) advocate for the inclusion of non-physician scope of practice characteristics in various

analyses of practice location attributes and desirability; (c) advocate for the inclusion of scope of practice expansion into measurements of physician well-being; and (d) study the impact of scope of practice expansion on medical student choice of specialty.

3. Our AMA will consider all available legal, regulatory, and legislative options to oppose state board decisions that increase non-physician health care provider scope of practice beyond legislative statute or regulation. (CME Rep. 1, I-00; Reaffirmed: CME Rep. 2, A-10; Modified: CCB/CLRPD Rep. 2, A-14; Appended: Res. 251, A-18; Appended: Res. 222, I-19)

H-160.949 Practicing Medicine by Non-Physicians

Our AMA: (1) urges all people, including physicians and patients, to consider the consequences of any health care plan that places any patient care at risk by substitution of a non-physician in the diagnosis, treatment, education, direction and medical procedures where clear-cut documentation of assured quality has not been carried out, and where such alters the traditional pattern of practice in which the physician directs and supervises the care given;

(2) continues to work with constituent societies to educate the public regarding the differences in the scopes of practice and education of physicians and non-physician health care workers;

(3) continues to actively oppose legislation allowing non-physician groups to engage in the practice of medicine without physician (MD, DO) training or appropriate physician (MD, DO) supervision;

(4) continues to encourage state medical societies to oppose state legislation allowing non-physician groups to engage in the practice of medicine without physician (MD, DO) training or appropriate physician (MD, DO) supervision;

(5) through legislative and regulatory efforts, vigorously support and advocate for the requirement of appropriate physician supervision of non-physician clinical staff in all areas of medicine; and

(6) opposes special licensing pathways for "assistant physicians" (i.e., those who are not currently enrolled in an Accreditation Council for Graduate Medical Education training program or have not completed at least one year of accredited graduate medical education in the U.S). (Res. 317, I-94; Modified by Res. 501, A-97; Appended: Res. 321, I-98; Reaffirmation A-99; Appended: Res. 240, Reaffirmed: Res. 708 and Reaffirmation A-00; Reaffirmed: CME Rep. 1, I-00; Reaffirmed: CMS Rep. 6, A-10; Reaffirmed: Res. 208, I-10; Reaffirmed: Res. 224, A-11; Reaffirmed: BOT Rep. 9, I-11; Reaffirmed: Res. 107, A-14; Appended: Res. 324, A-14; Modified: CME Rep. 2, A-21)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 231
(A-24)

Introduced by: American College of Medical Genetics and Genomics

Subject: Supporting the Establishment of Rare Disease Advisory Councils

Referred to: Reference Committee B

- 1 Whereas, a rare disease is defined as a disease or condition that impacts fewer than 200,000
2 people in the United States¹; and
3
- 4 Whereas, given the current estimate for the number of known rare diseases is more than
5 10,000, the rare disease population comprises of more than 30 million people in the United
6 States²; and
7
- 8 Whereas, the economic burden of rare diseases surpasses that of some of the most prevalent
9 chronic diseases in the United States³; and
10
- 11 Whereas, rare diseases are often chronic, progressive, and debilitating, and lead to significant
12 morbidity and mortality⁴; and
13
- 14 Whereas, rare disease patients continue to face hurdles with accessing new available
15 medications due to costs and payor policies, including prior authorizations and denials⁵; and
16
- 17 Whereas, patients with rare disorders face other unique challenges in healthcare including
18 limited access to specialists, the cost-sharing mechanism of prescriptions, insurance coverage
19 issues without a proper diagnosis, and more^{5,6}; and
20
- 21 Whereas, rare patients report significantly lower quality of life scores due to facing these hurdles
22 and experiencing a longer diagnostic journey than typical patients^{5,6}; and
23
- 24 Whereas, a Rare Disease Advisory Council (RDAC) is an advisory body that informs
25 policymakers on the issues relevant to the rare community and gives said community a stronger
26 voice⁷; and
27
- 28 Whereas, since 2015, Rare Disease Advisory Councils have been established in 27 states,
29 leaving many states without advocates for proper rights for rare patients⁷; and
30
- 31 Whereas, Rare Disease Advisory Councils have been actively working on state and federal
32 policies addressing barriers to obtaining proper care for patients with rare diseases such as
33 Medicaid eligibility, newborn screening processes, coverage of medical nutrition, out-of-pocket
34 prescription drug costs, reforming step therapy, and more⁸; and
35
- 36 Whereas, AMA Policy H 460.880 recognizes the under-treatment and under-diagnosis of
37 orphan diseases but fails to sufficiently include how to act on this recognition to actively support
38 rare disease patients and their families; therefore be it

1 RESOLVED, that our American Medical Association will support state legislation for the
2 establishment of Rare Disease Advisory Councils in each state (New HOD Policy).
3

Fiscal Note: Minimal - less than \$1,000

Received: 4/24/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 232
(A-24)

Introduced by: Association for Clinical Oncology, American College of Rheumatology

Subject: Medicare Advantage Part B Drug Coverage

Referred to: Reference Committee B

1 Whereas, 66% of Medicare beneficiaries have been diagnosed with at least two chronic
2 diseases; and
3
4 Whereas, the majority of patients enrolled in traditional (fee-for-service) Medicare have
5 additional coverage that limits their financial exposure to the 20% coinsurance required for Part
6 B drugs and biologicals; and
7
8 Whereas, over half of all Medicare-eligible patients were enrolled in a Medicare Advantage (MA)
9 plan in 2023; and
10
11 Whereas, Medicare patients are increasingly choosing MA plans because many of those plans
12 have lower premiums and are more affordable for less affluent patients; and
13
14 Whereas, more MA plans are listing specialty drugs and biologicals as either non-covered
15 benefits or are covering only 80% of the cost of physician administered drugs and biologicals;
16 and
17
18 Whereas, patients enrolled in MA are prohibited from purchasing Medigap policies; and
19
20 Whereas, less affluent patients may not be able to afford the remaining 20% coinsurance for
21 essential drugs and biologicals required by most MA plans, potentially leading to disparities in
22 health outcomes; and
23
24 Whereas, prior to a chronic disease diagnosis, patients enrolling in MA can have no knowledge
25 of which expensive drugs and biologicals they may require and, further, that those drugs and
26 biologicals may be designated as non-covered by the plan or require a 20% coinsurance
27 payment; and
28
29 Whereas, when a patient enrolled in MA is diagnosed with a chronic disease where costly
30 physician-administered drugs and biologicals are necessary, they cannot revert to traditional
31 (fee-for-service) Medicare or purchase a Medigap policy; therefore be it
32
33 RESOLVED, that our American Medical Association will advocate with Congress, through the
34 appropriate oversight committees, and with the Centers for Medicare & Medicaid Services
35 (CMS) to require that Medicare Advantage (MA) plans cover physician-administered drugs and
36 biologicals in such a way that the patient out of pocket cost is the same or less than the amount
37 that a patient with traditional Medicare plus a Medigap plan would pay. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 4/24/2024

RELEVANT AMA POLICY

Medicare Advantage Policies H-330.878

1. Our AMA supports that Medicare Advantage plans must provide enrollees with coverage for, at a minimum, all Part A and Part B original Medicare services, if the enrollee is entitled to benefits under both parts.
2. Our AMA will advocate: (a) for better enforcement of Medicare Advantage regulations to hold the Centers for Medicare & Medicaid Services (CMS) accountable for presenting transparency of minimum standards and to determine if those standards are being met for physicians and their patients; (b) that Medicare Advantage plans be required to post all components of Medicare covered and not covered in all plans across the US on their website along with the additional benefits provided; and (c) that CMS maintain a publicly available database of physicians in network under Medicare Advantage and the status of each of these physicians in regard to accepting new patients in a manner least burdensome to physicians.

Deemed Participation and Misleading Marketing by Medicare Advantage Private Fee for Service Plans D-330.930

Our AMA will continue its efforts to educate physicians and the general public on the implications of participating in programs offered under Medicare Advantage and educate physicians and the public about the lack of secondary coverage (Medigap policies) with Medicare Advantage plans and how this may affect enrollees.

Transparency of Costs to Patients for Their Prescription Medications Under Medicare Part D and Medicare Advantage Plans H-330.870

Our AMA will: (1) advocate for provision of transparent print and audio/video patient educational resources to patients and families in multiple languages from health care systems and from Medicare - directly accessible - by consumers and families, explaining clearly the different benefits, as well as the varied, programmatic and other out-of-pocket costs for their medications under Medicare, Medicare Supplemental and Medicare Advantage plans; (2) advocate for printed and audio/video patient educational resources regarding personal costs, changes in benefits and provider panels that may be incurred when switching (voluntarily or otherwise) between Medicare, Medical Supplemental and Medicare Advantage or other plans, including additional information regarding federal and state health insurance assistance programs that patients and consumers could access directly; and (3) advocate for increased funding for federal and state health insurance assistance programs and educate physicians, hospitals, and patients about the availability of and access to such programs.

Medicare Cost-Sharing D-330.951

Our AMA will urge the Centers for Medicare and Medicaid Services to require companies that participate in the Medicare Advantage program to provide enrollees and potential enrollees timely information in a comparable, standardized, and clearly-written format that details enrollment restrictions, as well as all coverage restrictions and beneficiary cost-sharing requirements for all services.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 233
(A-24)

Introduced by: Association for Clinical Oncology, American College of Rheumatology

Subject: Prohibiting Mandatory White Bagging

Referred to: Reference Committee B

- 1 Whereas, many health insurers and pharmacy benefit managers (PBMs) have adopted policies
- 2 that condition coverage of a clinician-administered drug, such as an IV infusion, on the drug
- 3 being dispensed from a PBM-affiliated mail order pharmacy; and
- 4
- 5 Whereas, this practice is commonly referred to as “white bagging”; and
- 6
- 7 Whereas, mandatory white bagging policies exclude payment for medically necessary drugs
- 8 from any health care provider that is not under common ownership with the insurer or PBM,
- 9 including in-network pharmacies; and
- 10
- 11 Whereas, drugs commonly subject to mandatory white bagging policies are often needed to
- 12 treat the most vulnerable patient populations with complex treatment plans who require efficient
- 13 and timely delivery of clinician-administered drugs for successful outcomes; and
- 14
- 15 Whereas, white bagging requires each individual patient-specific treatment dose to be shipped
- 16 in a separate parcel, via common carrier, to the administering provider, even if the administering
- 17 provider already has the drug in stock and available for administration; and
- 18
- 19 Whereas, shipments from specialty pharmacies can be delayed and are difficult for providers to
- 20 track; and
- 21
- 22 Whereas, if a patient’s clinical status changes from when the medication was ordered, the
- 23 adjusted medication must be re-ordered from the third-party pharmacy, which can result in
- 24 increases in canceled appointments, days to initiation of therapy, and frequency of past-due
- 25 administrations; and
- 26
- 27 Whereas, day-of treatment changes lead to drug waste when an unused portion of the drug
- 28 cannot be used for another patient, and practices and hospitals must then discard the unused
- 29 portion of highly toxic drugs according to state and federal safety standards, creating additional
- 30 administrative burden; and
- 31
- 32 Whereas, providers have no control over the shipping process, limiting their ability to prevent
- 33 improper storage or mishandling of white bagged drugs; and
- 34
- 35 Whereas, a 2023 analysis found that, on average, bagging increased oncology patients’ out-of-
- 36 pocket costs by \$180 per month, or \$2,160 per year; and
- 37
- 38 Whereas, since 2021, eight states have prohibited the use of payer-mandated white bagging;
- 39 therefore be it

1 RESOLVED, that our American Medical Association urge state and federal policymakers to
2 enact legislation to prohibit the mandatory use of white bagging (Directive to Take Action).
3

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

REFERENCES

RELEVANT AMA POLICY

Medication Brown Bagging H-100.951

1. Our AMA affirms that decisions to accept or refuse "brown bagged" (patient-acquired, physician-administered) pharmaceuticals be made only by physicians responsible for administering these medications.
2. Our AMA affirms that "brown bagged" pharmaceuticals be accepted for in-office or hospital administration only after the physician responsible for administering these medications determines that the individual patient, or his or her agent, is fully capable of safely handling and transporting the medication.
3. Our AMA will work with interested national medical specialty societies and state medical associations to oppose third party payer policies and legislative and regulatory actions that require patients to utilize "brown bagging" to ensure coverage of office-administered medications.
4. Our AMA will work with interested national medical specialty societies and state medical associations to oppose third party payer policies that reimburse office-administered drug costs at less than the provider's cost of acquiring the drug if the provider does not accept "brown bagging."

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 234
(A-24)

Introduced by: Association for Clinical Oncology, American Academy of Dermatology
Association, American College of Mohs Surgery, American Contact
Dermatitis Society, American College of Rheumatology

Subject: State Prescription Drug Affordability Boards - Study

Referred to: Reference Committee B

- 1 Whereas, in an effort to control high prescription drug costs, states are increasingly considering
2 prescription drug affordability boards (PDABs); and
3
4 Whereas, PDABs in Colorado, Maryland and Minnesota have the authority to set upper
5 payment limits (UPLs) for certain high-cost medications; and
6
7 Whereas, a UPL is the maximum reimbursement rate above which purchasers throughout the
8 state may not pay for prescription drug products; and
9
10 Whereas, Medicare pays most separately payable Part-B covered drugs and biologics at a rate
11 of the drug's average sales price plus 6%; and
12
13 Whereas, the 6% add-on payment for Medicare Part B drugs is intended to cover expenses
14 associated with administering drugs in-office, including storage and handling; and
15
16 Whereas, similar to the concept of an upper payment limit, the Inflation Reduction Act (IRA)
17 establishes a "maximum fair price" for a negotiated drug; and
18
19 Whereas, under the IRA, Medicare's payment to providers for Part B drugs with negotiated
20 prices will be at 106% of the maximum fair price; and
21
22 Whereas, reimbursement for physician administered drugs can be up to 125% of a drug's
23 average sales price in the private insurance market; and
24
25 Whereas, state PDAB legislation that includes UPL authority often lacks language that would
26 allow physicians to seek reimbursement for storage and handling of a physician-administered
27 drug subject to a UPL; therefore be it
28
29 RESOLVED, that our American Medical Association conduct a study to determine how upper
30 payment limits (UPLs) established by state prescription drug affordability boards (PDABs) will
31 impact reimbursement for physician-administered drugs and what impact state UPLs will have
32 on patient access to care (Directive to Take Action); and be it further
33
34 RESOLVED, that our AMA report the results of the study on UPLs to the House of Delegates at
35 A-25. (Directive to Take Action)
36

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 4/24/2024

REFERENCES

RELEVANT AMA POLICY

Reducing Prescription Drug Prices D-110.993

Our AMA will (1) continue to meet with the Pharmaceutical Research and Manufacturers of America to engage in effective dialogue that urges the pharmaceutical industry to exercise reasonable restraint in the pricing of drugs; and (2) encourage state medical associations and others that are interested in pharmaceutical bulk purchasing alliances, pharmaceutical assistance and drug discount programs, and other related pharmaceutical pricing legislation, to contact the National Conference of State Legislatures, which maintains a comprehensive database on all such programs and legislation.

Medicare Part B Competitive Acquisition Program (CAP) H-110.983

Our AMA will advocate that any revised Medicare Part B Competitive Acquisition Program meet the following standards to improve the value of the program by lowering the cost of drugs without undermining quality of care:

- (1) it must be genuinely voluntary and not penalize practices that choose not to participate;
- (2) it should provide supplemental payments to reimburse for costs associated with special handling and storage for Part B drugs;
- (3) it must not reduce reimbursement for services related to provision/administration of Part B drugs, and reimbursement should be indexed to an appropriate healthcare inflation rate;
- (4) it should permit flexibility such as allowing for variation in orders that may occur on the day of treatment, and allow for the use of CAP-acquired drugs at multiple office locations;
- (5) it should allow practices to choose from multiple vendors to ensure competition, and should also ensure that vendors meet appropriate safety and quality standards;
- (6) it should include robust and comprehensive patient protections which include preventing delays in treatment, helping patients find assistance or alternative payment arrangements if they cannot meet the cost-sharing responsibility, and vendors should bear the risk of non-payment of patient copayments in a way that does not penalize the physician;
- (7) it should not allow vendors to restrict patient access using utilization management policies such as step therapy; and
- (8) it should not force disruption of current systems which have evolved to ensure patient access to necessary medications.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 235
(A-24)

Introduced by: New Jersey

Subject: Establish a Cyber-Security Relief Fund

Referred to: Reference Committee B

- 1 Whereas, Cyber-attacks are becoming frequent and that they will continue to escalate and
2 become more complex; and
3
4 Whereas, the recent cyber-attack on “Optum” resulted in thousands of Physician payments to
5 be withheld for several weeks or months resulting in devastating consequences to the several
6 thousand families because of inability to meet the payroll of the physicians and their employees;
7 and
8
9 Whereas, the financial impact is global, affecting private practicing Physicians, Medical groups,
10 and healthcare systems; and
11
12 Whereas, United Healthcare’s full year 2023 earnings from operations were \$32.4 billion;
13 therefore be it
14
15 RESOLVED, that our American Medical Association, through appropriate channels, advocate
16 for a ‘Cyber Security Relief Fund” to be established by Congress (Directive to Take Action); and
17 be it further
18
19 RESOLVED, that the “Cyber Security Relief Fund” be funded through contributions from health
20 insurance companies and all payers - as a mandated requirement by each of the payer
21 (Directive to Take Action); and be it further
22
23 RESOLVED, that the “Cyber Security Relief Fund” only be utilized for ‘uninterrupted’ payments
24 to all providers- in a structured way, in the event of future cyber-attacks affecting payments.
25 (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 5/3/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 236
(A-24)

Introduced by: Delaware

Subject: Support of Physicians Pursuing Collective Bargaining and Unionization

Referred to: Reference Committee B

1 Whereas, the American Medical Association supports physicians' entitlement to engage in
2 collective bargaining, and it is AMA policy to advocate for broadening the scope of eligibility for
3 this right under federal law, thereby expanding the number of physicians eligible to join unions¹;
4 and

5
6 Whereas, the AMA highlights that bargaining units consisting solely of physicians are presumed
7 appropriate,¹ a recommendation that aligns with the acknowledgment of physicians' unique
8 skills, distinct expertise, and ethical and professional obligations; and

9
10 Whereas, in 1999 the AMA provided financial support for the establishment of a national labor
11 organization, the Physicians for Responsible Negotiation (PRN), under the National Labor
12 Relations Board (NLRB), an initiative aimed to support the development and operation of local
13 physician negotiating units as an option for employed physicians and physicians in-training, but
14 due to limited participation from physicians, the AMA withdrew this support in 2004¹; and

15
16 Whereas, since 2004, the number of physicians belonging to unions in the United States has
17 reportedly surged, with a notable 26% increase from 2014 to 2019 reaching a total of 67,673
18 physicians that were union members¹; and

19
20 Whereas, the percentage of physicians in the United States now employed by hospitals, health
21 systems, or corporate entities has seen a substantial rise, reaching 73.9% as of January 2022,
22 compared to 47.4% in 2018, and the acquisition of physician practices by hospitals and
23 corporate entities escalated between 2019-2022 during the pandemic^{2,3}; and

24
25 Whereas, the shift from a workforce of independent professional physicians to one composed of
26 employed physicians fundamentally alters the dynamics among hospitals, health systems,
27 corporate entities and physicians, with a risk of adversely affecting the conditions under which
28 care is delivered and quality of care provided,⁴ consequently altering the physician-patient
29 relationship; and

30
31 Whereas, major hospitals, health care systems, and other corporate entities that employ
32 physicians may restrict employment options available to these professionals in a market largely
33 influenced by their employer or where covenants not to compete may further contribute to an
34 employer's bargaining advantage¹; and

35
36 Whereas, the increasing corporatization of medicine, encompassing private equity involvement
37 in health care, raises concerns about alignment of incentives, costs, impacts on physician
38 wellness, and subsequent downstream effects on patients^{5,6}; and

1 Whereas, in recent years, there has been a rise in physician burnout, exacerbated by the
2 COVID-19 pandemic, primarily stemming from the excessive time dedicated to electronic health
3 record documentation, bureaucratic administrative duties, and moral distress arising from a
4 misalignment between physicians' values and the incentivized actions dictated by the health
5 care system⁷⁻¹¹; and
6

7 Whereas, as physicians increasingly transition to employment, there's a trend toward
8 standardization of work schedules, time of appointments, and other aspects of work conditions.
9 Studies indicate that burnout is directly impacted by a lack of control over work conditions and
10 that granting more autonomy can mitigate stress and burnout, and even reduce cardiovascular
11 risk¹²; and
12

13 Whereas, physicians encounter significant power differentials when negotiating with hospital
14 systems as employers and may lack sufficient influence without collective bargaining to
15 counterbalance the dynamic¹; and
16

17 Whereas, collective bargaining serves as an effective mechanism for safeguarding patient care
18 safety standards, enhancing work conditions, securing fair compensation and job stability, and
19 establishing a structured process for addressing grievances; and
20

21 Whereas, unionization is linked with enhanced wages and benefits, as well as diminished
22 disparities in compensation for minority groups¹³; and
23

24 Whereas, in 2022, the National Labor Relations Board concluded that employed physicians are
25 not in a supervisory role simply by virtue of their position in the organization and, therefore, may
26 be eligible to unionize¹⁴; and
27

28 Whereas, collective bargaining and unionization do not necessarily require resorting to strikes.
29 For example, first responder unions often utilize binding arbitration as an alternative tactic.
30 Other potential strategies may include work slowdowns, picketing, mass resignation,
31 whistleblowing to regulatory and accrediting bodies, boycotting administrative tasks, and
32 suspending billing activities, among other options; therefore be it
33

34 RESOLVED, that our American Medical Association investigate avenues for the AMA and other
35 physician associations to aid physicians in initiating and navigating collective bargaining efforts,
36 encompassing but not limited to unionization. (Directive to Take Action)
37

Fiscal Note: \$43,308: Consult experts and coordinate with medical societies to identify and
communicate ways to aid physicians in collective bargaining efforts.

Received: 5/3/2024

RELEVANT AMA POLICY

D-383.977 Investigation into Residents, Fellows, and Physician Unions

Our AMA will study the risks and benefits of collective bargaining for physicians and physicians-in-training in today's health care environment. [Res. 606, A-19]

D-383.988 Collective Bargaining and the Definition of Supervisors

Our AMA will support legislative efforts by other organizations and entities that would overturn the Supreme Court's ruling in *National Labor Relations Board v. Kentucky River Community Care, Inc., et al.* [BOT Action in response to referred for decision Res. 248, A-01; Modified: BOT Rep. 22, A-11; Reaffirmed: Res. 206, A-19]

Update:

2022: In Piedmont Health Services, Inc. and Piedmont Health Services Medical Providers United, Case No. 10-RC-286648, Region 10 of the National Labor Relations Board (Region) issued a Decision and Direction of Election (DDE) in which it held that physicians are not supervisors under the National Labor Relations Act (the Act) simply by virtue of their position in the healthcare institution.

This DDE is notable, as it confirms that physicians will not automatically be considered supervisors under the Act and may seek union representation. Indeed, Piedmont's physicians and providers ultimately voted in favor of union representation. Healthcare employers should consider reviewing their physicians' job descriptions and job duties to determine whether they potentially can be considered supervisors under the Act.

H-385.946 Collective Bargaining for Physicians

The AMA will seek means to remove restrictions for physicians to form collective bargaining units in order to negotiate reasonable payments for medical services and to compete in the current managed care environment; and will include the drafting of appropriate legislation. [Res. 239, A-97; Reaffirmation I-98; Reaffirmation A-01; Reaffirmation A-05; Reaffirmation A-06; Reaffirmation A-08; Reaffirmation I-10; Reaffirmed: Res. 206, A-19]

H-383.998 Resident Physicians, Unions and Organized Labor

Our AMA strongly advocates for the separation of academic issues from terms of employment in determining negotiable items for labor organizations representing resident physicians and that those organizations should adhere to the AMA's Principles of Medical Ethics which prohibits such organizations or any of its members from engaging in any strike by the withholding of essential medical services from patients. [CME Rep. 7, A-00; Reaffirmed: CME Rep. 2, A-10; Modified: Speakers Rep. 01, A-17; Reaffirmed: BOT Rep. 13, A-19]

H-385.976 Physician Collective Bargaining

Our AMA's present view on the issue of physician collective negotiation is as follows:

- (1) There is more that physicians can do within existing antitrust laws to enhance their collective bargaining ability, and medical associations can play an active role in that bargaining. Education and instruction of physicians is a critical need. The AMA supports taking a leadership role in this process through an expanded program of assistance to independent and employed physicians.
- (2) Our AMA supports continued intervention in the courts and meetings with the Justice Department and FTC to enhance their understanding of the unique nature of medical practice and to seek interpretations of the antitrust laws which reflect that unique nature.
- (3) Our AMA supports continued advocacy for changes in the application of federal labor laws to expand the number of physicians who can bargain collectively.
- (4) Our AMA vigorously opposes any legislation that would further restrict the freedom of physicians to independently contract with Medicare patients.
- (5) Our AMA supports obtaining for the profession the ability to fully negotiate with the government about important issues involving reimbursement and patient care.

[BOT Rep. P, I-88; Modified: Sunset Report, I-98; Reaffirmation A-00; Reaffirmation I-00; Reaffirmation A-01; Reaffirmation I-03; Reaffirmation A-04; Reaffirmed in lieu of Res. 105, A-04; Reaffirmation A-05; Reaffirmation A-06; Reaffirmation A-08; Reaffirmed: BOT Rep. 17, A-09; Reaffirmation I-10; Reaffirmed: Sub. Res. 222, I-10; Reaffirmed: Res. 215, A-11; Reaffirmed: BOT action in response to referred for decision Res. 201, I-12; Reaffirmed: Res. 206, A-19]

H-383.988 Physicians' Ability to Negotiate and Undergo Practice Consolidation

Our AMA will: (1) pursue the elimination of or physician exemption from anti-trust provisions that serve as a barrier to negotiating adequate physician payment; (2) work to establish tools to enable physicians to consolidate in a manner to insure a viable governance structure and equitable distribution of equity, as well as pursuing the elimination of anti-trust provisions that inhibited collective bargaining; and (3) find and improve business models for physicians to improve their ability to maintain a viable economic environment to support community access to high quality comprehensive healthcare. [Res. 229, A-12; Reaffirmed: Res. 206, A-19]

AMA Code of Medical Ethics

1.2.10 Political Action by Physicians

Like all Americans, physicians enjoy the right to advocate for change in law and policy, in the public arena, and within their institutions. Indeed, physicians have an ethical responsibility to seek change when they believe the requirements of law or policy are contrary to the best interests of patients. However, they have a responsibility to do so in ways that are not disruptive to patient care.

Physicians who participate in advocacy activities should:

- (a) Ensure that the health of patients is not jeopardized and that patient care is not compromised.
- (b) Avoid using disruptive means to press for reform. Strikes and other collection actions may reduce access to care, eliminate or delay needed care, and interfere with continuity of care and should not be used as a bargaining tactic. In rare circumstances, briefly limiting personal availability may be appropriate as a means of calling attention to the need for changes in patient care. Physicians should be aware that some actions may put them or their organizations at risk of violating antitrust laws or laws pertaining to medical licensure or malpractice.
- (c) Avoid forming workplace alliances, such as unions, with workers who do not share physicians primary and overriding commitment to patients.
- (d) Refrain from using undue influence or pressure colleagues to participate in advocacy activities and should not punish colleagues, overtly or covertly, for deciding not to participate.

[AMA Principles of Medical Ethics: I,III,VI](#)

The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law.

[Issued: 2016]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 237
(A-24)

Introduced by: American College of Preventive Medicine

Subject: Encouraging the Passage of the Preventive Health Savings Act (S.114)

Referred to: Reference Committee B

1 Whereas, the Congressional Budget Office (CBO) was established in 1974 to provide objective,
2 nonpartisan information to support the U.S. budget process and aid Congress in making
3 effective budget and economic policy¹; and
4

5 Whereas, the CBO is directed to estimate and project the cost of legislation approved by
6 Congressional committees for a specified period of time, usually 10 years²; and
7

8 Whereas, the CBO estimates the United States Federal Budget deficit will increase substantially
9 over the next 30 years³; and
10

11 Whereas, the CBO is evaluating the economic impact of legislation pertaining to roles of health
12 behaviors and preventive measures beyond the 10-year budget window in specific cases⁴; and
13

14 Whereas, the 118th House of Representatives has passed legislation in a bipartisan vote to
15 direct the CBO to expand the scoring window to estimate the budgetary effects of legislation
16 related to preventive health care services up to a 30-year period⁵; and
17

18 Whereas, expanding the CBO scoring window to estimate the budgetary effects over a 30-year
19 period of legislation related to preventive health care services would not significantly increase
20 the cost of generating economic estimates for legislation⁶; and
21

22 Whereas, the United States spends \$4.1 trillion in annual health care expenditure⁷; and
23

24 Whereas, 70% of the U.S. health care expenditure is spent on the management and treatment
25 of chronic disease⁷; and
26

27 Whereas, the American Medical Association encourages the CBO to more comprehensively
28 measure long-term budget deficit reductions and costs associated with legislation related to the
29 preventive health services⁸; therefore be it
30

31 RESOLVED, that our American Medical Association encourages continued advocacy to federal
32 and state legislatures of the importance of more accurately and effectively measuring the health
33 and economic impacts of investing in preventive health services to improve health and reduce
34 healthcare spending costs in the long term. (Directive to Take Action); and be it further
35

36 RESOLVED, that our AMA reaffirm the following policy: D-155.994, "Value-Based Decision
37 Making in the Health Care System" to encourage legislation and efforts to allow the
38 Congressional Budget Office to more effectively project long-term budget deficit reductions and
39 costs associated with legislation related to preventive health services. (Reaffirm HOD Policy)
40

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/8/2024

RELEVANT AMA POLICY

Value-Based Decision-Making in the Health Care System D-155.994

1. Our AMA will advocate for third-party payers and purchasers to make cost data available to physicians in a useable form at the point of service and decision-making, including the cost of each alternate intervention, and the insurance coverage and cost-sharing requirements of the respective patient.
2. Our AMA encourages efforts by the Congressional Budget Office to more comprehensively measure the long-term as well as short-term budget deficit reductions and costs associated with legislation related to the prevention of health conditions and effects as a key step in improving and promoting value-based decision-making by Congress. [CMS Rep. 7, A-08; Reaffirmed in lieu of Res. 230, I-14; Reaffirmation I-15]

American Medical Association House of Delegates

Resolution: 238
(A-24)

Introduced by: New York

Subject: AMA Supports Efforts to Fund Overdose Prevention Sites

Referred to: Reference Committee B

1 Whereas, the federal “Defund Heroin Injections Centers of 2023” Act prohibits federal funding
2 for injection sites; and
3

4 Whereas, this Act states: No Federal funds may be used by any Federal agency to operate or
5 control, or to pay the salaries of officers and employees of such an agency to operate or control,
6 an injection center in violation of section 416 of the Controlled Substances Act (21 U.S.C. 856;
7 commonly referred to as the “Crack House Statute”); and
8

9 Whereas, OPS (Overdose Prevention Sites) have been shown to be effective at reducing
10 overdoses, refer patients for ongoing drug treatment, prevent communicable disease and
11 decrease health care costs; therefore be it
12

13 RESOLVED, that our American Medical Association support legislation or regulation that would
14 fund overdose prevention sites. (New HOD Policy)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 5/7/2024

REFERENCES

<https://www.congress.gov/117/bills/hr6741/BILLS-117hr6741ih.pdf>

American Medical Association House of Delegates

Resolution: 239
(A-24)

Introduced by: New York

Subject: Requiring stores that sell tobacco products to display NYS Quitline information

Referred to: Reference Committee B

1 Whereas, state laws already only allow only certain stores (not pharmacies) to sell to certain
2 persons (those over age 20) in certain locations (not near schools); and
3

4 Whereas, the states various Tobacco Control Programs allow Quitline phone number and
5 website which offers to persons who smoke the ability to get help with stopping by texting,
6 calling, or chatting; free nicotine patches, gum or lozenges, and other tools for cessation
7 assistance, therefore be it
8

9 RESVOLVED, that our American Medical Association seek federal legislation and/or regulation
10 requiring all stores licensed to sell tobacco or nicotine products to display easily visible
11 information about the CDC hotline 1-800-QUIT-NOW in multiple languages and/or the
12 information for the corresponding state or territory. (Directive to Take Action)

Fiscal Note: Modest - between \$1,000 - \$5,000

Received: 5/8/2024

American Medical Association House of Delegates

Resolution: 240
(A-24)

Introduced by: New York

Subject: Expanding Visa Requirement Waivers for NY IMGs Working in Underserved Areas

Referred to: Reference Committee B

1 Whereas, the most common visa that international medical graduates (IMG) use to participate in
2 US graduate medical education programs is the J-1 visa¹; and
3
4 Whereas, the J-1 visa traditionally requires a mandatory two-year foreign residency after
5 completion of their graduate medical education , forcing many IMGs who may wish to begin
6 practice inside the US to undergo a long and painful transition out of the country before
7 reapplication under a new visa²; and
8
9 Whereas, the Conrad 30 waiver program is a federal exemption to the J-1 visa residency
10 requirement, which allows up to 30 IMGs per State under a J-1 visa to avoid the two-year
11 foreign residency requirement after graduation if they practice in a federally designated
12 medically underserved area or with a medically underserved population³; and
13
14 Whereas, some studies have suggested that US residency-trained IMG physicians may yield
15 superior patient outcomes relative to their US medical graduate peers⁶; and
16
17 Whereas, reapproval or expansion of the Conrad 30 waiver program is unlikely to meaningfully
18 harm the economic competitiveness of native New York physicians or physician practices due to
19 requirements that waiver recipients be employed by health systems that have been
20 unsuccessful in attracting US medical graduates to the same position⁹; and
21
22 Whereas, the Conrad State 30 and Physician Access Reauthorization Act would extend and
23 expand the Conrad 30 waiver exemption program, allowing for approximately ~50% additional
24 waivers to be granted on a per-year basis over the next decade¹¹; therefore be it
25
26 RESOLVED, that our American Medical Association supports reauthorization and expansion of
27 the Conrad-30 J-1 visa waiver program, including permitting reallocation of unused slots to
28 states that have already used the maximum number of waivers. (New HOD Policy)

Fiscal Note: Minimal - less than \$1,000

Received: 5/8/2024

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 241
(A-24)

Introduced by: New York

Subject: Healthcare Cybersecurity Breaches

Referred to: Reference Committee B

1 Whereas, cybersecurity attacks by malicious criminals on Healthcare entities: Insurers, Health
2 systems and Medical Practices are becoming more and more common; and
3
4 Whereas, the recent 2024 attack on Change Healthcare website has crippled Healthcare
5 operations across multiple insurers and threatens the financial viability of thousands of practices
6 and healthcare systems; and
7
8 Whereas, the timely delivery of healthcare to millions of patients is jeopardized by healthcare
9 Cybercrime, thus jeopardizing the health and safety of New Yorkers and the US population as a
10 whole ; making Healthcare Cybercrimes especially heinous and deserving of more vigorous
11 punishment and prevention efforts than are currently in effect; therefore be it
12
13 RESOLVED, that our American Medical Association advocate for the development of an
14 adequately funded multidisciplinary task-force including representation of AMA, health insurers,
15 the FBI and other pertinent stakeholders to prevent future healthcare cyberattacks throughout
16 the country and to increase the apprehension of cybercriminals who prey on patients and
17 healthcare entities, and to recommend appropriate penalties for their crimes. (Directive to Take
18 Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

Received: 5/8/24

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 242
(A-24)

Introduced by: Minority Affairs Section

Subject: Cancer Care in Indian Health Services Facilities

Referred to: Reference Committee B

- 1 Whereas, cancer is the leading cause of death among American Indian and Alaska Native
2 (AI/AN) persons in the United States (US)^{1,2}; and
3
4 Whereas, AI/AN Tribes and Villages are sovereign governments that have unique needs and
5 challenges; and
6
7 Whereas, AI/AN patients, as dual citizens of their Tribal Nations and the US, are entitled to the
8 same rights and privileges of US citizens, including those relating to healthcare (H-350.976 and
9 H-350.977); and
10
11 Whereas, the Indian Health Service (IHS) was established by Article I, Section 8 of the
12 Constitution to provide adequate and timely healthcare, in honoring the government-to-
13 government relationship between the United States and these Tribal organizations^{3,4}; and
14
15 Whereas, federal IHS facilities do not offer on-site cancer care or provide payment for cancer
16 treatment, unlike other federal health programs like the VA, unless funds are available for
17 referral^{5,6}; and
18
19 Whereas, several Indian Health Service Areas do not have a single comprehensive cancer
20 care center, increasing the likelihood that AI/AN patients have to obtain care from other public
21 and private payors and shoulder out-of-pocket costs⁷; and
22
23 Whereas, funding limitations to the IHS primarily limit health care to direct ambulatory care
24 services, thus denying access to comprehensive, specialty healthcare services to their patients
25 (H-350.977); and
26
27 Whereas, many cancers, including liver, stomach, kidney, lung, melanoma, and colorectal
28 cancer have a significantly higher prevalence among AI/AN persons⁸; and
29
30 Whereas, for the ten most populated AI/AN reservations, the median travel distance to a
31 National Cancer Institute (NCI) cancer center is 186.5 miles (range 77.8 - 629 miles), and the
32 median travel time is 3.37 hours (range 1.32 - 10.42 hours), while 45.2% of the general US
33 population lives <1 hour from an NCI cancer center⁹; and
34
35 Whereas, 14% of the US population lives >2 hours from an NCI cancer center, with 37% of
36 these individuals being identified as AI/AN persons⁹; and
37
38 Whereas, a study analyzing the effects of distance on cancer treatment outcomes found that
39 patients who traveled 50 miles or 1+ hour in driving time were associated with a more advanced

1 disease at diagnosis, and patients in rural areas were found to be twice as likely to have
2 unstaged cancer and/or more advanced disease when compared to urban counterparts¹⁰; and

3
4 Whereas, counties with poor access to healthcare are known to have statistically lower cancer
5 screening rates and higher cancer-related mortality rates¹¹; and

6
7 Whereas, oncology patients not first seen at NCI-designated Comprehensive Cancer Care
8 Centers have worse outcomes, even when adjusting for sociodemographic and clinical factors¹²;
9 and

10
11 Whereas, it is unethical to deny appropriate and timely cancer care to American Indian and
12 Alaska Native patients; therefore be it

13
14 RESOLVED, that our American Medical Association actively advocate for the federal
15 government to continue enhancing and developing alternative pathways for American Indian
16 and Alaska Native patients to access the full spectrum of cancer care and cancer-directed
17 therapies outside of the established Indian Health Service system (Directive to Take Action);
18 and be it further

19
20 RESOLVED, that our AMA (a) support collaborative research efforts to better understand the
21 limitations of IHS cancer care, including barriers to access, disparities in treatment outcomes,
22 and areas for improvement and (b) encourage cancer linkage studies between the IHS and the
23 CDC to better evaluate regional cancer rates, outcomes, and potential treatment deficiencies
24 among American Indian and Alaska Native populations. (Directive to Take Action)

Fiscal Note: Moderate - between \$5,000 - \$10,000

RELEVANT AMA Policy

Improving Health Care of American Indians H-350.976

Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.

(2) The federal government provide sufficient funds to support needed health services for American Indians.

(3) State and local governments give special attention to the health and health-related needs of non-reservation American Indians in an effort to improve their quality of life.

(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.

(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.

(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.

(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.

(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.

(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.

(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.

(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations. [CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13; Reaffirmed: BOT Rep. 09, A-23]

Cancer and Health Care Disparities Among Minority Women D-55.997

Our AMA encourages research and funding directed at addressing racial and ethnic disparities in minority women pertaining to cancer screening, diagnosis, and treatment. [Res. 509, A-08; Modified: CSAPH Rep. 01, A-18]

Clinical Preventive Services H-410.967

The AMA: (1) recommends the USPSTF guidelines to clinicians and medical educators as one resource for guiding the delivery of clinical preventive services. USPSTF recommendations should not be construed as AMA policy on screening procedures and should not take the place of clinical judgment and the need for individualizing care with patients; physicians should weigh the utility of individual recommendations within the context of their scope of practice and the situation presented by each clinical encounter; (2) will continue to encourage the adoption of practice guidelines as they are developed based on the best scientific evidence and methodology available; and (3) will continue to promote discussion, collaboration, and consensus among expert groups and medical specialty societies involved in preparation of practice guidelines. [CSA Rep. 1, A-97; Modified and Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmed: Sub. Res. 517, A-12; Modified: CSAPH Rep. 1, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 243
(A-24)

Introduced by: Minority Affairs Section

Subject: Disaggregation of Demographic Data for Individuals of Federally Recognized Tribes

Referred to: Reference Committee B

1 Whereas, the Indian Health Service (IHS) is a health care system for federally recognized
2 American Indians and Alaska Natives in the United States;¹ and
3
4 Whereas, the Snyder Act of 1921 and the Indian Health Care Improvement Act (IHCIA) of 1976
5 recognized treaty obligations in codifying federal responsibility for Native American health in the
6 creation of the IHS; and
7
8 Whereas, the Supreme Court decision of Morton v. Mancari 417 U.S. 535 (1974) ruled that
9 members of federally recognized tribes possess a unique political status of quasi-sovereign
10 tribal entities; and
11
12 Whereas, the IHS currently delivers care to over 2.8 million American Indians and Alaska
13 Natives;² and
14
15 Whereas, eligibility for IHS services is strictly restricted to members of federally recognized
16 American Indian or Alaska Native tribes;³ and
17
18 Whereas, the Indian Health Service (IHS) Physician Scholarship program, as well as many
19 other Native scholarship programs, require applicants to be enrolled members of federally
20 recognized tribes;⁴ and
21
22 Whereas, the IHS has severe physician vacancy issues;⁵ and
23
24 Whereas, American Indians and Alaska Natives carry the lowest life expectancy (65.2 years old)
25 of all races;⁶ and
26
27 Whereas, American Indians and Alaska Natives have the least representation in the physician
28 workforce of any racial group per capita;⁷ and
29
30 Whereas, the American Medical Association and its partners, such as the Association of
31 American Medical Colleges (AAMC) and the Accreditation Council for Graduate Medical
32 Education (ACGME), currently do not collect demographic data on federally recognized tribal
33 members; and
34
35 Whereas, demographic data of federally recognized tribal members is a necessary first step
36 towards better aiding the Indian Health Service (IHS); therefore be it
37
38 RESOLVED, that our American Medical Association add “Enrolled Member of a Federally
39 Recognized Tribe” on all AMA demographic forms (Directive to Take Action); and be it further

1 RESOLVED, that our AMA advocate for the use of “Enrolled Member of a Federally Recognized
2 Tribe” as an additional category in all uses of demographic data including but not limited to
3 medical records, government data collection and research, and within medical education
4 (Directive to Take Action); and be it further

5
6 RESOLVED, that our AMA support the Association of American Medical Colleges (AAMC)
7 inclusion of “Enrolled Member of a Federally Recognized Tribe” on all AAMC demographic
8 forms (New HOD Policy); and be it further

9
10 RESOLVED, that our AMA advocate for the Accreditation Council for Graduate Medical
11 Education (ACGME) to include “Enrolled Member of a Federally Recognized Tribe” on all
12 ACGME demographic forms. (Directive to Take Action)

13
Fiscal Note: To Be Determined

RELEVANT AMA POLICY

Disaggregation of Demographic Data for Individuals of Middle Eastern and North African (MENA) descent D-350.979

Our AMA will: (1) add “Middle Eastern/North African (MENA)” as a separate racial category on all AMA demographics forms; (2) advocate for the use of “Middle Eastern/North African (MENA)” as a separate race category in all uses of demographic data including but not limited to medical records, government data collection and research, and within medical education; and (3) study methods to further improve disaggregation of data by race which most accurately represent the diversity of our patients. [Res.19, I-21]

Disaggregation of Demographic Data Within Ethnic Groups H-350.954

1. Our AMA supports the disaggregation of demographic data regarding: (a) Asian-Americans and Pacific Islanders in order to reveal the within-group disparities that exist in health outcomes and representation in medicine; and (b) ethnic groups in order to reveal the within-group disparities that exist in health outcomes and representation in medicine.

2. Our AMA: (a) will advocate for restoration of webpages on the Asian American and Pacific Islander (AAPI) initiative (similar to those from prior administrations) that specifically address disaggregation of health outcomes related to AAPI data; (b) supports the disaggregation of data regarding AAPIs in order to reveal the AAPI ethnic subgroup disparities that exist in health outcomes; (c) supports the disaggregation of data regarding AAPIs in order to reveal the AAPI ethnic subgroup disparities that exist in representation in medicine, including but not limited to leadership positions in academic medicine; and (d) will report back at the 2020 Annual Meeting on the issue of disaggregation of data regarding AAPIs (and other ethnic subgroups) with regards to the ethnic subgroup disparities that exist in health outcomes and representation in medicine, including leadership positions in academic medicine. [Res. 001, I-17; Appended: Res. 403, A-19]

AMA Race/Ethnicity Data D-630.972

1. Our American Medical Association will continue to work with the Association of American Medical Colleges to collect race/ethnicity information through the student matriculation file and the GME census including automating the integration of this information into the Masterfile.
2. Our AMA will: (a) adopt racial and ethnic demographic data collection practices that allow self-identification of designation of one or more racial categories; (b) report demographic physician workforce data in categories of race and ethnicity whereby Latino, Hispanic, and other identified ethnicities are categories, irrespective of race; (c) adopt racial and ethnic physician workforce demographic data reporting practices that permit disaggregation of individuals who have chosen multiple categories of race so as to distinguish each category of individuals' demographics as alone or in combination with any other racial and ethnic category; and (d) collaborate with AAMC, ACGME, AACOM, AOA, NBME, NBOME, NRMP, FSBM, CMSS, ABMS, HRSA, OMB, NIH, ECFMG, and all other appropriate stakeholders, including minority physician organizations, and relevant federal agencies to develop standardized processes and identify strategies to improve the accurate collection, disclosure and reporting of racial and ethnic data across the medical education continuum and physician workforce. [BOT Rep. 24, I-06; Modified: CCB/CLRPD Rep. 3, A-12; Reaffirmed: CME Rep. 1, A-22; Appended: Res. 612, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 244
(A-24)

Introduced by: Minority Affairs Section

Subject: Graduate Medical Education Opportunities for American Indian and Alaska Native Communities

Referred to: Reference Committee B

1 Whereas, the federal government has a unique government-to-government relationship with
2 574 federally recognized tribes based on Article I, Section 8 of the U.S. Constitution; and
3
4 Whereas, the federal government has committed itself to provide health care services to Tribal
5 nations under the enforceable federal Indian trust responsibility, a legal fiduciary obligation to
6 provide basic social, medical, and educational services for American Indians and Alaska
7 Natives (AI/ANs);¹ and
8
9 Whereas, AI/AN are disproportionately affected by many chronic conditions, including heart
10 disease, cancer, diabetes, stroke, and accidental injuries;² and
11
12 Whereas, AI/AN have the lowest life expectancy of any racial group (65.2 years), with AI/AN
13 communities experiencing a 6.6-year decline between 2019 and 2021;³ and
14
15 Whereas, the Indian Health Service (IHS) provides health care to over 2.8 million AI/AN through
16 IHS and Tribal Health Programs and Urban Indian Organizations, often referred to as the I/T/U
17 or the Indian Health system;⁴ and
18
19 Whereas, the IHS is chronically under-funded compared to other federal health care systems,
20 and the lack of funds has contributed to health disparities in Tribal communities;⁵ and
21
22 Whereas, the IHS is the only large federal health care system to lack formalized partnerships
23 with academic medical centers, unlike the Veterans Health Administration and the Military
24 Health System;⁶ and
25
26 Whereas, IHS and Tribal medical facilities often suffer from high physician staffing vacancy
27 rates, contributing to negative outcomes;⁷ and
28
29 Whereas, Congress mandated that IHS form workforce partnerships with teaching hospitals in
30 the Indian Health Care Improvement Act of 1976 but has failed to appropriate funds to that
31 effect;⁸ and
32
33 Whereas, the President of the United States in the FY 2023 and FY 2024 Budget Proposals to
34 Congress has recommended establishing and funding a Division of Graduate Medical Education
35 in the IHS that would be tasked with expanding and supporting graduate medical education
36 programs to create a pathway and an enhanced ecosystem for future physicians to address
37 longstanding vacancy issues at IHS;⁹ and

1 Whereas, the AMA reaffirmed its recommendation in 2023 to support efforts in Congress to
2 enable the IHS to meet its obligation to bring American Indian health up to the general
3 population level, and support efforts to establish closer ties with teaching centers to increase
4 both the available manpower and the level of professional expertise available in Tribal clinics;¹⁰
5 and

6
7 Whereas, the AMA also reaffirmed its commitment to advocate that the IHS establish an Office
8 of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-
9 accredited medical schools and ACGME-accredited residency programs, and encourage the
10 development of funding streams to promote rotations and learning opportunities at IHS, Tribal,
11 and Urban Indian Health Programs;¹¹ and

12
13 Whereas, the AMA reaffirmed its recommendation in 2023 that the federal government provide
14 sufficient funds to support needed health services for American Indians, and encourage further
15 development and use of innovative delivery systems and staffing configurations to meet
16 American Indian health needs;¹² and

17
18 Whereas, the AMA acknowledges the importance of graduate medical education in training the
19 next generation of physicians, reducing physician shortages, and benefiting communities;¹³ and

20
21 Whereas, the AMA reaffirmed in 2022 that it will strenuously advocate for increasing the number
22 of GME positions to address the future physician workforce needs of the nation;¹⁴ and

23
24 Whereas, the AMA also is committed to strongly advocate that Congress fund additional
25 graduate medical education positions for the most critical workforce needs;¹⁵ and

26
27 Whereas, the AMA is also committed to utilizing its resources to share its content expertise with
28 policymakers and the public to ensure greater awareness of the significant societal value of
29 graduate medical education in terms of patient care, particularly for underserved and at-risk
30 populations, as well as global health, research, and education;¹⁶ and

31
32 Whereas, the AMA included in its Recovery Plan for America's Physicians the need to expand
33 the number of residency training slots and remove caps to Medicare-funded positions;¹⁷
34 therefore be it

35
36 RESOLVED, that our American Medical Association supports policy and communication efforts
37 to (1) advance legislative and regulatory policies and actions that establish, authorize, fund, and
38 incentivize the creation of graduate medical education opportunities in IHS, Tribal-administered,
39 and urban Indian health organizations and facilities and (2) establish associated partnerships
40 with accredited medical schools and teaching hospitals (New HOD Policy); and be it further

41
42 RESOLVED, that our AMA supports collaboratively working with Tribal nations, Tribal
43 organizations, academic medical centers, policy professionals, medical schools, teaching
44 hospitals, coalition builders, and other stakeholders to advocate to Congress, The White House,
45 the Department of Health and Human Services, and other government entities to establish
46 dedicated graduate medical education funding and programs that benefit Tribal communities,
47 increase physician training sites, and reduce physician shortages, particularly among
48 underserved populations. (New HOD Policy)

RELEVANT AMA Policy

Indian Health Service H-350.977

The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.

(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.

(3) Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration

should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.

(4) Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.

(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

(6) Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.

(7) Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs. [CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13; Appended: Res. 305, A-23; Reaffirmed: BOT Rep. 09, A-23]

Improving Health Care of American Indians H-350.976

Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.

(2) The federal government provide sufficient funds to support needed health services for American Indians.

(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.

(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.

(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.

(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.

(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.

(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.

(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.

(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.

(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations. - 319 AMA Support of U.S. Pathway Programs

REPORT 31 OF THE BOARD OF TRUSTEES (A-24)
The Morrill Act and Its Impact on the Diversity of the Physician Workforce
Reference Committee C

EXECUTIVE SUMMARY

This report was written in response to Resolution 308 brought forth by the Medical Student Section at the 2022 Annual Meeting of the House of Delegates. This resolution was referred for decision due to concern about legal implications of the first resolve related to both federal and state laws regarding affirmative action, land grant status, and federal trust responsibilities. To inform this action, a management report was subsequently submitted to the Board of Trustees (BOT) entitled “University Land Grant Status in Medical School Admissions.” The management report summarized concerns about implementing original Resolution 308-A-22 due to unknown legal implications and potentially unintended and negative consequences for communities that have been historically excluded from medicine. Also, it emphasized the importance of improving the health status of American Indian and Alaska Native (AI/AN) communities and increasing the number of AI/AN physicians who are uniquely qualified to provide care to these communities as well as the need to better understand the Morrill Act and its impact on efforts to diversify the physician workforce. Thus, the management report recommended that in lieu of Resolution 308-A-22, the AMA “study the historical and economic significance of the Morrill Act as it relates to its impact on diversity of the physician workforce.”

This report summarizes the extensive history of land acquisition, public education, federal recognition of tribes, the Morrill Act, economic impacts, and current physician workforce. It also reviews the role of the American Medical Association in that history as well as more recent improvement efforts. The report addresses concerns cited by the original author and notes the substantial role that medical education and organized medicine has played and can continue to play for the betterment of the physician workforce and AI/AN students and populations. Diversification of the physician workforce is imperative to meeting the health care needs in underserved communities across the U.S., particularly AI/AN populations. Medical education and organized medicine have much to learn from tribal nations, schools, and agencies to provide more culturally responsive information, understanding, and support. The report offers recommendations to strengthen its existing policies and provide leadership in more actionable efforts.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 31-A-24

Subject: The Morrill Act and Its Impact on the Diversity of the Physician Workforce
Presented by: Willie Underwood, III, MD, MSc, MPH, Chair
Referred to: Reference Committee C

1 INTRODUCTION

2
3 At the 2022 Annual Meeting of the House of Delegates, the Medical Student Section authored
4 Resolution 308 that asked the American Medical Association (AMA) to:

5 (1) work with the Association of American Medical Colleges, Liaison Committee on Medical
6 Education, Association of American Indian Physicians, and Association of Native American
7 Medical Students to design and promulgate medical school admissions recommendations in
8 line with the federal trust responsibility; and (2) amend Policy H-350.981, “AMA Support of
9 American Indian Health Career Opportunities,” by addition to read as follows: (2) Our AMA
10 support the inclusion of American Indians in established medical training programs in numbers
11 adequate to meet their needs. Such training programs for American Indians should be operated
12 for a sufficient period of time to ensure a continuous supply of physicians and other health
13 professionals. These efforts should include, but are not limited to, priority consideration of
14 applicants who self-identify as American Indian or Alaska Native and can provide some form
15 of affiliation with an American Indian or Alaska Native tribe in the United States, and robust
16 mentorship programs that support the successful advancement of these trainees. (3) Our AMA
17 utilize its resources to create a better awareness among physicians and other health providers of
18 the special problems and needs of American Indians and that particular emphasis be placed on
19 the need for stronger clinical exposure and a greater number of health professionals to work
20 among the American Indian population. (5) Our AMA acknowledges long-standing federal
21 precedent that membership or lineal descent from an enrolled member in a federally recognized
22 tribe is distinct from racial identification as American Indian or Alaska Native and should be
23 considered in medical school admissions even when restrictions on race-conscious admissions
24 policies are in effect. (6) Our AMA will engage with the Association of Native American
25 Medical Students and Association of American Indian Physicians to design and disseminate
26 American Indian and Alaska Native medical education curricula that prepares trainees to serve
27 AI/AN communities.

28
29 This resolution was referred for decision, due to concern about legal implications of the first
30 resolve related to both federal and state laws regarding affirmative action, land grant status, and
31 federal trust responsibilities. To inform this action, a management report was subsequently
32 submitted to the Board of Trustees (BOT) entitled “University Land Grant Status in Medical
33 School Admissions.” That report noted the central issue is improving the health status of AI/AN
34 communities and the need to increase the number of AI/AN physicians who are uniquely qualified
35 to provide culturally humble care to these communities. Further, it noted there may be risks
36 associated with implementing original Resolution 308-A-22 due to unknown legal implications and
37 potentially unintended and negative consequences for communities that have been historically

1 excluded from medicine. The management report identified a need to further understand all
2 components of the Morrill Act that may impact efforts to diversify the physician workforce prior to
3 developing any new policy recommendations. It recommended that in lieu of Resolution 308-A-22,
4 the AMA:

- 5
6 1. Work with the Association of American Medical Colleges, American Association of
7 Colleges of Osteopathic Medicine, Association of American Indian Physicians, and
8 Association of Native American Medical Students to increase representation of American
9 Indian physicians in medicine by promoting effective practices in recruitment,
10 matriculation, retention and graduation of American Indian medical students. (Directive to
11 Take Action)
- 12 2. Amend Policy H-350.981, “AMA Support of American Indian Health Career
13 Opportunities,” by addition and deletion to read as follows:
14 (2) Our AMA support the inclusion of American Indians in established medical training
15 programs in numbers adequate to meet their needs. Such training programs for American
16 Indians should be operated for a sufficient period of time to ensure a continuous supply of
17 physicians and other health professionals, prioritize consideration of applicants who self-
18 identify as American Indian or Alaska Native and can provide some form of affiliation
19 with an American Indian or Alaska Native tribe in the United States, and support the
20 successful advancement of these trainees. (3) Our AMA utilize its resources to create a
21 better awareness among physicians and other health providers of the special problems and
22 needs of American Indians and that particular emphasis be placed on the need for stronger
23 clinical exposure and a greater number of health professionals to work among the
24 American Indian population. (5) Our AMA acknowledges long-standing federal precedent
25 that membership or lineal descent from an enrolled member in a federally recognized tribe
26 is distinct from racial identification as American Indian or Alaska Native and should be
27 considered in medical school admissions even when restrictions on race-conscious
28 admissions policies are in effect. (Modify Current HOD Policy)
- 29 3. **Study the historical and economic significance of the Morrill Act as it relates to its**
30 **impact on diversity of the physician workforce. (Directive to Take Action)**

31
32 This BOT report is in response to Recommendation #3 above.

33 34 BACKGROUND

35
36 To better understand the Morrill Act and its impact, it is important to review the history of land
37 acquisition and public education as well as the federal recognition of tribes.

38 39 *Public education and land acquisition*

40
41 Support for public education was realized early in the formation of the republic. According to the
42 [Northwest Ordinance](#) of 1787, “Knowledge, being necessary to good government and the
43 happiness of mankind, schools and the means of education shall forever be encouraged.”¹ Those
44 who did receive instruction were primarily white children. Financing for early schools varied and
45 often charged tuition. Thus, many children were not included, depending on income, race,
46 ethnicity, gender, geographic location, and other reasons. Some rural areas had no schools. The
47 nation’s leaders at the time “believed strongly that preserving democracy would require an
48 educated population that could understand political and social issues and would participate in civic
49 life, vote wisely (only white men could vote), protect their rights and freedoms, and resist tyrants

1 and demagogues.”² Free public education began to expand in the 1830s, with states taking on the
2 provision of public education. Land acquisition, however, was key to implementing such education
3 widely. The largest occupier and ‘owner’ of such land at the time were American Indians — the
4 native and original caregivers of what is now the United States.

5
6 By 1887, American Indian tribes owned 138 million acres. However, the passage of the [General](#)
7 [Allotment Act](#) of 1887 (The Dawes Act) greatly impacted such ownership as their land became
8 subject to state and local taxation, of which many could not afford. By 1934, the total had dropped
9 to 48 million acres.³ [The Indian Reorganization Act](#) of 1934 (IRA) tamed this era of allotment and
10 marked a shift toward the promotion of tribal self-government. Subsequent Congressional acts
11 impacting tribes and their land — ownership, use, and development — include the following:

- 12 • [Indian Mineral Leasing Act](#): 1938
- 13 • [Indian Self-Determination and Education Assistance Act](#): 1975
- 14 • [Indian Mineral Development Act](#): 1982
- 15 • [Indian Tribal Energy Development and Self-Determination Act](#): 2005
- 16 • [Indian Tribal Energy Development and Self-Determination Act Amendments](#): 2017

17
18 There are approximately 2.4 billion acres in today’s United States.⁴ About 56 million acres of that
19 land (2.3%) is currently held in trust by the U.S. for various American Indian tribes and
20 individuals, making up the majority of American Indian land.² With trust land, the federal
21 government holds legal title but the beneficial interest remains with the individual or tribe. Trust
22 lands held on behalf of individuals are known as allotments. Fee land, on the other hand, is
23 purchased by tribes whereby the tribe acquires legal title under specific statutory authority.

24 *The Morrill Act and land-grant universities*

25
26
27 In 1862, Congress passed the [Morrill Act](#) named after Senator Justin Morrill of Vermont. “This act
28 made it possible for states to establish public colleges funded by the development or sale of
29 associated federal land grants. The original intention was to fund colleges of agriculture and
30 mechanical arts.⁵ Over 10 million acres provided by these grants were expropriated from tribal
31 lands of Native communities. The new land-grant institutions, which emphasized agriculture and
32 mechanic arts, opened opportunities to thousands of farmers and working people previously
33 excluded from higher education.”⁶ Much of this land was taken from American Indian tribes for the
34 benefit of white people by way of treaties and agreements (many of which the federal government
35 did not uphold its end) as well as seizure. In other words, “The government took the land for which
36 it paid little or nothing, from tribes with little bargaining power, that were impoverished, and that
37 were sometimes subject to threats to withhold rations and other benefits if they did not comply.”⁷
38 These now ‘public lands’ were surveyed into townships, and sections were reserved for public
39 schools; however, the land itself was often sold off, with proceeds used to fund the school program.
40 “The system invited misuse by opportunists, and substantial portions of the educational land-grants
41 never benefited education.”⁶ Support for land-grants was a significant factor in providing education
42 to white American children.

43
44 By way of the Morrill Act, the government granted each state 30,000 acres of public land, issued to
45 its Congressional representatives and senators to be used in establishing a “land grant” university.
46 Some of the land sales financed existing institutions while others chartered new schools. This
47 allocation grew to over 100 million acres. The Morrill land grants put into place a national system
48 of state colleges and universities. Examples of major universities that were chartered as land-grant
49 schools are Cornell University, Washington State University, Clemson University, and University
50 of Nebraska-Lincoln.

1 Following the Civil War, a [Second Morrill Act](#) was passed in 1890 to address the exclusion of
2 Black individuals from these educational opportunities due to their race. “It required states to
3 establish separate land-grant institutions for Black students or demonstrate that admission was not
4 restricted by race. The act granted money instead of land.”⁶ The [1890 Foundation](#) provides
5 additional information about these 19 historically Black colleges and universities (HBCUs), which
6 include Tuskegee University, Tennessee State University, and Alabama A&M University. In 1994,
7 a third land-grant act was passed — the Equity in Educational Land-Grant Status Act — that
8 bestowed land-grant status to American Indian tribal colleges. As a result, these colleges are
9 referred to as the “1994 land-grants.”⁸ Today’s land grant university (LGU) system is comprised of
10 institutions resulting from the above-mentioned acts passed in 1862 (57 original), 1890 (19
11 HBCUs), and 1994 (35 Tribal). “LGUs are located in all 50 states as well as the District of
12 Columbia and six U.S. territories. Of note, the “1994 institutions receive fewer federal funds
13 administered by National Institute of Food and Agriculture — in total — than 1862 and 1890
14 institutions, and they are ineligible for certain grant types available to 1862 and 1890 institutions.
15 Whereas the 1862 and 1890 institutions receive federal capacity funds specific to agricultural
16 research and extension (which brings research to the public through nonformal education
17 activities), 1994 institutions do not. Although 1994 institutions have more limited enrollment and
18 offer fewer postsecondary degrees than 1862 and 1890 institutions, some argue that funding for
19 agricultural research and extension at the 1994 institutions is insufficient and should be increased.”⁹

20

21 *Education of American Indians*

22

23 The inaccurate perception of American Indians as unintelligent and uncivilized led Congress to
24 pass the Indian Civilization Act in 1819 which paid missionaries to educate Natives and promote
25 the government’s notion of civility. Most American Indian children at that time were forcefully
26 relocated and brought to these schools to begin the assimilation into the “Western way of life”
27 under the authority of that Act — thus beginning the troubled history of American Indian boarding
28 schools that is still felt by current generations. One such school built in 1879, the Carlisle Indian
29 Industrial School, coined the term “Kill the Indian to save the man” summarizing a belief system to
30 erase Native culture through assimilation.¹⁰ These children were forcibly separated from their
31 families and not allowed to practice their spirituality, speak their language, or live according to
32 their culture under threat of punishment. They were even given new names. These practices
33 continued through the 1960s. In 1969, a Senate report of the Committee on Labor and Public
34 Welfare, entitled “Indian Education: A National Tragedy--A National Challenge“,” summarized
35 the devastating effects of forced assimilation of Native children and the failures of the education
36 system where students also experienced physical abuse, sexual violence, hunger, forced
37 sterilizations, and exposure to diseases. The trauma associated with this contributes to a well-
38 documented historical trauma that has been correlated to the high number of suicides and health
39 inequities experienced by American Indians in the U.S.¹¹ This trauma has had a devastating impact
40 on the potential number of students who consider enrollment in higher education due to a distrust
41 of any system associated with the U.S. government. Many who have been directly affected by
42 historical traumas have to overcome barriers like depression or other chronic diseases to participate
43 in a system that still does not align to their way of knowing. There was little consideration for the
44 higher education of American Indians (nor how to include a non-colonial perspective) until 1972
45 with the formation of the [American Indian Higher Education Consortium](#) (AIHEC). Through its
46 network of tribal colleges and universities (TCUs), AIHEC “provides leadership and influences
47 public policy on American Indian higher education issues through advocacy, research, and program
48 initiatives; promotes and strengthens indigenous languages, cultures, communities, and tribal
49 nations; and through its unique position, serves member institutions and emerging TCUs.”¹²

American Indian affairs and federal recognition of tribes

In 1775, Congress created a Committee on Indian Affairs under the leadership of Benjamin Franklin. The [U.S. Constitution](#) (Article I, Section 8, Clause 3) gave Congress the power “to regulate commerce with foreign nations, and among the several States, and with the Indian tribes.” The [Bureau of Indian Affairs](#) (BIA) — known over the years as the Indian Office, the Indian Bureau, the Indian Department, and the Indian Service — was established in 1824 to oversee and carry out the government’s trade and treaty relations with the tribes. The BIA received statutory authority from Congress in 1832; in 1849, it was transferred to the newly created U.S. Department of the Interior.¹³ “Over the years, the BIA has been involved in the implementation of federal laws that have directly affected all Americans. The General Allotment Act of 1887 opened tribal lands west of the Mississippi to non-Indian settlers, the [Indian Citizenship Act](#) of 1924 granted American Indians and Alaska Natives U.S. citizenship and limited rights to vote, and the New Deal and the Indian Reorganization Act of 1934 restored self-determination and dictated a model the United States expected tribal governments to use. The World War II period of relocation and the post-War termination era of the 1950s led to the activism of the 1960s and 1970s that saw the takeover of the BIA’s headquarters and resulted in the creation of the Indian Self-Determination and Education Assistance Act of 1975. This act as well as the [Tribal Self-Governance Act](#) of 1994 have fundamentally changed how the federal government and the tribes conduct business with each other.”¹³ Although the BIA was once responsible for providing health care services to American Indians and Alaska Natives, that role was legislatively transferred to the U.S. Department of Health, Education, and Welfare (now known as the Department of Health and Human Services) in 1954.¹³ It remains there under the auspices of the [Indian Health Service](#) (IHS). However, funding for this continues to be a problem. In 2019, IHS spending per capita was only \$4,078 while the national average spending per capita was \$9,726.¹⁴ At that time, it was also reported that American Indians and Alaska Natives (AI/AN) had a life expectancy 5.5 years less than the U.S. all races population (73.0 years compared to 78.5 years) and “die at higher rates than other Americans in many categories, including chronic liver disease and cirrhosis, diabetes mellitus, unintentional injuries, assault/homicide, intentional self-harm/suicide, and chronic lower respiratory diseases.”¹⁵ Groups such as the [Tribal Sovereign Leaders on the national Tribal Budget Formulation Workgroup](#) (TBFWG) have provided, and continue to provide, significant insights to inform IHS budget requests.

According to the BIA, “a federally recognized tribe is an AI/AN tribal entity that is recognized as having a government-to-government relationship with the United States, with the responsibilities, powers, limitations, and obligations attached to that designation, and is eligible for funding and services from the BIA. Furthermore, federally recognized tribes are recognized as possessing certain inherent rights of self-government (i.e., tribal sovereignty) and are entitled to receive certain federal benefits, services, and protections because of their special relationship with the United States.”¹⁶ Over the years, most of today’s federally recognized tribes received federal recognition status by way of treaties, acts of Congress, presidential executive orders or other federal administrative actions, or federal court decisions. In 1978, the Department of the Interior issued procedures for federal acknowledgment of Indian tribes to more uniformly handle requests — found in Part 83 of Chapter 25 of the [Code of Federal Regulations](#).¹⁷ In 1994, Congress enacted the [Federally Recognized Indian Tribe List Act](#). It formally established three ways to achieve federal recognition: (1) by act of Congress, (2) by the administrative procedures under 25 C.F.R. Part 83, or (3) by decision of a United States court. Congress has the authority to terminate a relationship with a tribe, and only Congress can restore its federal recognition. The act also requires the Secretary of the Interior to annually publish information on federally recognized tribal entities.¹⁸

1 As of January 2023, there were 574 federally recognized Tribal entities.¹⁹ There are also many
2 tribes that are not state or federally recognized. There are 324 federally recognized American
3 Indian reservations where 13 percent of the AI/AN population lives. The 2020 Census indicates
4 that 87 percent live outside of tribal statistical areas. It also shows that 9.1 million people identify
5 as AI/AN alone or in combination (2.9 percent of total U.S. population).²⁰

6 7 DISCUSSION

8 9 *Economic and educational impacts*

10
11 The Morrill Act, as well as the [Homestead Act](#) of 1862, had a significant impact on American
12 expansion. The Homestead Act encouraged western migration by providing settlers with 160 acres
13 of land. Such settlers were required to live on and cultivate the land. After five years, they were
14 entitled to the property upon payment of a small filing fee. While they certainly fostered prosperity
15 and educational opportunities for new American settlers, these came at the expense of the original
16 people — American Indians. The economic significance of these acts cannot be understated. In
17 2019, sixteen land-grant universities retained over half a million acres of Indigenous lands,
18 generating at least \$8.7 million.²¹ See Appendix A for a table of remaining Morrill Act lands and
19 revenue by university.

20
21 In addition to the economic impact, thousands of American Indian families were affected by the
22 Indian Civilization Act and boarding schools. Given the lingering effects to this day, it stands to
23 reason that many AI/AN students have a negative attitude toward the education system. According
24 to the Bureau of Indian Education (BIE), “Native youth have the lowest high school graduation rate
25 of students across all schools. Nationally, the AI/AN high school graduation rate is 69 percent, far
26 below the national average of 81 percent.”²² The BIE funds elementary and secondary schools on
27 64 reservations in 23 states, serving approximately 42,000 Indian students.²³ These BIE schools
28 hold an average graduation rate of 53 percent. The BIE also serves AI/AN post-secondary students
29 through higher education scholarships, supports funding for tribal colleges and universities, and
30 directly operates two post-secondary institutions — Haskell Indian Nations University in Kansas
31 and the Southwestern Indian Polytechnic Institute in New Mexico.

32 33 *Medical education and the physician workforce*

34
35 Significant school dropout rates and lower enrollment in higher education have negatively
36 impacted AI/AN representation in medical education and the physician workforce. According to
37 2023-2024 data from the Association of American Medical Colleges (AAMC), 1,0451 AI/AN
38 students were enrolled in MD-granting medical schools (about 1percent of the total student
39 population). Further, only 188 AI/AN students graduated from MD-granting medical schools.²⁴
40 This significant decline from enrollment to graduation is very concerning; medical education needs
41 to figure out why and what to do about it. The entire educational pathway (PreK-12 and
42 undergraduate) may need to be considered to help AI/AN students to prepare for their studies,
43 promote a sense of belonging, and avail themselves of mentorship opportunities. Tribes have a
44 vested interest in the training of AI/AN students, given they are more likely to return to and serve
45 their own communities as physicians. Such efforts will ultimately foster tribal self-governance and
46 self-determination.

47
48 Several universities have taken steps to increase AI/AN representation in medical schools. In 1973,
49 the University of North Dakota launched the Indians Into Medicine (INMED) program, which has
50 recruited, supported, and trained 250 AI/AN physicians. This program has served as a model for
51 other health professions within the university as well as for other medical schools that receive IHS

1 funding. Since many students face financial hardship, INMED offers a free summer program called
2 Med Prep that provides students with stipends, and it helps its medical school students identify
3 potential scholarship options. The university went one step further in 2020 to launch the country's
4 first PhD. program in Indigenous health.²⁵ Another example is Oregon Health & Science
5 University (OHSU) School of Medicine and its Wy'east Pathway, a 10-month postbaccalaureate
6 program for AI/AN students who unsuccessfully applied to medical school, have an MCAT score
7 below a certain cutoff, or lack clinical experience. The program provides biomedical and MCAT
8 classes as well as cultural support and skills-building to promote success in medical school.²⁶ Not
9 only do programs like these directly support AI/AN students, but they also promote collaboration
10 with and inclusion of non-indigenous allies. This combination can help to turn the tide on the
11 workforce issue.

12
13 The impact of low representation in medical schools is evident when examining the diversity of
14 physician workforce. In 2022, 0.3% of active physicians identified as AI/AN.²⁷ According to a
15 2018 [report](#) from the U.S. Government Accountability Office, the vacancy rate at IHS clinics
16 among staff physician positions was about 29% across the eight IHS geographic regions; the
17 highest vacancy was 46% in the areas servicing Bemidji, Minnesota, and Billings, Montana.²⁸ In
18 addition to representation in practicing medicine, there are also deficits in AI/AN representation in
19 academic positions. One study found that, compared with their white peers, AI/AN individuals had
20 48% lower odds of holding a full-time faculty position post residency.²⁹

21
22 As mentioned in other parts of this report, there is distrust in colonial constructs (U.S. laws,
23 policies, and institutions), but there may also be distrust in the colonial medicine through IHS
24 because of the history of forced sterilization and because traditional forms of medicine were
25 outlawed (as well as any religious/cultural beliefs associated with them). In fact, the Department of
26 the Interior's 1883 Code of Indian Offenses noted that "any medicine man convicted of
27 encouraging others to follow traditional practices was to be confined in the agency prison for not
28 less than 10 days or until he could provide evidence that he had abandoned his beliefs."³⁰ This
29 context has given rise to a distrust of medicine and medical education that continues today.

30
31 In June 2023, the Supreme Court of the U.S. (SCOTUS) issued a ruling on affirmative action that
32 eliminated race as a consideration in college and universities' admission processes. This ruling
33 should not change tribal colleges; however, will it likely impact AI/AN students who attend non-
34 tribal institutions because most wrongly collect tribal identity as a racial category. "Most, if not all,
35 mainstream colleges and universities rely entirely on self-reporting when it comes to determining
36 tribal identity of students. This means if a Native student doesn't indicate they are a tribal citizen,
37 then they are not counted as such."³¹ This lack of data can impact the understanding of student
38 enrollment as well as funding opportunities. It is critical to re-emphasize that "Native American" is
39 not only a racial category but also the designation which gives those who are enrolled in federally
40 recognized tribes a protected classification by treaty and is not subject to the SCOTUS decision on
41 race/ethnicity. Many schools may not include identifying Native Americans in their admissions
42 consideration as they may fear violation of the SCOTUS decision.

43 44 *The AMA's role: accountability and restitution*

45
46 The AMA and its members play a complicated role in the history of American Indians. AMA
47 members were party to the claiming of land in the "Western territories" in the mid-1850s, as
48 described in the A-1857 report "[Report on the Fauna and Medical Topography of Washington](#)
49 [Territory](#). AMA archives contain a 1865 report entitled "[On Some Causes Tending to Promote the](#)
50 [Extinction of the Aborigines of America](#)" which details study of the Onondoga tribe, concluding
51 "But those of us who pity and strive to arrest the downward course of this remnant of the original

1 lords of the forest, may delay what we are wholly unable to prevent, for I much fear that before the
2 poor Indian has learned the laws of his physical nature and how to obey them, economy of time and
3 means, industry, and reliance upon his own muscles and broad acres for his support, instead of
4 looking for the government to hire his teacher and physician, and for his wants to be met by others,
5 without forecast and plan of us own — before these radical changes in his habits are effected — the
6 waning remnant of the Onondagas will forever have passed away.”³²

7
8 Physicians were involved in American Indian boarding schools, the development of the Indian
9 Health Service, and the study of illnesses and healing practices on AI/AN tribes. Their works were
10 published in JAMA and included:

- 11 • [The Medicine and Surgery of the Winnebago and Dakota Indians \(1883\)](#)
- 12 • [Improved Sanitary and Social Conditions of the Seminoles of Florida \(1896\)](#)
- 13 • [Indian Method of Treating Measles \(1903\)](#)
- 14 • [The Indian Medical Service \(1913\)](#)

15
16 Past harms also include the AMA’s role in promulgating discriminatory practices resulting from
17 the [Flexner Report](#), a landmark 1910 criticism of U.S. medical education resulting in a reduction in
18 the number of medical schools including the closing of 5 out of the 7 historically black medical
19 schools. Past decisions such as these continue to negatively impact populations in need. The AMA
20 acknowledges that AI/AN populations experience significant health disparities up to the present
21 including lower access to care and underfunding of public programs such as the Indian Health
22 Service serving AI/AN communities. In addition, AI/AN persons continue to be severely
23 underrepresented in the physician and healthcare workforce.

24
25 The AMA launched various supportive efforts such as:

- 26 • Asked the federal government to step in to stop the spread of trachoma in Native
27 communities ([A-1924](#)) and provide better health services for the population ([A-1929](#));
 - 28 • Issued AMA Statement on Infant Mortality ([A-1968](#));
 - 29 • Advocated for the transfer of functions relating to health and hospitalization of American
30 Indians from the Bureau of Indian Affairs to the U.S. Public Health Service ([I-1953](#));
 - 31 • Appealed for more funding for hospitals and health services on reservations ([I-1957](#));
 - 32 • Collaborated with the IHS on efforts related to health care delivery and health aide training
33 programs ([I-1970](#));
 - 34 • Led large-scale study of health care for American Indians that was used to guide the
35 Senate’s “Indian Health Care Improvement Act” of 1976 ([I-1973](#));
 - 36 • Created Project USA to recruit physicians to medically underserved areas, including
37 AI/AN reservations ([I-1975](#));
 - 38 • Sought to exempt Indian Health Services from competitive procurement practices
39 regulations ([A-1984](#));
 - 40 • Initiated a project with the AAIP to improve health care for American Indians ([A-1995](#));
 - 41 • With the National Medical Association, established the Commission to End Health Care
42 Disparities in 2004 – a collaboration of health care organizations to address racial and
43 ethnic health care disparities and diversity in the physician workforce.
 - 44 • In 2013, the AMA launched its innovative “Accelerating Change in Medical Education”
45 initiative to rebuild medical education from the ground up. Now known as the
46 [ChangeMedEd](#) initiative, this effort has fostered collaborations with schools like Oregon
47 Health & Science University School of Medicine and the University of Washington School
48 of Medicine to increase the numbers of AI/AN students and faculty.
- 49

1 Although the Commission was retired in 2016, a new effort emerged in 2018 through the adoption
2 of policy calling for a strategic framework to address health equity on a national scale — resulting
3 in the creation of the [AMA Center for Health Equity](#). Among other things, the Center is leading a
4 task force that will “guide organizational transformation within and beyond the AMA toward
5 restorative justice to promote truth, reconciliation, and healing in medicine and medical education.
6 ...The task force will inform and advise the AMA on ways to establish restorative justice dialogues
7 between AMA leaders, physicians from historically marginalized racial and ethnic groups and their
8 physician associations, and other critical stakeholders.”³³

9
10 Recently, an AMA [article](#) from December 2023 addressed vacancies at the Indian Health Service.
11 Also, an [AMA Update](#) on January 8, 2024 discussed how tribal medical education programs could
12 solve the rural health care crisis. Featuring Oklahoma State University College of Osteopathic
13 Medicine’s unique partnership with The Cherokee Nation, the discussion addressed the importance
14 of physicians truly understanding the communities they serve.

15
16 AMA Advocacy has been actively participating in efforts to support AI/AN populations and related
17 physicians. Federal efforts in just the last two years include:

- 18 • May 2022: [Letter](#) sent to Senators Mastro and Murkowski in support of the Indian Health
19 Service Health Professions Tax Fairness Act (S.2874).
- 20 • April 2023: [Letter](#) sent to U.S. Department of Agriculture addressing Menu Planning
21 Options for American Indian and Alaska Native Students.
- 22 • October 2023: [Letter](#) sent to U.S. Department of Health and Human Services and Indian
23 Health Service to highlight the importance of high quality, timely care for American
24 Indians, Alaska Natives, and Native Hawaiians, particularly as it related to physician and
25 medical student members.
- 26 • February 2024: Multi-organizational [letter](#) sent to both the House Appropriations
27 Subcommittee on Interior and Senate Appropriations Subcommittee on Interior,
28 Environment, and Related Agencies, Environment, and Related Agencies. This letter
29 detailed support for the inclusion of \$30 million in new funding in the FY2025 Interior,
30 Environment, and Related Agencies appropriations bills to address chronic clinical staff
31 shortages across Indian Country through GME programming.

32
33 The AMA Foundation (AMAF) funds the [Physicians of Tomorrow Program](#). This program
34 distributes a \$10,000 tuition assistance scholarship to medical students approaching their final year
35 of school with the goal of creating a diverse cohort of students who are dedicated to serving
36 underserved communities. The AMAF is also bringing attention to AI/AN issues in medical
37 education, as seen in a 2022 [article](#) featuring AMA members.

38 The [AMA Ed Hub](#)TM offers a variety of equity-related educational opportunities — from its panel
39 discussion on [Truth and Reconciliation in Medicine](#) to its Prioritizing Equity series. Titles of
40 relevance include:

- 41 • [For Us, By Us: Advocating for Change in Native Health Policy](#)
- 42 • [Getting to Justice in Education](#)
- 43 • [The Root Cause and Considerations for Health Care Professionals](#)
- 44 • [How the Past Informs the Present in Healthcare](#)

45 46 RELEVANT AMA POLICIES

47
48 The AMA has several policies in support of AI/AN tribes and communities as well as students and
49 trainees in order to foster diversity of the physician workforce in an effort to improve public health
50 including AI/AN populations. For example:

- 1 • [AMA Support of American Indian Health Career Opportunities H-350.981](#) promotes
2 recruitment of AI/AN into health careers including medicine and the concept of AI/AN
3 self-determination.
- 4 • [Promising Practices Among Pathway Programs to Increase Diversity in Medicine D-
5 350.980](#) establishes a task force to guide organizational transformation within and beyond
6 the AMA toward restorative justice to promote truth, reconciliation, and healing in
7 medicine and medical education.
- 8 • [Underrepresented Student Access to US Medical Schools H-350.960](#) recognizes some
9 people have been historically underrepresented, excluded from, and marginalized in
10 medical education and medicine because of their race, ethnicity, disability status, sexual
11 orientation, gender identity, socioeconomic origin, and rurality, due to racism and other
12 systems of exclusion and discrimination.
- 13 • [Strategies for Enhancing Diversity in the Physician Workforce H-200.951](#) supports
14 increased diversity across all specialties in the physician workforce in the categories of
15 race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin,
16 and rurality.
- 17 • [Cultural Leave for American Indian Trainees H-350.957](#) recognizes the importance of
18 cultural identity in fostering trainee success and supports accommodating cultural
19 observances.

20
21 See Appendix B for the full policies. Additional policies can be accessed in the [AMA Policy](#)
22 [Finder](#) database, which include:

- 23 • [Strategies for Enhancing Diversity in the Physician Workforce D-200.985](#)
- 24 • [Continued Support for Diversity in Medical Education D-295.963](#)
- 25 • [AMA Support of American Indian Health Career Opportunities H-350.981](#)
- 26 • [Indian Health Service H-350.977](#)
- 27 • [Desired Qualifications for Indian Health Service Director H-440.816](#)
- 28 • [Strong Opposition to Cuts in Federal Funding for the Indian Health Service D-350.987](#)
- 29 • [Improving Health Care of American Indians H-350.976](#)
- 30 • [Plan for Continued Progress Toward Health Equity H-180.944](#)

31 32 SUMMARY AND RECOMMENDATIONS

33
34 This report illuminates these concerns as well as the substantial part that medical education and
35 organized medicine has played and can continue to play for the betterment of the physician
36 workforce and AI/AN students and populations. Organizations like the [Association of American](#)
37 [Indian Physicians](#) (AAIP) hold an esteemed role in such efforts. AAIP was established in 1971 by a
38 group of 14 AI/AN physicians to support AI/AN communities and serve as an educational,
39 scientific, and charitable nonprofit.

40
41 As stated in the AAMC's [2018 publication](#), *Reshaping the Journey: American Indians and Alaska*
42 *Natives in Medicine*, "Medical schools are chiefly responsible for the development of what the
43 physician workforce looks like today and what it will look like in the future.... We must view this
44 issue as a national crisis facing not just the American Indian-Alaskan Native (AI/AN)
45 communities, but all medical schools and teaching hospitals.... We need transformative thinking
46 and a new systems-based approach if we are to resolve this crisis with a plausible solution."³⁴
47 Diversification of the physician workforce is imperative to meeting the health care needs in
48 underserved communities across the U.S., particularly AI/AN populations. Also, medical education
49 has much to learn from tribal nations, schools, and organizations to provide more culturally
50 responsive information, understanding, and support.

1 The Board of Trustees that the following recommendations be adopted, and the remainder of this
2 report be filed. That our AMA:

- 3
4 1. Amend [AMA Support of American Indian Health Career Opportunities H-350.981](#) by
5 addition to read:
6 (4) Our AMA will continue to support the concept of American Indian self-
7 determination as imperative to the success of American Indian programs and recognize
8 that enduring acceptable solutions to American Indian health problems can only result
9 from program and project beneficiaries having initial and continued contributions in
10 planning and program operations to include training a workforce from and for these
11 tribal nations.
12 (6) Our AMA acknowledges the significance of the Morrill Act of 1862, the resulting
13 land-grant university system, and the federal trust responsibility related to tribal
14 nations.
15
16 2. Amend [AMA Support of American Indian Health Career Opportunities D-350.976](#) by
17 deletion of clause (2) as having been accomplished by this report.
18 ~~(2) study the historical and economic significance of the Morrill Act as it relates to~~
19 ~~its impact on diversity of the physician workforce.~~
20
21 3. Amend [AMA Support of American Indian Health Career Opportunities D-350.976](#) by
22 addition of a new clause to read:
23 Convene key parties, including but not limited to the Association of American Indian
24 Physicians (AAIP) and American Indian/Alaska Native (AI/AN) tribes/entities such as
25 Indian Health Service and National Indian Health Board, to discuss the representation
26 of AI/AN physicians in medicine and promotion of effective practices in recruitment,
27 matriculation, retention, and graduation of medical students.
28
29 4. Reaffirm the following policies:
30 a. [Indian Health Service H-350.977](#)
31 b. [Underrepresented Student Access to US Medical Schools H-350.960](#)
32 c. [Strategies for Enhancing Diversity in the Physician Workforce H-200.951](#)
33 d. [Continued Support for Diversity in Medical Education D-295.963](#)
34 e. [AMA Support of American Indian Health Career Opportunities D-350.976.](#)
35
36

[The land-grant universities still profiting off Indigenous homelands](#), High Country News, 2020.

APPENDIX B – RELEVANT AMA POLICIES

[AMA Support of American Indian Health Career Opportunities H-350.981](#)

AMA policy on American Indian health career opportunities is as follows:

(1) Our AMA, and other national, state, specialty, and county medical societies recommend special programs for the recruitment and training of American Indians in health careers at all levels and urge that these be expanded. (2) Our AMA supports the inclusion of American Indians in established medical training programs in numbers adequate to meet their needs. Such training programs for American Indians should be operated for a sufficient period of time to ensure a continuous supply of physicians and other health professionals, prioritize consideration of applicants who self-identify as American Indian or Alaska Native and can provide some form of affiliation with an American Indian or Alaska Native tribe in the United States, and support the successful advancement of these trainees. (3) Our AMA will utilize its resources to create a better awareness among physicians and other health providers of the special problems and needs of American Indians and particular emphasis will be placed on the need for stronger clinical exposure and a greater number of health professionals to work among the American Indian population. (4) Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs and recognize that enduring acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations. (5) Our AMA acknowledges long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect.

[Promising Practices Among Pathway Programs to Increase Diversity in Medicine D-350.980](#)

Our AMA will establish a task force to guide organizational transformation within and beyond the AMA toward restorative justice to promote truth, reconciliation, and healing in medicine and medical education.

[Underrepresented Student Access to US Medical Schools H-350.960](#)

Our AMA: (1) recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population; (2) supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students; (3) recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination; (4) is committed to promoting truth and reconciliation in medical education as it relates to improving equity; (5) recognizes the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations; (6) will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine; (7) will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school; (8) will recommend that medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants; (9) will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine; and (10) will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979, (1) (a) encouraging state and local governments to make quality elementary and secondary education available to all.

[Strategies for Enhancing Diversity in the Physician Workforce H-200.951](#)

Our AMA: (1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality; (2) commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in

better educational outcomes; (3) encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties; (4) encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine; (5) encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal; and (6) continue to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.

[Cultural Leave for American Indian Trainees H-350.957](#)

Our AMA recognizes the importance of cultural identity in fostering trainee success and encourages residency programs, fellowship programs, and medical schools to accommodate cultural observances for trainees from American Indian, Alaska Native, and Native Hawaiian communities.

[Strategies for Enhancing Diversity in the Physician Workforce D-200.985](#)

1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups. 2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically underserved areas. 3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community. 4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with their requirements for a diverse student body and faculty. 5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population. 6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity. 7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers. 8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs. 9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities. 10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP). 11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities. 12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population. 13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

[Continued Support for Diversity in Medical Education D-295.963](#)

Our AMA will: (1) publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training; (2) request that the Liaison Committee

on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population; (5) directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or funding in medical education; (6) advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement; (7) investigate the impacts of state legislation regarding DEI-related efforts on the education and careers of students, trainees, and faculty; (8) recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts; and (9) collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure.

[AMA Support of American Indian Health Career Opportunities H-350.981](#)

AMA policy on American Indian health career opportunities is as follows:

(1) Our AMA, and other national, state, specialty, and county medical societies recommend special programs for the recruitment and training of American Indians in health careers at all levels and urge that these be expanded. (2)) Our AMA supports the inclusion of American Indians in established medical training programs in numbers adequate to meet their needs. Such training programs for American Indians should be operated for a sufficient period of time to ensure a continuous supply of physicians and other health professionals, prioritize consideration of applicants who self-identify as American Indian or Alaska Native and can provide some form of affiliation with an American Indian or Alaska Native tribe in the United States, and support the successful advancement of these trainees. (3) Our AMA will utilize its resources to create a better awareness among physicians and other health providers of the special problems and needs of American Indians and particular emphasis will be placed on the need for stronger clinical exposure and a greater number of health professionals to work among the American Indian population. (4) Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs and recognize that enduring acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations. (5) Our AMA acknowledges long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect.

[Indian Health Service H-350.977](#)

The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population. (2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian

care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation. (3) Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps. (4) Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued. (5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population. (6) Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs. (7) Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.

[Desired Qualifications for Indian Health Service Director H-440.816](#)

Our AMA supports the following qualifications for the Director of the Indian Health Service:

1. Health profession, preferably an MD or DO, degree and at least five years of clinical experience at an Indian Health Service medical site or facility.
2. Demonstrated long-term interest, commitment, and activity within the field of Indian Health.
3. Lived on tribal lands or rural American Indian or Alaska Native community or has interacted closely with an urban Indian community.
4. Leadership position in American Indian/Alaska Native health care or a leadership position in an academic setting with activity in American Indian/Alaska Native health care.
5. Experience in the Indian Health Service or has worked extensively with Indian Health Service, Tribal, or Urban Indian health programs.
6. Knowledge and understanding of social and cultural issues affecting the health of American Indian and Alaska Native people.
7. Knowledge of health disparities among Native Americans / Alaska Natives, including the pathophysiological basis of the disease process and the social determinants of health that affect disparities.
8. Experience working with Indian Tribes and Nations and an understanding of the Trust Responsibility of the Federal Government for American Indian and Alaska Natives as well as an understanding of the sovereignty of American Indian and Alaska Native Nations.
9. Experience with management, budget, and federal programs.

[Strong Opposition to Cuts in Federal Funding for the Indian Health Service D-350.987](#)

1. Our AMA will strongly advocate that all of the facilities that serve Native Americans under the Indian Health Service be adequately funded to fulfill their mission and their obligations to patients and providers.
2. Our AMA will ask Congress to take all necessary action to immediately restore full and adequate funding to the Indian Health Service.
3. Our AMA adopts as new policy that the Indian Health Service not be treated more adversely than other health plans in the application of any across the board federal funding reduction.
4. In the event of federal inaction to restore full and adequate funding to the Indian Health Service, our AMA will consider the option of joining in legal action seeking to require the federal government to honor existing treaties, obligations, and previously established laws regarding funding of the Indian Health Service.
5. Our AMA will request that Congress: (A) amend the Indian Health Care Improvement Act to authorize Advanced Appropriations; (B) include our recommendation for the Indian Health Service (IHS) Advanced Appropriations in the Budget Resolution; and (C) include in the enacted appropriations bill IHS Advanced Appropriations.
6. Our AMA supports an increase to the Federal Medical Assistance Percentage (FMAP) to 100% for medical services which are received at or through an Urban Indian Organization that has a grant or contract with the Indian Health Service (IHS) and encourages state and federal governments to reinvest Medicaid savings from 100% FMAP into tribally driven health improvement programs.

[Improving Health Care of American Indians H-350.976](#)

Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens. (2) The federal government provide sufficient funds to support needed health services for American Indians. (3) State and local governments give special attention to the health and health-related needs of non-reservation American Indians in an effort to improve their quality of life. (4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs. (5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians. (6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents. (7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems. (8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians. (9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside. (10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians. (11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

[Plan for Continued Progress Toward Health Equity H-180.944](#)

Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 1-A-24

Subject: Council on Medical Education Sunset Review of 2014 House of Delegates’ Policies

Presented by: Cynthia Jumper, MD, MPH, Chair

Referred to: Reference Committee C

1 Policy [G-600.110](#), “Sunset Mechanism for AMA Policy,” calls for the decennial review of American
2 Medical Association (AMA) policies to ensure that our AMA’s policy database is current, coherent, and
3 relevant:
4

- 5 1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will
6 typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action
7 of our AMA House that reaffirms or amends an existing policy position shall reset the sunset “clock,”
8 making the reaffirmed or amended policy viable for another 10 years.
9
- 10 2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following
11 procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are
12 subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the
13 appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies
14 shall develop and submit a report to the House of Delegates identifying policies that are scheduled to
15 sunset; (d) For each policy under review, the reviewing council can recommend one of the following
16 actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the
17 policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy
18 in any fashion, the reviewing council shall provide a succinct, but cogent justification; (f) The
19 Speakers shall determine the best way for the House of Delegates to handle the sunset reports.
20
- 21 3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its
22 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been
23 accomplished.
24
- 25 4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset:
26 (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been
27 accomplished; or (c) when the policy or directive is part of an established AMA practice that is
28 transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of
29 Delegates Reference Manual: Procedures, Policies and Practices.
30
- 31 5. The most recent policy shall be deemed to supersede contradictory past AMA policies.
32
- 33 6. Sunset policies will be retained in the AMA historical archives.
34

35 See Appendix for a table of 2014 policies and recommended actions.

36 RECOMMENDATION

37

- 1 The Council on Medical Education recommends that the House of Delegates policies listed in the
- 2 appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.
- 3 (Directive to Take Action)

Fiscal Note: \$1,000.

APPENDIX: RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendations
D-275.958	USMLE Step 1 Timing	<p>Our AMA will ask the appropriate stakeholders to track United States Medical Licensing Examination (USMLE) Step 1 Exam timing and subsequently publish aggregate data to determine the significance of advanced clinical experience on Step 1 Exam performance.</p> <p>(Res. 911, I-14)</p>	<p>Sunset - accomplished.</p> <p>After I-14, the Association of American Medical Colleges (AAMC), National Board of Medical Examiners (NBME), and Federation of State Medical Boards (FSMB) were notified of the HOD directive. It was also communicated via the <i>MedEd Update</i> newsletter to each medical school, residency program director, directors of medical education at U.S. teaching hospitals, and other interested groups.</p>
D-275.981	Potential Impact of the USMLE Step 2 CS and COMLEX-PE on Undergraduate and Graduate Medical Education	<p>Our AMA will: (1) continue to closely monitor the USMLE Step 2 CS and the COMLEX-USA Level 2-PE, collecting data on initial and final pass rates, delays in students starting residency training due to scheduling of examinations, economic impact on students, and the potential impact of ethnicity on passing rates; and (2) encourage residency program directors to proactively evaluate their access to resources needed to assist resident physicians who have not passed these examinations to remediate.</p> <p>(CME Rep. 4, A-04; Modified: CME Rep. 2, A-14)</p>	<p>Sunset – no longer relevant.</p> <p>USMLE Step 2 CS and the COMLEX-USA Level 2-PE were discontinued in 2021 and 2022 respectively.</p>
D.275.983	Physicians? Right to Reasonable Privacy Protection and the Federation Credentials Verification Service	<p>Our AMA will request the Federation Credentials Verification Service (FCVS) to (1) add to its "Affidavit and Release" and "Authorization for Release of Records" forms appropriate language that: (a) allows physicians to revoke a prior authorization to the FCVS at any time through an affirmative action on the part of the physician (e.g., written notice) and (b) informs physicians their authorization will remain in effect unless and until revoked by the physician in accordance with guidance provided by the FCVS; and (2) clarify its release does not extend to liability which arises from the gross negligence or willful misconduct of FCVS.</p> <p>(BOT Rep. 22, A-04; Reaffirmed: CMS Rep. 1, A-14)</p>	<p>Retain – still relevant. Amend title to read as follows:</p> <p>Physicians? Right to Reasonable Privacy Protection and the Federation Credentials Verification Service</p> <p>After A-04, the FSMB was notified of this HOD directive.</p> <p>The current FCVS waiver does not contain language contained in the AMA policy. FSMB has shared this AMA policy with their FCVS department and legal staff for review and welcome any AMA language for consideration.</p>

<p>D-275.995</p>	<p>Licensure and Credentialing Issues</p>	<p>Our AMA will: (1) support recognition of the Federation of State Medical Boards' (FSMB) Credentials Verification Service by all licensing jurisdictions; and (2) encourage the National Commission on Quality Assurance (NCQA) and all other organizations to accept the Federation of State Medical Boards' Credentials Verification Service, the Educational Commission for Foreign Medical Graduates' Certification Verification Service, and the AMA Masterfile as primary source verification of credentials. Res. 303, I-00; Reaffirmation A-04; Modified:</p> <p>(CCB/CLRPD Rep. 2, A-14; Reaffirmed: BOT Rep. 3, I-14)</p>	<p>Retain - still relevant. Amend policy with change in title to read as follows:</p> <p>Licensure and Credentialing Issues <u>Primary Source Verification of Credentials</u></p> <p>Our AMA will: (1) supports recognition of the Federation of State Medical Boards' (FSMB) Credentials Verification Service by all licensing jurisdictions; and (2) encourages the National Commission on Quality Assurance (NCQA) and all other organizations to accept recognition of the Federation of State Medical Boards' Credentials Verification Service, the Educational Commission for Foreign Medical Graduates' Certification Verification Service, and the AMA Masterfile as primary source verification of credentials.</p>
<p>D-300.984</p>	<p>Physician Reentry</p>	<p>Our AMA:</p> <ol style="list-style-type: none"> 1. Will continue to collaborate with other appropriate organizations on physician reentry issues including research on the need for and the effectiveness of reentry programs. 2. Will work collaboratively with the American Academy of Pediatrics and other interested groups to convene a conference on physician reentry which will bring together key stakeholders to address the development of reentry programs as well as the educational needs of physicians reentering clinical practice. 3. Will work with interested parties to establish a physician reentry program (PREP) information data base that is publicly accessible to physician applicants and which includes information pertaining to program characteristics. 4. Will support efforts to ensure the affordability and accessibility, and to address the unique liability issues related to PREPs. 5. Will make available to all interested parties the physician reentry program (PREP) system Guiding Principles for use as a basis for all reentry programs: a. Accessible: The PREP system is accessible by geography, time and cost. Reentry programs are available and accessible geographically across the United States and include national and regional pools of reentry positions. Reentering physicians with families or community ties are not burdened by having to relocate to attend a program. The length of time of reentry programs is standardized and is 	<p>Retain – in part. Sunset clauses (2) and (3) as having been accomplished and (6) as no longer relevant. Amend policy to read as follows:</p> <p>Our AMA:</p> <ol style="list-style-type: none"> 1. Will continue to collaborate with other appropriate organizations on physician reentry issues including research on the need for and the effectiveness of reentry programs. 2. Will work collaboratively with the American Academy of Pediatrics and other interested groups to convene a conference on physician reentry which will bring together key stakeholders to address the development of reentry programs as well as the educational needs of physicians reentering clinical practice. 3. Will work with interested parties to establish a physician reentry program (PREP) information data base that is publicly accessible to physician applicants and which includes information pertaining to program characteristics. 4. Will support efforts to ensure the affordability and accessibility and to address the unique liability issues related to PREPs <u>physician reentry programs.</u> 5. Will make available to all interested parties the continue to support physician reentry program (PREP) system these guiding principles for use as a basis for all reentry programs: (a): Accessible: The PREP system is accessible Obtainable by geography, time, and cost. Reentry programs are available and accessible geographically across the United States and include national and regional pools of reentry positions. Reentering physicians with families or community ties are not burdened by having to relocate to attend a program. The length of time of reentry programs is standardized and is commensurate with the assessed clinical and

	<p>commensurate with the assessed clinical and educational needs of reentering physicians. The cost of reentry programs is not prohibitive to the physician, health care institutions or the health care system. b. Collaborative: The PREP system is designed to be collaborative to improve communication and resource sharing. Information and materials including evaluation instruments are shared across specialties, to the extent possible, to improve program and physician performance. A common nomenclature is used to maximize communication across specialties. Reentry programs share resources and create a common repository for such resources, which are easily accessible. c. Comprehensive: The PREP system is comprehensive to maximize program utility. Physician reentry programs prepare physicians to return to clinical activity in the discipline in which they have been trained or certified and in the practice settings they expect to work including community-based, public health, and hospital-based or academic practice. d. Ethical: The PREP system is based on accepted principles of medical ethics. Physician reentry programs will conform to physician licensure statutes. The standards of professionalism, as stated in the AMA Code of Medical Ethics, must be followed. e. Flexible: The PREP system is flexible in structure in order to maximize program relevancy and usefulness. Physician reentry programs can accommodate modifications to program requirements and activities in ways that are optimal to the needs of reentering physicians. f. Modular: Physician reentry programs are modularized, individualized and competency-based. They are tailored to the learning needs of reentering physicians, which prevents the need for large, expensive, and standardized programs. Physicians should only be required to take those modules that allow them to meet an identified educational need. g. Innovative: Innovation is built into a PREP system allowing programs to offer state of the art learning and meet the diverse and changing needs of reentry physicians. Physician reentry programs develop and utilize learning tools including experimenting with innovative and novel curricular methodologies such as distance learning technologies and simulation. h.</p>	<p>educational needs of reentering physicians. The cost of reentry programs is not prohibitive to the physician, health care institutions, or the health care system. (b)- Collaborative: The PREP system is <u>Designed</u> to be collaborative to improve communication and resource sharing. Information and materials including evaluation instruments are shared across specialties, to the extent possible, to improve program and physician performance. A common nomenclature is used to maximize communication across specialties. Reentry programs share resources and create a common repository for such resources, which are easily accessible. (c)- Comprehensive: The PREP system is comprehensive <u>Broad</u> to maximize program utility. Physician reentry programs prepare physicians to return to clinical activity in the discipline in which they have been trained or certified and in the practice settings they expect to work including community-based, public health, and hospital-based or academic practice. (d)- Ethical: The PREP system is <u>Based</u> on accepted principles of medical ethics. Physician reentry programs will conform to physician licensure statutes. The standards of professionalism, as stated in the AMA Code of Medical Ethics, must be followed. (e)- Flexible: The PREP system is flexible <u>Pliable</u> in structure in order to maximize program relevancy and usefulness. Physician reentry programs can accommodate modifications to program requirements and activities in ways that are optimal to the needs of reentering physicians. (f)- Modular: Physician reentry programs are modularized, individualized, and competency-based. They are tailored to the learning needs of reentering physicians, which prevents the need for large, expensive, and standardized programs. Physicians should only be required to take those modules that allow them to meet an identified educational need. (g)- Innovative: Innovation is built into a PREP system allowing <u>Allows</u> programs to offer state of the art learning and meet the diverse and changing needs of reentry physicians. Physician reentry programs develop and utilize learning tools including experimenting with innovative and novel curricular methodologies such as distance learning technologies and simulation. (h)- Accountable: The PREP system <u>Has</u> mechanisms for assessment and is open to evaluation. Physician reentry programs have an evaluation component that is comparable among all specialties. Program assessments use objective measures to evaluate physician's competence at time of entry, during the program and at time of completion. Program outcomes are measured. Reliability and validity of</p>
--	--	--

		<p>Accountable: The PREP system has mechanisms for assessment and is open to evaluation. Physician reentry programs have an evaluation component that is comparable among all specialties. Program assessments use objective measures to evaluate physician's competence at time of entry, during the program and at time of completion. Program outcomes are measured. Reliability and validity of the measures are established. Standardization of measures exist across programs to assess whether or not national standards are being met. i. Stable: A funding scheme is in place to ensure the PREP system is financially stable over the long-term. Adequate funding allows physician reentry programs to operate at sufficient and appropriate capacity. j. Responsive: The PREP system makes refinements, updates and other changes when necessary. Physician reentry programs are equipped to address systemic changes such as changes in regulations. Additionally, the PREP system is prepared to respond efficiently to urgent health care needs within society including mobilizing clinically inactive physicians temporarily into the workforce to attend to an acute public health crisis, such as a terrorist, biological, chemical, or natural disaster.</p> <p>6. Our AMA encourages each state which does not grant a full and unrestricted license to physicians undergoing reentry to develop a non-disciplinary category of licensure for physicians during their reentry process.</p> <p>(CME Rep. 6, A-08; Reaffirmed: CME Rep. 11, A-12; Modified: CCB/CLRPD Rep. 2, A-14; Appended: Res. 310, A-14)</p>	<p>the measures are established. Standardization of measures exists across programs to assess whether or not national standards are being met. (i) Stable: A funding scheme is in place to ensure the PREP system is financially stable stability over the long-term. Adequate funding allows physician reentry programs to operate at sufficient and appropriate capacity. (j) Responsive: The PREP system <u>m</u>akes refinements, updates, and other changes when necessary. Physician reentry programs are equipped to address systemic changes such as changes in regulations. Additionally, the PREP system <u>It</u> is prepared to respond efficiently to urgent health care needs within society including mobilizing clinically inactive physicians temporarily into the workforce to attend to an acute public health crisis, such as a terrorist, biological, chemical, or natural disaster.</p> <p>6. Our AMA Will encourages each states that which does not grant a full and unrestricted license to physicians undergoing reentry to develop a non-disciplinary category of licensure for physicians during their reentry process.</p> <p>Sunset clause (2) as having been accomplished. Records indicate the AMA and the American Academy of Pediatrics hosted joint conferences in 2008 and 2011. They also launched the National Inactive Physicians Survey, which was published in 2011. Plans are underway for a similar study that will ask many of the same questions as the previous study.</p> <p>Sunset clause (3) as having been accomplished. FSMB developed a directory of physician assessment and remedial education programs.</p> <p>Regarding clause (6), state board requirements for reentry are listed on the FSMB website. FSMB's Workgroup on Reentry to Practice developed a draft report that discusses difficulties obtaining licensure based on time away from practice and speaks to differing reentry requirements when absences from practice result from disciplinary action or criminal conviction. Open comment period ended Feb 16, 2024.</p> <p>Remove references to "PREP" as it does not reflect current nomenclature.</p>
<p>D-300.988</p>	<p>Implications of the "Stark II" Regulations for Continuing Medical Education</p>	<p>Our AMA will (1) request that the Centers for Medicare & Medicaid Services develop an explicit exception within the regulations for Section 1877 of the Social Security Act (Stark law) that permits physician compensation without financial limit in the form of continuing medical education that is</p>	<p>Retain – in part. Amend policy to read as follows:</p> <p>Our AMA will (1) request that the Centers for Medicare & Medicaid Services develop an explicit exception within the regulations for Section 1877 of the Social Security Act (Stark law) that permits</p>

		<p>offered for the purpose of ensuring quality patient care; and (2) monitor the impact of the Section 1877 (Stark II) regulations on the ability of health care institutions to provide continuing medical education to their medical staffs.</p> <p>(CME Rep. 6, I-04; Reaffirmed: CME Rep. 2, A-14)</p>	<p>physician compensation without financial limit in the form of continuing medical education that is offered for the purpose of ensuring quality patient care; and (2) monitor the impact of the Section 1877 (Stark II) regulations on the ability of health care institutions to provide continuing medical education to their medical staffs.</p> <p>Sunset clause (1) as having been accomplished. After I-04, Centers for Medicare & Medicaid Services was notified of this HOD directive.</p> <p>Retain clause (2) as there remain situations where health care institutions seek guidance on whether providing certain types of continuing medical education violates section 1877.</p>
D-300.994	Reduced Continuing Medical Education (CME) Fees for Retired Physicians	<p>Our AMA supports reduced registration fees for retired physicians at all continuing medical education (CME) programs and encourages CME providers to consider a reduced fee policy for retired physicians.</p> <p>(Res. 302, I-01; Reaffirmed: CME Rep. 2, A-11; Modified: CME Rep. 2, A-14)</p>	Retain - still relevant.
D-310.967	Resident Pay During Orientation	<p>Our AMA will advocate that all resident and fellow physicians should be compensated, and receive benefits, at a level commensurate with the pay that they will receive while in their training program, for all days spent in required orientation activities prior to the onset of their contractual responsibilities.</p> <p>(Res. 302, A-07; Modified: CCB/CLRPD Rep. 2, A-14)</p>	Retain - still relevant.
D-310.980	Increase in ACGME Fees	<p>Our AMA will work with the Accreditation Council for Graduate Medical Education to limit the increase of the ACGME fees.</p> <p>(Res. 311, A-04; Reaffirmed: CME Rep. 2, A-14)</p>	<p>Sunset – not practical.</p> <p>ACGME has limited increases for many years. It is incumbent on organizations to be able to control their own fees.</p>
D-310.982	Protecting the Privacy of Physician Information Held by the ACGME	<p>Our AMA will request the Accreditation Council for Graduate Medical Education and any other organization with a similar case and procedure log for resident physicians to (1) develop and implement a system to remove or sufficiently protect identifying data from individual physicians? data logs; and (2) adopt a policy not to disseminate any data specific to individual physicians without the written consent of the physician.</p> <p>(Res. 301, A-04; Reaffirmed: CME Rep. 2, A-14)</p>	<p>Sunset – accomplished.</p> <p>After A-04, ACGME was notified of this HOD directive. Records of the correspondence state that “in discussing this issue last week with John Nysten, he assured me this is already ACGME policy.”</p> <p>The ACGME data systems include the Accreditation Data System (ADS), the Case Log System, the Medical School Portal, and ACGME surveys. Public-facing data is available here. The majority of data are available only to individuals with login credentials. Logins are provided to</p>

			<p>designated institutional officials (DIOs), program directors, program coordinators, residents, fellows, and designated medical school users. Users have access to the following systems:</p> <ul style="list-style-type: none"> • Program directors: ADS, including Case Logs for viewing reports. • DIOs: ADS, including Case Logs for viewing reports. • Residents and fellows: Case Logs and ACGME Surveys. • Faculty members: ACGME Surveys • Medical school users: Medical School Portal. • Others: ADS Public.
<p>D-310.992</p>	<p>Limits on Training Opportunities for J-1 Residents</p>	<p>Our AMA will request that the Bureau of Educational and Cultural Affairs, Accreditation Council for Graduate Medical Education (ACGME), American Board of Medical Specialties and the Educational Commission for Foreign Medical Graduates develop criteria by which J-1 exchange visitor physicians could seek extension of the length of their visa beyond the 7-year limit in order to participate in fellowship or subspecialty programs accredited by the ACGME.</p> <p>(Res. 303, A-01; Reaffirmed: CME Rep. 2, A-11; Reaffirmation A-14)</p>	<p>Sunset – accomplished.</p> <p>After A-01, the Bureau of Educational and Cultural Affairs and the Educational Commission for Foreign Medical Graduates were notified of this HOD directive. It was also communicated to each residency program director and directors of medical education at U.S. teaching hospitals via the <i>Medical Education Bulletin</i>.</p> <p>According to ECFMG’s (now a member of Intealth) Exchange Visitor Sponsor Program (EVSP), “any international medical graduate seeking to extend his/her participation in ECFMG-sponsored training beyond seven years must file a formal extension request with the Department of State (DOS) through ECFMG.” In addition to the ECFMG fee and DOS fee, documentation must include: complete application for ECFMG sponsorship, letter of support from applicant’s current and proposed program directors, statement of educational objectives from applicant, and letter of “exceptional need” from the home country government; this letter must be signed by either the home country’s ambassador to the United States or the home country’s minister of health confirming an “exceptional need” for the applicant to be trained in the field of medicine being pursued.</p>
<p>D-373.999</p>	<p>Informed Patient Choice and Shared Decision Making</p>	<p>1. Our AMA will work with state and specialty societies, medical schools, and others as appropriate to educate and communicate to medical students and to physicians about the importance of shared decision-making guidance through publications and other educational methods and assist the medical community in moving towards patient-centered care.</p> <p>(Res. 817, I-08; Modified: Res. 301, A-14)</p>	<p>Retain - still relevant.</p>

<p>D-480.999</p>	<p>State Authority and Flexibility in Medical Licensure for Telemedicine</p>	<p>Our AMA will continue its opposition to a single national federalized system of medical licensure.</p> <p>(CME Rep. 7, A-99; Reaffirmed and Modified: CME Rep. 2, A-09; Reaffirmed in lieu of Res. 920, I-13; Reaffirmed: BOT Rep. 3, I-14)</p>	<p>Retain - still relevant.</p> <p>This policy is central to Advocacy’s work on telehealth licensure.</p>
<p>G-620.065</p>	<p>Dues Exemption/ Adjustment for Physicians Unable to Attain Residency Training Program</p>	<p>Our AMA urges state societies to offer membership at significantly discounted rates for example, equal to the charge for medical students or residents, to physicians who have graduated from American medical schools or who have successfully completed Educational Commission on Foreign Medical Graduate (ECFMG) and United States Medical Licensing Examination (USMLE) examinations but have been unable to obtain American residency positions.</p> <p>(Res. 611, A-14)</p>	<p>Retain - still relevant.</p>
<p>H-40.977</p>	<p>Pay Equity for Physicians in Active and Reserve Uniformed Services</p>	<p>For reservists called to active duty or on short-term mobilization assignments, the AMA supports the adjustment of pay and allowances upwards to approach pay and allowances for those with similar rank and qualifications in regular and long-term reserve status.</p> <p>(Sub. Res. 233, I-92; Reaffirmed: CMS Rep. 10, A-03; Reaffirmed: CME Rep. 2, I-04; Reaffirmed: CMS Rep. 1, A-14)</p>	<p>Retain - still relevant.</p>
<p>H-40.983</p>	<p>Active and Reserve Physicians and Physicians-In-Training</p>	<p>(1) Our AMA requests the Residency Review Committees and Specialty Boards to develop flexible policies to ensure that (a) resident physicians and fellows who are members of the active or reserve components of the uniformed services of the United States retain their academic and training status within their respective training programs during periods of reserve activation or active duty with the uniformed services; and (b) active duty or deployment time with the uniformed services during a residency or fellowship should be credited toward the usual training period for eligibility for matriculation and Board examinations when the trainee's experiences have been educationally appropriate.</p> <p>(2) Our AMA strongly encourages state licensing boards to waive requirements for continuing medical education credits for</p>	<p>Retain – still relevant.</p> <p>ACGME works closely with the Department of Defense around issues with deployment of both residents and faculty. The institutional review group is revising their requirements, which will likely be released in fall 2024 with an open comment period.</p>

		<p>physicians during periods of reserve or national guard activation or active duty with the uniformed services.</p> <p>(3) Our AMA supports the position that, at the time of national emergency, residents and fellows called to support their country in military service should be placed, when possible, in positions consistent with their specialty and level of training.</p> <p>(Res. 187, I-90; Modified: Sunset Report, I-00; Reaffirmed: CME Rep. 2, I-04; Modified: CME Rep. 2, A-14)</p>	
H-95.943	MDs/DOs as Medical Review Officers	<p>Our AMA: (1) reaffirms its policy that only licensed MDs/DOs with knowledge of substance use disorders should serve as Medical Review Officers (MROs); (2) reaffirms its policy that all MDs/DOs who serve as MROs should obtain continuing medical education credit in this subject area; (3) vigorously advocates that any legislation concerning drug testing in the workplace include a provision for a Medical Review Officer (MRO) who will review all positive test results and further that only a licensed physician may serve as the MRO and further that this physician MRO has knowledge of substance abuse disorders and has appropriate medical training to interpret and evaluate an individual's positive test results together with his or her medical history and any other relevant biomedical information ; and (4) vigorously opposes legislation that is inconsistent with these policies.</p> <p>(CCB/CLRPD Rep. 3, A-14)</p>	<p>Retain – still relevant. Amend policy to read as follows:</p> <p>Our AMA: (1) reaffirms its policy <u>affirms</u> that only licensed MDs/DOs with knowledge of substance use disorders should serve as Medical Review Officers (MROs); (2) reaffirms its policy <u>affirms</u> that all MDs/DOs who serve as MROs should obtain continuing medical education credit in this subject area; (3) vigorously advocates <u>affirms</u> that any legislation concerning drug testing in the workplace include a provision for a Medical Review Officer (MRO) who will review all positive test results and further that only a licensed physician may serve as the MRO and further that this physician MRO has knowledge of substance abuse disorders and has appropriate medical training to interpret and evaluate an individual's positive test results together with their medical history and any other relevant biomedical information-; and (4) vigorously opposes legislation that is inconsistent with these policies.</p> <p>Clauses (1) and (2) are consistent with ACOEM's MRO training. Language in clause (3) is redundant.</p>
H-275.929	Additions to United States Medical Licensure Examination and Comprehensive Osteopathic Medical Licensure Examination	<p>Our AMA opposes additions to the United States Medical Licensing Examination and Comprehensive Osteopathic Medical Licensure Examination that lack predictive validity for future performance as a physician.</p> <p>(Res. 308, A-04; Reaffirmed: CME Rep. 2, A-14)</p>	<p>Retain - still relevant. Amend policy with change in title to read as follows:</p> <p><u>Oppose Additions to United States Medical Licensure Examination and Comprehensive Osteopathic Medical Licensure Examination</u></p>
H-275.930	Opposition to Clinical Skills Examinations	<p>Our AMA: (1) opposes clinical skills examinations for the purpose of physician medical relicensure; (2) reaffirms its</p>	<p>Retain- in part. Amend policy to read as follows:</p>

	<p>for Physician Medical Relicensure</p>	<p>support for continuous quality improvement of practicing physicians, and supports research into methods to improve clinical practice, including practice guidelines; and (3) continues to support the implementation of quality improvement through local professional, non-governmental oversight.</p> <p>(Res. 307, A-04; Reaffirmed: CME Rep. 2, A-14)</p>	<p>Our AMA: (1) opposes clinical skills examinations for the purpose of physician medical relicensure; and (2) reaffirms its supports for continuous quality improvement of practicing physicians, and supports; research into methods to improve clinical practice, including practice guidelines; and (3) continues to supports the implementation of quality improvement through local professional, non-governmental oversight.</p> <p>Retain clause (1) as still relevant.</p> <p>Sunset clause (2) which is addressed in policies H-450.970, H-450.965, and D-478.984.</p> <p>Retain clause (3) and append to H-450.970 where it better aligns with the content and title.</p>
<p>H-275.945</p>	<p>Self-Incriminating Questions on Applications for Licensure and Specialty Boards</p>	<p>The AMA will:</p> <p>(1) encourage the Federation of State Medical Boards and its constituent members to develop uniform definitions and nomenclature for use in licensing and disciplinary proceedings to better facilitate the sharing of information;</p> <p>(2) seek clarification of the application of the Americans with Disabilities Act to the actions of medical licensing and medical specialty boards; and</p> <p>(3) until the applicability and scope of the Americans with Disabilities Act are clarified, will encourage the American Board of Medical Specialties and the Federation of State Medical Boards and their constituent members to advise physicians of the rationale behind inquiries on mental illness, substance abuse or physical disabilities in materials used in the licensure, reregistration, and certification processes when such questions are asked.</p> <p>(BOT Rep. 13, I-93; Reaffirmed: CME Rep. 10-I-94; Reaffirmed: CME Rep. 2, A-04; Reaffirmed: CME Rep. 2, A-14)</p>	<p>Sunset – accomplished.</p> <p>Sunset clause (1) as having been accomplished. FSMB Physician Data Center (PDC) and Disciplinary Alert Service (DAS) foster the appropriate sharing of information and uniformity of definitions and nomenclature.</p> <p>Sunset clause (2) as having been accomplished. FSMB adopted policy Physician Wellness and Burnout (2018) that addresses the ADA related to licensing.</p> <p>Sunset clause (3), as it is addressed in policy H-275.970.</p>
<p>H-275.973</p>	<p>State Control of Qualifications for Medical Licensure</p>	<p>(1) The AMA firmly opposes the imposition of federally mandated restrictions on the ability of individual states to determine the qualifications of physician candidates for licensure by endorsement. (2) The AMA actively opposes the enactment of any legislation introduced in Congress that promotes these objectives.</p> <p>(Res. 84, I-87; Reaffirmed: Sunset Report, I-97; Reaffirmed: CME Rep. 2, A-07; Reaffirmed: BOT Rep. 3, I-14)</p>	<p>Retain - still relevant. Amend policy with change in title to read as follows:</p> <p><u>Support</u> State Control of Qualifications for Medical Licensure</p>

<p>H-275.977</p>	<p>Verifying Physicians' Credentials</p>	<p>The AMA endorses the use of pluralistic approaches to the verification and validation of physicians' credentials. The AMA will seek legislation that managed care companies be required to request credentialing information in a uniform standardized format which all groups involved in credentialing would accept.</p> <p>(Sub. Res. 91, A-87; Amended by Res. 736, A-97; Reaffirmed: Sunset Report, I-97; Reaffirmed: CME Rep. 2, A-07; Reaffirmed: BOT Rep. 3, I-14)</p>	<p>Sunset – duplicative.</p> <p>Sunset the first sentence as superseded by policy D-275.995 that supports primary source verification of credentials via the AMA Masterfile, FSMB's Federation Credentials Verification Service, and the Educational Commission for Foreign Medical Graduates' Certification Verification Service.</p> <p>Sunset the second sentence, which is already addressed by policy H-285.979.</p>
<p>H-275.988</p>	<p>Identifying Persons with Illegally Obtained Medical Degrees</p>	<p>The AMA supports appropriate efforts of private and governmental agencies in identification of persons possessing illegally obtained medical degrees.</p> <p>(Res. 43, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: CME Rep. 2, A-04; Reaffirmed: CME Rep. 2, A-14)</p>	<p>Retain- still relevant.</p>
<p>H-275.996</p>	<p>Physician Competence</p>	<p>Our AMA:</p> <p>(1) urges the American Board of Medical Specialties and its constituent boards to reconsider their positions regarding recertification as a mandatory requirement rather than as a voluntarily sought and achieved validation of excellence;</p> <p>(2) urges the Federation of State Medical Boards and its constituent state boards to reconsider and reverse their position urging and accepting specialty board certification as evidence of continuing competence for the purpose of re-registration of licensure; and</p> <p>(3) favors continued efforts to improve voluntary continuing medical education programs, to maintain the peer review process within the profession, and to develop better techniques for establishing the necessary patient care data base.</p> <p>(CME Rep. J, A-80; Reaffirmed: CLRPD Rep. B, I-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CME Rep. 7, A-02; Reaffirmed: CME Rep. 7, A-07; Reaffirmed: CME Rep. 16, A-09; Reaffirmed in lieu of Res. 302, A-10; Reaffirmed in lieu of Res. 320, A-14)</p>	<p>Sunset – accomplished.</p> <p>Sunset clause (1) as having been accomplished. According to the ABMS, “member board certification is a voluntary specialty credential that indicates a physician or medical specialist’s proficiency in a particular specialty area of medicine.”</p> <p>Sunset clause (2) as having been accomplished, given the FSMB was notified of this policy after A-80. In 2012, the FSMB House of Delegates adopted a policy that states “The Federation of State Medical Boards (FSMB) supports the use of, and encourages state boards to recognize, a licensee’s participation in an ABMS MOC and/or AOA BOS OCC program as an acceptable means of meeting CME requirements for license renewal.” FSMB is aware of a small but growing number of state medical boards that accept participation in continuing certification as evidence of substantive compliance with CME requirements.</p> <p>Sunset clause (3) as duplicative. Addressed in AMA policy Support for Continuing Medical Education H-300.958.</p>
<p>H-295.863</p>	<p>Impairment Prevention and Treatment in the Training Years</p>	<p>Our AMA: (1) reaffirms the importance of preventing and treating psychiatric illness, alcoholism and substance abuse in medical students, residents and fellows; (2) strongly encourages medical schools and teaching</p>	<p>Retain - still relevant. Amend policy to read as follows:</p> <p>Our AMA: (1) reaffirms the importance of preventing and treating psychiatric illness,</p>

		<p>hospitals to develop and maintain impairment prevention and treatment programs with confidential services for medical students, residents and fellows; (3) urges medical schools, hospitals with graduate medical education programs, and state and county medical societies to initiate active liaison with local impaired physician committees in order to more effectively diagnose and treat medical student and resident substance abuse; (4) advocates (a) further study (and continued monitoring of other studies) concerning the problem of substance abuse among students, residents, and faculty in U.S. medical schools, and (b) development of model policy and programmatic guidelines which might assist in the establishment of programs for medical students, residents and faculty and which could significantly impact this problem and potentially reduce the risk of future impairment among physicians.</p> <p>(CCB/CLRPD Rep. 3, A-14)</p>	<p>alcoholism, and substance abuse use in medical students, residents, and fellows; (2) strongly encourages medical schools and teaching hospitals to develop and maintain impairment prevention and treatment programs with confidential services for medical students, residents, and fellows; (3) urges medical schools, hospitals with graduate medical education programs, and state and county medical societies to initiate active liaison with local impaired physician committees in order to more effectively diagnose and treat medical student and resident substance abuse use; (4) advocates (a) further study (and continued monitoring of other studies) concerning the problem of substance abuse use among students, residents, and faculty in U.S. medical schools, and (b) development of model policy and programmatic guidelines which might assist in the establishment of programs for medical students, residents, and faculty and which could significantly impact this problem and potentially reduce the risk of future impairment among physicians.</p> <p>Change from “abuse to “use” in keeping with policy Destigmatizing the Language of Addiction H-95.917.</p>
H-295.880	Service Learning in Medical Education	<p>Our AMA will support the concept of service learning as a key component in medical school and residency curricula, and that these experiences should include student and resident collaboration with a community partner to improve the health of the population.</p> <p>(Res. 321, A-04; Reaffirmed: CME Rep. 2, A-14)</p>	Retain - still relevant.
H-295.929	Faculty/Staff Appointments at More Than One Medical School	<p>The AMA encourages medical schools that currently do not permit volunteer faculty members to hold appointments at more than one medical school to review this policy, to ensure that it is in the best interests of medical education and program integrity. Nonsalaried faculty members of medical schools should be allowed to hold concurrent appointments at more than one medical school as long as the individual physician agrees to carry out all responsibilities assigned by each medical school.</p> <p>(CME Rep. 3, I-93; Reaffirmed: CME Rep. 2, A-05; Modified: CME Rep. 2, A-14)</p>	Retain - still relevant.
H-295.983	Extramural Clerkships and	<p>The AMA (1) recognizes the essential role of the medical school faculty in the</p>	Retain - still relevant.

	Early Career Decisions	determination of the core clinical education of medical students; and (2) opposes resident recruitment practices which would interfere with scheduled core clinical clerkships at the student's medical school. (Res. 77, I-84; CLRPD Rep. 3 - I-94; Reaffirmed: CME Rep. 2, A-04; Reaffirmed: CME Rep. 2, A-14)	
H-295.985	Humanism in Graduate Medical Education	The AMA encourages medical schools and teaching hospitals to strengthen educational programs for undergraduates and resident physicians in recognizing and meeting the emotional needs of patients and their families. (Sub. Res. 154, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: CME Rep. 2, A-04; Reaffirmed: CME Rep. 2, A-14)	Retain - still relevant.
H-305.950	Fairness in Publication of Names of Loan Defaulters	The AMA opposes the selective publication of names of defaulters on federally funded student loans. (Res. 309, A-94; Reaffirmed: CME Rep. 2, A-04; Reaffirmed: CME Rep. 2, A-14)	Retain - still relevant.
H-310.990	Shared Residency Positions	The AMA supports the concept of shared residency positions and the continued collection and publication of data on these positions, and encourages residency program directors to offer such positions where feasible. (Res. 81, I-84; Reaffirmed by CLRPD Rep. 3 - I-94; Reaffirmed: CME Rep. 2, A-04; Modified: CME Rep. 2, A-14)	Retain – still relevant. Amend policy to read as follows: The AMA supports the concept of shared residency positions and the continued collection and publication of data on these positions, and encourages residency program directors to offer such positions where feasible.
H-355.977	Reporting of Resident Physicians to the National Practitioner Data Bank	1. Our AMA: (A) seeks opportunities to limit reports concerning residents to the National Practitioner Data Bank to only those situations where a final adverse action has been taken by a medical licensing jurisdiction; (B) opposes attempts to extend reports concerning residents to the National Practitioner Data Bank beyond those covered in Item 1 of this policy; and (C) advocates for legislation amending, as appropriate, the NPDB reporting requirements regarding resident physicians to be consistent with this policy, and opposes the expansion of existing reporting requirements. (CCB/CLRPD Rep. 3, A-14)	Retain - still relevant. Amend policy to read as follows: 1. Our AMA: (A) seeks opportunities to support <u>the limiting of</u> reports concerning residents to the National Practitioner Data Bank to only those situations where a final adverse action has been taken by a medical licensing jurisdiction; and (B) opposes attempts to extend reports concerning residents to the National Practitioner Data Bank beyond those covered in Item 1 of this policy; and (C) advocates for legislation amending, as appropriate, the NPDB reporting requirements regarding resident physicians to be consistent with this policy, and opposes the expansion of existing reporting requirements.

REPORT 2 OF THE COUNCIL ON MEDICAL EDUCATION (A-24)
The Current Match Process and Alternatives (Resolution 302-A-23)

EXECUTIVE SUMMARY

This report was written in response to Resolution 302, brought forth by the Resident and Fellow Section at the 2023 Annual Meeting of the House of Delegates. This resolution was referred for study. Now AMA Policy [D-310.944](#), it asks that that the American Medical Association “study alternatives to the current residency and fellowship Match process which would be less restrictive on free market competition for applicants.”

This report summarizes the history of The Match[®] and time before The Match, differentiates between the application process versus The Match, explains aspects of The Match process as well as independent match processes, and offers perspective from the National Resident Matching Program[®] (NRMP[®]). The Council on Medical Education understands the concerns presented by the authors of Resolution 302-A-23 and their frustrations related to lack of control over their own destinies. This report illuminates the importance of ongoing communication and transparency by the NRMP as well as collaboration among all invested parties. Further, this report makes clear that there are no currently identified alternatives other than an unstructured, open market approach, which the Council believes would be detrimental to the majority of trainees in comparison to the current Match process. Thus, attention should be focused on what can be done to improve The Match and other specialty matches rather than focusing on its replacement, as a match process continues to be the best solution for trainees at this time.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 02-A-24

Subject: The Current Match Process and Alternatives (Resolution 302-A-23)

Presented by: Cynthia Jumper, MD, MPH, Chair

Referred to: Reference Committee C

1 INTRODUCTION

2
3 At the 2023 Annual Meeting of the House of Delegates, Resolution 302-A-23 entitled “Antitrust
4 Legislation Regarding the AAMC, ACGME, NRMP and Other Relevant Associations or
5 Organizations” asked “that our American Medical Association study alternatives to the current
6 residency and fellowship Match process which would be less restrictive on free market competition
7 for applicants.” The Resident and Fellow Section (RFS), authors of the resolution, noted concerns
8 related to preservation of the process of free market competition, antitrust laws, and The Match®.
9 Their resolution stated, “The Match poses significant anticompetition concerns and the
10 procompetitive effect of streamlining residency job applications and increasing percentage of
11 position filled needs to be outweighed by the anticompetitive effect of the lack of negotiation
12 power of residents.”¹

13
14 The resolution, now American Medical Association (AMA) Policy [D-310.944](#), was referred for
15 study. This report seeks to address this directive by providing historical context, differentiating
16 between the application process versus The Match, explaining aspects of The Match process as
17 well as independent match processes, and offering perspective from the National Resident
18 Matching Program® (NRMP®). It seeks to illuminate what can be done within the confines of The
19 Match to make it better and clarify that there are no currently identified “alternatives” other than
20 the free market approach. To provide context, The Match is defined by the NRMP as “a
21 computerized mathematical algorithm, ‘the matching algorithm,’ to place applicants into the most
22 preferred residency and fellowship positions at programs that also prefer them.”² It is intended to
23 favor the rank list of the applicant.

24 25 BACKGROUND

26 27 *History of The Match*

28
29 The trainee internship experience began in the late 1800s and was formalized shortly thereafter.
30 Such positions began to outnumber the students available. “In the early 1900s, competition among
31 hospitals for interns and among medical students for good internships led to increasingly early
32 offers of internships to students. By the 1940s, appointments were often made as early as the
33 beginning of the junior year of medical school. ...From 1945 through 1951, efforts were made to
34 enforce a uniform date for accepting offers. However, students were still faced with offers having
35 very short deadlines, compelling them to accept or reject offers without knowing what other offers
36 might be forthcoming.”³ Such challenges led to the creation of a centralized clearinghouse to allow
37 for students to benefit from uniform appointment dates while reducing congestion and pressure.

1 The clearinghouse was created by the National Interassociation Committee on Internships, who
2 later changed its name to the National Intern Matching Program (NIMP). It included national
3 organizations such as the AMA (Council on Medical Education), American Hospital Association,
4 Association of American Medical Colleges (AAMC) and federal hospitals involved in resident
5 training.⁴ Dissatisfaction among students led to proposals of algorithms that were felt to be more
6 equitable.

7
8 The NIMP was established as a 501c(3) and operated through the 1960s. In 1966, the [Millis](#)
9 [Commission Report](#), authorized by the AMA Council on Medical Education, examined medical
10 education in the U.S., particularly the length and quality of graduate medical education. It
11 supported a broader move to integrated residency training.⁵ The NIMP became the NIRMP in
12 1968. The organization, in 1972, revised its participation requirements such that The Match
13 expanded to include all first-year resident positions and required all institutions participating in The
14 Match to select U.S. senior students in allopathic medical schools through it. By 1975, the NIRMP
15 had become the NRMP.

16
17 The NRMP oversees The Match, which is the mathematical algorithm to match applicants and
18 programs to their most preferred ranked choices. In 2012, researchers Lloyd Shapley and Alvin
19 Roth won the Nobel Prize in Economics for developing the “theory of stable allocations and the
20 practice of market design” which led to the development of the algorithm used for The Match.
21 They “pioneered theoretical concepts to understand and solve the matching problem and clarified
22 those ideas and applied them to engineer algorithms that are now widely used in the real world.”⁶
23 The current algorithm has been used since 1998. The Match continues to be updated to address the
24 changing needs of applicants and to yield a favorable match while producing a stable outcome.

25
26 In the past, osteopathic medical students could also participate in the [American Osteopathic](#)
27 [Association](#) (AOA) national match process through the [National Matching Services](#) (NMS).
28 Starting in July 2015, the AOA and the Accreditation Council for Graduate Medical Education
29 (ACGME) began a transition to a single accreditation system (SAS) to combine the AOA and
30 NRMP match programs. Between 2015 and 2020, AOA programs applied for accreditation to the
31 ACGME, and if granted, these programs could take residents through the NRMP match. By 2020,
32 most AOA programs had transitioned to the SAS or had withdrawn and were no longer taking new
33 residents but were allowed to complete the training of the residents remaining in their programs
34 under AOA accreditation until the last resident finished. The intent of the SAS was to foster
35 inclusion for osteopathic medical students as well as residents at former AOA programs. Data from
36 2020-2023 indicates that Doctor of Osteopathic Medicine (DO) applicants have an increased match
37 rate from 90.7% to 91.6%, which also correlates with the opening of more DO schools.⁷

38 39 *The Match process*

40
41 The intention of The Match is to make the best possible match for all participants and ensure the
42 uniform process is fair, efficient, transparent, and reliable. Referred to as the Main Residency
43 Match, it is part of a larger undertaking that begins with applying to and interviewing with training
44 programs. Most applicants use the [Electronic Residency Application Service](#)[®] (ERAS[®]), a product
45 of the AAMC, to apply to programs per their chosen specialty. This centralized online application
46 service delivers applications and supporting documents to residency programs. Next, applicants
47 register for The Match in the NRMP’s [Registration, Ranking, and Results](#)[®] (R3[®]) system.
48 Applicants are invited to interview per the criteria set by each program. Both applicants and
49 programs submit their rank order preferences in the R3 system by a predetermined deadline,
50 usually in early March. The NRMP runs their matching [algorithm](#) according to the preferences
51 submitted and all parties are notified of the results later that month. Matched applicants and

1 programs enter into an agreement. Unmatched applicants and programs may elect to participate in
 2 the NRMP’s [Supplemental Offer and Acceptance Program](#) (SOAP) during Match Week. See
 3 Appendix A for an infographic of this process. The NRMP website provides [data](#) on the Main
 4 Residency Match (including 2023) as well as research reports, survey reports, and research briefs.

5
 6 The NRMP’s [Main Residency All In Policy](#) asserts that if a program is registering for the Main
 7 Residency Match®, then they must register and attempt to fill all positions through the Match (or
 8 another national matching plan).⁸ This policy only applies to those positions a program wishes to
 9 fill. Programs planning to participate in The Match cannot offer positions outside The Match. If
 10 that were to happen prior to program registration and activation, then the program is ineligible to
 11 enroll in The Match (unless the NRMP grants an exception). Per the [Fellowship Match All In](#)
 12 [Policy, Specialties Matching Service®](#) (SMS®) Match sponsors may *voluntarily* implement the All
 13 In Policy for their fellowship matches. AMA Policy [D-310.977\(6\)](#) “does not support the current
 14 ‘All-In’ policy for the Main Residency Match to the extent that it eliminates flexibility within the
 15 match process.”⁹

16
 17 In its current form, the NRMP contends that The Match process is uncongested, defers acceptance,
 18 promotes true preferences, and establishes a thick market “which allows for multi-specialty
 19 applications and couple matching (including for mixed-specialty couples).”¹⁰ It is built upon the
 20 following core components:

43
 44 *Independent match processes*

45
 46 According to the NRMP, “U.S. medical school graduates and students and graduates of
 47 international medical schools can be offered positions outside of the Main Residency Match
 48 provided it is in a program that does not participate in the Match and thus not subject to the All In
 49 Policy. No applicant can accept a position outside of the Match after the Rank Order List
 50 Certification Deadline.”¹¹ Some programs choose to participate in an early match process, and the
 51 percentage of outside-the-match offers varies by specialty.¹² Not all are affiliated with the NRMP.

1 For example, students in the Health Professions Scholarship Program and the Uniformed Services
 2 University of the Health Sciences who wish to apply for military PGY-1 positions go through a
 3 similar process overseen by the Joint Service Graduate Medical Education Selection Board. While
 4 they still use the ERAS system, military medical students complete a different application that
 5 includes ranking programs. Deadlines also differ, as materials are submitted late August through
 6 mid-October, and results are announced in mid-December. The military does not use a computer-
 7 generated algorithm, rather it is a process of discussions and negotiations. An applicant can be
 8 placed in a program that they did not even rank.¹³ Other examples include:

- 9
- 10 • Preventive Medicine and Public Health: First implemented in 2017, the American College
 11 of Preventive Medicine (ACPM) oversees their own match called the [Residency](#)
 12 [Standardized Acceptance Process](#) (SAP).¹⁴
- 13
- 14 • Plastic Surgery and Ophthalmology: The San Francisco Residency Match, more commonly
 15 referred to as [SF Match](#), is a residency and fellowship matching service that has been used
 16 by several specialties and subspecialties for over 40 years. It includes residencies in plastic
 17 surgery and ophthalmology, overseen by the American Council of Academic Plastic
 18 Surgeons and Association of University Professors of Ophthalmology respectively. It also
 19 currently includes 25 fellowship matches, ranging from abdominal transplant surgery to
 20 rhinology.
- 21
- 22 • Urology: For over 30 years, the American Urological Association, in conjunction with the
 23 Society of Academic Urologists, has overseen the [Urology Residency Match Program](#).
- 24
- 25 • Neuromuscular medicine: Starting in 2020, the American Association of Neuromuscular &
 26 Electrodiagnostic Medicine started its own standardized match process called the
 27 Neuromuscular Fellowship Application Portal that uses an online hub through which
 28 residents submit application materials, communicate with programs, and receive offers.¹⁵
 29 The first cycle hosted a partial match process, whereby programs submitted rank lists but
 30 applicants did not rank programs. The following cycle was a full match process.¹⁵

31

32 DISCUSSION

33

34 *Before The Match and other match processes*

35

36 The time before The Match and other match processes presented real challenges, added stress to
 37 the residency application process, and fueled unequal treatment. One reflection written about the
 38 time before The Match noted, “Medical students and hospitals once negotiated directly with each
 39 other. Competition for talent was fierce amid a tight labor market, with residency programs
 40 extending offers to medical students up to two years before graduation. This process had significant
 41 downsides: Students had to deal with exploding offers and felt pressure to commit to a program
 42 before getting sufficient exposure to different medical specialties. Medical students, residents, and
 43 hospitals all backed reform.”¹⁶ While The Match offered solutions to those who experienced life
 44 before it, a new generation of residency applicants has questioned its efficacy.

45

46 *Perceived challenges faced by residency applicants*

47

48 As summarized in the introduction, the RFS, as authors of the original resolution, noted concerns
 49 about lack of negotiation power of residents. Consternations were also raised regarding the
 50 possibility of residency/fellowship out-of-match offers being better than those in The Match;

1 however, there is no data to support this notion. Discussions of these concerns among trainees are
2 evident on social media platforms and the internet. For example, [The Student Doctor Network](#), “a
3 non-profit educational website dedicated to building a diverse doctor workforce,” has hosted
4 forums that debate this very issue.¹⁶ In a 2021 forum called “What are the alternatives to the
5 Match? What do you think would happen if it were abolished?”, trainees raised several points for
6 consideration. They shared that it is within the realm of possibility that programs would have zero
7 incentive to increase wages to be more competitive if The Match went away. Without The Match
8 or some unified system of application, programs could try to fill their spots earlier and such timing
9 may not align with the applicant’s desired specialty training. In the non-physician job market, a
10 candidate often has to make a decision about accepting a position without knowing the full extent
11 of the employment details.¹⁷ The NRMP and other matches are not involved in any negotiations or
12 agreements between programs and applicants, and if what a program is willing to offer to an
13 applicant is unacceptable to the applicant, the applicant can simply not include that program in
14 their rank list.

15 *The impact of The Match on competition for residency positions*

16 Another concern raised by the RFS is alleged lack of competition. In 1890, Congress passed The
17 Sherman Act, the first antitrust law, followed in 1914 by two additional antitrust laws—the Federal
18 Trade Commission Act (which formed the FTC) and the Clayton Act. Challenges to The Match
19 were brought forth in a class-action lawsuit in 2002, alleging The Match as violating the Sherman
20 Antitrust Act as described in the [AMA Journal of Ethics](#).¹⁸ However, [U.S. Code 37b](#) was passed
21 into law in 2004, entitled “Confirmation of antitrust status of graduate medical resident matching
22 programs,” to “confirm that the antitrust laws do not prohibit sponsoring, conducting, or
23 participating in a graduate medical education residency matching program, or agreeing to do so;
24 and ensure that those who sponsor, conduct or participate in such matching programs are not
25 subjected to the burden and expense of defending against litigation that challenges such matching
26 programs under the antitrust laws.”¹⁹

27 Concern was also raised about The Match possibly having a negative impact on resident salaries. A
28 2006 economic study by [Bulow and Levin](#) is frequently cited to support this claim²⁰. However,
29 Bulow and Levin also noted that The Match “was developed for efficiency reasons, and on that
30 score, it appears to do quite well.”²⁰ Research published since the Bulow-Levin paper does not
31 support their conclusions. Agarwal noted that “The Match is not the likely cause of low salaries.”²¹
32 According to Konishi & Sapozhnikov, “competitive salary vector is the best-case scenario for
33 applicants in the decentralized market. [... T]he reference salary vector adopted by Bulow and
34 Levin (2006) for the decentralized market outcome might not have a strong justification and could
35 be regarded as rather optimistic.”²² Also, it is important to consider that most resident salaries are
36 funded by clinical revenues from the sponsoring institution and federal government sources,
37 particularly Medicare graduate medical education funds from a budget set by Congress. Since
38 clinical revenue and institutional funding can vary by specialty and setting, disparities in pay may
39 result, even across residency programs at the same institution unfortunately.

40 Resolution 308 implied that a free-market approach may be more beneficial for trainees. As
41 described earlier in this report regarding the history of The Match and the era before its
42 implementation, the free market posed many problems. Returning to such a process would not
43 likely improve the challenges experienced previously. Economists agree that a free-market
44 approach is not without flaws.^{23,24} For example, “Apart from agriculture, few real-world markets
45 are perfectly competitive.”²⁵ Roth asserts that a centralized matching system can improve the
46 welfare of all participants in that market and, depending on its design, can address the problems of
47 unraveling and the congestion.²⁶ It seems that further analysis of what works well and what does
48
49
50
51

1 not work well is warranted in order to improve The Match process. As described in this report, the
2 NRMP and others are committed to continued review and improvement.

3
4 The Council on Medical Education recently addressed mechanisms to advocate for the needs of
5 residents in its report, “Organizations to Represent the Interests of Resident and Fellow Trainees”
6 ([CME 5-I-23](#)), which was adopted at the Interim 2023 Meeting. It also reviewed duty hour
7 standards; work conditions; the impact of private equity; and the roles of government agencies,
8 accreditors, medical staff organizations, associations, and unions. The adoption of that report
9 signifies renewed efforts to advocate for the interests of trainees.

10 *Coalition for Physician Accountability recommendations*

11
12
13 The [Coalition for Physician Accountability](#) (CPA) is comprised of representatives from national
14 organizations (including the AMA) responsible for the oversight, education, and assessment of
15 medical students and physicians throughout their medical careers. In April 2021, the CPA’s
16 Undergraduate Medical Education-Graduate Medical Education Review Committee (UGRC)
17 released 28 recommendations for comprehensive improvement of the UME-GME transition. The
18 UGRC was comprised of several workgroups, one of which focused on the mechanics of the
19 application/selection process from the graduate medical education perspective. The final
20 recommendations were categorized according to themes and refer to the residency application
21 process as well as The Match and other matching processes. Two themes of note address an
22 equitable, mission-driven application review (Recommendations #14-20) as well as optimization of
23 the application, interview, and selection processes (Recommendations #21-24). Specifically,
24 Recommendation #23 states that “Innovations to the residency application process should be
25 piloted to reduce application numbers and concentrate applicants at programs where mutual interest
26 is high, while maximizing applicant placement into residency positions. Well-designed pilots
27 should receive all available support from the medical community and be implemented as soon as
28 the 2022-2023 application cycle; successful pilots should be expanded expeditiously toward a
29 unified process.”²⁷

30 *Recent NRMP proposals*

31
32
33 The NRMP maintains that it is committed to considering ways to inform the transition to residency
34 or improve the matching process. In 2021, the NRMP issued a statement on the feasibility of an
35 early match. Specifically, NRMP was asked to pilot the Early Result and Acceptance Program
36 (ERAP) proposed for obstetrics and gynecology. This pilot program was created through a grant
37 provided by the AMA’s Reimagining Residency program. The NRMP concluded that an early
38 match would disadvantage applicants, and that changes to the process could potentially cause
39 behavior changes that could negatively affect outcomes for all participants.¹⁰

40
41 To consider the feasibility of a proposed Two-Phase Main Residency Match (that would replace
42 The Match and SOAP), the NRMP Board of Directors opened a call for comment period in
43 August-September 2022. The goal was to “alleviate some of the stressors inherent in the current
44 transition to residency based on available evidence.”²⁸ After considering the over 8,000 responses
45 to the call, the NRMP Board of Directors decided to not pursue the proposal as written, stating that
46 “Although the benefits/advantages articulated by the community are significant, the
47 risks/disadvantages are considered of greater consequence.”²⁹ The AAMC hosted several listening
48 sessions with their constituency to discuss this two-phase proposal and issued a statement
49 concluding that a long-term evaluation plan would be needed with a focus on “learners and
50 equity.”³⁰ The AAMC also noted that ERAS would still play a role in a two-phase match and
51 recommended further discussions.

1 AMA ENGAGEMENT
2

3 The AMA has been actively engaged in monitoring this process, is in regular communication with
4 the NRMP, and actively participates in the CPA. The AMA Medical Student Section (MSS) and
5 RFS each offer to their members the opportunity to apply to represent the AMA on the [NRMP](#)
6 [Board](#). Both AMA sections have solicited for or nominated members every year for at least the last
7 ten years. The NRMP board offers three seats for student directors and three seats for resident
8 physician directors. The NRMP no longer has designated AMA seats for students or residents due
9 to a change in their [bylaws](#) in 2017. To promote effective communication, fostering relationships
10 among key parties is vital. The AMA will continue to look for opportunities to collaborate with the
11 NRMP and other matching organizations.

12
13 Through the AMA's [ChangeMedEd](#) initiative, efforts are underway across the continuum with
14 visionary partners to create bold innovations. Specifically, [Reimagining Residency](#) is a grant
15 program dedicated to promoting systemic change in graduate medical education (GME). "It
16 supports bold and innovative projects that provide a meaningful and safe transition from
17 undergraduate medical education to graduate medical education."³¹ Several Reimagining Residency
18 projects directly address the transition from undergraduate medical education (UME) to GME.
19 "Right Resident, Right Program, Ready Day One," a collaboration with the Association of
20 Professors of Gynecology & Obstetrics (APGO), raises cross-specialty standards for the residency
21 application and interview process. It promotes signaling to reduce the number of applications
22 submitted by formalizing communication about true preferences. APGO has also developed an
23 Alignment Check Index (ACI). This adjunct to AMA's FREIDA platform seeks to better align
24 applicant preferences and characteristics with those being sought by specific residency programs. A
25 project at New York University (NYU), called the "Transition to Residency Advantage," builds on
26 experience with UME coaching to train a cadre of GME coaches and then effect a learner-driven
27 warm handoff from UME to GME. Two additional projects, the "California Oregon Medical
28 Partnership to Address Rural Disparities in Rural Education and Health" (COMPADRE) and the
29 University of North Carolina's "Fully Integrated Readiness for Service Training" (FIRST) are
30 creating pathways to rural practice that entail dedicated pathways from medical school to residency
31 that meet the needs of those areas. Also, the AMA helps to inform future GME advocacy by
32 addressing concerns regarding the challenges faced by the current GME system. A 2023
33 [compendium](#) of such GME advocacy initiatives is available for review.

34
35 *Council on Medical Education efforts*
36

37 Since 2012, the Council on Medical Education has offered several reports that address residency
38 and The Match as listed below. Additional Council reports can be accessed in the [AMA Council](#)
39 [Report Finder](#) database.

- 40 • [Organizations to Represent the Interests of Resident and Fellow Trainees" \(CME 5-I-23\)](#)
- 41 • [Optimizing Match Outcomes \(CME Report 3-A-21\)](#)
- 42 • [Standardizing the Residency Match System and Timeline \(CME Report 3-A-19\)](#)
- 43 • [The Transition from Undergraduate Medical Education to Graduate Medical Education](#)
44 [\(CME Report 5-I-19\)](#)
- 45 • [Options for Unmatched Medical Students \(CME Report 5-A-17\)](#)
- 46 • [Standardizing the Allopathic Residency Match System and Timeline \(CME Report 6-A-](#)
47 [17\)](#)
- 48 • [Resident and Fellow Compensation and Health Care System Value \(CME Report 4-A-16\)](#)
- 49 • [Transparency in the National Resident Matching Program Match Agreement \(CME Report](#)
50 [12-A-12\)](#)

1 *Relevant AMA Policy*

2
3 The AMA has ample policy in support of trainees that address such topics as The Match, other
4 match processes, residency application process, and graduate medical education. These policies
5 exemplify the AMA’s commitment to closely monitor these issues and engage with the NRMP and
6 others to optimize successful, equitable matching. See Appendix B for the following full policies:

- 7 • [Study of the Current Match Process and Alternatives D-310.944](#)
- 8 • [Residents and Fellows’ Bill of Rights H-310.912](#)
- 9 • [Preliminary Year Program Placement H-310.910](#)
- 10 • [Closing of Residency Programs H-310.943](#)
- 11 • [Protection of Resident and Fellow Training in the Case of Hospital or Training Program](#)
12 [Closure D-310.948](#)
- 13 • [Residency Interview Schedules H-310.998](#)

14
15 Of note, Policy [D-310.977](#) “National Resident Matching Program Reform” includes the following
16 clauses that state the AMA:

- 17 (4) will continue to review the NRMP’s policies and procedures and make
18 recommendations for improvements as the need arises, to include making the conditions of
19 the Match agreement more transparent while assuring the confidentiality of the match;
- 20 (5) will work with the Accreditation Council for Graduate Medical Education (ACGME)
21 and other appropriate agencies to assure that the terms of employment for resident
22 physicians are fair and equitable and reflect the unique and extensive amount of education
23 and experience acquired by physicians;
- 24 (6) does not support the current the “All-In” policy for the Main Residency Match to the
25 extent that it eliminates flexibility within the match process;
- 26 (7) will work with the NRMP, and other residency match programs, in revising Match
27 policy, including the secondary match or scramble process to create more standardized
28 rules for all candidates including application timelines and requirements;
- 29 (8) will work with the NRMP and other external bodies to develop mechanisms that limit
30 disparities within the residency application process and allow both flexibility and standard
31 rules for applicants;

32
33 Additional related policies, such as those listed below, can be accessed in the [AMA Policy Finder](#)
34 database:

- 35 • [Strengthening Interview Guidelines for American Indian and Alaska Native Medical](#)
36 [School, Residency, and Fellowship Applicants H-295.852](#)
- 37 • [Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship](#)
38 [Selection Process D-310.945](#)
- 39 • [Eliminating Questions Regarding Marital Status, Dependents, Plans for Marriage or](#)
40 [Children, Sexual Orientation, Gender Identity, Age, Race, National Origin and Religion](#)
41 [During the Residency and Fellowship Application Process H-310.919](#)
- 42 • [Strategies for Enhancing Diversity in the Physician Workforce D-200.985](#)
- 43 • [US Physician Shortage H-200.954](#)
- 44 • [Collective Bargaining: Antitrust Immunity D-383.983](#)
- 45 • [AMA’s Aggressive Pursuit of Antitrust Reform D-383.990](#)
- 46 • [Antitrust Relief for Physicians Through Federal Legislation H-383.990](#)
- 47 • [Antitrust Relief H-383.992](#)

48
49 SUMMARY AND RECOMMENDATIONS

50

1 The Council on Medical Education understands the concerns presented by the authors of
2 Resolution 302-A-23 and their frustrations related to lack of control over their own destinies. This
3 report describes the origins of The Match and its current state as well as information about
4 independent match processes. It also clarifies the difference between the AAMC's ERAS
5 application process versus NRMP's Match process, acknowledges challenges, and summarizes
6 recent considerations and recommendations. This report illuminates the importance of ongoing
7 communication and transparency by the NRMP as well as collaboration among all invested parties.
8 Further, this report makes clear that there are no currently identified alternatives other than an
9 unstructured, open market approach, which the Council believes would be detrimental to the
10 majority of trainees in comparison to the current Match process. Accordingly, attention should be
11 focused on what can be done to improve The Match and other specialty matches rather than
12 focusing on its replacement, as a match process continues to be the best solution for trainees at this
13 time.

14
15 The Council on Medical Education therefore recommends that the following recommendations be
16 adopted and the remainder of this report be filed. That our AMA:

- 17
18 1. AMA Policy [D-310.977](#), "National Resident Matching Program Reform" be amended by
19 addition to read as follows. Our AMA:
20
21 (20) Encourages the piloting of innovations to the residency application process with aims
22 to reduce application numbers, focus applicants on programs with reciprocal interest, and
23 maximize residency placement. With support from the medical education community,
24 successful pilots should be expanded to enhance the standardized process.
25
26 (21) Continues to engage the National Resident Matching Program® (NRMP®) and other
27 matching organizations on behalf of residents and medical students to further develop
28 ongoing relationships, improve communications, and seek additional opportunities to
29 collaborate including the submission of suitable nominees for their governing bodies as
30 appropriate. (Modify Current HOD Policy)
31
32 2. Reaffirm AMA Policies [H-310.900](#) "Resident and Fellow Physicians Seeking to Transfer
33 GME Program" and [H-310.912](#) "Residents and Fellows' Bill of Rights." (Reaffirm HOD
34 Policy)
35
36 3. Rescind AMA policy [D-310.944](#), "Study of the Current Match Process and Alternatives,"
37 as having been accomplished by this report. (Rescind HOD Policy)
38
39

40 Fiscal note: \$1,000

APPENDIX A: THE MATCH PROCESS

APPENDIX B: RELEVANT AMA POLICY

[National Resident Matching Program Reform D-310.977](#)

Our AMA:

- (1) will work with the National Resident Matching Program (NRMP) to develop and distribute educational programs to better inform applicants about the NRMP matching process, including the existing NRMP waiver and violations review policies;
- (2) will actively participate in the evaluation of, and provide timely comments about, all proposals to modify the NRMP Match;
- (3) will request that the NRMP explore the possibility of including the Osteopathic Match in the NRMP Match;
- (4) will continue to review the NRMP's policies and procedures and make recommendations for improvements as the need arises, to include making the conditions of the Match agreement more transparent while assuring the confidentiality of the match;
- (5) will work with the Accreditation Council for Graduate Medical Education (ACGME) and other appropriate agencies to assure that the terms of employment for resident physicians are fair and equitable and reflect the unique and extensive amount of education and experience acquired by physicians;
- (6) does not support the current the "All-In" policy for the Main Residency Match to the extent that it eliminates flexibility within the match process;
- (7) will work with the NRMP, and other residency match programs, in revising Match policy, including the secondary match or scramble process to create more standardized rules for all candidates including application timelines and requirements;
- (8) will work with the NRMP and other external bodies to develop mechanisms that limit disparities within the residency application process and allow both flexibility and standard rules for applicants;
- (9) encourages the National Resident Matching Program to study and publish the effects of implementation of the Supplemental Offer and Acceptance Program on the number of residency spots not filled through the Main Residency Match and include stratified analysis by specialty and other relevant areas;
- (10) will work with the NRMP and ACGME to evaluate the challenges in moving from a time-based education framework toward a competency-based system, including: a) analysis of time-based implications of the ACGME milestones for residency programs; b) the impact on the NRMP and entry into residency programs if medical education programs offer variable time lengths based on acquisition of competencies; c) the impact on financial aid for medical students with variable time lengths of medical education programs; d) the implications for interprofessional education and rewarding teamwork; and e) the implications for residents and students who achieve milestones earlier or later than their peers;
- (11) will work with the Association of American Medical Colleges (AAMC), American Osteopathic Association (AOA), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to evaluate the current available data or propose new studies that would help us learn how many students graduating from US medical schools each year do not enter into a US residency program; how many never enter into a US residency program; whether there is disproportionate impact on individuals of minority racial and ethnic groups; and what careers are pursued by those with an MD or DO degree who do not enter residency programs;
- (12) will work with the AAMC, AOA, AACOM and appropriate licensing boards to study whether US medical school graduates and international medical graduates who do not enter residency programs may be able to serve unmet national health care needs;
- (13) will work with the AAMC, AOA, AACOM and the NRMP to evaluate the feasibility of a national tracking system for US medical students who do not initially match into a categorical residency program;
- (14) will discuss with the National Resident Matching Program, Association of American Medical Colleges, American Osteopathic Association, Liaison Committee on Medical Education, Accreditation Council for Graduate Medical Education, and other interested bodies potential pathways for reengagement in medicine following an unsuccessful match and report back on the results of those discussions;
- (15) encourages the Association of American Medical Colleges to work with U.S. medical schools to identify best practices, including career counseling, used by medical schools to facilitate successful matches for medical school seniors, and reduce the number who do not match;
- (16) supports the movement toward a unified and standardized residency application and match system for all non-military residencies;

(17) encourages the Educational Commission for Foreign Medical Graduates (ECFMG) and other interested stakeholders to study the personal and financial consequences of ECFMG-certified U.S. IMGs who do not match in the National Resident Matching Program and are therefore unable to get a residency or practice medicine;

(18) encourages the AAMC, AACOM, NRMP, and other key stakeholders to jointly create a no-fee, easily accessible clearinghouse of reliable and valid advice and tools for residency program applicants seeking cost-effective methods for applying to and successfully matching into residency; and

(19) will work with appropriate stakeholders to study options for improving transparency in the resident application process.

[Study of the Current Match Process and Alternatives D-310.944](#)

Our American Medical Association will study alternatives to the current residency and fellowship Match process which would be less restrictive on free market competition for applicants.

[Residents and Fellows' Bill of Rights H-310.912](#)

1. Our AMA continues to advocate for improvements in the ACGME Institutional and Common Program Requirements that support AMA policies as follows: a) adequate financial support for and guaranteed leave to attend professional meetings; b) submission of training verification information to requesting agencies within 30 days of the request; c) adequate compensation with consideration to local cost-of-living factors and years of training, and to include the orientation period; d) health insurance benefits to include dental and vision services; e) paid leave for all purposes (family, educational, vacation, sick) to be no less than six weeks per year; and f) stronger due process guidelines.

2. Our AMA encourages the ACGME to ensure access to educational programs and curricula as necessary to facilitate a deeper understanding by resident physicians of the US health care system and to increase their communication skills.

3. Our AMA regularly communicates to residency and fellowship programs and other GME stakeholders this Resident/Fellows Physicians' Bill of Rights.

4. Our AMA: a) will promote residency and fellowship training programs to evaluate their own institution's process for repayment and develop a leaner approach. This includes disbursement of funds by direct deposit as opposed to a paper check and an online system of applying for funds; b) encourages a system of expedited repayment for purchases of \$200 or less (or an equivalent institutional threshold), for example through payment directly from their residency and fellowship programs (in contrast to following traditional workflow for reimbursement); and c) encourages training programs to develop a budget and strategy for planned expenses versus unplanned expenses, where planned expenses should be estimated using historical data, and should include trainee reimbursements for items such as educational materials, attendance at conferences, and entertaining applicants. Payment in advance or within one month of document submission is strongly recommended.

5. Our AMA will partner with ACGME and other relevant stakeholders to encourage training programs to reduce financial burdens on residents and fellows by providing employee benefits including, but not limited to, on-call meal allowances, transportation support, relocation stipends, and childcare services.

6. Our AMA will work with the Accreditation Council for Graduate Medical Education (ACGME) and other relevant stakeholders to amend the ACGME Common Program Requirements to allow flexibility in the specialty-specific ACGME program requirements enabling specialties to require salary reimbursement or "protected time" for resident and fellow education by "core faculty," program directors, and assistant/associate program directors.

7. Our AMA encourages teaching institutions to offer retirement plan options, retirement plan matching, financial advising and personal finance education.

8. Our AMA adopts the following "Residents and Fellows' Bill of Rights" as applicable to all resident and fellow physicians in ACGME-accredited training programs:

RESIDENT/FELLOW PHYSICIANS' BILL OF RIGHTS

Residents and fellows have a right to:

A. An education that fosters professional development, takes priority over service, and leads to independent practice.

With regard to education, residents and fellows should expect: (1) A graduate medical education experience that facilitates their professional and ethical development, to include regularly scheduled didactics for which they are released from clinical duties. Service obligations should not interfere with

educational opportunities and clinical education should be given priority over service obligations; (2) Faculty who devote sufficient time to the educational program to fulfill their teaching and supervisory responsibilities; (3) Adequate clerical and clinical support services that minimize the extraneous, time-consuming work that draws attention from patient care issues and offers no educational value; (4) 24-hour per day access to information resources to educate themselves further about appropriate patient care; and (5) Resources that will allow them to pursue scholarly activities to include financial support and education leave to attend professional meetings.

B. Appropriate supervision by qualified physician faculty with progressive resident responsibility toward independent practice.

With regard to supervision, residents and fellows must be ultimately supervised by physicians who are adequately qualified and allow them to assume progressive responsibility appropriate to their level of education, competence, and experience. In instances where clinical education is provided by non-physicians, there must be an identified physician supervisor providing indirect supervision, along with mechanisms for reporting inappropriate, non-physician supervision to the training program, sponsoring institution or ACGME as appropriate.

C. Regular and timely feedback and evaluation based on valid assessments of resident performance.

With regard to evaluation and assessment processes, residents and fellows should expect: (1) Timely and substantive evaluations during each rotation in which their competence is objectively assessed by faculty who have directly supervised their work; (2) To evaluate the faculty and the program confidentially and in writing at least once annually and expect that the training program will address deficiencies revealed by these evaluations in a timely fashion; (3) Access to their training file and to be made aware of the contents of their file on an annual basis; and (4) Training programs to complete primary verification/credentialing forms and recredentialing forms, apply all required signatures to the forms, and then have the forms permanently secured in their educational files at the completion of training or a period of training and, when requested by any organization involved in credentialing process, ensure the submission of those documents to the requesting organization within thirty days of the request.

D. A safe and supportive workplace with appropriate facilities.

With regard to the workplace, residents and fellows should have access to: (1) A safe workplace that enables them to fulfill their clinical duties and educational obligations; (2) Secure, clean, and comfortable on-call rooms and parking facilities which are secure and well-lit; (3) Opportunities to participate on committees whose actions may affect their education, patient care, workplace, or contract.

E. Adequate compensation and benefits that provide for resident well-being and health.

(1) With regard to contracts, residents and fellows should receive: a. Information about the interviewing residency or fellowship program including a copy of the currently used contract clearly outlining the conditions for (re)appointment, details of remuneration, specific responsibilities including call obligations, and a detailed protocol for handling any grievance; and b. At least four months advance notice of contract non-renewal and the reason for non-renewal.

(2) With regard to compensation, residents and fellows should receive: a. Compensation for time at orientation; and b. Salaries commensurate with their level of training and experience. Compensation should reflect cost of living differences based on local economic factors, such as housing, transportation, and energy costs (which affect the purchasing power of wages), and include appropriate adjustments for changes in the cost of living.

(3) With regard to benefits, residents and fellows must be fully informed of and should receive: a. Quality and affordable comprehensive medical, mental health, dental, and vision care for residents and their families, as well as retirement plan options, professional liability insurance and disability insurance to all residents for disabilities resulting from activities that are part of the educational program; b. An institutional written policy on and education in the signs of excessive fatigue, clinical depression, substance abuse and dependence, and other physician impairment issues; c. Confidential access to mental health and substance abuse services; d. A guaranteed, predetermined amount of paid vacation leave, sick leave, family and medical leave and educational/professional leave during each year in their training program, the total amount of which should not be less than six weeks; e. Leave in compliance with the Family and Medical Leave Act; and f. The conditions under which sleeping quarters, meals and laundry or their equivalent are to be provided.

F. Clinical and educational work hours that protect patient safety and facilitate resident well-being and education.

With regard to clinical and educational work hours, residents and fellows should experience: (1) A reasonable work schedule that is in compliance with clinical and educational work hour requirements set forth by the ACGME; and (2) At-home call that is not so frequent or demanding such that rest periods are significantly diminished or that clinical and educational work hour requirements are effectively circumvented. Refer to AMA Policy H-310.907, "Resident/Fellow Clinical and Educational Work Hours," for more information.

G. Due process in cases of allegations of misconduct or poor performance.

With regard to the complaints and appeals process, residents and fellows should have the opportunity to defend themselves against any allegations presented against them by a patient, health professional, or training program in accordance with the due process guidelines established by the AMA.

H. Access to and protection by institutional and accreditation authorities when reporting violations.

With regard to reporting violations to the ACGME, residents and fellows should: (1) Be informed by their program at the beginning of their training and again at each semi-annual review of the resources and processes available within the residency program for addressing resident concerns or complaints, including the program director, Residency Training Committee, and the designated institutional official; (2) Be able to file a formal complaint with the ACGME to address program violations of residency training requirements without fear of recrimination and with the guarantee of due process; and (3) Have the opportunity to address their concerns about the training program through confidential channels, including the ACGME concern process and/or the annual ACGME Resident Survey.

9. Our AMA will work with the ACGME and other relevant stakeholders to advocate for ways to defray additional costs related to residency and fellowship training, including essential amenities and/or high cost specialty-specific equipment required to perform clinical duties.

10. Our AMA believes that healthcare trainee salary, benefits, and overall compensation should, at minimum, reflect length of pre-training education, hours worked, and level of independence and complexity of care allowed by an individual's training program (for example when comparing physicians in training and midlevel providers at equal postgraduate training levels).

11. The Residents and Fellows' Bill of Rights will be prominently published online on the AMA website and disseminated to residency and fellowship programs.

12. Our AMA will distribute and promote the Residents and Fellows' Bill of Rights online and individually to residency and fellowship training programs and encourage changes to institutional processes that embody these principles.

[Preliminary Year Program Placement H-310.910](#)

1. Our AMA encourages the Accreditation Council for Graduate Medical Education, the American Osteopathic Association, and other involved organizations to strongly encourage residency programs that now require a preliminary year to match residents for their specialty and then arrange with another department or another medical center for the preliminary year of training unless the applicant chooses to pursue preliminary year training separately.

2. Our AMA encourages appropriate stakeholders to explore options to decrease the burden upon medical students who must apply to separate preliminary PGY-1 and categorical PGY-2 positions.

3. Our AMA will work with the Accreditation Council for Graduate Medical Education to encourage programs with PGY-2 positions in the National Resident Matching Program (NRMP) with insufficient availability of local PGY-1 positions to create local PGY-1 positions that will enable coordinated applications and interviews for medical students.

4. Our AMA encourages the NRMP, the San Francisco Match, the American Urological Association, the Electronic Residency Application Service, and other stakeholders to reduce barriers for medical students, residents, and physicians applying to match into training programs, including barriers to "couples matching," and to ensure that all applicants have access to robust, informative statistics to assist in decision-making.

5. Our AMA encourages the NRMP, San Francisco Match, American Urological Association, Electronic Residency Application Service, and other stakeholders to collect and publish data on a) the impact of separate matches on the personal and professional lives of medical students and b) the impact on medical students who are unable to successfully "couples match" with their significant others due to staggered entry into residency, utilization of unlinked match services, or other causes.

[Closing of Residency Programs H-310.943](#)

1. Our AMA: (a) encourages the Accreditation Council for Graduate Medical Education (ACGME) to address the problem of non-educational closing or downsizing of residency training programs; (b) reminds all institutions involved in educating residents of their contractual responsibilities to the resident; (c) encourages the ACGME and the various Residency Review Committees to reexamine requirements for "years of continuous training" to determine the need for implementing waivers to accommodate residents affected by non-educational closure or downsizing; (d) will work with the American Board of Medical Specialties Member Boards to encourage all its member boards to develop a mechanism to accommodate the discontinuities in training that arise from residency closures, regardless of cause, including waiving continuity care requirements and granting residents credit for partial years of training; (e) urges residency programs and teaching hospitals be monitored by the applicable Residency Review Committees to ensure that decreases in resident numbers do not place undue stress on remaining residents by affecting work hours or working conditions, as specified in Residency Review Committee requirements; (f) opposes the closure of residency/fellowship programs or reductions in the number of current positions in programs as a result of changes in GME funding; and (g) will work with the Centers for Medicare and Medicaid Services (CMS), ACGME, and other appropriate organizations to advocate for the development and implementation of effective policies to permit graduate medical education funding to follow the resident physician from a closing to the receiving residency program (including waivers of CMS caps), in the event of temporary or permanent residency program closure.

2. Our AMA will work with the Centers for Medicare and Medicaid Services (CMS) to establish regulations that protect residents and fellows impacted by program or hospital closure, which may include recommendations for:

A. Notice by the training hospital, intending to file for bankruptcy within 30 days, to all residents and fellows primarily associated with the training hospital, as well as those contractually matched at that training institution who may not yet have matriculated, of its intention to close, along with provision of reasonable and appropriate procedures to assist current and matched residents and fellows to find and obtain alternative training positions that minimize undue financial and professional consequences, including but not limited to maintenance of specialty choice, length of training, initial expected time of graduation, location and reallocation of funding, and coverage of tail medical malpractice insurance that would have been offered had the program or hospital not closed;

B. Revision of the current CMS guidelines that may prohibit transfer of funding prior to formal financial closure of a teaching institution;

C. Improved provisions regarding transfer of GME funding for displaced residents and fellows for the duration of their training in the event of program closure at a training institution; and

D. Protections against the discrimination of displaced residents and fellows consistent with H-295.969.

3. Our AMA will work with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, National Resident Matching Program, Educational Commission for Foreign Medical Graduates, Centers for Medicare and Medicaid Services, and other relevant stakeholders to identify a process by which displaced residents and fellows may be directly represented in proceedings surrounding the closure of a training hospital or program.

4. Our AMA will work with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, National Resident Matching Program, Educational Commission for Foreign Medical Graduates, Centers for Medicare and Medicaid Services, and other relevant stakeholders to:

A. Develop a stepwise algorithm for designated institutional officials and program directors to assist residents and fellows with finding and obtaining alternative training positions;

B. Create a centralized, regulated process for displaced residents and fellows to obtain new training positions; and

C. Develop pathways that ensure that closing and accepting institutions provide liability insurance coverage to residents, at no cost to residents.

[Protection of Resident and Fellow Training in the Case of Hospital or Training Program Closure D-310.948](#)

Our AMA will:

1. ask the Centers for Medicare & Medicaid Services (CMS) to stipulate in its regulations that residency slots are not assets that belong to the teaching institution;

2. encourage the Association of American Medical Colleges (AAMC), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to develop a process

similar to the Supplemental Offer and Acceptance Program (SOAP) that could be used in the event of a sudden teaching institution or program closure;

3. encourage the Accreditation Council for Graduate Medical Education (ACGME) to specify in its Institutional Requirements that sponsoring institutions are to provide residents and residency applicants information regarding the financial health of the institution, such as its credit rating, or if it has recently been part of an acquisition or merger;

4. work with AAMC, AACOM, ACGME, and relevant state and specialty societies to coordinate and collaborate on the communication with sponsoring institutions, residency programs, and resident physicians in the event of a sudden institution or program closure to minimize confusion, reduce misinformation, and increase clarity;

5. encourage ACGME to revise its Institutional Requirements, under section IV.E., Professional Liability Insurance, to state that sponsoring institutions must create and maintain a fund that will ensure professional liability coverage for residents in the event of an institution or program closure; and

6. continue to work with ACGME, interested specialty societies, and others to monitor issues, collect data, and share information related to training programs run by nonprofit and for-profit entities and their effect on medical education.

[Residency Interview Schedules H-310.998](#)

1. Our AMA encourages residency and fellowship programs to incorporate in their interview dates increased flexibility, whenever possible, to accommodate applicants' schedules. Our AMA encourages the ACGME and other accrediting bodies to require programs to provide, by electronic or other means, representative contracts to applicants prior to the interview. Our AMA encourages residency and fellowship programs to inform applicants in a timely manner confirming receipt of application and ongoing changes in the status of consideration of the application.

2. Our AMA will: (a) oppose changes to residency and fellowship application requirements unless (i) those changes have been evaluated by working groups which have students and residents as representatives, (ii) there are data which demonstrates that the proposed application components contribute to an accurate representation of the candidate, (iii) there are data available to demonstrate that the new application requirements reduce, or at least do not increase, the impact of bias that affects medical students and residents from underrepresented minority backgrounds, and (iv) the costs to medical students and residents are mitigated; and (b) continue to work with specialty societies, the Association of American Medical Colleges, the National Resident Matching Program and other relevant stakeholders to improve the application process in an effort to accomplish these requirements.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 301
(A-24)

Introduced by: Medical Student Section, International Medical Graduates Section

Subject: Fairness for International Medical Students

Referred to: Reference Committee C

1 Whereas, international students comprise over 10% of US graduate students but only 0.6% of
2 US medical students, indicating that the US recruits globally for academia, research, and other
3 highly educated professions, but not for medicine¹⁻³; and
4

5 Whereas, only 35% of medical schools consider international applicants, only 17% of whom are
6 admitted compared to 38% of domestic applicants⁴⁻⁷; and
7

8 Whereas, international medical students are ineligible for public loans, may be ineligible for
9 medical school scholarships, require a US cosigner for private loans, and may be required to
10 deposit up to four years of tuition upfront into an escrow account prior to matriculation⁷⁻¹⁰; and
11

12 Whereas, many common national medical student scholarships, including the AMA Physicians
13 of Tomorrow scholarship, the Tylenol Future Care scholarship, and the National Medical
14 Fellowships awards, are restricted to domestic students only¹¹⁻¹³; and
15

16 Whereas, international medical students offer valuable diversity of thought, cultural
17 perspectives, and unique life experiences that enrich medical schools, complement efforts to
18 improve physician workforce diversity, address physician shortages, and allow the US to attract
19 and retain the best and brightest future doctors from around the world^{9,14}; therefore be it
20

21 RESOLVED, that our American Medical Association encourage additional medical schools to
22 consider applications from and to admit international students to their programs alongside
23 domestic students (New HOD Policy); and be it further
24

25 RESOLVED, that our AMA amend policy H-255.968 "Advance Tuition Payment Requirements
26 for International Students Enrolled in US Medical Schools" by addition and deletion to read as
27 follows;
28

29 Advance Tuition Payment Requirements for International Students
30 Enrolled in US Medical Schools H-255.968

31 Our AMA:

- 32 1. supports the autonomy of medical schools to determine optimal tuition
33 requirements for international students;
- 34 2. encourages medical schools and undergraduate institutions to fully
35 inform international students interested in medical education in the US of
36 the limited options available to them for tuition assistance;
- 37 3. supports the Association of American Medical Colleges (AAMC) in its
38 efforts to increase transparency in the medical school application process
39 for international students by including school policy on tuition requirements
40 in the Medical School Admission Requirements (MSAR); and

- 1 4. supports efforts to re-evaluate and minimize the use of pre-payment
2 requirements specific to international medical students; and
3 5. encourages medical schools to explore alternative means of
4 prepayment, such as a letter of credit, for four years for covering the costs
5 of medical school. (Modify Current HOD Policy); and be it further
6

7 RESOLVED, that our AMA advocate for increased scholarship and funding opportunities for
8 international students accepted to or currently attending United States medical schools.
9 (Directive to Take Action)
10

Fiscal Note: Minimal - less than \$1,000

Received: 3/28/2024

RELEVANT AMA POLICY

D-255.980 Impact of Immigration Barriers on the Nation's Health

1. Our AMA recognizes the valuable contributions and affirms our support of international medical students and international medical graduates and their participation in U.S. medical schools, residency and fellowship training programs and in the practice of medicine.
2. Our AMA will oppose laws and regulations that would broadly deny entry or re-entry to the United States of persons who currently have legal visas, including permanent resident status (green card) and student visas, based on their country of origin and/or religion.
3. Our AMA will oppose policies that would broadly deny issuance of legal visas to persons based on their country of origin and/or religion.
4. Our AMA will advocate for the immediate reinstatement of premium processing of H-1B visas for physicians and trainees to prevent any negative impact on patient care.
5. Our AMA will advocate for the timely processing of visas for all physicians, including residents, fellows, and physicians in independent practice.

6. Our AMA will work with other stakeholders to study the current impact of immigration reform efforts on residency and fellowship programs, physician supply, and timely access of patients to health care throughout the U.S. [Alt. Res. 308, A-17; Modified: CME Rep. 01, A-18; Reaffirmation: A-19; Reaffirmed: CME Rep. 4, A-21; Reaffirmed: Res. 234, A-22; Reaffirmed: Res. 210, A-23]

H-295.888 Progress in Medical Education: the Medical School Admission Process

1. Our AMA encourages: (A) research on ways to reliably evaluate the personal qualities (such as empathy, integrity, commitment to service) of applicants to medical school and support broad dissemination of the results. Medical schools should be encouraged to give significant weight to these qualities in the admissions process; (B) premedical coursework in the humanities, behavioral sciences, and social sciences, as a way to ensure a broadly-educated applicant pool; and (C) dissemination of models that allow medical schools to meet their goals related to diversity in the context of existing legal requirements, for example through outreach to elementary schools, high schools, and colleges.

2. Our AMA: (A) will continue to work with the Association of American Medical Colleges (AAMC) and other relevant organizations to encourage improved assessment of personal qualities in the recruitment process for medical school applicants including types of information to be solicited in applications to medical school; (B) will work with the AAMC and other relevant organizations to explore the range of measures used to assess personal qualities among applicants, including those used by related fields; (C) encourages the development of innovative methodologies to assess personal qualities among medical school applicants; (D) will work with medical schools and other relevant stakeholder groups to review the ways in which medical schools communicate the importance of personal qualities among applicants, including how and when specified personal qualities will be assessed in the admissions process; (E) encourages continued research on the personal qualities most pertinent to success as a medical student and as a physician to assist admissions committees to adequately assess applicants; and (F) encourages continued research on the factors that impact negatively on humanistic and empathetic traits of medical students during medical school. [CME Rep. 8, I-99; Reaffirmed: CME Rep. 2, A-09; Appended: CME Rep. 3, A-11; Reaffirmed: CME Rep. 1, A-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 302
(A-24)

Introduced by: Private Practice Physicians Section

Subject: The Role of Maintenance of Certification

Referred to: Reference Committee C

1 Whereas, the principle of lifelong learning is fundamental to maintaining and enhancing the
2 quality of patient care delivered by physicians; and
3

4 Whereas, certified medical education (CME) already plays a pivotal role in facilitating lifelong
5 learning by offering opportunities for physicians to stay current with advances in medical
6 knowledge and technology; and
7

8 Whereas, specialty boards contend that the process of re-certification and maintenance of
9 certification (MOC) contributes to the enhancement of patient care quality by counteracting a
10 natural decline in medical knowledge and skills over time during active practice, although
11 existing evidence is at odds with this assertion and does not suggest that re-certification and
12 MOC significantly enhance the quality of care provided by physicians^(1,2); and
13

14 Whereas, the current landscape of board certification lacks sufficient competition which has
15 resulted in elevated costs for physicians seeking certification in their respective specialties,
16 competition policy experts noting the harms of consolidation in the market for certification,
17 spirited public debate amongst physicians about the value of MOC to both patients and
18 physicians, and the Department of Justice advocating for efforts to increase competition in the
19 market for physician board certification⁽³⁻⁶⁾; and
20

21 Whereas, the obligation of high-stakes testing as part of MOC is not a comprehensive or optimal
22 way to assess clinical knowledge or competence for physicians who have maintained active
23 clinical practice; and
24

25 Whereas, our American Medical Association has a responsibility to investigate issues that
26 impact physicians and their patients; therefore be it
27

28 RESOLVED, that our American Medical Association adopt a policy that states that maintenance
29 of certification requirements should not be duplicative of continuing medical education
30 requirements and not be used to determine or dictate hospital privileges, insurance network
31 credentialing, or hiring practices (New HOD Policy); and be it further
32

33 RESOLVED, that our AMA recognizes the importance of fostering competition in the market for
34 board certification, allowing physicians to have the autonomy to choose the most suitable
35 pathway for their individual learning and professional development needs (New HOD Policy);
36 and be it further
37

38 RESOLVED, that our AMA undertake a comprehensive review of the available evidence
39 concerning the impact of maintenance of certification on the quality and safety of patient care
40 and report the findings of this investigation to its members and stakeholders, including

1 policymakers and legislators, to inform future healthcare policy with a report back to the House
2 of Delegates by Annual 2025 (Directive to Take Action).

3

Fiscal Note: Minimal - less than \$1,000

Received: 4/17/2024

RELEVANT AMA POLICY

Continuing Board Certification D-275.954

Our AMA will:

1. Continue to monitor the evolution of Continuing Board Certification (CBC), continue its active engagement in discussions regarding their implementation, encourage specialty boards to investigate and/or establish alternative approaches for CBC, and prepare a report regarding the CBC process at the request of the House of Delegates or when deemed necessary by the Council on Medical Education.
2. Continue to review, through its Council on Medical Education, published literature and emerging data as part of the Council's ongoing efforts to critically review CBC issues.
3. Continue to monitor the progress by the American Board of Medical Specialties (ABMS) and its member boards on implementation of CBC, and encourage the ABMS to report its research findings on the issues surrounding certification and CBC on a periodic basis.
4. Encourage the ABMS and its member boards to continue to explore other ways to measure the ability of physicians to access and apply knowledge to care for patients, and to continue to examine the evidence supporting the value of specialty board certification and CBC.
5. Work with the ABMS to streamline and improve the Cognitive Expertise (Part III) component of CBC, including the exploration of alternative formats, in ways that effectively evaluate acquisition of new knowledge while reducing or eliminating the burden of a high-stakes examination.
6. Work with interested parties to ensure that CBC uses more than one pathway to assess accurately the competence of practicing physicians, to monitor for exam relevance and to ensure that CBC does not lead to unintended economic hardship such as hospital de-credentialing of practicing physicians.
7. Recommend that the ABMS not introduce additional assessment modalities that have not been validated to show improvement in physician performance and/or patient safety.
8. Work with the ABMS to eliminate practice performance assessment modules, as currently written, from CBC requirements.
9. Encourage the ABMS to ensure that all ABMS member boards provide full transparency related to the costs of preparing, administering, scoring and reporting CBC and certifying examinations.
10. Encourage the ABMS to ensure that CBC and certifying examinations do not result in substantial financial gain to ABMS member boards, and advocate that the ABMS develop fiduciary standards for its member boards that are consistent with this principle.
11. Work with the ABMS to lessen the burden of CBC on physicians with multiple board certifications, particularly to ensure that CBC is specifically relevant to the physician's current practice.

12. Work with key stakeholders to (a) support ongoing ABMS member board efforts to allow multiple and diverse physician educational and quality improvement activities to qualify for CBC; (b) support ABMS member board activities in facilitating the use of CBC quality improvement activities to count for other accountability requirements or programs, such as pay for quality/performance or PQRS reimbursement; (c) encourage ABMS member boards to enhance the consistency of quality improvement programs across all boards; and (d) work with specialty societies and ABMS member boards to develop tools and services that help physicians meet CBC requirements.
13. Work with the ABMS and its member boards to collect data on why physicians choose to maintain or discontinue their board certification.
14. Work with the ABMS to study whether CBC is an important factor in a physician's decision to retire and to determine its impact on the US physician workforce.
15. Encourage the ABMS to use data from CBC to track whether physicians are maintaining certification and share this data with the AMA.
16. Encourage AMA members to be proactive in shaping CBC by seeking leadership positions on the ABMS member boards, American Osteopathic Association (AOA) specialty certifying boards, and CBC Committees.
17. Continue to monitor the actions of professional societies regarding recommendations for modification of CBC.
18. Encourage medical specialty societies' leadership to work with the ABMS, and its member boards, to identify those specialty organizations that have developed an appropriate and relevant CBC process for its members.
19. Continue to work with the ABMS to ensure that physicians are clearly informed of the CBC requirements for their specific board and the timelines for accomplishing those requirements.
20. Encourage the ABMS and its member boards to develop a system to actively alert physicians of the due dates of the multi-stage requirements of continuous professional development and performance in practice, thereby assisting them with maintaining their board certification.
21. Recommend to the ABMS that all physician members of those boards governing the CBC process be required to participate in CBC.
22. Continue to participate in the Coalition for Physician Accountability, formerly known as the National Alliance for Physician Competence forums.
23. Encourage the PCPI Foundation, the ABMS, and the Council of Medical Specialty Societies to work together toward utilizing Consortium performance measures in Part IV of CBC.
24. Continue to assist physicians in practice performance improvement.
25. Encourage all specialty societies to grant certified CME credit for activities that they offer to fulfill requirements of their respective specialty board's CBC and associated processes.
26. Support the American College of Physicians as well as other professional societies in their efforts to work with the American Board of Internal Medicine (ABIM) to improve the CBC program.
27. Oppose those maintenance of certification programs administered by the specialty boards of the ABMS, or of any other similar physician certifying organization, which do not appropriately adhere to the principles codified as AMA Policy on Continuing Board Certification.
28. Ask the ABMS to encourage its member boards to review their maintenance of certification policies regarding the requirements for maintaining underlying primary or initial specialty board certification in addition to subspecialty board certification, if they have not yet done so, to allow physicians the option to focus on continuing board certification activities relevant to their practice.
29. Call for the immediate end of any mandatory, secured recertifying examination by the ABMS or other certifying organizations as part of the recertification process for all those specialties that still require a secure, high-stakes recertification examination.
30. Support a recertification process based on high quality, appropriate Continuing Medical Education (CME) material directed by the AMA recognized specialty societies covering the physician's practice area, in cooperation with other willing stakeholders, that would be completed on a regular basis as determined by the individual medical specialty, to ensure lifelong learning.
31. Continue to work with the ABMS to encourage the development by and the sharing between specialty boards of alternative ways to assess medical knowledge other than by a secure high stakes exam.
32. Continue to support the requirement of CME and ongoing, quality assessments of physicians, where such CME is proven to be cost-effective and shown by evidence to improve quality of care for patients.
33. Through legislative, regulatory, or collaborative efforts, will work with interested state medical societies and other interested parties by creating model state legislation and model medical staff bylaws while advocating that Continuing Board Certification not be a requirement for: (a) medical staff

membership, privileging, credentialing, or recredentialing; (b) insurance panel participation; or (c) state medical licensure.

34. Increase its efforts to work with the insurance industry to ensure that continuing board certification does not become a requirement for insurance panel participation.

35. Advocate that physicians who participate in programs related to quality improvement and/or patient safety receive credit for CBC Part IV.

36. Continue to work with the medical societies and the American Board of Medical Specialties (ABMS) member boards that have not yet moved to a process to improve the Part III secure, high-stakes examination to encourage them to do so.

37. Our AMA, through its Council on Medical Education, will continue to work with the American Board of Medical Specialties (ABMS), ABMS Committee on Continuing Certification (3C), and ABMS Stakeholder Council to pursue opportunities to implement the recommendations of the Continuing Board Certification: Vision for the Future Commission and AMA policies related to continuing board certification.

38. Our AMA, through its Council on Medical Education, will continue to work with the American Board of Medical Specialties (ABMS) and ABMS member boards to implement key recommendations outlined by the Continuing Board Certification: Vision for the Future Commission in its final report, including the development and release of new, integrated standards for continuing certification programs that will address the Commission's recommendations for flexibility in knowledge assessment and advancing practice, feedback to diplomates, and consistency.

39. Our AMA will work with the ABMS and its member boards to reduce financial burdens for physicians holding multiple certificates who are actively participating in continuing certification through an ABMS member board, by developing opportunities for reciprocity for certification requirements as well as consideration of reduced or waived fee structures.

40. Our AMA will continue to publicly report its work on enforcing AMA Principles on Continuing Board Certification.

MOC Provisions of Interstate Medical Licensure Compact D-275.955

Our American Medical Association will, in collaboration with the Federation of State Medical Boards and interested state medical boards, request a clarifying statement from the Interstate Medical Licensure Compact Commission that the intent of the language in the model legislation requiring that a physician "holds" specialty certification refers only to initial specialty certification recognized by the American Board of Medical Specialties or the American Osteopathic Association's (AOA's) Bureau of Osteopathic Specialists and that there is no requirement for participation in ABMS's Maintenance of Certification or AOA's Osteopathic Continuous Certification (OCC) program in order to receive initial or continued licensure under the Interstate Medical Licensure Compact.

Citation: Res. 235, A-15

An Update on Maintenance of Licensure D-275.957

Our American Medical Association will: 1. Continue to monitor the evolution of Maintenance of Licensure (MOL), continue its active engagement in discussions regarding MOL implementation, and report back to the House of Delegates on this issue.

2. Continue to review, through its Council on Medical Education, published literature and emerging data as part of the Council's ongoing efforts to critically review MOL issues.

3. Work with the Federation of State Medical Boards (FSMB) to study whether the principles of MOL are important factors in a physician's decision to retire or have a direct impact on the U.S. physician workforce.

4. Work with interested state medical societies and support collaboration with state specialty medical societies and state medical boards on establishing criteria and regulations for the implementation of MOL that reflect AMA guidelines for implementation of state MOL programs and the FSMB's Guiding Principles for MOL.

5. Explore the feasibility of developing, in collaboration with other stakeholders, AMA products and

services that may help shape and support MOL for physicians.

6. Encourage the FSMB to continue to work with state medical boards to accept physician participation in the American Board of Medical Specialties maintenance of certification (MOC) and the American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) osteopathic continuous certification (OCC) as meeting the requirements for MOL and to develop alternatives for physicians who are not certified/recertified, and advocate that MOC or OCC not be the only pathway to MOL for physicians.

7. Continue to work with the FSMB to establish and assess MOL principles, with the AMA to assess the impact of MOL on the practicing physician and the FSMB to study its impact on state medical boards.

8. Encourage rigorous evaluation of the impact on physicians of any future proposed changes to MOL processes, including cost, staffing, and time.

Citation: CME Rep. 3, A-15; Modified: CME Rep. 2, I-15

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 303
(A-24)

Introduced by: Young Physicians Section

Subject: Amend Policy D-275.948 Title "Education, Training and Credentialing of Non-Physician Health Care Professionals and Their Impact on Physician Education and Training". Creation of an AMA Task Force to Address Conflicts of Interest on Physician Boards.

Referred to: Reference Committee C

1 Whereas, physicians strive for the highest degree of patient care and professionalism¹; and

2

3 Whereas, professionalism in medicine has been achieved through self-governance and self-
4 regulation¹; and

5

6 Whereas, non-physicians serving in executive and board leadership roles in physician
7 organizations compromises the objective of self-regulation and self-governance; and

8

9 Whereas, the president and CEO of the National Resident Matching Program (NRMP) is a non-
10 physician, holds the following credentials D.H.Sc., M.B.A., B.S.N., has never participated in the
11 MATCH, never completed a residency or fellowship, and yet has held prior leadership positions
12 overseeing accreditation of physician residency and fellowship programs, was an executive
13 director at the ACGME, and held the position of designated institution official (DIO) for a
14 graduate medical education (GME) program²; and

15

16 Whereas, the newly elected vice chair of the National Board of Medical Examiners (NBME) is a
17 non-physician, holds the following credentials R.N., Ph.D., received a bachelor of science in
18 nursing, received a master of science in nursing education, received a doctor of philosophy in
19 theory development and research in nursing, has never taken any NBME examination for board
20 certification, and yet now holds the position of vice chair for the organization³; and

21

22 Whereas, the current chair of the Accreditation Council for Graduate Medical Education
23 (ACGME) is a non-physician, holds the following credentials M.A., and is co-founder of a
24 strategic human resource consulting firm⁴; and

25

26 Whereas, the recently elected President and current Vice President of the American College of
27 Cardiology (ACC) is a non-physician, holds the following credentials R.N., M.S.N., and is
28 president and CEO of Cardiovascular Management of Illinois, a cardiology physician practice
29 management company⁵; and

1 Whereas, non-physicians, who do not themselves go through physician education,
2 accreditation, certification, licensing, and credentialing, may have difficulty appreciating the
3 needs and challenges of physician trainees and practicing physicians from lack of personal
4 experience, and therefore should not be making major decisions for physicians or representing
5 physicians in the highest roles of these organizations; and
6

7 Whereas, the purpose of having non-physicians on physician boards is to have a public voice
8 on these boards, not to lead the organization itself (i.e. in the highest roles of the organizations);
9 and
10

11 Whereas, non-physicians can participate on physician boards as a public member without
12 leading these organizations in the highest roles; and
13

14 Whereas, one of the focal points of the AMA Recovery Plan is to fight scope creep, and works
15 to educate legislators about the differences in training between physicians and non-physicians⁶;
16 and
17

18 Whereas, having non-physicians lead physician boards is contradictory to the AMA message
19 about scope creep and the importance of physician-led teams; and
20

21 Whereas, our advocacy to legislators about the importance of physician education is
22 compromised by a conflict of interest if we have non-physicians in the highest roles determining
23 physician standards; and
24

25 Whereas, there are highly qualified physicians that could hold these leadership roles now held
26 by non-physicians⁶; and
27

28 Whereas, having these non-physicians lead national standard-setting organizations in our
29 physician profession undermines physician confidence in these organizations; and
30

31 Whereas, the current title of policy D-275.948 does not match the content of the policy;
32 therefore be it
33

34 RESOLVED, that our American Medical Association amend the title of policy D-275.948 by
35 substitution and deletion as follows:

36 ~~Education, Training and Credentialing of Non-Physician Health Care Professionals and Their~~
37 ~~Impact on Physician Education and Training~~ Addressing Non-physician Positions and
38 Participation on Physician Regulatory Boards and Bodies and Potential Conflicts of Interest D-
39 275.948 (Modify Current HOD Policy); and be it further
40

41 RESOLVED, that our AMA work with relevant stakeholders and regulatory bodies and boards
42 involved in physician education, accreditation, certification, licensing, and credentialing to
43 advocate for physician leadership of these regulatory bodies and boards in order to be

- 1 consistent with the AMA Recovery Plan's efforts to fight scope creep, and prevent undermining
2 physician confidence in these organizations (Directive to Take Action); and be it further
3
4 RESOLVED, that our AMA create a task force with the mission to increase physician awareness
5 of and participation in leadership positions on regulatory bodies and boards involved in
6 physician education, accreditation, certification, licensing, and credentialing through
7 mechanisms including but not limited to mentorship programs, leadership training programs,
8 board nominations, publicizing the opportunities to the membership, and creating a centralized
9 list of required qualifications and methods to apply for these positions. (Directive to Take Action)

Fiscal Note: To Be Determined

Received: 4/8/2024

RELEVANT AMA POLICY

Education, Training and Credentialing of Non-Physician Health Care Professionals and Their Impact on Physician Education and Training D-275.948

1. Our AMA acknowledges that a conflict of interest exists when non-physician health care professionals hold positions on physician regulatory bodies or physician boards when these individuals represent a field that either possesses or seeks to possess the ability to practice without physician supervision.
2. Our AMA will encourage key regulatory bodies involved with physician education, accreditation, certification, licensing, and credentialing to: (A) increase transparency of the process by encouraging them to openly disclose how their board is composed and members are selected; and (B) review and amend their conflict of interest and other policies related to non-physician health care professionals holding formal leadership positions (e.g., board, committee) when that non-physician professional represents a field that either possesses or seeks to possess the ability to practice without physician supervision. [CME Rep. 5, A-22; Modified: Res. 323, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 304
(A-24)

Introduced by: Academic Physicians Section

Subject: Spirituality in Medical Education and Practice

Referred to: Reference Committee C

1 Whereas, current AMA policy recognizes the importance of spirituality concerns to many
2 patients and encourages patient access to spiritual care services (H-160.900) but does not
3 detail how the provision of spiritual care to patients would optimally involve physicians,
4 physicians-in-training, or other members of the care team; and

5
6 Whereas, the term “spiritual care” does not require, yet does not exclude, the invoking of any
7 general or specific religious beliefs; rather, spirituality is broadly defined as seeking meaning,
8 purpose, and connectedness, and is inclusive of all ways people may understand spirituality in
9 their lives; and

10
11 Whereas, our AMA’s policies on diversity, equity, and inclusion note the need to respect people
12 and their diverse backgrounds, which applies specifically to the quality and equity of patient
13 care, in that members of medical care teams should demonstrate respect for the culture and
14 spirituality of the patient (and the patient’s family); and

15
16 Whereas, many health organizations, including the World Health Organization (WHO), via its
17 Resolution on Palliative Care, have noted the need for prevention and relief of suffering by
18 means of early identification and correct assessment and treatment of pain and other problems,
19 whether physical, psychosocial, or spiritual – and in the case of WHO, have declared that the
20 treatment of all severe pain, including spiritual pain, is a human right;¹ and

21
22 Whereas, many patients value clinicians who are able to integrate inquiry about patients’
23 spirituality as related to their health, and benefit from access to specialist spiritual care services,
24 when such access is enabled for them; and

25
26 Whereas, a Delphi review of the literature found sufficient evidence to recommend education on
27 spirituality and health in the care of patients with serious and/or chronic illness;^{2,3} and

28
29 Whereas, patient referral and access to spiritual care services would be enhanced if all
30 physicians and medical students had learned how to provide generalist spiritual care through
31 the assessment and treatment of spiritual distress as a clinical symptom, with treatment options
32 to include compassionate listening and presence to patients’ suffering, reflective inquiry to
33 enable patients to fully express their spiritual distress, referral to and collaboration with spiritual
34 care specialists, and continued follow up with the patient on spiritual issues as indicated; and

35
36 Whereas, instruction in medical education regarding spiritual health as part of whole person
37 care, assessment, and treatment of spiritual distress could be expected to enhance “emotional
38 intelligence” and the recognition of opportunities for either providing spiritual care or referring
39 the patient to a spiritual care specialist; and

1 Whereas, burnout—a condition characterized by feelings of pervasive energy depletion or
2 exhaustion, negativism or cynicism about one’s occupation or occupational role, and/or a sense
3 of inadequacy or ineffectiveness in one’s occupational role, is a pervasive emotion and state
4 among clinicians and clinicians-in-training; and
5

6 Whereas, spiritual distress can contribute to burnout across the continuum of medical education
7 and practice, with an association between increased burnout and decreased meaning in work,
8 while the practice of spirituality may be a protective factor against burnout, with such
9 interventions as “reflection rounds” helping health professionals and students rekindle their
10 sense of meaning in their chosen vocation;⁴ and
11

12 Whereas, it is therefore reasonable to hope that by providing physicians and physicians-in-
13 training with opportunities to become more well-educated regarding matters of spirituality, and
14 by enabling them to implement a spiritual approach to their own life and life stresses—including
15 use of spiritual resources such as meditation, seeking professional spiritual care if needed,
16 and/or finding a spiritual community of support—that these individuals may be favorably
17 impacted and be less susceptible to burnout; and
18

19 Whereas, by extension, increased knowledge and awareness of spiritual principles may
20 enhance the abilities of caregivers to not only provide more effective care to others, but also to
21 provide more effective self-care to themselves; therefore be it
22

23 RESOLVED, that our American Medical Association amend Policy H-160.900 to read as
24 follows:
25

26 Addressing Patient Spirituality in ~~Medicine~~ Medical Education and Practice
27

28 (1) Our AMA recognizes the importance of individual patient spirituality and its impact on
29 health and encourages patient access to spiritual care services.
30

31 (2) Our AMA encourages the availability of education about spiritual health, defined as
32 meaning, purpose, and connectedness, in curricula in medical school, graduate medical
33 education, and continuing physician professional development as an integral part of
34 whole person care, which could include:

35 (a) assessing spiritual health as part of the history and physical;

36 (b) addressing treatment of spiritual distress by the clinician, with appropriate referral to
37 spiritual care professionals;

38 (c) acknowledging patients’ spiritual resources;

39 (d) developing compassionate listening skills;

40 (e) ensuring ongoing follow-up of patients’ spiritual health by clinicians as appropriate;

41 (f) describing respect for the spiritual, religious, existential, and cultural value of those
42 they serve and understanding why it is important to not impose their own personal
43 values and beliefs on those served; and

44 (g) self-reflection on one’s own spirituality within professional development courses,
45 especially as related to their vocation and wellbeing. (Modify Current HOD Policy)
46

Our AMA recognizes the importance of individual patient spirituality and its impact on health and encourages patient access to spiritual care services.

Redesigning the Medicare Hospice Benefit D-330.895

Our American Medical Association advocates for:

1. A 21st century evolution of the Medicare hospice benefit that meets the quadruple aim of health care; advances health equity; and improves access, support, and outcomes for seriously ill patients across all geographies, including underserved and low-resource communities; and
2. A reformed Medicare hospice benefit that may incorporate the following components:
 - a. Hospice eligibility should not be based solely on a specified prognosis or life expectancy but rather on patients' needs.
 - b. Patients must continue to have an open choice of hospice providers.
 - c. Hospice services, including telehealth or telemedicine, should be provided by a full, physician-led interdisciplinary team.
 - d. Patients and their caregivers should receive adequate support using home- or facility-based hospice services, identified by a thorough assessment of their social determinants of health. This would incorporate 24-hour a day care for beneficiaries with very limited life expectancy who lack around the clock caregivers.
 - e. Patients should have concurrent access to disease-directed treatments along with palliative services.
 - f. Payments to hospices should be sufficient to support the quality, experience, scope, and frequency of care that beneficiaries deserve throughout the later stages of serious illness as dictated by their physical, psychological, social, spiritual, and practical needs.
 - g. The hospice benefit should be consistent, including with regard to the quality and intensity of services, regardless of which Medicare program or entity pays for services.
 - h. Metrics for health provider accountability should focus on those aspects of care and experience that matter most to patients, families, and caregivers.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 305
(A-24)

Introduced by: Oklahoma

Subject: Public Service Loan Forgiveness Reform

Referred to: Reference Committee C

1 Whereas, there is a physician shortage across all specialties, locations, and practice types in
2 the United States¹; and
3

4 Whereas, the federal government is responsible for direct healthcare services through the
5 Veteran's Health Administration (VHA) and Indian Health Service (IHS); and
6

7 Whereas, the VHA and IHS both experience chronic, nationwide physician shortages (12.9% at
8 VHA as of 2022², 25% at IHS as of 2018³), paralleling the nation's physician shortage; and
9

10 Whereas, the VHA loan repayment program offers up to \$200,000 in relief to physicians over
11 five years, with no service commitment, while the IHS loan repayment program offers up to
12 \$50,000 in relief to physicians, with a two-year service commitment^{4,5}; and
13

14 Whereas, the VHA has bolstered physician retention and reduced physician burnout by offering
15 competitive financial relief to physicians and making improvements in workload, organizational
16 satisfaction, and psychological safety^{6,7}; and
17

18 Whereas, the VHA compensates physicians using Title 38 pay scales, which provides special
19 authority to recruit and retain employees in certain health care occupations, and also allows the
20 agency to be competitive with other healthcare facilities in the area^{8,9}; and
21

22 Whereas, the IHS compensates physicians using Title 5 pay scales, which are generally less
23 than Title 38 pay scales^{10,11}; and
24

25 Whereas, the Partnership for Public Service and Boston Consulting Group (PPS-BCG) reported
26 that the IHS ranked in the bottom-quartile of agencies within the U.S. Department of Health and
27 Human Services for employee engagement and satisfaction (332 of 432) in 2022¹²; and
28

29 Whereas, the PPS-BCG reported that nearly half of IHS physicians and other employees were
30 not satisfied with their pay and nearly a third were not satisfied with their work-life balance in
31 2022¹²; and
32

33 Whereas, the AMA recommends that compensation for IHS physicians be increased to a level
34 competitive with other federal agencies and non-governmental service (H-350.977); and
35

36 Whereas, physicians employed by the federal government may be eligible for the Public Service
37 Loan Forgiveness Program, which forgives qualifying federal loans after a standard ten-year
38 repayment plan¹³; and

1 Whereas, loan repayment can address physician retention and decrease physician burnout in
2 facilities that may not provide competitive pay or are in geographically remote locations^{14,15,16};
3 and
4

5 Whereas, the AMA has stated that reducing physician burnout should be an urgent priority¹⁷;
6 and
7

8 Whereas, the AMA already supports immediate changes in the Public Service Loan
9 Forgiveness Program to allow physicians to receive immediate loan forgiveness when they
10 practice in a Veteran's Health Administration facility (D-510.990) due to the VA physician
11 shortage; therefore be it
12

13 RESOLVED, that our American Medical Association amend Indian Health Service H-350.977 by
14 addition and deletion as follows:
15

16 Indian Health Service H-350.977

17 The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to
18 meet its obligation to bring American Indian health up to the general population level. The AMA
19 specifically recommends: (1) Indian Population: (a) In current education programs, and in the
20 expansion of educational activities suggested below, special consideration be given to involving
21 the American Indian and Alaska native population in training for the various health professions,
22 in the expectation that such professionals, if provided with adequate professional resources,
23 facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration
24 with American Indian leaders of the possibility of increased numbers of nonfederal American
25 Indian health centers, under tribal sponsorship, to expand the American Indian role in its own
26 health care; (c) Increased involvement of private practitioners and facilities in American Indian
27 care, through such mechanisms as agreements with tribal leaders or Indian Health Service
28 contracts, as well as normal private practice relationships; and (d) Improvement in
29 transportation to make access to existing private care easier for the American Indian population.
30 (2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities
31 and roads, and the availability of alternative nonfederal resources, the AMA recommends that
32 those Indian Health Service facilities currently necessary for American Indian care be identified
33 and that an immediate construction and modernization program be initiated to bring these
34 facilities up to current standards of practice and accreditation.

35 (3) Personnel Manpower: (a) Compensation scales for Indian Health Service physicians be
36 increased to a level competitive with other Federal agencies and nongovernmental service; (b)
37 Consideration should be given to increased compensation for specialty and primary care service
38 in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made
39 to establish closer ties with teaching centers and other federal health agencies, thus increasing
40 both the available staffing manpower and the level of professional expertise available for
41 consultation; (d) Allied health professional staffing of Service facilities should be maintained at a
42 level appropriate to the special needs of the population served without detracting from physician
43 compensation; (e) Continuing education opportunities should be provided for those health
44 professionals serving these communities, and especially those in remote areas, and, increased
45 peer contact, both to maintain the quality of care and to avert professional isolation and burnout;
46 and (f) Consideration should be given to a federal statement of policy supporting continuation of
47 the Public Health Service to reduce the great uncertainty now felt by many career officers of the
48 corps.

49 (4) Medical Societies: In those states where Indian Health Service facilities are located, and in
50 counties containing or adjacent to Service facilities, that the appropriate medical societies
51 should explore the possibility of increased formal liaison with local Indian Health Service
52 physicians. Increased support from organized medicine for improvement of health care provided

- 1 under their direction, including professional consultation and involvement in society activities
2 should be pursued.
- 3 (5) Our AMA also support the removal of any requirement for competitive bidding in the Indian
4 Health Service that compromises proper care for the American Indian population.
- 5 (6) Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic
6 Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical
7 schools and ACGME-accredited residency programs.
- 8 (7) Our AMA will encourage the development of funding streams to promote rotations and
9 learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.
- 10 (8) Our AMA will call for an immediate change in the Public Service Loan Forgiveness Program
11 to allow physicians to receive immediate loan forgiveness when they practice in an Indian
12 Health Service, Tribal, or Urban Indian Health Program. (Modify Current HOD Policy)
13

Fiscal Note: Modest - between \$1,000 - \$5,000

RELEVANT AMA POLICY

Indian Health Service H-350.977

The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.

(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.

(3) Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.

(4) Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.

(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

(6) Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.

(7) Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.

Fixing the VA Physician Shortage with Physicians D-510.990

1. Our AMA will work with the VA to enhance its loan forgiveness efforts to further incentivize physician recruiting and retention and improve patient access in the Veterans Administration facilities.
2. Our AMA will call for an immediate change in the Public Service Loan Forgiveness Program to allow physicians to receive immediate loan forgiveness when they practice in a Veterans Administration facility.
3. Our AMA will work with the Veterans Administration to minimize the administrative burdens that discourage or prevent non-VA physicians without compensation (WOCs) from volunteering their time to care for veterans.
4. Our AMA will: (a) continue to support the mission of the Department of Veterans Affairs Office of Academic Affiliations for expansion of graduate medical education (GME) residency positions; and (b) collaborate with appropriate stakeholder organizations to advocate for preservation of Veterans Health Administration funding for GME and support its efforts to expand GME residency positions in the federal budget and appropriations process.
5. Our AMA supports postgraduate medical education service obligations through programs where the

expectation for service, such as military service, is reasonable and explicitly delineated in the contract with the trainee.

6. Our AMA opposes the blanket imposition of service obligations through any program where physician trainees rotate through the facility as one of many sites for their training.

Physician Burnout D-405.972

Our AMA will work with: (1) Centers for Medicare and Medicaid Services (CMS), The Joint Commission, and other accrediting bodies and interested stakeholders to add an institutional focus on physician wellbeing as an accreditation standard for hospitals, focusing on system-wide interventions that do not add additional burden to physicians; and (2) hospitals and other stakeholders to determine areas of focus on physician wellbeing, to include the removal of intrusive questions regarding physician physical or mental health or related treatments on initial or renewal hospital credentialing applications.

Principles of and Actions to Address Medical Education Costs and Student Debt H-305.925

The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will:

1. Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy.
2. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research.
3. Encourage the expansion of National Institutes of Health programs that provide loan repayment in exchange for a commitment to conduct targeted research.
4. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit: (a) inclusion of all medical specialties in need, and (b) service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas.
5. Encourage the National Health Service Corps to have repayment policies that are consistent with other federal loan forgiveness programs, thereby decreasing the amount of loans in default and increasing the number of physicians practicing in underserved areas.
6. Work to reinstate the economic hardship deferment qualification criterion known as the "20/220 pathway," and support alternate mechanisms that better address the financial needs of trainees with educational debt.
