MEMORANDUM FROM THE SPEAKER OF THE HOUSE OF DELEGATES

- **All Delegates, Alternate Delegates and others receiving this material are reminded that it refers only to items to be considered by the House.**

- **No action has been taken on anything herein contained, and it is informational only.**

- **Only those items that have been acted on finally by the House can be considered official.**

- **REMINDER*: Only the Resolve portions of the resolutions are considered by the House of Delegates. The Whereas portions or preambles are informational and explanatory only.***

AMA
AMERICAN MEDICAL ASSOCIATION

UNDERSTANDING THE RECORDING OF AMERICAN MEDICAL ASSOCIATION POLICY

Current American Medical Association (AMA) policy is catalogued in PolicyFinder, an electronic database that is updated after each AMA House of Delegates (HOD) meeting and available online. Each policy is assigned to a topical or subject category. Those category headings are alphabetical, starting with "abortion" and running to "women"; the former topic was assigned the number 5, and "women" was assigned 525. Within a category, policies are assigned a 3 digit number, descending from 999, meaning that older policies will *generally* have higher numbers within a category (eg, 35.999 was initially adopted before 35.984). A policy number is not affected when it is modified, however, so a higher number may have been altered more recently than a lower number. Numbers are deleted and not reused when policies are rescinded.

AMA policy is further categorized into one of four types, indicated by a prefix:

- "H" – for statements that one would consider positional or philosophical on an issue
- "D" – for statements that direct some specific activity or action. There can be considerable overlap between H and D statements, with the assignment made on the basis of the core nature of the statement.
- "G" – for statements related to AMA governance
- "E" – for ethical opinions, which are the recommendations put forward in reports prepared by the Council on Ethical and Judicial Affairs and adopted by the AMA-HOD

AMA policy can be accessed at https://policysearch.ama-assn.org/policyfinder.

The actions of the AMA-HOD in developing policy are recorded in the *Proceedings*, which are available online as well. Annotations at the end of each policy statement trace its development, from initial adoption through any changes. If based on a report, the annotation includes the following abbreviations:

BOT – Board of Trustees
CCB – Council on Constitution and Bylaws
CEJA – Council on Ethical and Judicial Affairs
CLRPD – Council on Long Range Planning and Development
CME – Council on Medical Education
CMS – Council on Medical Service
CSAPH – Council on Science and Public Health

If a resolution was involved, "Res" is indicated. The number of the report or resolution and meeting (A for Annual; I for Interim) and year (two digits) are also included (eg, BOT Rep. 1, A-14 or Res. 319, I-12).

AMA policy is recorded in the following categories, and any particular policy is recorded in only a single category.

5.000 Abortion	10.000 Accident Prevention/Unintentional Injuries
15.000 Accident Prevention: Motor Vehicles	20.000 Acquired Immunodeficiency Syndrome
25.000 Aging	30.000 Alcohol and Alcoholism
35.000 Allied Health Professions	40.000 Armed Forces
45.000 Aviation Medicine	50.000 Blood
55.000 Cancer	60.000 Children and Youth
65.000 Civil and Human Rights	70.000 Coding and Nomenclature
75.000 Contraception	80.000 Crime
85.000 Death and Vital Records	90.000 Disabled
95.000 Drug Abuse	100.000 Drugs
105.000 Drugs: Advertising	110.000 Drugs: Cost
115.000 Drugs: Labeling and Packaging	120.000 Drugs: Prescribing and Dispensing
125.000 Drugs: Substitution	130.000 Emergency Medical Services
135.000 Environmental Health	140.000 Ethics
145.000 Firearms: Safety and Regulation	150.000 Foods and Nutrition

155.000 Health Care Costs	160.000 Health Care Delivery
165.000 Health Care/System Reform	170.000 Health Education
175.000 Health Fraud	180.000 Health Insurance
185.000 Health Insurance: Benefits and Coverage	190.000 Health Insurance: Claim Forms and Claims Processing
195.000 Health Maintenance Organizations	200.000 Health Workforce
205.000 Health Planning	210.000 Home Health Services
215.000 Hospitals	220.000 Hospitals: Accreditation Standards
225.000 Hospitals: Medical Staff	230.000 Hospitals: Medical Staff - Credentialing and Privileges
235.000 Hospitals: Medical Staff - Organization	240.000 Hospitals: Reimbursement
245.000 Infant Health	250.000 International Health
255.000 International Medical Graduates	260.000 Laboratories
265.000 Legal Medicine	270.000 Legislation and Regulation
275.000 Licensure and Discipline	280.000 Long-Term Care
285.000 Managed Care	290.000 Medicaid and State Children's Health Insurance Programs
295.000 Medical Education	300.000 Medical Education: Continuing
305.000 Medical Education: Financing and Support	310.000 Medical Education: Graduate
315.000 Medical Records and Patient Privacy	320.000 Medical Review
330.000 Medicare	335.000 Medicare: Carrier Review
340.000 Medicare: PRO	345.000 Mental Health
350.000 Minorities	355.000 National Practitioner Data Bank
360.000 Nurses and Nursing	365.000 Occupational Health
370.000 Organ Donation and Transplantation	373.000 Patients
375.000 Peer Review	380.000 Physician Fees
383.000 Physician Negotiation	385.000 Physician Payment
390.000 Physician Payment: Medicare	400.000 Physician Payment: Medicare - RBRVS
405.000 Physicians	406.000 Physician-Specific Health Care Data
410.000 Practice Parameters	415.000 Preferred Provider Arrangements
420.000 Pregnancy and Childbirth	425.000 Preventive Medicine
430.000 Prisons	435.000 Professional Liability
440.000 Public Health	445.000 Public Relations
450.000 Quality of Care	455.000 Radiation and Radiology
460.000 Research	465.000 Rural Health
470.000 Sports and Physical Fitness	475.000 Surgery
478.000 Technology - Computer	480.000 Technology - Medical
485.000 Television	490.000 Tobacco Use, Prevention and Cessation
495.000 Tobacco Products	500.000 Tobacco: AMA Corporate Policies and Activities
505.000 Tobacco: Federal and International Policies	510.000 Veterans Medical Care
515.000 Violence and Abuse	520.000 War
525.000 Women	600.000 Governance: AMA House of Delegates
605.000 Governance: AMA Board of Trustees and Officers	610.000 Governance: Nominations, Elections, and Appointments
615.000 Governance: AMA Councils, Sections, and Committees	620.000 Governance: Federation of Medicine
625.000 Governance: Strategic Planning	630.000 Governance: AMA Administration and Programs
635.000 Governance: Membership	640.000 Governance: Advocacy and Political Action

LIST OF MATERIALS INCLUDED IN THIS HANDBOOK (A-25)

Resolutions and reports have been collated by referral according to reference committee assignment. In the listing below, referral is indicated by letter following the title of the report. Resolutions have been numbered according to referrals (i.e., those referred to the Reference Committee on Ethics and Bylaws begin with 001, Reference Committee B begins with 201, etc.).

The informational reports contain no recommendations and will be filed on Saturday, June 7, unless a request is received for referral and consideration by a Reference Committee (similar to the use of a consent calendar).

1. **Memorandum from the Speaker**

2. **Understanding the Recording of American Medical Association Policy**

3. **Declaration of Professional Responsibility - Medicine's Social Contract with Humanity**

4. **Delegate / Alternate Delegate Job Description, Roles, and Responsibilities**

5. **Seating Allocation and Seating Chart for the House of Delegates**

6. **Hotel Maps**

7. **Official Call to the Officers and Members of the AMA**
   - **Officials of the Association and AMA Councils**
   - **Ex Officio Members of the HOD**
   - **SSS Representatives**
   - **Listing of Delegates and Alternate Delegates**

8. **Reference Committee Schedule and Room Assignments**

9. **Note on Order of Business**

10. **Summary of Fiscal Notes**

11. **List of Resolutions by Sponsor**

FOLLOWING COLLATED BY REFERRAL

12. **Report(s) of the Board of Trustees - Michael Suk, MD, JD, MPH, MBA, Chair**

01	Annual Report	F
02	New Specialty Organizations Representation in the House of Delegates	E&B

DECLARATION OF PROFESSIONAL RESPONSIBILITY: MEDICINE'S SOCIAL CONTRACT WITH HUMANITY

Preamble

Never in the history of human civilization has the well-being of each individual been so inextricably linked to that of every other. Plagues and pandemics respect no national borders in a world of global commerce and travel. Wars and acts of terrorism enlist innocents as combatants and mark civilians as targets. Advances in medical science and genetics, while promising great good, may also be harnessed as agents of evil. The unprecedented scope and immediacy of these universal challenges demand concerted action and response by all.

As physicians, we are bound in our response by a common heritage of caring for the sick and the suffering. Through the centuries, individual physicians have fulfilled this obligation by applying their skills and knowledge competently, selflessly and at times heroically. Today, our profession must reaffirm its historical commitment to combat natural and man-made assaults on the health and well-being of humankind. Only by acting together across geographic and ideological divides can we overcome such powerful threats. Humanity is our patient.

Declaration

We, the members of the world community of physicians, solemnly commit ourselves to:

1. Respect human life and the dignity of every individual.

2. Refrain from supporting or committing crimes against humanity and condemn all such acts.

3. Treat the sick and injured with competence and compassion and without prejudice.

4. Apply our knowledge and skills when needed, though doing so may put us at risk.

5. Protect the privacy and confidentiality of those for whom we care and breach that confidence only when keeping it would seriously threaten their health and safety or that of others.

6. Work freely with colleagues to discover, develop, and promote advances in medicine and public health that ameliorate suffering and contribute to human well-being.

7. Educate the public and polity about present and future threats to the health of humanity.

8. Advocate for social, economic, educational, and political changes that ameliorate suffering and contribute to human well-being.

9. Teach and mentor those who follow us for they are the future of our caring profession.

We make these promises solemnly, freely, and upon our personal and professional honor.

Adopted by the House of Delegates of the American Medical Association
in San Francisco, California on December 4, 2001

Delegate/Alternate Delegate Job Description, Roles and Responsibilities

At the 1999 Interim Meeting, the House of Delegates adopted as amended Recommendation 16 of the final report of the Special Advisory Committee to the Speaker of the House of Delegates. This recommendation included a job description and roles and responsibilities for delegates and alternate delegates. The description and roles and responsibilities were modified at the 2002 Annual Meeting by Recommendation 3 of the Joint Report of the Board of Trustees and Council on Long Range Planning and Development. The modified job description, qualifications, and responsibilities are listed below.

Delegates and Alternate Delegates should meet the following job description and roles and responsibilities:

Job Description and Roles and Responsibilities of AMA Delegates/Alternate Delegates

Members of the AMA House of Delegates serve as an important communications, policy, and membership link between the AMA and grassroots physicians. The delegate/alternate delegate is a key source of information on activities, programs, and policies of the AMA. The delegate/alternate delegate is also a direct contact for the individual member to communicate with and contribute to the formulation of AMA policy positions, the identification of situations that might be addressed through policy implementation efforts, and the implementation of AMA policies. Delegates and alternate delegates to the AMA are expected to foster a positive and useful two-way relationship between grassroots physicians and the AMA leadership. To fulfill these roles, AMA delegates and alternate delegates are expected to make themselves readily accessible to individual members by providing the AMA with their addresses, telephone numbers, and e-mail addresses so that the AMA can make the information accessible to individual members through the AMA web site and through other communication mechanisms. The qualifications and responsibilities of this role are as follows:

A. Qualifications
- AMA member.
- Elected or selected by the principal governing body or the membership of the sponsoring organization.
- The AMA encourages that at least one member of each delegation be involved in the governance of their sponsoring organization.

B. Responsibilities
- Regularly communicate AMA policy, information, activities, and programs to constituents so he/she will be recognized as the representative of the AMA.
- Relate constituent views and suggestions, particularly those related to implementation of AMA policy positions, to the appropriate AMA leadership, governing body, or executive staff.
- Advocate constituent views within the House of Delegates or other governance unit, including the executive staff.
- Attend and report highlights of House of Delegates meetings to constituents, for example, at hospital medical staff, county, state, and specialty society meetings.
- Serve as an advocate for patients to improve the health of the public and the health care system.
- Cultivate promising leaders for all levels of organized medicine and help them gain leadership positions.
- Actively recruit new AMA members and help retain current members.
- Participate in the AMA Membership Outreach Program.

SEATING ALLOCATION – 2025 ANNUAL MEETING

ADDICTION MEDICINE - 3
American Society of Addiction Medicine (ASAM) – 3
Trustee (Levin) – 1
Delegates - 2

AMGA - 1

MEMBERS OF THE HOUSE OF DELEGATES - JUNE 2025
The following is a list of credentialed delegates and alternate delegates to the House of Delegates as reported to the Executive Vice President

Medical Association of the State of Alabama
Delegates
B Jerry Harrison, MD, Haleyville, AL
John Meigs Jr, MD, Brent, AL
William Schneider, MD, Huntsville, AL
George C. Smith, Jr MD, Lineville, AL
Alternate Delegates
Mark H. LeQuire, MD, Montgomery, AL
Alexis Mason, MD, Tuscaloosa, AL
Jane Weida, MD, Tuscaloosa, AL
Tom Weida, MD, Tuscaloosa, AL

Alaska State Medical Association
Delegate
Alex Malter, MD MPH, Juneau, AK
Alternate Delegate
Rhene Merkouris, MD, Anchorage, AK

Arizona Medical Association
Delegates
Veronica K. Dowling, MD, Lakeside, AZ
Timothy Fagan, MD, Tucson, AZ
Gary R. Figge, MD, Tucson, AZ
M Zuhdi Jasser, MD, Phoenix, AZ
Marc Leib, MD, Phoenix, AZ
Alternate Delegates
Ilana Addis, MD, Tucson, AZ
David Baltazer, DO, Scottsdale, AZ
Stewart Goldman, MD, Phoenix, AZ
Nadeem Kazi, MD, Casa Grande, AZ

Arkansas Medical Society
Delegates
Amy Cahill, MD, White Hall, AR
Stephen Magie, MD, Conway, AR
Alternate Delegates
Danny Wilkerson, MD, Little Rock, AR
Alan Wilson, MD, Monticello, AR

California Medical Association
Delegates
Jerry P Abraham, MD MPH, Los Angeles, CA
Barbara J. Arnold, MD, Sacramento, CA
Patricia L. Austin, MD, Alamo, CA
Dirk Stephen Baumann, MD, Burlingame, CA
Peter N. Bretan, Jr MD, Novato, CA
J Brennan Cassidy, MD, Newport Beach, CA
Maisha Draves, MD, Fairfield, CA
Suparna Dutta, MD, Oakland, CA
Kyle P. Edmonds, MD, San Diego, CA
Sergio Flores, MD, San Diego, CA
George Fouras, MD, Los Angeles, CA
Anjalee Galion, MD, Santa Ana, CA
Dev A. GnanaDev, MD, Upland, CA
Brian Grady, MD, San Francisco, CA
Donaldo Hernandez, MD, Seaside, CA
Robert Hertzka, MD, Rancho Santa Fe, CA
Jennifer Hone, MD, Santa Barbara, CA
Samuel Huang, MD, Los Angeles, CA
Jeff Klingman, MD, Orinda, CA
Raymond Ko, Walnut Creek, CA
Terence Lin, MD, Fremont, CA
John Maa, MD, San Francisco, CA
Ramin Manshadi, MD, Stockton, CA
Theodore Mazer, MD, Fort Myers, FL
Kelly McCue, MD, Davis, CA
Mihir Parikh, MD, La Jolla, CA
Stephen Parodi, MD, Oakland, CA
Albert Ray, MD, San Diego, CA
Daniel Resnick, Pomona, OR
Ryan J. Ribeira, MD, Mountain View, CA
Katrina Saba, MD, Oakland, CA
Illan Shapiro-Strygler, MD, Commerce, CA
Seema Sidhu, MD, Fremont, CA
Tatiana W. Spirtos, MD, Redwood City, CA
James J. Strebig, MD, Irvine, CA
Shannon Udovic-Constant, MD, San Francisco, CA
Holly Yang, MD, San Diego, CA
Alternate Delegates
Ameena Ahmed, MD, Oakland, CA
Alpesh Amin, MD, Anaheim, CA
Jack Chou, MD, Baldwin Park, CA
Duc Chung, MD, Los Angeles, CA
James Cotter, MD, Napa, CA
Michele Evans, MD, Rocklin, CA
David Friscia, MD, San Diego, CA
Liliane Gibbs, MD, Anaheim, CA
Douglas Gibson, MD, Folsom, CA
Raminder Gill, MD, Sacramento, CA
Catherine Gutfreund, MD, Santa Rosa, CA
Eric Hansen, DO, Oak Hills, CA
Janet Jacobson, MD, Anaheim, CA
Scott Richard Karlan, MD, West Hollywood, CA
Mark H. Kogan, MD, San Pablo, CA
Sudeep Kukreja, MD, Orange, CA
Mehzabin Lala, Pomona, CA
Man Kit Leung, MD, San Francisco, CA
Stacey Ludwig, MD, Los Angeles, CA
Debbie Lupeika, MD, Redding, CA
Lindsay Mazotti, MD, Danville, CA
Linda Mirdamadi, MD, Los Angeles, CA
Chang Na, MD, Bakersfield, CA
Smita Rouillard, MD, Fresno, CA
Sion Roy, MD, Malibu, CA
Shivani Ruben, MD, Sacramento, CA
Samuel Santoro, DO, Vacaville, CA
Shireen Saxena, MD, Los Angeles, CA
Ryan Shanahan, MD, Ventura, CA
Raymond Tsai, MD, Lost Hills, CA
William Tseng, MD, San Diego, CA

Valencia Walker, MD, Los Angeles, CA
Christina Wang, MD, San Francisco, CA
Patricia Wang, MD, Antioch, CA
Barbara Weissman, MD, Pacifica, CA
Anna Yap, MD, Carmichael, CA

Colorado Medical Society
Delegates
David Downs, MD, Denver, CO
Jan Kief, MD, Merritt Island, FL
Rachelle M. Klammer, MD, Denver, CO
A. "Lee" Morgan, MD, Denver, CO
Tamaan Osbourne-Roberts, MD FAAFP, Denver, CO
Lynn Parry, MD, Littleton, CO
Alternate Delegates
Amy Duckro, DO, Lafayette, CO
Carolynn Francavilla, MD, Lakewood, CO
Brigitta J. Robinson, MD, Centennial, CO
Michael Volz, MD, Englewood, CO
Kimberly Warner, MD, Denver, CO
Patricia Weber, MD, Grand Jct, CO

Connecticut State Medical Society
Delegates
Katherine L. Harvey, MD, Canton, CT
Kathleen A. LaVorgna, MD, Norwalk, CT
Bollepalli Subbarao, MD, Middletown, CT
Steven C. Thornquist, MD, Bethany, CT
Alternate Delegates
M. Natalie Achong, MD, Unionville, CT
Raymond Lorenzoni, MD, Woodbridge, CT
Stacy Taylor, MD, New Hartford, CT
Michael Virata, MD, Woodbridge, CT

Medical Society of Delaware
Delegate
Janice Tildon-Burton, MD, Newark, DE
Alternate Delegate
Matthew Burday, DO, Wilmington, DE

Medical Society of the District of Columbia
Delegates
Peter E. Lavine, MD, Washington, DC
Raymond K. Tu, MD, Washington, DC
Alternate Delegates

REPORT OF THE BOARD OF TRUSTEES

B of T Report 02-A-25

Subject: New Specialty Organizations Representation in the House of Delegates

Presented by: Michael Suk, MD, JD, MPH, MBA, Chair

Referred to: Reference Committee on Ethics and Bylaws

The Board of Trustees (BOT) and the Specialty and Service Society (SSS) considered the applications of the American Academy of Emergency Medicine and American Society for Laser Medicine and Surgery, Inc. for national medical specialty organization representation in the American Medical Association (AMA) House of Delegates (HOD). The applications were first reviewed by the AMA SSS Rules Committee and presented to the SSS Assembly for consideration. The applications were considered using criteria developed by the Council on Long Range Planning and Development and adopted by the HOD (Policy G-600.020). (Exhibit A)

Organizations seeking admission were asked to provide appropriate membership information to the AMA. That information was analyzed to determine AMA membership, as required under criterion three. A summary of this information is attached to this report as Exhibit B.

In addition, organizations must submit a letter of application in a designated format. This format lists the above-mentioned guidelines followed by each organization's explanation of how it meets each of the criteria.

Before a society is eligible for admission to the HOD, it must participate in the SSS for three years. These organizations have actively participated in the SSS for more than three years.

Review of the materials and discussion during the SSS meeting at the November 2024 Interim Meeting indicated that the American Academy of Emergency Medicine and American Society for Laser Medicine and Surgery, Inc. meet the criteria for representation in the HOD.

RECOMMENDATION

Therefore, the Board of Trustees recommends that the American Academy of Emergency Medicine and American Society for Laser Medicine and Surgery, Inc. be granted representation in the AMA House of Delegates and that the remainder of the report be filed. (Directive to Take Action)

Fiscal Note: Less than $500

APPENDIX
Exhibit A

GUIDELINES FOR REPRESENTATION IN & ADMISSION TO THE HOUSE OF DELEGATES:

National Medical Specialty Societies

1) The organization must not be in conflict with the constitution and bylaws of the American Medical Association by discriminating in membership on the basis of race, religion, national origin, sex, or handicap.

2) The organization must (a) represent a field of medicine that has recognized scientific validity; and (b) not have board certification as its primary focus, and (c) not require membership in the specialty organization as a requisite for board certification.

3) The organization must meet one of the following criteria:

   - 1,000 or more AMA members;
   - At least 100 AMA members and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA; or
   - Have been represented in the House of Delegates at the 1990 Annual Meeting and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA.

4) The organization must be established and stable; therefore, it must have been in existence for at least 5 years prior to submitting its application.

5) Physicians should comprise the majority of the voting membership of the organization.

6) The organization must have a voluntary membership and must report as members only those who are current in payment of applicable dues are eligible to participate on committees and the governing body.

7) The organization must be active within its field of medicine and hold at least one meeting of its members per year.

8) The organization must be national in scope. It must not restrict its membership geographically and must have members from a majority of the states.

9) The organization must submit a resolution or other official statement to show that the request is approved by the governing body of the organization.

10) If international, the organization must have a US branch or chapter, and this chapter must be reviewed in terms of all of the above guidelines.

RESPONSIBILITIES OF NATIONAL MEDICAL SPECIALTY ORGANIZATIONS

1. To cooperate with the AMA in increasing its AMA membership.

2. To keep its delegate to the House of Delegates fully informed on the policy positions of the organizations so that the delegate can properly represent the organization in the House of Delegates.

3. To require its delegate to report to the organization on the actions taken by the House of Delegates at each meeting.

4. To disseminate to its membership information to the actions taken by the House of Delegates at each meeting.

5. To provide information and data to the AMA when requested.

Exhibit B - Summary Membership Information

Organization	**AMA Membership of Organization's Total Eligible Membership**
American Academy of Emergency Medicine*	1,727 of 6,270 (28%)
American Society for Laser Medicine and Surgery, Inc.	323 of 1,156 (28%)

* *Represented in the House of Delegates at the 1990 Annual Meeting*

REPORT OF THE BOARD OF TRUSTEES

B of T Report 18-A-25

Subject: Physician Assisted Suicide

Presented by: Michael Suk, MD, JD, MPH, MBA, Chair

Referred to: Reference Committee on Ethics and Bylaws

At the 2023 Interim Meeting, the House of Delegates (HOD) referred Resolution 004, "Study of Physician Assisted Suicide and Medical Aid in Dying," which was introduced by the Medical Student Section. This resolution asked our American Medical Association (AMA) to:

> Oppose criminalization of physicians and health professionals who engage in medical aid in dying at a patient's request and with their informed consent, and oppose civil or criminal legal action against patients who engage or attempt to engage in medical aid in dying
>
> Use the term "medical aid in dying" instead of the term "physician assisted suicide" and accordingly amend HOD policies and directives, excluding Code of Medical Ethics opinions
>
> Rescind our HOD policies on physician assisted suicide, H-270.965 "Physician Assisted Suicide" and H-140.952 "Physician Assisted Suicide," while retaining our Code of Medical Ethics opinion on this issue
>
> Amend H-140.966 "Decisions Near the End of Life" by deletion as follows, while retaining our Code of Medical Ethics opinions on these issues:
>
> > Our AMA believes that:
> >
> > (1) The principle of patient autonomy requires that physicians must respect the decision to forgo life-sustaining treatment of a patient who possesses decision-making capacity. Life-sustaining treatment is any medical treatment that serves to prolong life without reversing the underlying medical condition. Life-sustaining treatment includes, but is not limited to, mechanical ventilation, renal dialysis, chemotherapy, antibiotics, and artificial nutrition and hydration.
> >
> > (2) There is no ethical distinction between withdrawing and withholding life-sustaining treatment.
> >
> > (3) Physicians have an obligation to relieve pain and suffering and to promote the dignity and autonomy of dying patients in their care. This includes providing effective palliative treatment even though it may foreseeably hasten death. More research must be pursued, examining the degree to which palliative care reduces the requests for euthanasia or assisted suicide.
> >
> > ~~(4) Physicians must not perform euthanasia or participate in assisted suicide. A more careful examination of the issue is necessary. Support, comfort, respect for patient~~

© 2025 American Medical Association. All rights reserved.

~~autonomy, good communication, and adequate pain control may decrease dramatically the public demand for euthanasia and assisted suicide. In certain carefully defined circumstances, it would be humane to recognize that death is certain and suffering is great. However, the societal risks of involving physicians in medical interventions to cause patients' deaths is too great to condone euthanasia or physician-assisted suicide at this time.~~

(5) Our AMA supports continued research into and education concerning pain management

Study changing our existing position on medical aid in dying, including reviewing government data, health services research, and clinical practices in domestic and international jurisdictions where it is legal

BACKGROUND

Physician assisted suicide occurs when "a physician facilitates a patient's death by providing the necessary means and/or information to enable the patient to perform a life-ending act" [1]. This act is sometimes referred to using other terminology such as medical aid in dying. Currently, there is no federal law governing physician assisted suicide; therefore, individual states are permitted to determine their own legal stance. At this time, 10 states and the District of Columbia permit this practice; however, most states have legislation banning this practice [2]. Furthermore, two states have removed their residency requirement, effectively opening the practice of physician assisted suicide more broadly to patients throughout the US.

Our AMA has a long-standing policy (H-270.965) opposing the legalization of physician assisted suicide. That said, our AMA is also opposed to the criminalization of physician medical judgement and the regulation of medical practice through criminal penalties (H-160.954, D-160.911, D-275.944, H-5.980, D-5.999). Additionally, our AMA has policy preserving a physician's right to exercise their autonomy (H-405.958, *Code of Medical Ethics* Opinion 1.1.7).

DISCUSSION

The referred resolution addresses several issues encompassed within the broad context of physician-assisted suicide: terminology, opposition to the legalization and practice of physician assisted suicide, and opposition to the criminalization of physician participation in assisted suicide. This report addresses these topics in the context of our AMA's current HOD policies and Code of Medical Ethics guidance. In addition, the Council on Ethical and Judicial Affairs has produced two informational reports to further discuss the ethical complexity of these topics as they relate to physician assisted suicide and the practice of medicine.

Terminology

The terminology used in the AMA Code of Medical Ethics and HOD policy to describe this practice offers a clear delineation of intent and action. The use of other terminology to describe this practice has the potential to confuse patients and unduly influence decision making [5]. Descriptors such as Medical Aid in Dying (MAID), physician aid-in-dying, and death with dignity could apply to palliative care practices and compassionate care near the end of life that do not include intending the death of patients. In CEJA Report 2-A-19, "Physician Assisted Suicide," the Council determined that PAS was the terminology which described the practice best. The report supported this supposition with the following analysis which remains valid:

The Council recognizes that choosing one term of art over others can carry multiple, and not always intended messages. However, in the absence of a perfect option, CEJA believes ethical deliberation and debate is best served by using plainly descriptive language. In the Council's view, despite its negative connotations, the term "physician assisted suicide" describes the practice with the greatest precision. Most importantly, it clearly distinguishes the practice from euthanasia. The terms "aid in dying" or "death with dignity" could be used to describe either euthanasia or palliative/hospice care at the end of life and this degree of ambiguity is unacceptable for providing ethical guidance.

Opposition to the legalization and practice of physician assisted suicide

AMA policy opposes the legalization and practice of physician assisted suicide stating that it is "fundamentally incompatible with the physician's role as a healer" [1]. In developing CEJA Report 2 (A-19) which informed our AMA's current ethics standards on physician assisted suicide, the Council on Ethical and Judicial Affairs analysis and deliberations were informed by available data and research. However, its decision was not an empirically dictated one, but rather, it was driven by the core values of medicine preserved within the Code of Medical Ethics.

Although legislative developments since 2019 have occurred, recent empirical data reviewing physician assisted suicide practices in US and international jurisdictions where PAS and/or euthanasia are legal are subject to varied interpretations. As a matter of ethical reasoning, the data does not settle the ethical issue. Additionally, the relevant core ethical values at stake have not changed since the adoption of CEJA Report 2 (A-19). As such, the AMA's position on physician assisted suicide should remain unchanged.

Of note, the AMA's position on physician assisted suicide is not a position of neutrality and establishes that the profession of medicine should not support the legalization or practice of physician assisted suicide or see it as part of a physician's role.

Opposition to the criminalization of physician participation in assisted suicide

While AMA policy opposes the legalization of or participation in physician assisted suicide, this stance must also be balanced with AMA policies opposing criminalization of physician medical judgement within the confines of the law and the use of criminal penalties to regulate medical practice. As a physician's choice to engage in the practice of physician assisted suicide is considered by many to be a medical judgement, failing to oppose criminalization of physicians who engage in physician assisted suicide may be contrary to the AMA's long-standing opposition to interference with physician medical judgement. To wit, the AMA's recognition that physicians may have differing aspects of conscience is upheld in the *Code of Medical Ethics,* which states that "morally admirable individuals hold diverging, yet equally deeply held and well-considered perspectives about physician assisted suicide." Additionally, the *Code* Appendix to the opinion on physician assisted suicide notes that the AMA *Code* preserves the opportunity for individual physicians "to act (or refrain from acting) in accordance with the dictates of conscience in their professional practice." [2]. In essence, if after due moral consideration, a physician decides to participate in the practice, they will be judged to have acted conscientiously, consistent with the AMA *Code* [3].

If after due moral consideration, a physician exercises their autonomy, conscience, and medical judgement to participate in physician assisted suicide, our AMA should uphold its long-standing opposition to the criminalization of physician medical judgement and the imposition of criminal penalties on medical practice. Opposing criminalization of physicians who engage in physician

assisted suicide, while simultaneously not supporting the legalization of this practice, will allow our AMA to uphold its existing core values including not supporting the legalization of the practice of physician assisted suicide (H-270.965, *Code of Medical Ethics* Opinion 5.7), opposing criminalization of physician medical judgement and health care decisions (H-160.954, D-160.911, D-275.944, H-5.980, D-5.999, D-160.999), and allowing physicians to uphold their conscience (H-405.958, *Code of Medical Ethics* Opinion 1.1.7).

It is important to distinguish between opposing the legalization of physician assisted suicide and opposing the criminalization of physicians who engage in the practice within the confines of the law in the jurisdiction in which they practice as an exercise of their medical judgement. Opposing legalization refers to our AMA organizational stance against the *practice* of physician assisted suicide, whereas criminalization refers to our AMA organizational stance regarding the *consequences* to physicians for engaging in the practice of physician assisted suicide. Additionally, criminalization is different from a civil penalty in that criminalization has a potential consequence of incarceration, whereas a civil penalty only carries a financial consequence.

Additionally, in keeping with AMA policy of protecting the patient-physician relationship, including protecting patients who engage in shared-medical decision making with their physician and patient exercise of autonomous medical decision making and information consent (H-165.837, *Code* 2.1.1, and 1.1.3), it follows that our AMA should oppose the criminalization of patients engaging or attempting to engage in physician assisted suicide at their request, with their informed consent.

CONCLUSION

While AMA policy opposes legalization of physician assisted suicide, it also upholds the principles that medical judgement should not be subject to criminal penalties and remains committed to protecting the integrity of the patient-physician relationship.

RECOMMENDATIONS

The Board of Trustees recommends adoption of the following in lieu of the Resolution 004-I-23, "Study of Physician Assisted Suicide and Medical Aid in Dying" and the remainder of this report be filed:

Our American Medical Association opposes:

(1) Civil or criminal legal action against physicians and health professionals who legally engage in physician assisted suicide at a patient's request and with their informed consent.

(2) Civil or criminal legal action against patients who engage or attempt to engage in physician assisted suicide.

Fiscal Note: Minimal – Less than $500

REPORT OF THE BOARD OF TRUSTEES

B of T Report 26-A-25

Subject:	Using Personal and Biological Data to Enhance Professional Wellbeing and Reduce Burnout
Presented by:	Michael Suk, MD, JD, MPH, MBA, Chair
Referred to:	Reference Committee on Ethics and Bylaws

At the 2024 Annual Meeting, the House of Delegates (HOD) adopted Resolution 001, Resolved 2, "Using Personal and Biological Data to Enhance Professional Wellbeing and Reduce Burnout," resulting in policy D-460.962, which directs our AMA to: "develop ethical guidelines on the collection, use, and protection of personal and biological data obtained to improve professional workforce wellbeing." This report is in fulfillment of this second directive from D-460.962.

BACKGROUND

Burnout represents a serious health crisis for physicians and other health care practitioners. Burnout compromises physician well-being and can negatively impact the quality of care that physicians provide to their patients [1]. The COVID-19 pandemic greatly exacerbated rates of burnout, with prevalence among physicians rising from 38.2 percent in 2020 to 62.8 percent in 2021 [2]. Drivers of burnout include increasing administrative burdens, lack of support from physicians' institutions and health care systems, changing political and legal landscapes, and other disruptions to the patient-physician relationship.

Since the height of the pandemic, the rate of burnout has trended downward, reaching below 50% in 2023 for the first time in four years [3]. Contributing to this decline are various health systems' initiatives to promote professional well-being, including hiring more staff, creating opportunities for coaching and leadership development, appointing wellness officers, and attempts to afford physicians greater flexibility and autonomy [4].

Though burnout is widespread throughout the medical profession, it is highly contextual and can manifest in different ways and to different extents depending on the individual and on the practice, institution, or health system in which the physician works. As such, health systems have increasingly turned to data to help guide and tailor their resources and efforts to support physician well-being, including using physician personal health information and biological data to inform interventions to reduce burnout [5]. However, how such physician information is collected and used raises ethical concerns.

The collection and use of physicians' personal health information and/or biological data raises ethical issues related to consent, privacy, confidentiality, and data security. Additionally, the collection and use of such data to help reduce burnout raises questions of accountability regarding who is ultimately responsible for implementing changes to reduce burnout, and risks shifting the focus of burnout reduction interventions from organizational strategies to individual physician behavioral changes, placing the burden of reducing burnout directly on physicians themselves.

© 2025 American Medical Association. All rights reserved.

DISCUSSION

There is general agreement within the medical profession that more needs to be done to reduce burnout and improve physician well-being. Because individual personal health information and biological data can provide valuable insights into physical and mental health, the collection and use of such data offer potential avenues to support the well-being of healthcare professionals, including the early identification of burnout and the development of evidence-based prevention strategies. The Internet of Things (IoT), which, in relation to health data, refers to a network of connected medical devices, such as wearable sensors that continuously capture various health metrics, including heart rate, blood pressure, sleep levels, and blood glucose levels, and transmit this information wirelessly in real time to a health care platform, has made it easier than ever to collect and monitor personal health information and has been promoted as a potential tool for combating physician burnout. Many physicians already use such wearable technologies as tools for self-monitoring and behavioral modification to promote well-being. However, while the collection and use of physicians' personal health information may help to identify and reduce burnout, doing so also poses serious concerns regarding efficacy, privacy, ethical data collection, and accountability.

Validity and Relevance of Collected Data

A primary concern raised with respect to relying on personal health information and/or biological data to reduce burnout is whether the observable data can accurately reflect the underlying subjective sense of well-being and mental health associated with burnout [6]. There are numerous factors associated with burnout, and the relationships between these factors are complex; furthermore, failure to accurately model this dynamic will inevitably result in a failure to adequately capture burnout. While substantive research has been done on physician burnout, there is no clear consensus on the definition or on how to assess it [7].

In their critique of the bio-psycho-social model of burnout (a framework that emphasizes the interconnectedness of biology, psychology, and social factors in human health and illness), Listopad et al identify a total of 40 factors related to burnout and conclude that the bio-psycho-social model is insufficient to identify all the factors and explain the pathogenesis of burnout; they propose extending the model to include spiritual and work culture dimensions that also impact burnout [8]. In addition to biological and psychological factors, which might be more readily detected via personal health information, Listopad et al show that socio-environmental factors, spirituality, and work culture also play an important role in the onset of burnout, which poses a problem for any data-based detection of burnout that fails to include these dimensions [8]. As Adler et al explain:

> Unlike illnesses solidly grounded in biological mechanisms, mental health and well-being is so fluid, psychosocial, and personal a construct that its indicators are necessarily up to individual interpretation—to monitor sleep and sociality in a potentially depressed person is not to monitor blood glucose in a person with diabetes. Removing a patient's ability to provide interpretation—their "right to self-presentation"—risks endorsing a fully data-centric perspective on well-being, one that might flatten necessary subjectivity [6].

Questions thus remain regarding what data best represents physician well-being and burnout, and how that data should be utilized.

Privacy and Confidentiality of Collected Data

Additional concerns regarding the collection and use of personal health information and/or biological data to reduce burnout center around issues related to privacy, confidentiality, data security, consent, and autonomy. There is general agreement among scholars that collecting and analyzing personal sensing data, the kind recorded by IoT technologies, poses real challenges to current norms around privacy, especially regarding the relationship between physicians and their supervisors [9]. Such challenges include concerns that personal data used to enhance professional well-being might blur the boundaries between work and life contexts, might recast physicians as patients, and that anonymity might be functionally impossible [6].

A central issue that emerges is how to balance respect for privacy with program utility. The challenge that arises is that anonymizing data is generally recognized as decreasing the utility of that data for improving individual-level well-being [6]. Research using protected health information (PHI) generally requires stricter privacy protections than de-identified data used for quality assessment (QI) or quality improvement (QI). However, even de-identified data risks re-identification, and it is highly likely that at small health care institutions anonymity of physician data would be impossible. Furthermore, even if anonymity were possible, reporting on average values derived from de-identified datasets defeats the purpose of identifying individuals struggling with burnout.

While informed consent has been considered the key tool to remediate concerns regarding data privacy and confidentiality, Adler et al note with respect to personal sensing data, consent is not the same thing as an ongoing data use agreement [6]. An ongoing data use agreement (DUA) is a legal contract that outlines how specific data can be used and shared between parties, essentially governing the access and usage of sensitive information once it has been collected, whereas informed consent is a process in which individuals are given detailed information about a medical intervention or data collection activity before agreeing to participate. While an informed consent agreement primarily focuses on an individual's understanding of a medical intervention and their right to participate in it, a DUA focuses on the restrictions and permitted uses of collected data once it is shared. Such data sharing by physicians raises related concerns including who owns the data, how it is to be protected, and assurance that it will only be used to improve physician well-being.

Ethical Data Collection

Sharing personal health information, which could be collected even during non-working hours, potentially blurs the boundaries between physicians' work and personal lives and could be considered a violation of their privacy. Passive data collection and sharing also violates physicians' control over disclosure and may violate their autonomy. Any data collection program aimed at improving physician well-being would thus require an opt-out option, though it should be noted that opting out could negatively impact the overall quality of the data captured and negate any individual-level burn-out interventions. Relatedly, physicians should recognize that they have a duty to promote occupational health, though meeting this obligation should not come at the cost of violating their own individual rights.

To limit or reduce the risk of violations to physicians' privacy and autonomy, a crucial aspect of any such burnout reduction program would be a requirement to obtain the informed consent of any participating physicians, and would likely require the implementation of a DUA as well. In determining whether such a program would allow physicians to voluntarily opt-in or require them to voluntarily opt-out, it is important to acknowledge that, while opt-in policies may reduce the

likelihood of participation and thus decrease the quality of any datasets obtained, opt-in policies do preserve the autonomy of physicians more than opt-out policies. Furthermore, it is imperative that anyone developing such programs recognize that the more data that is collected, the more personal the data is, and the more identifiable the information is all contribute to increasingly higher standards of physician protections that need to be in place.

Accountability

Current practices of physician performance profiling should be considered a warning sign about the likelihood that physician personal and/or biological data will be used only to improve physician well-being. The two main types of physician profiling in the US are clinical profiling and economic profiling, which examine a physician's treatments and outcomes of care or their financial performance (including cost and utilization of services), respectively. While, ideally, profiling should provide physicians with meaningful information on their clinical performance to help improve the quality of the services they provide, such profiling has largely become a tool for hospitals and other health care entities to control costs rather than as a method of measuring and improving quality of care [9]. Such developments raise questions about whether programs that use physician personal and/or biological data will actually use that data to serve physicians' best interests.

The focus on individual physician data also raises concerns regarding who may be seen as accountable for making improvements. The collection of individual physician data places an emphasis on individual behaviors rather than on institutional changes, which the consensus of researchers believe is necessary to significantly reduce burnout [10]. As Olson et al note, ameliorating burnout requires a systems approach and that organization-level interventions are far more effective at reducing burnout than individual-based interventions [10]. Rather than focusing only on programs aimed at promoting individual physician resiliency, Olson et al suggest that health care entities can reduce burnout by promoting workplace efficiency, supporting work-life integration, and granting greater physician control and autonomy over clinical decision-making and practice management in conjunction with promoting personal resilience [10].

Ultimately, collecting and using physician personal health information and/or biological data to improve physician well-being should only be implemented if the data is used solely to ameliorate stress-causing working conditions with clear accountability within the program regarding who is responsible for instituting those improvements. Any use of physician personal health information or biological data for other ends, such as improving operational efficiency, especially any ends that could be perceived as retaliatory or perpetuating unjust biases, should be avoided.

RELEVANT AMA POLICY AND RESOURCES

It deserves to be noted that all physicians are at times likely to also be patients and suffer their own illnesses and injuries that require medical attention. In their capacity as patients, physicians enjoy the same rights as any other patient as outlined in the AMA *Code of Medical Ethics* (see Opinion 1.1.3, "Patient Rights") [11]. Like any patient, they are entitled to receive quality care (Opinion 1.1.6), to informed consent (Opinion 2.1.1), to have their privacy respected (Opinion 3.1.1), and to have their de-identified data handled with care (Opinion 3.3.4) [12-15].

In their capacity as physicians, they also have obligations to practice continual self-awareness and self-observation to ensure that they are competent to practice medicine (Opinion 8.13), to strive to promote their own health and wellness (Opinion 9.3.1), and to intervene with respect and compassion in the event that they discover a colleague is not able to practice safely (Opinion 9.3.2)

[16-18]. Any programmatic collection and use of physician data, especially that which might be considered private health information, must adhere to the ethics guidance outlined in the AMA *Code of Medical Ethics*.

The collection and use of physician data raises several concerns, including issues related to privacy and consent, access and appropriate use, and the potential for coercion and discrimination. To protect physicians whose data is collected and used to improve physician well-being, it is therefore crucial that, in addition to the AMA *Code of Medical Ethics*, the AMA Privacy Principles be followed [19]. These principles, derived primarily from AMA HOD policy, were developed to provide individuals with data rights and protections from data holders other than HIPAA-covered entities. These guidelines provide broad guardrails to address individual rights, equity, data stewardship and related entity responsibilities, appropriate applicability, and enforcement. Any programmatic collection and use of physician data to improve well-being must also recognize that different specialties will likely require custom solutions, that different sized institutions will likely require tailored solutions, and that, generally, one-size-fits-all interventions are likely to be ineffective. Lastly, the collection of physician data is likely to be insufficient on its own to reduce burnout—physician engagement and collaboration will be crucial to successfully operationalize the collection and use of physician data to reduce burnout and improve physician well-being.

CONCLUSION

As technologies advance, the workplace is becoming increasingly quantified, with data analytics being used to identify opportunities for optimization and to improve productivity. The implementation of new tools for the collection and use of data is remaking the boundaries of appropriate information flows and will continue to have a growing impact on physicians and the practice of medicine. The collection and use of physicians' personal health information and/or biological data has the potential to help reduce burnout and improve physician well-being; however, the practice also creates several ethical dilemmas and should not be viewed as a panacea.

Further research is needed to better capture and define the lived experiences of burnout and well-being. Prior to implementation, policy protections should be developed to hold supervisors and administrators accountable and ensure that such programs are truly physician-centered and do not place the onus of preventing burnout on those suffering from it. Additionally, new policies and relational norms will need to be developed to protect physician data, prevent abuse of the power differential between data subjects and the data recipients, and ensure that such data is used solely for improving physician well-being and not in any way that could be perceived as retaliatory [6].

In light of these observations, the medical profession may consider collecting physician data to improve well-being but should do so with extreme caution. Furthermore, when collecting physician data, it is imperative that the AMA *Code of Medical Ethics* and AMA Privacy Principles be followed.

RECOMMENDATIONS

The Board of Trustees recommends that the following be adopted and the remainder of the report be filed.

1. With the aim of promoting physician well-being in the workplace, physician personal health information and/or biological data should be:

a. Collected only if evidence supports that the specific data being collected is minimized to only that which is relevant and necessary to the development of interventions which promote physician well-being and reduce professional burnout;

b. Collected only if physicians are informed whether the data is directly or indirectly identifiable;

c. Collected only if physicians have the ability to opt-in or opt-out without retribution, penalty, or direct or indirect coercion;

d. Collected only if physicians are able to provide informed consent prior to data acquisition and use;

e. Collected only if physicians retain the option to opt-out at any time;

f. Used only to ameliorate burnout-inducing working conditions. (New HOD Policy)

2. Any use of physician personal health information or biological data that is retaliatory or that perpetuates unjust biases should be avoided and prohibited. (New HOD Policy)

3. The second directive of Policy D-460.962 be rescinded having been accomplished by this report.

Fiscal Note: Less than $500

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 1-A-25

Subject: Bylaws Review Report

Presented by: Jerry Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

Per AMA Bylaw 6.1.1, the Council on Constitution and Bylaws is responsible for recommending changes in the Bylaws as it deems appropriate for action by the House of Delegates. The Council focuses its fact-finding review and proposed bylaw amendments on provisions that are internally inconsistent, incomplete or inaccurate.

In this report, the Council notes that the Bylaw language associated with the process of filling a Medical Student Trustee position is not only inconsistent with language regarding the initial election of the Medical Student Trustee but inconsistent with language about filling other Board vacancies. Also, the Council finds that other language is inaccurate in describing how the medical student members of Councils are appointed and incomplete as to how and when student vacancies may be filled.

The Council has proposed some bylaw amendments to provide consistency, clarity and accuracy.

BACKGROUND

Bylaw 3.5.6 and its subprovisions provide for the election of the Medical Student Trustee by the Medical Student Section and detail the position's term, ability for reelection and the filling of vacancies as follows:

> 3.5.6 Medical Student Trustee. The Medical Student Section shall elect the medical student trustee annually. The medical student trustee shall have all of the rights of a trustee to participate fully in meetings of the Board, including the right to make motions and to vote on policy issues, intra-Board elections or other elections, appointments or nominations conducted by the Board of Trustees.
>
> 3.5.6.1 Term. The medical student trustee shall be elected at the Business Meeting of the Medical Student Section prior to the Interim Meeting for a term of one year beginning at the close of the next Annual Meeting and concluding at the close of the second Annual Meeting following the meeting at which the trustee was elected.
>
> 3.5.6.2 Re-election. The medical student trustee shall be eligible for re-election as long as the trustee remains eligible for medical student membership in AMA.
>
> 3.5.6.3 Cessation of Enrollment. The term of the medical student trustee shall terminate and the position shall be declared vacant if the medical student

trustee should cease to be eligible for medical student membership in the AMA by virtue of the termination of the trustee's enrollment in an educational program. If the medical student trustee graduates from an educational program during their term, the trustee shall be permitted to continue to serve on the Board of Trustees for up to 200 days after graduation but not extending past the Annual Meeting following graduation.

Bylaw 3.6 sets forth the process for filling any vacancy on the Board, including that of the Medical Student Trustee:

3.6 Vacancies.

3.6.1 Appointment. The Board of Trustees may, by appointment, fill any vacancy in the office of Speaker, Vice Speaker or Trustee, except the public trustee, to serve until the next meeting of the House of Delegates. A vacancy in the office of medical student trustee shall be filled by appointment by the Board of Trustees from 2 or more nominations provided by the Medical Student Section Governing Council. The Board of Trustees may request additional nominations from the Medical Student Section Governing Council before making the appointment.

The Council notes that the filling of some but not all Board vacancies is permissive rather than mandatory, and supports consistent language throughout.

The Council also found that there is inconsistent language across the AMA Councils with respect to appointed members. AMA Policy G-610.090 speaks to the need to make "every effort to have two or more candidates for each vacancy." Policy also directs the Board, the Speakers, and the President (in appointing or nominating physicians for service on AMA Councils or in other leadership positions) to consider the need to enhance and promote diversity. The Council supports consistency between the Bylaws and policy.

Furthermore, the Council notes that there is explicit bylaw language regarding the role of the Medical Student Section (MSS) Governing Council vis-a-vis the appointed student members of the AMA Councils. However, the Council, including the Speakers, know it is ultimately the Board's responsibility to make all appointments and believes the Bylaw language should be accurate. Conversely, the Bylaws do not address the role of the Resident and Fellow Section in submitting the names of potential candidates for various appointed Councils as the Board considers not only those physicians nominated by the Resident and Fellow Section, but other residents/fellows who are self-nominated or nominated by a Federation entity.

Lastly, the Council also believes that there should be consistent language across the Councils to permit the Board to fill a vacancy in the medical student position, with the lone exception of the Council on Ethical and Judicial Affairs which does not permit any vacancy to be filled by appointment.

6.5 Council on Ethical and Judicial Affairs.

6.5.5 Membership.

6.5.5.1 Nine active members of the AMA, one of whom shall be a resident/fellow physician and one of whom shall be a medical student. Members elected to

the Council on Ethical and Judicial Affairs shall resign all other positions held by them in the AMA upon their election to the Council. No member, while serving on the Council on Ethical and Judicial Affairs, shall be a delegate or an alternate delegate to the House of Delegates, or an Officer of the AMA, or serve on any other council, committee, or as representative to or Governing Council member of an AMA Section, with the exception of service on the Committee on Conduct at AMA Meetings (CCAM) as specified in AMA Policy.

6.5.6 Nomination and Election. The members of the Council shall be elected by the House of Delegates on nomination by the President-Elect who assumes the office of President at the conclusion of the meeting. State associations, national medical specialty societies, Sections, and other organizations represented in the House of Delegates, and members of the Board of Trustees may submit the names and qualifications of candidates for consideration by the President-Elect.

***

6.5.9 Vacancies.

6.5.9.1 Members other than the Resident/Fellow Physician Member. Any vacancy among the members of the Council other than the resident/fellow physician member shall be filled at the next meeting of the House of Delegates. The new member shall be elected by the House of Delegates, on nomination by the President, for the remainder of the unexpired term.

6.5.9.2 Resident/Fellow Physician Member. If the resident/fellow physician member of the Council ceases to complete the term for which elected, the remainder of the term shall be deemed to have expired. The successor shall be elected by the House of Delegates at the next Annual Meeting, on nomination by the President, for a 2-year term.

6.6 Council on Long Range Planning and Development.

6.6.2 Membership.

6.6.2.1 Ten active members of the AMA. Five members shall be appointed by the Speaker of the House of Delegates as follows: Two members shall be appointed from the membership of the House of Delegates, 2 members shall be appointed from the membership of the House of Delegates or from the AMA membership at-large, and one member appointed shall be a resident/fellow physician. Four members shall be appointed by the Board of Trustees from the membership of the House of Delegates or from the AMA membership at-large. One member appointed shall be a medical student member appointed by the Governing Council of the Medical Student Section with the concurrence of the Board of Trustees.

***

6.6.5 Vacancies.

6.6.5.1 Members Other than the Resident/Fellow Physician and Medical Student Member. Any vacancy among the members of the Council other than the resident/fellow physician and the medical student member shall be filled by appointment by either the Speaker of the House of Delegates or by the Board of Trustees as provided in Bylaw 6.6.2. The new member shall be appointed for a 4-year term.

6.6.5.2 Resident/Fellow Physician Member. If the resident/fellow physician member of the Council ceases to complete the term for which appointed, the remainder of the term shall be deemed to have expired. The successor shall be appointed by the Speaker of the House of Delegates for a 2-year term.

6.7 Council on Legislation.

6.7.2 Membership.

6.7.2.1 Twelve active members of the AMA, one of whom shall be a resident/fellow physician, and one of whom shall be a medical student. These members of the Council shall be appointed by the Board of Trustees. The medical student member shall be appointed from nominations submitted by the Medical Student Section.

***

6.7.5 Vacancies. Any vacancy occurring on the Council shall be filled for the remainder of the unexpired term at the next meeting of the Board of Trustees. Completion of an unexpired term shall not count toward maximum tenure on the Council.

6.8 Election - Council on Constitution and Bylaws, Council on Medical Education, Council on Medical Service, and Council on Science and Public Health.

6.8.1 Nomination and Election. Members of these Councils, except the medical student member, shall be elected by the House of Delegates. The Chair of the Board of Trustees will present announced candidates, who shall be entered into nomination by the Speaker at the opening session of the meeting at which elections take place. Nominations may also be made from the floor by a member of the House of Delegates at the opening session of the meeting at which elections take place.

6.8.2 Medical Student Member. Medical student members of these Councils shall be appointed by the Governing Council of the Medical Student Section with the concurrence of the Board of Trustees.

6.9 Term and Tenure - Council on Constitution and Bylaws, Council on Medical Education, Council on Medical Service, and Council on Science and Public Health.

6.9.1 Term.

6.9.1.1 Members other than the Resident/Fellow Physician Member and Medical Student Member. Members of these Councils other than the

resident/fellow physician and medical student member shall be elected for terms of 4 years.

6.9.1.2 Resident/Fellow Physician Member. The resident/fellow physician member of these Councils shall be elected for a term of 2 years. Except as provided in Bylaw 6.11, if the resident/fellow physician member ceases to /be a resident/fellow physician at any time prior to the expiration of the term for which elected, the service of such resident/fellow physician member on the Council shall thereupon terminate, and the position shall be declared vacant.

6.9.1.3 Medical Student Member. The medical student member of these Councils shall be appointed for a term of one year. Except as provided in Bylaw 6.11, if the medical student member ceases to be enrolled in an educational program at any time prior to the expiration of the term for which elected, the service of such medical student member on the Council shall thereupon terminate, and the position shall be declared vacant.

***

6.9.3 Vacancies.

6.9.3.1 Members other than the Resident/Fellow Physician and Medical Student Member. Any vacancy among the members of these Councils other than the resident/fellow physician and medical student member shall be filled at the next Annual Meeting of the House of Delegates. The successor shall be elected by the House of Delegates for a 4-year term.

6.9.3.2 Resident/Fellow Physician Member. If the resident/fellow physician member of these Councils ceases to complete the term for which elected, the remainder of the term shall be deemed to have expired. The successor shall be elected by the House of Delegates for a 2-year term.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following amendments (highlighted in RED) to the Bylaws be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

3--Officers

***

3.6 Vacancies.

3.6.1 Appointment. The Board of Trustees may, by appointment, fill any vacancy in the office of Speaker, Vice Speaker or Trustee, except the public trustee, to serve until the next meeting of the House of Delegates. A vacancy in the office of medical student trustee ~~shall~~ may be filled by appointment by the Board of Trustees from a minimum of two ~~2 or more nominations~~ nominees submitted ~~provided~~ by the Medical Student

Section Governing Council. The Board of Trustees may request additional nominations from the Medical Student Section Governing Council before making the appointment.

6--Councils

6.6 Council on Long Range Planning and Development.

6.6.2 Membership.

6.6.2.1 Ten active members of the AMA. Five members shall be appointed by the Speaker of the House of Delegates as follows: Two members shall be appointed from the membership of the House of Delegates, ~~2~~ two members shall be appointed from the membership of the House of Delegates or from the AMA membership at-large, and one member appointed shall be a resident/fellow physician. Four members shall be appointed by the Board of Trustees from the membership of the House of Delegates or from the AMA membership at-large. One member ~~appointed~~ shall be a medical student member-appointed by the Board of Trustees from a minimum of two-nominees submitted by the Medical Student Section Governing Council ~~of the Medical Student Section with the concurrence of the Board of Trustees~~. The Board of Trustees may request additional nominations from the Medical Student Section Governing Council before making the appointment.

6.6.5 Vacancies.

6.6.5.1 Members Other than the Resident/Fellow Physician and Medical Student Member. Any vacancy among the members of the Council other than the resident/fellow physician member and the medical student member shall be filled by appointment by either the Speaker of the House of Delegates or by the Board of Trustees as provided in Bylaw 6.6.2. The new member shall be appointed for a ~~4~~four-year term.

6.6.5.2 Resident/Fellow Physician Member. If the resident/fellow physician member of the Council ceases to complete the term for which appointed, the remainder of the term shall be deemed to have expired. The successor shall be appointed by the Speaker of the House of Delegates for a ~~2~~two-year term.

6.6.5.3 Medical Student Member. If the medical student member of the Council ceases to complete the term for which appointed, the Board of Trustees may appoint a successor to fill the remainder of the unexpired term from a minimum of two nominees submitted by the Medical Student Section Governing Council. The Board of Trustees may request additional nominations from the Medical Student Section Governing Council before making the appointment.

6.7 Council on Legislation.

6.7.2 Membership.

6.7.2.1 Twelve active members of the AMA, one of whom shall be a resident/fellow physician, and one of whom shall be a medical student. These members of the Council shall be appointed by the Board of Trustees. The medical student member shall be appointed by the Board of Trustees from a minimum of two nominees ~~nominations~~ submitted by the Medical Student Section Governing Council. The Board of Trustees may request additional nominations from the Medical Student Section Governing Council before making the appointment.

6.7.3 Term.

6.7.3.1 Members of the Council on Legislation shall be appointed for terms of one year, beginning at the conclusion of the Annual Meeting. Except as provided in Bylaw 6.11, if the resident/fellow physician member ceases to be a resident/fellow physician at any time prior to the expiration of the term for which appointed, the service of such resident/fellow physician member on the Council shall thereupon terminate, and the position shall be declared vacant. Except as provided in Bylaw 6.11, if the medical student member ceases to be enrolled in an educational program the service of such medical student member on the Council shall thereupon terminate, and the position shall be declared vacant.

***

6.7.5 Vacancies. Any vacancy occurring on the Council ~~shall~~ may be filled for the remainder of the unexpired term at the next meeting of the Board of Trustees. Completion of an unexpired term shall not count toward maximum tenure on the Council.

6.8 Election - Council on Constitution and Bylaws, Council on Medical Education, Council on Medical Service, and Council on Science and Public Health.

6.8.1 Nomination and Election. Members of these Councils, except the medical student member, shall be elected by the House of Delegates. The Chair of the Board of Trustees will present announced candidates, who shall be entered into nomination by the Speaker at the opening session of the meeting at which elections take place. Nominations may also be made from the floor by a member of the House of Delegates at the opening session of the meeting at which elections take place.

6.8.2 Medical Student Member. Medical student members of these Councils shall be appointed by the Board of Trustees from a minimum of two nominees submitted by the Medical Student Section Governing Council ~~of the Medical Student Section with the concurrence of the Board of Trustees~~. The Board of Trustees may request additional nominations from the Medical Student Section Governing Council before making the appointments.

6.9 Term and Tenure - Council on Constitution and Bylaws, Council on Medical Education, Council on Medical Service, and Council on Science and Public Health.

6.9.1 Term.

6.9.1.3 Medical Student Member. The medical student member of these Councils shall be appointed for a term of one year. Except as provided in Bylaw 6.11, if the medical student member ceases to be enrolled in an educational program at any time prior to the expiration of the term for which elected, the service of such medical student member on the Council shall thereupon terminate, and the position shall be declared vacant.

6.9.2 Tenure. Members of these Councils may serve no more than ~~8~~eight years. The limitation on tenure shall take priority over a term length for which the member was elected. Medical student members who are appointed shall assume office at the close of the Annual Meeting with the exception of a medical student who is appointed to fill a vacancy.

6.9.3 Vacancies.

6.9.3.1 Members other than the Resident/Fellow Physician and Medical Student Member. Any vacancy among the members of these Councils other than the resident/fellow physician and medical student member shall be filled at the next Annual Meeting of the House of Delegates. The successor shall be elected by the House of Delegates for a ~~4~~four-year term.

6.9.3.2 Resident/Fellow Physician Member. If the resident/fellow physician member of these Councils cease~~s~~ to complete the term for which elected, the remainder of the term shall be deemed to have expired. The successor shall be elected by the House of Delegates for a ~~2~~two-year term.

6.9.3.3 Medical Student Member. If the medical student member of these Councils ceases to complete the term for which appointed, the Board may appoint a medical student member from a minimum of two nominees submitted by the Medical Student Section Governing Council to fill the remainder of the one-year term. The Board of Trustees may request additional nominations from the Medical Student Section Governing Council before making the appointment.

6.11 Term of Resident/Fellow Physician or Medical Student Member. A resident/fellow physician member of a Council who completes residency or fellowship within 90 days prior to an Annual Meeting shall be permitted to serve on the Council until the completion of the Annual Meeting. A medical student member of a Council who graduates from an educational program during their term shall be permitted to serve on the Council for up to 200 days after graduation but not extending past the completion of the Annual Meeting following graduation. Service on a Council as a resident/fellow physician and/or medical student member shall not be counted in determining maximum Council tenure.

(Modify Bylaws)

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 2-A-25

Subject: Concurrent Service on Councils and Section Governing Councils

Presented by: Jerry P. Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

Our AMA's parliamentary authority, the American Institute of Parliamentarians Standard Code of Parliamentary Procedure (AIPSC), states that no member can hold two incompatible offices, and recommends that if it is unclear whether certain offices are incompatible, an organization should clarify the compatibility or lack thereof in its bylaws. Per AIPSC (2nd ed.) 26.26, "Incompatibility not only consists of practical impossibility to perform the duties of both offices but also includes a conflict between the duties of the two offices." AIPSC (2nd ed.) further clarifies that unless the bylaws provide otherwise, a member who holds an office may be a candidate for another office without first giving up the current office, but if the member is elected to and accepts an incompatible office, the former office is forfeited. The Council, as part of its responsibilities embodied in Bylaw 6.1.1, examined the AMA Bylaws, Council rules and section Internal Operating Procedures for existing language regarding concurrent service.

AMA Bylaw 3.2.1.1 states, "Trustees shall resign all other positions held by them in the AMA upon their election and/or appointment," with a few exceptions: 1) The Speaker and Vice Speaker, under Bylaw 6.1.2.2, are ex officio members of the Council on Constitution and Bylaws without the right to vote, and 2) the House of Delegates' Selection Committee for the Public Member of the Board of Trustees (Bylaw 2.15.5) includes two appointed trustees; and 3) Bylaws 2.13.6 whereby the membership of Special Committees of the House of Delegates are in accordance with the motions authorizing their appointment and ***may*** include Board members. The Council recognizes that there also are several task forces or committees in which Board and/or Council members have a role, notably the AMA Foundation Board, Search Committee for the AMA Executive Vice President, Task Force on Digital Health and AI, and Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted. The Council also knows that each AMA Council, each AMA Section and the AMPAC Board has one or more trustees who are designated as Board liaisons.

AMA Bylaw 6.5.1.1 states, "No member, while serving on the Council on Ethical and Judicial Affairs, shall be a delegate or an alternate delegate to the House of Delegates, or an Officer of the AMA, or serve on any other council, committee, or as representative to or Governing Council member of an AMA Section, with the exception of service on the Committee on Conduct at AMA Meetings (CCAM) as specified in AMA Policy." Beyond that, the AMA Bylaws are silent on concurrent service on more than one Council or Section Governing Councils or concurrent service on an AMA Council and a Section Governing Council. While rare, there have been instances over the years where concurrent service has occurred.

The Council found that some but not all Sections have language in their Rules (known as Internal Operating Procedures) prohibiting concurrent service on a Section Governing Council and an AMA Council.

© 2025 American Medical Association. All rights reserved.

To bring our AMA Bylaws into compliance with AIPSC (2nd ed.), the Council believes it is appropriate that there be AMA Bylaw language specifically prohibiting concurrent service as a voting member on multiple Councils, multiple Section Governing Councils or on a Council and a Section Governing Council. Codifying such language is especially important since most Councils and Section Governing Councils meet in conjunction with the HOD meetings. Council/Section meetings often overlap, as do member responsibilities. Lastly, the Council believes such an explicit prohibition in our AMA Bylaws will eliminate potential conflicts of interest that can occur when holding two leadership positions simultaneously, provide consistency across Councils, and expand a finite number of leadership opportunities to more members.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following amendments (highlighted in RED) to the Bylaws be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

6 Councils

6.0.1 Responsibilities

***

6.0.1.4 Concurrent Service. A Council member may not serve concurrently as a voting member of more than one Council or on a Council and a Section Governing Council.

7 Sections

7.0.3 Governing Council. There shall be a Governing Council for each Section to direct the programs and the activities of the Section. The programs and activities shall be subject to the approval of the Board of Trustees or the House of Delegates.

7.0.3.1 Qualifications. Members of each Section Governing Council must be members of the AMA and of the Section. A Section Governing Council member may not serve concurrently as a voting member of more than one Section Governing Council or on an AMA Council while a voting member of a Section Governing Council.

(Modify Bylaws)

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 3-A-25

Subject: Clarifying Bylaw Language

Presented by: Jerry P. Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

The Council on Constitution and Bylaws has responsibility per AMA Bylaw 6.1.1 for recommending changes in the Bylaws as it deems appropriate for action by the House of Delegates. In this report, the Council focuses its fact-finding review and proposed bylaw amendments on various provisions relating to membership and representation that are no longer accurate or relevant.

BACKGROUND

Membership Categories (Bylaw Section 1). Our AMA Constitution Article III states, "The American Medical Association is composed of physician members who are represented in the House of Delegates through state associations and other constituent associations, national medical specialty societies and other entities, as specified in the Bylaws." The Bylaws further define constituent associations as "recognized medical associations of states, commonwealths, districts, territories, or possessions of the United States of America."

The Council is aware that current Bylaw language may be confusing as AMA members are defined by how they pay their dues. At one time, some but not all constituent medical societies sent a single dues invoice to physicians and medical students for dues associated with the constituent medical society, the county medical society and AMA, and the constituent society subsequently transmitted the AMA dues to the AMA along with a list of their AMA dues-paying and dues-exempt members. Those who joined via this mechanism were known as Active Constituent Members. Those physicians and medical students who paid their dues directly to the AMA were categorized as Active Direct Members.

Additional language identifies the other categories of membership (Affiliate Members, Honorary Members and International Members) and specifies the rights and privileges of those members. The Council noted that while these membership categories comprehensively define the rights and privileges of members, the current language for Active and Direct Members does not, and provides only for receipt of the *Journal of the American Medical Association* and such other publications as the Board of Trustees may authorize.

Lastly, the Constitution Article VIII states that "Funds may be raised by annual dues or by assessment on the active members of the Association on recommendation by the Board of Trustees and after approval by the House of Delegates." Bylaw 1.1.1.5 states that active members are liable for such dues as are determined and fixed by the House of Delegates, and Bylaw 1.1.1.5.4 states that "active members are delinquent if their dues and assessments are not received by the House of Delegates." The Council notes the latter is inaccurate as it is the Board of Trustees, not the House of Delegates, which establishes the dues delinquency date.

© 2025 American Medical Association. All rights reserved.

House of Delegates (Bylaw Section 2). This section identifies the types of entities represented in the HOD, and sets forth the apportionment of the constituent medical societies and the national medical specialty societies. The Bylaws for constituent medical societies and the national medical specialty societies grant an extra delegate to those societies that are 'unified' (require all its members to also be AMA members). The Council learned that there have been no unified societies since 2007.

Another bylaw awards an additional delegate to those constituent societies who are not unified but where 75 percent or more of their members are AMA members. The Council learned that it has been many years since any constituent society had such a large percentage of AMA members.

Young Physicians Section (Bylaws Section 7.5) Similarly, in Section 7, unified societies receive additional delegates to the Young Physicians Section.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following amendments (highlighted in RED) to the Bylaws be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

1—Membership

1.1.1 Categories.

Categories of membership in the American Medical Association (AMA) are: Active ~~Constituent, Active Direct,~~ Members, Affiliate Members, Honorary Members, and International Members.

1.1.1 Active Member~~ship~~.

~~**1.1.1.1 Active Constituent.** Constituent associations are recognized medical associations of states, commonwealths, districts, territories, or possessions of the United States of America. Active constituent members are members of constituent associations who are entitled to exercise the rights of membership in their constituent associations, including the right to vote and hold office, as determined by their respective constituent associations and who meet one of the following requirements:~~

~~a. Possess the United States degree of doctor of medicine (MD) or doctor of osteopathic medicine (DO), or a recognized international equivalent.~~

~~b. Are medical students in educational programs provided by a college of medicine or osteopathic medicine accredited by the Liaison Committee on Medical Education or the Commission on Osteopathic College Accreditation leading to the MD or DO degree. This includes those students who are on an approved sabbatical, provided that the student will be in good standing upon returning from the sabbatical.~~

~~1.1.1.1.1 **Admission.** Active constituent members are admitted to membership upon certification by the constituent association to the AMA, provided there is no disapproval by the Council on Ethical and Judicial Affairs.~~

1.1.1.1 Active Members.

~~1.1.1.1 **Active Direct.** Active direct members are those who apply for membership in the AMA directly. Applicants residing in states where the constituent association requires all of its members to be members of the AMA are not eligible for this category of membership unless the applicant is serving full time in the Federal Services that have been granted representation in the House of Delegates.~~

Active ~~direct~~ members must meet one of the following requirements:

a. Possess the United States degree of doctor of medicine (MD) or doctor of osteopathic medicine (DO), or a recognized international equivalent.

b. Are medical students in educational programs provided by a college of medicine or osteopathic medicine accredited by the Liaison Committee on Medical Education or the Commission on Osteopathic College Accreditation leading to the MD or DO degree. This includes those students who are on an approved sabbatical, provided that the student will be in good standing upon returning from the sabbatical.

1.1.1.1.1

~~1.1.1.2.1~~ **Admission.** Active ~~direct~~ members are admitted to membership upon application to the AMA or through a constituent association, provided that there is no disapproval by the Council on Ethical and Judicial Affairs or an objection to membership from a society represented in the House of Delegates.

1.1.1.1.1.1

~~1.1.1.2.1.1~~ **Notice.** The AMA shall notify each constituent association of the name and address of those applicants for ~~active direct~~ membership residing within its jurisdiction.

1.1.1.1.1.2

~~1.1.1.2.1.2 **Objections.** Objections to applicants for active direct membership must be received by the Executive Vice President of the AMA within 45 days of receipt by the constituent association of the notice of the application for such membership.~~ All objections to membership will immediately be referred to the Council on Ethical and Judicial Affairs for prompt disposition

pursuant to the rules of the Council on Ethical and Judicial Affairs.

1.1.1.2
~~1.1.1.3~~ **Council on Ethical and Judicial Affairs Review.** The Council on Ethical and Judicial Affairs may consider information pertaining to the character, ethics, professional status and professional activities of the applicant for membership. The Council shall provide by rule for an appropriate hearing procedure to be provided to the applicant.

1.1.1.3
~~1.1.1.4~~ **Rights and Privileges.** Active members may attend AMA meetings, hold office, and are entitled to receive the *Journal of the American Medical Association* and such other publications as the Board of Trustees may authorize.

1.1.1.4
~~1.1.1.5~~ **Dues and Assessments.** Active members are liable for such dues and assessments as are determined and fixed by the House of Delegates.

~~1.1.1.5.1 **Active Constituent Members.** Active constituent members shall pay their annual dues to the constituent associations for transmittal to the AMA, except as may be otherwise arranged by the Board of Trustees.~~

~~1.1.1.5.2 **Active Direct Members.** Active direct members shall pay their annual dues directly to the AMA.~~

1.1.1.4.1
~~1.1.1.5.3~~ **Exemptions.** On request, active members may be exempt from the payment of dues on January 1 following their sixty-fifth birthday, provided they are fully retired from the practice of medicine. Additionally, the Board of Trustees may exempt members from payment of dues to alleviate financial hardship or because of retirement from medical practice due to medical disability. The Board of Trustees shall establish appropriate standards and procedures for granting all dues exemptions. Members who were exempt from payment of dues based on age and retirement under Bylaw provisions applicable in prior years shall be entitled to maintain their dues-exempt status in all subsequent years. Dues exemptions for financial hardship or medical disability shall be reviewed annually.

1.1.1.4.2
~~1.1.1.5.4~~ **Delinquency.** Active members are delinquent if their dues and assessments are not received by the date determined by the Board of Trustees ~~House of Delegates~~, and shall forfeit their membership in the AMA if such delinquent dues and assessments are not received by the AMA within

30 days after a notification to the delinquent member has been made on or following the delinquency date.

1.1.2 Affiliate Members.

***

1.1.3 Honorary Members.

***

1.1.4 International Members.

Physicians who have graduated from medical schools located outside the United States and its territories and are ineligible to be ~~for~~ Active Members ~~Constituent or Active Direct membership~~ and who can fulfill and document the following requirements:

a. Graduation from a medical school listed in the World Health Organization Directory.

b. Possession of a valid license in good standing in the country of graduation or practice location documented by one of the following:

(i) verification that the applicant is an international member of a national medical specialty society seated in the House of Delegates that has a procedure to verify the applicant's educational credentials;

(ii) certification from the national medical association in the country of practice attesting to the applicant's valid authorization to practice medicine without limitation; or

(iii) certification from the registry or licensing authority of the country of practice attesting to the applicant's valid license in good standing.

1.1.4.1 Admission. International members are admitted to membership by providing a completed application accompanied by the required documentation. The Council on Ethical and Judicial Affairs shall provide by rule for an appropriate hearing procedure to be provided to the applicant should denial of membership be based on information pertaining to the applicant's character, ethical conduct, or professional status.

****

1.2 Maintenance of Membership.

A member may hold only one category of membership in the AMA at any one time. Membership may be retained as long as the member complies with the provisions of the Constitution and Bylaws and Principles of Medical Ethics of the AMA.

~~1.3 Transfer of Membership.~~

~~Members of the AMA, except members serving full time in the Federal Services, who move to a jurisdiction in which the constituent association requires that all members of the constituent association be members of the AMA, must apply for membership in the constituent association within one year after moving into the jurisdiction to continue membership in the AMA. Unless membership in the constituent association has been granted within 2 years after application, membership in the AMA shall cease.~~

1.3
~~1.4~~ **Discrimination.**

Membership in the AMA or in any constituent association, national medical specialty society or professional interest medical association represented in the House of Delegates, shall not be denied or abridged because of sex, color, creed, race, religion, disability, ethnic origin, national origin, sexual orientation, gender identity, age, or for any other reason unrelated to character, competence, ethics, professional status or professional activities.

1.4.
~~1.5~~ **Termination of Membership or Other Discipline.**

The Council on Ethical and Judicial Affairs, after due notice and hearing may censure, suspend, expel, or place on probation any member of the AMA for an infraction of the Constitution or these Bylaws, for a violation of the Principles of Medical Ethics, or for unethical or illegal conduct.

2—House of Delegates

2.0.1 **Composition and Representation.** The House of Delegates is composed of delegates selected by recognized constituent associations and specialty societies, and other delegates as provided in this bylaw.

***

2.1 **Constituent Associations.** Constituent associations are recognized medical associations of states, commonwealths, districts, territories, or possessions of the United States. Each recognized constituent association granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment~~, and such additional delegate seats as may be provided under Bylaw 2.1.1.2~~. Only one constituent association from each U.S. state, commonwealth, territory, or possession shall be granted representation in the House of Delegates.

2.1.1 **Apportionment.** The apportionment of delegates from each constituent association is one delegate for each 1,000, or fraction thereof, active constituent and active direct members of the AMA within the jurisdiction of each constituent association, as recorded by the AMA as of December 31 of each year.

2.1.1.1 **Effective Date.** Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year.

2.1.1.1.1 Retention of Delegate. If the membership information as recorded by the AMA as of December 31 warrants a decrease in the number of delegates representing a constituent association, the constituent association shall be permitted to retain the same number of delegates, without decrease, for one additional year, if it promptly files with the AMA a written plan of intensified AMA membership development activities among its members. At the end of the one year grace period, any applicable decrease will be implemented.

~~**2.1.1.2 Unified Membership.** A constituent association that adopts bylaw provisions requiring all members of the constituent association to be members of the AMA shall not suffer a reduction in the number of delegates allocated to it by apportionment during the first 2 years in which the unified membership bylaw provisions are implemented.~~

~~**2.1.2 Additional Delegates.** A constituent association meeting the following criteria shall be entitled to the specified number of additional delegates.~~

~~**2.1.2.1 Unified Membership.** A constituent association shall be entitled to 2 additional delegates if all of its members are also members of the AMA. If during any calendar year a constituent association adopts bylaw provisions requiring unified membership, and such unified membership is to be fully implemented within the following calendar year, the constituent association shall be entitled to the 2 additional delegates. The constituent association shall retain the 2 additional delegates only if the membership information as recorded by the AMA as of each subsequent December 31 confirms that all of the constituent association's members are members of the AMA.~~

~~**2.1.2.2 Minimum 75% Membership.** A constituent association shall be entitled to one additional delegate if 75% or more of its members, but not all of its members, are members of the AMA. The constituent association shall retain the additional delegate only if the membership information as recorded by the AMA as of each subsequent December 31 confirms that 75% or more of the constituent association's members are members of the AMA. If the membership information indicates that less than 75% of the constituent association's members are members of the AMA, the constituent association shall be permitted to retain the additional delegate for one additional year if it promptly files with the AMA a written plan of intensified AMA membership development activities among its members. If the membership information for the constituent association, as recorded by the AMA as of the following December 31 indicates that for the second successive year less than 75% of the constituent association's members are members of the AMA, the constituent association shall not be entitled to retain the additional delegate.~~

~~**2.1.2.3 Maximum Additional Delegates.** No constituent association shall be entitled to more than 2 additional delegates under Bylaw 2.1.2.~~

~~2.1.2.3.1 **Effective Date.** The additional delegates provided for under this bylaw shall be based upon membership information recorded by the AMA as of December 31 of each year. Allocation of these seats shall take effect on January 1 of the following year.~~

2.2 National Medical Specialty Societies. The number of delegates representing national medical specialty societies shall equal the number of delegates representing the constituent societies. Each national medical specialty society granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment~~, and such additional delegate seat as may be provided under Bylaw 2.2.2~~. The total number of delegates apportioned to national medical specialty societies under Bylaw 2.2.1 shall be adjusted to be equal to the total number of delegates apportioned to constituent societies under sections 2.1.1 ~~and 2.1.2~~ using methods specified in AMA policy.

2.2.1 Apportionment. The apportionment of delegates from each specialty society represented in the AMA House of Delegates is one delegate for each 1,000, or fraction thereof, physician specialty society members as of December 31 of each year who are eligible to serve on committees or the governing body, are active members of the AMA and are members in good standing and current in payment of applicable dues of both the specialty society and the AMA. ~~The delegates eligible for seating in the House of Delegates by apportionment are in addition to the additional delegate and alternate delegate authorized for unified specialty societies meeting the requirements of Bylaw 2.2.2.~~

2.2.1.1 Effective Date. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year.

~~2.2.2 **Additional Delegate.** A specialty society that has adopted and implemented bylaw provisions requiring unified membership is entitled to one additional delegate. If during any calendar year the specialty society adopts bylaw provisions requiring unified membership, and such unified membership is to be fully implemented within the following calendar year, the specialty society shall be entitled to the additional delegate. The specialty society shall retain the additional delegate only if the membership information recorded by the AMA as of each subsequent December 31 confirms that all of the specialty society's members are members of the AMA.~~

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 01-A-25

Subject: The AMA *Code of Medical Ethics* Evolving to Provide Health Care Systems Ethics Guidance

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

BACKGROUND

In 1847, the AMA established the world's first national code of ethics for physicians [1-2]. Stewarded by the Council on Ethical and Judicial Affairs (and its predecessors), the AMA *Code of Medical Ethics* is continually updated to help physicians meet their ethical obligations to patients in an ever changing scientific and practice environment [3]. As a living document, the *Code* has gone through major updates. In 1957, a major revision of the *Code* distinguished medical etiquette from medical ethics. In 1980, the *Code* was updated to address the tension between ethical standards and legal requirements [4]. More recently, the *Code* modernization project, completed in 2016, worked to ensure that Ethical Opinions in the *Code* were internally consistent, used modern terminology, and provided sound ethical guidance to physicians [5].

While the *Code* remains focused on the ethical duties of physicians, today's practitioners interact with many health care-related organizations, whether they be hospitals, insurers, or pharmaceutical companies. One major structural change in the practice environment is that most physicians are no longer self-employed (or their own bosses) and are now employees of hospitals, group practices, or other corporate entities. For example, the trend towards employed physicians accelerated within recent years, and the number of physicians in private practices dropped below 50 percent for the first time in 2020 [6]. Consequently, the decisions that physicians make in service to their patients are increasingly shaped, influenced, and sometimes dictated by organizational actors.

ETHICAL ISSUE

When organizational actors shape, influence, or dictate decisions that physicians make in service to their patients, it can create moral tension and ethical conflict between physicians and the health care organizations with whom they are interacting. For the *Code* to serve its purpose in this rapidly changing practice environment, its ethics opinions should speak to how health care organizations can support physicians in meeting their ethical obligations to patients, or what will be referred to as "health system ethics" for the remainder of this report.

Up to now, the *Code* has addressed health system ethics indirectly by speaking to the ethical responsibilities of physicians in organizational leadership positions and a case-by-case basis such

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

as in Opinion 11.2.7, Responsibilities to Promote Equitable Care. Therefore, the issue is whether the *Code* should again evolve so that its opinions also provide ethics guidance to health care organizations regarding how they can support physicians in upholding their ethical obligations to patients.

ETHICAL ANALYSIS

The purpose of the *Code* addressing health systems ethics is to provide guidance regarding actions health care organizations ought to take to create environments that will support and enable physicians to abide by and uphold their individual ethical obligations and duties. As this is a new way of approaching the development of ethics opinions within the *Code*, the Council on Ethical and Judicial Affairs sought feedback from various stakeholders as follows:

- CEJA Open Forum at I-23 entitled "Should the AMA *Code* Speak to Health Care Systems." Invited panelists included Drs. Michael Suk, Jessie Ehrenfeld, and Michael Tutty of our AMA leadership.
- A virtual meeting in October of 2024, with physician leadership from key AMA Sections and Councils. Attendees included Dr. Nancy Church from the Organized Medical Staff Section, Dr. Stephen Parodi from the Integrated Physician Practices Section, and Drs. Betty Chu and Steve Epstein from the Council on Medical Service.
- CEJA Open Forum at I-24 entitled "Evolving the AMA *Code* to Speak to Health Care Organizations." Invited panelists included Dr. Christopher DeRienzo, Chief Physician Executive, at the American Hospital Association and Julie Wagner, Head of Global Ethics, Compliance, and Enforcement Legal Policy, at the Pharmaceutical Research and Manufacturers of America.

During these above engagements, there was broad support expressed for the *Code* to address health system ethics. The ethics logic for moving toward providing health system ethics guidance is premised on the understanding that when health care organizations are acting ethically, physicians are better able to provide high quality patient care. Additionally, when any party to patient care fails to act ethically, patients' trust in the medical profession and of health care organizations can be undermined, contributing to greater moral distress and burnout among physicians, as well as damaged organizational reputation and market position for health care organizations.

RECOMMENDATION

In the light of the above, the Council on Ethical and Judicial Affairs recommends that the following be adopted and the remainder of the report be filed:

That our AMA supports the continued evolution of the *Code of Medical Ethics* in addressing how health care organizations and physicians can work together in meeting their mutual obligations to serve patients and the public.

Fiscal Note: Less than $500

REPORT 02 OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS (A-25)
Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization (Res 016-A-23)

EXECUTIVE SUMMARY

In adopting Policy H-405.946, "Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization," the House of Delegates requested that the Council on Ethical and Judicial Affairs (CEJA) "review the advisory restricting collective action in section 1.2.10 of its Code of Medical Ethics to allow for more flexibility on the part of physicians who have exhausted other non-disruptive methods for reform."

Although not all collective actions by physicians may impact clinical practice, the practical issue for consideration is whether disruptive collection actions by physicians, such as but not limited to strikes, may be permissible. The ethical dilemma is whether physicians can prioritize patient welfare over their own self-interest while engaging in tactics that have the potential to harm patients in the short term, even if the ultimate goal of the action is proposed to be long-term patient benefit. To respond to these issues, CEJA recommends amending Opinion 1.2.10, "Political Action by Physicians," to more clearly articulate that disruptive collective actions that create the potential for harm to patients, even minimally, and even if undertaken for the purpose of improving the care of other patients in the future, are to be avoided; however, this does not mean that all forms of disruptive collective action must be avoided. Disruptive actions should, though, only be undertaken as a last resort when good faith negotiations have broken down and the aim of the action is to improve patient care.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 02-A-25

Subject: Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Policy H-405.946, "Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization," was adopted at the 2023 Annual Meeting and asks that the Council on Ethical and Judicial Affairs (CEJA) "review the advisory restricting collective action in section 1.2.10 of its *Code of Medical Ethics* to allow for more flexibility on the part of physicians who have exhausted other non-disruptive methods for reform."

BACKGROUND

The consolidation of hospitals and physician practices in recent years has led to a shift in the practice of medicine away from the independent practice model to one in which physicians increasingly find themselves working as employees. In 2012, only 5.6 percent of physicians were directly employed by hospitals, with 23.4 percent of physician-owned practices having some hospital ownership; however, by 2022, a total of 74 percent of practicing physicians were employed, including 52.1 percent of physicians employed by hospitals or health systems and 21.8 percent employed by other corporate entities [1]. Paralleling this increase in corporate intrusion into medicine has been the rise of unionization within the profession. While the number of physicians who are members of a union is relatively small, and mostly among house officers, their ranks saw an approximately 26 percent increase in just five years from 2014–2019 [2]. As of 2021, an estimated 5.9 percent of practicing physicians were union members, with union contracts covering 8.1 percent of practicing physicians [1]. Currently, two of the main physician unions are the Federation of Physicians and Dentists and the Union of American Physicians and Dentists.

As the financing, organization, and leadership of the health care system change, the practice environment increasingly makes it challenging for physicians to provide the kind of care patients want and deserve. Physicians are now increasingly held to strict performance metrics that many feel are more about meeting corporate financial goals than they are about providing quality patient care. As a recent New York Times article puts it, "longer-term consolidation of health care companies has left workers feeling powerless in big bureaucracies. They say the trend has left them with little room to exercise their professional judgment" [3]. There is a growing sense among physicians that current working conditions are increasingly compromising the patient–physician relationship, physicians' health, and medical professionalism, driving burnout, moral injury, and retirement from medicine.

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

Unions are seen by some as a mechanism for physicians to exert influence on corporate health systems where physicians have less autonomy than in private practices [4]. Unions' power for collective bargaining comes from their ability to organize members to take collective action. Unionization, however, is not the only means by which physicians can organize and take collective action. Hospitals' organized medical staff has been a means by which physicians have exercised authority over decision making and culture, but the authority and scope of responsibility of the organized medical staff has been limited [5]. While employed physicians in large systems have not explored re-invigorating the organized medial staff, this remains an alternative means by which physicians can reclaim lost authority and exercise collective action.

Physicians may undertake many forms of collective action, both in the public arena and within health care institutions. Public actions include, but are not limited to, public advocacy, media campaigns, lobbying, negotiation, and litigation. Collective actions in the clinical setting increasingly are being considered as additional forms of collective action, particularly to effect change in specific clinical environments. Some of these are not disruptive, such as negotiation with administrators. Disruptive actions are also being considered, such as picketing, refusal to comply with corporate directives deemed unethical, withholding billing, work slowdowns, or striking. A primary concern surrounding the use of these disruptive collective actions by physicians in the clinical setting is that some of these actions may impact patient care and thus be in direct conflict with physicians' professional and ethical duties to not abandon patients and to prioritize patient care above self-interest [6].

Relevant Laws

In 1935, Congress passed the National Labor Relations Act (NLRA), amended in 1947 through the Taft-Hartley Act, which guarantees private sector employees the right to unionize, engage in collective bargaining, and take collective actions such as strikes [1]. The NLRA covers most private sector employees but does not cover independent contractors, supervisors, or managers. Part-time physicians working as independent contractors, physicians in private practice, and physicians considered to serve a supervisory role, such as medical directors or tenured medical faculty, are currently excluded [2].

When Congress passed the 1974 amendments to the NLRA, which extended coverage to nonprofit hospitals, it added Section 8(g), requiring health care employee unions to give at least a ten-day notice before engaging in any strike or picketing to ensure that hospitals have sufficient time to make appropriate arrangements for the continuity of patient care in the event of a work stoppage [2].

Laws prohibiting the corporate practice of medicine are an under-appreciated mechanism for physicians to use in reclaiming clinical authority. Most states have had laws dating to the 1880s that prohibit the corporate practice of medicine, but little attention has been paid to the potential use of such laws to prevent health care institutions from infringing upon the clinical decision-making authority that properly belongs to physicians [7].

Relevant AMA Policy Provisions

In 2019, the AMA modified two relevant policies: H-385.973 "Collective Negotiations" and H-385.976 "Physician Collective Bargaining" [8,9]. Both support the right of physicians to engage in collective bargaining and express the AMA's commitment to work for the expansion of which physicians are eligible for that right under federal law. This includes supporting efforts to narrow the definition of supervisors such that more physicians are protected under the NLRA.

Though not policy, the AMA's Advocacy Resource Center has also issued a recent Issue Brief: "Collective bargaining for physicians and physicians in training" that outlines AMA policy on physician unions and collective bargaining, including the interpretation that the AMA's position is that "physicians should refrain from the use of the strike as a bargaining tactic, although in rare circumstances, individual or grassroots actions, such as brief limitations of personal availability, may be appropriate as a means of calling attention to needed changes in patient care" [2].

Relevant Code *Provisions*

The AMA *Code of Medical Ethics* Opinion 1.1.1, "Patient-Physician Relationships," states that the core tenets of the clinical encounter for the physician are "to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare." This foundational opinion emphasizes the primary ethical duties of physicians to prioritize patient care and regard their responsibility to the patient as paramount. The Principles enumerated in the Code also indicate that such duties extend beyond the bedside and that physicians have a responsibility to seek changes to laws that are contrary to the best interests of the patient.

Opinion 1.2.10, "Political Action by Physicians," currently states that not only *can* physicians seek to change policies or laws that they find contrary to the best interest of patients but they in fact *have* an ethical duty to do so, though they also "have a responsibility to do so in ways that are not disruptive to patient care" [10]. While the opinion states that "[s]trikes and other collective actions […] should not be used as a bargaining tactic", it also adds that "[i]n rare circumstances, briefly limiting personal availability may be appropriate as a means of calling attention to the need for changes in patient care" [10]. However, this permissibility must be balanced by the opinion's first directive that physicians participating in advocacy activities should "[e]nsure that the health of patients is not jeopardized and that patient care is not compromised" [10].

This is in line with Opinion 1.1.6, "Quality," which states that "[a]s professionals dedicated to promoting the well-being of patients, physicians individually and collectively share the obligation to ensure that the care patients receive is safe, effective, patient centered, timely, efficient, and equitable" [11]. Taken together, by stating that "physicians have an ethical responsibility to seek change" at times (Opinion 1.2.10) and that they also have an "obligation to ensure" quality care (Opinion 1.1.6), these opinions highlight the fact that certain conditions may arise that actually demand action be taken by physicians to improve patient care.

Opinion 9.3.1, "Physician Health & Wellness," similarly outlines that physicians have a responsibility to take action when their own health or wellness is compromised [12]. The opinion stipulates that physicians have a responsibility both individually and collectively to ensure and promote health and wellness among physicians, and that when their health or wellness is compromised, individual physicians should fulfill this responsibility by "taking measures to mitigate the problem" [12]. Physician health and wellness is necessary for effective healing and the provision of quality care, and collective action may be an appropriate means of securing institutional conditions that are conducive to patient health and well-being.

Additional Relevant Policy

The World Medical Association recommends that physicians adopt the following guidelines regarding collective action:

1. Physicians who take part in collective action are not exempt from their ethical or professional obligations to patients.
2. Even when the action taken is not organized by or associated with the Constituent Member, the Constituent Member should ensure that the individual physician is aware of and abides by their ethical obligations.
3. Whenever possible, physicians should press for reforms through non-violent public demonstrations, lobbying and publicity or informational campaigns, and/or through negotiation or mediation.
4. If involved in collective action, Constituent Members should act to minimize the harm to the public and ensure that essential and emergency health services, and the continuity of care, are provided throughout a strike. Further, Constituent Members should advocate for measures to review exceptional cases. If involved in collective action, Constituent Members should provide continuous and up-to-date information to their patients and the general public with regard to the demands of the conflict and the actions being undertaken. The general public must be kept informed in a timely manner about any strike actions and the restrictions they may have on health care [13].

ETHICAL ISSUE

What are the ethical considerations regarding participation in collective labor action by physicians? Since certain collective actions can be disruptive, they present a potential risk to patient care and thus create a dilemma for physicians, particularly when collective actions may create immediate risks to patients, even if intended as a means to improve patient care in the long term. What collective actions by physicians are ethically permissible must be examined to ensure that the primacy and quality of patient care are protected. The core ethical issue is whether physicians who embrace tactics used by organized labor will also still be able to embrace their role as professionals.

RELEVANT PRACTICAL MATTERS FOR CLINICAL PRACTICE

While not all collective actions by physicians may impact clinical practice, disruptive actions such as strikes result in practical challenges to clinical care. This report defines a disruptive collective action by physicians as any collective action that disrupts the day-to-day workflow of physicians within the health care systems in which they practice. Some of these actions may have the potential to decrease quality of care and cause patient harm.

REVIEW OF RELEVANT LITERATURE

The normative ethics literature on the use of collective actions by physicians is generally cautious about collective actions that present a risk to patients, such as striking. A common stance is that, provided adequate precautions are taken to minimize the risk to patients, the primary goal of the collective action is to improve patient care, and the disruptive action is considered only as a last resort after all other means have been exhausted, physician strikes may be ethically justifiable [6,13,18,19,20]. However, strikes and other disruptive collective actions become ethically problematic when they are done for any reason other than for improving patient care, such as for increasing physicians' income [6,18].

One line of argument in favor of permitting disruptive collective actions that might harm patients, such as strikes, is to suggest that physicians are, and have always been, workers like any other set of workers, and that claims of professionalism that would place physicians in a special position of privilege in recognition of a higher set of ethical standards have always been a mere pretense. On

this view, there is nothing intrinsically "special" about medicine as opposed to any other form of work. There are some limits on what forms of collective action may be undertaken that are due to the critical nature of the service physicians provide, but there is no reason to maintain the fiction that they cannot engage in strikes or job actions because they are professionals called to put patient interest ahead of self-interest. The ethical question thus becomes how to draw limits on the scope of permissible collective action that recognizes physicians as laborers with all the rights of laborers, while drawing limits that protect the public from harm.

A second line of argument is a variation on this first line of argument—asserting that while medicine is ideally construed as a profession with intrinsically special rights and obligations, one must now, however reluctantly, accept the de-professionalization of physicians as a socioeconomic and historical fact. On this view, physicians have been forced out of their professional status by changes in the financing and organization of health care and the only available means of asserting power now is through unionization and the means of negotiation that have been used for the last two centuries by other workers in resolving disputes with their employers. Again, the operative ethical question becomes one of setting limits on these actions in accord with the vital nature of the service physicians provide.

A third line of argument attempts to reconcile a conception of physicians as professionals, obligated to place patient interest above self-interest, with an understanding that, under certain circumstances (such as those experienced by house officers and, increasingly, physicians employed in large health care systems), there is a *de facto* imbalance in power between the administrators and the employed physicians. They argue on consequentialist grounds that if impediments to good patient care are sufficiently serious, and the goal of a disruptive collective action (such as a strike) is to improve patient care in the long run, then if potential harm to patients in the short-run is minimized, the action is undertaken only as a last resort, and the goal of improving patient care through the action is foreseeably achievable, such an action could be justified [6,19]. These commentators reject the idea that a disruptive collective action with the potential to harm patients could be ethically and justifiably undertaken solely to advance the welfare of physicians. However, they generally recognize that the motives for such actions will often be mixed, and admit that the argument that physician welfare could be sought as the primary (or even secondary) goal of a strike but justified as a necessary means for achieving patient welfare in the long run might either be self-deceived, or, at least, difficult for the public to believe [6,19,21].

Others have held that strikes by physicians are almost never justifiable [22-24]. Strikes by physicians raise serious questions at the heart of what it means to be a physician. As Pellegrino has written:

> Whatever justification they may have, strikes or "slow downs" by segments of the profession have seriously damaged the image of medicine as a profession dedicated to service above its own interests. One of the distinguishing features of the medical profession has thus been compromised by physicians themselves. Those who choose to pursue self-interest, as union members may, cannot at the same time demand a superior moral position in society [22].

Contrary to the arguments favoring physicians strikes, opponents have appealed to the principle that the duty to promote the good of the patient is always paramount, and that strikes will always harm patients, at least to a modest degree. In fact, they argue, this is the point of the strike—to disrupt care, inconvenience, or possibly harm patients, even if minimally, in order to pressure administrators into acceding to the demands of the striking physicians. Even granting that the

ultimate aim of the strike is to improve patient care in the long run, patients will be harmed in the short run, and this conflicts with the profession's ancient duty to protect patients from harm.

Moreover, opponents take issue with the consequentialist argument that some patients could justifiably be exposed to potential harms now for the sure benefit of others in the future. They argue that a primary principle of ethics is that persons should always be treated as ends in themselves and never as means only. Physician strikes, by their nature, instrumentalize some patients, using their potential harm as means of achieving physicians' ends, even if those ends are justifiable and good.

Additionally, the effect of strikes on public trust in the profession must be considered. Trust is the glue that holds the patient-physician relationship together. The sense that one's own health as a patient could in any way be jeopardized or used as a bargaining tool might lead to public distrust in the profession.

While there is not a substantive body of empirical research on the effects of physician strikes on patient outcomes, there are some data. Although the majority of available empirical evidence shows that strikes have minimal impact on patient care [25-28], much of the data are of relatively poor quality, are at risk of bias, and suffer from a lack of generalizability [26,27]. Furthermore, most studies examine patient mortality as the primary outcome of interest, which has limitations as an indicator of deleterious change in patient health outcomes [25]. Importantly, a 2019 study found a slight increase in 30-day readmission rates for Black patients on strike days in the UK, suggesting that the ways in which strikes impact staffing are unlikely to affect all patient groups equally, with minority groups more likely to experience worse care when hospital systems are under strain [28]. This observation has critical importance in determining care for vulnerable populations when considering collective actions. Additionally, there is a lack of crucial research on how collective actions by physicians impact patient perceptions of and trust in both the medical profession and health care institutions. Reports of strongly negative public perceptions during a recent physicians' strike in Korea, while not systematic, suggest a note of caution [29].

ETHICAL ANALYSIS

In its review of Opinion 1.2.10, "Political Action by Physicians," CEJA has examined the ethics of collective actions by physicians. While the practical issue for consideration is whether disruptive collection actions by physicians, such as but not limited to strikes, may be permissible, the ethical dilemma is whether physicians can, in fact, fully understand themselves as professionals called to prioritize patient welfare over their own self-interest while engaging in tactics that have the potential to harm patients in the short term, even if the ultimate goal of the action is proposed to be long-term patient benefit.

Historically, physicians retained strong independence in clinical practice, and self-regulation permitted this professionalism to flourish. However, the growth of the health care sector has seen an increase in the complexity of health care systems, the transition to a majority physician employment structure, and as a result, a loss of physician independence and control in clinical practice. This bureaucratization has led physicians to seek other non-physicians to run the administrative aspects of their practices, and decreasing margins has led physicians to seek capital infusions and buyouts from private equity firms and venture capitalists, further driving the financialization of medicine and the employment of physicians.

The result is a general loss of control over practice conditions that have driven dissatisfaction, burnout, and early retirement from the profession. However, the issue is not necessarily

employment itself, but the associated loss of independence of clinical practice and control over the clinical environment, which many today see as the de-professionalization of medicine.

For those seeking to maintain and restore physician authority and independence, the primary avenue has been to pursue legal and political actions, such as lobbying (either independently or through specialty associations). However, with the change towards physician employment, physicians are now considering the use of tools that laborers have historically relied on for negotiating, such as legally permissible collective actions, in their attempts to improve patient care. This acceptance of the tools of organized labor, however, is in tension with medicine's self-understanding and public representation of itself as a profession with distinct privileges granted by society in recognition of its commitment to a distinctive set of ethical duties. Certainly, some forms of collective action are not likely to violate the norms of medical professionalism [30]. Disruptive collective actions, however, which have the potential to disrupt the day-to-day workflow of physicians, decrease quality of care, and cause harm to patients, seem prima facie to violate the medical profession's fundamental duty to do no harm and care for patients. Any disruptive collective action that causes harm to patients is inherently inconsistent with the responsibilities and duties of physicians.

Disruptive collective actions that create the potential for harm to patients, even minimally, and even if undertaken for the purpose of improving the care of other patients in the future, are therefore to be avoided. This does not mean, however, that all forms of disruptive collective action must be avoided. Certain forms of disruptive action, such as collective refusal to comply with administrative directives that are understood as antithetical to good patient care or otherwise incompatible with the norms of professional ethics, may be ethically justified. Other forms of disruptive action that are aimed at disrupting administrative processes such as billing but do not disrupt service to patients, might also be justified. Disruptive actions should only be undertaken, however, as a last resort when good faith negotiations have broken down and the aim of the action is to improve patient care.

CONCLUSION

Physicians must uphold their central ethical and professional responsibilities to patients when considering collective actions. When considering disruptive collective actions, physicians should take into account that the care of current patients must be continued and not compromised; urgent, emergent and otherwise needed medical care must still be provided; and all other non-disruptive actions that do not negatively impact patients must first be exhausted. Additionally, the primary goal of the action must be to improve patient care and not solely physician self-interest. To protect the integrity of the profession, patients and the public should also be informed well in advance and be continuously updated with respect to the demands being made and the actions being undertaken, with the terms for resolving disruptive actions made public and open to scrutiny and discussion. Whether all these conditions can ever be met in a physician strike or work slowdown remains an open question.

Physicians thinking about participating in disruptive collective actions therefore must first consider their professional responsibilities and obligations.

RECOMMENDATIONS

The Council on Ethical and Judicial Affairs recommends that the following recommendations be adopted and the remainder of the report be filed:

1. That Opinion 1.2.10 be amended by addition and deletion with a change in title as follows:

Advocacy and Collective Actions by Physicians ~~Political Action by Physicians~~

Like all Americans, physicians enjoy the right to advocate for change in law and policy, in the public arena, and within their institutions. Indeed, physicians have an ethical responsibility to seek change when they believe the requirements of law, ~~or~~ policy, or practice are contrary to the best interests of patients. However, advocacy actions should not put the wellbeing of patients in jeopardy.

Collective action is one means by which physicians can advocate for patients, the health of communities, the profession, and their own health. Physicians have a responsibility to avoid disruption to patient care when engaging in any collective action. When considering collective actions that have the potential to be disruptive, whether aimed at changing the policies of government, the private sector, or their own institutions, there are additional considerations that should be addressed. These include avoiding harm to patients, minimizing the impact of actions on patient access to care, maintaining trust in the patient-physician relationship, fulfilling the responsibility to improve patient care, avoiding mental and physical harms to physicians, promoting physician wellbeing, upholding the values and integrity of the profession, and considering alternative measures that could reasonably be expected to achieve similar results with less potential effect on patient and physician wellbeing.

When considering participation ~~Physicians who participate~~ in advocacy activities, including collective actions:

(a) ~~Ensure that the health of patients is not jeopardized, and that patient care is not compromised.~~ Physicians should recognize that, in pursuing their primary commitment to patients, physicians can, and at times may have an obligation to, engage in collective political action to advocate for changes in law and institutional policy aimed at promoting patient care and wellbeing.

(b) ~~Avoid using disruptive means to press for reform. Strikes and other collective actions may reduce access to care, eliminate or delay needed care, and interfere with continuity of care and should not be used as a bargaining tactic. In rare circumstances, briefly limiting personal availability may be appropriate as a means of calling attention to the need for changes in patient care. Physicians should be aware that some actions may put them or their organizations at risk of violating antitrust laws or laws pertaining to medical licensure or malpractice.~~ Physicians may also engage in collective action to advocate for changes within their institutions, including changes in patient care practices, physician work conditions, health and wellbeing, and/or institutional culture that negatively affect patient care.

(c) Physicians should refrain from collective action that could jeopardize the health of patients or compromise patient care.

(d) Physicians may consider engaging in disruptive forms of collective action that do not compromise patient care only as a last resort, with the primary objective to improve patient care and outcomes by calling attention to and/or making needed changes in practices, protocols, incentives, expectations, structures, and/or institutional culture.

(e) Disruptive actions, including strikes, that could directly compromise patient care should be avoided and should not be used solely for physician self-interest.

(f) Physicians should avoid forming workplace or other alliances, such as unions, with ~~workers~~ colleagues and others who do not share physicians' primary and overriding commitment to patients.

(g) Physicians should refrain from using ~~undue influence or pressure colleagues~~ punitive or coercive means to force others to participate in advocacy activities or collective actions, or to penalize others ~~and should not punish colleagues, overtly or covertly,~~ for deciding not to participate in such activities.

2. That Policy H-405.946(2) be rescinded as having been accomplished by this report. (Rescind AMA Policy)

Fiscal Note: Less than $500

REPORT 05 OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS (A-25)
"Protecting Physicians Who Engage in Contracts to Deliver Health Care Services"
(D-140.951)

EXECUTIVE SUMMARY

Policy D-140.951, "Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices," asks that the Council on Ethical and Judicial Affairs (CEJA) to "study and clarify the ethical challenges and considerations regarding physician professionalism raised by the advent and expansion of private equity ownership".

Increasing investments by private equity firms in health care raise ethical concerns regarding dual loyalties of physicians and competing interests between profits and patients. The ethical concerns raised by private equity firms' incursion into health care warrant extreme caution. To respond to these issues, CEJA recommends amending Opinion 11.2.3, "Contracts to Deliver Health Care Services" to more clearly encompass partnerships with private equity firms and the ethical dilemmas and obligations that they raise for both physicians seeking capital to support their private practice as well as physicians entering into employment contracts with private equity-owned health care entities.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 05-A-25

Subject: Protecting Physicians Who Engage in Contracts to Deliver Health Care Services

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Policy D-140.951, "Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices," asks our American Medical Association (AMA) to "study and clarify the ethical challenges and considerations regarding physician professionalism raised by the advent and expansion of private equity ownership", the Council on Ethical and Judicial Affairs (CEJA) presented Report 02-A-23, Report 03-A-24, and Report 02-I-24, which offered recommendations on amending Opinion 11.2.3, "Contracts to Deliver Health Care Services." The last report was referred back to CEJA at the 2024 Interim Meeting, with testimony expressing a desire that a stronger stance be taken against private equity's (PE) involvement in health care, noting that the report placed too high of a bar on physicians contracting with private equity and needs stronger language to guide physicians working for private equity investors. CEJA acknowledges that private equity investment in health care raises pressing, complex issues, which will ultimately require multiple avenues to address, such as the related Council on Medical Service report (CMS 03-A-25) on private equity and the corporate practice of medicine as well as work currently being done by our AMA's Advocacy unit to promote physician-led care and reduce burnout. The present report has been revised in light of the valuable comments proffered at the last meeting, and offers specific ethics analysis and guidance for physicians impacted by private equity's involvement in medicine.

BACKGROUND

The past several decades have seen an increase in the corporatization, financialization, and commercialization of health care [1,2]. Since 2018, more physicians now work as employees of hospitals or health care systems rather than in private practice [3,4]. Our AMA reports that this trend is continuing: "[e]mployed physicians were 50.2 percent of all patient care physicians in 2020, up from 47.4 percent in 2018 and 41.8 percent in 2012. In contrast, self-employed physicians were 44 percent of all patient care physicians in 2020, down from 45.9 percent in 2018 and 53.2 percent in 2012" [4]. A major factor in these trends has been the incursion of private equity into health care. It is estimated that private equity capital investment between 2000 and 2018 grew from $5 billion to $100 billion [1]. Between 2016 and 2017 alone, the global value of private equity deals in health care increased 17 percent, with health care deals compromising 18 percent of all private equity deals in 2017 [5].

Private equity firms use capital from institutional investors to purchase private practices, typically utilizing a leveraged buy-out model that finances the majority of the purchase through loans for

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

which the physician practice serves as security, with the goal of selling the investment within three to seven years and yielding a return of 20-30 percent [1,5,6]. However, private equity investment broadly encompasses many types of investors and strategies, including venture capital firms that primarily invest in early-stage companies for a minority ownership, growth equity firms that tend to partner with promising later-stage ventures, and traditional private equity firms that borrow money through a leveraged buyout to take a controlling stake of mature companies [7]. Private equity firms represent a unique business model within health care due to their primary focus, not on goods or services, but on quick returns on financial investment, emphasis on fulfilling promises to investors, and treatment of health care entities as not substantially different from non-health related investments.

When ownership shifts from physicians to private equity firms, the firms typically seek to invest resources to expand market share, increase revenue, and decrease costs to make the practice more profitable before selling it to a large health care system, insurance company, another private equity firm (as a secondary buyout), or the public via an initial public offering (IPO) [8]. To expand market share, private equity typically employs a "platform and add-on" or "roll-up" approach in which smaller add-ons are acquired after the initial purchase of a large, established practice, allowing private equity firms to gain market power in a specific health care segment or sub-segment [1,9]. These practices by private equity appear to be driving mergers and acquisitions within health care, significantly contributing to the consolidation of the health care industry that has dramatically increased over the past decade [9].

Proponents of private equity investments in health care claim that private equity provides access to capital infusions, which may facilitate practice innovation and aid in the adoption of new technological infrastructure [6,8]. Proponents also advocate that private equity can bring "valuable managerial expertise, reduce operational inefficiencies, leverage economies of scale, and increase healthcare access by synergistically aligning profit incentives with high quality care provision" [10].

Critics argue that private equity's focus on generating large, short-term profits likely establishes an emphasis on profitability over patient care, which creates dual loyalties for physicians working as employees at private equity-owned practices [5,6]. Critics further assert that prioritizing profits likely jeopardizes patient outcomes, overburdens health care companies with debt, leads to an over-emphasis on profitable services, limits access to care for certain patient populations (such as uninsured individuals or individuals with lower rates of reimbursement such as Medicaid or Medicare patients), and fundamentally limits physician control over the practice and clinical decision making [5,8,10].

While more empirical research is needed on the impacts of private equity investment in health care, there is a growing accumulation of evidence that private equity investment results in negative outcomes, including increases in costs, decreases in the quality of patient care, and decreases in patient satisfaction [10-13]. This is particularly worrisome as private equity firms are emerging to be major employers of physicians. Currently, it is estimated that 8 percent of all private hospitals in the U.S. and 22 percent of all proprietary for-profit hospitals are owned by private equity firms [14].

Relevant Laws

Fuse Brown and Hall write that despite the market consolidation that results from private equity acquisitions within health care, these acquisitions generally go unreported and unreviewed since they do not exceed the mandatory reporting threshold under the Hart-Scott-Rodino (HSR) Act and

that there are currently no legal guidelines for assessing the collective market effects of add-on acquisitions. However, they do note:

> Under Section 7 of the Clayton Act, federal antitrust authorities—the Federal Trade Commission (FTC) and the Department of Justice —can sue to block mergers and acquisitions where the effect of the transaction may be "substantially to lessen competition, or to tend to create a monopoly." To determine whether a transaction may threaten competition, antitrust agencies analyze whether the transaction will enhance the market power of the transacting parties in a given geographic and product market. […] Typically, the FTC oversees health care acquisitions (other than insurance).[1]

To protect patients from harmful billing practices, the federal government has passed the No Surprise Act, the False Claims Act, Anti-Kickback Statute, and Stark Law. Additionally, most states have similar laws, such as those barring fee-splitting and self-referral, and several states have passed laws regulating or restricting the use of gag clauses in physician contracts [1]. In 2024, the FTC also issued a final rule banning noncompete clauses in all employment contracts; while a district court issued an order stopping the FTC from enforcing the rule, the FTC has appealed that decision [15].

The federal Emergency Medical Treatment and Labor Act ensures that hospitals with an emergency department provide all patients access to emergency services regardless of their ability to pay. Similarly, federal law requires nonprofit hospitals, which account for 58 percent of community hospitals, provide some level of charity care as a condition for their tax-exempt status, which the Internal Revenue Service defines as "free or discounted health services provided to persons who meet the organization's eligibility criteria for financial assistance and are unable to pay for all or a portion of the services" [16].

While there is no federal law banning the corporate practice of medicine (CPOM), most states do have CPOM laws that prohibit corporations from owning or operating medical practices. However, these state laws typically include exceptions that allow corporate investors, such as private equity firms, to invest in health care entities through a physician management company or management services organization, and which also provide potential avenues for corporate investors to circumvent stringent limits on their operational authority.

Relevant AMA Policy Provisions

Council on Medical Service Report 11-A-19 reviewed the scope and impact of private equity and venture capital investment in health care, and its recommendations were adopted as Policy H-160.891, "Corporate Investors." This policy delineates 11 factors that physicians should consider before entering into partnership with corporate investors, including alignment of mission, vision, and goals; the degree to which corporate partners may require physicians to cede control over practice decision making; process for staff representation on the board of directors and medical leadership selection; and retaining medical authority in patient care and supervision of nonphysician practitioners.

Our AMA further developed and published materials to assist physicians contemplating partnering with private equity and venture capital firms:

- Venture Capital and Private Equity: How to Evaluate Contractual Agreements
- Model Checklist: Venture Capital and Private Equity Investments
- Snapshot: Venture Capital and Private Equity Investments

Policy H-310.901, "The Impact of Private Equity on Medical Training," encourages GME training institutions and programs to "demonstrate transparency on mergers and closures, especially as it relates to private equity acquisition" and asserts that our AMA will "[s]upport publicly funded independent research on the impact that private equity has on graduate medical education."

Policy H-385.926, "Physician Choice of Practice," states that "[o]ur AMA supports the freedom of physicians to choose their method of earning a living (fee-for-service, salary, capitation, etc.)." While this policy upholds physician autonomy and supports the freedom of physicians to choose where and how they practice, the right to choose a method of earning a living is not unbounded, as the policy also states that physicians should charge their patients fair fees and provide "adequate fee information prior to the provision of services" whenever possible.

Additionally, policy H-215.981, "Corporate Practice of Medicine," states, "[o]ur AMA opposes the corporate practice of medicine and supports the restriction of ownership and operational authority of physician medical practices to physicians or physician-owned groups." This policy recognizes the attendant risks that the corporate practice of medicine represents to both patients and the practice of medicine.

Relevant AMA *Code Provisions*

Opinion 10.1.1, "Ethical Obligations of Medical Directors," states that physicians in administrative positions must uphold their core professional obligations to patients. The opinion mandates that physicians in their role as medical directors should help develop guidelines and policies that are fair and equitable, and that they should always "[p]ut patient interests over personal interests (financial or other) created by the nonclinical role."

Opinion 11.2.1, "Professionalism in Health Care Systems," acknowledges that "[p]ayment models and financial incentives can create conflicts of interest among patients, health care organizations, and physicians" and offers recommendations for physicians within leadership positions regarding the ethical use of payment models that influence where and by whom care is delivered. Key elements include the need for transparency, fairness, a primary commitment to patient care, and avoiding overreliance on financial incentives that may undermine physician professionalism.

Opinion 11.2.2, "Conflicts of Interest in Patient Care," clearly states: "[t]he primary objective of the medical profession is to render service to humanity; reward or financial gain is a subordinate consideration. […] When the economic interests of the hospital, health care organization, or other entity are in conflict with patient welfare, patient welfare takes priority."

Opinion 11.2.3, "Contracts to Deliver Health Care Services," stipulates that physicians' fundamental ethical obligation to patient welfare requires physicians to carefully consider any contract to deliver health care services they may enter into to ensure they do not create untenable conflicts of interest. The opinion states that physicians should negotiate or remove "any terms that unduly compromise physicians' ability to uphold ethical standards." However, it should be acknowledged that physicians have little leverage in changing entire payment structures or reimbursement mechanisms when negotiating their contracts with hospitals. Similarly, physicians in private practice often feel that they have little leverage in negotiating the sale of their practice; they simply receive an offer and are told they can take it or leave it.

Opinion 11.2.3.1, "Restrictive Covenants," states: "[c]ovenants-not-to-compete restrict competition, can disrupt patient care, and may limit access to care" and that physicians should not enter into covenants that "[u]nreasonably restrict the right of a physician to practice medicine for a

specified period of time or in a specified geographic area on termination of a contractual relationship". However, many hospitals and hospital systems today now routinely include noncompete clauses as part of their physician contracts. These clauses put physicians at risk of violation of professional obligations and their widespread use has the potential to undermine the integrity of the profession as a whole. While the FTC issued a rule in April 2024 banning most noncompete agreements, a Texas District Judge issued a preliminary injunction on July 3, 2024, halting the enforcement of the ban.

ETHICAL ANALYSIS

The increasing corporatization and financialization of health care have generated legitimate concerns over ethical dilemmas they raise regarding a focus on profits at the expense of patient care. Prioritizing profits over patients is incompatible with physicians' ethical obligations. In other words, because it is unethical for physicians to place profit motives above commitments to patient care and well-being, when private equity firms invest in health care, their business model is prima facie ethically problematic for physicians. Private equity's primary objective of fast profit-making in order to uphold their promises to investors is at odds with physicians' primary obligation of acting in the patient's best interest.

However, although private equity-owned health care entities are different in their ownership structure and oversight compared to other traditional health care investors, private equity-acquired health care entities may not be substantively different from other for-profit and non-profit health care entities in terms of their stated goals of both solvency and patient care. Zhu and Polsky argue that private equity is not inherently unethical and that there are likely good and bad actors as is the case in many sectors [6]. They add: "physicians should be aware that private equity's growth is emblematic of broader disruptions in the physician-practice ecosystem and is a symptom of medicine's transformation into a corporate enterprise" [6].

The corporatization of medicine comes with ethical and professional risks that are perhaps best exemplified by private equity but are not unique to private equity alone. One only needs to turn to the systemic failure of nonprofit hospitals to provide adequate charity care or how for-profit hospitals often reduce access to care (particularly for Medicaid recipients) to see examples of how the corporatization and financialization of medicine has increasingly come to treat health care as a mere commodity [17,18]. This is despite the fact that health care is inherently different from normal market goods because the demand for health care is substantially inelastic and nonfungible, and medical knowledge is a social good collectively produced by the work of generations of physicians, researchers, and patients. The real problem with private equity's involvement in health care is that it blatantly reveals that as a society, we have increasingly moved towards treating health care as a commodity when as a profession, we know this should not be the case.

While business ethics and medical ethics are not inherently antithetical, differences do clearly exist [19]. Many physicians are thus justly concerned about any removal of professional control that may accompany the increasing commercialization of the physician's role. Veatch points out that paradoxically, despite being open to the profit motive in the practice of medicine, the profession as a whole has shown strong resistance to the commercialization of medical practice. For Veatch, the crux of the issue is whether people perceive health care as a fundamental right or a commodity like any other, adding that the notion of health care as a right jeopardizes any profit motive in health care including traditional private practitioner fee-for-service models [19].

Pellegrino offers a similar analysis, arguing that health care is not a commodity but rather a human good that society has an obligation to provide in some measure to all citizens [20]. Pellegrino

argues that health care is substantively different from traditional market goods—it is not fungible, cannot be proprietary because medical knowledge is possible only due to collective achievements, is realized in part through the patient's own body, and requires an intensely personal relationship—and thus cannot be a commodity. Pellegrino warns that the commodification of health and medicine turns any interaction between the patient and physician into a commercial transaction subject to the laws and ethics of business rather than to medical and professional ethics. "In this view," Pellegrino writes, "inequities are unfortunate but not unjust […]. In this view of health care, physicians and patients become commodities too" [20].

As health care has become increasingly commodified, the ethical risks to patients and physicians are being realized as physicians find themselves increasingly working as employees and worrying about the impact commercial enterprises—such as private equity investments—may be having on patients.

Private equity represents the latest and most extreme form of health care commercialization that has escalated over the past few decades. This is the very reason why private equity firms became interested in health care in the first place—they recognized that health care as a market was already ripe for investment and future profitability. Private equity firms use the same investment models in health care that they do in other industries—invest in fragmented markets, acquire the most promising targets as a platform, expand through add-on acquisitions, and exit the market once a significant consolidation of market share can secure a sale, secondary buyout, or IPO [9]. Each individual acquisition is typically too small to require review by anti-trust regulators at the FTC; at the same time, however, this practice is driving the trend of mergers and acquisitions in the health care sector [9].

Fuse Brown and Hall explain, "[private equity] functions as a divining rod for finding market failures—where PE has penetrated, there is likely a profit motive ripe for exploitation" [1]. They continue that private equity investments pose three primary risks:

> First, PE investment spurs health care consolidation, which increases prices and potentially reduces quality and access. Second, the pressure from PE investors to increase revenue can lead to exploitation of billing loopholes, overutilization, upcoding, aggressive risk-coding, harming patients through unnecessary care, excessive bills, and increasing overall health spending. Third, physicians acquired by PE companies may be subject to onerous employment terms and lose autonomy over clinical decisions [1].

While the profit motive of private equity firms may drive them to take part in less than scrupulous practices, such as private equity's exploitation of out-of-network surprise billing, there is also potential for private equity to play a more positive role in transforming health care practices [1,21]. Powers et al write:

> Ultimately, private equity—a financing mechanism—is not inherently good or bad. Instead, it acts to amplify the response to extant financial incentives. Within a fee-for-service construct, this is intrinsically problematic. But value-based payment models can serve as an important guardrail, helping to ensure that financial return to private equity investors are appropriately aligned with system goals of access, quality, equity, and affordability [21].

Private equity firms could help accelerate changes in health care payment and delivery towards value-based models. With such models, where financial performance is tied to quality and value, private equity may be incentivized to invest in changes that support better health and lower costs [21].

While more research is needed on the impacts of private equity investments in health care and on de-investment, when private equity firms ultimately pull out of a health care sector, private equity firms' involvement in health care does not appear to be exceptional within the current corporate transformation of the profession. As Fuse Brown and Hall point out, "PE investment in health care is just the latest manifestation of the long trend of increasing commercialization of medicine. And so long as the U.S. treats health care as a market commodity, profit-seeking will persist" [1]. Any financing model of health care that ignores patient care or puts profits over patient care should be considered unethical by physicians and the public.

Concerns over private equity's incursion into health care are clearly warranted. However, the financial and investment landscape of health care continues to evolve, and while private equity may be the latest trend it will not be the last version that emerges within the health care marketplace. Health care spending in the US continues to rise each year, with health spending increasing by 4.1 percent in 2022 for a total of $4.5 trillion and accounting for roughly 17 percent of total GDP [22]. With so much money involved in health care, it is bound to draw in investors; the involvement of investors from outside of health care, who may treat it as merely a market commodity and do not share physicians' overriding commitment to patient care and well-being, should be concerning. Such involvement by outside investors is likely to further transform health care, driving consolidation, commercialization, and de-professionalization.

In a practical approach to the current financial health care landscape, Ikrum et al offer some realistic recommendations for partnering with private equity in health care:

> While PE involvement in health care delivery invokes inherent concerns, it has provided much-needed capital for many primary care practices to mitigate the effects of the pandemic and to potentially undertake care delivery innovations such as population health management under value-based payment models. To make partnerships with private investors work, providers need to select the right investors, establish strategies upfront to address misaligned objectives, and define a successful partnership by setting goals for and transparently reporting on indicators that reflect both financial and clinical performance. Safeguards and regulations on sales may also protect patients and providers [7].

While private equity's overriding profit motive may be unethical in many instances, the reality is that private equity is already a large player in health care and physicians urgently need guidance on how to interact with private equity firms and private equity-owned health care entities. Keeping within its purview, the *Code* should offer guidance to physicians and to the practice of medicine on how to best interact with private equity and other outside forces that increasingly impact health care today. To support physicians as private equity continues to increase its market share of health care entities, practical guidance is needed related to both the sale of physician-owned practices to private equity as well as to those seeking employment by private equity-owned health care entities to help physicians navigate today's evolving financial health care landscape. Guidance is also needed for physicians employed by corporate entities that interact with the health care profession, including by private equity firms, management service organizations (MSOs), professional services corporations (PCs), insurance companies, and pharmaceutical benefit managers (PBMs).

CONCLUSION

The ethical concerns raised by private equity investments in health care are not unique but instead represent ethical dilemmas that exist due to the very nature of treating health care as a commodity. As highlighted by policy H-215.981, "Corporate Practice of Medicine," it is not some corporate practices but all corporate practices of medicine that create the potential for ethical dilemmas and

so should be avoided. Any decision to pursue financial incentives over and above patient care is unethical, and physicians' concerns regarding private equity's focus on short-term profits at the expense of patients' and their own well-being are justly warranted. Due to such concerns, physicians should strongly consider whether they can sell their practice to private equity investors while also upholding their ethical and professional obligations to patients and to the profession as a whole. Such reflection is also warranted for any physician considering employment by a corporate entity, such as a private equity firm, MSO, PC, insurance company, or PBM.

It is therefore crucial that policy guidelines be developed to ensure that private equity-acquired hospitals, hospital systems, and physician practices function in an ethical manner that prioritizes patients and patient care over profits. Policies that require greater transparency and disclosure of data on private equity ownership, greater state regulatory control over private equity acquisitions, closing payment and billing loopholes, rules requiring an independent clinical director on the Board of private equity firms engaged in health care, and means for physicians to help set goals and measure outcomes to ensure the alignment of corporate and clinical values should be considered [7]. The growth of private equity investment within the health care marketplace is clearly concerning and is an urgent issue that needs greater regulatory oversight. Beyond established ethical and professional norms, new regulations must be developed to prevent private equity from negatively impacting patient care and the medical profession [6]. A new Senate Budget Committee Bipartisan Staff Report, released in January 2025, calls for greater oversight, transparency, and restrictions of private equity involvement in health care [23]. While the report acknowledges that "not every PE firm operates in an identical fashion, the evidence highlights systemic issues with PE in investment in health care," and goes on to conclude, "the findings of the investigation call into question the compatibility of private equity's profit-driven model with the essential role hospitals play in public health. The consequences of this ownership model—reduced services, compromised patient care, and even complete hospital closures—potentially pose a threat to the nation's health care infrastructure, particularly in underserved and rural areas" [23].

Because the private equity business model creates serious potential risks and conflicts of interest for the practice of medicine, it is essential for physicians considering entering into partnership with private equity firms to first reflect on their ethical and professional obligations. If they do decide to proceed, however, physicians have a duty to evaluate their contracts and require that the agreements are consistent with the norms of medical ethics. Likewise, physicians considering entering into a contractual relation as an employee—whether with a private equity-owned hospital or otherwise—should ensure that their contract does not place them in an untenable conflict of interest or compromise their ability to fulfill their ethical and professional obligations to patients [8]. While we must acknowledge that physicians often have little power in contract negotiations, their ethical obligation remains nonetheless to try to negotiate when contractual agreements are likely to lead to ethical dilemmas. If a contract would prevent a physician from upholding their professional ethical obligations, the contract should not be entered into.

The Preamble to the *Code* stipulates that "[o]pinions of the AMA Council on Ethical and Judicial Affairs lay out the ethical responsibilities of physicians as members of the profession of medicine." Although some areas of concern therefore extend beyond what the *Code* may speak to, CEJA is currently studying the ethical obligations of health care entities that interact with physicians and is considering entering a report in the near future regarding the potential need for a new opinion to address additional stakeholders involved in our evolving health care landscape. CEJA recognizes that private equity investment raises concerns for physicians and for the practice of medicine but also acknowledges the *Code* is unable to speak to the totality of the issues raised by such investment practices. This is why it is crucial that multiple AMA units, such as the Council on

Medical Service's related report on private equity, work in tandem to address the complexity of the many issues raised by private equity firms' investment in health care entities.

It is the conclusion of the Council on Ethical and Judicial Affairs that increasing investment by private equity firms in health care raises ethical concerns regarding dual loyalties of physicians and competing interests between profits and patients. To respond to these issues, CEJA recommends amending Opinion 11.2.3, "Contracts to Deliver Health Care Services," to more clearly address concerns raised by entering into partnerships with private equity firms, physicians employed by corporate entities (including private equity firms, MSOs, insurance companies, and PBMs), and the ethical risks that may arise for both physicians seeking capital to support their private practice as well as physicians entering into employment contracts with private equity-owned health care entities.

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends that Opinion 11.2.3, "Contracts to Deliver Health Care Services," be amended by addition and deletion as follows and the remainder of this report be filed:

> Prioritizing profits over patients is incompatible with physicians' ethical obligations. No part of the health care system that supports or delivers patient care should place profits over such care. Physicians have a fundamental ethical obligation to put the welfare of patients ahead of other considerations, including personal financial interests. This obligation requires ~~them to~~ that before entering into contracts to deliver health care services, physicians consider carefully the proposed contract to assure themselves that its terms and conditions ~~of contracts to deliver health care services before entering into such contracts to ensure that those contracts~~ do not create untenable conflicts of interest or compromise their ability to fulfill their ethical and professional obligations to patients. Those physicians who enter into contracts with corporate entities, such as private equity firms, management service organizations, professional services corporations, insurance companies, or pharmaceutical benefit managers, who act within their capacity as a physician, even as administrators or intermediaries, also have a duty to uphold the ethical obligations of the medical profession.
>
> Ongoing evolution in the health care system continues to bring changes to medicine, including changes in reimbursement mechanisms, models for health care delivery, restrictions on referral and use of services, clinical practice guidelines, and limitations on benefits packages. While these changes are intended to enhance quality, efficiency, and safety in health care, they can also put at risk physicians' ability to uphold professional ethical standards ~~of informed consent and fidelity to patients~~ and can impede physicians' freedom to exercise independent professional judgment and tailor care to meet the needs of individual patients.
>
> As physicians seek capital to support their practices or enter into various differently structured contracts to deliver health care services—with group practices, hospitals, health plans, investment firms, or other entities—they should be mindful that while ~~many~~ some arrangements have the potential to promote desired improvements in care, ~~some~~ other arrangements ~~also~~ have the potential to ~~impede~~ put patients' interests at risk and to interfere with physician autonomy.
>
> When contracting with entities, or having a representative do so on their behalf, to provide health care services, physicians should:

(a) Carefully review the terms of proposed contracts, preferably with the advice of legal and ethics counsel, ~~or have a representative do so on their behalf~~ to assure themselves that the arrangement:

(i) minimizes conflict of interest with respect to proposed reimbursement mechanisms, financial or performance incentives, restrictions on care, or other mechanisms intended to influence physicians' treatment recommendations or direct what care patients receive, in keeping with ethics guidance;

(ii) does not compromise the physician's own financial well-being or ability to provide high-quality care through unrealistic expectations regarding utilization of services or terms that expose the physician to excessive financial risk;

(iii) ~~allows~~ ensures the physician can ~~to~~ appropriately exercise professional judgment;

(iv) includes a mechanism to address grievances and supports advocacy on behalf of individual patients;

(v) is transparent and permits disclosure to patients~~.~~;

(vi) enables physicians to have significant influence on, or preferably outright control of, decisions that impact practice staffing;

(vii) prohibits the corporate practice of medicine.

(b) Negotiate modification or removal of any terms that unduly compromise physicians' ability to uphold ethical or professional standards.

When entering into contracts as employees, preferably with the advice of legal and ethics counsel, physicians should:

(c) Advocate for contract provisions to specifically address and uphold physician ethics and professionalism.

(d) Advocate that contract provisions affecting practice align with the professional and ethical obligations of physicians and negotiate to ensure that alignment.

(e) Advocate that contracts do not require the physician to practice beyond their professional capacity and provide contractual avenues for addressing concerns related to good practice, including burnout or related issues.

(f) Not enter into any contract that would require the physician to violate their professional ethical obligations.

When contracted by a corporate entity involved in the delivery of health care services, physicians should:

(g) Terminate any contract that requires the physician to violate their professional ethical obligations and report any known or suspected ethical violations through the appropriate oversight mechanisms.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 06-A-25

Subject: Amendment to Opinion 1.1.1 "Patient-Physician Relationships"

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

The Council on Ethical and Judicial Affairs (CEJA) believes that the AMA *Code of Medical Ethics* and the profession would be better served by amending guidance to provide a more robust discussion of the nature of patient-physician relationships and physicians' associated ethical obligations. Indeed, the practice of medicine has changed in ways that demand a thorough review and potential reconceptualization of the obligations of both individual physicians and the profession as a whole.

BACKGROUND

Relevant House Policies

Several House policies reference the importance of the patient-physician relationship. Though not an exhaustive list, the following policies capture the spirit of the patient-physician relationship expressed within AMA House policy: H-165.837 "Protecting the Patient-Physician Relationship", H-225.950 "AMA Principles for Physician Employment", and H-275.937 "Patient/Physician Relationship and Medical Licensing Boards" [1-3]. The patient-physician relationship as expressed by these policies is understood to be fundamental and paramount to the practice of medicine. This relationship is understood to carry certain obligations for physicians, including the duty to be patient advocates, to prioritize patient care, and be transparent regarding cost-sharing arrangements. Other considerations, including personal financial concerns, are to be secondary to the relationship. Furthermore, this relationship is not perceived as purely contractual, as termination of employment does not necessarily end the relationship between a physician and persons under their care (H-225.950).

Relevant Code Provisions

Within the AMA *Code of Medical Ethics*, the patient-physician relationship is understood as: "fundamentally a moral activity that arises from the imperative to care for patients and to alleviate suffering[… that is] based on trust" (Opinion 1.1.1). This relationship is primarily represented as emerging from a physician's fiduciary duty to patients, in which both parties enter into this fiduciary relationship via a consensual agreement. Though not an exhaustive list, the following opinions capture the spirit of the patient-physician relationship expressed within the *Code:* Opinion 1.1.1 "Patient-Physician Relationships", Opinion 1.1.3 "Patient Rights", Opinion 1.1.5

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

© 2025 American Medical Association. All rights reserved.

"Terminating a Patient-Physician Relationship", Opinion 1.1.6 "Quality", Opinion 1.1.7 "Physician Exercise of Conscience", Opinion 8.6 "Promoting Patient Safety" [4-9]. These opinions demonstrate that the patient-physician relationship entails fiduciary responsibility, mutual respect, support for the continuity of care, open communication, quality care, and trust.

ETHICAL ISSUES

Current guidance in Opinion 1.1.1 "Patient-Physician Relationships" focuses heavily on legal considerations about when a relationship is established and has little purchase on the ethical concerns raised by extensive changes to the practice of medicine that have recently occurred. Among these changes are the continuing development of technology (such as augmented intelligence), the use of team-based care, the rising number of employed physicians (as contrasted with those in private practice), interference in the patient-physician relationship by third parties (such as health care administrators, insurers or government), and the recognition that physicians have an obligation to advocate for changes to institutions, policies, and practices in order to improve patient care and promote health care justice.

A major change to the patient-physician relationship over the past few decades has been an increased recognition of the importance of patient autonomy. Ironically, however, this move away from paternalism towards patient autonomy in the setting of the patient-physician relationship has taken place while medicine has come to be dominated by large institutions, financial concerns such as cost-containment, changes in financing designed to influence patient and physician behavior, commercialization, an increasing reliance on markets, and other pressures that have had a de-professionalizing effect on physicians. These changes have led in turn to a loss of autonomy for both physicians and patients. Even as the discretionary space of physicians has shrunk, their responsibilities have expanded. Physicians are now called to engage in cultural competency and humility, trauma-informed approaches to care, and to recognize past harms and historical contexts of patient populations. They are called upon to be the mechanism by which medical inflation will be controlled. They are called upon to advocate not just only for their own individual patients within systems of care but to advocate for changes in the social systems that determine health care needs and distribute illness, injury, and disability unjustly.

Recognizing that each patient brings different experiences to the relationship is now seen as a crucial part of establishing trust within a patient-physician relationship. The question that arises, however, is how is that trust to be earned within systems that often appear untrustworthy and designed to frustrate the commitment of physicians to act for the good of their patients?

ETHICAL ANALYSIS

The patient-physician relationship is foundational for medical ethics. It is characterized by the nature of illness, the need for healing, and a commitment to help, culminating in a decision to take action directed toward healing and the alleviation of suffering caused by disease, injury, or disability. This relationship is inherently unequal. The patient is unavoidably in a position of vulnerability and dependency, while the physician holds the knowledge and the resources that the patient needs [10]. The sick, injured, and disabled therefore have little choice but to trust that their physicians will use the power of medicine for their good as individual patients. That trust is established by the physician's act of profession—the commitment, generally undertaken through an oath, to be worthy of patients' trust—and the patent's agreement to cooperative collaboration.

The heart of professionalism is thus the public commitment of physicians to use their medical knowledge, skills, and judgment for the good of their patients. Moreover, since patients are first and foremost persons, true healing can only take place when the uniqueness and personhood of patients are taken into account, incorporating their biological particularities, beliefs, relationships, emotions, values, and goals into medical decisions. This requires a mutually respectful, trusting collaboration aimed at serving the patient's good. For patients, this entails an obligation to seek care and be as candid as possible with their physicians.

All medical actions are oriented towards the ethical centrality of the patient-physician relationship. While the paradigmatic instance of this dynamic is serious illness, or injury, the care of patients with chronic conditions also requires a sustained, trusting relationship. Palliation, too, aims at the relief of medical suffering and provides healing in a holistic sense even when cure is not possible. Prevention is also oriented towards the good of individual patients and requires trust that interventions are appropriate for that aim. Public health efforts provide the common resources necessary to promote healing and prevent illness, injury, and disability, and thus unite societal commitments to justice and prevention of harm with physicians' duties of beneficence, nonmaleficence, and respect for persons.

This understanding of the patient-physician relationship makes medicine an inherently moral enterprise, qualitatively different from the commercial transactions of providers and consumers. The patient-physician relationship itself is part of the healing process and not a commodity or product. Even economists recognize that the demand for health care is substantially inelastic and nonfungible, placing it outside the assumptions of normative market economics. Medical knowledge is not property that physicians own. It is a social good built up by the work of generations of physicians, scientists, and researchers and made possible by the generosity of generations of patients who have contributed to the advancement of medical progress (and who, it is acknowledged, have not always consented to such participation).

Medicine does not exist in a vacuum. Natural, historical, socioeconomic, and political circumstances always condition the patient-physician relationship. Physicians, for instance, do not always live up to the ideals of the profession. Structural social inequities result in unequal access to health care. While the patient-physician relationship itself is not a market commodity, markets provide many of the goods and services that physicians rely on to care for patients. Unfortunately, this also means that these goods and services are subject to the vicissitudes and inequities inherent to market systems, sexism, racism, and other unjust forms of discrimination.

Political decisions, for good or for ill, can also have a tremendous impact on care, affecting the distribution of physicians, the services they can provide for patients, the conditions under which physicians work, and the tenor of the patient-physician relationship. Therefore, if the good of the patient is the central moral focus of medicine, a commitment to justice will be required to ensure the integrity of the patient-physician relationship and to make the services of physicians available to all who stand in need of their care. In a pluralistic, liberal democracy, this requires, in turn, that professions be granted a relatively independent status outside other social institutions such as the market and the government. Too much encroachment by the market or the government into the legitimate authority of the medical profession ultimately undermines the central moral focus of medicine: the patient-physician relationship. Likewise, without the proper degree of self-regulation and respect for other social institutions, the medical profession itself can lose track of its own moral center. The good of the patient ought never to be made subservient to the political or financial ends of physicians, governments, or markets. Determining what the good of the patient is requires that physicians have the freedom and flexibility to adopt a patient-centered approach to care that allows for patients to feel heard and respected.

As the profession of medicine continues to change, there are concerns about how these changes impact patient-physician relationships and thus the relevance of the patient-physician relationship itself. However, despite the evolving landscape of the medical profession, the patient-physician relationship remains vital to the practice of medicine and to medical ethics. Regardless of changes to their roles that physicians face, clinical encounters will always be subject to the professional and ethical obligations that emerge from patient-physician relationships.

When we examine the patient-physician relationship, what we are really after is the source of the obligations that ground medical ethics. While medicine has always been practiced under non-ideal circumstances that can make it difficult to carry out these obligations to a maximal extent, we recognize that current circumstances are making it more difficult than ever. Moreover, we recognize that a patient-physician relationship may arise in a variety of contexts, and that these may not always be geared towards benefiting the patient, the physician, or both. The goal of this report, however, is to outline the core aspects of ethical and just patient-physician relationships and articulate gaps in the current *Code* Opinion 1.1.1. in order to better support patients and physicians as the medical profession and health care ecosystems continue to evolve.

Trust and the Patient-Physician Relationship

The pressures of increasing de-professionalization and de-personalization in the healthcare environment have sometimes obscured or even seemed to denigrate the value of the patient-physician relationship. New ethical questions have arisen as systems of care have changed in ways that have made it more difficult for physicians to fulfil their duties that arise from a recognition that this relationship is central to the meaning and value of the profession. While the patient-physician relationship has responded and evolved in light of these challenges and in the face of other technological, economic, and sociocultural changes, there can be no doubt that patients' trust in medicine has declined. Nonetheless, there is also a renewed interest in the relational aspect of the patient-physician relationship and new attempts to build the trust that sustains it.

Trust is in many ways the cornerstone of any interpersonal relationship. Social psychologists who study trust have noted that the development of dyadic trust is a process that involves commitment, cooperation, and the building of confidence in benevolent values, motives, goals, and intentions [11]. Trust—and distrust—may be enacted in the immediate but is also built over time. Interpersonal trust is also impacted by (and in turn impacts) social trust, as social trust influences the development of interpersonal trust which then also impacts trust in the institutions in which interpersonal interactions take place [12].

To protect the patient-physician relationship, then, a central goal of the medical profession should be to foster trust in health care, which has been in sharp decline for the past half century [13]. One of the primary means to engender trust is through good communication. Research has shown that aspects of physician communication can impact patient outcomes (such as medication compliance) and patient satisfaction (which is associated with greater continuity of care), and that patient-centered approaches to care, which consider the patient's perspective on equal ground with the physician's clinical diagnosis, enhance communication and the patient-physician relationship [14].

Fostering Trust to Support the Patient-Physician Relationship

Research on physician communication practices have found at least five broad communication categories including: information giving, information seeking (questioning), partnership building, rapport-building behaviors (both verbal and nonverbal behaviors that explicitly convey emotional content), and socioemotional behaviors [15]. How patients and physicians view these aspects of

communication, and the patient-physician relationship in general, are not always the same, however. In one study comparing physician and patient evaluations of the relationship, researchers found that while physicians identified their technical expertise and knowledge as vital for establishing trust in the relationship, emphasizing the importance of competence, devotion, serviceability, and reliability, patients stressed the importance of interpersonal skills as more important, such as caring, appreciation, and empathy [16]. Recognizing this difference in perceptions is crucial for understanding how trust can be gained or lost, especially considering that researchers found trust to make the largest contribution to patient-physician perceived satisfaction [16].

Patient satisfaction is strongly associated with positive physician communication behaviors. Because physicians' communication behaviors vary widely, however, there is significant room here for improving patient-physician relationships. One study found that only 33% of physicians were rated "excellent" on all four communication behaviors analyzed, while 12% were rated either "fair" or "poor" on all four behaviors [17]. Patient-physician communication is one of the strongest factors that impact patient satisfaction and is fundamental to facilitating shared responsibility and trust [18].

Communication is not the only value that engenders and supports trust. Research has found that clinicians whose patients expressed trust in them worked in environments that placed an emphasis on quality, communication, clinical cohesion, and alignment of values between clinicians and organizational leaders [19]. Like communication, physician empathy has also been regarded as central to patient-centered care, and research has found that empathy correlates with patient satisfaction, adherence, outcomes, and enablement [20]. Other models of trust establish foundational factors that include competency, motive, and transparency [21].

The Future of Patient-Physician Relationships

When considering the source of the ideal patient-physician relationship, its emergence is simultaneously contractual, dependent on virtues, and relational. All three of these conceptual models rely on trust, and trust in turn is supported by additional values. Interpersonal trust is reliant upon collaboration, respect, empathy, and reciprocity. Contractual trust is reliant upon competency, transparency, aligned motives, and continuity. These values in many ways become ideal virtues within health care that help create trust in the institution of medicine over time, which is crucial for initial clinical encounters as well as for individuals who lack capacity.

Physicians have an ethical duty to support the patient-physician relationship by upholding the virtues of the profession. This ethical duty is grounded in medical professionalism and the commitment to serve as healers. The relationship that patients and physicians enter into is sustained by trust—in both the profession as whole, as well as in both the patient and the physician who agree to participate in a cooperative and collaborative partnership. This trust gives rise to physicians' ethical responsibility to place patients' welfare above the physician's own self-interest. This partnership is unique in that it is inherently unequal in terms of vulnerability, yet equal in importance with respect to both individuals' contributions to the relationship; similarly, the relationship is not a commodity product, yet it involves interacting with market economics. The patient-physician relationship is contextual—biological, historical, socioeconomic, and political elements will always be relevant—but it is also fundamentally a moral activity.

Honavar writes, "[the p]atient–physician relationship is a complex psychosocial interplay of vulnerability, trust, and authority in a professional setting" [22]. Currently, the *Code* primarily speaks to the importance of trust within the patient-physician relationship without acknowledging

that the reason trust is crucial is because of the unequal vulnerabilities and authorities at play. The power dynamics of every patient-physician relationship will be different, of course, but it is crucial that the *Code* address such concepts as patient vulnerability, the importance of respect, communication, and competency in establishing trust. Ultimately, Opinion 1.1.1 must move beyond the current language that focuses on when a patient-physician relationship begins in order to more fully address how to ethically and justly sustain the relationship. Furthermore, knowing that the practice of medicine will continue to change and that as a result, so too will patient-physician relationships, the *Code* needs to clearly acknowledge that patient-physician relationships are inherently dynamic, contextual, and will continue to evolve.

RECOMMENDATION

Your Council on Ethical and Judicial Affairs recommends that Opinion 1.1.1, "Patient Physician Relationships" be amended by addition and deletion and the remainder of this report be filed.

> The practice of medicine, and its embodiment in the clinical encounter between a patient and a physician, is fundamentally a moral activity that arises from the imperative to care for patients and to alleviate suffering. ~~The relationship between a patient and a physician is based on trust, which gives rise to~~ The relationship that emerges between a patient and a physician must be based on trust. The physician's obligation to be trustworthy entails additional ethical duties such as a commitment to act for the good of patients; to uphold respect for patients as persons; to develop good communication skills; and to be professionally competent. This trust is fostered by physicians' ethical responsibilit~~y~~ies to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare.
>
> A patient-physician relationship ~~exists~~ commences when a physician begins to serve a patient's medical needs. ~~Generally, the relationship is entered into by mutual consent between physician and patient (or surrogate). However, in certain circumstances a limited patient-physician relationship may be created without the patient's (or surrogate's) explicit agreement. Such circumstances include:~~ This generally occurs in response to a request by a patient or a patient's surrogate, but can also occur in certain contractual, legally mandated, or emergency settings without the explicit request or consent of the patient.
>
> While the patient-physician relationship may involve one patient and one physician in today's complex health care system, such relationships often involve multiple members of a care team, patient family members and surrogates. The core values of the patient-physician relationship, however, remain unchanged. How these values are implemented will depend on many factors, including the setting, the needs of the patient, the duration of the relationship, and the training, expertise, and experience of the physician, and will necessarily reflect the myriad ways that patients and physicians interact. While every patient-physician relationship will be different and will change over time, the fundamental importance of establishing and sustaining trust through respect for persons, good communication, and professional competency will always be crucial at every layer, node, and time of the relationship. It is the duty of physicians, therefore, to uphold these values and support patients and the primacy of the patient-physician relationship to the best of their ability in all practice settings and at all times.
>
> ~~(a) When a physician provides emergency care or provides care at the request of the patient's treating physician. In these circumstances, the patient's (or surrogate's) agreement to the relationship is implicit.~~

~~(b) When a physician provides medically appropriate care for a prisoner under court order, in keeping with ethics guidance on court-initiated treatment.~~

(c) ~~When a physician examines a patient in the context of an independent medical examination, in keeping with ethics guidance. In such situations, a limited patient-physician relationship exists.~~

REPORT 07 OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS (A-25)
Guidelines on Chaperones for Sensitive Exams
(Reference Committee on Ethics and Bylaw)

EXECUTIVE SUMMARY

In this report, CEJA considers the appropriate use of chaperones for sensitive exams, and, in general, how to create safe environments for all patients while maintaining professional boundaries. The report recommends revising Opinion 1.2.4, "Use of Chaperones" to reflect current best practices for sensitive exams. New recommendations include: (1) adoption of an "opt-out" approach for sensitive exams in routine circumstances; (2) the requirement of training/qualifications for chaperones; (3) guidance for when a physician may require a chaperone even if the patient declines; and (4) guidance for sensitive examinations and persons who cannot give informed consent, including children and adolescents.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 07-A-25

Subject: Guidelines on Chaperones for Sensitive Exams

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaw

Policy D-140.950, "Guidelines on Chaperones for Sensitive Exams," was adopted at the 2022 Interim Meeting and reads as follows:

> Our American Medical Association will ask the Council on Ethical and Judicial Affairs to consider amending E-1.2.4, "Use of Chaperones in Code of Medical Ethics," to ensure that it is most in line with the current best practices for adult and pediatric populations and potentially considers the following topics:
>
> a. Opt-out chaperones for breast, genital, and rectal exams.
> b. Documentation surrounding the use or not-use of chaperones.
> c. Use of chaperones for patients without capacity.
> d. Asking patients' consent regarding the gender of the chaperones and attempting to accommodate that preference as able.
> e. Use of chaperone at physician request when physician deems necessary.

This report is being submitted in response to this directive from the House of Delegates.

BACKGROUND

Conducting sensitive examinations in an ethically and clinically sound manner requires physicians to be responsive to both the distinctive characteristics of the individual patient and to the boundaries appropriate to the patient-physician relationship. While a sensitive exam is typically understood as one involving any examination of, or procedure involving, the genitalia, breasts, perianal region or the rectum, physicians should be aware that a patient's personal history, including their cultural background and beliefs or identity may broaden their definition of what constitutes a sensitive examination or procedure [1]. Efforts to provide a comfortable and considerate atmosphere for the patient during sensitive exams are part of respecting patients' dignity. These efforts may include providing appropriate gowns, private facilities for undressing, sensitive use of draping, and clearly explaining various components of the physical examination. They also include the use of chaperones regardless of the gender of the physician or patient [2].

A chaperone "is a trained person who acts as support and witness for a patient exam or procedure" [1]. If the chaperone is trained to do so, they may also assist the provider with equipment and specimen handling. The use of chaperones is appropriate in a variety of specialties and clinical

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council

settings [3]. Several states have implemented legal mandates ranging in stringency from requiring that physicians offer a chaperone for sensitive examinations, to "defining examination of the genitals or breasts by a physician of the opposite gender without a chaperone as professional misconduct" [4]. Physicians should therefore make themselves aware of local regulations when they consider their chaperone policy.

Having chaperones present can help prevent misunderstandings between the patient and physician and can protect the integrity of the patient-physician relationship. A fair and effective policy on the use of chaperones must balance: (1) concern for physician and patient safety; (2) respect for patient preferences; and (3) the ethical responsibility to maintain clear professional boundaries.

ETHICAL ANALYSIS

Appropriate use of chaperones during sensitive examinations and procedures is meant to protect both the physician and the patient. Having a chaperone present can increase trust between the physician and patient, contribute to the comfort and safety of the patient, and maintain the patient's dignity. The use of chaperones can also help protect the physician against accusations of misconduct that arise from misunderstandings or that are intentionally false.

There is a power imbalance embedded in the patient-physician relationship. Patients make themselves vulnerable to the physician both by permitting procedures and examinations to be conducted on their bodies and by disclosing private information to the physician during the course of the clinical encounter.

The physician guides the care that the patient receives and should adopt practices within the clinical encounter to foster trustworthiness. The presence of a trained chaperone contributes to establishing the formal nature of the contact between physician and patient, and a chaperone may serve as a witness when a patient expresses concern, asks questions, or withdraws consent. Knowing that the encounter has been witnessed allows both the physician and patient reassurance that the encounter was professional and safe, which fosters trustworthiness.

What is considered a sensitive examination or procedure can vary widely among patients. In order to foster trust between the patient and physician and to set appropriate professional boundaries for sensitive examinations and procedures, various factors affecting the particular patient should be considered, including history of trauma, sexual orientation, gender identity, personal beliefs, and cultural norms and expectations.

Since patients may not disclose their history of sexual assault or previous negative healthcare experiences, trauma-informed care (sometimes alternatively described as "healing centered engagement") [5] should be employed for all examinations, including those not usually understood as sensitive. A trauma-informed framework "assumes that all people have experienced trauma, are experiencing it, or may experience it in the future" [6]. This approach is focused on creating "safety, empowerment and trustworthiness" in the clinical encounter [7]. For sexual and gender minority patients, their lived experiences, perspectives and current health needs should guide physicians in jointly identifying which examinations and procedures should be treated as sensitive [7]. Likewise, some patients may have personal or religious beliefs or may adhere to cultural norms that they wish to have respected in the clinical encounter. This may necessitate tailoring the conditions and understanding of what are defined as sensitive exams to the patient's level of comfort and concepts of appropriateness. One way for physicians to provide a consistently safe and respectful environment for *all* patients is to be open to broadening the range of circumstances in which a chaperone is used.

The presence of a chaperone also promotes patient safety by acting as a deterrent to inappropriate behavior [1]. Patients may be more comfortable with someone of a particular gender being present because that person can better understand the kinds of embarrassment or discomfort associated with their sensitive exam and so may be better equipped to provide support [8].

Patients' right to dignity (Opinion 1.1.3 "Patient Rights") is closely tied to their physical privacy (Opinion 3.1.1 "Privacy in Health Care"). Since medical examinations and procedures often require the patient to put aside their norms regarding modesty and give consent to being seen and touched in ways they would not usually allow, maintaining their physical privacy is a critical way to show respect and foster trustworthiness. The presence of a chaperone reinforces the professional nature of the interaction with the goal of providing reassurance that the patient's experience and wishes are taken into account [1].

Having chaperones present can also help prevent misunderstandings between patients and physicians by clarifying expectations and facilitating communication about the examination. Chaperones who are familiar with the elements of sensitive examinations and procedures, know how to properly observe them, and know when to intervene if they have concerns. Chaperones may augment a patient's sense of safety by ensuring for the patient that the interventions are necessary. Further, having a third-party present who can attest to what occurred during the encounter may protect physicians from false allegations of misconduct [1].

Mandatory, Opt-in, and Opt-Out Chaperone Policies

There are three types of chaperone policy: opt-in, opt-out, and mandatory.

- A mandatory policy is one in which a chaperone *must be* present during all sensitive examinations or procedures, or else the examination or procedure will not be performed (except in an emergency).
- An opt-in policy is one in which patients are *automatically offered* a chaperone for sensitive examinations and procedures and in other situations one is made available upon request.
- An opt-out policy is one in which a chaperone *is automatically provided* for all sensitive examinations and procedures (with an option for the patient to decline with physician agreement), and one is made available upon request in other situations.

Currently, the AMA *Code of Medical Ethics* recommends an opt in policy, meaning that physicians should "adopt a policy that patients are free to request a chaperone and communicate that policy to patients" and that a patient's request should always be honored (Opinion 1.2.4 "Use of Chaperones"). Under the opt-in model, the default is to proceed with the examination or procedure unless an explicit request for a chaperone is made by the patient. This opt-in approach provides less protection for both the patient and physician than a mandatory or opt-out approach, since the responsibility to ask for the chaperone belongs to the patient. The difficulty with this type of policy is that it assumes the patient feels empowered to ask for a chaperone without fear of damaging the patient-physician relationship or causing inconvenience or annoyance [3]. Additionally, evidence suggests that patients may not request a chaperone because they think it may insinuate that their physician is untrustworthy [10,11] and only a small percentage of patients feel comfortable asking for a chaperone when none was explicitly offered [12].

By contrast, under an opt-out policy, patients do not need to make a specific request because the policy makes it standard practice to have chaperones present for sensitive examinations. Specifically, chaperones are made available and routinely present during sensitive exams, unless

the patient refuses. Opt-out policies are effective at protecting both the physician and the patient since, by default, they make it the norm to have a third-party present as a witness to sensitive exams or procedures.

Although the opt-out approach offers patients more protection, in some cases, this approach may introduce problems with obtaining informed consent. For instance, once a chaperone is brought into the examination room, a patient may be reluctant to object since this is presented as the usual way things are done. Some patients also may not realize they have a choice. Further, if a patient does not speak up (either way), their silence may be taken to be tacit approval, when in actuality the patient is intimidated or does not understand what is happening [13]. Under ordinary circumstances, remaining silent should not be understood as valid consent. While obtaining explicit consent is important, as noted above, the value of adhering to patient preferences must be balanced against the values of protecting patients and physicians and the maintenance of professional boundaries. These considerations may be weighed differently depending on the specific features of the encounter.

Both opt-in and opt-out policies can create challenges in part because patients' requests and/or consent for use of a chaperone take place directly in the treatment room. For this reason, it has been suggested that patients' preferences regarding chaperones should be solicited by front desk staff or other intake staff as a routine part of the check-in procedure [11,4]. This is an opportunity to provide materials explaining the purpose of the chaperone and to inform patients of the standard policy while allowing patients to express their preferences in a low-pressure environment. However, regardless of where and how consent for the use of a chaperone is solicited and obtained, physicians should keep in mind that what is most important during "the process of obtaining informed consent is equalizing the patient's ability to say *yes* or *no*" [6].

While opt-in policies have historically been regarded as adequate, this is no longer the case in some specialties. There is precedent to believe that a shift to opt-out policies will better protect both patients and physicians in many settings. The American College of Obstetricians and Gynecologists (ACOG) argues that given "the profoundly negative effect of sexual misconduct on patients and the medical profession and the association between misconduct and the absence of a chaperone" regular use of chaperones is necessary to assure patients and the public that significant "efforts are being made to create a safe environment for all patients" [1]. Because physician misconduct undermines the integrity of the profession as a whole, there is strong reason to adopt policies that reduce it. Physicians also deserve to work in an environment where false allegations of misconduct or misunderstandings between physicians and patients do not compromise either their professional reputation or the relationships of trust that they have established with their patients. Likewise, patients deserve to be treated in an environment that supports their agency and improves the quality of their experience, without being expected to make a special request. These goals are best promoted through the implementation of an opt-out policy for the use of chaperones. Therefore, the presence of chaperones should be standard during sensitive exams and procedures. In other situations, it is recommended that chaperones be made available for any examination requiring the patient to disrobe, or when the patient requests one. As such, patients must be informed that they are entitled to request a chaperone whenever they wish. Finally, physicians should honor all patients' preferences for a chaperone even when a trusted companion is present.

Use of Chaperone at Physician Request

There may be times when the physician would prefer to use a chaperone, but the patient declines. In these cases, ACOG suggests:

> "[It] should be explained that the chaperone is an integral part of the clinical team whose role includes assisting with the examination and protecting the patient and the physician. Any concerns the patient has regarding the presence of a chaperone should be elicited and addressed if feasible" [1].

Ideally, these conversations will be a process of joint decision-making between the patient and the physician. If the patient declines a chaperone when the physician determines having a chaperone present is clinically indicated, every effort should be made to accommodate the preferences of the patient, consistent with the requirements of patient safety, physician safety, and the maintenance of professional boundaries. Physicians should inquire about specific concerns the patient may have and suggest ways these might be addressed in a mutually acceptable manner. Physicians should engage the patient in a detailed discussion of how care might be provided in a way that maintains a comfortable and respectful environment before deciding that they cannot perform the exam or procedure. Ultimately, "if an unchaperoned examination is performed, the rationale for proceeding should be documented" [1]. As a last resort, if the patient and physician cannot come to an agreement, then the physician may defer the examination or procedure and refer the patient to another clinician. In this situation, patients should be provided with "reasonable assistance in making alternative arrangements" so they can receive care in a timely fashion (Opinion 1.1.3 "Patient Rights").

Use of Chaperone without Patient Consent in Exceptional Circumstances

In many situations, insisting on a chaperone when the patient declines may be a violation of their autonomy and therefore impermissible. However, in keeping with their best clinical and ethical judgment, physicians may nonetheless proceed with a chaperone in the following circumstances:

- When it is an emergency and failure to proceed rapidly would result in an immediate risk to the patient's life or long-term health, or
- In cases where the integrity of the patient-physician relationship is at risk, such as when a patient's behavior compromises (or has previously threatened) professional boundaries, or the physician has reason to believe such a boundary violation or other unsafe situation is likely to occur. [14]

Documentation of Patient Preference and Chaperone Use

Regardless of the chaperone policy normally implemented in a particular setting, the medical record should reflect the presence or absence of a chaperone for each examination [1,3,11]. The record should include whether the patient requested a chaperone explicitly or one was present as a matter of policy. Additionally, the record should state whether the patient received counseling on the purpose and importance of chaperones, and the name and gender of the chaperone. Note that there are range of acceptable practices for recording chaperone information; the extent of documentation, including what precise data to include, varies among medical specialties. Additionally, with regard to patients' preference for specific characteristics of a chaperone physicians should be mindful not to accede to discriminatory or disruptive patient demands. Disrespectful, derogatory, or prejudiced language or conduct, or prejudiced requests for accommodation of personal preferences on the part of either patients or physicians can undermine trust and compromise the integrity of the patient-physician relationship while also creating an "environment that strains relationships among patients, physicians, and the health care team." (Opinion 1.1.2 " Discrimination & Disruptive Behavior by Patients") Discriminatory requests should not normally be accommodated, and accommodation should only occur after careful weighing of the circumstances.

Pediatric & Adolescent Patients

Appropriate use of chaperones for pediatric and adolescent patient populations is distinct from adult patients because they have different needs and sensitivities. Normally, a parent or guardian may act as the chaperone for young pediatric patients (from newborns to age 11) [15]. In cases where a parent or guardian is unavailable or their presence would interfere with the examination (such as in cases of suspected abuse), another chaperone should be present [15]. Should a parent or guardian decline the physician's request that a chaperone be present in such situations, it may nevertheless be appropriate for the physician to insist for the sake of patient safety.

Addressing the needs of adolescent patients (age 12-17) is more complex. Since many adolescents are "preoccupied with their changing bodies, self-conscious about their appearance, and longing for increased privacy," any examination that requires them to remove their clothes could be distressing [12]. Physicians should not assume that their own definitions of a sensitive examination reflect the understanding of the individual teenage patient [16]. Research shows that 60-70 percent of female adolescents would like the option of a chaperone both for standard and for sensitive examinations. Only 21 percent indicated that they would ask for a chaperone if one was not offered, and substantially more female adolescents wanted a chaperone for sensitive examinations if they had a chaperone in the past [12].

Many adolescents want their parent to act as chaperone instead of a healthcare professional, although in general as their age increases their preference for a non-parent chaperone also increases [16]. Some adolescents did not wish to have chaperones, indicating that it would be more embarrassing, awkward, or uncomfortable to have an additional person in the room [11].

As such, when treating adolescents, the best policy is to explain the role of chaperone in detail and then solicit their preferences. It is also important to ask whether they wish to have their family member or guardian in the room, either in addition to, or instead of, the healthcare professional acting as chaperone. Since adolescents may not have prior experience with chaperones, it is probably not sufficient to have them fill out a form at intake. Instead, their options should be presented during a conversation (and their parent or guardian, if they wish to have them present) so a decision can be made together. Their preferences are also likely to change over time, so this conversation will need to be revisited.

As noted in Opinion 2.2.1 "Pediatric Decision Making," the "more mature a minor patient is […] the stronger the ethical obligation to seek minor patients' assent." This obligation extends to their assent for the presence of a chaperone, as well as their preferences for who the chaperone will be and the gender of the chaperone. In general, physicians and parents/guardians should respect a minor's refusal to assent to a chaperone (except under the conditions mentioned above when a physician may either insist or may decline to proceed with the examination).

Policies around the use of chaperones for adolescents are separate from issues of parental consent for treatment. Physicians should be aware that in some jurisdictions, "the law permits minors to receive confidential services relating to contraception, or to pregnancy testing, prenatal care and delivery services" or to prevent, diagnose, or treat sexually transmitted disease without parental consent and/or notification (Opinion 2.2.2 "Confidential Healthcare for Minors"). Once the legally required consent has been obtained, the minor patient's preferences concerning use of chaperones can be discussed [17].

Patients with Diminished or Lacking Decisional Capacity

It is widely agreed that patients who are unable to give informed consent should always have a chaperone present for sensitive examinations and procedures. These patients might be unconscious, sedated, or have cognitive impairments or severe mental illness [9,2,3]. When treating adult patients who lack capacity to consent, it is desirable to have a trusted companion, social worker, caregiver, or group home escort present alongside the chaperone, "to alleviate potential stress to the patient" [3]. It should be made clear that chaperones are mandatory in these circumstances.

Identifying & Informing Appropriate Chaperones

An authorized member of the health care team should serve as a chaperone and understand the responsibilities of the role. Broadly speaking, chaperones should be provided with information regarding:

- Expected components of the procedures they will be observing;
- Ways to ensure patient comfort during the examination or procedure;
- Appropriate gowning or draping for privacy;
- Suitable positioning in the room such that they can assess the nature of the contact between physician and patient;
- How to intervene or stop an examination or procedure if they are concerned that the patient is distressed or that inappropriate contact has occurred;
- Reporting mechanisms for concerns and non-compliance with established chaperone policy.

Chaperones may feel uncertain or hesitant about intervening during an examination or procedure, or about reporting misconduct. To establish expectations for the role of chaperones, institutions and practices should set policies for both physicians and chaperones in advance. They should also agree on methods of communication to signal patient distress or chaperone concerns while examinations or procedures are in progress [3].

Chaperones are responsible for upholding privacy and confidentiality. Since physicians are obligated to "seek to protect privacy in all settings to the greatest extent possible" opportunities should be provided for private conversation with the patient without the chaperone present. In addition, physicians should minimize inquiries or history taking during a chaperoned examination or procedure. If a patient shares information with the chaperone that is relevant to patient care but requests that this not be disclosed to the physician, the chaperone should make it clear that they cannot maintain confidentiality when this would endanger the health of the patient. The chaperone may also encourage the patient to either raise the issue with the physician themselves or obtain permission from the patient to communicate the information to the physician separately.

Chaperones must be made aware of appropriate mechanisms for reporting unprofessional conduct in keeping with ethics guidance and without fear of retaliation. As far as possible, lines of authority in the reporting process should be removed from the immediate employment and clinical supervisory hierarchy of the reporter [3]. Multiple pathways for patient reporting should be established, including an anonymous option, and this information should be communicated clearly to patients. When a patient reports a concern about misconduct, this must not adversely affect their care.

Expert consensus is that individuals for whom patient care is not a routine part of their ordinary duties (such as front desk or office support staff) should not function as chaperones [1,17]. It may be appropriate for medical students, residents, and fellows to perform the duties of chaperone, provided that special attention is paid to how these duties may be impacted by the power imbalance inherent in the trainee-supervisor relationship. Trainees should be provided with information about their role serving as a chaperone, sufficient knowledge about the procedure or interaction they will be observing, and how to report any concerns without repercussions, fear of retaliation, or other professional disadvantages. The standard approach is to have healthcare staff such as nurses, medical assistants or physician assistants act as chaperones, provided they are fully trained in the responsibilities of the role. Occupying a dual role as chaperone and member of the care team is acceptable when the two sets of responsibilities do not conflict and are well understood by everyone involved. “Parents and other untrained individuals” should not act as chaperones, except in the case of young children, as discussed above [3,17].

Concerns may arise regarding the additional resources needed to implement current best practices for the use of chaperones. In particular, physicians may be concerned that these resources will be diverted away from patient care. However, it has been established that “most patients regard the offer of a chaperone as a sign of respect,” and further, that physician misconduct has significant detrimental effects on patient well-being, the patient-physician relationship, and the integrity of the profession as a whole [1,10]. In light of these considerations, the fact of limited resources or additional costs does not justify the failure to regularly employ chaperones for sensitive examinations and procedures, and/or to make them available in other situations at the patient’s request.

CONCLUSION

Policies surrounding the appropriate use of chaperones for sensitive examinations and procedures have evolved in recent years. New standards specify that use of chaperones should be standard for all sensitive exams and procedures and that chaperones should be made available in all situations when the patient requests one. Use of chaperones should not be influenced by the gender of the physician or patient. Chaperones should receive information regarding the responsibilities of their role, and patient preferences concerning chaperones should be documented. Reporting mechanisms that do not expose chaperones to retaliation must also be established in order for the new standards to serve the purpose of protecting both the physician and the patient.

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends that alternate Opinion 1.2.4 be adopted in lieu of Opinion 1.2.4 and the remainder of the report be filed:

> Conducting sensitive examinations in an ethically and clinically sound manner requires physicians to be responsive to both the distinctive characteristics of the individual patient and to the professional boundaries of the patient-physician relationship. While a sensitive exam is typically understood as one involving any examination of, or procedure involving, the genitalia, breasts, perianal region or the rectum, physicians should be aware that a patient’s personal history, beliefs or identity may broaden their definition of what constitutes a sensitive examination or procedure. Respecting patient boundaries and promoting patient dignity requires providing a safe and therapeutic clinical encounter during sensitive exams while also empowering patients. Such efforts include measures that promote patient privacy, such as providing appropriate gowns, private facilities for undressing, sensitive use of draping, and clearly explaining various components of the physical examination. They may also include the

use of chaperones regardless of the gender of the physician or patient. Having chaperones present can help protect the integrity of the patient-physician relationship. Physicians should, as always, also be mindful of any applicable legal or regulatory requirements regarding the use of chaperones. A fair and effective policy on the use of chaperones must balance: (1) respect for patient preferences and the integrity and safety of the clinical encounter; (2) protection of physicians; and (3) boundaries of the patient-physician relationship.

Physicians should:

(a) Provide a chaperone for all sensitive exams, with an option for patients to decline if they wish, unless the delay in obtaining a chaperone would result in significant harm to the patient. For all other types of examinations and procedures, patients must be informed that they are entitled to request a chaperone, and one should be made available when they make such a request. Physicians should honor patients' request for a chaperone, even if a patient's trusted companion is present.

(b) Provide an opportunity for private conversation with the patient without the chaperone present and minimize inquiries or history taking during a chaperoned examination or procedure.

(c) Make every effort to accommodate the preferences of the patient, consistent with the interests of patients, physicians and the maintenance of professional boundaries. If the patient and physician cannot arrive at a mutually acceptable arrangement, then the physician may facilitate transfer of care.

(d) Always use a chaperone for sensitive exams if the patient lacks the capacity to consent at the time of care, unless the delay in obtaining a chaperone would result in significant harm to the patient.

(e) Allow a parent or guardian to act as the chaperone for young pediatric patients. If a parent or guardian is unavailable, or their presence may interfere with the examination, another chaperone should be present. For adolescent patients, it is appropriate to use a chaperone either in addition to, or instead of, a family member or guardian as determined during shared decision making between patient and physician.

(f) Have an authorized member of the health care team act as a chaperone. All chaperones should be provided with information and understand the responsibilities of the role. Chaperones should be made aware of mechanisms for reporting unprofessional conduct in keeping with ethics guidance and without fear of retaliation. Physicians should establish clear expectations that chaperones will uphold professional and legal standards of privacy and confidentiality.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 08-A-25

Subject:	Laying the First Steps Towards a Transition to a Financial and Citizenship Need Blinded Model for Organ Procurement and Transplantation
Presented by:	Jeremy A. Lazarus, MD, Chair
Referred to:	Reference Committee on Ethics and Bylaws

Policy H-370.954 was adopted at A-23 and asks that the Council on Ethical and Judicial Affairs (CEJA) consider amending Opinion 6.2.1, "Organ Transplantation from Deceased Donors," to address concerns regarding immigration status and access to donated organs.

BACKGROUND

Resolution 003-A-23 noted the profound disparities that exist in the United States between undocumented immigrants versus documented immigrants and citizens access to organ transplantation. For example, United Network of Organ Sharing (UNOS) data reveals that only 0.4 percent of liver transplants in the U.S. went to undocumented immigrants, while undocumented immigrants accounted for up to 3 percent of the total deceased liver organ donors in the U.S. [1].

AMA's ethical criteria for organ allocation were set out in a 1993 CEJA report on organ transplantation [2}. Ethical criteria for scarce resource allocation include the likelihood of benefit, change in quality of life, duration of benefit, urgency of need, and the amount of resources required for successful treatment. These criteria must be weighed in a complex analysis that takes into account all these criteria together.

Likelihood of benefit is aimed to "maximize the number of lives saved as well as the length and quality of life" [2]. Change in quality of life is a criterion that one maximizes benefit "if treatment is provided to those who will have the greatest improvement in quality of life", however defining what constitutes "quality of life" is difficult as it will "depend greatly on patients' individual, subjective values" [2]. Duration of benefit can be thought of as the length of time a patient can benefit from a treatment, which often will involve a calculus of life expectancy to be part of analysis; however, life expectancy is not always a determinative factor when making allocation decisions [2]. Urgency of need "prioritizes patients according to how long they can survive without treatment" [2]. The amount of resources gives higher priority to "patients who will need less of a scarce resource" in order to maximize the number of lives saved [2]. Resources in this context does not mean a patient's finances, but rather scarce medical resources like an organ, e.g. a patient who requires two organ transplants may be lower priority than someone who only needs one [2].

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

ETHICAL ISSUE

To what extent may non-medical factors such as immigration and/or socioeconomic status be considered in organ transplantation allocation decisions.

REVIEW OF RELEVANT LITERATURE

The ethical problem regarding "fairness" has been well documented, as undocumented immigrants "are able to, and do donate their organs, but they are effectively barred from receiving transplants" [3] or, after receiving transplants, may not have the proper resources down the line to receive continued therapies like immunosuppressive medications [4]. The Organ Procurement and Transplantation Network (OPTN) declares that "residency status cannot factor into decisions on whether to allocate an organ to a specific patient" [5]. The OPTN policy states: "A candidate's citizenship or residency status in the United States must not be considered when allocating deceased donor organs to candidates for transplantation. Allocation of deceased donor organs must not be influenced positively or negatively by political influence, national origin, ethnicity, race, sex, religion, or financial status" [6]. While OPTN's policy strives to achieve equity, the practical reality is that financial and socioeconomic considerations are indirectly weighed, as insurance coverage is usually needed for pre-and post-opt care.

Despite the perception that immigration status may affect health status, "unauthorized immigrants who receive liver transplants in the United States have comparable three-year survival rates to the U.S. citizens", indicating that survival outcomes are not drastically different for undocumented immigrants and that "concern for worse survival should not be used as a reason to deny access to liver transplant" [7]. Additionally, a cardiothoracic transplant study in the U.S. found that citizenship status was not relevant in determining transplant outcomes, noting that "citizenship status does not appear to be an independent determinate of early post-transplant outcomes", reinforcing that immigration status by itself is not a medically relevant characteristic in determining likely success of organ transplantation [8].

Lack of insurance is often the largest obstacle for undocumented immigrants seeking organ donation. Many undocumented immigrants who would otherwise be good candidates for an organ transplant do not have insurance to cover the surgical procedure or the long-term after care, and as a result are removed or not allowed on transplant wait lists [9]. Other practices, such as hospitals asking patients for Social Security numbers while making transplant eligibility assessment—though there is "no legal requirement to do"—also exclude undocumented immigrants from transplant eligibility, further contributing to disparities [10].

ETHICAL ANALYSIS

Numerous factors are involved in the allocation of organs and scarce resources and are all aimed at maximizing the "good", i.e. "number of lives saved, number of years of life saved, and improvement in quality of life" [2]. Opinion 11.1.3, "Allocating Limited Health Care Resources" addresses these criteria. The 1995 CEJA opinion on organ transplantation states that both social worth and ability to pay are not ethically justified criteria to make decisions on how to allocate scarce resources. Additionally, the ethical concerns raised by Res 003 are valid, in that immigrant status itself is being used as an indicator of financial status or socioeconomic status. However, the key aspects associated with the disparities of immigration status, "social worth" and "ability to pay", are both already addressed by H-370.982.

Not all undocumented immigrants have lower economic status. Some immigrants (undocumented or otherwise) may have strong financial means, e.g. wealthy foreign immigrants who travel the U.S. for medical care. Hence, specifically calling out "immigration status" or "undocumented status" is not ideal, as the term is not precise and does not always imply an individual without proper insurance or financial means or a person with lower socioeconomic status.

As previously discussed, it is impossible to truly separate medically relevant and non-medically relevant criteria in the context of organ donation. The *Code's* broader approach to generally avoid lists of specific examples of non-clinical characteristics allows physicians to make their own analysis about what is and is not clinically relevant in specific cases. There is clearly an apparent disparity between those who donate organs and those who receive them and we continue to have disparities in outcomes due to socioeconomic status. While finances and ability to pay are by themselves not medically relevant and in an ideal sense, should not be ethically considered, they often must be considered in the context of organ transplantation eligibility because they can affect the patient's ability to obtain the necessary resources or participate adequately in regiments to ensure the long-term viability of the transplant thus, becoming medically relevant; however, when these non-medical factors are not clinically relevant should not be considered. The result is an ethical tension that is effectively paradoxical. Leaving the paradox outside of the policy allows for more fluidity in interpretation of the *Code* in any context.

RECOMMENDATION

In consideration of the foregoing, the Council on Ethical and Judicial Affairs recommends that the following be adopted and the remainder of the report be filed:

When making organ transplantation allocation decisions, physicians have a responsibility to provide equitable and just access to health care, including only utilizing organ allocation protocols that are based on ethically sound and clinically relevant criteria.

When making allocation decisions for organ transplantation, physicians should not consider non-medical factors, such as socioeconomic and/or immigration status, except to the extent that they are clinically relevant.

Given the lifesaving potential of organ transplants, as a profession, physicians should:

(a) Make efforts to increase the supply of organs for transplantation.

(b) Strive to reduce and overcome non-clinical barriers to transplantation access.

(c) Advocate for health care entities to provide greater and more equitable access to organ transplants for all who could benefit.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 09-A-25

Subject: Ethical Impetus for Research in Pregnant and Lactating Individuals

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Policy D-140.949, "Ethical Impetus for Research in Pregnant and Lactating Individuals," was adopted at the 2024 Annual Meeting and asks "that our Council on Ethical and Judicial Affairs (CEJA) consider updating its ethical guidance on research in pregnant and lactating individuals."

BACKGROUND

More than four million individuals give birth in the United States every year [1] and 70 percent of these individuals will require at least one prescription medication while pregnant [2]. Despite the widespread use of medications during pregnancy, most information about the efficacy and safety of medication used during pregnancy comes from the post-marketing setting and is not derived from clinical research trials [3].

Only a dozen medications have been approved by the United States Food and Drug Administration (FDA) for use during pregnancy, and those medications are for gestation- or birth-related medical issues [4]. Therefore, any medications utilized to treat chronic health conditions in pregnancy are used without FDA approval ("off label"). Only 2.4 percent of those commonly used medications for chronic health conditions have included pregnant individuals in controlled human clinical trials. The lack of clinical trial data is a result of the historical exclusion of pregnant and lactating individuals from clinical trials. Exclusion of pregnant and lactating individuals from clinical trials has often occurred due to the fear of harming the fetus or newborn, as well as concern that physiologic changes in pregnancy or during lactation will impact the results of pharmacologic trials [3,5]. The effect of this exclusion is that physicians and patients are forced to make decisions about whether to utilize medications during pregnancy without adequate fetal and maternal safety data [6].

ETHICAL ISSUES

Pregnant and lactating individuals have been systematically excluded from clinical trials for decades out of concern for negative effects on fetuses and nursing infants. This exclusion has resulted in a paucity of evidence regarding safe and effective medication use in these groups of individuals. Due to the existing knowledge gaps surrounding the use of medications during pregnancy and breastfeeding, physicians and patients are faced with making treatment decisions without appropriately understanding the potential benefits and risks to both the pregnant individual

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

© 2025 American Medical Association. All rights reserved.

and their fetuses or nursing infant. Additionally, these knowledge gaps prevent physicians from being able to appropriately counsel pregnant patients regarding the risks, benefits, and alternatives of treatments. At issue is how to balance respect for pregnant and lactating individuals with the potential benefits and harms of research.

REVIEW OF RELEVANT LITERATURE

Pregnant and lactating individuals have historically been considered "vulnerable" and subjected to additional research protections and exclusion from research [7]. This problem is known as the "protection-inclusion dilemma", whereby groups deemed "vulnerable" are "over-protected" and excluded from research, leading to justice issues including a "lack of relevant health data for under-represented populations" [8]. The consequence of the protection-inclusion dilemma is that most of the medications pregnant individuals are prescribed are not FDA approved for pregnancy. This is problematic because while "there are significant physiologic changes in pregnancy, including near doubling of maternal blood volume and alterations in binding proteins, the pharmacokinetics [PK] and efficacy of drugs in pregnancy are, by and large, unknown" [7]. This uncertainty for prescribers results in dosages labelled for use in nonpregnant individuals being used for pregnant individuals, "with little consideration for the PK changes that occur during pregnancy" [9].

Although the negative effects of excluding pregnant and lactating individuals in clinical trials have been noted for years, little has been done in that time to address the significant knowledge gaps in research that remain. For example, many Institutional Review Boards (IRB) "continue to regard pregnancy as a near-automatic cause for exclusion, regardless of the costs of exclusion or the magnitude or likelihood of the risks of participation," and the lack of research data leads to persistent disparities for chronic disease managements among pregnant individuals [5].

Relevant Laws

The FDA has several relevant regulations. 45 CFR 46, Subpart B "Additional Protections for Pregnant Women, Human Fetuses and Neonates Involved in Research", provides regulations regarding research involving pregnant individuals. 45 CFR §46.204 – "Research involving pregnant women or fetuses" states that:

> Pregnant women or fetuses may be involved in research if all of the following conditions are met:
> (b) The risk to the fetus is caused solely by interventions or procedures that hold out the prospect of direct benefit for the woman or the fetus; or, if there is no such prospect of benefit, the risk to the fetus is not greater than minimal and the purpose of the research is the development of important biomedical knowledge which cannot be obtained by any other means [10].

Additionally, as of January 21, 2019, the Common Rule no longer labels pregnant individuals as "vulnerable" with regards to IRBs. This is because while pregnant individuals have historically been deemed vulnerable, it has since been recognized that while some individuals who are pregnant may be vulnerable, being pregnant in and of itself does not automatically denote vulnerability [11].

Relevant Code Provision(s)

The *Code of Medical Ethics* encourages the inclusion of pregnant individuals in clinical trials, when appropriate, so long as the research "balance[s] the health and safety of the woman who participates and the well-being of the fetus with the desire to develop new and innovative

therapies" (Opinion 7.3.4). However, the *Code* also places constraints on physicians involved in maternal-fetal research, advising that they should "[e]nroll a pregnant woman in maternal-fetal research only when there is no simpler, safer intervention available to promote the well-being of the woman or fetus" (Opinion 7.3.4).

ETHICAL ANALYSIS

A multitude of historical, legal, scientific, and societal factors have resulted in the exclusion of pregnant and lactating individuals from clinical trials for decades. However, the ethical principle of justice necessitates that the benefits and burdens of research participation be fairly distributed across all groups, including pregnant and lactating individuals, because failure to do so produces disparities that impact both safety and quality of care for pregnant and lactating individuals, fetuses, and nursing infants.

Concerns for fetal safety have served as the primary justification for the exclusion of pregnant individuals from clinical trials for decades, but this exclusion has paradoxically resulted in substantial maternal and fetal harm. Because information about toxicity and dosing for pregnant and lactating individuals has not been determined through smaller scale and well-controlled clinical trials for most medications, far more pregnant and lactating individuals who require medications for chronic medical conditions are being exposed to potentially harmful medications via "off label" uses.

Examples of this harm can be seen in the historical use of thalidomide and diethylstilbestrol in pregnant individuals. While the tragic consequences of their use have been cited as reasons to exclude pregnant individuals from clinical trials, it was actually the lack of controlled data from clinical trials that caused such widespread detrimental effects due to the teratogenic effects of these drugs not being examined until post-marketing surveillance data was available. Had smaller scale and better controlled clinical trials been conducted, mass marketing and exposure to these medications for pregnant individuals may have been avoided because the teratogenic effects would have been discovered during trials [12]. Another example is that of ACE inhibitors, which were used in pregnant individuals for three decades prior to the 1996 discovery that its use in the first trimester can cause congenital anomalies [5]. Had it been studied more rigorously through smaller scale clinical trials with individuals consenting to the risks of participating in research, this discovery may have been made much sooner and far fewer individuals would have been exposed to this drug in the first trimester without knowing the risks of doing so.

Historically, concern for pregnant individuals and fetuses has centered on defining this population as "vulnerable", thus needing broad shielding from risks, such as medical research. Such an approach to research practices has been deemed "overly paternalistic, disempowering, or coercive" [13]. Pregnant and lactating individuals are not automatically vulnerable, and this approach does not respect their autonomy to assess the benefits and risks of participation for themselves and their fetuses or newborns [14]. Pregnant and lactating individuals should always be provided the opportunity to decide whether research participation is in their best interest through informed consent. If pregnant or lactating individuals are unable to be included in research, alternative ways to rectify any gap in knowledge should be developed. For example, pregnant and lactating individuals should be instructed on how to participate in research registries and adverse event reporting programs.

CONCLUSION

The historical exclusion of pregnant and lactating individuals from clinical trials has resulted in a lack of data about the appropriate safety, dosage, and efficacy of most medications in this group. This knowledge gap has created an ethical imperative to include more pregnant and lactating individuals in clinical trials. While consideration of maternal, fetal, and nursing infant well-being should be important criteria included in guidelines for research, wholesale exclusion of pregnant and lactating individuals from clinical trials comes with its own risk to fetal and maternal safety. Theoretical risks for fetal harm should not automatically be assumed to outweigh potential risks of ongoing nonparticipation. Currently, the *Code* does not reference this disparity. Nor does it refer to lactating individuals. It also does not contain gender neutral language, i.e. it references women and not individuals.

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends that the following be adopted and the remainder of this report be filed:

Research involving pregnant and lactating individuals, including but not limited to, research regarding interventions intended to benefit pregnant or lactating individuals and/or their fetuses or nursing infants, must balance the health and safety of individuals who participate and the well-being of their fetuses or nursing infant against the desire to develop new and innovative therapies. Although it is important to carefully consider potential fetal risks involved when pregnant and lactating individuals participate in research, it is critical to realize that large scale exclusion from participation by these individuals has also precluded potential benefits and in some cases resulted in harm for this group. The paucity of data on safe and effective medical treatment during pregnancy and breastfeeding has resulted in physicians and patients choosing between pursuing medical interventions with uncertain risks to themselves and their fetuses or nursing infants, or foregoing the interventions altogether, which might itself cause harm due to undertreatment of medical conditions.

Understanding both the potential risks of participation and of non-participation, physicians conducting research should adhere to general principles for the ethical conduct of research, and should:

(a) Include pregnant and lactating individuals in research, unless there is a significant clinical reason not to, in order to establish a greater knowledge base, produce relevant data, and promote respect for individuals.

(b) Obtain the informed, voluntary consent of the pregnant or lactating individual, as in all human participant's research.

(c) Where scientifically appropriate, base studies on well-designed, ethically sound research with animals and nongravid human participants that has been carried out prior to conducting research on pregnant and lactating individuals to better assess potential risks.

(d) Plan alternative ways to rectify any gap in knowledge, when it is not possible to enroll pregnant or lactating individuals in research.

(e) Ensure risks to the fetus or nursing infants are not greater than minimal, especially when the intervention under study is not intended primarily to benefit the fetus or infant, but

rather for the development of important biomedical knowledge that cannot be obtained by any other means.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

CEJA Report 10-A-25

Subject: The Preservation of the Primary Care Relationship

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Policy D-140.948, "The Preservation of the Primary Care Relationship," was adopted at the 2024 Annual Meeting. Item two of this policy asks:

> Our AMA requests the Council on Ethical and Judicial Affairs review the ethical implications of health systems requiring patients to change to primary care clinicians employed by their system to access specialists.

This report is in fulfillment of this directive.

BACKGROUND

There are concerns that some large health systems are restricting access to specialty care unless patients first change their primary care physician to one employed by their system, resulting in the disruption of well-established patient-physician relationships and continuity of care. This could be particularly challenging for patients whose insurance or socioeconomic status prevents them from changing their primary care physician (PCP). For instance, community health clinics/centers (CHCs), a core health-safety net for many in the US that provides primary care to anyone who walks through their doors, already suffer from limited access to specialty care, and requiring CHC patients to find a new PCP in order to receive specialty care, which can already be challenging to obtain, might not always be possible [1].

Finding a new PCP can also be a challenge in and of itself, as the US is experiencing a shortage of PCPs. An estimated 83 million Americans live in areas with insufficient access to primary care, and it is projected that by 2036, the US will face a shortage of over 68,000 primary care physicians [2,3]. Placing this burden on patients who are actively seeking needed care could easily and needlessly delay their care and lead to a break in the continuity of their care. Proponents argue that having physicians in the same network could improve coordinated care. Conversely, maintaining current PCPs while simply working to improve communication could effectively uphold continuity of care while also supporting coordination. This may be especially important in rural areas.

Relevant AMA Policy

Our American Medical Association (AMA) has several relevant House policies, including D-140.948, "The Preservation of the Primary Care Relationship," which states: "(1) Our American Medical Association opposes health systems requiring patients to switch to primary care physicians within a health system in order to access specialty care. […] (3) Our AMA advocates for policies that promote patient choice, ensure continuity of care, and uphold the sanctity of the patient-physician relationship, irrespective of healthcare system pressures or economic incentives."

© 2025 American Medical Association. All rights reserved.

H-160.901, "Preservation of Physician-Patient Relationships and Promotion of Continuity of Patient Care," states: "Our AMA supports: (1) policies that encourage the freedom of patients to choose the health care delivery system that best suits their needs and provides them with a choice of physicians; (2) the freedom of choice of physicians to refer their patients to the physician practice or hospital that they think is most able to provide the best medical care when appropriate care is not available within a limited network of providers; and (3) policies that encourage patients to return to their established primary care provider after emergency department visits, hospitalization or specialty consultation."

And H-285.944, "Disease Management and Demand Management," states: "The AMA strongly encourages health insurance plans and managed care organizations that provide disease management to involve the patient's current primary or principal care physician in the disease management process as much as possible, and to minimize arrangements that may impair the continuity of a patient's care across different settings."

Relevant Code *Opinions*

The AMA *Code of Medical Ethics* also has several relevant Opinions that support the preservation of primary care relationships and patient-physician relationships more broadly. These include Opinion 1.1.1, "Patient-Physician Relationships," which states, ""[t]he relationship between a patient and a physician is based on trust, which gives rise to physicians' ethical responsibility to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare"; Opinion 1.1.3, "Patient Rights," which states that patients' rights include "courtesy, respect, dignity, and timely, responsive attention to his or her needs" as well as a right "[t]o continuity of care"; and Opinion 1.1.6, "Quality," which states, "physicians individually and collectively share the obligation to ensure that the care patients receive is safe, effective, patient centered, timely, efficient, and equitable." Together, these opinions articulate physicians' obligations to prioritize patients' welfare and highlight the ethical importance of providing care that is timely, equitable, and continuous.

Also of note, Opinion 11.2.3, "Contracts to Deliver Health Care Services," states that physicians "should be mindful that while many arrangements have the potential to promote desired improvements in care, some arrangements also have the potential to impede patients' interests." Relatedly, Opinion 11.2.1 "Professionalism in Health Care Systems," states that physicians in leadership positions within health care organizations should ensure that financial incentives and other tools "do not disadvantage identifiable populations of patients or physicians or exacerbate health care disparities;" Opinion 11.3.1 "Fees for Medical Services," states that physicians should not charge unnecessary fees "or fees solely to facilitate hospital admission"; and Opinion 11.3.4 "Fee Splitting" states that a fee solely for referral of a patient is unethical.

ETHICS ISSUE

Does requiring patients to switch to primary care physicians within a health system in order to access specialty care violate professional ethical obligations, such as continuity of care, and/or negatively impact the patient-physician relationship by violating the trust that is the foundation of the relationship and source of professional privilege for the practice of medicine?

ETHICAL ANALYSIS

Requiring patients to switch PCPs in order to access specialty care raises several ethical concerns regarding potential wrongs and harms that such requirements may cause. Principal among these

concerns is that such requirements represent an undue barrier to care, that such barriers violate the trust fundamental to the patient-physician relationship, and ultimately undermine public trust in and respect for the practice of medicine.

The AMA *Code of Medical Ethics* is very clear that patients have a right to timely care that is responsive to their needs as well as to continuity of care (Opinion 1.1.3). Respect for these rights by the medical profession is what enables patients to trust that the obligations of the patient-physician relationship will be upheld. Timeliness is also a fundamental aspect of quality care (Opinion 1.1.6). Requiring patients to change PCPs in order to receive needed care could violate these ethical obligations.

Furthermore, such requirements raise concerns regarding issues of equity. If the patient populations of various insurance plans differ, such as those between Health Maintenance Organizations (HMOs) and Preferred Provider Organizations (PPOs), it is likely that requirements regarding changing PCPs to access specialty care will have stronger impacts on certain patient populations than others. For example, compared to PPOs, HMO patient populations tend to be younger, with higher rates of Black and Hispanic patients [4]. Additionally, because HMOs are generally less costly than PPOs, they are likely to attract more people of lower socioeconomic backgrounds[5]. The *Code* is explicit in its insistence that all financial incentives and tools should be implemented fairly and in ways that do not disadvantage identifiable patient populations (Opinion 11.2.1).

CONCLUSION

As outlined in policy D-140.948, "The Preservation of the Primary Care Relationship," our AMA opposes the practice of "health systems requiring patients to switch to primary care physicians within a health system in order to access specialty care." This policy stems from the 2024 Annual Meeting Resolution 014, "The Preservation of the Primary Care Relationship," the second resolve of which asked your Council on Ethical and Judicial Affairs (CEJA) to "review the ethical implications of health systems requiring patients to change to primary care clinicians employed by their system to access specialists". This report is in fulfillment of the second resolve.

After review, CEJA has found that the AMA *Code of Medical Ethics* has several relevant Opinions that support the preservation of primary care relationships. These include Opinion 1.1.1, "Patient-Physician Relationships," Opinion 1.1.3, "Patient Rights," Opinion 1.1.6, "Quality," Opinion 11.2.3, "Contracts to Deliver Health Care Services," Opinion 11.2.1 "Professionalism in Health Care Systems," and Opinion 11.3.1 "Fees for Medical Services."
Existing Ethics and House policy are clear that the choice of who to see should be between patients and physicians. Such decisions should be based on the best interest of the patient. Policies that influence these decisions should be in accordance with physicians' professional and ethical obligations, and should support patient choice, continuity of care, equity, and the patient-physician relationship. Any practices that may compromise the patient-physician relationship should be closely examined with attention to these considerations. The *Code* opposes any practices that threaten to undermine patient-physician relationships.

RECOMMENDATION

The Council on Ethical and Judicial affairs recommends that Policy D-140.948(2) be rescinded as having been accomplished by this report.

Fiscal Note: Less than $500

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 11-A-25

Subject: CEJA's Sunset Review of 2015 House Policies

Presented by: Jeremy Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. This policy reads as follows, laying out the parameters for review and specifying the needed procedures:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as

* Reports of the Council on Ethical and Judicial Affairs are assigned to the reference committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends that the House of Delegates policies that are listed in the Appendix to this report be acted upon in the manner indicated and the remainder of this report be filed. (Directive to Take Action)

Fiscal Note: Less than $500.

APPENDIX – RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
H-295.877	Medical Treatment of Prisoners of War and Detainees	Our AMA encourages medical schools to include ethics training on the issue of medical treatment of prisoners of war and detainees.	Retain; remains relevant.
H-295.961	Medicolegal, Political, Ethical and Economic Medical School Course	(1) The AMA urge every medical school and residency program to teach the legal, political, ethical and economic issues which will affect physicians. (2) The AMA will work with state and county medical societies to identify and provide speakers, information sources, etc., to assist with the courses. (3) An assessment of professional and ethical behavior, such as exemplified in the AMA Principles of Medical Ethics, should be included in internal evaluations during medical school and residency training, and also in evaluations utilized for licensure and certification. (4) The Speaker of the HOD shall determine the most appropriate way for assembled physicians at the opening sessions of the AMA House of Delegates Annual and Interim Meetings to renew their commitment to the standards of conduct which define the essentials of honorable behavior for the physician, by reaffirming or reciting the seven Principles of Medical Ethics which constitute current AMA policy. (5) There should be attention to subject matter related to ethics and to the doctor-patient relationship at all levels of medical education: undergraduate, graduate, and continuing. Role modeling should be a key element in helping medical students and resident physicians to develop and maintain professionalism and high ethical standards. (6) There should be exploration of the feasibility of improving an assessment of ethical qualities in the admissions process to medical school. (7) Our AMA pledges support to the concept that professional attitudes, values, and behaviors should form an integral part of medical education across the continuum of undergraduate, graduate, and continuing medical education.	Retain; remains relevant.
H-410.987	Practice Parameters - Their Relevance to Physician Credentialing	1. The term practice guidelines should be used to refer to strategies for patient management that are designed to assist physicians in clinical decision-making. The terms should not be used to refer to the criteria for professional training, skills and experience utilized in the granting of general or procedure-specific clinical privileges.	Retain; remains relevant.

		2. The documentation of adherence to, or intent to practice within, relevant practice guidelines should not be used as an additional criterion for the granting of general or procedure-specific clinical privileges unless and until a relationship between adherence to such practice guidelines and desired patient outcomes is adequately documented. 3. Practice guidelines developed by a particular medical specialty or specialties should not preclude the performance of the procedures or treatments addressed in that practice guideline by physicians not formally credentialed in that specialty or specialties. Individual character, training, competence, experience, and judgment should continue to be the criteria for granting general or procedure-specific clinical privileges.	
H-450.973	Outcomes Research	1. It is the policy of the AMA to (a) continue to promote outcomes research as an effective mechanism to improve the quality of medical care, (b) urge that the results of outcomes research be used for educational purposes and not as part of punitive processes, (c) promote the use of outcomes research in the development of practice parameters, (d) advocate that findings of outcomes research which identify individual physicians should only be disclosed within formal peer review processes, and (e) monitor outcomes research activities of the federal government, research organizations, and others. 2. The AMA urges state medical societies, national medical specialty societies, hospital medical staffs, and individual physicians to (a) assist organizations in the planning, development, implementation, and evaluation of appropriate outcomes research, (b) identify the significance and limitations of the findings of outcomes research, and (c) ensure that outcomes research is conducted in a manner that protects the confidentiality of patients and physicians. 3. The AMA urges organizations conducting or planning to conduct outcomes research to (a) ensure the accuracy of the data used in outcomes research, (b) include relevant physician organizations and practicing physicians in all phases of outcomes research, including the planning, development, implementation, and evaluation of outcomes research, (c) provide physician organizations and practicing physicians with adequate opportunity to review and comment on interpretations of the results of	Retain; remains relevant.

		outcomes research, and (d) ensure that outcomes research is conducted in a manner that maintains patient and physician confidentiality.	
H-460.898	Principles of Human Subjects Research Shall Apply to Online Medical Research Projects	Our American Medical Association declares social media sites' terms of service as an insufficient proxy for informed consent prior to being enrolled in any medical experiment and recommends that online social networks provide users with specific informed consent outlining the aims, risks and possible benefits of any medical experimental study prior to study enrollment.	Retain; remains relevant.
H-65.993	Abuse of Medicine for Political Purposes	The AMA opposes the use of the practice of medicine to suppress political dissent wherever it may occur.	Retain; remains relevant.
H-85.952	Advance Directives During Pregnancy	1. Our AMA vigorously affirms the patient-physician relationship as the appropriate locus of decision making and the independence and integrity of that relationship. 2. Our AMA will promote awareness and understanding of the ethical responsibilities of physicians with respect to advance care planning, the use of advance directives, and surrogate decision making, regardless of gender or pregnancy status, set out in the Code of Medical Ethics. 3. Our AMA recognizes that there may be extenuating circumstances which may benefit from institutional ethics committee review, or review by another body where appropriate.	Retain; remains relevant.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS[1]

CEJA Report 13-A-25

Subject: Presumed Consent & Mandated Choice for Organs from Deceased Donors

Presented by: Jeremy A. Lazarus, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Resolution 017-A-24, "Addressing the Historical Injustices of Anatomical Specimen Use," Resolve 7, asks that our AMA amend Opinion 6.1.4 "Presumed Consent & Mandated Choice for Organs from Deceased Donors" as follows:

> Physicians who propose to develop or participate in pilot studies of presumed consent or mandated choice should ensure that the study adheres to the following guidelines:
>
> (a) Is scientifically well designed and defines clear, measurable outcomes in a written protocol.
>
> (b) Has been developed in consultation with the population among whom it is to be carried out.
>
> (c) Has been reviewed and approved by an appropriate oversight body and is carried out in keeping with guidelines for ethical research.
>
> ~~Unless there are data that suggest a positive effect on donation, n~~ Neither presumed consent nor mandated choice for cadaveric organ donation should be widely implemented.

BACKGROUND

Increased organ donation from deceased donors results in lives saved, as one deceased organ donor can save up to eight lives through organ transplantation and improve the lives of up to 75 persons through tissue donation [1]. Although organ donation upholds utilitarian ethical principles, many deceased persons (prior to death) and their families as their surrogates (after death) choose not to donate. The most common reasons cited for choosing not to donate organs include mistrust of doctors, hospitals, and the organ allocation system as well as fears that the deceased persons organs will be sold on a black market or go to someone who does not deserve the organ (i.e. someone who brought on their own illness or is a "bad person") [2]. The widespread mistrust and fear associated with organ donation results in 17 people in the US dying every day while on the waiting list for an organ transplant [1].

Our AMA policy, including the *Code of Medical Ethics*, supports increasing the organ supply (Opinion 6.1.2) and promoting organ donation awareness (D-370.997) while also recognizing the

[*1] Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

© 2025 American Medical Association. All rights reserved.

need to "continue to monitor ethical issues related to organ transplantation" (H-370.967). Obtaining consent for organ donation, while an ethical imperative, may present a barrier to increasing organ supply (Opinion 6.1.2). There are three common methods of obtaining consent employed to facilitate organ donation including: 1) voluntary consent; 2) mandated choice; and 3) presumed consent. Although the voluntary consent model is traditionally used in the US and supported by *Code* guidance, our AMA has policy which supports "studies that evaluate the effectiveness of mandated choice and presumed consent models for increasing organ donation" (H-370.959). Additionally, the *Code* provides guidance for physicians who propose to develop or participate in pilot studies of presumed consent and mandated choice (Opinion 6.1.4).

ETHICAL ISSUE

Resolution 017-A-24, Resolve 7 proposes striking the phrase "unless there are data that suggest a positive effect on donation . . ." from the guidance regarding the use of presumed consent and mandated choice models for organ donation as outlined in *Code* Opinion 6.1.4. Removal of this phrase would remove a caveat which provides an opportunity for implementing presumed consent or mandated choice when data suggest a positive effect on donation. This ethical analysis weighs the benefits and burdens of adopting a more restrictive informed consent model for organ donation.

ETHICAL ANALYSIS

The *Code of Medical Ethics* requires that informed consent be obtained from the patient or their surrogate prior to organ donation. Among the three methods of informed consent for organ donation (voluntary consent, mandated choice and presumed consent), the *Code* supports voluntary consent (Opinion 6.1.2); however, each of the three methods of consent has advantages and drawbacks. Voluntary consent prioritizes individual autonomy by having potential donors make a voluntary decision to donate organs. While voluntary consent upholds autonomy, its opponents claim it results in a lower donation rate due to passive decision-making. Mandated choice takes consent to a more stringent level by requiring everyone to state their organ donation preference when executing a state supported document, such as receiving a driver's license, potentially resulting in a higher donation rate; however, this system also raises concerns of coercion which may undermine voluntary consent [3]. Conversely, presumed consent operates under an opt-out system which assumes consent to donate unless a person has explicitly registered their refusal to donate. While opt-out systems have the potential to result in the highest yield for organ donation, these systems may exacerbate distrust in the health care system and place additional stress on families who may not be aware of their deceased loved ones wishes regarding organ donation [4]. Additionally, opt-out systems raise ethical concerns surrounding respect for autonomy and voluntary consent.

In a 2005 CEJA report on Presumed Consent and Mandated Choice for Organs from Deceased Donors, the model of voluntary consent was adopted due to the need for data from research studies regarding whether ethically appropriate models of presumed consent or mandated choice would result in a positive effect on organ donation [5]. In the 20 years since this CEJA report was adopted, different models of consent have been utilized worldwide with varying impacts on organ donation models. A 2019 study assessing the effect of opt-out and opt-in approaches to organ donation across 35 similar countries found no significant difference in deceased-donor rates in per million populations [6]. However, a 2019 systematic review of opt-out versus opt-in consent models found that opt-out consent increases both deceased donation rate and deceased transplantation rates [7]. At a macro level, studies comparing aggregate donation rates across countries have reached different conclusions, a trend which is also observed when looking at donation systems at a micro level. For example, in 2015 Wales introduced an opt-out system which

over time significantly increased organ donation consent [8]. Whereas Chile, Singapore, and Sweden provide examples of opt-out systems failing to increase donation [9].

While the data regarding whether opt-in versus opt-out models of consent increase deceased organ donation remain inconsistent, ethics concerns with each model persist which require consideration. From an ethical perspective, voluntary consent upholds patient autonomy and maximizes trust and transparency within the health care system; whereas presumed consent systems may undermine patient autonomy and diminish trust in the health care system [10]. However, voluntary consent models require healthcare professionals to obtain consent from the families of potential donors at the bedside during an emotionally difficult time. This is often without the knowledge of what the patient would have wanted. It is estimated that obtaining family voluntary consent at the bedside for organ donation results in an estimated 15-45 percent loss in potential deceased donors in the US [10].

CONCLUSION

The *Code of Medical Ethics* requires that informed consent be obtained from the patient or their surrogate prior to organ donation and prioritizes the voluntary choice model of consent. Due to the low rate of organ donation and high need in order to save lives, there is an active call to increase organ donation supply through the implementation of mandated choice or presumed consent models. Currently, the *Code* provides guidance that "unless there are data that suggest a positive effect on donation, neither presumed consent nor mandated choice for cadaveric organ donation should be widely implemented." However, the *Code* also recognizes that "these models merit further study to determine whether either or both can be implemented in a way that meets fundamental ethical criteria for informed consent and provides clear evidence that their benefits outweigh ethical concerns" (Opinion 6.1.4).

If the phrase "unless there are data that suggest a positive effect on donation" is removed, *Code* guidance on the utilization of presumed consent and mandated choice models for organ donation will become more stringent and effectively result in guidance to not widely implement either of these two consent models, even when data suggest a positive effect on donation. Given the pressing need for an increase in organ donation and the paucity of conclusory data regarding the effect of consent model type on donation, effectually disallowing a model of informed consent for organ donation when data suggest a positive effect on organ donation would undermine the well-being of potential recipients waiting for a lifesaving organ donation. However, it is important to ensure that regardless of what the data show, the chosen consent model must be ethically implemented to respect both the donor and the recipient and must keep with ethics standards on informed consent and guidance for organ transplantation from deceased donors (Opinion 6.2.1).

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends that Resolution 17-A-24 not be adopted and the remainder of this report be filed.

Fiscal Note: Less than $500

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 001
(A-25)

Introduced by: Illinois

Subject: Opposition to Censuring Medical Societies or Organizations Based on Politics or Policies of Governments

Referred to: Reference Committee on Ethics and Bylaws

Whereas, the International Federation of Medical Student Associations (IFMSA) is a global organization that fosters collaboration, education, and advocacy among medical students from diverse countries; and

Whereas, the IFMSA has suspended the Federation of Israeli Students of Medicine, a member society, based on the perceived political or military policies of its host country; and

Whereas, the Illinois State Medical Society and the American Medical Association uphold principles of equity, inclusion, and the importance of engagement in a diverse global community; and

Whereas, It is essential for medical organizations, including international medical organizations, to focus on the advancement of medical education and the promotion of human health rather than engaging in politically motivated actions that may undermine the collaborative nature of their mission; and

Whereas, censure of a member society based solely on the political or military policies of its host government may unfairly penalize medical students who are working toward positive change and who may not have control over their government's policies; therefore be it

RESOLVED, that our American Medical Association adopt a policy opposing the censure of any medical group or society or organization, based on the politics or policies of the local, state or national political leadership, such that the art and science of medicine is kept separate from politics. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/21/2025

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 002
(A-25)

Introduced by: Indiana

Subject: Physician Disclosures of Relationships in Private Equity Held Organizations

Referred to: Reference Committee on Ethics and Bylaws

Whereas, private equity investment in the United States health care system has expanded to $100 billion in all sectors, including nursing homes, hospitals, primary care, and specialty practices; and

Whereas, complex financial arrangements obscure physician relationships with private equity owned entities at the Medicare enrollment level, i.e. Provider, Enrollment, Chain, and Ownership System (PECOS), including employment, shareholder status, or medical directorship(s); and

Whereas, the American Medical Association has policy (D-140.951) which will study and clarify the ethical challenges raised by the expansion of private equity ownership, including but not limited to the effect on the professional responsibilities and ethical priorities for physician practices; therefore be it

RESOLVED, that our American Medical Association support physician disclosure of private equity relationship(s), including employment, shareholder status, or medical directorship(s) at any accredited education function that bears continuing AMA medical education credit or approval through the Accreditation Council for Continuing Medical Education (New HOD Policy); and be it further

RESOLVED, that our AMA support physician disclosure of private equity relationship(s) for any committee member that reviews state or federal government (i.e. The Relative Value Scale Update Committee) resource allocation as it pertains to provision of medical services. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

Received: 4/16/25

RELEVANT AMA POLICY

D-140.951 Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices
Our American Medical Association will study and clarify the ethical challenges and considerations regarding physician professionalism raised by the advent and expansion of private equity ownership or management of physician practices and report back on the status of any ethical dimensions inherent in these arrangements, including consideration of the need for ethical guidelines as appropriate. Such a study should evaluate the impact of private equity ownership, including but not limited to the effect on the professional responsibilities and ethical priorities for physician practices. Citation: Res. 026, A-22; Reaffirmed: BOT Rep. 14, A-23.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 003
(A-25)

Introduced by: LGBTQ+ Section

Subject: Opposition to Censorship in Public Libraries

Referred to: Reference Committee on Ethics and Bylaws

Whereas, public libraries are widely trusted civic institutions with an extensive population reach, receiving an estimated four million visits each day across over 16,500 public libraries nationwide, that serve as an essential community resource to advance population health and address health disparities[1-4]; and

Whereas, a report by the American Library Association has demonstrated that book challenges have become increasingly prevalent over the past four years with over 4200 unique book titles in public and school libraries being challenged during 2023, representing a 65% increase compared to the previous year, of which nearly 1500 were banned[5,6]; and

Whereas, book challenges are especially impacting access to information in public libraries where the number of titles targeted for censorship increased by 92% in 2023 compared to 2022[5]; and

Whereas, over 95% of book bans were enacted without following the best practice guidelines for book challenges outlined by the American Library Association and the National Coalition Against Censorship[7-9]; and

Whereas, a 2023 analysis by the Washington Post demonstrated that book challenges frequently cited out-of-context concerns about “sexual” (61%), “inappropriate” (29%), and “pornographic” (22%) content as part of their rationale[10]; and

Whereas, LGBTQ+ content is frequently conflated with “harmful” or “obscene” content in book, and this has enabled the recent passage of legislation like Idaho’s House Bill 710 that requires libraries to remove any books deemed harmful based on a definition of obscene materials that includes “any homosexual act”[10-13]; and

Whereas, nearly half (47%) of books targeted for censorship in 2023 represent LGBTQ+ or BIPOC stories, and banning books about the lived experiences and histories of these marginalized communities intensifies feelings of exclusion and stigma, exacerbating their pre-existing risks of developing mental health disorders[5,14-16]; and

Whereas, several of the most frequently banned books include titles that discuss sexual assault, diminishing resources to teach empathy for survivors’ stories and build awareness of sexual violence, which is important for youth given that at least 25% of girls and 5% of boys will experience sexual abuse before the age of 18 and 67% of these incidents go unreported[11,17-20]; and

Whereas, the majority of banned books are young adult books, middle grade books, chapter books, or picture books specifically written and selected for younger audiences, with many of

targeted titles like “It’s Perfectly Normal” providing age-appropriate references to sexuality and real-world context for concepts covered in comprehensive sexual education classes[11,21,22]; and

Whereas, a national 2015 survey found that 84% of teens searched for sexual health information online – including topics like sexually transmitted infections, puberty, pregnancy, sexual assault, and intimate partner violence – but several teens also reported finding “negative” health information with 43% encountering online pornography in these searches[23]; and

Whereas, the American Library Association has launched Unite Against Book Bans, which is a national coalition that the AMA has not yet partnered with, in support of “each person’s constitutionally protected right to choose and read books that raise important issues and lift up the voices of those who are often silenced”[5,24]; and

Whereas, at least 129 library-adverse bills were introduced in 2024, and although most were unsuccessful in current legislatures, it is difficult to predict the future trajectory of these bills especially in the context of the political proposals to diminish libraries’ roles as neutral and inclusive spaces for access to a wide range of information[12,25,26]; and

Whereas, lawsuits challenging book bans implemented in conservative states like Texas and Iowa have been heard in federal courts with mixed success in blocking overreaching legislation that would require removal of books related to gender identity and sexual orientation[27,28]; and

Whereas, the US Supreme Court has previously heard a case on the removal of books from school libraries in Island Trees School District v. Pico, and in April 2025, the US Supreme Court is set to hear a new case of parents who object to their children reading developmentally appropriate books with LGBTQ+ themes in schools[29-31]; and

Whereas, various bills and resolutions have been introduced in the US House of Representatives to address the national issue of discriminatory book bans in public libraries without succes[32,33,34]; and

Whereas, under the new presidential administration and guidance from its recent executive orders, agencies like the Department of Education and the Department of Defense have taken actions in support of restricting access to books and health content curricula dealing with LGBTQ+ themes, even going so far as to revoke all guidance characterizing book bans as civil rights violations[35,36,37]; therefore be it

RESOLVED, that our American Medical Association support efforts to safeguard free access to diverse health information by preventing publicly funded entities from censoring books or educational materials in a manner that discriminates on the basis of race, nationality, gender identity, sexual orientation, religion, disability, political affiliation, or socioeconomic status (New HOD Policy); and be it further

RESOLVED, that our AMA amend Policy H-60.898, “Opposing the Censorship of Sexuality and Gender Identity Discussions in Public Schools” by addition and deletion as follows:

Opposing the Censorship of Sexuality and Gender Identity Discussions in Public Schools and Libraries, H-60.898
1. Our American Medical Association opposes censorship of LGBTQIA+ topics and opposes any policies that limit discussion or restrict mention of sexuality, sexual orientation, and gender identity in schools, or educational curricula, or public libraries.

2. Our AMA will support policies that ensure an inclusive, well-rounded educational environment free from censorship of discussions surrounding sexual orientation, sexuality, and gender identity in public schools. (Modify Current HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

Opposing the Censorship of Sexuality and Gender Identity Discussions in Public Schools, H-60.898

1. Our American Medical Association opposes censorship of LGBTQIA+ topics and opposes any policies that limit discussion or restrict mention of sexuality, sexual orientation, and gender identity in schools or educational curricula.

2. Our AMA will support policies that ensure an inclusive, well-rounded educational environment free from censorship of discussions surrounding sexual orientation, sexuality, and gender identity in public schools.

[Res. 442, A-22]

Sexuality Education, Sexual Violence Prevention, Abstinence, and Distribution of Condoms in Schools, H-170.968

2. Our AMA urges schools at all education levels to implement comprehensive, developmentally appropriate sexuality education programs that: (a) are based on rigorous, peer reviewed science; (b) incorporate sexual violence prevention; … (f) appropriately and comprehensively address the sexual behavior of all people, inclusive of sexual and gender minorities; (g) include ample involvement of parents, health professionals, and other concerned members of the community in the development of the program; (h) are part of an overall health education program; and (i) include culturally competent materials that are language-appropriate for Limited English Proficiency (LEP) pupils.

9. Our AMA supports the development of sexual education curriculum that integrates dating violence prevention through lessons on healthy relationships, sexual health, and conversations about consent.

10. Our AMA encourages physicians and all interested parties to develop best-practice, evidence-based, guidelines for sexual education curricula that are developmentally appropriate as well as medically, factually, and technically accurate.

Sexual Assault Education and Prevention in Public Schools, H-515.953
Our AMA supports state legislation mandating that public middle and high school health education programs include age appropriate information on sexual assault education and prevention, including but not limited to topics of consent and sexual bullying. [Res. 209, I-18]

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations, H-160.991
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to date education and information to enable the provision of high quality and culturally competent care to LGBTQ people. [CSA Rep. C, I-81; Reaffirmed: CLRPD Rep. F, I-91; CSA Rep. 8, I-94; Appended: Res. 506, A-00; Modified and Reaffirmed: Res. 501, A-07; Modified: CSAPH Rep. 9, A-08; Reaffirmation, A-12; Modified: Res. 08, A-16; Modified Res. 903, I-17; Modified Res. 904, I-17; Res. 16, A-18; Reaffirmed: CSAPH Rep. 01, I-18; Reaffirmed: CSAPH Rep. 08, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution 004
(A-25)

Introduced by: Minority Affairs Section

Subject: Reducing the Harmful Impacts of Immigration Status on Health

Referred to: Reference Committee on Ethics and Bylaws

Whereas, undocumented workers, accounting for 8.3 million of the U.S. workforce in 2022 and contributing over $5 billion in federal taxes, are vital to industries like agriculture, construction, and healthcare but often face wage theft, poor conditions, lack of health insurance, and workplace bullying[1-8]; and

Whereas, the strenuous labor demands and restricted access to basic rights experienced by undocumented workers have been linked to higher rates of alcoholism, depression, anxiety, and social isolation[9-12]; and

Whereas, despite facing systemic human rights violations, undocumented workers are often unable to assert fundamental rights due to fear of deportation, limited legal protections, and policies that violate international standards for workplace equality[13]; and

Whereas, the Department of Labor recognizes that migrant workers, regardless of immigration status, are entitled to rights such as forming unions, receiving minimum wage, and protection from discrimination, harassment, and retaliation, while undocumented workers face barriers that impact their employment, healthcare access, and overall quality of life[14]; and

Whereas, the E-Verify system, which requires employers to check immigration status before hiring, has led to over 300,000 legal workers being denied employment due to database errors, failed to significantly reduce the number of employed undocumented workers, and resulted in reduced wages for undocumented workers, forcing them to work longer hours to make up for lost income[15-16]; and

Whereas, the use of immigration enforcement in the workplace creates an environment of coercion and exploitation for undocumented workers, whose vulnerability extends beyond work to housing, healthcare, and basic needs, with limited legal protections and economic disparities perpetuating a cycle of abuse and leaving them with few options for recourse or recovery[9,17-19]; and

Whereas, undocumented workers have limited options to seek care through community health clinics and federally qualified health centers, which often operate on limited resources and may not be able to serve the comprehensive needs of undocumented workers due to lack of healthcare options outside of working hours, translation services, cultural competency, and lack of funding[20,21]; and

Whereas, despite contributing taxes and supporting the Medicare Trust Fund, nearly half of undocumented immigrants remain uninsured due to ineligibility for Medicaid, CHIP, Medicare, or ACA Marketplace coverage, relying instead on emergency Medicaid under EMTALA, which cost $974 million of the $3.3 trillion in national healthcare expenditures[22,23]; and

Whereas, immigration status significantly impacts health outcomes, with undocumented patients experiencing higher mortality rates compared to citizens due to limited access to preventive and comprehensive healthcare[24,25]; and

Whereas, undocumented individuals ineligible for federal health coverage often have to rely on costly emergency department care for chronic conditions like dialysis, increasing mortality and healthcare expenses[26]; and

Whereas, expanding healthcare access for undocumented people reduces emergency room utilization, lowers overall spending, and improves health outcomes through earlier diagnosis, preventive screenings, and better management of chronic conditions[20,27]; and

Whereas, organizations like the Occupational Safety and Health Administration (OSHA), the National Employment Law Project, and the Virginia Legal Aid Justice Center work to protect undocumented workers through visa support, policy advocacy, and improved labor laws[28-30]; and

Whereas, national and local groups, including National COSH, provide undocumented workers with education, legal services, and safety training, though such resources often fail to reach isolated or rural communities, leaving many unaware of their rights and protections[31-38]; and

Whereas, the threat of deportation prevents undocumented workers from reporting labor violations and exacerbates mental health issues, poverty, and child safety risks among immigrant families[1,40-43]; and

Whereas, while the Department of Homeland Security's deferred action process offers protection from immigration-related retaliation and access to critical resources, its limitations, including a complex application process, language barriers, and temporary protections, leave many non-citizen workers vulnerable to harassment and termination[44-46]; and

Whereas, undocumented individuals, including Deferred Action for Childhood Arrivals (DACA) recipients, face significant barriers to legalization, including limited asylum appointments via the U.S. Customs and Border Protection (CBP) One App, high documentation costs, visa backlogs, and restrictive immigration policies[47-51]; and

Whereas, the UN High Commissioner for Refugees (UNHCR) affirms the right to seek asylum, but high asylum-seeker volumes at the U.S.-Mexico border limit this right, increasing the risk of undocumented workers and abuse, while asylum provides legal protections and benefits not available to undocumented workers[52-54]; and

Whereas, family reunification programs help alleviate the mental health effects of separation by reuniting legalized immigrants with their families, while undocumented children, especially unaccompanied minors, face significant legal and emotional challenges, including difficulties obtaining citizenship and lack of essential services[55-56]; and

Whereas, since 2021, over 400,000 unaccompanied minors have entered the U.S. to escape poverty and violence, many working in unsafe jobs with insufficient safety oversight, which increases the risk of injury and mortality[57]; and

Whereas, unaccompanied minors also face increased stressors due to lack of parental guidance and legal protections, with the Central American Minors (CAM) program offering some children a pathway to refugee or parolee status, helping over 5,000 individuals since 2014[58-63]; and

Whereas, coalitions such as Refugee Council USA, which includes Amnesty International and OXFAM as members, can amplify advocacy efforts and allow the AMA to streamline its advocacy

efforts and broaden its reach by collaborating on initiatives to healthcare access and policy reform for immigrant populations[64]; therefore be it

RESOLVED, that our American Medical Association support protecting the human right to seek asylum (New HOD Policy); and be it further

RESOLVED, that our AMA support pathways to citizenship for undocumented immigrants who entered the US as minors, including Deferred Action for Childhood Arrivals (DACA) recipients and Dreamers (New HOD Policy); and be it further

RESOLVED, that our AMA support family reunification pathways for children and adult immigrants from other countries if their parent/guardian, spouse, or child/dependent has documented status in the U.S. (New HOD Policy); and be it further

RESOLVED, that our AMA support deferral of deportation (and if applicable, employment authorization, driver's licenses, and identification documents) for people with disabilities and significantly limiting chronic illness, people who work in healthcare and social care, and relatives of people with documented or DACA status, and people without violent felonies (New HOD Policy); and be it further

RESOLVED, that our AMA support federal and state efforts to remove immigration enforcement from workplaces and employment consideration, including the removal of E-Verify mandates. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

D-515.979 Intimate Partner Violence Policy and Immigration

Our AMA: (1) encourages appropriate stakeholders to study the impact of mandated reporting of domestic violence policies on individuals with undocumented immigrant status and identify potential barriers for survivors seeking care; and (2) will work with community based organizations and related stakeholders to clarify circumstances that would trigger mandated reporting of intimate partner violence and provide education on the implications of mandatory reporting on individuals with undocumented immigrant status. [Res. 002, I-17]

H-65.938 Guiding Principles for the Healthcare of Migrants

1. Our American Medical Association advocates for the development of adequate policies and / or legislation to address the healthcare needs of migrants and asylum seekers in cooperation with relevant legislators and stakeholders based on the following guiding principles, adapted from the High-level meeting of the Global Consultation on Migrant Health, i.e. the "Colombo Statement."
2. Our AMA recognizes that migration status is a social determinant of health.
3. Our AMA affirms the importance of multi-sectoral coordination and inter-country engagement and partnership in enhancing the means of addressing health aspects of migration.
4. Our AMA recognizes that the enhancement of migrants' health status relies on an equitable and non-discriminatory access to and coverage of health care and cross-border continuity of care at an affordable cost avoiding severe financial consequences for migrants, as well as for their families.
5. Our AMA recognizes that investment in migrant health provides positive dividends compared to public health costs due to exclusion and neglect, and therefore underscore the need for financing mechanisms that mobilize different sectors of society, innovation, identification and sharing of good practices in this regard.
6. Our AMA recognizes that the promotion of the physical and mental health of migrants as defined by the following select objectives from the World Health Organization's 72nd World Health Assembly, Global action plan on promoting the health of refugees and migrants, 2019-2023, is accomplished by
    a. Ensuring that essential components, such as vaccination of children and adults and the provision of health promotion, disease prevention, timely diagnosis and treatment, rehabilitation and palliative services for acute, chronic and infectious diseases, injuries, mental and behavioral disorders, and sexual and reproductive health care for women, are addressed.
    b. Improving the quality, acceptability, availability and accessibility of health care services, for instance by overcoming physical, financial, information, linguistic and other cultural barriers, with particular attention to services for chronic conditions and mental health, which are often inadequately addressed or followed up during the migration and displacement process, and by working to prevent occupational and work-related diseases and injuries among migrant workers and their families by improving the coverage, accessibility and quality of occupational and primary health care services and social protection systems.
    c. Ensuring that the social determinants of migrants' health are addressed through joint, coherent multisectoral actions in all public health policy responses, especially ensuring promotion of well-being for all at all ages, and facilitating orderly, safe, and responsible migration and mobility of people, including through implementation of planned and well-managed migration policies, as defined in the Sustainable Development Goals of the United Nations.
    d. Ensuring that information and disaggregated data at global, regional and country levels are generated and that adequate, standardized, comparable records on the health of migrants are available to support policy-makers and decision-makers to develop more evidence-based policies, plans and interventions.
    e. Providing accurate information and dispelling fears and misperceptions among migrant and host populations about the health impacts of migration and displacement on migrant populations and on the health of local communities and health systems. [Res. 016, A-24]

H-135.935 OSHA Standards for Lead

Our AMA will advocate with American College of Occupational and Environmental Medicine and other professional organizations to change the Occupational Safety & Health Administration legal standard for temporary medical removal from all lead work environments, regardless of the airborne lead concentrations, which result in workers' blood lead levels exceeding 20 mcg/dL on any two consecutive blood tests, or any single value exceeding 30 mcg/dL, as recommended by a subgroup of an expert panel convened by the Association of Occupational and Environmental Clinics (2007) and by Cal/OSHA (2009). [Res. 423, A-10; Reaffirmed: CSAPH Rep. 01, A-20]

D-350.975 Immigration Status is a Public Health Issue

1. Our AMA declares that immigration status is a public health issue that requires a comprehensive public health response and solution.

2. Our AMA recognizes interpersonal, institutional, structural, and systemic factors that negatively affect immigrants' health.
3. Our AMA will promote the development and implementation of educational resources for healthcare professionals to better understand health and healthcare challenges specific for the immigrant population.
4. Our AMA will support the development and implementation of public health policies and programs that aim to improve access to healthcare and minimize systemic health barriers for immigrant communities. [Res. 904, I-22; Reaffirmed: Res. 210, A-23]

H-350.957 Addressing Immigrant Health Disparities
1. Our American Medical Association recognizes the unique health needs of refugees, and encourages the exploration of issues related to refugee health and support legislation and policies that address the unique health needs of refugees.
2. Our AMA: (A) urges federal and state government agencies to ensure standard public health screening and indicated prevention and treatment for immigrant children, regardless of legal status, based on medical evidence and disease epidemiology; (B) advocates for and publicizes medically accurate information to reduce anxiety, fear, and marginalization of specific populations; and (C) advocates for policies to make available and effectively deploy resources needed to eliminate health disparities affecting immigrants, refugees or asylees.
3. Our AMA will call for asylum seekers to receive all medically-appropriate care, including vaccinations in a patient centered, language and culturally appropriate way upon presentation for asylum regardless of country of origin. [Res. 804, I-09; Appended: Res. 409, A-15; Reaffirmation: A-19; Appended: Res. 423, A-19; Reaffirmation: I-19]

D-440.927 Opposition to Regulations That Penalize Immigrants for Accessing Health Care Services
Our AMA will, upon the release of a proposed rule, regulations, or policy that would deter immigrants and/or their dependents from utilizing non-cash public benefits including but not limited to Medicaid, CHIP, WIC, and SNAP, issue a formal comment expressing its opposition. [Res. 254, A-18; Reaffirmed: Res. 259, A-23]

D-365.995 Protecting Workers During Catastrophes
1. Our American Medical Association will advocate for legislation that creates federal standards of safety and protection of workers during natural or man-made catastrophes.
2. Our AMA will advocate that the United States Department of Labor, the Occupational Safety and Health Administration (OSHA), and other appropriate parties develop and enforce evidence-based policies, guidelines, and protections for workers at their place of employment during catastrophes. [Res. 411, A-23]

H-60.906 Opposing the Detention of Migrant Children
Our AMA: (1) opposes the separation of migrant children from their families and any effort to end or weaken the Flores Settlement that requires the United States Government to release undocumented children "without unnecessary delay" when detention is not required for the protection or safety of that child and that those children that remain in custody must be placed in the "least restrictive setting" possible, such as emergency foster care; (2) supports the humane treatment of all undocumented children, whether with families or not, by advocating for regular, unannounced, auditing of the medical conditions and services provided at all detention facilities by a non-governmental, third party with medical expertise in the care of vulnerable children; and (3) urges continuity of care for migrant children released from detention facilities. [Res. 004, I-18; Reaffirmed: Res. 234, A-22]

H-315.966 Patient and Physician Rights Regarding Immigration Status
Our AMA supports protections that prohibit U.S. Immigration and Customs Enforcement, U.S. Customs and Border Protection, or other law enforcement agencies from utilizing information from medical records to pursue immigration enforcement actions against patients who are undocumented. [Res. 018, A-17]

H-440.876 Opposition to Criminalization of Medical Care Provided to Undocumented Immigrant Patients
1. Our AMA: (a) opposes any policies, regulations or legislation that would criminalize or punish physicians and other health care providers for the act of giving medical care to patients who are undocumented immigrants; (b) opposes any policies, regulations, or legislation requiring physicians and

other healthcare providers to collect and report data regarding an individual patient's legal resident status; and (c) opposes proof of citizenship as a condition of providing health care. 2. Our AMA will work with local and state medical societies to immediately, actively and publicly oppose any legislative proposals that would criminalize the provision of health care to undocumented residents. [Res. 920, I-06; Reaffirmed and Appended: Res. 140, A-07; Modified: CCB/CLRPD Rep. 2, A-14]

D-135.967 Advocating for Heat Exposure Protections for All Workers
Our AMA: (1) will advocate for all workers to have access to preventive cool-down rest periods in shaded, ventilated, and/or cooled areas for prevention of injury from sun exposure and heat injury as well as appropriate access to emergency services when signs and symptoms of heat exposure injury; (2) will advocate for legislation that creates federal standards for protections against heat stress and sun exposure specific to the hazards of the workplace; (3) supports policy change at the federal level via legislation or administrative rule changes by the Occupational Safety and Health Administration (OSHA) that would require that workers receive health educational materials about prevention and recognition of heat exhaustion and heat exposure injury that is in the worker's primary language: (4) will work with the United States Department of Labor, OSHA, and other appropriate federal stakeholders to develop and enforce evidence-based policies, guidelines, and protections against heat injury for workers independent of legal status; and (5) recognizes there are particular medical conditions and medications, including but not limited to psychotropics, which increase an individual’s vulnerability to the negative impacts of heat and sun exposure and advocate for recognition of this, as well as additional protections as part of any guidelines, legislation or other policies. [Res. 502, I-21]

H-130.967 Action Regarding Illegal Aliens
Our AMA supports the legislative and regulatory changes that would require the federal government to provide reasonable payment for federally mandated medical screening examinations and further examination and treatment needed to stabilize a condition in patients presenting to hospital emergency departments, when payment from other public or private sources is not available. [BOT Rep. MM, A-89; Reaffirmed by BOT Rep. 17 - I-94; Reaffirmed by Ref. Cmt. B, A-96; Reaffirmation A-02; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17]

D-440.985 Health Care Payment for Undocumented Persons
Our AMA shall assist states on the issue of the lack of reimbursement for care given to undocumented immigrants in an attempt to solve this problem on a national level. [Res. 148, A-02; Reaffirmation A-07; Reaffirmed: CMS Rep. 01, A-17; Reaffirmation: A-19; Reaffirmation: I-19]

H-165.823 Options to Maximize Coverage under the AMA Proposal for Reform
1. That our AMA advocate for a pluralistic health care system, which may include a public option, that focuses on increasing equity and access, is cost-conscious, and reduces burden on physicians.
2. Our AMA will advocate that any public option to expand health insurance coverage must meet the following standards:
a. The primary goals of establishing a public option are to maximize patient choice of health plan and maximize health plan marketplace competition.
b. Eligibility for premium tax credit and cost-sharing assistance to purchase the public option is restricted to individuals without access to affordable employer-sponsored coverage that meets standards for minimum value of benefits.
c. Physician payments under the public option are established through meaningful negotiations and contracts. Physician payments under the public option must be higher than prevailing Medicare rates and at rates sufficient to sustain the costs of medical practice.
d. Physicians have the freedom to choose whether to participate in the public option. Public option proposals should not require provider participation and/or tie physician participation in Medicare, Medicaid and/or any commercial product to participation in the public option.
e. The public option is financially self-sustaining and has uniform solvency requirements.
f. The public option does not receive advantageous government subsidies in comparison to those provided to other health plans.
g. The public option shall be made available to uninsured individuals who fall into the “coverage gap” in states that do not expand Medicaid – having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credits – at no or nominal cost.
3. Our AMA supports states and/or the federal government pursuing auto-enrollment in health insurance coverage that meets the following standards:

a. Individuals must provide consent to the applicable state and/or federal entities to share their health insurance status and tax data with the entity with the authority to make coverage determinations.
b. Individuals should only be auto-enrolled in health insurance coverage if they are eligible for coverage options that would be of no cost to them after the application of any subsidies. Candidates for auto-enrollment would, therefore, include individuals eligible for Medicaid/Children's Health Insurance Program (CHIP) or zero-premium marketplace coverage.
c. Individuals should have the opportunity to opt out from health insurance coverage into which they are auto-enrolled.
d. Individuals should not be penalized if they are auto-enrolled into coverage for which they are not eligible or remain uninsured despite believing they were enrolled in health insurance coverage via auto-enrollment.
e. Individuals eligible for zero-premium marketplace coverage should be randomly assigned among the zero-premium plans with the highest actuarial values.
f. Health plans should be incentivized to offer pre-deductible coverage including physician services in their bronze and silver plans, to maximize the value of zero-premium plans to plan enrollees.
g. Individuals enrolled in a zero-premium bronze plan who are eligible for cost-sharing reductions should be notified of the cost-sharing advantages of enrolling in silver plans.
h. There should be targeted outreach and streamlined enrollment mechanisms promoting health insurance enrollment, which could include raising awareness of the availability of premium tax credits and cost-sharing reductions, and establishing a special enrollment period.
4. Our AMA: (a) will advocate that any federal approach to cover uninsured individuals who fall into the"coverage gap" in states that do not expand Medicaid--having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credit eligibility--make health insurance coverage available to uninsured individuals who fall into the coverage gap at no or nominal cost, with significant cost-sharing protections; (b) will advocate that any federal approach to cover uninsured individuals who fall into the coverage gap provide states that have already implemented Medicaid expansions with additional incentives to maintain their expansions; (c) supports extending eligibility to purchase Affordable Care Act (ACA) marketplace coverage to undocumented immigrants and Deferred Action for Childhood Arrivals (DACA) recipients, with the guarantee that health plans and ACA marketplaces will not collect and/or report data regarding enrollee immigration status; and (d) recognizes the potential for state and local initiatives to provide coverage to immigrants without regard to immigration status. [CMS Rep. 1, I-20; Appended: CMS Rep. 3, I-21; Reaffirmation: A-22; Reaffirmed: CMS Rep. 3, A-22; Reaffirmed: Res. 122, A-22; Modified: Res. 813, I-22; Reaffirmed: CMS Rep. 5, I-23]

H-430.976 Opposing the Use of Vulnerable Incarcerated People in Response to Public Health Emergencies

1. Our AMA acknowledges that systemic racism is a root of incarcerated labor policies and practices.
2. Our AMA supports:

(a) Efforts to ensure that all work done by individuals who are incarcerated in correctional facilities is fully voluntary.

(b) Eliminating policies that require forced labor or impose adverse consequences on incarcerated workers who are unable to carry out their assigned jobs due to illness, injury, disability, or other physical or mental limitations.

(c) Eliminating policies that negatively impact good time, other reductions of sentence, parole eligibility, or otherwise extend a person's incarceration for refusal to work when they are unable to carry out their assigned jobs due to illness, injury, disability, or other physical or mental limitations.

(d) The authority of correctional health care professionals to determine when an individual who is incarcerated is unable to carry out assigned work duties.

3. Our AMA encourages:

(a) Congress and state legislatures to clarify the meaning of "employee" to explicitly include incarcerated workers within that definition to ensure they are afforded the same workplace health and safety protections as other workers.

(b) Congress to enact protections for incarcerated workers considering their vulnerabilities as a captive labor force, including anti-retaliation protections for workers who are incarcerated who report unsafe working conditions to relevant authorities.

(c) Congress to amend the Occupational Safety and Health Act to include correctional institutions operated by state and local governments as employers under the law.

(d) The U.S. Department of Labor to issue a regulation granting the Occupational Safety and Health Administration jurisdiction over the labor conditions of all workers incarcerated in federal, state, and local correctional facilities.

4. Our AMA encourages:

(a) Comprehensive safety training that includes mandatory safety standards, injury and illness prevention, job-specific training on identified hazards, and proper use of personal protective equipment and safety equipment for incarcerated workers.

(b) That safety training is delivered by competent professionals who treat incarcerated workers with respect for their dignity and rights.

(c) That all incarcerated workers receive adequate personal protective equipment and safety equipment to minimize risks and exposure to hazards that cause workplace injuries and illnesses.

(d) Correctional facilities to ensure that complaints regarding unsafe conditions and abusive staff treatment are processed and addressed by correctional administrators in a timely fashion.

5. Our AMA acknowledges that investing in valuable work and education programs designed to enhance incarcerated individuals' prospects of securing employment and becoming self-sufficient upon release is essential for successful integration into society.

6. Our AMA strongly supports programs for individuals who are incarcerated that provides opportunities for advancement, certifications of completed training, certifications of work performance achievements, and employment-based recommendation letters from supervisors. [BOT Rep. 02, I-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 005
A-25

Introduced by: Minority Affairs Section

Subject: Dedicated Interfaith Prayer and Reflection Spaces in Medical Schools and Healthcare Facilities

Referred to: Reference Committee on Ethics and Bylaws

Whereas, spirituality is important to many patients with serious illness;[1] and

Whereas, frequent religious service attendance was associated with lower risk of all-cause mortality, suicide, and depression;[2] and

Whereas, early research indicates broad agreement that religion is a social determinant of health and involvement in religion is linked to mostly beneficial health outcomes;[3] and

Whereas, many faiths, including but not limited to Islam, Christianity, Judaism, Buddhism, and Baha'i preach daily prayer, reflection, or meditation as spiritual practices;[4] and

Whereas, the most likely religious group to experience discrimination in institutional settings were Muslims, according to The Institute for Social Policy and Understanding's (ISPU) American Muslim Poll 2022: A Politics and Pandemic Status Report;[5] and

Whereas, numerous studies have highlighted how the lack of cultural competence and healthcare accommodations, such as prayer spaces, are reasons Muslim patients delay healthcare, and Muslim patients have expressed that it is difficult for them to complete their obligatory daily prayers when admitted to in-patient medical institutions and while accessing medical care;[6–8] and

Whereas, many physicians note that their religion and faith has contributed positively to providing exceptional patient care;[9] and

Whereas, a 2021 study found an association between better spiritual well-being of residents with greater sense of work accomplishment, overall self-rated health, decreased burnout and depressive symptoms;[10] and

Whereas, a 2021 study found that identification as an active participant within a religious affiliation had statistically significant lower burnout scores among medical students ;[11] and

Whereas, Muslims must perform ablution, or *wudhu*, before prayer and pray 5 times a day in a quiet, clean space;[6,7] and

Whereas, Oriental Orthodox Christians must pray the canonical hours seven times a day, and Jewish law requires Jews to pray three times a day;[12,13] and

Whereas, the provision of spiritual care in the medical care of patients with serious illness is associated with better end-of-life outcomes;[1] and

Whereas, results from a survey following implementation of reflection spaces in the hospital showed that 90% of responders displayed a preference for using the reflection room versus a hospital unit;[14] and

Whereas, interfaith prayer and reflection rooms are a viable solution to providing diverse student populations a space for spirituality, while also creating an opportunity for awareness of religious pluralism on university campuses;[15] and

Whereas, medical students would feel more supported if their religious and cultural beliefs are valued;[16] and

Whereas, recently, some medical institutions and schools are recognizing the importance and need for interfaith prayer spaces and have started to create those spaces for their students and personnel;[16-19] and

Whereas, Liaison Committee on Medical Education (LCME) standard IS-16 and element 3.3 state that medical education programs must engage in ongoing, systematic, and focused efforts to attract and retain students, faculty, staff, and others from demographically diverse backgrounds;[20] and

Whereas, in 2011, the Association of American Medical Colleges (AAMC) "encouraged medical institutions to embrace a framework for diversity that included removing social…barriers to diversity," but stated almost a decade later that this has not happened;[21] and

Whereas, the AAMC's Chief Diversity and Inclusion Officer, David A. Acosta, MD, has stated that true equity is reached when "*every* person in the academic medical community" can obtain their full potential regardless of their social identity;[22] and

Whereas, AMA's 2024-2025 Organizational Strategic Plan to Advance Health Equity will "amplify and integrate often 'invisible-ized' narratives of historically marginalized physicians and patients" in all that the AMA does;[23] and

Whereas, the AMA states it is committed to maintaining diversity, equity, and inclusion among medical students and physicians;[24] and

Whereas, Policy H-160.900 states that the AMA recognizes the impact spirituality has on health and encourages patient access to spirituality;[25] and

Whereas, Policy D-200.985 states that the AMA will encourage the LCME to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty;[26] and

Whereas, Policy H-295.927 encourages the AMA, LCME, medical schools, and teaching hospitals to address issues related to the health and well-being of medical students;[27] and

Whereas, Policy D-350.996 states that as part of their advocacy and public health efforts, the AMA will incorporate strategies that eliminate minority health care disparities;[28] therefore be it

RESOLVED, that our American Medical Association support the establishment and maintenance of dedicated interfaith prayer and reflection spaces in medical schools, teaching hospitals, and healthcare facilities, including spaces for ritual purification, as a component of

fostering inclusive, supportive environments for patients, students, and healthcare workers from all religious and spiritual backgrounds (New HOD Policy); and be it further

RESOLVED, that our AMA encourage the Liaison Committee on Medical Education (LCME), the Accreditation Council for Graduate Medical Education (ACGME), and other relevant accrediting bodies to consider access to interfaith prayer, reflection, and purification spaces as part of their standards related to diversity, equity, inclusion, and learner well-being (New HOD Policy); and be it further

RESOLVED, that our AMA encourage medical schools and healthcare institutions to engage affected communities, including students, trainees, and patients from diverse religious and spiritual traditions, in the planning, implementation, and upkeep of interfaith prayer and reflection spaces to ensure these spaces are welcoming, accessible, and responsive to user needs (New HOD Policy); and be it further

RESOLVED, that our AMA support the development, evaluation, and dissemination of best practices for implementing inclusive interfaith prayer, reflection, and purification spaces in clinical and educational settings, including research on their impact on learner well-being, patient experience, and institutional culture. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

RELEVANT AMA POLICY

H-160.900 Addressing Patient Spirituality in Medicine
Our AMA recognizes the importance of individual patient spirituality and its impact on health and encourages patient access to spiritual care services. [Res. 004, I-16; Modified: Res. 304, A-24]

D-200.985 Strategies for Enhancing Diversity in the Physician Workforce
1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.

10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs. [CME Rep. 1, I-06; Reaffirmation I-10; Reaffirmation A-13; Modified: CCB/CLRPD Rep. 2, A-14; Reaffirmation: A-16; Appended: Res. 313, A-17; Appended: Res. 314, A-17; Modified: CME Rep. 01, A-18; Appended: Res. 207, I-18; Reaffirmation: A-19; Appended: Res. 304, A-19; Appended: Res. 319, A-19; Modified: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22; Modified: Res. 320, A-23]

D-350.996 Strategies for Eliminating Minority Health Care Disparities
Our American Medical Association will continue to identify and incorporate strategies specific to the elimination of minority health care disparities in its ongoing advocacy and public health efforts, as appropriate. [Res. 731, I-02; Modified: CCB/CLRPD Rep. 4, A-12; Reaffirmed: CCB/CLRPD Rep. 1, A-22; Reaffirmed: CMS Rep. 03, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 006
(A-25)

Introduced by: American Association of Public Health Physicians, Medical Student Section,

Subject: Military Deception as a Threat to Physician Ethics

Referred to: Reference Committee on Ethics and Bylaws

Whereas, the United States Central Intelligence Agency (CIA)'s use of a fake, physician-led hepatitis immunization program to gather military intelligence in Pakistan in 2011 made legitimate polio vaccination clinics a target for militant violence, with public health workers becoming the target of attacks[1-3]; and

Whereas, disclosure of these operations contributed to a subsequent decline in polio and hepatitis vaccination rates in Pakistan despite an unchanged provision of health services, suggesting the vaccine ruse damaged the reputation of vaccines and of formal medicine in the region[1,4]; and

Whereas, growing global distrust in healthcare institutions and providers is a threat to global vaccine uptake and improved health outcomes[5-7]; and

Whereas, the World Health Organization's declaration of polio's re-emergence as a public health emergency of international concern (PHEIC), political rhetoric surrounding the COVID-19 pandemic, and other emerging threats underscores the importance of political neutrality in public health campaigns and global medical interventions in order to maintain trust in health institutions[1]; and

Whereas, our AMA Code of Medical Ethics serves as the foundational ethical guidance for all AMA policy and a codification of expectations regarding physician conduct and the "responsibility towards patients first and foremost, as well as to society, to other health professionals, and to self", including in settings of armed conflict and military intervention; and

Whereas, our AMA Code of Medical Ethics Opinions 1.1.1, 1.1.3, 8.11, and 11.1.1 provide strong, clear guidance on physicians' ethical responsibilities to prioritize patient welfare, advocate for informed, transparent decision making, protecting vulnerable populations, and protecting patient rights; and

Whereas, current AMA Policy "support[s] medical neutrality, under the principles of the Geneva Convention" (H-520.998) and "support[s] the efforts of physicians around the world to practice medicine ethically in any and all circumstances, including during wartime" (D-65.993); and

Whereas, AMA Code of Medical Ethics Opinion 9.7 affirms that while physicians have civic duties, they are not required to perform duties that conflict with fundamental medical ethics, offering guidance limited to medical testimony, court-initiated treatment, capital punishment, interrogation, and torture; and

Whereas, the Geneva Conventions, AMA Code of Medical Ethics, and AMA policies lack clear ethical guidance on physician conduct when government entities use medical, public health, or humanitarian aid deceptively for military gain or non-patient welfare purposes, highlighting a significant gap; and

Whereas, the World Medical Association (WMA), in collaboration with international organizations, has endorsed the Ethical Principles of Care in Times of Armed Conflict and Other Emergencies, which emphasize that healthcare privileges and facilities must only serve healthcare needs, and that physicians' primary ethical obligation is to their patients[8]; and

Whereas, the WMA's Statement in Times of Armed Conflict and Other Situations of Violence reaffirms that physicians must never exploit the vulnerability of the wounded and sick or misuse healthcare privileges for unintended purposes[9]; and

Whereas, the misuse of medical aid as a cover for military intelligence gathering undermines the physician duty to patients and threatens public trust of healthcare providers and institutions; therefore be it

RESOLVED, that our American Medical Association oppose the deceptive use of medical, public health, and humanitarian aid for secret or ulterior motives by government and military entities, including to gather national security intelligence or gain leverage in an armed conflict. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

AMA Code of Medical Ethics Opinion 8.11: Health Promotion & Preventive Care
Health promotion should be a collaborative, patient-centered process that promotes trust and recognizes patients' self-directed roles and responsibilities in maintaining health.

AMA Code of Medical Ethics Opinion 1.1.1: Patient-Physician Relationships
The practice of medicine, and its embodiment in the clinical encounter between a patient and a physician, is fundamentally a moral activity that arises from the imperative to care for patients and to alleviate suffering. The relationship between a patient and a physician is based on trust, which gives rise to physicians' ethical responsibility to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare.

AMA Code of Medical Ethics Opinion 11.1.1: Defining Basic Health Care
Physicians regularly confront the effects of lack of access to adequate care and have a corresponding responsibility to contribute their expertise to societal decisions about what health care services should be included in a minimum package of care for all.

Individually and collectively as a profession, physicians should advocate for fair, informed decision making about basic health care that:

(a) Is transparent.
(c) Protects the most vulnerable patients and populations, with special attention to historically disadvantaged groups.

AMA Code of Medical Ethics Opinion 1.1.3: Patient Rights
The health and well-being of patients depends on a collaborative effort between patient and physician in a mutually respectful alliance. Patients contribute to this alliance when they fulfill responsibilities they have, to seek care and to be candid with their physicians.

Physicians can best contribute to a mutually respectful alliance with patients by serving as their patients' advocates and by respecting patients' rights. These include the right:

(h) To be advised of any conflicts of interest their physician may have in respect to their care.

D-65.993 War Crimes as a Threat to Physicians' Humanitarian Responsibilities
1. Our American Medical Association will implore all parties at all times to understand and minimize the health costs of war on civilian populations generally and the adverse effects of physician persecution in particular.
2. Our AMA will support the efforts of physicians around the world to practice medicine ethically in any and all circumstances, including during wartime, episodes of civil strife, or sanctions and condemn the military targeting of health care facilities and personnel and using denial of medical services as a weapon of war, by any party, wherever and whenever it occurs.
3. Our AMA will advocate for the protection of physicians' rights to provide ethical care without fear of persecution. [BOT Action in response to referred for decision Res. 620, A-09; Modified: BOT Rep. 09, A-19; Modified: Res. 002, I-22; Reaffirmed: Res. 603, A-24]

H-520.998 Medical Neutrality
Our American Medical Association supports medical neutrality, under the principles of the Geneva Convention, for all health care workers and the sick and wounded in all countries. [Sub. Res. 72, I-81; Reaffirmed: CLRPD Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CEJA Rep. 8, A-11; Reaffirmed in lieu of Res. 601, I-13; Reaffirmed: CEJA Rep. 05, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 007
(A-25)

Introduced by: Medical Student Section, LGBTQ+ Section

Subject: Use of Inclusive Language in AMA Policy

Referred to: Reference Committee on Ethics and Bylaws

Whereas, in 2019, our American Medical Association established the Center for Health Equity to embed and advance equity across all aspects of health care, including within the American Medical Association itself; and

Whereas, our AMA, in partnership with the Association of American Medical Colleges (AAMC) Center for Health Justice, developed "Advancing Health Equity: A Guide to Language, Narrative and Concepts," a comprehensive health equity communication guide[1]; and

Whereas, AMA policy H-65.942, "Supporting the Use of Gender-Neutral Language," provides a model for broad-based updates to the AMA policy compendium via ongoing use of the reaffirmation and sunset mechanisms; and

Whereas, existing AMA policies continue to utilize other language or terminology that is outdated, obsolete, exclusive, inaccurate, or offensive, which hinders our mission to promote the art and science of medicine and the betterment of public health; and

Whereas, despite this, existing policy is not comprehensively updated to use inclusive language via the sunset and reaffirmation mechanisms unless initiated by resolutions submitted to the House of Delegates (HOD), AMA staff, or an AMA Council[6]; and

Whereas, ad hoc resolutions submitted to the HOD largely result in reactionary, targeted changes to existing policy, creating cyclical administrative burden on AMA staff; and

Whereas, AMA Councils annually have the opportunity to review policies for sunset and have existing, though variable, mechanisms by which to edit policy language in their sunset report, providing a process to proactively update AMA policy to utilize inclusive language; and

Whereas, prior Sunset reports did not fully incorporate gender-neutral language updates, leaving the discrepancies to be identified and rectified by the House of Delegates [2-5]; and

Whereas, there is no explicit and comprehensive policy directive to ensure that future AMA policy or amendments to existing policy are standardized to use inclusive language; therefore be it

RESOLVED, that our American Medical Association, in consultation with relevant parties, including the AMA Center for Health Equity, amend existing policies to ensure the use of the most updated, inclusive, equitable, respectful, non-stigmatizing, and person-first language and use such language in all future AMA policies and amendments (Directive to Take Action); and be it further

RESOLVED, that our AMA, in consultation with relevant parties, including the AMA Center for Health Equity, identify other types of outdated language in AMA policies and devise a timely mechanism for editorial changes, including both one-time updates and a protocol for editorial changes to language at the HOD Reference Committee recommendation stage and whenever a policy is amended, modified, appended, reaffirmed, or reviewed for sunset; and report back to the House of Delegates. (Directive to Take Action)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

H-70.912 Eliminating Use of the Term "Mental Retardation" by Physicians in Clinical Settings
Our American Medical Association recommends that physicians adopt the term “intellectual disability” instead of “mental retardation” in clinical settings. [Res. 024, A-19]

H-440.821 Person-First Language for Obesity
Our AMA: (1) encourages the use of person-first language (patients with obesity, patients affected by obesity) in all discussions, resolutions and reports regarding obesity; (2) encourages the use of preferred terms in discussions, resolutions and reports regarding patients affected by obesity including weight and unhealthy weight, and discourage the use of stigmatizing terms including obese, morbidly obese, and fat; and (3) will educate health care providers on the importance of person-first language for treating patients with obesity; equipping their health care facilities with proper sized furniture, medical equipment and gowns for patients with obesity; and having patients weighed respectfully. [Res. 402, A-17; Modified: Speakers Rep., I-17]

H-65.942 Supporting the Use of Gender-Neutral Language
Our American Medical Association will (1) Recognize the importance of using gender-neutral language such as gender neutral pronouns, terms, imagery, and symbols in respecting the spectrum of gender identity, (2) prospectively amend all current AMA policy, where appropriate, to include gender-neutral language by way of the reaffirmation and sunset processes, (3) utilize gender-neutral language in future policies1 internal communications, and external communications where gendered language does not specifically need to be used, (4) encourage the use of gender-neutral language in public health and medical messaging, (5) encourage other professional societies to utilize gender-neutral language in their work, and (6) support the use of gender-neutral language in clinical spaces that may serve both cisgender and gender-diverse individuals. [Res. 602, A-23]

D-65.990 Utilization of "LGBTQ" in Relevant Past and Future AMA Policies
1. Our American Medical Association will utilize the terminology “lesbian, gay, bisexual, transgender, and queer plus” and the abbreviation “LGBTQ+” in all future policies and publications when broadly addressing this population.

2. Our AMA will revise all relevant and active policies to utilize the abbreviation “LGBTQ+” in place of the abbreviations “LGBT” and “GLBT” where such text appears.

3. Our AMA will revise all relevant and active policies to utilize the terms “lesbian, gay, bisexual, transgender, and queer plus” to replace “lesbian, gay, bisexual, and transgender” where such text appears. [Res. 016, A-18; Modified: CCB Rep. 05, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 008
(A-25)

Introduced by: Medical Student Section

Subject: Humanism in Anatomical Medical Education

Referred to: Reference Committee on Ethics and Bylaws

Whereas, when beginning cadaveric donor dissection, medical students commonly experience negative emotional or physical reactions which they are expected to quickly overcome, even though many continue to feel discomfort and prolonged guilt[1-2]; and

Whereas, the term "donor" can be more humanistic than the objectifying commonly used term "cadaver"[3,4]; and

Whereas, a diverse medical student community should nurture religious, cultural, and spiritual views towards deceased bodies[5-6]; and

Whereas, most schools conduct donor ceremonies before, during, and/or after dissection courses to convey respect and gratitude to donors and their families, but less than half of these schools include donor names in ceremonies[7-9]; and

Whereas, a survey of students who attended a donor ceremony shared more positive responses regarding their studies, reflection on death, and development of empathy compared to those not attend[10]; and

Whereas, memorial ceremonies and/or daily rituals demonstrate positive educational effects and help prevent decline of students' responsibility and respect during dissection courses[1]; and

Whereas, multiple studies show that students appreciate knowing their donors' identities, which increases positive response to working with donors[1,9]; and

Whereas, a study showed that donors supported anonymous disclosure of information after learning that students wanted to know more about their background to establish the idea of their donor as their first patient[11]; and

Whereas, another study found that "person-minded" medical students developed complex rules regarding respectful behavior towards donors, including habits that reinforced donors' humanity, in contrast to "specimen-minded" students[12]; and

Whereas, Indigenous students engaging in a cultural ceremony showed their respect and appreciation to donors, while also supporting their own spiritual and mental health[13]; therefore be it

RESOLVED, that our American Medical Association supports the incorporation of humanism in human anatomy education programs, including, but not limited to, time for HIPAA-compliant

recognition of donor backgrounds, reflection, discussion, and feedback (New HOD Policy); and be it further

RESOLVED, that our AMA supports accommodations for learners' and donors' cultural observances surrounding the deceased when appropriate (New HOD Policy); and be it further

RESOLVED, that our AMA supports donor memorial ceremonies at centers that utilize cadaveric-based human anatomy education programs. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

Date Received: 4/17/25

RELEVANT AMA POLICY

H-295.896 Conscience Clause: Final Report
Principles to guide exemption of medical students from activities based on conscience include the following:
(1) Medical schools should address the various types of conflicts that could arise between a physician's individual conscience and patient wishes or health care institution policies as part of regular curricular discussions of ethical and professional issues.
(2) Medical schools should have mechanisms in place that permit students to be excused from activities that violate the students' religious or ethical beliefs. Schools should define and regularly review what general types of activities a student may exempt as a matter of conscience, and what curricular alternatives are required for students who exempt each type of activity.

(3) Prospective students should be informed prior to matriculation of the school's policies related to exemption from activities based on conscience.
(4) There should be formal written policies that govern the granting of an exemption, including the procedures to obtain an exemption and the mechanism to deal with matters of conscience that are not covered in formal policies.
(5) Policies related to exemption based on conscience should be applied consistently.
(6) Students should be required to learn the basic content or principles underlying procedures or activities that they exempt. Any exceptions to this principle should be explicitly described by the school.
(7) Patient care should not be compromised in permitting students to be excused from participating in a given activity. [CME Rep .9, I-98; Reaffirmed: CEJA Rep. 11, A-08; Reaffirmed: CME Rep. 01, A-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 009
(A-25)

Introduced by: New England

Subject: Patient centered health care as a Determinant of Health

Referred to: Reference Committee on Ethics and Bylaws

Whereas, this resolution enforces, and emphasizes the importance of patient centered health care and the role of physicians in supporting informed involuntary patient decision-making; and

Whereas, it is a call for the American Medical Association to advocate for the recognition and reinforcement of patient centered health care as a fundamental personal right. This right empowers individuals to actively engage in their healthcare decisions, ensuring these choices are informed, voluntary and reflective of their personal values and goals; and

Whereas, it is the professional and ethical duty of physicians to facilitate patient centered health care by providing comprehensive information, guidance, and support. Empowering patients to make rigorous ethical decisions, free from coercion, and undue influence; and

Whereas, this commitment underscores respect for patient dignity, and the central role of patients in determining their healthcare journey; and

Whereas, patient centered health care is the foundational, ethical principle, that each person should have the right to make their own decisions about their goals and direction in life, such that they control their own destiny, and claim personal responsibility for their choices, actions, words, and responses to others and to events. It is a defining aspect of the declaration by the World Health Organization in 1988[1] that personal behavior is a major determinant of a person's health; and

Whereas, health is defined as a holistic state of security and well-being; physical, mental, social, and environmental. Health is determined by many factors that are broadly classified as three interrelated, and inter-dependent dimensions; that are attributed to the patient/person individually and collectively, (community/culture); to the environment, in which each person lives, (SDOH), social determinants of health); and that provided by your health profession and healthcare system, with its ability to mentor and sustain wellness; restore and remediate human suffering, illness, and injury; and

Whereas, as trusted members of the profession of medicine, we are obligated to bring safe, rigorous, comprehensive, critical thinking, and actions to those we serve. The road to health and all its dimensions is about the orchestration of personal, environmental and health system (professional) development. It's about assessing and taking meaningful action in the relevant aspects of all three areas, not being unduly preoccupied with one area over another, depending on the health fad of the day; and

Whereas, the Massachusetts Medical Society has made great progress in the development of policy and advocacy that advances the social (environmental) determinants, caregiver development (resilience and burnout) and health system reform there is renewed interest in the

historical traditional area of individual patient development namely personal critical, thinking, behavior, and responsibility which may lead to better outcomes for patients individually and collectively; and

Whereas, the Massachusetts Medical Society has declared and its policy compendium[2] now states that " healthcare is a basic human right – enjoyment of the highest attainable, standard of health in all its dimensions, including healthcare, is a basic human right. The provision of healthcare services, as well as optimizing the social determinants of health is an ethical obligation of a civil society." The challenge thus becomes, how do we fulfill this promise? Despite enormous efforts in reforming our health system, addressing the social determinants of health, and ever-increasing funding by private and government means the gap between the production of illness and injury grows relative to the level of resources available to sustain and restore health. Could it be that asking our patients for help might be a promising idea? John F Kennedy alluded to this issue when he proclaimed in his inaugural address on January 20, 1961. The following quote "ask not what your country can do for you, ask what you can do for your country"; and

Whereas, our patients increasingly ask: "What can I as a patient, family member, or friend do to help sustain, or restore my health, and/or mitigate my suffering and disability? Indeed act to better my life and that of others?"; and

Whereas, patients look to the profession of medicine for answers they are seeking to be active participants in health. The theme of personal responsibility and action is about trusting and effective partnerships, and collaborative relationships that facilitate health. Daniel Johnson, MD as president of our AMA from 1996 to 1997 spoke to the role and obligation of our profession to patients in his presidential address. He spoke of the patient caregiver relationship and its enduring value. He likened it to a stagecoach, full of passengers on a wild ride through a terrifying landscape. The driver, the passengers and the shotgun, are on a journey to health. The medical profession is the shotgun and serves as a guide for the stagecoach, and its powerful horses moving through the hostile countryside. The horses and the stagecoach are the health system. The intent of his story is to illustrate the value, endurance and power of our relationship to one another, the patient physician relationship. It highlights that human relationships are necessary tools to guide a successful, safe and productive life's journey; and

Whereas, with this background in mind, the Ethics Committee of the Massachusetts Medical Society anonymously voted to recommend the following resolution[3] to our House of Delegates. It has been adopted and placed in our policy compendium. We in turn, as we have done many times before, offer it to our AMA for consideration; therefore be it

RESOLVED, that our American Medical Association adopt that patient centered health care is a fundamental right of individuals to actively participate in decisions concerning their health care, allowing them to make informed choices, aligned with their values and goals (New HOD Policy); and be it further

RESOLVED, that our AMA physicians have a professional and moral obligation to empower patients to make informed decisions about their care, free from coercion, or undue influence. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

AMA Code of Medical Ethics
1.1.3 Patient Rights

The health and well-being of patients depends on a collaborative effort between patient and physician in a mutually respectful alliance. Patients contribute to this alliance when they fulfill responsibilities they have, to seek care and to be candid with their physicians.
Physicians can best contribute to a mutually respectful alliance with patients by serving as their patients' advocates and by respecting patients' rights. These include the right:

(a) To courtesy, respect, dignity, and timely, responsive attention to his or her needs.

(b) To receive information from their physicians and to have opportunity to discuss the benefits, risks, and costs of appropriate treatment alternatives, including the risks, benefits and costs of forgoing treatment. Patients should be able to expect that their physicians will provide guidance about what they consider the optimal course of action for the patient based on the physician's objective professional judgment.

(c) To ask questions about their health status or recommended treatment when they do not fully understand what has been described and to have their questions answered.

(d) To make decisions about the care the physician recommends and to have those decisions respected. A patient who has decision-making capacity may accept or refuse any recommended medical intervention.

(e) To have the physician and other staff respect the patient's privacy and confidentiality.

(f) To obtain copies or summaries of their medical records.

(g) To obtain a second opinion.

(h) To be advised of any conflicts of interest their physician may have in respect to their care.

(i) To continuity of care. Patients should be able to expect that their physician will cooperate in coordinating medically indicated care with other health care professionals, and that the physician will not discontinue treating them when further treatment is medically indicated without giving them sufficient notice and reasonable assistance in making alternative arrangements for care.

AMA Principles of Medical Ethics: I, IV, V, VIII, IX

AMA Code of Medical Ethics
1.1.4 Patient Responsibilities

Successful medical care requires ongoing collaboration between patients and physicians. Their partnership requires both individuals to take an active role in the healing process.

Autonomous, competent patients control the decisions that direct their health care. With that exercise of self-governance and choice comes a number of responsibilities. Patients contribute to the collaborative effort when they:

(a) Are truthful and forthcoming with their physicians and strive to express their concerns clearly. Physicians likewise should encourage patients to raise questions or concerns.

(b) Provide as complete a medical history as they can, including providing information about past illnesses, medications, hospitalizations, family history of illness, and other matters relating to present health.

(c) Cooperate with agreed-on treatment plans. Since adhering to treatment is often essential to public and individual safety, patients should disclose whether they have or have not followed the agreed-on plan and indicate when they would like to reconsider the plan.

(d) Accept care from medical students, residents, and other trainees under appropriate supervision. Participation in medical education is to the mutual benefit of patients and the health care system; nonetheless, patients' (or surrogates') refusal of care by a trainee should be respected in keeping with ethics guidance.

(e) Meet their financial responsibilities with regard to medical care or discuss financial hardships with their physicians. Patients should be aware of costs associated with using a limited resource like health care and try to use medical resources judiciously.

(f) Recognize that a healthy lifestyle can often prevent or mitigate illness and take responsibility to follow preventive measures and adopt health-enhancing behaviors.

(g) Be aware of and refrain from behavior that unreasonably places the health of others at risk. They should ask about what they can do to prevent transmission of infectious disease.

(h) Refrain from being disruptive in the clinical setting.

(i) Not knowingly initiate or participate in medical fraud.

(j) Report illegal or unethical behavior by physicians or other health care professionals to the appropriate medical societies, licensing boards, or law enforcement authorities.

AMA Principles of Medical Ethics: I, IV, VI

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 010
(A-25)

Introduced by: Organized Medical Staff Section

Subject: Managing Conflict of Interest Inherent in New Payment Models—Patient Disclosure

Referred to: Reference Committee on Ethics and Bylaws

Whereas, exacting and specific disclosures are a key component of the social compact between physicians and society at large, such that patients can have some assurances the care they receive is not unduly influenced by physicians' financial or contractual obligations; and

Whereas, value-based care payment systems task physicians with not only being care providers, but also with being cost managers; and

Whereas, physicians have reported anecdotally being pushed out of value-based contracts when their practices account for greater spending while lower-spending physicians did not seem to report the same risks; and

Whereas, physicians have reported experiencing pressure to cut medication costs even to the extent of changing patient prescriptions or treatment options specifically due to the threat to outcome scores having a negative impact on physicians' ratings; and

Whereas, regulatory and legislative attempts to address these concerns in the form of sunshine and disclosure laws may not be a comprehensive fix as such laws and regulations are not universal and lead to a patchwork of rules across states; and

Whereas, the effect of transparency on cost and physician and patient behavior is limited with studies showing that exposing patients to greater transparency about their healthcare costs had only a modest association with decreased healthcare spending; and

Whereas, it is not enough to abandon efforts to ensure equity is achieved even if patients themselves are not particularly inclined to pay attention to incentive structures and physicians' ethical code of conduct should still require that physicians make certain disclosures; therefore be it

RESOLVED, that our American Medical Association advocate for legislation at the state and federal level requiring complete disclosure of financial arrangements with physicians that are potentially against patients' best interests, including financial incentives and disincentives, by insurers, facilities that employ physicians, and pharmacy benefit managers (Directive to Take Action); and be it further

RESOLVED, that our AMA produce a report with the aim of updating our Code of Medical Ethics to include guidance on disclosure of financial arrangements between physicians and healthcare facilities, employers, or payors that are potentially against patients' best interests (Directive to Take Action).

Fiscal Note: Modest – between $1,000 - $5,000

Received: 2/28/2025

RELEVANT AMA POLICY

Physician Pay-for-Performance Programs H-140.872

Physician pay-for-performance (PFP) compensation arrangements should be designed to improve health care quality and patient safety by linking remuneration to measures of individual, group, or organizational performance. To uphold their ethical obligations, physicians who are involved with PFP programs must take appropriate measures to promote patients' well-being.

(1) Physicians who are involved in the design or implementation of PFP programs should advocate for:
(a) incentives that are intended to promote health care quality and patient safety, and are not primarily intended to contain costs;
(b) program flexibility that allows physicians to accommodate the varying needs of individual patients;
(c) adjustment of performance measures by risk and case-mix in order to avoid discouraging the treatment of high-risk individuals and populations;
(d) processes to make practice guidelines and explanations of their intended purposes and the clinical findings upon which they are based available to participating physicians.

(2) Practicing physicians who participate in PFP programs while providing medical services to patients should:
(a) maintain primary responsibility to their patients and provide competent medical care, regardless of financial incentives;
(b) support access to care for all people and avoid selectively treating healthier patients for the purpose of bolstering their individual or group performance outcomes;
(c) be aware of evidence-based practice guidelines and the findings upon which they are based;
(d) always provide care that considers patients' individual needs and preferences, even if that care conflicts with applicable practice guidelines;
(e) not participate in PFP programs that incorporate incentives that conflict with physicians' professional values or otherwise compromise physicians' abilities to advocate for the interests of individual patients.
Citation: CEJA Rep. 3, I05; Reaffirmed: A-06; Reaffirmed: I-06; Reaffirmed: CEJA Rep. 3, A-16; Reaffirmed: BOT Action in response to referred for decision: Res. 237, I-17

Informed Consent and Decision-Making in Health Care H-140.989
(1) Health care professionals should inform patients or their surrogates of their clinical impression or diagnosis; alternative treatments and consequences of treatments, including the consequence of no treatment; and recommendations for treatment. Full disclosure is appropriate in all cases, except in rare situations in which such information would, in the opinion of the health care professional, cause serious harm to the patient.

(2) Individuals should, at their own option, provide instructions regarding their wishes in the event of their incapacity. Individuals may also wish to designate a surrogate decision-maker. When a patient is incapable of making health care decisions, such decisions should be made by a surrogate acting pursuant to the previously expressed wishes of the patient, and when such wishes are not known or ascertainable, the surrogate should act in the best interests of the patient.

(3) A patient's health record should include sufficient information for another health care professional to assess previous treatment, to ensure continuity of care, and to avoid unnecessary or inappropriate tests or therapy.

(4) Conflicts between a patient's right to privacy and a third party's need to know should be resolved in favor of patient privacy, except where that would result in serious health hazard or harm to the patient or

others.
(5) Holders of health record information should be held responsible for reasonable security measures through their respective licensing laws. Third parties that are granted access to patient health care information should be held responsible for reasonable security measures and should be subject to sanctions when confidentiality is breached.

(6) A patient should have access to the information in his or her health record, except for that information which, in the opinion of the health care professional, would cause harm to the patient or to other people.

(7) Disclosures of health information about a patient to a third party may only be made upon consent by the patient or the patient's lawfully authorized nominee, except in those cases in which the third party has a legal or predetermined right to gain access to such information.
Citation: BOT Rep. NN, A-87; Reaffirmed: Sunset Report: I-97; Reaffirmed: Res. 408, A-02; Reaffirmed: BOT Rep. 19, I06; Reaffirmed: A-07; Reaffirmed: A-09; Reaffirmed: BOT Rep. 5, I-16

The Impact of Pharmacy Benefit Managers on Patients and Physicians D-110.987
1. Our AMA supports the active regulation of pharmacy benefit managers (PBMs) under state departments of insurance.
2. Our AMA will develop model state legislation addressing the state regulation of PBMs, which shall include provisions to maximize the number of PBMs under state regulatory oversight.
3. Our AMA supports requiring the application of manufacturer rebates and pharmacy price concessions, including direct and indirect remuneration (DIR) fees, to drug prices at the point-of-sale.
4. Our AMA supports efforts to ensure that PBMs are subject to state and federal laws that prevent discrimination against patients, including those related to discriminatory benefit design and mental health and substance use disorder parity.
5. Our AMA supports improved transparency of PBM operations, including disclosing:
- Utilization information;
- Rebate and discount information;
- Financial incentive information;
- Pharmacy and therapeutics (P&T) committee information, including records describing why a medication is chosen for or removed in the P&T committee’s formulary, whether P&T committee members have a financial or other conflict of interest, and decisions related to tiering, prior authorization and step therapy;
- Formulary information, specifically information as to whether certain drugs are preferred over others and patient cost-sharing responsibilities, made available to patients and to prescribers at the point-of-care in electronic health records;
- Methodology and sources utilized to determine drug classification and multiple source generic pricing; and
- Percentage of sole source contracts awarded annually.
6. Our AMA encourages increased transparency in how DIR fees are determined and calculated.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 011
(A-25)

Introduced by: Resident and Fellow Section, International Medical Graduates Section

Subject: Opposition of Health Care Entities from Reporting Individual Patient Immigration Status

Referred to: Reference Committee on Ethics and Bylaws

Whereas, the Emergency Medical Treatment and Labor Act (EMTALA) prevents any hospital emergency department that receives Medicare funds from refusing to treat patients for any reason[1]; and

Whereas, Governor Greg Abbott issued an executive order directing the Texas Health and Human Services Commission (HHSC) to collect information on undocumented immigrants immigrant status who utilize Texas public hospitals for inpatient and emergency care[2]; and

Whereas, the executive order directs public hospitals and acute care facilities that receive funding from Medicaid and/or Children's Health Insurance Program (CHIP) to collect information regarding the cost of medical care provided to undocumented immigrants beginning November 1, 2024[2]; and

Whereas, the executive order directs those hospitals and providers to inform the patient that federal law mandates that any response to immigration status questions will not affect patient care[2]; and

Whereas, undocumented immigrants are one of the most marginalized and vulnerable ethnic minority communities in the US and face extreme difficulties accessing healthcare[3]; and

Whereas, the aim of the executive order is to seek compensation from the federal government for care provided to undocumented immigrants since rates of uncompensated care in Texas is high; however, much of this is due to current Texas legislation excluding people from accessing health coverage due to non-expansion of Medicaid and eliminating options for non-US citizens from accessing insurance[4]; and

Whereas, one study demonstrated that undocumented immigrants encounter significant barriers to emergency healthcare currently due to lack of insurance and severity at presentation, increasing the risk of long-term hospitalizations[5]; and

Whereas, similar tracking efforts have been released in Florida where the state found that undocumented immigrants made up 0.8% of hospital visits from June to December of 2023[6]; and

Whereas, at least 50% of those without Deferred Action for Childhood Arrivals (DACA) reported experiencing barriers to healthcare related to documentation status and DACA recipients had 80% decreased odds of facing discrimination when seeking healthcare and 70% decreased odds of documentation status[7]; and

Whereas, experts are predicting in today's climate of anti-immigrant rhetoric and fears of mass deportations, requiring hospital staff to inquire the immigration status of patients before providing care is likely to intimate undocumented immigrants and deter them from seeking medical care for themselves or their children, potentially endangering the health and lives of these families[8]; and

Whereas, as physicians and as the AMA we recognize that enjoyment of the highest attainable standard of health, in all its dimensions, is a basic right (H-65.960); and

Whereas, the use of de-identified healthcare data is an essential method for protecting patient privacy and a sense of security for many patients[9]; and

Whereas, implicit and explicit bias in healthcare directly impact marginalized groups of patients and may lead to discriminatory behavior and potentially suboptimal delivery of healthcare[10]; therefore be it

RESOLVED, that our American Medical Association amend Policy H-440.876, "Opposition to Criminalization of Medical Care Provided to Undocumented Immigrant Patients" by addition and deletion to read:

1. Our American Medical Association opposes
    a. any policies, regulations or legislation that would criminalize or punish physicians and other health care providers for the act of giving medical care to patients who are undocumented immigrants;
    b. any policies, regulations, or legislation requiring physicians, ~~and~~ other health care providers, and healthcare entities to collect and report data regarding an individual patient's legal resident status; and
    c. proof of citizenship as a condition of providing health care~~.~~;and
    d. withholding federal funds if institutions fail to comply with policies which mandate collection of a patient's immigration status.

2. Our AMA opposes any legislative proposals that would criminalize the provision of health care to undocumented residents (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA supports collection of de-identified patient information regarding immigration status for funding and research purposes only. (New HOD Policy)

RELEVANT AMA POLICY

Opposition to Criminalization of Medical Care Provided to Undocumented Immigrant Patients H-440.876

1. Our American Medical Association opposes:
    a. any policies, regulations or legislation that would criminalize or punish physicians and other health care providers for the act of giving medical care to patients who are undocumented immigrants;
    b. any policies, regulations, or legislation requiring physicians and other health care providers to collect and report data regarding an individual patient's legal resident status; and
    c. proof of citizenship as a condition of providing health care.
2. Our AMA opposes any legislative proposals that would criminalize the provision of health care to undocumented residents.

[Res. 920, I-06; Reaffirmed and Appended: Res. 140, A-07; Modified: CCB/CLRPD Rep. 2, A-14; Modified: BOT Rep. 09, A-24]

Health, In All Its Dimensions, Is a Basic Right H-65.960

1. Our American Medical Association acknowledges that enjoyment of the highest attainable standard of health, in all its dimensions, including health care is a basic human right.
2. Our AMA acknowledges that the provision of health care services as well as optimizing the social determinants of health is an ethical obligation of a civil society.

[Res. 021, A-19; Reaffirmed: Res. 234, A-22]

Immigration Status is a Public Health Issue D-350.975

1. Our American Medical Association declares that immigration status is a public health issue that requires a comprehensive public health response and solution.
2. Our AMA recognizes interpersonal, institutional, structural, and systemic factors that negatively affect immigrants' health.
3. Our AMA will promote the development and implementation of educational resources for healthcare professionals to better understand health and healthcare challenges specific for the immigrant population.
4. Our AMA will support the development and implementation of public health policies and programs that aim to improve access to healthcare and minimize systemic health barriers for immigrant communities.

[Res. 904, I-22; Reaffirmed: Res. 210, A-23]

Health Care Payment for Undocumented Persons D-440.985

Our AMA shall assist states on the issue of the lack of reimbursement for care given to undocumented immigrants in an attempt to solve this problem on a national level.

[Res. 148, A-02; Reaffirmation A-07; Reaffirmed: CMS Rep. 01, A-17; Reaffirmation: A-19; Reaffirmation: I-19]

Options to Maximize Coverage under the AMA Proposal for Reform H-165.823

1. That our American Medical Association advocates for a pluralistic health care system, which may include a public option, that focuses on increasing equity and access, is cost-conscious, and reduces burden on physicians.
2. Our AMA will advocate that any public option to expand health insurance coverage must meet the following standards:
    a. The primary goals of establishing a public option are to maximize patient choice of health plan and maximize health plan marketplace competition.
    b. Eligibility for premium tax credit and cost-sharing assistance to purchase the public option is restricted to individuals without access to affordable employer-sponsored coverage that meets standards for minimum value of benefits.
    c. Physician payments under the public option are established through meaningful negotiations and contracts. Physician payments under the public option must be higher than prevailing Medicare rates and at rates sufficient to sustain the costs of medical practice.
    d. Physicians have the freedom to choose whether to participate in the public option. Public option proposals should not require provider participation and/or tie physician participation in Medicare, Medicaid and/or any commercial product to participation in the public option.
    e. The public option is financially self-sustaining and has uniform solvency requirements.
    f. The public option does not receive advantageous government subsidies in comparison to those provided to other health plans.
    g. The public option shall be made available to uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid – having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credits – at no or nominal cost.
3. Our AMA supports states and/or the federal government pursuing auto-enrollment in health insurance coverage that meets the following standards:
    a. Individuals must provide consent to the applicable state and/or federal entities to share their health insurance status and tax data with the entity with the authority to make coverage determinations.
    b. Individuals should only be auto-enrolled in health insurance coverage if they are eligible for coverage options that would be of no cost to them after the application of any subsidies. Candidates for auto-enrollment would, therefore, include individuals eligible for Medicaid/Children's Health Insurance Program (CHIP) or zero-premium marketplace coverage.
    c. Individuals should have the opportunity to opt out from health insurance coverage into which they are auto-enrolled.
    d. Individuals should not be penalized if they are auto-enrolled into coverage for which they are not eligible or remain uninsured despite believing they were enrolled in health insurance coverage via auto-enrollment.
    e. Individuals eligible for zero-premium marketplace coverage should be randomly assigned among the zero-premium plans with the highest actuarial values.
    f. Health plans should be incentivized to offer pre-deductible coverage including physician services in their bronze and silver plans, to maximize the value of zero-premium plans to plan enrollees.
    g. Individuals enrolled in a zero-premium bronze plan who are eligible for cost-sharing reductions should be notified of the cost-sharing advantages of enrolling in silver plans.
    h. There should be targeted outreach and streamlined enrollment mechanisms promoting health insurance enrollment, which could include raising awareness of the availability of premium tax credits and cost-sharing reductions, and establishing a special enrollment period.
4. Our AMA:
    a. will advocate that any federal approach to cover uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid--having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credit eligibility--make health insurance coverage available to uninsured individuals who fall into the coverage gap at no or nominal cost, with significant cost-sharing protections.

b. will advocate that any federal approach to cover uninsured individuals who fall into the coverage gap provide states that have already implemented Medicaid expansions with additional incentives to maintain their expansions.
c. supports extending eligibility to purchase Affordable Care Act (ACA) marketplace coverage to undocumented immigrants and Deferred Action for Childhood Arrivals (DACA) recipients, with the guarantee that health plans and ACA marketplaces will not collect and/or report data regarding enrollee immigration status.
d. recognizes the potential for state and local initiatives to provide coverage to immigrants without regard to immigration status.

5. Our American Medical Association supports federal and state efforts to provide subsidies for undocumented immigrants to purchase health insurance, including by extending eligibility for premium tax credits and cost-sharing reductions to purchase Affordable Care Act (ACA) plans.

[CMS Rep. 1, I-20; Appended: CMS Rep. 3, I-21; Reaffirmation: A-22; Reaffirmed: CMS Rep. 3, A-22; Reaffirmed: Res. 122, A-22; Modified: Res. 813, I-22; Reaffirmed: CMS Rep. 5, I-23; Appended: Res. 817, I-24]

Medical Needs of Unaccompanied, Undocumented Immigrant Children D-65.992

1. Our American Medical Association will take immediate action by releasing an official statement that acknowledges that the health of unaccompanied immigrant children without proper documentation is a humanitarian issue.

2. Our AMA urges special consideration of the physical, mental, and psychological health in determination of the legal status of unaccompanied minor children without proper documentation.

3. Our AMA will immediately meet and work with other physician specialty societies to identify the main obstacles to the physical health, mental health, and psychological well-being of unaccompanied children without proper documentation.

4. Our AMA will participate in activities and consider legislation and regulations to address the unmet medical needs of unaccompanied minor children without proper documentation status, with issues to be discussed to include the identification of:

    a. The health needs of this unique population, including standard pediatric care as well as mental health needs.

    b. Health care professionals to address these needs, to potentially include but not be limited to non-governmental organizations, federal, state, and local governments, the US military and National Guard, and local and community health professionals.

    c. The resources required to address these needs, including but not limited to monetary resources, medical care facilities and equipment, and pharmaceuticals.

    d. Avenues for continuity of care for these children during the potentially extended multi-year legal process to determine their final disposition.

[Res. 5, I-15; Reaffirmed: BOT Action in response to referred for decision: Res. 003, I-18; Reaffirmed: Res. 210, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 012
(A-25)

Introduced by: Resident and Fellow Section, American College of Physicians

Subject: Carceral Systems and Practices in Behavioral Health Emergency Care

Referred to: Reference Committee on Ethics and Bylaws

Whereas, law enforcement officers (LEOs) often serve as first responders during behavioral health emergencies (BHEs), including as transport to hospitals[1–4]; and

Whereas, although some LEOs may possess de-escalation skills, effective trainings are not universally implemented, and the mere presence of armed, uniformed officers with police vehicles can exacerbate feelings of distress and escalate BHEs, particularly in communities where relationships with police are characterized by tension and distrust[5]; and

Whereas, individuals with untreated mental illness are 16 times more likely to be killed during a police encounter than other civilians[6]; and

Whereas, Black children have a 1.8-times greater odds of being handcuffed during a BHE than white children, with 2.6-times greater odds among Black girls compared to white girls and 1.5-times greater odds in the most disadvantaged neighborhoods compared to the least[7]; and

Whereas, from 2003-2018, compared to white adolescents, Black and Hispanic adolescents had six and three times greater risk of firearm-related mortality due to legal intervention, respectively[8,9]; and

Whereas, the high-profile deaths of individuals like a 15-year-old Black teen with autism who was killed by a deputy responding to a BHE call, have reinvigorated long standing clarion calls to reform BHE response systems[10–12]; and

Whereas, the American Civil Liberties Union has argued that reliance on police creates a disparity between responses to physical and mental health emergencies, thereby discriminating against people with mental health conditions and developmental disabilities[13]; and

Whereas, the U.S. Department of Justice indicated in February 2024 that existing civil rights statutes like the Americans with Disabilities Act “may require dispatching a different type of response to mental health emergencies when appropriate, such as mobile crisis teams staffed with behavioral health professionals, to avoid discrimination on the basis of disability”[14]; and

Whereas, alternatives to carceral BHE responses which prioritize leadership by trained mental health professionals, coordination with community-based services, and compassionate person-centered responses have existed for decades in cities across the U.S. with remarkable efficacy and cost savings[6,12,15–17]; and

Whereas, the 9-8-8 Implementation Act, which our AMA has not yet actively supported despite endorsement from numerous other organized medical societies, would provide federal funding

and guidance for more states to implement crisis response infrastructure which relies on trained mental health specialists instead of armed law enforcement[18]; and

Whereas, our AMA Code of Ethics 1.2.7 is clear that patients should "never be restrained punitively, for convenience, or as an alternative to reasonable staffing",[19] and international human rights standards note that – especially for children and youth – physical restraints "can only be used in exceptional cases, where all other control methods have been exhausted and failed"[20]; and

Whereas, incarcerated youth are often routinely and indiscriminately shackled when seeking emergency mental health care regardless of their safety or elopement risk, which is inconsistent with the rehabilitative goals of the juvenile justice system, our AMA's own Code of Ethics, international human rights standards, and the policy positions of leading public health organizations[21–24]; therefore be it

RESOLVED, that our American Medical Association amend policy H-345.972 (Mental Health Crisis Interventions) by addition and deletion to read as follows:

1. Our American Medical Association continues to support jail diversion and community based treatment options for mental illness.
2. Our AMA advocates for funding and implementation of evidence-based interventions to decouple behavioral health response systems from carceral systems, including but not limited to diverting acute mental illness and social-service related calls to mobile crisis teams staffed by mental health trained professionals rather than solely or primarily relying on armed law enforcement.
   ~~Our AMA supports implementation of law enforcement-based crisis intervention training programs for assisting those individuals with a mental illness, such as the Crisis Intervention Team model programs.~~
3. Our AMA supports federal funding to encourage increased community and law enforcement participation in crisis intervention training programs.
4. Our AMA supports legislation and federal funding for evidence-based training programs by qualified mental health professionals aimed at educating corrections and law enforcement officers in effectively interacting with people with mental health crises or ~~and~~ other behavioral dysregulation ~~issues~~ in all ~~detention and~~ correctional facilities and communities.
5. Our AMA supports:
   a. increased research on disparate use of force and non-violent de-escalation tactics during ~~for~~ law enforcement encounters with people who have mental illness and/or developmental disabilities.
   b. research on fatal encounters with law enforcement and the prevention thereof (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA support ending routine reliance on law enforcement to triage, evaluate, or transport individuals experiencing behavioral health emergencies and instead support improved funding for Emergency Medical Services to meet communities' needs (New HOD Policy); and be it further

RESOLVED, that our AMA advocate against the routine application of physical restraints, including handcuffs, during behavioral health emergency responses or as part of police protocols when transporting non-incarcerated individuals to receive health care services (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate against the indiscriminate shackling of children and adults during prehospital and hospital care, as the use of restraints should be limited to the least restrictive option and only applied when medically necessary (Directive to Take Action); and be it further

RESOLVED, that our AMA ask the Council on Judicial and Ethical Affairs to study this topic to provide clearer guidance for healthcare professionals regarding interacting with law enforcement while caring for patients and the indiscriminate shackling of youth and adults in carceral custody, with particular attention to the removal of shackles in lieu of the least restrictive restraint option. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 04/21/25

RELEVANT AMA POLICY

1.2.7 Use of Restraints
All individuals have a fundamental right to be free from unreasonable bodily restraint. At times, however, health conditions may result in behavior that puts patients at risk of harming themselves. In such situations, it may be ethically justifiable for physicians to order the use of chemical or physical restraint to protect the patient.

Except in emergencies, patients should be restrained only on a physician's explicit order. Patients should never be restrained punitively, for convenience, or as an alternate to reasonable staffing.

Physicians who order chemical or physical restraints should:
(a) Use best professional judgment to determine whether restraint is clinically indicated for the individual patient.
(b) Obtain the patient's informed consent to the use of restraint, or the consent of the patient's surrogate when the patient lacks decision-making capacity. Physicians should explain to the patient or surrogate:
(i) why restraint is recommended;
(ii) what type of restraint will be used;
(iii) length of time for which restraint is intended to be used.
(c) Regularly review the need for restraint and document the review and resulting decision in the patient's medical record.

In certain limited situations, when a patient poses a significant danger to self or others, it may be appropriate to restrain the patient involuntarily. In such situations, the least restrictive restraint reasonable should be implemented and the restraint should be removed promptly when no longer needed.

Mental Health Crisis Interventions H-345.972
1. Our American Medical Association continues to support jail diversion and community based treatment options for mental illness.
2. Our AMA supports implementation of law enforcement-based crisis intervention training programs for assisting those individuals with a mental illness, such as the Crisis Intervention Team model programs.
3. Our AMA supports federal funding to encourage increased community and law enforcement participation in crisis intervention training programs.
4. Our AMA supports legislation and federal funding for evidence-based training programs by qualified mental health professionals aimed at educating corrections officers in effectively interacting with people with mental health and other behavioral issues in all detention and correction facilities.
5. Our AMA supports:
    1. increased research on non-violent de-escalation tactics for law enforcement encounters with people who have mental illness and/or developmental disabilities.
    2. research of fatal encounters with law enforcement and the prevention thereof.

[Res. 923, I-15; Appended: Res. 220, I-18; Reaffirmed: CSAPH Rep. 2, A-21; Reaffirmed: BOT Rep. 2, I-21; Appended: Res. 408, A-22]

Shackling of Pregnant Women in Labor H-420.957
1. Our American Medical Association supports language recently adopted by the New Mexico legislature that "an adult or juvenile correctional facility, detention center or local jail shall use the least restrictive restraints necessary when the facility has actual or constructive knowledge that an inmate is in the 2nd or 3rd trimester of pregnancy. No restraints of any kind shall be used on an inmate who is in labor, delivering her baby or recuperating from the delivery unless there are compelling grounds to believe that the inmate presents:
    - An immediate and serious threat of harm to herself, staff or others.
    - A substantial flight risk and cannot be reasonably contained by other means."

If an inmate who is in labor or who is delivering her baby is restrained, only the least restrictive restraints necessary to ensure safety and security shall be used.

2. Our AMA will develop model state legislation prohibiting the use of shackles on pregnant women unless flight or safety concerns exist.

[Res. 203, A-10; Reaffirmed: BOT Rep. 04, A-20; Reaffirmed: CSAPH Rep. 06, A-23]

CMS Interim Final Rule on the Use of Seclusion and Restraints H-280.952

Our AMA uses the following principles in establishing policy regarding restraints and seclusion:
(1) the patient has the right to be free of restraints and seclusion unless medically necessary.
(2) the least restrictive means be considered first.
(3) the use of restraints and seclusion is a medical decision and should not be dictated by government agencies.
(4) when a physician is not physically present a properly trained and authorized health care professional may institute seclusion and restraints when this is clinically appropriate. In such cases the physician shall be contacted immediately. The patient must be examined by a physician within a period of time that meets an acceptable clinical standard.

[Sub. Res. 101, I-99; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: CSAPH Rep. 01, A-19]

Policing Reform D-65.987

1. Our American Medical Association will advocate for efforts to implement evidence-based policing and the creation of evidence-based standards for law enforcement.
2. Our AMA will advocate for sentinel event reviews in the criminal justice system following an adverse event, such as an in-custody death.
3. Our AMA encourages further research by subject matter experts on the issues related to the transfer of military equipment to law enforcement agencies, including the impact on communities, particularly those in minoritized and marginalized communities.
4. Our AMA supports greater police accountability, procedurally just policing models, and greater community involvement in policing policies and practices.
5. Our American Medical Association advocates for research to be conducted that examines the public health consequences of negative interactions with police, including the impact on civilians and law enforcement professionals.
6. Our AMA advocates for a change to the U.S. Standard Certificate of Death to include a “check box” that would capture deaths in custody and further categorize the custodial death using cause and manner of death and information from the “How Injury occurred” section of the death certificate.

[BOT Rep. 2, I-21; Appended: Res. 425, A-23]

Policing Reform H-65.954

1. Our American Medical Association recognizes police brutality as a manifestation of structural racism which disproportionately impacts Black, Indigenous, and other people of color.
2. Our AMA will work with interested national, state, and local medical societies in a public health effort to support the elimination of excessive use of force by law enforcement officers.
3. Our AMA will advocate against the utilization of racial and discriminatory profiling by law enforcement through appropriate anti-bias training, individual monitoring, and other measures.
4. Our AMA will advocate for legislation and regulations which promote trauma-informed, community-based safety practices.
5. Our American Medical Association recognizes the way we police our communities is a social determinant of health.
6. Our AMA advocates for the reform of qualified immunity and other measures that shield law enforcement officers from consequences of misconduct to further address systemic racism in policing and mitigate use of excessive force.
7. Our AMA supports research on the impact upon employed physicians in law enforcement and the potential risk for exacerbating the physician workforce shortage within correctional medicine if qualified immunity was eliminated.

[Res. 410, I-20; Reaffirmed: CSAPH Rep. 2, A-21; Reaffirmed: BOT Rep. 2, I-21; Appended: Res. 431, A-23]

Research the Effects of Physical or Verbal Violence Between Law Enforcement Officers and Public Citizens on Public Health Outcomes H-515.955

1. Our American Medical Association encourages the National Academies of Sciences, Engineering, and Medicine and other interested parties to study the public health effects of physical or verbal violence between law enforcement officers and public citizens, particularly within ethnic and racial minority communities.
2. Our AMA affirms that physical and verbal violence between law enforcement officers and public citizens, particularly within racial and ethnic minority populations, is a social determinant of health.
3. Our AMA encourages the Centers for Disease Control and Prevention as well as state and local public health agencies to research the nature and public health implications of violence involving law enforcement.
4. Our AMA encourages states to require the reporting of legal intervention deaths and law enforcement officer homicides to public health agencies.
5. Our AMA encourages appropriate stakeholders, including, but not limited to the law enforcement and public health communities, to define “serious injuries” for the purpose of systematically collecting data on law enforcement-related non-fatal injuries among civilians and officers.

[Res. 406, A-16; Modified: BOT Rep. 28, A-18; Reaffirmed: BOT Rep. 2, I-21; Reaffirmed: CSAPH Rep. 4, I-23]

Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections D-430.993

1. Our American Medical Association supports the development of:
    1. Best practices for acute care of patients in the custody of law enforcement or corrections.
    2. Clearly defined and consistently implemented processes between health care professionals and law enforcement that:
        a. can best protect patient confidentiality, privacy, and dignity while meeting the needs of patients, health professionals, and law enforcement and
        b. ensures security measures do not interfere with the capacity to provide medical, mental health, pregnancy, end of life care, palliative care, and substance use care, especially in emergency situations, and
    3. If conflict arises during an incarcerated individual’s hospitalization that the hospital’s bioethics committee should convene to address the issue and not a law enforcement liaison.
2. Our AMA affirms that:
    1. the adoption of best practices in the acute care of patients in the custody of law enforcement or corrections is an important effort in achieving overall health equity for the U.S. as a whole.
    2. it is the responsibility of the medical staff to ensure quality and safe delivery of care for incarcerated patients.
2. Our AMA supports universal coverage of essential health benefits for all individuals in the custody of law enforcement or corrections and who are incarcerated.
3. Our AMA will work with interested parties, including but not limited to, the American College of Emergency Physicians and the American College of Correctional Physicians, to develop model federal legislation requiring health care facilities to inform patients in custody about their rights as a patient under applicable federal and state law.

[Res. 407, A-22; Modified: CSAPH Rep. 06, A-23; Reaffirmed: CSAPH Rep. 4, I-23]

Pharmacological Intervention for Agitated Individuals in the Out-of-Hospital Setting H-130.932

1. Our American Medical Associatio believes that current evidence does not support “excited delirium” or “excited delirium syndrome” as a medical diagnosis and opposes the use of the terms until a clear set of diagnostic criteria are validated.
2. Our AMA recognizes that the treatment of medical emergency conditions outside of a hospital is usually done by a subset of healthcare practitioners who are trained and have expertise as emergency medical service (EMS) practitioners. It is vital that EMS practitioners and systems are overseen by physicians who have specific experience and expertise in providing EMS medical direction.
3. Our AMA is concerned about law enforcement officer use of force accompanying “excited delirium” that leads to disproportionately high mortality among communities of color, particularly among Black

men, and denounces “excited delirium” solely as a justification for the use of force by law enforcement officers.

4. Our AMA opposes the use of sedative/hypnotic and dissociative agents, including ketamine, as a pharmacological intervention for agitated individuals in the out-of-hospital setting, when done solely for a law enforcement purpose and not for a legitimate medical reason.
5. Our AMA recognizes that sedative/hypnotic and dissociative pharmacological interventions for agitated individuals used outside of a hospital setting by non-physicians have significant risks intrinsically, in the context of age, underlying medical conditions, and also related to potential drug-drug interactions with agents the individual may have taken.
6. Our AMA encourages the continued use of the necessary and effective dual-response method of communication between law enforcement and EMS to appropriately care for all patients encountered by first responders, including those patients demonstrating agitated or combative behavior.
7. Our AMA calls for comprehensive, independent analysis of law enforcement agencies to:
    a. Review cases labeled as “excited delirium” to determine frequency of use of the term, including prevalence of its use by race, ethnicity, gender, age, and other demographic factors.
    b. Assess the available training and guidelines used to prepare law enforcement first responders to respond to individuals with agitated or combative behavior, including de-escalation training.
    c. Assess efforts to ensure adherence to approved training on an ongoing basis.
8. Our AMA calls for comprehensive, independent analysis, performed by appropriate medical and behavioral health professionals, of EMS agencies to:
    a. Review the usage of ketamine and other sedative-hypnotic medications used to sedate patients with agitated or combative behavior and correlation of the tern “excited delirium” with race, ethnicity, gender, age or other demographic factors.
    b. Assess whether existing training and guidelines, including continuous quality improvement processes, have been properly established by supervising EMS medical directors and behavioral health specialists, to:
        i. Require appropriate monitoring of any patient who receives sedative/hypnotic and dissociative pharmacological interventions for treatment in the out-of-hospital setting.
        ii. Ensure proper use of ketamine and other sedative/hypnotic and dissociative pharmacological interventions under defined protocols/guidelines after appropriate education on indications, usage and complications.
        iii. Include an appropriate stepwise approach to the treatment of patients in the out-of-hospital setting, including de-escalation training, that provides safety to the patient and providers.
    c. Assess, on an ongoing basis, that personnel are conducting themselves according to guidelines and training.
9. Our AMA urges law enforcement and frontline emergency medical service personnel, who are a part of the “dual response” in emergency situations, to participate in appropriate training, overseen by EMS medical directors. The training should minimally include de-escalation techniques and the appropriate use of pharmacological intervention for agitated individuals in the out-of-hospital setting.
10. Our AMA urges medical and behavioral health specialists, not law enforcement, to serve as first responders and decision makers in medical and mental health emergencies in local communities and that administration of any pharmacological treatments in the out-of-hospital setting be done equitably, in an evidence-based, anti-racist, and stigma-free way.

[CSAPH Rep. 2, A-21; Appended: BOT Action in response to referred for decision: CSAPH Rep. 2, A-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 013
(A-25)

Introduced by: Senior Physicians Section

Subject: Continued Support of World Health Organization (WHO) & United States Agency for International Development (USAID)

Referred to: Reference Committee on Ethics and Bylaws

Whereas, the American Medical Association Senior Physicians Section is concerned that a withdrawal from the World Health Organization (WHO) poses a threat to the health of United States of America citizens by limiting access to information on emerging infections in WHO member countries[1,2,3,4,5]; and

Whereas, the United States Agency for International Aid (USAID), a Congressional authorized agency, has had its funds and staff suspended, making it difficult to continue providing life-saving health programs in developing countries for disease outbreaks and epidemics for seniors[6,7]; and

Whereas, it is critical for the U.S. to remain a global leader in public health in order to protect the interests of Americans and provide continued guidance on reforms that enhance accountability and cost-effectiveness within international organizations, which in turn strengthens America's leadership role; and

Whereas, the United States Agency for International Development (USAID) works in many areas, including agriculture, economic growth, education, democracy, human rights, governance, and the environment to promote prosperity, democracy, and security worldwide[8]; therefore be it

RESOLVED, that our American Medical Association opposes withdrawal from the World Health Organization (WHO) as a continued public health threat to the U.S population by limiting early access to evolving worldwide epidemics (Directive to Take Action); and be it further

RESOLVED, that our AMA opposes any cuts to USAID (United States Agency for International Development) programs that increase the risk of infection among vulnerable populations, including senior citizens, or that withhold funding from critical initiatives supporting agriculture, economic development, environmental protection, education, democracy, human rights, and governance in developing countries. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/20/25

RELEVANT AMA POLICY

G-630.070 International Strategy

1. Our American Medical Association recognizes the importance of the involvement of the medical profession in this country in influencing the standards utilized by other nations with regard to ethics, medical education and medical practice, and the commitment to the patient-physician relationship.
2. Our AMA supports the activities of the World Medical Association (WMA) to improve health care in developing countries and supports WMA commendation of those countries that demonstrate exemplary efforts to improve health care delivery to their populations.
3. Our AMA:
    a. continues to support the World Health Organization as an institution.
    b. advocates full funding as understood by the United States Government for the World Health Organization.
    c. will participate in coalitions with other interested organizations to lend its support and expertise to assist the World Health Organization.
    d. encourages the World Medical Association to develop a cooperative work plan with the World Health Organization as expeditiously as possible.
4. Our AMA supports the position of the U.S. government to preserve the integrity of the World Health Organization (WHO) and opposes any attempts to politicize the WHO.
5. Our AMA will include the International Medical Graduates Section as a resource for international medical initiatives.
6. Our AMA will:
    a. continue to focus its international activities on and through organizations that are multinational in scope.
    b. encourage ethnic and other medical associations to assist medical education and improve medical care in various areas of the world.
    c. encourage American medical institutions and organizations to develop relationships with similar institutions and organizations in various areas of the world.
    d. work with the Association of American Medical Colleges (AAMC) and the American Association of Colleges of Osteopathic Medicine (AACOM) to ensure that medical students participating in global health programs, including but not limited to international electives and summer clinical experiences are held accountable to the same ethical standards as students participating in domestic service-learning opportunities.
    e. work with the AAMC to ensure that international electives provide measurable and safe educational experiences for medical students, including appropriate learning objectives and assessment methods.
    f. communicate support for a coordinated approach to global health education, including information sharing between and among medical schools, and for activities, such as the AAMC Global Health Learning Opportunities (GHLOTM), to increase student participation in international electives.
7. Our AMA will adhere to a focused strategy that channels and leverages our reach into the global health community, primarily through participation in the World Medical Association and the World Health Organization.

REPORT 2 OF THE COUNCIL ON MEDICAL SERVICE (A-25)
Reconsidering the Affordable Care Act (ACA) Eligibility Firewall
(Resolution 103-A-23)
(Reference Committee A)

EXECUTIVE SUMMARY

As highlighted in this report, employer-sponsored health insurance (ESI) remains the dominant source of health coverage in this country and most people seem satisfied with it. However, because of shortcomings inherent to the ESI system—namely equity and affordability concerns, and rising costs—it does not work well for everyone. Some workers, especially those with lower incomes, may be contributing more for an employer plan than they would pay for subsidized marketplace coverage. A provision in the Affordable Care Act (ACA), colloquially referred to as "the firewall," prohibits workers with "affordable" and "adequate" ESI offers from receiving premium tax credits to purchase marketplace plans.

The main concerns from Council on Medical Service about eliminating the firewall abruptly and fully include the potential impacts on physician payment and practice sustainability, employer behavior and ESI stability, and federal expenditures, since allowing millions of people to opt out of ESI coverage and into the ACA marketplace could prove to be prohibitively expensive, while also disrupting both ESI and ACA markets. Instead, the Council recommends an incremental approach to reducing the affordability threshold that prioritizes workers most in need. As such, we believe it makes the most sense to support a firewall policy change that targets individuals and families with the lowest incomes who could benefit the most from ACA premium tax credits and cost-sharing subsidies that are not available under ESI. Accordingly, the Council recommends that it be the policy of our AMA that the ACA eligibility firewall not apply to individuals offered employer-sponsored coverage whose household incomes are at or below 200 percent of the federal poverty level. We believe this recommendation is an appropriate first step in addressing ESI affordability challenges while at the same time preserving physician practice sustainability, stability in the ESI market, and limits on federal spending increases.

Because ESI enrollees with lower incomes are more likely to report difficulties covering the costs of medical care and may not know if they are subject to the firewall, the Council recommends amending Policy H-165.843 to encourage employers to 1) implement programs that improve affordability of ESI premiums and/or cost-sharing; 2) provide employees with user-friendly information regarding their eligibility for subsidized ACA marketplace plans based on their offer of ESI; and 3) provide employees with information regarding available health plan options, including the plans' cost, network breadth, and prior authorization requirements, which will help them choose a plan that meets their needs.

To address physician payment concerns, the Council also recommends advocating that physician payments by insurers participating in the ACA marketplace be sustainable, reflect the full cost of practice and the value of the care provided, include inflation-based updates, and pay no less than prevailing Medicare rates.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 2-A-25

Subject: Reconsidering the Affordable Care Act (ACA) Eligibility Firewall (Resolution 103-A-23)

Presented by: Stephen Epstein, MD, MPP, Chair

Referred to: Reference Committee A

At the June 2023 Annual Meeting, the House of Delegates referred Resolution 103, which was sponsored by the Medical Student Section and asked the American Medical Association (AMA) to: (1) recognize the inefficiencies and complexity of the employer-sponsored health insurance system and the existence of alternative models that better align incentives to facilitate access to high quality health care; (2) support movement toward a health care system that does not rely on employer-sponsored health insurance and enables universal access to high quality health care; (3) amend Policy H-165.828[1], "Health Insurance Affordability," by addition and deletion to read as follows:

Health Insurance Affordability H-165.828[1]
~~1. Our AMA supports modifying the eligibility criteria for premium credits and cost-sharing subsidies for those offered employer-sponsored coverage by lowering the threshold that determines whether an employee's premium contribution is affordable to that which applies to the exemption from the individual mandate of the Affordable Care Act (ACA).~~Our AMA advocates for the elimination of the employer-sponsored insurance firewall such that no individual would be ineligible for premium tax credits and cost-sharing assistance for marketplace coverage solely on the basis of having access to employer-sponsored health insurance.

and (4) amend Policy H-165.823[2] by deletion to read as follows:

Options to Maximize Coverage Under the AMA Proposal for Reform H-165.823[2]
2. Our AMA will advocate that any public option to expand health insurance coverage must meet the following standards:
a. The primary goals of establishing a public option are to maximize patient choice of health plan and maximize health plan marketplace competition.
~~b. Eligibility for premium tax credit and cost-sharing assistance to purchase the public option is restricted to individuals without access to affordable employer-sponsored coverage that meets standards for minimum value of benefits.~~
b~~e~~. Physician payments under the public option are established through meaningful negotiations and contracts. Physician payments under the public option must be higher than prevailing Medicare rates and at rates sufficient to sustain the costs of medical practice.
c~~d~~. Physicians have the freedom to choose whether to participate in the public option. Public option proposals should not require provider participation and/or tie participation in Medicare, Medicaid and/or any commercial product to participation in the public option.
d~~e~~. The public option is financially self-sustaining and has uniform solvency requirements.

© 2025 American Medical Association. All rights reserved.

ef. The public option does not receive advantageous government subsidies in comparison to those provided to other health plans.
fg. The public option shall be made available to uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid—having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credits—at no or nominal cost.

Council on Medical Service Report 2-A-24 was referred back to the Council to ensure that the recommendations maximize patient access to care while protecting physician practice revenue and sustainability. This report discusses employer-sponsored insurance (ESI) affordability, explains the ACA affordability threshold (known as the "firewall"), summarizes relevant AMA policy, and makes policy recommendations.

BACKGROUND

Almost a decade and a half after enactment of the ACA, employer-sponsored insurance ESI continues to be the dominant source of health coverage for Americans under 65 years of age. In 2023, 164.7 million people under age 65, or 60 percent of the non-elderly population, had health insurance coverage through an employer.[1] Although ESI is the most common type of health insurance, coverage varies significantly by income as well as race and ethnicity. While 84 percent of individuals with incomes at or above 400 percent of the federal poverty level (FPL) had ESI, it covered fewer than one-quarter of individuals with incomes below 200 percent FPL. Additionally, larger percentages of white and Asian people have ESI while individuals who are African American and Latino are less likely to have employer-based coverage.[2,3]

Overall, most Americans appear satisfied with employment-based coverage. According to KFF's survey of consumer experiences with health insurance, in 2023, 80 percent of adults with ESI and 73 percent of those with ACA marketplace coverage rated their health coverage as "excellent" or "good" although people in poorer health gave more negative ratings across all plan types. Regardless of health status, enrollees in marketplace plans were most likely to rate their experiences with health insurance as fair or poor.[4] Ninety-three percent of workers responding to a 2022 poll sponsored by the U.S. Chamber of Commerce expressed high rates of satisfaction with ESI, with a large majority (89 percent) expressing a preference for ESI over other types of coverage.[5] Eighty percent of respondents to this survey ranked health insurance as the most important workplace benefit provided to them, and a majority cited "affordability" and "high quality" as ESI's most critical features.[6]

Although ESI is popular, it has become increasingly costly for employers and employees, especially small firms and lower-income workers. According to 2024 data from the KFF Employer Health Benefits Survey:

- Fifty-four percent of all firms offered health benefits, including almost all (98 percent) large employers (those with 200 or more workers) and just over half (53 percent) of smaller firms (those with three to 199 workers). Eight percent of firms with at least 50 employees that offer health benefits offer a plan that has a narrow provider network.[7]
- Seventy-five percent of eligible employees took up coverage when it was offered to them, a slight decrease from 2013 (80 percent) and a more sizeable decrease from 2003 (84 percent). Across both firms that offer health benefits and those that do not, more than half (54 percent) of workers have employer coverage.[8]
- Annual health insurance premiums averaged $8,951 for individual coverage and $25,572 for family coverage, six and seven percent more than last year, respectively. In comparison, the

Bureau of Labor Statistics found that wages increased 4.5 percent while inflation grew by 3.2 percent. Notably, premiums for family coverage have increased 24 percent over the last five years while, during the same time period, inflation has risen 23 percent and wages have increased 28 percent. Workers pay, on average, $1,368 annually for individual coverage and $6,296 toward the cost of family premiums.

- Seventy-six percent of firms offering coverage offered only one type of plan. Large firms were significantly more likely to offer more than one plan type than small firms.
- Almost half (48 percent) of covered employees are enrolled in preferred provider organizations (PPOs), the most common plan type offered. Twenty-seven percent of covered workers are enrolled in a high-deductible health plan (HDHP) with savings option.[9]

ESI Affordability

To manage costs, many employer-based plans include substantial deductibles and other out-of-pocket cost-sharing that, together with premium contributions, increase employee health costs and impact affordability.[10] The comparability of ESI and ACA marketplace plan affordability is complicated by differences among enrollees across plans; differences in plan design and regulatory requirements; and enrollee tax savings. In a 2024 report, the U.S. Government Accountability Office (GAO) found that average premiums for employer plans in 2022 were lower than average premiums for marketplace plans. However, after accounting for employer contributions to workers' premiums and federal premium tax credits for marketplace plans, average worker premium contributions to ESI plans were higher than average enrollee premium contributions to marketplace plans.[11] A report from The Commonwealth Fund and Urban Institute found that, prior to the American Rescue Plan Act of 2021 (ARPA) enhancements to marketplace premium tax credits, adults with nongroup coverage reported higher average premiums and health care costs than ESI enrollees and were more likely to report foregoing health care and having problems affording care.[12]

According to KFF's 2024 Employer Health Benefits Survey, the average annual deductible for employees with single coverage was $1,787, a figure that has held relatively steady over the last five years but is 47 percent higher than the average deductible amount 10 years ago.[13] Overall, nearly a third of employees (32 percent) had plan deductibles of $2,000 or more, including half of workers at small firms, whose average annual deductible was $2,575 compared to $1,538 for employees of larger firms.[14]

High-Deductible Health Plans: Not only are deductible amounts rising, but more workers are now covered by high-deductible health plans (HDHPs), which typically have higher deductibles and lower premiums when compared to traditional plans. Such plans generally require patients to pay the full cost of health services and medications until deductibles are met. Although an HDHP's lower premium may be attractive to some people, the responsibility for out-of-pocket expenses becomes problematic when deductibles are too high for enrollees to afford and patients are unable to cover their costs. Not surprisingly, studies have found that reductions in health spending achieved through HDHPs are primarily due to patients simply receiving less medical care as they become more cost-conscious when seeking services.[15] As previously highlighted by the Council on Medical Service (Council on Medical Service Report 2-Nov-20, Mitigating the Negative Effects of High-Deductible Health Plans), the imposition of greater consumer cost-sharing is frequently used to ensure that those receiving health care services "have skin in the game," and as a lever to minimize premium growth.

Over the years, HDHPs have become a more common ESI offering. Among workers with HDHPs, 52 percent had plans with Health Savings Accounts (HSAs) while eight percent participated in

plans with Health Reimbursement Arrangements (HRAs), figures that varied considerably between high and low wage employees. Among workers in the lowest 25 percent wage category, 32 percent had plans with HSAs and 12 percent had HRAs. Among workers in the highest 25 percent wage category, 66 percent had plans with HSAs and seven percent had HRAs.[16] Theoretically, lower premiums may result in higher wages that may help offset the risk associated with HDHPs.

Small Employer Coverage: Health coverage is especially challenging for small business, whose employees frequently pay more for health coverage. According to the Commonwealth Fund, these workers generally contribute a greater share of premium costs and have larger deductible amounts than large-firm employees.[17] KFF has also highlighted the lack of affordable family coverage options for workers at smaller firms employing fewer than 200 people. These employees pay on average $8,334 towards family coverage premiums each year with a quarter paying at least $12,000 annually, not including deductibles and other cost-sharing expenses.[18]

Lower-Income Employees and Affordability: Several analyses have pointed out that workers with lower incomes are disproportionately burdened by ESI costs and usually pay a greater share of income toward employer plan premiums and other out-of-pocket expenses.[19, 20, 21] A KFF analysis of data from its 2023 survey of consumer experiences with health insurance found that adults with incomes below 200 percent FPL who have ESI were significantly more likely than higher-income peers to report difficulties paying for medical care; treatment delays and declines in health due to insurance problems, such as prior authorization; dissatisfaction with the availability and quality of health providers in their plan's network; and more difficulty comparing plans and signing up for coverage.[22] Additional KFF research from 2022 found that, on average, families with incomes below 200 percent FPL pay approximately 10.4 percent of income toward health care premiums and out-of-pocket expenses (7.7 percent for premiums) while those with incomes at or above 400 percent FPL pay about 3.5 percent toward premiums and medical expenses (2.3 percent for premiums).[23] Though employers could utilize health benefit design strategies to address affordability issues facing lower-income workers, few seem to do so; in 2022, 10 percent of large firms reportedly had programs that lowered premium costs for lower-income employees while only five percent reported programs to lower their cost-sharing expenses.[24] COBRA coverage is often too costly an option for workers who are leaving a job.

Though many workers mistakenly think otherwise, they—not the firms they work for—pay the majority of ESI costs, both directly through contributions and indirectly through wage adjustments made to cover employers' health care costs.[25] Building on the literature linking growth in health insurance costs to stagnant wages, a 2023 *JAMA* analysis suggests a likely association between increased premium costs for workers with ESI family coverage and decreased earnings and increased income inequality.[26] Because workers earning lower wages contribute a greater share of income toward ESI premiums, the analysis posits that making employer plans more affordable for lower-wage workers could help address earnings inequality. This study also identified large disparities in premium costs as a percentage of income by race (African American and Latino families paid higher percentages of earnings toward premium costs than white families), and found that over 30 years, families with ESI may have cumulatively lost, on average, more than $125,000 in earnings due to increases in premium costs.[27]

ACA Provisions on Affordability and Employer Shared Responsibility

Though not nearly as dominant as ESI, ACA marketplace plans have become a growing source of health coverage; in January 2025, more than 23 million people had enrolled in marketplace plans, up from 11 million in 2020.[28] Under the ACA, individuals are not eligible for marketplace premium tax credits if they are eligible for "minimum essential coverage," which is broadly

defined to include Medicare, Medicaid, and other public programs as well as ESI. Accordingly, individuals with offers of coverage from an employer do not qualify for ACA marketplace subsidies unless their ESI offer is deemed either unaffordable or inadequate. In 2025, an employer plan was considered unaffordable if an employee's premium contribution exceeded 9.02 percent of that person's household income.[29] To be considered adequate, a plan must cover at least 60 percent of average costs (actuarial value); anything less is deemed inadequate.[30] The ACA provision making workers with affordable and adequate ESI offers ineligible to receive premium tax credits to purchase marketplace coverage is colloquially referred to as "the firewall." This affordability threshold was established to address multiple concerns with the landmark legislation; namely, to prevent disruption to the ESI market and prevent prohibitive increases in federal spending (for marketplace subsidies) while preserving ESI as the principal source of health coverage in this country. Notably, the affordability threshold changes from year to year based on a methodology that considers rates of premium growth and income growth.

As explained in a 2014 Council on Medical Service Report on the future of ESI, the ACA aimed to build upon the ESI framework and provide low-income, non-elderly individuals without access to ESI with either Medicaid coverage or subsidized private coverage offered through the nongroup marketplace. As such, provisions in the ACA statute included incentives and penalties intended to prevent disruption to the ESI market. For example, to incentivize employers to continue offering coverage, the ACA contained an "employer shared responsibility" provision, also called the "employer mandate," which requires employers with 50 or more full-time employees to either offer affordable minimum essential coverage to full-time employees and their dependents or pay a penalty to the Internal Revenue Service (IRS).[31] Under this provision, employers face two potential penalties:

- If an employer does not offer minimum essential coverage to at least 95 percent of its full-time employees and dependents, and at least one employee receives a premium tax credit for coverage offered through an ACA exchange, the employer faces a penalty that is based on all full-time employees (except 30), including those who have ESI or coverage from another source. In 2024, the penalty was $2,970 per employee.[32]
- If an employer offers coverage to at least 95 percent of its employees but at least one employee obtains a premium tax credit for ACA coverage due to the employer's coverage not being "affordable" or "adequate," the employer must pay a penalty for each employee who receives the premium tax credit. In 2024, the penalty is $4,460 per employee.[33]

AMA Policy on the ACA Affordability Threshold

In the early years of ACA implementation, a 2015 Council on Medical Service report on health insurance affordability recommended making changes to how affordable coverage is defined under the law in order to provide more workers and their families with access to marketplace plans when those plans are more affordable than employer plans. This report established Policy H-165.828, which included several provisions calling for the ACA's "family glitch" to be fixed and capping the tax exclusion for ESI as a funding stream to improve insurance affordability. Policy H-165.828[1] as originally written (prior to being amended in 2021) established AMA support for:

> … modifying the eligibility criteria for premium credits and cost-sharing subsidies for those offered ESI by lowering the threshold that determines whether an employee's premium contribution is affordable to that which applies to the exemption from the individual mandate of the ACA.

In 2015 when this policy was adopted, individuals were deemed exempt from the ACA's individual mandate—which was repealed in 2017—if the lowest-priced coverage available to them cost more than 8.05 percent of their household income. The same year, individuals with employer coverage offers were eligible for ACA marketplace plan premium tax credits if their ESI premium contributions exceeded 9.56 percent of income. The aforementioned Policy H-165.828[1] was crafted to align the definitions of affordability with respect to being exempt from the individual mandate (>8.05 percent) and premium tax credit eligibility for individuals with ESI offers (>9.56 percent).

Policy H-165.828[1] was amended via adoption of the recommendations in a 2021 Council on Medical Service report to address new inconsistencies between the definition of affordability pertaining to premium tax credit eligibility and provisions in ARPA, which extended eligibility for premium subsidies to people with incomes greater than 400 percent FPL and capped premiums for those with the highest incomes at 8.5 percent of their income. ARPA increased the generosity of premium tax credits and lowered the cap on the percentage of income individuals are required to pay for premiums of the benchmark (second-lowest-cost silver) plan for everyone. At the time the report was written, in 2021, employer coverage with an employee share of the premium less than 9.83 percent of income was considered "affordable." To open the door to premium tax credit eligibility to individuals with ESI premiums that were above the maximum affordability threshold applied to subsidized marketplace plans, Policy H-165.828[1] was amended to establish AMA support for:

> … modifying the eligibility criteria for premium credits and cost-sharing subsidies for those offered ESI by lowering the threshold that determines whether an employee's premium contribution is affordable to the level at which premiums are capped for individuals with the highest incomes eligible for subsidized ACA coverage.

Federal Subsidies for ACA Premium Tax Credits and Cost-Sharing

In 2023, the federal government subsidized coverage obtained through the ACA marketplaces and the Basic Health Program (BHP) at a cost of $92 billion.[34] This figure includes ARPA federal subsidy enhancements for premium tax credits and cost-sharing reductions that were extended through 2025 by the Inflation Reduction Act (IRA), which decreased the maximum required contribution for previously eligible enrollees and extended eligibility to people with incomes exceeding 400 percent FPL, effectively reducing premium costs by 44 percent, on average. [35] Prior to ARPA, required premium contribution percentages ranged from about two percent of household income for people with poverty level income to nearly 10 percent of income for people with incomes between 300 to 400 percent FPL; people earning more than 400 percent FPL were not eligible for premium tax credits.[36] This year, as shown in Table 1, required premium contribution percentages range from zero for people with less than 150 percent FPL to 8.5 percent for those making around 400 percent FPL or more.

Table 1: Required Individual Contribution Percentage for 2025[37]

Household income percentage of Federal poverty line:	% at start of range	% at top of range
Less than 150%	0.00%	0.00%
At least 150% but less than 200%	0.00%	2.00%
At least 200% but less than 250%	2.00%	4.00%
At least 250% but less than 300%	4.00%	6.00%
At least 300% but less than 400%	6.00%	8.50%
At least 400% and higher	8.50%	8.50%

The more generous federal subsidies have made marketplace plan premiums much more affordable while targeting the largest premium tax credits to people most in need. Notably, more than 90 percent of the 21 million people enrolled in marketplace coverage in 2024 received subsidies that lowered their premium amounts. If the subsidies are not extended beyond 2025, many people will face substantial premium increases, making marketplace coverage less affordable and less attractive as an insurance option. According to the Congressional Budget Office (CBO), without a permanent extension of the premium tax credits, healthier people will leave the ACA marketplace and premiums will rise for remaining enrollees by an estimated 4.3 percent in 2026, 7.7 percent in 2027, and 7.9 percent, on average, over the 2026-2034 period. The CBO also estimates that the number of uninsured people will increase by 2.2 million in 2026, 3.7 million in 2027, and 3.8 million on average between 2026 and 2034.[38] The Urban Institute projects that expiration of the enhanced subsidies will cause four million people to lose health insurance, especially in states that have not adopted Medicaid expansion.[39] According to the Commonwealth Fund, the loss of enhanced subsidies after 2025 would also cause significant economic harm to states, including job losses to health providers and other economic sectors.[40]

Premium tax credits for ACA marketplace coverage are calculated by subtracting the required contribution from the actual cost of the "benchmark" (second-lowest-cost silver) plan, though the credit can be applied toward any marketplace plan except catastrophic coverage.[41] People with incomes below 250 percent FPL also receive subsidies for cost-sharing expenses that are based on income, so that people with incomes between 100 and 150 percent FPL receive the most generous subsidies.[42] These cost-sharing reductions are only available to those enrolled in silver plans. According to the CBO, in 2023 the average federal subsidy per ACA marketplace/BHP enrollee was $5,990,[43] although the range of subsidy amounts is considerable.

Federal Subsidies for ESI

For many decades, the U.S. tax code has provided a sizeable tax benefit to both employers and employees by excluding premium contributions towards ESI from federal income and payroll taxes. As ESI premiums have risen over the years, so has the tax benefit. The amount of an individual's subsidy depends on that person's marginal tax rate that would be owed if employer-paid premiums were taxed as wages. Accordingly, people with greater incomes and higher marginal tax rates receive larger federal ESI subsidies than people with lower-incomes and lower tax rates.[44] According to the CBO, the average federal subsidy per ESI enrollee in 2023 was $2,170.[45]

In part due to the enhanced subsidies for marketplace enrollees established by ARPA and extended by the IRA, several analysts have observed a growing disparity between federal subsidies that help defray ACA marketplace plan costs, and subsidies for ESI coverage. To illustrate this expanding gap, a 2024 American Enterprise Institute (AEI) paper calculated the value of subsidies that would be received by a family of four with $75,000 in income, depending on whether they purchased ESI or marketplace coverage. According to AEI, if the family enrolled in an employer-based plan, their tax subsidy would be around $4,100, compared to the more than $15,000 in federal premium subsidies the family would be eligible for if enrolled in a marketplace plan.[46] Other analyses have noted that workers with lower incomes may be contributing more for an employer-based plan than they would pay for coverage under a subsidized marketplace plan, and that it could be financially advantageous for these workers to move to the marketplace.[47] However, lower-income workers, including those with incomes at or below 200 percent of FPL ($30,120 for an individual; $62,400 for a family of four), cannot enroll in marketplace coverage if they have an offer of ESI. Without the firewall, and if current subsidy enhancements are extended, workers earning less than 150

percent of FPL would be eligible for zero premium silver plans in the ACA marketplace as well as generous cost-sharing reductions. Employees making 200 percent of FPL would also be eligible for cost-sharing reductions and their premium contributions would be capped at two percent of household income.[48] Thus, lower-income workers at or below 200 percent of FPL may find more affordable coverage on the marketplace, depending on how much they must pay for premiums, deductibles and copayments under their ESI plan.

Importantly, some lower-income employees who would be financially incentivized to enroll in a marketplace plan if the firewall is repealed might opt to retain ESI coverage if they are satisfied with their plan and able to see the physicians they want in a timely manner. The Centers for Medicare & Medicaid Services has previously acknowledged the proliferation of narrow networks among ACA exchange plans, and several studies have demonstrated varying degrees of challenges facing marketplace enrollees attempting to access in-network providers, most commonly mental health specialists. A 2020 *JAMA* study found that provider networks were broader in ESI plans and narrower in marketplace plans but that networks may also be limited in lower-quality employer plans.[49] The Council has previously observed that, while marketplace plans may be attractive to some people because their premium prices are lower, purchasers may not be aware that a plan's provider network could be narrower and that they may have trouble getting needed care from in-network physicians, hospitals, and other providers. Therefore, some workers with ESI coverage who would become newly eligible for marketplace subsidies if the firewall is repealed may decide to keep their employer plan to avoid possible care disruptions and to preserve relationships with their treating physicians. Depending on income and a range of other factors, this could be true for some employees who utilize more services and medications or who have a family member on their plan who has a health condition that requires timely access to specialty care.

POLICY OPTIONS ADDRESSING ESI AFFORDABILITY

During the development of this report, the Council reviewed papers from a broad spectrum of organizations and also met with subject matter experts who suggested a range of approaches to improving affordability in ESI and nongroup markets. Review of the literature uncovered a handful of data analyses and a range of conflicting opinions on the best way forward. The studies generally agreed that lifting the firewall would increase access to less expensive insurance for people with low incomes. However, they differed in their assessment of the percent of the population that would move from ESI to the ACA marketplace, the impact of employer behavior, and their willingness to support increased federal health spending. These studies are summarized below in alphabetical order.

American Enterprise Institute (AEI): A 2020 paper published by AEI recognizes both the value of ESI to many Americans as well as its flaws, including rising costs for both employers and employees. AEI asserts that ESI is worth preserving and suggests tax reforms as the centerpiece of a framework for a more stable ESI system, including the provision of a tax benefit for employers that would be applied to employee premiums. According to AEI, such firm-level tax credits could be structured to provide greater support to lower-income employees but less support to those with higher incomes.[50]

Bipartisan Policy Center (BPC): A 2022 BPC report recognized that ESI is less affordable for lower-wage workers but suggests that fully eliminating the firewall would be quite costly for the federal government. Instead, BPC recommended that Congress adjust the affordability threshold to align with the percentage cap on premium contributions for marketplace plans.[51] As discussion of broad tax cut extensions (and the need to pay for them) intensified late last year, BPC suggested

that the ESI tax exclusion be capped at the 80th percentile of premiums, or around $10,000 for single plans and $30,000 for family plans.[52]

Center on Budget and Policy Priorities (CBPP): A 2019 CBPP analysis acknowledged that eliminating the firewall would improve equity but concluded that a full repeal would be too costly to recommend. Instead, the CBPP suggested strengthening the standards for employer coverage offers, such as by raising the minimum value standard (from 60 to 70 percent) or establishing more robust benefit standards for ESI plans.[53]

Commonwealth Fund: A 2020 analysis found that, depending on marketplace subsidy amounts in place, between six and 13 percent of people with ESI would pay lower premium amounts if they were able to switch to marketplace plans. Importantly, the paper pointed out that people with the lowest incomes would benefit the most from lower marketplace premiums, as would African American, Latino, American Indian and Alaska Native individuals. According to the brief, much is unknown about potential employer responses to elimination of the firewall, including whether firms will incentivize sicker workers to move to exchange plans or stop offering coverage altogether.[54] A 2024 Commonwealth Fund paper on automatic enrollment in health insurance posits that 1.2 million people with incomes below 150 percent of FPL and 6.5 million people with income between 150 percent and 200 percent of FPL would become eligible for marketplace subsidies if the firewall were eliminated. The analysis states that "most" of these newly eligible individuals currently have ESI although some are paying full premiums for nongroup plans.[55]

Congressional Budget Office (CBO): In 2020, the CBO estimated that approximately 25 percent of workers with ESI would become eligible for marketplace subsidies if the firewall was repealed. For 20 percent of those newly eligible, post-subsidy premiums for marketplace plans would be lower than ESI premiums, thus making the nongroup market an attractive option. The CBO maintained that, although firms would respond differently to a lifting of the firewall, most of the savings incurred would likely be passed on to employees and adverse selection would be minimized.[56]

Urban Institute: Urban Institute data presented to the Council and published by The Commonwealth Fund estimated that eliminating the firewall would decrease ESI coverage by two percent or less, meaning approximately 1.8 million people would transition out of ESI, with most of these workers shifting to marketplace coverage. Urban Institute's modeling assumes that most workers would stay enrolled in ESI coverage because ESI tax benefits are substantial. In this scenario, federal spending on marketplace premium tax credits would increase by $17.8 billion, or 18 percent; state spending would increase by $460 million; employer spending on premium contributions would decrease $8.1 billion; and households would save $4.4 billion per year in health spending. This study also projected that 1.4 million fewer people would be uninsured if the firewall was eliminated, including 0.4 million people between 138 percent and 200 percent of the poverty line, 0.8 million people between 200 percent and 400 percent of the poverty line, and 0.1 million people above 400 percent of the poverty line. It is estimated that this would save an estimated $1.5 billion in uncompensated care costs. The study also noted additional benefits may occur from elimination of the ESI firewall due to elimination of red tape that will make it easier for individuals who already qualify for PTCs to actually receive those benefits.[57]

RELEVANT AMA POLICY

Policy H-165.829 encourages the development of state waivers to develop and test different models for transforming employer-provided health insurance coverage, including giving employees a choice between employer-sponsored coverage and individual coverage offered through health

insurance exchanges, and allowing employers to purchase or subsidize coverage for their employees on the individual exchanges. Among its many provisions, Policy H-165.920 supports:

- A system where individually owned health insurance is the preferred option but employer-provided coverage is still available to the extent the market demands it;
- An individual's right to select his/her health insurance plan and to receive the same tax treatment for individually purchased coverage, for contributions toward employer-provided coverage, and for completely employer-provided coverage; and
- A replacement of the present federal income tax exclusion from employee's taxable income of employer-provided insurance coverage with tax credits for individuals and families.

Under Policy H-165.851, the AMA supports incremental steps toward financing individual tax credits for the purchase of health insurance, including but not limited to capping the tax exclusion for employment-based health insurance. Policy H-165.843 encourages employers to promote greater individual choice and ownership of plans; enhance employee education regarding how to choose health plans that meet their needs; and support increased fairness and uniformity in the health insurance market. Policy H-185.918 further encourages employers to: (a) provide robust education to help patients make good use of their benefits to obtain the care they need, (b) collaborate with employees to understand their health insurance preferences and needs, (c) tailor benefit designs to the health insurance preferences and needs of their employees, and (d) pursue strategies to help enrollees spread the costs associated with high out-of-pocket costs across the plan year. Policy H-165.881 advocates for equal-dollar contributions by employers irrespective of an employee's health plan choice. Policy H-165.854 supports Health Reimbursement Arrangements (HRAs)—account-based health plans that employers can offer to reimburse employees for their medical expenses—as one mechanism for empowering patients to have greater control over health care decision-making. Under Policy D-165.971, the AMA will work to ensure that any Association Health Plan Programs safeguard state and federal patient protection laws.

Policy H-165.824 supports improving affordability in health insurance exchanges by expanding eligibility for premium tax credits beyond 400 percent FPL; increasing the generosity of premium tax credits; expanding eligibility for cost-sharing reductions; and increasing the size of cost-sharing reductions. Policy H-165.828, which as previously noted addresses the affordability threshold (firewall), also supports capping the tax exclusion for employment-based health insurance as a funding stream to improve health insurance affordability. This policy further supports education regarding deductibles, cost-sharing, and Health Savings Accounts (HSAs).

Policy H-165.823 supports a pluralistic health care system and advocates that eligibility for premium tax credit and cost-sharing assistance to purchase a public option be restricted to individuals without access to affordable employer-sponsored coverage that meets standards for minimum value of benefits. This policy sets additional standards for supporting a public option and states that it shall be made available to uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid at no or nominal cost.

DISCUSSION

The AMA has long supported health system reform alternatives that are consistent with AMA policies concerning pluralism, freedom of choice, freedom of practice, and universal access for patients. To expand coverage to all Americans, the AMA has advocated for the promotion of individually selected and owned health insurance; the maintenance of the safety net that Medicaid and CHIP provide; and the preservation of employer-sponsored coverage to the extent the market

demands it. ESI continues to be the dominant source of health coverage for people under 65 years of age, and most people enrolled in employer coverage seem satisfied with it. Still, the Council acknowledges that because of shortcomings inherent to the ESI system—including equity and affordability concerns, and rising costs—it does not work well for everyone, especially workers with lower incomes and those employed by smaller firms.

As explained in this report, people with higher earnings receive larger federal ESI subsidies than their lower-income peers, and lower-income people pay a greater share of earnings towards ESI. The Council recognizes that federal tax benefits available to ESI subscribers facing the greatest affordability challenges are not nearly as generous as the enhanced subsidies currently available to lower-income individuals enrolled in ACA marketplace plans. However, the affordability "firewall" makes employees with "affordable" ESI offers ineligible for federal subsidies to purchase ACA plans. To illustrate, an employee of a big box retailer earning 200 percent of FPL or less could pay up to 9.02 percent of his income towards "affordable" ESI. However, if he was eligible to move to the ACA marketplace, his premium contributions would be capped at two percent of income and he would also be eligible for cost-sharing subsidies. Under Policy H-165.828[1]), the AMA supports lowering the affordability threshold (firewall) to the level at which premiums are capped for individuals with the highest incomes eligible for subsidized coverage (currently 8.5 percent).

During the development of this report, the Council reviewed the literature and heard from experts presenting an array of views regarding the potential impacts of fully eliminating the firewall, which is the policy change requested by referred Resolution 103-A-23. The Council found that estimates varied regarding how many workers would transition from ESI to exchange plans if the firewall was repealed. Therefore, we cannot predict with certainty how coverage patterns and payments to physicians would be affected. The Council's revised recommendations reflect, in part, our concerns regarding the harms that significant coverage transitions out of ESI and into ACA plans could have on physician payment and the sustainability of physician practices. Although payment rates in the nongroup market tend to vary, they are generally lower than rates paid by ESI plans. In fact, a study published in 2024 found that, in 2021, marketplace nongroup insurers paid health providers substantially less than employer small-group plans. Even though the study found that marketplace rates were generally higher than Medicare payments,[58] the Council is aware that in some states marketplace plan payments barely exceed, or are even lower than, Medicare rates. In the current environment of Medicare and Medicaid physician payment inadequacies, the Council recognizes that significant shifts from ESI to the ACA marketplace could have deleterious effects on physician practices, adding to their considerable burdens and threatening their viability.

The Council is also concerned about potential employer responses to a repeal of the firewall, which cannot be predicted and will likely vary, with some firms possibly shifting certain employees to the marketplace or ceasing to offer health coverage altogether, and without assurances that employer savings would be passed along to workers. Still, we understand that the firewall is problematic for lower-income workers who may be contributing more for an employer plan than they would pay for marketplace coverage and for people working for small employers whose ESI costs have become increasingly expensive. Given the enhanced subsidies for premium tax credits and cost-sharing reductions available under current law, it is likely that at least some employees with incomes at or below 200 percent of FPL—whose premium contributions for exchange plans would be capped at two percent of income—would find marketplace coverage significantly more affordable than their ESI plan. However, if the more generous premium tax credits are allowed to expire at the end of this year, the cost of marketplace coverage will rise, potentially making ACA plans less attractive. Even among employees who would benefit financially from transitioning to the marketplace, some may opt to retain ESI coverage if they are satisfied with that plan, concerned

about the network breadth of exchange plans, or interested in preserving relationships with their treating physicians.

If the firewall was eliminated, the Council is also concerned about the potential costs that would be incurred by the federal government, which already spends upwards of $1.8 trillion on health insurance subsidies—across all coverage programs—each year.[59] Allowing potentially millions of ESI enrollees to access ACA marketplace subsidies could prove to be prohibitively expensive. We cannot estimate the exact costs of eliminating the firewall, which would depend on how many workers ultimately move to exchange plans, but expect it could total tens of billions of dollars or more per year. We believe that budgetary considerations may make the full repeal option unrealistic, financially, and also politically since it would be unpopular with ESI proponents, including employers (and employees) who value and want to preserve the ESI tax exclusion.

For all of these reasons, the Council decided to recommend an incremental approach to reducing the affordability threshold so that it first benefits workers most in need, after which the effects of this change on coverage patterns, federal and consumer health spending, and employer behavior could be monitored. At this time, we support a firewall policy change that targets employees with the lowest incomes who could benefit the most from ACA premium tax credit and cost-sharing subsidies not available under ESI. Accordingly, the Council recommends that the ACA eligibility firewall not apply to individuals offered employer-sponsored coverage whose household incomes are at or below 200 percent of the FPL, so they can receive federal premium tax credits and cost-sharing assistance if they opt to enroll in a marketplace health plan. We believe this recommendation is an appropriate first step to addressing ESI affordability challenges among the lowest-wage workers while at the same time preserving physician practice sustainability, stability in the ESI market, and limits on federal spending increases. We recommend 200 percent of the FPL since it represents workers most in need and, as the studies cited in this report note, more data are available for individuals with incomes at this threshold. Furthermore, we believe that defining the affordability threshold by a percentage of FPL should make it easier for employees to determine whether they are eligible for ACA subsidies. To protect employees and their ability to choose a health plan that best meets their needs, the Council maintains that some level of employer shared responsibility requirements will need to continue so that employers do not push workers to the marketplace involuntarily or stop offering ESI to certain income groups.

Because ESI enrollees with lower incomes are more likely to report difficulties covering the costs of medical care and who may not know if they are firewalled, the Council recommends amending Policy H-165.843 to encourage employers to: 1) implement programs that improve affordability of ESI premiums and/or cost-sharing; 2) provide employees with user-friendly information regarding their eligibility for subsidized ACA marketplace plans based on their offer of ESI; and 3) provide employees with information regarding available health plan options, including the plans' cost, network breadth, and prior authorization requirements, which will help them choose a plan that meets their needs. The Council recognizes that employers are already required to provide employees with notice about the ACA marketplace and that, depending on income and ESI offer, they may be eligible for lower-cost coverage in the marketplace. However, it may be challenging for some employees to determine whether they are eligible for marketplace subsidies without tools to help them do so.

To address physician payment concerns, the Council also recommends advocating that physician payments by insurers participating in the ACA marketplace be sustainable, reflect the full cost of practice and the value of the care provided, include inflation-based updates, and pay no less than prevailing Medicare rates. This policy mirrors other AMA physician payment policies and is critical to ensuring physician practice sustainability.

RECOMMENDATIONS

The Council on Medical Service recommends that the following recommendations be adopted in lieu of Resolution 103-A-23, and that the remainder of the report be filed.

1. That it be the policy of our American Medical Association (AMA) that the Affordable Care Act (ACA) eligibility firewall not apply to individuals offered employer-sponsored coverage whose household incomes are at or below 200 percent of the federal poverty level, so they can receive federal premium tax credits and cost-sharing assistance if they opt to enroll in a marketplace health plan as an affordable alternative to their employer-based plan. (New HOD Policy)

2. That our AMA amend Policy H-165.843 by addition and deletion to read:

   Our AMA encourages employers to:
   a) promote greater individual choice and ownership of plans;
   b) implement plans to improve affordability of premiums and/or cost-sharing, especially expenses for employees with lower incomes and those who may qualify for Affordable Care Act marketplace plans based on affordability criteria;
   c) ~~help employees determine if their employer coverage offer makes them ineligible or eligible for federal marketplace subsidies~~ provide employees with user-friendly information regarding their eligibility for subsidized ACA marketplace plans based on their offer of employer-sponsored insurance;
   ~~b~~d) ~~enhance employee education regarding available health plan options and how to choose health plans that meet their needs~~ provide employees with information regarding available health plan options, including the plan's cost, network breadth, and prior authorization requirements, which will help them choose a plan that meets their needs;
   ~~c~~e) offer information and decision-making tools to assist employees in developing and managing their individual health care choices;
   ~~d~~f) support increased fairness and uniformity in the health insurance market; and
   ~~e~~g) promote mechanisms that encourage their employees to pre-fund future costs related to retiree health care and long-term care. (Modify HOD Policy)

3. That our AMA advocate that physician payments by health insurers participating in the ACA marketplace be sustainable, reflect the full cost of practice and the value of the care provided, include inflation-based updates, and pay no less than prevailing Medicare rates. (New HOD Policy)

Fiscal Note: Less than $500.

REPORT 5 OF THE COUNCIL ON MEDICAL SERVICE (A-25)
Medicaid Estate Recovery Reform
(Resolution 104-A-24)
(Reference Committee A)

EXECUTIVE SUMMARY

At the 2024 Annual Meeting, the House of Delegates referred Resolution 104, which was sponsored by the Medical Student Section and asked the American Medical Association (AMA) to oppose federal or state efforts to impose liens on or seek adjustment or recovery from the estate of individuals who received long-term services or supports coverage under Medicaid. During the development of this report, the Council reviewed the literature on Medicaid estate recovery, met with an expert, and discussed potential reforms. Of note, the Council's deliberations took place at a time of heightened concern regarding potential reductions in Medicaid funding, which would have deleterious effects on state budgets and Medicaid programs.

Because Medicaid estate recovery is not directly addressed in AMA policy, the Council found that new policy is needed and that, given widespread concerns regarding potential federal Medicaid funding cuts, new policy must allow for state flexibility. The Council's recommendations are thus intended to support and encourage meaningful estate recovery reforms without requiring states to abandon the practice. In some states, the return on investment may not be worth the costs of administering Medicaid estate recovery programs; however, states that recoup the most funds may not want to forego that revenue, especially if federal Medicaid funds are reduced. For these reasons, the Council decided not to oppose estate recovery efforts outright. Instead, this report recommends support for specific reforms intended to help maintain Medicaid as a safety net and ensure that long-term services and supports (LTSS) are provided to people most in need.

To acknowledge the variance in estate recovery efforts and allow states more flexibility than they currently have, the Council recommends that the AMA support making Medicaid estate recovery optional, instead of mandatory. This recommendation allows states to decide whether (or not) to continue their estate recovery programs, which is consistent with longstanding AMA policy allowing states some flexibility in implementing their Medicaid programs. When Medicaid estate recovery is pursued, the Council recommends: 1) limiting recoupment to the costs of LTSS and not for other Medicaid services that were provided; 2) standards for hardship waivers that prohibit claims against a sole income-producing asset of heirs, homes of modest value, and any estate less than a specified threshold value; 3) exempting estates from recovery efforts when the value of the recovery is projected to be less than the cost of recoupment efforts; 4) basing estate recovery on the costs of LTSS care when managed care organizations are utilized, instead of the capitation amount, when the cost of LTSS is lower than the capitation amount; 5) providing education regarding state Medicaid estate recovery requirements; 6) screening patients for hardship waivers and assisting them with filing, if eligible; and 7) collecting and making publicly available important data regarding estates that have been pursued and amounts that have been recovered.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 5-A-25

Subject: Medicaid Estate Recovery Reform (Resolution 104-A-24)

Presented by: Stephen Epstein, MD, MPP, Chair

Referred to: Reference Committee A

At the 2024 Annual Meeting, the House of Delegates (HOD) referred Resolution 104, which was sponsored by the Medical Student Section and asked the American Medical Association (AMA) to oppose federal or state efforts to impose liens on or seek adjustment or recovery from the estate of individuals who received long-term services or supports coverage under Medicaid. The Board of Trustees assigned this item to the Council on Medical Service for a report back to the House of Delegates. This report describes federal Medicaid estate recovery requirements, discusses the pros and cons of estate recovery, and makes policy recommendations for future reforms.

BACKGROUND

Since the Medicaid program's inception in 1965, states have been permitted to try to collect repayments for certain Medicaid services after older enrollees had died. In 1982, the Tax Equity and Fiscal Responsibility Act gave states the option to utilize property liens to prevent Medicaid enrollees from evading estate recovery efforts by transferring their homes to someone else shortly before their death. The Omnibus Budget Reconciliation Act of 1993 (OBRA 93) mandated estate recovery efforts targeting certain deceased enrollees who had used Medicaid long-term services and supports (LTSS), including nursing facility services and home and community-based services (HCBS), while allowing states some discretion in how estate recovery programs are implemented. Under OBRA 93, states must attempt to recover payments from the estates of individuals who received Medicaid LTSS when they were aged 55 or older; enrollees of any age expected to reside permanently in long-term care facilities; and, under certain circumstances, individuals with long-term care insurance.[1]

For the age 55 and older group, federal law stipulates that states must pursue estate payments for amounts that are at least equal to the costs of a patient's nursing facility care, HCBS, and hospital services and prescriptions provided while an enrollee was receiving LTSS. States have the option to also pursue estate recovery for the costs of other Medicaid-covered services, except for Medicare cost-sharing assistance that is provided to individuals who are dually eligible for Medicaid and Medicare. According to KFF, 37 states go beyond minimum federal estate recovery requirements and apply recoupment efforts to optional Medicaid services, including 32 states that try to recover the costs of all Medicaid services (as long as LTSS services were provided); 28 states that target some people under age 55; and five states that focus on certain optional benefits.[2]

Generally speaking, and depending on a specific state's policies, elements of an individual's estate that can be subject to recovery efforts include cash, checking and savings accounts, stocks and bonds, remaining funds in certain types of trusts (e.g., Qualified Income Trust and/or Irrevocable

© 2025 American Medical Association. All rights reserved.

Funeral Trust) and any other items of value, including an individual's home. Life insurance policies are generally protected unless the beneficiary is the Medicaid enrollee's estate.[3]

Federal law also places some parameters around estate recovery efforts. For example, states are not permitted to seek recovery from the estate of a deceased Medicaid enrollee who is survived by a spouse until the spouse has died, and once the spouse has died, states can waive recovery if they determine efforts will not be cost effective. Similarly, states must exempt or defer recovery from the estates of enrollees who are survived by a child under 21 or a child of any age who is blind or has a disability.[4] As such, states may not try to take the homes of deceased enrollees that are occupied by a surviving spouse, child under 21, child of any age who is blind or has a disability, or a sibling who has an equity stake in that home. However, states are allowed to impose liens on the property of enrollees who are receiving institutionalized care and are not expected to return home, unless the home is occupied by the individual's spouse, child under age 21, child of any age who is blind or has a disability, or sibling who has an equity interest in the home.[5] Once survivors have died or a surviving child has turned 21, states can—and often do—proceed with attempting to recoup payments from estates. Pursuant to court judgments, states are also permitted to impose liens to pay for Medicaid benefits that were incorrectly provided.

OBRA 93 required states to establish procedures for waiving estate recovery due to undue hardships, which the Centers for Medicare & Medicaid Services (CMS) has stated could include: 1) an estate that is the sole income-producing asset for survivors (e.g., family farm); 2) a home of modest value, defined as roughly half the average home value in the county; and 3) other compelling circumstances. Although states are not required to implement these particular hardship examples, most (49) have reported adopting at least one of the three, including 35 states that said they use the "sole income-producing asset" criteria.[6] Notably, only 15 states report waiving estate recovery for homes of modest value.[7]

For Medicaid managed care organization (MCO) enrollees who would be subject to estate recovery under fee for service (FFS), states can seek recoupment of MCO capitation payments rather than the costs of Medicaid services that were provided. In states that pursue estate recovery for all Medicaid services, the total capitation payment for the period the individual was enrolled in the MCO must be sought. If the state applies estate recovery to some, but not all services, the state must pursue recoupment of the part of the capitation payment attributed to those services.[8] According to KFF, 30 states report trying to recoup payments for MCO capitation payments which, notably, can exceed the amount that Medicaid had actually spent on the enrollee.

Medicaid Long-Term Services and Supports (LTSS)

LTSS refers to the broad range of clinical health and related services provided to help people who have functional or cognitive limitations with activities of daily living (ADL) when these individuals need extra care either at home or in a facility. ADLs include eating, bathing, dressing, and instrumental tasks like medication management, house cleaning, and meal preparation. LTSS are intended to help individuals with self-care needs over an extended time period, which differentiates them from post-acute services, such as home health or skilled nursing facility (SNF) care, that are designed to help individuals recover after a hospitalization.[9]

Older adults and people living with chronic illnesses and disabilities are among the estimated nine million users of Medicaid LTSS, a figure that includes the 7.8 million enrollees who received HCBS in 2022 and 1.5 million individuals who received LTSS that year in an institutional setting.[10] The significantly larger share of people receiving HCBS reflects a shift over the years in the provision of LTSS from nursing homes and other facilities to home and community settings. Over half (57

percent) of enrollees receiving Medicaid LTSS are under 65, although—not surprisingly—more than two-thirds of individuals receiving institutional care are 65 and older.[11] Importantly, these statistics exclude individuals receiving unpaid LTSS that is generally provided by family members and friends outside of Medicaid, as well as individuals paying for LTSS (including assisted living or nursing home care) out of pocket. Although more people have private long-term care insurance than was the case years ago, in 2021 only about 80,000 people filed claims for such benefits.[12] Of note, insurance coverage for LTSS is profoundly different than coverage for other health care services in that it is quite limited outside of Medicaid and, within Medicaid, LTSS is only available to people meeting strict eligibility requirements who must spend down their income and assets to qualify.

Although nursing facility services are a mandatory benefit under Medicaid, coverage for most HCBS—other than home health—is optional and, therefore, varies by state. Complex eligibility rules regarding income, assets, and functional limitations also vary significantly by state, as do LTSS eligibility pathways. In general, applicants for Medicaid LTSS must "spend down" their income and assets in order to qualify for LTSS, and "look-back" rules are in place to try to keep people from transferring assets to others to become Medicaid-eligible. Although data are somewhat lacking on this topic, analyses have found that advantaged groups are more likely to engage in estate planning to circumvent "look-back" and estate recovery requirements.[13]

As the largest payer, Medicaid covers the costs of roughly 60 percent of total LTSS expenditures in the United States. Additional payments are made out of pocket by individuals and by private long-term care insurers, the Department of Defense, the Department of Veterans Affairs, and state and local governments.[14] In 2022, Medicaid LTSS spending totaled just over $200 billion, which included $129.4 billion for HCBS and $71 billion for institutional care. The average expenditure per user on institutional care was over $48,000, significantly higher than average per-person spending on HCBS ($16,491).[15] Demonstrating the need for LTSS, approximately 700,000 people are on waiting lists for HCBS.[16] In 2020, CBO estimated that, in 2030, $160 billion will be spent on HCBS and $80 billion on institutional care.[17] Recognizing that people are aging and living longer, which will impact the use of and spending for LTSS, the Council on Medical Service has addressed long-term care in this country and presented reports on LTSS financing reforms (Council Report 5-A-18) and financing structures for HCBS (Council Report 4-N-21).

PROS AND CONS OF MEDICAID ESTATE RECOVERY

The Federal Estate Recovery Mandate was established as a program integrity tool intended to help ensure that Medicaid LTSS recipients use their own resources to cover the costs of their care. Proponents of estate recovery underscore that such efforts are needed to ensure that families are not transferring or otherwise protecting their financial resources in order to qualify for Medicaid LTSS and that Medicaid funds are used to care for the neediest enrollees. Additionally, the recovery of assets may help supplement Medicaid funding in some states and even federally, since a portion of the money recovered must be paid to the federal government for the share of the services that were federally funded. Within federal parameters, states have discretion in how aggressively they choose to pursue estate recovery and, therefore, there is wide variability in how states administer their recovery programs.

Criticisms over the years have highlighted that Medicaid estate recovery primarily targets individuals and families who are poor, that families of color are disproportionately affected, and that the process contributes to wealth inequality and intergenerational poverty. To qualify for Medicaid LTSS in the first place, individuals must have limited incomes and have spent down most of their financial resources, though the value of a person's home and certain other assets are not counted in eligibility assessments. Due to the high cost of long-term care in this country, many middle-income

people also qualify for Medicaid once their savings have been spent down. However, critics also note that middle- and higher-income people frequently use estate planning vehicles (e.g., trusts) to protect their assets and evade recovery efforts, while people who cannot afford estate planning services tend to give up more to the state, thus widening estate recovery disparities. The lack of available data prevents a thorough understanding of how many people shelter assets from state Medicaid programs, but it is not an unusual practice. Notably, the Medicaid and CHIP Payment Access Commission (MACPAC) has concluded from its surveys and interviews that estate recovery is not very effective in recouping money from people who may have the means to cover LTSS themselves.[18]

Advocates concerned about estate recovery efforts have noted that estate recovery programs can dissuade people in need of LTSS from applying for Medicaid services. Critics also argue that very little payment is collected by most states and that recovered dollars represent a small slice of what Medicaid spends on LTSS. In 2019, when an estimated $733 million was recovered overall from estates, only eight states recouped more than one percent of the cost of FFS LTSS and 28 states recovered less than 0.5 percent.[19] Based in part on each state's priorities and program administration, amounts recovered vary significantly by state. For example, in 2019, Iowa recovered over 14 percent of FFS LTSS spending in the state while Hawaii, Louisiana, and West Virginia recovered only 0.02 percent. Moreover, five states with the largest recoveries (Massachusetts, New York, Pennsylvania, Ohio, and Wisconsin) recouped nearly half of all collections in the U.S.[20] As noted by the authors of Resolution 104-A-24, the administrative costs of implementing estate recovery programs can be substantial, thus diminishing the utility of such efforts. Although little data are available on state administrative costs, there seems to be a wide range of spending on estate recovery across states. According to MACPAC's data from five states, the administrative costs of recovery ranged from 3.7 percent to 32.1 percent of the amount collected. MACPAC's research also suggests that states could collect more from estates if their program efforts mirrored those in states that recoup the most money.[21]

REFORM PROPOSALS

At the national level, MACPAC published a thorough analysis of the state-of-play in a 2021 report to Congress on estate recovery reforms. This report recommended that Congress amend the Social Security Act to:

1. Make Medicaid estate recovery optional for the populations and services for which it is required under current law;
2. Allow states providing LTSS under managed care arrangements to pursue estate recovery based on the cost of care when the cost of services used by an enrollee was less than the capitation payment made to an MCO; and
3. Direct the Department of Health and Human Services Secretary to set minimum standards for hardship waivers so that states are not allowed to pursue recovery for: a) any asset that is the sole income-producing asset of survivors; b) homes of modest value; and c) any estate valued under a certain threshold.[22]

Federal legislation from the last Congress includes H.R. 7573, which was sponsored solely by Democrats and prohibits all estate recovery efforts, and H.R. 8094, which was introduced by a Republican House member and would prohibit states from pursuing estate recovery when the individual's home is transferred to someone who is eligible for medical assistance or has an income below 138 percent of the Federal Poverty Level (FPL).[23]

Although states must meet minimum federal requirements for estate recovery, within those parameters, they can implement their own reforms. Examples of recent state activity include legislation in Maine and Massachusetts that scaled back recovery efforts to federal minimum requirements. Additionally, Georgia, Illinois, Massachusetts, and South Carolina have established cost effectiveness thresholds that essentially waive recovery of estates worth less than $25,000. [24] Illinois has also begun requiring the state Medicaid agency to publicly report data on estate recovery. Some states, like Massachusetts, also provide enrollees with more thorough explanations of estate recovery requirements when they are applying for Medicaid LTSS.

RELEVANT AMA POLICY

AMA policy does not specifically address Medicaid estate recovery efforts, although numerous policies focus on long-term care and LTSS. Under Policy H-280.991, the AMA maintains that programs to finance long-term care should:

- Assure access to needed services when personal resources are inadequate to finance care;
- Prevent impoverishment of the individual or family in the face of extended or catastrophic service costs.
- Cover needed services in a timely, coordinated manner in the least restrictive setting;
- Provide coverage for the medical components of long-term care through Medicaid for all individuals with income below 100 percent of the FPL; and
- Provide sliding scale subsidies for the purchase of LTC insurance coverage for individuals with income between 100-200 percent of the FPL.

Although not specific to Medicaid estate recovery, Policy H-290.982 supports increasing investments in HCBS; allowing states to use long-term care eligibility criteria which distinguish between people who can be served in a home or community-based setting and those who can only be serviced in a nursing facility; buy-ins for home and community-based care for people with incomes and assets above Medicaid eligibility limits; and grants to states to develop new long-term care infrastructures and encourage expansion of long-term care financing to middle-income families who need assistance. Policy H-280.945 also supports incentivizing states to expand access to HCBS. Policy D-280.982 directs the AMA to:

- Advocate for business models in long-term care for the elderly which incentivize and promote the ethical and equitable use of resources to maximize care quality, staff and resident safety, and resident quality of life, and which hold patients' interests as paramount over maximizing profit; and
- Advocate for further research into alternatives to current options for long-term care to promote the highest quality and value LTSS models as well as functions and structures which best support these models for care.

DISCUSSION

The Council reviewed the literature on Medicaid estate recovery, met with an expert, and deliberated at length about potential reforms. At the request of the Medical Student Section, which sponsored referred Resolution 104-A-24, the Council limited its study to estate recovery and, therefore, does not make recommendations regarding Medicaid LTSS eligibility requirements (e.g., spend-down rules), which are equally complex and should be addressed separately.

Of note, the Council's deliberations took place at a time of heightened unease among state medical associations, national medical specialty societies, the AMA, and many states and advocacy groups

regarding potential reductions in Medicaid funding, which would have deleterious effects on state budgets and Medicaid programs. At the time this report was written, Congress had not enacted any Medicaid cuts; however, many states were considering how to prepare for federal Medicaid changes. For context, it is also important to point out that the AMA has not received any inquiries or requests for assistance with estate recovery reforms. Still, because estate recovery is not directly addressed in AMA policy, the Council agrees that new policy is needed and that, given the uncertainties around federal Medicaid funding, this policy should retain state flexibility. Accordingly, the Council crafted recommendations that support and encourage meaningful estate recovery reforms without requiring states to abandon the practice or take other immediate actions.

Medicaid LTSS provides a critical safety net for lower-income people who have few resources and need assistance with ADLs, including older adults with chronic illnesses or dementia and younger people living with disabilities. The Council recognizes that demand for critical LTSS services is likely to grow as the U.S. population ages and people live longer, and that Medicaid services should be available to those most in need of LTSS. We do not believe that Medicaid should pay for the long-term care costs of people who have financial means to do so themselves; however, because LTSS is exorbitantly expensive and not covered by most insurers, we understand the challenges of preventing people from sheltering their assets and misusing the system.

As discussed in this report, federal law requires states to perform estate recovery as a condition of their participation in Medicaid. Based on surveys and interviews with key stakeholders, MACPAC reported that states primarily recoup funds from modest-sized estates and that individuals with more financial means often evade recovery efforts, raising equity concerns. We acknowledge these concerns and believe that additional guardrails may be needed. We also recognize that states and other stakeholders, including physicians, hold differing views on the benefits and harms of estate recovery programs. For example, in some states, the return on investment may not be worth the costs of administering estate recovery programs; however, states that recoup the most funds may not want to forego that revenue, especially in a challenging fiscal environment. For these reasons, the Council decided not to oppose estate recovery efforts outright. Instead, we recommend support for specific reforms intended to help maintain Medicaid as a safety net and ensure that, as intended, LTSS are provided to people most in need. To acknowledge the variance in estate recovery across states and allow states more flexibility than they currently have, the Council recommends that the AMA support making Medicaid estate recovery optional, instead of mandatory. This recommendation allows states to decide whether (or not) to continue their estate recovery programs, which is consistent with longstanding AMA policy allowing states some flexibility in implementing their Medicaid programs.

When Medicaid estate recovery is pursued, the Council recommends supporting the following additional reforms:

- First, the Council learned that more than half of states apply recoupment efforts beyond LTSS and attempt to recover the costs of some or all other Medicaid-covered services provided to an enrollee. We do not believe it is appropriate to pursue recovery beyond the costs of LTSS care, and, therefore, recommend that estate recovery be limited to the costs of LTSS and not other Medicaid services that may have been utilized.
- The Council also recommends support for developing standards for hardship waivers that prohibit claims against a sole income-producing asset of heirs; homes of modest value; and any estate less than a specified threshold value. This language mirrors one of MACPAC's recommendations and was also used by CMS to describe sample hardship waiver criteria. The Council discussed recommending a specified threshold value but believe that other stakeholders are better equipped to determine an appropriate threshold amount.

- Relatedly, the Council recommends support for exempting estates when the value of the recovery is projected to be less than the cost of recoupment efforts. We do not believe it makes sense to pursue estate recovery when the return would be so low.
- When MCOs are utilized, the Council recommends basing estate recovery on the costs of LTSS care, instead of the capitation amount, when the cost of LTSS is lower. Similar to the first reform (see above), we do not believe that estates should be pursued for amounts exceeding the cost of care that was provided. Our recommended approach would also be easier for families to understand since they may not know the amount of capitation that was paid for them.
- Similarly, the Council feels strongly that LTSS enrollees and their families must be better educated about estate recovery requirements so they are not surprised by a state's recoupment efforts after the enrollee has died. Although states are required to provide basic information to enrollees, it is not always adequate or easy to find. Accordingly, the Council recommends supporting education at the time of enrollment in LTSS, and during any renewal process, that is appropriate to enrollees' language and health literacy abilities.
- To ensure that available hardship waivers are offered to eligible enrollees, the Council recommends screening patients for hardship waivers and assisting them with filing such waivers, if eligible.
- Finally, the Council also recommends supporting data collection and public reporting on estate recovery programs. We found data to be lacking and believe more information is needed to accurately evaluate the impacts and effectiveness (or not) of estate pursuits.

RECOMMENDATIONS

The Council on Medical Service recommends that the following recommendations be adopted in lieu of Resolution 104-A-24, and that the remainder of the report be filed:

1. That our American Medical Association (AMA) support making Medicaid estate recovery optional, instead of mandatory, for states. (New HOD Policy)

2. That our AMA support the following when Medicaid estate recovery is pursued:

    a. Limiting recoupment to the costs of long-term services and supports (LTSS) and not for other Medicaid services that were provided;
    b. Establishing standards for hardship waivers that prohibit claims against a sole income-producing asset of heirs; homes of modest value; and any estate less than a specified threshold value;
    c. Exempting estates from recovery efforts when the value of the recovery is projected to be less than the cost of recoupment efforts;
    d. Basing estate recovery on the costs of LTSS care when managed care organizations are utilized, instead of the capitation amount, when the cost of LTSS is lower than the capitation amount;
    e. Providing education regarding state Medicaid estate recovery requirements at the time of enrollment in LTSS, and during any renewal process, that is appropriate to enrollees' language and health literacy abilities;
    f. Screening patients for hardship waivers and assisting them with filing, if eligible; and
    g. Collecting and making publicly available important data regarding estates that have been pursued and amounts that have been recovered. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 6-A-25

Subject: Prescription Medication Price Negotiation (Resolution 113-A-24)

Presented by: Stephen Epstein, MD, MPP, Chair

Referred to: Reference Committee A

At the 2024 Annual Meeting, the House of Delegates referred Resolution 113, which was sponsored by the New England Delegation, and asked our American Medical Association (AMA) to support drug price negotiation for all payers, advocate that any medication in which the price rises faster than inflation be automatically added to the negotiation schedule, and support extending the annual Medicare cap on out-of-pocket prescription drug spending to all payers. The following report discusses the history and current state of medication price negotiation, out-of-pocket caps, AMA efforts on the topic, and offers recommendations in line with the spirit of the resolution.

BACKGROUND

Enactment of the Inflation Reduction Act of 2022 (IRA) has had far-reaching impacts in the health care sector, particularly regarding Medicare drug pricing.[1] Most notably, the IRA allows the Centers for Medicare & Medicaid Services (CMS) to directly negotiate the prices of certain high-cost drugs.[2,3] CMS initially selected 10 medications that are considered "high expenditure," are single source, and do not have a biosimilar/generic alternative. Additionally, manufacturers are required to pay rebates to the federal government if the price of medications for Medicare Part B or Part D beneficiaries are raised faster than the rate of overall inflation as measured by the Consumer Price Index for All Urban Consumers (CPI-U).[1,2]

At the time this report was written, there had not been significant movement in either direction regarding implementation of the drug pricing regulations by the Trump administration. However, it seems likely that they will choose to maintain current drug pricing practices put in place by the Biden administration, implement modifications to these practices, or repeal them altogether.[4] A focus on reducing drug prices through Medicare negotiations remains a cause with bipartisan support. Over half of all Americans report believing that Medicare drug pricing should be a "top priority" of the current administration.[5] CMS released a statement declaring that the current administration intends to focus on the issue by negotiating drug prices,[6] although recent actions may indicate a change in focus from the Biden administration. For example, shortly after taking office, President Trump signed executive orders rescinding regulations designed to lower Medicare beneficiaries' drug spending. Specifically, the two-dollar generic out-of-pocket (OOP) cap was removed and the reduction of Medicare payment for accelerated Food and Drug Administration (FDA) medications was reduced.[7] Additionally, three ongoing projects through the CMS Innovation Center designed to explore strategies to lower drug prices were halted .[7] It is also possible that the administration will not directly support nor reject the Medicare negotiations, thereby indirectly supporting drug industry opposition. For example, the administration may choose not to defend the existing laws and regulations against legal challenge or may propose rules designed to exempt more drugs from negotiations.[4]

Pharmaceutical prices are typically categorized in three ways: public list price, net price, and OOP expense for the patient.[8] The public list price of a drug is set by the manufacturer and is typically the starting point for negotiations. The net price of a drug is the amount that is actually paid by the plan sponsor or, in the case of public plans, the government. This price is determined through either negotiation, mostly done by pharmacy benefit managers (PBMs), or in some rare cases by the payer itself. This is also the price that is typically dictated by legislation or regulations when applicable. Finally, patient OOP cost is the amount that the patient pays to receive the medication.[8,9] There are many elements that are incorporated in price determination, such as the number of medications available to treat the same condition, the route of administration of the medication, and the payer. These elements are used to set the prices that are paid by patients and plans.[8,9] Without PBMs, this process is relatively straightforward. Manufacturers sell prescription drugs to pharmacies who, in turn, sell the drug to the patient at a price determined by their insurance coverage and plan. However, the addition of PBMs to this process increases complexity and reduces transparency. These benefit managers become the "middlemen" between manufacturers, pharmacies, insurance companies, and consumers, which allows them to determine the actual OOP cost to the patient.[8,10]

PRICE NEGOTIATION

Private payers engage in drug price negotiation, primarily relying on PBMs to handle the negotiations. PBMs work directly with drug manufacturers to negotiate drug prices and associated rebates to find the lowest cost for the payer. While, in theory, this should lead to beneficiaries having access to lower cost medications, in reality PBMs often favor the higher priced drugs. This is due to the rebates, calculated as a percentage of the list price, that are kept by the PBM and payer, and rarely directly benefit beneficiaries.[11] These rebates are not typically passed on to the patient and, as a result, patients may end up paying a higher price and/or not benefiting from the PBM negotiations.[11,12] Additionally, a significant portion of PBMs are vertically integrated with payers, stifling competition. This lack of competition, which is not just a result of vertical integration but also the process of rebate negotiation, often results in higher insurance premiums for beneficiaries and lower pharmaceutical reimbursement rates.[12] While the negotiation practices of private payers, often via PBMs, may not be as advantageous for patients as it should be, the bottom line is that these payers do currently negotiate drug prices to lower overall insurer costs.

Historically, public payers have not negotiated drug prices in the manner that was implemented by the aforementioned IRA. Since its inception in 2022, the IRA has allowed CMS to negotiate the price of Medicare Part B and D prescription drugs. This negotiation process began in 2024 for Part D and included 10 drugs in the initial negotiation cycle.[1] The Maximum Fair Prices (MFPs) for these 10 drugs will go into effect in January 2026. These drugs include blood thinners and medications to treat diabetes, heart failure, psoriasis, rheumatoid arthritis, blood cancers, and Crohn's disease. Medicare negotiated prices ranged from a price drop as small as $6 and as large as $22,027. Not surprisingly, the drug with the highest list price, Stelara,® showed the most significant price decrease while the drug with the lowest list price, NovoLog®/Fiasp,® yielded the smallest price reduction. A full and regularly updated table of the Medicare negotiated drug prices can be accessed via the Peterson-KFF Health System Tracker. In early 2025, CMS announced 15 additional drugs that will be included in the Medicare drug pricing negotiation schedule. Assuming the cycle of negotiation continues as intended, the MFPs for these drugs will go into effect January 2027.[2,3] CMS projects that the negotiated MFPs will save approximately $1.5 billion in its first year.[2] In order for prescription drugs to be eligible for negotiation, they must meet certain criteria. Specifically, they must be covered by Medicare and be a single brand-name drug or biologic that does not have a therapeutically equivalent generic or biosimilar that is being marketed. Additionally, eligible biologics must be 11 years past the earliest FDA approval or licensure and

name-brand small-molecule drugs must be at least seven years past approval/licensure. Until 2028, negotiation is limited to Part D plans adding 15 drugs each year through 2028. In 2029 Part B plans will be included and the number of negotiated drugs will increase to 20.[1,3,13]

Importantly, there is no "trigger" that automatically includes a medication in future negotiations. However, under the IRA if the cost of a drug rises faster than inflation, manufacturers are required to provide Medicare with rebates.[3] This provision is designed to discourage manufacturers from unnecessarily raising drug prices without valid reasoning, as in 2015 when the manufacturer for Daraprim® increased the price by over 5,000 percent overnight.[3,13] Though a medication's price increasing faster than inflation *might* be a reason for inclusion, it is not *necessarily* a reason. There are valid reasons that a drug price may increase, such as when a medication's treatment value increases or an increase in the cost of raw materials.[14,15] While it is important to discourage unnecessary hikes in drug prices, it is also important to ensure that medications are accessible to patients when needed. Therefore, drugs should not be automatically included in negotiations without complete assessment from appropriate regulators, legislators, and/or experts. A discussion surrounding the criteria states have utilized to select regulated or negotiated medications can be found in CMS Report 8-A-25.

Pharmaceutical manufacturers have pursued litigation to stop these government negotiation practices, citing that the negotiated prices may harm competition and, as a result, innovation. At the time this report was written, there were nine open legal cases against the federal government and/or CMS.[16] These lawsuits generally center around the claim that the program will violate the Fifth Amendment by forcing manufacturers to provide selected medications to the government without fair compensation, that the program limits corporate free speech, and that associated penalties are "excessive fines" which is in violation of the Eighth Amendment. Some cases also claim that the negotiation program violates portions of the Due Process Clause by not allowing for adequate separation of powers.[14,15] To date, none of these legal challenges have been successful in blocking or minimizing the drug negotiation. However, most of these cases are still ongoing and one has recently found minor traction via an appeals court.[17] Most experts following these cases agree that it is likely one will end up being heard by the United States Supreme Court. Although the voracity with which the current administration will defend the program is uncertain, potentially mitigating the need for a Supreme Court ruling.[15,16]

IMPACT OF PRICE NEGOTIATION

While experts do agree that reducing the amount patients pay for drugs will improve medication adherence, and as a result health outcomes, there is some debate regarding whether price negotiation, and particularly the establishment of MFPs, are the best method to reduce drug prices. Some experts suggest that increasing drug price negotiation is a tactic that could be used in tandem with other tactics to lower drug prices in the U.S.[18] Specifically, the Congressional Budget Office (CBO) analyzed a bill asserting more aggressive negotiation and found that it could yield over $450 billion in savings for Medicare over a 10-year period. It is estimated that if the negotiated prices were expanded to commercial insurance plans, anticipated savings to the system could reach the trillion-dollar mark over 10 years.[17] These experts stress that drug price negotiation alone is not likely to solve the problem of U.S. drug prices. However, in tandem with other efforts such as rebate reform, administrative simplification, and increased transparency, costs could be reduced.[17]

Other experts have voiced concerns surrounding the increased use of price negotiation. Many drug manufacturers claim that the implementation of negotiation and MFPs will stifle innovation and potentially prevent, or slow, the development of new pharmaceuticals.[18] Importantly, much of the

resistance to price negotiation has come from entities that benefit from the current system, such as manufacturers, potentially calling the motives of these challenges into question.[14,15,18]

In addition to the lowered costs that may result from negotiation, the price transparency required in the IRA may improve pricing.[17,19] The public access to a drug's Medicare Negotiated Price, the MFP, is a relatively novel level of transparency that may encourage private payers to follow the lead on CMS negotiated prices. While the current legislation does not require private payers to follow the set MFPs, it is common for private insurance companies to eventually follow the lead of CMS.[18] Research has demonstrated that increases in transparency throughout the drug pricing system could be a significant help in lower drug prices overall.[17]

Federal efforts, like the Prescription Pricing for the People Act of 2025, have been introduced to regulated PBM business practices and drug pricing. Additionally, the Transparency in Coverage rule, released in 2020, outlines the requirements for payers/plans to disclose negotiated rates and historical net price for prescription drugs. In addition to federal efforts, a number of states have enacted laws related to portions of the drug pricing process. These laws center around affordability reviews, consumer cost sharing, PBMs, increased transparency, and purchasing processes. However, since none of these state laws have been enacted at a federal level, no impact has been seen nationally.[20] Due to the lack of transparency in the drug pricing process, the result of each specific element, be it negotiation, PBMs, or another aspect, is difficult to assess.

OUT-OF-POCKET CAPS

In addition to introducing CMS drug price negotiations, the IRA also lowered the prescription drug OOP cap for Medicare Part D beneficiaries. Historically, this cap has been between $3,300 and $3,800. Starting in 2025, this has been lowered to $2,000 due to elimination of the coinsurance cost in the catastrophic coverage phase. Experts estimate that if this cap had been implemented in 2021, 1.5 million beneficiaries would have saved in OOP costs.[21]

While the IRA did not expand the prescription drug OOP cap to non-Medicare payers, most, if not all, plans have caps on annual OOP spending. Research has demonstrated that median annual OOP spending on medical expenses ranged between $360 and $1,500 with the top 10 percent spending at least $7,000.[22] Importantly, this is for all medical spending, not just prescription drugs. Because many private payers do not separate prescription drug OOP costs from overall OOP medical costs, it is challenging to make a direct comparison to Medicare levels.[21] Researchers and other experts agree that high OOP costs can be detrimental to patients, some suggesting spending caps as a potential solution to this issue.[23,24] The financial burden of high OOP costs can often lead to patients accruing significant medical debt and potentially forgoing future, necessary treatment. If a patient cannot afford their OOP cost, they may delay or skip treatment altogether, leading to lower medication adherence and poorer health outcomes. OOP caps could have potential to increase prescription drug affordability for patients in turn potentially leading to better health outcomes.[23,24]

While experts agree that high OOP costs can be detrimental to patients, some voice concerns around the unintended consequences of OOP caps such as disproportionate financial burdens to lower income patients.[24,25] If all beneficiaries are given a uniform cap, this may be affordable for some but not for others. Even more importantly, these caps are often not paid for by insurers but rather shifted to patients through premium increases. These premium raises could, and often do, make insurance unaffordable for many beneficiaries. Some experts argue that this could be mitigated by adding income-based eligibility requirements for OOP costs or income-proportional caps.[23,24,25] Nonetheless, it is essential to ensure that the potential economic impacts of universal

OOP caps be weighed against the potential benefits to ensure that patients still have access to reasonably priced insurance coverage.

AMA POLICY AND ADVOCACY

The AMA has undertaken robust advocacy efforts to lower drug costs for patients, especially around regulation and increasing the transparency of PBMs. Specifically, over the past two years the AMA has written a number of letters to payers, regulators, and legislators and testified before both the House and Senate regarding regulation of PBMs. The AMA also has an ongoing grassroots campaign, TruthinRx, designed to support patients and physicians in understanding and fighting the lack of transparency through education and advocacy. Additionally, the AMA has expressed support to federal legislators to implement drug price negotiation, regulators in reducing patient OOP costs, and for reasonable OOP caps on drug spending. The AMA is continuing to work with legislators, regulators, drug manufacturers, and payers to ensure that patients not only have access to affordable medications but also affordable health coverage.

In addition to the advocacy on drug pricing transparency and affordability, the AMA has extensive policies that address the issue. Policies H-110.980 and H-110.987 outline the AMA's efforts to ensure that patients have access to affordable medications. These policies discuss AMA standards for drug affordability, process transparency, and patient access. Policy H-110.980 highlights different strategies and approaches, such as supporting increased transparency and promoting value-based pricing, that the AMA utilizes to ensure that medications are accessible and affordable. Policies H-110.986 and H-110.979 expand on this support for value-based strategies to manage drug coverage. Specifically, H-110.986 discusses AMA support for adding value metrics into drug prices and H-110.979 outlines AMA advocacy for formulary development to incorporate value-based processes. In conjunction with the aforementioned policies that address all payer types, Policy D-330.954 focuses on managing prescription drug prices in Medicare and outlines support for price negotiation. Finally, Policies D-110.987, D-120.988, and D-120.934 target PBMs and the need for increased regulation and transparency. Policy D-120.934 outlines AMA steps to ensure that PBMs do not prevent physicians from appropriately treating patients, Policy D-120.988 details prevention of appropriate treatment by PBMs, and Policy D-110.987 discusses the impacts of these, and other, negative PBM practices.

The AMA also has policy and ongoing advocacy to address concerns from experts surrounding unintended consequences of introducing OOP caps or extending drug price negotiations. Policies H-320.939 and D-320.982, along with the AMA's Fix Prior Auth grassroots campaign, work to mitigate concerns regarding increases in utilization management/prior authorization. Policy H-320.939 outlines the efforts that the AMA has made to reduce the amount of utilization management and fix the system as a whole. Policy D-320.982 outlines strategies, including emerging technology, that could be used to assist in minimizing the impact of utilization management on patients and physicians. Finally, Policies H-165.828, H-290.954, and H-165.824 outline AMA efforts to support the affordability of health insurance for all. Policy H-165.828 centers around the AMA efforts to ensure that health coverage is affordable for all patients, while Policies H-165.824 and H-290.954 center on ACA and public plan affordability.

DISCUSSION

Despite the current uncertainty of Medicare drug price negotiations, the practice of negotiation has been a part of drug pricing in the private sector for decades. The current drug pricing system, hallmarked by close relationships between private insurers and their PBM negotiators, is complicated and opaque. As a result, the system often still yields drug prices that remain

unaffordable for many patients. While this system is not simple to fix, it is possible that the current CMS negotiation efforts may be a step in the right direction. While some experts voice concern that negotiation may stifle innovation, many anticipate that it has the potential to save both consumers and public payers significant amounts of money, helping prescriptions become more affordable. Regardless of the impact of price negotiation, it is clear that payers of all types participate in the negotiation process. For private payers this is often done by PBMs and for public payers via CMS. The Council believes that when used responsibly, prescription drug price negotiation has real potential to make significant changes, and that the AMA should support utilization of all ongoing efforts, to make drug prices affordable. The AMA has a strong body of policy and ongoing advocacy to address drug affordability. Therefore, the Council recommends the reaffirmation of Policy H-110.987, which details the AMA's efforts to encourage regulators, legislators, physicians, and patients to work together towards transparency and affordability in drug pricing. To ensure that this support is explicit for all medications, including those used to manage health and prevent future complications, the Council recommends the adoption of new HOD policy as outlined in Recommendation 1. Additionally, as outlined in the report, PBMs are exceptionally influential in setting drug prices, as they are currently faced with little regulation. Therefore, the Council recommends that Policy D-110.987 be reaffirmed, as it outlines how the AMA continues to hold legislators and regulators accountable to ensure that PBMs are monitored and transparency is increased. The Council believes that this new HOD policy, along with the suggested reaffirmations, will ensure that efforts to increase medication affordability continue.

As previously discussed, OOP costs are another aspect of drug pricing that elicit affordability concerns for patients. Researchers agree that high OOP medical costs can cause significant financial burden to patients and adverse health outcomes. Specifically, when OOP costs are higher, patients are less likely to adhere to treatment and often experience worse health outcomes. However, blanket OOP caps may not be a simple solution to the problem. Experts have called the actual impact of these caps into question and expressed concern that payers might shift costs to patients via premium increases. It is clear that OOP caps need to be handled in a manner that balances the potential positives and negatives. Therefore, the Council recommends the adoption of new HOD policy that supports the establishment of a reasonable OOP prescription drug cap while maintaining patient premiums. The Council believes that this new policy captures the intent of the third resolve of Resolution 113-A-24 while balancing potential unintended consequences.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 113-A-24, and the remainder of the report be filed:

1. That our American Medical Association (AMA) support efforts to ensure that patients have affordable access to medications. (New HOD Policy)

2. That our AMA encourage all payers, both public and private, in efforts to establish a reasonable and affordable cap on patient out-of-pocket prescription drug spending in a manner that does not increase patient premiums. (New HOD policy)

3. That our AMA reaffirm Policy H-110.987, which supports efforts to ensure drug prices are affordable to patients. (Reaffirm HOD Policy)

4. That our AMA reaffirm Policy D-110.987, which supports efforts to increase PBM transparency and regulation. (Reaffirm HOD Policy)

Fiscal Note: Less than $500

Council on Medical Service Report 6-A-25
Prescription Medication Price Negotiation
Policy Appendix

Additional Mechanisms to Address High and Escalating Pharmaceutical Prices, H-110.980
1. Our American Medical Association (AMA) will advocate that the use of arbitration in determining the price of prescription drugs meet the following standards to lower the cost of prescription drugs without stifling innovation:
a. The arbitration process should be overseen by objective, independent entities.
b. The objective, independent entity overseeing arbitration should have the authority to select neutral arbitrators or an arbitration panel.
c. All conflicts of interest of arbitrators must be disclosed and safeguards developed to minimize actual and potential conflicts of interest to ensure that they do not undermine the integrity and legitimacy of the arbitration process.
d. The arbitration process should be informed by comparative effectiveness research and cost-effectiveness analysis addressing the drug in question.
e. The arbitration process should include the submission of a value-based price for the drug in question to inform the arbitrator's decision.
f. The arbitrator should be required to choose either the bid of the pharmaceutical manufacturer or the bid of the payer.
g. The arbitration process should be used for pharmaceuticals that have insufficient competition; have high list prices; or have experienced unjustifiable price increases.
h. The arbitration process should include a mechanism for either party to appeal the arbitrator's decision.
i. The arbitration process should include a mechanism to revisit the arbitrator's decision due to new evidence or data.
2. Our AMA will advocate that any use of international price indices and averages in determining the price of and payment for drugs should abide by the following principles:
a. Any international drug price index or average should not be used to determine or set a drug's price, or determine whether a drug's price is excessive, in isolation.
b. The use of any international drug price index or average should preserve patient access to necessary medications.
c. The use of any international drug price index or average should limit burdens on physician practices.
d. Any data used to determine an international price index or average to guide prescription drug pricing should be transparent and updated regularly.
3. Our AMA supports the use of contingent exclusivity periods for pharmaceuticals, which would tie the length of the exclusivity period of the drug product to its cost-effectiveness at its list price at the time of market introduction. (CMS Rep. 4, I-19; Reaffirmed: CMS Rep. 3, I-20; Modified: CMS Rep. 4, A-22)

Pharmaceutical Costs, H-110.987
1. Our American Medical Association (AMA) encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.
2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.
3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.

4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
7. Our AMA supports legislation to shorten the exclusivity period for biologics.
8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
10. Our AMA supports:
a. drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by 10 percent or more each year or per course of treatment and provide justification for the price increase;
b. legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and
c. the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of 10 percent or more each year or per course of treatment.
11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.
12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.
13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation. (CMS Rep. 2, I-15; Reaffirmed in lieu of: Res. 817, I-16; Appended: Res. 201, A-17; Reaffirmed in lieu of: Res. 207, A-17; Modified: Speakers Rep. 01, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Appended: BOT Rep. 14, A-19; Reaffirmed: Res. 105, A-19; Appended: Res. 113, I-21; Reaffirmed in lieu of: Res. 810, I-22; Reaffirmed: Res. 801, I-23; Reaffirmed: Res. 801, I-23)

Value-Based Management of Drug Formularies, H-110.979
Our American Medical Association: (1) will advocate that pharmacy benefit managers (PBMs) and health plans use a transparent process in formulary development and administration, and include practicing network physicians from the appropriate medical specialty when making determinations regarding formulary inclusion or placement for a particular drug class; (2) will advocate that any refunds or rebates received by a health plan or PBM from a pharmaceutical manufacturer under an outcomes-based contract be shared with impacted patients; and (3) opposes indication-based formularies in order to protect the ability of patients to access and afford the prescription drugs they need, and physicians to make the best prescribing decisions for their patients. (CMS Rep. 6, I-20)

Incorporating Value into Pharmaceutical Pricing, H-110.986
1. Our American Medical Association (AMA) supports value-based pricing programs, initiatives and mechanisms for pharmaceuticals that are guided by the following principles:
a. value-based prices of pharmaceuticals should be determined by objective, independent entities;
b. value-based prices of pharmaceuticals should be evidence-based and be the result of valid and reliable inputs and data that incorporate rigorous scientific methods, including clinical trials, clinical data registries, comparative effectiveness research, and robust outcome measures that capture short- and long-term clinical outcomes;
c. processes to determine value-based prices of pharmaceuticals must be transparent, easily accessible to physicians and patients, and provide practicing physicians and researchers a central and significant role;
d. processes to determine value-based prices of pharmaceuticals should limit administrative burdens on physicians and patients;
e. processes to determine value-based prices of pharmaceuticals should incorporate affordability criteria to help assure patient affordability as well as limit system-wide budgetary impact; and
f. value-based pricing of pharmaceuticals should allow for patient variation and physician discretion.
2. Our AMA supports the inclusion of the cost of alternatives and cost-effectiveness analysis in comparative effectiveness research.
3. Our AMA supports direct purchasing of pharmaceuticals used to treat or cure diseases that pose unique public health threats, including hepatitis C, in which lower drug prices are assured in exchange for a guaranteed market size. (CMS Rep. 05, I-16; Reaffirmed in lieu of: Res. 207, A-17; Reaffirmed: CMS-CSAPH Rep. 01, A-17; Reaffirmed: CMS Rep. 07, A-18; Reaffirmed: CSAPH Rep. 2, I-19; Reaffirmed: CMS Rep. 4, I-19; Reaffirmed: CMS Rep. 6, I-20; Reaffirmed: Res. 113, A-23)

Prescription Drug Prices and Medicare, D-330.954
1. Our American Medical Association (AMA) will support federal legislation which gives the Secretary of the Department of Health and Human Services the authority to negotiate contracts with manufacturers of covered Part D drugs.
2. Our AMA will work toward eliminating Medicare prohibition on drug price negotiation.
3. Our AMA will prioritize its support for the Centers for Medicare & Medicaid Services to negotiate pharmaceutical pricing for all applicable medications covered by CMS. (Res. 211, A-04; Reaffirmation I-04; Reaffirmed in lieu of Res. 201, I-11Appended: Res. 206, I-14; Reaffirmed: CMS Rep. 2, I-15; Appended: Res. 203, A-17; Reaffirmed: CMS Rep. 4, I-19; Reaffirmed: CMS Rep. 3, I-20; Reaffirmed: Res. 113, I-21; Reaffirmed: CMS Rep. 4, A-22; Reaffirmed in lieu of: Res. 810, I-22)

The Impact of Pharmacy Benefit Managers on Patients and Physicians, D-110.987
1. Our American Medical Association (AMA) supports the active regulation of pharmacy benefit managers (PBMs) under state departments of insurance.
2. Our AMA will develop model state legislation addressing the state regulation of PBMs, which shall include provisions to maximize the number of PBMs under state regulatory oversight.
3. Our AMA supports requiring the application of manufacturer rebates and pharmacy price concessions, including direct and indirect remuneration (DIR) fees, to drug prices at the point-of-sale.
4. Our AMA supports efforts to ensure that PBMs are subject to state and federal laws that prevent discrimination against patients, including those related to discriminatory benefit design and mental health and substance use disorder parity.
5. Our AMA supports improved transparency of PBM operations, including disclosing:

- Utilization information;
- Rebate and discount information;
- Financial incentive information;
- Pharmacy and therapeutics (P&T) committee information, including records describing why a medication is chosen for or removed in the P&T committee's formulary, whether P&T committee members have a financial or other conflict of interest, and decisions related to tiering, prior authorization and step therapy;
- Formulary information, specifically information as to whether certain drugs are preferred over others and patient cost-sharing responsibilities, made available to patients and to prescribers at the point-of-care in electronic health records;
- Methodology and sources utilized to determine drug classification and multiple source generic pricing; and
- Percentage of sole source contracts awarded annually.

6. Our AMA encourages increased transparency in how DIR fees are determined and calculated. (CMS Rep. 05, A-19; Reaffirmed: CMS Rep. 6, I-20)

Inappropriate Actions by Pharmacies and Pharmacy Benefit Mangers, D-120.988
Our American Medical Association, in cooperation with pharmacy benefit managers, pharmacy companies, and other drug retailing organizations, shall develop model procedures that physicians may use when prescribing off-formulary pharmaceuticals that are medically indicated and that these procedures be in compliance with the Health Insurance and Portability and Accountability Act of 1996. (Res. 528, A-02; Reaffirmation I-04; Reaffirmation A-06; Reaffirmed: CSAPH Rep. 01, A-16)

Evaluating Actions by Pharmacy Benefit Manager and Payer Policies on Patient Care, D-120.934
1. Our American Medical Association (AMA) will take steps to implement AMA Policies H-120.947 and D-35.981 that prescriptions must be filled as ordered by physicians or other duly authorized/licensed persons, including the quantity ordered.
2. Our AMA will work with pharmacy benefit managers, payers, relevant pharmacy associations, and stakeholders to: (a) identify the impact on patients of policies that restrict prescriptions to ensure access to care and urge that these policies receive the same notice and public comment as any other significant policy affecting the practice of pharmacy and medicine; and (b) prohibit pharmacy actions that are unilateral medical decisions.
3. Our AMA will report back at the 2018 Annual Meeting on actions taken to preserve the purview of physicians in prescription origination. (Res. 233, I-17; Reaffirmed: CMS Rep. 05, A-23)

Prior Authorization and Utilization Management Reform, H-320.939
1. Our American Medical Association (AMA) will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation, Prior Authorization Physician Survey and other PA research, and the AMA Prior Authorization Toolkit, which is aimed at reducing PA administrative burdens and improving patient access to care.
2. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician.
3. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes, including the extent to which these processes contribute to patient harm.

4. Our AMA will advocate for health plans to minimize the burden on patients, physicians, and medical centers when updates must be made to previously approved and/or pending prior authorization requests. (CMS Rep. 08, A-17; Reaffirmation: I-17; Reaffirmed: Res. 711, A-18; Appended: Res. 812, I-18; Reaffirmed in lieu of: Res. 713, A-19; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: Res. 811, I-19; Reaffirmed: CMS Rep. 4, A-21; Appended: CMS Rep. 5, A-21; Reaffirmation: A-22)

Prior Authorization Reform, D-320.982
Our American Medical Association will explore emerging technologies to automate the prior authorization process for medical services and evaluate their efficiency and scalability, while advocating for reduction in the overall volume of prior authorization requirements to ensure timely access to medically necessary care for patients and reduce practice administrative burdens. (Res. 704, A-19; Reaffirmation: A-22)

Health Insurance Affordability, H-165.828
1. Our American Medical Association (AMA) supports modifying the eligibility criteria for premium credits and cost-sharing subsidies for those offered employer-sponsored coverage by lowering the threshold that determines whether an employee's premium contribution is affordable to the level at which premiums are capped for individuals with the highest incomes eligible for subsidized coverage in Affordable Care Act (ACA) marketplaces.
2. Our AMA supports legislation or regulation, whichever is relevant, to fix the ACA's "family glitch," thus determining the eligibility of family members of workers for premium tax credits and cost-sharing reductions based on the affordability of family employer-sponsored coverage and household income.
3. Our AMA encourages the development of demonstration projects to allow individuals eligible for cost-sharing subsidies, who forego these subsidies by enrolling in a bronze plan, to have access to a health savings account (HSA) partially funded by an amount determined to be equivalent to the cost-sharing subsidy.
4. Our AMA supports capping the tax exclusion for employment-based health insurance as a funding stream to improve health insurance affordability, including for individuals impacted by the inconsistency in affordability definitions, individuals impacted by the "family glitch," and individuals who forego cost-sharing subsidies despite being eligible.
5. Our AMA supports additional education regarding deductibles and cost-sharing at the time of health plan enrollment, including through the use of online prompts and the provision of examples of patient cost-sharing responsibilities for common procedures and services.
6. Our AMA supports efforts to ensure clear and meaningful differences between plans offered on health insurance exchanges.
7. Our AMA supports clear labeling of exchange plans that are eligible to be paired with a Health Savings Account (HSA) with information on how to set up an HSA.
8. Our AMA supports the inclusion of pregnancy as a qualifying life event for special enrollment in the health insurance marketplace. (CMS Rep. 8, I-15; Reaffirmed in lieu of: Res. 121, A-16; Reaffirmation: A-17)

Improving Medicaid and CHIP Access and Affordability, H-290.954
1. Our American Medical Association (AMA) opposes premiums, copayments, and other cost-sharing methods for Medicaid and the Children's Health Insurance Program, including Section 1115 waiver applications that would allow states to charge premiums or copayments to Medicaid beneficiaries.
2. Our AMA encourages the Centers for Medicare & Medicaid Services to amend existing Section 1115 waivers to disallow states the ability to charge premiums or copayments to Medicaid beneficiaries. (Res. 803, I-23)

Improving Affordability in the Health Insurance Exchanges, H-165.824

1. Our American Medical Association (AMA) will:

a. support adequate funding for and expansion of outreach efforts to increase public awareness of advance premium tax credits.

b. support expanding eligibility for premium tax credits up to 500 percent of the federal poverty level.

c. support providing young adults with enhanced premium tax credits while maintaining the current premium tax credit structure which is inversely related to income.

d. encourage state innovation, including considering state-level individual mandates, auto-enrollment and/or reinsurance, to maximize the number of individuals covered and stabilize health insurance premiums without undercutting any existing patient protections.

2. Our AMA supports:

a. eliminating the subsidy "cliff," thereby expanding eligibility for premium tax credits beyond 400 percent of the federal poverty level (FPL).

b. increasing the generosity of premium tax credits.

c. expanding eligibility for cost-sharing reductions.

increasing the size of cost-sharing reductions. (CMS Rep. 02, A-18; Appended: CMS Rep. 02, A-19; Reaffirmed: CMS Rep. 3, I-21)

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 9-A-25

Subject: Minimum Requirements for Medication Formularies (Resolution 809-I-24)

Presented by: Stephen Epstein, MD, MPP, Chair

Referred to: Reference Committee A

At the 2024 Interim Meeting, the House of Delegates referred Resolution 809, which was introduced by the Mississippi Delegation, and asked that our American Medical Association (AMA) advocate for all payers to create, maintain, and enforce a minimum formulary for all beneficiaries that includes all "commonly prescribed, inexpensive, and generic" medications unless there are reasonable safety or economic concerns. The following report discusses the background and current state of formularies, impacts of their expansion, and AMA efforts on the topic. Additionally, the report recommends the adoption and reaffirmation of policies designed to balance formulary inclusion and economic concerns.

BACKGROUND

Formularies were initially simple lists of medications implemented by the military in the late 1700s during the American War of Independence.[1] In the mid-1900s, the concept of formularies became more widespread and took root in hospital pharmacies needing authorization to dispense interchangeable medications.[2] In 1965, with the inception of Medicare, formularies became well established as part of reimbursement eligibility requirements.[3] By the 1980s, formularies began to take a more contemporary shape, primarily due to the development of multi-brand categories of drugs with similar, but not identical, uses and prices. To encourage the use of their drugs, manufacturers began to offer rebates to purchasers. As a result, payers placed the more advantageous drugs, often due to higher rebates, in more favorable formulary positions.[4] Today's formularies continue to tout the goal of managing costs, ensuring patient access to therapies, and improving health outcomes.[4,5] While the actual outcomes delivered by formularies are diverse and occasionally questionable, they are highly influential in dictating what medications are accessible to patients.[4]

Contemporary formularies tend to follow similar rebate incentive structures as were developed in the 1980s, but with time have become increasingly complicated and, in many cases, opaque.[4,6] Formularies today are usually one of four types; open, closed, value-based, and tiered. Open structured formularies are those in which coverage for all prescription medications is granted.[6] While this may seem to be the most advantageous to patients, these types of formularies often see significantly higher cost to the patient and can actually block access due to high out-of-pocket (OOP) costs and/or high premiums.[4,6] Closed formularies are those that offer a narrower range of covered medications, but often at a lower cost to patients.[6] Within these formularies payers often select the medications that have higher rebates and, therefore, are financially advantageous to the payer.[4,6] Tiered formularies are more common and more complex in their execution. Within the tiers, payers incentivize the use of medications by placing them on lower tiers which, in turn, come

© 2025 American Medical Association. All rights reserved.

with a lower OOP expense for the patient. While there is no limit on the number of tiers, it is most common for plans to have a three-tiered structure. Typically, tier one includes the most preferred medications, tier two includes preferred name brand drugs, and tier three includes non-preferred name brand drugs. Drugs are typically considered to be "preferred" by the payer when more attractive rebates are offered by the manufacturer or if the list price of the medication is lower.[4,6] Finally, value-based formularies are based on an assessment of the impact of a treatment on overall health care spending and long-term health compared to other structures which are based solely on the upfront cost of the drug. While value-based formularies vary in the specific criteria used to determine high versus low value drugs, most take clinical parameters, quality of life, and utilization of health care resources into account. Similar to tiered formularies, the use of preferred drugs, in this case defined as the higher value drugs, is encouraged by lower OOP costs.[4,6]

While it may seem that generic medications would often be placed on lower formulary tiers, that is not always the case. In practice, many payers place name-brand drugs on lower tiers due to greater price concessions offered by manufacturers. Therefore, drugs with higher list prices can often yield payers higher rebates, although these cost savings are often not passed on to the patient.[6] In some cases, patient OOP costs are determined by the list price, and as a result patients end up paying more than a generic option.[7] While the data for private plans are limited, anecdotal evidence and research based on Medicare Part D plans seem to confirm the underuse of generic drugs to reduce cost. For example, one study found that 72 percent of Medicare Part D formularies had at least one branded product place on a lower tier than the comparable generic medication and 30 percent of branded multisource drugs had fewer utilization management requirements than the generic product.[8] Additionally, trends of generic drug usage in Medicare Part D seem to be declining as there was a 22 percent drop in generic medications placed on tiers between 2016 and 2025.[7,8]

Regardless of the formulary structure or drug type, the placement of medications is determined by a pharmacy and therapeutics (P&T) committee.[5] These committees are typically made up of physicians, other practitioners, legal experts, and administrators. P&T Committees will generally assess the safety, clinical efficacy, patient adherence, patient satisfaction, and economic factors of a drug in order to determine if it is placed on a formulary and/or the appropriate tier.[4,6] While payers are able to develop their own formularies, most choose to rely on pharmacy benefit managers (PBMs) to create and maintain formularies due to the high associated costs.[6] Typically, PBMs will create a number of formulary choices for payers to select from and, if desired, customize. While there are no federal legislative or regulatory guidelines for non-Medicare plans, Part D plans must follow guidelines and participate in annual reviews coordinated by the Centers for Medicare & Medicaid Services (CMS). These requirements were put in place by CMS in 2006 and are designed to regulate how private Part D plans create and manage formularies.[4,5,6,9]

FORMULARY REQUIREMENTS

Since its founding, Medicare has required payers to provide formularies in order to be approved for reimbursement. In 2003, the Medicare Prescription Drug Improvement and Modernization Act (MMA) was signed into law and included specific details as to minimum formulary requirements. MMA's goal was to not only update Medicare's prescription benefits, but to ensure that all associated carriers and their plans provide beneficiaries with high-quality and cost-effective drug benefits.[9,10] Since 2006, Medicare has required that at least two medications from each class are included in the plan formulary. However, there is some flexibility in this requirement should a medication class not include two or more medications. Additionally, in cases when there are therapeutic advantages of a specific medication for patients with certain diseases, more than two medications may be required to be included in the formulary.[9,11]

The Patient Protection and Affordable Care Act (ACA), signed into law in 2010, also includes minimum formulary requirements for associated plans.[12] Due to the structure of the ACA, specific formulary requirements vary significantly across states. However, prescription medication is considered one of the Essential Health Benefits (EHBs) that plans are required to cover. Specifically, states must ensure that plans either cover one drug in each of the United States Pharmacopeia (USP) class or at least the same number of drugs in each category and class of the EHB Benchmark plan for the respective state.[13] The 2025 USP list includes 50 medication categories, 175 medication classes, 207 Pharmacotherapeutic informational groups, and over 2,055 example drugs and how each example fits into each category, class, and group.[14] States have the ability to, within reason, establish their own EHB Benchmark plan, or the floor plan, for their state. As a result, some states, like Washington, require that plans cover at least one drug in every USP class, while other states, like Illinois and South Dakota, have more nuanced basic requirements. Each state is required to submit a plan to the Center for Consumer Information and Insurance Oversight (CCIIO) for approval.[13] Part of the role of CCIIO is to ensure that EHB Benchmark plans allow consumers access to high quality insurance plans while minimizing payer ability to discriminate between types of beneficiaries and to encourage marketplace competition.[13]

Although private health insurance plans operating outside of Medicare do not have blanket minimum drug formulary requirements, some states require plans to meet the ACA minimum. Additionally, many organizations, including the AMA, have offered guidance around formulary best practices. Specifically, the AMA, along with other relevant organizations, endorsed the Principles of a Sound Drug Formulary System.[15] While these principles do not specifically outline a minimum formulary requirement, they do delineate the need to ensure that formularies provide patients with medications necessary to address their diagnosis in a manner that is clinically appropriate and economically responsible.[15] Other organizations, including the American Academy of Family Physicians and American Society of Health-System Pharmacists, have outlined the need for formularies to be balanced based on efficacy, safety, cost, and patient outcomes.[16,17]

FORMULARY EXCEPTION PROCESS

An important aspect of formularies is the exception process. Since the vast majority of plans do not cover every medication on the market, patients and physicians may need to engage with exceptions to seek coverage of a medication. These exceptions occur when the covered medication is not an option for a patient. Commonly, this is due to allergies, a history of unsuccessful use of covered medications, covered medications not meeting therapeutic need, and/or concern that a covered medication would exacerbate an existing condition(s).[18] There may also be the need to submit an exception if a patient needs a quantity, dosage, or delivery method that is not typically covered. Importantly, exceptions are not limited to medications that are not covered at all by a payer. In some cases, if a medication is placed on a formulary tier that makes it unaffordable to the patient, an exception can be requested. This type of exception is called a tiering exception while the traditional exception process is called a formulary exception.[18,19]

While there is not one standardized process for exceptions, typically the process includes a request from the patient/patient representative paired with a physician statement. In some cases, the physician may directly request the exception and provide the statement for the patient.[19] When requesting a formulary exception, the physician statement typically includes information regarding the medical necessity of the alternative medication and potential consequences should the covered drug be used. When requesting a tiering exception, the physician statement will discuss the medical necessity of the medication and why it is unaffordable. In some cases, payers may require a statement of patient financial hardship.[18] Payers will typically respond to exception requests within

72 hours from the submission of the physician statement, although in urgent or emergency situations the payer should respond within 24 hours.[18,19]

As previously mentioned, there is not a requirement for payers to utilize a standard exception process, and as a result there is variance in the criteria utilized to review exception requests. Most plans will compare applicable scientific evidence on the efficacy and safety of the covered and requested drugs. Should an exception request be denied by the payer, the patient and/or physician may file an appeal to reverse the decision.[19] Similar to the original exception request, there is not a standardized process for appeals, however plans should have a defined method in place. For example, Medicare Part D plans provide a multistep appeals process starting with redetermination by the drug plan and escalating to an appeal in a federal court.[10,19]

IMPACTS OF FORMULARY EXPANSION

While it may seem beneficial for all medications to be included in drug formularies, research has shown that this may have unintended consequences. Specifically, economists have shown that, at least among ACA plans, those that cover more EHB drugs have significantly more utilization management requirements in place.[20] This seems to hold true when new drugs are added to formularies, as plans are increasingly likely to add utilization management requirements, often in the form of prior authorization. As discussed in a number of previous Council reports (CMS 6-A-24; CMS 8-A-17; CMS 7-A-16) prior authorization and other forms of utilization management are extremely burdensome for physicians/physician offices and potentially dangerous to patients. However, utilization management is not the only way that physicians are impacted by formulary placement and expansion. Many physicians report challenges with securing payment for high cost, but necessary physician-administered medications placed on higher tiers. Others have reported difficulties in receiving the full payment rate for administering vaccines, especially in private practice settings, from public payers.[21] A fuller discussion of the challenges faced by physicians in adequate vaccine payment can be found in CMS Report 3-I-20.

In addition to the potential challenges faced by physicians if formularies are expanded, patients may face adverse consequences. A main concern is that if payers incur additional costs, in this case due to formulary expansion, those costs may be passed on to the beneficiary through premium increases or higher OOP costs. Specifically, payers could simply require higher levels of patient cost sharing if they are required to include more medications on a formulary. Additionally, payers may react to forced formulary expansion by placing more medications on less desirable formulary tiers, leading to higher patient OOP costs and/or more utilization management requirements.[22] In conjunction with the potential negative impacts on patients with expanded formularies, research has demonstrated that overall, stricter formularies may not negatively impact patients. In some cases, research has shown that stricter formularies are actually associated with reported positive impacts, such as better medication adherence and clinical outcomes.[22] At the same time, other research seems to show that these policies also reduce costs in the majority of cases.[23] Together these concerns and conclusions may suggest that more stringent formularies are not harmful to patients and may actually lower drug-related costs.

However, research has also demonstrated that when formularies are too restrictive, there can be negative outcomes like lower medication adherence and, in some cases, higher OOP costs for patients.[22,24] These two metrics go hand in hand as patients who face higher OOP costs are less likely to adhere to treatment plans, potentially incurring additional costs to treat the consequences from non-adherence down the line.[22,24] Additionally, the aforementioned utilization management does not just impact physicians but patients, as well. Patients who experience prior authorization have significantly increased wait times to access their medications and those who experience other

forms of utilization management, like step therapy, can face long, uphill battles to obtain the necessary medication(s).[22,25] Therefore, it is important that formularies are balanced enough to allow patients to access necessary medications while also ensuring that utilization management and patient cost-sharing are not egregious.

AMA POLICY AND ADVOCACY

The AMA has established a number of policies that address the development and maintenance of drug formularies. Policy H-125.979 outlines the need for formulary information to be available to physicians and prescribers in real-time at the point of prescribing. This policy outlines efforts to ensure that formulary lists are also accessible to patients and that medications are not removed during the policy term. Policy H-110.979 outlines the AMA's advocacy efforts to ensure that both PBMs and payers are not just transparent in the creation of formularies, but also that rebates and refunds received will be shared with patients. Policy H-125.991 details the AMA standards for the makeup of P&T committees, the approval of their decisions by medical staff within hospital or institutional settings, and suggested guidelines for the creation and maintenance of a formulary system. Finally, Policy H-125.985 encourages all entities who design formularies or benefit packages, including managed care organizations and PBMs, to follow the principles outlined in the aforementioned Principles of a Sound Drug Formulary System.

The AMA also has several policies outlining the ideal formulary exception process for payers. Policy H-285.965 outlines the steps that physicians should take to ensure that patients have awareness of the most advantageous course of treatment, even when engaging with a formulary exception process is necessary. Policy H-320.949 outlines efforts to ensure that payers are required to provide exception processes that have clear response times and appeal processes. This policy also dictates support for legislative and regulatory efforts to ensure that these standards are implemented. Policy H-185.942 details the basic criteria that should be followed by payers and physicians in relation to utilization management criteria and when it can be appropriately utilized. In addition to these policies, the second principle of the AMA Prior Authorization and Utilization Management Reform Principles outlines the flexibility that should be provided by payers to ensure that patients have the ability receive effective and individualized care. In addition to policies related to the formulary exception process, Policies H-320.939 and D-320.982 detail the AMA's fight to make sure physicians are not experiencing undue burdens related to prior authorization and to mitigate the number of prior authorizations required. Additionally, the AMA has a longstanding grassroots campaign (Fix Prior Auth) working to educate about how prior authorization impacts patients and physicians as well as working to fix the system.

Finally, the AMA has many policies outlining the need for prescription medications to be affordable and accessible to patients. Specifically, Policy H-110.997 outlines support for programs that work to lower the cost of prescription drugs while also maintain quality of care and physician autonomy. Policy H-100.964 builds on the previously mentioned policy and expands the support for efforts to ensure that medications are covered in a manner that allows patients to access medications affordably. Policy H-125.984 reiterates support for generic medications when deemed appropriate and cost effective for the patient. This policy also supports programs that are designed to bolster generic development and federal approvals. Among other strategies to improve the affordability of prescription medications, Policy H-110.987 outlines AMA support for legislation and regulation that works to reduce drug prices, anticompetitive behaviors, and price gouging in an effort to increase drug affordability. In addition to the AMA body of policy on drug pricing, there have been extensive advocacy efforts over the last few years to bring awareness and offer solutions to high drug prices through letters to regulators (CMS 2023, CMS 2024), legislators (Senate 2024), and payers (NAIC 2023), along with testimony provided to the House of

Representatives (House 2023, House 2023(a)). Additionally, the AMA grassroots campaign, TruthinRx, works to gather and disseminate physician and patient stories as well as to advocate for lower drug prices and increased process transparency.

DISCUSSION

While formularies have been around, in some form, for centuries, the current iteration is exceptionally complicated and, in many cases, opaque. As a result, the effectiveness of formularies increasingly has been called into question. Formularies are developed by P&T committees and, at least among private payers, are typically maintained by PBMs. Medication placement on these coverage lists is often heavily dictated by the rebates given to payers by drug manufacturers. Rebates, and other financial incentives are not required to be passed to the patient and, as a result, patients rarely see a share of the financial incentives that payers receive. Current formulary minimums vary greatly by payer type and state. While there is not a national minimum formulary requirement for private payers, public payers do have minimum standards that generally require a certain number of medications in each class to be included in each plan's formulary.

Patients must have access to medications deemed as most appropriate by their physicians and such access must be affordable in order to be effective. Formularies are one method designed to decrease medication costs. In some situations, more limited formularies have resulted in their intended outcomes: lower costs and greater patient access. Yet, when formularies are too restrictive, they may have the opposite effect: higher costs and lower access. In order to ensure that patients have access to affordable coverage and medications, the Council believes that formularies must find a middle ground between being too limited or too expansive, balancing the need for coverage with the potential for OOP or premium cost increases. It is essential to acknowledge that PBMs have significant negotiation power in formulary creation and drug placement and thus yield substantial power in the process. The complications of the negotiation process and the potential economic tradeoffs indicate the need for a nuanced approach to formulary minimum requirements. As such, support for a mandate to cover all medications could have serious adverse consequences on patients and physicians.

Therefore, the Council recommends the adoption of new AMA policy that supports a more nuanced approach, supporting all payers in setting a minimum formulary that covers all drugs in each of the protected classes and at least two medications in each of the non-protected classes. The Council believes that this minimum formulary requirement balances the intent of Resolution 809-I-24 while ensuring that patients and physicians will not face significant increases in OOP cost or utilization management requirements. Additionally, to ensure that patients have access to medications that are prescribed by their physician in an affordable manner, formularies exhibit transparency, and cost-savings are passed to the patient, the Council recommends that Policy H-110.979 be reaffirmed. While affordability and formulary composition are exceptionally important, it is also vital that patients and physicians have an avenue to request coverage when a medication is not included in a formulary. In order to protect and simplify this process the Council also recommends reaffirmation of Policy H-320.949, which details the AMA principles to ensure that utilization management, including formulary exception processes, are clear, not overly burdensome, and have a defined appeals process.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 809-I-24, and the remainder of the report be filed:

1. Our American Medical Association (AMA) support all public and private payers in maintaining a formulary that includes at least:
    a. Coverage for substantially all drugs in the six protected classes; immunosuppressants, antidepressants, antipsychotics, anticonvulsants, antiretrovirals, and antineoplastics; and
    b. Coverage for at least two medications in each non-protected therapeutic category. (New HOD Policy)

2. That our AMA reaffirm Policy H-110.979, which outlines AMA efforts to advocate for transparency in formularies and that patients can access medications (Reaffirm HOD Policy)

3. That our AMA reaffirm Policy H-320.949, which details AMA principles regarding requirements for the formulary exception process (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

Council on Medical Service Report 9-A-25
Minimum Requirements for Medication Formularies
Policy Appendix

Private Health Insurance Formulary Transparency, H-125.979

1. Our American Medical Association (AMA) will work with pharmacy benefit managers, health insurers, and pharmacists to enable physicians to receive accurate, real-time formulary data at the point of prescribing.
2. Our AMA supports legislation or regulation that ensures that private health insurance carriers declare which medications are available on their formularies by October 1 of the preceding year, that formulary information be specific as to generic versus trade name and include copay responsibilities, and that drugs may not be removed from the formulary nor moved to a higher cost tier within the policy term.
3. Our AMA will develop model legislation:
    a. requiring insurance companies to declare which drugs on their formulary will be covered under trade names versus generic.
    b. requiring insurance carriers to make this information available to consumers by October 1 of each year.
    c. forbidding insurance carriers from making formulary deletions within the policy term.
4. Our AMA will promote the following insurer-pharmacy benefits manager - pharmacy (IPBMP) to physician procedural policy: In the event that a specific drug is not or is no longer on the formulary when the prescription is presented, the IPBMP shall provide notice of covered formulary alternatives to the prescriber promptly so that appropriate medication can be provided to the patient within 72 hours.
5. Drugs requiring prior authorization, shall be adjudicated by the IPBMP within 72 hours of receipt of the prescription.
6. Our AMA
    a. promotes the value of online access to up-to-date and accurate prescription drug formulary plans from all insurance providers nationwide.
    b. supports state medical societies in advocating for state legislation to ensure online access to up-to-date and accurate prescription drug formularies for all insurance plans.
7. Our AMA will continue its efforts with the National Association of Insurance Commissioners addressing the development and management of pharmacy benefits.
8. Our AMA will develop model state legislation on the development and management of pharmacy benefits. (Sub. Res. 724, A-14; Appended: Res. 701, A-16; Appended: Alt. Res. 806, I-17; Reaffirmed: CMS Rep. 07, A-18; Reaffirmed: BOT Rep. 20, A-19; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: CMS Rep. 2, A-21; Reaffirmed: CMS Rep. 06, A-24)

Value-Based Management of Drug Formularies, H-110.979

Our American Medical Association: (1) will advocate that pharmacy benefit managers (PBMs) and health plans use a transparent process in formulary development and administration, and include practicing network physicians from the appropriate medical specialty when making determinations regarding formulary inclusion or placement for a particular drug class; (2) will advocate that any refunds or rebates received by a health plan or PBM from a pharmaceutical manufacturer under an outcomes-based contract be shared with impacted patients; and (3) opposes indication-based formularies in order to protect the ability of patients to access and afford the prescription drugs they need, and physicians to make the best prescribing decisions for their patients. (CMS Rep. 6, I-20)

Drug Formularies and Therapeutic Interchanges, H-125.991

It is the policy of the American Medical Association (AMA):

(1) That the following terms be defined as indicated:

(a) Formulary: a compilation of drugs or drug products in a drug inventory list; open (unrestricted) formularies place no limits on which drugs are included whereas closed (restrictive) formularies allow only certain drugs on the list;

(b) Formulary system: a method whereby the medical staff of an institution, working through the pharmacy and therapeutics committee, evaluates, appraises, and selects from among the numerous available drug entities and drug products those that are considered most useful in patient care;

(c) Pharmacy & Therapeutics (P&T) Committee: an advisory committee of the medical staff that represents the official, organizational line of communication and liaison between the medical staff and the pharmacy department; its recommendations are subject to medical staff approval;

(d) Therapeutic alternates: drug products with different chemical structures but which are of the same pharmacological and/or therapeutic class, and usually can be expected to have similar therapeutic effects and adverse reaction profiles when administered to patients in therapeutically equivalent doses;

(e) Therapeutic interchange: authorized exchange of therapeutic alternates in accordance with previously established and approved written guidelines or protocols within a formulary system; and

(f) Therapeutic substitution: the act of dispensing a therapeutic alternate for the drug product prescribed without prior authorization of the prescriber.

(2) That our AMA reaffirms its opposition to therapeutic substitution (dispensing a therapeutic alternate without prior authorization) in any patient care setting.

(3) That drug formulary systems, including the practice of therapeutic interchange, are acceptable in inpatient hospital and other institutional settings that have an organized medical staff and a functioning Pharmacy and Therapeutics (P&T) Committee, provided they satisfy the following standards:

(a) The formulary system must:

(i) have the concurrence of the organized medical staff;

(ii) openly provide detailed methods and criteria for the selection and objective evaluation of all available pharmaceuticals;

(iii) have policies for the development, maintenance, approval and dissemination of the drug formulary and for continuous and comprehensive review of formulary drugs;

(iv) provide protocols for the procurement, storage, distribution, and safe use of formulary and non-formulary drug products;

(v) provide active surveillance mechanisms to regularly monitor both compliance with these standards and clinical outcomes where substitution has occurred, and to intercede where indicated;

(vi) have enough qualified medical staff, pharmacists, and other professionals to carry out these activities;

(vii)provide a mechanism to inform the prescriber in a timely manner of any substitutions, and that allows the prescriber to override the system when necessary for an individual patient without inappropriate administrative burden;

(viii) provide a mechanism to assure that patients/guardians are informed of any change from an existing outpatient prescription to a formulary substitute while hospitalized, and whether the prior medication or the substitute should be continued upon discharge from the hospital;

(ix) include policies that state that practitioners will not be penalized for prescribing non-formulary drug products that are medically necessary; and

(x) be in compliance with applicable state and federal statutes and/or state medical board requirements.

(b) The P&T Committee must:

(i) objectively evaluate the medical usefulness and cost of all available pharmaceuticals (reliance on practice guidelines developed by physician organizations is encouraged);

(ii) recommend for the formulary those drug products which are the most useful and cost-effective in patient care;
(iii) conduct drug utilization review (DUR) activities;
(iv) provide pharmaceutical information and education to the organization's (e.g., hospital) staff;
(v) analyze adverse results of drug therapy;
(vi) make recommendations to ensure safe drug use and storage; and
(vii) provide protocols for the timely procurement of non-formulary drug products when prescribed by a physician for the individualized care of a specific patient, when that decision is based on sound scientific evidence or expert medical judgment.
(c) The P&T Committee's recommendations must be approved by the medical staff;
(d) Within the drug formulary system, the P & T Committee shall recommend, and the medical staff must approve, all drugs that are subject to therapeutic interchange, as well as all processes or protocols for informing individual prescribing physicians; and
(e) The act of providing a therapeutic alternate that has not been recommended by the P&T Committee and approved by the medical staff is considered unauthorized therapeutic substitution and requires immediate prior consent by the prescriber; i.e., authorization for a new prescription.
(4) That drug formulary systems in any outpatient setting shall operate under a P&T Committee whose recommendations must have the approval of the medical staff or equivalent body, and must meet standards comparable to those listed above. In addition:
(a) That our AMA continues to insist that managed care and other health plans identify participating physicians as their "medical staff" and that they use such staff to oversee and approve plan formularies, as well as to oversee and participate on properly elected P&T Committees that develop and maintain plan formularies;
(b) That our AMA continues to insist that managed care and other health plans have well-defined processes for physicians to prescribe non-formulary drugs when medically indicated, that this process impose minimal administrative burdens, and that it include access to a formal appeals process for physicians and their patients; and
(c) That our AMA strongly recommends that the switching of therapeutic alternates in patients with chronic diseases who are stabilized on a drug therapy regimen be discouraged.
(5) That our AMA encourages mechanisms, such as incentive-based formularies with tiered co-pays, to allow greater choice and economic responsibility in drug selection, but urges managed care plans and other third party payers to not excessively shift costs to patients so they cannot afford necessary drug therapies. (BOT Rep. 45, I-93; Reaffirmed by Sub. Res. 501, A-95; Appended: BOT Rep. 7, I-99; Modified: Sub. Res. 524 and Reaffirmed: Res. 123, A-00; Reaffirmed: Res. 515, I-00; Reaffirmed: CMS Rep. 8, A-02; Reaffirmed: Res. 533, A-03; Modified: CMS Rep. 6, A-03; Modified: CSA Rep. 2, A-04; Reaffirmation I-04; Reaffirmed in lieu of Res. 535, A-05; Reaffirmed: BOT Action in response to referred for decision Res. 503, A-05; Reaffirmed: CMS Rep. 2, I-05; Reaffirmation A-06; Reaffirmation A-08; Reaffirmed: CMS Rep. 2, A-10; Reaffirmed: CMS Rep. 01, A-20)

Expanded Use of the AMA's Principles of a Sound Drug Formulary, H-125.985
Our American Medical Association (AMA) urges managed care organizations, pharmacy benefit managers, and others who design benefit packages and/or make pharmacy benefit decisions, to utilize the Principles of a Sound Drug Formulary System (as described in BOT Rep. 28, I-00) as they develop their pharmaceutical benefit plan(s) and that the Principles of a Sound Drug Formulary System be readily available on the AMA web site.(Res. 520, A-01; Amended: Res. 514, A-02; Reaffirmed: CSA Rep. 2, A-04; Reaffirmation I-04; Reaffirmed: Sub. Res. 529, A-05; Reaffirmed in lieu of Res. 535, A-05; Reaffirmed: BOT Action in response to referred for decision Res. 503, A-05; Reaffirmation A-06; Reaffirmed: CSAPH Rep. 01, A-16)

Prior Authorization and Utilization Management Reform, H-320.939

1. Our American Medical Association (AMA) will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation, Prior Authorization Physician Survey and other PA research, and the AMA Prior Authorization Toolkit, which is aimed at reducing PA administrative burdens and improving patient access to care.
2. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician.
3. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes, including the extent to which these processes contribute to patient harm.
4. Our AMA will advocate for health plans to minimize the burden on patients, physicians, and medical centers when updates must be made to previously approved and/or pending prior authorization requests. (CMS Rep. 08, A-17; Reaffirmation: I-17; Reaffirmed: Res. 711, A-18; Appended: Res. 812, I-18; Reaffirmed in lieu of: Res. 713, A-19; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: Res. 811, I-19; Reaffirmed: CMS Rep. 4, A-21; Appended: CMS Rep. 5, A-21; Reaffirmation: A-22)

Prior Authorization Reform, D-320.982

Our American Medical Association will explore emerging technologies to automate the prior authorization process for medical services and evaluate their efficiency and scalability, while advocating for reduction in the overall volume of prior authorization requirements to ensure timely access to medically necessary care for patients and reduce practice administrative burdens. (Res. 704, A-19; Reaffirmation: A-22)

Cost of Prescription Drugs, H-110.997

Our American Medical Association (AMA):

(1) supports programs whose purpose is to contain the rising costs of prescription drugs, provided that the following criteria are satisfied: (a) physicians must have significant input into the development and maintenance of such programs; (b) such programs must encourage optimum prescribing practices and quality of care; (c) all patients must have access to all prescription drugs necessary to treat their illnesses; (d) physicians must have the freedom to prescribe the most appropriate drug(s) and method of delivery for the individual patient; and (e) such programs should promote an environment that will give pharmaceutical manufacturers the incentive for research and development of new and innovative prescription drugs;

(2) reaffirms the freedom of physicians to use either generic or brand name pharmaceuticals in prescribing drugs for their patients and encourages physicians to supplement medical judgments with cost considerations in making these choices;

(3) encourages physicians to stay informed about the availability and therapeutic efficacy of generic drugs and will assist physicians in this regard by regularly publishing a summary list of the patient expiration dates of widely used brand name (innovator) drugs and a list of the availability of generic drug products;

(4) encourages expanded third party coverage of prescription pharmaceuticals as cost effective and necessary medical therapies;

(5) will monitor the ongoing study by Tufts University of the cost of drug development and its relationship to drug pricing as well as other major research efforts in this area and keep the AMA House of Delegates informed about the findings of these studies;

(6) encourages physicians to consider prescribing the least expensive drug product (brand name or FDA A-rated generic); and
(7) encourages all physicians to become familiar with the price in their community of the medications they prescribe and to consider this along with the therapeutic benefits of the medications they select for their patients. (BOT Rep. O, A-90; Sub. Res. 126 and Sub. Res. 503, A-95; Reaffirmed: Res. 502, A-98; Reaffirmed: Res. 520, A-99; Reaffirmed: CMS Rep. 9, I-99; Reaffirmed: CMS Rep.3, I-00; Reaffirmed: Res. 707, I-02; Reaffirmation A-04; Reaffirmed: CMS Rep. 3, I-04; Reaffirmation A-06; Reaffirmed in lieu of Res. 814, I-09; Reaffirmed in lieu of Res. 201, I-11; Reaffirmed in lieu of: Res. 207, A-17; Reaffirmed: BOT Rep. 14, A-18)

Pharmaceutical Costs, H-110.987

1. Our American Medical Association (AMA) encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.
2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.
3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.
4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
7. Our AMA supports legislation to shorten the exclusivity period for biologics.
8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
10. Our AMA supports:
    a. drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by 10 percent or more each year or per course of treatment and provide justification for the price increase;
    b. legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and
    c. the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of 10 percent or more each year or per course of treatment.
11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.
12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.

13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation. (CMS Rep. 2, I-15; Reaffirmed in lieu of: Res. 817, I-16; Appended: Res. 201, A-17; Reaffirmed in lieu of: Res. 207, A-17; Modified: Speakers Rep. 01, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Appended: BOT Rep. 14, A-19; Reaffirmed: Res. 105, A-19; Appended: Res. 113, I-21; Reaffirmed in lieu of: Res. 810, I-22; Reaffirmed: Res. 801, I-23; Reaffirmed: Res. 801, I-23)

Generic Drugs, H-125.984
Our American Medical Association (AMA) believes that: (1) Physicians should be free to use either the generic or brand name in prescribing drugs for their patients, and physicians should supplement medical judgments with cost considerations in making this choice.
(2) It should be recognized that generic drugs frequently can be less costly alternatives to brand-name products.
(3) Substitution with Food and Drug Administration (FDA) "B"-rated generic drug products (i.e., products with potential or known bioequivalence problems) should be prohibited by law, except when there is prior authorization from the prescribing physician.
(4) Physicians should report serious adverse events that may be related to generic substitution, including the name, dosage form, and the manufacturer, to the FDA's MedWatch program.
(5) The FDA, in conjunction with our AMA and the United States Pharmacopoeia, should explore ways to more effectively inform physicians about the bioequivalence of generic drugs, including decisional criteria used to determine the bioequivalence of individual products.
(6) The FDA should fund or conduct additional research in order to identify the optimum methodology to determine bioequivalence, including the concept of individual bioequivalence, between pharmaceutically equivalent drug products (i.e., products that contain the same active ingredient(s), are of the same dosage form, route of administration, and are identical in strength).
(7) The Congress should provide adequate resources to the FDA to continue to support an effective generic drug approval process. (CSA Rep. 6, A-02; Reaffirmed: CSAPH Rep. 2, A-07; Reaffirmation A-08; Reaffirmation A-09; Reaffirmed in lieu of Res. 525, A-10; Reaffirmed in lieu of Res. 224, I-14; Reaffirmed in lieu of: Res. 922, I-18)

Managed Care Cost Containment Involving Prescription Drugs H-285.965
(1) Physicians who participate in managed care plans should maintain awareness of plan decisions about drug selection by staying informed about pharmacy and therapeutics (P&T) committee actions and by ongoing personal review of formulary composition. P&T committee members should include independent physician representatives. Mechanisms should be established for ongoing peer review of formulary policy. Physicians who perceive inappropriate influence on formulary development from pharmaceutical industry consolidation should notify the proper regulatory authorities.
(2) Physicians should be particularly vigilant to ensure that formulary decisions adequately reflect the needs of individual patients and that individual needs are not unfairly sacrificed by decisions based on the needs of the average patient. Physicians are ethically required to advocate for additions to the formulary when they think patients would benefit materially and for exceptions to the formulary on a case-by-case basis when justified by the health care needs of particular patients. Mechanisms to appeal formulary exclusions should be established. Other cost-containment mechanisms, including prescription caps and prior authorization, should not unduly burden physicians or patients in accessing optimal drug therapy.

(3) Limits should be placed on the extent to which managed care plans use incentives or pressures to lower prescription drug costs. Financial incentives are permissible when they promote cost-effectiveness, not when they require withholding medically necessary care. Physicians must not be made to feel that they jeopardize their compensation or participation in a managed care plan if they prescribe drugs that are necessary for their patients but that may also be costly. There should be limits on the magnitude of financial incentives, incentives should be calculated according to the practices of a sizable group of physicians rather than on an individual basis, and incentives based on quality of care rather than cost of care should be used. Physician penalties for non-compliance with a managed care formulary in the form of deductions from withholds or direct charges are inappropriate and unduly coercive. Prescriptions should not be changed without physicians having a change to discuss the change with the patient.
(4) Managed care plans should develop and implement educational programs on cost-effective prescribing practices. Such initiatives are preferable to financial incentives or pressures by HMOs or hospitals, which can be ethically problematic.
(5) Patients must fully understand the methods used by their managed care plans to limit prescription drug costs. During enrollment, the plan must disclose the existence of formularies, the provisions for cases in which the physician prescribes a drug that is not included in the formulary and the incentives or other mechanisms used to encourage physicians to consider costs when prescribing drugs. In addition, plans should disclose any relationships with pharmaceutical benefit management companies or pharmaceutical companies that could influence the composition of the formulary. If physicians exhaust all avenues to secure a formulary exception for a significantly advantageous drug, they are still obligated to disclose the option of the more beneficial, more costly drug to the patient, so that the patient can decide whether to pay out-of-pocket.
(6) Research should be conducted to assess the impact of formulary constraints and other approaches to containing prescription drug costs on patient welfare.
(7) Our AMA urges pharmacists to contact the prescribing physician if a prescription written by the physician violates the managed care drug formulary under which the patient is covered, so that the physician has an opportunity to prescribe an alternative drug, which may be on the formulary.
(8) When pharmacists, insurance companies, or pharmaceutical benefit management companies communicate directly with physicians or patients regarding prescriptions, the reason for the intervention should be clearly identified as being either educational or economic in nature.
(9) Our AMA will develop model legislation which prohibits managed care entities, and other insurers, from retaliating against a physician by disciplining, or withholding otherwise allowable payment because they have prescribed drugs to patients which are not on the insurer's formulary, or have appealed a plan's denial of coverage for the prescribed drug.
(10) Our AMA urges health plans including managed care organizations to provide physicians and patients with their medication formularies through multiple media, including Internet posting
(11) In the case where Internet posting of the formulary is not available and the formulary is changed, coverage should be maintained until a new formulary is distributed
(12) For physicians who do not have electronic access, hard copies must be available. (CEJA Rep. 2, A-95; Res. 734, A-97; Appended by Res. 524 and Sub. Res.714, A-98; Reaffirmed: Res. 511, A-99; Modified: Res. 501, Reaffirmed: Res. 123 and 524, A-00; Modified: Res. 509, I-00; Reaffirmed: CMS Rep. 6, A-03; Reaffirmation I-04; Reaffirmed: Sub. Res. 529, A-05; Reaffirmation A-08; Reaffirmation A-10; Reaffirmed in lieu of Res. 822, I-11; Reaffirmation A-14; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: CMS Rep. 6, I-2)

Clinical Practice Guidelines and Clinical Quality Improvement Activities H-320.949
Our American Medical Association (AMA) adopts the following principles for the development and application of utilization management guidelines:

1. The criteria or guidelines used for utilization management shall be based upon sound clinical evidence and consider, among other factors, the safety and effectiveness of diagnosis or treatment, and must be age appropriate.
2. These utilization management guidelines and the criteria for their application shall be developed with the participation of practicing physicians.
3. Appropriate data, clinical evidence, and review criteria shall be available on request.
4. When used by health plans or health care organizations, such criteria must allow variation and take into account individual patient differences and the resources available in the particular health care system or setting to provide recommended care. The guidelines should also include a statement of their limitations and restrictions.
5. Patients and physicians shall be able to appeal decisions based on the application of utilization management guidelines.
6. The competence of non-physician reviewers and the availability of same-specialty peer review must be delineated and assured.
7. Maintaining the best interests of the patient uppermost, the final decision to discharge a patient, or any other patient management decision, remains the prerogative of the physician. (BOT Rep. 6, A-99; Reaffirmed: Res. 820, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmed: Res. 708, A-16; Reaffirmed: CMS Rep. 08, A-17; Reaffirmed: CMS Rep. 4, A-21)

Third Party Payer Quantity Limits H-185.942

1. Our American Medical Association (AMA) supports the protection of the patient-physician relationship from interference by payers and Pharmacy Benefit Managers (PBMs) via various utilization control mechanisms, including medication and testing and treatment supply quantity limits.
2. Our AMA will work with third party payers and PBMs to ensure that if they use quantity limits for prescription drugs or testing and treatment supplies, an exceptions process must be in place to ensure that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, and that any such process should place a minimum burden upon patients, physicians and their staff.
3. Our AMA supports interested states legislative efforts and federal action and will develop model state legislation to ensure that third party payers or PBMs that institute quantity limits for prescription drugs or testing and treatment supplies include an exceptions process so that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, including provisions such as the following:
    - physicians can specify limited supplies of medications during initial trials of a medication, or if a larger quantity of medication would expose an at-risk patient to potential harm (e.g., opioids, benzodiazepines, or psychostimulants)
    - physicians can appeal adverse determinations regarding quantity limitations;
    - payers must provide an easily accessible list of all medications and testing and treatment supplies with quantity limits and the requirements for the exception process on the payer's Web site;
    - payers must indicate, what, if any, clinical criteria (e.g., evidence-based guidelines, FDA label, scientific literature) support the plan's quantity limitations;
    - physicians with specialized qualifications may not be subject to quantity limits;
    - payers cannot charge patients for an additional co-pay if an exception request for a higher medication or testing and treatment supply quantity has been approved based on medical necessity;
    - payer decisions on exception, and subsequent appeal requests, of quantity limits must be made within two working days in non urgent situations and one working day in urgent cases; and

- physicians or patients can submit any denied appeals to an independent review body for a final, binding decision. (BOT Rep. 12, A-12; Reaffirmation: I-17; Modified: CMS Rep. 05, A-23)

Drug Issues in Health System Reform H-100.964

1. Our American Medical Association (AMA) consistent with AMA Policy H-165.925, supports coverage of prescription drugs, including insulin, in the AMA standard benefits package.
2. Our AMA supports consumer choice of at least two options for their pharmaceutical benefits program. This must include a fee-for-service option where restrictions on patient access and physician autonomy to prescribe any FDA-approved medication are prohibited.
3. Our AMA reaffirms AMA Policy H-110.997, supporting the freedom of physicians to use either generic or brand name pharmaceuticals in prescribing drugs for their patients and encourage physicians to supplement medical judgments with cost considerations in making these choices.
4. Our AMA supports a managed pharmaceutical benefits option with market-driven mechanisms to control costs, provided cost control strategies satisfy AMA criteria defined in AMA Policy H-110.997 and that drug formulary systems employed are consistent with standards defined in AMA Policy H-125.991.
5. Our AMA supports prospective and retrospective drug utilization review (DUR) as a quality assurance component of pharmaceutical benefits programs, provided the DUR program is consistent with Principles of Drug Use Review defined in AMA Policy H-120.978.
6. Our AMA encourages physicians to counsel their patients about their prescription medicines and when appropriate, to supplement with written information; and supports the physician's role as the "learned intermediary" about prescription drugs.
    a. Our AMA encourages physicians to incorporate medication reviews, including discussions about drug interactions and side effects, as part of routine office-based practice, which may include the use of medication cards to facilitate this process. Medication cards should be regarded as a supplement, and not a replacement, for other information provided by the physician to the patient via oral counseling and, as appropriate, other written information.
7. Our AMA reaffirms AMA Policy H-120.991, supporting the voluntary time-honored practice of physicians providing drug samples to selected patients at no charge, and to oppose legislation or regulation whose intent is to ban drug sampling.
8. Our AMA supports CEJA's opinion that physicians have an ethical obligation to report adverse drug or device events; supports the FDA's MedWatch voluntary adverse event reporting program; and supports FDA efforts to prevent public disclosure of patient and reporter identities.
9. Our AMA opposes legislation that would mandate reporting of adverse drug and device events by physicians that would result in public disclosure of patient or reporter identities.
10. Our AMA reaffirms AMA Policy H-120.988, supporting physician prescribing of FDA-approved drugs for unlabeled indications when such use is based upon sound scientific evidence and sound medical opinion, and supporting third party payer reimbursement for drugs prescribed for medically accepted unlabeled uses.
11. Our AMA reaffirms AMA Policy H-100.989, supporting the present classification of drugs as either prescription or over-the-counter items and opposing the establishment of a pharmacist-only third (transitional) class of drugs. (BOT Rep. 53, A-94; Reaffirmed by Sub. Res. 501, A-95; Reaffirmed by CSA Rep. 3, A-97; Amended: CSA Rep. 2, I-98; Renumbered: CMS Rep. 7, I-05; Reaffirmation A-10; Reaffirmed in lieu of Res. 201, I-11; Modified: CMS Rep. 1, A-21)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 101
(A-25)

Introduced by: American Academy of Child and Adolescent Psychiatry, American Society of Addiction Medicine

Subject: Uniform Adoption of Service Intensity Tools to Support Medical Decision-making and Service Gap Analysis

Referred to: Reference Committee A

Whereas, our nation is in the midst of a mental health and an opioid crisis; and

Whereas, most insurers are not in compliance with state and federal parity law[1]; and

Whereas, health plans utilize proprietary service intensity decision-making criteria for medical necessity and utilization management[2]; and

Whereas, there exist evidence-based, nationally-recognized service intensity assessment instruments and level of care placement criteria consistent with generally accepted mental health and substance use disorder that determine the level of treatment services needed for a patient based on a clinically derived and empirically tested service intensity algorithm standards of care[3]; and

Whereas, since 2020, four states have passed legislation requiring health plans to adopt and utilize evidence-based, nationally recognized service intensity assessment instruments and level of care placement criteria consistent with generally accepted mental health and substance use disorder standards of care developed by professional medical associations[4]; and

Whereas, gaps in the mental health and addiction service array exist in communities across America issues; and

Whereas, utilization of nationally recognized service intensity assessment instruments and level of care placement criteria consistent with generally accepted mental health and substance use disorder standards of care can help identify gaps in the continuum of mental health and addiction treatment services in communities and certain patient populations; therefore be it

RESOLVED, that our American Medical Association advocate that federal and state policymakers utilize evidence-based nationally recognized service intensity assessment instruments and level of care placement criteria developed by professional medical associations to require coverage of treatment and recovery services in mental health and substance use disorder treatment. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

H-285.920 Criteria for Level of Care Status

1. Our American Medical Association support the development and use of level of care guidelines that meet the following criteria:
   a. Level of care guidelines should function as guidelines only, and should not be used as requirements for all instances and cases. That is, level of care guidelines must allow for appropriate physician autonomy in making responsible medical decisions.
   b. Level of care guidelines should acknowledge the complexity of care for each patient under the particular set of clinical circumstances.
   c. Level of care guidelines should apply to all facility support systems so that patients are not assigned a level of care that slows or stalls their treatment.
   d. Level of care guidelines should be developed under the direction of actively practicing physicians.
   e. Level of care guidelines should be developed based on individual patient severity of illness and intensity of service.
   f. Level of care guidelines should be validated through standard data quality control checks and professional advisory consensus.
   g. Level of care guidelines should be reviewed and updated.
   h. Level of care guidelines should allow for a timely appeal process.
2. It is the policy of the AMA that private sector accrediting organizations, where applicable, should adopt standards that are consistent with AMA criteria for the development and use of level of care status guidelines.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:102
(A-25)

Introduced by: American College of Chest Physicians

Subject: Access to Single Maintenance and Reliever Therapy for Asthma

Referred to: Reference Committee A

Whereas, asthma inhaler adherence is as low as 22 to 63% in patients prescribed an inhaled corticosteroid maintenance inhaler with a short-acting beta-agonist reliever inhaler: and

Whereas, 60% of asthma-related hospitalizations can be attributed to poor inhaler adherence: and

Whereas, Single Maintenance and Reliever Therapy (SMART) utilizes a combined inhaled corticosteroid/long-acting beta-agonist inhaler for both maintenance and reliever therapy: and

Whereas, SMART has been shown to improve inhaler adherence, reduce asthma exacerbations, reduce emergency room visits, and reduce hospitalizations: and

Whereas, the Global Initiative for Asthma (GINA) and the National Asthma Education and Prevention Program (NAEPP) recommend SMART for patients with moderate to severe asthma; and

Whereas, SMART may require patient to use more medication than a typical 30-day supply and may require up to three inhalers per month; and

Whereas, at least 33 states have quantity limits in their Medicaid programs more restrictive than three inhalers per month for inhaled corticosteroid/long-acting beta-agonist combination inhalers; and

Whereas, commercial insurers have quantity limits as low as 1 inhaled corticosteroid/long-acting beta-agonist combination inhalers per 30-day period; and

Whereas, SMART medications are currently covered in 45 state Medicaid plans, with 35 states requiring a copay to access SMART medications in some or all plans; and

Whereas, copays as low as $1 to $5 are associated with reduced adherence and increased use of costlier services, such as the emergency room; therefore be it

RESOLVED, that our American Medical Association work with the Centers for Medicare and Medicaid Services and major national insurance carriers to remove or increase quantity limits for inhaled corticosteroid/long-acting beta-agonist combination inhalers when prescribed in accordance with evidence-based guidelines (Directive to Take Action); and be it further

RESOLVED, that our AMA work with state medical associations to advocate for the removal of copays for asthma inhalers in all state Medicaid plans. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

Patient Access to Asthma Medications H-185.906
Our American Medical Association supports efforts to ensure access to and insurance coverage, including Medicaid coverage, and reduce cost-sharing for metered-dose **inhaler** formulations for children and others who require it for optimal medication administration.

Asthma Control H-160.932
1. Our American Medical Association encourages physicians to make appropriate use of evidence-based guidelines, including those contained in the National Asthma Education and Prevention Program Coordinating Committee Expert Panel Working Group 2020 Focused Updates to the Asthma Management Guidelines.
2. Our AMA encourages physicians to provide self-management education tailored to the literacy level of the patient by teaching and reinforcing appropriate self-monitoring, the use of a written asthma action plan, taking medication correctly, and avoiding environmental factors that worsen asthma.
3. Our AMA encourages physicians to incorporate the four components of care (assessment and monitoring; education; control of environmental factors and comorbid conditions; and appropriate medication selection and use).
4. Our AMA will, in collaboration with interested parties and organizations, develop content to help physicians talk through the different asthma control options and their known economic costs and environmental impacts.

Third Party Payer Quantity Limits H-185.942
1. Our American Medical Association supports the protection of the patient-physician relationship from interference by payers and Pharmacy Benefit Managers (PBMs) via various utilization control mechanisms, including medication and testing and treatment supply quantity limits.

2. Our AMA will work with third party payers and PBMs to ensure that if they use quantity limits for prescription drugs or testing and treatment supplies, an exceptions process must be in place to ensure that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, and that any such process should place a minimum burden upon patients, physicians and their staff.

3. Our AMA supports interested states legislative efforts and federal action and will develop model state legislation to ensure that third party payers or PBMs that institute quantity limits for prescription drugs or testing and treatment supplies include an exceptions process so that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, including provisions such as the following:

    - physicians can specify limited supplies of medications during initial trials of a medication, or if a larger quantity of medication would expose an at-risk patient to potential harm (e.g., opioids, benzodiazepines, or psychostimulants)
    - physicians can appeal adverse determinations regarding quantity limitations;
    - payers must provide an easily accessible list of all medications and testing and treatment supplies with quantity limits and the requirements for the exception process on the payer's Web site;
    - payers must indicate, what, if any, clinical criteria (e.g., evidence-based guidelines, FDA label, scientific literature) support the plan's quantity limitations;
    - physicians with specialized qualifications may not be subject to quantity limits;

- payers cannot charge patients for an additional co-pay if an exception request for a higher medication or testing and treatment supply quantity has been approved based on medical necessity;
- payer decisions on exception, and subsequent appeal requests, of quantity limits must be made within two working days in non urgent situations and one working day in urgent cases; and
- physicians or patients can submit any denied appeals to an independent review body for a final, binding decision.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 103
(A-25)

Introduced by: American Society for Gastrointestinal Endoscopy, American College of Rheumatology, American Gastroenterological Association

Subject: Inadequate Reimbursement for Biosimilars

Referred to: Reference Committee A

Whereas, biologics are vitally important therapeutic options for patients with certain chronic diseases; and

Whereas, biosimilars have the potential to promote a sustainable, robust market that encourages competition, cost savings, and better patient care; and

Whereas, insurers and their pharmacy benefit managers (PBMs) have exerted disproportionate sway on drug formularies by pressuring pharmaceutical companies to offer significant rebates in exchange for preferred formulary placement, including “fail first” status; and

Whereas, these rebates are reflected in manufacturers ’quarterly Average Sales Price (ASP) reporting to the Centers for Medicare and Medicaid Services (CMS), and thus artificially lower the ASP to the point that many providers ’acquisition costs substantially exceed Medicare and other private health plan payments; and

Whereas, the ASP for most biosimilars continues to fall short of many providers ’acquisition costs – even for the earliest biosimilars – forcing providers to either administer the drug at a financial loss, transfer care to another site of service (e.g. a hospital), or switch the patient’s therapy when they are stable on current therapy, which may be further complicated by “step therapy” requirements imposed by payers; and

Whereas, the Inflation Reduction Act’s temporary increase of the ASP “add-on” from 6% to 8% does not go nearly far enough to ensure that physicians are not infusing biosimilars at a loss; and

Whereas, biosimilars will never be fully integrated into the healthcare system and many patients will be left without access to life-saving therapies until Congress removes manufacturer rebates from the ASP; therefore be it

RESOLVED, that our American Medical Association work with stakeholders to advocate for legislation that will Amend Section 1847A(c)(3) of the Social Security Act to permanently remove manufacturer rebates from the ASP methodology for biologics. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/22/2025

RELEVANT AMA POLICY

Biosimilar Coverage Structures H-100.940

1) Our American Medical Association supports the development and implementation of strategies to incentivize the use of lower cost biosimilars when safe, fiscally prudent for the patient and not financially disadvantageous to the clinical practice, clinically appropriate, and agreed upon as the best course of treatment by the patient and physician.
2) Our AMA advocates to eliminate acquisition cost and reimbursement disparities for in-office biosimilar treatment across diverse treatment locations.
3) Our AMA supports patient education regarding biosimilars and their safety and efficacy.

CMS Rep. 04, I-24

Reforming Medicare Part B Drug Reimbursement to Promote Patient Affordability and Physician Practice Sustainability H-330.864

1. Our American Medical Association supports the creation of a new reimbursement model for Part B drugs that;

    a. disentangles reimbursement from the drug price, or any weighted market average of the drug price, by reimbursing physicians for the actual cost of the drug; and

    b. ensures adequate compensation for the cost of acquisition, inventory, storage, and administration of clinically-administered drugs that is based on physician costs, not a percent of the drug price.

2. Our AMA maintains the principles that any revised Part B reimbursement models should promote practice viability, especially for small physician practices, practices in rural and/or underserved areas, and practices with a significant proportion of Medicare patients, to promote continued treatment access for patients. Res. 221, A-24

Cuts in Medicare Outpatient Infusion Services D-330.960

1. Our AMA will actively support efforts to seek legislation to ensure that Medicare payments for drugs fully cover the physician's acquisition, inventory and carrying cost and that Medicare payments for drug administration and related services are adequate to ensure continued patient access to outpatient infusion services.

2. Our AMA will continue strong advocacy efforts working with relevant national medical specialty societies to ensure adequate physician payment for Part B drugs and patient access to biologic and pharmacologic agents.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 104
(A-25)

Introduced by: Daniel H. Johnson, Jr, MD

Subject: Study of Whether the HSA Model Could Become an Option for Medicaid Beneficiaries

Referred to: Reference Committee A

Whereas, one in five Americans are enrolled in Medicaid; and

Whereas, states have some limited flexibility in administering the benefits of Medicaid; therefore be it

RESOLVED, that our American Medical Association conduct a thorough study to determine whether subsidies of low-income beneficiaries enrolled in Medicaid could be applied using the HSA model as one option in a more pluralistic system of Medicaid insurance plan design, with a report back at the I-25 Meeting of our House of Delegates. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/15/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 105
(A-25)

Introduced by: Florida, New York, Maryland, Mississippi, Tennessee, New Jersey, West Virginia

Subject: Development of an Educational Resource on Opting Out of Medicare for Physicians

Referred to: Reference Committee A

Whereas, recent Medicare reimbursement cuts have created significant financial challenges for physicians, particularly in maintaining viable practices and delivering quality care; and

Whereas, physicians participating in Medicare face increasing administrative burdens and financial strain due to payment rates that fail to keep pace with inflation and rising practice costs; and

Whereas, many physicians are unaware of the process and implications of opting out of Medicare as a means to explore alternative practice models; and

Whereas, the American Medical Association is committed to supporting physicians' ability to make informed decisions about their participation in federal programs; therefore be it

RESOLVED, that our American Medical Association create and maintain a prominently featured page on its website dedicated to providing clear, comprehensive information on the process of opting out of Medicare, including:

1. A step-by-step guide on how to opt out of Medicare, including sample documents and timelines;
2. An overview of the legal, financial, and ethical considerations for physicians considering this option;
3. Information on alternative payment models and strategies to ensure continuity of patient care; and
4. Frequently Asked Questions (FAQs) to address common concerns and scenarios physicians may face when opting out of Medicare (Directive to Take Action); and be it further

RESOLVED, that our AMA ensure this educational resource is easily accessible via the AMA website's search function and is regularly updated to reflect changes in Medicare policies and regulations (Directive to Take Action); and be it further

RESOLVED, that our AMA conduct outreach efforts to promote awareness of this resource among its members and provide additional support for physicians exploring alternative practice models. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

RELEVANT AMA POLICY

D-390.961 Medicare Physician Payment Reform
1. Our American Medical Association will continue to advocate for adequate investment in comparative effectiveness research that is consistent with AMA Policy H-460.909, and in effective methods of translating research findings relating to quality of care into clinical practice.
2. Our AMA will advocate for better methods of data collection, development, reporting and dissemination of practical clinical decision-making tools for patients and physicians, and rapid, confidential feedback about comparative practice patterns to physicians to enable them to make the best use of the information at the local and specialty level.
3. Our AMA urges physician organizations, including state medical associations and national medical specialty societies, to develop and recruit groups of physicians to experiment with diverse ideas for achieving Medicare savings, including the development of organizational structures that maximize participation opportunities for physician practices.
4. Our AMA will continue to advocate for changes in antitrust and other laws that would facilitate shared-savings arrangements, and enable solo and small group practices to make innovations that could enhance care coordination and increase the value of health care delivery.
5. Our AMA supports local innovation and funding of demonstration projects that allow physicians to benefit from increased efficiencies based on practice changes that best fit local needs.
6. Our AMA will work with appropriate public and private officials and advisory bodies to ensure that bundled payments, if implemented, do not lead to hospital-controlled payments to physicians. [CMS 6, A-09 Reaffirmation A-10 Reaffirmation I-13 CMS Rep. 5, I-16 Reaffirmation: A-22]

H-390.849 Physician Payment Reform
1. Our American Medical Association will advocate for the development and adoption of physician payment reforms that adhere to the following principles:
a. Promote improved patient access to high-quality, cost-effective care.
b. Be designed with input from the physician community.
c. Ensure that physicians have an appropriate level of decision-making authority over bonus or shared-savings distributions.
d. Not require budget neutrality within Medicare Part B.
e. Be based on payment rates that are sufficient to cover the full cost of sustainable medical practice.
f. Ensure reasonable implementation timeframes, with adequate support available to assist physicians with the implementation process.
g. Make participation options available for varying practice sizes, patient mixes, specialties, and locales.
h. Use adequate risk adjustment methodologies.
i. Incorporate incentives large enough to merit additional investments by physicians.
j. Provide patients with information and incentives to encourage appropriate utilization of medical care, including the use of preventive services and self-management protocols.
k. Provide a mechanism to ensure that budget baselines are reevaluated at regular intervals and are reflective of trends in service utilization.
l. Attribution processes should emphasize voluntary agreements between patients and physicians, minimize the use of algorithms or formulas, provide attribution information to physicians in a timely manner, and include formal mechanisms to allow physicians to verify and correct attribution data as necessary.
m. Include ongoing evaluation processes to monitor the success of the reforms in achieving the goals of improving patient care and increasing the value of health care services.
2. Our AMA opposes bundling of payments in ways that limit medically necessary care, including institutional post-acute care, or otherwise interfere with a physician's ability to provide high quality care to patients.
3. Our AMA supports payment methodologies that redistribute Medicare payments among providers based on outcomes (including functional improvements, if appropriate), quality and risk-adjustment measures only if measures are scientifically valid, reliable, and consistent with national medical specialty society- developed clinical guidelines/standards.
4. Our AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.

5. Our AMA supports the development of a public-private partnership for the purpose of validating statistical models used for risk adjustment. [CMS Rep. 6, A-09 Reaffirmation A-10 Appended: Res. 829, I-10 Appended: CMS Rep. 1, A-11 Appended: CMS Rep. 4, A-11 Reaffirmed in lieu of Res. 119, A-12 Reaffirmed in lieu of Res. 122, A-12 Modified: CMS Rep. 6, A-13 Reaffirmation I-15 Reaffirmation: A-16 Reaffirmed in lieu of: Res. 712, A-17 Reaffirmed: BOT Action in response to referred for decision: Res. 237, I-17 Reaffirmation: A-19 Reaffirmed: BOT Action in response to referred for decision Res. 111, A-19 Reaffirmed: BOT Action in response to referred for decision Res. 132, A-19 Reaffirmed: Res. 212, I-21 Reaffirmed: Res. 240, A-22 Reaffirmation: A-22 Modified: CMS Rep. 04, A-23 Reaffirmed: Res. 214, A-23 Reaffirmation: A-23]

D-385.945 Advocacy and Action for a Sustainable Medical Care System
1. Our American Medical Association will declare Medicare physician payment reform as an urgent advocacy and legislative priority for our AMA.
2. Our AMA will prioritize significant increases in funding for federal and state advocacy budgets specifically allocated to achieve Medicare physician payment reform to ensure that physician payments are updated annually at least equal to the annual percentage increase in the Medicare Economic Index.
3. Our AMA Board of Trustees will report back to the House of Delegates at each annual and interim meeting on the progress of our AMA in achieving Medicare payment reform until predictable, sustainable, fair physician payment is achieved. [Res. 214, A-23]

D-390.922 Physician Payment Reform and Equity
Our American Medical Association will implement a comprehensive advocacy campaign, including a sustained national media strategy engaging patients and physicians in promoting Medicare physician payment reform, to achieve enactment of reforms to the Medicare physician payment system consistent with AMA policy and in accord with the principles (Characteristics of a Rational Medicare Payment System) endorsed by over 120 state and medical specialty Federation of Medicine members. [Res. 240, A-22 Modified: Res. 214, A-23]

D-390.946 Sequestration
a. Our American Medical Association will continue to prioritize and actively pursue vigorous and strategic advocacy to prevent sequester and other cuts in Medicare payments due to take effect on January 1, 2022.
b. Our AMA will seek positive inflation-adjusted annual physician payment updates that keep pace with rising practice costs;
c. Our AMA will ensure Medicare physician payments are sufficient to safeguard beneficiary access to care.
d. Our AMA will work towards the elimination of budget neutrality requirements within Medicare Part B.
e. Our AMA will eliminate, replace, or supplement budget neutrality in MIPS with positive incentive payments.
f. Our AMA will advocate strongly to the current administration and Congress that additional funds must be put into the Medicare physician payment system to address increasing costs of physician practices, and that continued budget neutrality is not an option.
g. Our AMA will advocate for payment policies that allow the Centers for Medicare & Medicaid Services to retroactively adjust overestimates of volume of services. [Res. 212, I-21 Reaffirmed: Res. 240, A-22 Reaffirmed: CMS Rep. 02, A-23 Reaffirmed: Res. 214, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 106
(A-25)

Introduced by: Illinois

Subject: Advocating for All Payer Coverage for Custom Breast Prostheses for Patients with History of Mastectomy Secondary to Breast Cancer Treatment

Referred to: Reference Committee A

Whereas, treatment of breast cancer commonly includes a combination of surgery, chemotherapy, radiation therapy, and/or hormone therapy; and

Whereas, more than 100,000 women in the United States undergo some form of mastectomy to surgically treat breast cancer per year[1]; and

Whereas, patients who undergo mastectomy are often provided the option of breast reconstruction; and

Whereas, an estimated 25-50% of patients opt for breast reconstruction[2,3,4]; and

Whereas, patients who do not undergo breast reconstruction typically opt for a breast prosthesis; and

Whereas, women who use breast prostheses report that prostheses can increase confidence, enhance body image and self-esteem, and provide a sense of normalcy[5]; and

Whereas, the three main types of breast prostheses are leisure prostheses, silicone prostheses, and custom prostheses; and

Whereas, a leisure breast prosthesis is typically made of foam, fiberfill, polyester fiberfill, or beaded materials encased in a cloth shell; designed to slip into a pocketed mastectomy bra; and are lighter in weight which can be helpful for patients when exercising; and

Whereas, a silicone breast prosthesis is heavier, designed to wear inside a pocketed mastectomy bra, but are typically uncomfortable to wear in hot weather; and

Whereas, pocketed mastectomy bras are an added expense that patients must account for when purchasing leisure and silicone breast prostheses; and

Whereas, a custom breast prosthesis is worn directly on the chest wall and allows for a precise fit[6]; and

Whereas, benefits of custom breast prostheses include appropriate weight distribution; alleviation of stress and friction against sensitive areas of the chest wall; and a precise match of skin tone, breast shape, and areola size and color[7]; and

Whereas, alleviation of stress and friction along with a precise fit against the chest wall can be especially helpful, as patients may have scarring secondary to mastectomy or radiation therapy; and

Whereas, patients who wear custom breast prostheses also have less sweating and perceived dislodgement[8]; and

Whereas, patients report that, compared to conventional prostheses, custom prostheses were more satisfying, comfortable, easy to wear, and coupled with a sense of feeling less like a victim[9]; and

Whereas, medicare and some insurance companies do not cover custom breast prostheses[10,11,12]; and

Whereas, the wholesale cost of a breast prosthesis is $1,500[13], and the retail cost of a custom breast prosthesis can be as high $5,000[14] and

Whereas, custom breast prostheses evidently provide a better fit, comfort, and appearance; therefore be it

RESOLVED, that our American Medical Association work with all relevant medical specialty societies, third party payers, including CMS, and other national stakeholders as deemed appropriate to require third party payers to include reimbursement for custom breast prosthesis for patients who have had mastectomy secondary to breast cancer treatment. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

Symptomatic and Supportive Care for Patients with Cancer H-55.999
Our AMA recognizes the need to ensure the highest standards of symptomatic, rehabilitative, and supportive care for patients with both cured and advanced cancer. The Association supports clinical research in evaluation of rehabilitative and palliative care procedures for the cancer patient, this to include such areas as pain control, relief of nausea and vomiting, management of complications of surgery, radiation and chemotherapy, appropriate hemotherapy, nutritional support, emotional support, rehabilitation, and the hospice concept. Our AMA actively encourages the implementation of continuing education of the practicing American physician regarding the most effective methodology for meeting the symptomatic, rehabilitative, supportive, and other human needs of the cancer patient.
CSA Rep. H, I-78; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Reaffirmed: Sub. Res. 514, I-00; Modified: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20

Breast Reconstruction H-55.973
Our AMA: (1) believes that reconstruction of the breast for post-treatment rehabilitation of patients with in situ or invasive breast neoplasm should be considered reconstructive surgery rather than aesthetic surgery; (2) supports education for physicians and breast cancer patients on breast reconstruction and its availability; (3) recommends that third party payers provide coverage and reimbursement for medically necessary breast cancer treatments including but not limited to prophylactic contralateral mastectomy and/or salpingo-oophorectomy; and (4) recognizes the validity of contralateral breast procedures needed for the achievement of symmetry in size and shape, and urges recognition of these ancillary procedures by Medicare and all other third parties for reimbursement when documentation of medical necessity is provided.
CCB/CLRPD Rep. 3, A-14; Modified: Res. 912, I-18

Quality Cancer Care Preservation Act H-330.897
Our AMA continues to support existing policy principles in evaluating legislative language on matters relating to Medicare reimbursement for physician acquisition and administration of prescription drugs.
BOT Action in response to referred for decision Res. 129, A-03; Reaffirmed: BOT Rep. 28, A-13; Reaffirmation A-15

Adequacy of Health Insurance Coverage Options H-165.846
1. Our AMA supports the following principles to guide in the evaluation of the adequacy of health insurance coverage options:
A. Any insurance pool or similar structure designed to enable access to age-appropriate health insurance coverage must include a wide variety of coverage options from which to choose.
B. Existing federal guidelines regarding types of health insurance coverage (e.g., Title 26 of the US Tax Code and Federal Employees Health Benefits Program [FEHBP] regulations) should be used as a reference when considering if a given plan would provide meaningful coverage.
C. Provisions must be made to assist individuals with low-incomes or unusually high medical costs in obtaining health insurance coverage and meeting cost-sharing obligations.
D. Mechanisms must be in place to educate patients and assist them in making informed choices, including ensuring transparency among all health plans regarding covered services, cost-sharing obligations, out-of-pocket limits and lifetime benefit caps, and excluded services.
2. Our AMA advocates that the Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) program be used as the model for any essential health benefits package for children.
3. Our AMA: (a) opposes the removal of categories from the essential health benefits (EHB) package and their associated protections against annual and lifetime limits, and out-of-pocket expenses; and (b) opposes waivers of EHB requirements that lead to the elimination of EHB categories and their associated protections against annual and lifetime limits, and out-of-pocket expenses.
CMS Rep. 7, A-07; Reaffirmation I-07; Reaffirmation A-09; Reaffirmed: Res. 103, A-09; Reaffirmation I-09; Reaffirmed: CMS Rep. 3, I-09; Reaffirmed: CMS Rep. 2, A-11; Appended: CMS Rep. 2, A-11;

Reaffirmed in lieu of Res. 109, A-12; Reaffirmed: CMS Rep. 1, I-12; Reaffirmed: CMS Rep. 3, A-13; Reaffirmed in lieu of Res. 812, I-13; Reaffirmed: CMS Rep. 6, I-14; Reaffirmed: CMS Rep. 6, I-15; Appended: CMS Rep. 04, I-17; Reaffirmed in lieu of: Res. 101, A-19

Insurance Coverage for Compression Stockings H-330.876
Our AMA supports Medicare payment for gradient compression stockings as prescribed by a physician under Medicare benefits coverage.
Res. 126, A-17

Third Party Responsibility for Payment H-185.981
Our AMA (1) will develop, with the assistance of the Blue Cross and Blue Shield Association, the Group Health Association of America, the Health Insurance Association of America, and other relevant health care organizations, guidelines for a standardized system of verifying eligibility for health benefits; (2) will assume a leadership role with these organizations in the development of guidelines for a standardized system of verifying eligibility for health benefits; and (3) following the development of such guidelines, will work with major insurers and managed care plans to promote the development of a standardized, national health benefits verification system based on the guidelines, which would include an obligation on the part of the insurer or managed care plan to pay physicians for any services rendered to patients whose eligibility for benefits have been verified erroneously.
Sub. Res. 721, A-92; Reaffirmed: Sub. Res. 828, A-99; Reaffirmation A-00; Reaffirmed: CMS Rep. 6, A-10; Reaffirmed: Sub. Res. 813, I-13

Reference Pricing H-185.935
Our AMA supports the appropriate use of reference pricing as a possible method of providing health insurance coverage of specific procedures, products or services, consistent with the following principles:
1. Practicing physicians must be actively involved in the identification of services that are appropriate for a reference pricing system.
2. Appropriate reference pricing strategies may be considered for elective services or procedures for which there is evidence of a significant variation in cost that does not correspond
to a variation in quality of care. Additional considerations include the relative complexity of the service, the potential for variation either across patients or during the course of a treatment, and the sufficient availability of providers in a geographic region.
3. Reference prices should be set at a level that reflects current market conditions and ensures that patients have access to a choice of providers. Prices should be reviewed annually and adjusted as necessary based on changes in market conditions.
4. Hospitals or facilities delivering services subject to reference pricing should avoid cost-shifting from one set of services to another.
5. Information about the services subject to reference pricing and the potential patient cost-sharing obligations must be fully transparent and easily accessible to patients and providers, both prior to and at the point of care. Educational materials should be made available to help patients and physicians understand the incentives and disincentives inherent in the reference pricing arrangement.
6. Insurance companies must notify patients of all services subject to reference pricing at the time of health plan enrollment. Patients must be indemnified against any additional charges associated with changes to reference pricing policies for the balance of the contract period.
7. Insurers that use reference pricing must develop and maintain systems that allow patients to effectively and appropriately compare prices among providers, including systems that help patients calculate their estimated costs for each provider prior to seeking care.
8. Plan sponsors should continually monitor and evaluate the effect of reference pricing policies on access to high quality patient care, and ensure that procedures are in place to make plan modifications as necessary.
CMS Rep. 3, I-14

Value-Based Insurance Design H-185.939
Our AMA supports flexibility in the design and implementation of value-based insurance design (VBID) programs, consistent with the following principles:
a. Value reflects the clinical benefit gained relative to the money spent. VBID explicitly considers the clinical benefit of a given service or treatment when determining cost-sharing structures or other benefit design elements.
b. Practicing physicians must be actively involved in the development of VBID programs. VBID program design related to specific medical/surgical conditions must involve appropriate specialists.
c. High-quality, evidence-based data must be used to support the development of any targeted benefit design. Treatments or services for which there is insufficient or inconclusive evidence about their clinical value should not be included in any targeted benefit design elements of a health plan.
d. The methodology and criteria used to determine high- or low-value services or treatments must be transparent and easily accessible to physicians and patients.
e. Coverage and cost-sharing policies must be transparent and easily accessible to physicians and patients. Educational materials should be made available to help patients and physicians understand the incentives and disincentives built into the plan design.
f. VBID should not restrict access to patient care. Designs can use incentives and disincentives to target specific services or treatments, but should not otherwise limit patient care choices.
g. Physicians retain the ultimate responsibility for directing the care of their patients. Plan designs that include higher cost-sharing or other disincentives to obtaining services designated as low-value must include an appeals process to enable patients to secure care recommended by their physicians, without incurring cost-sharing penalties.
h. Plan sponsors should ensure adequate resource capabilities to ensure effective implementation and ongoing evaluation of the plan designs they choose. Procedures must be in place to ensure VBID coverage rules are updated in accordance with evolving evidence.
i. VBID programs must be consistent with AMA Pay for Performance Principles and Guidelines (Policy H-450.947), and AMA policy on physician economic profiling and tiered, narrow or restricted networks (Policies H-450.941 and D-285.972).
CMS Rep. 2, A-13; Reaffirmed in lieu of Res. 122, A-15; Reaffirmed in lieu of: Res. 121, A-16; Reaffirmed: CMS Rep. 05, I-16; Reaffirmation I-16; Reaffirmed: Joint CMS/CSAPH Rep. 01, I-17; Reaffirmed: CMS Rep. 07, A-18; Reaffirmed: Joint CMS CSAPH Rep. 01, I-18; Reaffirmed: CMS Rep. 06, A-19

Oppose Local Coverage Determination for Lower Limb Prostheses H-330.882
Our AMA (1) opposes local coverage determinations on lower limb prostheses that undermine physician judgment and compromise patient access; and (2) will request that the Centers for Medicare and Medicaid Services expeditiously host a national meeting open to all interested parties to focus on appropriate standards for lower limb prostheses that optimize care for patients. Sub. Res. 818, I-15

Survivorship Care Plans H-55.969
Our American Medical Association supports the voluntary use of survivorship care plans for cancer survivors when deemed appropriate by a patient's treating physician and supports reimbursement for physician preparation of survivorship care plans for patients. Res. 108, A-15; Reaffirmation: A-18

Breast Implants H-525.984
Our AMA: (1) supports that individuals be fully informed about the risks and benefits associated with breast implants and that once fully informed the patient should have the right to choose; and (2) based on current scientific knowledge, supports the continued practice of breast augmentation or reconstruction with implants when indicated.
CSA Rep. M, I-91; Modified: Sunset Report, I-01; Reaffirmed: Res. 727, I-02; Modified: CSAPH Rep. 1, A-12; Modified: CSAPH Rep. 1, A-22

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 107
(A-25)

Introduced by: Illinois

Subject: Advocating for All Payer Coverage of Reconstructive and Cosmetic Surgical Care Related to Cleft Lip and Palate

Referred to: Reference Committee A

Whereas, Children with cleft lip and palate (CLP) typically require extensive, multidisciplinary care, often utilizing more medical services for longer periods compared to unaffected children[1]; and

Whereas, There is no national standard governing the scope of these benefits, so each state determines the extent of coverage [1]; and

Whereas, In Illinois, individual or group policies of accident and health insurance covers for medically necessary care and treatment of CLP for individuals under the age of 19 [2]; and

Whereas, Many patients with CLP have osseous and dental abnormalities; and

Whereas, Facial abnormalities from CLP can significantly affect social development and psychosocial well-being during adolescence; and

Whereas Patients experience increased anxiety and depression; appearance-related distress; social and functional challenges such as public speaking, being photographed, or participating in school activities; and adverse effects on their peer relationships [3-11]; and

Whereas, Approximately 66% of adults with CLP are concerned about their oral and nasal appearance even after having initial reconstructive surgeries completed which impacts overall psychosocial well-being, leading to decreased self-esteem and impaired social interactions [3-11]; and

Whereas, Certain reparative procedures, such as orthognathic surgery, can only be performed after skeletal maturity and require associated orthodontic treatments, including the use of fixed appliances to align and level the teeth, establish proper occlusion, and prepare the dental arches for surgery[12-16]; and

Whereas, Patients are often only eligible for these procedures in late adolescence or early adulthood; and

Whereas, For example, to address maxillary hypoplasia, patients require orthognathic surgery to advance the maxilla and remedy malocclusion, providing patients with vast medical benefits including improved occlusion and function, enhanced airway function, and speech improvement [17-25]; and

Whereas, After the completion of orthognathic surgeries, revision rhinoplasty is typically the final stage of cleft care, especially for patients with unilateral cleft, to improve nasal structure, function, and aesthetics[26-28]; and

Whereas, These concerns may persist well beyond the age of 18 and warrant continued surgical care and coverage into adulthood [29-31]; and

Whereas, CLP reconstruction procedures (i.e., orthodontic work, orthognathic surgery, revision rhinoplasty, scar revision) address functional and aesthetic concerns which persist into adulthood, as facial growth and development continues to affect the outcomes of previous surgeries [26-28, 31, 32]; and

Whereas, Prior studies demonstrate that comprehensive, long-term treatment for CLP reduces overall healthcare costs by preventing further complications and improves long-term quality of life [33,34]; therefore, be it

RESOLVED, that our American Medical Association work with all relevant medical specialty societies, third party payers, including the Centers for Medicare and Medicaid Services and other national entities as deemed appropriate to require third party payers to include reimbursement for reconstructive medical services for the treatment of cleft lip and palate. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

Definitions of "Cosmetic" and "Reconstructive" Surgery H-475.992
(1) Our AMA supports the following definitions of "cosmetic" and "reconstructive" surgery: Cosmetic surgery is performed to reshape normal structures of the body in order to improve the patient's appearance and self-esteem. Reconstructive surgery is performed on abnormal structures of the body, caused by congenital defects, developmental abnormalities, trauma, infection, tumors or disease. It is generally performed to improve function, but may also be done to approximate a normal appearance. (2) Our AMA encourages third party payers to use these definitions in determining services eligible for coverage under the plans they offer or administer. CMS Rep. F, A-89; Reaffirmed: Sunset Report, A-00; Reaffirmed, A-03; Reaffirmed: CMS Rep. 4, A-13

Coverage of Children's Deformities, Disfigurement and Congenital Defects H-185.967
(1)Our American Medical Association declares: (a) that treatment of a minor child's congenital or developmental deformity or disorder due to trauma or malignant disease should be covered by all insurers; (b) that such coverage shall include treatment which, in the opinion of the treating physician, is medically necessary to return the patient to a more normal appearance (even if the procedure does not materially affect the function of the body part being treated); and (c) that such insurability should be portable, i.e., not denied as a pre-existing condition if the patient's insurance coverage changes before treatment has been either initiated or completed. (2) Our AMA will advocate for appropriate funding for comprehensive dental coverage (including dental implants) for children with orofacial clefting. Sub. Res. 119, I-97Reaffirmed, A-03Reaffirmation A-05Reaffirmation A-08Appended: Res. 109, A-13Reaffirmed: CMS Rep. 01, A-23

Insurance Coverage for Adults with Childhood Diseases H-185.963
Our AMA: (1) urges public and private third party payers to increase access to health insurance products for adults with congenital and/or childhood diseases that are designed for the unique needs of this population; and (2) emphasizes that any health insurance product designed for adults with congenital and/or childhood diseases include the availability of specialized treatment options, medical services, medical equipment and pharmaceuticals, as well as the accessibility of an adequate number of physicians specializing in the care of this unique population CMS Rep. 2, I-99Modified and Reaffirmed: CMS Rep. 5, A-09Reaffirmed: CMS Rep. 01, A-19

Evaluating Health System Reform Proposals H-165.888
1. Our AMA will continue its efforts to ensure that health system reform proposals adhere to the following principles: (A) Physicians maintain primary ethical responsibility to advocate for their patients' interests and needs.(B) Unfair concentration of market power of payers is detrimental to patients and physicians, if patient freedom of choice or physician ability to select mode of practice is limited or denied. Single-payer systems clearly fall within such a definition and, consequently, should continue to be opposed by the AMA. Reform proposals should balance fairly the market power between payers and physicians or be opposed.(C) All health system reform proposals should include a valid estimate of implementation cost, based on all health care expenditures to be included in the reform; and supports the concept that all health system reform proposals should identify specifically what means of funding (including employer-mandated funding, general taxation, payroll or value-added taxation) will be used to pay for the reform proposal and what the impact will be. (D) All physicians participating in managed care plans and medical delivery systems must be able without threat of punitive action to comment on and present their positions on the plan's policies and procedures for medical review, quality assurance, grievance procedures, credentialing criteria, and other financial and administrative matters, including physician representation on the governing board and key committees of the plan. (E) Any national legislation for health system reform should include sufficient and continuing financial support for inner-city and rural hospitals, community health centers, clinics, special programs for special populations and other essential public health facilities that serve underserved populations that otherwise lack the financial means to pay for their health care. (F) Health system reform proposals and ultimate legislation should result in adequate resources to enable medical schools and residency

programs to produce an adequate supply and appropriate generalist/specialist mix of physicians to deliver patient care in a reformed health care system. (G) All civilian federal government employees, including Congress and the Administration, should be covered by any health care delivery system passed by Congress and signed by the President. (H) True health reform is impossible without true tort reform. 2. Our AMA supports health care reform that meets the needs of all Americans including people with injuries, congenital or acquired disabilities, and chronic conditions, and as such values function and its improvement as key outcomes to be specifically included in national health care reform legislation. 3. Our AMA supports health care reform that meets the needs of all Americans including people with mental illness and substance use / addiction disorders and will advocate for the inclusion of full parity for the treatment of mental illness and substance use / addiction disorders in all national health care reform legislation. 4. Our AMA supports health system reform alternatives that are consistent with AMA principles of pluralism, freedom of choice, freedom of practice, and universal access for patients. AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 108
(A-25)

Introduced by: Indiana

Subject: Firearm Storage Diagnosis and Counseling Reimbursement

Referred to: Reference Committee A

Whereas, firearm-related injuries remain a leading cause of accidental death in children aged 0-17, are the leading cause of death in children aged 1-19, and are the most common cause of completed suicide. These death rates disproportionately affect people of color and are also true for Indiana where firearms were responsible for 1,211 deaths and 61% of completed suicides in 2022; and

Whereas, firearm storage counseling is widely agreed to be a critical intervention for firearm harm reduction and is recommended by multiple specialty organizations, including our American Medical Association; and

Whereas, several disorders and behaviors are recognized as warranting specific screening, diagnosis, and intervention, such as substance use disorders and tobacco use. These have specific diagnostic codes (such as F10.1 for Alcohol Abuse Disorder and Z72.0 for Tobacco Use) which help clarify illness severity for documentation, communicate risk factors between providers, allow for billing of pertinent services provided, and facilitate statistical health care data collection; and

Whereas, no ICD-10 diagnostic code currently exists for unsafe firearm storage. Counseling on unsafe firearm storage can only be documented using code Z71.89 for “Other Specific Counseling,” which includes “guns in the home counseling” but also encompasses over 100 other forms of counseling from Accutane and circumcisions to asthma and routine vaccination; and

Whereas, Current Procedural Terminology (CPT) codes exist for the reimbursement of specific interventions addressing diseases and social determinants of health such as alcohol abuse screening and counseling (CPT codes 99408-99409) and tobacco cessation counseling (CPT codes 99406-99407) including requirements on the type and duration of intervention specific to their diagnoses; and

Whereas, no CPT code currently exists specific to firearm storage counseling. CPT codes 99401-99404 cover “preventive medicine counseling” and can be used but have no requirements specific to firearm storage counseling and mandate a minimum of 8 minutes of counseling which is inappropriate for most firearm counseling; and

Whereas, improving the management of unsafe firearm storage requires enabling its appropriate diagnosis by providers and incentivizing counselling interventions; therefore be it

RESOLVED, that our American Medical Association advocate for the creation of an ICD-10 code specifically designating counseling for firearm storage and a new Current Procedural Terminology coding, which specifically encompasses the provision of Firearm Storage

Counseling, its minimum requirements for qualification, and its reimbursement. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 109
(A-25)

Introduced by: Indiana

Subject: Medicare Advantage Plans Double Standard

Referred to: Reference Committee A

Whereas, according to Medicare Advantage and Part D Final Rule (CMS-4201-F), Medicare states that only “coverage criteria based on current evidence in widely used treatment guidelines or clinical literature” may be used to determine insurance company payment to hospitals for the care they provide; and

Whereas, Medicare Advantage plans treat hospitals with a Medicare Advantage plan contract differently than hospitals without a contract; and

Whereas, Medicare Advantage plan denials on hospitals without a Medicare Advantage contract go through five different levels of appeal which include neutral Medicare auditors; and

Whereas, Medicare Advantage plan denials for hospitals contracted with a Medicare Advantage plan are processed by Medicare Advantage plan employees or their subcontractors with limited external oversight; and

Whereas, some of these denials by Medicare Advantage plan employees no longer follow sound scientific principles or the standard of care; and

Whereas, Medicare Advantage plans profit by these unsupervised denials at the expense of hospitals and physicians; and

Whereas, hospitals serving in medically underserved areas including rural hospitals are often forced to choose between terminating contracts with Medicare Advantage plans that are abusing the denials process or leaving their patients with costly out-of-network coverage; therefore be it

RESOLVED, that our American Medical Association seek legislation to require all payors, including Medicare Advantage plans, to use uniform payment denial appeals processes, which includes external review, for all appeals regardless of whether the physician or provider is contracted with the payor. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/16/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 110
(A-25)

Introduced by: Louisiana

Subject: Study of the Federal Employee Health Benefit Plan (FEHBP)

Referred to: Reference Committee A

Whereas, the Federal Employee Health Benefit Plan (FEHBP) offers an expanded array of health insurance options for its beneficiaries; and

Whereas, FEHBP beneficiaries have the annual opportunity to switch plans if dissatisfied with the previous choice; and

Whereas, the FEHBP provides employees with the same premium support no matter which plan they choose; therefore be it

RESOLVED, that our American Medical Association conduct a thorough study of the FEHBP to understand the successes and failures, strengths and weaknesses of the program (Directive to Take Action); and be it further

RESOLVED, that our AMA determines how the FEHBP compares with AMA policy H-165.881 to see whether it might be an appropriate model to achieve private and public health system reform, with a report back to the I-25 Meeting of our House of Delegates. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/17/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 111
(A-25)

Introduced by: Mississippi

Subject: New Reimbursement System Needed for Rural Hospital Survival

Referred to: Reference Committee A

Whereas, rural patients require hospitalization by their physicians and deserve to be treated close to their communities; and

Whereas, the current hospital reimbursement system is adversarial to rural hospitals and communities and negatively impacting their access to healthcare, specifically acute hospitalization; and

Whereas, Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs), which are located in underserved and rural areas, qualify for specific reimbursement systems under Medicare and Medicaid; and

Whereas, current efforts to support rural hospitals, such as Critical Care status and Rural Emergency Hospital designation require the closing of acute hospital beds, which results in rural residents having to receive basic acute care long distances from their homes; and

Whereas, rural hospitals, which often operate very efficiently and provide high quality care, need to be reimbursed differently than the current system does to survive; and

Whereas, a reimbursement system for rural hospitals which provides global reimbursement in the manner established for RHCs and FQHCs could be a successful model for the provision of acute hospitalization in rural areas; therefore be it

RESOLVED, that our American Medical Association study the issue and report back the best options for achieving a new reimbursement system for rural hospital survival in our country. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/21/2025

RELEVANT AMA POLICY

Rural Hospital Payment Models D-190.969
1. Our American Medical Association supports and encourages efforts to develop and implement proposals for improving payment models to rural hospitals.
2. Our AMA will report back no later than the 2026 Annual Meeting on data analysis and appropriate recommendations for improved rural hospital payments based on innovative payment models such as the Pennsylvania Rural Health Model (PARHM).
CMS Rep. 6, I-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 112
(A-25)

Introduced by: New York

Subject: Continuation of Affordable Connectivity Program

Referred to: Reference Committee A

Whereas, funding for the Affordable Connectivity Program (ACP), which offered a monthly discount on broadband internet services, ended on June 1, 2024 for; and

Whereas, there are healthcare disparities and an inability of some patients to afford internet access; and

Whereas, the COVID-19 health pandemic heightened awareness and dramatically increased the need for use of telehealth; and

Whereas, “Telehealth offers patients and providers significant benefits as a lower cost, easier way to access quality care”; and

Whereas, Telehealth has been shown in surveys to benefit both physicians and patients and physicians would be able to maintain continuity of care to those patients who are unable to make in-person visits; and

Whereas, Telehealth would benefit patients as it would increase patient access to a greater number of physicians particularly for the homebound, increase choice of patients for their physicians and has been shown to increase patient satisfaction; and

Whereas, “The rise of telehealth during pandemic boosted mental health treatment rates” in a society where “90% of US adults say the U.S. is experiencing a mental health crisis”; and

Whereas, “An American Medical Association (AMA) survey released shows physicians have enthusiastically embraced telehealth and expect to use it even more in the future and “Nearly 85% of physician respondents indicated they are currently using telehealth to care for patients, and nearly 70% report their organization is motivated to continue using telehealth in their practice”; therefore be it.

RESOLVED, that our American Medical Association advocate for continuing the Affordable Connectivity Program to enable all patients to have access to telehealth and to decrease healthcare disparities. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/22/2025

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 113
(A-25)

Introduced by: Ohio

Subject: Improving Patient Access to Pharmacies and Medications in Pharmacy Deserts

Referred to: Reference Committee A

Whereas, multiple pharmacies closed in Ohio in 2024, leaving many small towns without pharmacy services and creating pharmacy deserts; and

Whereas, over 15.8 million people in the U.S. live in areas without adequate access to pharmacies; and

Whereas, pharmacy closures have been associated with reduced patient adherence to cardiovascular medications among older U.S. adults; and

Whereas, multiple factors contribute to pharmacy closures; and

Whereas, pharmacy reimbursement rates for Medicare and Medicaid prescriptions have lagged behind private insurance payments, disproportionately affecting pharmacies in rural and low -income urban areas, especially independent pharmacies; and

Whereas, independent pharmacies are more likely to close than chain pharmacies; and

Whereas, pharmacy closures are more prevalent in rural and low -income urban areas, exacerbating pharmacy deserts; and

Whereas, some insurance companies designate preferred pharmacies that often exclude independent pharmacies; and

Whereas, over 20 states have adopted rules permitting telepharmacy, helping to alleviate pharmacy deserts; therefore be it

RESOLVED, that our American Medical Association support efforts to expand telepharmacy as a potential solution to pharmacy deserts (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for equitable reimbursement rates for pharmaceuticals between Medicare, Medicaid, and private insurers to ensure sustainable pharmacy operations in rural and underserved areas (Directive to Take Action); and be it further

RESOLVED, that our AMA study and address the impact of preferred pharmacy networks on patient access to pharmacy services, particularly in pharmacy deserts, with attention to supporting independent pharmacies. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 114
(A-25)

Introduced by: Private Practice Physicians Section

Subject: An Assessment of Physician Support for Value-Based Payment Models and its Impact on Healthcare to Inform AMA Advocacy Efforts—A Survey

Referred to: Reference Committee A

Whereas, value-based payment (VBP)'s impact on care: The Center for Medicare and Medicaid Innovation's VBP models have not only failed to improve quality but have likely led to a decline in the quality of care patients receive[1-6]; and

Whereas, VBP's impact on access: VBP programs such as the Hospital Readmission Reduction Program and the Merit-based Incentive Payment System risk increasing health disparities because they have been shown to disproportionately penalize safety-net hospitals and physicians caring for greater numbers of vulnerable patients[7-9]; and

Whereas, VBP's impact on physicians: Although there may have been response bias, a survey piloted through the New York County Medical Society in 2023 found most physicians thought VBP models would harm patients (78 percent). Few physicians were supporters of VBP (28 percent). It was particularly concerning that 94 percent of physicians believed VBP models would add to physician burnout. Responses to survey questions were remarkably similar for both employed and private practitioners; and

Whereas, VBP's impact on cost: A Congressional Budget Office review of The Center for Medicare and Medicaid Innovation's programs, created to reign in cost, not only resulted in a more than five billion dollar increase in cost but are projected to increase costs over the next ten years[10]; and

Whereas, the Center for Medicare and Medicaid Innovation plans to have all Medicare beneficiaries care for by physicians who are accountable for cost and quality of care by 2030; and

Whereas, county and state medical societies and the American Medical Association have been steadily losing members, likely due in part to physicians' lack of faith that these organizations endeavor to understand their needs, value their opinions, and advocate effectively for their interests and the quality of patient care; therefore be it

RESOLVED, that our American Medical Association conducts a physician survey of adequate size and scope to ascertain the impact of value-based payment models on a wide spectrum of both employed and independent physician practices, exploring its specific effects on the quality of care physicians provide (i.e., help or harm quality), patient access to care (i.e., limit Medicare patients), physician professionalism (i.e., honoring patient preferences, managing conflict of interest), and adequacy of the physician workforce (i.e., availability of primary care, burnout, early retirement) to provide legislators a better understanding and inform future AMA advocacy efforts. (Directive to Take Action)

Fiscal Note: $594,118 – Contract to survey physicians and staffing.

RELEVANT AMA POLICY

Advocacy of Private Practice Options for Healthcare Operations in Large Corporations D-160.909

1. Our American Medical Association will inform corporate efforts about the value of private practices to successfully participate in new “value-based” models.
2. Our AMA will identify and work with a corporate entity that is advancing these models to explore a two year pilot among independent private practices in which our AMA will:
    a. convene physician practices in a community.
    b. provide educational resources and technical assistance to practices to support their participation with the corporate entity.
    c. formally evaluate the pilot for outcomes.
3. Our AMA will advocate with commercial payers and health plans and federal and state payers and policymakers to support private practice through policies and models that provide adequate payment, infrastructure and data to succeed in “value-based” models.
   Citation: BOT Rep. 14, A-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 115
(A-25)

Introduced by:	Society for Cardiovascular Angiography and Interventions, American Association of Clinical Urologists, American College of Cardiology, American Vein & Lymphatic Society, American Venous Forum, Outpatient Endovascular and Interventional Society
Subject:	Supporting Legislative Efforts to Remove Certain High-Cost Supplies and Equipment from the Medicare Physician Fee Schedule
Referred to:	Reference Committee A

Whereas, Medicare Physician Fee Schedule (MPFS) reimbursement cuts have become so severe for certain non-facility services that, in 2025, 300 non-facility services are paid at rates less than the direct costs associated with those procedures, according to data from the Centers for Medicare and Medicaid Services (CMS)[1]; and

Whereas, the number of non-facility services reimbursed at less than direct costs grew 50% since 2024[2]; and

Whereas, because these data do not account for other costs, including indirect costs and physician work, the number of services under the MPFS for which reimbursement does not even cover cost likely is much higher than 300 services; and

Whereas, non-facility services are increasingly unsustainable under the MPFS, which is a catalyst for (1) private practice closure[3], (2) site-of-service reimbursement disparities[4], (3) higher Medicare spending and beneficiary coinsurance as services migrate to high-cost sites of service[5], (4) reduced rural access to important specialty care services[6]; and

Whereas, non-facility services are critical to the MPFS (1) as a lowest cost option to Medicare beneficiaries[7], (2) for rural access where ambulatory surgical centers are not typically present[8], and (3) as an option during pandemics so hospitals can focus on the most vulnerable patients; and

Whereas, the migration of non-facility care to higher cost settings results in higher Medicare spending, higher Medicare beneficiary coinsurance, and reduced access to care[9]; and

Whereas, in many states, certificate of need laws and cost considerations are a barrier to ambulatory surgical centers, thus making hospitals the only site-of-service option outside of a non-facility setting[10]; and

Whereas, office-based services under the MPFS for which reimbursement does not cover cost predominantly utilize high-cost supplies and equipment; and

Whereas, the decades-long migration of high-cost supplies and equipment from the Hospital Outpatient Prospective Payment System to the PFS has not been accompanied by corresponding funding allocations and has contributed to the dilution of the MPFS; and

Whereas, in 2010, CMS removed high-cost Part B drugs from the PFS in 2010 due to similar concerns relating to the impact on the MPFS[11]; and

Whereas, the AMA RUC has recommended for many years that CMS separately identify and pay for high-cost disposable supplies priced more than $500, but, since 2011, CMS has consistently stated its inability to adopt such recommendations[12]; and

Whereas, CMS also has noted its concern with very expensive equipment items[13]; and

Whereas, removing certain high-cost supplies priced more than $500 as well as certain high-cost equipment from the PFS would (1) help to address the ongoing closures of non-facility centers, (2) bolster resources available for the PFS, and (3) meaningfully address site-of-service reimbursement differences; therefore be it

RESOLVED, that our American Medical Association support legislative proposals to reform the Medicare Physician Fee Schedule by removing and separately paying for certain services containing high-cost supplies priced more than $500 as well as certain services containing high-cost equipment from the Medicare Physician Fee Schedule. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

H-400.957 Medicare Reimbursement of Office-Based Procedures
Our AMA will: (1) encourage CMS to expand the extent and amount of reimbursement for procedures performed in the physician's office, to shift more procedures from the hospital to the office setting, which is more cost effective; (2) seek to have the RBRVS practice expense RVUs reflect the true cost of performing office procedures; and (3) work with CMS to develop consistent regulations to be followed by carriers that include reimbursement for the costs of disposable supplies and surgical tray fees incurred with office-based procedures and surgery. (Sub. Res. 103, I-93 Reaffirmed by Rules & Credentials Cmt., A-96 Reaffirmation A-04 Reaffirmation I-04 Reaffirmed: CMS Rep. 1, A-14 Reaffirmed: CMS Rep. 3, A-14)

H-330.925 Appropriate Payment Level Differences by Place and Type of Service
Our AMA (1) encourages CMS to adopt policy and establish mechanisms to fairly reimburse physicians for office-based procedures; (2) encourages CMS to adopt a site neutral payment policy for hospital outpatient departments and ambulatory surgical centers; (3) advocates for the use of valid and reliable data in the development of any payment methodology for the provision of ambulatory services; (4) advocates that in place of the Consumer Price Index for all Urban Consumers (CPI-U), CMS use the hospital market basket index to annually update ambulatory surgical center payment rates; (5) encourages the use of CPT codes across all sites-of-service as the only acceptable approach to payment methodology; and (6) will join other interested organizations and lobby for any needed changes in existing and proposed regulations affecting payment for ambulatory surgical centers to assure a fair rate of reimbursement for ambulatory surgery. [Sub. Res. 104, A-98Reaffirmation I-98Appended: CMS Rep. 7, A-99Reaffirmation A-00Reaffirmation I-03Reaffirmation A-11Reaffirmed: CMS Rep. 3, A-13Reaffirmed: Sub. Res. 104, A-14Reaffirmed: Res. 116, A-14Modified: CMS Rep. 3, A-14Reaffirmation A-14 Reaffirmation A-15Reaffirmation: I-17]

D-330.902 The Site-of-Service Differential
1. Our American Medical Association supports Medicare payment policies for outpatient services that are site-neutral without lowering total Medicare payments.

2. Our AMA supports Medicare payments for the same service routinely and safely provided in multiple outpatient settings (eg, physician offices, HOPDs, and ASCs) that are based on sufficient and accurate data regarding the actual costs of providing the service in each setting.

3. Our AMA will urge CMS to update the data used to calculate the practice expense component of the Medicare physician fee schedule by administering a physician practice survey (similar to the Physician Practice Information Survey administered in 2007-2008) every five years, and that this survey collect data to ensure that all physician practice costs are captured.

4. Our AMA encourages CMS to both:
a. Base disproportionate share hospital payments and uncompensated care payments to hospitals on actual uncompensated care data.
b. Study the costs to independent physician practices of providing uncompensated care.

5. Our AMA will collect data and conduct research both:
a. to document the role that physicians have played in reducing Medicare spending.
b. to facilitate adjustments to the portion of the Medicare budget allocated to physician services that more accurately reflects practice costs and changes in health care delivery.

6. Our AMA will produce a graphic report illustrating the fiscal losses and inequities that practices without facility fees have endured for decades as a result of the site of service differential factoring in inflation.

7. Our AMA will consider disseminating the resulting educational materials and graphics.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 116
(A-25)

Introduced by: Senior Physicians Section

Subject: Medicare Coverage of Registered Dietitian (RD) and Certified Nutrition Support Specialist (CNSS) Visits Beyond Type 2 Diabetes and Renal Disease

Referred to: Reference Committee A

Whereas, Medicare coverage for dietary counseling is currently restricted to individuals with type 2 diabetes and renal disease under existing regulations[1]; and

Whereas, Medicare lack of coverage for dietary consult visits, including those for obesity, pancreatic insufficiency, hyperlipidemia, irritable bowel syndrome (IBS), small intestinal bacterial overgrowth (SIBO), gout, and allergies places a financial strain on both patients and their physicians; and

Whereas, the American Medical Association should advocate for patients to access personalized, evidence-based advice that complement medical treatments improving health outcomes and potentially reducing the need for more costly interventions in the future[2,3]; and

Whereas, it is essential that a licensed registered dietitian (RD) or certified nutrition support specialist (CNSS) provides dietary counseling, as many individuals with minimal or no training wrongly identify themselves as nutritionists; therefore be it

RESOLVED, that our American Medical Association support legislation for Medicare coverage for registered dietitian (RD) or certified nutrition support specialist (CNSS) visits referred by physicians for conditions such as obesity, pancreatic insufficiency, hyperlipidemia, irritable bowel syndrome (IBS), small intestinal bacterial overgrowth (SIBO), gout, and allergies, recognizing that other significant chronic conditions can also benefit from tailored dietary interventions (Directive to Take Action); and be it further

RESOLVED, that our AMA specify that payment for registered dietician or certified nutrition support specialist services should be made separately from Medicare physician services (i.e. outside the Medicare physician fee schedule) to avoid having a negative impact on the conversion factor that would impact payment for all physician services. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

H-440.859 American's Health

1. Our American Medical Association will make improving health through increased activity and proper diet a priority.
2. Our AMA will propose legislation calling on the federal government and state governments to develop new and innovative programs in partnership with the private sector that encourage personal responsibility for proper dietary habits and physical activity of individual Americans.
3. Our AMA will continue to work in conjunction with the American College of Sports Medicine, American Heart Association, US Department of Health and Human Services and any other concerned organizations to provide educational materials that encourage a healthier America through increased physical activity and improved dietary habits.

[Res. 201, A-09; Reaffirmation A-12; Reaffirmed: BOT Rep. 9, A-22]

H-440.866 The Clinical Utility of Measuring Body Mass Index, Body Composition, Adiposity, and Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity

1. Our American Medical Association supports greater emphasis in physician educational programs on the risk differences within and between demographic groups at varying levels of adiposity, BMI, body composition, and waist circumference and the importance of monitoring these in all individuals.
2. Our AMA supports additional research on the efficacy of screening for overweight and obesity, using different indicators, in improving various clinical outcomes across populations, including morbidity, mortality, mental health, and prevention of further weight gain.
3. Our AMA supports more research on the efficacy of screening and interventions by physicians to promote healthy lifestyle behaviors, including healthy diets and regular physical activity, in all of their patients to improve health and minimize disease risks.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 117
(A-25)

Introduced by: Mississippi

Subject: Liberalized Remorse Period for Medicare Advantage Plan Insureds

Referred to: Reference Committee A

Whereas, healthcare is a vital component of wellbeing; and

Whereas, the healthcare system is increasingly complicated, expensive, and difficult for the average adult to navigate in their favor; and

Whereas, health insurance is, for most Americans currently, necessary to access standard of care treatment and prevention for acute and chronic diseases; and

Whereas, health insurance costs and coverage options vary greatly, even within the same company; and

Whereas, currently, patients are allowed to leave their Medicare Advantage plan from January through March of each year; and

Whereas, patients covered by Medicare Advantage plans often experience “buyer’s remorse” after March of each year due to unanticipated health crises that increase or change the healthcare resources they need and, thusly, cause Traditional Medicare to be a better option for their needs; and

Whereas, the harm caused by these changes and lack of access to unanticipated needs are not simply remedied; therefore be it

RESOLVED, that our American Medical Association advocate for the Centers for Medicare Services to expand the period that Medicare Advantage (MA) plan insureds can leave their MA plan and obtain coverage by traditional Medicare part B and D plans from the current policy of January through March to any month for any reason with plan changes becoming effective on the first day of the next month (Directive to Take Action); and be it further

RESOLVED, that our AMA prepare a “tool-kit” for both patients and physicians to help patients make an informed choice regarding their Medicare coverage options. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/21/2025

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 118
(A-25)

Introduced by: Women Physicians Section

Subject: Improving Access to Peripartum Pelvic Floor Physical Therapy

Referred to: Reference Committee A

Whereas, pelvic floor disorders during and after childbirth have significant lifelong consequences for women, including pelvic organ prolapse, urinary incontinence, bowel dysfunction, and pelvic-perineal pain syndrome, and is common among adult women[1–5]; and

Whereas, pelvic floor injuries occur in roughly 1 in 5 primiparous women, and prevalence is projected to increase 46% by 2050 due to an aging pregnant population and increasing rates of comorbidities during delivery[3,4,6,7]; and

Whereas, pelvic floor physical therapy is recommended in the peripartum period as a first-line treatment for pelvic floor dysfunction, yet more than 300,000 women – 10% of all women who give birth vaginally each year – have surgery to correct pelvic floor disorders annually[3,8]; and

Whereas, many pelvic floor injuries after childbirth go underdiagnosed and under-repaired, with lack of insurance coverage, and time constraints reported as the most significant barriers to care[3,5,9]; and

Whereas, while Federally Qualified Health Centers (FQHCs) provide care to one-third of all low-income women of reproductive age (who are at higher risk for pelvic floor disorders), only 5% of FQHCs have access to pelvic floor physical therapy and have identified cost to patient, insurance status, and wait times as barriers to care[10,11]; and

Whereas, pelvic floor physical therapist providers are increasingly operating out-of-network or through cash- based services due to low reimbursement rates, non-coverage by insurance, and discrepancies in what insurance companies deem “medically necessary”[12]; and

Whereas, multiple bills have previously been introduced to the United States Congress supporting Medicaid and the Children’s Health Insurance Program (CHIP) coverage for postpartum pelvic health services, including pelvic floor physical therapy[13,14]; therefore be it

RESOLVED, that our American Medical Association advocates for all relevant payers to cover timely access to comprehensive pelvic floor physical therapy during the antepartum and postpartum period in all health care facilities (Directive to Take Action); and be it further

RESOLVED, that our AMA supports efforts to improve education for clinicians and patients on the risk factors of pelvic floor dysfunction during childbirth and the benefits and indications of pelvic floor physical therapy. (New HOD Policy)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

Extending Medicaid Coverage for One Year Postpartum D-290.974
Our AMA will work with relevant stakeholders to: (1) support and advocate, at the state and federal levels, for extension of Medicaid and Children's Health Insurance Program (CHIP) coverage to at least 12 months after the end of pregnancy; and (2) expand Medicaid and CHIP eligibility for pregnant and postpartum non-citizen immigrants.
[Res. 221, A-19; Modified: Joint CMS/CSAPH Rep. 1, I-21; Modified: Res. 701, I-21]

Reducing Inequities and Improving Access to Insurance for Maternal Health Care H-185.917
1. Our American Medical Association acknowledges that structural racism and bias negatively impact the ability to provide optimal health care, including maternity care, for people of color.
2. Our AMA encourages physicians to raise awareness among colleagues, residents and fellows, staff, and hospital administrators about the prevalence of racial and ethnic inequities and the effect on health outcomes, work to eliminate these inequities, and promote an environment of trust.

3. Our AMA encourages physicians to pursue educational opportunities focused on embedding equitable, patient-centered care for patients who are pregnant and/or within 12 months postpartum into their clinical practices and encourages physician leaders of health care teams to support similar appropriate professional education for all members of their teams.
4. Our AMA will continue to monitor and promote ongoing research regarding the impacts of societal (e.g., racism or unaffordable health insurance), geographical, facility-level (e.g., hospital quality), clinician-level (e.g., implicit bias), and patient-level (e.g., comorbidities, chronic stress or lack of transportation) barriers to optimal care that contribute to adverse and disparate maternal health outcomes, as well as research testing the effectiveness of interventions to address each of these barriers.
5. Our AMA will promote the adoption of federal standards for clinician collection of patient-identified race and ethnicity information in clinical and administrative data to better identify inequities. The federal data collection standards should be:

Informed by research (including real-world testing of technical standards and standardized definitions of race and ethnicity terms to ensure that the data collected accurately reflect diverse populations and highlight, rather than obscure, critical distinctions that may exist within broad racial or ethnic categories),
Carefully crafted in conjunction with clinician and patient input to protect patient privacy and provide non-discrimination protections.
Lead to the dissemination of best practices to guide respectful and non-coercive collection of accurate, standardized data relevant to maternal health outcomes.

6. Our AMA supports the development of a standardized definition of maternal mortality and the allocation of resources to states and Tribes to collect and analyze maternal mortality data (i.e., Maternal Mortality Review Committees and vital statistics) to enable stakeholders to better understand the underlying causes of maternal deaths and to inform evidence-based policies to improve maternal health outcomes and promote health equity.
7. Our AMA encourages hospitals, health systems, and state medical associations and national medical specialty societies to collaborate with non-clinical community organizations with close ties to minoritized and other at-risk populations to identify opportunities to best support pregnant persons and new families.
8. Our AMA encourages the development and funding of resources and outreach initiatives to help pregnant individuals, their families, their communities, and their workplaces to recognize the value of comprehensive prepregnancy, prenatal, peripartum, and postpartum care. These resources and initiatives should encourage patients to pursue both physical and behavioral health care, strive to reduce barriers to pursuing care, and highlight care that is available at little or no cost to the patient.
9. Our AMA supports adequate payment from all payers for the full spectrum of evidence-based prepregnancy, prenatal, peripartum, and postpartum physical and behavioral health care.
10. Our AMA encourages hospitals, health systems, and states to participate in maternal safety and quality improvement initiatives such as the Alliance for Innovation on Maternal Health program and state perinatal quality collaboratives.
11. Our AMA will advocate for increased access to risk-appropriate care by encouraging hospitals, health systems, and states to adopt verified, evidence-based levels of maternal care.
[Joint CMS/CSAPH Rep. 1, I-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 119
(A-25)

Introduced by: Women Physicians Section

Subject: Cancer Survivorship Program Coverage

Referred to: Reference Committee A

Whereas, per the National Cancer Institute and American Cancer Society, an individual is considered a cancer survivor from the time of diagnosis through life regardless of their stage of treatment or remission status[1,14]; and

Whereas, cancer survivors have the ethical right to continued follow-up with basic standards of care that address their specific needs[10]; and

Whereas, cancer survivors are at an elevated risk for both recurrence of their previous cancer as well as development of new primary cancers[12]; and

Whereas, cancer survivors experience a combination of physical and psychosocial symptoms, related to their cancer survivorship status that necessitate specialized care[5]; and

Whereas, survivorship care is a complex, multidisciplinary process requiring coordination among multiple providers[13]; and

Whereas, per the National Cancer Institute, the status of current survivorship care is suboptimal, leaving survivors with persistent symptoms and unmet needs while perpetuating healthcare disparities[14]; and

Whereas, among surveys and interviews conducted by the American Society of Clinical Oncology Cancer Survivorship Committee concerning insurance coverage, more than half of respondents reported denials for symptom management and supportive care services, with fertility services, indicated dental services, and mental health services being denied “always” or “most of the time” in 23.1%, 22.5%, and 12.8% of cases, respectively[4]; and

Whereas, facilities reported coverage denials for numerous survivorship related screenings and treatments for breast cancer survivors (63.46%), for Hodgkin lymphoma survivors (49.04%), and for maintenance therapies (41.74%)[4]; and

Whereas, recent studies suggest that established breast cancer survivorship care interventions that improve patient-provider communication are especially promising[6]; and

Whereas, care of the gynecologic cancer survivor extends beyond cancer treatment to encompass multisystem health; management of fertility, contraception, and vasomotor symptoms; and genetic counseling[8]; and

Whereas, as of 2022, over 50% of cancer survivors between 18-65 years old experience financial hardship, have higher annual out-of-pocket medical expenses (more than double than

those without cancer), and over 50% carry some medical debt from cancer related treatment[2]; and

Whereas, reductions in disparities after implementation of the Affordable Care Act were present, in terms of sociodemographic factors in noninsurance and care unaffordability among cancer survivors under age 65 with largest decreases in women, those with low or medium income, multiple comorbid conditions, the unemployed, and those residing in Medicaid expansion states, disparities still remain in coverage, including the uptick of 82,750 uninsured survivors in 2017 in mainly non-expansion states[9,11]; and

Whereas, cancer survivors were more likely than those without cancer history to report delays in care, forgone medical care, and experience inability to afford medications and medical care[15]; and

Whereas, cancer survivorship care standards recommend that health systems serve survivors by providing resources related to financial hardship and insurance coverage as well as cancer treatment sequelae[13]; and

Whereas, although, 74% of identified NIH grants are focused on cancer survivors from underrepresented populations, there is a clear lack of grants focused on cancer survivors from Pacific Islander populations as well as sexual and gender minorities[13]; and

Whereas, there are currently no established billing codes categorized specifically for survivorship care[3]; and

Whereas, the Comprehensive Cancer Survivorship Act, introduced in 2023, would establish programs and requirements to support services for cancer survivors, including Medicare coverage for cancer care planning and coordination services, employment assistance, and Medicaid and CHIP coverage of fertility services[7]; therefore be it

RESOLVED, that our American Medical Association recognizes cancer survivorship as a critical component of comprehensive cancer care and supports insurance coverage for prevention and early detection of new primary cancers and recurrences, as well as for supportive care services aimed at managing the long-term consequences and sequelae of cancer and its treatment (New HOD Policy); and be it further

RESOLVED, that our AMA advocates for work with key stakeholders to achieve adequate coverage for cancer survivorship care. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

Survivorship Care Plans H-55.969

Our American Medical Association supports the voluntary use of survivorship care plans for cancer survivors when deemed appropriate by a patient's treating physician and supports reimbursement for physician preparation of survivorship care plans for patients.
[Res. 108, A-15 Reaffirmation: A-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 120
(A-25)

Introduced by: Association for Clinical Oncology, American College of Rheumatology

Subject: Medigap, Pre-Existing Conditions, and Medicare Coverage Education

Referred to: Reference Committee A

Whereas, patients may be attracted to Medicare Advantage (MA) plans because of the low premiums and other benefits; and

Whereas, many of these patients may be unaware that many MA plans may deny coverage for specialty drugs or cover specialty drugs with a coinsurance (a percentage of the drug cost) instead of copays (a fixed amount); and

Whereas, the median coinsurance for specialty drugs is 25% for Medicare Part D (linked to Medicare Fee-for-Service (FFS)) enrollees and is 30% for MA enrollees, which can lead to higher out-of-pocket costs for the same drug for MA enrollees; and

Whereas, patients who wish to switch back to Medicare FFS find that they frequently cannot purchase a Medicare Supplement Insurance (Medigap) plan that covers their pre-existing condition(s) because these plans are allowed to deny coverage or adjust premiums based on pre-existing conditions if not purchased within a limited timeframe from first eligibility for Medicare or do not afterwards fall within limited exceptions that allow for guaranteed issue; and

Whereas, the Patient Protection and Affordable Care Act (ACA) prohibited other plans from denying patients coverage because of pre-existing conditions; therefore be it

RESOLVED, that our American Medical Association compile information to supply to practices and patients about Medicare Supplement Insurance (Medigap) plans' policies regarding noncoverage for pre-existing health conditions if these plans are not purchased at specific times (Directive to Take Action); and be it further

RESOLVED, that our AMA create an educational campaign on both Medicare Advantage (MA) and Medicare Fee-for-Service (FFS) coverage (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for the elimination of Medigap insurers' ability to deny coverage due to a patient's pre-existing health conditions and work with Congress and the Centers for Medicare & Medicaid Services (CMS) to ensure coverage in MA is, at a minimum, no less than coverage provided under Medicare FFS. (Directive to Take Action).

Fiscal Note: Moderate – between $5,000 - $10,000

RELEVANT AMA POLICY

Medigap Patient Protections H-330.866

1. Our American Medical Association supports annual open enrollment periods and guaranteed lifetime enrollment eligibility for Medigap plans.
2. Our AMA will extend advocacy efforts to ensure federal “guaranteed issue” protections are enacted, allowing beneficiaries the freedom to switch from Medicare Advantage to Traditional Medicare plans without facing prohibitive barriers.
3. Our AMA will advocate for extending modified community rating regulations to Medigap supplemental insurance plans, similar to those enacted under the Affordable Care Act for commercial insurance plans.
4. Our AMA supports efforts to expand access to Medigap plans to all individuals who qualify for Medicare benefits.
5. Our AMA supports efforts to improve the affordability of Medigap supplemental insurance for lower income Medicare beneficiaries.

Ensuring Marketplace Competition and Health Plan Choice H-165.825

Our AMA will: (1) support health plans offering coverage options for individuals and small groups competing on a level playing field, including providing coverage for pre-existing conditions and essential health benefits; (2) oppose the sale of health insurance plans in the individual and small group markets that do not guarantee: (a) pre-existing condition protections and (b) coverage of essential health benefits and their associated protections against annual and lifetime limits, and out-of-pocket expenses, except in the limited circumstance of short-term limited duration insurance offered for no more than three months; and (3) support requiring the largest two Federal Employees Health Benefits Program (FEHBP) insurers in counties that lack a marketplace plan to offer at least one silver-level marketplace plan as a condition of FEHBP participation.

Health Insurance Market Regulation H-165.856

Our American Medical Association supports the following principles for health insurance market regulation:

1. There should be greater national uniformity of market regulation across health insurance markets, regardless of type of sub-market (e.g., large group, small group, individual), geographic location, or type of health plan.
2. State variation in market regulation is permissible so long as states demonstrate that departures from national regulations would not drive up the number of uninsured, and so long as variations do not unduly hamper the development of multi-state group purchasing alliances, or create adverse selection.
3. Risk-related subsidies such as subsidies for high-risk pools, reinsurance, and risk adjustment should be financed through general tax revenues rather than through strict community rating or premium surcharges.
4. Strict community rating should be replaced with modified community rating, risk bands, or risk corridors. Although some degree of age rating is acceptable, an individual's genetic information should not be used to determine his or her premium.
5. Insured individuals should be protected by guaranteed renewability.
6. Guaranteed renewability regulations and multi-year contracts may include provisions allowing insurers to single out individuals for rate changes or other incentives related to changes in controllable lifestyle choices.
7. Guaranteed issue regulations should be rescinded.
8. Health insurance coverage of pre-existing conditions with guaranteed issue within the context of an individual mandate, in addition to guaranteed renewability.

9. Insured individuals wishing to switch plans should be subject to a lesser degree of risk rating and pre-existing conditions limitations than individuals who are newly seeking coverage.
10. The regulatory environment should enable rather than impede private market innovation in product development and purchasing arrangements. Specifically:
    a. legislative and regulatory barriers to the formation and operation of group purchasing alliances should, in general, be removed;
    b. benefit mandates should be minimized to allow markets to determine benefit packages and permit a wide choice of coverage options; and
    c. any legislative and regulatory barriers to the development of multi-year insurance contracts should be identified and removed.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 09-A-25

Subject:	Council on Legislation Sunset Review of 2015 House Policies
Presented by:	Michael Suk, MD, JD, MPH, MBA, Chair
Referred to:	Reference Committee B

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. Policy G-600.010 reads as follows, laying out the parameters for review and specifying the procedures to follow:

1. As the House of Delegates (HOD) adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after 10 years unless action is taken by the HOD to retain it. Any action of our AMA HOD that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the HOD identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification; or (f) The Speakers shall determine the best way for the HOD to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the HOD should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA HOD Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

© 2025 American Medical Association. All rights reserved.

RECOMMENDATION

The Board of Trustees recommends that the House of Delegates policies that are listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

APPENDIX – Recommended Actions

Policy Number	Title	Text	Recommendation
D-105.995	Protecting Social Media Users by Updating FDA Guidelines	Our AMA will lobby the Food and Drug Administration to: (1) update regulations to ensure closer regulation of paid endorsements of drugs or medical devices by individuals on social media; and (2) develop guidelines to ensure that compensated parties on social media websites provide information that includes the risks and benefits of specific drugs or medical devices and off-use prescribing in every related social media communication in a manner consistent with advertisement guidelines on traditional media forms.	Retain – this policy remains relevant.
D-130.976	Implications of the November 2003 Emergency Medical Treatment and Labor Act (EMTALA) Final Rule	Our AMA will: (1) ask the EMTALA Technical Advisory Group (TAG) and the Centers for Medicare and Medicaid Services (CMS) for assistance in ameliorating the differential economic and staffing burdens on certain categories of facilities, including but not limited to academic health centers, trauma centers, critical access hospitals, and safety net hospitals, which are likely to receive high volumes of patients as a result of the EMTALA regulations; (2) work with the EMTALA TAG and CMS to ensure that physicians staffing emergency departments and on-call emergency services be appropriately compensated for providing EMTALA mandated services; (3) with input from all interested Federation members, coordinate an effort to educate the membership about emergency department coverage issues and the efforts to resolve them; (4) seek to require all insurers, both public and private, to pay promptly and fairly all claims for services mandated by	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		EMTALA for all plans they offer, or face fines and penalties comparable to those imposed on providers; and (5) seek to have CMS require all states participating in Medicaid, as a condition of continued participation, establish and adequately fund state Emergency Medical Services funds which physicians providing EMTALA-mandated services may bill, and from which those physicians shall receive prompt and fair compensation.	
D-165.961	Physician Taxes	Our AMA will (1) proactively and vigorously oppose taxes on physician services, physician-owned facility taxes or "pass-through" taxes on medical services; and (2) work closely with national specialty societies and state medical societies to assist with advocacy efforts to combat existing and proposed taxes on physician services and physician-owned facilities.	Retain – this policy remains relevant.
D-165.989	Managed Care Organization Reimbursement Formulas	Our AMA will continue to assist states medical associations in their efforts to enact meaningful legislation that protects patients and patient access through network adequacy provisions.	Retain – this policy remains relevant.
D-180.998	Insurance Parity for Mental Health and Psychiatry	Our AMA in conjunction with the American Psychiatric Association and other interested organizations will develop model state legislation for the use of state medical associations and specialty societies to promote legislative changes assuring parity for the coverage of mental illness, alcoholism, and substance abuse.	Sunset this policy. The AMA worked with the American Psychiatric Association and other organizations to develop and promote model state legislation that has been successfully enacted in multiple states and provisions have been introduced in at least four states in the 2025 state legislative sessions.
D-185.999	Information Included On Health Insurance Identification Cards	Our AMA will continue to work with payers, the federal and state governments, and standards organizations to adopt and implement appropriate policies, technologies (e.g., smart cards, telephone hot lines, electronic data interchange, and website access), and national technology standards to provide physicians with	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		accurate and real time verification of patient eligibility, co-payment due, deductible payable information, and claims processing.	
D-260.993	Opposition to Laboratory Reporting Provisions of H.R. 4302	Our American Medical Association will work with federation members and other major stakeholders, including the clinical laboratory and hospital associations, to identify and pursue viable congressional and regulatory strategies to eliminate or substantially reduce the reporting burden associated with Medicare rate setting for laboratory fee schedule services and procedures while supporting access to clinical laboratory services among the spectrum of providers of these services.	Retain – this policy remains relevant.
D-265.990	Strategic Lawsuits Against Public Participation (SLAPP)	Our AMA will make available, but not as a matter of advocacy priority, model anti-SLAPP legislation protecting physicians? First Amendment rights in the context of proceedings relating to quality of health care.	Retain – this policy remains relevant.
D-270.995	Physician Ownership and Referral for Imaging Services	Our AMA will work collaboratively with state medical societies and specialty societies to actively oppose any and all federal and state legislative and regulatory efforts to repeal the in-office ancillary exception to physician self-referral laws, including as they apply to imaging services.	Retain – this policy remains relevant.
D-275.955	MOC Provisions of Interstate Medical Licensure Compact	Our American Medical Association will, in collaboration with the Federation of State Medical Boards and interested state medical boards, request a clarifying statement from the Interstate Medical Licensure Compact Commission that the intent of the language in the model legislation requiring that a physician "holds" specialty certification refers only to initial specialty certification recognized by the American Board of Medical Specialties or the American Osteopathic Association's (AOA's) Bureau of Osteopathic Specialists and that there is no requirement for participation in ABMS's Maintenance of Certification or AOA's Osteopathic Continuous Certification (OCC) program in order to receive initial or continued	Sunset this policy. This directive has been accomplished. In 2015, the AMA requested a clarifying statement from the Interstate Medical Licensure Compact Commission (IMLCC) as specified in this directive. In a response letter, the IMLCC clarified that a physician must hold specialty certification at the time of their application to the Compact but is not required to participate in MOC or OCC. The letter stated that

Policy Number	Title	Text	Recommendation
		licensure under the Interstate Medical Licensure Compact.	the Compact does not have any language requiring that physicians participate in MOC or OCC and has no requirement for continued certification beyond the initial authorization of licensure.
D-285.963	Out of Network Coverage Denials for Physician Prescriptions and Ordered Services	Our American Medical Association will pursue regulation or legislation to prohibit any insurer from writing individual or group policies which deny or unreasonably delay coverage of medically necessary prescription drugs or services based on network distinctions of the licensed health care provider ordering the drug or service.	Retain – this policy remains relevant.
D-305.955	Funding for Teaching Health Center Graduate Medical Education Program	Our American Medical Association will encourage Congress to reauthorize the Teaching Health Center Graduate Medical Educational Program to its full and ongoing funding needs to continue the training of primary providers in community based health centers in underserved areas to assure a continuing supply of primary providers and dentists for the underserved populations.	Retain – this policy remains relevant.
D-315.977	Indemnity for Breaches in Electronic Health Record Cybersecurity	Our AMA will advocate for indemnity or other liability protections for physicians whose electronic health record data and other electronic medical systems become the victim of security compromises.	Retain – this policy remains relevant.
D-315.978	Protecting Consumers' Personal Data	Our AMA supports legislation that prohibits the inappropriate sharing of health and other personal information obtained from health insurance marketplaces.	Retain – this policy remains relevant.
D-330.907	Protect Medicare Beneficiary Access to Complex Rehabilitation Wheelchairs	Our AMA strongly encourages the Centers for Medicare and Medicaid Services (CMS) to refrain from implementing policies on January 1, 2016 that would curtail access to complex rehabilitation technology (CRT) wheelchairs and accessories by applying competitively bid prices to these specialized devices. In the event that CMS does not refrain from implementing policies limiting access to	Sunset this policy. This policy has been accomplished. The 2022 Inpatient Rehabilitation Facility final rule permanently exempted (across all settings) complex rehabilitation technology wheelchairs and accessories from

Policy Number	Title	Text	Recommendation
		CRT wheelchairs, our AMA will encourage Congress to support legislation (e.g. H.R. 3229) that would provide a technical correction to federal law to clarify that CMS cannot apply Medicare competitive bidding pricing to CRT wheelchairs.	Medicare's competitive bidding program.
D-330.908	Improving the Local Coverage Determination Process	1. Our AMA will advocate through legislative and/or regulatory efforts as follows: A. When Medicare Administrative Contractors (MACs) propose new or revised Local Coverage Determinations (LCDs) said Contractors must: (1) Ensure that Carrier Advisory Committee meeting minutes are recorded and posted to the Contractor's website; and (2) Disclose the rationale for the LCD, including the evidence upon which it is based when releasing an approved LCD; B. That the Centers for Medicare and Medicaid Services adopt a new LCD reconsideration process that allows for an independent review of a MAC's payment policies by a third-party, with appropriate medical and specialty expertise, empowered to make recommendations to the Secretary of Health and Human Services that said policies should be withdrawn or revised; and C. That MACs shall be prohibited from adopting another MAC's LCD without first undertaking a full and independent review of the underlying science and necessity of such LCD in their jurisdiction. 2. Our AMA will work with interested state medical and national specialty societies to develop model legislation or regulations requiring commercial insurance companies, state Medicaid agencies, or third party payers to: A. Publish all edits that are to be used in their claims processing in a manner that is freely accessible and downloadable to physicians; and B. Participate in a transparent process that allows for review, challenge, and deletion of unfair edits.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
D-330.944	Admission Criteria for Inpatient Rehabilitation Services	Our AMA will seek a legislative change to the admission criteria for Inpatient Rehabilitation Facilities to diagnosis-specific, functional-level and limitations of the individual patient as opposed to diagnosis-specific criteria alone.	Sunset this policy. The intent of this policy has been realized through regulatory updates to the 2017 Inpatient Rehabilitation Facilities (IRF) Reference Booklet, which outlines both diagnosis-specific and functional-level assessments in determining IRF admissions.
D-330.948	Medicare Demonstration Projects	Our AMA will: (1) encourage CMS to continue to seek input at the earliest possible occurrence from medical associations in the development of Medicare demonstration projects that are intended to contain costs and/or improve the appropriateness or quality of patient care; (2) encourage CMS to continue to vary the types of physician practices (e.g., by size, geographic location) that it utilizes in its Medicare demonstration projects; (3) encourage CMS to limit requirements that may make participation in Medicare demonstration projects financially and/or administratively impracticable for a wide range of physician practices; and (4) join state and specialty societies early on to assist with developing Medicare demonstration projects to protect the interests of patients and physicians.	Retain – this policy remains relevant.
D-35.982	AMA Support for States in Their Development of Legislation to Support Physician-Led, Team Based Care	1. Our AMA will continue to assist states in opposing legislation that would allow for the independent practice of certified registered nurse practitioners. 2. Our AMA will assist state medical societies and specialty organizations that seek to enact legislation that would define the valued role of mid-level and other health care professionals within a physician-led team based model structured to efficiently deliver optimal quality patient care and to assure patient safety.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		3. Our AMA will actively oppose health care teams that are not physician-led.	
D-383.980	Health Care Entity Consolidation	Our AMA will (1) study the potential effects of monopolistic activity by health care entities that may have a majority of market share in a region on the patient-doctor relationship; and (2) develop an action plan for legislative and regulatory advocacy to achieve more vigorous application of antitrust laws to protect physician practices which are confronted with potentially monopolistic activity by health care entities.	Retain – this policy remains relevant.
D-385.974	Freedom of Practice in Medical Imaging	Our AMA will: (1) encourage and support collaborative specialty development and review of any appropriateness criteria, practice guidelines, technical standards, and accreditation programs, particularly as Congress, federal agencies and third party payers consider their use as a condition of payment, and to use the AMA Code of Ethics as the guiding code of ethics in the development of such policy; (2) actively oppose efforts by private payers, hospitals, Congress, state legislatures, and the Administration to impose policies designed to control utilization and costs of medical services unless those policies can be proven to achieve cost savings and improve quality while not curtailing appropriate growth and without compromising patient access or quality of care; (3) actively oppose efforts to require patients to receive imaging services at imaging centers that are mandated to require specific medical specialty supervision and support patients receiving imaging services at facilities where appropriately trained medical specialists can perform and interpret imaging services regardless of medical specialty; and	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		(4) actively oppose any attempts by federal and state legislators, regulatory bodies, hospitals, private and government payers, and others to restrict reimbursement for imaging procedures based on physician specialty, and continue to support the reimbursement of imaging procedures being performed and interpreted by physicians based on the proper indications for the procedure and the qualifications and training of the imaging specialists in that specific imaging technique regardless of their medical specialty.	
D-390.952	96-Hour Rule for Critical Access Hospitals	1. Our American Medical Association will support and lobby for passage of legislation that would provide relief to Critical Access Hospitals from the "96-hour rule." 2. Our AMA will join with other affected stakeholders to enhance efforts for passage of legislation that would provide relief to Critical Access Hospitals from the "96-hour rule."	Retain – this policy remains relevant.
D-390.979	Economic Impact of Shifts in Site of Service	Our AMA will strongly advocate that, should the Sustainable Growth Rate formula continue to be used, the Centers for Medicare and Medicaid Services increase the SGR target to take into account procedures that are newly priced in the office setting, and continue to analyze the shift in site of service of these procedures to determine if the SGR target adjustments are accurate.	Sunset this policy. This policy is outdated. The SGR formula was permanently repealed in 2015 with the passage of the Medicare Access and CHIP Reauthorization Act.
D-40.990	Support for the Veterans to Paramedics Transition Act of 2015	Our AMA supports legislation to enable veterans who desire to serve as paramedics to obtain training to satisfy emergency medical services personnel certification requirements, taking into account previous medical coursework and training received when such veterans were members of the armed forces.	Sunset this policy. The Veterans to Paramedics Transition Act of 2015 has not been reintroduced since 2015.
D-410.995	Fairness in Medical Imaging Interpretation	1. Our AMA will continue to work with specialty societies and CMS to ensure that fair Medicare accreditation standards for advanced imaging services are adopted by the selected accrediting organizations.	Retain this policy in part. Delete clauses 2 and 3. The MIPPA accreditation program has been fully implemented and the two-

Policy Number	Title	Text	Recommendation
		~~2. Our AMA will encourage Congress and the Administration to allow the MIPPA-mandated Medicare accreditation program to be fully implemented and evaluated before further changes to Medicare's imaging standards and payments are made.~~ ~~3. Our AMA will monitor the two-year Medicare appropriateness program, scheduled to begin in 2010, and work with specialty societies and the CMS to develop appropriateness (and exceptions) criteria if it decides to move forward with a permanent program.~~ ~~4~~2. Our AMA will continue to work with specialty societies to correct payer and RBM policies that unfairly exclude qualified physicians from providing imaging services.	year Medicare appropriateness program ended over a decade ago.
D-435.969	Liability Related to Referrals from Free Clinics	That our American Medical Association will work with interested medical associations to enact state legislation that provides medical liability immunity, similar to the protections granted under the Federal Tort Claims Act (FTCA), to physicians who provide charity care in hospitals, offices, clinics or other health care settings to patients referred from free clinics.	Retain – this policy remains relevant.
D-435.980	Inclusion of Residents in Medical Liability Reform	Our AMA: (1) officially supports the inclusion of all physicians, including unlicensed residents, in state and federal medical liability caps; (2) will advocate for the inclusion of unlicensed residents in all pending and future federal medical liability reform legislation; and (3) will work with state medical societies to advocate for the inclusion of unlicensed residents in all current, pending, and future state medical liability reform legislation.	Retain – this policy remains relevant.
D-450.964	Medicare Quality and Resource Use Reports	Our AMA will continue to work with the Centers for Medicare & Medicaid Services to improve the design, content, and performance indicators included in the Quality and Resource Use Reports	Sunset this policy. The QRURs and VBM program were discontinued after

Policy Number	Title	Text	Recommendation
		(QRURs) for physicians, so that the reports reflect the quality and cost data associated with these physicians in calculating Value-Based Payment Modifiers (VBM).	December 31, 2018, after the transition to the Merit-based Incentive Payment System.
D-450.967	The PQRI Reporting Standard Should be Amended	Our AMA will petition the Centers for Medicaid and Medicare Services to streamline and make less arduous the reporting standard of the Physicians' Quality Reporting Initiative and ask Congress to delay implementation of the mandatory nature of the program until the system has been refined to be more efficient and physician friendly.	Sunset this policy. The Physicians' Quality Reporting Initiative was discontinued and replaced by the Merit-based Incentive Payment System.
D-95.975	Physician Self-Monitoring of Controlled Substance Prescriptions	Our American Medical Association will work with the National Alliance for Model State Drug Laws (NAMSDL), as well as other appropriate national organizations and stakeholders, to update the NAMSDL's Model Prescription Monitoring Program Act to provide health care professionals the opportunity to review their schedule 2-5 controlled substance prescribing patterns as a means to help monitor appropriate prescribing and detect and identify fraudulent prescriptions dispensed under their respective Drug Enforcement Administration numbers.	Sunset this policy. Every state now has a functional Prescription Drug Monitoring Program, and there are procedures to permit an authorized user the opportunity to review their prescribing history.
H-120.939	Physicians Should be Able to Cancel or Rescind Renewals of Prescriptions After the Prescription has Been Delivered to the Pharmacy	Our AMA will support legislation or regulations that: (i) authorize physicians to cancel or rescind renewals of prescriptions previously written; (ii) mandate pharmacies, including pharmacy benefit plans, to implement easy-to- use procedures to permit physicians to issue orders to cancel or rescind renewals of prescriptions previously written; (iii) prevent such renewals from being filled or mailed to the patient; and (iv) enable the pharmacy or pharmacy benefit plan to readily implement such renewal orders, when directed by the physician, regardless of the state of residence of the patient, the state of practice or licensure of the physicians, and the state of business operation of the pharmacy or the pharmacy benefit plan.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-120.955	Non-Physician Prescribing	1. Our AMA advocates that prescriptive authority include the responsibility to monitor the effects of the medication and to attend to problems associated with-the use of the medication. This responsibility includes the liability for such actions. 2. Our AMA supports the development of methodologically valid research on the relative impact of non-physician prescribing on the quality of health care.	Retain – this policy remains relevant.
H-130.941	Legal Issues Surrounding the Deployment and Utilization of Licensed Physicians in Response to Declared Disasters	Our AMA: (1) encourages physicians who are interested in volunteering during a disaster to register with their state's Emergency System for Advance Registration of Volunteer Health Professionals program, local Medical Reserve Corps unit, or similar registration systems capable of verifying that practitioners are licensed and in good standing at the time of deployment; and (2) (a) supports the National Conference of Commissioners on Uniform State Laws (NCCUSL) Uniform Emergency Volunteer Health Practitioners Act (UEVHPA) with the liability language of Alternative A; and (b) continues to advocate for civil liability protections for qualified physicians that provide care in a disaster who are not covered under the UEVHPA, but are covered in AMA model legislation titled "To Protect Physicians from Civil Liability Arising from Health Care Provided During a Disaster."	Retain – this policy remains relevant.
H-140.861	Physicians' Self-Referral	Business arrangements among physicians in the health care marketplace have the potential to benefit patients by enhancing quality of care and access to health care services. However, these arrangements can also be ethically challenging when they create opportunities for self-referral in which patients' medical interests can be in tension with physicians' financial interests. Such arrangements can undermine a robust commitment to professionalism in medicine as well as	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		trust in the profession. In general, physicians should not refer patients to a health care facility that is outside their office practice and at which they do not directly provide care or services when they have a financial interest in that facility. Physicians who enter into legally permissible contractual relationships--including acquisition of ownership or investment interests in health facilities, products, or equipment; or contracts for service in group practices--are expected to uphold their responsibilities to patients first. When physicians enter into arrangements that provide opportunities for self-referral they must:(1) Ensure that referrals are based on objective, medically relevant criteria. (2) Ensure that the arrangement: (a) is structured to enhance access to appropriate, high quality health care services or products; (b) within the constraints of applicable law: (i) does not require physician-owners/investors to make referrals to the entity or otherwise generate revenues as a condition of participation; (ii) does not prohibit physician-owners/investors from participating in or referring patients to competing facilities or services; and (iii) adheres to fair business practices vis-a-vis the medical professional community--for example, by ensuring that the arrangement does not prohibit investment by nonreferring physicians. (3) Take steps to mitigate conflicts of interest, including:	

Policy Number	Title	Text	Recommendation
		(a) ensuring that financial benefit is not dependent on the physician-owner/investor's volume of referrals for services or sales of products; (b) establishing mechanisms for utilization review to monitor referral practices; and (c) identifying or if possible making alternate arrangements for care of the patient when conflicts cannot be appropriately managed/mitigated. (4) Disclose their financial interest in the facility, product, or equipment to patients; inform them of available alternatives for referral; and assure them that their ongoing care is not conditioned on accepting the recommended referral.	
H-140.874	Opposition to Legislation that Presumes to Prescribe Patients' Preferences for Artificial Hydration and Nutrition	Our AMA opposes legislation that would presume to prescribe the patient's preferences for artificial hydration and nutrition in situations where the patient lacks decision-making capacity and an advance directive or living will.	Retain – this policy remains relevant.
H-180.947	Maintaining Freedom of Choice with Insurance Products	Our AMA opposes consolidation in the health insurance industry that may result in anticompetitive markets.	Retain – this policy remains relevant.
H-185.932	Support for Inclusion of Vasectomy in the ACA Preventive Services and Contraceptive Mandate	Our American Medical Association will work in concert with national specialty and state medical societies to advocate for patient access to the full continuum of evidence-based contraceptive methods and sterilization procedures, including vasectomy and male contraceptive counseling, to promote gender equity in contraceptive services under the ACA.	Retain – this policy remains relevant.
H-190.955	Virtual Credit Card Payments	1. Our American Medical Association will educate its members about the use of virtual credit cards by third party payers, including the costs of accepting virtual credit card payments from third party payers, the beneficiaries of the administrative fees paid by the physician practice inherent in accepting such payments and the lower cost alternative	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		of electronic funds transfer via the Automated Clearing House. 2. Our AMA will advocate for advance disclosure by third-party payers of transaction fees associated with virtual credit cards and any rebates or other incentives awarded to payers for utilizing virtual credit cards. 3. Our AMA supports transparency, fairness, and provider choice in payers' use of virtual credit card payments, including: advanced physician consent to acceptance of this form of payment; disclosure of transaction fees; clear information about how the provider can opt out of this payment method at any time; and prohibition of payer contracts requiring acceptance of virtual credit card payments for network inclusion.	
H-230.969	Strengthening Medical Staff Bylaws	The AMA: (1) will study the feasibility of assisting states in developing legislation to mandate that hospital medical staff bylaws be viewed as contracts; and (2) will study the feasibility of introducing federal legislation to mandate that medical staff bylaws be viewed as a contract.	Retain – this policy remains relevant.
H-275.955	Physician Licensure Legislation	Our AMA reaffirms earlier policy urging licensing jurisdictions to adopt laws and rules facilitating the movement of physicians between states, to move toward uniformity in requirements for the endorsement of licenses to practice medicine, and to base endorsement of medical licenses on an assessment of competence rather than on passing a written examination of cognitive knowledge.	Sunset this policy. This policy has been superseded by Policy H-275.978, as modified.
H-275.965	Health Care Quality Improvement Act of 1986 Amendments	The AMA supports modification of the federal Health Care Quality Improvement Act in order to provide immunity from federal antitrust liability to those medical staffs credentialing and conducting good faith peer review for allied health professionals to the same extent that immunity applies to credentialing of physicians and dentists.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-280.950	Medicare's Three-Day Hospital Stay Requirement	Our AMA will ask the leadership of the American Association of Retired Persons, the Federation, the American Hospital Association, the Federation of American Hospitals, and the American Osteopathic Association to join with the AMA as signatories on a letter requesting that the Centers for Medicare & Medicaid rescind Medicare's three-day hospital stay requirement for access to skilled nursing care.	Sunset this policy. The HOD adopted more recent policy on this topic (i.e., H-280.947 "Three-Day Stay Rule"), and continues to advocate (e.g., sign-on letter) to the Centers for Medicare & Medicaid Services with other organizations.
H-280.977	Direct Admission of Medicare Patients to Skilled Nursing Facilities	Our AMA supports regulatory change and any necessary legislation which would delete the 3-day prior hospitalization requirement for provision of skilled nursing facility benefits under Medicare, so as to allow coverage for direct admission of Medicare patients to a skilled nursing facility whether or not they have been discharged from an acute care hospital within the last 30 days.	Retain – this policy remains relevant.
H-320.946	Radiology Benefits Manager	Our American Medical Association: (1) strongly encourages radiology benefits managers (RBMs) to adhere to uniform physician-developed best practice guidelines; (2) supports the use of appropriate use criteria developed by physicians with relevant expertise working in a collaborative process involving all national medical specialty societies that provide and/or order the imaging service in question; (3) supports an independent study assessing the magnitude of the cost and administrative burden of imaging utilization strategies on ordering physician offices, imaging providers, and patients and the impact these strategies have on patient safety and outcomes; (4) strongly encourages each radiology benefit manager (RBM) to publish and distribute the specific diagnostic codes used by their firm to approve or disapprove specific imaging procedures. This information should be distributed by the RBM via electronic or paper means to each physician who is credentialed to participate on health plans that utilize that particular RBM; and (5) opposes the practice of forced	Retain this policy in part. Clauses 1-5 of this policy remains relevant. The Physician Consortium for Performance Improvement referenced in clause 6 no longer exists, so this clause can be deleted.

Policy Number	Title	Text	Recommendation
		test substitution and arbitrary denial of requested imaging services by RBMs contracted by third-party payers that meet appropriate use criteria, and that RBMs be held accountable for harm caused by substitution or delay of requested studies~~; and (6) encourages the Physician Consortium for Performance Improvement? to continue to develop patient-centered measures, including those that address the appropriate use of imaging~~.	
H-330.897	Quality Cancer Care Preservation Act	Our AMA continues to support existing policy principles in evaluating legislative language on matters relating to Medicare reimbursement for physician acquisition and administration of prescription drugs.	Retain – this policy remains relevant.
H-330.928	Managed Medicare Reimbursement	The AMA advocates that Medicare managed care plans (e.g., Medicare Advantage, etc.) that use the RBRVS do so in a manner that maintains the relativity of the RBRVS utilized in the traditional Medicare program.	Retain – this policy remains relevant.
H-330.939	Reimbursement by Medicare for Psychotherapy Provided by Residents	The AMA will work with CMS to accomplish regulations for Medicare Part B payment for attending physicians' services that would not require the "physical presence" of the attending physician in the room at the same time that a resident provided psychotherapy.	Retain – this policy remains relevant.
H-340.903	Quality Improvement Organization Status	The AMA urges CMS to carefully review the potential for conflict of interest when the same organization that contracts as a Medicare Quality Improvement Organization fulfills similar quality improvement contracts in the private sector.	Retain – this policy remains relevant.
H-340.990	QIO Involvement in Quality Review and Physician Sanctions	The AMA urges modification of CMS's QIO contracts and regulations to provide that: (1) any perceived quality review assessment involving a member of a hospital's organized medical staff be concurrently presented for comment and review by the appropriate committee(s) of the organized medical staff; (2) the organized medical staff have the opportunity to make appropriate	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		recommendations for corrections, when it deems that it is applicable, before the QIO shall act on a quality review matter; (3) the organized medical staff should act and inform the QIO organization in a reasonable period of time concerning what action, if any, was taken in relation to a perceived quality review problem; and (4) the QIO should be prohibited from taking any further action, such as sanctions of a member of the medical staff, before such medical staff involvement, review and reporting has been completed.	
H-370.958	Removing Disincentives and Studying the Use of Incentives to Increase the National Organ Donor Pool	1. Our AMA supports the efforts of the National Living Donor Assistance Center, Health Resources Services Administration, American Society of Transplantation, American Society of Transplant Surgeons, and other relevant organizations in their efforts to eliminate disincentives serving as barriers to living and deceased organ donation. 2. Our AMA supports well-designed studies investigating the use of incentives, including valuable considerations, to increase living and deceased organ donation rates. 3. Our AMA will seek legislation necessary to remove legal barriers to research investigating the use of incentives, including valuable considerations, to increase rates of living and deceased organ donation.	Retain – this policy remains relevant.
H-375.973	Protecting Physicians at the Peer Review Process in the Current Managed Care Environment	Our AMA: (1) will work with the Federation of State Medical Boards to adopt a policy to support state legislative efforts to protect the integrity and effectiveness of the peer review process by prohibiting managed care companies from automatically terminating providers who have been sanctioned by state medical boards or by information being provided by the National Practitioners Data Bank without providing due process to the provider; and (2) espouses as policy the guarantee of due process and civil rights safeguards to physicians in peer review and in credentialing.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-375.990	Peer Review of the Performance of Hospital Medical Staff Physicians	Our American Medical Association encourages peer review of the performance of hospital medical staff physicians, which is objective and supervised by physicians. Membership on peer review committees and hearing panels should be open to all physicians on the medical staff and should not be restricted to those physicians who have an exclusive contract with the hospital, salaried physicians, or those on the faculty.	Retain – this policy remains relevant.
H-385.914	Stark Law and Physician Compensation	Our AMA opposes and continues to advocate against the misuse of the Stark Law and regulations to cap or control physician compensation.	Retain – this policy remains relevant.
H-385.941	Opposition to CMS User Fees	Our AMA strongly: (1) opposes any attempt on the part of the federal or state governments or other entities to impose user fees, provider taxes, access fees, or bed taxes on physicians and other health care providers to subsidize or fund any health care program; (2) opposes any directive from the CMS to slow down the rate of payment of Medicare claims or reduce administrative services to patients, physicians, and other health care providers; and (3) urges Congress to appropriate sufficient funds to enable the CMS and its carriers to carry out their statutorily required functions.	Retain – this policy remains relevant.
H-40.992	Prohibition of Pay Allowances to Military Physicians Serving in Managerial and Administrative Positions	The AMA opposes legislative or regulatory prohibition of the application of various special pay allowances to military physicians serving in executive and managerial positions.	Retain – this policy remains relevant.
H-405.989	Physicians and Surgeons	1. It is AMA policy to refer only to Doctors of Medicine (MDs) and Doctors of Osteopathy (DOs) as “physicians and surgeons.” 2. The AMA supports working to ensure that federal and state regulations and hospital medical staff bylaws comply with this designation.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-435.953	Minor Statute of Repose/Limitations	Our AMA supports federal legislation that would establish a Minor Statute of Repose/Limitations that includes the following language: An action by a minor upon a medical claim shall be commenced within 3 years from the date of the alleged manifestation of injury, except that actions by a minor under the full age of 6 years shall be commenced within 3 years of manifestation of injury or prior to the minor's 8th birthday, whichever provides the longer period. Such time limitation shall be tolled for minors for any period during which a parent or guardian and a health care provider or health care organization have committed fraud or collusion in the failure to bring an action on behalf of the injured minor.	Retain – this policy remains relevant.
H-435.956	Professional Liability Alternative Financing	Our AMA supports legislation that would amend the Internal Revenue Code to allow medical professionals and entities to establish tax-exempt professional liability trusts to pay medical liability claims.	Retain – this policy remains relevant.
H-435.969	Report of the Special Task Force on Professional Liability and the Advisory Panel on Professional Liability	Our AMA: (1) reaffirms its support for investigating promising Alternative Dispute Resolution (ADR) mechanisms, in the context of demonstration projects designed to evaluate whether they resolve medical liability claims fairly and in a more timely and cost-effective manner. (2) The AMA strongly recommends that if cost containment goals are to be achieved, ADR proposals designed to provide greater access to legal process must incorporate effective mechanisms to: (a) identify non-meritorious claims and dispose of them; (b) decrease the proportion of cases being litigated; (c) increase the portion of any settlement payment received by the patient; and (d) identify appropriate guidelines for the payment of damages; and (3) continues to monitor and disseminate information to state and component medical societies about state and federal initiatives that address the issue of protections from liability risks	Retain this policy in part. The reference to MICRA should be deleted. MICRA has been amended since this policy was first adopted and some states have stronger liability protections for physicians.

Policy Number	Title	Text	Recommendation
		for physicians who provide volunteer activities and care of the indigent, as well as the effectiveness of those initiatives. Effective medical liability reform~~, based on the California Medical Injury Compensation Reform Act (MICRA) model,~~ is integral to health system reform.	
H-435.975	~~Bush Administration Professional Liability Proposal~~ Federal Medical Liability Reform Policy	(1) Our AMA ~~commends the Bush Administration for its legislative efforts designated to achieve medical liability reform and~~ supports the elements of medical liability reform legislative proposals ~~introduced in the 102nd Congress~~ which are consistent with Association policy, including (1) limitations of $250,000 or lower on recovery of non-economic damages; (2) the mandatory offset of collateral sources of plaintiff compensation; (3) a decreasing, sliding scale regulation of attorney contingency fees; (4) periodic payment of future awards of damages; and (5) a limitation on the period for suspending the application of state statutes of limitations for minors to no more than six years after birth. Effective medical liability reform~~, based on the California Medical Injury Compensation Reform Act (MICRA) model,~~ is integral to health system reform.	Retain this policy in part. The substance of this policy remains relevant; however, a new title and edits will more accurately describe this policy without tying it to a prior Congress or Administration. Also, the reference to MICRA should be deleted. MICRA has been amended since this policy was first adopted and some states have stronger liability protections for physicians.
H-435.983	Impact of Product Liability on the Development of New Medical Technologies	The AMA (1) urges the continuation of efforts at the state and federal level to reform product liability laws, (2) supports creative solutions to prevent product liability suits from slowing the development and utilization of medical technologies in this country. Effective medical liability reform~~, based on the California Medical Injury Compensation Reform Act (MICRA) model,~~ is integral to health system reform; and (3) continues to support efforts to alleviate the growing health crisis caused by decreasing availability or provision of biomaterials to manufacturers of medical devices and implants and to support legislative efforts to provide legal	Retain this policy in part. The reference to MICRA should be deleted. MICRA has been amended since this policy was first adopted and some states have stronger liability protections for physicians.

Policy Number	Title	Text	Recommendation
		protection to biomaterial suppliers to ensure that all Americans have access to medical devices.	
H-5.998	Public Funding of Abortion Services	Our American Medical Association reaffirms its opposition to legislative proposals that utilize federal or state health care funding mechanisms to deny established and accepted medical care to any segment of the population.	Retain – this policy remains relevant.
H-95.937	Abuse-Deterrent Prescription Drugs	Our AMA supports the Food and Drug Administration's ongoing efforts to evaluate the efficacy, safety, and labeling of abuse-deterrent technology, and opposes barriers to appropriate access to and coverage of prescription drugs with abuse-deterrent properties.	Retain – this policy remains relevant.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 13-A-25

Subject: The Uniform Health-Care Decisions Act (Resolution 250-A-24)

Presented by: Michael Suk, MD, JD, MPH, MBA, Chair

Referred to: Reference Committee B

INTRODUCTION

This American Medical Association (AMA) Board of Trustees report arises from Resolution 250-A-24, "Endorsement of the Uniform Health-Care Decisions Act." As introduced by the Michigan Delegation. Resolution 250-A-24 called upon the AMA to amend policy D-140.968, "Standardized Advance Directives," as follows:

> Our AMA will endorse the "Uniform Health-Care Decisions Act," which was drafted and adopted by the National Conference of Commissioners on Uniform State Laws (NCCUSL) in ~~1993~~ 2023, and work with our state medical societies to advocate for its adoption in the states.

Testimony in support of Resolution 250-A-24 emphasized that AMA had endorsed the 1993 version of the Uniform Health-Care Decisions Act (UHCDA), that a new and updated version of the UHCDA had been approved in 2023, and that endorsement of the 2023 version was a needed update to AMA policy. Supportive testimony also praised the UHCDA's new provisions related to end-of-life care. On the other hand, other testimony voiced concern about the UHCDA provisions related to mental health and expressed that the UHCDA inadequately addressed complex issues that would negatively impact medical practice.

Resolution 250-A-24 was referred. This report examines the binary question of whether the AMA should endorse the 2023 UHCDA as adopted by the Uniform Laws Commission (ULC). This report does not seek or recommend changes to the UHCDA.

BACKGROUND

The ULC is a nonpartisan, non-profit association comprised of state commissions on uniform laws from each state. Members of the ULC are licensed attorneys. The ULC's purpose is "to study and review the law of the states to determine which areas of law should be uniform [and] promote the principle of uniformity by drafting and proposing specific statutes in areas of the law where uniformity between the states is desirable."[1] Importantly, the ULC drafts model legislation, but the legislation must be enacted by a state legislature to be effective.

In 1993, the ULC, then known as the National Conference of Commissioners on Uniform State Laws, promulgated the UHCDA, a third-generation model bill that addressed advance health care directives and health care decision-making on behalf of patients lacking capacity. Subsequently, the AMA adopted policy to endorse the 1993 UHCDA. Six states (Alaska, Hawaii, Maine,

© 2025 American Medical Association. All rights reserved.

Mississippi, New Mexico, and Wyoming) enacted the 1993 UHCDA. In 2020, the ULC appointed a drafting committee to modernize and expand the UHCDA, and in 2023 the ULC approved and recommended the 2023 UHCDA for enactment in all states.

The 2023 UHCDA governs powers of attorney for health care, advance directives, and other forms of health care instructions intended to inform health care professionals and agents about a patient's wishes, priorities, and values regarding health care decisions made for them when they are unable to make such decisions themselves. The UHCDA also governs determination of capacity, judicial review, and appointment of surrogate decisionmakers when there is no advance directive. In addition, the UHCDA establishes certain duties and powers of agents and health care professionals and shields them from liability when they act reasonably and in good faith.

Among the changes in the 2023 UHCDA is the authorization of advance directives specifically for mental health care. These directives enable individuals to provide specific instructions reflecting their preferences for mental health care and/or to authorize an agent to make mental health care decisions on their behalf. The provisions also allow an individual to limit their own ability to revoke an advance mental health care directive when experiencing an acute mental health event.

To date, one state (Delaware) has enacted the 2023 UHCDA.

AMA POLICY

As noted earlier in this report, AMA Policy D-140.968, "Standardized Advance Directives," endorses the 1993 UHCDA and urges state medical societies to advocate for its adoption.

Policy H-85.957, "Encouraging Standardized Advance Directives Forms Within States," encourages each state medical society to develop a standardized form of advance directives for use by physicians and other health care providers as a template to discuss end-of-life care with their patients.

Policy H-140.845, "Encouraging the Use of Advance Directives and Health Care Powers of Attorney," states that AMA will: (1) encourage health care providers to discuss with and educate young adults about the establishment of advance directives and the appointment of health care proxies; (2) encourage nursing homes to discuss with resident patients or their health care surrogates/decision maker as appropriate, a care plan including advance directives, and to have on file such care plans including advance directives; and that when a nursing home resident patient's advance directive is on file with the nursing home, that advance directive shall accompany the resident patient upon transfer to another facility; (3) encourage all physicians and their families to complete a Durable Power of Attorney for Health Care (DPAHC) and an Advance Directive (AD); (4) encourage all medical schools to educate medical students and residents about the importance of having a DPAHC/AD before becoming severely ill and encourage them to fill out their own DPAHC/AD; (5) along with other state and specialty societies, work with any state that has technical problems with their DPAHC/AD to correct those problems; (6) encourage every state medical association and their member physicians to make information about Living Wills and health care powers of attorney continuously available in patient reception areas; (7) (a) communicate with key health insurance organizations, both private and public, and their institutional members to include information regarding advance directives and related forms and (b) recommend to state Departments of Motor Vehicles the distribution of information about advance directives to individuals obtaining or renewing a driver's license; (8) work with Congress and the Department of Health and Human Services to (a) make it a national public health priority to educate the public as to the importance of having a DPAHC/AD and to encourage patients to work

with their physicians to complete a DPAHC/AD and (b) to develop incentives to individuals who prepare advance directives consistent with our current AMA policies and legislative priorities on advance directives; (9) work with the Centers for Medicare and Medicaid Services to use the Medicare enrollment process as an opportunity for patients to receive information about advance health care directives; (10) continue to seek other strategies to help physicians encourage all their patients to complete their DPAHC/AD; and (11) advocate for the implementation of secure electronic advance health care directives.

Policy H-85.956, "Educating Physicians About Advance Care Planning," supports efforts to increase the prevalence and quality of meaningful advance care planning, including the use of advance directives, to improve recognition of and adherence to a patient's advance care decisions, the development of materials to educate physicians, patients and others about advance care planning and the requirements and implications of the Patient Self-Determination Act, and patient education resources. The Policy also encourages medical schools and residency programs to increase awareness of advance care planning and educate trainees about the use of such tools.

Policy H-140.970, "Decisions to Forgo Life-Sustaining Treatment for Incompetent Patients," states that: (1) Advance directives (living wills and durable powers of attorney for health care) are the best insurance for individuals that their interests will be promoted if they become incompetent. Generally, it is most effective if the individual designates a proxy decisionmaker and discusses with the proxy his or their values regarding decisions about life support. (2) Without an advance directive that designates a proxy, the patient's family should become the surrogate decisionmaker. Family includes people with whom the patient is closely associated. In the case when there is no person closely associated with the patient, but there are people who both care about the patient and have some relevant knowledge of the patient, such relations should be involved in the decision-making process and may be appropriate surrogates. (3) It is the responsibility of physicians to provide all relevant medical information and to explain to surrogate decisionmakers that decisions should be based on substituted judgment (what the patient would have decided) when there is evidence of patients' preferences and values. If there is not adequate evidence of preferences and values, the decision should be based on the best interests of the patient (what outcome would most likely promote the patient's well-being). (4) Institutional ethics committees should be established for the purpose of facilitating sound decision-making. These ethics committees should be structured so that a diversity of perspectives, including those from outside medicine, are represented. (5) The surrogate's decision should almost always be accepted by the physician. However, there are four situations that may require either institutional or judicial review and/or intervention in the decision-making process. These situations are when: (a) there is no available family willing to be the patient's surrogate decisionmaker; (b) there is a dispute among family members and there is no decisionmaker designated in an advance directive; (c) a health care provider believes that the family's decision is clearly not what the patient would have decided if competent; and (d) a health care provider believes that the decision is not a decision that could reasonably be judged to be in the patient's best interests. Decisions based on a conflict of interest generally would not be in the patient's best interest. In these four cases, the guidelines outlined in the report should be followed. When there are disputes among family members or between family and health care providers, the use of ethics committees specifically designed to facilitate sound decision-making is recommended before resorting to the courts. (6) Judicial reviews for decisions about life-sustaining treatment should be a last resort. It is strongly encouraged that when judicial review is necessary, in nonemergency situations, the courts should determine who is to make treatment decisions, including appointing a guardian, rather than making treatment decisions. (7) When a permanently unconscious patient was never competent or had not left any evidence of previous preferences or values, since there is no objective way to ascertain what would be in the

best interests of the patient, the surrogate's decision should not be challenged as long as the decision is based on the decisionmaker's true concern for what would be best for the patient. (8) In the case of seriously ill or handicapped newborns, present and future interests of the infant must be considered. Due to the complexities involved in deciding about life support for seriously ill newborns, physicians should specifically discuss with parents the risks and uncertainties involved. When possible, parents should be given time to adjust to the shock of the situation and absorb the medical information presented to them before making decisions about life-sustaining treatment. In addition, counseling services and an opportunity to talk with couples who have had to make similar decisions should be available to the parents. (9) Due to the complexity of decisions for permanently unconscious patients and newborns, an ethics committee should be available, whenever possible, to facilitate the surrogate's decision-making. (10) Hospitals and other health care facilities should establish protocols regarding assessment of decision-making capacity, informing patients about advance directives, identifying surrogate decisionmakers, the use of advance directives, substituted judgment and best interests in decision-making, and the procedures for challenging the decision of a surrogate. These protocols should be in accordance with the CEJA preceding guidelines.

Policy H-85.952, "Advance Directives During Pregnancy," affirms the patient-physician relationship as the appropriate locus of decision making and the independence and integrity of that relationship, promotes awareness and understanding of the ethical responsibilities of physicians with respect to advance care planning, the use of advance directives, and surrogate decision making, regardless of gender or pregnancy status, set out in the Code of Medical Ethics, and recognizes that there may be extenuating circumstances which may benefit from institutional ethics committee review, or review by another body where appropriate.

Finally, AMA Policy H-140.826, "Use of Psychiatric Advance Directives," recognizes the potential for advance care planning to promote the autonomy of patients with mental illness and urges the mental health community to continue to study the role of advance care planning in therapeutic relationships and the use of psychiatric advance directives to promote the interests and well-being of patients, and support efforts to increase awareness and appropriate utilization of psychiatric advance directives.

DISCUSSION

Advance care planning is an important aspect of ensuring patient treatment preferences are respected in the event the patient is unable to communicate their wishes. Central to respecting patient autonomy at the end of life or during incapacity is the use of advance directives, a health care power of attorney, and other advance care planning instruments. However, laws governing these instruments may vary across states and this inconsistency can create confusion, complexity, and barriers to effective health care decision-making, ultimately undermining the very goals of advance care planning. A uniform approach among state laws could help minimize confusion and inconsistency and promote high-quality patient care and effective communication and decision-making between patients, families, and health care professionals, particularly in cases when medical decision-making may occur across state lines, amidst conflict between family members or when a patients' preferences have not been made clear. The UHCDA provides a framework for the creation, execution, and recognition of advance care planning tools, the delegation of health care decision-making, and the relevant duties of agents and health care providers. Indeed, existing AMA policy aligns with the goals of the UHCDA. However, inconsistencies between the UHCDA, AMA policy, and clinical practice raise concerns about whether broad endorsement of the UHCDA is appropriate for the AMA.

One critical criticism of the 2023 UHCDA centers around determinations of patient capacity to make health care decisions, and the lack of clear guidelines for complex medical scenarios. Specifically, under the UHCDA, the determination of capacity requires consideration of two criteria: (1) whether an individual is willing and able to communicate a decision and (2) whether the individual understands the nature and consequences of making or revoking a decision or instruction. In contrast, the widely accepted assessment of decisional capacity in clinical practice, which has been incorporated into state laws, assesses four skills: whether the individual is able to understand relevant information; appreciate the clinical circumstances; exhibit a rational process of decision making; and communicate a consistent choice.[2] While the approaches are not necessarily in conflict in all cases, the UHCDA approach could, particularly with regard to psychiatric care, conflict with the accepted medical standard for assessing capacity. This could lead to confusion among health care professionals and in application in the courts.

Additionally, some UHCDA provisions directly conflict with existing AMA policy. For example, AMA Policy H-140.970, "Decisions to Forgo Life-Sustaining Treatment for Incompetent Patients," states that, in the absence of an advance directive, the patient's family should become the surrogate decisionmaker regarding decisions to forgo life-sustaining treatment, whereas the UHCDA first prioritizes "an adult the individual has identified, other than in a power of attorney for health care, to make a health-care decision for the individual if the individual cannot make the decision" before family. AMA policy also identifies when decisions to forgo life-sustaining treatment warrant institutional or judicial review, including when there is a dispute among family members and no designated decisionmaker, and when there is no available family willing to be the patient's surrogate decisionmaker. In contrast, the UHCDA instructs health care providers to comply with the decision of a majority of the family members when there is a dispute and authorizes non-family members to function as surrogate decisionmakers according to a priority list. AMA policy also advocates for use of institutional ethics committees, whereas the UHCDA makes no mention of ethics committees. The UHCDA also authorizes and promotes use of mental health advance directives, whereas AMA policy merely recognizes the potential benefit of mental health advance directives and urges further study.

The UHCDA also conflicts with AMA policies that vigorously support and advocate for appropriate physician supervision of non-physician clinical staff in all areas of medicine. Specifically, the UHCDA authorizes a "responsible health-care professional" to determine whether a patient lacks capacity when a physician, psychologist, physician assistant, advanced practice registered nurse, or social worker is unavailable, and a prompt decision is necessary to avoid loss of life or serious harm. The UHCDA does not require the "responsible health-care professional" to have any specific training, expertise, or license. AMA Policy H-160.949, "Practicing Medicine by Non-Physicians," expressly opposes state legislation allowing non-physician groups to engage in the practice of medicine without physician training or appropriate physician supervision.

It is critical to note that AMA does not endorse the actions of other organizations with which it does not completely and wholly agree. Though individuals may disagree about the appropriate weight to be given to the concerns and conflicts discussed in this report, the Board of Trustees (the Board) finds the lack of perfect alignment determinative. Therefore, the Board recommends against endorsement of the UHCDA. Additionally, adoption of the 2023 UHCDA by the ULC renders AMA Policy D-140.968, "Standardized Advance Directives," outdated and the policy should be rescinded.

RECOMMENDATION

The Board of Trustees recommends that the following be adopted in lieu of Resolution 250-A-24 and the remainder of the report be filed.

1. That Policy D-140.968, "Standardized Advance Directives," be rescinded. (Rescind HOD Policy)

Fiscal Note: Less than $500

REPORT 14 OF THE BOARD OF TRUSTEES (A-25)
A Public Health-Centered Criminal Justice System
(Reference Committee B)

EXECUTIVE SUMMARY

INTRODUCTION. Resolution 215-I-23, "A Public Health-Centered Criminal Justice System," was referred. This resolution asked that our American Medical Association support legislation that reduces the negative health impacts of incarceration by: a. advocating for decreasing the magnitude of penalties, including the length of prison sentences, to create a criminal justice model focused on citizen safety and improved public health outcomes and rehabilitative practices rather than retribution; b. advocating for legislation and regulations that reduce the number of people placed in prison conditions, such as preventing people who were formerly incarcerated from being sent back to prison without justifiable cause; and c. supporting the continual review of sentences for people at various time points of their sentence to enable early release of people who are incarcerated but unlikely to pose a risk to society. It also asked that our AMA recognize the inefficacy of mandatory minimums and three-strike rules and the negative consequences of resultant longer prison sentences to the health of incarcerated individuals, and support legislation that reduces or eliminates mandatory minimums and three-strike rules.

DISCUSSION. The United States (U.S.) incarcerates nearly two million people, far more than any other country in the world. The problem of mass incarceration in the U.S. is not just a function of the number of people in prison—or the larger number of people who cycle in and out of correctional facilities every year but also a function of the length of time the system incarcerates people. Retribution, deterrence, incapacitation, and rehabilitation are all concepts that have been central to sentencing theory, policy, and practice over the last two centuries. These principles have been backed by limited evidence of success—and evidence of harm. This report discusses the history of sentencing in the U.S., the use of mandatory minimums and three-strike penalties, the impact of longer sentencing on public safety, racial disparities observed in longer sentencing practices, and reforms that have reduced longer sentences without compromising public safety. This report also discusses sentencing reforms to address mass incarceration and summarizes AMA policy as it relates to the criminal justice system.

CONCLUSION. Experts argue that future reforms are still needed to address mass incarceration. This includes more expansive drug law reform such as addressing mandatory minimum sentences for drug offenses, repealing the 18:1 disparity between crack and powder cocaine, expanding alternative sentences, including the existing statutory safety valve, and reducing the number of people currently held in correctional facilities by making changes retroactive. The recommendations in this report support efforts to reduce the reliance on incarceration, particularly for non-violent offenders, acknowledges that rehabilitation and successful reentry into the community requires adequate support systems and services, and supports providing judges with the discretion to help ensure that sentences are fair and fit the crime. Further, the recommendations of this report build upon existing AMA policy centered around drug policy reform and lend way to adopting policies needed for public health centered-criminal justice system.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 14-A-25

Subject: A Public Health-Centered Criminal Justice System

Presented by: Michael Suk, MD, JD, MPH, MBA, Chair

Referred to: Reference Committee B

INTRODUCTION

Resolution 215-I-23, "A Public Health-Centered Criminal Justice System," introduced by the Medical Student Section was referred. This resolution asked that that our American Medical Association:

> support legislation that reduces the negative health impacts of incarceration by: a. advocating for decreasing the magnitude of penalties, including the length of prison sentences, to create a criminal justice model focused on citizen safety and improved public health outcomes and rehabilitative practices rather than retribution, b. advocating for legislation and regulations that reduce the number of people placed in prison conditions, such as preventing people who were formerly incarcerated from being sent back to prison without justifiable cause, and c. supporting the continual review of sentences for people at various time points of their sentence to enable early release of people who are incarcerated but unlikely to pose a risk to society; and
>
> (1) recognize the inefficacy of mandatory minimums and three-strike rules and the negative consequences of resultant longer prison sentences to the health of incarcerated individuals, and (2) support legislation that reduces or eliminates mandatory minimums and three-strike rules.

BACKGROUND

The U.S. incarcerates nearly two million people, far more than any other country in the world.[1] The problem of mass incarceration in the U.S. is not just a function of the number of people in prison—or the larger number of people who cycle in and out of correctional facilities every year but also a function of the length of time the system incarcerates people. Retribution, deterrence, incapacitation, and rehabilitation are all concepts that have been central to sentencing theory, policy, and practice over the last two centuries.[1]

As of 2019, 57 percent of the U.S. prison population was serving sentences of 10 or more years.[1,2] As of 2020, one in seven people in U.S. correctional facilities was serving a life sentence.[1,3] In 2022, the Council on Criminal Justice, examining National Corrections Reporting system data, found that from 2005 to 2019 the percentage of people serving sentences of 10 or more years in state correctional facilities grew substantially, reaching 57 percent of the total population in 2019.[1,4] On any given day, there are nearly 1.7 million people serving sentences in prison and jail, almost 500,000 more detained in jail pretrial, another 4.4 million under some form of probation or parole control, and between 70 and 100 million marked with a record of arrest or conviction.[1,5,6,7] This level of incarceration reaches into more than 100 million U.S. households: half of all adults in

© 2025 American Medical Association. All rights reserved.

the U.S. have had a family member detained at least overnight.[1,8] Black and Latinx people make up 58
percent of the U.S. prison population but just 31 percent of the nation's overall population.[1,9,10] Among those serving life and "virtual life" sentences—sentences of 50 years or more—nearly half are Black, and another 16 percent are Latinx.[1,11] One in five Black men in prison is serving a life sentence.[12] Black men receive harsher sentences and serve more time in prison compared to white men—in the federal system, for example, their sentences are 19.1 percent longer—even after controlling for factors like conviction history, education, and income.[1,12] In the same system, Black people are also 21.2 percent less likely to receive a sentence shorter than advised by the sentencing guidelines than white people.[1,12] In the last 20 years, however, racial disparities have dropped as the number of White people in prison continues to increase while the number of Black people drops.[1,13]

Incarceration and Health

It is well documented that justice-involved people have a higher prevalence of acute and chronic health conditions than the general U.S. population.[14] This includes higher rates of infectious diseases, mental health diagnoses, substance use disorders, traumatic brain injuries, hypertension, heart-related problems, diabetes, asthma, and stroke, along with overall lower life expectancy.[15,16,17] The higher prevalence of these acute and chronic conditions among incarcerated people has been partially attributed to pre-incarceration exposure to adverse structural determinants such as poverty and unstable housing.[15] However, the experience of incarceration itself is also associated with adverse health outcomes.[16-17] Violence—whether self-directed, interpersonal, or perpetrated by agents of the state—is also a significant documented harm of incarceration.[18] While men are more likely to experience interpersonal violence from another justice-involved person, women are more likely to be assaulted by staff.[18,19] Strikingly, transgender people are targeted at nearly 10 times the rate of other justice-involved people.[18,20] In addition to widespread violence and sexual assault inside carceral settings, other extreme human rights violations such as mass forced sterilizations, regular use of solitary confinement, and abandonment during natural disasters are known harms linked to incarceration.[18,21]

In addition to direct health consequences experienced by justice-involved people, the harms of the carceral system extend to families and communities of justice-involved people through mechanisms such as family separation and disruption of community cohesion.[22] For example, parental/caregiver incarceration is associated with food insecurity during childhood and a greater risk of living with mental health issues in childhood and adolescence.[23] If incarcerated pregnant people have children or give birth while incarcerated, the harm from incarceration is carried through generations even after release.[23] These detrimental consequences also extend to adult partners and relatives, inducing relationship strain and onset of depression and anxiety.[24] Some of the carceral system's harms are indirectly mediated through pathways such as added economic pressures (e.g., household income loss and paying for fees and fines) and housing precarity, which have been linked to adverse health outcomes.[25]

A Public Health Approach to Criminal Justice

A public health-centered approach to the criminal justice system is focused on prevention and early intervention and prioritizes addressing structural determinants such as poverty, education, employment, and environment that shape the prevalence of incarceration and increase the risk of adverse health outcomes.[26] These prevention strategies include providing equitable access to resources that communities need to thrive, including stable and supportive housing, affordable high-quality education starting in early childhood, well-paying employment, culturally responsive youth programs, and affordable and accessible health care (including access to mental health first

responders and within-community mental health services).[26,27] A public health approach emphasizes treatment for those facing mental health crises or substance use disorders rather than incarceration to help address underlying conditions. For those who are incarcerated, providing comprehensive health care services during incarceration, and linking people to services post release can help improve health and well-being. Rehabilitation and reentry programs are also vital to help individuals reintegrate into society post-release. It is also important to evaluate the effectiveness of these interventions to understand the impact not only on justice-involved individuals, but also on public safety and the overall health of communities. There is also a significant lack of support for women once they are released. There are fewer options for job training, fewer housing options, and often incarcerated women have less support systems when released compared to men.[28] Creating reentry programs tailored to women's needs is essential and these programs should focus on trauma-informed care, parenting support, and vocational training to address the unique challenges women face.[28]

Restorative Justice Approaches

Restorative justice is a nonpunitive, nonretributive process to address interpersonal harm that centers survivors of harm and brings together everyone affected to decide collectively how to heal and to repair harm.[29] Transformative justice builds upon this process by focusing not only on the individuals involved but also on the larger systems and structures that created the conditions for that harm to occur.[30] Although restorative and transformative justice processes vary widely in implementation, making evaluation of their effectiveness challenging, research on restorative justice shows it to be a promising solution to the problem of incarceration.[30] For example, one of the most comprehensive meta-analyses on restorative justice revealed higher levels of satisfaction among individuals involved in the process (including those who were harmed and those who did harm), a greater likelihood of adhering to restorative agreements, and decreased rates of recidivism relative to those who did not participate in a restorative justice process.[31] Another meta-analysis of restorative justice programs with young people less than 18 years of age showed a general trend of decreased reengagement with the legal system, a greater sense of fairness among both the young people who did harm and the people who were harmed, and greater satisfaction in comparison with those who did not participate in a program.[32] These outcomes suggest better mental well-being for all individuals involved when a restorative justice process is used as an alternative to the carceral system.[30,31] Preliminary evidence suggests that restorative justice approaches provide a more effective and less harmful means of accountability than continuing to invest in punitive paradigms.[18,30,31]

SENTENCING IN THE U.S.

Sentencing in criminal law refers to the process of determining the appropriate punishment or penalty for a person who has been convicted.[33] It typically involves taking into consideration factors, such as the nature and severity of the crime, the defendant's criminal history, and any mitigating or aggravating circumstances.[32] Retribution, deterrence, incapacitation, and rehabilitation are all concepts that have been central to sentencing theory, policy, and practice over the last two centuries.[32] The federal courts and some states have sentencing guidelines to guide judges in determining appropriate sentences and to encourage uniformity.[32]

Near the end of the 20th century, states and the federal government passed sentencing laws and policies that resulted in increasing incarceration rates in the U.S.[33] These laws fell into four main categories—mandatory minimums, "truth in sentencing," new and longer enhancements based on prior criminal convictions (such as "three-strikes" laws and other "habitual offender" laws), and laws that restricted parole release, such as life without parole sentences.[1,34] This report is focused

on mandatory minimum sentences, including three strike laws, as they fall within the purview of the original resolution.

MANDATORY MINIMUM PENALTIES & SENTENCING ENHANCEMENTS

All 50 states, the District of Columbia, and the federal government require a judge to order a set minimum period of incarceration if a person is convicted of certain crimes.[1,35] Mandatory minimums, limit judges' discretion to consider a person's individual circumstances.[1,34] On the federal level, the term "mandatory minimum penalty" requires, upon conviction of a federal criminal offense and the satisfaction of criteria set forth in that statute, the imposition of a specified minimum term of imprisonment.[36] Mandatory minimum penalties vary in length depending on the offense type and specified criteria, from two years for aggravated identity theft, to life in prison for certain drug trafficking offenses. The statutory criteria that trigger mandatory minimum penalties can be classified into at least one of three categories: (a) penalties triggered by offense characteristics or elements of the offense of conviction; (b) penalties triggered by reference to another underlying offense; or (c) penalties triggered by the offender's criminal history.[35]

Not all offenders convicted of an offense carrying a mandatory minimum penalty are sentenced to the minimum term of imprisonment specified in the statute of conviction.[35,37] Under the current system, a sentencing court can impose a sentence below an otherwise applicable statutory mandatory minimum penalty if: (1) the prosecution files a motion based on the defendant's "substantial assistance" to authorities in the investigation or prosecution of another person who has committed an offense; or (2) in certain drug trafficking cases, the defendant qualifies for the statutory "safety valve" contained in 18 U.S.C. § 3553(f).[35,36,38]

Unlike a substantial assistance departure—which applies to all types of federal offenses carrying a mandatory minimum penalty—the safety valve statute only applies in cases in which a defendant faces a mandatory minimum penalty after being convicted of a drug trafficking offense listed in the statute.[35,39] In addition, the safety valve only applies if the following five criteria are met:

- the defendant does not have more than one criminal history point, as determined under the sentencing guidelines;
- the defendant did not use violence or credible threats of violence or possess a firearm or other dangerous weapon (or induce another participant to do so) in connection with the offense;
- the offense did not result in death or serious bodily injury to any person;
- the defendant was not an organizer, leader, manager, or supervisor of others in the offense, as determined by the sentencing guidelines and was not engaged in a continuing criminal enterprise; and
- no later than the time of the sentencing hearing, the defendant has truthfully provided to the Government all information and evidence the defendant has concerning the offense or offenses that were part of the same course of conduct or of a common scheme or plan, but the fact that the defendant has no relevant or useful or other information to provide or that the government is already aware of the information shall not preclude a determination by the court that the defendant has not complied with this requirement.[35-38]

Where these criteria are met, judges shall impose a sentence without regard to the statutory mandatory minimum penalty for the covered offenses.[35,38] The drug trafficking guideline also provides for a 2-level decrease if the defendant meets the safety valve subdivision criteria.[40] This decrease applies regardless of whether the defendant was convicted of an offense carrying a mandatory minimum penalty.[41] It should also be noted that states have mandatory minimum

sentencing laws as well, but these vary state by state.[42] Successful state reforms to mandatory minimum sentencing are summarized in Appendix I. Ultimately, federal mandatory minimums result in longer incarceration because few ways around them exist, except via safety valve provisions or substantial assistance motions as mentioned above.

Three Strike Laws

Three strike laws are a criminal sentencing structure in which significantly harsher punishments are imposed on repeated offenders.[43] These laws generally mandate a life sentence for the third violation of violent felonies. These types of laws originated from the Violent Crime Control and Law Enforcement Act of 1994.[44] The federal three strikes statute punishes a defendant with "mandatory life imprisonment if he or she is convicted in federal court of a 'serious violent felony' and has two or more prior convictions in federal or state courts, at least one of which is a 'serious violent felony.'[43] The other prior offense may be a 'serious drug offense.'"[43] The "serious violent felony" includes murder, manslaughter, sex offenses, kidnapping, robbery, and any offense punishable by 10 years or more which includes an element of the use of force or involves significant risk of force.[43]

At the federal level, the First Step Act has eased the mandatory minimum sentencing imposed under the three strikes law.[44] Previously, a person with two or more prior convictions involving a "serious violent felony" or "serious drug felony" was punishable with life imprisonment without parole.[44] Now, this sentence is reduced to 25 years in prison and the sentence for the first offense is reduced from 20 years to 15 years in prison.[44] This reform has given more discretion to judges.[44] The Bureau of Prisons reports that the federal prison population is declining, thanks to the First Step Act.[45] However, a significant portion of the prison population resides in state correctional facilities.[44] Currently, 28 states have enacted the three strikes law.[46] Moreover, some states have a "two-strikes provision," where a subsequent strike-able offense is punishable with twice the term of its ordinary term.[45] In a few states, someone can be released on parole after serving a certain number of years in prison.[45]

ARGUMENTS IN SUPPORT OF MANDATORY MINIMUMS

Promotion of Uniformity in Sentencing and Avoidance of Unwarranted Disparity

Some view mandatory minimum penalties as promoting uniformity and reducing unwarranted disparities because such penalties require courts to impose similar sentences for similar offenses.[47,48] Congress enacted many mandatory minimum penalties, together with the then-mandatory guidelines system, as part of its effort in the 1980s to narrow judicial sentencing discretion and curb what it viewed as unduly disparate and lenient sentences.[49] According to some scholars, the importance of mandatory minimum penalties in ensuring uniformity has increased. The Department of Justice has observed that sentencing disparities have increased under the advisory guidelines system because for "offenses for which there are no mandatory minimums, sentencing decisions have become largely unconstrained as a matter of law."[50] This has led to greater variation in sentencing, which in turn "undermines the goals of sentencing to treat like offenders alike, eliminate unwarranted disparities in sentencing, and promote deterrence through predictability in sentence."[51] Furthermore, some prosecutors have charged offenses carrying mandatory minimum penalties to narrow the sentencing court's discretion.[52]

Protection of the Public through Certainty in Punishment, Deterrence, and Incapacitation

Law enforcement officials have historically urged the enactment of mandatory minimum penalties.[52] It is believed by some that mandatory minimum penalties deter crime by imposing certain, predictable, and generally severe punishment.[53] Because mandatory minimum penalties require a certain term of incarceration, they are viewed as "an effective means of alerting would-be offenders to the consequences of certain illegal conduct."[54] According to the Department of Justice, sentencing reforms in the 1980s, including the enactment and enhancement of many mandatory minimum penalties, helped reduce crime rates.[48] Some prosecutors and police officers report that the certainty of punishment provided by mandatory minimum penalties is "critical" to law enforcement efforts.[55] Furthermore, some believe that the severity of mandatory minimum penalties increases their deterrent effect by raising the "cost" of committing crime to would-be offenders.[56] In addition to their deterrent effect, some policymakers assert that mandatory minimum penalties reduce crime by incapacitating criminals and protecting the public from their potential future offenses.[57] For example, law enforcement officers have reported that incapacitation through mandatory minimum penalties has reduced methamphetamine- and firearm-related crime.[58]

Effective Law Enforcement Tool that Induces Pleas and Cooperation

The threat of a mandatory minimum penalty gives law enforcement leverage over defendants, who may be encouraged to cooperate in exchange for lesser charges or safety valve and substantial-assistance benefits.[59] Some have stated that the potential application of more severe penalties in federal court "has convinced a number of suspects to give up information."[60] Similarly, the Department of Justice views mandatory minimum penalties as an essential and critical tool in obtaining cooperation from members of "violent street gangs and drug distribution networks."[59]

Assistance to State and Local Law Enforcement

Another justification for federal mandatory minimum penalties relates to the relationship between state and federal law enforcement.[61] Due to the substantial concurrent state and federal jurisdiction in many drug and firearm cases, if a state sentence for a crime is inappropriately low, the existence of a substantially higher, federal mandatory minimum can help ensure a sentence that protects the public.[60] The prospect of being convicted under a federal statute carrying a mandatory minimum penalty can induce defendants to plead to state charges.[60]

ARGUMENTS IN OPPOSITION OF MANDATORY MINIMUMS

Contribution to Excessive Uniformity and Unwarranted Disparity

One of the weaknesses of mandatory minimums is that they apply one-size-fits-all sentences to defendants who are not equally liable.[62] According to the American Bar Association (ABA), "[t]reating unlike offenders identically is as much a blow to rational sentencing policy as is treating similar offenders differently."[63] Mandatory minimum penalties may result in arbitrary and disparate sentences because they rely on certain specified triggering facts.[64] For example, so-called "sentencing cliffs" occur when an offender's "conduct just barely brings them within the terms of the mandatory minimum.[65] In such a case, the offender is subject to a significantly higher sentence than an offender whose conduct fell just outside the scope of the mandatory minimum penalty, even though their conduct was only marginally different.[66] For example, a defendant convicted of trafficking 100 grams of heroin would be subject to the five-year mandatory minimum penalty while one who sold only 99 grams of the drug would not, meaning that these defendants are subject to substantially different sentences despite nearly identical conduct.[67] A majority of judges believe that mandatory minimum penalties contribute to sentencing disparity. In a survey of United States

District Judges on a range of sentencing issues, 52 percent of judges ranked mandatory minimum penalties among the top three factors contributing to sentencing disparity.[68] In contrast, 78 percent believed that the sentencing guidelines have reduced unwarranted sentencing disparities among similarly situated defendants.[67]

Excessive Severity and Disproportionality

Many scholars view current federal mandatory minimum penalties as producing sentences that are excessively harsh relative to the gravity of the offense committed, in part because "all sentences for a mandatory minimum offense must be at the floor or above regardless of the circumstances of the crime."[69] The Department of Justice has stated that there are real and significant excesses in terms of the imprisonment meted out for some offenders under existing mandatory sentencing laws, especially for some non-violent offenders.[70] The Department of Justice explained that "[m]andatory minimum sentencing statutes in the federal system now apply to a significant array of serious crimes; and they also, by and large, mandate very severe imprisonment terms."[69] This, in turn, has produced exponential growth in the federal prison population since the 1980s, and the federal Bureau of Prison's overcapacity "has real and detrimental consequences for the safety of prisoners and guards, effective prisoner reentry, and ultimately, public safety."[69] For this reason, the Department of Justice suggests some reforms of existing mandatory minimum sentencing statutes to eliminate excess severity in current statutory sentencing laws and to help address the unsustainable growth in the federal prison population.[69]

Lack of Individualized Sentencing

Critics often argue that mandatory minimum penalties conflict with the goal of individualized sentencing.[71] For instance, the Judicial Conference has long urged Congress "to reconsider the wisdom" of mandatory minimum penalties because they "block judges from considering the individual circumstances of particular cases."[72,73] Because mandatory minimum penalties may prevent a judge from considering all (or even most) of the pertinent facts and circumstances of the case (such as offender characteristics), the resulting sentence may be unfair or irrational.[70-72] Likewise, the American Bar Association has also called for the repeal of federal mandatory minimum penalties after concluding that they are "inconsistent with the notion of individualized sentencing within a guided discretion regime."[71,72] Moreover, there is significant agreement with the Judicial Conference and the ABA among judges and lawmakers, practitioners, scholars, and advocacy groups.[74]

Ineffectiveness as a Deterrent or as a Law Enforcement Tool to Induce Pleas and Cooperation

Some scholars counter the claims made by proponents of mandatory minimum penalties that these penalties serve as an effective deterrent to crime.[75] Research conducted by social scientists and public policy analysts has found little evidence to support the argument that mandatory minimums prevent crime.[76] In fact, many assert it is an increase in the certainty of punishment through the prosecution of more offenders that is the more cost-effective deterrent compared to the severity of punishment that mandatory minimum penalties or longer sentences provide.[77] Some also dispute the claims that mandatory minimum penalties are a useful law enforcement tool for the investigation and prosecution of criminals by inducing pleas and cooperation. Others have also argued that mandatory minimum penalties are inefficient investigative tools.[78] Some further believe that mandatory minimum penalties cause a "cooperation backlash" that occurs "when sentencing practices are viewed as overly severe" and "many citizens become reluctant to assist the law enforcement effort."[77] Therefore, while mandatory minimum penalties can increase cooperation by offenders who face those punishments, they can hinder the

willingness of citizens to cooperate with law enforcement at the early stages of investigation and arrest.[77]

Disproportionate Impact Across Demographic Groups

Some scholars express concerns that mandatory minimum penalties unfairly impact racial minorities and the economically disadvantaged.[79] This may be attributed in part to the fact that the most frequently applied mandatory minimum penalties are for drug offenses, which according to some, disproportionately impacts certain racial or ethnic groups.[80] While acknowledging that this disproportionate impact may be more a function of law enforcement priorities rather than sentencing policy, some assert that mandatory minimum penalties are being applied most frequently to a population that is not necessarily representative of all people violating such laws.[81] They argue that this perceived uneven application creates perceptions of unfairness that undermine the public's acceptance of the criminal justice system.[80] Some also view legally relevant factors, such as criminal history and prosecutorial discretion in charging decisions or plea agreements, as contributors to the demographically disparate impact of mandatory minimum penalties.[80] Studies show that racial minorities are more likely than whites to have a prior record, which may result from disproportionate processing by the criminal justice system.[82] Research likewise indicates that offenders in certain racial groups may be less likely to get the benefit of prosecutorial discretion in charging decisions or plea agreements.[81]

Limited impact on reducing crime rates

Evidence across the U.S. shows there is no discernable relationship between incarceration rates and crime rates: cities with high incarceration rates do not have lower crime rates than cities with low incarceration rates.[1,83] Mandatory minimums have been justified as an incapacitation strategy for people who have committed violent crimes based on the assumption that they are likely to continue to do so.[1,81,82] Research also shows that people "age out" of crime.[1,84] Violent crime, measured by arrest rates, is much more prevalent among younger people from their late teens to early twenties.[1,83] The rate of arrest for such crimes begins to sharply decline after this point and is more than halved by the mid-thirties.[1,85] This means that people who commit crimes, even if they once presented a danger to others, may be safely released much before the end of the 20-, 30-, and 40-year or life sentences they are now serving.[1,84] Additionally, a substantial body of research demonstrates that incarceration of any length is developmentally harmful for young people and contradicts safety, increasing the risk of future involvement with the criminal legal system rather than reducing crime.[1,86] Increases in the number and length of prison and jail sentences have not produced more public safety, because most justice-involved people are not a danger to the community.[1,84,85] A tiny fraction of people commit the majority of violent crimes in the U.S.—according to the data, 1 to 5 percent of people engaged in unlawful behavior commit 50 to 75 percent of all violent crimes.[1,87]

Counterproductive for public safety

Long-term sentences produce diminishing returns for public safety as individuals "age out" of the high-crime years; such sentences are particularly ineffective for drug crimes as drug sellers are easily replaced in the community; increasingly punitive sentences add little to the deterrent effect of the criminal justice system; and mass incarceration diverts resources from program and policy initiatives that hold the potential for greater impact on public safety.[1,82-86] Further, removing large numbers of people, mostly men, from their communities and placing them in correctional facilities for years at a time creates more harm than good.[1,88] Not only does the loss of these primary relationships cause trauma, but employers also lose employees, churches lose members, and

neighborhood groups lose contributors. [1,87] A meta-analysis of 116 studies found that custodial sentences not only do not prevent reoffending, but they can also actually increase it.[1,89] Data suggests that incarceration itself can be "criminogenic"—that the prison environment, separation from community, or even the process of returning to the community is so destabilizing that it increases the likelihood of continued encounters with the criminal legal system.[1,90]

Increases cost of incarceration

Scholars argue that if mandatory sentences for nonviolent and drug offenders were necessary for public safety, their cost would be justified.[91] However, as corrections spending has climbed, most experts have come to believe incarcerating huge numbers of low-level, nonviolent and drug offenders post-conviction is an inefficient and ineffective method of controlling crime.[90] While public safety benefits of incapacitating dangerous individuals justifies the costs, according to the Pew Center on the States, "most criminologists now consider the increased use of prison for nonviolent offenders a questionable public expenditure, producing little additional crime control benefit for each dollar spent."[92] A study looked at the cost effectiveness of mandatory minimum drug laws and asserted: "[I]f reducing consumption or violence is the goal, more can be achieved by spending additional money arresting, prosecuting, and sentencing dealers to standard prison terms than by spending it on sentencing (fewer) dealers to longer, mandatory terms."[93] As a result, many states have adopted evidence-based, cost-effective sentencing reforms. For instance, prosecutors in Michigan suggested to legislators that the state was "warehousing too many low-level nonviolent offenders with a minimal role in the drug trade for too long in costly prison beds."[94] As a result, Michigan repealed most of its drug-related mandatory minimums. Prison admittances fell and Michigan saved billions in tax dollars.[93] More importantly, the crime rate fell 27 percent in the decade after the repeal. Other states have moved in a similar direction.[93]

PROPOSED REFORMS TO ADDRESS LONG SENTENCING

Removing extensions of sentences based on prior convictions

Most states have prior conviction enhancements, which increase the probability and length of prison sentences for each felony conviction a person has on their record.[1,95] However, experts argue that sentence enhancements based on prior conviction history are problematic on at least three grounds: they do not promote safety, they are one of the major drivers of racial disparities in sentencing, and they punish people disproportionately for their behavior.[1,94] Policymakers often support prior record enhancements by using a deterrence argument: they claim that people will be deterred by knowing that if they commit a crime again, they will be punished more severely.[1,96] But increasing the severity of punishment based on a person's previous convictions does not effectively deter future criminal behavior as mentioned above.[1,97] Scholars argue that people who engage in repeated acts of serious harm—the 1 to 5 percent subset of the people who have committed violence— are perhaps the intended focus for proposed incapacitation, but suggest there are targeted ways to address these people, such as requiring specific findings of patterned harm at sentencing to extend sentences, as opposed to indiscriminately doing so for everyone based on prior records.[1,96]

Abolishing mandatory minimums for low-level nonviolent offenses and drug offenses

There is growing discourse about abolishing mandatory minimums and requiring prosecutors and judges to wrestle with the appropriateness of incarceration in each case, as well as the length of any carceral sentence.[1,98] Experts argue that states can remove all mandatory minimums by reviewing existing statutes and deleting each reference to a set minimum period of incarceration per crime or

class of crime and replace it with a more general statement that a judge may sentence someone to incarceration up to the maximum period of incarceration.[1,97]

Creating a "second-look" sentencing review

Second-look laws allow courts to reexamine a sentence after a person has served a period of time—10 to 15 years in most instances —to determine if the sentence still serves its original purpose.[1,99] These laws have increasingly become a viable way to reexamine needlessly long sentences and send people home from prison who can safely return to the community.[1,100] In the 2021 legislative session, second-look bills were introduced in 14 states; three, in Illinois, Maryland, and Oregon, passed.[1,101] The less restrictive versions of these bills allow justice-involved people to petition for relief; more restrictive versions reserve the petition power to district attorneys or the courts.[1,102] Although second-look laws may reduce the number of people currently incarcerated, they can suffer from the same pitfalls as parole boards.[1,101] For example, the California prosecutor-led second-look law that passed in 2019 has thus far resulted in about 100 releases in a state with a daily prison population of nearly 100,000 people.[1,103] The District of Columbia law, along with its later expansion to encompass people who were convicted of offenses that occurred up to age 26, has a better track record, with 67 people released in five years in a jurisdiction that has a daily justice-involved population of around 1,400.[1,104]

Expanding the existing statutory safety valve

Scholars argue that if Congress maintains mandatory minimum sentences, it should limit their use to exceptional cases and expand the statutory "safety valve" provision to allow courts more discretion.[1,105] Currently the safety valve provision permits a sentencing court to disregard a statutory minimum sentence for the benefit of certain low-level, nonviolent, cooperative defendants who have a minimal prior criminal record and were convicted of certain mandatory minimum controlled-substance offenses.[1,106] While the First Step Act of 2018 expanded relief for defendants with slightly more extensive prior criminal records, some have encouraged Congress to permit courts to invoke the safety valve in a broader set of circumstances.[1,107]

CURRENT AMA POLICY

The AMA has extensive policy addressing criminal justice system reform due to the intersections with health. Most relevant to this report is AMA Policy D-430.992 "Reducing the Burden of Incarceration on Public Health" which calls on the AMA to support efforts to reduce the negative health impacts of incarceration, through implementation and incentivization of adequate funding and resources towards indigent defense systems; implementation of practices that promote access to stable employment and laws that ensure employment non-discrimination for workers with previous non-felony criminal records; and housing support for formerly incarcerated people, including programs that facilitate access to immediate housing after release from carceral settings. This policy also calls on the AMA to partner with public health organizations and other interested parties to urge Congress, the Department of Justice, the Department of Health and Human Services, and state officials and agencies to minimize the negative health effects of incarceration by supporting programs that facilitate employment at a living wage, and safe, affordable housing opportunities for formerly individuals who are incarcerated, as well as research into alternatives to incarceration. AMA Policy H-80.993 "Ending Money Bail to Decrease Burden on Lower Income Communities" supports legislation that promotes the use of non-financial release options for individuals charged with nonviolent crimes.

AMA Policy H-95.907 "Address Disproportionate Sentencing for Drug Offenses" supports efforts to eliminate this sentencing disparity (from 18:1 to 1:1) and apply them retroactively to those already convicted or sentenced. AMA Policy H-100.955 "Support for Drug Courts" supports the establishment of drug courts as an effective method of intervention for individuals with addictive disease who are convicted of nonviolent crimes; encourages legislators to establish drug courts at the state and local level in the U.S.; and encourages drug courts to rely upon evidence-based models of care for those who the judge or court determine would benefit from intervention rather than incarceration. AMA Policy H-95.899 "Restorative Justice for the Treatment of Substance Use Disorders" acknowledges that inequitable sentencing structures, such as towards crack cocaine versus opioids, have contributed to unjust imprisonments. AMA Policy H-95.901 "Drug Policy Reform" states that the AMA supports elimination of criminal penalties for drug possession for personal use as part of a larger set of related public health and legal reforms designed to improve carefully selected outcomes. Further, AMA Policy H-430.980 "Compassionate Release for Incarcerated Patients" supports policies that facilitate compassionate release for incarcerated patients based on serious medical conditions and advanced age.

CONCLUSIONS

Incarceration in the U.S. rose at an unprecedented rate for nearly four decades beginning in 1973.[108] The initiatives, under the narrative of "tough on crime," involved enacting a range of sentencing policies designed to increase admissions to prison and to lengthen the amount of time served on a felony sentence.[107] Such policies were adopted by the federal government and every state to varying degrees. As a result of these changes, the combined prison and jail population of about 330,000 in 1972 has grown to over 1.9 million today.[109] The goal of mass incarceration was to improve public safety outcomes.[110] Evidence has shown that incarceration has an impact on crime, but the scale of that effect is much more modest than many policymakers or members of the public believe.[108,109] At best, the rise of incarceration may have produced about a quarter of the decline in crime that has occurred since the early 1990s.[111] Other studies have found this effect to be as low as five percent.[1,109,110] The second primary research finding on the effects of incarceration is that there are diminishing returns to public safety.[110] A key factor underlying this conclusion is that lengthy prison terms keep individuals behind bars long after they present a significant risk to public safety.[1,110] Further, incarceration has negative health impacts on those who are incarcerated with studies noting higher rates of infectious diseases, mental health diagnoses, substance use disorders, and overall lower life expectancy.[1,23,110] Birthing people in correctional facilities face even more unique issues such as issues related to breastfeeding, the possibility of being shackled while giving birth, lack of access to prenatal care, as well as the trauma of being separated from their newborns.[1,23,110]

There have also been efforts to address the length of prison terms in both the federal and state systems. At the federal level, the most impactful shift has been the decisions by the U.S. Sentencing Commission to revise drug offense guidelines downward, initially for crack cocaine offenses and subsequently for all drug offenses, and then to apply those revisions retroactively.[1,110] In state corrections systems, approaches to reduce sentence lengths have been relatively modest. While twenty-nine states have adopted reforms to mandatory sentencing procedures since 2000, many of these have been narrow in scope, and as a result the impact of reform may be limited.[112] Half of the states still maintain life sentencing policies of "three strikes and you're out" habitual offender laws, and more than half limit parole consideration (generally until eighty-five percent of a sentence has been served) due to the adoption of "truth in sentencing" laws that apply to many convictions.[113] Experts argue that future reforms are still needed to address mass incarceration, these include, but are not limited to removing prior conviction enhancements, providing for judicial discretion in sentencing, and adequate support systems and services for successful reentry into the

community.[1,112] Ongoing research is essential to assess the effects of sentencing reform on individuals who have been incarcerated and public safety.

RECOMMENDATIONS

The Board of Trustees recommends that the following be adopted in lieu of Resolution 215-I-23, and the remainder of this report be filed.

1. Our AMA: (1) recognizes the negative impacts associated with prolonged incarceration, including on the physical and mental health of justice-involved individuals and their families, (2) supports efforts to reduce the reliance on incarceration, particularly for non-violent offenders, with recognition that rehabilitation and successful reentry into the community requires adequate support systems and services, (3) supports a system of continuous review of sentences for individuals who are incarcerated providing the opportunity for those who demonstrate rehabilitation and pose a minimal risk to society to be considered for early release, and (4) supports providing judges with the discretion to help ensure that sentences are fair and fit the crime, while protecting against unjust and inconsistent results. (New HOD Policy)
2. Our AMA supports additional research to assess the effects of sentencing reforms on the health impacts of individuals who have been incarcerated and public safety. (New HOD Policy)
3. That our AMA reaffirm the following policies: D-430.992 "Reducing the Burden of Incarceration on Public Health," H-95.899, "Restorative Justice for the Treatment of Substance Use Disorders;" H-95.901, "Drug Policy Reform," H-80.993, "Ending Money Bail to Decrease Burden on Lower Income Communities" (Reaffirm HOD Policy)

Fiscal Note: Minimal - less than $1,000

APPENDIX I - Successful State Reforms to Mandatory Minimum Sentencing

California's Proposition 47	Proposition 47 which passed in 2014, reclassified several property and drug offenses as misdemeanors and led to retroactively reduced sentences.[114] Within three months, almost 9,000 people had been released from California correctional facilities; within one year, that became 13,000 people. Evaluations of Proposition 47 have shown that it led to an immediate 15 percent decline in total drug arrests and a 20 percent decline in property crime arrests, as well as a reduction in racial disparities in arrest rates.[111] Analyses of Proposition 47 impact on crime rates in California have found that the proposition's passage was not associated with a change in violent crime rates, although larceny theft increased modestly following passage.[111] Proposition 47 also reduced recidivism: two-year rearrest and reconviction rates were significantly lower for people released after serving sentences for Proposition 47 offenses compared to their pre-reform counterparts.[115]
New York's Rockefeller Drug Law Reform	In 2009, the New York State Legislature passed full repeal of New York's Rockefeller Drug law and replaced it with a different statutory structure.[116] This sentencing reform permitted drug treatment and alternative-to-prison programs instead of prison sentences and set shorter sentence lengths for those still permitted to be imprisoned for felony drug convictions.[113] An impact study of these reforms found that in the nine months prior to Rockefeller Drug Law repeal, Black and Latinx people were three times more likely than white people to receive a prison sentence following a felony drug arrest.[117] After the drug law reforms, they were twice as likely as white people to go to prison—a 33 percent reduction in a disparity that researchers concluded could not be explained by factors other than race.[114] A follow-up on both sample groups showed that those sentenced to diversion after the reforms had 43 percent fewer rearrests than those sentenced to incarceration.[114]
Illinois	From 1980 to 1983, Illinois corrections officials released 21,000 incarcerated individuals—or 10 percent of the prison population—to alleviate the state's severe prison overcrowding, brought about in part by a huge increase in prosecutorial staffing and the state's move from indeterminate to determinate sentencing.[118] The largest portion of people released were convicted of burglary (26 percent) and armed robbery (15 percent).[115] The average sentence reduction per person was about 105 days, or 12 percent.[115] For the people released early who did go on to commit crimes, these accounted for less than 1 percent (4,500 arrests) of all recorded arrests for the three-year period covering their releases.[115]

REPORT OF THE BOARD OF TRUSTEES

B of T Report 16-A-25

Subject:	Research Correcting Political Misinformation and Disinformation on Scope of Practice
Presented by:	Michael Suk, MD, JD, MPH, MBA, Chair
Referred to:	Reference Committee B

INTRODUCTION

At the 2024 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted Policy D-405.968, "Research Correcting Political Misinformation and Disinformation on Scope of Practice," which calls for the following:

> That our AMA Board of Trustees perform a comprehensive literature review on current research on correcting political misinformation and disinformation and conduct field research on ways to correct political misinformation and disinformation amongst policymakers as it pertains to scope of practice. (Directive to Take Action)
>
> That our AMA Board of Trustees report its findings and recommendations to the HOD on correcting political misinformation and disinformation and that our AMA incorporate these findings to the extent possible into our AMA's advocacy efforts on scope of practice. (Directive to Take Action)

This report will provide an overview of the current research on correcting political misinformation and disinformation, as well as highlight field research currently underway by our AMA based on learnings from this literature review.

BACKGROUND

The topic of how to correct misinformation and disinformation has garnered much attention over the last decade, particularly as the internet and social media platforms have increased the ability for misinformation and disinformation to spread.[1] Misinformation and disinformation can occur across various disciplines such as health, the environment, politics, and crime[2] and can include "inaccurate news, conspiracy theories, disinformation campaigns, propaganda, and slanted reporting."[3] Misinformation can be created and spread by individuals, organizations, government entities, politicians, corporations, and/or the media.[4] In contrast to disinformation, there does not need to be mal-intent or even intent to mislead for something to qualify as misinformation. Indeed, misinformation can even arise unintentionally, such as through reporting on evolving events like natural disasters where information changes as the event unfolds and new information becomes available.[5] The scientific process also lends itself to refinement over time, "this piecemeal approach to knowledge construction is the very essence of the scientific process, through which isolated initial findings are sometimes refuted or found not to be replicable."[6]

© 2025 American Medical Association. All rights reserved.

For the purposes of this report, the Board of Trustees has been asked to focus its research on how best to correct political misinformation and disinformation. It is important to understand that the leading scholars on this issue caution that the issue is complex and there is no one-size fits all solution.[7] The ability to correct misinformation may depend on a variety of factors, such as the credibility of the source of information, whether the information aligns with one's personal beliefs, and whether the information aligns with one's social and political identities.[8] That said, studies do reveal some techniques that have shown promise in effectively correcting misinformation. In November 2023, the American Psychological Association published a Consensus Statement entitled*, Using Psychological Science to Understand and Fight Health Misinformation* (*APA Consensus Statement*). The *APA Consensus Statement* describes the body of research on the psychology of misinformation, noting that experts remain divided on many key issues, including "how to define misinformation clearly, how to quantify how many people are regularly exposed to it, what factors make people susceptible to believing and hearing it online and offline, and how best to counter the problem at scale."[9]

Defining Misinformation and Disinformation

There is not a commonly agreed upon definition for misinformation or disinformation. The *APA Consensus Statement* defines misinformation as "any information that is demonstrably false or otherwise misleading, regardless of its source or intention"[10] and goes on to distinguish between misinformation and disinformation, specifying that disinformation involves an explicit intent to deceive or manipulate others. The *APA Consensus Statement* elected to focus on the broader term of misinformation, noting the difficulty in proving motive, and thus the challenge in distinguishing between misinformation and disinformation.[11]

Other scholars in this area have offered the following definitions:

- Misinformation occurs when false information is shared, but no harm is meant;
- Disinformation occurs when false information is knowingly shared to cause harm; and
- Malinformation occurs when "genuine information is shared to cause harm, often by moving information designed to stay private into the public sphere."[12] Malinformation has also been defined as information that stems from the truth but is exaggerated in a way that misleads and causes potential harm.[13]

Theories for Correcting Misinformation

Much of the literature on corrective techniques focuses on misinformation not disinformation or malinformation. Misinformation corrective techniques may focus on correcting specific messages or teaching individuals how to spot manipulation techniques and stop the spread of misinformation.

The *APA Consensus Statement* describes the following four corrective techniques found in literature on this topic:

1. Debunking or fact-checking;
2. Inoculation theory or prebunking;
3. Literacy interventions; and
4. Nudging.

A separate meta-analysis comparing the effectiveness of techniques used to correct misinformation across science, health, politics, marketing, and crime focuses on the following common corrective techniques.

These techniques overlap with those in the *APA Consensus Statement* as noted below:

1. Appeals to consensus (similar to nudging);
2. Coherence (part of the corrective technique in debunking);
3. Source credibility (similar to literacy interventions);
4. Fact-checking (similar to debunking); and
5. Providing general warnings (similar to inoculation).

Debunking or Fact-Checking

Debunking or fact-checking is a common corrective technique used to state the inaccuracy of information, why it is incorrect, and often followed-up with the correct information. Unlike the inoculation or prebunking technique, which will be discussed below, this technique is used after misinformation has already been shared. Fact-checking is commonly used during political debates either in real-time or post-debate.

In general, studies have found that debunking alone is ineffective. One reason cited is because individuals tend to follow conversational norms and assume that speakers are truthful. Individuals may also continue to believe misinformation despite attempts to fact-check due to the "continued influence effect," in which misinformation retains its perceived truth despite attempts to correct.[14] In other words, fact-checking does not fully remove the false information from one's memory and familiarity with a message – even if it is incorrect – can increase its perceived truth. For example, one study found that debunking misinformation rarely eliminated one's reliance on misinformation, reducing references by only about 50 percent.[15] Studies also point to the importance of the tone of the correction, noting that authoritative retractions can be especially ineffective and may lead individuals to further entrench in the misinformation. The use of negative emotions in the correction has also been studied. For example, one study examining the use of emotions in corrective techniques related to tobacco found that the use of negative emotions was more effective than a simple correction; however, authors of the study caution that their findings are limited to the controlled setting in which they were examined and cannot be generalized.[16]

Research has found that the effectiveness of debunking increases when paired with other corrective methods, such as following up with correct information. According to several researchers, refuting the misinformation and replacing it with correct information has proven effective because it maintains the coherence of the story.[17] Indeed, leaving gaps in a narrative can limit the effectiveness of a corrective technique. Similarly, simple explanations are preferred over complex explanations.[18]

Inoculation Theory or Prebunking

Inoculation theory was originally developed by McGuire in the 1960s as a strategy to prevent misinformation from influencing individuals by building an individual's resistance to persuasion. Unlike fact-checking, inoculation or prebunking occurs before an individual receives the misinformation. The idea is to inoculate an individual by providing them with a weakened form of the misinformation, share why it is inaccurate, and provide clues on how one might be able to spot it in the future.[19] The theory has evolved to include both inoculating against specific messages and providing general mechanisms or forewarnings on how to spot common manipulation tactics.[20] Using inoculation techniques for specific issues typically involves two parts (1) identifying the threat, and (2) refutational preemption (prebunking). The threat component includes a warning that an individual will hear a specific piece of misinformation plus a less convincing version of the falsehood. This warning is then followed up with a refutational preemption or prebunking, i.e., the

correct information.[21] Noting the challenges with prebunking every piece of misinformation, researchers have turned to using inoculation to inform individuals on how to spot common manipulations techniques used to spread misinformation. These are often gamified and include platforms like "Bad News," (https://www.getbadnews.com/en) a role-playing game that teaches users manipulation techniques and awards them points for crafting a misinformation campaign that attracts followers, with the intent to make them better informed and able to spot misinformation in their daily lives.[22] Truth Labs for Education (https://inoculation.science/inoculation-videos/), is another example. Truth Labs for Education is a collaboration between Cambridge University, the University of Bristol, and Google Jigsaw that also has a series of videos aimed at inoculating individuals against common manipulation techniques used to spread misinformation. Similarly, Google has a series of videos (https://prebunking.withgoogle.com/) aimed at helping individuals spot manipulation techniques and providing guidance on how to successfully prebunk misinformation. Notably, there is overlap with these inoculation techniques and the literacy interventions and nudging techniques described below.

Inoculation has proven an effective technique in preempting the effect of misinformation. For example, one study found that inoculation of specific messages on climate change proved effective.[23] Researchers have also found that corrective actions including both a forewarning and preemptive refutation (prebunking) of the misinformation was most effective.[24] Since it would be nearly impossible to perform inoculation against each and every falsehood, studies have also measured the scalability of inoculation techniques across issues. The findings are promising. For example, studies have found that an individual who has been inoculated against one falsehood is less likely to be susceptible to misinformation in other contexts.[25] Similarly, a systemic review and meta-analysis confirmed this phenomenon finding that inoculation is "effective in creating more resistant attitudes against misinformation while improving truth discernment."[26] Studies have also found that inoculation can have long term effects – up to a week – and up to three months with brief reminders ("booster shots") of the inoculation.

Researchers, however, note that there are limitations with inoculation, including that most studies on the effectiveness of inoculation are done in controlled environments with only a few studies examining its effectiveness in correcting real-world misinformation.[27] In addition, most studies in this body of research focus on the effectiveness of inoculation techniques in improving the identification of misinformation. More research is needed on the effectiveness of inoculation in replacing misinformation with accurate information.

Literacy Interventions

Literacy intervention techniques are focused on improving an individual's ability to discern the accuracy of information and spot misinformation. As mentioned above, this technique often incorporates inoculation theories. The *APA Consensus Statement* describes this technique in terms of health literacy, media literacy, and digital literacy. Health literacy includes informing individuals how to evaluate health content for quality or accuracy. Media literacy includes the ability to evaluate the quality of print and online media and digital literacy includes the ability to properly execute tasks online.[28] These interventions often occur in formal settings, including schools, universities, and community centers.

In terms of the effectiveness of these approaches, the *APA Consensus Statement* describes mixed results, noting that there may be some short-term benefits, but that interventions may require a significant investment of time and resources (e.g., interventions lasting more than five hours were more likely to be effective than those lasting one hour).[29] In addition, the report notes that few

studies have focused on or shown a lasting effect of literacy interventions, challenging their long term impact.[30]

Nudging

Unlike the techniques described above, which are often focused on correcting misinformation, nudging is a technique used to encourage behavioral changes in individuals, such as encouraging them to correctly identify misinformation. Anti-misinformation nudges may include accuracy nudges, social-norm nudges, and motivational nudges.[31] Accuracy nudges encourage people to reflect on the importance of only sharing accurate information with others. Per the *APA Consensus Statement*, "social-norm nudges are geared toward news-sharing behavior and emphasize either injunctive norms (i.e., behaviors most people find acceptable or not) or descriptive norms about it (i.e., how other people respond in certain situations)."[32] Finally, motivational nudges "seek to motivate people to be as accurate as possible (e.g., paying them to correctly identify true and false news)."[33]

In general nudging is a systems-based technique aimed at correcting one's behavior rather than a technique used to correct misinformation related to specific topics or specific messages. For example, X and TikTok have, at times, integrated nudging techniques into their platform to encourage users to examine the veracity of the information and re-consider whether it should be shared with others.[34] Some have suggested that when inoculation is combined with nudging, the effectiveness of both techniques increases.[35]

In terms of the effectiveness of nudging, a meta-analysis described in the *APA Consensus Statement* "found that accuracy nudges were effective overall at improving sharing discernment, although this effect was both small and heterogeneous."[36] Similarly, a field study on X, when it was known as Twitter, found that social norm nudges were effective in improving the identification of misinformation.[37] Finally, motivational nudges, including paying people to correctly identify misinformation, were also found effective in both improving people's ability to accurately identify misinformation and reducing any partisan bias when reviewing information.

However, researchers also note mixed findings on studies of the effectiveness of nudging, as well as some general limitations. Notably, there is concern that effectiveness may be short-lived and wear off after several repetitions.[38] Nudging may also be less effective toward individuals who do not want to be nudged.[39]

DISCUSSION

The body of literature on techniques to correct political misinformation and disinformation provides guidance which may be applicable to correct myths often used by those supporting inappropriate scope of practice expansions. As noted in the literature, however, correction of political misinformation poses unique challenges, as research consistently shows people are more resistant to changing political beliefs compared to other domains. This resistance appears particularly strong among educated political partisans, suggesting that corrective techniques relying solely on increased education or providing additional information on a topic may be insufficient. This may be particularly true among legislators. Indeed, researchers have noted that an individual's worldview or ideology can play a key role in one's susceptibility to misinformation and the effectiveness of corrective techniques. Correcting political misinformation may also be faced with suspicion due to perceived motivations behind the misinformation and those correcting the misinformation.

Scholars have also shared limitations in this body of research. For example, much of the research has been done in a controlled setting, therefore, these techniques may not have the same level of effectiveness when replicated in a real-world environment. Finally, these theories are often tested on specific age groups or the general population, not policymakers or lawmakers, making it difficult to know whether these techniques will prove effective for this audience.

This literature review has been instrumental in providing the basis for our next step: assessing the effectiveness of these techniques to counter arguments related to scope of practice expansions. This step is currently underway and includes our AMA engaging in field research to test these techniques on specific messages often used by those supporting scope of practice expansions. Our AMA will incorporate findings from this field research into our scope of practice advocacy campaign. The cost necessary to implement Policy D-405.968, "Research Correcting Political Misinformation and Disinformation on Scope of Practice" including conducting the field research has already been approved and allocated by our AMA. With the directives having been accomplished, the Board of Trustees recommends rescinding this policy.

RECOMMENDATION

The Board of Trustees recommends the following recommendation be adopted and the remainder of the report be filed:

That our American Medical Association rescind Policy D-405.968, "Research Correcting Political Misinformation and Disinformation on Scope of Practice." (Rescind HOD Policy)

Fiscal Note: Less than $500.

REPORT 17 OF THE BOARD OF TRUSTEES (A-25)
Antidiscrimination Protections for LGBTQ+ Youth in Foster Care Report
(Reference Committee B)

EXECUTIVE SUMMARY

Background: During the 2024 Annual Meeting, the House of Delegates (HOD) referred for report the second Resolve of Resolution 224 titled, Antidiscrimination Protections for LGBTQ+ Youth in Foster Care. The resolve recommended, "that our AMA support efforts by the Department of Health and Human Services and other appropriate stakeholders to establish a reporting mechanism for the collection of anonymized and aggregated sexual orientation and gender identity data in the Adoption and Foster Care Analysis and Reporting System (AFCARS) only when strong privacy protections exist."

Discussion: LGBTQ+ youth, particularly transgender individuals, are disproportionately represented in the foster care system, facing significant challenges such as discrimination, mental health issues, and unstable placements. However, the lack of comprehensive data collection on sexual orientation and gender identity (SOGI) has hindered efforts to develop focused policies and interventions. Despite an unstable policy landscape, collecting SOGI data remains crucial.[i] Data collection enables child welfare agencies to better assess disparities, tailor services, and improve placement stability for LGBTQ+ youth.

This report explores considerations for integrating SOGI data into AFCARS, emphasizing the need for strong privacy protections. Creating a successful data strategy requires navigating political headwinds, concerns about privacy and data security, and varying state policies. To succeed, federal agencies can implement rigorous privacy measures, provide technical assistance to states, and ensure that SOGI data collection is voluntary and confidential. Moreover, ongoing collaboration between HHS, child welfare agencies, advocacy groups, and healthcare professionals is essential to establishing a sustainable reporting mechanism. Physicians and health care professionals play a key role by advocating for accurate data collection, safeguarding privacy, and ensuring that LGBTQ+ youth receive appropriate mental health and medical care.

Conclusion: Integrating SOGI data into AFCARS represents a critical step toward a more inclusive and equitable foster care system. With careful implementation, strong privacy protections, and support from healthcare professionals, this initiative can improve outcomes for LGBTQ+ youth and ensure that child welfare policies reflect the diverse needs of the children they serve.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 17-A-25

Subject:	Antidiscrimination Protections for LGBTQ+ Youth in Foster Care
Presented by:	Michael Suk, MD, JD, MPH, MBA, Chair
Referred to:	Reference Committee B

BACKGROUND

During the 2024 Annual Meeting, the House of Delegates (HOD) Resolve 2 of Resolution 224-A-2-24 titled, Antidiscrimination Protections for LGBTQ+ Youth in Foster Care was referred for report.[ii] The resolve recommended:

> RESOLVED, that our AMA support efforts by the Department of Health and Human Services and other appropriate stakeholders to establish a reporting mechanism for the collection of anonymized and aggregated sexual orientation and gender identity data in the Foster Care Analysis and Reporting System only when strong privacy protections exist.

Resolution 224-A-24 received mixed reviews when it was up for discussion in Reference Committee B. Testimony reflected that most LGBTQ+ groups believe that this data should be collected by the federal government "to enhance recruitment of foster homes, promote visibility for marginalized groups, help to analyze youth outcomes, and address disparities."[iii] However, there were serious concerns related to data privacy and overall child safety.[iv] Additional testimony highlighted the divide between which governmental body should collect SOGI data for LGBTQ+ youth, federal or state and local governments.[v]

DISCUSSION

The foster care system in the United States serves as a critical safety net for children and youth who are unable to remain in their homes due to abuse, neglect, or other family challenges. Administered at the state level with federal oversight and funding, the system provides temporary care and placement, aiming to ensure the safety, well-being, and permanency of children. (Permanency "is a permanent, stable living situation, ideally one in which family connections are preserved.")[vi] While the foster care system supports over 390,000 children annually, it faces significant challenges, including a shortage of foster families, disparities in outcomes for children of color and LGBTQ+ youth, and barriers to achieving permanency through reunification or adoption.[vii]

LGBTQ+ youth, particularly transgender individuals, are significantly overrepresented in the foster care system, with approximately 30 percent identifying as LGBTQ+ and five percent as transgender—far exceeding their representation in the general population.[viii] These youth face heightened risks of discrimination, mental health challenges, and disrupted placements due to systemic biases and lack of affirming care. Collecting sexual orientation and gender identity

(SOGI) data in the foster care system would be a critical step toward improving such outcomes for LGBTQ+ youth.[ix]

The U.S. Department of Health and Human Services (HHS) plays a central role in guiding and supporting efforts to collect SOGI data in child welfare. Within HHS, the Administration for Children and Families (ACF) oversees the Adoption and Foster Care Analysis and Reporting System (AFCARS), a national data system that tracks case-level information on children in foster care. Historically, AFCARS has not required the reporting of SOGI information.

However, recognizing the significant need for better data to serve LGBTQ+ youth, HHS and partnering agencies would make great strides in improving health outcomes by establishing a reporting mechanism for anonymized, aggregated SOGI data in AFCARS. These efforts would involve multiple interested parties – federal and state child welfare agencies, advocacy organizations, former foster youth, and experts in data collection and privacy – collaborating to design policies and practices that encourage SOGI data reporting.

A paramount concern in collecting SOGI information is ensuring strong privacy protections. Given the sensitive nature of sexual orientation and gender identity data, inappropriate disclosure can put youth at risk of stigma, discrimination, or even harm (for instance, some foster youth have been "outed" without consent, resulting in hostile reactions from caregivers).[x] Physicians and other healthcare professionals who care for foster youth understand the importance of confidentiality in maintaining trust; similarly, confidentiality is crucial when youth share SOGI information. The goal, therefore, is to develop data systems that yield valuable insights into LGBTQ+ foster youth's needs and the effectiveness of supportive interventions while rigorously safeguarding individual privacy. Federal guidance emphasizes that SOGI data collection must only proceed with measures to secure privacy, security, and civil rights – including robust consent practices and restrictions on data use.[xi] This report underscores the need for the establishment of a reporting mechanism for the collection of anonymized and aggregated sexual orientation and gender identity data into AFCARS and overview of privacy protections considerations.

Unstable Policy Landscape around Collection of Data among LGBTQ+ Communities

In recent years, the policy landscape has evolved to explicitly support the inclusion of SOGI data in foster care reporting. In 2016, under the Obama Administration, HHS's ACF issued a groundbreaking final rule to update AFCARS after over two decades; this rule would have, for the first time, required state child welfare agencies to collect and report SOGI-related data.[xii] The 2016 rule specified that youth ages 14 and older would be asked to voluntarily self-report their sexual orientation, and that agencies would report the sexual orientation of foster/adoptive parents and legal guardians, as well as whether a youth's entry into care involved family conflict related to SOGI. The ACF explained that these data points were intended to "better support children and youth in foster care who identify as LGBTQ+" by ensuring placement resources and services could be tailored to their needs. This policy marked a significant recognition at the federal level that SOGI data are integral to child welfare planning.

However, the implementation of the 2016 AFCARS SOGI data requirements was halted and reversed under the first Trump administration. The rule's effective date was delayed multiple times in 2017–2018, and by 2019 HHS proposed rescinding the SOGI elements, citing a desire to reduce reporting burden and concerns that sexual orientation data were "too sensitive and private" for a government record.[xiii] In May 2020, a final rule was issued that eliminated the collection of sexual orientation data from AFCARS entirely.[xiv] This rollback was met with strong opposition from advocacy groups and some state officials, who argued that removing SOGI data "is a huge mistake

that will harm the children we serve," making LGBTQ+ youth and their outcomes "invisible" in national statistics.[xv] Massachusetts youth advocates responded by urging their state to collect and report SOGI data on its own, condemning the federal withdrawal as an "abandonment" of responsibility to LGBTQ foster youth.[xvi] The policy back and forth between 2016 and 2020 highlighted that, absent federal requirements, efforts to gather SOGI data would rely on state-level initiative or future policy changes.

The pendulum continues to swing regarding SOGI data collection. In June 2022, President Biden issued Executive Order 14075 on Advancing Equality for LGBTQI+ Individuals, which explicitly directs federal agencies to improve SOGI data collection while safeguarding privacy.[xvii] This order led to the creation of a Federal Evidence Agenda on LGBTQI+ Equity and an HHS-led SOGI Data Action Plan in 2023.[xviii,xix] The HHS SOGI Data Action Plan calls on the entire department to enhance the health and well-being of all Americans by systematically collecting SOGI data in its programs, "whenever data on other demographic characteristics are collected."[xx] In practice, this means HHS operating divisions and staff divisions would be reviewing their data systems (including those for foster care) to add SOGI variables where feasible.[xxi] The plan urges updating binary gender categories to be more inclusive and ensuring that SOGI questions would be incorporated into demographic data collection as soon as possible.[xxii] This renewed policy emphasis from HHS leadership signaled strong support for establishing a SOGI reporting mechanism in AFCARS. Additionally, various states and localities have enacted their own policies to gather SOGI data in social services – for example, California implemented a SOGI data collection law that added SOGI fields to statewide client databases – further building momentum for broader adoption.[xxiii] However, in January 2025, President Trump rescinded Executive Order 14075 and other key policies aimed at protecting LGBTQ+ individuals, reversing federal efforts to collect SOGI data in foster care, health care, and other social services while also limiting anti-discrimination protections across multiple agencies.[xxiv,xxv]

Benefits of Collecting SOGI Data in Foster Care

Collecting SOGI data within AFCARS stands to yield significant benefits for the well-being of children and adolescents in foster care, particularly those who are LGBTQ+. One of the clearest benefits is the ability to identify and address health inequities and needs more accurately. LGBTQ+ youth in care face distinctive health challenges – for example, higher rates of depression, suicidal ideation, and trauma related to identity-based rejection.[xxvi] If child welfare and health care professionals know how many individuals are affected and can correlate that with health outcomes, they can better allocate mental health services, counseling, and support programs. For instance, if data reveal that a substantial percentage of foster youth identify as transgender, agencies can ensure there are clinicians trained in gender-affirming care available for consultations. Similarly, if lesbian, gay, or bisexual youth in care show higher utilization of emergency mental health services, that could prompt focused preventive interventions (such as support groups or mentoring programs to build resilience). In short, what gets measured gets addressed – by capturing SOGI information, the foster care system can move from anecdotal awareness of LGBTQ+ youths' struggles to quantitative evidence that spurs more efficient and effective health care planning and resource allocation.[xxvii,xxviii]

From a social services perspective, SOGI data helps ensure that policies and practices are inclusive. For example, knowing the proportion of youth identifying as LGBTQ+ can inform recruitment of foster families.[xxix] Agencies might invest more in recruiting affirming foster homes or training existing foster parents on LGBTQ+ issues if data show a high need. Essentially, SOGI data allows for a more individualized approach in a system that often has to take broad steps to address various challenges.

Physicians who work with foster children (e.g., pediatricians in foster care clinics, child psychiatrists) would see direct benefits too. Providing affirming sexual health counseling would benefit all of their patients, and could help close gaps for foster children, particularly those who identify as LGBTQ+. If a physician is aware that a patient is part of a population at elevated risk for certain issues, they can institute procedures and/or create systems that prompt focused screening and intervention. For example, a primary care doctor knowing their foster patient is LGBTQ+ might increase their frequency of screening for depression or anxiety. On a systemic level, health care professionals can partner with child welfare to develop trauma-informed, LGBTQ+-affirming care models when the need is documented.[xxx] Furthermore, data might reveal positive outcomes where supportive policies are in place, thereby guiding best practices that health care professionals can advocate for, and health systems can scale up.

Finally, at a human level, asking SOGI questions in a respectful manner can itself send a message of inclusion to youth of all identities. Many LGBTQ+ youth in particular report feeling invisible or misunderstood in systems of care. When a caseworker or health care professional asks about their identity in a validating way and that information is used to support them, it affirms to the young person that they are seen and valued. This can build trust in the system. Over time, as data-driven improvements take root, one would hope to see tangible benefits: reductions in homelessness among LGBTQ+ youth who have aged out of the foster care system, fewer incidences of bullying or abuse in placements, better mental health status, and more stable, affirming placements – all of which contribute to healthier outcomes.

Privacy Protections for SOGI Data in Foster Care

Privacy laws are a critical component that ensure sensitive information is protected. Any state that receives a grant under the Child Abuse Prevention and Treatment Act (CAPTA), "must provide an assurance that it has in effect and is enforcing a state law that includes methods to preserve the confidentiality of all child abuse and neglect reports and records in order to protect the rights of the child and the child's parents or guardians, including requirements to ensure that the information is released only to certain individuals and entities."[xxxi,xxxii]

While foster care agencies are not considered "covered entities" under the Health Insurance Portability and Accountability Act (HIPAA), the principles of health information privacy are highly relevant to the collection of SOGI data. SOGI data can be considered sensitive, similar to health information, and should be safeguarded accordingly. Under HIPAA, any individually identifiable health information, including SOGI data in medical or counseling records must be protected and disclosed only for permitted purposes.[xxxiii] In April 2024, HHS reinforced these protections, preventing disclosure of health data for investigations related to gender-affirming care, further underscoring the expectation of privacy for SOGI-related information.[xxxiv]

Since AFCARS is an administrative database rather than a public health repository, any SOGI data collected would be subject to federal confidentiality rules, which also means federal laws such as the Privacy Act of 1974 applies to AFCARS data, requiring a System of Records Notice outlining its collection and use and restricting disclosure without consent. When properly anonymized and aggregated, SOGI data falls outside the scope of personally identifiable information and is not subject to HIPAA or Privacy Act restrictions. However, the initial collection of SOGI data—when attached to a youth's case—must be carefully managed under strict confidentiality rules.

Federal and State Legal Protections

In recent years, several federal directives have specifically addressed SOGI data privacy. Executive Order 14075, which as mentioned above was rescinded in early 2025, instructed agencies to safeguard privacy, ensure informed consent, and limit the use of SOGI information.[xxxv] The Trump administration also rescinded the March 2021 Department of Justice (DOJ) memo providing that DOJ would apply the Supreme Court's holding in *Bostock v. Clayton County*[xxxvi] (that Title VII of the Civil Rights Act of 1964 protects employees against discrimination and unjust termination based on their sexual orientation or gender identity) in the context of Title IX and, accordingly, Section 1557, weakening protections.

However, federal civil rights laws including Title VI of the Civil Rights Act continue to prohibit discrimination based on sex, which includes sexual orientation and gender identity; reinforcing the notion that SOGI data should be used to prevent disparities, not perpetuate discrimination.

State laws also impact SOGI data collection in foster care. Child welfare information, including SOGI details, is generally protected under state confidentiality statutes, limiting access to authorized parties such as case workers and health care professionals.[xxxvii] Some states have taken proactive steps to affirm LGBTQ+ youth rights. For instance, California's Foster Youth Bill of Rights (AB 175) ensures that youth are referred to by their preferred name and gender pronouns.[xxxviii] Additionally, California's AB 959 mandates SOGI data collection across state programs, leading to its inclusion in child welfare databases like Child Welfare Services/Case Management System.[xxxix]

However, some states have enacted laws hostile to LGBTQ+ rights, such as bans on gender-affirming care or restrictions on discussing LGBTQ+ issues in schools.[xl] In such states, there are concerns that SOGI data could be misused. While foster care data is not public, legal safeguards must ensure that access to SOGI data remains restricted and not subject to improper demands. No lawful basis currently exists for law enforcement or other agencies to access SOGI data from child welfare records simply to enforce anti-LGBTQ policies. To ensure both the protection of sensitive information and the effectiveness of data collection, it is crucial to establish a secure and standardized approach.

SOGI data collection at the federal level ensures consistency, comparability, and comprehensive national oversight. Federal agencies like the CDC and HHS generally have the infrastructure, resources, and reach necessary to gather or support standardized data across states, which is essential for identifying disparities and informing equitable public health and policy interventions. While state and local governments can complement these efforts with localized data collection, relying solely on them could risk inconsistency and incomplete data due to varying political climates and resource limitations. A federal framework with assistance to state and local governments and clear guidelines and privacy protections would strike a balance, ensuring LGBTQ+ populations are accurately represented and better served nationwide.

Addressing Privacy Concerns

Despite safeguards, privacy risks remain. A primary concern is the unintended disclosure of a youth's LGBTQ+ status, which can lead to stigma, discrimination, or even removal from supportive placements. Reports from the Government Accountability Office highlight cases where case workers or foster parents inappropriately disclosed a youth's SOGI information, leading to harm.[xli] Additionally, in politically charged environments, concerns persist that SOGI data could be

accessed for punitive purposes, similar to efforts in some states to obtain medical records related to gender-affirming care.[xlii]

To mitigate these risks, agencies must uphold strict need-to-know access policies, ensuring SOGI data is only accessible to those directly involved in the individual's care. Courts typically receive only information relevant to a proceeding, and SOGI data should not be included unless necessary. HHS has committed to publishing only anonymized and aggregated SOGI data, ensuring no individual can be identified.

Individual consent remains a fundamental protection. The scrapped 2016 AFCARS rule framed SOGI questions as voluntary for youth age 14 and older, a principle likely to carry forward in future implementation. Research suggests that youth are more likely to disclose SOGI information when assured of confidentiality.[xliii] Agencies can further enhance privacy by requiring explicit consent before sharing SOGI data with third parties, such as foster parents.[xliv]

From a security perspective, child welfare information technology systems already incorporate firewalls, encrypted databases, and role-based access to restrict data visibility.[xlv] Confidentiality agreements and mandatory staff training on LGBTQ+ cultural appropriateness reinforce ethical data handling.[xlvi,xlvii]

Challenges and Considerations

Implementing SOGI data collection in foster care could present several challenges that should be addressed.

Resistance and Pushback: Some interested parties, including state and local officials, argue that sexual orientation and gender identity are private matters and question their relevance to child welfare.[xlviii] Others cite concerns about workforce burden, including training, software updates, and data entry.[xlix] Political opposition has also hindered progress, with some fearing that collecting SOGI data may be misinterpreted as encouraging LGBTQ+ identification.[l] Additionally, religious objections from foster agencies and parents further complicate data collection efforts.[li,lii]

Ethical and Community Concerns: The voluntary nature of SOGI disclosure is crucial, as individuals in foster care may not yet feel comfortable identifying or may fear repercussions. LGBTQ+ advocacy groups generally support data collection for visibility and service improvements, but concerns about misuse persist. Another concern is if SOGI data is improperly accessed, LGBTQ+ youth in foster care could become targets for discrimination, harassment, or punitive actions, particularly in states with anti-LGBTQ+ policies. Given the vulnerability of foster youth, unauthorized disclosure of their SOGI status could lead to unsafe placements, rejection by caregivers, or even legal repercussions in hostile jurisdictions, underscoring the critical need for strict privacy protections.
Agencies must engage youth, community members, and organizations most impacted to ensure ethical data practices and accountability. Furthermore, collecting this data creates an obligation to use it effectively, rather than letting it sit unused.

Balancing Data Collection with Privacy: Protecting individual privacy is a top priority. Agencies must implement strict safeguards, ensuring that only authorized personnel access SOGI information. Training caseworkers on appropriate, sensitive questioning and confidentiality protocols is essential to prevent accidental disclosures or misuse. Agencies should also monitor for breaches and adjust policies as needed.

Resource and Operational Considerations: States differ in technical capacity, and under-resourced agencies may struggle to integrate new data fields. If HHS reinstates SOGI data requirements, funding and technical support will be needed. Ensuring accuracy is also a challenge, as incorrect data entry or assumptions by caseworkers could lead to harm. Systems should allow self-reporting and updates to reflect evolving identities.

Changing Political Winds: The collection of SOGI data has been subject to policy reversals, with one administration requiring it and another rescinding it. These shifts create uncertainty for states and child welfare workers. Establishing bipartisan professional consensus, supported by organizations like the American Academy of Pediatrics and the Child Welfare League of America, can help normalize SOGI data collection as a standard child welfare practice rather than a political issue.

To navigate these challenges, transparency is key. Agencies must clearly communicate why they are collecting SOGI data, how it will be used, and the protections in place. Engaging people and organizations most impacted, addressing concerns proactively, and demonstrating the benefits—such as improved services—can help build trust. For health care professionals, these challenges mirror the initial resistance to collecting other sensitive health data, underscoring the importance of careful implementation, privacy protections, and long-term commitment to better care for LGBTQ+ foster youth.

Current AMA policy

The AMA has adopted several policies to support LGBTQ+ individuals in health care, foster care, and legal protections. Below is a summary of these policies.

Promoting Inclusive Gender, Sex, and Sexual Orientation Options on Medical Documentation (H-315.967)

- Supports the voluntary inclusion of biological sex, gender identity, sexual orientation, and related data in medical records in a culturally sensitive way.
- Advocates for standardized data collection in medical research to improve patient care.
- Calls for collaboration with health IT vendors to ensure equitable treatment of patients regardless of gender identity.
- Supports the use of personal health records to reduce administrative burden.
- Urges the incorporation of best practices into electronic health records at no additional cost to physicians.

Protecting the Integrity of Public Health Data Collection (H-440.817)

- Advocates for the inclusion of sexual orientation and gender identity (SOGI) data in national and state health surveys, registries, and surveillance systems.
- Opposes the removal of SOGI data from such databases without a plan for updating demographic measures.

Medical Spectrum of Gender (D-295.312)

- Works to educate the medical community and the public on the diversity of gender identities.
- Supports policies that ensure access to quality healthcare for gender-diverse individuals.

- Affirms that an individual's gender, sex, and sexual orientation may not always align, recognizing gender identity as distinct from sex assigned at birth.

Opposing Mandated Reporting of People Who Question Their Gender Identity (H-65.959)

- Opposes laws requiring disclosure of patient information related to gender identity, gender dysphoria, intersex identity, or gender transition, including for minors.

Support of Human Rights and Freedom (H-65.965)

- Supports the dignity, equal rights, and non-discrimination of all individuals, including those of diverse gender identities and sexual orientations.
- Opposes hate crimes and advocates for legal protections against discrimination.

Encouraging LGBTQ+ Representation in Medicine (D-200.972)

- Advocates for targeted recruitment of LGBTQ+ students in medical education.
- Supports including SOGI data in demographic surveys to assess representation in medicine.
- Works with medical organizations to better understand and address the unique experiences of LGBTQ+ individuals in healthcare professions.

Nondiscriminatory Policy for the Health Care Needs of LGBTQ Populations (D-65.996)

- Encourages physicians to display a nondiscrimination policy in medical offices affirming inclusivity for all patients.

Nondiscrimination Policy (H-65.983)

- Affirms that the AMA does not and has never discriminated based on sexual orientation or gender identity.

LGBTQ+ Older Adults (D-65.979)

- Promotes awareness of aging-related LGBTQ+ health issues among the public, healthcare professionals, and policymakers.
- Supports cultural competency training for clinicians caring for LGBTQ+ older adults.
- Advocates for inclusive healthcare policies and practices in all settings.
- Calls for increased funding for research on LGBTQ+ aging and health disparities.

Health Care Needs of LGBTQ+ Populations (H-160.991)

- Encourages nonjudgmental recognition of LGBTQ+ identities in medical care.
- Supports physician education on LGBTQ+ health needs at all levels, from medical school to continuing education.
- Opposes conversion therapy.
- Collaborates with organizations to enhance physician competency in LGBTQ+ healthcare, including screening for conditions such as STIs and intimate partner violence.
- Promotes partnerships with LGBTQ+ communities to improve medical understanding and care.

Antidiscrimination Protections for LGBTQ+ Youth in Foster Care (H-60.895)

- Supports federal and state policies that protect LGBTQ+ youth from discrimination in the foster care system.
- Advocates for training child welfare professionals and foster caregivers to create safe and affirming placements.
- Promotes efforts to reduce violence against LGBTQ+ youth in foster care.
- Encourages recruitment of LGBTQ+-affirming foster families.
- Supports placing gender-diverse youth in homes that respect their identities.

Equal Access for Adoption in the LGBTQ+ Community (D-60.964)

- Advocates for equal adoption rights for LGBTQ+ individuals meeting federal criteria.
- Encourages government funding for child welfare agencies that provide inclusive adoption services.

Reducing Suicide Risk Among LGBTQ+ Youth (H-60.927)

- Partners with public and private organizations to reduce suicide rates and improve mental health for LGBTQ+ youth.

Promotion of LGBTQ+ Friendly and Gender-Neutral Intake Forms (D-315.974)

- Supports the development and implementation of inclusive medical documentation and forms to ensure accurate patient data collection.

Endorsing LGBTQ+ Research IRB Training (D-460.966)

- Advocates for standardized Institutional Review Board (IRB) training on research involving LGBTQ+ populations.

Nondiscrimination in Healthcare (H-65.976)

- Encourages medical institutions to include sexual orientation and gender identity in nondiscrimination policies for patients, employees, and healthcare workers.

Preventing Anti-Transgender Violence (H-65.957)

- Calls for increased public education on hate crimes against transgender individuals, particularly Black transgender women.
- Advocates for law enforcement data collection on transgender hate crimes and improved reporting.
- Supports stronger policies to prevent bias in law enforcement interactions with transgender individuals.
- Promotes increased access to mental health care and resources for LGBTQ+ individuals.

Youth and Young Adult Suicide Prevention (H-60.937)

- Recognizes youth suicide as a serious health crisis.
- Supports physician education on suicide prevention, screening, and intervention.
- Advocates for increased mental health resources, research, and targeted programs for high-risk populations, including LGBTQ+ youth.
- Calls for public awareness and policy action to address youth mental health crises, particularly post-COVID-19.

Conclusion

Integrating SOGI data into AFCARS is a critical step toward a more equitable child welfare system. This report highlights the importance of collecting SOGI data with strong privacy protections to improve policies, practices, and health outcomes for LGBTQ+ youth, who are overrepresented in foster care yet remain largely invisible in national data. While some federal protections have gone away, other protections like HIPAA, the Privacy Act, and confidentiality laws ensure privacy safeguards, while modern technology enables secure and anonymized data collection.

Establishing a secure and anonymized SOGI data reporting system aligns foster care systems with broader public health goals, advancing health equity for LGBTQ+ youth. With careful implementation, this initiative can build trust, ensure safer placements, and improve long-term outcomes. Achieving these goals requires ongoing collaboration among HHS, child welfare agencies, health care professionals, and the youth themselves. Supporting SOGI data collection while upholding the highest privacy standards, would be a vital step toward a more inclusive, responsive foster care system—one that truly serves and protects all children.

RECOMMENDATION

The Board therefore recommends that Resolve 2 of Resolution 224-A-24 be adopted and the remainder of the report be filed:

1. That our AMA support efforts by the Department of Health and Human Services and other appropriate stakeholders to establish a reporting mechanism for the collection of anonymized and aggregated sexual orientation and gender identity data in the Adoption and Foster Care Analysis and Reporting System only when strong privacy protections exist. (New HOD Policy)

Fiscal Note: To be determined.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 21-A-25

Subject: Advocacy for More Stringent Regulations/Restrictions on Distribution of Cannabis (Res. 515-A-24)

Presented by: Michael Suk, MD, JD, MPH, MBA, Chair

Referred to: Reference Committee B

INTRODUCTION

At the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 515-A-24, "Advocacy for More Stringent Regulations/Restrictions on Distribution of Cannabis," was adopted. This resolution resulted in Policy D-95.954, which directed the AMA "to study possible legislative, legal or regulatory means to make the cannabis industry responsible for increasing costs of medical and social care for people affected by the problems caused by cannabinoids similar to regulations for smoking cessation in the United States." Delegates' testimony, while limited, focused primarily on the need to cover the costs of treatment, effects of high-potency cannabis and cannabis-derived products, and medical impacts on individuals who use cannabis and cannabis-derived products. This report provides relevant background, discusses issues raised by the resolution, cites AMA policy, and makes recommendations.

BACKGROUND

As of the time of this report, cannabis was classified by the federal government as a Schedule I Controlled Substance. Without going into extensive detail, the Schedule I status has not prevented state-based legalization efforts. Almost every state has a robust legal and regulatory framework regulating cannabis. According to the National Conference of State Legislatures (NCSL), at least 47 states, the District of Columbia, and three territories (Guam, Puerto Rico, and the U.S. Virgin Islands) allow for the use of cannabis for medical purposes and/or low tetrahydrocannabinol (THC), and cannabidiol (CBD) products.[1] In general, each state defines the type(s) of qualifying medical condition(s) to authorize the personal use of cannabis for medical purposes. These laws have been adopted via legislative and/or ballot initiatives, and there are regulatory structures in each of these states, the District of Columbia, and the three territories, to implement the laws. All include requirements on cannabis growers, manufacturers, retailers, advertisers, home growers, and others. The NCSL also reports that at least 24 states and the District of Columbia allow for adult use of non-medical cannabis. The Board of Trustees (Board) notes that the AMA has worked closely with many medical societies on these laws.

Cannabis use is highly prevalent in the United States. In 2023, more than 43 million people over the age of 12 used cannabis in the past month, and 4.3 million people aged 12-20 used cannabis in the past month, according to the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA).[2] In 2022, nearly 62 million people used cannabis in the past year, according to SAMHSA.[3] "Teenage marijuana use is at its highest level in 30 years, and today's teens are more

© 2025 American Medical Association. All rights reserved.

likely to use marijuana than tobacco," according to the American Academy of Child and Adolescent Psychiatry,[4] and the AMA Council on Science and Public Health (CSAPH) has detailed the clinical implications and public health effects of cannabis use in multiple previous reports.[5] The Board has provided the HOD with multiple reports concerning cannabis.[6] Finally, the AMA Cannabis Task Force also was instrumental in helping design and record a multi-episode podcast series on issues ranging from cannabis pharmacology to screening tools to counseling patients.[7]

Given the resolution's reference to tobacco, the Board notes that in 1998, more than 50 state and territory attorneys general entered into a Master Settlement Agreement (MSA)[8] with the nation's four largest tobacco companies: Philip Morris, R.J. Reynolds Tobacco Company, Brown & Williamson Tobacco Corporation, and Lorillard Tobacco Company. The state attorneys general claimed that the tobacco industry engaged in a wide range of culpable activity, including deceptive marketing and advertising about tobacco-related harms, youth impacts, and more. Additional states entered into similar agreements at the same time. Several dozen additional participating manufacturers also settled pursuant to the MSA. The MSA created a wide range of restrictions on tobacco-related marketing and advertising and other requirements. The MSA provided that states would receive approximately $206 billion over the first 25 years with additional funds to follow, but public health advocates have observed that much of the money does not go to tobacco cessation or prevention programs.[9] State attorneys general continue to sue the tobacco industry for ongoing deceptive acts.[10]

DISCUSSION

State Activity

States have taken a wide range of actions to restrict minors' exposure to legalized cannabis and cannabis-related marketing and advertising. States that have authorized cannabis for medical use or adult use restrict such use and sales to those 21 years of age and older. Also, marketing and advertising restrictions are common in states. This includes restrictions on content targeting children; print, radio and internet advertising; ads and promotions within a certain proximity to schools; content on public transportation; event sponsorship; and more.[11] The Board also points out that CSAPH Report 1 entitled, "Cannabis Therapeutic Claims in Marketing and Advertising," which was adopted at the 2024 Interim Meeting, provided significant background, research and analysis regarding cannabis-related advertising and marketing. The CSAPH recommendations in this report included asking the AMA to continue to monitor regulatory approaches concerning cannabis advertising and marketing. Without diving too deeply into the effects of these regulations, the Board wants to emphasize that not only is it continuing to monitor regulatory approaches as recommended by CSAPH, but also that the AMA has extensive policy (see below) – as well as model state legislation and other advocacy resources to help its national, state, and national medical specialty society partners enhance marketing and advertising restrictions relating to cannabis.

Social and Medical-Related Costs

The data varies for cannabis-related social and medical costs. One study of 248 individuals with cancer reported a median out-of-pocket cost of $80 per month for cannabis use.[12] Another study estimated that the cost for treating cannabis use disorder ranged between $3.5-$5.5 billion in the aggregate for hospital-related costs.[13] Cannabis use also has been linked to "increased risk of psychosis or schizophrenia in some users," as well as increased risks during pregnancy.[14] The American Lung Association has collected multiple reports showing additional adverse health effects, including increased risk of bronchitis, decreased immune system response, and more.[15] Other research shows that, "a marijuana comorbidity increases the cost of treating patients with

alcohol problems and mood disorder diagnoses, implying that there may be real health consequences associated with marijuana abuse and dependence."[16]

Cannabis use has been linked to a wide range of other costs, including how "cannabis use has been shown to be associated with cognitive decline, impaired educational or occupational attainment, risk of other substance use disorders, and poor quality of life."[17] A 2024 study from the U.S. Federal Reserve Bank in Kansas City found that substance use disorders and homelessness increased in states that authorized cannabis for adult use; increased economic benefits for the states; and increased in offenses for intoxicated driving and disorderly conduct.[18] Other economic benefits include the tax revenue on U.S. sales of cannabis, which have been approximately $1.5 billion per month for several years—with projections for 2025 ranging between $30-$45 billion.[19] The cannabis beverage industry also is growing, as well. In fact, from an estimated $1.2 billion in 2023, the market is projected to grow to nearly $4 billion by 2030.[20] Depending on the type of individual cannabis or cannabis-derived product, the out-of-pocket cost to consumers can vary from $10 up to $100 (or more) for products such as pre-rolls, vapes, flowers, edibles, beverages, tinctures, oils, or topical creams. Depending on the amount purchased, a single product could cost several hundred dollars.

Use of Cannabis Tax Revenue

States vary significantly regarding how they distribute cannabis tax revenue. The most common allocation categories are state general funds, public health efforts (i.e., substance abuse prevention, mental health, etc.), recidivism, education, police enforcement, and transportation. While some states allocate 50 percent or more of cannabis tax revenue to public health efforts, some states allocate less than 10 percent. Most states allocate at least a portion of cannabis tax revenue to public health efforts. AMA Policy H-95.923 entitled, "Taxes on Cannabis Products," specifically "encourages states and territories to allocate a substantial portion of their cannabis tax revenue for public health purposes, including substance abuse prevention and treatment programs, cannabis-related educational campaigns, scientifically rigorous research on the health effects of cannabis, and public health surveillance efforts." The Board believes that states need to be more purposeful with respect to these allocations. As a result, the Board strongly supports public health uses for cannabis-related revenue and therefore, recommends that states enact policies to ensure that <u>at least 50 percent</u> of cannabis tax revenues are directed to these purposes.

Who Comprises the Cannabis Industry?

Before being able to hold an industry "responsible," per the directive contained in Resolution 515, it is important to identify who that industry represents. For example, the "cannabis industry" includes companies that manufacture cannabis products.[21] The "industry" also includes cannabis growers[22] and cannabis dispensary chains.[23] Moreover, there are numerous businesses that also fall under the definition of "cannabis industry" that provide legal, marketing, financial, and other supports to the cannabis industry—just like any other product in the United States. Unlike the large tobacco manufacturers, whose products, marketing, and other business practices were largely consistent across the nation, each cannabis company, manufacturer, and retailer is subject to the specific state (and in some cases, local) laws and regulations.

Legal Status and Enforcement of Cannabis Laws

The unique legal status of cannabis also deserves attention. First, the Board is aware of policy considerations at work regarding the rescheduling of cannabis. As noted above, cannabis is a Schedule I Controlled Substance, and there is no interstate commerce in cannabis. Yet, most states

have authorized its use, and the federal government will generally not interfere in a state's regulatory authority governing retail or adult use if a state has authorized either or both. It is beyond the scope of this report to speculate about the implications of potential rescheduling or even the potential impacts of reclassifying hemp-derived cannabis products as cannabis. This is not to say that the federal government has not enforced the law.[24]

There also are multiple efforts already underway to hold the various players and entities that make up the "cannabis industry" responsible for cannabis-related harms. This includes state attorneys general that have been active in enforcing state laws regulating cannabis. For example:

- Colorado's attorney general filed suit against a cannabis company for alleged illegal marketing that exposed people under the age of 21 to high-potency cannabis products.[25]
- New York's attorney general successfully sued a cannabis dispensary operating without a license. [26]
- Connecticut's attorney general sued multiple companies for alleged violations of the state Unfair Trade Practices Act, including failure to comply with testing standards and misleading packaging designed to appeal to children.[27]
- The Missouri attorney general launched inquiries into multiple businesses that sell Delta-8 and Delta-9 goods on grounds that they potentially engaged in "deception, fraud, false promise, misrepresentation, unfair practices, and/or the concealment, suppression, or omission of material facts in connection with the sale or advertisement of CBD, Delta-8, and Delta-9 THC products."[28]
- The Nebraska attorney general filed suit against a business alleging violations for "failing to implement an age verification process, selling THC products to children, and selling products designed to appeal to children; Selling THC products which grossly understate or overstate the concentration of THC contained within the product and by failing to disclose which cannabinoids are contained in the product; Employing a purchase rewards program designed to increase sale frequency of addictive and psychoactive products, including to minors; and Selling THC products which are harmful when consumed."[29]
- The California attorney general filed suit against multiple companies, alleging the sale of "illegal inhalable hemp products in violation of Assembly Bill 45, failing to include warnings required by Proposition 65 for all commercial industrial hemp products, and engaging in unfair business practices."[30]

The Board emphasizes that these examples are just a snapshot into the legal actions taken by state attorneys general to enforce existing laws. In each case, the state lawsuit is based on specific state laws and regulatory requirements in effect. The Board believes that this is appropriate and commends the state attorneys general for these efforts.

There also are robust legal actions taken by the plaintiff's bar. This includes suits based on the federal Racketeer Influenced and Corrupt Organizations Act;[31] suits for deceptive marketing;[32] and product liability suits at the state and federal levels.[33] Furthermore, there are innumerable personal injury lawyers available to consider personal injury claims arising from cannabis use. The Board believes it is important to point out that there is no shortage of legal action already being taken to hold the cannabis industry responsible for alleged and real harms, as well as violations of state and federal laws.

AMA POLICY

The AMA has extensive policy regarding multiple aspects and issues concerning cannabis. This includes the AMA encouraging "states and territories to allocate a substantial portion of their cannabis tax revenue for public health purposes, including substance abuse prevention and treatment programs, cannabis-related educational campaigns, scientifically rigorous research on the health effects of cannabis, and public health surveillance efforts." (Policy H-95.923, "Taxes on Cannabis Products")

Related to the tobacco MSA, the AMA similarly "supports efforts to ensure that a substantial portion of any local, state or national tobacco litigation settlement proceeds be directed towards preventing children from using tobacco in any form, helping current tobacco users quit, and protecting nonsmokers from environmental tobacco smoke, and that any tobacco settlement funds not supplant but augment health program funding." (Policy H-495.983, "Tobacco Litigation Settlements")

The AMA also has complementary policy related to holding the pharmaceutical industry liable for actions related to "unethical and deceptive misbranding, marketing, and advocacy of opioids," which specifically calls on the AMA to support funds derived from opioid-litigation "be used exclusively for research, education, prevention, and treatment of overdose, opioid use disorder, and pain, as well as expanding physician training opportunities to provide clinical experience in the treatment of opioid use disorders." (Policy H-95-918, "Holding the Pharmaceutical Industry Accountable for Opioid-Related Costs") Importantly, the Board believes that these policies emphasize the need for the AMA to encourage policymakers that funds related to cannabis tax revenue—or proceeds from state attorneys general lawsuits for cannabis-related violations of law—these monies be directed to public health needs.

AMA policy also addresses multiple, additional legislative and regulatory issues. This includes advocating for "for regulations requiring point-of-sale warnings and product labeling for cannabis and cannabis-based products regarding the potential dangers of use during pregnancy and breastfeeding wherever these products are sold or distributed." (Policy H-95.936, "Cannabis Warnings for Pregnant and Breastfeeding Women")

The AMA broadly encourages states "to enforce cannabis-related marketing laws and to publicize and make publicly available the results of such enforcement activities." (Policy D-95.958, "Marketing Guardrails for the "Over-Medicalization" of Cannabis Use") The AMA also has created model state legislation and advocacy materials "to help states implement the provisions of AMA policies H-95.924, "Cannabis Legalization for Adult Use" and H-95.936, "Cannabis Warnings for Pregnant and Breastfeeding People" that currently do not have such model language, including regulation of retail sales, marketing and promotion (especially those aimed at children), misleading health claims, and product labeling regarding dangers of use during pregnancy and breastfeeding." (Policy D-95.956, "Cannabis Product Safety")

The Board further highlights AMA's considerable policy concerning restrictions on tobacco, including but not limited to Policy H-495.973, "FDA to Extend Regulatory Jurisdiction Over All Non-Pharmaceutical Nicotine and Tobacco Products." Although there was limited testimony to provide specific direction, based on all of the above, the Board recommends using AMA's tobacco policy as a guide to further the AMA's cannabis-related policy and adopting new and reaffirming existing policy to respond to the directive in Resolution 515-A-24. Finally, the Board recommends that Policy D-95.954, "Advocacy for More Stringent Regulations/Restrictions on the Distribution of Cannabis," be rescinded having been accomplished with this report.

RECOMMENDATIONS

The Board of Trustees recommends that the following recommendations be adopted, and the remainder of the report be filed:

1. That our American Medical Association (AMA) will advocate that any monies paid to the states, received as a result of a settlement or judgment, or other financial arrangement or agreement as a result of litigation for cannabis-related harms or violations of law, be used exclusively for research, education, prevention, and treatment of cannabis-related harms, as well as expanding physician training opportunities to provide clinical experience in the screening, diagnosis, and treatment of cannabis misuse and cannabis use disorder. (New HOD Policy)

2. That our AMA supports legislation and/or regulation of all cannabis products that:
    a. prohibits cannabis use in all places that tobacco use is prohibited, including in hospitals and other places in which health care is delivered;
    b. applies the same marketing and sales restrictions that are applied to tobacco cigarettes, including prohibitions on television advertising, product placement in television and films, and the use of celebrity spokespeople;
    c. prohibits product claims of reduced risk or effectiveness as tobacco cessation tools, until such time that credible evidence is available, evaluated, and supported by the FDA;
    d. requires the use of secure, child- and tamper-proof packaging and design, and safety labeling on all cannabis products;
    e. establishes manufacturing and product (including e-liquids) standards for identity, strength, purity, packaging, and labeling with instructions and contraindications for use;
    f. requires transparency and disclosure concerning product design, contents, and emissions; and
    g. prohibits the use of characterizing flavors that may enhance the appeal of such products to youth. (New HOD Policy)

3. That our AMA encourage state medical associations to strengthen existing cannabis marketing and advertising restrictions, including consideration of prohibitions on marketing and advertising to children. (New HOD Policy)

4. That our AMA support the review of conditions that states have approved to authorize cannabis for medical use and recommend the removal of those conditions without scientifically valid and well-controlled clinical trials supporting the use of cannabis. (New HOD Policy)

5. That Policy H-95.923, entitled “Taxes on Cannabis Products” be reaffirmed. (Reaffirm HOD Policy)

6. That Policy D-95.954, entitled “Advocacy for More Stringent Regulations/Restrictions on the Distribution of Cannabis,” be rescinded. (Rescind HOD Policy)

Fiscal Note: Less than $500.

AMERICAN MEDICAL ASSOCIATION

Resolution: 201
(A-25)

Introduced by: American Association of Neurological Surgeons, Congress of Neurological Surgeons, American Academy of Orthopaedic Surgeons, American College of Radiology

Subject: Inclusion of DICOM Imaging in Federal Interoperability Standards

Referred to: Reference Committee B

Whereas, the United States Core Data for Interoperability (USCDI), maintained by the Office of the National Coordinator for Health Information Technology (ONC), establishes standardized data elements that must be accessible, exchanged, and used across electronic health records (EHRs); and

Whereas, the Digital Imaging and Communications in Medicine (DICOM) standard is universally used in medical imaging and critical to the diagnosis and treatment of patients across numerous specialties; and

Whereas, imaging data are currently not a required component of the USCDI, thereby creating barriers to the seamless and timely exchange of DICOM images between healthcare systems, potentially leading to delayed care, repeat imaging, and increased healthcare costs; and

Whereas, federal electronic health record interoperability standards have made written imaging reports readily accessible between health systems, but DICOM-based imaging, the international standard for medical imaging, is not[1]; and

Whereas, current processes that include additional paperwork, navigating multiple proprietary image archive platforms and requesting physical compact discs by mail or hand delivery from patients and families[2] in order to share imaging between health systems are burdensome for patients, families, clinicians, and staff and inevitably result in delays[2]; and

Whereas, delays or barriers to accessing DICOM imaging results in delays in clinical care, suboptimal medical decision-making, and unnecessary duplication of imaging[3] with associated additional and unnecessary radiation exposure to the patient and financial and resource waste[4,5]; and

Whereas, the inclusion of DICOM imaging in federal interoperability standards would promote improved clinical decision-making, care coordination, patient safety, and outcomes by ensuring imaging is available at the point of care across institutions; and

Whereas, the American College of Radiology and other stakeholders are actively advocating for the incorporation of DICOM imaging into the USCDI; therefore be it

RESOLVED, that our American Medical Association support the addition of DICOM imaging to federal interoperability standards, namely the United States Core Data for Interoperability (USCDI), to promote standardized, interoperable image sharing across healthcare systems (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for policies and regulations requiring EHR and imaging archive system vendors to support the secure, efficient, and interoperable exchange of DICOM imaging data between healthcare entities. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

EHR Interoperability D-478.972
Our American Medical Association will enhance efforts to accelerate development and adoption of universal, enforceable electronic health record (EHR) interoperability standards for all vendors before the implementation of penalties associated with the Medicare Incentive Based Payment System.
1. Our AMA supports and encourages Congress to introduce legislation to eliminate unjustified information blocking and excessive costs which prevent data exchange.
2. Our AMA will develop model state legislation to eliminate pricing barriers to EHR interfaces and connections to Health Information Exchanges.
3. Our AMA will continue efforts to promote interoperability of EHRs and clinical registries.
4. Our AMA will seek ways to facilitate physician choice in selecting or migrating between EHR systems that are independent from hospital or health system mandates.
5. Our AMA will seek exemptions from Meaningful Use penalties due to the lack of interoperability or decertified EHRs and seek suspension of all Meaningful Use penalties by insurers, both public and private.
6. Our AMA will continue to take a leadership role in developing proactive and practical approaches to promote interoperability at the point of care.
7. Our AMA will seek legislation or regulation to require the Office of the National Coordinator for Health Information Technology to establish regulations that require universal and standard interoperability protocols for electronic health record (EHR) vendors to follow during EHR data transition to reduce common barriers that prevent physicians from changing EHR vendors, including high cost, time, and risk of losing patient data.
8. Our AMA will review and advocate for the implementation of appropriate recommendations from the “Consensus Statement: Feature and Function Recommendations to Optimize Clinician Usability of Direct Interoperability to Enhance Patient Care,” a physician-directed set of recommendations, to EHR vendors and relevant federal offices such as, but not limited to, the Office of the National Coordinator, and the Centers for Medicare and Medicaid Services.
Sub. Res. 212, I-15 Reaffirmed: BOT Rep. 03, I-16 Reaffirmed: Res. 221, I-16 Reaffirmed in lieu of: Res. 243, A-17 Reaffirmed: CMS Rep. 10, A-17 Appended: BOT Rep. 45, A-18 Reaffirmed: BOT Rep. 19, A-18 Appended: Res. 202, A-18 Appended: Res. 226, I-18 Reaffirmation: A-19 Reaffirmed: CMS Rep. 7, I-20 Reaffirmed: CMS Rep. 2, A-22

Consequences of Accepting Hospital and Health Care System Based EMRs/EHRs D-478.991
Our AMA will: (1) educate physicians regarding the potential adverse consequences of receiving EMRs/EHRs from hospitals and health care systems; and (2) encourage interoperability of information

systems used by hospitals and health care facilities. BOT Rep. 2, I-07Modified: CMS Rep. 01, A-17

Principles for Hospital Sponsored Electronic Health Records D-478.973

1. Our American Medical Association will promote electronic health record (EHR) interoperability, data portability, and health IT data exchange testing as a priority of the Office of the National Coordinator for Health Information Technology (ONC).
2. Our AMA will work with EHR vendors to promote transparency of actual costs of EHR implementation, maintenance and interface production.
3. Our AMA will work with the Centers for Medicare and Medicaid Services (CMS) and ONC to identify barriers and potential solutions to data blocking to allow hospitals and physicians greater choice when purchasing, donating, subsidizing, or migrating to new EHRs.
4. Our AMA will advocate that sponsoring institutions providing EHRs to physician practices provide data access and portability to affected physicians if they withdraw support of EHR sponsorship.

Information Technology Standards and Costs D-478.996

1. Our American Medical Association will:
    a. encourage the setting of standards for health care information technology whereby the different products will be interoperable and able to retrieve and share data for the identified important functions while allowing the software companies to develop competitive systems.
    b. work with Congress and insurance companies to appropriately align incentives as part of the development of a National Health Information Infrastructure (NHII), so that the financial burden on physicians is not disproportionate when they implement these technologies in their offices.
    c. review the following issues when participating in or commenting on initiatives to create a NHII:
        i. cost to physicians at the office-based level;
        ii. security of electronic records; and
        iii. the standardization of electronic systems;
    d. continue to advocate for and support initiatives that minimize the financial burden to physician practices of adopting and maintaining electronic medical records.
    e. continue its active involvement in efforts to define and promote standards that will facilitate the interoperability of health information technology systems.
2. Our AMA advocates that physicians:
    a. are offered flexibility related to the adoption and use of new certified Electronic Health Records (EHRs) versions or editions when there is not a sufficient choice of EHR products that meet the specified certification standards.
    b. not be financially penalized for certified EHR technology not meeting current standards.

National Health Information Technology D-478.995

1. Our American Medical Associaion will closely coordinate with the newly formed Office of the National Health Information Technology Coordinator all efforts necessary to expedite the implementation of an interoperable health information technology infrastructure, while minimizing the financial burden to the physician and maintaining the art of medicine without compromising patient care.
2. Our AMA:
    a. Advocates for standardization of key elements of electronic health record (EHR) and computerized physician order entry (CPOE) user interface design during the ongoing development of this technology.
    b. Advocates that medical facilities and health systems work toward standardized login procedures and parameters to reduce user login fatigue.
    c. Advocates for continued research and physician education on EHR and CPOE user interface design specifically concerning key design principles and features that can improve the quality, safety, and efficiency of health care.
    d. Advocates for continued research on EHR, CPOE and clinical decision support systems and vendor accountability for the efficacy, effectiveness, and safety of these systems.
3. Our AMA will request that the Centers for Medicare & Medicaid Services:

   a. Support an external, independent evaluation of the effect of Electronic Medical Record (EMR) implementation on patient safety and on the productivity and financial solvency of hospitals and physicians' practices.
   b. Develop, with physician input, minimum standards to be applied to outcome-based initiatives measured during this rapid implementation phase of EMRs.
4. Our AMA will
   a. seek legislation or regulation to require all EHR vendors to utilize standard and interoperable software technology components to enable cost efficient use of electronic health records across all health care delivery systems including institutional and community based settings of care delivery.
   b. work with CMS to incentivize hospitals and health systems to achieve interconnectivity and interoperability of electronic health records systems with independent physician practices to enable the efficient and cost effective use and sharing of electronic health records across all settings of care delivery.
5. Our AMA will seek to incorporate incremental steps to achieve electronic health record (EHR) data portability as part of the Office of the National Coordinator for Health Information Technology's (ONC) certification process.
6. Our AMA will collaborate with EHR vendors and other stakeholders to enhance transparency and establish processes to achieve data portability.
7. Our AMA will directly engage the EHR vendor community to promote improvements in EHR usability.
8. Our AMA will advocate for appropriate, effective, and less burdensome documentation requirements in the use of electronic health records.
9. Our AMA will urge EHR vendors to adopt social determinants of health templates, created with input from our AMA, medical specialty societies, and other stakeholders with expertise in social determinants of health metrics and development, without adding further cost or documentation burden for physicians.

AMERICAN MEDICAL ASSOCIATION

Resolution: 202
(A-25)

Introduced by: American Association of Neurological Surgeons, Congress of Neurological Surgeons, American Academy of Neurology

Subject: Preservation of the CDC Epilepsy Program Workforce and Infrastructure

Referred to: Reference Committee B

Whereas, the Centers for Disease Control and Prevention (CDC) Epilepsy Program has historically supported the epilepsy community through initiatives that improve public health, clinical care, education, and research; and

Whereas, this program has been instrumental in providing epidemiologic data[1], organizing educational conferences, funding epilepsy self-management programs, supporting local and national epilepsy initiatives, and contributing to key federal health reports; and

Whereas, the sudden and significant reduction in staff within the CDC Epilepsy Program has critically impaired its ability to function, placing ongoing and future projects in jeopardy; and

Whereas, loss of dedicated personnel disrupts collaborations between the CDC and professional, advocacy, and public health organizations, and may hinder evidence-based improvements in care and access for the 3.4 million Americans living with epilepsy; and

Whereas, the economic burden of epilepsy in the United States is estimated to exceed $15.5 billion annually, with direct costs (e.g., medical care, medications, hospitalizations) and indirect costs (e.g., lost productivity, unemployment, and caregiver burden) disproportionately affecting individuals with epilepsy and their families[2]; and

Whereas, people living with epilepsy are more likely to experience comorbid mental health conditions, stigma, social isolation, and barriers to education and employment[3]; and

Whereas, these challenges are particularly pronounced in underserved populations[4]; and

Whereas, discontinuation or interruption of the CDC Epilepsy Program's activities threatens the advancement of epilepsy care, limits access to essential public health data, and undermines the infrastructure necessary for coordinated national response to epilepsy-related challenges; and

Whereas, the American Medical Association has long supported funding and infrastructure for epidemiological research and public health surveillance; therefore be it

RESOLVED, that our American Medical Association advocate for the full restoration and continued support of the CDC Epilepsy Program, including its workforce and dedicated funding, to ensure its ability to support evidence-based public health initiatives in epilepsy (Directive to Take Action); and be it further

RESOLVED, that our AMA urge the Department of Health and Human Services and Congress to prioritize sustained funding and staffing for the CDC Epilepsy Program to promote ongoing

public health, clinical care advancement, and improved quality of life for people living with epilepsy. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/21/25

4. Institute of Medicine. *Epilepsy Across the Spectrum: Promoting Health and Understanding*. Washington, DC: The National Academies Press; 2012. doi:10.17226/13379

RELEVANT AMA POLICY

D-440.922 Full Commitment by our AMA to the Betterment and Strengthening of Public Health Systems

1. Our American Medical Association will champion the betterment of public health by enhancing advocacy and support for programs and initiatives that strengthen public health systems, to address pandemic threats, health inequities and social determinants of health outcomes.
2. Our AMA will develop an organization-wide strategy on public health including ways in which the AMA can strengthen the health and public health system infrastructure and report back regularly on progress.
3. Our AMA will work with the Federation and other stakeholders to strongly support the legal authority of health officials to enact reasonable, evidence-based public health measures, including mandates, when necessary to protect the public from serious illness, injury, and death and actively oppose efforts to strip such authority from health officials.
4. Our AMA will advocate for
    a. consistent, sustainable funding to support our public health infrastructure.
    b. incentives, including loan forgiveness and debt reduction, to help strengthen the governmental public health workforce in recruiting and retaining staff.
    c. public health data modernization and data governance efforts as well as efforts to promote interoperability between health care and public health.
    d. efforts to ensure equitable access to public health funding and programs. [Res. 407, I-20. Modified: CSAPH Rep. 2, I-21. Reaffirmed: CMS Rep. 5, A-2]

AMERICAN MEDICAL ASSOCIATION

Resolution: 203
(A-25)

Introduced by: American Association of Neurological Surgeons, Congress of Neurological Surgeons, American Society for Regional Anesthesia Pain Medicine

Subject: Supporting SUPPORT Act Modifications to Enhance Care of Patients with Chronic Pin

Referred to: Reference Committee B

Whereas, chronic pain remains a significant source of disability and healthcare expenditures in the United States; and

Whereas, a proportion of patients suffering from chronic pain are successfully managed on long term intrathecal therapy; and

Whereas, the sterile preservative-free mixtures of medications for intrathecal use are most often prepared by specialty compounding pharmacies; and

Whereas, for those patients who undergo pump refills in the office setting, the safest and most secure way to handle these syringes is to have the medication delivered to the managing physician's office; and

Whereas, the SUPPORT Act was passed to improve the access for patients to medications for the treatment of opioid use disorder (OUD); and

Whereas, Federal law restricts pharmacies from dispensing controlled medications to anyone except the end user. An exception to this prohibition was created by the SUPPORT act to allow direct dispensing to the practitioner, but only for medications used to treat OUD; and

Whereas, Section 3204 of the SUPPORT Act has been interpreted by DEA and DOJ as preventing pharmacies, including compounding pharmacies, from dispensing controlled substances for use in pain pumps directly to the prescribing physician; and

Whereas, this restriction raises the threat of prosecution of any physician whose practice directly receives these compounded medications for filling of intrathecal pumps; and

Whereas, the result of this has been to force patients to either receive and store the medication themselves, which is not adequately safe, or to coordinate delivery of the medication to their home with an appointment to have a healthcare provider to perform the refill at the patient's home as soon as the medication arrives; and

Whereas, The DEA and U.S. Department of Justice both recognize this issue but has stated in conversations with physicians and compounding pharmacies that the only solution is a legislative fix; therefore be it

RESOLVED, that our American Medical Association advocate for modifications to the SUPPORT Act that allow for the delivery of compounded syringes of medications intended for

the filling of intrathecal pumps directly to the prescribing physician's practice. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/21/25

RELEVANT AMA POLICY

D-95.955 Improving Access to Post-Acute Medical Care for Patients with Substance Use Disorder (SUD)
1.Our American Medical Association advocates to ensure that patients who require a post-acute medical care setting are not discriminated against because of their history of substance use disorder.
2.Our AMA advocates that our federal, state, and local governments remove barriers to evidence-based treatment for substance use disorders, including medications for opioid use disorder, at skilled nursing facilities.
3. Our AMA advocates that Medicare and Medicaid, including managed care organizations, remove barriers to coverage and treatment for substance use and opioid use disorder, including medications for opioid use disorder, in skilled nursing facilities [Res. 219, I-23 Reaffirmed: Res. 217, I-24]

D-95.968 Support the Elimination of Barriers to Evidence-Based Treatment for Substance Use Disorders

1. Our American Medical Association will:
    a. advocate for legislation that eliminates barriers to, increases funding for, and requires access to all appropriate FDA-approved medications or therapies used by licensed drug treatment clinics or facilities.
    b. develop a public awareness campaign to increase awareness that medical treatment of substance use disorder with medications for opioid use disorder (MOUD) and other evidence-based options as first-line treatments for this chronic medical disease.
2. Our AMA will support further research into how primary care practices can implement MOUD into their practices and disseminate such research in coordination with primary care specialties.
3. Our AMA Substance Use and Pain Care Task Force will increase its evidence-based educational resources focused on methadone maintenance therapy (MMT) and publicize those resources to the Federation.
4. Our AMA will support increased access to affordable, accessible transportation for individuals to obtain evidence-based treatment for substance use disorders

Res. 222, A-18Appended: BOT Rep. 02, I-19Modified: Res. 228, A-23

H-160.889 Neuropathic Pain
Our AMA: (1) supports the designation of neuropathic pain as a disease state distinct from nociceptive pain, encompassing metabolic, toxic, mechanical, and other injuries to nerve cells, as well as neuroplastic and neuroimmune adaptations to nerve cells in response to chronic pain; (2) encourages research related to neuropathic pain, payer coverage of treatment options for neuropathic pain, and improved resources for patients suffering with neuropathic pain; (3) encourages physicians to engage in meaningful conversation with their patients about what is known about the pathology of neuropathic pain and to set appropriate expectations collaboratively with their patients; and (4) cautions that a neuropathic pain disease designation should only be used when appropriate, not overused, and that the cause of the neuropathic pain be carefully elucidated and documented [CSAPH Rep. 2, I-20]

H-410.950 Pain Management
Our American Medical Association adopts the following guidelines on Invasive Pain Management Procedures for the Treatment of Chronic Pain, Including Procedures Using Fluoroscopy:
Interventional chronic pain management means the diagnosis and treatment of pain-related disorders with the application of interventional techniques in managing sub-acute, chronic, persistent, and intractable pain. The practice of pain management includes comprehensive assessment of the patient, diagnosis of the cause of the patient's pain, evaluation of alternative treatment options, selection of appropriate treatment options, termination of prescribed treatment options when appropriate, follow-up care, the diagnosis and management of complications, and collaboration with other health care providers.

Invasive pain management procedures include interventions throughout the course of diagnosing or treating pain which is chronic, persistent and intractable, or occurs outside of a surgical, obstetrical, or post- operative course of care. Invasive pain management techniques include:

1. Ablation of targeted nerves.
2. Procedures involving any portion of the spine, spinal cord, sympathetic nerves or block of major peripheral nerves, including percutaneous precision needle placement within the spinal column with placement of drugs such as local anesthetics, steroids, and analgesics, in the spinal column under fluoroscopic guidance or any other radiographic or imaging modality.
3. Surgical techniques, such as laser or endoscopic diskectomy, or placement of intrathecal infusion pumps, and/or spinal cord stimulators.

At present, invasive pain management procedures do not include major joint injections (except sacroiliac injections), soft tissue injections or epidurals for surgical anesthesia or labor analgesia.

When used for interventional pain management purposes such invasive pain management procedures do not consist solely of administration of anesthesia; rather, they are interactive procedures in which the physician is called upon to make continuing adjustments based on medical inference and judgments. In such instances, it is not the procedure itself, but the purpose and manner in which such procedures are utilized, that demand the ongoing application of direct and immediate medical judgment. These procedures are therefore within the practice of medicine, and should be performed only by physicians with appropriate training and credentialing.

Invasive pain management procedures require physician-level training. However, certain technical aspects of invasive pain management procedures may be delegated to appropriately trained, licensed or certified, credentialed non-physicians under direct and/or personal supervision of a physician who possesses appropriate training and privileges in the performance of the procedure being supervised, and in compliance with local, state, and federal regulations. Invasive pain management procedures employing radiologic imaging are within the practice of medicine and should be performed only by physicians with appropriate training and credentialing [BOT Rep. 16, A-13Reaffirmed: BOT Rep. 09, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 204
(A-25)

Introduced by: American Academy of Ophthalmology

Subject: Protecting the Prescriptive Authority of Plenary Licensed Physicians

Referred to: Reference Committee B

Whereas, physicians holding a plenary license (MD/DO) are authorized under state and federal law to diagnose and treat all conditions and prescribe medications in the full scope of their license, irrespective of specialty designation; and

Whereas, reports from board-certified physicians in specialties such as ophthalmology and anesthesiology indicate growing instances in which pharmacists are refusing to dispense valid prescriptions—such as for sedatives, anxiolytics, or dermatologic agents—based on non-clinical objections that the medication falls “outside the prescriber's specialty”; and

Whereas, such refusals contradict American Medical Association policy opposing pharmacists’ authority to initiate, modify, or substitute medications outside a physician’s explicit direction, and amount to inappropriate intrusion into the practice of medicine; and

Whereas, pharmacists are not trained or licensed to make medical diagnoses and their scope of practice does not include the authority to override a physician’s clinical judgment or determine a patient’s treatment plan; and

Whereas, these denials disrupt patient care, compromise safety, delay medically necessary treatment, and may create liability and access issues, particularly for patients with urgent or chronic conditions; and

Whereas, AMA policy supports the right of patients to have legally valid prescriptions filled, and of physicians to prescribe, cancel, and manage medication therapy without interference; therefore be it

RESOLVED, that our American Medical Association study the national prevalence and patterns of pharmacists refusing to fill valid prescriptions from plenary licensed physicians, including impact on patient outcomes and prescriber autonomy (Directive to Take Action); and be it further

RESOLVED, that our AMA work with state medical boards, pharmacy boards, and appropriate federal agencies to protect the authority of plenary licensed physicians to prescribe all legal medications in accordance with their training and medical judgment (Directive to Take Action); and be it further

RESOLVED, that our AMA reaffirm and publicize existing policy opposing unauthorized medication substitution, inappropriate pharmacy inquiries, and unauthorized treatment modification by pharmacists (Directive to Take Action); and be it further

RESOLVED, that our AMA support legislation or regulatory action requiring pharmacists and pharmacy chains to either fill a valid prescription or immediately refer the patient to an alternative dispensing pharmacy, with notification to the prescribing physician (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage interprofessional collaboration to clarify scope-of-practice boundaries, educate stakeholders on the legal authority of plenary licensure, and promote policies that ensure timely patient access to physician-directed therapy (New HOD Policy).

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/21/25

RELEVANT AMA POLICY

H-160.928 Drug Initiation or Modification by Pharmacists
Our AMA opposes pharmacists being given the authority to initiate or modify prescription drug treatment except on a case by case basis at the specific direction of a physician.[Res. 509, A-99; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: CSAPH Rep. 01, A-19]

H-125.995 Therapeutic and Pharmaceutical Alternatives by Pharmacists
The AMA opposes legislative attempts at any level of government that would permit pharmacists, when presented with a prescription for a drug product, to:
(1) dispense instead a drug product that is administered by the same route and which contains the same pharmaceutical moiety and strength, but which differs in the salt or dosage form (pharmaceutical alternatives); and
(2) dispense a drug product containing a different pharmaceutical moiety but which is of the same therapeutic and/or pharmacological class (therapeutic substitution).
Our AMA will work with state medical associations to ensure that state pharmacy laws and medical practice acts are properly enforced so that treating physician's directions cannot be overruled or substituted without prior physician approval. [Res. 89, I-85; Reaffirmed by Sub. Res. 501, A-95; Reaffirmed by CLRPD Rep. 2, I-95; Appended by Res. 501, A-98; Reaffirmed: CSAPH Rep. 2, A-08]

H-35.961 AMA Response to Pharmacy Intrusion Into Medical Practice
Our American Medical Association deems inappropriate inquiries from pharmacies to verify the medical rationale behind prescriptions, diagnoses, and treatment plans to be an interference with the practice of medicine and unwarranted. [CSAPH Rep. 8, A-23]

D-120.975 Preserving Patients' Ability to Have Legally Valid Prescriptions Filled
Our AMA will:
(1) work with state medical societies to support legislation to protect patients' ability to have legally valid prescriptions filled;
(2) enter into discussions with relevant associations (including but not limited to the American Hospital Association, American Pharmacists Association, American Society of Health System Pharmacists, National Association of Chain Drug Stores, and National Community Pharmacists Association) to guarantee that, if an individual pharmacist exercises a conscientious refusal to dispense a legal prescription, a patient's right to obtain legal prescriptions will be protected by immediate referral to an appropriate dispensing pharmacy; and
(3) in the absence of all other remedies, work with state medical societies to adopt state legislation that will allow physicians to dispense medication to their own patients when there is no pharmacist within a thirty-mile radius who is able and willing to dispense that medication. [Sub. Res. 6, A-05; Reaffirmed: CSAPH Rep. 1, A-15]

H-120.947 Preserving Patients' Ability to Have Legally Valid Prescriptions Filled
1. Our AMA reaffirms our policies supporting responsibility to the patient as paramount in all situations and the principle of access to medical care for all people; and supports legislation that requires individual pharmacists or pharmacy chains to fill legally valid prescriptions or to provide immediate referral to an appropriate alternative dispensing pharmacy without interference. In the event that an individual pharmacist or pharmacy chain refers a patient to an alternative dispensing source, the individual pharmacist or the pharmacy chain should return the prescription to the patient and notify the prescribing physician of the referral.
2. Our AMA supports the concept of advance prescription for emergency contraception for all women in order to ensure availability of emergency contraception in a timely manner. [Sub. Res. 6, A-05; Appended: BOT Rep. 18, I-06; Reaffirmed and Appended: BOT Rep. 2, A-08; Reaffirmed: CMS Rep. 01, A-18]

D-125.989 Substitution of Biosimilar Medicines and Related Medical Products
Our American Medical Association urges that State Pharmacy Practice Acts and substitution practices for biosimilars in the outpatient arena:
1. Preserve physician autonomy to designate which biologic or biosimilar product is dispensed to their patients;
2. Allow substitution when physicians expressly authorize substitution of a biologic or biosimilar product; and
3. In the absence of express physician authorization to the contrary, allow substitution of the biologic or biosimilar product when:
a. the biologic product is highly similar to the reference product, notwithstanding minor differences in clinically inactive components; and
b. there are no data indicating clinically meaningful differences between the biological product and the reference product in terms of the safety, purity, and potency of the product; and
c. the prescribing physician has been adequately notified by the pharmacist. [Res. 918, I-08; Modified: CSAPH Rep. 1, I-11; Modified: CSAPH Rep. 4, A-14; Modified: CSAPH Rep. 05, A-24; Reaffirmed: CMS Rep. 04, I-24]

H-120.939 Physicians Should be Able to Cancel or Rescind Renewals of Prescriptions After the Prescription has Been Delivered to the Pharmacy
Our AMA will support legislation or regulations that:
(i) authorize physicians to cancel or rescind renewals of prescriptions previously written;
(ii) mandate pharmacies, including pharmacy benefit plans, to implement easy-to-use procedures to permit physicians to issue orders to cancel or rescind renewals of prescriptions previously written;
(iii) prevent such renewals from being filled or mailed to the patient; and
(iv) enable the pharmacy or pharmacy benefit plan to readily implement such renewal orders, when directed by the physician, regardless of the state of residence of the patient, the state of practice or licensure of the physicians, and the state of business operation of the pharmacy or the pharmacy benefit plan. [BOT Rep. 8, A-11; Reaffirmation A-15]

D-120.923 Automatic Pharmacy-Generated Prescription Requests
Our American Medical Association advocates that pharmacy-generated requests for changes to a prescription (quantity dispensed, refills, or substitutions) clarify whether these requests are generated by the patient or patient’s surrogates, or automatically by the pharmacy. [Res. 706, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 205
(A-25)

Introduced by: American College of Lifestyle Medicine, Oregon Medical Association, Illinois

Subject: AMA Support for Continuance of the Section 1115 - Social Security Act, Medicaid Waiver Program

Referred to: Reference Committee B

Whereas, Section 1115 of the Social Security Act provides the USDHSS Secretary the authority to approve experimental, pilot or demonstration project that are likely to assist in promoting the objectives of the Medicaid program; and

Whereas, the purpose of this authority is to gives states additional flexibility to design, improve and evaluate state-specific policy approaches to better serve Medicaid populations[1]; and

Whereas, such waivers generally reflect priorities identified by the states and the CMS; and

Whereas, CMS additionally considers whether proposed waiver and/or expenditure authorities are appropriate and consistent with federal policies; and

Whereas, such demonstrations must be “budget neutral” to the Federal government (i.e., Federal Medicaid expenditures will not be more than federal spending without the demonstration); and

Whereas, such demonstrations are approved for an initial five-year period and can be extended for up to an additional three to five years[2]; and

Whereas, examples of such demonstrations have included care for seniors in Wisconsin, HIV/AIDs care in Maine, managed medical assistance in Florida, healthcare transformation and quality improvement in Texas as well as COVID-19 public health emergencies, 60 days post-partum related Medicaid coverage, transition-related strategies supporting community reentry for incarcerated persons in multiple states[3]; therefore be it

RESOLVED, that our American Medical Association work aggressively to advocate for, and assure, the continuance of the Section 1115 Medicaid Waiver Program as a critical safety net for our underserved and disadvantaged populations. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/18/25

RELEVANT AMA POLICY

Improving Medicaid and CHIP Access and Affordability H-290.954 Our American Medical Association opposes premiums, copayments, and other cost-sharing methods for Medicaid and the Children's Health Insurance Program, including Section 1115 waiver applications that would allow states to charge premiums or copayments to Medicaid beneficiaries**.**
Our AMA encourages the Centers for Medicare & Medicaid Services to amend existing Section 1115 waivers to disallow states the ability to charge premiums or copayments to Medicaid beneficiaries.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 206
(A-25)

Introduced by: American College of Lifestyle Medicine, Oregon Medical Association, Illinois

Subject: AMA Support for Renewal of Section 1115 - Social Security Act, Medicaid Waiver Demonstration Projects Supporting Food and Nutrition Services

Referred to: Reference Committee B

Whereas, Section 1115 of the Social Security Act provides the USDHSS Secretary the authority to approve experimental, pilot or demonstration project that are likely to assist in promoting the objectives of the Medicaid program[1-2]; and

Whereas, segment populations of Medicaid recipients experience food insecurity; and

Whereas, changes in food prices over the past four years have increased beyond the rate of general inflation in the US, and this particular economic factor has significantly increased the number of food insecure individuals; and

Whereas, an additional food access issue has been the growing grocery store gap limiting healthy food options leading to negative health outcomes including predictors of obesity; and

Whereas, the US Department of Agriculture has determined that diet-related chronic diseases affect food insecure communities at a higher rate with almost 90% of health care spending linked to diet-related chronic disease; and

Whereas, deploying additional Medicaid funding for nutrition services and supports could improve health outcomes, reduce health disparities and be cost effective supplements to traditional Medicaid medical services; and

Whereas, under the 1115 Demonstration and Waiver, expanding eligibility for nutritional services to food insecure populations will test whether such additions will improve health outcomes and utilization of appropriate care[1-2]; and

Whereas, a number of states, such as New York, Massachusetts, Oregon, North Carolina, the District of Columbia, have provided such nutritional services to underserved and disadvantaged populations with support from a Section 1115 Waiver[3]; and

Whereas, such states have applied for extensions for their existing Section 1115 Waivers for food and nutritional services[4]; therefore be it

RESOLVED, that our American Medical Association aggressively advocate for, and support, the renewals and extensions of any and all Section 1115 Waivers supporting food and nutritional services as a counter to the issues of food insecurity in many of our Medicaid beneficiaries. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

Improving Medicaid and CHIP Access and Affordability H-290.954

Our American Medical Association opposes premiums, copayments, and other cost-sharing methods for Medicaid and the Children's Health Insurance Program, including Section 1115 waiver applications that would allow states to charge premiums or copayments to Medicaid beneficiaries**.**

Our AMA encourages the Centers for Medicare & Medicaid Services to amend existing Section 1115 waivers to disallow states the ability to charge premiums or copayments to Medicaid beneficiaries.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 207
(A-25)

Introduced by: American College of Surgeons

Subject: Abolishing Venue Shopping

Referred to: Reference Committee B

Whereas, Venue Shopping is a legal strategy where plaintiffs' attorneys file medical malpractice cases in jurisdictions known for awarding large monetary awards or settlements, even if the case has no connection to that location; and

Whereas, Venue Shopping has led to certain Courts being overwhelmed with lawsuits, delays in resolutions of disputes, and dramatically increased awards or settlements for plaintiffs' attorneys; and

Whereas, in 2002, more than 1,600 physicians were forced to participate in the Pennsylvania Joint Underwriter Association, the insurer of last resort, as the state of Pennsylvania was reduced to only two medical malpractice insurance carriers because of large (>40%) rate hikes, owing in large part to Venue Shopping; and

Whereas, Venue Shopping was rendered illegal in Pennsylvania in 2002 by The Medical Care Availability and Reduction of Error ("Mcare") act leading to a stabilization of the medical malpractice insurance market in Pennsylvania; and

Whereas, in August 2022, The Pennsylvania Supreme Court reversed the ban on Venue Shopping by passing a rule allowing plaintiffs to sue in any Pennsylvania county in which care occurred, where a defendant could be served, or where any transaction or occurrence giving rise to the suit took place; and

Whereas, the widespread use of telehealth greatly expands the footprint of care opening the door to even greater abuses of Venue Shopping; and

Whereas, immediately following the reversal of the ban on Venue Shopping, there was a four – fold increase in the number of malpractice lawsuits filed in Philadelphia County, and between January and April, 2023, 43% of 657 medical malpractice complaints initiated in Philadelphia County were based on care provided outside the city; and

Whereas, changes to malpractice law in Pennsylvania can herald similar changes in neighboring states and in the entire United States; therefore be it

RESOLVED, that our American Medical Association fiercely advocate against Venue Shopping in medical professional liability actions in collaboration with all interested state medical and specialty societies (Directive to Take Action); and be it further

RESOLVED, that our AMA urgently draft model state and federal legislation rendering venue shopping illegal in medical professional liability actions. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 208
(A-25)

Introduced by: American Psychiatric Association

Subject: Binding Arbitration in Health Insurance Contracts

Referred to: Reference Committee B

Whereas, binding arbitration clauses in health insurance contracts can have significant impacts on physicians; and

Whereas, these clauses typically require that disputes be settled outside the court system, with physicians bound by decisions made in arbitration, often not allowing for appeals. This limits the ability of the physician to seek legal recourse or challenge decisions that are unfavorable and contributes to a sense of powerlessness; and

Whereas, arbitration is often viewed as more cost-effective than court trials, it still involves expenses that can place a financial burden on physicians. Health insurers have significant bargaining power which could result in arbitration outcomes that favor insurers, potentially reducing reimbursement rates and leading to higher premium; and

Whereas, arbitration clauses in health insurance contracts often favor the insurer. Physicians, especially small practices or individual clinicians, have little negotiating power regarding the inclusion of arbitration clauses in their contracts; and

Whereas, the financial stress and operational challenges that arise from disputes over insurance claims and arbitration can affect how physicians interact with their patients; and

Whereas, current AMA policy (H-435.945) only addresses binding arbitration between patients and physicians, not physicians and insurance companies; therefore be it

RESOLVED, that our American Medical Association study the effects of binding arbitration in health insurance contracts with physicians. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/22/25

RELEVANT AMA POLICY

Binding Arbitration H-435.945
Our American Medical Association supports the utilization of pre-dispute binding arbitration that is agreed to by a patient and a physician prior to non-emergent treatment as an effective method of doctor-patient conflict resolution

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 209
(A-25)

Introduced by: American Society of Addiction Medicine

Subject: Reducing Risk of Federal Investigation or Prosecution for Prescribing Controlled Addiction Medications for Legitimate Medical Purposes

Referred to: Reference Committee B

Whereas, addiction medications, such as medications for opioid use disorder (MOUD), are lifesaving treatments for addiction;[1] and

Whereas, in 2023, fewer than 20% of people with OUD in the US received MOUD;[2] and

Whereas, several reasons exist for the underutilization of MOUD, including practitioners' fear of intrusion into clinical practice by the US Department of Justice (DOJ), including the Drug Enforcement Administration (DEA);[3-9] and

Whereas, practitioners fear they will be investigated or prosecuted for well-intentioned prescribing of controlled medications that violate ambiguous federal law; and

Whereas, federal regulations implementing the federal Controlled Substances Act (CSA) authorize the prescribing of controlled substances, like buprenorphine, for "a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice;"[10] and

Whereas, federal circuit courts are divided on whether a CSA violation requires proof of both a (1) lack of legitimate medical purposes and (2) deviation from the usual course of professional practice (i.e., a conjunctive standard),[11-12] or whether proof of just one of these two conditions is sufficient (i.e., a disjunctive standard);[13-19] and

Whereas, case law suggests "legitimate medical purpose" under the CSA means having the intention to improve a patient's health-related condition;[12,14,20-23] and

Whereas, a disjunctive standard allows for prosecution based solely on a violation of the "usual course of professional practice;"[13-19] and

Whereas, the phrase "usual course of professional practice" is amorphous and ambiguous, with the meaning potentially varying among well-intentioned practitioners due to the heterogeneity of state regulations governing the practice of addiction medicine,[24,25] as well as the heterogeneity of patients with substance use disorder (SUD),[26] practitioners who treat SUD, and practice settings; and

Whereas, DOJ personnel do not typically have the requisite medical expertise to accurately evaluate the totality of the circumstances that may explain differences in prescribing practices across practitioners; and

Whereas, the DOJ's expertise would best be utilized by focusing on practitioners prescribing for improper reasons – that is, without a legitimate medical purpose; and

Whereas, it is important to consider Congressional intent in passing the CSA, which was to prevent the trafficking or dealing of drugs, not to ensure good quality medical treatment;[27] therefore be it

RESOLVED, that our American Medical Association support legislative, regulatory, and other advocacy efforts that (1) advance the adoption of a conjunction standard in the context of "legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice" under the federal Controlled Substances Act and implementing regulations and (2) address relevant federal regulations to clarify that "legitimate medical purpose" means "for the purpose of preventing, treating, or managing a patient's health-related condition." (New HOD Policy)

RELEVANT AMA POLICY

Protection for Physicians Who Prescribe Pain Medication H-120.960

Our AMA supports the following:
(1) the position that physicians who appropriately prescribe and/or administer controlled substances to relieve intractable pain should not be subject to the burdens of excessive regulatory scrutiny, inappropriate disciplinary action, or criminal prosecution. It is the policy of the AMA that state medical societies and boards of medicine develop or adopt mutually acceptable guidelines protecting physicians who appropriately prescribe and/or administer controlled substances to relieve intractable pain before seeking the implementation of legislation to provide that protection; (2) education of medical students and physicians to recognize addictive disorders in patients, minimize diversion of opioid preparations, and appropriately treat or refer patients with such disorders; and (3) the prevention and treatment of pain disorders through aggressive and appropriate means, including the continued education of doctors in the use of opioid preparations.

Our AMA opposes harassment of physicians by agents of the Drug Enforcement Administration in response to the appropriate prescribing of controlled substances for pain management.

DEA Regulations and the Ability of Physicians to Prescribe Controlled Medication Rationally, Safely, and Without Undue Threat of Prosecution D-120.979

Our AMA supports ongoing constructive dialogue between the DEA and clinicians, including physicians, regarding a proper balance between the needs of patients for treatment and the needs of the government to provide oversight and regulation to minimize risks to public health and safety.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 210
(A-25)

Introduced by: American Society for Gastrointestinal Endoscopy, American Gastroenterological Association, The Society of Thoracic Surgeons

Subject: Impact of Tariffs on Healthcare Access and Costs

Referred to: Reference Committee B

Whereas, tariffs on foreign countries will add to the costs for medical equipment and devices, pharmaceuticals, and other healthcare-related goods in the United States, thereby raising the overall cost of healthcare delivery; and

Whereas, tariffs intended to encourage domestic production of medical equipment, devices, pharmaceuticals and other healthcare-related goods must account for the feasibility, capacity and timelines for such domestic production in order to prevent product shortages and increased healthcare costs; and

Whereas, in the short-term, tariffs on medical equipment, devices and supplies may not be appropriately accounted for in Medicare physician and hospital reimbursement, forcing health care providers to administer services at a financial loss; and

Whereas, elevated healthcare costs may result in reduced patient access to essential medical services; and

Whereas, the American Medical Association is committed to advocating for policies that ensure affordable and equitable access to healthcare for all individuals; therefore be it

RESOLVED, that our American Medical Association actively monitor and assess the impact of current and proposed tariffs on healthcare costs and patient access to medical services (Directive to Take Action); and be it further

RESOLVED, that our AMA engage with relevant stakeholders, including policymakers and industry leaders, to advocate for trade policies that do not adversely affect the affordability and availability of medical supplies and pharmaceuticals (Directive to Take Action); and be it further

RESOLVED, that our AMA support legislative efforts aimed at mitigating the negative effects of tariffs on the healthcare system, ensuring that patient care remains accessible and affordable (Directive to Take Action); and be it further

RESOLVED, that our AMA conduct a study evaluating the short- and long-term impacts of U.S. tariffs on the healthcare delivery system, including effects on cost, supply chains, patient outcomes, and healthcare disparities, and, given the urgency associated with the issue, report its findings no later than the November 2025 interim meeting of the House of Delegates. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 211
(A-25)

Introduced by: California, Alabama, Colorado, Connecticut, Florida, Hawaii, Minnesota, Missouri, Nebraska, New Hampshire, New Mexico, North Dakota, Oklahoma, Oregon, Tennessee, Vermont, Washington, West Virginia, Integrated Physician Practice Section

Subject: Support for State Provider and Managed Care Organization Taxes to Sustain Federal Medicaid Matching Funding

Referred to: Reference Committee B

Whereas, the Medicaid program is a partnership between the federal government and the states to cover nearly 80 million low-income, vulnerable Americans – making it the largest source of health care coverage in the nation; and

Whereas, the federal government and the states share responsibility for financing Medicaid with the federal government guaranteeing federal matching payments to the states while the states are permitted to finance the non-federal share through state general funds, health-care related taxes (provider and managed care organization taxes) and local government funds; and

Whereas for two decades, all states except Alaska finance some of the state costs with taxes on health care providers (hospitals and nursing homes) and 20 states partially finance state costs with taxes on managed care organizations (MCOs) with 68% of state Medicaid funding coming from state general funds and 32% from local governments and provider/MCO taxes; Reliance on provider and MCO taxes have grown during economic downturns to cover higher state Medicaid costs; and

Whereas, under federal law and with the approval of state legislatures, states assess, usually voluntary, levies on hospitals, nursing homes and MCOs to generate state funds to match with federal Medicaid dollars, increasing the overall funding available to care for Medicaid patients, which has also increased all provider reimbursement rates; and

Whereas, federal rules set guidelines on how states can use provider and MCO taxes, ensuring they are 1) broad-based by applying to all providers or plans within a specific class and cannot be imposed only on providers or plans that primarily treat Medicaid patients; 2) uniform by applying to all providers or plans within a specific class (i.e., the tax cannot be higher on Medicaid revenue than non-Medicaid revenue; and 3) states cannot guarantee that providers or plans will receive their tax revenues back unless the tax revenues comprise 6% or less of net patient revenues from treating patients; and

Whereas, the provider and MCO assessments are applied to hospital, nursing home, and health plan revenues rather than directly to physician practices, do not impose costs on physicians or patients, and often result in increased physician and hospital reimbursement rates which improve Medicaid patients' access to care; and

Whereas, these financing mechanisms are structurally distinct from direct involuntary taxes on physician services, physician-owned facilities, or pass-through taxes - which are opposed by

AMA policy H-385.925, D-165.961, H 385.941 - because they do not create financial liabilities for physician practices but instead help to sustain funding for Medicaid patients and strengthen the viability of physicians and other providers; and

Whereas, recent Congressional proposals have suggested limiting or eliminating states' ability to use provider or MCO levies to finance their Medicaid programs – a cut of up to $630 billion nationally over ten years (CBO) - which would threaten health care coverage for millions of low-income children, pregnant women, veterans, the disabled and elderly, and would destabilize the provider safety net as well as the entire health care system; therefore be it

RESOLVED, that our American Medical Association support the use of broad-based, uniform Provider (hospital and nursing home) and Managed Care Organization (MCO) taxes to generate state funds to match with federal Medicaid funding that sustain or improve Medicaid patients' access to care while not financially burdening physician practices (New HOD Policy); and be it further

RESOLVED, that our AMA oppose federal proposals that would restrict or eliminate states' ability to assess Provider (hospital and nursing home) and Managed Care Organization Taxes to finance their Medicaid programs and protect patient access to care, as long as physician practices are not financially harmed (New HOD Policy); and be it further

RESOLVED, that our AMA amend policy H-385.925 as follows:
1. Our American Medical Association strongly opposes the imposition of a selective revenue tax on physicians ~~and other health care providers~~.
2. Our AMA will continue to work with state medical societies on issues relating to physician ~~and other provider~~ taxes, providing assistance and information as appropriate.
3. Our AMA strongly opposes the use of ~~provider~~ physician taxes or fees to fund health care programs or to accomplish health system reform.
4. Our AMA believes that the cost of taxes which apply to medical services should not be borne by physicians, but through adequate broad-based taxes for the appropriate funding of Medicaid and other government health care programs (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend policy D-165.961 as follows:
Our AMA will (1) proactively and vigorously oppose taxes on physician services, physician-owned facility taxes or "pass-through" taxes on physician medical services; and (2) work closely with national specialty societies and state medical societies to assist with advocacy efforts to combat existing and proposed taxes on physician services and physician-owned facilities (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend policy H-385.941 as follows:
Our AMA strongly: (1) opposes any attempt on the part of the federal or state governments or other entities to impose user fees, provider taxes, access fees, or bed taxes on physicians ~~and other health care providers~~ to subsidize or fund any health care program; (2) opposes any directive from the CMS to slow down the rate of payment of Medicare claims or reduce administrative services to patients, physicians, and other health care providers; and (3) urges Congress to appropriate sufficient funds to enable the CMS and its carriers to carry out their statutorily required functions. (Modify Current HOD Policy)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 212
(A-25)

Introduced by: Illinois

Subject: Setting Standards for Forensic Toxicology Laboratories Used in Litigation

Referred to: Reference Committee B

Whereas, forensic toxicology laboratories are called upon to analyze substances in bodily fluid matrices for litigation purposes; and

Whereas, litigation using bodily fluid matrices (e.g., workers' compensation arbitration, DUI legal actions) is often primarily dependent on the accuracy of drug/toxicology testing analyses (which is usually assumed to be reliable and precise); and

Whereas, the equipment utilized by forensic toxicology laboratories is similar to that used in hospital clinical chemistry laboratories for medical diagnostic and therapeutic purposes; and

Whereas, accreditation and licensure programs are designed to improve safety, promote a consistently high level of service, and advance the quality of laboratory services; laboratory licensure and accreditation are an assurance that the laboratory has met or exceeded a certifying agency's high standards of excellence; and

Whereas, proficiency testing is a regular, independent assessment of a laboratory's ability to generate accurate and precise test results and is a key component of a Quality Control Program which is used as an evaluation tool to guide performance improvement; Licensing and accrediting agencies incorporate proficiency findings into their overall compliance monitoring assessment of a laboratory; and

Whereas, there are a multitude of certification requirements for medical clinical chemistry laboratory accreditation and/or their personnel proficiency which may include but are not limited to Clinical Laboratory Improvement Amendments of 1988 (CLIA), College of American Pathologists (CAP) Laboratory Accreditation program (LAP), American Society for Clinical Pathology (ASCP), American Board of Clinical Chemistry (ABCC) – which are usually not achieved by forensic toxicology laboratories; and

Whereas, the laboratory director/certifying scientist of the forensic toxicology laboratories used by law enforcement and the judicial system may not be a licensed physician (with proper board certification) or a scientist with a relevant advanced graduate degree; and

Whereas, the University of Illinois Chicago (UIC) Analytical Forensic Testing Laboratory has been recently accused of providing flawed test results in cases of driving-under the influence of marijuana, many of them resulting in motorists being convicted and sent to jail; the lab has subsequently been the subject of allegations of a cover-up, and stopped doing tests for marijuana in law enforcement cases; and

Whereas, the UIC Analytical Forensic Testing Laboratory this same UIC laboratory lost the Racetrack Medication and Testing Consortium (RMTC) accreditation in early September 2024 due to non-compliance issue in racehorse blood bicarbonate testing; and

Whereas, any laboratory analysis of bodily fluids by forensic toxicology laboratories should have the same degree of accuracy and reliability as any hospital based clinical chemistry/toxicology laboratory; therefore be it

RESOLVED, that our American Medical Association pursue legislative or regulatory changes to require:

1. Forensic toxicology laboratories that analyze drugs in bodily fluids to follow the same protocols and obtain equivalent certifications as their clinical chemistry counterparts based in hospitals; and
2. CLIA – exempt forensic toxicology laboratories to obtain relevant accreditations and certifications such as CAP Forensic Drug Testing accreditation program (CAP FDT, formerly FUDT or Forensic Urine Drug Testing Accreditation Program]) the American Board of Forensic Toxicology Laboratory Accreditation Program (ABFT LAP), the American Society of Crime Laboratory Directors Laboratory Accreditation Board (ASCLD/LAB) or other related certification program (as their clinical chemistry counterparts in hospitals are required) which are publicly displayed; and
3. forensic toxicology laboratories to follow relevant state codes and regulations addressing testing of breath, blood, and urine for alcohol, other drugs, and intoxicating compounds; and
4. a Laboratory Director and/or Certifying Scientist who reviews all protocols and laboratory manuals and signs off on each result electronically to be a licensed physician (with proper and current board certification) or a scientist with an appropriate advanced graduate degree and certification; and
5. that results of laboratory proficiency testing and Quality Control Programs be available to the court and its litigants for review to assist in verifying forensic laboratory results. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 213
(A-25)

Introduced by: Indiana

Subject: Emergency Department Designation Requires Physician on Site

Referred to: Reference Committee B

Whereas, due to the legislative efforts of the Indiana State Medical Association, new legislation was added to Indiana Code in 2023, IC 16-21-2-14.5, which requires that “a hospital with an emergency department must have at least one physician on site and on duty who is responsible for the emergency department at all times the emergency department is open” but this law does not account for freestanding emergency departments (FSEDs); and

Whereas, “freestanding health facilities” are specifically excluded from the statutory definition of “hospital” in Indiana Code, IC 16-18-2-179; and

Whereas, numerous models of freestanding emergency care exist around the country including independently operated FSEDs, specialty emergency hospitals, physician and proprietary owned facilities, off-campus hospital-affiliated emergency departments, and joint venture partnerships between FSEDs and hospitals; and

Whereas, the prevalence of FSEDs has grown exponentially from 1% in 2001 to 11% in 2016 of all emergency departments nationwide; and

Whereas, patients may assume that any and all facilities which are referred to as emergency departments (EDs) or emergency rooms (ERs) can provide emergency medical care by a physician; therefore be it

RESOLVED, that our American Medical Association create model legislation for all states, as a matter of truth and transparency in the scope of available emergency medical services, which requires that all facilities using the designation “emergency department” mandate the presence of at least one physician on-site and on-duty who is responsible for the emergency department at all times. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 214
(A-25)

Introduced by: Indiana

Subject: United Health Care and InterQual Monopoly

Referred to: Reference Committee B

Whereas, United Health care, through its Optum subsidiary, recently purchased Change Healthcare, which owns InterQual; and

Whereas, InterQual defines the medical criteria by which necessity of medical services is determined by payers; and

Whereas, United Health care now solely controls defining criteria of medical necessity and thereby qualification of medical services for payment across all payers; and

Whereas, multiple hospitals are struggling financially in part due to insurance company denials of payment for care; and

Whereas, many of these struggling hospitals are in medically underserved areas including rural hospitals; therefore be it

RESOLVED, that our American Medical Association oppose managed care utilization review systems and tools that have anticompetitive effects, create undue influence over medical necessity criteria, or negatively impact fair access to the delivery and payment of medical services. (New HOD Policy)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/16/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution 215
(A-25)

Introduced by: Minority Affairs Section

Subject: Support for Changing Standards for Minors Working in Agriculture

Referred to: Reference Committee B

Whereas, child labor regulations differ between agricultural and non-agricultural sectors, with agricultural work being exempt from certain provisions of the federal Fair Labor Standards Act (FLSA)[1]; and

Whereas, in non-agricultural work, the FLSA mandates that minors aged 14 and 15 are restricted to working no more than 3 hours on school days and 18 hours during a school week, agricultural workers of the same age face no such limitations on hours worked[2,3]; and

Whereas, children aged 16 and older are permitted to work in hazardous jobs in agriculture that involve dangerous machinery, exposure to pesticides, hazardous environments, and strenuous labor, while workers in all other industries must be 18 years and older to undertake similarly classified hazardous work[1,3]; and

Whereas, the safety of child workers in agriculture, beyond the small protections provided by federal law, is subject to the discretion of individual states, resulting in significant variability in child labor protections across the country[1,2]; and

Whereas, The National Children's Center for Rural and Agricultural Health and Safety in the United States reported that from 2001 to 2015, 48% of all fatal injuries to young workers occurred in agriculture with 33 children injured daily, and deaths occurring every 3 days[4]; and

Whereas, in North Carolina, which follows only federal regulations for child farmworkers, studies reveal significant risks: 29% of adolescent farmworkers experience musculoskeletal injuries, many are exposed to harmful pesticides linked to adverse health and neurodevelopmental effects, and all workers face heightened risks of heat-related illnesses due to strenuous work conditions and lack of regulatory protections[5-7]; and

Whereas, child farmworkers experience educational disruptions due to the demands of agricultural labor, leading to lower academic achievement and higher dropout rates compared to their peers in other industries[8]; and

Whereas, the physical and mental demands of agricultural work, combined with poor living conditions for many child farmworkers, contribute to significant mental health challenges, which are often unaddressed due to limited access to healthcare services[9]; and

Whereas, the Children's Act for Responsible Employment and Farm Safety Care Bill (CARE Act) was introduced in 2023 to amend the Fair Labor Standards Act to raise labor standards and

protections for child farmworkers to the same level set for all children in other occupations, strengthening existing regulations and their enforcement[3,10-13]; and

Whereas, the CARE Act closes loopholes in current law relating to age, work restrictions, and expanding workplace health and safety standards that protect against exposure to dangerous pesticides and unsafe equipment [3,10-13]; and.

Whereas, AMA policy H-60.962 covers the illegal employment of children but does not support the expansion of protection for all children legally working in agriculture; therefore be it

RESOLVED, that our American Medical Association strongly supports federal and state efforts to ensure that child labor protections uniformly apply to children working in agriculture, including raising the minimum age of employment, work hour restrictions, and extending workplace health and safety standards against exposures to hazardous substances and unsafe equipment. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

H-10.984 Farm Related Injuries
Our AMA (a) emphasizes the need for more complete data on farm-related and other types of traumatic and occupational injuries; (b) reaffirms its support of regional medical facilities and programs having well-trained medical personnel and emergency care facilities capable of responding effectively to farm-related and other types of injuries; (c) advises manufacturers to improve machinery and farm implements so they are less likely to injure operators and others. Safety instructions should accompany each sale of a machine such as a power auger or tractor. Hazard warnings should be part of each power implement; (d) encourages parents, teachers, physicians, agricultural extension agencies, voluntary farm groups, manufacturers, and other sectors of society to inform children and others about the risks of agricultural injuries and about approaches to their prevention; (e) endorses the concept of making injury surveillance and prevention programs ongoing activities of state and local departments of public health; (f)encourages the inclusion of farm-related injury issues as part of the training program for medical students and residents involved in a rural health experience. [BOT Rep. U, A-91Reaffirmed: Sunset Report, I-01Reaffirmed: CSAPH Rep. 1, A-11Reaffirmed: CSAPH Rep. 1, A-21]

H-365.986 US Efforts to Address Health Problems Related to Agricultural Activities
Our AMA supports the endeavors of the U.S. Surgeon General and the National Institute of Occupational Safety and Health of CDC to address health problems related to agricultural activities. [Res. 212, A-91Reaffirmed: Sunset Report, I-01Reaffirmed: CSAPH Rep. 1, A-11Reaffirmed: BOT Rep. 7, A-21]

H-60.962 Enforcement of Child Labor Laws
Our AMA will work in conjunction with all appropriate organizations and specialty societies to enhance physician awareness of the problems and dangers associated with the illegal employment of children. AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution 216
(A-25)

Introduced by: Medical Student Section, American Academy of Child & Adolescent Psychiatry

Subject: Support for Aging-Out Foster Youth with Mental Health and Psychotropic Needs

Referred to: Reference Committee B

Whereas, foster care youth are 62% more likely to have serious mental health issues from adverse childhood experiences (ACEs), experience polypharmacy, and have inadequate medical supervision and documentation[1-4]; and

Whereas, youth "age-out" of foster care at 18-25, as mandated by the Department of Children and Families (DCF), and are vulnerable to dependence on psychotropic medications, which can hinder future independence, compounded by their struggles to access and navigate healthcare services such as Medicaid despite eligibility [5,6,9]; and

Whereas, there is a lack of data on continued mental health services for former foster children with complex needs, and limited funding is allocated to support youths aging out of foster care, underscoring the need for better resources during their transition to adulthood[7,8]; and

Whereas, the John Chafee program, provides federal funding and oversight to support states, territories, and Indian tribal entities in helping youth transition out of foster care, including programs that offer education assistance, employment services, financial guidance, housing, and life skills training,[10,11]; and

Whereas, nearly 80% of eligible youths aging-out don't utilize the John Chafee program due to low awareness of offerings, inadequate time for navigating transition services, learned helplessness, and lack of trust, leading to adverse socioeconomic outcomes [5,12–14,16]; and

Whereas, despite the John Chafee program's expansion, existing federal and state funded programs lack comprehensive mental health support for aging-out foster youths, forcing community organizations to fill the gaps[7,8,10,14,15]; and

Whereas, California's use of the Chafee program, along with the state's Transitional Housing Program, successfully supports aging-out foster youth mental health, with 70% of these youth showing improved outcomes as they transition to adulthood[16]; and

Whereas, in Massachusetts, agencies overseeing Chafee funds have collaborated with the Department of Mental Health to increase access for transition-age youth to mental health and substance use treatment[17]; therefore be it

RESOLVED, that our American Medical Association support federal and state initiatives aimed at increasing funding and enhancing accessibility to services designed to help youths as they

transition out of foster care; especially for youths requiring mental health support and access to psychotropic medications. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

H-60.897 Improved Foster Care Services for Children

Our American Medical Association will (a) encourage and support state, territorial, and tribal activities to implement changes to the child welfare system directed toward keeping children with their families when appropriate and the children's safety is assured, (b) support federal and state efforts to expand access to evidence-based treatment, counseling, mental health services, substance use disorder treatment, in-home parent skills-based services, and other services, (c) encourage and support state efforts expanding use of kinship and family foster care placement and state efforts to eliminate the use of non-therapeutic congregate foster care placement, (d) support both federal and state funding for improvements to the child welfare system which minimize harm to the child and help provide additional services to families that will safely prevent child separation from the family, (e) support government maintenance of a continuously

updated and comprehensive list of evaluated and tested prevention services and for families at risk for entry into the child welfare system. [Res. 216, A-23]

H-60.910 Addressing Healthcare Needs of Children in Foster Care
Our American Medical Association advocates for comprehensive, and evidence-based, trauma-informed care that addresses the specific mental, developmental, and physical health care needs of children in foster care. [Res. 907, I-17 Modified: Res. 420, A-23]

D-350.977 Addressing the Longitudinal Healthcare Needs of American Indian Children in Foster Care
Our American Medical Association (a) recognizes the Indian Child Welfare Act of 1978 as a model in American Indian and Alaska Native child welfare legislation, (b) supports federal legislation preventing the removal of American Indian and Alaska Native children from their homes by public and private agencies without cause, (c) will work with local and state medical societies and other relevant stakeholders to support legislation preventing the removal of American Indian and Alaska Native children from their homes by public and private agencies without cause, (d) supports state and federal funding opportunities for American Indian and Alaska Native child welfare systems, (e) will support the construction of health information systems to enhance information exchange between both tribal and non-tribal child welfare agencies and health care professionals, (f) will advocate for the designation of medical teams, and/or committees to longitudinally follow children in foster care, including to ensure the provision of continuity of care for children who are at the age of transition out of foster care, (g) will advocate for oversight of local, tribal, and state child welfare systems by physicians with expertise in pediatrics and child psychiatry, (h) will promote existing medical homes which provide continuity of care to children in foster care when feasible, (i) will support the appointment of a licensed pediatrician or family medicine physician (with substantial pediatric experience) in each state with experience in child welfare to the position of medical director of child welfare and a psychiatrist with substantial child and adolescent psychiatric experience to the position of psychiatric medical director of child welfare for each Title IV-E agency. [Res. 443, A-22Appended: Res. 930, I-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 217
(A-25)

Introduced by: Medical Student Section

Subject: Regulation and Oversight of the Troubled Teen Industry

Referred to: Reference Committee B

Whereas, the Troubled Teen Industry includes youth residential programs such as treatment centers, wilderness programs, boot camps, and therapeutic boarding schools, housing about 120,000–200,000 adolescents as of 2020, with around 50,000 privately placed by parents[1-3]; and

Whereas, under the 2018 Family First Prevention Services Act, these programs are only required to follow federal and scientific standards if federally funded or state-run, however many are privately run, and are not held to these standards, leading to the use of unproven and potentially harmful practices[1,4]; and

Whereas, regulation of these programs is primarily left to state legislatures, leading to inconsistent oversight, while the out-of-state placement of many children further hinders effective monitoring and accountability by resource-limited non-profit organizations[3,5,6]; and

Whereas, many programs prioritize punitive methods over evidence-based treatments like cognitive behavioral therapy or trauma-informed care, leading to thousands of allegations of abuse, including false imprisonment, forced labor, solitary confinement, and physical and sexual abuse, all of which contribute to lasting trauma and, in some cases, death[1-2,7-11]; and

Whereas, the Troubled Teen Industry as a whole has a disproportionate impact on BIPOC children, children with disabilities and children who identify as part of the LGBTQ+ community[5,12]; and

Whereas, despite repeated efforts over the past decade, significant federal legislation, including the Stop Child Abuse in Residential Programs for Teens Act, has consistently failed to pass in Congress[13]; and

Whereas, H.R. 2955, the Stop Institutional Child Abuse Act, proposes the creation of a Federal Work Group on Youth Residential Programs to implement best practices for the health, safety, care, treatment, and placement of youth, but the bill has remained in committee since its introduction in April 2023[14]; and

Whereas, current advocacy for youth residential programs often does not extend to other aspects of the Troubled Teen Industry, such as wilderness therapy programs, which are less regulated due to their classification as shorter-term solutions[15]; and

Whereas, there are about 40 wilderness therapy programs in the U.S., part of the 2,000 "troubled teen" programs, and the New York Times reported at least 31 deaths in these programs since 1980, with many more cases reported since then[15,16]; and

Whereas, California has recently passed and will soon implement California's Accountability in Children's Treatment Act, which expanded current regulations on residential facilities to include short term residential therapeutic programs, like wilderness therapy programs[17]; and

Whereas, current AMA policy Youth Residential Treatment Program Regulation (H-60.896) specifically advocates for regulation of youth residential facilities which does not account for all aspects of the Troubled Teen Industry; therefore be it

RESOLVED, that our American Medical Association amend Policy H-60.896 "Youth Residential Treatment Program Regulation" by addition to read as follows:

Youth Residential and Other Treatment Program Regulation

1. Our American Medical Association recognizes the need for licensing standards for all youth residential treatment facilities (including private and juvenile facilities) as well as other treatment facilities (including wilderness therapy programs and other programs aimed at treating behavioral and mental health issues in youths) to ensure basic safety and well-being standards for youth.
2. Our AMA supports recommendations including, but not limited to, patient placement criteria and clinical practice guidelines, as developed by of nonprofit health care medical associations and specialty societies, as the standard for regulating youth residential treatment and other relevant youth programs.
3. Our AMA opposes the use of any non-evidence-based therapies and abusive measures in Youth Residential and Other Treatment Programs and supports that only appropriately qualified and certified child and adolescent medical and mental health professionals provide services to participants, and support oversight and review by licensed physicians, mental health professionals, and any other appropriate healthcare professionals
4. Our AMA supports efforts to improve information sharing between states on promising practices for preventing and addressing maltreatment in residential facilities.

(Modify Current HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

H-60.896 Youth Residential Treatment Program Regulation

1. Our American Medical Association recognizes the need for licensing standards for all youth residential treatment facilities (including private and juvenile facilities) to ensure basic safety and well-being standards for youth.
2. Our AMA supports recommendations including, but not limited to, patient placement criteria and clinical practice guidelines, as developed by of nonprofit health care medical associations and specialty societies, as the standard for regulating youth residential treatment programs. [Res. 218, I-23]

H-170.972 Role of Physicians in Improving Adolescent Health

The American Medical Association supports programs that encourage teen health and supports the involvement of medical students, residents, and other physicians in educational efforts to enhance teen health. [Res. 431, A-94; Reaffirmed and Modified: CSA Rep. 6, A-04; Modified: CSAPH Rep. 1, A-14; Reaffirmed: CSAPH Rep. 01, A-24]

H-95.965 Residential Treatment for Women with Substance Use Disorder

Our AMA encourages state medical societies to support an exemption in public aid rules that would allow for the coverage of residential drug treatment programs for women with child-bearing potential. [Res. 405, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Modified: CSAPH Rep. 1, A-21]

H-60.981 Adolescent Health

It is the policy of the AMA to work with other concerned health, education, and community groups in the promotion of adolescent health to: (1) develop policies that would guarantee access to needed family support services, psychosocial services and medical services; (2) promote the creation of community-based adolescent health councils to coordinate local solutions to local problems; (3) promote the creation of health and social service infrastructures in financially disadvantaged communities, if comprehensive continuing health care providers are not available; and (4) encourage members and medical societies to work with school administrators to facilitate the transformation of schools into health enhancing institutions by implementing comprehensive health education, creating within all schools a designated

health coordinator and ensuring that schools maintain a healthy and safe environment. [Res. 252, A-90; Reaffirmed by BOT Rep. 24, A-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmed: CSAPH Rep. 01, A-17]

H-515.981 Family Violence-Adolescents as Victims and Perpetrators

1. Our American Medical Association:
    a. encourages physicians to screen adolescents about a current or prior history of maltreatment. Special attention should be paid to screening adolescents with a history of alcohol and drug misuse, irresponsible sexual behavior, eating disorders, running away, suicidal behaviors, conduct disorders, or psychiatric disorders for prior occurrences of maltreatment.
    b. urges physicians to consider issues unique to adolescents when screening youths for abuse or neglect.
2. Our AMA encourages state medical society violence prevention committees to work with child protective service agencies to develop specialized services for maltreated adolescents, including better access to health services, improved foster care, expanded shelter and independent living facilities, and treatment programs.
3. Our AMA will investigate research and resources on effective parenting of adolescents to identify ways in which physicians can promote parenting styles that reduce stress and promote optimal development.
4. Our AMA will alert the national school organizations to the increasing incidence of adolescent maltreatment and the need for training of school staff to identify and refer victims of maltreatment.
5. Our AMA urges youth correctional facilities to screen incarcerated youth for a current or prior history of abuse or neglect and to refer maltreated youth to appropriate medical or mental health treatment programs.
6. Our AMA encourages the National Institutes of Health and other organizations to expand continued research on adolescent initiation of violence and abuse to promote understanding of how to prevent future maltreatment and family violence. [CSA Rep. I, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13; Reaffirmed: CSAPH Rep. 08, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution 218
(A-25)

Introduced by: Medical Student Section, American College of Physicians, American College of Preventive Medicine, International Medical Graduates Section, Integrated Physician Practice Section

Subject: Distribution of Resident Slots Commensurate with Shortages

Referred to: Reference Committee B

Whereas, by 2036, the Health Resources & Services Administration (HRSA) projects an overall shortage of 139,940 physicians, with family medicine physicians, general internal medicine physicians, pediatricians, OBGYNs, and psychiatrists comprising 83% of the overall shortage[1]; and

Whereas, American Medical Association Policy H-200.949, “Principles of and Actions to Address Primary Care Workforce,” includes general internal medicine, family medicine, pediatrics, and OB/GYN as "primary care” specialties; and

Whereas, the National Health Service Corps considers general internal medicine, family medicine, pediatrics, OB/GYN, as well as psychiatry as specialties in shortage that preferentially receive scholarship support and loan repayment[2]; and

Whereas, preventive medicine physicians are another smaller primary care specialty not formally included in projections whose clinical scope can also help reduce the primary care shortage, in addition to their highly important role bolstering our public health workforce[3]; and

Whereas, our elderly population of over age 64 has been growing at the fastest rate since the 1800s, with an estimate of 55.8 million people, which represents a 38.6% increase in the last 10 years, resulting in increased demand for primary care services[4]; and

Whereas, primary care and psychiatry physician shortages are even more drastic than projected, because estimates like those from the HRSA assume that a large number of physician assistants and nurse practitioners will be hired instead of physicians to meet need[1]; and

Whereas, in both developing and developed countries, a sufficient primary care and psychiatry workforce has been associated with increased access to healthcare services, better health outcomes and decrease use in hospitalization and ED visits[6]; and

Whereas, based on HRSA data, the bipartisan Senate Finance Committee Medicare GME Working Group recently proposed allocating 25% of new Medicare GME slots to primary care and 15% to psychiatry, which are reasonable distributions considering that shortages in those fields are far more drastic[7]; and

Whereas, AMA action in the past has opposed allocating residency positions specifically to primary care and psychiatry, citing concerns about potential future shortages in other specialties

and emphasizing the need for flexibility to address regional demands and has also cosigned comments by the GME Advocacy Coalition, highlighting concerns about shortages across both primary care and specialties[8,9]; and

Whereas, the AMA's position does not align with the data on the extreme shortages in primary care and psychiatry, as the proposal's respective 25% and 15% slot allocations are far below their respective 53% and 30% shares of the physician shortage[1]; therefore be it

RESOLVED, that our American Medical Association support preferential distribution of new residency slots to general internal medicine, family medicine, preventive medicine, pediatrics, obstetrics and gynecology, and psychiatry, commensurate with their relative need and expected shortages. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

H-200.949 Principles of and Actions to Address Primary Care Workforce
1. Our patients require a sufficient, well-trained supply of primary care physicians--family physicians, general internists, general pediatricians, and obstetricians/gynecologists--to meet the nation's current and projected demand for health care services.
[CME Rep. 04, I-18; Reaffirmed: CMS Rep. 08, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution 219
(A-25)

Introduced by: Medical Student Section

Subject: Opposing Unwarranted National Institutes of Health Research Institute Restructuring

Referred to: Reference Committee B

Whereas, in June 2024, the House Energy and Commerce Committee's National Institutes of Health (NIH) Reform Report proposed reducing the number of NIH institutes from 27 to 15, many of which are crucial for addressing specific medical conditions and public health challenges[1-3]; and

Whereas, in April 2025, a leaked draft of the 2026 budget proposal reveals that the current administration plans to go further by cutting the NIH's $47 billion budget to $26 billion and consolidate its 27 institutes and centers into just eight[14]; and

Whereas, recent terminations of long-term NIH contracts, as well as firing or reassignment of NIH institutes and centers' directors, have lacked transparency and clarity, indicating that reforms may proceed without input from physicians, scientists, researchers, academics and other interest and patient advocacy groups[4,5]; and

Whereas, the proposed restructuring and consolidation of the NIH may disproportionately affect research in pediatrics, maternal health and infectious diseases, shift funding away from rare diseases and health disparities, disrupt ongoing studies, reduce funding for specialized research—particularly for underrepresented groups—and redirect support from long-term to short-term projects[1,6]; and

Whereas, the current administration has not committed to maintaining total NIH funding or proportional funding across consolidated institutes and centers; and

Whereas, restructuring to larger research institutes does not necessarily improve productivity, as shown by the Fogarty International Center (FIC), which, despite having the smallest budget, publishes over 20 peer-reviewed manuscripts per $1 million and funds 500 projects at 100 U.S. universities, along with global partnerships in infectious disease, Alzheimer's research, and biodiversity that could be lost through consolidation[7-9]; and

Whereas, public investment in the NIH has generated $94.5 billion in economic activity in 2024 alone, yielding $2.56 for every $1 invested, and supports over 400,000 jobs which underscores its vital role in driving innovation, job growth, and supporting the biotech and pharmaceutical industries[10-12]; and

Whereas, previous NIH reform efforts created commissions to periodically advise additional reforms in the future, such as the Scientific Management Review Board, but have not been utilized in the current restructuring and reorganization[13]; therefore be it

RESOLVED, that our American Medical Association support efforts to promote the inclusion of direct input from allopathic and osteopathic physicians and the scientific community, particularly researchers and academics, in decisions pertaining to the restructuring of the NIH. (New HOD Policy)

RELEVANT AMA POLICY

H-460.965 Viability of Clinical Research Coverages and Reimbursement

1. Our American Medical Association believes that legislation and regulatory reform should be pursued to mandate third party payer coverage of patient care costs (including co-pays/co-insurance/deductibles) of nationally approved (e.g., NIH, VA, ADAMHA, FDA), scientifically based research protocols or those scientifically based protocols approved by nationally recognized peer review mechanisms.
2. Our AMA believes that third party payers should formally integrate the concept of risk/benefit analysis and the criterion of availability of effective alternative therapies into their decision making processes.
3. Our AMA believes that third party payers should be particularly sensitive to the difficulty and complexity of treatment decisions regarding the seriously ill and provide flexible, informed and expeditious case management when indicated.
4. Our AMA believes that its efforts to identify and evaluate promising new technologies and potentially obsolete technologies should be enhanced.
5. Our AMA believes that its current efforts to identify unproven or fraudulent technologies should be enhanced.
6. Our AMA believes that sponsors (e.g., NIH, pharmaceutical firms) of clinical research should finance fully the incremental costs added by research activities (e.g., data collection,

investigators' salaries, data analysis) associated with the clinical trial. Investigators should help to identify such incremental costs of research.

7. Our AMA believes that supports monitoring present studies and demonstration projects, particularly as they relate to the magnitude (if any) of the differential costs of patient care associated with clinical trials and with general practice.
8. Our AMA believes that results of all trials should be communicated as soon as possible to the practicing medical community maintaining the peer reviewed process of publication in recognized medical journals as the preferred means of evaluation and communication of research results.
9. Our AMA believes that funding of biomedical research by the federal government should reflect the present opportunities and the proven benefits of such research to the health and economic well being of the American people.
10. Our AMA believes that the practicing medical community, the clinical research community, patient advocacy groups and third party payers should continue their ongoing dialogue regarding issues in payment for technologies that benefit seriously ill patients and evaluative efforts that will enhance the effectiveness and efficiency of our nation's health care system.
11. Our AMA believes that legislation and regulatory reform should be supported that establish program integrity/fraud and abuse safe harbors that permit sponsors to cover co-pays/coinsurance/ deductibles, otherwise not covered clinical care, and non-clinical ancillary costs in the context of nationally approved clinical trials.

[CSA Rep. F, I-89 Reaffirmed: Joint CMS/CSA Rep., I-92 Reaffirmed: BOT Rep.40, I-93 Reaffirmed: CSA Rep. 13, I-99 Reaffirmation A-00 Reaffirmed: CMS Rep. 4, A-02 Reaffirmed: CMS Rep. 4, A-12 BOT Action in response to referred for decision: Res. 813, I-15 BOT Action in response to referred for decision: Res. 823, I-15 Reaffirmation: I-18 Modified: Res. 226, A-22]

H-460.994 Support for Careers in Research

Our AMA: (1) supports joining with other public and private bodies in encouraging multiple approaches at local, state and national levels in support of the development of physician-investigators, and specifically encourages research and training grants without a pay-back provision; (2) encourages the several specialty boards through the Interspecialty Advisory Board to allow one or more years of clinical investigative training, as long as it has some relevance to that specialty, in lieu of a year of post-doctoral clinical experience, where appropriate; and (3) encourages the NIH to increase the stipends for NIH research traineeships and fellowships without reducing the actual number of available positions. [CSA Rep. G, A-80 Reaffirmed: CLRPD Rep. B, I-90 Reaffirmed: Sunset Report, I-00 Reaffirmation A-09 Reaffirmed: CSAPH Rep. 01, A-19]

H-460.975 Support for NIH Research Facilities

1. Our American Medical Association urges the enactment of federal legislation which would grant to the National Institutes of Health (NIH) funding authority to expand, remodel, and renovate existing biomedical research facilities and to construct new research facilities.
2. Our AMA urges that the authority be granted to the NIH Director and not fragmented at the categorical institute level.
3. Our AMA urges that institutions be required to match federal funding for this program in a systematic way.

[BOT Rep. S, I-88 Reaffirmed: Sunset Report, I-98 Reaffirmation A-00 Reaffirmed: BOT Rep. 6, A-10 Reaffirmed: BOT Rep. 7, A-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 220
(A-25)

Introduced by: New England

Subject: Strengthening AMA Policy on Noncompete Clauses in Ownership Transitions

Referred to: Reference Committee B

Whereas, noncompete clauses (also known as restrictive covenants or covenants-not-to-compete) restrict physician mobility, impede patient continuity of care, and may force patients to seek alternative providers—thereby adversely affecting the quality and accessibility of care (AMA Code of Ethics 11.2.3.1); and

Whereas, such clauses have been shown to exacerbate healthcare workforce shortages, particularly in rural or underserved communities, by limiting physician ability to relocate or establish practices where needed; and

Whereas, numerous states have enacted outright bans on or strict limitations for physician noncompete agreements, including California, Delaware, New Hampshire, New Mexico, Rhode Island, Massachusetts, Minnesota, North Dakota, and Oklahoma; and

Whereas, pending legislation in several states, including Arkansas, Pennsylvania, Indiana, Maryland, and Louisiana, aims either to ban or further restrict the enforcement of physician noncompete clauses in employment contracts; and

Whereas, there is significant evidence that noncompete clauses become especially problematic in the event of ownership transitions, such as mergers, acquisitions (whether structured as a purchase of practice, stock acquisition, or asset sale), or reorganization, which can result in a material change in the employer that should not automatically transfer restrictive covenants unless explicitly agreed to in writing (as seen in Pennsylvania case law regarding assignment clauses and in cases like *Joyner Sports Medicine v. Stejbach*); and

Whereas, several states (e.g., Pennsylvania) prohibit the automatic assignment or transfer of noncompete clauses in the event of an ownership transfer, merger, or acquisition unless explicitly stated in the contract, thereby protecting physicians from being bound by covenants negotiated with a previous employer; and

Whereas, the National Labor Relations Board (NLRB) has argued that noncompete clauses may violate federal labor law by chilling employee mobility; and

Whereas, in 2024 the Federal Trade Commission (FTC) issued a rule banning noncompete clauses for employees in for-profit companies, although this ban was later struck down by a federal judge, reflecting ongoing concerns at the federal level about anti-competitive practices in employment; and

Whereas, case law, including *Valley Medical Specialists v. Farber* (Arizona) and *Mercy Health Sys. v. Bicak* (Arkansas), demonstrates that restrictive covenants can be overly burdensome when they impede patient choice and continuity of care, especially when applied following

dismissals or changes in ownership (Farber Case), thereby reinforcing the need for legislative and regulatory reform; and

Whereas, physicians who are dismissed by their employer, whether in the old or new ownership context, should not be penalized by noncompete clauses that were negotiated under different employment conditions (Connecticut Statute and Pennsylvania Act 67, 2023); and

Whereas, the disruption of patient continuity of care during ownership transitions is a serious public health concern that warrants strong advocacy and clear policy recommendations from the AMA; therefore be it

RESOLVED, that our American Medical Association strongly oppose the enforcement of noncompete clauses (restrictive covenants) following any material change in practice ownership or control, including but not limited to private equity acquisitions, hospital mergers, stock acquisitions, asset sales, or reorganizations, that do not receive explicit, renewed, and informed physician consent (New HOD Policy); and be it further

RESOLVED, that our AMA advocate at both the state and federal levels for legislative and regulatory solutions that prohibit the assignment or automatic transfer of noncompete clauses in the event of ownership transitions, mergers, or acquisitions, thereby preventing such clauses from being imposed on physicians without fresh contract negotiations (Directive to Take Action); and be it further

RESOLVED, that our AMA support policies that render any noncompete clause void if the physician is dismissed by the employer or group, whether under the old or new ownership, and support amendments to state laws to that effect (New HOD Policy); and be it further

RESOLVED, that our AMA support that all physicians be provided with clear, comprehensible disclosures regarding any noncompete or assignment clauses contained in contracts, including detailed explanations of how such clauses would (or would not) be applied in the event of a merger, acquisition, or other ownership change. (New HOD Policy)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/15/25

RELEVANT AMA POLICY

H-160.885 Impact of Integration and Consolidation on Patients and Physicians
1) Our American Medical Association will continue to monitor the impact of hospital-physician practice and hospital-hospital mergers and acquisitions on health care prices and spending, patient access to care, potential changes in patient quality outcomes, and physician wages and labor.
2) Our AMA will continue to monitor how provider mix may change following mergers and acquisitions and how non-compete clauses may impact patients and physicians.
3) Our AMA will support efforts to collect relevant information regarding hospital-physician practice and hospital-hospital mergers and acquisitions in states or regions that may fall below the Federal Trade Commission (FTC)/Department of Justice review threshold.
4) Our AMA will encourage state and local medical associations, state specialty societies, and physicians to contact their state attorney general with concerns of anticompetitive behavior.
5) Our AMA will encourage physicians to share their experiences with mergers and acquisitions, such as those between hospitals and/or those between hospitals and physician practices, with the FTC via their online submission form.

H-265.987 Prohibiting Covenants Not-to-Compete
1) Our American Medical Association opposes all restrictive covenants between employers and physician employees and regularly update its state restrictive covenant legislative template.
2) Our AMA will continue to assist interested state medical associations and specialty societies in developing strategies for physician employee retention.

D-383.978 Restrictive Covenants of Large Health Care Systems
Our AMA, through its Organized Medical Staff Section, will educate medical students, physicians-in-training, and physicians entering into employment contracts with large health care system employers on the dangers of aggressive restrictive covenants, including but not limited to the impact on patient choice and access to care.

H-265.988 Prohibiting Covenants Not-To-Compete in Physician Contracts
1) Our American Medical Association support policies, regulations, and legislation that prohibits covenants not-to-compete for all physicians in clinical practice who hold employment contracts with for-profit or non-profit hospital, hospital system, or staffing company employers.
2) Our AMA will oppose the use of restrictive covenants not-to-compete as a contingency of employment for any physician-in-training, regardless of the ACGME accreditation status of the residency/fellowship training program.
3) Our AMA will study and report back on current physician employment contract terms and trends with recommendations to address balancing legitimate business interests of physician employers while also protecting physician employment mobility and advancement, competition, and patient access to care - such recommendations to include the appropriate regulation or restriction of a) Covenants not to compete in physician contracts with independent physician groups that include time, scope, and geographic restrictions; and b) De facto non-compete restrictions that allow employers to recoup recruiting incentives upon contract termination.

AMA Code of Ethics 11.2.3.1 Restrictive Covenants
1) Competition among physicians is ethically justifiable when it is based on such factors as quality of services, skill, experience, conveniences offered to patients, fees, or credit terms.
2) Covenants-not-to-compete restrict competition, can disrupt continuity of care, and may limit access to care.
3) Physicians should not enter into covenants that: (a) Unreasonably restrict the right of a physician to practice medicine for a specified period of time or in a specified geographic area on termination of a contractual relationship; and (b) Do not make reasonable accommodation for patients' choice of physician.
4) Physicians in training should not be asked to sign covenants not to compete as a condition of entry into any residency or fellowship program.

D-215.980 Support Before, During, and After Hospital Closure or Reduction in Services
1) Our American Medical Association will work with appropriate federal and state bodies to assure that whenever there is a threatened, or actual, hospital closure a process be instituted to safeguard the continuity of patient care and preserve the physician-patient relationship. Such a process should: a) assure adequate capacity exists in the immediate service area surrounding the hospital closure, including independent health resources, physicians, and support personnel to provide for the citizens of that area; b) allow that in said circumstances, restrictive covenants, records access, and financial barriers which prevent the movement of physicians and their patients to surrounding hospitals should be waived for an appropriate period of time; and c) ensure financial reserves exist, and are sufficient to cover any previous contractual obligations to physicians, e.g., medical liability tail coverage.
2) Our AMA will proactively offer support to physicians, residents and fellows, patients, and civic leaders affected by threatened or actual healthcare facility closures, change in ownership, or significant reductions in services via provision of information, resources, and effective, actionable advocacy.

H-160.891 Corporate Investors
Physicians should have a clear understanding of compensation agreements, mechanisms for conflict resolution, processes for exiting corporate investor partnerships, and application of restrictive covenants.

H-310.929 Principles for Graduate Medical Education
7) COMPENSATION OF RESIDENT PHYSICIANS. All residents should be compensated. Residents should receive fringe benefits, including, but not limited to, health, disability, and professional liability insurance and parental leave and should have access to other benefits offered by the institution. Residents must be informed of employment policies and fringe benefits, and their access to them. Restrictive covenants must not be required of residents or applicants for residency education.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 221
(A-25)

Introduced by: New England, Association for Clinical Oncology

Subject: Preservation of Medicaid

Referred to: Reference Committee B

Whereas, Medicaid provides healthcare coverage to 80 million Americans, including pregnant women, children, adults, seniors, people with disabilities, and many others[1]; and

Whereas, Medicaid coverage continues to improve health outcomes, with recent expansion linked to a 6% reduction in all-cause mortality, a 23% increase in self-reported excellent health, and 41% higher likelihood of having a usual source of care[2–9]; and

Whereas, Medicaid finances 40% of all births, insures 40% of individuals under 18 years of age, is the largest payer for behavioral health services, and is the largest payer of long-term care[10–13]; and

Whereas, rural physicians are more likely to serve patient populations who rely on Medicaid funding and would be disproportionately impacted by federal funding cuts[14]; and

Whereas, prior efforts to cut Medicaid spending via work requirements did not increase employment and led to increased medical debt, delayed care, and poorer medication compliance[15,16]; and

Whereas, the federal government finances 69% of Medicaid nationally, ensuring states can provide care without excessive fiscal burden[17]; and

Whereas, reductions to federal funding of Medicaid or changes to Medicaid eligibility at the federal level would lead to substantial loss of coverage for millions of Americans; and

Whereas, the U.S. Congress is considering cutting federal Medicaid spending by adopting a per-capita financing model, reducing the federal match rate, imposing work requirements on certain enrollees, and other policies that are likely to cause coverage reductions[18]; therefore be it

RESOLVED, that our American Medical Association make preservation of federal funding and eligibility for Medicaid one of its top and urgent legislative advocacy priorities, effective immediately, and request report back on the Board of Trustees' actions at I-25 (Directive to Take Action); and be it further

RESOLVED, that our AMA strongly oppose federal and state efforts to reduce eligibility and funding for all public health insurance programs, including Medicaid and CHIP. (New HOD Policy)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/15/25

RELEVANT AMA POLICY

Medicaid Expansion D-290.979

1. Our American Medical Association, at the invitation of state medical societies, will work with state and specialty medical societies in advocating at the state level to expand Medicaid eligibility to 133% (138% FPL including the income disregard) of the Federal Poverty Level as authorized by the ACA and will advocate for an increase in Medicaid payments to physicians and improvements and innovations in Medicaid that will reduce administrative burdens and deliver healthcare services more effectively, even as coverage is expanded.
2. Our AMA will: a. continue to advocate strongly for expansion of the Medicaid program to all states and reaffirm existing policies D-290.979, H 290.965 and H-165.823. b. work with interested state medical associations and national medical specialty societies to provide AMA resources on Medicaid expansion and covering the uninsured to health care professionals to inform the public of the importance of expanded health insurance coverage to all.

Improving Medicaid and CHIP Access and Affordability H-290.954

1. Our American Medical Association opposes premiums, copayments, and other cost-sharing methods for Medicaid and the Children's Health Insurance Program, including Section 1115 waiver applications that would allow states to charge premiums or copayments to Medicaid beneficiaries.
2. Our AMA encourages the Centers for Medicare & Medicaid Services to amend existing Section 1115 waivers to disallow states the ability to charge premiums or copayments to Medicaid beneficiaries.

Pediatric Specialty Medicaid Reimbursement D-290.972
1. Our American Medical Association will make increasing Medicaid reimbursement for pediatric specialists a significant part of its plan for continued progress toward health equity.
2. Our AMA will advocate for payment parity with Medicare for the same or similar services provided to pediatric patients under Medicaid.
3. Our AMA will work with specialty societies to develop a value-based payment model that makes pediatric specialist practices sustainable and promotes access to care and health equity among the pediatric patients.
4. Our AMA will work with interested state parties to support the implementation of the value-based payment model for pediatric specialists in state Medicaid programs.
5. Our AMA will advocate for any demonstration projects undertaken to modernize Medicaid payment using value based payment models developed by the AMA and pediatric specialty societies be exempt from Medicaid demonstration project budget neutrality requirements.

Opposition to Medicaid Work Requirements H-290.961
Our AMA opposes work requirements as a criterion for Medicaid eligibility.

Federal Medicaid Funding H-290.963
1. Our AMA opposes caps on federal Medicaid funding.
2. Our AMA will advocate that Congress and the Department of Health and Human Services seek and take into consideration input from our AMA and interested state medical associations, national medical specialty societies, governors, Medicaid directors, mayors, and other stakeholders during the process of developing federal legislation, regulations, and guidelines on Medicaid funding.

Expanding AMA Payment Reform Work and Advocacy to Medicaid and Other Non-Medicare Payment Models for Pediatric Health Care and Specialty Populations H-385.901
1. Our American Medical Association supports appropriate demonstration projects, carve outs, and adjustments for pediatric patients and services provided to pediatric patients within the payment reform arena.
2. Our AMA will extend ongoing payment reform research, education, and advocacy to address the needs of specialties and patient populations not served by current CMMI models or other Medicare-focused payment reform efforts.
3. Our AMA will support and work with national medical specialty societies that are developing alternative payment models for specific conditions or episodes, target patient populations including pediatric populations, and medical and surgical specialties and continue to advocate that the Centers for Medicare and Medicaid Services, including the Center for Medicare and Medicaid Innovation; state Medicaid agencies; and other payers implement physician-developed payment models.
4. Our AMA will consider improved Medicaid payment rates to be a priority given the critical impact these payment rates have on patient care and patient access to care.
5. Our AMA will support and collaborate with state and national medical specialty societies and other interested parties on the development and adoption of physician-developed alternative payment models for pediatric health care that address the distinct prevention and health needs of children and take long-term, life-course impact into account.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 222
(A-25)

Introduced by: New York

Subject: Need for Separate H1B Pathway for IMG Doctors in the USA

Referred to: Reference Committee B

Whereas, International Medical Graduates (IMGs) constitute a significant portion of the U.S. physician workforce, particularly in underserved areas and critical specialties; and

Whereas, IMG doctors face significant barriers under the current H1B visa system, including delays due to visa caps and the lottery process, which impact their ability to provide consistent care; and

Whereas, the complexity and duration of the current H1B visa and its 3-year renewal process impose undue burdens on IMG doctors, potentially interrupting their work and patient care; and

Whereas, the U.S. is projected to face a shortage of up to 124,000 physicians by 2034, making it imperative to ensure that IMG doctors remain a stable and uninterrupted part of the healthcare workforce; and

Whereas, several countries, including Canada and the UK, have established streamlined visa pathways for foreign-trained physicians, recognizing their vital role in addressing healthcare workforce shortages; therefore be it

RESOLVED, that our American Medical Association advocate for an expedited H-1B visa application and renewal process for International Medical Graduate physicians. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 223
(A-25)

Introduced by: New York

Subject: Preservation of Medicaid

Referred to: Reference Committee B

Whereas, Medicaid provides healthcare coverage to 80 million low-income Americans, including pregnant women, children, adults, seniors, people with disabilities, and LGBTQIA+ individuals[1]; and

Whereas, Medicaid improves health outcomes, with expansion linked to a 6% reduction in all-cause mortality, a 23% increase in self-reporting health as excellent, and 41% higher likelihood of having a usual care source[2–9]; and

Whereas, Medicaid finances 40% of all births (including nearly 50% of births in rural communities), insures 40% of individuals under 18 years of age, is the largest single payer for behavioral health services, including substance use disorder (SUD) treatment, and is the largest payer of long term care services in the United States[10–13]; and

Whereas, women physicians are more likely to serve patient populations who rely heavily on Medicaid funding and would be disproportionately impacted by federal funding cuts[14]; and

Whereas, previous efforts to cut Medicaid spending via work requirements did not increase employment and instead led to problems paying off medical debt, delayed care, and delayed taking medications due to cost[15,16]; and

Whereas, the federal government finances 69% of Medicaid nationally, ensuring states can provide care without excessive fiscal burden[17]; and

Whereas, reductions to federal funding of Medicaid or changes to Medicaid eligibility at the federal level would lead to substantial loss of coverage for millions of Americans; and

Whereas, U.S. Congress is considering cutting federal Medicaid spending by adopting a per-capita financing model, reducing the federal match rate, and imposing work requirements on certain enrollees —policies shown to force coverage reductions[18]; therefore be it

RESOLVED, that our American Medical Association strongly supports maintaining and expanding Medicaid coverage to ensure access to comprehensive healthcare for vulnerable populations (New HOD Policy); and be it further

RESOLVED, that our AMA opposes any state or federal efforts to impose work requirements as a condition of Medicaid eligibility (New HOD Policy); and be it further

RESOLVED, that our AMA opposes increasing cost-sharing requirements for Medicaid enrollees (New HOD Policy); and be it further

RESOLVED, that our AMA makes preservation of federal funding and eligibility for Medicaid an urgent and top legislative advocacy priority (Directive to Take Action); and be it further

RESOLVED, that our AMA strongly oppose federal and state efforts to restrict eligibility and funding for all public health insurance programs, including Medicaid and CHIP. (New HOD Policy)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 224
(A-25)

Introduced by: New York

Subject: Support SAVE Plan and Public Service Loan Forgiveness (PLSF) Applications

Referred to: Reference Committee B

Whereas, the SAVE plan is an income-driven repayment plan that grants forgiveness on subsidized and unsubsidized federal loans after 120 months of qualifying payments[1]; and

Whereas, the SAVE plan provides an interest benefit preventing interest from accruing if the income-driven monthly payment does not cover the interest; and

Whereas, repayment length is based on the principal amount of the loan and level of study (graduate vs. undergraduate), with a cap of 25 years; and

Whereas, the average medical student graduates with $234,579 in medical school-associated debt[2]; and

Whereas, a federal court has placed an injunction on the SAVE plan, preventing borrowers from applying to SAVE and placing currently enrolled borrowers in involuntary forbearance[3]; therefore be it

RESOLVED, that our American Medical Association supports the reinstatement of the SAVE plan or a replacement program with similar income-based payments, interest benefits, and loan forgiveness and allows those with 120 qualifying payments to submit a PSLF application (New HOD Policy); and be further

RESOLVED, that this resolution be submitted to the American Medical Association for consideration and advocacy, ensuring that the AMA supports and promotes the reinstatement of the SAVE plan or a similar program at the national level. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 225
(A-25)

Introduced by: New York

Subject: The Private Practice Physicians in the Community

Referred to: Reference Committee B

Whereas, I am a member and represent the endangered species of Medicine: The Private Practice Physicians which today comprise only 17% of practicing physicians. Recently the number has rapidly declined to near extinction levels. Many have gone into early retirement; others have joined the hospital or companies which offer employment opportunities; and

Whereas, there are several specific reasons for this decline, including the decline in reimbursements. This year a 2.83% cut in the physician payment schedule has occurred, the 5th straight year of cuts, a devastating decline in physician reimbursement that stretches beyond two decades; and

Whereas, private practice physicians are affected to a much larger degree than hospitalists as the hospital donors and state funding largely subtracts from the physician apportion; and

Whereas, hospitals and large group practices have greater market share due to ability to buy up practices in the community and claim enough member lives to negotiate higher reimbursement.The unregulated, unfettered urgent care and minute clinics also compete for business from the private physicians; and

Whereas, Direct care, concierge, and traditional personalized patient care in a private practice setting where the physician has greater flexibility and continuity with the patient fosters a stronger physician-patient relationship, which likely promotes better patient satisfaction and improved outcomes. The private practice physician has been the cornerstone and backbone of the healthcare system for the past few hundred years; and

Whereas, physicians have no reasonable labor protection, cannot unionize or strike unlike the hospitalists who can strike and unionize for better wages, are unable to share information about our contracts due to fear of accusations of “collusion”; and

Whereas, Corporate hospitals and large groups have taken over medicine with their bottom line agenda. In the year 2000 there were only a few hundred hospitalists, today there are 60,000 hospitalists, a number that is rapidly growing; therefore be it

RESOLVED, that our American Medical Association advocate for legislation, regulation or other policy mechanisms make it a priority to halt the constant yearly physician cutbacks in a climate of skyrocketing inflation and a high cost of living, in fact COLA should be built into ALL fee schedules (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate to The Centers for Medicare and Medicaid Services (CMS) and Congress to decrease the need for time consuming prior authorizations, decrease

the use of audits and recoupment and retrieving funds from physicians already burdened by ever increasing overhead and continual payment cutbacks. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 226
(A-25)

Introduced by: Pennsylvania

Subject: Regulations for Algorithmic-Based Health Insurance Utilization Review

Referred to: Reference Committee B

Whereas, utilization review by health insurance companies was originally intended to involve comprehensive examination of patient records by medical experts to ensure fair and objective decisions[1]; and

Whereas, there is growing concern regarding the use of algorithmic systems in utilization review, which bypass traditional medical review steps and rely on automated processes to make claim denial decisions[1]; and

Whereas, the utilization of artificial intelligence (AI) and machine learning algorithms in utilization review processes by insurance companies raises concerns regarding their technical limitations, longitudinal unreliability, and propensity for biass[2]; and

Whereas, AI algorithms may exhibit limitations in accurately assessing complex medical data and making informed utilization review decisions, particularly in cases where the underlying data is incomplete, unrepresentative, ambiguous, or subject to interpretation[2]; and

Whereas, AI algorithms may exhibit bias in their decision-making processes, reflecting and perpetuating existing disparities and inequities in healthcare access and outcomes, particularly for marginalized and underserved populations[2]; and

Whereas, the opacity and lack of interpretability of AI algorithms may hinder the identification and mitigation of bias and may lead to an overreliance on algorithmic predictions, leading to possibly unfair and discriminatory utilization review practices by insurance companies[2]; and

Whereas, the utilization of algorithmic systems, such as Cigna's PXDX, has raised questions about the transparency, accountability, and fairness in their assessment of medical claims, as these systems lack human oversight and may lead to erroneous denials of medically necessary care[3,4]; and

Whereas, even after investigations by the U.S. Department of Labor, congressional committees, and journalists, the usage of algorithms in utilization review has not been transparently disclosed to physicians, patients, and the general public[3,4]; and

Whereas, insurance companies such as UnitedHealth have been found to use restrictive algorithms and medical staff coercion to limit Medicare patients' access to rehabilitation care, resulting in a lawsuit and pressure from US Representatives to prompt CMS oversight of use of AI in Medicare Advantage plans[5]; and

Whereas, the improper use of utilization management programs have been found to lead to inappropriate denials, thereby resulting in delays in patient care, clinician burnout, and

increased administrative burden to appeal such denials with a substantial portion of denials ultimately overturned in providers' favor[6]; and

Whereas, consumers facing wrongful insurance denials often encounter significant obstacles in navigating the appeals process, leading to low rates of appeal and potentially, underreporting of violations[6,7]; and

Whereas, the utilization of algorithmic systems in medical review processes may undermine patient trust in insurance providers and the healthcare system as a whole, leading to medical mistrust and dissatisfaction[6]; and

Whereas, the financial consequences of payment delays and denials for medically necessary care have placed significant strains on health systems with billions of dollars in delayed or potentially unpaid claims reported[1,6]; and

Whereas, delays in patient care have been linked to serious adverse events including hospitalizations, disabilities; and even deaths, as reported by physicians[6]; and

Whereas, there is extensive documentation of insurance companies violating numerous state laws aimed at protecting consumers from unfair insurance denials, including denials for life-saving cancer medications and necessary surgeries[7]; and

Whereas, state insurance departments tasked with enforcing these laws often lack the resources and manpower necessary to effectively conduct thorough audits or investigations into violations[7]; and

Whereas, The American Medical Association (AMA) has conducted extensive research on utilization management programs, like prior authorization, revealing their detrimental impact on patient care delays, administrative costs, and workflow disruptions, highlighting the urgent need for reform[8]; and

Whereas, surveys of practicing physicians have consistently indicated that prior authorization requirements interfere with patient care, and limit progress in reforming health plans[8]; and

Whereas, The American Medical Association House of Delegates adopted the following five policies since 2022 to address the use of AI in reviewing patient claims and prior authorization requests: H-285.998 Managed Care (2024); H-320.968 Approaches to Increase Payer Accountability (2024); H-390.849 Physician Payment Reform (2023); H-480.935 Assessing the Potentially Dangerous Intersection Between AI and Misinformation (2023), and H-480.939 Augmented Intelligence (2022); therefore be it

RESOLVED, that our American Medical Association advocate for state and federal oversight of and/or legislative activity to assure the transparency, patient safety, and biases involved in algorithm usage in utilization review by insurance companies (Directive to Take Action); and be it further

RESOLVED, that our AMA reaffirm the following policies:
H-285.998 Managed Care (2024)
H-320.968 Approaches to Increase Payer Accountability (2024)
H-390.849 Physician Payment Reform (2023)

H-480.935 Assessing the Potentially Dangerous Intersection Between AI and Misinformation (2023)
H-480.939 Augmented Intelligence (2022). (Reaffirm HOD Policy)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/7/25

RELEVANT AMA POLICY

Managed Care H-285.998

1. Introduction The needs of patients are best served by free market competition and free choice by physicians and patients between alternative delivery and financing systems, with the growth of each system determined not by preferential regulation and subsidy, but by the number of persons who prefer that mode of delivery or financing.
2. Definition "Managed care" is defined as those processes or techniques used by any entity that delivers, administers, and/or assumes risk for health care services in order to control or influence the quality, accessibility, utilization, or costs and prices or outcomes of such services provided to a defined enrollee population.
3. Techniques Managed care techniques currently employed include any or all of the following: (a) prior, concurrent, or retrospective review of the quality, medical necessity, and/or appropriateness of services or the site of services; (b) controlled access to and/or coordination of services by a case manager; (c) efforts to identify treatment alternatives and to modify benefits for patients with high cost conditions; (d) provision of services through a network of contracting providers, selected and deselected on the basis of standards related to cost-effectiveness, quality, geographic location, specialty, and/or other criteria; (e) enrollee financial incentives and disincentives to use such providers, or specific service sites; and (f) acceptance by participating providers of financial risk for some or all of the contractually obligated services, or of discounted fees.
4. Case Management Health plans using the preferred provider concept should not use coverage arrangements which impair the continuity of a patient's care across different treatment settings. With the increased specialization of modern health care, it is advantageous to have one individual with overall responsibility for coordinating the medical care of the patient. The physician is best suited by professional preparation to assume this leadership role. The primary goal of high-cost case management or benefits management programs should be to help to arrange for the

services most appropriate to the patient's needs; cost containment is a legitimate but secondary objective. In developing an alternative treatment plan, the benefits manager should work closely with the patient, attending physician, and other relevant health professionals involved in the patient's care. Any health plan which makes available a benefits management program for individual patients should not make payment for services contingent upon a patient's participation in the program or upon adherence to treatment recommendations.

5. Utilization Review The medical protocols and review criteria used in any utilization review or utilization management program must be developed by physicians. Public and private payers should be required to disclose to physicians on request the screening and review criteria, weighting elements, and computer algorithms utilized in the review process, and how they were developed. Physician of the same specialty must be involved in any decision by a utilization management program to deny or reduce coverage for services based on questions of medical necessity. All health plans conducting utilization management or utilization review should establish an appeals process whereby physicians, other health care providers, and patients may challenge policies restricting access to specific services and decisions to deny coverage for services, and have the right to review of any coverage denial based on medical necessity by a physician independent of the health plan who is of the same specialty and has appropriate expertise and experience in the field. A physician whose services are being reviewed for medical necessity should be provided the identity of the reviewing physician on request. Any physician who makes judgments or recommendations regarding the necessity or appropriateness of services or site of services should be licensed to practice medicine and actively practicing in the same jurisdiction as the practitioner who is proposing or providing the reviewed service and should be professionally and individually accountable for their decisions. All health benefit plans should be required to clearly and understandably communicate to enrollees and prospective enrollees in a standard disclosure format those services which they will and will not cover and the extent of coverage for the former. The information disclosed should include the proportion of plan income devoted to utilization management, marketing, and other administrative costs, and the existence of any review requirements, financial arrangements or other restrictions that may limit services, referral or treatment options, or negatively affect the physician's fiduciary responsibility to their patients. It is the responsibility of the patient and their health benefits plan to inform the treating physician of any coverage restrictions imposed by the plan.

All health plans utilizing managed care techniques should be subject to legal action for any harm incurred by the patient resulting from application of such techniques. Such plans should also be subject to legal action for any harm to enrollees resulting from failure to disclose prior to enrollment any coverage provisions; review requirements; financial arrangements; or other restrictions that may limit services, referral, or treatment options, or negatively affect the physician's fiduciary responsibility to their patient.

When inordinate amounts of time or effort are involved in providing case management services required by a third party payer which entail coordinating access to other health care services needed by the patient, or in complying with utilization review requirements, the physician may charge the payer or the patient for the reasonable cost incurred. "Inordinate" efforts are defined as those "more costly, complex and time-consuming than the completion of standard health insurance claim forms, such as obtaining preadmission certification, second opinions on elective surgery, certification for extended length of stay, and other authorizations as a condition of payer coverage."

Any health plan or utilization management firm conducting a prior authorization program should act within two business days on any patient or physician request for prior authorization and respond within one business day to other questions regarding medical necessity of services. Any health plan requiring prior authorization for covered services should provide enrollees subject to such requirements with consent forms for release of medical information for utilization review purposes, to be executed by the enrollee at the time services requiring prior authorization are recommended by the physicians.

In the absence of consistent and scientifically established evidence that preadmission review is cost-saving or beneficial to patients, the AMA strongly opposes the use of this process.

Joint CMS/CLRPD Rep. I-91 Reaffirmed: CMS Rep. Approaches to Increase Payer Accountability H-320.968
Our AMA supports the development of legislative initiatives to assure that payers provide their insureds with information enabling them to make informed decisions about choice of plan, and to assure that payers take responsibility when patients are harmed due to the administrative requirements of the plan. Such initiatives should provide for disclosure requirements, the conduct of review, and payer accountability.

1. Disclosure Requirements. Our American Medical Association supports the development of model draft state and federal legislation to require disclosure in a clear and concise standard format by health benefit plans to prospective enrollees of information on:
    a. Coverage provisions, benefits, and exclusions.
    b. Prior authorization or other review requirements, including claims review, which may affect the provision or coverage of services.
    c. Plan financial arrangements or contractual provisions that would limit the services offered, restrict referral or treatment options, or negatively affect the physician's fiduciary responsibility to their patient.
    d. Medical expense ratios.
    e. Cost of health insurance policy premiums. (Ref. Cmt. G, Rec. 2, A-96; Reaffirmation A-97)
2. Conduct of Review. Our AMA supports the development of additional draft state and federal legislation to:
    a. Require private review entities and payers to disclose to physicians on request the screening criteria, weighting elements and computer algorithms utilized in the review process, and how they were developed.
    b. Require that any physician who recommends a denial as to the medical necessity of services on behalf of a review entity be of the same specialty as the practitioner who provided the services under review.
    c. Require every organization that reviews or contracts for review of the medical necessity of services to establish a procedure whereby a physician claimant has an opportunity to appeal a claim denied for lack of medical necessity to a medical consultant or peer review group which is independent of the organization conducting or contracting for the initial review.
    d. Require that any physician who makes judgments or recommendations regarding the necessity or appropriateness of services or site of service be licensed to practice medicine in the same jurisdiction as the practitioner who is proposing the service or whose services are being reviewed.
    e. Require that review entities respond within 48 hours to patient or physician requests for prior authorization, and that they have personnel available by telephone the same business day who are qualified to respond to other concerns or questions regarding medical necessity of services, including determinations about the certification of continued length of stay.
    f. Require that any payer instituting prior authorization requirements as a condition for plan coverage provide enrollees subject to such requirements with consent forms for release of medical information for utilization review purposes, to be executed by the enrollee at the time services requiring such prior authorization are recommended or proposed by the physician.
    g. Require that payers compensate physicians for those efforts involved in complying with utilization review requirements that are more costly, complex and time consuming than

the completion of standard health insurance claim forms. Compensation should be provided in situations such as obtaining preadmission certification, second opinions on elective surgery, and certification for extended length of stay.

3. Accountability. Our AMA believes that draft federal and state legislation should also be developed to impose similar liability on health benefit plans for any harm to enrollees resulting from failure to disclose prior to enrollment the information on plan provisions and operation specified under Section 1 (a)-(d) above.

Physician Payment Reform H-390.849

1. Our American Medical Association will advocate for the development and adoption of physician payment reforms that adhere to the following principles:
    a. Promote improved patient access to high-quality, cost-effective care.
    b. Be designed with input from the physician community.
    c. Ensure that physicians have an appropriate level of decision-making authority over bonus or shared-savings distributions.
    d. Not require budget neutrality within Medicare Part B.
    e. Be based on payment rates that are sufficient to cover the full cost of sustainable medical practice.
    f. Ensure reasonable implementation timeframes, with adequate support available to assist physicians with the implementation process.
    g. Make participation options available for varying practice sizes, patient mixes, specialties, and locales.
    h. Use adequate risk adjustment methodologies.
    i. Incorporate incentives large enough to merit additional investments by physicians.
    j. Provide patients with information and incentives to encourage appropriate utilization of medical care, including the use of preventive services and self-management protocols.
    k. Provide a mechanism to ensure that budget baselines are reevaluated at regular intervals and are reflective of trends in service utilization.
    l. Attribution processes should emphasize voluntary agreements between patients and physicians, minimize the use of algorithms or formulas, provide attribution information to physicians in a timely manner, and include formal mechanisms to allow physicians to verify and correct attribution data as necessary.
    m. Include ongoing evaluation processes to monitor the success of the reforms in achieving the goals of improving patient care and increasing the value of health care services.
2. Our AMA opposes bundling of payments in ways that limit medically necessary care, including institutional post-acute care, or otherwise interfere with a physician's ability to provide high quality care to patients.
3. Our AMA supports payment methodologies that redistribute Medicare payments among providers based on outcomes (including functional improvements, if appropriate), quality and risk-adjustment measures only if measures are scientifically valid, reliable, and consistent with national medical specialty society- developed clinical guidelines/standards.
4. Our AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.
5. Our AMA supports the development of a public-private partnership for the purpose of validating statistical models used for risk adjustment.

Assessing the Potentially Dangerous Intersection Between AI and Misinformation H-480.935

1. Our American Medical Association will study and develop recommendations on the benefits and unforeseen consequences to the medical profession of large language models (LLM) such as, generative pretrained transformers (GPTs), and other augmented intelligence-generated medical advice or content, and that our AMA propose appropriate state and federal regulations with a report back at A-24.
2. Our AMA will work with the federal government and other appropriate organizations to protect patients from false or misleading AI-generated medical advice.
3. Our AMA will encourage physicians to educate our patients about the benefits and risks of consumers facing LLMs including GPTs.
4. Our AMA will support publishing groups and scientific journals to establish guidelines to regulate the use of augmented intelligence in scientific publications that include detailing the use of augmented intelligence in the methods, exclusion of augmented intelligence systems as authors, and the responsibility of authors to validate the veracity of any text generated by augmented intelligence.

Res. 247, A-23

Augmented Intelligence H-480.939

Our American Medical Association supports the use and payment of augmented intelligence (AI) systems that advance the quadruple aim. AI systems should enhance the patient experience of care and outcomes, improve population health, reduce overall costs for the health care system while increasing value, and support the professional satisfaction of physicians and the health care team. To that end our AMA will advocate that:

1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
2. Payment and coverage for all health care AI systems must be conditioned on complying with all appropriate federal and state laws and regulations, including, but not limited to those governing patient safety, efficacy, equity, truthful claims, privacy, and security as well as state medical practice and licensure laws.
3. Payment and coverage for health care AI systems intended for clinical care must be conditioned on
    a. clinical validation.
    b. alignment with clinical decision-making that is familiar to physicians.
    c. high-quality clinical evidence.
4. Payment and coverage for health care AI systems must
    a. be informed by real world workflow and human-centered design principles.
    b. enable physicians to prepare for and transition to new care delivery models.
    c. support effective communication and engagement between patients, physicians, and the health care team.
    d. seamlessly integrate clinical, administrative, and population health management functions into workflow.
    e. seek end-user feedback to support iterative product improvement.
5. Payment and coverage policies must advance affordability and access to AI systems that are designed for small physician practices and patients and not limited to large practices and institutions. Government-conferred exclusivities and intellectual property laws are meant to foster

innovation, but constitute interventions into the free market, and therefore, should be appropriately balanced with the need for competition, access, and affordability.

6. Physicians should not be penalized if they do not use AI systems while regulatory oversight, standards, clinical validation, clinical usefulness, and standards of care are in flux. Furthermore, our AMA opposes:
    a. Policies by payers, hospitals, health systems, or governmental entities that mandate use of health care AI systems as a condition of licensure, participation, payment, or coverage.
    b. The imposition of costs associated with acquisition, implementation, and maintenance of healthcare AI systems on physicians without sufficient payment.
7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. Our AMA will further advocate:
    a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
    b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
    c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.
8. Our AMA, national medical specialty societies, and state medical associations:
    a. Identify areas of medical practice where AI systems would advance the quadruple aim.
    b. Leverage existing expertise to ensure clinical validation and clinical assessment of clinical applications of AI systems by medical experts.
    c. Outline new professional roles and capacities required to aid and guide health care AI systems.
    d. Develop practice guidelines for clinical applications of AI systems.
9. There should be federal and state interagency collaboration with participation of the physician community and other stakeholders in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD Policy)
10. AI is designed to enhance human intelligence and the patient-physician relationship rather than replace it.

BOT Rep. 21, A-19 Reaffirmation: A-22

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 227
(A-25)

Introduced by: Private Practice Physicians Section

Subject: Payment Recoupment—Let Sanity Prevail

Referred to: Reference Committee B

Whereas, insurance companies not only create barriers to care and payment, but manage to bamboozle physicians into retrospective recovery or claim recoupment with bolder and more outlandish schemes; and

Whereas, insurance companies often claim errors that are not the fault of the physician as the reason for recoupment; and

Whereas, insurance companies often try to cover up their mistakes and errors by imposing the costs on physicians for services legitimately performed for a medically necessary condition; and

Whereas, insurance companies recoup money for payments made “in error” due to a “coordination of benefits” error that is the fault of the insurance company; and

Whereas, medical practices are not debt collectors for insurance companies where debts belong to the patient or another insurance company; and

Whereas, claim recoupment is administratively costly to physician practices, has no meaningful due process, and is not overseen by any third party as claim-related appeals cannot be referred for outside appeals under most health plan provisions; and

Whereas, claim recovery or recoupment has a significant impact on the financial viability of medical practices with billions of dollars recurred in costs and billions unjustly stolen from physicians; and

Whereas, AMA policy D-385.944, “ERISA Preemption of State Laws Regulating Pharmacy Benefit Managers” refers to the US Supreme Court holding in Rutledge v. PCMA, which gives the states the ability to regulate certain administrative aspects of health plans that do not relate to “a particular scheme of substantive coverage” which includes claim recoupment and payment recovery; therefore be it

RESOLVED, that our American Medical Association advocates for legislation and regulations compliant with the Supreme Court holding in *Rutledge v. PCMA* (Directive to Take Action); and be it further

RESOLVED, that our AMA advocates for legislation and regulations that stipulate that if payment recovery or recoupment is due to coordination of benefit failure, the payer seeks recovery from the patient and/or the correct insurance company or primary payer responsible for the claim (Directive to Take Action); and be it further

RESOLVED, that our AMA advocates for legislation and that whenever a health plan seeks recoupment or payment recovery for overpayment or wrong payment from a physician, a detailed and comprehensive explanation for the payment recoupment/recovery must be provided (Directive to Take Action); and be it further

RESOLVED, that our AMA advocates for legislation and regulation that if the reason for claim recovery or recoupment is not due to physician error, the health plan may not seek recovery from the physician and that health plans must seek resolution from the patient on whose behalf the insurance company paid the claim and who has a contract with the insurance company or the third party responsible for the payment involved in claim recovery or recoupment (Directive to Take Action); and be it further

RESOLVED, that our AMA report back at the 2026 Annual Meeting on the progress of the implementation of this resolution (Directive to Take Action).

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/22/25

RELEVANT AMA POLICY

ERISA Preemption of State Laws Regulating Pharmacy Benefit Managers D-385.944
Our American Medical Association will study, and create resources for states, on the implication of *Rutledge, Attorney General Of Arkansas v. Pharmaceutical Care Management Association*, and any other relevant legal decisions from the last several years, in reference to potentially allowing more successful challenges to the actions of healthcare plans protected by the Employee Retirement Income Security Act of 1974 (ERISA) when the quality of care or healthcare outcomes are questioned.
Citation: Res. 224, I-23

Insurance Companies Use of Contractors to Recover Payments D-385.965
1. Our AMA will seek legislation to limit insurance companies, their agents, or any contractors from requesting payment back on paid claims to no more than 90 days after payment is made.
(a) Such legislation would require insurance companies, their agents, or any contractors to have a defined and acceptable process for physicians to dispute these maneuvers to get payment back on claims already processed, verified, and paid.
(b) Such legislation would ban insurance companies, their agents or contractors from using re-pricers and re-reviewers and to adhere to their own pricing and reviewing guidelines as agreed upon in their contracts with physicians.
2. Our AMA will pursue legislation to regulate self-insured plans in this regard and apply the same rules to Medicare and other federal plans.
Citation: Res. 215, A-09; Reaffirmed: BOT Rep. 09, A-19

Creating a Fair and Balanced Medicare and Medicaid RAC Program D-320.991
1. Our AMA will continue to monitor Medicare and Medicaid Recovery Audit Contractor (RAC) practices and recovery statistics and continue to encourage the Centers for Medicare and Medicaid Services (CMS) to adopt new regulations which will impose penalties against RACs for abusive practices.
2. Our AMA will continue to encourage CMS to adopt new regulations which require physician review of all medical necessity cases in post-payment audits, as medical necessity is quintessentially a physician determination and judgment.
3. Our AMA will encourage CMS to discontinue the denial of payments or imposition of negative action during an audit due to the absence of specific words in the chief complaint when the note provides adequate documentation of the reason for the visit and services rendered.
4. Our AMA will assist states by providing recommendations regarding state implementation of Medicaid RAC rules and regulations in order to lessen confusion among physicians and to ensure that

states properly balance the interest in overpayment and underpayment audit corrections for Recovery Contractors.
5. Our AMA will petition CMS to amend CMS' rules governing the use of extrapolation in the RAC audit process, so that the amended CMS rules conform to Section 1893 of the Social Security Act Subsection (f) (3) - Limitation on Use of Extrapolation; and insists that the amended rules state that when an RAC initially contacts a physician, the RAC is not permitted to use extrapolation to determine overpayment amounts to be recovered from that physician by recoupment, offset, or otherwise, unless (as per Section 1893 of the Social Security Act) the Secretary of Health and Human Services has already determined, before the RAC audit, either that (a) previous, routine pre- or post-payment audits of the physician's claims by the Medicare Administrative Contractor have found a sustained or high level of previous payment errors, or that (b) documented educational intervention has failed to correct those payment errors.
6. Our AMA, in coordination with other stakeholders such as the American Hospital Association, will seek to influence Congress to eliminate the current RAC system and ask CMS to consolidate its audit systems into a more balanced, transparent, and fair system, which does not increase administrative burdens on physicians.
7. Our AMA will: (A) seek to influence CMS and Congress to require that a physician, and not a lower level provider, review and approve any RAC claim against physicians or physician-decision making, (B) seek to influence CMS and Congress to allow physicians to be paid any denied claim if appropriate services are rendered, and (C) seek the enactment of fines, penalties and the recovery of costs incurred in defending against RACs whenever an appeal against them is won in order to discourage inappropriate and illegitimate audit work by RACs.
8. Our AMA will advocate for penalties and interest to be imposed on the auditor and payable to the physician when a RAC audit or appeal for a claim has been found in favor of the physician.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 228
(A-25)

Introduced by: Resident and Fellow Section, American Academy of Family Physicians, American College of Obstetricians and Gynecologists

Subject: CHIP Coverage of OTC Medications

Referred to: Reference Committee B

Whereas, the Children's Health Insurance Program (CHIP) is a joint federal and state program that provides health coverage to uninsured children in families with incomes too high to qualify for Medicaid, but too low to afford private coverage[1]; and

Whereas, CHIP was originally passed into law under the Balanced Budget Act of 1997, and was most recently extended through federal fiscal year 2027[2]; and

Whereas, in order for a child to be eligible for CHIP, they must be 1) under 19 years of age, 2) uninsured, 3) a citizen or meet immigration requirements, 4) a resident of the state where they are applying, and 5) eligible within the state's CHIP incoming range based on family income)[3]; and

Whereas, in 2009, the Children's Health Insurance Program Reauthorization Act (CHIRPA) amends the act to expand coverage to pregnant women, including coverage during the 60-day postpartum period[4]; and

Whereas, each state administers their own CHIP program with their own distinct rules and regulations, within federal guidelines, to meet the needs of their constituents[5]; and

Whereas, CHIP currently covers routine check-ups, immunizations, doctor visits, dental and vision care, inpatient and outpatient hospital care, lab and imaging services, emergency services, and prescription medications[6]; and

Whereas, since CHIP was enacted the uninsured rate for children 18 and under has fallen by 67.9% from 14.9 to 4.8%[7]; and

Whereas, 7.6 million children are currently enrolled in CHIP based on a 2021 report[8]; and

Whereas, CHIP beneficiaries can receive a range of prescription coverage; however, states may choose to limit coverage of over-the-counter (OTC) medications based on specific medication categories or require physician prescription for coverage of OTC medicines[9,10]; and

Whereas, CHIP currently imposes coverage limitations with respect to certain drug classes[11]; and

Whereas, the cost of medications, including OTC medications, are a significant contributor to overall cost for patients, especially for children with medical complexity[12]; and

Whereas, research has shown families who spent more on out-of-pocket costs for medications were more sensitive to high medication costs and had an immediate reduction in adherence when started on high-cost, long-term medications[13]; and

Whereas, the availability of OTC medication to treat mild conditions creates substantial savings for the US health system[14]; therefore be it

RESOLVED, that our American Medical Association advocate for expanding coverage of FDA-approved and/or medically necessary over-the-counter medications under the Children's Health Insurance Program (CHIP) for enrolled individuals, including by expanding medication classes covered under CHIP (Directive to Take Action); and be it further

RESOLVED, that our AMA oppose arbitrary limitations on the quantity of FDA-approved over-the-counter medications covered by the Children's Health Insurance Program for enrolled individuals (New HOD Policy); and be it further

RESOLVED, that our AMA oppose copayment requirements for over-the-counter medications for patients enrolled in CHIP. (New HOD Policy)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/21/25

RELEVANT AMA POLICY:

Medicaid Payment for Over-The-Counter Drugs When They are the Drug of Choice H-125.990
The AMA supports over-the-counter drug benefits under Medicaid that provide physician-prescribed medications to enrollees. Cost-conscious OTC drug programs should satisfy the criteria contained in Policy 110.997 for AMA support of programs designed to contain the rising costs of prescription drugs and follow AMA Policy 125.991 on development and implementation of drug formularies. [CMS Rep. 12, A-94; Reaffirmed: CMS Rep. 7, I-97; Reaffirmed: CMS Rep. 9, A-07; Reaffirmed: CMS Rep. 01, A-17]

Health Plan Coverage for Over-the-Counter Drugs H-185.956
Our AMA: (1) opposes mandated health plan coverage for over-the-counter (OTC) pharmaceuticals, including those that had previously been available only with a prescription; (2) encourages health insurers and health plans to cover medically necessary OTC drugs for which no prescription alternative exists; and (3) continues to support efforts to study the effects of converting medically necessary drugs from prescription to over-the-counter status on the costs and access to such medications.
[CMS Rep. 1, I-98; Renumbered: CMS Rep. 7, I-05; Reaffirmed: CMS Rep. 1, A-15]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 229
(A-25)

Introduced by: Senior Physicians Section

Subject: Guaranteeing Timely Delivery and Accessibility of Federal Health Data

Referred to: Reference Committee B

Whereas, a memorandum was issued on January 21, 2025 to all thirteen Operating Divisions within the U.S. Dept. of Health & Human Services including the Food and Drug Administration, the Centers for Disease Control and Prevention, the Center for Medicare & Medicaid Services (CMS) and the National Institutes of Health, as well as other lesser-known health agencies[1]; and

Whereas, the CDC (Centers for Disease Control and Prevention) and the NIH (National Institutes of Health) had an almost three-month embargo imposed on data, which delayed physicians' access to essential information needed to provide timely and effective patient care; and

Whereas, lack of access to vital health data undermines the integrity and training of physicians, hindering their ability to provide optimal care to patients; and

Whereas, the CDC was established to minimize potential health risks while ensuring continuous, unrestricted access to critical data for both scientists and the general public; and

Whereas, tracking emerging infectious disease trends — including and not limited to those such as malaria, Zika, Chagas, tuberculosis, syphilis, H5N1 influenza virus (aka bird flu), gonorrhea and chlamydia — provides invaluable insights into how diseases spread, identifies vulnerable populations, and helps assess the effectiveness of prevention measures or treatments[2]; and

Whereas, judicial mandates and executive orders that directly delay or restrict access to important health data directly conflict with medical ethics, as they force physicians to wait for potentially harmful outcomes; therefore be it

RESOLVED, that our American Medical Association advocate for the immediate removal of restrictions on the CDC, NIH and other pertinent federal agencies' to disseminate critical health information, as withholding such critical information from physicians impedes their ability to deliver the highest standard of care and exposes all patients who are receiving care to less than optimal outcomes (Directive to Take Action); and be it further

RESOLVED, that our AMA promote the recognition of the CDC, NIH, and other federal agencies in their efforts to minimize the risks of emerging infections, beginning this year and continuing into the future. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

RELEVANT AMA POLICY

H-440.813 Public Health Surveillance

1. Our American Medical Association recognizes public health surveillance as a core public health function that is essential to inform decision making, identify underlying causes and etiologies, and respond to acute, chronic, and emerging health threats.
2. Our AMA recognizes the important role that physicians play in public health surveillance through reporting diseases and conditions to public health authorities.
3. Our AMA encourages state legislatures to engage relevant state and national medical specialty societies as well as public health agencies when proposing mandatory reporting requirements to ensure they are based on scientific evidence and meet the needs of population health.
4. Our AMA recognizes the need for increased federal, state, and local funding to modernize our nation's public health data systems to improve the quality and timeliness of data.
5. Our AMA supports the CDC's data modernization initiative, including electronic case reporting, which alleviates the burden of case reporting on physicians through the automatic generation and transmission of case reports from electronic health records to public health agencies for review and action in accordance with applicable health care privacy and public health reporting laws.
6. Our AMA will advocate for incentives for physicians to upgrade their EHR systems to support electronic case reporting as well as incentives to submit case reports that are timely and complete.
7. Our AMA will share updates with physicians and medical societies on public health surveillance and the progress made toward implementing electronic case reporting.
8. Our AMA will advocate for increased federal coordination and funding to support the modernization and standardization of public health surveillance systems data collection by the Centers for Disease Control and Prevention and state and local health departments.
9. Our AMA supports data standardization that provides for minimum national standards, while preserving the ability of states and other entities to exceed national standards based on local needs and/or the presence of unexpected urgent situations.
[CSAPH Rep. 1, I-19; Reaffirmed: Res. 219, A-21; Appended: Alt. Res. 402, A-21; Modified: CSAPH Rep. 2, I-21]

H-440.847 Pandemic Preparedness

In order to prepare for a pandemic, our American Medical Association:
1.urges the Department of Health and Human Services Emergency Care Coordination Center, in collaboration with the leadership of the Centers for Disease Control and Prevention (CDC), state and local health departments, and the national organizations representing them, to urgently assess the shortfall in funding, staffing, supplies, vaccine, drug, and data management capacity to prepare for and respond to a pandemic or other serious public health emergency.
2. urges Congress and the Administration to work to ensure adequate funding and other resources: (a) for the CDC, the National Institutes of Health (NIH), the Strategic National Stockpile and other appropriate federal agencies, to support the maintenance of and the implementation of an expanded capacity to produce the necessary vaccines, anti- microbial drugs, medical supplies, and personal protective equipment, and to continue development of the nation's capacity to rapidly manufacture the necessary supplies needed to protect, treat, test and vaccinate the entire population and care for large numbers of seriously ill people, without overreliance on unreliable international sources of production; and (b) to bolster the infrastructure and capacity of state and local health departments to effectively prepare for and respond to a pandemic or other serious public health emergency.
3. encourages states to maintain medical and personal protective equipment stockpiles sufficient for effective preparedness and to respond to a pandemic or other major public health emergency.
4.urges the federal government to meet treaty and trust obligations by adequately sourcing medical and

personal protective equipment directly to tribal communities and the Indian Health Service for effective preparedness and to respond to a pandemic or other major public emergency.

5.urges the CDC to develop and disseminate electronic instructional resources on procedures to follow in an epidemic, pandemic, or other serious public health emergency, which are tailored to the needs of health care personnel in direct patient care settings;

6. supports the position that:

a. relevant national and state agencies (such as the CDC, NIH, and the state departments of health) continue to plan and test distribution activities in advance of a public health emergency, to assure that physicians, nurses, other health care personnel, and first responders having direct patient contact, receive any appropriate vaccination or medical countermeasure in a timely and efficient manner, in order to reassure them that they will have first priority in the event of such a pandemic.

b. such agencies should publicize now, in advance of any such pandemic, what the plan will be to provide immunization to health care providers.

7. will monitor progress in developing a contingency plan that addresses future vaccine production or distribution problems and in developing a plan to respond to a pandemic in the United States.

8. will encourage state and federal efforts to locate the manufacturing of goods used in healthcare and healthcare facilities in the United States.

9. will support federal efforts to encourage the purchase of domestically produced personal protective equipment.

[CSAPH Rep. 5, I-12; Reaffirmation A-15; Modified: Res. 415, A-21; Reaffirmed: CSAPH Rep. 1, I-22; Appended: Res. 924, I-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 230
(A-25)

Introduced by:	The Endocrine Society, American Association of Clinical Endocrinology, American Society for Reproductive Medicine, American Society for Metabolic and Bariatric Surgery, Obesity Medicine Association, American College of Physicians
Subject:	Advocating to Expand Private insurance Coverage of Anti-obesity Medications (AOM)
Referred to:	Reference Committee B

Whereas, the American Medical Association has declared that obesity is a disease[1]; and

Whereas, the Centers for Disease Control and Prevention (CDC) has reported that more than 2 in 5 U.S. adults have obesity[2]; and

Whereas, the CDC has reported health care for obesity is expensive for patients and the health care system. In 2019 dollars, annual medical costs for adults with obesity were $1,861 higher per person than adults with healthy weight. For adults with severe obesity, the excess costs were $3,097 per person. This accounts for nearly $173 billion in medical expenditures in 2019 dollars[3]; and

Whereas, the CDC has reported that many adults with obesity have other serious chronic diseases that are caused by obesity. For example, 58% of U.S. adults with obesity have high blood pressure, a risk factor for heart disease. Also, approximately 23% of U.S. adults with obesity have diabetes[4]; and

Whereas, clinical obesity across the lifespan continues to be a more serious problem with each passing year. Recent data show that obesity rates continue to be at record high levels with at least one in five adults in every U.S. state living with obesity[5]; and

Whereas, when combined with lifestyle and behavior changes, prescription medications help many people lose weight and maintain weight loss. On average, after 1 year, adults who take prescription medications as part of a lifestyle program lose 3% to 12% more of their starting body weight than people in a lifestyle program who do not take medication[6]; and

Whereas, Kaiser Family Foundation (KFF) analysis has found fewer than 20% of large employer firms currently do not cover GLP-1 drugs for weight loss and coverage in ACA Marketplace plans remains limited[7,8]; and

Whereas, tirzepatide has been shown to affect a mean weight reduction of 20.9% at 36 weeks and semaglutide has been shown to affect a mean weight reduction of 14.9% at 68 weeks 10[9,10]; therefore be it

RESOLVED, that our American Medical Association amend policy H-440.801, Advocacy Against Obesity-Related Bias by Insurance Providers, by addition to read as follows:

1. Our American Medical Association will urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to:
    a. Revise their policies to ensure that bariatric surgery is covered for patients who meet the appropriate medical criteria.
    b. Eliminate criteria that place unnecessary time-based mandates that are not clinically supported nor directed by the patient's medical provider.
    c. Ensure that insurance policies in their states do not discriminate against potential metabolic surgery patients based on age, gender, race, ethnicity, socioeconomic status.
    d. Advocate for the cost-effectiveness of all **obesity** treatment modalities in reducing healthcare costs and improving patient outcomes.
    e. Eliminate coverage exclusions for the pharmacologic treatment of obesity.
    f. Reduce the prior authorization burden for the coverage of anti-obesity medications, to include not requiring a new prior authorization for every dose change or requiring "step therapy".
    g. Support and cover chronic treatment with anti-obesity medications to maintain weight loss.
    h. Allow a patient's physician to prescribe anti-obesity medication and have it covered by insurance, without a requirement that patients must receive the prescription only from contracted disease management companies.
2. Our AMA will support and provide resources to state delegations in their efforts to advocate for the reduction of bias against patients that suffer from **obesity** for the actions listed. (Modify Current HOD Policy)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY:

H-440.842 Recognition of Obesity as a Disease
Our American Medical Association recognizes obesity as a disease state with multiple pathophysiological aspects requiring a range of interventions to advance obesity treatment and prevention. [Res. 420, A-13Reaffirmed: CSAPH Rep. 08, A-23]

H-440.801 Advocacy Against Obesity-Related Bias by Insurance Providers
1. Our American Medical Association will urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to:
    a. Revise their policies to ensure that bariatric surgery are covered for patients who meet the appropriate medical criteria.
    b. Eliminate criteria that place unnecessary time-based mandates that are not clinically supported nor directed by the patient's medical provider.
    c. Ensure that insurance policies in their states do not discriminate against potential metabolic surgery patients based on age, gender, race, ethnicity, socioeconomic status.
    d. Advocate for the cost-effectiveness of all obesity treatment modalities in reducing healthcare costs and improving patient outcomes.
2. Our AMA will support and provide resources to state delegations in their efforts to advocate for the reduction of bias against patients that suffer from obesity for the actions listed. [Res. 224, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 231
(A-25)

Introduced by: Washington State

Subject: Preventing Venue Shopping in Medical Liability to Protect Physician Practices and Access to Care

Referred to: Reference Committee B

Whereas, venue shopping in medical liability cases occurs when plaintiffs' attorneys select jurisdictions perceived to be more favorable for large verdicts, leading to increased healthcare costs and higher burnout for physicians; and

Whereas, physicians practicing in rural hospitals often have fewer resources, limited staff, and less advanced medical equipment compared to those within larger healthcare systems, and venue shopping may cause these physicians to reduce services, relocate, or retire, which especially impacts access to care in underserved areas; and

Whereas, Philadelphia, the preferred venue of plaintiffs, saw 544 medical malpractice cases filed in 2023 up from 275 cases in 2022, following reversal of Rule 1006(a.1) in January 2023, which stopped venue shopping and frivolous lawsuits; and

Whereas, higher rates of hospital closures and financial challenges increase health disparities that disproportionately affect maternal and infant care in rural areas; and

Whereas, the American Medical Association advocates for a balanced and fair legal process that protects physicians from unnecessary liability risks and ensures continued access to quality care for our patients; therefore be it

RESOLVED, that our American Medical Association advocate that claims be filed in the county where the alleged medical liability occurred (Directive to Take Action); and be it further

RESOLVED, that our AMA study and report on the impact of venue rule changes on medical liability case filings, healthcare costs, and access to care, particularly in rural and underserved areas (Directive to Take Action); and be it further

RESOLVED, that our AMA work with state medical societies to develop model legislation that protects against venue shopping while ensuring fair access to the legal system for patients with legitimate claims. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/9/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 232
(A-25)

Introduced by: Women Physicians Section

Subject: Preservation of Medicaid

Referred to: Reference Committee B

Whereas, Medicaid provides healthcare coverage to 80 million low-income Americans, including pregnant women, children, adults, seniors, people with disabilities, and LGBTQIA+ individuals[1]; and

Whereas, Medicaid improves health outcomes, with expansion linked to a 6% reduction in all-cause mortality, a 23% increase in self-reporting health as excellent, and 41% higher likelihood of having a usual care source[2–9]; and

Whereas, Medicaid finances 40% of all births (including nearly 50% of births in rural communities), insures 40% of individuals under 18 years of age, is the largest single payer for behavioral health services, including substance use disorder (SUD) treatment, and is the largest payer of long term care services in the United States[10–13]; and

Whereas, women physicians are more likely to serve patient populations who rely heavily on Medicaid funding and would be disproportionately impacted by federal funding cuts[14]; and

Whereas, previous efforts to cut Medicaid spending via work requirements did not increase employment and instead led to problems paying off medical debt, delayed care, and delayed taking medications due to cost[15,16]; and

Whereas, the federal government finances 69% of Medicaid nationally, ensuring states can provide care without excessive fiscal burden[17]; and

Whereas, reductions to federal funding of Medicaid or changes to Medicaid eligibility at the federal level would lead to substantial loss of coverage for millions of Americans; and

Whereas, U.S. Congress is considering cutting federal Medicaid spending by adopting a per-capita financing model, reducing the federal match rate, and imposing work requirements on certain enrollees —policies shown to force coverage reductions[18]; therefore be it

RESOLVED, that our American Medical Association make preservation of federal funding and eligibility for Medicaid an urgent and top legislative advocacy priority, effective immediately at the conclusion of the Annual 2025 House of Delegates Meeting (Directive to Take Action); and be it further

RESOLVED, that our AMA strongly opposes federal and state efforts to restrict eligibility and funding for all public health insurance programs, including Medicaid and CHIP. (New HOD Policy)

Fiscal Note: Moderate – between $5,000 - $10,000

Date Received: 04/21/2025

RELEVANT AMA POLICY

Medicaid Expansion D-290.979

1. Our American Medical Association, at the invitation of state medical societies, will work with state and specialty medical societies in advocating at the state level to expand Medicaid eligibility to 133% (138% FPL including the income disregard) of the Federal Poverty Level as authorized by the ACA and will advocate for an increase in Medicaid payments to physicians and improvements and innovations in Medicaid that will reduce administrative burdens and deliver healthcare services more effectively, even as coverage is expanded.
2. Our AMA will:
    a. continue to advocate strongly for expansion of the Medicaid program to all states and reaffirm existing policies D-290.979, H 290.965 and H-165.823.

b. work with interested state medical associations and national medical specialty societies to provide AMA resources on Medicaid expansion and covering the uninsured to health care professionals to inform the public of the importance of expanded health insurance coverage to all.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 233
(A-25)

Introduced by: Young Physicians Section

Subject: Increasing Transparency of AMA Medicare Payment Reform Strategy

Referred to: Reference Committee B

Whereas, the American Medical Association House of Delegates (HOD) recently identified Medicare payment reform as the top priority through a referendum; and

Whereas, since this resolution, the AMA has consistently communicated via emails and position statements that Medicare payment reform remains the top priority; and

Whereas, despite these communications, there appears to have been relatively little progress in advancing Medicare payment reform when compared to the extent of communication; and

Whereas, the continued need of substantial progress on Medicare payment reform necessitates an in-depth analysis to identify potential barriers and opportunities for enhancement of the current strategy; therefore be it

RESOLVED, that our American Medical Association provide a summary of findings and actionable recommendations from both internal and external advocacy consultants regarding Medicare payment reform. The report must primarily focus on barriers identified, gaps in the current strategy, and specific recommendations for improving and accelerating advocacy efforts (Directive to Take Action); and be it further

RESOLVED, that our AMA share with its members comprehensive reports on our Medicare payment reform advocacy efforts, including consultant findings on major barriers, strategy gaps, and recommendations for improvement, at both the Interim and Annual Meetings beginning at I-25, and more frequently as legislative dynamics dictate. (Directive to Take Action)

Fiscal Note: $108,308

American Medical Association, 2024. Medicare Physician Payment Reform Has Never Been More Urgent. Accessed 10/04/2024. https://www.ama-assn.org/about/leadership/medicare-physician-payment-reform-has-never-been-more-urgent

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 234
(A-25)

Introduced by: International Medical Graduates Section

Subject: Protection for International Medical Graduates

Referred to: Reference Committee B

Whereas, the American Medical Association recognizes the contributions of international medical graduates (IMG) to US healthcare, to medical education, residency and fellowship programs, and patient care, especially in underserved areas[(1)]; and

Whereas, the majority of IMGs spend a large portion of their careers requiring non-immigrant visas, immigrant visas or other protective immigration statuses; and

Whereas, the AMA recognizes that immigrant status is a public health issue (D-350.975) and social determinant of health (H-65.938) significantly affecting persons physical and mental wellbeing with limited support systems (https://www.nydailynews.com/2021/07/17/nyc-doctor-suicides-raise-concerns-about-treatment-of-resident-physicians-at-bronx-hospital/); and

Whereas, immigration status is a tool that can be weaponized systemically to push IMGs to accept abusive contracts and discriminatory conditions, discourages IMGs from reporting and seeking help; and

Whereas, unannounced visits by Immigration and Customs Enforcement (ICE) agents to medical offices and hospitals can disrupt patient care, create undue anxiety, and interfere with the physician-patient relationship[(2)]; therefore be it

RESOLVED, that our American Medical Association supports the designation of medical or mental healthcare facilities, such as a hospital, doctor's office, health clinic, vaccination or testing site, urgent care center, site that serves pregnant individuals, or community health center as a protected area, avoiding, when possible, targeted immigration enforcement, in order to preserve the continuity of patient care and medical education (New HOD Policy); and be it further

RESOLVED, that our AMA work with relevant stakeholders to develop a confidential mechanism through which IMG physicians can report workplace immigration related interviews, enforcement actions, or audits, in order to identify and address potential instances of unfair treatment or targeting of IMG physicians. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

RELEVANT AMA POLICY

Impact of Immigration Barriers on the Nation's Health D-255.980

1. Our American Medical Association recognizes the valuable contributions and affirms our support of international medical students and international medical graduates and their participation in U.S. medical schools, residency and fellowship training programs and in the practice of medicine.
2. Our AMA will oppose laws and regulations that would broadly deny entry or re-entry to the United States of persons who currently have legal visas, including permanent resident status (green card) and student visas, based on their country of origin and/or religion.
3. Our AMA will oppose policies that would broadly deny issuance of legal visas to persons based on their country of origin and/or religion.
4. Our AMA will advocate for the immediate reinstatement of premium processing of H-1B visas for physicians and trainees to prevent any negative impact on patient care.
5. Our AMA will advocate for the timely processing of visas for all physicians, including residents, fellows, and physicians in independent practice.
6. Our AMA will work with other stakeholders to study the current impact of immigration reform efforts on residency and fellowship programs, physician supply, and timely access of patients to health care throughout the U.S.
   (Alt. Res. 308, A-17; Modified: CME Rep. 01, A-18; Reaffirmation: A-19; Reaffirmed: CME Rep. 4, A-21; Reaffirmed: Res. 234, A-22; Reaffirmed: Res. 210, A-23)

Visa Complications for IMGs in GME D-255.991

1. Our American Medical Association will work with the ECFMG to minimize delays in the visa process for International Medical Graduates applying for visas to enter the US for postgraduate medical training and/or medical practice promote regular communication between the Department of Homeland Security and AMA IMG representatives to address and discuss existing and evolving issues related to the immigration and registration process required for International Medical Graduates.
2. Our AMA work through the appropriate channels to assist residency program directors, as a group or individually, to establish effective contacts with the State Department and the Department of Homeland Security, in order to prioritize and expedite the necessary procedures for qualified residency applicants to reduce the uncertainty associated with considering a non-citizen or permanent resident IMG for a residency position.
   Our AMA International Medical Graduates Section will continue to monitor any H-1B visa denials as they relate to IMGs? inability to complete accredited GME programs.
3. Our AMA will study, in collaboration with the Educational Commission on Foreign Medical Graduates and the Accreditation Council for Graduate Medical Education, the frequency of such J-1 Visa reentry denials and its impact on patient care and residency training.
4. Our AMA will, in collaboration with other stakeholders, advocate for unfettered travel for IMGs for the duration of their legal stay in the US in order to complete their residency or fellowship training to prevent disruption of patient care.
   (Res. 844, I-03; Reaffirmation A-09; Reaffirmation I-10; Appended: CME Rep. 10, A-11; Appended: Res. 323, A-12; Reaffirmation: A-19; Reaffirmed: Res. 234, A-22)

Disruptive Visits to Medical Offices by Government Investigators and Agents H-175.977

1. Our American Medical Association supports legislation and/or other appropriate means to ensure that State and Federal investigators, and/or agents, give a physician written notice prior to a visit to a medical office, so that such visit may be scheduled upon mutual agreement at a time when patients are not present in the medical office.
2. Our AMA, in any circumstances which lawfully permit a visit to a medical office without notice, such as a search warrant, arrest warrant or subpoena, investigators and/or agents should be required to initially identify themselves to appropriate medical staff quietly and confidentially that allows the physician an opportunity to comply in a manner that is
least disruptive and threatening to the patients in the medical office.
3. Our AMA encourages physicians to report incidents of inappropriate intrusions into
their medical offices to the AMA's Office of the General Counsel and consider development of a hotline for implementation.
(Res. 211, A-99; Reaffirmation I-01; Reaffirmed: BOT Rep. 22, A-11; Reaffirmed: BOT Rep. 7, A-21)

AMA Principles on International Medical Graduates H-255.988

1. Our American Medical Association supports current U.S. visa and immigration requirements applicable to foreign national physicians who are graduates of medical schools other than those in the United States and Canada.
2. Our AMA supports current regulations governing the issuance of exchange visitor visas to foreign national IMGs, including the requirements for successful completion of the USMLE.
3. Our AMA reaffirms its policy that the U.S. and Canada medical schools be accredited by a nongovernmental accrediting body.
4. Our AMA supports cooperation in the collection and analysis of information on medical schools in nations other than the U.S. and Canada.
5. Our AMA supports continued cooperation with the ECFMG and other appropriate organizations to disseminate information to prospective and current students in foreign medical schools. An AMA member, who is an IMG, should be appointed regularly as one of the AMA's representatives to the ECFMG Board of Trustees.
6. Our AMA supports working with the Accreditation Council for Graduate Medical Education (ACGME) and the Federation of State Medical Boards (FSMB) to assure that institutions offering accredited residencies, residency program directors, and U.S. licensing authorities do not deviate from established standards when evaluating graduates of foreign medical schools.
7. In cooperation with the ACGME and the FSMB, our AMA supports only those modifications in established graduate medical education or licensing standards designed to enhance the quality of medical education and patient care.
8. Our AMA continues to support the activities of the ECFMG related to verification of education credentials and testing of IMGs.
9. Our AMA supports that special consideration be given to the limited number of IMGs who are refugees from foreign governments that refuse to provide pertinent information usually required to establish eligibility for residency training or licensure.
10. Our AMA supports that accreditation standards enhance the quality of patient care and medical education and not be used for purposes of regulating physician manpower.
11. Our AMA representatives to the ACGME, residency review committees and to the ECFMG should support AMA policy opposing discrimination. Medical school admissions officers and directors of residency programs should select applicants on the basis of merit, without considering status as an IMG or an ethnic name as a negative factor.
12. Our AMA supports the requirement that all medical school graduates complete at least one year of graduate medical education in an accredited U.S. program in order to qualify for full and unrestricted licensure. State medical licensing boards are encouraged to allow an alternate set of criteria for granting licensure in lieu of this requirement: completion of medical school and residency training outside the U.S.;
extensive U.S. medical practice; and evidence of good standing within the local medical community.

13. Our AMA supports publicizing existing policy concerning the granting of staff and clinical privileges in hospitals and other health facilities.
14. Our AMA supports the participation of all physicians, including graduates of foreign as well as U.S. and Canadian medical schools, in organized medicine.
15. Our AMA offers encouragement and assistance to state, county, and specialty medical societies in fostering greater membership among IMGs and their participation in leadership positions at all levels of organized medicine, including AMA committees and councils, the Accreditation Council for Graduate Medical Education and its review committees, the American Board of Medical Specialties and its specialty boards, and state boards of medicine, by providing guidelines and non-financial incentives, such as recognition for outstanding achievements by either individuals or organizations in promoting leadership among IMGs.
16. Our AMA supports studying the feasibility of conducting peer-to-peer membership recruitment efforts aimed at IMGs who are not AMA members.
17. Our AMA membership outreach to IMGs to include using its existing publications to highlight policies and activities of interest to IMGs, stressing the common concerns of all physicians; publicizing its many relevant resources to all physicians, especially to nonmember IMGs; identifying and publicizing AMA resources to respond to inquiries from IMGs; and expansion of its efforts to prepare and disseminate information about requirements for admission to accredited residency programs, the availability of positions, and the problems of becoming licensed and entering full and unrestricted medical practice in the U.S. that face IMGs. This information should be addressed to college students, high school and college advisors, and students in foreign medical schools.
18. Our AMA supports recognition of the common aims and goals of all physicians, particularly those practicing in the U.S., and support for including all physicians who are permanent residents of the U.S. in the mainstream of American medicine.
19. Our AMA supports its leadership role to promote the international exchange of medical knowledge as well as cultural understanding between the U.S. and other nations.
20. Our AMA supports institutions that sponsor exchange visitor programs in medical education, clinical medicine and public health to tailor programs for the individual visiting scholar that will meet the needs of the scholar, the institution, and the nation to which he will return.
21. Our AMA supports informing foreign national IMGs that the availability of training and practice opportunities in the U.S. is limited by the availability of fiscal and human resources to maintain the quality of medical education and patient care in the U.S., and that those IMGs who plan to return to their country of origin have the opportunity to obtain GME in the United States.
22. Our AMA supports U.S. medical schools offering admission with advanced standing, within the capabilities determined by each institution, to international medical students who satisfy the requirements of the institution for matriculation.
23. Our AMA supports the Federation of State Medical Boards, its member boards, and the ECFMG in their willingness to adjust their administrative procedures in processing IMG applications so that original documents do not have to be recertified in home countries when physicians apply for licenses in a second state.
24. Our AMA supports continued efforts to protect the rights and privileges of all physicians duly licensed in the U.S. regardless of ethnic or educational background and opposes any legislative efforts to discriminate against duly licensed physicians on the basis of ethnic or educational background.
25. Our AMA supports continued study of challenges and issues pertinent to IMGs as they affect our country's health care system and our physician workforce.
26. Our AMA supports advocacy to Congress to fund studies through appropriate agencies, such as the Department of Health and Human Services, to examine issues and experiences of IMGs and make recommendations for improvements.

Z, A-86; Reaffirmed: Res. 312, I-93; Modified: CME Rep. 2, A-03; Reaffirmation I-11; Reaffirmed: CME Rep. 1, I-13; Modified: BOT Rep. 25, A-15; Modified: CME Rep. 01, A-16; Appended: Res. 304, A-17; Modified: CME Rep. 01, I-17; Reaffirmation: A-19; Modified: CME Rep. 2, A-21; Modified: CME Rep. 1, A-22; Modified: CCB/CLRPD Rep. 1, A-22; Reaffirmed: CME Rep. 03, A-23)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 235
(A-25)

Introduced by: Association for Clinical Oncology, American College of Rheumatology

Subject: CMS Payment Monitoring Following Government Staff Reductions

Referred to: Reference Committee B

Whereas, the Department of Health and Human Services (HHS) is implementing a large-scale restructuring, including a significant reduction in its workforce and plans to eliminate 10,000 employees in addition to 10,000 HHS employees who have already departed (20,000 total), thereby reducing the workforce from approximately 82,000 to 62,000; and

Whereas, the Centers for Medicare & Medicaid Services (CMS) initially eliminated 300 CMS positions, including at the Office of Program Operations and Local Engagement (OPOLE), which works with providers and health plans that serve Medicare recipients to ensure they're in compliance with CMS requirements and helps manage case work for Medicare Advantage (MA) and the Patient Protection and Affordable Care Act (ACA) Marketplace patients, which could impact providers' and patient access; and

Whereas, HHS also announced that it would consolidate the department's 28 divisions into 15 (including agencies such as CMS and the Food and Drug Administration (FDA), and HHS offices such as the Office of the Assistant Secretary of Legislation (ASL)), cut five of the 10 regional offices, and centralize core administrative functions; therefore be it

RESOLVED, that our American Medical Association will monitor federal staffing reductions with a focus on those at the Centers for Medicare & Medicaid Services (CMS) (Directive to Take Action); and be it further

RESOLVED, that our AMA offers a method whereby providers can report CMS payment delays and/or new or additional obstacles to timely receipt of reimbursement to our AMA, and that our AMA should use the information collected to inform advocacy efforts to protect physicians from unreasonable CMS payment delays and notify CMS of slowing payments and/or obstacles. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/22/25

RELEVANT AMA POLICY

Congressional Oversight Hearings and Legislative Reform of CMS H-330.910
Our AMA will: (1) seek immediate and periodic Congressional oversight hearings of the CMS on issues related to the administration of the Medicare and Medicaid programs and additionally will seek legislation to reform CMS; and (2) undertake and support activities that would hold state and federal agencies, their contractors, and employees dealing with health care issues to the same level of accountability as are physicians.

Physician Payment Reform H-390.849

1. Our American Medical Association will advocate for the development and adoption of physician payment reforms that adhere to the following principles:
    a. Promote improved patient access to high-quality, cost-effective care.
    b. Be designed with input from the physician community.
    c. Ensure that physicians have an appropriate level of decision-making authority over bonus or shared-savings distributions.
    d. Not require budget neutrality within Medicare Part B.
    e. Be based on payment rates that are sufficient to cover the full cost of sustainable medical practice.
    f. Ensure reasonable implementation timeframes, with adequate support available to assist physicians with the implementation process.
    g. Make participation options available for varying practice sizes, patient mixes, specialties, and locales.
    h. Use adequate risk adjustment methodologies.
    i. Incorporate incentives large enough to merit additional investments by physicians.
    j. Provide patients with information and incentives to encourage appropriate utilization of medical care, including the use of preventive services and self-management protocols.
    k. Provide a mechanism to ensure that budget baselines are reevaluated at regular intervals and are reflective of trends in service utilization.
    l. Attribution processes should emphasize voluntary agreements between patients and physicians, minimize the use of algorithms or formulas, provide attribution information to physicians in a timely manner, and include formal mechanisms to allow physicians to verify and correct attribution data as necessary.
    m. Include ongoing evaluation processes to monitor the success of the reforms in achieving the goals of improving patient care and increasing the value of health care services.
2. Our AMA opposes bundling of payments in ways that limit medically necessary care, including institutional post-acute care, or otherwise interfere with a physician's ability to provide high quality care to patients.
3. Our AMA supports payment methodologies that redistribute Medicare payments among providers based on outcomes (including functional improvements, if appropriate), quality and risk-adjustment measures only if measures are scientifically valid, reliable, and consistent with national medical specialty society- developed clinical guidelines/standards.
4. Our AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.
5. Our AMA supports the development of a public-private partnership for the purpose of validating statistical models used for risk adjustment.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 1-A-25

Subject:	Council on Medical Education Sunset Review of 2015 House of Delegates' Policies
Presented by:	Krystal Tomei, MD, MPH, Chair
Referred to:	Reference Committee C

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification; and (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its ten-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Medical Education recommends that the House of Delegates policies listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

Fiscal Note: $1,000.

APPENDIX: RECOMMENDED ACTIONS

	Policy Number	Title	Text	Recommendation
1	D-275.957	An Update on Maintenance of Licensure	Our American Medical Association will: 1. Continue to monitor the evolution of Maintenance of Licensure (MOL), continue its active engagement in discussions regarding MOL implementation, and report back to the House of Delegates on this issue. 2. Continue to review, through its Council on Medical Education, published literature and emerging data as part of the Council's ongoing efforts to critically review MOL issues. 3. Work with the Federation of State Medical Boards (FSMB) to study whether the principles of MOL are important factors in a physician's decision to retire or have a direct impact on the U.S. physician workforce. 4. Work with interested state medical societies and support collaboration with state specialty medical societies and state medical boards on establishing criteria and regulations for the implementation of MOL that reflect AMA guidelines for implementation of state MOL programs and the FSMB's Guiding Principles for MOL. 5. Explore the feasibility of developing, in collaboration with other stakeholders, AMA products and services that may help shape and support MOL for physicians. 6. Encourage the FSMB to continue to work with state medical boards to accept physician participation in the American Board of Medical Specialties maintenance of certification (MOC) and the American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) osteopathic continuous certification (OCC) as meeting the requirements for MOL and to develop alternatives for physicians who are not certified/recertified, and advocate that MOC or OCC not be the only pathway to MOL for physicians. 7. Continue to work with the FSMB to establish and assess MOL principles, with the AMA to assess the impact of MOL on the practicing physician and the FSMB to study its impact on state medical boards. 8. Encourage rigorous evaluation of the impact on physicians of any future proposed	**Rescind – no longer relevant.** Federation of State Medical Boards (FSMB) is not advancing Maintenance of Licensure (MOL) and has archived their MOL policies.

			changes to MOL processes, including cost, staffing, and time.	
2	D-275.973	Essentials for Approval of Examining Boards in Medical Specialties	Our AMA approves the twelfth revision of the Essentials for the Approval of Examining Boards in Medical Specialties.	**Rescind – no longer relevant.** AMA is no longer part of the American Board of Medical Specialties (ABMS) approval process. "Essentials" policy is now called "Admission of new medical specialty boards to membership in the ABMS" (policy 1.8, adopted Oct 2023).
3	D-275.975	Sharing of Medical Disciplinary Data Among Nations	Our AMA will, in conjunction with the Federation of State Medical Boards, support the efforts of the International Association of Medical Regulatory Authorities in its current efforts toward the exchange of information among medical regulatory authorities worldwide.	**Retain – still relevant.** FSMB was a founder of the International Association of Medical Regulatory Authorities (IAMRA) and its Secretariat continues to be supported by FSMB.
4	D-295.315	Enhancing the AMA's Role in Premedical Education	Our AMA will: (1) update its "Becoming a Physician" website with most relevant information to enhance usage and usability, and support the concept and explore the feasibility of enhancing current AMA online resources for premedical students; (2) explore the feasibility of developing innovative online "premedical" engagement activities that are affordable to students and cost-effective for our AMA and have value to medical school admissions personnel; and (3) explore the feasibility of developing resources to enhance premedical student advising and mentoring by physicians and others.	**Rescind – accomplished.** Program/website is now defunct.
5	D-305.965	Alternative Funding for Continuing Medical Education	1. Our AMA will seek funding for quality, unbiased continuing medical education for all physicians. 2. Our AMA supports physician autonomy by partnering with relevant organizations to encourage medical organizations or institutions that employ physicians and offer financial support towards continuing medical education (CME) to avoid prioritizing institutional goals over individual physician educational needs in the choice of CME coursework.	**Rescind clause (1) – accomplished.** **Retain clause (2) – still relevant.** (1) The House action was communicated to the Association of American Medical Colleges (AAMC), American Hospital Association, Medical Group Management Association, and Veterans Affairs as well as medical schools, residency program directors, directors of medical education at U.S. teaching hospitals, and other interested groups via the Med Ed Update newsletter.
6	D-310.952	Mitigation of Physician Performance Metrics on Trainee Education	Our American Medical Association will ask the Accreditation Council for Graduate Medical Education and other organizations to use data to evaluate the impact of supervising physicians? performance metrics on trainees? learning experience.	**Rescind – accomplished.** Accreditation Council for Graduate Medical Education and AAMC were notified of the House action. It was also shared with medical schools, residency program directors, directors

				of medical education at U.S. teaching hospitals, and other interested groups via AMA Med Ed Update newsletter.
7	D-405.984	Confidentiality of Enrollment in Physicians (Professional) Health Programs	1. Our American Medical Association will work with other medical professional organizations, the Federation of State Medical Boards, the American Board of Medical Specialties, and the Federation of State Physician Health Programs, to seek and/or support rules and regulations or legislation to provide for confidentiality of fully compliant participants in physician (and similar) health programs or their recovery programs in responding to questions on medical practice or licensure applications. 2. Our AMA will work with The Joint Commission, national hospital associations, national health insurer organizations, and the Centers for Medicare and Medicaid Services to avoid questions on their applications that would jeopardize the confidentiality of applicants who are compliant with treatment within professional health programs and who do not constitute a current threat to the care of themselves or their patients.	**Retain – still relevant.**
8	H-225.960	Voluntary Use of Hospitalists and Required Consent	It is the policy of our AMA that the use of a hospitalist physician as the physician of record during a hospitalization must be voluntary and the assignment of responsibility to the hospitalist physician must be based on the consent of the patient's personal physician and the patient.	**Retain – still relevant.**
9	H-255.983	Graduates of Non-United States Medical Schools	The AMA continues to support the policy that all physicians and medical students should be evaluated for purposes of entry into graduate medical education programs, licensure, and hospital medical staff privileges on the basis of their individual qualifications, skills, and character.	**Rescind – duplicative.** Addressed by more recent policies that provide greater clarity on the assessment of students and physicians entering GME. • H-275.934 • D-310.945 • H-295.895 Also, title is inaccurate since it is about "non-U.S." graduates while policy is much broader.
10	H-255.989	A Program for Exchange Visitor Physicians	(1) It is the AMA's policy to separate the issues involved in the support of alien physicians participating in exchange visitor physician programs for purposes of education, training and/or research followed by return to their native lands from the issues involving U.S. citizens who are graduates of foreign medical schools and	**Retain – still relevant. Amend title and clause (1) to update language as follows:** ~~A PROGRAM FOR~~ EXCHANGE PROGRAMS FOR VISITOR PHYSICIANS

			alien physician graduates of foreign medical schools who seek permanent residence in the United States. (2) The AMA urges government and private funding of the physician exchange visitor program under the auspices of an appropriate organization that will: consider the range and type of medical education and health care needs of those foreign nations sending exchange visitor physicians; the means to evaluate the level of knowledge and needs of prospective participants in graduate medical education programs; and identify truly outstanding public health, geographic medicine, basic medical science, and clinical training programs to answer the needs of the visitor's native land.	(1) ~~It is the~~ AMA~~'s policy to separate the issues involved in the~~ supports ~~of alien~~ non-citizen physicians participating in exchange visitor physician programs for purposes of education, training and/or research followed by return to their ~~native~~ home ~~lands~~ country. This is separate from the issues involving U.S. citizens who are graduates of foreign medical schools and ~~alien~~ non-citizen physician graduates of foreign medical schools who seek permanent residence in the U.S.~~ United States~~.
11	H-255.994	Physician Exemption from Medical School Standards and Performance Evaluation Requirements	Our AMA recommends to medical licensing boards that those physicians who are international medical graduates currently duly licensed by any licensing jurisdiction in the U.S. should not be denied endorsement of their licenses, or denied admission to reexamination when this is required by law, solely because they are unable to provide documentation of graduation from a school meeting "equivalent standards and performance evaluation requirements" to those of programs accredited by the Liaison Committee on Medical Education.	**Retain – still relevant.**
12	H-275.917	An Update on Maintenance of Licensure	AMA Principles on Maintenance of Licensure (MOL): 1. Our American Medical Association (AMA) established the following guidelines for implementation of state MOL programs: A. Any MOL activity should be able to be integrated into the existing infrastructure of the health care environment. B. Any MOL educational activity under consideration should be developed in collaboration with physicians, should be evidence-based and should be practice-specific. Accountability for physicians should be led by physicians. C. Any proposed MOL activity should undergo an in-depth analysis of the direct and indirect costs, including physicians' time and the impact on patient access to care, as well as a risk/benefit analysis, with particular attention to unintended consequences. D. Any MOL activity should be flexible and offer a variety of compliance options for all physicians, practicing or non-practicing, which may vary depending on their roles	**Rescind clauses (1), (2), (3B-D) – no longer relevant.** FSMB is not advancing MOL and has archived their MOL policies. **Retain clause (3A) – still relevant. Amend title and clause to update language as follows:** ~~AN UPDATE ON MAINTENANCE OF LICENSURE~~ ACCEPTANCE OF AMA PRA CREDIT AS EVIDENCE OF CONTINUING MEDICAL EDUCATION ~~3.~~ Our AMA will~~:~~ ~~A. C~~ continue to support and promote the AMA Physician's Recognition Award (PRA) Credit system as one of the three major continuing medical education (CME) credit systems that comprise the foundation for continuing medical education in the U.S., including the Performance

			(e.g., clinical care, research, administration, education). E. Any MOL activity should be designed for quality improvement and lifelong learning. F. Participation in quality improvement activities, such as chart review, should be an option as an MOL activity. 2. Our AMA supports the Federation of State Medical Boards Guiding Principles for MOL (current as of June 2015), which state that: A. Maintenance of licensure should support physicians' commitment to lifelong learning and facilitate improvement in physician practice. B. Maintenance of licensure systems should be administratively feasible and should be developed in collaboration with other stakeholders. The authority for establishing MOL requirements should remain within the purview of state medical boards. C. Maintenance of licensure should not compromise patient care or create barriers to physician practice. D. The infrastructure to support physician compliance with MOL requirements must be flexible and offer a choice of options for meeting requirements. E. Maintenance of licensure processes should balance transparency with privacy protections (e.g., should capture what most physicians are already doing, not be onerous, etc.). 3. Our AMA will: A. Continue to support and promote the AMA Physician's Recognition Award (PRA) Credit system as one of the three major CME credit systems that comprise the foundation for continuing medical education in the U.S., including the Performance Improvement CME (PICME) format, and continue to develop relationships and agreements that may lead to standards accepted by all U.S. licensing boards, specialty boards, hospital credentialing bodies, and other entities requiring evidence of physician CME as part of the process for MOL. B. Advocate that if state medical boards move forward with a more intense or rigorous MOL program, each state medical board be required to accept evidence of successful ongoing participation in the	Improvement CME (PICME) format, and continue to develop relationships and agreements that may lead to standards accepted by all U.S. licensing boards, specialty boards, hospital credentialing bodies, and other entities requiring evidence of physician CME ~~as part of the process for MOL~~.

			ABMS MOC and AOA-Bureau of Osteopathic Specialists Osteopathic Continuous Certification to have fulfilled all three components of the MOL, if performed, C. Advocate that state medical boards accept programs created by specialty societies as evidence that the physician is participating in continuous lifelong learning and allow physicians to choose which programs they participate in to fulfill their MOL criteria. D. Oppose any MOL initiative that creates barriers to practice, is administratively unfeasible, is inflexible with regard to how physicians practice (clinically or not), does not protect physician privacy, or is used to promote policy initiatives about physician competence.	
13	H-295.859	Guidelines for Students Shadowing Physicians	Our American Medical Association: (1) encourages physicians in both private practice and academic settings to provide shadowing opportunities to students interested in a career in medicine--particularly those from underrepresented populations--as part of the physician's commitment to the future of the profession; (2) encourages physicians to adopt the most appropriate shadowing model to the needs of the practice/institution and the student(s); and (3) endorses the clinical shadowing guidelines for students from the Association of American Medical Colleges as one model for such students and will help disseminate this document to K-12 students, premedical students, health professions advisors, hospitals, and physicians.	**Retain clauses (1), (2) - still relevant.** **Rescind clause (3) – accomplished.** House action was communicated to medical students, medical schools, residency program directors, directors of medical education at U.S. teaching hospitals, health professions advisors, and other interested groups via the MedEd Update newsletter, Medical Student Section (MSS) listserv, and National Association of Advisors for the Health Professions listserv. AMA policy avoids language to "endorse." AAMC's guidance document has not been updated since 2013. They conducted a clinical shadowing survey in 2016 and shared the results, which was meant to serve as updated guidance.
14	H-295.860	Promoting Transparency in Medical Education and Access to Training	Our American Medical Association: (1) strongly encourages medical schools and graduate medical education training programs to communicate with current and prospective medical students, residents and fellows how affiliations and mergers among health care organizations may impact health care delivery, medical education and training opportunities at their respective institutions; and (2) will work with the Accreditation Council for Graduate Medical Education and other appropriate stakeholders to support transparency within medical education, recommending that	**Retain – still relevant.**

			medical schools and graduate medical education training programs communicate with current and prospective medical students, residents and fellows how affiliations and mergers among health care organizations may impact health care delivery, medical education and training opportunities.	
15	H-295.862	Alignment of Accreditation Across the Medical Education Continuum	1. Our AMA supports the concept that accreditation standards for undergraduate and graduate medical education should adopt a common competency framework that is based in the Accreditation Council for Graduate Medical Education (ACGME) competency domains. 2. Our AMA recommends that the relevant associations, including the AMA, Association of American Medical Colleges (AAMC), American Osteopathic Association (AOA), and American Association of Colleges of Osteopathic Medicine (AACOM), along with the relevant accreditation bodies for undergraduate medical education (Liaison Committee on Medical Education, Commission on Osteopathic College Accreditation) and graduate medical education (ACGME, AOA) develop strategies to: a. Identify guidelines for the expected general levels of learners' competencies as they leave medical school and enter residency training. b. Create a standardized method for feedback from medical school to premedical institutions and from the residency training system to medical schools about their graduates' preparedness for entry. c. Identify areas where accreditation standards overlap between undergraduate and graduate medical education (e.g., standards related to the clinical learning environment) so as to facilitate coordination of data gathering and decision-making related to compliance. All of these activities should be codified in the standards or processes of accrediting bodies. 3. Our AMA encourages development and implementation of accreditation standards or processes that support utilization of tools (e.g., longitudinal learner portfolios) to track learners' progress in achieving the	**Rescind clause (1)- accomplished.** Liaison Committee on Medical Education (LCME) standards do require that schools include a competency framework as the basis for their educational program objectives. **Rescind clause (2) – accomplished.** The AMA has been an active member of the Foundational Competencies for Undergraduate Medical Education initiative. Regarding (2b). AAMC developed such a tool. **Retain clause (3) – still relevant. Amend to update language as follows:** 3. Our AMA ~~encourages~~ supports the development and implementation of ~~accreditation standards or processes that support utilization of~~ tools (e.g., longitudinal learner portfolios) to track learners' progress in achieving the defined competencies across the continuum. **Rescind clause (4) – no longer relevant.** Addressed by newer policy H-275.916. **Rescind clause (5a) – accomplished.** Addressed by AMA ChangeMedEd initiative (formerly called Accelerating Change in Medical Education). **Rescind Clause (5b) – accomplished.** Addressed by AMA's longstanding collaboration with ACGME.

			defined competencies across the continuum. 4. Our AMA supports the concept that evaluation of physicians as they progress along the medical education continuum should include the following: (a) assessments of each of the six competency domains of patient care, medical knowledge, interpersonal and communication skills, professionalism, practice-based learning and improvement, and systems-based practice; and (b) use of assessment instruments and tools that are valid and reliable and appropriate for each competency domain and stage of the medical education continuum. 5. Our AMA encourages study of competency-based progression within and between medical school and residency. a. Through its Accelerating Change in Medical Education initiative, our AMA should study models of competency-based progression within the medical school. b. Our AMA should work with the Accreditation Council for Graduate Medical Education (ACGME) to study how the Milestones of the Next Accreditation System support competency-based progression in residency. 6. Our AMA encourages research on innovative methods of assessment related to the six competency domains of the ACGME/American Board of Medical Specialties that would allow monitoring of performance across the stages of the educational continuum. 7. Our AMA encourages ongoing research to identify best practices for workplace-based assessment that allow performance data related to each of the six competency domains to be aggregated and to serve as feedback to physicians in training and in practice.	**Rescind clauses (6), (7) – accomplished.** HOD actions were communicated to the Accreditation Council for Graduate Medical Education, American Osteopathic Association, Association of American Medical Colleges, American Association of Colleges of Osteopathic Medicine, American Board of Medical Specialties, Commission on Osteopathic College Accreditation and Liaison Committee on Medical Education. Also, they were shared with medical schools, residency program directors, directors of medical education at U.S. teaching hospitals, and other interested groups via MedEd Update. **Amend title as follows:** ~~ALIGNMENT OF ACCREDITATION ACROSS THE MEDICAL EDUCATION CONTINUUM~~ TOOLS TO SUPPORT ACHIEVEMENT OF COMPETENCIES ACROSS LEARNING CONTINUUM
16	H-295.907	The Impact of the Changing Health Care Environment on Graduate Medical Education	Our American Medical Association will encourage the Accreditation Council for Graduate Medical Education to review the impact of the changing health care environment on the feasibility of meeting accreditation standards related to patient volume, number of procedures to be performed, residency program size, and the	**Rescind – accomplished.**

			requirement for the presence of residency programs in other disciplines.	
17	H-295.926	Support for Development of Continuing Education Programs for Primary Care Physicians in Non-Academic Settings	The AMA: (1) supports development, where appropriate, of programs of education for medical students and faculty in non-academic settings, making use of telecommunications as needed; (2) encourages that medical schools provide faculty development programs that are designated for *AMA PRA Category 1 Credit*"; and (3) encourages that teaching continue to be accepted for *AMA PRA Category 2 Credit*" when not designated for *AMA PRA Category 1 Credit*" .	**Retain – still relevant.**
18	H-295.953	Medical Student, Resident and Fellow Legislative Awareness	1. The AMA strongly encourages the state medical associations to work in conjunction with medical schools to implement programs to educate medical students concerning legislative issues facing physicians and medical students. 2. Our AMA will advocate that political science classes which facilitate understanding of the legislative process be offered as an elective option in the medical school curriculum. 3. Our AMA will establish health policy and advocacy elective rotations based in Washington, DC for medical students, residents, and fellows. 4. Our AMA will support and encourage institutional, state, and specialty organizations to offer health policy and advocacy opportunities for medical students, residents, and fellows.	**Retain clauses (1), (2), (4) – still relevant**. **Rescind clause (3) – accomplished**. Program is now defunct.
19	H-295.980	Clinical Training in STD for Medical Students/ Physicians in Training	The AMA urges medical schools to provide supervised training in sexually transmitted diseases for all medical students and physicians in training.	**Retain – still relevant. Amend title to update language as follows:** CLINICAL TRAINING IN ~~STD~~SEXUALLY TRANSMITTED INFECTIONS ~~FOR MEDICAL STUDENTS/ PHYSICIANS IN TRAINING~~ The AMA urges medical schools to provide supervised training in sexually transmitted ~~diseases~~ infections for all medical students and physicians in training.
20	H-300.959	Physician Participation in the AMA Physician's	It is policy that: (1) the AMA, state medical societies, and specialty societies in the AMA House of Delegates publicize and promote physician participation in the AMA	**Retain – still relevant. Amend to update language as follows:**

		Recognition Award	Physician's Recognition Award; and (2) that all physicians participate in the AMA Physician's Recognition Award as a visible demonstration of their commitment to continuing medical education.	~~It is policy that:~~ AMA encourages (1) ~~the AMA,~~ state medical societies~~,~~ and specialty societies in the AMA House of Delegates to publicize and promote physician participation in the AMA Physician's Recognition Award (PRA); and (2) ~~that~~ all physicians to participate in the AMA Physician's Recognition Award (PRA) as a visible demonstration of their commitment to continuing medical education.
21	H-300.969	Uniform Standards for Continuing Medical Education	The AMA (1) will continue its efforts to develop uniform standards for continuing medical education; and (2) will solicit input from all state medical associations, medical licensure boards, and national specialty organizations concerning the development of the most appropriate uniform standards for continuing medical education.	**Rescind – duplicative.** Clause (1) is addressed by newer policies H-300.976 "Unification of Education Credits" and 9.2.6 "Continuing Medical Education." Clause (2) was accomplished during simplification and alignment process in 2017.
22	H-305.942	The Ecology of Medical Education: The Infrastructure for Clinical Education	The AMA recommends the following to ensure that access to appropriate clinical facilities and faculty to carry out clinical education is maintained: (1) That each medical school and residency program identify the specific resources needed to support the clinical education of trainees, and should develop an explicit plan to obtain and maintain these resources. This planning should include identification of the types of clinical facilities and the number and specialty distribution of full-time and volunteer clinical faculty members needed. (2) That affiliated health care institutions and volunteer faculty members be included in medical school and residency program resource planning for clinical education when appropriate. (3) That medical school planning for clinical network development include consideration of the impact on the education program for medical students and resident physicians. (4) That accrediting bodies for undergraduate and graduate medical education be encouraged to adopt accreditation standards that require notification of changes in clinical affiliations, in order to ensure that changes in the affiliation status of hospitals or other clinical sites do not adversely affect the education of medical students and resident physicians.	**Retain – still relevant.**
23	H-305.971	Discrimination Against Resident Candidates Based on	Our American Medical Association urges residency programs to use the qualifications of residency applicants as a basis for filling available positions, and not the eligibility or	**Retain – still relevant.**

		Graduate Medical Education Medicare Funding	level of future Medicare graduate medical education funding.	
24	H-310.917	Securing Funding for Graduate Medical Education	Our American Medical Association: (1) continues to be vigilant while monitoring pending legislation that may change the financing of medical services (health system reform) and advocate for expanded and broad-based funding for graduate medical education (from federal, state, and commercial entities); (2) continues to advocate for graduate medical education funding that reflects the physician workforce needs of the nation; (3) encourages all funders of GME to adhere to the Accreditation Council for Graduate Medical Education's requirements on restrictive covenants and its principles guiding the relationship between GME, industry and other funding sources, as well as the AMA's Opinion 8.061, and other AMA policy that protects residents and fellows from exploitation, including physicians training in non-ACGME-accredited programs; and (4) encourages entities planning to expand or start GME programs to develop a clear statement of the benefits of their GME activities to facilitate potential funding from appropriate sources given the goals of their programs.	**Retain – still relevant.**
25	H-310.966	Residency Interview Costs	1. It is the policy of the AMA to pursue changes to federal legislation or regulation, specifically to the Higher Education Act, to include an allowance for residency interview costs for fourth-year medical students in the cost of attendance definition for medical education. 2. Our AMA will work with appropriate stakeholders, such as the Association of American Medical Colleges and the Accreditation Council for Graduate Medical Education, in consideration of the following strategies to address the high cost of interviewing for residency/fellowship: a) establish a method of collecting data on interviewing costs for medical students and resident physicians of all specialties for study, and b) support further study of residency/fellowship interview strategies aimed at mitigating costs associated with such interviews.	**Retain – still relevant.**

26	H-310.993	Resident Participation on Hospital Committees	The AMA encourages hospitals with graduate medical education programs to include residents on hospital executive, fiscal and other committees.	**Retain – still relevant.**
27	H-310.994	Curriculum Orientation of Medical Staff Membership in Teaching Programs	Our American Medical Association believes that teaching programs in hospitals with residencies throughout the US should incorporate information on the privileges and responsibilities of medical staff membership into their education program's orientation materials.	**Retain – still relevant.**
28	H-310.995	Anonymity for Resident Inquiries to Residency Review Committees	Our American Medical Association supports a detailed procedure to guarantee anonymity of a resident physician who initiates an inquiry by a residency review committee into the conduct of a residency program, to protect residents from reprisals and program directors from unfounded complaints. The procedure includes a mechanism for the resident who elects to forward a complaint to the residency review committee (RRC), outlines options for RRC action; and identifies possible final actions open to the RRC.	**Retain – still relevant.**
29	H-350.969	Medical Education for Members in Underserved Minority Populations	Our AMA: (1) actively opposes the reduction of resources and opportunities used to increase the number of minority medical and premedical students in training; (2) uses its influence in states and local communities to increase the representation of minority group members in medical education, as long as domestic health care disparities exist between minority populations and the greater population at-large; and (3) supports the need for an increase in the participation of under-represented minorities as investigators, trainees, reviewers, and subjects in peer review biomedical research at all levels.	**Retain – still relevant.**
30	H-350.970	Diversity in Medical Education	Our AMA will: (1) request that the AMA Foundation seek ways of supporting innovative programs that strengthen pre-medical and pre-college preparation for minority students; (2) support and work in partnership with local state and specialty medical societies and other relevant groups to provide education on and promote programs aimed at increasing the number of minority medical school admissions; applicants who are admitted; and (3) encourage medical schools to consider the likelihood of service to underserved populations as a medical school admissions criterion.	**Retain – still relevant.**

31	H-435.954	Impact of US Medical Liability Premiums on Clinical Medical Education	Our AMA opposes increases in medical liability insurance premiums based solely on preceptor or volunteer faculty status.	**Retain – still relevant. Amend title to update language as follows:** ~~IMPACT OF~~ US MEDICAL LIABILITY PREMIUMS ~~ON CLINICAL MEDICAL EDUCATION~~ AND FACULTY STATUS
32	H-475.985	Protecting the Integrity of General Surgery as a Specialty	Our American Medical Association policy is that general surgery is a single specialty, distinct from other surgical specialties and that general surgery should be recognized as such by state regulatory agencies.	**Retain – still relevant.**

REPORT 2 OF THE COUNCIL ON MEDICAL EDUCATION (A-25)
International Applicants to U.S. Medical Schools (Resolution 301-A-24)

EXECUTIVE SUMMARY

Resolution 301 was introduced at the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates. The resolution asked that the AMA encourage additional medical schools to consider applications from and to admit international students to their programs alongside domestic students; amend policy H-255.968 "Advance Tuition Payment Requirements for International Students Enrolled in U.S. Medical Schools" by addition and deletion; and advocate for increased scholarship and funding opportunities for international students accepted to or currently attending United States medical schools.

To understand the issues better, this report will provide background information and data related to international student application and visa processes, student payment and financial aid, and funding for medical schools. Furthermore, this report will discuss impediments for international students as well as resources available to them and explore the building of a representative workforce.

In sum, the topic of international students applying and entering U.S. medical schools is complex. While many governmental policies include much broader issues and concerns than the admission of international students into medical school (e.g., visa processes, financial aid, funding, administrative changes, voter/public interest), some barriers can be addressed.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 2-A-25

Subject: International Applicants to U.S. Medical Schools

Presented by: Krystal Tomei, MD, MPH, Chair

Referred to: Reference Committee C

INTRODUCTION

Resolution 301 entitled "Fairness for International Medical Students" was referred at the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD) and asked that our AMA:

- Encourage additional medical schools to consider applications from and to admit international students to their programs alongside domestic students (New HOD Policy); and be it further
- Amend policy H-255.968 "Advance Tuition Payment Requirements for International Students Enrolled in U.S. Medical Schools" by addition and deletion to read as follows:

  Advance Tuition Payment Requirements for International Students Enrolled in U.S. Medical Schools H-255.968

  Our AMA:

  - supports the autonomy of medical schools to determine optimal tuition requirements for international students;
  - encourages medical schools and undergraduate institutions to fully inform international students interested in medical education in the U.S. of the limited options available to them for tuition assistance;
  - supports the Association of American Medical Colleges (AAMC) in its efforts to increase transparency in the medical school application process for international students by including school policy on tuition requirements in the Medical School Admission Requirements (MSAR); and
  - supports efforts to re-evaluate and minimize the use of pre-payment requirements specific to international medical students; and
  - encourages medical schools to explore alternative means of prepayment, such as a letter of credit, ~~for four years~~ for covering the costs of medical school. (Modify Current HOD Policy); and be it further
- Advocate for increased scholarship and funding opportunities for international students accepted to or currently attending United States medical schools.

The reference committee received mixed testimony on this item. Concerns were raised regarding the Student and Exchange Visitor Program (SEVP), federal regulations regarding international students, limited funding opportunities for international students, the criteria of the F visa program to enter the U.S, the Form I-20 "Certificate of Eligibility for Nonimmigrant Student Status," Title IV federal financial aid funding, and the relationships between medical schools and their parent institutions. Also, testimony recommended that the American Association of Colleges of

Osteopathic Medicine (AACOM) be included along with AAMC. Given the complexities raised, the Reference Committee recommended that this item be referred. The HOD also moved to refer. This report was written in response to that directive.

BACKGROUND

To better understand policy proposed in this resolution, several of the foundational topics raised by the author are described.

International student application and visa processes

Applicants to U.S. medical schools

For the purpose of this report, "international" medical school applicants are commonly understood to be individuals who are neither U.S. citizens nor hold permanent resident status in the U.S.[1] According to the AAMC, some U.S. MD-granting medical schools do accept a small number of international applicants. In 2019, 48 schools (out of 155) indicated that they accept applications from international applicants per the AAMC Medical School Admission Requirements™ (MSAR™) guide.[2,3] The 2019 cycle for MD-granting programs in the U.S saw 53,371 total applicants[4] with 21,969 (41%) matriculated into medical school; 325 out of 1,890 foreign applicants who applied to such programs were accepted.[2] Among the 325 students accepted, 272 matriculated into medical school, including those who applied via the American Medical College Application Service® (AMCAS®) and Texas Medical & Dental Schools Application Services (TMDSAS).[2] Related policies vary across schools and can be researched on an allopathic school's website or within the MSAR's section on "Application Deadlines and Requirements." Additional data can be found on the AAMC website. Similar data from AACOM and osteopathic medical schools were not available.

The National Center for Education Statistics offers the College Navigator search engine to identify educational institutions. The first step to studying in the U.S. is to apply to a school approved by the U.S. Immigration and Customs Enforcement (ICE) Student and Exchange Visitor Program (SEVP). This program ensures the government has necessary data related to nonimmigrant students and exchange visitors, provides approval and oversight to authorized schools, and issues guidance to both students and schools regarding the requirements for maintaining their status. If a student is accepted, they are registered in the SEVP platform called Student and Exchange Visitor Information System (SEVIS).[5] For a school to be accepted into SEVP, it must complete the online "Petition for Approval of School for Attendance by Nonimmigrant Student," (Form I-17) in SEVIS and pay all required fees.[6]

Most U.S. medical schools use AMCAS to facilitate and streamline the student application process. Since AMCAS does not accept foreign transcripts or verify foreign coursework (unless the coursework was accepted by an accredited U.S., U.S. Territorial, or Canadian postsecondary institution), individual medical schools may ask an applicant for their transcript with the understanding that some courses may not be accepted.[2] For DO-granting medical schools, the AACOM oversees the American Association of Colleges of Osteopathic Medicine Application Service (AACOMAS).[1] Likewise, admission policies for international students vary across DO schools. Once admission to a SEVP-approved school is secured, an international student can apply for their student visa.

Although not legally U.S. citizens or permanent residents, the admission process and barriers for Deferred Action for Childhood Arrivals (DACA) applicants were determined not to be the intent of the referral and beyond the purview of this report.

Applicant race/ethnicity data

AAMC provides data on the number of applicants to U.S. MD-granting medical schools, to include a breakdown by race/ethnicity and state of legal residence (if known). Such data provides insight into the diversity, or lack thereof, of the incoming students and includes non-citizen and non-permanent residents. AAMC data for the academic year 2024-2025 totals 51,946 applicants and includes 1,852 non-U.S. citizen and non-permanent residents.[7] More detailed R/E data on U.S. citizens is available. 2024 AACOM data totals 22,107 applicants and includes 470 non-U.S. citizens and non-permanent residents.[8] Likewise, more detailed R/E data on U.S. citizens is also available. While much is known about the countries of origin of international medical graduates (IMGs),[9] race/ethnicity data on international student applicants is not as readily available. AAMC indicated that recent international applicants were from 112 countries; among them, matriculants were from 67 countries.[10] Similar data from AACOM or ECFMG were not available.

Visa entry to U.S.

The Immigration and Nationality Act allows the admission of different classes of foreign national nonimmigrants who seek temporary admission to the U.S.[11] The Department of State's Bureau of Consular Affairs oversees the student visa process. Non-citizen students must have a student visa to travel to the U.S. to study. The course of study and the type of school determines which type of visa is needed. For the F visa, the student must be entering the U.S. to attend university or college, high school, private elementary school, seminary, conservatory, or another academic institution, including a language training program. For the M visa, the student must be entering the U.S. to attend a vocational or other recognized nonacademic institution, other than a language training program.[5] J visas are non-immigrant visas for individuals approved to participate in exchange visitor programs in the U.S.[12]

The student must submit the Online Visa Application (Form DS-160), along with a photo and fee, and must schedule an interview at the U.S. Embassy or Consulate in the country where they live. Wait times for interviews at the consulate vary by location, time of year, and visa type and range from the same day to over a year (e.g., Kolkata, India). Additional documentation may be required at the interview including intent to depart the United States upon completion of the course of study and how the applicant will pay for all educational, living, and travel costs.[5] A visa does not guarantee entry into the United States; rather, the Department of Homeland Security's U.S. Customs and Border Protection officials at the port-of-entry have authority to permit or deny entry. Students in the U.S. with F visas must depart within 60 days after the program end date listed on the Form I-20, including any authorized practical training.[5] The same process described above can be used to apply to renew a visa. More detailed information is provided on the student visa website.

The visa system allowing international students to enter the U.S. is governed by federal immigration policy and law. For example, the current federal administration starting in 2025 has ordered the Departments of State, Justice, and Homeland Security to ensure visa applicants "do not bear hostile attitudes" toward U.S. "citizens, culture, government, institutions, or founding principles" and "are vetted and screened to the maximum degree possible."[13] How this executive order will be implemented may impact the opportunities of international students to enter and stay in the U.S. for study.

Student payment and financial aid receipt

According to the AAMC, the majority of medical students pay for their education through student loans. Further, the mean education debt for indebted medical school graduates in 2023 was $206,924, with 70 percent of all students having education debt.[14] MD school-specific information is provided in the AAMC Tuition and Student Fees workbooks, which contain tuition, fees, and health insurance costs reported by accredited medical education programs from academic year 1995 to present.[15]For DO students, the average graduate indebtedness in 2023-2024 was $259,196.[16]

While domestic students may have government financial assistance options, most international medical students need to secure private loans or institutional loans (if available from the enrolled medical school) and, if available for foreign study, financial aid from the student's country of citizenship. The application process for private loans varies from lender to lender. Some medical schools may require international applicants to show proof of financial means to pay for all four years of medical school or may require such applicants to have the full amount in an escrow account as some international medical schools require of U.S. applicants.[2]

The U.S. Department of Education (DOE) oversees federal student aid and determines eligibility for "non-citizens." This designation includes U.S. nationals (including natives of American Samoa or Swains Island), U.S. permanent residents, or individuals with an Arrival-Departure Record (I-94) from U.S. Citizenship and Immigration Services. The latter includes those designated as "Refugee," "Asylum Granted," "Cuban-Haitian Entrant (Status Pending)," "Conditional Entrant" (if issued before April 1, 1980), T-visa holders (victims of human trafficking; T-2, T-3, or T-4), or "Parolee." For the parolee designation, an individual must be paroled into the U.S. for at least one year and must be able to provide evidence from the United States Citizenship and Immigration Services of intention to become a U.S. citizen or permanent resident. If applicable, federal student aid such as Direct Unsubsidized Loans and Direct PLUS Loans may be available if eligibility requirements are met.[17]

According to Harvard Medical School, "Since federal financial aid programs require that the recipient be a citizen or permanent resident of the United States, the programs used to fund international or Deferred Action for Childhood Arrivals (DACA)-eligible MD student financial aid awards come from private and institutional sources. International and DACA-eligible MD students fill out the standard financial aid application materials and receive financial aid award determinations in a similar manner as U.S. citizens and permanent residents. International and DACA-eligible MD students who qualify for need-based institutional funding are first offered a standard loan package which consists of a combination of loans from institutional and/or private sources. A variety of private loan options are available to MD students regardless of financial need with options to borrow with or without a U.S. co-signer."[18]

The Council on Medical Education studied "Medical Student Debt and Career Choice" (CME 4-N-21) and "Financing Medical Education" (CME 2-A-23), both of which provide greater detail into cost, debt, and financial resources.

Funding medical schools

While considering how an international student will pay for school, it is also important to understand the mechanisms in which schools are funded and how they use their funding to aid students. A medical school is part of a larger academic institution that may be public or private. Funding may come from several sources, including but not limited to student tuition fees, federal

and/or state monies, philanthropy, clinical revenue, faculty practice plans, industry, grants, and private payers. There may be stipulations on each of these forms of funding and how it is to be spent. Such stipulations may or may not address international student fees. For example, governmental funding for medical schools is partially based on a desire to train more students in or from a certain jurisdiction. A state government may demand that state universities and their medical schools give priority to residents of their state when it comes to admission as well as tuition subsidies. This may also pertain to private universities in their state, especially when they receive government support. Thus, funding for international students will be secondary to supporting additional students from the state that is providing taxpayer funds to universities and their medical schools.

Governmental funding is also driven by law. The Higher Education Act (HEA) of 1965 regulates the relationship between the federal government, colleges and universities, and students. Title IV of the HEA authorizes a variety of programs and provisions to assist students in accessing financial aid in a postsecondary education. These programs are often the primary sources of federal aid to support such education.[19] The regulated entity could be the university, including their medical school or the medical school as a stand-alone entity. "Under the HEA 90/10 rule, proprietary institutions of higher education (IHEs) must derive at least 10 percent of their total tuition and fees revenue from non-Title IV sources (or, conversely, no more than 90 percent of their tuition and fees revenue from Title IV funds) during a fiscal year."[21] Further, the DOE issued rule changes which took effect starting in 2023.[20] "The HEA and accompanying regulatory provisions specify how revenues are to be calculated. If an IHE fails to meet the rule's requirement in a single year, its certification to participate in the Title IV aid programs becomes provisional for two institutional fiscal years. If an IHE fails to meet the rule's requirements in two consecutive years, it loses its eligibility to participate in the Title IV programs for at least two institutional fiscal years. The rationale behind the 90/10 rule is twofold: (1) reducing fraud, waste, and abuse at proprietary IHEs and (2) if a proprietary IHE is of sufficient quality, it should be able to attract a specific percentage of revenues from non-Title IV sources."[21] The impact on school funding could also affect accreditation. This rule may explain why some medical schools require international students to pay up front or show proof of ability to pay, as default of payment can threaten a school's Title IV funding, thereby impacting the availability of financial aid for all students attending their school. Of note, the current federal administration is considering changes to the DOE; the impact of such changes remains to be seen.[22]

The Council on Medical Education has studied medical education, as mentioned above, as well as medical schools in its report "For-Profit Medical Schools or Colleges" (CME 1-I-19).

DISCUSSION

Each of these topics illuminate the complexity of this issue. They also raise further concerns related to heterogeneity, fairness, and involvement of international students as well as the challenges and resources available to them.

Building a representative workforce

According to the AAMC, their 10-point strategic plan called "A Healthier Future for All" is focused on supporting the capacity building of pathway programs to expand the U.S. medical school applicant pool in order to diversify the physician workforce.[23] Likewise, AACOM addresses similar points in their strategic plan.[24]

The Council on Medical Education has addressed issues of equity in some recent reports. For example, two reports of relevance are "Ensuring Equity in Interview Processes for Entry to Undergraduate and Graduate Medical Education" (CME 3-I-23) and "Promising Practices Among Pathway Programs to Increase Diversity in Medicine" (CME 5-J-21).

Focus on pathway programs, while important, centers on underrepresented U.S. students who face systemic barriers to medical school admission. Consideration can also be given to the potential contribution of international students in advancing related efforts in U.S. medical schools.

Impediments for international students

As described above, international students face significant challenges, including but not limited to the following:

- Medical school application forms, processes, interviews, and deadlines: Cost, language barriers, detailed forms, and deadlines may inhibit international students in their ability to successfully apply and be accepted to a U.S. medical school.
- Visa application forms, processes, interviews, and deadlines: the cost, detailed forms and documentation, deadlines, and immigration policies may prevent some international students from entry into the U.S. for study. Further, wait times for interviews at some consulates can be prolonged, resulting in a significant lag between admission and receipt of an F-visa.
- Pre-payment or proof of ability to pay: Financial capacity is challenging for most medical students, let alone international students who face non-citizenship required fees and may also have financial hardships. In addition, applicants for a student visa may be required by the consular officer to provide documentation of how they will pay for all educational, living, and travel costs. "This evidence of financial ability includes but is not limited to family bank statements, documentation from a sponsor, financial aid letters, scholarship letters, or letter from an employer showing annual salary."[25] Data on how many medical schools also require this proof was not readily available.
- Limited financial aid options: Given their non-citizen status, international students often struggle with knowing where/how to identify possible resources, let alone how to apply for them. Countries often do not provide financial aid to their citizens studying in the U.S.
- Public interest: Voters often demand that their tax dollars should go primarily toward educating their own citizens who reside in their state and that state universities and their medical schools prioritize their own citizens in admissions and financial aid. This may apply as well to private medical schools receiving state support. With competition for medical school admission already high in the U.S., including for U.S. applicants identifying as historically minoritized, increasing admissions to international students may decrease government and public support for medical schools including funding for all medical students.
- Federal immigration policy: The President and current federal administration is prioritizing an "America First" agenda that purports security and safety concerns related to immigrants, migrants, and asylum seekers, which may adversely impact the entry of international persons for study in the U.S.[26] The AMA is monitoring changes in federal immigration law and regulations and its potential impact on the physician workforce.

Resources for international students

Despite the challenges, a number of resources are available to aid such students in their ability to study medicine in the U.S. This is in addition to the financial aid office at each medical school. These resources include, but are not limited to:

- AAMC offers information on "Applying to Medical School as an International Applicant" as well as the Financial Information, Resources, Services, and Tools (FIRST) program. FIRST provides free resources to students, including publications, videos, webinars, infographics, and charts to help students and residents make informed financial decisions related to their education.
- Federal Student Aid website provides detailed information on eligibility and options.
- Sallie Mae provides guidance on financial aid and how to control costs associated with medical school.
- F-1 Doctors is a peer-led mentorship platform for international applicants to U.S. medical (and dental) schools and U.S. residency programs. The platform currently hosts over 140 mentors from over 30 countries, providing free guidance on applying to such U.S. schools and programs.[27]

In the AMA, the IMG Section is a member group that convenes on and advocates for relevant issues affecting international medical graduates. The section also provides students with information on how to become certified by the Educational Commission for Foreign Medical Graduates (ECFMG)/Intealth and how to navigate practicing medicine in the U. S. as well as access to mentoring consults. The AMA Medical Education unit produced a 2022 issue brief on Support for IMGs practicing in the U.S. In the last five years, the Council on Medical Education published the following reports related to IMGs:

- Challenges to Primary Source Verification of International Medical Graduates Resulting from International Conflict (CME 8-A-23)
- Financial Burdens and Exam Fees for International Medical Graduates (CME 3-A-23)
- Expediting Entry of Qualified IMG Physicians to U.S. Medical Practice (CME 4-JUN-21)
- Licensure for International Medical Graduates Practicing in U.S. Institutions with Restricted Medical Licenses (CME 2-JUN-21)

Also, the AMA Medical Student Section is a member group that convenes on and advocates for relevant issues impacting medical students in the U.S. The AMA and AMA Foundation (AMAF) can consider additional ways they can support international applications and students within their own programs and initiatives, such as the AMAF medical student scholarships.

RELEVANT AMA POLICIES

The AMA has many policies in support of medical students, medical education, and medical schools. Such policies are accessible in the AMA Policy Finder. Regarding international medical students, related policies include:

- Advance Tuition Payment Requirements for International Students Enrolled in U.S. Medical Schools H-255.968
- Clinical Skills Assessment During Medical School D-295.988

SUMMARY

The topic of international students applying to and entering U.S. medical schools is complex. While many governmental policies discussed include much broader issues and concerns than the

admission of international students into medical school (e.g., visa processes, financial aid, funding, administrative changes, voter/public interest), some of the barriers can be addressed with the above resources.

RECOMMENDATIONS

The Council on Medical Education recommends the following be adopted, and the remainder of the report be filed:

That our AMA:

1. Supports all U.S. medical schools in (a) considering international applicants; (b) investigating additional financial aid opportunities, including scholarships, for international medical school applicants; and (c) re-evaluating their pre-payment requirements specific to international applicants.
2. Recognizes the federal government's current programs that allow for the entry of qualified international medical students into the U.S. and encourages the maintenance and/or improvement of such programs.
3. Supports relevant parties to include international medical students and applicants in data collection, philanthropy, and financial assistance programs.

(New HOD Policy)

Fiscal note: $1,000

APPENDIX: RELEVANT AMA POLICIES

Advance Tuition Payment Requirements for International Students Enrolled in U.S. Medical Schools H-255.968

1. Our American Medical Association supports the autonomy of medical schools to determine optimal tuition requirements for international students.
2. Our AMA encourages medical schools and undergraduate institutions to fully inform international students interested in medical education in the US of the limited options available to them for tuition assistance.
3. Our AMA supports the Association of American Medical Colleges (AAMC) in its efforts to increase transparency in the medical school application process for international students by including school policy on tuition requirements in the Medical School Admission Requirements (MSAR).
4. Our American Medical Association encourages medical schools to explore alternative means of prepayment, such as a letter of credit, for four years of medical school.

Clinical Skills Assessment During Medical School D-295.988

1. Our American Medical Association will encourage its representatives to the Liaison Committee on Medical Education (LCME) to ask the LCME to determine and disseminate to medical schools a description of what constitutes appropriate compliance with the accreditation standard that schools should "develop a system of assessment" to assure that students have acquired and can demonstrate core clinical skills.
2. Our AMA will work with the Federation of State Medical Boards, National Board of Medical Examiners, state medical societies, state medical boards, and other key stakeholders to pursue the transition from and replacement for the current United States Medical Licensing Examination (USMLE) Step 2 Clinical Skills (CS) examination and the Comprehensive Osteopathic Medical Licensing Examination (COMLEX) Level 2-Performance Examination (PE) with a requirement to pass a Liaison Committee on Medical Education-accredited or Commission on Osteopathic College Accreditation-accredited medical school-administered, clinical skills examination.
3. Our AMA will work to:
   a. ensure rapid yet carefully considered changes to the current examination process to reduce costs, including travel expenses, as well as time away from educational pursuits, through immediate steps by the Federation of State Medical Boards and National Board of Medical Examiners.
   b. encourage a significant and expeditious increase in the number of available testing sites.
   c. allow international students and graduates to take the same examination at any available testing site.
   d. engage in a transparent evaluation of basing this examination within our nation's medical schools, rather than administered by an external organization.
   e. include active participation by faculty leaders and assessment experts from U.S. medical schools, as they work to develop new and improved methods of assessing medical student competence for advancement into residency.
4. Our AMA is committed to assuring that all medical school graduates entering graduate medical education programs have demonstrated competence in clinical skills.
5. Our AMA will continue to work with appropriate stakeholders to assure the processes for assessing clinical skills are evidence-based and most efficiently use the time and financial resources of those being assessed.
6. Our AMA encourages development of a post-examination feedback system for all USMLE test-takers that would:
   a. Identify areas of satisfactory or better performance.

b. Identify areas of suboptimal performance.
c. Give students who fail the exam insight into the areas of unsatisfactory performance on the examination.

7. Our AMA, through the Council on Medical Education, will continue to monitor relevant data and engage with stakeholders as necessary should updates to this policy become necessary.

REPORT 3 OF THE COUNCIL ON MEDICAL EDUCATION (A-25)
Unmatched Graduating Physicians (Resolution 306-A-24)

EXECUTIVE SUMMARY

Resolution 306 was introduced at the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates. The resolution asked that the "Board of Trustees study the role these unmatched physicians can play in providing care to our patients, their impact of lessening the impact of physician shortages, and provide recommendations on how to enroll these graduating physicians with a uniform title, privileges, geographic restrictions, and collaboration choices, and report to the House of Delegates (HOD) at the next Interim meeting." The Reference Committee received mixed testimony on this item and it was ultimately referred by the HOD.

To examine if unmatched physicians without residency education would contribute meaningfully to addressing a physician workforce shortage and increase access to care, this report will provide background information and data related to physician education standards and graduate medical education as well as the physician workforce shortage. It will also review the quantity of unmatched U.S. medical graduates, reasons for being unmatched, and the Accreditation Council for Graduate Medical Education position on the unmatched.

Finally, this report will discuss concerns and considerations from the resolution author and physician community, implications for international medical graduates, and the AMA's own efforts and resources in this space.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 3-A-25

Subject: Unmatched Graduating Physicians (Res 306-A-24)

Presented by: Krystal Tomei, MD, MPH, Chair

Referred to: Reference Committee C

INTRODUCTION

At the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 306 was referred and asked that our "Board of Trustees study the role these unmatched physicians can play in providing care to our patients, their impact of lessening the impact of physician shortages, and provide recommendations on how to enroll these graduating physicians with a uniform title, privileges, geographic restrictions, and collaboration choices, and report to the HOD at the next Interim meeting."

The author purported many concerns in Resolution 306, demonstrating the complexities of the problem. These concerns include:

- Graduate medical education (GME) shortage (e.g., lack of funding; lack of residency slots)
- Unmatched physicians (e.g., a Missouri state law allowing physicians without residency training to practice and other similar state laws; lack of support/experiences for unmatched medical students so they can go on to match)
- Workforce (e.g., physician shortage in primary and specialty care; a decrease in practicing physicians; not enough medical students, residents, and fellows to meet the needs of patients)
- Scope of practice (e.g., physician assistants [PAs], advanced practice providers [AAPs], and nurse practitioners [NPs] have replaced physicians in shortage areas; state allowances for non-physician extenders to practice)

The reference committee received mixed testimony on this item. Testimony in opposition raised concerns about the multifactorial and nuanced problem of the physician shortage, variances in state laws related to non-physician providers, patient safety, physician education, lack of physician mentors, and circumvention of Accreditation Council for Graduate Medical Education (ACGME) standards by not participating in an accredited GME program. For these reasons, the reference committee recommended that resolution 306 be not adopted; however, the HOD final action moved for referral. This report is written in response to that directive.

BACKGROUND

To examine if unmatched physicians without residency education would contribute meaningfully to addressing a physician workforce shortage and increase access to care, the following issues and facts need to be considered.

Physician workforce shortage

The physician workforce shortage and maldistribution by geography and specialty is impacting access to care. In 2023, the Association of American Medical Colleges (AAMC) conducted a study entitled "The Complexities of Physician Supply and Demand: Projections From 2021 to 2036." The resulting report predicts that by the year 2036, the U.S. will face a physician shortage of up to 86,000 physicians.[1] While the physician shortage is a multifactorial and nuanced problem, the report asserts that the main drivers of the physician shortage are population demographics, retiring physicians, and the needs of groups that have been historically and intentionally excluded.

- Demographics: The study projects the U.S. population will grow by 8.4 percent overall, along with a growth in the aged 65 and older subpopulation by 34.1 percent leading to a significant increase in demand for primary care and for the specialists they most often need.
- Retirement: Currently, 42 percent of the clinical physician workforce is over age 55 (20 percent are aged 65 or older and 22 percent are between age 55 and 64). Thus, a substantial number of physicians will reach retirement age within the next decade.
- Underserved: The U.S. would have already needed 202,800 more physicians (as of 2021) to care for underserved communities in order to provide care at the same rate as other populations.[1]

These forecasts suggest worsening health inequities, particularly for the aging and underserved populations. AAMC offers projected data on physician demand through 2036 by patient race and ethnicity as well as urban-rural location. Of note, the AMA recently issued a brief on "Defining "rural" for the physician workforce."

Physician education standards and graduate medical education

For almost a century, successful completion of GME in the United States has been the established standard for physician education in the United States for independent practice and now for many countries around the world. Beginning in 1914, the AMA published the first list of hospitals approved for GME, and in 1927, the AMA Council on Medical Education and Hospitals began publishing the names of all the approved hospitals with GME programs in various specialties in the "Essentials of Approved Residencies and Fellowships." In the mid-20th century, the AMA played a key role with specialty boards in establishing residency review committees (RRCs), beginning with the RRCs for internal medicine and surgery in 1953. In 1956, the Federation of State Medical Boards recommended GME as a requirement for a full, unrestricted license to practice medicine. In 1972, the AMA helped found the Liaison Committee on Graduate Medical Education to accredit residency programs and, in 1981, was one of the five parent organizations establishing the ACGME.[2] In 2020, osteopathic and allopathic GME were unified into a single accreditation system to standardize GME for all physicians in the United States.[3]

GME is not only a critical part of the education of physicians in preparation for independent practice in a clinical specialty, GME is also a period of assessment for each trainee to ensure they are competent to practice. At completion of a GME program in the U.S., the residency director attests (per the 2024 ACGME Guide to the Common Program Requirements) that the resident has "demonstrated the knowledge, skills, and behaviors necessary to enter autonomous practice."[4] Allowing unmatched physicians to practice without GME would be a significant change in professional standards for patient care.

How many unmatched U.S. medical graduates are there?

Physicians applying for residency or fellowship enter a match to determine in which program they will train. The Council on Medical Education provides greater detail on the match processes and alternatives in their 2024 report, The Current Match Process and Alternatives (CME 2-A-24).

The National Residency Matching Program (NRMP) publishes annual results and reports on various data topics. According to the NRMP's report, "2024 Main Residency Match® By the Numbers," there were 41,503 total positions, and 38,941 of them were filled (93.8 percent), leaving 2,562 unfilled.[5] For PGY-1 positions, there were 38,494 total positions, and 35,984 of them were filled (93.5 percent), leaving 2,510 unfilled. In both instances (total positions and PGY-1 only), the percentages of filled spots went up 0.5 percent from the previous year.[5] See Appendix A for more report highlights or visit the NRMP® website for the complete data. Further Match data shows a match rate of 93.5 percent for U.S. MD seniors (an all-time high), 92.3 percent for U.S. DO seniors, 67 percent match rate for U.S. citizen international medical graduates (IMGs), and 58.5 percent match rate for non-U.S. citizen IMGs.[6]

Regarding IMGs in 2024, "19,050 U.S. citizen and non-U.S. citizen students and graduates of international medical schools (IMGs) registered for the Match, 1,668 more than 2023. Of the 4,751 U.S. IMGs who submitted rank order lists of programs, 3,181 matched to a PGY-1 position for a match rate of 67.0 percent. Of the 10,021 non-U.S. citizen IMGs who submitted rank order lists of programs, 5,864 matched to a PGY-1 position for a match rate of 58.5 percent. In 2024, the overall number of registered applicants was 50,413, the highest in the history of the Match. The number of registered non-U.S. citizen IMGs was 12,787, 1,986 more than last year."[7]

A total of 2,655 positions went unfilled in the 2024 NRMP Match, which included the 2,562 mentioned above as well as 93 additional positions in programs that did not submit a rank order list. Also, some unfilled programs had submitted a rank order list but chose not to participate in the Supplemental Offer and Acceptance Program® (SOAP®)to fill their unfilled positions. Among the 2,655 mentioned above, 97 percent (2,575) were placed in the SOAP offered by the NRMP during Match Week.[7] The SOAP is a process whereby eligible unmatched or partially matched applicants in The Match can apply for and be offered positions that went unfilled after the matching algorithm was processed. At the conclusion of SOAP, 176 positions still remained unfilled from 109 SOAP-participating programs. The matching and SOAP processes combined filled 99.6 percent of positions available through the Match, resulting in 0.4 percent unfilled positions."[7] This data does not include other match processes outside the NRMP. See Appendix A for a graph of NRMP Match data.

Reasons U.S. medical graduates are unmatched

Data provided by medical schools to the Liaison Committee on Medical Education (LCME) in the LCME Part II Annual Medical School Questionnaire offers insight into reasons medical school graduates did not match into a residency program. In 2023, 20,484 graduates accepted a residency position, and the total number of potential graduates who reported not entering residency training in 2023-2024 was 309 and their reasons given were:

- Research/pursuing additional degree or training: 113
- Did not find a residency position: 80
- Changing careers: 56
- Other: 56
- Family responsibilities/childcare: 4[8]

The LCME does not have additional details about the reasons. It is possible that those who "did not find a residency position" may not have found one in their desired specialty or geography even if

other positions were available. Data on osteopathic medical school graduates not entering residency training were not available.

Notably, 80 U.S. LCME medical graduates reported being unable to find a residency position, while the NRMP reported 176 unfilled residency positions after the SOAP. It is likely that the unmatched physicians had preferences for residency positions that were not met by the available vacant positions.

Regarding osteopathic medical schools, American Association of Colleges of Osteopathic Medicine's (AACOM) UME-GME Task Force Residency Match Working Group sent a survey to medical school advisers and deans in 2018-2019 to assess reasons why students did not match. The results indicated low board scores and lack of parallel plans were the main reasons students did not match.[9]

ACGME statement on those who are unmatched

The ACGME issued a statement of note in 2020 regarding "Unmatched US (Domestic, non-IMG) Allopathic and Osteopathic Medical Graduates, and International Medical Graduates with valid Educational Commission for Foreign Medical Graduates (ECFMG) certification Scenarios." It reads, "ACGME-accredited Sponsoring Institutions that permit programs to appoint unmatched/ uncommitted graduates, consistent with their programs'/ Sponsoring Institutions' match participation agreements, must offer at least 1 year of appointment in an ACGME-accredited program (if eligible per ACGME requirements). Any such appointments must be reviewed and approved in advance by the Sponsoring Institution's Graduate Medical Education Committee (GMEC). Enrollment in preliminary year positions, categorical positions, and positions in Transitional Year programs may be appropriate in this circumstance.

1. If the program would be within its approved complement, appointment in an ACGME-accredited program may proceed.
2. If the program would not be within its approved complement, Review Committee approval of a temporary complement increase must be obtained prior to appointment in an ACGME-accredited program. Approval of temporary complement increases, when required, must be obtained by programs of Sponsoring Institutions that have declared pandemic emergency status (Stage 3)."[10]

DISCUSSION

Concerns and considerations

Ultimately, Resolution 306 seeks to determine if unmatched physicians can have a significant impact on the physician shortage by creating opportunities for these physicians to practice.

There is a common misperception that there are not enough GME positions for graduates of U.S. medical schools. However, the data provided in this report proves otherwise, with the number of U.S. medical graduates who are unable to obtain a residency each year being very small (under 100) compared to the overall number of physicians entering GME (almost 40,000) and would have a very small potential impact on the physician workforce. For U.S. medical school graduates who are seeking a residency position but who remain without a residency position, there is likely a mismatch between their preferences and the residency positions available to them. Similarly, unmatched physicians may have preferences that may result in a lack of interest in some practice opportunities.

Residency is mandatory for medical licensure in the U.S. Thus, guidance for unmatched physicians is usually focused on getting them into a residency, which means applying for SOAP to attempt to match into unfilled positions or taking a year to prepare to reapply for The Match. Given AAMC predictions, it would be most advantageous to the health of the public if trainees choose to pursue the specialties of most need and seek employment in areas of most need. Should unmatched physicians decide not to reapply, they can pursue other careers in health care that contribute to the health of patients. Depending on their skills and interests, such employment paths include medical writing, consulting, administration, research, education, entrepreneurship, technology, or government agencies.

For DO students looking to strengthen their application, the National Board of Osteopathic Medical Examiners (NBOME) suggests that unmatched graduates also "consider applying to take COMLEX-USA Level 3 under the alternate pathway attestation, which permits candidates to obtain eligibility with endorsement by their COM dean."[11] Completion of Level 3 may be a way for DO applicants to strength their application while reapplying. Equivalent information for MD students was not available on the National Board of Medical Examiners website, although it is widely accepted that passing Step 3 can strength an application while reapplying.

There is little evidence to suggest that U.S. unmatched physicians can address the physician shortage. Without completing a residency, it is unlikely that they could provide the quality of care of a physician who completed an ACGME-accredited residency program. Residents cannot bill for their services and must be under supervision of fully licensed physicians, including in-person supervision during the first 6 months of residency. Thus, it would seem unmatched physicians should need at least this level of supervision, if not more. Further, hospital medical staff, medical groups, and/or payors should not grant privileges to unmatched physicians without residency training. For privileges, these entities often require completion of ACGME residency training.[12]

While ACGME accreditation standards call for structured supervision and longitudinal assessment in GME, an alternate pathway for unmatched physicians to enter practice lacks detailed guidelines for and enforcement of appropriate clinical supervision to assure patient safety and assess competence. In addition, a shortage of physicians in underserved areas able to supervise may lead to subquality oversight of unmatched physicians in these communities. Related, the AMA recently issued a brief on "The role of supervision in assessment of physician competency."

Also, the resolution implies that unmatched physicians should be granted practice privileges that are potentially greater than those who did match and entered GME. This issue could create distrust between physicians in residency programs and unmatched physicians.

In recent years, there has been movement toward creating positions for these individuals where they may function similarly to a non-physician provider. At least ten states have passed laws to provide this opportunity. For example, the Medical Association of the State of Alabama introduced a bill that was signed into state law in 2023 entitled the "Physician Workforce Act."[13] It creates a Bridge Year Graduate Physician Program. This program allows unmatched physicians to gain experience and skills under the supervision of licensed physicians. These individuals will receive a one-year renewable permit to practice medicine under an Alabama-licensed physician.[14] Since it is a new program, data is limited. While it seems that Alabama seeks to eventually get these individuals into residency positions, some states do not offer an end goal whereby these individuals may remain under supervision much like a non-physician provider. It calls into question the consequences for unmatched physicians who are unable to secure a desired GME position for years. It is unclear if this role is truly transitional, how long they will be allowed to continue in such a role, and how the medical community can prevent exploitation of unmatched physicians.

For example, a St. Louis physician was recently sentenced to prison for employing physician assistants and unmatched physicians to see patients but billing health plans as if he was the one providing direct care. The Department of Justice concluded that "under Missouri law, this is expressly illegal, especially since many of the assistants were not qualified to provide unsupervised care. While they had completed medical school, they did not finish a required residency. …Further, when hiring the assistants, the physician would market the roles as 'residency prep' and a 'stepping stone' toward full qualification."[15]

In 2023, the urology program at Case Western Reserve University School of Medicine in Ohio introduced a pilot program designed to afford an unmatched student a mentored and supervised year as a "Resident Team Assistant (RTA)," with support for research projects, attendance of educational didactic conferences, and experience within their subspecialty that reflects an experience similar to a one-year acting internship. Their responsibilities were limited by the lack of a training permit, but their duties were aligned to the needs of an ACGME-accredited residency program with educational exposure and resources afforded by such a position. This individual successfully matched the next year.[16]

An example of support for DO students who did not initially match into a residency program is a program at the Rocky Vista University (RVU) College of Osteopathic Medicine. In 2021, this institution launched the Predoctoral Internship (PDI) and Master's Predoctoral Internship (MPDI), both designed to aid students who did not match into a residency program to reenter the match process and successfully match. According to RVU, "The PDI and MPDI are rigorous, milestone-based programs designed to develop personalized experiences to meet the individual needs of an unplaced student to prepare them to reenter the match process and successfully match to a residency program. The key difference between the PDI and MPDI, outside of the curriculum structure, is that a student in the MPDI program will also be concurrently enrolled in an accredited master's program of their choice at a different institution. … The successes of these programs have spurred conversations about ways the university can incorporate components of the PDI and MPDI programs into the core curriculum of the COM to mitigate the need for such programs to exist."[17] The programs included 11 participants and achieved a 100 percent success rate for those re-entering the Match, while also helping to reduce anxiety and increase support throughout the process.[17] Additional information about the RVU innovation is available on the school's website and here. AACOM offers a toolkit to aid such students reentering the residency application and match process.[9]

A great concern about creating a pathway for unmatched physicians to enter practice absent completion of an ACGME accredited residency in order to ameliorate the physician shortage would essentially create a two-tiered health care system, further clouding the distinction in training and ability between physicians and non-physician providers. However, examples of successful programs to provide unmatched graduates with structured educational clinical experiences have shown greater success in truly assisting these graduates with a later successful match. Key parties are encouraged to consider the need and utility of programs to support unmatched physicians.

Another potential etiology of unmatched students underlies the decision of some residency programs to choose not to participate in the SOAP. These programs will only accept applicants who matched during the main residency Match. Understanding the decision of these residency programs to keep their positions unfilled rather than considering unmatched applicants for those positions may elucidate opportunities to increase the slots available for unmatched students. Programs need to actively indicate their participation in the SOAP each year; if overlooked it may result in programs with unfilled positions inadvertently not being available in the SOAP. Key

parties are encouraged to investigate processes to enable all unfilled residency positions to be available in the SOAP.

IMGs

Resolution 306 did not specify "U.S." unmatched physicians. Thus, it can be interpreted to include IMGs and open the door to broader implications. Regarding IMGs, the AMA is an active member of the newly formed Advisory Commission on Additional Licensing Models, co-chaired by the Federation of State Medical Boards (FSMB), Intealth™, and the ACGME. This Commission, established in March 2024, released draft preliminary recommendations on eligibility requirements for public comment through December 6, 2024. Notably, requiring GME training is recommended for the IMGs in any additional licensing pathway. More information is expected in 2025.

AMA efforts and resources

GME, matching, and the physician shortage are areas of significant concern of the AMA and often addressed in its Advocacy efforts. See Appendix B for a list of relevant accomplishments in the last two years alone.

In addition to the report cited earlier, the Council on Medical Education has actively addressed concerns related to GME and the physician workforce in reports such as:

- Guiding Principles and Appropriate Criteria for Assessing the Competency of Physicians Across the Professional Continuum, CME 1-I-21
- Optimizing Match Outcomes, CME 3-A-21
- Expanding UME Without Concurrent GME Expansion, CME 3-A-18
- Options for Unmatched Medical Students, CME 5-A-17
- Standardizing the Allopathic Residency Match System and Timeline, CME 6-A-17
- Addressing the Increasing Number of Unmatched Medical Students, CME 3-A-16

FREIDA™ is the AMA's Residency & Fellowship Database® that enables unmatched students to research residencies from more than 13,000 programs both during and following SOAP.

AMA media coverage and educational resources in the last two years include:

- Powerful Senate committee takes up physician shortage (Aug 2024)
- AMA president sounds alarm on national physician shortage (Oct 2023)
- Match: Which specialties place most residents through SOAP (Feb 2024)
- What if you don't match? 4 things you should do (March 2024)
- What's exacerbating the physician shortage crisis—and what's needed to fix it (May 2024).

REVANT AMA POLICIES

The AMA has strong policy in support of GME, medical licensure, board certification, and competent patient care – all of which illuminate the importance of completion of a residency. See Appendix C for full policies. To support an alternative to residency training that allows for insufficiently supervised patient care would go against longstanding AMA policy.

AMA policy D-310.977 entitled "National Resident Matching Program Reform" addresses the unmatched in clauses 11-15 and 17 to read as follows:

11. Our AMA will work with the Association of American Medical Colleges (AAMC), American Osteopathic Association (AOA), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to evaluate the current available data or propose new studies that would help us learn how many students graduating from US medical schools each year do not enter into a US residency program; how many never enter into a US residency program; whether there is disproportionate impact on individuals of minority racial and ethnic groups; and what careers are pursued by those with an MD or DO degree who do not enter residency programs.
12. Our AMA will work with the AAMC, AOA, AACOM and appropriate licensing boards to study whether US medical school graduates and international medical graduates who do not enter residency programs may be able to serve unmet national health care needs;
13. Our AMA will work with the AAMC, AOA, AACOM and the NRMP to evaluate the feasibility of a national tracking system for US medical students who do not initially match into a categorical residency program.
14. Our AMA will discuss with the National Resident Matching Program, Association of American Medical Colleges, American Osteopathic Association, Liaison Committee on Medical Education, Accreditation Council for Graduate Medical Education, and other interested bodies potential pathways for reengagement in medicine following an unsuccessful match and report back on the results of those discussions.
15. Our AMA encourages the Association of American Medical Colleges to work with U.S. medical schools to identify best practices, including career counseling, used by medical schools to facilitate successful matches for medical school seniors, and reduce the number who do not match.
17. Our AMA encourages the Educational Commission for Foreign Medical Graduates (ECFMG) and other interested stakeholders to study the personal and financial consequences of ECFMG-certified U.S. IMGs who do not match in the National Resident Matching Program and are therefore unable to get a residency or practice medicine.

Also, AMA Policy H-200.954 entitled "US Physician Shortage" addresses the underlying issue of this resolution — the physician shortage. Additional related policies are located in the AMA Policy Finder and include:

- Educational Strategies for Meeting Rural Health Physician Shortage H-465.988
- Proposed Revisions to AMA Policy on the Financing of Medical Education Programs H-305.929
- Evaluation of DACA-Eligible Medical Students, Residents and Physicians in Addressing Physician Shortages D-350.986
- Financing of Medical Education Programs D-305.973
- Fixing the VA Physician Shortage with Physicians D-510.990
- The Preservation, Stability and Expansion of Full Funding for Graduate Medical Education D-305.967
- Residents and Fellows' Bill of Rights H-310.912

SUMMARY

This report examined issues surrounding physicians who do not secure entry into an accredited residency program by graduation. It addressed concerns related to competency to perform patient care as well as the growing physician shortage, both of which were raised by the resolution author. Based on the data and analysis in this report, changing professional standards to permit the small number of unmatched physicians without GME training to practice is a problematic and negligible response to physician workforce shortages and lack of access to care. Successful completion of a

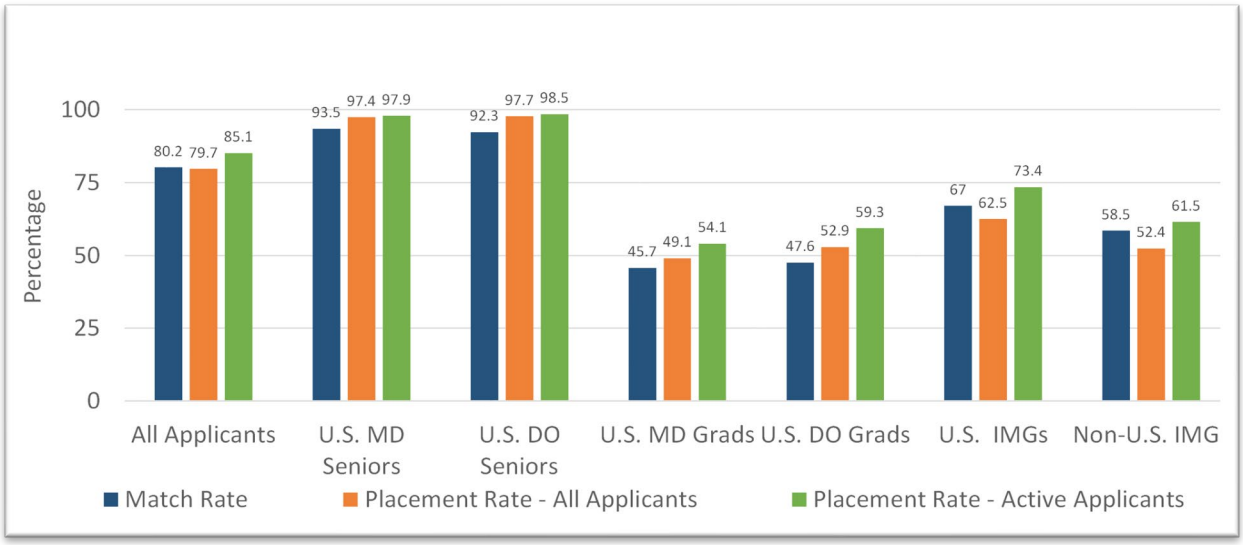
residency is a key tenant of medical education and licensure and is highly supported by AMA policy. However, there may be more that key parties can do to support and prepare applicants to succeed is securing a GME position in their residency applications and The Match (or other match processes). Such parties should evaluate their roles and efforts.

RECOMMENDATIONS

The Council on Medical Education recommends that the following be adopted in lieu of Resolution 306-A-24, and the remainder of the report be filed:

1. Encourage relevant parties to examine the root causes for physicians who do not secure entry into an accredited residency program by graduation and evaluate each of their efforts to address them including informing medical students and their advisers how to obtain GME training opportunities. Such parties include but are not limited to medical schools, residency programs, Association of American Medical Colleges, American Association of Colleges of Osteopathic Medicine, National Resident Matching Program , Intealth, and Accreditation Council for Graduate Medical Education . (New HOD Policy)

2. Encourage relevant parties to evaluate opportunities that have successfully matched previously unmatched physicians into residency positions, so students can be better counselled on opportunities that improve their chances of matching into a residency program. (New HOD Policy)



3. Reaffirm AMA policies D-310.977 "National Resident Matching Program Reform" and H-200.954 "U.S. Physician Shortage." (Reaffirm HOD Policy)

Fiscal note: $1,000

APPENDIX A:

PGY-1 Match and Placement Rates by Applicant Type, 2024

.

National Resident Matching Program, Results and Data: 2024 Main Residency Match. Reprinted with permission from NRMP, 2025.

APPENDIX B: AMA ADVOCACY EFFORTS IN LAST TWO YEARS

- June 24, 2024: comments were submitted on the Senate Finance Committee's draft policy proposal and specific questions for consideration on policies related to the Medicare Graduate Medical Education (GME) program. If workforce barriers for physicians are reduced and additional investments in GME are made, it will help to increase the number of physicians in the U.S., which will lead to healthier communities and ultimately a healthier country as access to much-needed medical care increases.
- June 10, 2024: comments were submitted to the Centers for Medicare & Medicaid Services (CMS) on the Fiscal Year 2025 Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System (LTCH PPS), supporting the expansion of resources and the removal of barriers to the training and retention of obstetric care physicians, especially in rural and underserved areas. We also recommended that CMS consider increasing support for programs that integrate comprehensive approaches to maternity care and highlight the importance of social determinants of health (SODH) in maternal and infant outcomes. The AMA also supported the allocation of Graduate Medical Education (GME) slots to strategically address the most pressing needs within the health care system, including the shortage of mental health professionals. We urged CMS to adopt a distribution framework that considers the specific needs of communities and the capacity of institutions to provide high quality education and training to residents.
- May 16, 2024: Statement for the Record was submitted to the U.S. Senate Committee on Finance as part of the hearing entitled, "Rural Health Care: Supporting Lives and Improving Communities." The statement covered a number of issues, including recommendations on ways to increase and retain the physician workforce, especially in rural communities.
- October 19, 2023: Statement for the Record was submitted to the U.S. House of Representatives Committee on Energy and Commerce Subcommittee on Health as part of the hearing entitled "What's the Prognosis? Examining Medicare Proposals to Improve Patient Access to Care & Minimize Red Tape for Doctors." This statement covers a number of issues including GME and workforce issues that the AMA would like addressed to strengthen the physician workforce.
- October 5, 2023: letter was sent by request from the House Committee on Ways and Means' for information (RFI) commenting on ways to improve health care in rural and underserved areas. A number of subject areas were covered including needed improvements for workforce issues and scope of practice considerations.
- March 20, 2023: comments were submitted to the Senate Committee on Health, Education, Labor and Pensions responding to their request for comment concerning health care workforce shortages. We discussed rural hospitals, physician burnout, prior authorization, loan repayment and scholarship programs, support for physician led teams, and physician payment.
- On July 29, 2022: information was provided regarding the Department of Health and Human Services' (HHS) Initiative To Strengthen Primary Health Care.
- May 22, 2023: letter was signed in support of the Resident Physician Shortage Reduction Act of 2023 (S. 1302). This bipartisan legislation is crucial to expanding the physician workforce and to ensuring that patients across the country are able to access quality care from physicians.
- On May 9, 2023: letter was sent in strong support of H.R. 2389, the "Resident Physician Shortage Reduction Act of 2023." This bipartisan legislation would gradually raise the number of Medicare-supported graduate medical education (GME) positions by 2,000 per

year for seven years, for a total of 14,000 new slots. A share of these positions would be targeted to hospitals with diverse needs including hospitals in rural areas, hospitals serving patients from health professional shortage areas (HPSAs), hospitals affiliated with historically Black medical schools, hospitals in states with new medical schools or branch campuses, and hospitals already training over their caps.

APPENDIX C: RELEVANT AMA POLICIES

National Resident Matching Program Reform D.310.977

1. Our American Medical Association will work with the National Resident Matching Program (NRMP) to develop and distribute educational programs to better inform applicants about the NRMP matching process, including the existing NRMP waiver and violations review policies.
2. Our AMA will actively participate in the evaluation of, and provide timely comments about, all proposals to modify the NRMP Match.
3. Our AMA will request that the NRMP explore the possibility of including the Osteopathic Match in the NRMP Match.
4. Our AMA will continue to review the NRMP's policies and procedures and make recommendations for improvements as the need arises, to include making the conditions of the Match agreement more transparent while assuring the confidentiality of the match.
5. Our AMA will work with the Accreditation Council for Graduate Medical Education (ACGME) and other appropriate agencies to assure that the terms of employment for resident physicians are fair and equitable and reflect the unique and extensive amount of education and experience acquired by physicians.
6. Our AMA does not support the current the "All-In" policy for the Main Residency Match to the extent that it eliminates flexibility within the match process.
7. Our AMA will work with the NRMP, and other residency match programs, in revising Match policy, including the secondary match or scramble process to create more standardized rules for all candidates including application timelines and requirements.
8. Our AMA will work with the NRMP and other external bodies to develop mechanisms that limit disparities within the residency application process and allow both flexibility and standard rules for applicants.
9. Our AMA encourages the National Resident Matching Program to study and publish the effects of implementation of the Supplemental Offer and Acceptance Program on the number of residency spots not filled through the Main Residency Match and include stratified analysis by specialty and other relevant areas.
10. Our AMA will work with the NRMP and ACGME to evaluate the challenges in moving from a time-based education framework toward a competency-based system, including:
    a. Analysis of time-based implications of the ACGME milestones for residency programs.
    b. The impact on the NRMP and entry into residency programs if medical education programs offer variable time lengths based on acquisition of competencies.
    c. The impact on financial aid for medical students with variable time lengths of medical education programs.
    d. The implications for interprofessional education and rewarding teamwork.
    e. The implications for residents and students who achieve milestones earlier or later than their peers.
11. Our AMA will work with the Association of American Medical Colleges (AAMC), American Osteopathic Association (AOA), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to evaluate the current available data or propose new studies that would help us learn how many students graduating from US medical schools each year do not enter into a US residency program; how many never enter into a US residency program; whether there is disproportionate impact on individuals of minority racial and ethnic groups; and what careers are pursued by those with an MD or DO degree who do not enter residency programs.
12. Our AMA will work with the AAMC, AOA, AACOM and appropriate licensing boards to study whether US medical school graduates and international medical graduates who do not enter residency programs may be able to serve unmet national health care needs;

13. Our AMA will work with the AAMC, AOA, AACOM and the NRMP to evaluate the feasibility of a national tracking system for US medical students who do not initially match into a categorical residency program.
14. Our AMA will discuss with the National Resident Matching Program, Association of American Medical Colleges, American Osteopathic Association, Liaison Committee on Medical Education, Accreditation Council for Graduate Medical Education, and other interested bodies potential pathways for reengagement in medicine following an unsuccessful match and report back on the results of those discussions.
15. Our AMA encourages the Association of American Medical Colleges to work with U.S. medical schools to identify best practices, including career counseling, used by medical schools to facilitate successful matches for medical school seniors, and reduce the number who do not match.
16. Our AMA supports the movement toward a unified and standardized residency application and match system for all non-military residencies.
17. Our AMA encourages the Educational Commission for Foreign Medical Graduates (ECFMG) and other interested stakeholders to study the personal and financial consequences of ECFMG-certified U.S. IMGs who do not match in the National Resident Matching Program and are therefore unable to get a residency or practice medicine.
18. Our AMA encourages the AAMC, AACOM, NRMP, and other key stakeholders to jointly create a no-fee, easily accessible clearinghouse of reliable and valid advice and tools for residency program applicants seeking cost-effective methods for applying to and successfully matching into residency.
19. Our AMA will work with appropriate stakeholders to study options for improving transparency in the resident application process.
20. Our AMA encourages the piloting of innovations to the residency application process with aims to reduce application numbers per applicant, focus applicants on programs with reciprocal interest, and maximize residency placement. With support from the medical education community, successful pilots should be expanded to enhance the standardized process.
21. Our AMA will continue to engage the National Resident Matching Program® (NRMP®) and other matching organizations on behalf of residents and medical students to further develop ongoing relationships, improve communications, and seek additional opportunities to collaborate including the submission of suitable nominees for their governing bodies as appropriate.

US Physician Shortage H-200.954

1. Our American Medical Association explicitly recognizes the existing shortage of physicians in many specialties and areas of the US.
2. Our AMA supports efforts to quantify the geographic maldistribution and physician shortage in many specialties.
3. Our AMA supports current programs to alleviate the shortages in many specialties and the maldistribution of physicians in the US.
4. Our AMA encourages medical schools and residency programs to consider developing admissions policies and practices and targeted educational efforts aimed at attracting physicians to practice in underserved areas and to provide care to underserved populations.
5. Our AMA encourages medical schools and residency programs to continue to provide courses, clerkships, and longitudinal experiences in rural and other underserved areas as a means to support educational program objectives and to influence choice of graduates' practice locations.
6. Our AMA encourages medical schools to include criteria and processes in admission of medical students that are predictive of graduates' eventual practice in underserved areas and with underserved populations.

7. Our AMA will continue to advocate for funding from public and private payers for educational programs that provide experiences for medical students in rural and other underserved areas.
8. Our AMA will continue to advocate for funding from all payers (public and private sector) to increase the number of graduate medical education positions in specialties leading to first certification.
9. Our AMA will work with other groups to explore additional innovative strategies for funding graduate medical education positions, including positions tied to geographic or specialty need.
10. Our AMA continues to work with the Association of American Medical Colleges (AAMC) and other relevant groups to monitor the outcomes of the National Resident Matching Program; and
11. Our AMA continues to work with the AAMC and other relevant groups to develop strategies to address the current and potential shortages in clinical training sites for medical students.
12. Our AMA will:
    a. promote greater awareness and implementation of the Project ECHO (Extension for Community Healthcare Outcomes) and Child Psychiatry Access Project models among academic health centers and community-based primary care physicians;
    b. work with stakeholders to identify and mitigate barriers to broader implementation of these models in the United States; and
    c. monitor whether health care payers offer additional payment or incentive payments for physicians who engage in clinical practice improvement activities as a result of their participation in programs such as Project ECHO and the Child Psychiatry Access Project; and if confirmed, promote awareness of these benefits among physicians.
13. Our AMA will work to augment the impact of initiatives to address rural physician workforce shortages.
14. Our AMA supports opportunities to incentivize physicians to select specialties and practice settings which involve delivery of health services to populations experiencing a shortage of providers, such as women, LGBTQ+ patients, children, elder adults, and patients with disabilities, including populations of such patients who do not live in underserved geographic areas.

Educational Strategies for Meeting Rural Health Physician Shortage H-465.988

1. In light of the data available from the current literature as well as ongoing studies being conducted by staff, our American Medical Association recommends that:
    a. Our AMA encourage medical schools and residency programs to develop educationally sound rural clinical preceptorships and rotations consistent with educational and training requirements, and to provide early and continuing exposure to those programs for medical students and residents.
    b. Our AMA encourage medical schools to develop educationally sound primary care residencies in smaller communities with the goal of educating and recruiting more rural physicians.
    c. Our AMA encourage state and county medical societies to support state legislative efforts toward developing scholarship and loan programs for future rural physicians.
    d. Our AMA encourage state and county medical societies and local medical schools to develop outreach and recruitment programs in rural counties to attract promising high school and college students to medicine and the other health professions.
    e. Our AMA urge continued federal and state legislative support for funding of Area Health Education Centers (AHECs) for rural and other underserved areas.
    f. Our AMA continue to support full appropriation for the National Health Service Corps Scholarship Program, with the proviso that medical schools serving states with large rural underserved populations have a priority and significant voice in the selection of recipients for those scholarships.

g. Our AMA support full funding of the new federal National Health Service Corps loan repayment program.
h. Our AMA encourage continued legislative support of the research studies being conducted by the Rural Health Research Centers funded by the National Office of Rural Health in the Department of Health and Human Services.
i. Our AMA continue its research investigation into the impact of educational programs on the supply of rural physicians.
j. Our AMA continue to conduct research and monitor other progress in development of educational strategies for alleviating rural physician shortages.
k. Our AMA reaffirm its support for legislation making interest payments on student debt tax deductible.
l. Our AMA encourage state and county medical societies to develop programs to enhance work opportunities and social support systems for spouses of rural practitioners.

2. Our AMA will work with state and specialty societies, medical schools, teaching hospitals, the Accreditation Council for Graduate Medical Education (ACGME), the Centers for Medicare and Medicaid Services (CMS) and other interested stakeholders to identify, encourage and incentivize qualified rural physicians to serve as preceptors and volunteer faculty for rural rotations in residency.
3. Our AMA will:
   a. work with interested stakeholders to identify strategies to increase residency training opportunities in rural areas with a report back to the House of Delegates; and
   b. work with interested stakeholders to formulate an actionable plan of advocacy with the goal of increasing residency training in rural areas.
4. Our AMA will encourage ACGME review committees to consider adding exposure to rural medicine as appropriate, to encourage the development of rural program tracks in training programs and increase physician awareness of the conditions that pose challenges and lack of resources in rural areas.
5. Our AMA will encourage adding educational webinars, workshops and other didactics via remote learning formats to enhance the educational needs of smaller training programs.

Proposed Revisions to AMA Policy on the Financing of Medical Education Programs H-305.929

1. It is AMA policy that:

A. Since quality medical education directly benefits the American people, there should be public support for medical schools and graduate medical education programs and for the teaching institutions in which medical education occurs. Such support is required to ensure that there is a continuing supply of well-educated, competent physicians to care for the American public.

B. Planning to modify health system organization or financing should include consideration of the effects on medical education, with the goal of preserving and enhancing the quality of medical education and the quality of and access to care in teaching institutions are preserved.

C. Adequate and stable funding should be available to support quality undergraduate and graduate medical education programs. Our AMA and the federation should advocate for medical education funding.

D. Diversified sources of funding should be available to support medical schools' multiple missions, including education, research, and clinical service. Reliance on any particular revenue source should not jeopardize the balance among a medical school's missions.

E. All payers for health care, including the federal government, the states, and private payers, benefit from graduate medical education and should directly contribute to its funding.

F. Full Medicare direct medical education funding should be available for the number of years required for initial board certification. For combined residency programs, funding should be available for the longest of the individual programs plus one additional year. There should be

opportunities to extend the period of full funding for specialties or subspecialties where there is a documented need, including a physician shortage.
G. Medical schools should develop systems to explicitly document and reimburse faculty teaching activity, so as to facilitate faculty participation in medical student and resident physician education and training.
H. Funding for graduate medical education should support the training of resident physicians in both hospital and non-hospital (ambulatory) settings. Federal and state funding formulas must take into account the resources, including volunteer faculty time and practice expenses, needed for training residents in all specialties in non-hospital, ambulatory settings. Funding for GME should be allocated to the sites where teaching occurs.
I. New funding should be available to support increases in the number of medical school and residency training positions, preferably in or adjacent to physician shortage/underserved areas and in undersupplied specialties.

2. Our AMA endorses the following principles of social accountability and promotes their application to GME funding: (a) Adequate and diverse workforce development; (b) Primary care and specialty practice workforce distribution; (c) Geographic workforce distribution; and (d) Service to the local community and the public at large.
3. Our AMA encourages transparency of GME funding through models that are both feasible and fair for training sites, affiliated medical schools and trainees.
4. Our AMA believes that financial transparency is essential to the sustainable future of GME funding and therefore, regardless of the method or source of payment for GME or the number of funding streams, institutions should publicly report the aggregate value of GME payments received as well as what these payments are used for, including: (a) Resident salary and benefits; (b) Administrative support for graduate medical education; (c) Salary reimbursement for teaching staff; (d) Direct educational costs for residents and fellows; and (e) Institutional overhead.
5. Our AMA supports specialty-specific enhancements to GME funding that neither directly nor indirectly reduce funding levels for any other specialty.

Evaluation of DACA-Eligible Medical Students, Residents and Physicians in Addressing Physician Shortages D-350.986

1. Our American Medical Association will study the issue of Deferred Action for Childhood Arrivals-eligible medical students, residents, and physicians and consider the opportunities for their participation in the physician profession and report its findings to the House of Delegates.
2. Our AMA will issue a statement in support of current US healthcare professionals, including those currently training as medical students or residents and fellows, who are Deferred Action for Childhood Arrivals recipients.

Financing of Medical Education Programs D-305.973

1. Our American Medical Association will work with the federal government, including the Centers for Medicare and Medicaid Services, and the states, along with other interested parties, to bring about the following outcomes:
   a. Ensure adequate Medicaid and Medicare funding for graduate medical education.
   b. Ensure adequate Disproportionate Share Hospital funding.
   c. Make the Medicare direct medical education per-resident cost figure more equitable across teaching hospitals while assuring adequate funding of all residency positions.
   d. Revise the Medicare and Medicaid funding formulas for graduate medical education to recognize the resources utilized for training in non-hospital settings.
   e. Stabilize funding for pediatric residency training in children's hospitals.
   f. Explore the possibility of extending full direct medical education per-resident payment beyond the time of first board eligibility for specialties/subspecialties in shortage/defined need.

g. Identify funding sources to increase the number of graduate medical education positions, especially in or adjacent to physician shortage/underserved areas and in undersupplied specialties.
h. Act on existing policy by seeking federal legislation requiring all health insurers to support graduate medical education through an all-payer trust fund created for this purpose.

2. Our AMA will work with other interested parties to ensure adequate funding to support medical school educational programs, including creating mechanisms to fund additional medical school positions.

Fixing the VA Physician Shortage with Physicians D-510.990

1. Our AMA will work with the VA to enhance its loan forgiveness efforts to further incentivize physician recruiting and retention and improve patient access in the Veterans Administration facilities.
2. Our AMA will call for an immediate change in the Public Service Loan Forgiveness Program to allow physicians to receive immediate loan forgiveness when they practice in a Veterans Administration facility.
3. Our AMA will work with the Veterans Administration to minimize the administrative burdens that discourage or prevent non-VA physicians without compensation (WOCs) from volunteering their time to care for veterans.
4. Our AMA will: (a) continue to support the mission of the Department of Veterans Affairs Office of Academic Affiliations for expansion of graduate medical education (GME) residency positions; and (b) collaborate with appropriate stakeholder organizations to advocate for preservation of Veterans Health Administration funding for GME and support its efforts to expand GME residency positions in the federal budget and appropriations process.
5. Our AMA supports postgraduate medical education service obligations through programs where the expectation for service, such as military service, is reasonable and explicitly delineated in the contract with the trainee.
6. Our AMA opposes the blanket imposition of service obligations through any program where physician trainees rotate through the facility as one of many sites for their training.

The Preservation, Stability and Expansion of Full Funding for Graduate Medical Education D-305.967

1. Our American Medical Association will actively collaborate with appropriate stakeholder organizations, (including Association of American Medical Colleges, American Hospital Association, state medical societies, medical specialty societies/associations) to advocate for the preservation, stability and expansion of full funding for the direct and indirect costs of graduate medical education (GME) positions from all existing sources (e.g. Medicare, Medicaid, Veterans Administration, CDC and others).
2. Our AMA will actively advocate for the stable provision of matching federal funds for state Medicaid programs that fund GME positions.
3. Our AMA will actively seek congressional action to remove the caps on Medicare funding of GME positions for resident physicians that were imposed by the Balanced Budget Amendment of 1997 (BBA-1997).
4. Our AMA will strenuously advocate for increasing the number of GME positions to address the future physician workforce needs of the nation.
5. Our AMA will oppose efforts to move federal funding of GME positions to the annual appropriations process that is subject to instability and uncertainty.
6. Our AMA will oppose regulatory and legislative efforts that reduce funding for GME from the full scope of resident educational activities that are designated by residency programs for accreditation and the board certification of their graduates (e.g. didactic teaching, community service, off-site ambulatory rotations, etc.).

7. Our AMA will actively explore additional sources of GME funding and their potential impact on the quality of residency training and on patient care.
8. Our AMA will vigorously advocate for the continued and expanded contribution by all payers for health care (including the federal government, the states, and local and private sources) to fund both the direct and indirect costs of GME.
9. Our AMA will work, in collaboration with other stakeholders, to improve the awareness of the general public that GME is a public good that provides essential services as part of the training process and serves as a necessary component of physician preparation to provide patient care that is safe, effective and of high quality.
10. Our AMA staff and governance will continuously monitor federal, state and private proposals for health care reform for their potential impact on the preservation, stability and expansion of full funding for the direct and indirect costs of GME.
11. Our AMA:
    a. recognizes that funding for and distribution of positions for GME are in crisis in the United States and that meaningful and comprehensive reform is urgently needed.
    b. will immediately work with Congress to expand medical residencies in a balanced fashion based on expected specialty needs throughout our nation to produce a geographically distributed and appropriately sized physician workforce; and to make increasing support and funding for GME programs and residencies a top priority of the AMA in its national political agenda.
    c. will continue to work closely with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, American Osteopathic Association, and other key stakeholders to raise awareness among policymakers and the public about the importance of expanded GME funding to meet the nation's current and anticipated medical workforce needs.
12. Our AMA will collaborate with other organizations to explore evidence-based approaches to quality and accountability in residency education to support enhanced funding of GME.
13. Our AMA will continue to strongly advocate that Congress fund additional graduate medical education (GME) positions for the most critical workforce needs, especially considering the current and worsening maldistribution of physicians.
14. Our AMA will advocate that the Centers for Medicare and Medicaid Services allow for rural and other underserved rotations in Accreditation Council for Graduate Medical Education (ACGME)-accredited residency programs, in disciplines of particular local/regional need, to occur in the offices of physicians who meet the qualifications for adjunct faculty of the residency program's sponsoring institution.
15. Our AMA encourages the ACGME to reduce barriers to rural and other underserved community experiences for graduate medical education programs that choose to provide such training, by adjusting as needed its program requirements, such as continuity requirements or limitations on time spent away from the primary residency site.
16. Our AMA encourages the ACGME and the American Osteopathic Association (AOA) to continue to develop and disseminate innovative methods of training physicians efficiently that foster the skills and inclinations to practice in a health care system that rewards team-based care and social accountability.
17. Our AMA will work with interested state and national medical specialty societies and other appropriate stakeholders to share and support legislation to increase GME funding, enabling a state to accomplish one or more of the following: (a) train more physicians to meet state and regional workforce needs; (b) train physicians who will practice in physician shortage/underserved areas; or (c) train physicians in undersupplied specialties and subspecialties in the state/region.
18. Our AMA supports the ongoing efforts by states to identify and address changing physician workforce needs within the GME landscape and continue to broadly advocate for innovative

pilot programs that will increase the number of positions and create enhanced accountability of GME programs for quality outcomes.

19. Our AMA will continue to work with stakeholders such as Association of American Medical Colleges (AAMC), ACGME, AOA, American Academy of Family Physicians, American College of Physicians, and other specialty organizations to analyze the changing landscape of future physician workforce needs as well as the number and variety of GME positions necessary to provide that workforce.
20. Our AMA will explore innovative funding models for incremental increases in funded residency positions related to quality of resident education and provision of patient care as evaluated by appropriate medical education organizations such as the Accreditation Council for Graduate Medical Education.
21. Our AMA will utilize its resources to share its content expertise with policymakers and the public to ensure greater awareness of the significant societal value of graduate medical education (GME) in terms of patient care, particularly for underserved and at-risk populations, as well as global health, research and education.
22. Our AMA will advocate for the appropriation of Congressional funding in support of the National Healthcare Workforce Commission, established under section 5101 of the Affordable Care Act, to provide data and healthcare workforce policy and advice to the nation and provide data that support the value of GME to the nation.
23. Our AMA supports recommendations to increase the accountability for and transparency of GME funding and continue to monitor data and peer-reviewed studies that contribute to further assess the value of GME.
24. Our AMA will explore various models of all-payer funding for GME, especially as the Institute of Medicine (now a program unit of the National Academy of Medicine) did not examine those options in its 2014 report on GME governance and financing.
25. Our AMA encourages organizations with successful existing models to publicize and share strategies, outcomes and costs.
26. Our AMA encourages insurance payers and foundations to enter into partnerships with state and local agencies as well as academic medical centers and community hospitals seeking to expand GME.
27. Our AMA will develop, along with other interested stakeholders, a national campaign to educate the public on the definition and importance of graduate medical education, student debt and the state of the medical profession today and in the future.
28. Our AMA will collaborate with other stakeholder organizations to evaluate and work to establish consensus regarding the appropriate economic value of resident and fellow services.
29. Our AMA will monitor ongoing pilots and demonstration projects, and explore the feasibility of broader implementation of proposals that show promise as alternative means for funding physician education and training while providing appropriate compensation for residents and fellows.
30. Our AMA will monitor the status of the House Energy and Commerce Committee's response to public comments solicited regarding the 2014 IOM report, Graduate Medical Education That Meets the Nation's Health Needs, as well as results of ongoing studies, including that requested of the GAO, in order to formulate new advocacy strategy for GME funding, and will report back to the House of Delegates regularly on important changes in the landscape of GME funding.
31. Our AMA will advocate to the Centers for Medicare & Medicaid Services to adopt the concept of “Cap-Flexibility” and allow new and current Graduate Medical Education teaching institutions to extend their cap-building window for up to an additional five years beyond the current window (for a total of up to ten years), giving priority to new residency programs in underserved areas and/or economically depressed areas.
32. Our AMA will:

a. encourage all existing and planned allopathic and osteopathic medical schools to thoroughly research match statistics and other career placement metrics when developing career guidance plans.
b. strongly advocate for and work with legislators, private sector partnerships, and existing and planned osteopathic and allopathic medical schools to create and fund graduate medical education (GME) programs that can accommodate the equivalent number of additional medical school graduates consistent with the workforce needs of our nation.
c. encourage the Liaison Committee on Medical Education (LCME), the Commission on Osteopathic College Accreditation (COCA), and other accrediting bodies, as part of accreditation of allopathic and osteopathic medical schools, to prospectively and retrospectively monitor medical school graduates' rates of placement into GME as well as GME completion.

33. Our AMA encourages the Secretary of the U.S. Department of Health and Human Services to coordinate with federal agencies that fund GME training to identify and collect information needed to effectively evaluate how hospitals, health systems, and health centers with residency programs are utilizing these financial resources to meet the nation's health care workforce needs. This includes information on payment amounts by the type of training programs supported, resident training costs and revenue generation, output or outcomes related to health workforce planning (i.e., percentage of primary care residents that went on to practice in rural or medically underserved areas), and measures related to resident competency and educational quality offered by GME training programs.
34. Our AMA will publicize best practice examples of state-funded Graduate Medical Education positions and develop model state legislation where appropriate.
35. Our American Medical Association will ask federal agencies that fund graduate medical education (including but not limited to the Centers for Medicare and Medicaid Services, the Department of Veterans Affairs, the Department of Defense, the Health Resources and Services Administration, and others) to issue an annual report detailing the quantity of total GME funding for each year including how Direct GME funds are allocated on a per resident or fellow basis, for the previous year.

Residents and Fellows' Bill of Rights H-310.912

1. Our American Medical Association continues to advocate for improvements in the ACGME Institutional and Common Program Requirements that support AMA policies as follows:
   a. Adequate financial support for and guaranteed leave to attend professional meetings.
   b. Submission of training verification information to requesting agencies within 30 days of the request.
   c. Adequate compensation with consideration to local cost-of-living factors and years of training, and to include the orientation period.
   d. Health insurance benefits to include dental and vision services.
   e. Paid leave for all purposes (family, educational, vacation, sick) to be no less than six weeks per year.
   f. Stronger due process guidelines.
2. Our AMA encourages the ACGME to ensure access to educational programs and curricula as necessary to facilitate a deeper understanding by resident physicians of the US health care system and to increase their communication skills.
3. Our AMA regularly communicates to residency and fellowship programs and other GME stakeholders this Resident/Fellows Physicians' Bill of Rights.
4. Our AMA:
   a. will promote residency and fellowship training programs to evaluate their own institution's process for repayment and develop a leaner approach. This includes disbursement of funds by direct deposit as opposed to a paper check and an online system of applying for funds.

b. encourages a system of expedited repayment for purchases of $200 or less (or an equivalent institutional threshold), for example through payment directly from their residency and fellowship programs (in contrast to following traditional workflow for reimbursement).
c. encourages training programs to develop a budget and strategy for planned expenses versus unplanned expenses, where planned expenses should be estimated using historical data, and should include trainee reimbursements for items such as educational materials, attendance at conferences, and entertaining applicants. Payment in advance or within one month of document submission is strongly recommended.

5. Our AMA will partner with ACGME and other relevant stakeholders to encourage training programs to reduce financial burdens on residents and fellows by providing employee benefits including, but not limited to, on-call meal allowances, transportation support, relocation stipends, and childcare services.
6. Our AMA will work with the Accreditation Council for Graduate Medical Education (ACGME) and other relevant stakeholders to amend the ACGME Common Program Requirements to allow flexibility in the specialty-specific ACGME program requirements enabling specialties to require salary reimbursement or "protected time" for resident and fellow education by "core faculty," program directors, and assistant/associate program directors.
7. Our AMA encourages teaching institutions to offer retirement plan options, retirement plan matching, financial advising and personal finance education.
8. Our AMA adopts the following "Residents and Fellows' Bill of Rights" as applicable to all resident and fellow physicians in ACGME-accredited training programs:
   RESIDENT/FELLOW PHYSICIANS' BILL OF RIGHTS
   Residents and fellows have a right to
   A. An education that fosters professional development, takes priority over service, and leads to independent practice.
      With regard to education, residents and fellows should expect:
      1. A graduate medical education experience that facilitates their professional and ethical development, to include regularly scheduled didactics for which they are released from clinical duties. Service obligations should not interfere with educational opportunities and clinical education should be given priority over service obligations;
      2. Faculty who devote sufficient time to the educational program to fulfill their teaching and supervisory responsibilities;
      3. Adequate clerical and clinical support services that minimize the extraneous, time-consuming work that draws attention from patient care issues and offers no educational value;
      4. 24-hour per day access to information resources to educate themselves further about appropriate patient care; and
      5. Resources that will allow them to pursue scholarly activities to include financial support and education leave to attend professional meetings.
   B. Appropriate supervision by qualified physician faculty with progressive resident responsibility toward independent practice.
      With regard to supervision, residents and fellows must be ultimately supervised by physicians who are adequately qualified and allow them to assume progressive responsibility appropriate to their level of education, competence, and experience. In instances where clinical education is provided by non-physicians, there must be an identified physician supervisor providing indirect supervision, along with mechanisms for reporting inappropriate, non-physician supervision to the training program, sponsoring institution or ACGME as appropriate.
   C. Regular and timely feedback and evaluation based on valid assessments of resident performance.
      With regard to evaluation and assessment processes, residents and fellows should expect:

1. Timely and substantive evaluations during each rotation in which their competence is objectively assessed by faculty who have directly supervised their work;
2. To evaluate the faculty and the program confidentially and in writing at least once annually and expect that the training program will address deficiencies revealed by these evaluations in a timely fashion;
3. Access to their training file and to be made aware of the contents of their file on an annual basis; and
4. Training programs to complete primary verification/credentialing forms and recredentialing forms, apply all required signatures to the forms, and then have the forms permanently secured in their educational files at the completion of training or a period of training and, when requested by any organization involved in credentialing process, ensure the submission of those documents to the requesting organization within thirty days of the request.

D. A safe and supportive workplace with appropriate facilities.
With regard to the workplace, residents and fellows should have access to:
1. A safe workplace that enables them to fulfill their clinical duties and educational obligations;
2. Secure, clean, and comfortable on-call rooms and parking facilities which are secure and well-lit;
3. Opportunities to participate on committees whose actions may affect their education, patient care, workplace, or contract.

E. Adequate compensation and benefits that provide for resident well-being and health.
1. With regard to contracts, residents and fellows should receive:
   a. Information about the interviewing residency or fellowship program including a copy of the currently used contract clearly outlining the conditions for (re)appointment, details of remuneration, specific responsibilities including call obligations, and a detailed protocol for handling any grievance.
   b. At least four months advance notice of contract non-renewal and the reason for non-renewal.
2. With regard to compensation, residents and fellows should receive:
   a. Compensation for time at orientation.
   b. Compensation, including salary and benefits, commensurate with their level of training and experience. Compensation should reflect cost of living differences based on local economic factors, such as housing, transportation, and energy costs (which affect the purchasing power of wages), and include appropriate adjustments for changes in the cost of living.
3. With regard to benefits, residents and fellows must be fully informed of and should receive:
   a. Quality and affordable comprehensive medical, mental health, dental, and vision care for residents and their families, as well as retirement plan options, professional liability insurance and disability insurance to all residents for disabilities resulting from activities that are part of the educational program.
   b. An institutional written policy on and education in the signs of excessive fatigue, clinical depression, substance abuse and dependence, and other physician impairment issues.
   c. Confidential access to mental health and substance abuse services.
   d. A guaranteed, predetermined amount of paid vacation leave, sick leave, family and medical leave and educational/professional leave during each year in their training program, the total amount of which should not be less than six weeks.
   e. Leave in compliance with the Family and Medical Leave Act.

f. The conditions under which sleeping quarters, meals and laundry or their equivalent are to be provided.

F. Clinical and educational work hours that protect patient safety and facilitate resident well-being and education.
With regard to clinical and educational work hours, residents and fellows should experience:
1. A reasonable work schedule that is in compliance with clinical and educational work hour requirements set forth by the ACGME.
2. At-home call that is not so frequent or demanding such that rest periods are significantly diminished or that clinical and educational work hour requirements are effectively circumvented. Refer to AMA Policy H-310.907, "Resident/Fellow Clinical and Educational Work Hours," for more information.

G. Due process in cases of allegations of misconduct or poor performance.
With regard to the complaints and appeals process, residents and fellows should have the opportunity to defend themselves against any allegations presented against them by a patient, health professional, or training program in accordance with the due process guidelines established by the AMA.

H. Access to and protection by institutional and accreditation authorities when reporting violations
With regard to reporting violations to the ACGME, residents and fellows should:
1. Be informed by their program at the beginning of their training and again at each semi-annual review of the resources and processes available within the residency program for addressing resident concerns or complaints, including the program director, Residency Training Committee, and the designated institutional official.
2. Be able to file a formal complaint with the ACGME to address program violations of residency training requirements without fear of recrimination and with the guarantee of due process.
3. Have the opportunity to address their concerns about the training program through confidential channels, including the ACGME concern process and/or the annual ACGME Resident Survey.

9. Our AMA will work with the ACGME and other relevant stakeholders to advocate for ways to defray additional costs related to residency and fellowship training, including essential amenities and/or high cost specialty-specific equipment required to perform clinical duties.
10. Our AMA believes that healthcare trainee salary, benefits, and overall compensation should, at minimum, reflect length of pre-training education, hours worked, and level of independence and complexity of care allowed by an individual's training program (for example when comparing physicians in training and midlevel providers at equal postgraduate training levels).
11. The Residents and Fellows' Bill of Rights will be prominently published online on the AMA website and disseminated to residency and fellowship programs.
12. Our AMA will distribute and promote the Residents and Fellows' Bill of Rights online and individually to residency and fellowship training programs and encourage changes to institutional processes that embody these principles, including resident/fellow empowerment and peer-selected representation in institutional leadership.
13. Our AMA encourages development of accreditation standards and institutional policies designed to facilitate and protect residents/fellows who seek to exercise their rights.
14. Our AMA encourages the formation of peer-led resident/fellow organizations that can advocate for trainees' interests, as outlined by the AMA's Residents and Fellows' Bill of Rights, at sponsoring institutions.

REPORT 4 OF THE COUNCIL ON MEDICAL EDUCATION (A-25)
Access to Restricted Health Services When Completing Physician Certification Exams (Res. 307-A-24)
(Reference Committee C)

EXECUTIVE SUMMARY

AMA Policy D-275.944, Access to Reproductive Health Services When Completing Physician Certification Exams calls on our AMA to "study the impact of laws restricting reproductive healthcare and gender-affirming care on examinees and examiners of national specialty board exams and existing alternatives to in-person board examinations."

The title of this report was modified to "Access to Restricted Health Services When Completing Physician Certification Exams" to reflect the report's wider scope for potentially restricted health services.

This report reviews the history and context of national specialty board examinations, and examples of current format, location, and accommodation information for these exams. The report also reviews information available on legal restrictions on health care and any known impacts to patients or physicians at the time of the report's writing. It then estimates how many board examinees could specifically be impacted. This report may not reflect legal or social changes occurring after its initial drafting.

Finally, the report discusses the challenges and nuances involved in equity and assessing safety within rapidly changing sociopolitical environments, including differing assessments and perceptions of risk to personal safety. The report recommends amending existing AMA policy on access to reproductive health care during board certification exams with new AMA policy to support the physical and psychological safety of board examination candidates when taking certification examinations.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 4-A-25

Subject: Access to Restricted Health Services When Completing Physician Certification Exams (Res. 307-A-24)

Presented by: Krystal Tomei, MD, MPH, Chair

Referred to: Reference Committee C

Resolution 307-A-24, "Access to Reproductive Health Services When Completing Physician Certification Exams," was introduced by the California delegation at the 2024 Annual Meeting of the American Medical Association (AMA). Alternate language was proposed in Reference Committee C to reduce the risk of unintended consequences from implementation, while supporting the original resolution's intentions as an urgent issue regarding the potential for personal health and/or legal risk in states with laws restricting health services, particularly reproductive and gender-affirming care.

Alternate Resolution 307 was adopted by the House of Delegates, becoming AMA Policy D-275.944, Access to Reproductive Health Services When Completing Physician Certification Exams. The first resolve was already implemented, and states: "Our American Medical Association will encourage national specialty boards who hold in-person centralized mandatory exams for board certification to provide alternate options when those exams take place in states with laws banning or restricting abortion, gender-affirming care, or reproductive healthcare services such that travel to those states would present either a limitation in access to necessary medical care, or threat of civil or criminal penalty against the examinees and examiners."

The second resolve states that the AMA will "study the impact of laws restricting reproductive healthcare and gender-affirming care on examinees and examiners of national specialty board exams and existing alternatives to in-person board examinations." This report is that study. The title has been modified to "Access to Restricted Health Services When Completing Physician Certification Exams" to reflect the report's wider scope for potentially restricted health services.

BACKGROUND

National specialty board examinations are one mechanism by which specialty boards determine whether a physician has the knowledge and skills to practice safely and effectively in their area of specialization, both initially and on a continuing basis. As discussed in Council on Medical Education Report 4-I-23, "Recognizing Specialty Certifications for Physicians," the history of specialty board examinations is as follows:

"In 1933, the [AMA] established the American Board of Medical Specialties (ABMS) to bring order to the proliferation of specialty boards and address conflicts arising between specialty boards. Other entities later emerged as certification boards and have varying standards for obtaining initial board certification and maintaining continuing certification over time. AMA support of these entities is contingent with the certification program meeting accepted standards that include offering an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty."[1]

Historically, there has been discrimination against osteopathic board certification,[2] which is changing over time,[3] and some osteopathic boards, such as Obstetrics & Gynecology and Emergency Medicine, are open to MDs as well as DOs.[4] AMA policy Medical Specialty Board Certification Standards H-275.926 opposes discrimination against physicians based solely on lack of ABMS or equivalent American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) board certification. However, in the current health care system, board certification is "no longer as discretionary as it once was."[5]

Current Examination Locations

Each entity engaged in specialty board examination has different procedures for examination, and this varies between specialties. As a non-comprehensive example of differences—not representing the hundreds of possibilities for board certification—the following table compares a few different entities and specialty board examinations within these entities' standards, based on data publicly available in December 2024:

Umbrella Entity	**Specialty**	**Types of exams for board certification**	**Location of in-person exams**
American Board of Medical Specialties (ABMS)	American Board of Obstetrics & Gynecology (ABOG)	In-person certifying exam	Dallas, TX
American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS)	American Osteopathic Board of Obstetrics & Gynecology (AOBOG)	Written AOBOG exam (or ABOG qualifying exam) and in-person oral exam	Chicago, IL
American Board of Physician Specialties (ABPS)	Obstetrics & Gynecology	Initial certification not offered,[6] recertification requires ABOG or AOBOG initial certification	N/A
ABMS	American Board of Pediatrics (ABP)	In-person computer-based exam	Prometric testing centers (multiple locations)
AOA-BOS	American Osteopathic Board of Pediatrics (AOBP)	Written exam	N/A (remotely proctored)
ABMS	American Board of Emergency Medicine (ABEM)	Written qualifying exam and in-person certifying exam[7]	Written exam at Pearson-Vue testing centers; Raleigh, NC certifying exam in 2026[8]
AOA-BOS	American Osteopathic Board of Emergency Medicine (AOBEM)	Written and oral exam	N/A (remotely proctored)

Examiners and Examinees

When safety concerns arise, attention to concerns from both board examiners and examinees is important. However, differences exist between examinees and examiners. If they wish to be board certified, examinees must take mandatory examinations to achieve board certification for their career within a specific time frame. Examiners are also examinees (board certified, with varying requirements for continuing certification) but in the role of examiner are typically optional volunteers who choose to participate for a variety of reasons, such as leadership and professional development, deeper involvement in the specialty, and credit toward continuing certification. This report will focus primarily on initial board certification and examinees due to the disproportionate impact, though the needs of both groups are important, deserve attention, and often overlap.

Pre-Existing General Accommodations

For all specialty boards in the United States, reasonable accommodations must be provided in alignment with the Americans with Disabilities Act, a federal civil rights law prohibiting discrimination against people with disabilities in everyday activities.[9] A 2024 article on structural bias in board examinations points out, however, that "society often overlooks individuals who do not qualify for federally protected disability benefits but are nevertheless unable to overcome hurdles equitably."[10] In practice, accommodations—disability-related and otherwise—vary between specialties.[11] A non-comprehensive sample of current accommodation policies (as of December 2024) is below:

According to ABMS Standards for Initial Certification, "Test accommodations must be offered to candidates with documented disabilities (e.g., learning and reading disabilities; physical disabilities; visual impairments) to comply with the Americans with Disabilities Act; Member Boards may also offer accommodations in other situations (e.g., extra break time for nursing mothers). Applicants should be provided with information describing the documentation to be submitted with the request for accommodations and the timeframe within which an accommodation decision will be made. Procedures for responding to these requests should be equitable and consistent and should include a mechanism for handling candidate appeals of these decisions."[12]

According to AOA Testing Accommodation Policies & Procedures, "Reasonable and appropriate accommodations are provided in accordance with the Americans with Disabilities Act (ADA) for individuals with documented disabilities, as well as to those requiring accommodations for use/availability of specific personal items, nursing/breastfeeding and/or related to religious observation. All requests for accommodation must be submitted at least 90 days before the applicable examination."[13] Materials also note a procedure for late requests.

Pre-Existing Security Policies

Some boards offer additional information about security for test-takers, such as ABOG, which noted on their website in February 2025, for instance: "ABOG always has security measures in place both during examination weeks as well as during off-examination timeframes. While we do not want to publicize every security measure taken, below are some of the security features you can expect during the Certifying Examination:

- No ABOG site (hotel meeting room for registration, building where the examinations are held, exam floors, etc.) is designated to the public as ABOG spaces by signage.
- ABOG staff is trained in security/emergency protocols including but not limited to fire evacuation, CPR and first aid, and active shooter response.

- The elevators in the ABOG building are badge access only. Only ABOG staff members can move freely about the building.
- The stairwells in the ABOG building are locked and can only be accessed with a code which is changed frequently.
- Additional security personnel are on-site during exam weeks in a number of high-traffic locations.
- Security cameras are live throughout the ABOG building."[14]

Alternatives to In-Person Board Examinations

Each specialty board decides on the best format and location for its respective examinations. During the height of the COVID-19 pandemic, several ABMS member boards pivoted from postponing their oral exams to converting to a virtual format.[15] Later research in 2023 found that the American Board of Emergency Medicine (ABEM)'s virtual oral exam had "substantial validity evidence and reliability to support ongoing use… to make confident and defensible certification decisions,"[16] and good satisfaction with comparable passing rates for the virtual general surgery certifying exam through the American Board of Surgery.[17] Research on the American Board of Anesthesiology's virtual exam, however, demonstrated both pros and cons of the virtual format and prompted a return to an in-person exam due to standardization and security concerns, as well as imperfect technology.[18]

Decisions about relocation, meanwhile, also vary between specialties. Some specialty boards partner with nationwide companies that already offer multiple testing locations, depending on the exam type, while others contract with one specific physical location only. Rapidly changing laws and political climates also offer difficulties as state policies on important issues may shift more rapidly in the future than in-person contracts and logistical planning reasonably allows for.

ABMS offered the following information highlighting some of the considerations Member Board Executives are taking into account when looking at existing and alternative test sites:

- Not all assessments measure the same things: "When ABMS Member Boards were required to move from in-person exams to virtual during COVID, data collected demonstrated that not all content or constructs could be tested equally in a virtual environment as in-person."
- "High variability in the content and components of assessments across specialties. Each Member Board designs assessments critical to the skills, knowledge, and behaviors that are specific to each specialty and sub-specialty."
- "Inability to include low fidelity simulations in remote exams."
- "Consistency to ensure, within each Member Board, every candidate is tested in the same way."
- "Ensuring exam security."
- "Increased exam costs to create and support alternate in-person testing facilities that are equal to existing assessment sites in equipment, staffing, timing and security. Projections by some Member Boards who have explored these options would result in a 4-fold increase in costs for all candidates."
- "How specific laws could impact individuals traveling from out-of-state during participation in certifying exams."

"All Member Boards," ABMS stated, "are committed to providing testing environments that minimize the stress to candidates and are exploring options for alternative test sites with respect to the above."[19]

Restricted Health Care and Safety Concerns

As described later in this report, some states in the U.S. currently have laws restricting reproductive and/or gender-affirming health care. National specialty board examination testing location concerns, for the purposes of this report, center multiple arenas, including but not limited to potential risks (physical and legal) to:

- pregnant examiners and examinees
- examiners and examinees who provide reproductive care
- transgender or gender non-conforming examiners and examinees
- examiners and examinees who are primary caregivers of and travel with transgender or gender non-conforming children
- examiners and examinees who provide gender-affirming care

These concerns regarding potential risks are also diverse in terms of levels of legal authorization and overt versus covert threat, including but not limited to:

- states with proposed bills that have not been implemented into law, but wherein overall societal hostility and violence toward people seeking and/or providing reproductive and/or gender-affirming care may be heightened;
- states with implemented laws against reproductive and/or gender-affirming care, but with no known examples of criminal or civil penalties enacted;
- states with implemented laws against reproductive and/or gender-affirming care, with known examples of actual criminal or civil penalties;
- states with implemented laws against reproductive and/or gender-affirming care, with known examples of physical harm to patients due to inadequate care;
- states with officials in authority who seek notoriety from threatening or harming individuals engaged in providing and/or receiving reproductive and/or gender affirming care.

Proposed bills fluctuate quickly and will not be tracked in this report. However, several of the below sections describe current state laws at the time of this writing, as well as known examples of additional tangible actions that have been taken, with acknowledgment that a social climate of hatred and fear has significant negative impacts on people, whether or not overt legal actions occurred against them.[20] As one of the goals of specialty board examination, as stated by ABMS, is consistency within each Member Board, ensuring every candidate is tested in the same way, such health and safety considerations are also relevant to the disproportionate impact some test-takers may experience in states with restrictions on health care.

Legal Restrictions to Reproductive Health Care

According to the New York Times abortion ban tracker, sourced from the Center for Reproductive Rights, the Guttmacher Institute, and KFF (formerly known as the Kaiser Family Foundation), as of December 3, 2024, the 13 states with the most restrictive laws for reproductive health care are: Idaho, South Dakota, Oklahoma, Texas, Arkansas, Louisiana, Indiana, Kentucky, Tennessee, Mississippi, Alabama, West Virginia, and Missouri.[21] Though Missouri voted to enshrine abortion

rights in the constitution at the end of 2024, ongoing regulatory complexities mean this medical procedure remains unavailable in that state.[22] However, according to Guttmacher, 27 states are predominantly restrictive toward reproductive health care.[23] The remaining 23 states have some protections, either paired simultaneously with restrictions, or primarily protective. Within restrictive states, many also have laws deemed "targeted regulation of abortion providers (TRAP)" laws, imposing standards beyond what the medical profession has deemed necessary for patient safety in order to make providing reproductive care more difficult.[24] Private litigation against physicians and health care workers is currently possible under Texas' SB8.[25] Although some states have proposed prison sentences for physicians who perform abortions past gestational limits,[26] to date no physician has been criminally prosecuted for this reason.[27]

Though no specific board exam related examples are publicly known, potential risks to pregnant examinees or examiners in emergency situations in states with abortion bans may include life-threatening delays in and/or inadequate care.[28,29] In response to this concern, ABOG's website states: "ABOG has a partnership with UT Southwestern to provide medical care in unanticipated, urgent, or emergency situations for examination candidates, examiners, or staff. [University of Texas Southwestern] is in close proximity to the ABOG offices and offers high standards of obstetrical care in medical emergencies." In July 2024, the Texas Medical Board clarified that "imminence of death or impairment of a major bodily function is not required" for legal emergency reproductive care.[30] However, nationwide more generally, laws tend to create situations of "hesitant medicine" that negatively impact the patient-physician relationship and destabilize decision-making within health care,[31] and many broader anecdotes exist about the dangers.[32]

At least one Texas woman was also arrested and indicted on murder charges following a self-managed abortion in 2022, though charges were later dropped and current Texas law exempts patients seeking abortions from criminal charges.[33]

Potential legal risks to examinees or examiners who provide reproductive health care may not currently be problematic for out-of-state test takers within Texas. ABOG, in regards to the Texas location of their specialty board exam, notes: "Any candidate taking a Certifying Exam, whether it be virtual or physically in Texas, should not be at legal risk. SB8 only applies to abortions performed in Texas. More importantly, SB8 text specifically references and pertains to the performance or induction of an abortion: '… a physician may not knowingly perform or induce an abortion on a pregnant woman' beyond the point in time when a fetal heartbeat is detected. Additionally, civil liability for aiding and abetting applies only to abortions performed in Texas. This should mean that the action for which a plaintiff is filing a lawsuit must be proven to be tied to a specific abortion performed. Care of patients on a case list and ensuing discussion with examiners during the Certifying Exam are not subject to SB8."[34] The only current, known instance of a suit against a physician related to SB8 was dismissed after a ruling that a bystander not directly impacted by an abortion service provided cannot sue the abortion provider.[35] Dallas and several other cities chose in 2022 to deprioritize using city resources to investigate abortions,[36] and several elected city prosecutors vowed in 2023 not to prosecute individuals who seek or provide abortion care.[37]

Fears remain, however. Unrelated to board examinations, in December 2024, the Texas Attorney General sued a New York physician for allegedly providing telemedicine and mailing abortion pills to a patient who lived in Texas—however, enforcement, even in the event the plaintiff wins, is ambiguous due to New York's shield laws.[38] In Indiana, a physician was publicly targeted by the state's Attorney General and reprimanded and fined by the Indiana Medical Licensing Board after publicly recounting a case where an abortion was provided to a young patient who was a victim of rape.[39] While there is reason for physicians to be concerned about legal repercussions in many

states, no known successful prosecutions of physicians resulting in criminal or civil penalties have thus far taken place. AMA advocates for legal protections for medical students and physicians who cross state lines to receive education in or deliver reproductive health services, including contraception and abortion (Preserving Access to Reproductive Health Services D-5.999).

In November 2023, the Attorneys General of New York, Arizona, California, Colorado, Connecticut, Delaware, the District of Columbia, Hawaii, Illinois, Maine, Maryland, Massachusetts, Michigan, Minnesota, Nevada, New Jersey, New Mexico, North Carolina, Oregon, Pennsylvania, Rhode Island, Vermont, Washington, and Wisconsin collectively began correspondence with ABOG regarding concerns around OB/GYN specialty exam required travel to Texas and has engaged with ABOG on the possibility of establishing testing exemptions related to restrictive laws under certain circumstances. At the time of this writing, this is under consideration by ABOG.[40]

Legal Restrictions to Gender-Affirming Care and Facilities

According to the American Civil Liberties Union (ACLU) "Mapping Attacks on LGBTQ Rights in U.S. State Legislatures in 2024," seven states have official, active laws restricting LGBTQ+ rights within health care specifically as of December 2024. These states are: Idaho, New Hampshire, Ohio, South Carolina, Tennessee, Utah, and Wyoming.[41] The Human Rights Campaign"Attacks on Gender Affirming Care by State" notes 26 states with law or policy banning gender affirming care when states with litigation proceedings challenging the bans are included.[42] Related to other health impacts, according to the Movement Advancement Project's "Equality Maps: Bans on Transgender People's Use of Public Bathrooms & Facilities According to Their Gender Identity,"[43] both Florida and Utah currently make it a criminal offense in certain circumstances for transgender people to use bathrooms or facilities consistent with their gender identity, and these two states, as well as North Dakota, Louisiana, Mississippi, Alabama, and Ohio ban transgender people from using bathrooms consistent with their gender identity in some or all government-owned buildings and locations, including some colleges. K-12 school bathroom bans are even more extensive, though outside the direct scope of this report regarding physicians and travel. Restrictions such as these can lead to significant physical health impacts,[44] and bathroom discrimination is associated with poorer mental health outcomes.[45]

No specific board exam related examples are publicly known regarding enforcement of the above policies. Several non-comprehensive general examples of enforcement thus far include the following: in 2022, Texas Attorney General office and governor encouraged the Texas Department of Family and Protective Services to consider gender-affirming care to constitute child abuse,[46] and some investigations have taken place for this reason,[47] prompting fear for parents or caregivers of transgender children. Physicians who provide transgender care have in some cases been threatened with violence.[48] There are no known arrests of physicians providing gender-affirming care, but Texas Attorney General Ken Paxton has, at the time of this writing, sued three Texas physicians for providing gender-affirming care to minors.[49]

DISCUSSION

Little data currently exists on the impact of these issues on board examiners and examinees directly, and state laws restricting reproductive and gender affirming care have been only recently enforced against patients and physicians. The most obvious impact is a threat to physical safety due to inappropriate or reduced access to care and facilities, which has been demonstrated more broadly in research discussed above, though no public anecdotes exist related to taking board exams. In terms of criminal or civil liability, many laws have not currently been officially enforced at all,

serving instead to perpetuate bias and fear without direct legal action. While there is genuine reason for physicians to be concerned about legal repercussions in many states, few actual successful prosecutions of physicians resulting in criminal or civil penalties have taken place.

In some cases, legal restrictions may be intended primarily to have an overall "chilling effect,"[50] which has unfortunately been "successful" to some degree. For instance, research has found that there is a lower OB/GYN supply in abortion-ban states, despite minimal tangible state-level changes in the 2 years post-*Dobbs*.[51] The difficult balance becomes balancing legitimate psychological and physical safety concerns with strategies to counter the chilling effect of a fear-driven political climate, particularly encouragement for providers of gender-affirming care and providers of reproductive care to continue delivering high-quality, legal patient care in defiance of disinformation and social pressure, when feasible and appropriate. This is a challenging balance, and policy around the concept tends to focus around high-risk public health crises and emphasizes institutional responsibility as well, such as AMA's Pandemic Ethics and the Duty of Care H-140.821, which includes statements such as: "The duty to treat is foundational to the profession of medicine but is not absolute. The health care work force is not an unlimited resource and must be preserved to ensure that care is available in the future. For their part, physicians have a responsibility to protect themselves, as well as a duty of solidarity to colleagues to share risks and burdens in a public health crisis. So too, health care institutions have responsibilities to support and protect health care professionals and to apportion the risks and benefits of providing care as equitably as possible."

Hypothetical risk during direct patient care is also different than hypothetical risk during certification exams, when educational environments should ideally remain as physically and psychologically safe as possible for appropriate learning.[52,53]

Numbers of Impacted Examiners or Examinees

The numbers of those who could be directly impacted by physical safety concerns (i.e., pregnant examiners and examinees, transgender examiners and examinees) are not readily available for a variety of reasons within most medical education demographic information. These reasons include privacy and discrimination concerns, particularly in a political climate when this information may be misused against individuals, as well as the tendency for gender-related data collection to focus on a male/female binary based on birth sex, despite the problematic nature of this framing.[54] Some respondents within binary male/female gender demographic questions are likely transgender but this disaggregation is not available.

ABMS board certification data does list those who chose not to report their gender, which may partially include but is not limited to non-binary or gender non-conforming people. As of June 2024 data, the number of ABMS active diplomates in the United States who did not report gender was 59,498 individuals, or about six percent of the 957,915 active U.S. diplomates, though this does not accurately reflect actual transgender information. Not specific to physicians, approximately 1.1 percent of the U.S. population openly identifies as transgender, with an additional 1.5 percent neither trans, cis male, nor cis female, for a total of 2.6 percent, according to a Jan-Apr census pulse 2024.[55] This nationwide data is likely underreported, although within medicine, transgender and gender non-conforming physicians are likely to be underrepresented compared to general proportions within the overall U.S. population.[56] In general, transgender medical students and physicians already experience significant barriers,[57] signaling a need for systemic and individual responses to improve gender equity within medical education.[58]

Approximations of pregnancy or potential for pregnancy are also highly problematic to calculate, especially because gender is not inherently tied to pregnancy and health information is unknown. Regarding pregnancy, in 2020, research focusing on "reproductive age women" approximated that 3.9% of this population subset was pregnant at any given time.[59] Compared loosely to ABMS diplomate data for "female" diplomates under age 45 (131,331 individuals), this may be approximately 5,121 people pregnant at any given time, though this data describes those who hold board certification status through ABMS, not those taking exams.

Within the field of OB/GYN specifically, according to 2024 National Resident Matching Program (NRMP) data,[60] applicants who obtained a position and ranked their preferred specialty as OB/GYN were approximately 90 percent "female" in 2024.[61] There were 1,533 matches into OB/GYN, 1,103 of which were MD seniors.[62] An additional six positions were filled with SOAP, for a total of 1,539 filled residency positions. Thus, approximately 1,385 individuals (who may be more likely to be capable of pregnancy) matched into residency in 2024 alone. Approximately 54 of these individuals may be pregnant at any given time based on above pregnancy likelihood calculations. These individuals may sit for board exams in the near future in one state with restrictive laws (Texas), if specialty certified by ABOG (not if certified by AOBOG). Note, however, that laws restricting reproductive care may also feel or be threatening to anyone capable of pregnancy, regardless of actual pregnancy status.

Anyone practicing gender-affirming care or reproductive care may also have legal or safety concerns, particularly when treating patients who travel from out of state or via telemedicine or simply for being a known practitioner in general, regardless of their own personal experiences. Regardless of identity, the majority of providers of adolescent gender-affirming care in one study, for instance, reported receiving harassment and targeted threats.[63] Fear and harassment have increased even for those not directly impacted,[64] and some research suggests worsened negative impacts in states with restrictive laws.[65]

Social Injustice, Safety, and Educational Equity

One limitation regarding navigating safety, risk, and equity during certification exams is the difficulty of navigating safety threats for examinees and examiners across the many domains where genuine safety concerns arise in the face of systemic oppression. This is true for rapidly shifting legal landscapes, where bills are introduced but may not be implemented into law or laws may be enacted, challenged in courts, modified, and so on. Threats are particularly difficult to react to when significant but generally extrajudicial. For example, police murder of unarmed Black Americans has significant spillover effects on the sense of safety and mental health of Black Americans in the U.S. in general.[66] Experiences of racism and oppression negatively impact cognitive function due to trauma[67] already setting up inequity within education and testing compared to those with more social privilege, i.e., anyone less likely to be targeted by oppression, who need not use as many resources preparing oneself for the possibility of experiencing life-ending systemic violence. Certain areas of the U.S. may also informally be more dangerous for visibly Black examinees and other learners of color, depending on a variety of factors, even without overtly discriminatory laws in place.

For gender and LGBTQ+ rights specifically, it is also difficult to tackle a much wider problem with individualized testing location changes alone, as it is a systemic problem that continues to proliferate. Transgender people, for instance, particularly transgender women of color, have long been subject to violence, discrimination, and arrest for existing,[68] and genuine safety concerns or health inequities (such as inappropriately gendered restroom facilities) may exist in any public

location in the U.S., even in locations without overtly hostile laws—though those locations are on the face of it the most apparently dangerous.

Exemptions and other strategies for examiner and examinee safety, therefore, may be best understood as broadly as feasible within a social justice lens through a variety of thoughtful strategies as requested by those most impacted by injustice, rather than solely focused on the direct enforcement of specific hostile laws or an individual burden of proof at any given time.

RELEVANT AMA POLICY

AMA has robust policy in support of both gender-affirming and reproductive care, and already encourages "national specialty boards who hold in-person centralized mandatory exams for board certification to provide alternate options when those exams take place in states with laws banning or restricting abortion, gender-affirming care, or reproductive healthcare services such that travel to those states would present either a limitation in access to necessary medical care, or threat of civil or criminal penalty against the examinees and examiners" (Access to Reproductive Health Services When Completing Physician Certification Exams, D-275.944). AMA continues to advocate for the physician-patient relationship, as well as the improvement of medical education in other ways. Additional examples are listed in Appendix A.

SUMMARY

Concerns related to potential risk, both physical and legal, for those who provide and/or receive evidence-based reproductive and/or gender-affirming health care are genuine and can be particularly challenging to alleviate when comprised of a rapidly shifting blend of formal legal restrictions, ambiguity in enforcement, fear-provoking social contexts, and informal, extrajudicial threat. The AMA, through its Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted, as well as several other avenues, remains committed to engaging with issues related to federal and state policies on reproductive and gender-affirming care that may impact both physicians and patients, including but not limited to national specialty board examiners and examinees. AMA policy also encourages national specialty boards who hold in-person centralized mandatory exams for board certification to provide alternate options when those exams take place in states with laws banning or restricting abortion, gender-affirming care, or reproductive health care services. Although research is not yet available on the specific impacts of reproductive and gender-affirming care restrictions on board examiners and examinees, the Council on Medical Education supports the work of AMA's task force and continues to closely monitor these rapidly evolving issues.

RECOMMENDATION

The Council on Medical Education recommends that the following be adopted, and the remainder of the report be filed:

1. That our AMA amend D-275.944 "Access to Reproductive Health Services When Completing Physician Certification Exams," by deletion and addition as follows:

   "2. ~~Our AMA will study the impact of laws restricting reproductive healthcare and gender-affirming care on examinees and examiners of national specialty board exams and existing alternatives to in-person board examinations.~~

Our AMA supports the physical and psychological safety of board examination candidates when taking certification examinations."

Fiscal note: $1,000

APPENDIX A: RELEVANT AMA POLICY

Access to Reproductive Health Services When Completing Physician Certification Exams D-275.944

1. Our American Medical Association will encourage national specialty boards who hold in-person centralized mandatory exams for board certification to provide alternate options when those exams take place in states with laws banning or restricting abortion, gender-affirming care, or reproductive healthcare services such that travel to those states would present either a limitation in access to necessary medical care, or threat of civil or criminal penalty against the examinees and examiners.
2. Our AMA will study the impact of laws restricting reproductive healthcare and gender-affirming care on examinees and examiners of national specialty board exams and existing alternatives to in-person board examinations.

Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted G-605.009

1. Our American Medical Association will convene a task force of appropriate AMA councils and interested state and medical specialty societies, in conjunction with the AMA Center for Health Equity, and in consultation with relevant organizations, practices, government bodies, and impacted communities for the purpose of preserving the patient-physician relationship.
2. This task force, which will serve at the direction of our AMA Board of Trustees, will inform the Board to help guide organized medicine's response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources on issues including but not limited to:
    a. Health equity impact, including monitoring and evaluating the consequences of abortion bans and restrictions for public health and the physician workforce and including making actionable recommendations to mitigate harm, with a focus on the disproportionate impact on under-resourced, marginalized, and minoritized communities.
    b. Practice management, including developing recommendations and educational materials for addressing reimbursement, uncompensated care, interstate licensure, and provision of care, including telehealth and care provided across state lines.
    c. Training, including collaborating with interested medical schools, residency and fellowship programs, academic centers, and clinicians to mitigate radically diminished training opportunities.
    d. Privacy protections, including best practice support for maintaining medical records privacy and confidentiality, including under HIPAA, for strengthening physician, patient, and clinic security measures, and countering law enforcement reporting requirements.
    e. Patient triage and care coordination, including identifying and publicizing resources for physicians and patients to connect with referrals, practical support, and legal assistance.
    f. Coordinating implementation of pertinent AMA policies, including any actions to protect against civil, criminal, and professional liability and retaliation, including criminalizing and penalizing physicians for referring patients to the care they need.

g. Anticipation and preparation, including assessing information and resource gaps and creating a blueprint for preventing or mitigating bans on other appropriate health care, such as gender affirming care, contraceptive care, sterilization, infertility care, and management of ectopic pregnancy and spontaneous pregnancy loss and pregnancy complications.
h. Work with interested parties to encourage the development of institution-level guidance and protection for physicians practicing in states with restrictions potentially interfering with the patient-physician relationship.

3. Our American Medical Association will appoint an ad hoc committee or task force, composed of physicians from specialties who routinely provide gender-affirming care, payers, community advocates, and state Medicaid directors and/or insurance commissioners, to identify issues with physician payment and reimbursement for gender-affirming care and recommend solutions to address these barriers to care.

Medical Specialty Board Certification Standards H-275.926

1. Our American Medical Association opposes any action, regardless of intent, that appears likely to confuse the public about the unique credentials of American Board of Medical Specialties (ABMS) or American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) board certified physicians in any medical specialty, or take advantage of the prestige of any medical specialty for purposes contrary to the public good and safety.
2. Our AMA opposes any action, regardless of intent, by organizations providing board certification for non-physicians that appears likely to confuse the public about the unique credentials of medical specialty board certification or take advantage of the prestige of medical specialty board certification for purposes contrary to the public good and safety.
3. Our AMA continues to work with other medical organizations to educate the profession and the public about the ABMS and AOA-BOS board certification process. It is AMA policy that when the equivalency of board certification must be determined, the certification program must first meet accepted standards for certification that include both
    a. a process for defining specialty-specific standards for knowledge and skills and
    b. offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. In addition, accepted standards, such as those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination.
4. Our AMA opposes discrimination against physicians based solely on lack of ABMS or equivalent AOA-BOS board certification, or where board certification is one of the criteria considered for purposes of measuring quality of care, determining eligibility to contract with managed care entities, eligibility to receive hospital staff or other clinical privileges, ascertaining competence to practice medicine, or for other purposes. Our AMA also opposes discrimination that may occur against physicians involved in the board certification process, including those who are in a clinical practice period for the specified minimum period of time that must be completed prior to taking the board certifying examination.
5. Our AMA advocates for nomenclature to better distinguish those physicians who are in the board certification pathway from those who are not.
6. Our AMA encourages member boards of the ABMS to adopt measures aimed at mitigating the financial burden on residents related to specialty board fees and fee procedures, including shorter preregistration periods, lower fees and easier payment terms.
7. Our AMA encourages continued advocacy to federal and state legislatures, federal and state regulators, physician credentialing organizations, hospitals, and other interested parties to define physician board certification as the medical profession establishing specialty-specific

standards for knowledge and skills, using an independent assessment process to determine the acquisition of knowledge and skills for initial certification and recertification.

Accommodating Lactating Individuals Taking Medical Examinations H-295.861

1. Our American Medical Association urges all medical licensing, certification and board examination agencies, and all board proctoring centers, to grant special requests to give breastfeeding individuals additional break time and a suitable environment during examinations to express milk.
2. Our AMA encourages that such accommodations to breastfeeding individuals include necessary time per exam day, in addition to the standard pool of scheduled break time found in the specific exam, as well as access to a private, non-bathroom location on the testing center site with an electrical outlet for individuals to breast pump.

Clarification of Evidence-Based Gender-Affirming Care H-185.927

1. Our American Medical Association recognizes that medical and surgical treatments for gender dysphoria and gender incongruence, as determined by shared decision making between the patient and physician, are medically necessary as outlined by generally-accepted standards of medical and surgical practice.
2. Our AMA will work with state and specialty societies and other interested stakeholders to:
    a. advocate for federal, state, and local laws and policies to protect access to evidence-based care for gender dysphoria and gender incongruence;
    b. oppose laws and policies that criminalize, prohibit or otherwise impede the provision of evidence-based, gender-affirming care, including laws and policies that penalize parents and guardians who support minors seeking and/or receiving gender-affirming care;
    c. support protections against violence and criminal, civil, and professional liability for physicians and institutions that provide evidence-based, genderaffirming care and patients who seek and/or receive such care, as well as their parents and guardians; and
    d. communicate with stakeholders and regulatory bodies about the importance of gender-affirming care for patients with gender dysphoria and gender incongruence.
3. Our AMA will advocate for equitable, evidence-based coverage of gender-affirming care by health insurance providers, including public and private insurers.

Principles for Advancing Gender Equity in Medicine H-65.961

Our AMA:

1. declares it is opposed to any exploitation and discrimination in the workplace based on personal characteristics (i.e., gender);
2. affirms the concept of equal rights for all physicians and that the concept of equality of rights under the law shall not be denied or abridged by the U.S. Government or by any state on account of gender;
3. endorses the principle of equal opportunity of employment and practice in the medical field;
4. affirms its commitment to the full involvement of women in leadership roles throughout the federation, and encourages all components of the federation to vigorously continue their efforts to recruit women members into organized medicine;
5. acknowledges that mentorship and sponsorship are integral components of one's career advancement, and encourages physicians to engage in such activities;
6. declares that compensation should be equitable and based on demonstrated competencies/expertise and not based on personal characteristics;
7. recognizes the importance of part-time work options, job sharing, flexible scheduling, re-entry, and contract negotiations as options for physicians to support work-life balance;

8. affirms that transparency in pay scale and promotion criteria is necessary to promote gender equity, and as such academic medical centers, medical schools, hospitals, group practices and other physician employers should conduct periodic reviews of compensation and promotion rates by gender and evaluate protocols for advancement to determine whether the criteria are discriminatory; and
9. affirms that medical schools, institutions and professional associations should provide training on leadership development, contract and salary negotiations and career advancement strategies that include an analysis of the influence of gender in these skill areas.

Our AMA encourages: (1) state and specialty societies, academic medical centers, medical schools, hospitals, group practices and other physician employers to adopt the AMA Principles for Advancing Gender Equity in Medicine; and (2) academic medical centers, medical schools, hospitals, group practices and other physician employers to: (a) adopt policies that prohibit harassment, discrimination and retaliation; (b) provide anti-harassment training; and (c) prescribe disciplinary and/or corrective action should violation of such policies occur.

Effects of Work on Pregnancy H-420.960

1. Our American Medical Association supports the right of employees to work in safe workplaces that do not endanger their reproductive health or that of their unborn children.
2. Our AMA supports workplace policies that minimize the risk of excessive exposure to toxins with known reproductive hazards irrespective of gender or age.
3. Our AMA encourages physicians to consider the potential benefits and risks of occupational activities and exposures on an individual basis and work with patients and employers to define a healthy working environment for pregnant people.
4. Our AMA encourages employers to accommodate increased physical requirements of pregnant people; recommended accommodations include varied work positions, adequate rest and meal breaks, access to regular hydration, and minimizing heavy lifting.
5. Our AMA acknowledges that future research done by interdisciplinary study groups composed of obstetricians/gynecologists, occupational medicine specialists, pediatricians, and representatives from industry can best identify adverse reproductive exposures and appropriate accommodations.

Strategies for Enhancing Diversity in the Physician Workforce H-200.951

1. Our American Medical Association supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality.
2. Our AMA commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes.
3. Our AMA encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties.
4. Our AMA encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine.
5. Our AMA encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal.

6. Our AMA continues to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.

Encouraging LGBTQ+ Representation in Medicine D-200.972

1. Our American Medical Association will advocate for the creation of targeted efforts to recruit sexual and gender minority students in efforts to increase medical student, resident, and provider diversity.
2. Our AMA encourages the inclusion of sexual orientation and gender identity data in all surveys as part of standard demographic variables, including but not limited to governmental, AMA, and the Association of American Medical Colleges surveys, given respondent confidentiality and response security can be ensured.
3. Our AMA will work with the Association of American Medical Colleges to disaggregate data of LGBTQ+ individuals in medicine to better understand the representation of the unique experiences within the LGBTQ+ communities and their overlap with other identities.

Access to Basic Human Services for Transgender Individuals H-65.964

Our AMA: (1) opposes policies preventing transgender individuals from accessing basic human services and public facilities in line with one's gender identity, including, but not limited to, the use of restrooms; and (2) will advocate for the creation of policies that promote social equality and safe access to basic human services and public facilities for transgender individuals according to one's gender identity.

Support for Access to Preventive and Reproductive Health Services H-425.969

Our American Medical Association supports access to preventive and reproductive health services for all patients and opposes legislative and regulatory actions that utilize federal or state health care funding mechanisms to deny established and accepted medical care to any segment of the population.

Support for Access to Preventive and Reproductive Health Services H-425.969

Our American Medical Association supports access to preventive and reproductive health services for all patients and opposes legislative and regulatory actions that utilize federal or state health care funding mechanisms to deny established and accepted medical care to any segment of the population.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 5-A-25

Subject:	Disaffiliation from the Alpha Omega Alpha Honor Medical Society due to Perpetuation of Racial Inequities in Medicine (Res. 309-A-24)
Presented by:	Krystal Tomei, MD, MPH, Chair
Referred to:	Reference Committee C

Resolution 309-A-24, "Disaffiliation from the Alpha Omega Alpha Honor Medical Society due to Perpetuation of Racial Inequities in Medicine," was introduced by the Resident and Fellow Section at the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates and was referred for study.

This resolution originally stated the following:

RESOLVED, that our American Medical Association recognizes that the Alpha Omega Alpha Honor Medical Society disproportionately benefits privileged trainees (New HOD Policy); and be it further

RESOLVED, that our AMA supports institutional disaffiliation from the Alpha Omega Alpha Honor Medical Society due to its perpetuation of racial inequities in medicine (New HOD Policy); and be it further

RESOLVED, that our AMA recognizes that the Alpha Omega Alpha Honor Medical Society perpetuates and accentuates discrimination against trainees of color that is inherent in medical training. (New HOD Policy)

Reference Committee C heard testimony about historical inequities exhibited by Alpha Omega Alpha (AΩA) Honor Medical Society, and an amendment was offered in the online testimony to add an osteopathic medical honor society to this resolution. Testimony also noted that such inequities may be a chapter level problem. The Council on Medical Education noted that the broader issue has been studied and addressed in its report CME 2-I-22, which considered the potential of bias fostered by several honor societies including AΩA, resulting in policy D-310.945, "Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process." Among other clauses, in this policy, AMA advocates "to remove membership in medical honor societies as a mandated field of entry on the Electronic Residency Application Service (ERAS)—thereby limiting its use as an automated screening mechanism…"

Testimony also discussed AMA's own history of discrimination, with only recent efforts to rectify this, and suggested a restorative justice informed approach to address past and current harms. In addition, testimony noted that AΩA recently secured new leadership six months prior and requested time for that leader to demonstrate AΩA's commitment to diversity, equity, and belonging. Reference Committee C recommended that D-310.945 be reaffirmed in lieu of Resolution 309 and noted that calling for disaffiliation from AΩA could induce reputational risk to the AMA when amicable relationships are needed to encourage and assist such groups to

© 2025 American Medical Association. All rights reserved.

collaborate with us to build a diverse physician workforce. In the full House of Delegates meeting, the complexities of Resolution 309 were emphasized, and the resolution was referred for study.

The Medical Student Section submitted comments to the Council on Medical Education suggesting disaffiliation from both AΩA and the osteopathic equivalent, Sigma Sigma Phi (SSP) would give further emphasis on holistic review of medical students in residency applications, allowing for a more level application field for underrepresented medical students.

The Council on Medical Education acknowledges the potential conflict of interest that, at the time of this writing, some Council members are members of AΩA and/or SSP.

BACKGROUND

CME Report 2-I-22, "Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process," previously provided an extensive review of multiple medical honor societies, including AΩA and SSP. Within this report, we presented the background of these honor societies and discussed the ongoing efforts to reduce bias and mitigate inequities that may result from these honor society memberships. The report resulted in AMA Policy D-310.945, which includes but is not limited to language that encourages "medical schools, medical honor societies, and residency/fellowship programs to work toward ethical, equitable, and transparent recruiting processes, which are made available to all applicants," advocates "for residency and fellowship programs to avoid using objective criteria available in the Electronic Residency Application Service (ERAS) application process as the sole determinant for deciding which applicants to offer interviews," and advocates "to remove membership in medical honor societies as a mandated field of entry on the Electronic Residency Application Service (ERAS)—thereby limiting its use as an automated screening mechanism…" This policy also emphasizes AMA's support of innovation work to improve medical education transitions.

It is also noteworthy that while SSP was hypothetically suggested for inclusion in the resolution's call for disaffiliation, SSP has significantly different in criteria than AΩA, as referenced in that report, and known studies about specific honor society inequities did not investigate SSP. There are also several other honor society organizations, and each has different, varied, and unknown impacts. AΩA also committed to tackling bias within the organization after concerns were raised.

Updated Information Since 2022

Since the House of Delegates adopted the previous Council report in November 2022, the following new information has been made available.

One November-December 2022 perspectives piece was published in the *Journal of Surgical Education* that proposed that AΩA leadership overhaul national criteria in the following ways: "(1) convene a national task force to review current selection criteria and make actionable recommendations, (2) incorporate standardized diversity goals into selection criteria to hold chapters accountable and limit internal bias, and 3) report diversity and inclusivity statistics annually to the public to promote organizational accountability."[1]

One institution's November 2023 study described holistic review of applicants within one neurosurgery program with the intention of reducing bias and shifting the focus away from traditional metrics such as USMLE scores and AΩA status, which no longer predict rank lists in this program.[2] Actual diversity impacts, if any, were not directly studied due to a lack of retrospective data. Another study published in November 2023 explored natural language

processing in an effort to reduce bias in medical student clerkship assessments, researching the use of a statement provided to clinical performance assessors that included the following language: "As medical educators, we value diversity and inclusion and strive to treat our students fairly and equitably. Data show that, despite our intentions, bias continues to impact student assessment. This leads to persistent inequities in grades, residency attainment, and Alpha Omega Alpha Honors Society achievement."[3] Results on the impact on narrative language use at two institutions were inconsistent, which the authors suggested may be related to the optionality of the module.

In December 2023, AΩA elected Dr. Bradley E. Barth as nationwide Executive Director, noting in Dr. Barth's biography the priority of increasing diversity within the organization: "While a Councilor at KUSM [the University of Kansas School of Medicine], Dr. Barth increased the number of newly elected AΩA students traditionally underrepresented in medicine from 6% to 24%, a trend that has continued since he stepped down as Councilor in 2022. His work on diversity, equity, and inclusion at KUSM has been used as an example of a best practice for numerous other AΩA Chapters across the country."[4]

The original Council report noted that according to the 2021 National Resident Matching Program (NRMP) data set, "student membership in AΩA was 13th on the list of important factors of an applicant, cited by 50.6 percent of program directors. Comparable data showed GHHS [Gold Humanism Honor Society] membership at 14th (50.5 percent) and SSP membership at 22nd (21 percent)."[5] Updated data from the 2024 NRMP program director survey indicated AΩA status became less important when determining which applicants to interview: 43 percent of program directors considered it important. Reported GHHS importance also declined (48 percent), while SSP stayed the same at 21 percent.[6]

DISCUSSION

Beyond the specifics of any individual organization, honors societies conceptually are part of a hierarchy-based framework of medical education, and one piece of a larger system. As also discussed in the Council's report, CME Report 04-A-23, "Decreasing Bias in Assessments of Medical Student Clinical Clerkship Performance," attempting to eliminate hierarchy in only one facet of an inequitable system is a challenge that may result in a cascade where inequities are shifted to another domain rather than alleviated.

The inherent concept of competition between learners, and exclusivity in honors (rather than a focus on every learner eventually meeting high standards of competency for workforce needs) would need to be overhauled within a competency-based medical education model. However, this is not specific to any single honor society, nor would reform or even elimination of honor societies necessarily tackle wider issues related to the current system, such as competition between learners to secure a limited number of highly desired residency positions due to specialty, geography, perceived prestige, and/or other factors, despite discordance between medical student choices and public demand for certain specialties and geographies. Within the current system, all measures of student performance and achievement during medical school play a role in competition and can be potentially subject to bias.

AΩA's new efforts in addressing immediate bias concerns specific to AΩA, as discussed above, have not yet been studied and should be reviewed once enough time has passed for impact data to be gathered and analyzed. AΩA also functions as individual chapters within medical schools, so successful program-specific efforts toward equity would be eliminated with a broad disaffiliation. AMA policy should also, generally, put forth wider values to inform AMA's mission, rather than

targeting specific organizations whose impacts are unknown as in the case of SSP and whose practices may shift over time after a recent commitment to change as in the case of AΩA.

Many of these values are already expressed within D-310.945, "Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process."

RELEVANT AMA POLICY

AMA has several policies related to honor societies, fairness in residency and fellowship selection processes, decreasing bias, and supporting diversity within medical education. These are listed in Appendix A.

SUMMARY

Valid concerns exist regarding bias within medical education. This includes AMA's own history of harms within structural and institutional racism and research on bias within honor society selection processes, including AΩA's past practices. At a structural level, many concerns exist centered around the negative impacts of hierarchy-based educational systems, of which honor societies are one small, downstream component. There is a significant need to tackle wider challenges related to the inherent issues with competitive and time-based medical education systems. In the context of AΩA's recent commitment to changed processes and equity, unknown equity data on selection processes for the other organization in question (SSP), and potential unintended negative consequences to minoritized groups by broadly rejecting ranking learners in one context alone, regardless of the heterogeneity of individual honor society chapters, official AMA disaffiliation from AΩA and/or SSP is not appropriate. Consideration of these issues does, however, further emphasize the need for equity work and competency-based medical education more broadly. Educational institutions are encouraged to discern in their own contexts what practices and affiliations are most beneficial for equity among their learners. AMA has existing policies in place promoting ethical, equitable, and transparent processes within the current system, as well as policies supporting innovation toward necessary structural changes.

RECOMMENDATION

The Council on Medical Education recommends that AMA Policy D-310.945, "Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process," and AMA Policy D-295.317, "Competency Based Medical Education Across the Continuum of Education and Practice," be reaffirmed in lieu of Resolution 309-A-24, and the remainder of the report be filed.

Fiscal note: $1,000

APPENDIX A: RELEVANT AMA POLICY

Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process D-310.945

1. Our American Medical Association will encourage medical schools, medical honor societies, and residency/fellowship programs to work toward ethical, equitable, and transparent recruiting processes, which are made available to all applicants.

2. Our AMA will advocate for residency and fellowship programs to avoid using objective criteria available in the Electronic Residency Application Service (ERAS) application process as the sole determinant for deciding which applicants to offer interviews.
3. Our AMA will advocate to remove membership in medical honor societies as a mandated field of entry on the Electronic Residency Application Service (ERAS)—thereby limiting its use as an automated screening mechanism—and encourage applicants to share this information within other aspects of the ERAS application.
4. Our AMA will advocate for and support innovation in the undergraduate medical education to graduate medical education transition, especially focusing on the efforts of the Accelerating Change in Medical Education initiative, to include pilot efforts to optimize the residency/fellowship application and matching process and encourage the study of the impact of using filters in the Electronic Residency Application Service (ERAS) by program directors on the diversity of entrants into residency.
5. Our AMA will encourage caution among medical schools and residency/fellowship programs when utilizing novel online assessments for sampling personal characteristics for the purpose of admissions or selection and monitor use and validity of these tools.

Decreasing Bias in Assessments of Medical Student Clinical Clerkship Performance H-295.851

1. Our American Medical Association will continue to encourage work in support of the Coalition for Physician Accountability's Undergraduate Medical Education-Graduate Medical Education Review Committee "Recommendations for Comprehensive Improvement of the UME-GME Transition."
2. Our AMA will encourage and support UME institutions' investment in
    a. developing more valid, reliable, and unbiased summative assessments for clinical clerkships, including development of assessors' awareness regarding structural inequities in education and wider society, and
    b. providing standardized and meaningful competency data to program directors.
3. Our AMA will encourage institutions to publish information related to clinical clerkship grading systems and residency match rates, with subset data for learners from varied groups, including those that have been historically underrepresented in medicine or may be affected by bias.
4. Our AMA will encourage UME institutions to include grading system methodology with grades shared with residency programs.

Supporting Two-Interval Grading Systems for Medical Education H-295.866

Our American Medical Association will work with stakeholders to encourage the establishment of a two-interval grading system in medical colleges and universities in the United States for the non-clinical curriculum.

Competency Based Medical Education Across the Continuum of Education and Practice D-295.317

1. Our American Medical Association Council on Medical Education will continue to study and identify challenges and opportunities and critical stakeholders in achieving a competency-based curriculum across the medical education continuum and other health professions that provides significant value to those participating in these curricula and their patients.
2. Our AMA Council on Medical Education will work to establish a framework of consistent vocabulary and definitions across the continuum of health sciences education that will facilitate competency-based curriculum, andragogy and assessment implementation.
3. Our AMA will continue to explore, with the Accelerating Change in Medical Education initiative and with other stakeholder organizations, the implications of shifting from time-based to competency-based medical education on residents' compensation and lifetime earnings.

Competency-Based Portfolio Assessment of Medical Students D-295.318

1. Our American Medical Association will work with the Association of American Medical Colleges, the American Osteopathic Association and the Accreditation Council for Graduate Medical Education, and other organizations to examine new and emerging approaches to medical student evaluation, including competency-based portfolio assessment.
2. Our AMA will work with the NRMP, ACGME and the 11 schools in the AMA's Accelerating Change in Medical Education consortium to develop pilot projects to study the impact of competency-based frameworks on student graduation, the residency match process and off-cycle entry into residency programs.

Filtering International Medical Graduates During Residency or Fellowship Applications H-255.963

1. Our American Medical Association recognizes the exclusion of certain residency applicants from consideration, such as international medical graduates.
2. Our AMA opposes discriminatory use of filters designed to inequitably screen applicants, including international medical graduates, using the Electronic Residency Application Service® (ERAS®) system.

Continued Support for Diversity in Medical Education D-295.963

1. Our American Medical Association will publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training.
2. Our AMA will request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups.
3. Our AMA will work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations.
4. Our AMA will advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population.
5. Our AMA will directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or funding in medical education.
6. Our AMA will advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement.
7. Our AMA will investigate the impacts of state legislation regarding DEI-related efforts on the education and careers of students, trainees, and faculty.
8. Our AMA will recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts.
9. Our AMA will collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure.

Strategies for Enhancing Diversity in the Physician Workforce H-200.951

1. Our American Medical Association supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality.
2. Our AMA commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes.
3. Our AMA encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties.
4. Our AMA encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine.
5. Our AMA encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal.
6. Our AMA continues to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 6-A-25

Subject:	Reporting of Total Attempts of USMLE Step 1 and COMLEX-USA Level 1 Examinations (Res 315-A-24)
Presented by:	Krystal Tomei, MD, MPH, Chair
Referred to:	Reference Committee C

INTRODUCTION

At the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 315 entitled "Cease Reporting of Total Attempts of USMLE Step 1 and COMLEX-USA Level 1 Examinations," was referred. The resolution asked our AMA to "advocate that NBME and NBOME cease reporting the total number of attempts of the Step 1 and COMLEX-USA Level 1 examinations to residency and fellowship programs and licensure."

Resolution 315 received mixed testimony as well as commentary from the National Board of Osteopathic Medical Examiners (NBOME). Testimony against reporting addressed personal stories related to failing the United States Medical Licensing Examination (USMLE®) Step 1, stressing perceived possible impact on career advancement. On the other hand, testimony in favor of reporting addressed the value of transparency to inform holistic review, enhance precision education, and determine residency program resource needs to support learners in their programs. Also, concerns were raised regarding public safety perceptions and scope of practice when advocating for increased numbers of exam attempts. Further, testimony noted current state laws requiring the reporting of exam attempts for licensure. Given the concerns, the reference committee recommended that Resolution 315 not be adopted; however, the HOD moved to refer the item for study. This report was written in response to that directive.

It should be noted that while the Resolved statement in Resolution 315 addressed both allopathic (USMLE) and osteopathic (COMLEX-USA) medical school exams, the Whereas statements only addressed Step 1.

BACKGROUND

USMLE® Step 1

The USMLE is a joint program of the Federation of State Medical Boards (FSMB) and National Board of Medical Examiners (NBME) and pertains to students enrolled in MD schools. It is comprised of three exams — Step 1, Step 2 Clinical Knowledge (CK), and Step 3. Step 1 is usually taken at the end of the second year of medical school. It assesses whether the examinee "understands and can apply important concepts of the sciences basic to the practice of medicine, with special emphasis on principles and mechanisms underlying health, disease, and modes of therapy. It ensures mastery of not only the sciences that provide a foundation for the safe and competent practice of medicine in the present, but also the scientific principles required for maintenance of competence through lifelong learning."[1] The exam is administered by Prometric at

© 2025 American Medical Association. All rights reserved.

its various locations. Beginning in 2022, the results of Step 1 are reported as pass/fail only. Examinees receive a Step 1 Score Report. It does not provide performance feedback; however, examinees who fail will receive information to help assess how close they scored in relation to the passing standard. This report is provided to the examinee; in some circumstances, medical schools may receive scores and pass/fail outcomes for their students. The total number of attempts allowed per Step exam is four.[2]

If an examinee needs to reschedule their exam due to an unforeseen circumstance, they do so through the Prometric website which states, "The fee to reschedule an exam varies by testing organization, as does the amount of time you have to do so without penalty. Please check the procedures specific to the organization whose exam you are taking for rescheduling timeliness and penalties."[3]

It is policy of the USMLE program that a student's complete examination history of all Steps and its components be reported on the USMLE transcript. This includes all passes, failures, and incomplete attempts for each Step and its components.[4] Communication with NBME staff indicated that no exceptions are made to this policy.

USMLE Step 1 examinee performance data since the implementation of pass/fail scoring is provided in the table below:[5]

US/Canadian Schools	**2022 Number Tested**	**2022 Percent Passing**	**2023* Number Tested**	**2023* Percent Passing**
MD Degree	24,317	91%	25,146	90%
1st Takers	22,828	93%	23,100	92%
Repeaters**	1,489	71%	2,046	70%
DO Degree	4,722	89%	4,913	86%
1st Takers	4,659	89%	4,798	87%
Repeaters**	63	67%	115	60%
Total	29,039	91%	30,059	90%
Non-US/Canadian Schools	**2022 Number Tested**	**2022 Percent Passing**	**2023* Number Tested**	**2023* Percent Passing**
1st Takers	22,030	74%	22,611	72%
Repeaters**	2,926	45%	3,530	47%
Total	24,956	71%	26,141	68%

Table reprinted with permission from NBME, 2025.
* Represents data for examinees tested in 2023 and reported through March 13, 2024.
** "Repeaters" represents examinations given, not number of examinees.

COMLEX-USA® Level 1

The Comprehensive Osteopathic Medical Licensure Exam (COMLEX-USA®) is offered by the National Board of Osteopathic Medical Examiners (NBOME) and pertains to students enrolled in DO schools. It is also comprised of three exams — Level 1, Level 2 Cognitive Evaluation (CE), and Level 3. Level 1 is taken after the end of the second year of medical school prior to the clerkship training. The exam assesses "competency in the areas of knowledge related to practicing medicine. It tests the medical knowledge and clinical skills that are considered essential for an osteopathic physician to practice medicine without supervision."[6] Starting in May 2023, the exam is offered by Pearson VUE. Level 1 is reported as pass/fail. In addition, examinees receive a "formative performance profile that compares both total examination performance and performance

in individual content areas to the performance of other first-time test-takers who passed the examination."[7] It is only provided to the examinee and their school; the NBOME cautions against using the profile for any other purpose and discourages residency programs from requesting it. Like USMLE, the switch to pass/fail was instituted in 2022, and examinees are allowed a total of four attempts per Level exam.

If an examinee needs to reschedule their exam due to an unforeseen circumstance, it is done through their NBOME account. The NBOME website states the examinee has "up to 24 hours before your scheduled exam date to reschedule or cancel your appointment. You may reschedule or cancel your appointment more than 30 days before your scheduled date at no charge. Failure to reschedule or cancel within 24 hours and failure to appear at the testing center will cause your exam to be deemed a 'No Show,' and a fee will be assessed."[8]

The certified COMLEX-USA transcript contains scores and/or pass/fail status for all COMLEX-USA examinations taken and score interpretation annotations/notes and is sent directly to either participating state medical boards or the Federation Credentials Verification Service (FCVS).[9]

COMLEX-USA Level 1 examinee performance data since the implementation of pass/fail scoring is provided in the table below:[10]

Years	First Time Takers	First Time Pass Rate	Repeat Test Takers	Repeat Pass Rate
2023-2024	9,222	93.0%	822	80.8%
2022-2023	8,798	90.6%	861	75.6%

Table reprinted with permission from NBOME, 2025. Data accessed 12/06/24. NBOME website indicates data is updated automatically every 5 minutes.

DISCUSSION

Author's concerns

The resolution raised concerns about Step 1 overall as well as concerns related specifically to the pass/fail scoring system. In general, the author conveyed that Step 1 is an inadequate indicator of future professional competence as a physician. Also, they noted issues regarding stress (i.e., burnout, social isolation, suicidal ideation, substance use) and inequities (i.e., performance disparities related to gender and age).

In addition to the concern about reporting of total number of attempts, on which the Resolved statement is based, the author also noted other concerns about pass/fail. The author cited declining pass rates since the introduction of the new scoring system. The author surmised that examinees experience heightened pressure to pass on the first attempt, and that pass/fail scoring has placed an increased emphasis on Step 2 exam results and extracurricular activities.

Other concerns and considerations

Process assistance: The process of preparing for and taking (and rescheduling/retaking) the Step 1 or Level 1 exam can be daunting. While NBME, NBOME, Prometric, and Pearson VUE all offer a bounty of information on their websites, some students may benefit from more direct assistance. MD and DO schools may consider if they can better advise and assist student examinees with arranging their Step 1 or Level 1 exam.

Financial assistance: Registering for the exam (and rescheduling, if necessary) can be costly for students. In August 2024, USMLE announced the "NBME is introducing a new fee assistance program for students with demonstrated financial need who meet the required criteria to use towards the registration cost of the USMLE Step exams. This program will provide aid to approximately 1,300 medical students to cover their fees for USMLE Step 1 or Step 2 Clinical Knowledge (CK) examinations."[11] NBOME states, "If for some reason beyond your control you are unable to get to your COMLEX-USA examination or complete it, you may qualify to have all or part of your rescheduling or cancellation fees waived that would otherwise be incurred. Additionally, we may be able to assist you with other fees you have incurred. For example, you may qualify for assistance if your flight is cancelled on your way to take your COMLEX-USA examination, your examination is cancelled though force majeure, you had a family emergency, or (knock on wood) you are ill on the day of your scheduled administration."[12] While the cost burdens on the examinees is clear, there is also a financial cost incurred to the testing center for arranging exam administration and security when an examinee cancels without sufficient notice, which may raise the overall cost of the exam.

Test accommodations: Both NBME and NBOME state on their websites that they provide reasonable and appropriate accommodations in accordance with the Americans with Disabilities Act for examinees who provide the required documentation.[13,14] Thus, it is incumbent on the examinee to read and adhere to the processes and related deadlines. However, further assistance and flexibility may be needed, whether from the organizations themselves or the medical schools, to aid such students and ensure their comprehension and timeliness.

Test offerings: While NBME, NBOME, Prometric, and Pearson VUE all indicate some levels of flexibility in the availability and scheduling of exams, there may be sensitivities around the school curriculum and cycles that can be further considered in order to provide the most optimal scheduling for students. There are anecdotes that students are delaying taking Step 1 or Level 1. Medical schools should advise students and provide them opportunities to take the exam at the most appropriate stage of their medical school curriculum for passing.

Reporting of total attempts

While the Resolved statement of Resolution 315 is focused on ceasing reporting of total number of exam attempts, it is important to fully explore this issue. For the residency application process, students may be reticent to disclose why they rescheduled or retook an exam for fear of judgment and exclusion. These concerns need to be addressed by relevant parties (medical schools and residency programs) to communicate to students that disclosure allows faculty the opportunity to provide support and assistance to improve their success on the numerous future exams students will encounter in their medical education.

As discussed in the reference committee hearing, disclosure of the total number of exam attempts may be an important data point for residency program directors. In the spirit of holistic assessment, knowing if and why a student took Step 1or Level 1 more than once can help to determine the support the applicant needs as a resident. The path to licensure and board certification involves several examinations, and if the applicant has difficulty with passing such exams, faculty need to be aware so problems can be quickly identified and mitigated. Conversely, denying applicant performance information to program directors only masks problems that may lead to failure to complete residency.

The primary purpose of the USMLE is for licensure by state medical boards. State medical licensing boards have their own criteria for the number of attempts per Step or Level exam, which

may be in state law. This information is provided by the FSMB and can be found at https://www.fsmb.org/step-3/state-licensure/. Applicants should consider in advance which state(s) they wish to practice in and review this information in preparation for their exams.

Another consideration is public transparency. When it comes to government agencies, including state licensing boards, the public demands transparency including disclosure about licensing decisions. While it is unlikely that individual patients may ask if a physician ever failed a Step or Level exam, advocates and journalists often demand that performance information on license holders should be available to foster public accountability.

The significance of Step 1 passage as it relates to Match rates has been studied. The National Resident Matching Program® (NRMP®) provides data on such correlations. They also offer information from program director surveys; 2024 results indicate that "program director key considerations for interviewing included USMLE Step 1 pass."[15] Additional information is provided on their website. While past studies have indicated that a high Step 1 score is a significant predictor of passing a specialty board exam,[16] it may be too soon to show correlation between today's pass/fail scoring and board passage.

RELEVANT AMA POLICIES

AMA policy H-275.953(2)(c) "The Grading Policy for Medical Licensure Examinations" states that "Scores are reported in pass/fail format for each student to the medical school. The school also receives a frequency distribution of numerical scores for the aggregate of their students." Given that it supports the reporting of each attempt, it thereby implies support in knowing the total number of attempts. Therefore, Resolution 315's desire to cease total reporting may conflict with current policy. However, this policy does support holistic review of applicants; such review may include an understanding of not only the total number of attempts but why. H-275.953(1) states that "selection of residents should be based on a broad variety of evaluative criteria, and to propose that the ACGME General Requirements state clearly that residency program directors must not use NBME or USMLE ranked passing scores as a screening criterion for residency selection." It supports that for holistic review to be truly beneficial to students and programs, program directors should want to understand why a student failed or needed to reschedule licensing exams.

Further, policy D-200.985(9) "Strategies for Enhancing Diversity in the Physician Workforce," asserts that "Our AMA will recommend that medical school admissions committees and residency/ fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities." It infers the notion that holistic review works better with more data. Such holistic assessment also aligns with the AMA's efforts related to precision education and competency-based medical education, both addressed in its ChangeMedEd initiative.

Additional policies of relevance are located in the AMA Policy Finder and include:

- Clinical Skills Assessment During Medical School D-295.988
- Discouraging the Use of Licensing Exams for Internal Promotion in Medical Schools H-275.958
- Alternatives to the Federation of State Medical Boards Recommendations on Licensure H-275.934

SUMMARY

Resolution 315-A-24 raised important considerations related to the implications of total reporting of exam attempts, whether it be USMLE® Step 1 or COMLEX-USA® Level 1. As discussed, the culture shift toward holistic assessment in residency applications should ease some concerns. Regarding licensure, such disclosure is state-mandated in most cases and would need to be considered further by such relevant parties to determine its pertinence. Medical schools and residency programs can consider how they may play a stronger role in assisting examinees and applicants.

RECOMMENDATIONS

The Council on Medical Education recommends that the following be adopted in lieu of Resolution 315-A-24, and the remainder of the report be filed:

1. Encourage the National Board of Medical Examiners (NBME) and National Board of Osteopathic Medical Examiners (NBOME) to continue evaluating barriers for students related to testing centers (e.g., rescheduling, cost, etc.). (New HOD Policy)

2. Encourage medical schools to assist examinees in scheduling of USMLE® and COMLEX-USA® exams and consider opportunities for flexibility. (New HOD Policy)

3. Encourage communication and transparency between residency programs and applicants involving the rescheduling or retaking of the USMLE® Step 1 and COMLEX-USA® Level 1 exam. (New HOD Policy)

4. Reaffirm policies H-275.953 "The Grading Policy for Medical Licensure Examinations" and D-200.985 "Strategies for Enhancing Diversity in the Physician Workforce." (Reaffirm HOD Policy)

Fiscal note: $1,000

APPENDIX: RELEVANT AMA POLICIES

The Grading Policy for Medical Licensure Examinations H-275.953

1. Our American Medical Association's representatives to the ACGME are instructed to promote the principle that selection of residents should be based on a broad variety of evaluative criteria, and to propose that the ACGME General Requirements state clearly that residency program directors must not use NBME or USMLE ranked passing scores as a screening criterion for residency selection.
2. Our AMA adopts the following policy on NBME or USMLE examination scoring:
   a. Students receive "pass/fail" scores as soon as they are available. (If students fail the examinations, they may request their numerical scores immediately.)
   b. Numerical scores are reported to the state licensing authorities upon request by the applicant for licensure. At this time, the applicant may request a copy of their numerical scores.
   c. Scores are reported in pass/fail format for each student to the medical school. The school also receives a frequency distribution of numerical scores for the aggregate of their students.
3. Our AMA will:
   a. promote equal acceptance of the USMLE and COMLEX at all United States residency programs.
   b. work with appropriate stakeholders including but not limited to the National Board of Medical Examiners, Association of American Medical Colleges, National Board of Osteopathic Medical Examiners, Accreditation Council for Graduate Medical Education and American Osteopathic Association to educate Residency Program Directors on how to interpret and use COMLEX scores.
   c. work with Residency Program Directors to promote higher COMLEX utilization with residency program matches in light of the new single accreditation system.
4. Our AMA will work with appropriate stakeholders to release guidance for residency and fellowship program directors on equitably comparing students who received 3-digit United States Medical Licensing Examination Step 1 or Comprehensive Osteopathic Medical Licensing Examination of the United States Level 1 scores and students who received Pass/Fail scores.

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our American Medical Association, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following:
   a. Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school.
   b. Diversity or minority affairs offices at medical schools.
   c. Financial aid programs for students from groups that are underrepresented in medicine.
   d. Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.

6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

Clinical Skills Assessment During Medical School D-295.988

1. Our American Medical Association will encourage its representatives to the Liaison Committee on Medical Education (LCME) to ask the LCME to determine and disseminate to medical schools a description of what constitutes appropriate compliance with the accreditation standard that schools should "develop a system of assessment" to assure that students have acquired and can demonstrate core clinical skills.
2. Our AMA will work with the Federation of State Medical Boards, National Board of Medical Examiners, state medical societies, state medical boards, and other key stakeholders to pursue the transition from and replacement for the current United States Medical Licensing Examination (USMLE) Step 2 Clinical Skills (CS) examination and the Comprehensive Osteopathic Medical Licensing Examination (COMLEX) Level 2-Performance Examination (PE) with a requirement to pass a Liaison Committee on Medical Education-accredited or Commission on Osteopathic College Accreditation-accredited medical school-administered, clinical skills examination.
3. Our AMA will work to:
    a. ensure rapid yet carefully considered changes to the current examination process to reduce costs, including travel expenses, as well as time away from educational pursuits, through immediate steps by the Federation of State Medical Boards and National Board of Medical Examiners.
    b. encourage a significant and expeditious increase in the number of available testing sites.
    c. allow international students and graduates to take the same examination at any available testing site.
    d. engage in a transparent evaluation of basing this examination within our nation's medical schools, rather than administered by an external organization.

   e. include active participation by faculty leaders and assessment experts from U.S. medical schools, as they work to develop new and improved methods of assessing medical student competence for advancement into residency.
4. Our AMA is committed to assuring that all medical school graduates entering graduate medical education programs have demonstrated competence in clinical skills.
5. Our AMA will continue to work with appropriate stakeholders to assure the processes for assessing clinical skills are evidence-based and most efficiently use the time and financial resources of those being assessed.
6. Our AMA encourages development of a post-examination feedback system for all USMLE test-takers that would:
   a. Identify areas of satisfactory or better performance.
   b. Identify areas of suboptimal performance.
   c. Give students who fail the exam insight into the areas of unsatisfactory performance on the examination.
7. Our AMA, through the Council on Medical Education, will continue to monitor relevant data and engage with stakeholders as necessary should updates to this policy become necessary.

Discouraging the Use of Licensing Exams for Internal Promotion in Medical Schools H-275.958
It is the policy of the AMA to encourage the discontinuation of the use of the USMLE Step 1 Exam as a requirement for the promotion of medical students to the clinical phase.

Alternatives to the Federation of State Medical Boards Recommendations on Licensure H-275.934
Our American Medical Association adopts the following principles:
1. Ideally, all medical students should successfully complete Steps 1 and 2 of the United States Medical Licensing Examination (USMLE) or Levels 1 and 2 of the Comprehensive Osteopathic Medical Licensing Examination (COMLEX USA) prior to entry into residency training. At a minimum, individuals entering residency training must have successfully completed Step 1 of the USMLE or Level 1 of COMLEX USA. There should be provision made for students who have not completed Step 2 of the USMLE or Level 2 of the COMLEX USA to do so during the first year of residency training.
2. All applicants for full and unrestricted licensure, whether graduates of U.S. medical schools or international medical graduates, must have completed one year of accredited graduate medical education (GME) in the U.S., have passed all state-required licensing examinations (USMLE or COMLEX USA), and must be certified by their residency program director as ready to advance to the next year of GME and to obtain a full and unrestricted license to practice medicine. State medical licensing boards are encouraged to allow an alternate set of criteria for granting licensure in lieu of this requirement for completing one year of accredited GME in the U.S.: (a) completion of medical school and residency training outside the U.S.; (b) extensive U.S. medical practice; and (c) evidence of good standing within the local medical community.
3. There should be a training permit/educational license for all resident physicians who do not yet have a full and unrestricted license to practice medicine. To be eligible for an initial training permit/educational license, the resident must have completed Step 1 of the USMLE or Level 1 of COMLEX USA.
4. Residency program directors shall report only those actions to state medical licensing boards that are reported for all licensed physicians.
5. Residency program directors should receive training to ensure that they understand the process for taking disciplinary action against resident physicians, and are aware of procedures for dismissal of residents and for due process. This requirement for residency program directors should be enforced through Accreditation Council for Graduate Medical Education accreditation requirements.

6. There should be no reporting of actions against medical students to state medical licensing boards.
7. Medical schools are responsible for identifying and remediating and/or disciplining medical student unprofessional behavior, problems with substance abuse, and other behavioral problems. as well as gaps in student knowledge and skills.
8. The Dean's Letter of Evaluation should be strengthened and standardized, to serve as a better source of information to residency programs about applicants.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 7-A-25

Subject:	Designation of Descendants of Enslaved Africans in America (Resolution 218-A-24)
Presented by:	Krystal Tomei, MD, MPH, Chair
Referred to:	Reference Committee C

Resolution 218-A-24, "Designation of Descendants of Enslaved Africans in America," was introduced by the Michigan delegation at the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates and was referred. The original resolution stated:

RESOLVED, that our American Medical Association work with appropriate organizations including, but not limited to, the Association of American Medical Colleges to adopt and define the term Descendants of Enslaved Africans in America and separate it from the generic terms African American and Black in glossaries and on medical school applications. (Directive to Take Action)

Reference Committee B heard mixed testimony on Resolution 218, indicating that it is important to disaggregate data to make sure everyone is recognized and that the data influencing policies, programs, and solutions are accurate. However, testimony also highlighted that over the last four years, our AMA has been working with the Association of American Medical Colleges and the Accreditation Council for Graduate Medical Education through the Physician Data Initiative (PDI) to establish best practices for data sharing and standards for sociodemographic data, including race, ethnicity, and more. Reference Committee B also heard that the Office of Management and Budget recently concluded an extensive national consultation process concerning updating race and ethnicity standards, which our AMA provided comments on. The process found that further research is needed to fully understand the implications of a designation for "Descendants of Enslaved Africans in America," because individuals and civil rights groups disagreed on whether or how to implement this potential revision. Due to the need for more time to understand the resolution's nuances and implications and to collaborate with partners through the PDI, Resolution 218 was referred for study by the House of Delegates.

BACKGROUND

The AMA recognizes racism as a public health threat.[1] Medical education must strive to alleviate systemic and institutional racism, including but not limited to, anti-Black racism, which has been perpetuated by the AMA itself.[2] For this reason, it is also important for the AMA to act based on priorities established by affected communities and civil rights organizations, particularly when questions of individual and group identity are raised. This is a better approach than the AMA determining itself how subsections of underrepresented groups define and understand themselves. This report reviews some of the basic history and current conversations surrounding the disaggregation of "Descendants of Enslaved Africans in America" and related terms, both outside of and within medical education, with the observation that Black and/or African American viewpoints on these considerations are not monolithic.

The Context for Defining "Descendants of Enslaved Africans in America"

Defining and disaggregating subsections of Black and African American people according to whether they had enslaved African ancestors or not is a challenge, particularly when narrowly defined within the continental U.S. The authors of this resolution stated that "Descendants of Enslaved Africans in America are the only people in U.S. history to be classified as nonhuman and property" and "the only people for whom it was illegal to attend school or learn how to read or write in the United States." There have been discussions of reparations for systemic harms to Black Americans. According to the University of California, San Francisco's "Medical Reparations: A Resolution Paper,"[3] there are multiple viewpoints for the appropriate recipients of reparations:

> "Some have argued that reparations in the form of compensation should be exclusively paid to those whose families were wronged by slavery because slavery was the original wrong, inflicting the original harm. Thus those who are descendants of slaves have been living in a position of deficit that needs to be addressed and rectified."
>
> "Others have argued that the legacies of slavery in the US have impacted all Black Americans, thus reparations should be focused on eliminating anti-Black Racism and providing compensation to all Black Americans (including those whose families were never slaves). In other words, reparations should not only compensate descendants of slaves but also funding efforts to root out and eradicate ongoing forms of institutional racism, namely the lack of people of color at every level of the socio-economic hierarchy."

Differing Viewpoints on Definitions and Categorization

When emphasis is on defining and disaggregating descendants of enslaved Africans in America (and other related terms) into a separate category from Black and African American demographic questions, stances on this are varied. For example, NAACP's work on reparations describes them as for "every descendant of an enslaved African American and [every] Black person [who is] a descendant of those living in the United States including during American slavery until the Jim Crow era," and acknowledges evidence of systemic racism still present today.[4] The National African American Reparations Commission (NAARC) focuses on "people of African descent" and "the benefit of Black America as a whole."[5] The National Coalition of Blacks for Reparations in America (N'COBRA) is "a mass-based coalition organized for the sole purpose of obtaining reparations for African descendants in the United States," and in terms of definitions, states: "Within the broadest definition, all Black people of African descent in the United States should receive reparations in the form of changes in or elimination of laws and practices that allow them to be treated differently and less well than White people."[6]

While none of these organizations focus on distinct racial identity for descendants of enslaved Africans, other groups do. A well-known variation on this phrasing is "American Descendants of Slavery" (ADOS), which, according to those who claim the term, emerged in 2016 for the purpose of "categorizing Black Americans with generational roots in the United States as American descendants of slavery (ADOS), distinct from African or Caribbean immigrants."[7] The ADOS Foundation "[insists] upon a specific group designation" for "descendants of chattel slavery in the United States of America." Even those who may under certain conditions be considered to "qualify" as ADOS may struggle with the wording or believe that it does not reflect the depth of their own experience.[8] On the other hand, some find value and meaning in the term and suggest genealogical lineage as a possible alternative to the current nationwide ban on race-based admissions in higher education.[9]

The discussion of descendants of enslaved Africans existed well before 2016.[10] People have many reasons for using the term ADOS or variations of this acronym to refer to Black and African American people experiencing the violent, harmful legacy of slavery via direct experiences of their known ancestors in the U.S. Though not reflective of every individual who identifies with ADOS, some have raised concerns about the primary organization associated with the ADOS-specific acronym, the ADOS Advocacy Foundation. For example, a *New York Times* article raised concerns about the movement's anti-migrant rhetoric within some ADOS discussions, public use of and defense of a Nazi slogan, and alleged affiliations with white supremacist groups, as well as reported fears by Black scholars of messaging co-optation by white supremacists, even when individual ADOS supporters are well-intentioned.[11] The ADOS Advocacy Foundation's website itself states: "Although our justice claim for reparations is sacred to ADOS, we are fiercely committed to advocating for policies that eliminate the divides faced by black citizens with immigrant backgrounds. We recognize the lived experience of racism and discrimination among all black people in America, and we invite all people from all backgrounds to join this cause."[12]

Groups like the Institute of the Black World 21st Century (IBW21) recognize the impacts of slavery and support reparations but reject the use of ADOS in the context of the 2016 movement, expressing the opinion that use of the term in this context could "further marginalize and oppress Black communities."[13] Given the variation of views on the purpose of self-identification of Black descendants of slavery within the Black community, it is problematic for organizations outside the community to impose their own definitions of identity.

Concerns with Medical Education Definition and Enactment of Lineage-Specific Terms

Systemic oppression and anti-Black racism continue in the U.S. to this day in a variety of forms,[14] and many forms of this violence do not inherently depend upon an awareness of a Black person's specific ancestry.[15] The history of anti-Black racism in the U.S., including within medical education, is complex and systemic, and there are challenges inherent in institutionally establishing categories based on descendancy. As one scholar points out, "for good or for ill, the social and political history of this country has defined the Black race using the rule of hypodescent."[16] This is also known as the one-drop rule, which asserts that even one drop of blood from a Black ancestor makes one Black. This establishes wide-ranging, pervasive anti-Black racism in opposition to supposed white "racial purity." Hickman warns against viewing "racial injustice in the drawing of the boundaries around the Black race rather than in racism itself,"[17] while also acknowledging a diversity of experiences within those racialized as Black within the U.S.

There are problems inherent in the AMA delineating and defining a specific category for Black identity. The AMA as an organization has only recently begun to address its own history of racism, and only 4.3 percent of AMA member physicians and medical students[18] identify as "non-Hispanic Black" compared to 13.6 percent "non-Hispanic" Black people in the U.S.[19] Implementation issues would also arise with doing so. Some people who "qualify" for whatever definition is chosen may choose the label, but the label may not be claimed by all those who "qualify" to claim the terms. Some prefer terms like Descendants of Enslaved Africans in America. Some may actively oppose these terms or prefer others, and some may be uncertain. The term does not necessarily capture clear or objective data if it were to be used. The scope of slavery definitions in the Americas is also ambiguous—for example, a family history of slavery in the continental U.S., versus the wider "Americas," or slavery in places that are now considered U.S. territory, such as Puerto Rico.

Finally, in the background of the original resolution, concerns were raised regarding lying about race on medical education applications. Verification of self-reported demographic information is problematic regardless of which categorization is used. Self-reported descendancy from enslaved

Africans is not inherently more objective than any other self-reported experience. It would be inappropriate, resource intensive, and likely intrusive and exclusionary for already underrepresented populations if medical education institutions attempted to collect and verify genealogical records. These records may or may not also be known to individuals or accurately represent someone's direct lived experience within systemic racism.

Federal Efforts and the Office of Management and Budget (OMB) Revisions

In March 2024, the Office of Management and Budget (OMB) finalized revisions to Statistical Policy Directive No. 15: Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (SPD 15).[20] This process included the following:

> "*Summary of Public Input*. The [Federal Register Notice] asked, "How can Federal surveys or forms collect data related to descent from enslaved peoples originally from the African continent? For example, when collecting and coding responses, what term best describes this population group (e.g., is the preferred term 'American Descendants of Slavery,' 'American Freedmen,' or something else)? How should this group be defined? Should it be collected as a detailed group within the 'Black or African American' minimum category, or through a separate question or other approach?"
>
> "The majority of the public input on this subject expressed support for adding a category or question to identify descendants of persons enslaved in the United States. There was support for terms including: Foundational Black American, American Descendant of Slavery, American Freedman or Freedman, Black American, African-American, and Negro or American Negro; however, there was disagreement about which term is preferred. Commenters described the importance of collecting these data and the value for data users and policymakers, pointed to existing research that shows differences in outcome measures, like income and wealth, and stated that descendants of persons who were enslaved in the United States are ethnically distinct from African immigrants."
>
> "Other commenters, including civil rights groups, opposed the collection of these data. Commenters expressed concern about the difficulty of verifying that identification is accurate, the usefulness or necessity of the data, the exclusion of other groups of historically enslaved people, and the creation of confusion that could make the Black or African American community harder to count. Related, there was also concern about potential harm to the full and accurate count of the Black or African American population, particularly Black or African American immigrants. The comments noted the lack of in-depth research and engagement with the diverse Black or African American community on terminology, definition, and data collection and coding protocol, as well as implications on the counts of other Black or African American diasporic populations."
>
> "*Working Group's Final Recommendation*. The Working Group did not recommend disaggregation of the Black or African American category by descent from persons who were enslaved in the United States. They identified the disaggregation of Black or African American population groups as a priority area for future research and noted that additional stakeholder engagement is also needed."
>
> "*OMB Decision*. OMB concurs with this recommendation and the Working Group's determination that further research is needed."

Physician Data Initiative Recommended Standards

In 2024, a partnership between the AMA, the Accreditation Council for Graduate Medical Education (ACGME), and the Association of American Medical Colleges (AAMC) released recommended standards[21] for data collection and reporting in race and ethnicity as well as language proficiency.[22]

The "short version" of the race and ethnicity standards asks "How do you self-identify?" and offers the following options:

"Please check as many categories as may apply:

□ American Indian or Alaska Native
□ Asian
□ Black or African American
□ Hispanic or Latino
□ Middle Eastern or North African
□ Native Hawaiian or Pacific Islander
□ White
□ Some other race or ethnicity: [write-in]"

The "long version" asks "How do you self-identify? Please check as many categories and subcategories as may apply:" and within the Black or African American category, offers the following options:

□ African
□ African American
□ Afro-Caribbean
□ Ethiopian
□ Haitian
□ Jamaican
□ Nigerian
□ Somali
□ Some other Black or African American: [write-in]"

DISCUSSION

People targeted for anti-Black racism have diverse experiences and histories that may be ambiguous to define, including potential histories of dehumanization, state violence, and enslavement within and outside of the continental United States. Narratives of "choice" in immigration are also not always clear cut for many individuals and their past family experiences. When speaking of "chosen" immigration in contrast to those with family history of being enslaved in the continental US, not all those called "immigrants" have an experience based in free will, either: they may also have family contexts of chattel slavery (i.e., enslavement outside continental U.S. before ancestors arrived to the U.S.), traumatic refugee circumstances, imprisonment, forced unpaid labor, and/or human trafficking.

While specifically defining and verifying family history of enslavement in the U.S. for the purposes of one aspect of reparations may be valuable to consider, this would be inappropriate for the AMA, AAMC, or medical schools to determine and define this, and this work should be led and determined by the affected communities and civil rights groups. Some individuals and groups

may choose to identify with these family experiences as part of a racial or ethnic identity distinguished from or in addition to an overall identity of being Black or African American. Individuals' feelings on this concept vary.

There may also be value in disaggregating and exploring health inequities for subsets of racial/ethnic groups based on the known traumatic experiences of one's ancestors, such as chattel slavery. However, populations of medical education learners or applicants are not the appropriate group to study to determine this information in a comprehensive way. There are also limitations on self-reporting and verification of any genealogical information in medical education demographics and varying opinions within the affected communities about the benefits or harms of this delineation.

It also remains important to avoid single narratives of divisions between Black, African, and/or African American lineages of "immigrants" or "non-immigrants," as experiences of ancestral and/or current slavery and/or oppression are highly complex issues. Current Physician Data Initiative recommendations include space for people to self-identify as they prefer, without imposing specific definitions.

RELEVANT AMA POLICY

The AMA has several policies related to racial justice and diversity within medical education. A selection of these are listed in Appendix A.

SUMMARY

The AMA and medical education have a responsibility to oppose systemic and institutional racism, including but not limited to anti-Black racism and the legacy of chattel slavery, which have resulted in inequities in health outcomes. Black and/or African American viewpoints on designations like "Descendants of Enslaved Africans in America" are highly complex and non-monolithic. Support should be given to ongoing collective work, led by civil rights groups and by communities most affected by anti-Black racism, to determine the appropriate means of identifying and addressing the harmful ramifications of slavery and racism on these communities. AMA is not an appropriate institution to define and designate how underrepresented individuals should identify themselves, and the current Physician Data Initiative recommendations include write-in space for people to self-identify as they prefer, without imposing specific definitions.

RECOMMENDATIONS

The Council on Medical Education therefore recommends that the following be adopted in lieu of Resolution 218-A-24, and the remainder of the report be filed:

1. Our AMA acknowledges that anti-Black racism, including but not limited to direct experiences and/or family histories of slavery, results in significant and ongoing harm to Black people and communities. (New HOD Policy)
2. Our AMA will raise awareness of the Physician Data Initiative's work to disaggregate racial/ethnic identification categories on demographic forms and offer opportunities for individuals to self-identify. (New HOD Policy)

Fiscal note: $2,000

APPENDIX A: RELEVANT AMA POLICY

Racism as a Public Health Threat H-65.952

1. Our American Medical Association acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.
3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of:
    a. The causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism.
    b. How to prevent and ameliorate the health effects of racism.
4. Our AMA:
    a. supports the development of policy to combat racism and its effects.
    b. encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.

Immigration Status is a Public Health Issue D-350.975

1. Our American Medical Association declares that immigration status is a public health issue that requires a comprehensive public health response and solution.
2. Our AMA recognizes interpersonal, institutional, structural, and systemic factors that negatively affect immigrants' health.
3. Our AMA will promote the development and implementation of educational resources for healthcare professionals to better understand health and healthcare challenges specific for the immigrant population.
4. Our AMA will support the development and implementation of public health policies and programs that aim to improve access to healthcare and minimize systemic health barriers for immigrant communities.

Elimination of Race as a Proxy for Ancestry, Genetics, and Biology in Medical Education, Research and Clinical Practice H-65.953

1. Our AMA recognizes that race is a social construct and is distinct from ethnicity, genetic ancestry, or biology.
2. Our AMA supports ending the practice of using race as a proxy for biology or genetics in medical education, research, and clinical practice.
3. Our AMA encourages undergraduate medical education, graduate medical education, and continuing medical education programs to recognize the harmful effects of presenting race as biology in medical education and that they work to mitigate these effects through curriculum change that: (a) demonstrates how the category "race" can influence health outcomes; (b) that supports race as a social construct and not a biological determinant and (c) presents race within a socio-ecological model of individual, community and society to explain how racism and systemic oppression result in racial health disparities.

4. Our AMA recommends that clinicians and researchers focus on genetics and biology, the experience of racism, and social determinants of health, and not race, when describing risk factors for disease.

Continued Support for Diversity in Medical Education D-295.963

1. Our American Medical Association will publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training.
2. Our AMA will request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups.
3. Our AMA will work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations.
4. Our AMA will advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population.
5. Our AMA will directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or funding in medical education.
6. Our AMA will advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement.
7. Our AMA will investigate the impacts of state legislation regarding DEI-related efforts on the education and careers of students, trainees, and faculty.
8. Our AMA will recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts.
9. Our AMA will collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure.

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our American Medical Association, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following:
    a. Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school.
    b. Diversity or minority affairs offices at medical schools.
    c. Financial aid programs for students from groups that are underrepresented in medicine.
    d. Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.

3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

<u>Diversity in the Physician Workforce and Access to Care D-200.982</u>

1. Our American Medical Association will continue to advocate for programs that promote diversity in the US medical workforce, such as pipeline programs to medical schools.
2. Our AMA will continue to advocate for adequate funding for federal and state programs that promote interest in practice in underserved areas, such as those under Title VII of the Public Health Service Act, scholarship and loan repayment programs under the National Health Services Corps and state programs, state Area Health Education Centers, and Conrad 30, and also encourage the development of a centralized database of scholarship and loan repayment programs.
3. Our AMA will continue to study the factors that support and those that act against the choice to practice in an underserved area, and report the findings and solutions at the 2008 Interim Meeting.

<u>Underrepresented Student Access to US Medical Schools H-350.960</u>

1. Our American Medical Association recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population.

2. Our AMA supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students.
3. Our AMA recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination.
4. Our AMA is committed to promoting truth and reconciliation in medical education as it relates to improving equity.
5. Our AMA recognizes the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations.
6. Our AMA will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine.
7. Our AMA will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school.
8. Our AMA will recommend that medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants.
9. Our AMA will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine.
10. Our AMA will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979,
    a. encouraging state and local governments to make quality elementary and secondary education available to all.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 8-A-25

Subject:	Disaggregation of Demographic Data for Individuals of Federally Recognized Tribes (Res. 243-A-24)
Presented by:	Krystal Tomei, MD, MPH, Chair
Referred to:	Reference Committee C

Resolution 243-A-24, "Disaggregation of Demographic Data for Individuals of Federally Recognized Tribes," was introduced by the Minority Affairs Section at the 2024 Annual Meeting of the American Medical Association (AMA) House of Delegates and was referred. The resolution asked the following:

"RESOLVED, that our American Medical Association add 'Enrolled Member of a Federally Recognized Tribe' on all AMA demographic forms (Directive to Take Action); and be it further

"RESOLVED, that our AMA advocate for the use of 'Enrolled Member of a Federally Recognized Tribe' as an additional category in all uses of demographic data including but not limited to medical records, government data collection and research, and within medical education (Directive to Take Action); and be it further

"RESOLVED, that our AMA support the Association of American Medical Colleges (AAMC) inclusion of 'Enrolled Member of a Federally Recognized Tribe' on all AAMC demographic forms (New HOD Policy); and be it further

"RESOLVED, that our AMA advocate for the Accreditation Council for Graduate Medical Education (ACGME) to include 'Enrolled Member of a Federally Recognized Tribe' on all ACGME demographic forms. (Directive to Take Action)"

Reference Committee B testimony noted AMA's work with the AAMC and the ACGME through the Physician Data Initiative (PDI) to establish best practices for data sharing and standards for sociodemographic data, including race, ethnicity, and more. Testimony also discussed that the Office of Management and Budget (OMB) recently concluded an extensive national consultation process concerning updating race and ethnicity standards, to which AMA provided comments. Testimony highlighted that the OMB ultimately decided to "remove the phrase 'who maintains tribal affiliation or community attachment' in the American Indian/Alaska Native (AI/AN) definition... to improve estimates of the AI/AN population in Federal statistics." However, testimony also indicated the possible value in collecting data about members of federally recognized tribes because it is a legal designation, not a racial category, and therefore not subject to the recent U.S. Supreme Court decisions banning the use of race in holistic college admissions processes. Testimony indicated it would be beneficial to study the implications of this designation to ensure that AMA policy is more comprehensive and does not exclude AI/AN individuals because their tribe is not federally recognized. Testimony also noted that more time is needed to understand the nuances and implications of this resolution and to collaborate with partners through the PDI to fully consider the short and long-term implications of these changes. Resolution 243 was referred for study.

BACKGROUND

According to the U.S. Department of the Interior, Indian Affairs, "A federally recognized tribe is an American Indian or Alaska Native tribal entity that is recognized as having a government-to-government relationship with the United States, with the responsibilities, powers, limitations, and obligations attached to that designation, and is eligible for funding and services from the Bureau of Indian Affairs. Furthermore, federally recognized tribes are recognized as possessing certain inherent rights of self-government (i.e., tribal sovereignty) and are entitled to receive certain federal benefits, services, and protections because of their special relationship with the United States. At present, there are 574 federally recognized American Indian and Alaska Native tribes and villages."[1]

Federally recognized tribal enrollment in the United States is a legal and political category in relation to the U.S. government, rather than a racial or ethnic identity.[2] The U.S. does not grant sovereign status to these tribes but rather chooses whether or not to acknowledge the continued existence of a tribe's inherent sovereignty. Many tribes remain unacknowledged by the federal government, with some of these recognized only by states,[3] or not at all. Native Hawaiians, for instance, are not federally recognized as a sovereign tribe or tribes.[4] Recognition itself may be linked to the process of colonization. For example, Patty Ferguson-Bohnee, JD, associate dean, clinical professor of law, and faculty director of the Indian Legal Program at Arizona State University, indicated in a 2021 presentation that, "The inclusion of a federal acknowledgement requirement poses a direct threat to the right and sovereignty of all tribes and creates a particular challenge for non-BIA listed tribes by attempting to link tribal sovereignty to federal acknowledgement… The Federal Acknowledgement Process persists in functioning as a barrier to historically well documented tribes seeking to achieve federal recognition."[5] These concerns are a natural consequence of the current social structure: "Because the foundation of colonial governments requires those entities to ignore the inherent rights of Indigenous Peoples, these governments—such as the United States government—have a tendency to ignore some Indigenous Peoples, and recognize others."[6]

Various U.S. government actions over time have also broken treaties with many tribes,[7] including actions to terminate federal recognition of tribal sovereignty.[8] As noted by the U.S. National Archives, "From 1953 until 1970, Congress initiated 60 separate termination proceedings against American Indian tribes, and over three million acres of tribal lands were relinquished as a result. Although the Nixon administration repudiated termination in 1970 and shifted federal Indian policy toward self-determination, the effect of termination was nevertheless devastating for many tribes."[9]

The United Nations Declaration on the Rights of Indigenous Peoples does not directly determine or define tribal status or Indigenous identity, stating in Article 9, "Indigenous peoples and individuals have the right to belong to an indigenous community or nation, in accordance with the traditions and customs of the community or nation concerned," and in Article 33, "Indigenous peoples have the right to determine their own identity or membership in accordance with their customs and traditions."[10]

Demographic Definitions and the Indian Health Service

The original resolution's interest in including additional categorization of Indigenous medical education learners and physicians was in part driven by the Indian Health Service's (IHS) role, referred to in the resolution, as "a health care system for federally recognized American Indians and Alaska Natives in the United States," noting significant physician vacancies as well as the IHS

Physician Scholarship program's requirement for applicants to be enrolled members of federally recognized tribes.[11] Indeed, while earlier IHS scholarship opportunities (such as for pre-medicine) are also eligible for both descendants and members of either federal or state recognized tribes in the 2025-2026 scholarship cycle, health professions scholarships, including for physicians-in-training, are restricted to enrolled members of federally recognized tribes—no descendants of members, nor members of state recognized tribes.[12]

While tribes and groups eligible for IHS health care are restricted to those federally recognized, individual patient eligibility for IHS is complex. Though it generally defaults to federal recognition, there are several exceptions where patients who are not enrolled members of a federally recognized tribe may receive services at the time of this writing, including but not limited to: non-enrolled membership in an AI/AN federally recognized group evidenced by other "reasonable" factors, children of otherwise eligible patients, spouses if the appropriate tribal organization deems them eligible, people who are pregnant under some circumstances, and others. IHS employees are not required to be AI/AN, although IHS does by law provide preference to AI/AN applicants,[13] and determines this via Bureau of Indian Affairs (BIA) standards.[14]

Physician vacancies in IHS have been attributed to issues such as matching local market salaries and housing scarcity,[15] as well as lack of GME funding[16] and management concerns.[17] AI/AN people experience significant challenges based on wider systemic oppression in education in general and therefore are underrepresented in high school and college degrees as well as in the physician workforce.[18]

Tribal Enrollment Data and Data Sovereignty

There are currently 574 AI/AN tribes federally recognized by the U.S. government. While the BIA maintains a list of tribal leaders,[19] AI/AN nations maintain their own enrollment records and processes.[20] Racial or ethnic self-identity, or status as an Indigenous person per one's own community or nation's customs and traditions, would not and likely should not be defined by broad medical education groups like the AMA. Enrollment in a federally recognized tribe is a verifiable legal and political status, and any data collected on this would therefore need to be verified. As discussed in a presentation by the American Indian Health Commission for Washington State, available on the U.S. Bureau of Justice Assistance website, tribal data sovereignty is of the utmost importance: "Tribal Nations' inherent sovereign authority to administer the collection, ownership, and application of their own data is rooted in a tribal nation's right to govern their people."[21] Collecting and reporting on alleged federally recognized tribal enrollment without each tribal nation's permission or verification would be a direct violation of tribal sovereignty and inappropriate.[22] Hypothetical collection of this data would require meaningful partnerships with the appropriate and specific tribal leaders in each of the potential 574 federally recognized tribes to ascertain if collection and verification of this data within medical education is even a desirable priority for each nation, and if so, the resources and data privacy and dissemination agreements needed.

Office of Management and Budget Revisions

In March 2024, OMB finalized revisions to Statistical Policy Directive No. 15: Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity (SPD 15).[23] Previously, the demographic data standards on AI/AN included the phrase "who maintain tribal affiliation or community attachment," and the removal of this phrase was supported by the National Congress of American Indians and several other relevant organizations.[24]

This was removed in the final recommendations, such that, within a combined question for race and ethnicity, AI/AN is defined as follows: "American Indian or Alaska Native. Individuals with origins in any of the original peoples of North, Central, and South America, including, for example, Navajo Nation, Blackfeet Tribe of the Blackfeet Indian Reservation of Montana, Native Village of Barrow Inupiat Traditional Government, Nome Eskimo Community, Aztec, and Maya." The standards allow for minimum category data collection with no write-ins, but they also allow for a write-in field for "additional details." The OMB stated this is "especially critical for the American Indian or Alaska Native category, which does not have required detailed categories under these standards." The revised standards do not collect information on federal recognition.

Physician Data Initiative Recommended Standards

In 2024, a partnership between the AMA, ACGME, and AAMC released recommended standards[25] for data collection and reporting in race and ethnicity as well as language proficiency, "driven by the importance of a diverse physician workforce and a more equitable health system."[26]

The "short version" of the race and ethnicity standards asks, "How do you self-identify?" and offers the following options:

"Please check as many categories as may apply:

□ American Indian or Alaska Native
□ Asian
□ Black or African American
□ Hispanic or Latino
□ Middle Eastern or North African
□ Native Hawaiian or Pacific Islander
□ White
□ Some other race or ethnicity: [write-in]"

The "long version" asks "How do you self-identify? Please check as many categories and subcategories as may apply:" and within the AI/AN subsection states:

"□ American Indian or Alaska Native
    □ Tribal affiliation: [write-in]"

DISCUSSION

No current standards support broad official medical education collection of federal tribal enrollment recognition status, and significant concerns arise related to accurately collecting this data. It is especially concerning regarding tribal data sovereignty, and the potential consequences to state recognized tribal members and other Indigenous learners who are not federally or state recognized.

There may also be privacy concerns within certain forms of disaggregation in medical education. For instance, according to the AAMC, in 2023, there were only 90 total AI/AN self-reported applicants to U.S. MD-granting medical schools, and 57 Native Hawaiian or Other Pacific Islander (though some Indigenous applicants may have been aggregated under other ethnic categories, such as multiracial.)[27] Based on some AI/AN organizational recommendations, it may be valuable to disaggregate data on those who indicate multiple ethnicities, without disaggregating based on federal recognition of enrollment in specific tribes. For instance, the National Congress of

American Indians "has recommended applying the approach used by the U.S. Census Bureau to report data on AI/AN alone… and AI/AN in combination with other races and ethnicities."[28]

Given significant underrepresentation of AI/AN medical education learners and physicians, it is valuable to work directly with tribes on admissions pathways, scholarships, and other programs.[29] AMA policy acknowledges "long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect."[30] Rather than broadly attempting to collect and verify federal enrollment data from any applicant, the focused work of engaging directly with tribes to create programs to reduce inequities may be beneficial. Although federally recognized tribes tend to have more legal protections in the U.S., where legal and feasible, this work should ideally also include tribes and communities that are not federally recognized. This is in alignment with AMA's stance that "Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs."[31] AMA policy also supports AI/AN access to health care both within and outside of IHS.[32]

Any collection or reporting on enrollment status, whether federally recognized or not, must be in direct collaboration with tribes as sovereign nations with inherent rights to self-determine priorities and data strategies. This should be undertaken on a case-by-case basis in response to each tribe's communicated needs, as collection of delineated enrollment data within medical education may or may not be relevant to each nation's priorities.

RELEVANT AMA POLICY

The AMA has policy related to Indigenous peoples and medical education. Some examples are as follows:

- H-350.981, "AMA Support of American Indian Health Career Opportunities," continues to support the concept of American Indian self-determination as imperative to the success of American Indian programs and recognize that enduring acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations. This includes training a workforce from and for these tribal nations.
- H-350.976, "Improving Health Care of American Indians and Alaska Natives," recommends that the federal government provide sufficient funds to support needed health services for American Indians and Alaska Natives.
- H-270.950, "Indian Health Service Licensing Exemptions," works with interested parties to evaluate existing regulatory and licensure opportunities and barriers to physician participation in health care services for Native Americans, Alaska Natives, and Native Hawaiians.
- H-350.939, "Health Care Access for American Indians and Alaska Natives," supports the federal government continuing to enhance and develop alternative pathways for American Indian and Alaska Native patients to access the full spectrum of health care, including within and outside of the established Indian Health Service (IHS) system.

- H-350.950, "Tribal Public Health Authority," supports the use of data-sharing agreements between local and state public health departments and American Indian and Alaska Native Tribes and Villages and Tribal Epidemiology Centers.
- H-350.977, "Indian Health Service," supports efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level.
- H-460.884, "Indigenous Data Sovereignty," recognizes that American Indian and Alaska Native (AI/AN) Tribes and Villages are sovereign governments that should be consulted before the conduct of research specific to their members, lands, and properties.

SUMMARY

Attending to the health care workforce needs of AI/AN and Indigenous populations is very important, as is respect for tribal data sovereignty. It would not be appropriate nor feasible for the AMA to collect and verify federal tribal enrollment data as part of medical education demographic information. It would also not be appropriate for the AMA to advocate for other medical education organizations to do so unless in direct collaboration with each of the relevant sovereign nations and led by the communicated priorities and needs of these tribal governments.

RECOMMENDATIONS

The Council on Medical Education recommends that the following be adopted in lieu of Resolution 243-A-24, and that the remainder of this report be filed.

1. That AMA Policy H-460.884, "Indigenous Data Sovereignty," be amended by addition:

   4. Our AMA recognizes that data collection on tribal membership, including for medical education and workforce, should recognize and respect Tribal data sovereignty and include Tribal consultation. (Modify HOD Policy)

2. That our AMA reaffirm Policy H-350.981, "AMA Support of American Indian Health Career Opportunities." (Reaffirm HOD Policy)

Fiscal note: $1,000

APPENDIX A: RELEVANT AMA POLICY

AMA Support of American Indian Health Career Opportunities H-350.981

Our American Medical Association policy on American Indian health career opportunities is as follows:

1. Our American Medical Association, and other national, state, specialty, and county medical societies recommend special programs for the recruitment and training of American Indians in health careers at all levels and urge that these be expanded.
2. Our AMA supports the inclusion of American Indians in established medical training programs in numbers adequate to meet their needs. Such training programs for American Indians should be operated for a sufficient period of time to ensure a continuous supply of physicians and other health professionals, prioritize consideration of applicants who self-identify as American Indian or Alaska Native and can provide some form of affiliation with an American Indian or Alaska Native tribe in the United States, and support the successful advancement of these trainees.
3. Our AMA will utilize its resources to create a better awareness among physicians and other health providers of the special problems and needs of American Indians and particular emphasis will be placed on the need for stronger clinical exposure and a greater number of health professionals to work among the American Indian population.
4. Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs and recognize that enduring acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations to include training a workforce from and for these tribal nations.
5. Our AMA acknowledges long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect.
6. Our AMA acknowledges the significance of the Morrill Act of 1862, the resulting land-grant university system, and the federal trust responsibility related to tribal nations.

Improving Health Care of American Indians and Alaska Natives H-350.976

1. Our American Medical Association recommends that all individuals, special interest groups, and levels of government recognize the American Indian and Alaska Native people as full citizens of the US, entitled to the same equal rights and privileges as other US citizens.
2. Our AMA recommends that the federal government provide sufficient funds to support needed health services for American Indians and Alaska Natives.
3. Our AMA recommends that state and local governments give special attention to the health and health-related needs of nonreservation American Indians and Alaska Natives in an effort to improve their quality of life.
4. Our AMA recommends that American Indian and Alaska Native religious and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
5. Our AMA recognizes practitioners of Indigenous medicine as an integral and culturally necessary individual in delivering health care to American Indians and Alaska Natives.
6. Our AMA monitors Medicaid Section 1115 waivers that recognize the value of traditional American Indian and Alaska Native healing services as a mechanism for improving patient-centered care and health equity among American Indian and Alaska Native populations when coordinated with physician-led care.
7. Our AMA supports consultation with Tribes to facilitate the development of best practices, including but not limited to culturally sensitive data collection, safety monitoring, the

development of payment methodologies, healer credentialing, and tracking of traditional healing services utilization at Indian Health Service, Tribal, and Urban Indian Health Programs.

8. Our AMA recommends strong emphasis be given to mental health programs for American Indians and Alaska Natives in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
9. Our AMA recommends a team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
10. Our AMA will continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
11. Our AMA recommends that state and county medical associations establish liaisons with intertribal health councils in those states where American Indians and Alaska Natives reside.
12. Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian and Alaska Native health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians and Alaska Natives.
13. Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and Alaska Natives and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

<u>Indian Health Service Licensing Exemptions H-270.950</u>

Our American Medical Association will work with interested parties to evaluate existing regulatory and licensure opportunities and barriers to physician participation in health care services for Native Americans, Alaska Natives, and Native Hawaiians.

<u>Health Care Access for American Indians and Alaska Natives H-350.939</u>

1. Our American Medical Association supports the federal government continuing to enhance and develop alternative pathways for American Indian and Alaska Native patients to access the full spectrum of health care, including within and outside of the established Indian Health Service (IHS) system.
2. Our AMA supports collaborative research efforts to better understand the limitations of IHS health care, including barriers to access, disparities in treatment outcomes, and areas for improvement.
3. Our AMA encourages studies between the IHS and the CDC to better evaluate regional health outcomes, and potential treatment deficiencies among American Indian and Alaska Native populations, including with respect to cancer care.
4. Our AMA supports federal and other efforts to increase funding for and provide technical assistance to develop and expand accessible specialty care services at IHS, Tribal, and Urban Indian Health Programs and associated facilities, including by contracting with other physician practices.

<u>Tribal Public Health Authority H-350.950</u>

1. Our American Medical Association will support the Department of Health and Human Services issuing guidance, through the Centers for Disease Control and Prevention and the Indian Health Service, on Public Health and Tribal-affiliated data-sharing with American Indian and Alaska Native Tribes and Villages and Tribal Epidemiology Centers.
2. Our AMA will support the use of data-sharing agreements between local and state public health departments and American Indian and Alaska Native Tribes and Villages and Tribal Epidemiology Centers.

Indian Health Service H-350.977

The policy of the American Medical Association is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. Our AMA specifically recommends:

1. Indian Population:
    a. In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently;
    b. Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care;
    c. Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and
    d. Improvement in transportation to make access to existing private care easier for the American Indian population.
2. Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
3. Personnel:
    a. Compensation scales for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service;
    b. Consideration should be given to increased compensation for specialty and primary care service in remote areas;
    c. In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers and other federal health agencies, thus increasing both the available staffing and the level of professional expertise available for consultation;
    d. Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served without detracting from physician compensation;
    e. Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation and burnout; and
    f. Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
4. Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
5. Our AMA also supports the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

6. Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.
7. Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA will call for an immediate change in the Public Service Loan Forgiveness Program to allow physicians to receive immediate, but incremental, loan forgiveness when they practice in an Indian Health Service, Tribal, or Urban Indian Health Program.
9. Our AMA supports reform of the Indian Health Service (IHS) Loan Repayment Program eligibility for repayment with either a part-time or full-time employment commitment to IHS and Tribal Health Programs.

Indigenous Data Sovereignty H-460.884

1. Our American Medical Association recognizes that American Indian and Alaska Native (AI/AN) Tribes and Villages are sovereign governments that should be consulted before the conduct of research specific to their members, lands, and properties.
2. Our AMA supports that AI/AN Tribes and Villages' Institutional Review Boards (IRBs) and research departments retain the right to oversee and regulate the collection, ownership, and management of research data with the consent of their members, and that individual members of AI/AN Tribes and Villages retain their autonomy and privacy regarding research data shared with researchers, AI/AN Tribes and Villages, and governments, consistent with existing protections under 45 CFR 46.
3. Our AMA encourages:
    a. the use and regular review of data-sharing agreements for all studies between academic medical centers and AI/AN Tribes and Villages be mutually agreed upon and aligned with AI/AN Tribes' and Villages' preferences.
    b. the National Institutes of Health and other stakeholders to provide flexible funding to AI/AN Tribes and Villages for research efforts, including the creation and maintenance of IRBs.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 301
(A-25)

Introduced by: American College of Cardiology, American Society of Echocardiography, American Society of Nuclear Cardiology, Heart Rhythm Society, Society for Cardiovascular Angiography & Interventions, Society of Cardiovascular Computed Tomography, Society for Cardiovascular Magnetic Resonance

Subject: Examining ABMS Processes for New Boards

Referred to: Reference Committee C

Whereas, certification of clinical competence is a cornerstone of the medical profession; and

Whereas, the American Board of Medical Specialties (ABMS) was established in 1933 as an independent body “to serve the public and medical profession by improving the quality of health through setting professional standards for lifelong certification in partnership with Member Boards;” and

Whereas, the ABMS recently updated their standards for continuing certification, which address the six core competencies and a more holistic approach; and

Whereas, the American College of Cardiology, the American Heart Association, the Heart Failure Society of America, the Heart Rhythm Society and the Society for Cardiovascular Angiography & Interventions broadly supported an independent cardiovascular board by collaborating to establish a new, independent American Board of Cardiovascular Medicine (ABCVM); and

Whereas, the ABCVM prepared a comprehensive application that sufficiently demonstrated how each of the ABMS standards for both initial and continuing certification would be met; and

Whereas, despite strong professional advocacy and an application that met/exceeded the standards, the ABMS chose to not recognize that cardiology is deserving of a separate board; and

Whereas, AMA policy supports the creation and existence of certification entities that meet accepted standards for assessment of knowledge and skills in a medical specialty; therefore be it

RESOLVED, that our American Medical Association supports the creation and recognition of practice competency certification mechanisms for physicians, when the oversight bodies for such certification meet established criteria (New HOD Policy); and be it further

RESOLVED, that our AMA Council on Medical Education examine ABMS processes for new boards to determine whether the ABCVM met the necessary requirements to be recognized as an independent board, with report back to the AMA Board of Trustees (BOT) and the AMA HOD. (Directive to Take Action)

Fiscal Note: Minimal – less than $1,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 302
(A-25)

Introduced by: American College of Lifestyle Medicine

Subject: AMA Study of Lifestyle Medicine and Culinary Electives to Reduce Burnout and Bolster Career Satisfaction in Trainees

Referred to: Reference Committee C

Whereas, the American Medical Association reports that, as of 2021, nearly 63% of physicians reported symptoms of burnout, up from 38% in 2020, and that large-scale change is needed to address the physician burnout crisis;[1] and

Whereas, the AMA recognizes that physician well-being is influenced by both organizational and individual factors;[1] and

Whereas, the AMA successfully fought for passage of the Dr. Lorna Breen Health Care Provider Protection Act of March 2022, which provides essential physician wellness resources to address persistently high rates of burnout-related suicide among physicians by encouraging urgent attention from researchers, health leaders and policy makers to develop and evaluate specific interventions to protect physicians' mental health;[1] and

Whereas, the United States will be short by as many as 86,000 physicians by 2036, according the Association of American Medical Colleges, due to early retirement, two in three doctors experiencing burnout during the pandemic, and fewer students gravitating to medical careers;[2] and

Whereas, the AMA has advocated for an all-hands-on-deck approach to solving for the projected physician shortage;[2] and

Whereas, the well-being of providers is considered an essential component of meeting the Quintuple Aim;[3] and

Whereas, the AMA Code of Ethics states that it is the ethical responsibility of a provider to attend to their self-care and well-being;[4] and

Whereas, self-care can help prevent burnout, enhance empathy, and improve attitudes among primary care providers;[5] and

Whereas, suboptimal care for patients may be one of the unintended consequences of provider burnout;[6] and

Whereas, research has shown an association between lifestyle medicine competencies, self-care, and self-reported increase in career satisfaction;[7] and

Whereas, individual risk-reduction intervention to combat burnout through lifestyle interventions can target primordial, primary, secondary, and tertiary prevention;[6] and

Whereas, Lifestyle Medicine Interest Groups have been established across more than 100 medical schools, the Lifestyle Medicine Residency Curricula (LMRC) has been adopted by 368 residency programs across over 170 locations, and LM Fellowship curricula enrollment has grown exponentially;[8,9] and

Whereas, Congressional 2022 bipartisan resolution H. Res.1118 calls for meaningful education on health professional education on nutrition and diet;[10] and

Whereas, an expert panel of 22 nutrition subject matter experts and 15 residency program directors reached consensus on recommended nutrition competencies, the level of medical education at which they should be included, and recommendations for monitoring implementation and evaluation of these competencies;[10] and

Whereas, academic medical schools in the Teaching Kitchen Collaborative have developed elective curricula to teach culinary and other lifestyle self-care skills, an established concept of lifestyle medicine, in affordable, culturally diverse, and time-efficient ways to medical students and test efficacy on dietary habits, physical activity, and overall health and well-being;[11] and

Whereas, the Culinary Medicine Curriculum developed at Stanford University Medical School for medical students has been distributed by the American College of Lifestyle Medicine and has been downloaded over 10,000 times as of March 2024, demonstrating the vast interest in lifestyle and culinary medicine knowledge and skills;[12] therefore be it

RESOLVED, that our American Medical Association study the impact and outcomes of teaching elective and affordable culinary and lifestyle self-care skills to medical students, residents, and fellows to reduce burnout and bolster career satisfaction. (Directive to Take Action)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

Healthy Lifestyles H-425.972
Our AMA: (A) recognizes the 15 competencies of lifestyle medicine as defined by a blue ribbon panel of experts convened in 2009 whose consensus statement was published in the Journal of the American Medical Association in 2010; (B) will urge physicians to acquire and apply the 15 clinical competencies of lifestyle medicine, and offer evidence-based lifestyle interventions as the first and primary mode of preventing and, when appropriate, treating chronic disease within clinical medicine; and (C) will work with appropriate federal agencies, medical specialty societies, and public health organizations to educate and assist physicians to routinely address physical activity and nutrition, tobacco cessation and other lifestyle factors with their patients as the primary strategy for chronic disease prevention and management.

2.Our AMA supports policies and mechanisms that incentivize and/or provide funding for the inclusion of lifestyle medicine education and social determinants of health in undergraduate, graduate and continuing medical education.

Programs on Managing Physician Stress and Burnout H-405.95
1. Our American Medical Association supports existing programs to assist physicians in early identification and management of stress and the programs supported by the AMA to assist physicians in early identification and management of stress will concentrate on the physical, emotional and psychological aspects of responding to and handling stress in physicians' professional and personal lives, and when to seek professional assistance for stress-related difficulties.
2. Our AMA will review relevant modules of the STEPs Forward Program and also identify validated student-focused, high quality resources for professional well-being, and will encourage the Medical Student Section and Academic Physicians Section to promote these resources to medical students.

Using Personal and Biological Data to Enhance Professional Wellbeing and Reduce Burnout D-460.96
1. Our American Medical Association will monitor and report on the research regarding technology, measures, and effective use of personal and biological data to assess professional workforce wellbeing and inform organizational interventions to mitigates burnout.
2. Our AMA will develop ethical guidelines on the collection, use, and protection of personal and biological data obtained to improve professional workforce wellbeing.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 303
(A-25)

Introduced by: Minority Affairs Section

Subject: Support for the Establishment of an Indigenous-Led Medical School in the United States

Referred to: Reference Committee C

Whereas, American Indian and Alaska Native (AI/AN) individuals remain deeply underrepresented in the U.S. physician workforce, comprising only 0.4% of active physicians despite representing approximately 2.9% of the U.S. population, contributing to persistent healthcare workforce shortages and access challenges in Tribal and urban AI/AN communities[1-4]; and

Whereas, AI/AN communities experience disproportionately high rates of chronic illness, mental health conditions, substance use disorder, and maternal morbidity, in part due to structural inequities, limited access to culturally concordant care, and the intergenerational impact of historical trauma[5-7]; and

Whereas, increasing the number of physicians from AI/AN communities and those trained to serve Indigenous populations is a critical strategy to promote health equity, improve care delivery, and strengthen trust between healthcare systems and AI/AN patients[9]; and

Whereas, significant barriers continue to prevent AI/AN students from entering and succeeding in medical education, including geographic isolation, financial hardship, limited mentorship, and experiences of systemic racism and discrimination[9]; and

Whereas, although the partnership between the Oklahoma State University College of Osteopathic Medicine and the Cherokee Nation represents a historic advancement by establishing a medical school campus on Tribal land, the distinct knowledge systems and healing philosophies of Indigenous cultures have yet to be systematically integrated and reconciled within the curriculum of an accredited U.S. medical school[10-11]; and

Whereas, the creation of an Indigenous-governed medical school would provide a culturally safe, community-anchored environment to recruit, educate, and retain AI/AN students and faculty, while serving as a center for excellence in Indigenous health education and healing traditions[12-13]; and

Whereas, the Indigenous School of Medicine (ISOM), a 501(c)(3) nonprofit organization founded by Indigenous physicians and educators from institutions including Johns Hopkins, Mayo Clinic, and Yale University, is developing a fully accredited U.S. allopathic medical school that integrates Indigenous healing knowledge with Western biomedical training and prioritizes Tribal governance and sovereignty[14]; and

Whereas, our American Medical Association has existing policies supporting AI/AN health equity, including: H-350.977 (Support of the Indian Health Service), CME Report 5-A-18 (Study

on American Indian and Alaska Native Students in Medical School), and CME Report 3-A-24 (Reimbursement for Traditional Indigenous Healing Practices); and

Whereas, the development of an Indigenous-led medical school aligns with national efforts to address physician workforce shortages, diversify medical education, and promote culturally responsive care models[15-17]; and

Whereas, multiple federal agencies, philanthropic foundations, and academic institutions are increasingly supporting Indigenous-led initiatives in health and education, presenting a timely opportunity for multisector collaboration and advocacy[18-21]; therefore be it

RESOLVED, that our American Medical Association support efforts to establish a fully accredited, allopathic, Indigenous-governed medical school in the United States, with a governance and leadership structure grounded in Tribal sovereignty and cultural integrity, and guided by principles of accountability to Indigenous Nations, inclusion of Indigenous leadership, and alignment with community-defined values and priorities (Directive to Take Action); and be it further

RESOLVED, that our AMA work collaboratively with Tribal Nations, Indigenous-led organizations, academic institutions, and relevant governing bodies to explore the feasibility, infrastructure, and resource needs for such an institution (Directive to Take Action); and be it further

RESOLVED, that our AMA support initiatives to develop culturally centered medical curricula, recruit Indigenous faculty and leadership, and facilitate pathways to institutional accreditation that reflect the values and priorities of Tribal communities (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for funding and resource development, including through partnerships with academic, philanthropic, health system, and governmental stakeholders, to support sustainable development and operation of an Indigenous-led medical school. (Directive to Take Action)

Fiscal Note: Moderate – between $5,000 - $10,000

RELEVANT AMA POLICY

H-350.977 Indian Health Service

The policy of the American Medical Association is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. Our AMA specifically recommends:

1. Indian Population:
    a. In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently;
    b. Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care;
    c. Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and
    d. Improvement in transportation to make access to existing private care easier for the American Indian population.
2. Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
3. Personnel:
    a. Compensation scales for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service;
    b. Consideration should be given to increased compensation for specialty and primary care service in remote areas;
    c. In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers and other federal health agencies, thus increasing both the available staffing and the level of professional expertise available for consultation;
    d. Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served without detracting from physician compensation;
    e. Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer

contact, both to maintain the quality of care and to avert professional isolation and burnout; and

f. Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.

4. Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
5. Our AMA also supports the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.
6. Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.
7. Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA will call for an immediate change in the Public Service Loan Forgiveness Program to allow physicians to receive immediate, but incremental, loan forgiveness when they practice in an Indian Health Service, Tribal, or Urban Indian Health Program.
9. Our AMA supports reform of the Indian Health Service (IHS) Loan Repayment Program eligibility for repayment with either a part-time or full-time employment commitment to IHS and Tribal Health Programs. [CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13; Appended: Res. 305, A-23; Reaffirmed: BOT Rep. 09, A-23; Reaffirmed: CMS Rep. 03, A-24; Reaffirmed: Res. 244, A-24; Reaffirmed: BOT Rep. 31, A-24; Modified: CMS Res. 305, A-24]

H-350.976 Improving Health Care of American Indians and Alaska Natives

1. Our American Medical Association recommends that all individuals, special interest groups, and levels of government recognize the American Indian and Alaska Native people as full citizens of the US, entitled to the same equal rights and privileges as other US citizens.
2. Our AMA recommends that the federal government provide sufficient funds to support needed health services for American Indians and Alaska Natives.
3. Our AMA recommends that state and local governments give special attention to the health and health-related needs of nonreservation American Indians and Alaska Natives in an effort to improve their quality of life.
4. Our AMA recommends that American Indian and Alaska Native religious and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
5. Our AMA recognizes practitioners of Indigenous medicine as an integral and culturally necessary individual in delivering health care to American Indians and Alaska Natives.
6. Our AMA monitors Medicaid Section 1115 waivers that recognize the value of traditional American Indian and Alaska Native healing services as a mechanism for improving patient-centered care and health equity among American Indian and Alaska Native populations when coordinated with physician-led care.
7. Our AMA supports consultation with Tribes to facilitate the development of best practices, including but not limited to culturally sensitive data collection, safety monitoring, the development of payment methodologies, healer credentialing, and tracking of traditional healing services utilization at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA recommends strong emphasis be given to mental health programs for American Indians and Alaska Natives in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
9. Our AMA recommends a team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
10. Our AMA will continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.

11. Our AMA recommends that state and county medical associations establish liaisons with intertribal health councils in those states where American Indians and Alaska Natives reside.
12. Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian and Alaska Native health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians and Alaska Natives.
13. Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and Alaska Natives and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations. [CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13; Reaffirmed: BOT Rep. 09, A-23; Modified: CMS Rep. 03, A-24; Reaffirmed: Res. 244, A-24]

D-350.976 AMA Support of American Indian Health Career Opportunities

1. Our American Medical Association will work with the Association of American Medical Colleges, American Association of Colleges of Osteopathic Medicine, Association of American Indian Physicians, and Association of Native American Medical Students to increase representation of American Indian physicians in medicine by promoting effective practices in recruitment, matriculation, retention and graduation of American Indian medical students.
2. Our AMA will Convene key parties, including but not limited to the Association of American Indian Physicians (AAIP) and American Indian/Alaska Native (AI/AN) tribes/entities such as Indian Health Service and National Indian Health Board, to discuss the representation of AI/AN physicians in medicine and promotion of effective practices in recruitment, matriculation, retention, and graduation of medical students. [BOT Action in response to referred for decision: Res. 308, A-22; Modified: BOT Rep. 31, A-24; Reaffirmed: BOT Rep. 31, A-24]

H-350.981 AMA Support of American Indian Health Career Opportunities

Our American Medical Association policy on American Indian health career opportunities is as follows:

1. Our American Medical Association, and other national, state, specialty, and county medical societies recommend special programs for the recruitment and training of American Indians in health careers at all levels and urge that these be expanded.
2. Our AMA supports the inclusion of American Indians in established medical training programs in numbers adequate to meet their needs. Such training programs for American Indians should be operated for a sufficient period of time to ensure a continuous supply of physicians and other health professionals, prioritize consideration of applicants who self-identify as American Indian or Alaska Native and can provide some form of affiliation with an American Indian or Alaska Native tribe in the United States, and support the successful advancement of these trainees.
3. Our AMA will utilize its resources to create a better awareness among physicians and other health providers of the special problems and needs of American Indians and particular emphasis will be placed on the need for stronger clinical exposure and a greater number of health professionals to work among the American Indian population.
4. Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs and recognize that enduring acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations to include training a workforce from and for these tribal nations.
5. Our AMA acknowledges long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect.
6. Our AMA acknowledges the significance of the Morrill Act of 1862, the resulting land-grant university system, and the federal trust responsibility related to tribal nations. [CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: CME Rep. 1, A-22; BOT Action in response to referred for decision: Res. 308, A-22; Modified: BOT Rep. 31, A-24]

H-200.951 Strategies for Enhancing Diversity in the Physician Workforce

1. Our American Medical Association supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality.

2. Our AMA commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes.
3. Our AMA encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties.
4. Our AMA encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine.
5. Our AMA encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal.
6. Our AMA continues to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations. [CME Rep. 1, I-06; Reaffirmed: CME Rep. 7, A-08; Reaffirmed: CCB/CLRPD Rep. 4, A-13; Modified: CME Rep. 01, A-16; Reaffirmation A-16; Modified: Res. 009, A-21; Modified: CME Rep. 5, A-21; Reaffirmed: BOT Rep. 31, A-24]

H-295.874 Educating Medical Students in the Social Determinants of Health and Cultural Competence
Our AMA: (1) Supports efforts designed to integrate training in social determinants of health, cultural competence, and meeting the needs of underserved populations across the undergraduate medical school curriculum to assure that graduating medical students are well prepared to provide their patients safe, high quality and patient-centered care. (2) Supports faculty development, particularly clinical faculty development, by medical schools to assure that faculty provide medical students' appropriate learning experiences to assure their cultural competence and knowledge of social determinants of health. (3) Supports medical schools in their efforts to evaluate the effectiveness of their social determinants of health and cultural competence teaching of medical students, for example by the AMA serving as a convener of a consortium of interested medical schools to develop Objective Standardized Clinical Exams for use in evaluating medical students' cultural competence. (4) Will conduct ongoing data gathering, including interviews with medical students, to gain their perspective on the integration of social determinants of health and cultural competence in the undergraduate medical school curriculum. (5) Recommends studying the integration of social determinants of health and cultural competence training in graduate and continuing medical education and publicizing successful models. [CME Rep. 11, A-06; Reaffirmation A-11Modified in lieu of Res. 908, I-14; Reaffirmed in lieu of Res. 306, A-15; Reaffirmed: BOT Rep. 39, A-18; Modified: CME Rep. 01, A-20]

H-160.883 American Indian and Alaska Native Language Revitalization and Elder Care
1. Our American Medical Association recognizes that access to language concordant services for American Indian and Alaka Native (AI/AN) patients will require investment in Indigenous languages in North America.
2. Our AMA supports federal-tribal funding opportunities for American Indian and Alaska Native language revitalization efforts, especially those that increase health information resources and access to language-concordant health care services for American Indian and Alaska Native elders living on or near tribal lands.
3. Our AMA supports the development of best practices for AI/AN elder care to ensure this group is provided culturally-competent healthcare outside of the umbrella of the Indian Health Service. [Res. 215, A-24]

H-350.939 Health Care Access for American Indians and Alaska Natives
1. Our American Medical Association supports the federal government continuing to enhance and develop alternative pathways for American Indian and Alaska Native patients to access the full spectrum of health care, including within and outside of the established Indian Health Service (IHS) system.
2. Our AMA supports collaborative research efforts to better understand the limitations of IHS health care, including barriers to access, disparities in treatment outcomes, and areas for improvement.

3. Our AMA encourages studies between the IHS and the CDC to better evaluate regional health outcomes, and potential treatment deficiencies among American Indian and Alaska Native populations, including with respect to cancer care.
4. Our AMA supports federal and other efforts to increase funding for and provide technical assistance to develop and expand accessible specialty care services at IHS, Tribal, and Urban Indian Health Programs and associated facilities, including by contracting with other physician practices. [Res. 242, A-24]

H-350.957 Cultural Leave for American Indian Trainees
Our American Medical Association recognizes the importance of cultural identity in fostering trainee success and encourages residency programs, fellowship programs, and medical schools to accommodate cultural observances for trainees from American Indian, Alaska Native, and Native Hawaiian communities. [Res. 323, A-22]

H-295.897 Enhancing the Cultural Competence of Physicians
1. Our American Medical Association continues to inform medical schools and residency program directors about activities and resources related to assisting physicians in providing culturally competent care to patients throughout their life span and encourage them to include the topic of culturally effective health care in their curricula.
2. Our AMA continues to support research into the need for and effectiveness of training in cultural competence and cultural humility, using existing mechanisms such as the annual medical education surveys.
3. Our AMA will assist physicians in obtaining information about and/or training in culturally effective health care through dissemination of currently available resources from the AMA and other relevant organizations.
4. Our AMA encourages training opportunities for students and residents, as members of the physician-led team, to learn cultural competency from community health workers, when this exposure can be integrated into existing rotation and service assignments.
5. Our AMA supports initiatives for medical schools to incorporate diversity in their Standardized Patient programs as a means of combining knowledge of health disparities and practice of cultural competence with clinical skills.
6. Our AMA will encourage the inclusion of peer-facilitated intergroup dialogue in medical education programs nationwide.
7. Our AMA supports the development of national standards for cultural humility training in the medical school curricula. [CME Rep. 5, A-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-11; Appended: Res. 304, I-16; Modified: CME Rep. 01, A-17; Appended: Res. 320, A-17; Reaffirmed: CMS Rep. 02, I-17; Appended: Res. 315, A-18; Modified: Res. 322, A-22]

H-350.960 Underrepresented Student Access to US Medical Schools
1. Our American Medical Association recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population.
2. Our AMA supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students.
3. Our AMA recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination.
4. Our AMA is committed to promoting truth and reconciliation in medical education as it relates to improving equity.
5. Our AMA recognizes the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations.
6. Our AMA will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine.
7. Our AMA will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school.

8. Our AMA will recommend that medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants.
9. Our AMA will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine.
10. Our AMA will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979,
    a. encouraging state and local governments to make quality elementary and secondary education available to all. [Res. 908, I-08; Reaffirmed in lieu of Res. 311, A-15; Appended: CME Rep. 5, A-21; Appended: Res. 305, I-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 304
(A-25)

Introduced by: Medical Student Section, International Medical Graduates Section, LGBTQ+ Section, Minority Affairs Section

Subject: Addressing Professionalism Standards in Medical Training

Referred to: Reference Committee C

Whereas, professionalism is ambiguously defined as a set of standards of beliefs about how one should operate in the workplace or as “the state or practice of doing one’s job with skill, competence, ethics and courtesy,” of which its largely subjective nature may create opportunities for harm and discrimination[1-3]; and

Whereas, medical education centers the importance of professionalism in course syllabi, clinical evaluations, and residency reference letters, resulting in the subjective grading of professionalism having direct effects on medical students' future career[4-6]; and

Whereas, the American Medical Association Code of Medical Ethics centers professionalism around maintaining the patient-physician relationship, public trust, ethical behavior, privacy and confidentiality, with no consistent incorporation of cultural diversity[27-31]; and

Whereas, biases and Eurocentric standards in defining professionalism have led to unfair evaluations of students, particularly underrepresented minorities, and it is crucial to establish a uniform, equitable definition of professionalism that respects diverse identities and promotes fair assessments[7-9]; and

Whereas, professionalism standards frequently reference "appropriateness" in areas such as speech and dress without clearly defining what is considered appropriate, leaving subjective interpretation to administrations whose judgments can vary significantly, resulting in inconsistent and potentially biased enforcement[2,3]; and

Whereas, the phenomenon of racial weathering and the pressure to conform to dominant cultural norms within medical institutions disproportionately impacts students from underrepresented backgrounds and of color in medical schools, leading to significant physical and mental health challenges[10-17]; and

Whereas, previous encounters of professionalism violations have not explicitly addressed the concerns for which an individual was unprofessional, but rather the concept itself was cited as the reason, which allows a method of weaponization as institutions do not have to acknowledge their rationale[2;] and

Whereas, physicians and trainees are in unique positions as community leaders to advocate for our patients and for humanity[19-21]; and

Whereas, even in contemporary times, the advocacy of individuals has been met with

penalization and seen as exhibiting “unprofessional behavior”, even though the right to advocate is protected under the Supreme Court ruling of Healy v James (1972)[22-24]; and

Whereas, emphasis on professionalism discourages open communication between doctors and patients by forcing trainees to become overly concerned with projecting a certain image rather than engaging in authentic human centered interactions, limiting diversity and inclusion of diverse perspectives originally encouraged in medical practice[13,25-27]; therefore be it

RESOLVED, that our American Medical Association supports regular institutional review, including review by Diversity, Equity and Inclusion (DEI) offices or other appropriate entities, of professionalism policies in medical school and residency programs, ensuring that they do not lead to discriminatory practices (New HOD Policy); and be it further

RESOLVED, that our AMA supports the Accreditation Council for Graduate Medical Education (ACGME), the Association of American Medical Colleges (AAMC), and American Association of Colleges of Osteopathic Medicine (AACOM) to establish guidelines for residency programs and medical school professionalism policies that encourage institutions to outline actions that constitute a violation (New HOD Policy); and be it further

RESOLVED, that our AMA advocates for AAMC, ACGME, and AACOM to support measures that prevent medical schools and residency programs from using professionalism violations as a means to stop student advocacy measures. (Directive to Take Action)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

Decreasing Bias in Assessments of Medical Student Clinical Clerkship Performance H-295.851

1. Our American Medical Association will continue to encourage work in support of the Coalition for Physician Accountability's Undergraduate Medical Education-Graduate Medical Education Review Committee "Recommendations for Comprehensive Improvement of the UME-GME Transition."
2. Our AMA will encourage and support UME institutions' investment in
    a. developing more valid, reliable, and unbiased summative assessments for clinical clerkships, including development of assessors' awareness regarding structural inequities in education and wider society, and
    b. providing standardized and meaningful competency data to program directors.
3. Our AMA will encourage institutions to publish information related to clinical clerkship grading systems and residency match rates, with subset data for learners from varied groups, including those that have been historically underrepresented in medicine or may be affected by bias.
4. Our AMA will encourage UME institutions to include grading system methodology with grades shared with residency programs. [CME Rep. 04, A-23]

Decreasing Bias in Evaluations of Medical Student Performance D-295.307
Our American Medical Association will work with appropriate stakeholders to promote efforts to evaluate methods for decreasing the impact of bias in medical student performance evaluation as well as reducing the impact of bias in the review of disciplinary actions. [Res. 309, A-22; Reaffirmed: CME Rep. 04, A-23]

Fostering Professionalism During Medical School and Residency Training D-295.983
(1) Our AMA, in consultation with other relevant medical organizations and associations, will work to develop a framework for fostering professionalism during medical school and residency training. This planning effort should include the following elements:
(a) Synthesize existing goals and outcomes for professionalism into a practice-based educational framework, such as provided by the AMA's Principles of Medical Ethics.
(b) Examine and suggest revisions to the content of the medical curriculum, based on the desired goals and outcomes for teaching professionalism.
(c) Identify methods for teaching professionalism and those changes in the educational environment, including the use of role models and mentoring, which would support trainees' acquisition of professionalism.
(d) Create means to incorporate ongoing collection of feedback from trainees about factors that support and inhibit their development of professionalism.
(2) Our AMA, along with other interested groups, will continue to study the clinical training environment to identify the best methods and practices used by medical schools and residency programs to fostering the development of professionalism, to include an evaluation of professional behavior, carried out at regular intervals and employing methods shown to be valuable in adding to the information that can be obtained from observational reports. An ideal system would utilize multiple evaluation formats and would build upon educational experiences that are already in place. The results of such evaluations should be used both for timely feedback and appropriate interventions for medical students and resident physicians aimed at improving their performance and for summative decisions about progression in training. [CME Rep. 3, A-01; Reaffirmation I-09; Reaffirmed: CME Rep. 01, A-19; Modified: CME Rep. 01, A-20]

Professionalism in the Use of Social Media E-2.3.2
Physicians and medical students should be aware that they cannot realistically separate their personal and professional personas entirely online and should curate their social media presence accordingly. Physicians and medical students therefore should:
(a) When publishing any content, consider that even personal social media posts have the potential to damage their professional reputation or even impugn the integrity of the profession.
(b) Respect professional standards of patient privacy and confidentiality and refrain from publishing patient information online without appropriate consent. [AMA Principles of Medical Ethics: I,II,IV, Issued: 2016]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 305
(A-25)

Introduced by: Medical Student Section, American College of Lifestyle Medicine

Subject: Curricular Structure Reform to Support Physician and Trainee Well-Being

Referred to: Reference Committee C

Whereas, the urgency of the COVID-19 pandemic disrupted the in-person structure of medical education and required rapid and novel adaptations to existing medical school curricula to incorporate online distance learning[1-3]; and

Whereas, studies have found that most students felt online learning provided insufficient opportunities for interaction and was less effective than face-to-face learning, and that medical students preferred a curriculum with 42% online learning and 58% on-site learning[3,4]; and

Whereas, a cross-sectional study comparing online-only, hybrid, and on-site only learning of evidence-based medical curricula demonstrates that a hybrid model offers increased learning motivation, autonomy, and satisfaction, while also increasing the efficiency of delivery of the material, which in turn increases students' understanding of the material[5]; and

Whereas, a 2022 AAMC survey found that 70% of medical students used non-institutional videos and other online content (3rd party resources) daily or weekly for medical information[6]; and

Whereas, distance learning may reduce the financial burden of medical school (for example, reduced transportation costs), reduce the impact of socioeconomic barriers on academic performance, and increase the accessibility of medical education, particularly for students with disabilities[7]; and

Whereas, the impact of distance learning on various knowledge-based and behavioral-based core competencies of medical education remains unknown, including its impact on medical student mental health and burnout[8]; and

Whereas, 42% of physicians report feeling burned out, exacerbated by factors such as bureaucracy, long working hours, insufficient compensation, and a lack of clinical autonomy[9-11]; and

Whereas, the prevalence of burnout among residents is significantly associated with difficulty meeting professionalism milestones, with up to half of residents reporting burnout or emotional exhaustion, and nearly half of medical students report burnout symptoms following matriculation [12-17]; and

Whereas, the Liaison Committee on Medical Education (LCME) mandates that medical schools support their medical students through the development and institution of "programs to promote

their well-being and to facilitate their adjustment to the physical and emotional demands of medical education"[18]; and

Whereas, inflexible burnout prevention programs that include mandatory assignments, punitive measures, and suboptimal scheduling of sessions fail to accommodate individual needs, are likely to be ineffective, and can paradoxically increase stress and workload among physicians and medical students [19-21]; and

Whereas, evidence-based burnout prevention programs prioritize flexibility, participant autonomy, mindfulness, leisure time, and self-care and allow individuals to choose activities that best suit their needs and schedules, leading to increased effectiveness, improved job satisfaction, better relationships with others, and reduced burnout among medical professionals[20-22,26,27]; and

Whereas, integrating effective burnout prevention programming into medical education curricula can lead to a reduction of student anxiety, increased ability to complete required sessions, and improved psychological well-being while completing coursework[22-25,28]; therefore be it

RESOLVED, that our American Medical Association promote a systems approach to student well-being and support research into the impact (beneficial or deleterious) of various educational structures and processes, including but not limited to, the use of third-party resources and distance learning, upon learner well-being and self-efficacy (New HOD Policy); and be it further

RESOLVED, that our AMA discourage physician, resident/fellow, and medical student burnout prevention programs which impose inflexible requirements, mandatory assignments, or punitive measures, except where required by law (New HOD Policy); and be it further

RESOLVED, that our AMA support evidence-based burnout prevention programs that:
a) prioritize personal time for participants;
b) facilitate voluntary participation in activities relating to personal values, leisure, hobbies, group and peer engagement, and self-care; and
c) are integrated directly into medical school and residency program curricula, and;
D) provide multiple options to complete any expectations or activities flexibly (New HOD Policy); and be it further

RESOLVED, that our AMA support the implementation of evidence-based evaluation strategies in the ChangeMedEd Initiative for the ongoing assessment and improvement of burnout prevention programs. (New HOD Policy)

Fiscal Note: Minimal – less than $1,000

Date Received: 04/10/2025

RELEVANT AMA POLICY

D-310.968 Physician and Medical Student Burnout

Our American Medical Association recognizes that burnout, defined as emotional exhaustion, depersonalization, and a reduced sense of personal accomplishment or effectiveness, is a problem among residents, fellows, and medical students.

Our AMA will work with other interested groups to regularly inform the appropriate designated institutional officials, program directors, resident physicians, and attending faculty about resident, fellow, and medical

student burnout (including recognition, treatment, and prevention of burnout) through appropriate media outlets.
Our AMA will encourage partnerships and collaborations with accrediting bodies (e.g., the Accreditation Council for Graduate Medical Education and the Liaison Committee on Medical Education) and other major medical organizations to address the recognition, treatment, and prevention of burnout among residents, fellows, and medical students and faculty.
Our AMA will encourage further studies and disseminate the results of studies on physician and medical student burnout to the medical education and physician community.
Our AMA will continue to monitor this issue and track its progress, including publication of peer-reviewed research and changes in accreditation requirements.
Our AMA encourages the utilization of mindfulness education as an effective intervention to address the problem of medical student and physician burnout.
Our AMA will encourage medical staffs and/or organizational leadership to anonymously survey physicians to identify local factors that may lead to physician demoralization.
Our AMA will continue to offer burnout assessment resources and develop guidance to help organizations and medical staffs implement organizational strategies that will help reduce the sources of physician demoralization and promote overall medical staff well-being.
Our AMA will continue to:
address the institutional causes of physician demoralization and burnout, such as the burden of documentation requirements, inefficient work flows and regulatory oversight.
develop and promote mechanisms by which physicians in all practices settings can reduce the risk and effects of demoralization and burnout, including implementing targeted practice transformation interventions, validated assessment tools and promoting a culture of well-being. [CME Rep. 8, A-07; Modified: Res. 919, I-11; Modified: BOT Rep. 15, A-19; Reaffirmation: A-22; Reaffirmed: Res. 802, I-24]

D-345.983 Study of Medical Student, Resident, and Physician Suicide
Our American Medical Association will explore the viability and cost-effectiveness of regularly collecting National Death Index (NDI) data and confidentially maintaining manner of death information for physicians, residents, and medical students listed as deceased in the AMA Physician Masterfile for long-term studies.
Our AMA will monitor progress by the Association of American Medical Colleges, the American Association of Colleges of Osteopathic Medicine, and the Accreditation Council for Graduate Medical Education (ACGME) to collect data on medical student and resident/fellow suicides to identify patterns that could predict such events.
Our AMA will support the education of faculty members, residents and medical students in the recognition of the signs and symptoms of burnout and depression and supports access to free, confidential, and immediately available stigma-free mental health and substance use disorder services.
Our AMA will collaborate with other stakeholders to study the incidence of and risk factors for depression, substance misuse and substance use disorders, and attempted and completed suicide among physicians, residents, and medical students.
Our AMA will work with appropriate stakeholders to explore the viability of developing a standardized reporting mechanism for the collection of current wellness initiatives that institutions have in place to inform and promote meaningful mental health and wellness interventions in these populations. [CME Rep. 06, A-19; Modified: Res. 326, A-22]

H-295.993 Inclusion of Medical Students and Residents in Medical Society Impaired Physician Programs
Our AMA: (1) recognizes the need for appropriate mechanisms to include medical students and resident physicians in the monitoring and advocacy services of state physician health programs and wellness and other programs to prevent impairment and burnout; and (2) encourages medical school administration and students to work together to develop creative ways to inform students concerning available student assistance programs and other related services. [Sub. Res. 84, I-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed and appended: CME Rep. 4, I-98; Reaffirmed: CME Rep. 2, A-08; Modified: CME Rep. 01, A-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 306
(A-25)

Introduced by: Medical Student Section

Subject: Innovation and Reform of Medical Education

Referred to: Reference Committee C

Whereas, in 1904, the American Medical Association created a Council on Medical Education to standardize the preliminary requirements for entry into medical school[1]; and

Whereas, since 1930, medical school prerequisites have remained largely static, besides the addition of a math/calculus requirement and the expansion of organic chemistry from one semester to one year, despite substantial pushback from many scholars, who frequently compare them to hazing rituals[2-8]; and

Whereas, chemistry courses, particularly organic chemistry, disproportionately dissuade students from pursuing medicine, particularly underrepresented minorities and women[7,9]; and

Whereas, the sheer volume of requirements disproportionately impacts lower socioeconomic status (SES) students, resulting in reduced study time, a lower GPA, and reduced time to participate in extracurricular activities, culminating in a discriminatory system that ultimately favors the wealthy[10]; and

Whereas, students with low prerequisite GPAs often take post-baccalaureate courses to compensate, despite data showing that these programs, which commonly attract older, underrepresented, and social science majors, do not improve performance on preclinical medical school exams[11]; and

Whereas, required pre-medical courses, including physics and chemistry, often function as "weed-out" courses and are assessed on the MCAT regardless of coursework, limiting students' ability to explore other important topics for physicians, such as social justice, ethics, or personal interests[12,13]; and

Whereas, community college and associate degrees (AS/AA) are a large source of education throughout the United States, but almost all medical schools require a bachelor's degree (BS/BA) to apply[14]; and

Whereas, requiring a BS/BA for medical school admission imposes significant academic, administrative, and financial burdens, with the average cost of attendance for a 4-year public in-state institution in 2024 being $108,584, over three times the cost of a 2-year in-district program at $34,878[15]; and

Whereas, permitting admission with an AS/AA degree could reduce barriers for students of lower socioeconomic status, who are more likely to attend 2-year programs, fostering a more equitable, affordable, and inclusive path to medicine[15-17]; and

Whereas, the AMA has made it a priority to address medical education costs and student debt through policy H-305.92518; and

Whereas, many community colleges offer all mandatory prerequisites for medical school, and students can take remaining prerequisites at local universities at a lower total cost than pursuing a four-year BS/BA[19]; and

Whereas, AS/AAs degree programs are audited and accredited by the same governing bodies that accredit BS/BA degree programs and are held to the same accreditation standards as BS/BA programs, ensuring equivalent educational quality[20]; and

Whereas, all applicants, regardless of their degree, would still take the Medical School Admissions Test (MCAT), a universal standardized admission assessment tool[21]; and

Whereas, some students initially enroll in a less expensive AS/AA program due to uncertainty of their career path, and then have to return to school later and pay for more courses than necessary, further delaying their entry to medical school[22]; and

Whereas, permitting applicants with alternative degrees to apply to medical school allows them to allocate more time to clinical and research experience while meeting all pre-medical prerequisites and demonstrating academic rigor, especially with the expansion of research opportunities at community colleges[23]; and

Whereas, 31% of dental schools and 96% of pharmacy schools do not require a BS/BA as there is no national admissions requirement[24,25]; and

Whereas, considering students with AS/AA degrees is more closely aligned with the holistic review process that promotes equity and diversity in the medical profession[26]; and

Whereas, physicians and trainees are increasingly concerned by the disproportionate focus of standardized exams on less prevalent conditions compared to conditions such as diabetes and cardiovascular disease, highlighting the need to shift to more clinically relevant examination content that better aligns with competencies for effective patient care[27-31]; and

Whereas, despite medical curricula covering USMLE Step 1 content, clerkship directors report insufficient student preparation in areas like life-cycle stages, epidemiology, and systems of care, while students feel unprepared to apply preclinical knowledge during clinical clerkships due to a disconnect between preclinical and clinical curricula[31-35]; and

Whereas, preclinical exams emphasizing knowledge that is decontextualized and not integrated with clinical knowledge in practice contribute to the difficult transition of medical students between preclerkship and clerkship years[35,36]; and

Whereas, a comparison of pre-clerkship and post-clerkship for both basic sciences test scores and USMLE Step 1 scores showed a significant increase in scores after clerkship, underlying a lack of knowledge that is filled during the clerkship[36-38]; and

Whereas, Step 1 is widely known as an inaccurate predictor of clinical success and shows no strong correlation with residency exam performance, and poor integration of basic sciences with clinical practice undermines the relevance of these subjects, hindering knowledge retention and application[39,40]; and

Whereas, test performance is positively correlated with perceived relevance of examination material, and the evolving landscape of medical practice necessitates that standardized exams be regularly reviewed and updated to ensure valid assessment of knowledge and skills relevant to current clinical practice as indicators of competency[41]; and

Whereas, AMA Policies H-275.929 and H-275.924 set a precedent for revising national standardized exams and continuing certification to ensure they have predictive validity and are relevant to clinical practice, with the AMA Council on Medical Education actively working with the American Board of Medical Specialties to reform maintenance of certification to enhance clinical relevance[42]; and

Whereas, as rising tuition and living costs have led to an average medical student debt of $202,453, accelerated three-year programs, which are increasingly common, help students save on tuition, enter the workforce earlier, and address the projected shortage of 21,100 to 55,200 primary care physicians by 2032[43-48]; and

Whereas, by shortening preclinical curriculum and starting clinical exposure earlier, three-year students meet all graduation requirements while achieving similar clinical performance ratings during key clerkships and maintaining similar outcomes in residency milestones and performance[46,49]; and

Whereas, many three-year medical programs prioritize residency positions in primary care, psychiatry, and under-resourced or rural areas, reducing the time, stress, and cost of a pplying to residency, while also achieving high enrollment of underrepresented groups and significantly higher primary care placement rates compared to the national averages of 9% for allopathic and 23% for osteopathic schools[46,50-54]; and

Whereas, some schools have adopted or are considering a 12-month preclinical curriculum, reducing live lectures in response to students' use of asynchronous online resources, which transitions students to clerkships 6 to 12 months earlier and allows three-year programs to maintain or increase clinical exposure[55-57]; therefore be it

RESOLVED, that our American Medical Association collaborate with AMA’s ChangeMedEd Initiative to study the following topics and report back with recommendations on ways to innovate the structure, content, and timing of medical education:

a) Expansion of three-year pathways and pathways prioritizing residency seats for students entering primary care, OBGYN, psychiatry, and practice in under-resourced, rural, and IHS areas;
b) Re-evaluation of premedical prerequisites for clinical readiness (including organic chemistry, calculus, and calculus-based physics versus high-school physics) and expectation of a bachelor’s degree for medical school;
c) Medical school acceptance of prerequisite credit earned in high school or community college or via placement/test-out examinations, to prevent pressure to repeat coursework;
d) Options to shorten preclinical education to better reflect clinical readiness and emphasize clinical exposure, including external asynchronous study aids, placement/test-out examinations, and completion of preclinical education prior to medical school;
e) Possibility of merging the MCAT and USMLE Step 1/COMLEX Level 1;
f) Changes to standardized exams to better reflect clinical readiness, including adjusting frequency of questions based on their proportional relevance to clinical knowledge

expected for a general medical degree, while still including content on less common concepts. (Directive to Take Action)

Fiscal Note: Minimal – less than $1,000

RELEVANT AMA POLICY

H-295.871 Accelerating Change in Medical Education: Strategies for Medical Education Reform
Our AMA continues to recognize the need for transformation of medical education across the continuum from premedical preparation through continuing physician professional development and the need to involve multiple stakeholders in the transformation process, while taking an appropriate leadership and coordinating role. [CME Rep. 13, A-07; Reaffirmed: CME Rep. 01, A-17]

D-295.317 Competency Based Medical Education Across the Continuum of Education and Practice
1. Our American Medical Association Council on Medical Education will continue to study and identify challenges and opportunities and critical stakeholders in achieving a competency-based curriculum across the medical education continuum and other health professions that provides significant value to those participating in these curricula and their patients.
2. Our AMA Council on Medical Education will work to establish a framework of consistent vocabulary and definitions across the continuum of health sciences education that will facilitate competency-based curriculum, andragogy and assessment implementation.
3. Our AMA will continue to explore, with the Accelerating Change in Medical Education initiative and with other stakeholder organizations, the implications of shifting from time-based to competency-based medical education on residents' compensation and lifetime earnings. [CME Rep. 3, A-14; Appended: CME Rep. 04, A-16; Reaffirmed: CME Rep. 04, A-23]

H-200.949 Principles of and Actions to Address Primary Care Workforce
1. Our patients require a sufficient, well-trained supply of primary care physicians--family physicians, general internists, general pediatricians, and obstetricians/gynecologists--to meet the nation’s current and projected demand for health care services.
2. To help accomplish this critical goal, our American Medical Association (AMA) will work with a variety of key stakeholders, to include federal and state legislators and regulatory bodies; national and state specialty societies and medical associations, including those representing primary care fields; and accreditation, certification, licensing, and regulatory bodies from across the continuum of medical education (undergraduate, graduate, and continuing medical education).
3. Through its work with these stakeholders, our AMA will encourage development and dissemination of innovative models to recruit medical students interested in primary care, train primary care physicians, and enhance both the perception and the reality of primary care practice, to encompass the following components: a) Changes to medical school admissions and recruitment of medical students to primary care specialties, including counseling of medical students as they develop their career plans; b) Curriculum changes throughout the medical education continuum; c) Expanded financial aid and debt relief options; d) Financial and logistical support for primary care practice, including adequate reimbursement, and enhancements to the practice environment to ensure professional satisfaction and practice sustainability; and e) Support for research and advocacy related to primary care.
4. Admissions and recruitment: The medical school admissions process should reflect the specific institution’s mission. Those schools with missions that include primary care should consider those predictor variables among applicants that are associated with choice of these specialties.
5. Medical schools, through continued and expanded recruitment and outreach activities into secondary schools, colleges, and universities, should develop and increase the pool of applicants likely to practice primary care by seeking out those students whose profiles indicate a likelihood of practicing in primary care and underserved areas, while establishing strict guidelines to preclude discrimination.
6. Career counseling and exposure to primary care: Medical schools should provide to students career counseling related to the choice of a primary care specialty, and ensure that primary care physicians are well-represented as teachers, mentors, and role models to future physicians.
7. Financial assistance programs should be created to provide students with primary care experiences in ambulatory settings, especially in underserved areas. These could include funded preceptorships or summer work/study opportunities.
8. Curriculum: Voluntary efforts to develop and expand both undergraduate and graduate medical education programs to educate primary care physicians in increasing numbers should be continued. The establishment of appropriate administrative units for all primary care specialties should be encouraged.

9. Medical schools with an explicit commitment to primary care should structure the curriculum to support this objective. At the same time, all medical schools should be encouraged to continue to change their curriculum to put more emphasis on primary care.
10. All four years of the curriculum in every medical school should provide primary care experiences for all students, to feature increasing levels of student responsibility and use of ambulatory and community-based settings.
11. Federal funding, without coercive terms, should be available to institutions needing financial support to expand resources for both undergraduate and graduate medical education programs designed to increase the number of primary care physicians. Our AMA will advocate for public (federal and state) and private payers to a) develop enhanced funding and related incentives from all sources to provide education for medical students and resident/fellow physicians, respectively, in progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model) to enhance primary care as a career choice; b) fund and foster innovative pilot programs that change the current approaches to primary care in undergraduate and graduate medical education, especially in urban and rural underserved areas; and c) evaluate these efforts for their effectiveness in increasing the number of students choosing primary care careers and helping facilitate the elimination of geographic, racial, and other health care disparities.
12. Medical schools and teaching hospitals in underserved areas should promote medical student and resident/fellow physician rotations through local family health clinics for the underserved, with financial assistance to the clinics to compensate their teaching efforts.
13. The curriculum in primary care residency programs and training sites should be consistent with the objective of training generalist physicians. Our AMA will encourage the Accreditation Council for Graduate Medical Education to (a) support primary care residency programs, including community hospital-based programs, and (b) develop an accreditation environment and novel pathways that promote innovations in graduate medical education, using progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model).
14. The visibility of primary care faculty members should be enhanced within the medical school, and positive attitudes toward primary care among all faculty members should be encouraged.
15. Support for practicing primary care physicians: Administrative support mechanisms should be developed to assist primary care physicians in the logistics of their practices, along with enhanced efforts to reduce administrative activities unrelated to patient care, to help ensure professional satisfaction and practice sustainability.
16. There should be increased financial incentives for physicians practicing primary care, especially those in rural and urban underserved areas, to include scholarship or loan repayment programs, relief of professional liability burdens, and Medicaid case management programs, among others. Our AMA will advocate to state and federal legislative and regulatory bodies, among others, for development of public and/or private incentive programs, and expansion and increased funding for existing programs, to further encourage practice in underserved areas and decrease the debt load of primary care physicians. The imposition of specific outcome targets should be resisted, especially in the absence of additional support to the schools.
17. Our AMA will continue to advocate, in collaboration with relevant specialty societies, for the recommendations from the AMA/Specialty Society RVS Update Committee (RUC) related to reimbursement for E&M services and coverage of services related to care coordination, including patient education, counseling, team meetings and other functions; and work to ensure that private payers fully recognize the value of E&M services, incorporating the RUC-recommended increases adopted for the most current Medicare RBRVS.
18. Our AMA will advocate for public (federal and state) and private payers to develop physician reimbursement systems to promote primary care and specialty practices in progressive, community-based models of integrated care focused on quality and outcomes such as the patient-centered medical home and the chronic care model consistent with current AMA Policies H-160.918 and H-160.919.
19. There should be educational support systems for primary care physicians, especially those practicing in underserved areas.
20. Our AMA will urge urban hospitals, medical centers, state medical associations, and specialty societies to consider the expanded use of mobile health care capabilities.
21. Our AMA will encourage the Centers for Medicare & Medicaid Services to explore the use of telemedicine to improve access to and support for urban primary care practices in underserved settings.
22. Accredited continuing medical education providers should promote and establish continuing medical education courses in performing, prescribing, interpreting and reinforcing primary care services.

23. Practicing physicians in other specialties--particularly those practicing in underserved urban or rural areas--should be provided the opportunity to gain specific primary care competencies through short-term preceptorships or postgraduate fellowships offered by departments of family medicine, internal medicine, pediatrics, etc., at medical schools or teaching hospitals. In addition, part-time training should be encouraged, to allow physicians in these programs to practice concurrently, and further research into these concepts should be encouraged.
24. Our AMA supports continued funding of Public Health Service Act, Title VII, Section 747, and encourages advocacy in this regard by AMA members and the public.
25. Research: Analysis of state and federal financial assistance programs should be undertaken, to determine if these programs are having the desired workforce effects, particularly for students from disadvantaged groups and those that are underrepresented in medicine, and to gauge the impact of these programs on elimination of geographic, racial, and other health care disparities. Additional research should identify the factors that deter students and physicians from choosing and remaining in primary care disciplines. Further, our AMA should continue to monitor trends in the choice of a primary care specialty and the availability of primary care graduate medical education positions. The results of these and related research endeavors should support and further refine AMA policy to enhance primary care as a career choice. [CME Rep. 04, I-18; Reaffirmed: CMS Rep. 08, A-2]

H-275.929 Oppose Additions to United States Medical Licensure Examination and Comprehensive Osteopathic Medical Licensure Examination
Our American Medical Association opposes additions to the United States Medical Licensing Examination and Comprehensive Osteopathic Medical Licensure Examination that lack predictive validity for future performance as a physician. [Res. 308, A-04; Reaffirmed: CME Rep. 2, A-14; Modified: CME Rep. 01, A-24]

H-275.924 Continuing Board Certification
Our American Medical Association Principles on Continuing Board Certification
(1) Changes in specialty-board certification requirements for CBC programs should be longitudinally stable in structure, although flexible in content…(4) Any changes in the CBC process should not result in significantly increased cost or burden to physician participants (such as systems that mandate continuous documentation or require annual milestones). (5) CBC requirements should not reduce the capacity of the overall physician workforce. It is important to retain a structure of CBC programs that permits physicians to complete modules with temporal flexibility, compatible with their practice responsibilities… (12) CBC should be based on evidence and designed to identify performance gaps and unmet needs, providing direction and guidance for improvement in physician performance and delivery of care. (13) The CBC process should be evaluated periodically to measure physician satisfaction, knowledge uptake and intent to maintain or change practice. (14) CBC should be used as a tool for continuous improvement… (18) CBC activities and measurement should be relevant to clinical practice. (19) The CBC process should be reflective of and consistent with the cost of development and administration of the CBC components, ensure a fair fee structure, and not present a barrier to patient care. (20) Any assessment should be used to guide physicians' self-directed study. (21) Specific content-based feedback after any assessment tests should be provided to physicians in a timely manner. (22) There should be multiple options for how an assessment could be structured to accommodate different learning styles… (27) Our AMA will continue to work with the national medical specialty societies to advocate for the physicians of America to receive value in the services they purchase for Continuing Board Certification from their specialty boards. Value in CBC should include cost effectiveness with full financial transparency, respect for physicians' time and their patient care commitments, alignment of CBC requirements with other regulator and payer requirements, and adherence to an evidence basis for both CBC content and processes. [CME Rep. 16, A-09; Reaffirmed: CME Rep. 11, A-12; Reaffirmed: CME Rep. 10, A-12; Reaffirmed in lieu of Res. 313, A-12; Reaffirmed: CME Rep. 4, A-13; Reaffirmed in lieu of Res. 919, I-13; Appended: Sub. Res. 920, I-14; Reaffirmed: CME Rep. 2, A-15; Appended: Res. 314, A-15Modified: CME Rep. 2, I-15; Reaffirmation A-16; Reaffirmed: Res. 309, A-16; Modified: Res. 307, I-16; Reaffirmed: BOT Rep. 05, I-16; Appended: Res. 319, A-17; Reaffirmed in lieu of: Res. 322, A-17; Modified: Res. 953, I-17; Reaffirmation: A-19; Modified: CME Rep. 02, A-19; Reaffirmed: Res. 310, I-22; Reaffirmed in lieu of: Res. 302, A-24; Reaffirmed in lieu of: Res. 316, A-24]

H-305.925 Principles of and Actions to Address Medical Education Costs and Student Debt
The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will:

1. Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy.
2. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research.
3. Encourage the expansion of National Institutes of Health programs that provide loan repayment in exchange for a commitment to conduct targeted research.
4. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit:
    a. inclusion of all medical specialties in need, and
    b. service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas.
5. Encourage the National Health Service Corps to have repayment policies that are consistent with other federal loan forgiveness programs, thereby decreasing the amount of loans in default and increasing the number of physicians practicing in underserved areas.
6. Work to reinstate the economic hardship deferment qualification criterion known as the “20/220 pathway,” and support alternate mechanisms that better address the financial needs of trainees with educational debt.
7. Advocate for federal legislation to support the creation of student loan savings accounts that allow for pre-tax dollars to be used to pay for student loans.
8. Work with other concerned organizations to advocate for legislation and regulation that would result in favorable terms and conditions for borrowing and for loan repayment, and would permit 100% tax deductibility of interest on student loans and elimination of taxes on aid from service-based programs.
9. Encourage the creation of private-sector financial aid programs with favorable interest rates or service obligations (such as community- or institution-based loan repayment programs or state medical society loan programs).
10. Support stable funding for medical education programs to limit excessive tuition increases, and collect and disseminate information on medical school programs that cap medical education debt, including the types of debt management education that are provided.
11. Work with state medical societies to advocate for the creation of either tuition caps or, if caps are not feasible, pre-defined tuition increases, so that medical students will be aware of their tuition and fee costs for the total period of their enrollment.
12. Encourage medical schools to:
    a. study the costs and benefits associated with non-traditional instructional formats (such as online and distance learning, and combined baccalaureate/MD or DO programs) to determine if cost savings to medical schools and to medical students could be realized without jeopardizing the quality of medical education;
    b. engage in fundraising activities to increase the availability of scholarship support, with the support of the Federation, medical schools, and state and specialty medical societies, and develop or enhance financial aid opportunities for medical students, such as self-managed, low-interest loan programs;
    c. cooperate with postsecondary institutions to establish collaborative debt counseling for entering first-year medical students;
    d. allow for flexible scheduling for medical students who encounter financial difficulties that can be remedied only by employment, and consider creating opportunities for paid employment for medical students;
    e. counsel individual medical student borrowers on the status of their indebtedness and payment schedules prior to their graduation;

   f. inform students of all government loan opportunities and disclose the reasons that preferred lenders were chosen;
   g. ensure that all medical student fees are earmarked for specific and well-defined purposes, and avoid charging any overly broad and ill-defined fees, such as but not limited to professional fees;
   h. use their collective purchasing power to obtain discounts for their students on necessary medical equipment, textbooks, and other educational supplies;
   i. work to ensure stable funding, to eliminate the need for increases in tuition and fees to compensate for unanticipated decreases in other sources of revenue; mid-year and retroactive tuition increases should be opposed.
13. Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties.
14. Take an active advocacy role during reauthorization of the Higher Education Act and similar legislation, to achieve the following goals:
   a. Eliminating the single holder rule.
   b. Making the availability of loan deferment more flexible, including broadening the definition of economic hardship and expanding the period for loan deferment to include the entire length of residency and fellowship training.
   c. Retaining the option of loan forbearance for residents ineligible for loan deferment.
   d. Including, explicitly, dependent care expenses in the definition of the “cost of attendance”.
   e. Including room and board expenses in the definition of tax-exempt scholarship income.
   f. Continuing the federal Direct Loan Consolidation program, including the ability to “lock in” a fixed interest rate, and giving consideration to grace periods in renewals of federal loan programs.
   g. Adding the ability to refinance Federal Consolidation Loans.
   h. Eliminating the cap on the student loan interest deduction.
   i. Increasing the income limits for taking the interest deduction.
   j. Making permanent the education tax incentives that our AMA successfully lobbied for as part of Economic Growth and Tax Relief Reconciliation Act of 2001.
   k. Ensuring that loan repayment programs do not place greater burdens upon married couples than for similarly situated couples who are cohabitating.
   l. Increasing efforts to collect overdue debts from the present medical student loan programs in a manner that would not interfere with the provision of future loan funds to medical students.
15. Continue to work with state and county medical societies to advocate for adequate levels of medical school funding and to oppose legislative or regulatory provisions that would result in significant or unplanned tuition increases.
16. Continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden of medical students, and monitor the short-and long-term impact of the economic environment on the availability of institutional and external sources of financial aid for medical students, as well as on choice of specialty and practice location.
17. Collect and disseminate information on successful strategies used by medical schools to cap or reduce tuition.
18. Continue to monitor the availability of and encourage medical schools and residency/fellowship programs to:
   a. provide financial aid opportunities and financial planning/debt management counseling to medical students and resident/fellow physicians;
   b. work with key stakeholders to develop and disseminate standardized information on these topics for use by medical students, resident/fellow physicians, and young physicians; and
   c. share innovative approaches with the medical education community.
19. Seek federal legislation or rule changes that would stop Medicare and Medicaid decertification of physicians due to unpaid student loan debt. Our AMA believes that it is improper for physicians not to repay their educational loans, but assistance should be available to those physicians who are experiencing hardship in meeting their obligations.
20. Related to the Public Service Loan Forgiveness (PSLF) Program, our AMA supports increased medical student and physician participation in the program, and will:

a. Advocate that all resident/fellow physicians have access to PSLF during their training years.
b. Advocate against a monetary cap on PSLF and other federal loan forgiveness programs.
c. Work with the United States Department of Education to ensure that any cap on loan forgiveness under PSLF be at least equal to the principal amount borrowed.
d. Ask the United States Department of Education to include all terms of PSLF in the contractual obligations of the Master Promissory Note.
e. Encourage the Accreditation Council for Graduate Medical Education (ACGME) to require residency/fellowship programs to include within the terms, conditions, and benefits of program appointment information on the employer's PSLF program qualifying status.
f. Advocate that the profit status of a physician's training institution not be a factor for PSLF eligibility,
g. Encourage medical school financial advisors to counsel wise borrowing by medical students, in the event that the PSLF program is eliminated or severely curtailed.
h. Encourage medical school financial advisors to increase medical student engagement in service-based loan repayment options, and other federal and military programs, as an attractive alternative to the PSLF in terms of financial prospects as well as providing the opportunity to provide care in medically underserved areas.
i. Strongly advocate that the terms of the PSLF that existed at the time of the agreement remain unchanged for any program participant in the event of any future restrictive changes.
j. Monitor the denial rates for physician applicants to the PSLF.
k. Undertake expanded federal advocacy, in the event denial rates for physician applicants are unexpectedly high, to encourage release of information on the basis for the high denial rates, increased transparency and streamlining of program requirements, consistent and accurate communication between loan servicers and borrowers, and clear expectations regarding oversight and accountability of the loan servicers responsible for the program.
l. Work with the United States Department of Education to ensure that applicants to the PSLF and its supplemental extensions, such as Temporary Expanded Public Service Loan Forgiveness (TEPSLF), are provided with the necessary information to successfully complete the program(s) in a timely manner.
m. Work with the United States Department of Education to ensure that individuals who would otherwise qualify for PSLF and its supplemental extensions, such as TEPSLF, are not disqualified from the program(s).

21. Advocate for continued funding of programs including Income-Driven Repayment plans for the benefit of reducing medical student load burden.
22. Strongly advocate for the passage of legislation to allow medical students, residents and fellows who have education loans to qualify for interest-free deferment on their student loans while serving in a medical internship, residency, or fellowship program, as well as permitting the conversion of currently unsubsidized Stafford and Graduate Plus loans to interest free status for the duration of undergraduate and graduate medical education.
23. Continue to monitor opportunities to reduce additional expense burden upon medical students including reduced-cost or free programs for residency applications, virtual or hybrid interviews, and other cost-reduction initiatives aimed at reducing non-educational debt.
24. Encourage medical students, residents, fellows and physicians in practice to take advantage of available loan forgiveness programs and grants and scholarships that have been historically underutilized, as well as financial information and resources available through the Association of American Medical Colleges and American Association of Colleges of Osteopathic Medicine, as required by the Liaison Committee on Medical Education and Commission on Osteopathic College Accreditation, and resources available at the federal, state and local levels.
25. Support federal efforts to forgive debt incurred during medical school and other higher education by physicians and medical students, including educational and cost of attendance debt.
26. Support that residency and fellowship application services grant fee assistance to applicants who previously received fee assistance from medical school application services or are determined to have financial need through another formal mechanism. [CME Report 05, I-18; Appended: Res. 953, I-18; Reaffirmation: A-19; Appended: Res. 316, A-19; Appended: Res. 226, A-21;

Reaffirmed in lieu of: Res. 311, A-21; Modified: CME Rep. 4, I-21; Reaffirmation: A-22; Appended: CME Rep. 02, A-23; Appended: Res. 311, A-23; Reaffirmed: Res. 314, A-24; Reaffirmed: Res. 215, I-24; Reaffirmed: BOT Rep. 07, I-24]

D-200.985 Strategies for Enhancing Diversity in the Physician Workforce

1. Our American Medical Association, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following:
    a. Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school.
    b. Diversity or minority affairs offices at medical schools.
    c. Financial aid programs for students from groups that are underrepresented in medicine.
    d. Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs. [CME Rep. 1, I-06; Reaffirmation I-10; Reaffirmation A-13; Modified: CCB/CLRPD Rep. 2, A-14; Reaffirmation: A-16; Appended: Res. 313, A-17; Appended: Res. 314, A-17; Modified: CME Rep. 01, A-18; Appended: Res. 207, I-18; Reaffirmation: A-19; Appended: Res. 304, A-19; Appended: Res. 319, A-19; Modified: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22; Modified: Res. 320, A-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 307
(A-25)

Introduced by: New York

Subject: Disclosure of Individual Physician Volunteers Participation in Committee Decision-making to other Organizations, Stakeholders and Joint Providers

Referred to: Reference Committee C

Whereas, Accredited Continuing Education is recognized as essential for the continuing professional and personal development for physicians to improve the health and wellbeing of patients as well as the communities in which we live and work; and

Whereas, Accreditation Council for Continuing Medical Education (ACCME) updated Standards for Integrity and Independence in accredited Continuing Education policies and guidelines require an accredited provider of Continuing Education (CE) to comply in order to maintain its accreditation status; and

Whereas, the Standard 3 for Integrity and Independence in accredited Continuing Education requires the identification, mitigation and disclosure of relevant financial relationships of all individuals in control of the educational activity to its learners; and

Whereas, the CME committee members are planners of the activity; and

Whereas, the CME committee members, who have fulfilled the stringent requirements of these Standards, are volunteering their time and expertise in the approval process/decision-making of the education activity; and

Whereas, many of the educational activities are with joint providers (of which many are non-physician led CE provider entities) who are engaged in providing accredited CE to physicians; and

Whereas, there are instances when the subject matter and/or the content of the educational activity is considered controversial; and

Whereas, there are instances when the decisions made by the committee are not aligned with the joint provider applicant’s expectations or unfavorable to the joint provider; and

Whereas, despite the existence of an independent appeals process, there have been reported threats of legal action against the committee and its members; and

Whereas, disclosure of individual names of committee members’ attendance, manner of voting or participation in the decision-making of the individual educational activity can have an adverse impact on the volunteers and the committee’s work; and

Whereas, the decisions are made by the committee reflecting its work and not of any individual member, thus making the disclosure of an individual’s personal participation information unnecessary; therefore be it

RESOLVED, that our American Medical Association adopt a policy that individual names of committee members' attendance, manner of voting or participation in the decision-making of the committee activity is considered confidential information and not disclosed to outside entities (other organizations, stakeholders and joint providers) (Directive to Take Action); and be it further

RESOLVED, that our AMA petition the ACCME to amend policies which require disclosure of physician participation in the planning and development of accredited continuing education for physicians. (Directive to Take Action)

Fiscal Note: Minimal – less than $1,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 308
(A-25)

Introduced by: Ohio

Subject: Streamlining Annual Compliance Training Requirements for Physicians

Referred to: Reference Committee C

Whereas, compliance training is valuable to maintaining high standards of patient care and professional conduct; and

Whereas, physicians are currently required to complete multiple, often redundant, annual compliance trainings across various healthcare facilities, resulting in undue burdens on their time and resources; and

Whereas, annual compliance training often results in physicians spending an many hours annually on repetitive training sessions, time better utilized for patient care; and

Whereas, the lack of a standardized, centralized system for compliance training contributes to inefficiencies and unnecessary duplication of efforts; and

Whereas, the financial and administrative burdens associated with compliance trainings are significant and often uncompensated; therefore be it

RESOLVED, that our American Medical Association advocate for the creation of reciprocity programs that allow physicians to receive credit for compliance training completed at one healthcare entity towards requirements at other facilities, provided the training meets specified standards (Directive to Take Action); and be it further

RESOLVED, that our AMA collaborate with relevant stakeholders to explore options for fair compensation or continuing medical education (CME) credits for time spent on mandatory compliance training. (Directive to Take Action)

Fiscal Note: Modest – between $1,000 - $5,000

Received: 4/22/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 309
(A-25)

Introduced by: Oklahoma

Subject: Increasing Education on Physician-Led Care and Advocacy in Residency Training

Referred to: Reference Committee C

Whereas, the healthcare landscape is evolving, with increasing pressure from non-physician practitioners and corporate entities, including private equity, which may challenge the physician-led model of care and affect the quality of patient care; and

Whereas, physicians are uniquely qualified to lead patient care in diagnostic and interventional procedures, ensuring that decisions are made with a high degree of medical expertise and in the best interest of patients; and

Whereas, physician-led care is central to the highest quality of healthcare delivery, and preserving this model is crucial to maintaining patient safety, appropriate medical decision-making, and ethical standards in medical practice; and

Whereas, advocacy for physician-led care is essential to protecting the medical profession from external pressures that may dilute physician oversight and autonomy, particularly in the context of healthcare policy, regulation, and corporate influence; and

Whereas, residents are the future leaders of the profession, and it is critical that they are equipped with both the knowledge and skills to advocate for physician-led care and engage in effective advocacy at the local, state, and national levels; and

Whereas, other professions include advocacy in their curricular requirements including engaging with the legislature through advocacy days on the hill such as transporting students to the Capitol during class time for course credit [1] [2] [3]; and

Whereas, our American Medical Association has long lead advocacy, such as the National Advocacy Conference, State Advocacy Summit and Medical Student Advocacy Conference, making it uniquely suited to develop educational modules for trainees; and

Whereas, our AMA plays a pivotal role in supporting education, professional development, and advocacy within the medical community; therefore be it

RESOLVED, that our American Medical Association develop and provide educational resources, toolkits, and workshops that residency programs can implement to teach residents about physician-led care, advocacy strategies, and how to effectively engage with healthcare policymakers and organizations (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage residency programs to include opportunities for residents and trainees to engage in real-world advocacy efforts at the local, state, and national levels, in collaboration with state societies and other medical organizations. (New HOD Policy)

Fiscal Note: Moderate – between $5,000 - $10,000

Received: 4/17/25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 310
(A-25)

Introduced by: Resident and Fellow Section

Subject: Protections for Trainees Experiencing Retaliation in Medical Education

Referred to: Reference Committee C

Whereas, discrimination is a pervasive, harmful phenomenon that plagues current graduate medical education programs, with studies finding over 45% of residents had exposure to some type of workplace mistreatment (e.g., discrimination, abuse, harassment) and nearly 25% experience discrimination based on their race, ethnicity, or religion, with the highest rates for Black respondents [1,2,3]; and

Whereas, discrimination has been shown to lead to higher rates of burnout and early withdrawal from residency[2]; and
