REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 1-A-26

Subject: Council on Science and Public Health Sunset Review of 2016 House Policies

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee D

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. This policy reads as follows, laying out the parameters for review and specifying the needed procedures:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.
6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Science and Public Health recommends that the House of Delegates policies listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed. (Directive to Take Action)

Fiscal Note: Minimal

APPENDIX: RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
D-120.936	Urine Drug Testing	Our AMA will, in conjunction with the AMA Opioid Task Force, develop practical guidance and educational materials to assist physicians with implementing urine drug testing as part of a risk mitigation strategy when opioid analgesics are prescribed for chronic use.	Rescind, accomplished. *The AMA hosted the Webinar "The Art of Urine Drug Testing: A Patient-Centered Approach." The AMA also promotes related education on the AMA Ed Hub™: Fundamentals of Urine Drug Testing and Crossing the Knowledge Gap in Drug Test Interpretation.*
D-120.937	Hormone Therapies: Off-Label Uses and Unapproved Formulations	Our AMA urges the United States Pharmacopeia to re-examine the validity of the current estriol monograph.	Retain, still relevant.
D-120.940	NPS Report Distribution to Practicing Physicians	Our AMA will distribute and promote the National Pain Strategy report to practicing physicians.	Rescind, accomplished.
D-120.969	Compounded Hormone Therapy Preparations	Our AMA: (1) recognizes the term "bioidentical hormone" as a marketing term not grounded in science; use of the term "compounded hormone therapy" is preferred; (2) will urge that renewed attention be devoted to the purity and potency of compounded hormone therapy formulations; (3) will urge continued attention to the reporting of adverse events related to the use of compounded hormone therapies; (4) recommends that physicians and other prescribers fully inform patients of the potential side effects and risks of the use of compounded hormone replacement therapy; (5) will request that when drug ingredients with black box warnings are used in compounded products, patients should be informed about the warnings and precautions associated with the use of such drug ingredients; and (6) supports that patients be informed that compounded products are not FDA-approved.	Retain, still relevant.

D-120.988	Inappropriate Actions by Pharmacies and Pharmacy Benefit Managers	Our AMA, in cooperation with pharmacy benefit managers, pharmacy companies, and other drug retailing organizations, shall develop model procedures that physicians may use when prescribing off-formulary pharmaceuticals that are medically indicated and that these procedures be in compliance with the Health Insurance and Portability and Accountability Act of 1996.	Retain, still relevant.
D-135.970	Coal-Tar Based Sealcoat Threat to Human Health and the Environment	Our AMA will advocate for legislation to ban the use of pavement sealcoats that contain polycyclic aromatic hydrocarbons (PAH) or require use of sealcoat products that contain minimal PAH.	Retain, still relevant.
D-135.986	Public Health Hazards Associated with Landscaping Services	Our AMA encourages the Occupational Safety and Health Administration to collaborate with the AMA, other appropriate medical societies, and other pertinent federal agencies to identify and recommend strategies to prevent and reduce the potential public health hazards created by various landscaping services (including lawn-mowing, fertilization, weed, insect & grub control, tree & bush care, debris removal, fence, driveway, rock garden & stone path construction requiring use of saws, and a full spectrum of motorized equipment).	Retain as amended to correct formatting errors. Our AMA encourages the Occupational Safety and Health Administration to collaborate with the AMA, other appropriate medical societies, and other pertinent federal agencies to identify and recommend strategies to prevent and reduce the potential public health hazards created by various landscaping services (including lawn-mowing, fertilization, weed, insect, and ~~&~~ grub control, tree ~~&~~ and bush care, debris removal, fence, driveway, rock garden and ~~&~~ stone path construction requiring use of saws, and a full spectrum of motorized equipment).
D-135.987	Modern Chemicals Policies	Our AMA: (1) will call upon the United States government to implement a national modern, comprehensive chemicals policy that is in line with current scientific knowledge on human and environmental health, and that	Retain, still relevant.

		requires a full evaluation of the health impacts of both newly developed and industrial chemicals now in use; and (2) encourages the training of medical students, physicians, and other health professionals about the human health effects of toxic chemical exposures.	
D-135.993	Contamination of Drinking Water by Pharmaceuticals and Personal Care Products	Our AMA supports the EPA and other federal agencies in engaging relevant stakeholders, which may include, but is not limited to the AMA, pharmaceutical companies, pharmaceutical retailers, state and specialty societies, and public health organizations in the development of guidelines for physicians and the public for the proper disposal of pharmaceuticals and personal care products to prevent contamination of drinking water systems.	Retain as amended and convert to an H-policy. Our AMA supports ~~the EPA and other federal agencies in engaging relevant stakeholders, which may include, but is not limited to the AMA, pharmaceutical companies, pharmaceutical retailers, state and specialty societies, and public health organizations in the development of guidelines for physicians and the public for~~ the proper disposal of pharmaceuticals and personal care products to prevent contamination of drinking water systems. *The EPA has developed resources and finalized a rule on managing pharmaceutical waste.*
D-30.994	Take Action to End Alcohol Ads on College Sports Telecasts	Our AMA will enhance its efforts to end alcohol advertising on sports broadcasts and particularly on college sports broadcasts; and to reach this goal, work with others to place special emphasis on college athletic conferences that are now or soon will be negotiating broadcast rights contracts, taking steps that include, but are not limited to: (1) Appealing directly to the NCAA, all college athletic conferences and member schools to end alcohol ads on their broadcasts; (2) Encouraging physicians, particularly those in or associated with college communities, to express their	Retain, still relevant.

		opposition to alcohol ads directly to top college administrators; (3) Urging state and local medical associations to contact colleges in their jurisdictions--particularly in the above conferences--and press them to end alcohol ads on their broadcasts; (4) Urging state and local medical associations to call on state legislatures to pass resolutions requesting colleges in their state to end alcohol ads on their broadcasts; and (5) Organizing a "sign-on" letter from medical societies to the NCAA President and Executive Committee urging an end to alcohol ads on NCAA broadcasts.	
D-440.997	Support for Public Health	1. Our AMA House of Delegates request the Board of Trustees to include in their long range plans, goals, and strategic objectives to support the future of public health in order "to fulfill society's interest in assuring the conditions in which people can be healthy." This shall be accomplished by AMA representation of the needs of its members? patients in public health-related areas, the promotion of the necessary funding and promulgation of appropriate legislation which will bring this to pass. 2. Our AMA: (A) will work with Congress and the Administration to prevent further cuts in the funds dedicated under the Patient Protection and Affordable Care Act to preserve state and local public health functions and activities to prevent disease; (B) recognizes a crisis of inadequate public health funding, most intense at the local and state health jurisdiction levels, and	Retain as amended. 1. Our AMA House of Delegates request the Board of Trustees to include in their long range plans, goals, and strategic objectives to support the future of public health in order "to fulfill society's interest in assuring the conditions in which people can be healthy." This shall be accomplished by AMA representation of the needs of its members~~?~~ and patients in public health-related areas, and the promotion of the necessary funding and promulgation of appropriate legislation which will bring this to pass.

		encourage all medical societies to work toward restoration of adequate local and state public health functions and resources; and (C) in concert with state and local medical societies, will continue to support the work of the Centers for Disease Control and Prevention, and the efforts of state and local health departments working to improve community health status, lower the risk of disease and protect the nation against epidemics and other catastrophes. 3. Our AMA recognizes the importance of timely research and open discourse in combatting public health crises and opposes efforts to restrict funding or suppress the findings of biomedical and public health research for political purposes.	
D-490.979	Banning Smoking in All Workplaces	Our AMA will (1) actively support national, state, and local legislation and actively pursue regulations banning smoking in all workplaces; and (2) work to ensure that federal legislation banning smoking in all workplaces does not prohibit or weaken more strict state or local regulations.	Retain, still relevant.
D-620.989	Promote Teen Health Week	1. Our AMA will actively promote Teen Health Week 2017 and encourage state medical associations and specialty medical associations across the nation to join the initial efforts as originated in Pennsylvania, and will encourage schools and other appropriate organizations to adopt, promote and participate in Teen Health Week. 2. Our AMA will actively advocate, through direct communication with the appropriate agencies and organizations,	Retain as amended and convert to an H-policy. 1. Our AMA will actively promote Teen Health Week ~~2017~~ and encourage state medical associations, ~~and~~ specialty medical associations, ~~across the nation to join the initial efforts as originated in Pennsylvania, and will encourage~~ schools and other appropriate organizations to adopt, promote and participate in Teen Health Week. ~~2. Our AMA will actively advocate, through direct communication with the~~

		for the development of an annually recognized Teen Health Week.	~~appropriate agencies and organizations, for the development of an annually recognized Teen Health Week~~ *The AMA promoted Teen Health Week via an article in 2017 and 2018. We also promoted the International Adolescent Health Week in 2021 (Facebook interview with founder of IAHW).*
H-10.961	Ocular Injuries from Air Guns	Our AMA: (1) encourages the use and provision of protective eyewear when using air guns; and (2) encourages education on the proper use of protective eyewear to avoid ocular injuries.	Retain, still relevant.
H-10.974	Assurance of the Public's Health Aboard Cruise Ships	The AMA, through federal legislation or international treaty as appropriate, urge the development of standards for the provision of medical care, including emergency medical care, for passengers aboard cruise ships entering or leaving United States ports.	Retain as amended. The AMA~~, through federal legislation or international treaty as appropriate, urge the development of~~ supports standards for the provision of medical care, including emergency medical care, for passengers aboard cruise ships entering or leaving United States ports. *The American College of Emergency Physicians published Cruise Ship Health Care Guidelines, which according to the CDC, most major cruise lines follow.*
H-115.985	Warning Labels on Over-The-Counter Iron Preparations and Dietary Supplements	The AMA (1) urges physicians to warn diagnosed patients with hereditary hemochromatosis against the use of over-the-counter iron preparations and dietary supplements containing iron; (2) believes that therapeutic doses of iron should be used only to treat iron-deficiency anemia; and (3) believes that the prophylactic use of iron preparations should be reserved for individuals at high risk of developing iron deficiency.	Retain, still relevant.

H-120.932	Pharmacy Review of First Dose Medication	It is AMA policy that a pharmacist should be available in person or by other means for consultation when medication is administered in a hospital setting.	Retain, still relevant.
H-120.943	Adequate Prescription Medication Supply	1. Our AMA urges health plans to: (a) define a month's supply as a minimum of 31 days and three month's supply as a minimum of 93 days, so that patients are not shorted on their one-month or three-month supply of prescription drugs; and (b) allow prescription refills to provide the appropriate number of doses for the time period specified by the physician. 2. Our AMA will advocate and support advocacy at the state and federal levels against arbitrary prescription limits that restrict access to medically necessary treatment by limiting the dose, amount or days of the first or subsequent prescription for patients with pain related to a cancer or terminal diagnosis.	Retain, still relevant.
H-120.945	Pharmacy Compounding	Our AMA: (1) recognizes that traditional compounding pharmacies must be subject to state board of pharmacy oversight and comply with current United States Pharmacopeia and National Formulary (USP-NF) compounding monographs, when available, and recommends that they be required to conform with USP-NF General Chapters on pharmaceutical compounding to ensure the uniformity, quality, and safety of compounded medications; (2) encourages all state boards of pharmacy to reference sterile compounding quality standards, including but not limited to those contained in United States Pharmacopeia Chapter 797, as the	Retain, still relevant.

		standard for sterile compounding in their state, and to satisfy other relevant standards that have been promulgated by the state in its laws and regulations governing pharmacy practice; (3) supports the view that facilities (other than pharmacies within a health system that serve only other entities within that health system) that compound sterile drug products without receiving a prescription order prior to beginning compounding and introduce such compounded drugs into interstate commerce be recognized as compounding manufacturers subject to FDA oversight and regulation; (4) supports the view that allowances must be made for the conduct of compounding practices that can realistically supply compounded products to meet anticipated clinical needs, including urgent and emergency care scenarios, in a safe manner; and (5) in the absence of new federal legislation affecting the oversight of compounding pharmacies, continues to encourage state boards of pharmacy and the National Association of Boards of Pharmacy to work with the United States Food and Drug Administration to identify and take appropriate enforcement action against entities that are illegally manufacturing medications under the guise of pharmacy compounding.	
H-120.963	Epidemiology of Drug Errors	The AMA will continue its collaborations with the Food and Drug Administration and the US Pharmacopoeial Convention, Inc., along with its own ongoing initiatives, to identify and eliminate causes of medication errors.	Retain as amended to update terminology and correct spelling. The AMA will continue its collaborations with the Food and Drug Administration and the US Pharmacop~~o~~eial Convention, ~~Inc.~~, along with its own ongoing

			initiatives, to identify and eliminate causes of medication errors.
H-125.985	Expanded Use of the AMA's Principles of a Sound Drug Formulary	Our AMA urges managed care organizations, pharmacy benefit managers, and others who design benefit packages and/or make pharmacy benefit decisions, to utilize the Principles of a Sound Drug Formulary System (as described in BOT Rep. 28, I-00) as they develop their pharmaceutical benefit plan(s) and that the Principles of a Sound Drug Formulary System be readily available on the AMA web site.	Retain as amended. Our AMA urges managed care organizations, pharmacy benefit managers, and others who design benefit packages and/or make pharmacy benefit decisions, to utilize the Principles of a Sound Drug Formulary System ~~(as described in BOT Rep. 28, I-00)~~ as they develop their pharmaceutical benefit plan(s) ~~and that the Principles of a Sound Drug Formulary System be readily available on the AMA web site.~~ *AMA does not have control over this resource and thus, would not showcase it on our website. The resource is readily available online.*
H-130.979	National Disaster Medical System	The AMA endorses the U.S. Department of Homeland Security's National Disaster Medical System, which was designed to fulfill three main objectives: (1) to provide medical assistance to a disaster area in the form of medical teams, supplies and equipment; (2) to evacuate patients who cannot be cared for in the affected area to designated locations elsewhere in the nation; and (3) to provide hospitalization in a national network of hospitals that have agreed to accept patients in the event of a national emergency.	Retain as amended. The AMA endorses the U.S. Administration for Strategic Preparedness and Response's ~~U.S. Department of Homeland Security's~~ National Disaster Medical System which was designed to fulfill three main objectives: (1) to provide medical assistance to a disaster area in the form of medical teams, supplies and equipment; (2) to evacuate patients who cannot be cared for in the affected area to designated locations elsewhere in the nation; and (3) to provide hospitalization in a national network of hospitals that have agreed to accept patients in the event of a national emergency. *The National Disaster Medical System is no longer managed under the Department of Homeland Security; it's under HHS's Administration for Strategic Preparedness and Response.*

H-135.924	Assurance and Accountability for EPA's State Level Agencies	Our AMA supports requiring that the United States Environmental Protection Agency (EPA) conduct regular quality assurance reviews of state agencies that are delegated to enforce EPA regulations.	Retain, still relevant.
H-135.925	Medications Return Program	1. Our AMA supports access to safe, convenient, and environmentally sound medication return for unwanted prescription medications 2. Our AMA supports such a medication disposal program be fully funded by the pharmaceutical industry, including costs for collection, transport and disposal of these materials as hazardous waste. 3. Our AMA supports changes in federal law or regulation that would allow a program for medication recycling and disposal to occur.	Retain, still relevant.
H-135.927	Human and Environmental Effects of Light Emitting Diode (LED) Community Lighting	1. Our AMA supports the proper conversion to community-based Light Emitting Diode (LED) lighting, which reduces energy consumption and decreases the use of fossil fuels. 2. Our AMA encourages minimizing and controlling blue-rich environmental lighting by using the lowest emission of blue light possible to reduce glare. 3. Our AMA encourages the use of 3000K or lower lighting for outdoor installations such as roadways. All LED lighting should be properly shielded to minimize glare and detrimental human and environmental effects, and consideration should be given to utilize the ability of LED lighting to be dimmed for off-peak time periods.	Retain, still relevant.
H-135.936	Proper Disposal of Unused Prescription and	1. Our AMA supports initiatives designed to promote and facilitate the	Retain as amended.

	Over-the-Counter (OTC) Drugs	safe and appropriate disposal of unused medications. 2. Our AMA will work with other national organizations and associations to inform, encourage, support and guide hospitals, clinics, retail pharmacies, and narcotic treatment programs in modifying their US Drug Enforcement Administration registrations to become authorized medication collectors and operate collection receptacles at their registered locations. 3. Our AMA will work with other appropriate organizations to develop a voluntary mechanism to accept non-controlled medication for appropriate disposal or recycling.	1. Our AMA supports initiatives designed to promote and facilitate the safe and appropriate disposal of unused medications. 2. Our AMA ~~will work with other~~ supports efforts by national organizations and associations to inform, encourage, ~~support~~ and guide hospitals, clinics, retail pharmacies, and narcotic treatment programs in modifying their US Drug Enforcement Administration registrations to become authorized medication collectors and operate collection receptacles at their registered locations. 3. Our AMA ~~will work with~~ supports other appropriate organizations ~~to~~ developing a voluntary mechanism to accept non-controlled medication for appropriate disposal or recycling. *Related AMA work includes the following: Keeping unused meds out of the wrong hands just got easier ; 2024 FDA Guidance ; 2025 FDA Guidance ; AMA 2019 Article – AMA urges participation in Prescription Drug Take Back Day*.
H-135.956	Human and Environmental Health Impacts of Chlorinated Chemicals	The AMA: (1) encourages the Environmental Protection Agency to base its evaluations of the potential public health and environmental risks posed by exposure to an individual chlorinated organic compound, other industrial compound, or manufacturing process on reliable data specific to that compound or process; (2) encourages the chemical industry to increase knowledge of the environmental behavior, bioaccumulation potential, and toxicology of their products and by-products; and (3) supports the implementation of risk reduction	Retain, still relevant.

		practices by the chemical and manufacturing industries.	
H-145.973	Firearm Related Injury and Death: Adopt a Call to Action	Our AMA endorses the specific recommendations made by an interdisciplinary, inter-professional group of leaders from the American Academy of Family Physicians, American Academy of Pediatrics, American College of Emergency Physicians, American College of Obstetricians and Gynecologists, American College of Physicians, American College of Surgeons, American Psychiatric Association, American Public Health Association, and the American Bar Association in the publication "Firearm-Related Injury and Death in the United States: A Call to Action From 8 Health Professional Organizations and the American Bar Association," which is aimed at reducing the health and public health consequences of firearms and lobby for their adoption.	Retain, still relevant.
H-145.982	Prevention of Ocular Injuries from BB and Air Guns	The AMA encourages businesses that sell BB and air guns to make appropriate and safe protective eye wear available and encourages its use to their customers and to distribute educational materials on the safe use of non-powder guns.	Retain, still relevant.
H-15.978	Voluntary Highway Lights-On Campaign	The AMA advocates and encourages the institution of voluntary lights-on efforts during daylight hours for all motor vehicles not already automatically equipped with daytime running lights on American highways.	Retain, still relevant.
H-150.979	Fast Food	The AMA encourages fast food restaurants to reduce the saturated fat content of their foods, as well as to offer	Retain as amended to correct grammar. The AMA encourages fast food restaurants to reduce the saturated fat content of their foods, as well as to offer

		low fat alternatives to highly saturated fat foods.	low fat alternatives to foods high~~ly~~ in saturated fat ~~foods~~.
H-170.995	Healthful Lifestyles	The AMA believes that consumers should be encouraged and assisted to learn healthful practices by: (1) educating and motivating the consumers to adopt more healthful lifestyles; (2) exploring methods of utilizing public communication more effectively in health education efforts directed towards motivating consumers to adopt healthful lifestyles; (3) encouraging consumers, in appropriate risk groups, to utilize professional preventive health care services which would permit the early detection and treatment, or the prevention, of illness; and physicians demonstrating these practices through personal examples of health lifestyles.	Retain as amended to correct grammar. The AMA believes that consumers should be encouraged and assisted to learn healthful practices by: (1) educating and motivating the consumers to adopt more healthful lifestyles; (2) exploring methods of utilizing public communication more effectively in health education efforts directed towards motivating consumers to adopt healthful lifestyles; (3) encouraging consumers, in appropriate risk groups, to utilize professional preventive health care services which would permit the early detection and treatment, or the prevention, of illness; and physicians demonstrating these practices through personal examples of healthy lifestyles.
H-20.904	HIV/AIDS Education and Training	(1) Public Information and Awareness Campaigns Our AMA: a) Supports development and implementation of HIV/AIDS health education programs in the United States by encouraging federal and state governments through policy statements and recommendations to take a stronger leadership role in ensuring interagency cooperation, private sector involvement, and the dispensing of funds based on real and measurable needs. This includes development and implementation of language- and culture-specific education programs and materials to inform minorities of risk behaviors associated with HIV infection. b) Our AMA urges the communications industry, government officials, and the	Retain as amended to update terminology. …(3) Education and Training Initiatives for Practicing Physicians and Other Health Care ~~Workers~~ Personnel Our AMA supports continued efforts to work with other medical organizations, public health officials, universities, and others to foster the development and/or enhancement of programs to provide comprehensive information and training for primary care physicians, other front-line health ~~workers~~ personnel (specifically including those in addiction treatment and community health centers and correctional facilities), and auxiliaries focusing on basic knowledge of HIV infection, modes of transmission, and recommended risk reduction strategies.

		health care communities together to design and direct efforts for more effective and better targeted public awareness and information programs about HIV disease prevention through various public media, especially for those persons at increased risk of HIV infection; c) Encourages education of patients and the public about the limited risks of iatrogenic HIV transmission. Such education should include information about the route of transmission, the effectiveness of universal precautions, and the efforts of organized medicine to ensure that patient risk remains immeasurably small. This program should include public and health care worker education as appropriate and methods to manage patient concern about HIV transmission in medical settings. Statements on HIV disease, including efficacy of experimental therapies, should be based only on current scientific and medical studies; d) Encourages and will assist physicians in providing accurate and current information on the prevention and treatment of HIV infection for their patients and communities; e) Encourages religious organizations and social service organizations to implement HIV/AIDS education programs for those they serve. (2) HIV/AIDS Education in Schools Our AMA: a) Endorses the education of elementary, secondary, and college students regarding basic knowledge of HIV infection, modes of transmission,	

		and recommended risk reduction strategies; b) Supports efforts to obtain adequate funding from local, state, and national sources for the development and implementation of HIV educational programs as part of comprehensive health education in the schools. (3) Education and Training Initiatives for Practicing Physicians and Other Health Care Workers Our AMA supports continued efforts to work with other medical organizations, public health officials, universities, and others to foster the development and/or enhancement of programs to provide comprehensive information and training for primary care physicians, other front-line health workers (specifically including those in addiction treatment and community health centers and correctional facilities), and auxiliaries focusing on basic knowledge of HIV infection, modes of transmission, and recommended risk reduction strategies.	
H-215.961	Community Benefit Dollars for Diabetes Prevention	1. Our AMA supports allocating community benefit dollars to cover the cost of enrolling patients in an in-person or virtual diabetes prevention program that is part of the Center for Disease Control and Prevention's Diabetes Prevention Recognition Program. 2. Our AMA will work with the American Hospital Association and other stakeholders to develop and disseminate a position paper with guidance for covering the costs of the Center for Disease Control and Prevention's Diabetes Prevention	Retain, still relevant.

		Recognition Program with community benefit dollars. 3. Our AMA encourages each state medical society to work with their respective hospitals and local Diabetes Prevention Program providers to offer the Center for Disease Control and Prevention's Diabetes Prevention Recognition Program to patients. 4. Our AMA encourages that private and public payors offer the Centers for Disease Control and Prevention's Diabetes Prevention Recognition Program to patients as part of their suite of benefits.	
H-245.967	Prevention of Newborn Falls in Hospitals	Our AMA supports implementation of newborn fall prevention plans and post-fall procedures through clinically proven, high-quality, and cost-effective approaches.	Retain, still relevant.
H-25.991	Alzheimer's Disease	Our AMA: (1) encourages physicians to make appropriate use of guidelines for clinical decision making in the diagnosis and treatment of Alzheimer's disease and other dementias; (2) encourages physicians to make available information about community resources to facilitate appropriate and timely referral to supportive caregiver services; (3) encourages studies to determine the comparative cost-effectiveness/cost-benefit of assisted in-home care versus nursing home care for patients with Alzheimer's disease and related disorders; (4) encourages studies to determine how best to provide stable funding for the	Retain, still relevant.

		long-term care of patients with Alzheimer's disease and other dementing disorders; (5) supports the use of evidence-based cost-effective technologies with prior consent of patients or designated healthcare power of attorney, as a solution to prevent, identify, and rescue missing patients with Alzheimer's disease and other related dementias with the help of appropriate allied specialty organizations; (6) supports increased awareness of the sex and gender differences in incidence and etiology of Alzheimer's disease and related dementias; and (7) encourages increased enrollment in clinical trials of appropriate patients with Alzheimer's disease and related dementias, and their families, to better identify sex-differences in incidence and progression and to advance a treatment and cure of Alzheimer's disease and related dementias.	
H-280.946	Policies on Intimacy and Sexual Behavior in Residential Aged Care Facilities	Our AMA urges long-term care facilities and other appropriate organizations to: (1) adopt policies and procedures on intimacy and sexual behavior that preserve residents' rights to pursue sexual relationships, while protecting them from unsafe, unwanted, or abusive situations; and (2) provide staff with in-service training to develop a framework to address intimacy in their patient population.	Retain, still relevant.
H-30.935	Powdered Alcohol	Our AMA supports federal and state laws banning the manufacture, importation, distribution, and sale of	Retain, still relevant.

		powdered or crystalline alcohol intended for human consumption.	
H-30.948	Improving Nutritional State of Persons with Alcohol Use Disorder	The AMA encourages appropriate local, state and federal agencies to increase their efforts to: (a) improve the overall nutritional and health status of individuals with alcohol dependency and (b) reduce alcohol dependency.	Retain as amended to align the policy language with the title. The AMA encourages appropriate local, state and federal agencies to increase their efforts to: (a) improve the overall nutritional and health status of individuals with alcohol use disorder ~~dependency~~ and (b) reduce alcohol use disorder ~~dependency.~~
H-345.971	Faith and Mental Health	Our AMA supports: (1) mental health and faith community partnerships that foster improved education and understanding regarding culturally competent, medically accepted, and scientifically proven methods of care for psychiatric and substance use disorders; (2) better understanding on the part of mental health providers of the role of faith in mental health and addiction recovery for some individuals; and (3) efforts of mental health providers to create respectful, collaborative relationships with local religious leaders to improve access to scientifically sound mental health services.	Retain, still relevant.
H-345.974	Culturally, Linguistically Competent Mental Health Care and Outreach for At-Risk Communities	Our American Medical Association supports adequate attention and funds being directed towards culturally and linguistically competent mental health direct services for the diverse, multi-ethnic communities at greatest risk, and encourages greater cultural and linguistic-competent outreach to ethnic communities including partnerships with ethnic community organizations, health care advocates, and respected media outlets.	Retain, as amended to update language to be more inclusive. Our American Medical Association supports adequate attention and funds being directed towards culturally and linguistically competent mental health direct services for the diverse~~, multi-ethnic~~ communities at ~~greatest~~ risk, and encourages greater cultural and linguistic-competent outreach to ~~ethnic~~ communities including partnerships with ~~ethnic~~ community organizations

H-370.961	Umbilical Cord Blood Transplantation: The Current Scientific Understanding	Our AMA will: (1) encourage continued research into the scientific issues surrounding the use of umbilical cord blood-derived hematopoietic stem cells for transplantation, including the ex vivo expansion of umbilical cord blood-derived hematopoietic stem cells; the combination of multiple units of closely matched, unrelated umbilical cord blood cells for transplantation; and the improvement of umbilical cord blood cells collection techniques; and (2) support education for physicians and the public about the potential benefits of, and limitations to, umbilical cord blood transplantation as an alternative to bone marrow transplantation.	Retain, still relevant.
H-370.970	Umbilical Cord Blood Transplantation: The Current Scientific Understanding	Our AMA: (1) urges physicians to recognize that umbilical cord blood transplantation is a viable alternative to bone marrow transplantation in appropriately selected patients; (2) encourages the development of national standardized guidance to address the ethical, economic, and social issues surrounding umbilical cord blood transplantation; and (3) will continue to study cord blood banking in this country, and work with appropriate specialty societies and organizations, such as the National Marrow Donor Program, to develop and disseminate materials to educate physicians and the public about the issues of marketing cord blood banking services directly to patients, the informed consent process, and the existence of federally mandated regulatory oversight of these processes to ensure safety and compliance with specific uniform standards.	Retain, still relevant.

H-420.982	Standard Terminology for Reporting of Reproductive Health Statistics in the United States	The AMA supports attempts to standardize terminology for reproductive health statistics and, thus, to provide a uniform basis from which the collection and analysis of statistical data may proceed.	Retain, still relevant.
H-425.984	Clinical Preventive Services	Implications for Adolescent, Adult, and Geriatric Medicine: (1) Prevention should be a philosophy that is espoused and practiced as early as possible in undergraduate medical schools, residency training, and continuing medical education, with heightened emphasis on the theory, value, and implementation of both clinical preventive services and population-based preventive medicine. (2) Practicing physicians should become familiar with authoritative clinical preventive services guidelines and routinely implement them as appropriate to the age, gender, and individual risk/environmental factors applicable to the patients in the practice at every opportunity, including episodic/acute care visits. (3) Where appropriate, clinical preventive services recommendations should be based on outcomes-based research and effectiveness data. Federal and private funding should be increased for further investigations into outcomes, application, and public policy aspects of clinical preventive services.	Retain, still relevant.
H-440.824	Educating Clinicians and the Public About Amebic Meningoencephalitis	Our AMA supports: (1) CDC training and education efforts relating to Primary Amebic Meningoencephalitis (PAM); and (2) clinical guidelines and standards of care that promote rapid diagnosis and effective treatment of PAM.	Retain, still relevant. *Diagnosis of PAM is almost exclusively through CDC, which provides 24/7 support. CDC has a page on treatment options. With only 5 survivors and a survival rate of only 5%, it's hard to know what works. Delayed diagnosis is still*

			thought to be a common reason for bad outcomes with PAM.
H-440.825	Fund for Public Health Emergency Response	Our AMA supports the reauthorization and appropriation of sufficient funds to a public health emergency fund within the Department of Health and Human Services to facilitate adequate responses to public health emergencies without redistributing funds from established public health accounts.	Retain, still relevant.
H-440.826	Opposition to Quarantine for Zika Patients	Our AMA opposes quarantine measures for Zika-infected patients.	Retain, still relevant.
H-440.841	Permitting Sunscreen in Schools	1. Our AMA supports the exemption of sunscreen from over-the-counter medication possession bans in schools and encourages all schools to allow students to bring and possess sunscreen at school without restriction and without requiring physician authorization. 2. Our AMA will work with state and specialty medical societies and patient advocacy groups to provide advocacy resources and model legislation for use in state advocacy campaigns seeking the removal of sunscreen-related bans at schools and summer camp programs.	Retain, still relevant.
H-440.864	Noise Pollution	Our AMA recognizes noise pollution as a public health hazard, with respect to hearing loss, and supports initiatives to increase awareness of the health risks of loud noise exposure.	Retain, still relevant.
H-440.879	Expedited Partner Therapy (Patient-delivered Partner Therapy): An Update	Our AMA supports the Centers for Disease Control and Prevention's guidance on expedited partner therapy (EPT) that was published in its 2006 white paper, Expedited Partner Therapy in the Management of Sexually Transmitted Diseases.	Retain as amended. Our AMA supports the Centers for Disease Control and Prevention's guidance on expedited partner therapy (EPT) that was published in its ~~2006 white paper, Expedited Partner Therapy in the Management of Sexually Transmitted~~

			~~Diseases~~ Sexually Transmitted Infections (STI) Treatment Guidelines.
H-440.880	Definition of Health	The AMA officially adopts the following definition of health: "Health is a state of physical and mental well-being."	Retain, still relevant. *The Council notes that this definition should include social well-being, but the sunset report is not the appropriate mechanism for this change.*
H-440.897	Noise Induced Hearing Loss In Children And Adolescents	1. Our AMA: (a) encourages public education about the dangers of noise-induced hearing loss especially from toys and electronic devices; and (b) encourages the Consumer Product Safety Commission and other appropriate agencies to study the impact of toys and electronic devices on noise-induced hearing loss among children and adolescents. 2. Our AMA adopts pediatric noise exposure standards recommending that children avoid toys that produce greater than 85 dB of SPL, or greater than 90 dB SPL for more than one hour. 3. Our AMA will work with other stakeholders to ensure toy manufacturers' adherence to pediatric noise exposure standards that children avoid toys that produce 85 dB of SPL, or greater than 90 dB SPL. 4. Our AMA will work with other stakeholders to require that manufacturers label toys with the level of sound produced and/or a warning that sound production exceeds safety standards (85 dB of SPL) and may result in hearing loss.	Retain as amended. 1. Our AMA: (a) encourages public education about the dangers of noise-induced hearing loss especially from toys and electronic devices; and (b) encourages the Consumer Product Safety Commission and other appropriate agencies to study the impact of toys and electronic devices on noise-induced hearing loss among children and adolescents. 2. Our AMA adopts pediatric noise exposure standards recommending that children avoid toys that produce greater than 85 dB of SPL~~, or greater than 90 dB SPL for more than one hour~~. 3. Our AMA will work with other stakeholders to ensure toy manufacturers' adherence to pediatric noise exposure standards that children avoid toys that produce 85 dB of SPL~~, or greater than 90 dB SPL~~. 4. Our AMA will work with other stakeholders to require that manufacturers label toys with the level of sound produced and/or a warning that sound production exceeds safety standards (85 dB of SPL) and may result in hearing loss. *According to the National Institute on Deafness and Other Communication Disorder noises are more likely to damage*

			your hearing if they are: 85 dBA and last a few hours; 100 dBA and last at least 14 minutes; or 110 dBA and last at least 2 minutes. 85 dB is the level set by the National Institute of Occupational Health and Safety (NIOSH) for mandatory hearing protection.
H-440.948	Health Care Workers Infected with Hepatitis B Virus	All health care workers (i.e., any person involved in patient care in a paid capacity or as a volunteer and as a student, resident, trainee, or trained worker) who are at risk of infection with HBV should be fully immunized with HBV vaccine.	Retain as amended to update language with a change in title. Health Care ~~Workers~~ Personnel Infected with Hepatitis B Virus All health care personnel ~~workers~~ (i.e., any person involved in patient care in a paid capacity or as a volunteer and as a student, resident, trainee, or trained worker) who are at risk of infection with HBV should be fully immunized with a HBV vaccine.
H-455.986	Radon in Residential Dwellings and other Buildings	Our AMA (1) supports assuming a leadership role in educating physicians, others of the health care community, and the public concerning the significance of radon levels in residential dwellings and other buildings and the possible health effects of those levels; and (2) encourages the real estate community to increase transparency and disclosure of prior radon testing, and the most recent results of such testing.	Retain as amended. Our AMA (1) supports ~~assuming a leadership role in~~ educating physicians, others ~~of~~ in the health care community, and the public concerning the significance of radon levels in residential dwellings and other buildings and the possible health effects of those levels; and (2) encourages the real estate community to increase transparency and disclosure of prior radon testing, and the most recent results of such testing.
H-455.989	Involvement of Physician Expertise in Non-Military Radiation Emergencies	The AMA encourages physicians to provide expertise on the health aspects of radiation incidents, emergencies and accidents to the public, the media and responsible government agencies.	Retain, still relevant.
H-460.897	Tobacco Use or Exposure as a Variable in Clinical Research	Our AMA urges clinical investigators to carefully consider the need to include an assessment of smoking status, smoking history, and exposure to secondhand smoke in the design of	Retain, still relevant.

		clinical trial protocols and analysis of patient outcomes.	
H-460.929	Expanded Public Education Program in Support of Animal Research	The AMA opposes legislative limits placed on the appropriate and humane use of animals in research.	Retain, still relevant.
H-470.965	Ultimate and Extreme Fighting	Our AMA: (1) opposes ultimate fighting and extreme fighting events; and (2) encourages states which have not banned these events to pass a law doing so.	Retain, still relevant.
H-480.944	Improving Genetic Testing and Counseling Services	Our AMA supports: (1) appropriate utilization of genetic testing, pre- and post-test counseling for patients undergoing genetic testing, and physician preparedness in counseling patients or referring them to qualified genetics specialists; (2) the development and dissemination of guidelines for best practice standards concerning pre- and post-test genetic counseling; and (3) research and open discourse concerning issues in medical genetics, including genetic specialist workforce levels, physician preparedness in the provision of genetic testing and counseling services, and impact of genetic testing and counseling on patient care and outcomes.	Retain, still relevant.
H-480.945	Genome Editing and its Potential Clinical Use	Our AMA (1) encourages continued research into the therapeutic use of genome editing; and (2) urges continued development of consensus international principles, grounded in science and ethics, to determine permissible therapeutic applications of germline genome editing.	Retain, still relevant.
H-485.992	Support for Increased Educational	The AMA encourages independent television stations and network affiliates throughout the United States to	Retain, still relevant.

	Children's Television Programming	broadcast at least one hour per day, during regular viewing hours, of educational programming for children.	
H-495.977	Banning the Sale of Tobacco Products in Pharmacies and Health Care Facilities	Our AMA supports efforts to ban the sale of tobacco products meeting the definition of "tobacco product" under the Family Smoking Prevention and Tobacco Control Act, with the exception of medicinal nicotine products approved by the FDA, where health care is delivered or where prescriptions are filled, including retail outlets housing store-based health clinics.	Retain, still relevant.
H-50.972	Blood Donor Deferral Criteria Revisions	Our AMA will advocate for the elimination of current deferral policy and ask the Food and Drug Administration to develop recommendations for individual risk assessment during the public commentary period.	Rescind. *Current AMA policy "Blood and Tissue Donor Deferral Criteria H-50.973" is more comprehensive.*
H-505.961	Challenging the Pro-Tobacco Actions of the U.S. Chamber of Commerce	1. Our AMA strongly objects to any pro-tobacco efforts by the U.S. Chamber of Commerce and encourages the U.S. Chamber of Commerce to be transparent in all advocacy activity on behalf of tobacco companies. 2. Our AMA urges conscientious companies that are members of the U.S. Chamber of Commerce to call for an end to all pro-tobacco efforts within the organization.	Retain, still relevant. *The original policy was prompted by a multipart NYT investigation into how the U.S. Chamber of Commerce (U.S. Chamber) has helped the tobacco industry fight life-saving policies in more than a dozen countries.*
H-510.988	Supporting Awareness of Stress Disorders in Military Members and Their Families	Our AMA supports efforts to educate physicians and supports treatment and diagnosis of stress disorders in military members, veterans and affected families and continue to focus attention and raise awareness of this condition in partnership with the Department of	Retain, still relevant.

		Defense and the Department of Veterans Affairs.	
H-525.975	Heart Disease in Women	1. Our AMA supports increased awareness and education on preventive measures for heart disease in women and encourages comprehensive care of heart disease in women. 2. Our AMA urges research to address the gaps in knowledge related to coronary pathophysiology and diagnostic, treatment, and interventional strategies for heart disease in women; and to better understand the role of demographic, socioeconomic, and psychological factors in the onset of heart disease in women.	Retain, still relevant.
H-525.976	An Expanded Definition of Women's Health	Our AMA recognizes the term "women's health" as inclusive of all health conditions for which there is evidence that women's risks, presentations, and/or responses to treatments are different from those of men, and encourages that evidence-based information regarding the impact of sex and gender be incorporated into medical practice, research, and training.	Retain as amended to address formatting error. Our AMA recognizes the term "women's health" ~~—~~as inclusive of all health conditions for which there is evidence that women's risks, presentations, and/or responses to treatments are different from those of men, and encourages that evidence-based information regarding the impact of sex and gender be incorporated into medical practice, research, and training.
H-525.991	Inclusion of Women in Clinical Trials	Our AMA: (1) encourages the inclusion of women, including pregnant women when appropriate, in all research on human subjects, except in those cases for which it would be scientifically irrational, in numbers sufficient to ensure that results of such research will benefit both men and women alike; (2) supports the National Institutes of Health policy requiring investigators to account for the possible role of sex as a biological variable in vertebrate animal and human studies; and (3) encourages	Retain, still relevant.

		translation of important research results into practice.	
H-60.916	Youth Incarceration in Adult Facilities	1. Our AMA supports, with respect to juveniles (under 18 years of age) detained or incarcerated in any criminal justice facility: (a) early intervention and rehabilitation services, (b) appropriate guidelines for parole, and (c) fairness in the expungement and sealing of records. 2. Our AMA opposes the detention and incarceration of juveniles (under 18 years of age) in adult criminal justice facilities.	Retain as amended. 1. Our AMA supports, with respect to juveniles (under 18 years of age) detained or incarcerated in any ~~criminal justice~~ correctional facility: (a) early intervention and rehabilitation services, (b) appropriate guidelines for parole, and (c) fairness in the expungement and sealing of records. 2. Our AMA opposes the detention and incarceration of juveniles (under 18 years of age) in adult ~~criminal justice~~ correctional facilities. *The term "criminal justice facility" is not commonly used, especially by NCCHC. The appropriate term is "correctional facility." Amendments reflect that change.*
H-60.922	Solitary Confinement of Juveniles in Legal Custody	Our AMA: (1) opposes the use of solitary confinement in juvenile correction facilities except for extraordinary circumstances when a juvenile is at acute risk of harm to self or others; (2) opposes the use of solitary confinement of juveniles for disciplinary purposes in correctional facilities; and (3) supports that isolation of juveniles for clinical or therapeutic purposes must be conducted under the supervision of a physician.	Retain as amended to update language and change in title. Title Change: Solitary Confinement of Juveniles in ~~Legal Custody~~ Correctional Facilities Our AMA: (1) opposes the use of solitary confinement in juvenile correctional facilities except for extraordinary circumstances when a juvenile is at acute risk of harm to self or others; (2) opposes the use of solitary confinement of juveniles for disciplinary purposes in correctional facilities; and (3) supports that isolation of juveniles for clinical or therapeutic purposes must be conducted under the supervision of a physician.
H-60.930	Insufficient Sleep in Adolescents	1. Our AMA identifies adolescent insufficient sleep and sleepiness as a public health issue and supports education about sleep health as a	Retain, still relevant.

		standard component of care for adolescent patients. 2. Our AMA: (a) encourages school districts to aim for the start of middle schools and high schools to be no earlier than 8:30 a.m., in order to allow adolescents time for adequate sleep; (b) encourages physicians, especially those who work closely with school districts, to become actively involved in the education of parents, school administrators, teachers, and other members of the community to stress the importance of sleep and consequences of sleep deprivation among adolescents, and to encourage school districts to structure school start times to accommodate the biologic sleep needs of adolescents; and (c) encourages continued research on the impact of sleep on adolescent health and academic performance.	
H-60.986	Health Status of Detained and Incarcerated Youth	Our AMA (1) encourages state and county medical societies to become involved in the provision of adolescent health care within detention and correctional facilities and to work to ensure that these facilities meet minimum national accreditation standards for health care as established by the National Commission on Correctional Health Care; (2) encourages state and county medical societies to work with the administrators of juvenile correctional facilities and with the public officials responsible for these facilities to discourage the following inappropriate practices: (a) the detention and incarceration of youth for reasons related to mental illness; (b) the detention and incarceration of children	Retain as amended to update language. (2) encourages state and county medical societies to work with the administrators of juvenile correctional facilities and with the public officials responsible for these facilities to discourage the following inappropriate practices: (a) the detention and incarceration of youth for reasons related to mental health conditions ~~illness~~; (b) the detention and incarceration of children and youth in adult jails; and (c) the use of experimental therapies, not supported by scientific evidence, to alter behavior.

		and youth in adult jails; and (c) the use of experimental therapies, not supported by scientific evidence, to alter behavior. (3) encourages state medical and psychiatric societies and other mental health professionals to work with the state chapters of the American Academy of Pediatrics and other interested groups to survey the juvenile correctional facilities within their state in order to determine the availability and quality of medical services provided. (4) advocates for increased availability of educational programs by the National Commission on Correctional Health Care and other community organizations to educate adolescents about sexually transmitted diseases, including juveniles in the justice system.	
H-65.974	Gender-Based Violence	Our AMA: (1) opposes inhumane treatment of people of both genders; and (2) encourages the development of programs to educate and alert all cultures to remaining practices of inhumane treatment based on gender and promote recognition of abusive practices and adequate health care for victims thereof.	Retain as amended to update language. Our AMA: (1) opposes inhumane treatment of people of ~~both~~ all genders; and (2) encourages the development of programs to educate and alert all cultures to remaining practices of inhumane treatment based on gender and promote recognition of abusive practices and adequate health care for ~~victims~~ survivors thereof.
H-75.987	Reducing Unintended Pregnancy	Our AMA: (1) urges health care professionals to provide care for women of reproductive age, to assist them in planning for pregnancy and support age-appropriate education in esteem building, decision-making and family life in an effort to introduce the concept of planning for childbearing in the educational process; (2) supports reducing unintended pregnancies as a national goal; and (3) supports the	Retain as amended to update language. Our AMA: (1) urges health care professionals to provide care for ~~women~~ patients of reproductive age, to assist them in planning for pregnancy and support age-appropriate education in esteem building, decision-making and family life in an effort to introduce the concept of planning for childbearing in the educational process;

		training of all primary care physicians and relevant allied health professionals in the area of preconception counseling, including the recognition of long-acting reversible contraceptives as efficacious and economical forms of contraception.	
H-75.996	Media Advertising and Public Service Announcements Regarding Contraception and Safe Sexual Practices	The AMA urges the print and broadcast media to permit advertising and public service announcements regarding contraception and safe sexual practices as a matter of public health awareness.	Retain, still relevant.
H-90.967	Support for Persons with Intellectual Disabilities	Our American Medical Association encourages appropriate government agencies, non-profit organizations, and specialty societies to develop and implement policy guidelines to provide adequate psychosocial resources for persons with intellectual disabilities, with the goal of independent function when possible.	Retain, still relevant.
H-95.933	Action to Address Illegal Methamphetamine Production	Our AMA supports: (1) the widespread and proper use of the National Precursor Log Exchange (NPLEx) for pseudoephedrine-containing OTC products; (2) the replacement of current pseudoephedrine-containing OTC products with formulations that are resistant to methamphetamine production; and (3) initiatives that focus on prevention and treatment of methamphetamine abuse.	Retain as amended to update language. Our AMA supports: (1) the widespread and proper use of the National Precursor Log Exchange (NPLEx) for pseudoephedrine-containing OTC products; (2) the replacement of current pseudoephedrine-containing OTC products with formulations that are resistant to methamphetamine production; and (3) initiatives that focus on prevention and treatment of methamphetamine misuse and use disorder. ~~abuse~~
H-95.935	Increasing Awareness of Nootropic Use	1. Our AMA: (a) opposes the prescription of controlled substances, including stimulants and wakefulness-promoting agents, for the purpose of cognitive enhancement in otherwise normal, healthy individuals; and (b) discourages the nonmedical use of	Retain, still relevant.

		prescription drugs, including stimulants and wakefulness-promoting agents for cognitive enhancement at all levels of education and in the workplace. 2. Our AMA encourages continued research into the risks and benefits of drugs and other substances for improving function in patients undergoing cognitive decline or who are experiencing cognitive impairment. 3. Our AMA encourages more research into the patterns of use, as well as risks and benefits, of dietary supplements (including herbal remedies) being promoted for cognitive enhancement. 4. Our AMA urges the Federal Trade Commission to examine advertisements for dietary supplements and herbal remedies that claim cognitive enhancement to ensure that they are truthful and not misleading, and are substantiated.	
H-95.942	Safe Disposal of Used Syringes, Needles and Other Sharps in the Community	1. Our AMA recognizes that used sharps in the community pose a public health hazard in diverse ways to workers and to the public. 2. The AMA requests manufacturers of disposable hypodermic needles and syringes to adopt designs to prevent reuse, and to include in the packaging clear directions for their correct disposal. 3. Our AMA continues to support the mission of the Coalition for Safe Community Needle Disposal.	Retain as amended. 1. Our AMA recognizes that used sharps in the community pose a public health hazard in diverse ways to workers and to the public. 2. The AMA requests manufacturers of disposable hypodermic needles and syringes to adopt designs to prevent reuse, and to include in the packaging clear directions for their correct disposal. 3. Our AMA continues to support the mission of SafeNeedleDisposal.org ~~the Coalition for Safe Community Needle Disposal~~. *The Coalition was renamed in 2014 in accordance with new ownership.*

H-95.958	Syringe and Needle Exchange Programs	Our AMA: (1) encourages all communities to establish needle exchange programs and physicians to refer their patients to such programs; (2) will initiate and support legislation providing funding for needle exchange programs for injecting drug users; and (3) strongly encourages state medical associations to initiate state legislation modifying drug paraphernalia laws so that injection drug users can purchase and possess needles and syringes without a prescription and needle exchange program employees are protected from prosecution for disseminating syringes.	Retain as amended to update language. Our AMA: (1) encourages all communities to establish ~~needle~~ syringe exchange programs and physicians to refer their patients to such programs; (2) will initiate and support legislation providing funding for ~~needle~~ syringe exchange programs for injecting drug users; and (3) strongly encourages state medical associations to initiate state legislation modifying drug paraphernalia laws so that people who inject drugs ~~injection drug users~~ can purchase and possess needles and syringes without a prescription and ~~needle~~ syringe exchange program employees are protected from prosecution for disseminating syringes.

REPORT 2 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-26)
Setting Standards for Forensic Toxicology Laboratories Used in Litigation

EXECUTIVE SUMMARY

BACKGROUND. Resolution 212-A-25, referred by the House of Delegates (HOD), asked our American Medical Association (AMA) to pursue legislative or regulatory changes to require: 1. Forensic toxicology laboratories that analyze drugs in bodily fluids to follow the same protocols and obtain equivalent certifications as their clinical chemistry counterparts based in hospitals; 2. CLIA – exempt forensic toxicology laboratories to obtain relevant accreditations and certifications such as CAP Forensic Drug Testing accreditation program (CAP FDT, formerly FUDT or Forensic Urine Drug Testing Accreditation Program]) the American Board of Forensic Toxicology Laboratory Accreditation Program (ABFT LAP), the American Society of Crime Laboratory Directors Laboratory Accreditation Board (ASCLD/LAB) or other related certification program (as their clinical chemistry counterparts in hospitals are required) which are publicly displayed; 3. forensic toxicology laboratories to follow relevant state codes and regulations addressing testing of breath, blood, and urine for alcohol, other drugs, and intoxicating compounds; 4. a Laboratory Director and/or Certifying Scientist who reviews all protocols and laboratory manuals and signs off on each result electronically to be a licensed physician (with proper and current board certification) or a scientist with an appropriate advanced graduate degree and certification; and that results of laboratory proficiency testing and Quality Control Programs be available to the court and its litigants for review to assist in verifying forensic laboratory results.

METHODS. English language articles were selected from searches of PubMed and Google Scholar using the search terms “CLIA-exempt toxicology labs”, “forensic labs”, “toxicology labs” AND “litigation”, and “forensic labs AND crime”. Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and other applicable organizations were also reviewed for relevant information.

DISCUSSION. Forensic toxicology laboratories play a critical role in medicolegal decision-making, yet unlike CLIA-regulated clinical laboratories, CLIA-exempt forensic labs operate without a unified national oversight system, resulting in fragmented standards, inconsistent accreditation practices, and limited transparency. National scientific reviews have repeatedly documented deficiencies in method validation, quality assurance, independence, and access to underlying laboratory data, as well as instances of laboratory fraud and misconduct.

CONCLUSION. This report reviews the current oversight structure for forensic toxicology laboratories, outlines key differences between clinical and forensic laboratory regulation, and summarizes the extensive scientific literature documenting persistent challenges—such as inconsistent standards, insufficient method validation, limited access to underlying laboratory data, cognitive bias, and cases of laboratory fraud. It further examines the economic and operational pressures facing laboratories and the uneven adoption of accreditation and quality systems. Based on these findings, the recommendations support the development of consistent national baseline standards, a coordinated accreditation framework, increased transparency in laboratory practices, and nationally aligned expectations for scientific qualifications and oversight in CLIA-exempt forensic toxicology laboratories.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 2-A-26

Subject: Setting Standards for Forensic Toxicology Laboratories Used in Litigation

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee D

Resolution 212-A-25, "Setting Standards for Forensic Toxicology Laboratories Used in Litigation," was referred by the House of Delegates (HOD), and asked the following:

That our American Medical Association pursue legislative or regulatory changes to require:

1. Forensic toxicology laboratories that analyze drugs in bodily fluids to follow the same protocols and obtain equivalent certifications as their clinical chemistry counterparts based in hospitals; and
2. CLIA – exempt forensic toxicology laboratories to obtain relevant accreditations and certifications such as CAP Forensic Drug Testing accreditation program (CAP FDT, formerly FUDT or Forensic Urine Drug Testing Accreditation Program]) the American Board of Forensic Toxicology Laboratory Accreditation Program (ABFT LAP), the American Society of Crime Laboratory Directors Laboratory Accreditation Board (ASCLD/LAB) or other related certification program (as their clinical chemistry counterparts in hospitals are required) which are publicly displayed; and
3. forensic toxicology laboratories to follow relevant state codes and regulations addressing testing of breath, blood, and urine for alcohol, other drugs, and intoxicating compounds; and
4. a Laboratory Director and/or Certifying Scientist who reviews all protocols and laboratory manuals and signs off on each result electronically to be a licensed physician (with proper and current board certification) or a scientist with an appropriate advanced graduate degree and certification; and
5. that results of laboratory proficiency testing and Quality Control Programs be available to the court and its litigants for review to assist in verifying forensic laboratory results.

BACKGROUND

In the United States (U.S.), the type of laboratory accreditation required by a toxicology laboratory depends on the purpose of the laboratory's testing menu: clinical versus forensic. Like all clinical laboratories, clinical toxicology laboratories are subject to direct federal regulatory requirements for Clinical Laboratory Improvement Amendments of 1988 (CLIA) certification, classified as waived, moderate, or high-complexity testing operations.[1] CLIA requirements include on-site inspections and acceptable participation in proficiency testing, which may be met by achieving accreditation from an agency with CLIA-deemed status.[2,3] Forensic toxicology laboratories are CLIA-exempt under federal regulations but nonetheless subject to all applicable state and local regulatory requirements, which typically mandate independent laboratory accreditation.[4] Forensic science performed in toxicology labs has faced increasing scrutiny regarding these labs' methods and reliability.[5,6]

© 2026 American Medical Association. All rights reserved.

A multi-year, Congressionally-mandated study released in 2009 by the National Research Council (NRC) was critical of weaknesses in the scientific underpinnings of the forensic disciplines routinely used in the criminal justice system.[6] The NRC outlined a comprehensive series of recommended reforms (see Table 2).[6] Reports have also highlighted concerns regarding the lack of standardization and oversight, the absence of independence of forensic laboratories from law enforcement, bias affecting the results and their interpretation, and the lack of reporting on measurement uncertainty.[6,7] In addition to calls for improvements in forensic science methods, there have been prominent cases of fraud by forensic scientists.[5,8] While toxicology is often perceived as one of the more objective forensic disciplines due to its reliance on analytical chemistry and quantitative measurements, it is not immune to bias, fraud, and error.[5,8,9] However, it is important to note that forensic toxicology laboratories face mounting pressures—including rising case volumes, staffing shortages, limited funding, and expanding testing demands—that contribute to persistent backlogs and hinder their capacity to maintain rigorous scientific practices.[6] These strains are intensified by the need to triage urgent requests, outdated equipment in some jurisdictions, and limited federal investment in toxicology research, leaving many labs without the resources needed for method validation, quality assurance, or modernization.[6]

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms “CLIA-exempt toxicology labs”, “forensic labs”, “toxicology labs” AND “litigation”, and “forensic labs AND crime”. Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and other applicable organizations were also reviewed for relevant information.

DISCUSSION

For the purposes of this report, forensic science refers to the application of scientific or technical practices to the recognition, collection, analysis, and interpretation of evidence for criminal, civil, or regulatory matters.[9] It encompasses a wide range of disciplines with distinct technologies and practices.[9] The National Institute of Justice (NIJ) categorizes these into multiple areas, including toxicology, firearms and toolmarks, questioned documents, trace evidence, controlled substances, DNA and serology screening, fire debris analysis, post-mortem analysis, impression and blood-pattern evidence, crime-scene investigation, medicolegal death investigation, and digital evidence.[10]

Because these disciplines vary widely in methods, error rates, research foundations, and levels of scientific acceptance, forensic science is not a uniform field.[6,7] Some areas rely on laboratory-based analytical techniques (i.e., DNA analysis, toxicology, drug chemistry), while others depend heavily on expert interpretation of observed patterns (i.e., fingerprints, handwriting, toolmarks, bite marks).[7,11] Forensic work is performed by individuals with diverse training backgrounds—from scientists such as chemists and biologists to law-enforcement personnel, crime-scene specialists, forensic pathologists, and laboratory technologists.[12] Importantly, Many forensic techniques are based on practical experience rather than fully validated scientific methods, and therefore may not fully account for the limitations inherent in their underlying methodologies.[6,7]

Forensic science has transformed litigation by introducing objective, empirically grounded evidence that helps courts resolve complex questions with far greater accuracy and confidence.[9] Advances such as DNA analysis have exonerated the innocent and identified perpetrators with unprecedented precision, fundamentally improving fairness and reliability in the justice system.[9] Across disciplines—including toxicology, digital forensics, and pattern evidence—scientific

methods now provide critical insights that strengthen fact-finding, support informed judicial decision-making, and enhance public trust in legal outcomes.[6,9]

What is the difference between clinical and forensic toxicology laboratories?

Both clinical and forensic toxicology laboratories aim to deliver accurate and timely analytical results, but they differ in purpose, end-users, and operational requirements.[13] Clinical laboratories perform rapid physiological testing to guide patient care, while forensic laboratories conduct one-time analyses intended for medicolegal proceedings.[6,14] Consequently, the two types of laboratories differ in how samples are collected and processed, the staffing and funding structures they rely on, and the technologies they employ.[6,14]

All U.S. clinical laboratories are regulated under CLIA, which applies to any facility performing tests on human specimens for diagnosis, treatment, prevention, or health assessment.[1,6,15] CLIA requires certification, biennial inspections, proficiency testing, quality control and quality assurance procedures.[6,15] Enforcement mechanisms include sanctions, certificate suspension or revocation, civil injunctions, fines, and publication of laboratory sanctions. Clinical labs must meet these standards to receive Medicare or Medicaid reimbursement.[1,6,15]

In contrast, toxicology laboratories performing only forensic testing are CLIA-exempt, because they test human specimens for purposes other than medical diagnosis or treatment—such as criminal, civil, workplace, or other medicolegal uses.[6,14] This category includes Substance Abuse and Mental Health Services Administration (SAMHSA)-certified workplace drug-testing laboratories.[16] Since CLIA does not apply, federal accreditation requirements do not govern these forensic laboratories.[16]

Clinical laboratory toxicology testing may still generate evidence with legal consequences, for example, in cases involving pregnant patients, newborns, children, or individuals involved in injury-producing incidents.[17] Unless requested by law enforcement or a court, such testing is treated as medical rather than forensic. Some clinical laboratories also conduct forensic drug testing, and in these circumstances, they are advised to maintain clear policies that separate clinical and forensic workflows, including specimen handling, processing, and documentation, to ensure appropriate regulatory compliance and evidentiary integrity.[17]

OVERSIGHT OF FORENSIC TOXICOLOGY LABS

Federal and State Oversight

Currently, there is no comprehensive federal regulatory system that oversees or governs forensic toxicology laboratories in the U.S.[18] Oversight is fragmented, largely voluntary, and dominated by private accreditation bodies, not federal regulation.[6,18] The only significant federal accreditation requirement applies to DNA labs participating in the Combined DNA Index System , via the DNA Identification Act.[19] Some federal entities operate forensic toxicology laboratories, but these labs follow internal standards and do not regulate state or local forensic toxicology labs.[20] As a result, voluntary accreditation is the closest thing to oversight of forensic toxicology labs.[21]

Given the lack of federal oversight, some states have established oversight bodies, including state forensic science commissions, task forces, oversight and advisory boards, or investigative councils with the goal of improving the field of forensic sciences through oversight and coordination of forensic science resources.[22] Twenty-one states and Washington, D.C. currently have statutorily

created or created by another means, such as through state legislation, forensic science state commissions or oversight bodies; however, all vary considerably with respect to which functions they fulfill (See Figure 1).[22]

Accreditation

Accreditation of toxicology laboratories relies on a multilayered system built around internationally recognized technical standards—primarily International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) 17025—supported by national accrediting bodies and supplemented by state requirements that add discipline-specific controls.[23] These mechanisms aim to ensure that laboratories produce scientifically valid, reliable, and defensible results for criminal justice, medicolegal death investigation, and public safety.[23] Accreditation involves external experts who review documentation, perform on-site assessments, evaluate corrective actions, and verify ongoing compliance through surveillance audits.[23]

Two major accrediting bodies— ANSI National Accreditation Board (ANAB) and American Association for Laboratory Accreditation (A2LA)—currently accredit most forensic laboratories.[24,25] ANAB, which absorbed the former American Society of Crime Laboratory Directors (ASCLD/LAB), accredits labs to ISO/IEC 17025 and is the sole accreditor approved by several state forensic commissions.[26] It also evaluates laboratories using the American Board of Forensic Toxicology (ABFT) toxicology checklist, providing dual recognition for ISO/IEC 17025 with toxicology-specific criteria.[24,27] A2LA accredits laboratories under ISO/IEC 17025 for testing and calibration and ISO/IEC 17020 for inspection functions.[25] The College of American Pathologists (CAP), while best known for clinical laboratory accreditation, accredits clinical-toxicology laboratories and those operating in hybrid forensic-clinical environments.[28] It should be noted that there are various players involved in forensic toxicology laboratory practice that include laboratory accrediting bodies, standards-setting groups, professional societies, and oversight organizations (see Table 1).

However, accreditation is not guaranteed of error-free performance. Recent events continue to illustrate that accreditation alone does not consistently prevent fraud, deter misconduct, or ensure reliable scientific practices.[6–8] For example, an Injustice Watch investigation found that the accredited University of Illinois Chicago Analytical Forensic Testing Laboratory produced flawed and misleading THC test results used in cannabis DUI prosecutions across the state, with evidence that methodological problems were concealed for years despite accreditation audits.[6–8] This suggests that confidence in accredited labs may at times be misplaced. Because accreditation is not universally required, many unaccredited forensic laboratories continue operating without any substantial external oversight.

BRIEF SUMMARY OF ISSUES IN FORENSIC SCIENCE IN COURT PROCEEDINGS

Courts act as gatekeepers to ensure expert testimony is based on reliable science.[29,30] In practice, however, many courts admitted forensic toxicology and other forensic results with minimal scrutiny for decades.[5–7,31,32] Appellate analyses have found that judges are often more exacting with expert evidence in civil cases than in criminal cases.[6,33–37] Reports observed this disparity as well, noting appellate courts were "more willing to second-guess…scientific evidence in civil cases than in criminal cases."[6,33–38]

Relatedly, courts historically allowed certain forensic techniques to be presented by experts despite a lack of robust scientific validation.[6,39–41] Prior to the reforms of the last decade, it was not uncommon for a forensic toxicologist to testify about novel or less standard analyses (for instance,

using a new lab-derived method to identify a toxin) without the judge requiring proof of validation.[5–7,42] The consequence, as reports have reiterated, is that some evidence may not have met modern scientific standards of reliability.[6,41,43]

Validation and Research. Multiple studies have repeatedly found that many forensic disciplines rely on tradition and professional judgment rather than rigorous scientific testing.[5–7,40] Two concepts are central to evaluating reliability: foundational validity (whether a method has been empirically shown to work) and validity as applied (whether it was correctly used in a specific case).[7,44,45] Even scientifically sound methods can produce unreliable results without proper validation, consistent application, and clear documentation.[7,40,45,46] Forensic toxicology often uses instruments designed for clinical or research settings, but forensic samples may involve low drug concentrations, degraded materials, or complex mixtures.[7,40,45] Studies emphasize the need for validation that demonstrates repeatability, interlaboratory reproducibility, and known error rates.[6,7,40,45]

Practice Protocols and Standards. The lack of uniform standards across laboratories leads to differing protocols and inconsistent results.[6,31,32] A 2024 National Institute of Standards and Technology (NIST) analysis found that procedures "vary both within and across disciplines," producing variable outcomes that directly affect litigation.[31] For example, one lab may report a substance as present while another—using different thresholds or extraction methods—reports it as negative.[6,7,31] Such inconsistencies can result in different legal outcomes across jurisdictions and contribute to conflicting expert testimony.[6,7,31]

Substances and Technological Gaps. Toxicology laboratories struggle to keep pace with rapidly evolving drug markets, including synthetic opioids, novel psychoactive substances, and adulterants like xylazine.[7,31,47] These trends create significant measurement challenges and often outstrip laboratory method development.[31,47,48] As a result, some substances may go undetected or be mis-quantified, weakening evidentiary reliability in both criminal and civil cases.[7,47,48] Courts require toxicology findings to be valid, reliable, and consistent—standards difficult to achieve without ongoing scientific investment.[7,31,47,49]

Quality Assurance (QA) Programs. Strong quality assurance systems are essential, yet multiple investigations have found serious QA failures in forensic labs.[6,7,50] For example, an audit of the Houston Police Department Crime Lab revealed missing QA programs, insufficient training, poor documentation, analytical errors, and even falsified results.[51–53] Weak QA increases the risk of false positives, false negatives, and contamination, contributing to wrongful convictions; nearly one-quarter of DNA exonerations have involved misapplied forensic science.[6,52–54]

Exculpatory or Contradictory Result Disclosures. Some laboratories have withheld results inconsistent with prosecution theories. For example, a review of the North Carolina State Bureau of Investigation lab found analysts repeatedly omitted confirmatory tests that negated preliminary findings, violating discovery obligations.[7,55] Such nondisclosure can lead to wrongful convictions and undermines the expectation that forensic scientists serve as neutral, objective experts. [7,55–57]

Access to Underlying Data. Even without misconduct, defense teams may struggle to obtain raw data, quality control (QC) logs, or validation records due to proprietary software or restrictive policies.[6,7,58,59] Limited transparency hinders meaningful review of forensic evidence and can mask systemic issues until discovered through litigation or external audits—often years later.[6,7,60]

Cognitive and Contextual Bias. Toxicologists, like other experts, are vulnerable to biases influenced by case context or institutional pressures.[6,61,62] Bias can affect interpretation of marginal

results or QC anomalies.[63,64] Reports have warned of insufficient safeguards against cognitive bias, and few toxicology processes undergo black-box studies to measure examiner error and reliability.[6,7,65,66] These vulnerabilities risk introducing subjectivity into evidence presented as objective.

Overstatement and Over-Interpretation. Experts have historically overstated certainty, implying zero error or drawing unsupported conclusions.[7,67,68] Multiple reports have criticized such overstatement and emphasized that testimony must reflect actual scientific limitations.[6,7,67–69] In toxicology, this includes overstating impairment based on drug levels or failing to provide error rates and probabilities when reporting results.[6,7,67–69] Over-interpretation can mislead courts and juries, compromising fair outcomes.

SYSTEMIC PRESSURES IMPACTING FORENSIC TOXICOLOGY LABS

Forensic toxicology laboratories operate in a system burdened by compounding pressures and economic challenges including persistent backlogs driven by rising case submissions, limited staffing, inadequate funding, and expanding statutory testing requirements.[6,70,71] Studies show that forensic toxicology laboratories routinely process thousands of cases annually, with roughly 20 percent remaining backlogged delays that can prolong incarceration. [6,70,71] As a result, even highly skilled laboratories struggle to keep pace with scientific, operational, and legal expectations, despite their commitment to producing accurate and reliable results.

Law enforcement and prosecutors increasingly demand rapid laboratory results, often before charges are filed and again before trial.[70] At the same time, agencies continue expanding testing requests (i.e., DNA from guns or property crimes), forcing laboratories to triage between urgent new cases and older cold cases, exacerbating workflow bottlenecks.[6,70] DNA analysis—supported by extensive research, strong quality control, and validated statistical models—has become a benchmark for forensic reliability.[6,70,72] Its success highlights the comparative scientific gaps in other disciplines, including toxicology, which receive far less federal investment despite representing the majority of forensic casework.[6,70]

As a result, most forensic disciplines operate with limited research infrastructure, few funding sources, and foundational studies conducted largely within crime laboratories rather than independent academic institutions.[6,7,31,73] This shortage of high-quality research hinders method validation, new tool development, and evidence-based improvements, intensifying pressures on laboratories already operating under substantial resource constraints.[6,7,31,74] Further, accreditation, proficiency testing, and quality assurance programs—while essential to reliability—also impose meaningful financial burdens.[6,74] It should be noted that forensic toxicology labs are not fully supported by a single stable funding system. Instead, they rely on a patchwork of funding sources through a combination of state, county, and municipal appropriations, supplemented by federal grants and fee-for-service revenue for testing performed for law enforcement, courts, medical examiners, and other agencies.[74]

KEY FEDERAL ACTIONS TAKEN TO IMPROVE FORENSIC SCIENCE

Multiple reports have identified systemic deficiencies across forensic science, including fragmented laboratory systems, inconsistent training, limited research funding, and a lack of scientific validation for many commonly used methods.[6,7,31] Recommendations from those reports called for sustained national reform to improve scientific foundations, oversight, and practitioner standards (see Table 2-4).[6,7,31] In response, many national reforms were initiated.[7] These reforms are summarized in Table 4. Collectively, these efforts—national coordination initiatives, standards

development, expanded research funding, and accreditation and certification reforms—represent the most significant progress in the last decade.[75–82] Nonetheless, substantial work remains, particularly in establishing the scientific validity and reliability of many forensic methods still used in courts today.[81]

EXISTING AMA POLICY

The AMA has limited policy on the use of forensic toxicology tests in litigation. AMA Policy H-80.994, "Use of all Appropriate Medical Forensic Techniques in the Criminal Justice System" states that the AMA supports the availability and use of all appropriate medical forensic techniques in the criminal justice system. However, AMA does have policy regarding CLIA-certified labs. For example, AMA Policy H-480.933, "Regulation and Control of Self-Service Labs" states that the AMA will advocate for direct access testing, in which patients may order a diagnostic laboratory test on demand, should only be provided by teams which are physician-led, and performed in facilities that are CLIA-certified. Finally, the Code of Medical Ethics 4.1.4 "Forensic Genetics" states that physicians from whom genetic information is sought for purposes of criminal justice: may ethically carry out DNA analysis on stored tissue samples or release genetic information without the consent of a living or deceased patient (or the patient's authorized surrogate) in response to a warrant or court order; should release only the minimum information necessary for the specific purpose; and should decline to participate in the use of information from a genetic database created exclusively for criminal justice for any purpose other than identification.

CONCLUSION

Forensic toxicology laboratories play a critical role in both civil and criminal litigation, yet the U.S. lacks a unified regulatory framework to ensure their scientific reliability, transparency, and independence.[6,7,79,83] The current system functions largely on voluntary accreditation, variable state oversight, inconsistent methodological standards, and divergent admissibility practices. Although clinical laboratories operate within a comprehensive federal regulatory structure under CLIA, forensic toxicology laboratories remain largely exempt from these requirements.[1,6] This regulatory gap persists despite the scientific complexity and high-stakes consequences associated with toxicology findings in medicolegal settings.[1]

National reviews of forensic science over the past two decades consistently identify the same systemic deficiencies: lack of foundational validation, inadequate quality control systems, limited research infrastructure, vulnerability to cognitive and contextual bias, and insufficient transparency regarding laboratory practices and error rates.[6,7,31,79] Toxicology, though often perceived as an objective, instrument-driven discipline, is not exempt from these shortcomings—particularly when analytical limitations and interpretive errors intersect with the demands of litigation.[5,8] However, forensic toxicology laboratories face mounting pressures—including rising case volumes, staffing shortages, limited funding, and expanding testing demands—that contribute to persistent backlogs and hinder their capacity to maintain rigorous scientific practices.[6] As a result, even highly skilled laboratories struggle to keep pace with scientific, operational, and legal expectations, despite their commitment to producing accurate and reliable results.[6]

This report also highlights the ongoing consequences of fragmentation in forensic laboratory oversight. Inconsistent standards across jurisdictions, gaps in accreditation, and limited access to underlying laboratory data hinder courts' ability to evaluate evidence under modern scientific admissibility standards.[6,7,84] High-profile laboratory fraud cases further underscore the dangers of inadequate auditing, insufficient documentation practices, and the absence of independent oversight.[8,51,52] At the same time, toxicology laboratories face increasing workloads, rapid

proliferation of synthetic and emerging drugs, outdated instrumentation in some jurisdictions, and pressure to produce rapid results—all of which strain their capacity to maintain rigorous scientific practices.[6,70,71] Reports note that the pathway forward must therefore prioritize the core principles of scientific validity, transparency, and accountability.[6,7,31,81] They conclude that by embracing validated methods, standardized practices, and transparent quality systems, forensic toxicology laboratories can better fulfill their essential role in promoting justice, safeguarding due process, and upholding public confidence in the medicolegal system.[6,7,31,81]

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted in lieu of Resolution 212-A-25, and the remainder of the report be filed.

1. Our American Medical Association supports national efforts to establish a unified, science-based oversight framework for CLIA-exempt forensic toxicology laboratories, including the development of consistent baseline standards, a coordinated national accreditation structure, enhanced transparency requirements, and complementary oversight expectations for individual forensic toxicology practitioners to address the absence of mandatory accreditation and the current fragmentation of quality systems; and

2. Our American Medical Association encourages greater transparency in forensic toxicology laboratory operations, including publicly accessible information on personnel qualifications, accreditation status and scope, quality assurance practices, method validation documentation, and scientific oversight processes, and the key evidentiary materials needed for judicial evaluation such as raw data, validation records, quality-control logs, and proficiency testing results, to strengthen the reliability, interpretability, and accountability of medicolegal testing. (New HOD Policy)

Fiscal Note: Modest

Figure 1: Map of Forensic Science State Commissions or Oversight Bodies.[22]
States with a Commission include Texas, Oklahoma, Missouri, Illinois (also on the Task Force), Indiana, New York, Rhode Island, and Delaware. States with an Advisory/Oversight Board include Montana, Nebraska, Kansas, Arkansas, Alabama, North Carolina, South Carolina, and Massachusetts. States with a committee include Maryland, Wisconsin, and Arizona. States with a Council include Washington State and Washington, DC. States with a Task Force include Michigan. All other states have no commission.

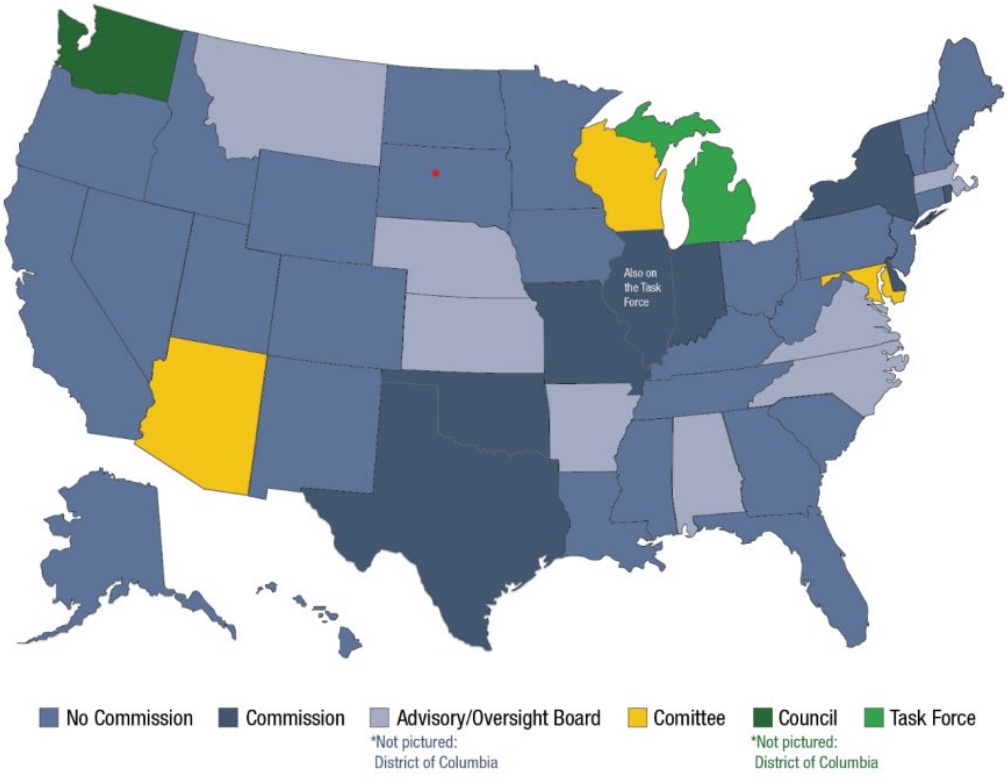

Table 1: Overview of Organizations Involved in Forensic Toxicology Practice and Oversight

Organization	Type	Primary Role in Forensic Toxicology Labs
ANSI National Accreditation Board (ANAB)[26]	Accrediting Body	Accredits forensic laboratories (including toxicology) to ISO/IEC 17025; often integrates ABFT toxicology criteria into scopes.
American Association for Laboratory Accreditation (A2LA)[25]	Accrediting Body	Accredits labs to ISO/IEC 17025 (testing/calibration) and, where applicable, ISO/IEC 17020 (inspection functions).
American Board of Forensic Toxicology (ABFT)[27]	Accrediting Body (Toxicology-Specific) & Individual Certifier	offers laboratory accreditation specifically for forensic toxicology and certification for individual forensic toxicologists.
College of American Pathologists – Forensic Drug Testing (CAP-FDT)[28]	Accrediting Body (Clinical/Forensic Workplace)	Accredits laboratories performing forensic drug testing (often workplace/model programs) and hospital/hybrid settings.
SAMHSA – National Laboratory Certification Program (NLCP)[16]	Federal Certification Program (Workplace Testing)	Certifies laboratories for federal workplace drug testing (urine/oral fluid) under NLCP.
Organization of Scientific Area Committees for Forensic Science (OSAC, NIST)[78]	Standards Development	Develops and promotes science-based forensic standards and posts them to the OSAC registry; informs what accrediting bodies/labs can adopt.
American Society of Crime Laboratory Directors (ASCLD)[26]	Professional Association	Supports lab leadership, quality improvement, and policy; networking/training for lab directors.
American Academy of Forensic Sciences (AAFS)[85]	Professional Society	Multidisciplinary professional home; advances ethics, education, and scientific exchange across forensic disciplines.
Society of Forensic Toxicologists (SOFT)[86]	Professional Society	Discipline-specific community for forensic toxicology; issues practice guidelines, supports training and research.
Consortium of Forensic Science Organizations (CFSO)[87]	Advocacy/Coordination	Represents multiple forensic organizations; advocates for funding, research, and policy reforms.
National Association of Medical Examiners (NAME)[88]	Office Accreditation (Medical Examiner/Coroner)	Accredits medicolegal death investigation offices and sets practice guidelines for me/coroner systems.
International Association of Coroners and Medical Examiners (IACME)[89]	Office Accreditation (Medical Examiner/Coroner)	Accredits coroner/medical examiners' offices; promotes standards for medicolegal death investigation operations.

Table 2: Summary of 13 recommendations made in the 2009 National Research Council report "Strengthening Forensic Science in the United States: A Path Forward.[6]

#	NRC Recommendation	Summary
1	**Create a National Institute of Forensic Science (NIFS)**	Establish an independent federal entity to lead standardization, research, accreditation, and policy.
2	**Standardize terminology and reporting**	Require consistent language, limits statements of certainty, and prevent overstated claims.
3	**Fund research to establish scientific foundations**	Support foundational and applied research in all forensic disciplines, particularly those lacking empirical validation.
4	**Develop and enforce standards for forensic practice**	Create mandatory, science-based standards for methods, training, reporting, and testimony.
5	**Require mandatory accreditation of laboratories**	All forensic laboratories must be accredited and demonstrate adherence to national quality standards.
6	**Require certification of forensic practitioners**	Practitioners should meet competency standards and undergo regular proficiency testing.
7	**Support independence of forensic laboratories**	Remove forensic labs from law-enforcement control to prevent bias and ensure neutrality.
8	**Strengthen quality assurance and quality control**	Implement rigorous QA/QC measures, including blind proficiency testing, to detect errors and misconduct.
9	**Improve forensic science education**	Develop standardized, science-based curricula for universities and training programs.
10	**Create national code of ethics**	Require ethical standards, reporting obligations, and consequences for misconduct or nondisclosure.
11	**Improve medicolegal death investigation systems**	Modernize and professionalize coroner/medical examiner systems nationwide.
12	**Strengthen interoperability and information sharing**	Coordinate forensic data standards and technology across agencies for improved nationwide use.

13	**Increase federal support for forensic science**	Substantially increase sustained funding for research, standards development, and laboratory improvement.

Table 3: Summary of 8 recommendations made in the 2016 Report to the President "Forensic Science in Criminal Courts: Ensuring Scientific Validity."[7]

#	PCAST Recommendation	Summary
1	**Establish clear scientific criteria for "foundational validity"**	Define standards requiring empirical testing, reproducible results, known error rates, and peer-reviewed studies before a forensic method is deemed scientifically valid.
2	**Require empirical "black-box" studies for subjective methods**	Subjective feature-comparison disciplines (e.g., firearms, footwear, bite marks, hair microscopy) must demonstrate accuracy and reliability through properly designed, large-scale black-box studies.
3	**Require empirical testing of "validity as applied"**	Examiners must demonstrate they can reliably apply validated methods in casework through proficiency testing that simulates real forensic conditions.
4	**DOJ/NIST should ensure foundational validity before admitting forensic methods in court**	Federal agencies should evaluate forensic disciplines and clearly identify which methods meet scientific standards for validity. Methods lacking foundational validity should not be presented as reliable evidence.
5	**Develop and fund large-scale independent research programs**	Calls for substantial federal funding (NIJ, NIST, NSF) for foundational and applied research, especially for subjective pattern-comparison methods.
6	**Create national scientific oversight for forensic methods**	Establish bodies (independent of law enforcement) responsible for scientific review, research priorities, and setting validity standards for forensic techniques.
7	**Ensure forensic testimony is scientifically accurate and limited in scope**	Examiners must not overstate conclusions. Testimony should reflect actual empirical support, known error rates, and limitations, avoiding claims of individualization unless scientifically justified.
8	**Strengthen proficiency testing, certification, and accreditation**	Improve examiner certification and lab accreditation by requiring rigorous, scientifically meaningful proficiency tests and transparent reporting of results.

Table 4: Summary of 4 recommendations made in the 2024 National Institute of Standards and Technology report "Strategic Opportunities to Advance Forensic Science in the United States A Path Forward Through Research and Standards."[31]

#	NIST Recommendation	Summary
1	**Accuracy & Reliability of Forensic Methods**	Quantify and establish statistically rigorous measures of accuracy, repeatability, reproducibility, and uncertainty for complex forensic methods
2	**New Methods & Technology Development**	Develop new and improved methods for rapid, robust, and scientifically validated analysis of complex forensic evidence
3	**Science Based Standards & Guidelines**	Develop rigorous, consensus-based documentary standards, conformity assessment schemes, and guidelines across forensic disciplines
4	**Adoption & Implementation of Advances**	Promote widespread adoption of improved methods, standards, technologies, and training across the forensic ecosystem

Table 5: Brief timeline of recent U.S. efforts to strengthen forensic science.[6,7,31,32,78,90]

Date	Event
November 2005	Congress authorizes the NAS to conduct a national study of forensic science.
February 2009	NAS issues *Strengthening Forensic Science in the United States: A Path Forward*, a landmark report proposing 13 major reforms.
February 2013	DOJ and NIST announce formation of NCFS and NIST-administered scientific guidance groups.
Sept 2013 – Apr 2014	OSTP establishes a research strategy working group (DOJ–NIST–NSF).
February 2014	NIST announces creation of OSAC (Organization of Scientific Area Committees) at first NCFS meeting.
February 2014	OSTP issues *Strengthening Forensic Science: A Progress Report*.
September 2016	PCAST releases *Forensic Science in Criminal Courts: Ensuring Scientific Validity of Feature-Comparison Methods*, calling for empirical validation, black-box studies, and federal action.
April 2017	DOJ discontinues NCFS as federal advisory body, ending formal DOJ–NIST joint forensic policy leadership.
2021–2022	Several states (e.g., Texas, New York) incorporate OSAC standards by reference or require labs to consider OSAC Registry standards in accreditation.

2022–2026	NIJ releases and implements its *Forensic Science Strategic Research Plan 2022–2026*, outlining national priorities: foundational research, applied methods, workforce development, and coordinated community practice.
September 2024	NIST issues *Strategic Opportunities to Advance Forensic Science in the United States: A Path Forward Through Research and Standards* (NIST SP-1319).
2025	NIJ publishes *Forensic Science Strategic Research Plan 2022–2026*, reaffirming federal investment priorities and partnerships.
2026 (Ongoing)	NIST continues scientific foundation reviews; NIJ continues research funding aligned with the 2022–2026 plan.

REPORT 3 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-26)
Public Health Implications of Food Subsidies

EXECUTIVE SUMMARY

BACKGROUND. Policy H-150.915, "Public Health Implications of US Food Subsidies," adopted at the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD) asked that our AMA study the public health implications of United States food subsidies, focusing on: (1) How these subsidies influence the affordability, availability, and consumption of various food types across different demographics. (2) Potential for restructuring food subsidies to support the production and consumption of more healthful foods, thereby contributing to better health outcomes and reduced healthcare costs related to diet-related diseases. (3) Avenues to advocate for policies that align food subsidies with the nutritional needs and health of the American public, ensuring that all segments of the population benefit from equitable access to healthful, affordable food.

METHODS. English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: "food/farm/agricultural subsidies" AND "public health", "food/farm/agricultural subsidies" AND "diet," and "food/farm/agricultural subsidies" AND "nutrition." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies, such as the United States (U.S.) Department of Agriculture and applicable professional and advocacy organizations were also reviewed for relevant information.

DISCUSSION. Poor diet is a leading cause of morbidity and mortality, both in the U.S. and globally. Poor dietary habits include low intake of fruits, vegetables, and whole grains as well as excessive consumption of added sugars, saturated fats, and sodium, often via ultra-processed foods. Farm subsidies are monetary payments and other types of financial support provided by the federal government to farmers or agribusinesses. Agricultural subsidies in the U.S. primarily support the production of just a few commodity crops, namely corn, soybeans, cotton, and wheat, which are used heavily in ultra-processed foods, biofuels such as ethanol, and food for livestock. Additionally, a majority of agricultural subsidies go to large agrobusinesses and very wealthy individuals/corporations, while many smaller and independent, family-run farms receive comparatively little government assistance. One outcome of our current agricultural subsidy system is that many food groups recommended as part of a healthy diet, such as fresh fruits and vegetables, tend to be more expensive per unit of energy relative to less healthy and highly processed foods that rely on cheap commodity crops such as corn, soybeans, and wheat. There are limited studies that directly evaluate the impact of farm subsidies on health, but current evidence shows that individuals in the highest quartile of subsidized food consumption had higher probabilities of obesity, abdominal adiposity, and dysglycemia compared to the lowest quartile of consumption. Additionally, agricultural practices have direct and indirect impacts on the environment through a myriad of pathways, which in turn impact public health. These primarily include environmental contaminants/pollutants, climate change, and depletion of natural resources and areas.

CONCLUSION. Current farm subsidies support an agricultural system focused on commodity crops, such as corn, which fosters increased consumption of unhealthy foods and negatively impacts health. Agricultural practices incentivized by farm subsidies also have direct and indirect adverse impacts on the environment through a myriad of pathways. Strategies to improve the current system should prioritize the production and consumption of more fruits, vegetables, and whole grains.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 3-A-26

Subject: Public Health Implications of Food Subsidies

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee D

AMA Policy H-150.915, "Public Health Implications of US Food Subsidies," was adopted at the 2025 Annual Meeting of the American Medical Association (AMA) House of the Delegates (HOD) and states the following:

> Our AMA will study the public health implications of United States food subsidies, focusing on:
> 1. How these subsidies influence the affordability, availability, and consumption of various food types across different demographics.
> 2. Potential for restructuring food subsidies to support the production and consumption of more healthful foods, thereby contributing to better health outcomes and reduced healthcare costs related to diet-related diseases.
> 3. Avenues to advocate for policies that align food subsidies with the nutritional needs and health of the American public, ensuring that all segments of the population benefit from equitable access to healthful, affordable food.

METHODS

English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: "food/farm/agricultural subsidies" AND "public health", "food/farm/agricultural subsidies" AND "diet," and "food/farm/agricultural subsidies" AND "nutrition." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies, such as the United States (U.S.) Department of Agriculture and applicable professional and advocacy organizations were also reviewed for relevant information.

BACKGROUND

Poor diet is a leading cause of morbidity and mortality, both in the U.S. and globally.[1] In the U.S., it has been estimated that about one million people die annually from diet-related chronic diseases, such as type 2 diabetes, cardiovascular disease, obesity, and some cancers.[2] Globally, noncommunicable diseases account for more than 70 percent of deaths and an estimated 40 percent are attributed to dietary factors.[3] Poor dietary habits include low intake of fruits, vegetables, and whole grains as well as excessive consumption of added sugars, saturated fats, and sodium, often via ultra-processed foods.[3] For example, the average adult in the U.S. only consumes two of the five recommended daily servings of fruits and vegetables while consumption of ultra-processed foods has steadily increased.[4,5] Additionally, according to the Centers for Disease Control and Prevention (CDC), Americans consume too many added sugars as part of their diet, which contributes to a number of health concerns, including excessive weight gain, type 2 diabetes, and

© 2026 American Medical Association. All rights reserved.

heart disease.[6] High-fructose corn syrup is particularly concerning, as overall consumption increased by more than 1000 percent between 1970 and 1990 and it has little to no nutritional value as an additive.[7]

The health consequences of poor diet are inequitably distributed, with individuals from marginalized, communities of color and indigenous populations experiencing the worst diet-associated health outcomes.[8–10] Additionally, people with lower incomes generally have lower dietary quality and consume fewer fruits, vegetables and whole grains, but consume more refined grains, added sugars, and saturated fats compared to those with higher incomes.[11] Access to healthy, nutritious, and affordable foods is an important social determinant of health that is influenced by several upstream environmental, community and policy factors.[11] Agricultural policies, and specifically the U.S. Farm Bill and its associated food and farm subsidies, represent a critical component of the federal policy landscape impacting the U.S. food system. In the broadest sense, food subsidies are financial aid provided by the government to producers or consumers to make food more affordable or to support agricultural industries. On the consumer side, food subsidies in the U.S. most notably include the Supplemental Nutrition Assistance Program (SNAP), child nutrition programs, and emergency food assistance.[12] On the producer side, agricultural or farm subsidies (used interchangeably here) are monetary payments and other types of direct financial support provided by the federal government to farmers or agribusinesses.[13] Based on the whereas clauses included in the original resolution (Res 428-A-25) which prompted this report, the primary focus of this report will be on farm subsidies but will also briefly touch on consumer subsidies.

DISCUSSION

Farm subsidies were first institutionalized in the 1930s during the Great Depression and U.S. dust bowl, a time where crop prices had fallen considerably, rural areas were experiencing extreme poverty, and nearly a fifth of the U.S. population was still employed in the farm sector.[14] Food and farm subsidies are generally controlled by the U.S. Farm Bill, an omnibus piece of legislation that is normally reauthorized every five to six years and forms the basis of all or most of the agricultural policy in the U.S. A visual breakdown of how money is distributed under the U.S. Farm Bill as of 2018 can be seen in Figure 1. As of 2018, about three-quarters of the $428 billion allocated to the farm bill was intended for nutrition programs – namely SNAP.[15] Nine percent of funds were earmarked for crop insurance programs, seven percent for commodities, seven percent for conservation programs, and about one percent for miscellaneous programs.[15]

Farm subsidies, in particular the crop insurance program and commodity payments, are intended to help farmers deal with natural disasters and risk management while also incentivizing the development of specific farming practices and conservation efforts.[16] There are five general categories of agricultural subsidies, which include:

1. Direct payments, which are paid at a set rate every year regardless of sales or weather conditions.
2. Counter-cyclical payments are triggered when commodity market prices fall below certain thresholds.
3. A revenue assurance program provides for overall profitability for a given crop.
4. Marketing loans, which offer favorable terms whereby farmers can realize gains through loan deficiency payments and commodity certificates.
5. Disaster payments and crop insurance subsidies; disaster payments allow farmers to recoup large losses due to natural disasters or other ecological factors, and the government also subsidizes crop insurance to further insulate farmers from risk.[17,18]

Agricultural subsidies, historically and currently, primarily support the production of just a few commodity crops, namely corn, soybeans, cotton, and wheat. These crops are used heavily in ultra-processed foods, biofuels such as ethanol, and food for livestock.[19] For example, the U.S is the largest producer of corn in the world but a majority of corn produced is not used for direct human consumption. Corn is a major component of livestock feed, which accounts for nearly 40 percent of total domestic corn use, and another 35 to 40 percent of corn is used for biofuel production (see Figure 2).[20] Corn farms alone received approximately 30.5 percent of all federal farm subsidies, equaling $3.2 billion in 2024.[16] A very small percentage of U.S. farm subsidies are used to produce other fresh fruits and vegetables.

Additionally, a majority of agricultural subsidies go to large agribusinesses and wealthy individuals/corporations, while many smaller and independent, family-run farms receive comparatively little government assistance.[21] For example, one report found that between 2012 to 2020, the top 10 percent of farms (in terms of size), which also tend to be owned and operated by wealthier individuals, received 56.4 percent of all crop insurance subsidies, with the top 5 percent receiving 36.4 percent.[22] A Government Accountability Office report found that a recipient of agricultural subsidies in the form of insurance premium subsidies, whose annual gross income exceeded $900,000, received an average of $1.2 million annually in premium subsidies during the years 2009 to 2013, while participants whose annual gross incomes were less than $900,000 received an average of about $7,480 annually in premium subsidies during the same period.[23] Thus, current agricultural subsidies policy accumulates more benefits to wealthier farmers and does much less to support middle- and lower-income farms.[24] There are also important racial and ethnic disparities in the distribution of farm subsidies. U.S. farm subsidies have historically favored large, white-owned farms and have systematically marginalized African American and Indigenous farmers. These groups have and continue to face barriers in accessing government subsidies, such as United States Department of Agriculture (USDA) denying or delaying loans to African American and Indigenous farmers, resulting in substantial land loss and a widening racial wealth gap in agriculture.[19,25–27]

The downstream impacts of U.S. farm subsidies result from a complex system that is largely driven by the financial incentives provided for large-scale production of commodity crops, which both fuels the widespread availability of unhealthy foods while simultaneously promoting farming practices that contribute to environmental degradation. Figure 3 depicts a high-level conceptual causal pathway diagram that traces how U.S. farm subsidies impact agricultural production decisions which then influence both the consumer food environment and several environmental outcomes, all of which have public health impacts. The following two sections summarize the health and environmental impacts of farm subsidies.

Health Impacts of Farm and Food Subsidies

Public health proponents of reforms to farm subsidies have argued that subsidization of commodity crops, such as corn, fosters increased consumption of ultra-processed foods, sugar-sweetened beverages, and more meat and dairy products than were historically recommended by the U.S. Dietary Guidelines, as unhealthy foods are more widely available and cheaper than healthy alternatives as a result of farm subsidies.[7,28,29] Food groups recommended as part of a healthy diet, such as fresh fruits and vegetables, tend to be more expensive per unit of energy compared to many highly processed goods that rely on cheap commodity crops such as corn, soybeans, and wheat. For example, one study found the purchase price of ultra-processed foods was $0.55 versus $1.45 for unprocessed foods per 100 kcal.[30] This trend is not limited to the U.S. A report by the United Nation's Food and Agriculture Organization found that vegetables were on average nine times more expensive than starchy food staples worldwide.[31] See Figure 4 for a helpful visual comparing the

global prices of different food categories per kilocalorie. Additionally, the availability of vegetables for consumption in the U.S. has been steadily declining for the last two decades while the domestic availability of meat has increased.[32,33]

The 2017 AMA Council on Science and Public Health report on sugar-sweetened beverages referenced a 2016 study that found individuals consuming the highest amounts of foods made from subsidized commodities have a 14 to 41 percent higher probability of cardiometabolic risk as measured by BMI, abdominal adiposity, C-reactive protein, and lipid levels.[34] An updated version of this study published in 2020 using more recently available data found consistent results. Namely, those in the highest quartile of subsidized food consumption had higher probabilities of obesity, abdominal adiposity, and dysglycemia compared to the lowest quartile of consumption, although some associations were significantly weakened from the previous years of study.[35] However, the authors note that U.S. consumption of foods created with subsidized crops has declined since the previously published study, from 56 percent to 51 percent.[35] This finding aligns with steady a decline of corn being used to create high fructose corn syrup in recent years, from around five percent in 2016 to three percent in 2024, which can be attributed to several factors, including changes to consumer preferences and the increasing proportion of corn being used as biofuel.[29,36,37]

Beyond sugar-sweetened beverages, another pathway through which agricultural subsidies impact the American diet is the consumption of meat. In general, grain-fed animals gain weight faster and become fatter than pasture-fed animals with diets lower in grains. Thus, the lower cost of feed makes it faster and cheaper to raise poultry, hogs, and cattle, which translates to relatively low costs for meat products.[7] As of 2025, the USDA estimates that the average American will consume about 60 pounds of beef and about 100 pounds of poultry per capita each year.[33] Americans are among the top per capita meat consumers in the world and are estimated to eat more than 1.5 times the average daily protein requirement due to high meat consumption.[38] Diets with higher meat consumption, particularly of red and processed meat, are correlated with the occurrence of several chronic diseases and acute health conditions, including high cholesterol, heart disease, stroke, obesity, certain cancers, type 2 diabetes, and premature death.[7,38,39] Additionally, there is some evidence that pasture-raised animals are better for consumers' health than heavily grain-fed animals since pasture-raised animals tend to have lower calories and total fat, higher levels of vitamins and good fatty acids, and a healthier balance of omega-3 and omega-6 fats.[40,41]

There are limited studies, beyond the ones referenced above, that quantify the impact of agricultural subsidies in their current form on dietary shifts and their resulting health outcomes. However, several studies have used modeling approaches to estimate impacts from taxes on certain food (e.g., sugar sweetened beverage taxes) and subsidizing the *purchase* of fresh fruit and vegetables. There is an important distinction between subsidies for consumers to purchase fruit and vegetables versus subsidies for farmers to grow produce beyond the few commodity crops mentioned above. The following studies address subsidized purchases, not subsidized production.

A modeling study published in 2020 compared the effects in New Zealand of a 20 percent fruit and vegetable subsidy, taxes on foods high in saturated fat, sugar, and salt, and an 8 percent junk food tax.[42] Models estimated a positive impact on health-adjusted life years per 1000 people for all the policies, ranging from 127 for the junk food tax, 212 for the fruit and vegetable subsidy, to 581 for the sugar tax. The study also reported significant health expenditure savings across the remaining lifespan per capita ranging from nearly $500 to over $2100 depending on the policy.[42] A similar study was done to simulate the effects of these types of food policies in the Australian population. In this study, taxes on sugar, salt, saturated fat, and sugar-sweetened beverages were estimated to have strong net positive health gains. The authors note that while fruit and vegetable purchasing

subsidies are a cost-effective addition to taxes, they do not lead to significant health benefits when modeled as a standalone intervention.[43]

SNAP is the largest food subsidy and nutrition assistance program in the U.S. which provides roughly 40 million low-income Americans with monthly benefits to purchase groceries.[12] SNAP has been demonstrated to reduce health care costs, improve health outcomes, and has been referred to as the nation's most important anti-hunger program.[44] SNAP functions as a prevention strategy against food insecurity, which is associated with several negative health outcomes across the lifespan. SNAP health benefits include better self-reported health, lower risk of heart disease and obesity among adults who had access to SNAP earlier in life, higher likelihood of periodic medical check-ups for infants and children in participating families, and greater medication adherence among older participants.[44]

Environmental Impacts of Farm Subsidies

Agricultural practices have direct and indirect impacts on the environment through a myriad of pathways, which in turn impact public health. Due to the nature of our current agricultural subsidy system and its incentives, the production of just a few commodity crops by large companies represent an overwhelming amount of agricultural production, and these therefore play a large role in the environmental impact of agriculture.[45] There are a few broad categories of environmental impact tied to the food system; these primarily include environmental contaminants/pollutants, climate change, and depletion of natural resources and areas.[45]

Environmental contaminants and pollutants. Agricultural production, at nearly every stage of the process, is associated with the release of environmental contaminants and pollutants, which include nutrients, such as nitrogen and phosphorous; pesticides; pharmaceuticals; pathogens; and air pollutants/gases (e.g., ammonia, methane, and fine particulate matter).[45] What follows is a high level summary of these issues and their impacts to the environment and public health.

Nutrients such as nitrogen, phosphorous, and potassium are essential for plant growth. Fertilizers, both organic and synthetic, are commonly applied during agriculture to provide these nutrients and promote higher crop yields. Organic fertilizers are derived from natural resources, such as decomposed plant matter or animal waste, while synthetic fertilizers are manufactured with blends of chemical compounds, with generally higher concentrations of nutrients.[46] Global agricultural use of synthetic fertilizers has increased fivefold since the 1960s, which increases the amount of nitrogen entering the environment. Synthetic fertilizers greatly increase the nutrient load in soil within a short amount of time, which impacts water quality through runoff. This includes nitrates entering groundwater systems as well as rivers and coastal areas. Nitrogen oxides and nitrous oxide are also released as an air pollutant into the atmosphere.[47] Nitrogen oxides contribute to air pollution, irritate the respiratory system, and can react with other chemicals and water in the atmosphere to create acid rain.[48] Acute, low levels of exposure to nitrous oxides can irritate the eyes, nose, throat, and lungs and cause coughing, shortness of breath, tiredness, and nausea.[49] Nitrogen, phosphorus, and other plant nutrients in surface water contribute to algae blooms that can foul drinking and recreational water systems and sometimes poison pets or wild animals.[50]

Another well-studied environmental concern from agriculture is pesticides. Pesticides are commonly and extensively used in agriculture to increase crop yields and to protect crops from pests that could reduce yield production. Types of pesticides include herbicides, insecticides, fungicides, and rodenticides. An estimated two million tons of pesticides are used globally each year.[51] The move towards large scale monoculture agriculture is associated with an increase in the use of pesticides in order to compensate for each crop's susceptibility to disease from specific

pathogens.[52] The level of toxicity for any pesticide depends on the type of pesticide and its chemical structure, its mode of entry, the dose, and the exposure period.[53]

Due to the relatively low cost of subsidized grains, another outcome from the current industrial agricultural system supported is the growth in Concentrated Animal Feeding Operations (CAFOs). CAFOs are a specific type of large-scale industrial agricultural facility that raises animals, usually at high density, for the consumption of meat, eggs, or milk. CAFOs are reflective of a major shift that has occurred within the U.S. agricultural system in the past 60 years, from one previously characterized by small and medium-sized farms to one that is now dominated by much larger operations that concentrate large numbers of animals in relatively small geographic areas. The primary environmental and public health concern from CAFOs is the large volume of manure produced by animals, which contain potential contaminants and can negatively impact local air quality and water systems.[45] Local communities around CAFOs suffer from lower quality of life due to the intensity of odors, gaseous emissions, insect vectors, and diseases spreading from the farms. There is an important environmental justice aspect to these exposures, as swine CAFOs have been found to be disproportionately located near rural, low-income African American communities in some parts of the country.[54]

As noted above, one major concern with CAFOs is the large amount of animal waste that is produced which then needs proper disposal. This creates another agricultural pollutant: pathogens. Pathogens from animal waste can infect other animals, can infiltrate local water supplies, and can be spread onto other agricultural products through the application of fertilizer in the form of animal waste. Despite vast improvements in food safety over the last century, there are still millions of human foodborne illnesses that occur every year.[55,56] There are also distinct risks from cross-species pathogens from the raising of livestock, particularly with CAFOs, and the potential risk of disease in other animals and humans. One recent example came from the highly pathogenic avian influenza A (H5N1), which spread quickly among poultry farms and then to dairy cows and subsequently infected a small number of farm workers, who were primarily Latino migrant workers.[57,58] One study found that agricultural intensification over the past several decades is associated with an increased risk of zoonotic disease emergence and that the future of zoonotic diseases will be closely linked to the evolution of our agricultural systems.[59]

As a protective measure, many farms will proactively give animals antibiotics to mitigate the risk of infection and quick spread of pathogens in CAFOs. As a result, CAFOs have also been implicated in concerns over growing antibiotic resistance and the contamination of natural systems with pharmaceutical byproducts, as the animals being held in CAFOs often must consume large amounts of antibiotics to survive within the cramped and compact conditions. The growing evidence of the environmental and public health harm caused by CAFOs has resulted in major public health and medical organizations adopting policies on them. Farm workers and nearby communities are exposed to numerous air pollutants from CAFOs, including particulate matter, ammonia, hydrogen sulfide, volatile organic compounds, noxious fumes, microorganisms, and endotoxins.[60–62] In 2019, the American Public Health Association approved the policy, "Precautionary Moratorium on New and Expanding Concentrated Animal Feeding Operations," and in 2023, the AMA adopted policy H-135.908, "Public health implications of industrialized farms," which recognizes CAFOs as a public health hazard.[63,64]

Climate Change. Agriculture is a major contributor to U.S. greenhouse gas (GHG) emissions and accounts for almost 11 percent of U.S. GHG emissions.[19] GHG emissions associated with agriculture are heavily concentrated in a few commodities, namely those having to do with cattle (e.g., beef and dairy), as cows produce substantial methane emissions with their ruminant digestive process, and from nitrous oxide emissions from activities like fertilizer application and storage of

manure.[65,66] In fact, nitrous oxide generated by agriculture is estimated to be responsible for about eight percent of total global anthropogenic GHG warming as of 2021.[47] Subsidies can play an important role in impacting GHG emissions associated with agriculture, as they influence how much is produced, what is produced, where it is produced, and how goods are produced.[67] One modeling study analyzing data from countries that participate in the Organisation for Economic Co-operation and Development (OECD) found that agricultural subsidies had the effect of increasing production of crops and GHG emissions, but results were variable across countries and were highly dependent on the commodities grown and technology used.[65]

While current agricultural practices exacerbate climate change, climate change itself impacts agricultural production through a variety of pathways. For example, climate change threatens food supplies by increasing the risk of flooding and extreme rain events, which can lead to contamination of food and water and destroy crops. At the same time, climate change can lead to increased drought and hotter temperatures in other parts of the country that could damage crops and harm livestock.[19,47] This current dynamic and negatively reinforcing relationship between agriculture and climate change is one that could be used as a powerful lever for positive change and climate change mitigation if subsidies were redesigned to promote more sustainable practices across the industry

Depletion of natural resources and areas. Our current agricultural system contributes to the depletion of natural resources, most importantly, healthy soil, freshwater, and natural areas, which is also tied to biodiversity. The critical importance of soil health for the future of agriculture cannot be understated. While soil erosion is a natural process, it has been identified as one of the most important land degradation processes that occurs with agriculture. Soil creation is a long-term geological process and one that is unable to keep up with current rates of erosion from agriculture. Erosion processes deplete organic matter within the soil and reduce its overall fertility and water holding capacity.[45] This last point creates a positive feedback loop – as soil continues to erode, it has less water holding capacity and therefore is more likely to have increased runoff, which furthers the process of erosion.[45] Agricultural runoff is a leading cause of pollution to rivers and streams, lakes, and impairments to wetlands.[68] While crop yields have generally increased over the past century, this has largely been from technological advances, including more intensive use of fertilizers, which for the time being has been able to mask potential effects of continuous soil degradation.[45] While monoculture farming increases productivity of single crops, it contributes to faster degradation of soil and its fertility, and requires a higher use of fertilizers.[52]

Fresh water is crucial for agriculture. In the U.S., agriculture is a major user of ground and surface water. Irrigation accounts for 47 percent of our nation's total freshwater withdrawals from both sources between 2010 and 2020.[69] Irrigation for cropland is highly geographically dependent, with a large majority of the irrigated land concentrated in western states where the production of many crops requires irrigation due to a more arid climate.[69] Irrigation for agriculture is a primary culprit for groundwater depletion – defined as long-term water-level declines caused by sustained groundwater pumping – which is a major sustainability issue and being felt acutely in the High Plains region of the U.S. (including the Ogallala aquifer) and other aquifers in the Mountain West and Southwest.[70,71] Corn and soybeans, which are also the most subsidized commodity crops in the U.S., are a few of the crops with the highest water consumption demands.[71,72] Reduced groundwater levels are not just a threat to the sustainability of our current food production system, but also have other adverse impacts, including land subsidence, increased costs for users as it becomes increasingly difficult to pump water from underground aquifers, and reduced water quality primarily due to saltwater intrusion.[71]

The intensification of agricultural production over the last 50 years has led to the expansion of agricultural lands into previously natural areas, which has put pressure on existing wild habitats and species and negatively impacted biodiversity.[47] According to the U.S. Environmental Protection Agency, nearly 1.2 billion acres of the nation's 2.3 billion acres are devoted to agriculture.[68] Due to changes in the U.S. Farm Bill in 1990, annual acres planted for both corn and soybeans crops, the two biggest U.S. crops in terms of total production, have increased by 14 and 26 million, respectively, over the last 35 years.[73] Ironically, declines in biodiversity caused by the expansion of agriculture and the increased use of fertilizers and pesticides, has resulted in a reduction in the number and variety of pollinators as well as natural predators for common agricultural pests, which has an overall net negative impact on current agriculture and creates a positive feedback loop in terms of necessitating increased use of synthetic inputs in the future.[74] The loss of biodiversity has also been found to increase the risk of human exposure to both new and established zoonotic pathogens.[75] Agricultural ecosystems have also become less diverse as monoculture farming has expanded, which has the effect of reducing national food security and stability.[76]

Agricultural Sustainability. While sustainability has many facets, agricultural sustainability aims to meet current food and resource needs without compromising the ability of future generations to do the same.[77] Pillars of sustainable agriculture include building healthy soil and preventing erosion, effective water management, minimizing air and water pollution, reducing climate warming emissions, increasing climate resilience, and promoting biodiversity.[77,78] There are many types of sustainable agricultural practices, and they tend to be most effective when used in combination. A few examples include:

- Rotating crops on a regular basis and planting a variety of crops, which creates healthier soil and improves pest control.
- To help reduce soil erosion, planting cover crops during the off-season and perennial plants to maintain living roots in the soil year-round.
- Creating nutrient management and targeted irrigation strategies to help reduce the application of excessive nutrients and water runoff.
- Integrated pest management approaches to help reduce the use of chemical pesticides.
- Agroforestry, a practice in which trees and shrubs are incorporated into fields, which provide shade and shelter for plants and animals that may be beneficial in controlling pests.
- Developing a systems approach to farmland management that treats uncultivated or less intensively cultivated areas as integral to the farm ecosystem.[78]

Improving the Farm Bill for Health

Multiple health and medical organizations agree that a diet aimed at achieving optimal human and planetary health should prioritize a wide variety of whole and minimally processed plant foods including vegetables, fruits, whole grains, and legumes, with moderate inclusion of animal-sources foods, while minimizing red and processed meats, foods high in saturated fat, and ultra-processed foods.[79–81] Aligned with this dietary guidance, several health-related associations have developed recommendations for future reauthorizations of the U.S Farm Bill to improve health and sustainability. Recommendations include increased subsidies for fruit and vegetable production, creating incentives for sustainable agricultural practices, conservation efforts, and more equitable distribution of subsidies that help diversify crops and improve equity within rural farming communities that have been historically excluded from federal agricultural assistance programs.[19,82] For example, the Society for Behavioral Medicine has recommended the inclusion of fruits and vegetables in commodity programs, providing additional insurance subsidies for producing fruits

and vegetables, and developing new insurance programs geared towards fruit and vegetable production.[82] Another recommendation is to establish financial incentives that increase funding for organic agriculture practices and prioritize sustainable agricultural practices in government-funded farm-to-table institution programs.[83] Other important focus areas for increased research and funding would be restorative agriculture, precision farming techniques, improving resilience in the face of climate change, and agricultural practices that take a broader ecological approach that considers its role within the larger environmental context.[19,45]

Many of the other recommendations for the U.S. Farm Bill focus on nutritional assistance and improving accessibility of healthy foods for consumers. A common theme in these recommendations is that the U.S. Farm Bill should incorporate a 'food is medicine' framework.[83] The 'food is medicine' framework is defined as the provision of healthy food resources or interventions in coordination with the healthcare sector to prevent, manage, or treat specific clinical conditions.[84] Specific interventions within a food is medicine approach includes medically tailored meals, produce prescriptions, medically tailored groceries, and nutrition counseling. So, for example, the Society for Behavioral Medicine has recommended that a reauthorization of the Farm Bill should increase the amount of funding available for produce prescription programs through the Gus Schumacher Nutrition Incentive Program.[83]

The other major theme of recommendations from medical professionals and associations includes continued and increased federal spending to support nutritional assistance programs, namely the Women, Infants and Children (WIC) program and SNAP. Continued and increased federal funding to support the WIC program and SNAP benefits is crucial for improving accessibility to healthful and nutritious food and reducing insecurity among low-income individuals and families in the U.S.[19,83,85] Other initiatives aimed at consumers to assist in purchasing healthy foods funded by the U.S. Farm Bill include the Food Insecurity Nutrition Incentive program and the Healthy Food Financing Initiative. The Food Insecurity Nutrition Incentive program is a grant-based program which provides financial incentives for families to purchase healthy foods while the Healthy Food Financing Initiative is designed to stimulate economic development and job creation by supporting farmers and healthy food retailers in low-income communities, underserved communities, and communities of color.[85] There is strong evidence that incentive programs like these can have positive impacts on health. The Community Preventive Services Task Force has recommended fruit and vegetable incentive programs as an important community-based program based on strong evidence of effectiveness in reducing household food insecurity and increasing household fruit and vegetable consumption.[86]

Other recommendations to update the Farm Bill to improve health include increased consumer education and increased nutritional research funding. Specifically, the Academy of Nutrition and Dietetics recommended increased funding for nutrition education programs that empower communities to develop skills to choose healthful diets and reduce the risks of developing chronic disease that are done in conjunction with nutrition assistance or delivery programs.[85] Research funding should also be increased to improve our understanding of the connections between nutrition, our food system, and accessibility by supporting existing initiatives and centers, for example the Agricultural and Food Research Initiative and the Agricultural Research Service's Human Nutrition Research Centers.[85]

Current Regulatory Landscape

The last time the U.S. Farm Bill was officially reauthorized was in 2018. However, there were important components normally considered in the Farm Bill that were included in H.R.1, dubbed by its proponents as the "One Big Beautiful Bill Act." Passed in July 2025 through budget

reconciliation, H.R. 1 covers several major farm bill provisions and funds them through 2031. However, the funds allocated for SNAP in H.R. 1 represent one of the largest cuts to SNAP funding in its history, equaling approximately $187 billion in cuts through 2030. Additionally the bill created new cost-sharing requirements for states and stricter work requirements for recipients.[87] These funding cuts and changes are estimated to reduce or eliminate SNAP benefits for nearly four million Americans.[87]

H.R. 1 also included provisions related to agriculture subsidies for commodities and crop insurance. The bill increased reference prices for covered commodities like wheat, corn, and soybeans and payment limits were increased for commodity programs. Funding for important crop insurance programs were extended and expanded. Affordability issues were partially addressed through expansion of premium assistance for beginning farmers and ranchers and a new pilot program for poultry insurance was created. The bill also made permanent certain 2017 tax provisions beneficial to family farms and ranches, including increased estate tax exemptions and enhanced business expensing options.[88–90]

H.R. 1 also restructured funding that had been obligated for climate-specific conservation funds under the Inflation Reduction Act into a permanent farm bill baseline funding pool.[89] The high level summary from one organization, the National Sustainable Agriculture Coalition, notes that the agricultural provisions in H.R. 1 increased subsidies for large commodity growers (even though they already primarily benefit from that program), included little to no support for smaller farmers and those that grow diversified crops, made drastic cuts to nutrition assistance programs, preserved some conservation efforts, and ultimately delayed the passage of a comprehensive farm bill that is overdue.[88] However, in November 2025, Congress passed an omnibus appropriations package that extended the remaining 2018 Farm Bill provisions until September 30, 2026, including the Conservation Reserve Program, that were left out of H.R. 1.[92]

EXISTING AMA POLICY

AMA has several existing policies that recognize the unhealthy contribution of excessive sugars in the American diet and encourages healthier food option availability.[34,93–95] Additionally, AMA Policy H-150.932, "Reform the U.S. Farm Bill to Improve U.S. Public Health and Food Sustainability," supports the creation of a new advisory board to review and recommend U.S. Farm Bill budget allocations to ensure any government subsidies are only used to help produce healthy food choices and sustainable foods, and that advisory committee members include physicians, public health officials and other public health stakeholders.[96] Policy D-150.978, "Sustainable Foods," supports practices and policies in medical schools, hospitals, and other health care facilities that model a healthy and ecologically sustainable food system… [and] evidence-based policies and programs to eliminate disparities in healthy food access…such as tax incentive programs, community-level initiatives and federal legislation.[97] Policy D-150.944, "Combating Obesity and Health Disparities," supports the provision of vegetables, fruits, legumes, grains, vegetarian foods, and healthful dairy and nondairy beverages in school lunches and food assistance programs as well as federal subsidies that encourage the consumption of foods and beverages low in fat, added sugars, and cholesterol.[98] Policy H-135.908, "Public health implications of industrialized farms," recognizes CAFOs as a public health hazard.[64] In a related report, CSAPH published a 2017 report on sugar sweetened beverages that included a section on the role of U.S. farm subsidies in the American diet and related health impacts.[34] AMA also has several policies on SNAP that support continued and increased funding for the program to improve diet and nutrition for all Americans.[99,100] Lastly, in March 2024, AMA joined the Medical Society Consortium on Climate and Health and 78 other health care organizations in sending a letter to the House of Representatives Agriculture Committee on the U.S. Farm Bill reauthorization, emphasizing the

importance of supporting a farm bill that prioritizes affordable and nutritious food as well as clean air and water.[101]

CONCLUSION

While U.S. farm subsidies were historically intended to stabilize the agricultural sector and produce enough food for Americans during challenging times, the nature of the U.S. food and agricultural system has changed drastically over the past 100 years. Currently, farm subsidies disproportionately benefit large, corporate farm operations and support an agricultural system focused on commodity crops, such as corn. This system fosters increased or excessive consumption of less healthy foods, such as unhealthy ultraprocessed foods, which are often more widely available and cheaper than healthy alternatives partly because of farm subsidies. Despite improvements in production efficiencies, agricultural practices have direct and indirect impacts on the environment through a myriad of pathways, which in turn impact public health. These include environmental contaminants and pollutants, climate change, and depletion of natural resources and areas. Strategies to improve the current food subsidy system should include increased subsidies for fruit and vegetable production, incentives for sustainable agricultural practices and conservation efforts, and more equitable distribution of subsidies that help diversify crops and improve equity for small producers that have been historically excluded from federal agricultural assistance programs.

RECOMMENDATIONS

The Council on Science and Public Health recommends that AMA Policy H-150.932, "Reform the US Farm Bill to Improve US Public Health and Food Sustainability," be amended by addition and deletion to read as follows and the remainder of the report be filed.

~~Reform the US Farm Bill to Improve US Public Health and Food Sustainability:~~ Our American Medical Association will advocate for ~~supports~~:

- Increased subsidies for the production of a diversity of health-promoting, whole foods, including fruits and vegetables;
- Reallocation of existing subsidies to improve equity for farmers that have been historically excluded from or underfunded by federal agricultural assistance programs;
- Increased funding for financial incentives, programs, and research initiatives to support sustainable agricultural practices, restorative agriculture, conservation efforts, and other projects that improve ecological diversity and resilience to climate change;
- Strengthen funding for U.S. Farm Bill initiatives which incorporate a 'food is medicine' approach and support interventions such as medically tailored meals, produce prescriptions, medically tailored groceries, nutrition counseling, and evidence-based education on preparation of healthy food; and
- the creation of a new advisory board to review and recommend US Farm Bill budget allocations to ensure any government subsidies are only used to help produce healthy food choices and sustainable foods, and that advisory committee members include physicians, public health officials and other public health stakeholders. (Modify Current HOD Policy)

Fiscal Note: Minimal

REPORT 4 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-26)
Improving Public Awareness of Lung Cancer Screening and CAD in Chronic Smokers

EXECUTIVE SUMMARY

BACKGROUND: Resolution 404-A-25, "Improving Public Awareness of Lung Cancer Screening and CAD in Chronic Smokers" was referred for study. This report outlines the current state of low-dose computed tomography (LDCT) for lung cancer screening (LCS) including: (1) disease prevalence, screening rates, and high-risk populations, (2) risks, benefits, and evidence of effectiveness and potential future applications (3) barriers to and disparities in screening, and (4) current efforts to promote awareness among physicians and the public.

METHODS: English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: "lung cancer screening" AND "low dose CT." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies and applicable professional and advocacy organizations were also reviewed for relevant information.

DISCUSSION: Lung cancer has significant health and economic impacts in the U.S. It is the second most common cancer, is generally diagnosed at late stages, and consequently comes with a poor prognosis. Moreover, these effects are often more prevalent among marginalized individuals. Fortunately, there is evidence that LDCT has a high sensitivity and specificity for detecting lung cancer. Targeted screening can result in earlier diagnosis and better health outcomes like reduced lung cancer-specific mortality, yet screening rates remain low. Consequently, significant research efforts evaluate the barriers to and disparities in LDCT for LCS as well as efforts to address those barriers and improve LDCT LCS rates. Most of the current interventions to improve LDCT LCS focus on either improving education or addressing structural barriers. There is some evidence that educational interventions, particularly those that use shared decision-making (SDM), improve knowledge and awareness for both patients and clinicians. However, even with increased use of SDM screening, screening rates remain low, suggesting greater emphasis should be put on evaluating ways to improve SDM or on interventions that address structural barriers. Early efforts to bring LDCT to underserved areas (e.g., mobile LDCT and telehealth) or facilitate patient navigation (e.g., centralized programs, scheduling support, reminders, transportation) may improve screening rates but there is a clear need for more research to confirm the evidence of effectiveness, feasibility, and scalability.

CONCLUSION: There have been substantial efforts to better understand low LDCT LCS rates and disparities. Evidence supports continued efforts to improve knowledge and awareness with educational interventions, particularly those that use SDM. However, persistent low screening rates despite SDM efforts demonstrate the need for continued research into optimal methods of implementation as well as into interventions that address logistical and structural barriers. Currently, efforts to bring LDCT to underserved areas or facilitation of patient navigation have shown promise, but ultimately more research is needed to confirm the evidence of effectiveness, feasibility, and scalability.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 4-A-26

Subject: Improving Public Awareness of Lung Cancer Screening and CAD in Chronic Smokers

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee D

Resolution 404-A-25, "Improving Public Awareness of Lung Cancer Screening and CAD in Chronic Smokers," was referred for study and asked the following:

> That our American Medical Association will partner with other professional and public health organizations as well as key stakeholders in cardiology, pulmonology, oncology, and imaging specialties to increase awareness amongst chronic smokers (who would benefit from appropriate lung cancer screening) regarding their risk for both lung cancer and coronary artery disease and encourage their participation in screening programs through a joint public campaign effort; and be it further
>
> That our AMA promote physician education and awareness regarding the value of chest CT in detecting both lung cancer and calcified atherosclerotic plaque and encourage reporting the extent of coronary artery calcification in non-contrast chest CT studies performed as a part of lung cancer screening program.

METHODS

English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: "lung cancer screening" AND "low dose CT." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies and applicable professional and advocacy organizations were also reviewed for relevant information.

BACKGROUND

Lung cancer is the second most commonly diagnosed cancer in the United States (U.S.), is generally detected at late stages, and consequently comes with a poor prognosis.[1–3] Early-stage lung cancer is more amenable to treatment and has a better prognosis; however, it requires early detection. Fortunately, there is evidence that low-dose computed tomography (LDCT) has a high sensitivity and specificity for detecting lung cancer.[4–12] Moreover, targeted screening can reduce lung cancer-specific mortality.[5,8–16] Despite the benefits of LDCT for lung cancer screening (LCS), rates of screening remain low.[17–22] This report outlines the current state of LDCT for LCS including: (1) the evidence of effectiveness, (2) disease prevalence, screening rates and high-risk populations, (3) barriers to and disparities in screening, and (4) current efforts to promote awareness among physicians and the public.

DISCUSSION

The Lung Cancer Landscape: Prevalence, Mortality, Risk Factors, and Disparities

The 2026 Cancer Statistics report estimates 229,410 new cases of lung cancer will be diagnosed in the U.S. this year.[23] Although lung cancer incidence is falling, it remains the leading cause of cancer deaths in U.S. men and women (19 percent and 21 percent respectively).[23,24] Most patients diagnosed with lung cancer present with distant or metastatic disease which is harder to treat and associated with higher mortality.[25,26] Notably the five-year relative survival for lung cancer has improved steadily, rising from 12 percent in 1975–1977, to 15 percent in 1995–1997, and reaching 28 percent in 2015–2021.[23] In addition to loss of life, lung cancer caused approximately $13 billion in lost earnings in the U.S. in 2019, not to mention the $1.35 billion in patient out-of-pocket costs associated with lung cancer treatment and caregiving.[27–29] Furthermore, there is evidence that cancer costs increased by stage with statistically significant and economically meaningful differences between the lower cost of early-stage cancer compared to higher cost late-stage cancer.[30,31] The risk of developing lung cancer is primarily driven by smoking status, with 80 to 90 percent of lung cancer deaths linked to smoking.[3,32,33] Although, smoking prevalence dropped from 42 percent in 1964 to 11 percent in 2023, it continues to be the leading cause of preventable death in the U.S.[23,34] Other risk factors for lung cancer include environmental exposures (e.g., radon, heavy metals, asbestos, arsenic), radiation therapy, other noncancer lung diseases, race/ethnicity, and family history.[3,25]

Factors that impact smoking behaviors have a significant impact on lung cancer rates. Historically, men had higher rates of smoking and a higher incidence of lung cancer. However, recently men have shown steeper reductions in lung cancer incidence compared with women, who took up cigarette smoking later and were slower to quit.[23,27,35] Age also increases lung cancer risk as more than half of diagnoses occur at age 70 years or older, and 83 percent occur at age 65 years or older.[36]

Notably, tobacco marketing efforts have historically targeted members of marginalized and underserved communities, who often have the highest incidence and mortality from the disease.[27,37–41] Native American people have the highest lung cancer mortality at 38.7 per 100,000 compared with 34.5 per 100,000 in White people, who rank second, and 33.1 per 100,000 in Black people, who rank third.[23] There is also evidence that Black males have the highest rates of age-adjusted lung cancer incidence and lung cancer mortality of all U.S. racial/ethnic groups.[39,41] Generally, Black individuals tend to develop lung cancer at an earlier age and are diagnosed at a later stage than white individuals.[39,42,43] Trends are also less favorable for Asian American, Native Hawaiian, and Pacific Islander women, among whom lung cancer incidence is increasing.[27] Evidence also shows that American Indian/Alaskan Natives have the highest overall prevalence of cigarette smoking and the slowest decline in lung cancer incidence of any group.[27,34,39,41,44] Incidence rates declined fastest in Black individuals in the last 10 years.[27] There is also evidence that lung cancer disproportionately affects people of low socioeconomic status, who experience more environmental exposures, higher lung cancer mortality, and have fewer resources and are less able to manage the economic burden of screening and treatment.[27,39,45–47]

Geography also impacts lung cancer rates and mortality. Rural populations experience particularly stark disparities in lung cancer outcomes including higher rates of smoking, a higher incidence of lung cancer, greater late-stage diagnosis, and have higher lung cancer mortality.[48–51] This is particularly true for Black individuals in rural areas when compared than those in urban areas.[39,52] State to state differences are notable and often tied to historical smoking trends.[27]

Recommendations for Lung Cancer Screening with LDCT

LDCT converts a series of x-ray images to create 3-D views of tissues and organs, but uses significantly less radiation than regular CT, thereby decreasing the radiation exposure risk.[53] Lung cancer screening guidelines recommend annual screening with LDCT as it has a moderate net benefit in persons at high risk of lung cancer based on age, total cumulative exposure to tobacco smoke, and years since quitting smoking.[54] However, there is slight variability in the screening guidelines regarding age and pack year cutoffs. (See Table 1).

Benefits of LDCT: screening efficacy, lung cancer mortality, incidental findings, and future applications

There is strong evidence from multiple systematic reviews, meta-analyses, and other studies that LDCT has high sensitivity and specificity to detect lung cancer.[4–12] There is also a well-defined high-risk population that may benefit from LCS with LDCT as LDCT is associated with increased diagnosis of early-stage non-small cell lung cancer (NSCLC), increased rates of resection, and a significant reduction in lung cancer-related mortality.[5,8–15,38,55–62]

Furthermore, some researchers and clinicians suggest that LDCT for LCS may be a useful tool to diagnose other cardiovascular and pulmonary conditions (e.g., ischemic heart disease, COPD, coronary artery disease) in otherwise asymptomatic patients.[63–71] LDCT for LCS provides images of the entire chest and upper abdomen and using a single scan to evaluate multiple conditions could reduce radiation exposure, save time, and decrease costs.[63,64] Cardiovascular conditions like coronary artery calcification (CAC), increase with age, are more common in smokers, and are frequently noted on LCS LDCT scans.[55,65,72,73] Additionally, although the clinical standard for evaluating CVD risk via CAC requires a dedicated ECG-synchronized cardiac CT, it can also be measured on any standard protocol CT image that includes complete imaging of the heart such as routine noncontrast-enhanced, non-ECG gated chest CT (NCT) scans.[63,64]

Current evidence suggests that CAC, particularly general grading of CAC volume, can be feasibly and reliably assessed using visual or software quantitative analysis methods on LDCT for LCS, which is reinforced by the fact that CAC is one of the most common incidental findings on LDCT for LCS.[63,66,69,74–79] Simultaneously, some evidence suggests that using LDCT from LCS to assess CAC and specifically for the assessment of Agatston calcium scoring may be less accurate.[63] There is also substantial variability in CAC detection on LDCT scans for LCS.[55,67,68,80] Therefore, while using LDCT for LCS to evaluate CAD and CAC is possible, there is no consensus regarding specific approaches or guidelines for using LDCT images for CVD risk assessment.[63,64] Technological innovation utilizing machine learning and artificial intelligence has been proposed as a tool to help diagnose CAC on LDCT for LCS; however, more research is needed to determine the evidence of effectiveness and ensure that the tools are both ethical and equitable.[6,64,71,81–83]

While there is potential benefit in using LDCT for LCS to diagnose CAD and CAC and facilitate earlier clinical intervention, it is important to avoid unnecessary workup – particularly when diagnosis does not necessarily engender clinical action or intervention.[66,69,74] For instance, the Nederlands-Leuvens Longkanker Screenings Onderzoek (NELSON) study found that only 1 percent of incidental findings had significant clinical implications and current data is unclear regarding whether knowledge of the presence of CAC on LDCT for LCS translates to intervention or decreased CV mortality.[70,80] Ultimately, further studies are needed to determine whether CAC could enhance uptake and adherence to primary prevention strategies.[67,70]

Finally, it is important to note that most studies of LDCT for LCS lack diversity, thereby limiting generalizability of the findings to marginalized groups who face higher incidence of lung cancer, lower rates of screening and treatment, more advanced lung cancer disease at diagnosis, and higher lung cancer mortality.[38,84–91] Much of the evidence for LDCT comes primarily from two large clinical trials: The National Lung Screening Trial (NLST) and NELSON; however, 89.6 percent of participants in the NLST were White and of higher socioeconomic status than the general population, while the NELSON study did not report these demographic factors.[38,92–95]

Risks of LDCT: overdiagnosis, false positives, psychological harm, etc.

Although there is strong evidence supporting the use of LDCT for LCS in high-risk groups, it is important to acknowledge that potential psychological harms, overdiagnosis, false positives, and consequent unnecessary treatments and health care costs remain challenges.[11,25,96–99] Overdiagnosis occurs when malignancies that would have remained asymptomatic or progressed too slowly to impact a patient's health are discovered, whereas false positives occur when the LDCT picks up an abnormal finding (e.g., cyst, calcification), but follow-up scans or inquiry are unconcerning.[98–101] Both overdiagnosis and false positives are risks associated with LDCT for LCS that can have negative psychological impacts (e.g., increased anxiety and stress), result in unnecessary diagnostic procedures (e.g., follow-up imaging, biopsies), overtreatment (e.g., surgery, radiation, chemotherapy), and extended patient monitoring.[97,100,102] There is some evidence that false-positives and misdiagnosis are more common among people who are screened using LDCT than x-ray.[12,97] However, there is also evidence that false positive and misdiagnosis rates may be reduced by factors like extending the length of post-screening follow-up, assessing the volume doubling time of detected nodules, and implementing Lung Imaging Reporting and Data System (Lung-RADS) criteria.[9,13,100,103,104] Lung-RADS is a classification system to aid interpretation of findings in LDCT for LCS and standardize follow-up and management decisions. There is no consensus on the optimal cut-off size for nodules classified as positive.[9,10]

Psychological harms like anxiety and distress are commonly associated with cancer screening and LDCT for LCS is no different.[105] False-positive results, overdiagnosis and detection of incidental findings in asymptomatic people are risks that can reduce screening participation.[106] Short-term adverse psychological burden has been reported, particularly after a false-positive result, but this was found to diminish over time.[107–109] Multiple reviews have shown that are no long-term psychological harms from screening.[12,104] Also, there are interventions which have been regularly shown to reduce psychosocial burden in cancer screening including patient-centered communication, psychological preparation for different types of outcome, the use of decision aids in shared decision making (SDM), and multi-faceted interventions incorporating emotional support and patient education can reduce negative experiences.[80,105,110,111] Finally, evidence suggests rates of false positives and overdiagnosis of lung cancer using LDCT are not very different from the overdiagnosis rate of breast cancer, and therefore might be reasonable.[62]

General Lung Cancer Screening Rates

Despite the strong evidence that LDCT is effective for LCS, support from professional organizations and advocacy groups, and increased prevalence of LCS programs (e.g., in community, cancer centers, academic health systems, and Veterans Health Care Administration (VHA)), actual rates of screening remain very low.[20,21] A 2024 study found that roughly 12.7 million adults were eligible for lung cancer screening with LDCT, but only 18.3 percent were screened.[22] This mirrors studies from 2017, 2020, and 2022 that found similarly low screening rates at 14.4 percent, 6.5 percent, and 18.1 percent respectively.[17–19] Importantly, there is significant state to state variability in screening rates -- Florida has a 18.1 percent screening rate, whereas Nevada is

much lower at 6.5 percent.[20,27,39,112] In contrast, one study found county-level breast, cervical, and colorectal cancer screening rates ranging from 39.8 to 89.7 percent.[113] Another study found that among those eligible for LCS, breast and colorectal cancer screening rates were nearly 4 times higher than the LCS rates.[114]

Disparities in Lung Cancer Screening

Lung cancer screening is one of the most observed topics in the health disparities literature.[91] Evidence of disparities in LCDT use for LCS are notable among racial and ethnic minoritized adults, uninsured individuals, and residents of specific regions.[21,38,91,115–118] Evidence also suggests that education level, income, and veteran status also impact lung cancer screening decisions and rates.[21,38,91,115–118] A number of studies and systematic reviews found that Black or Hispanic adults had lower rates of LCS than White adults.[38,116–119] However, the most recent data shows that Native American people have some of the lowest screening rates (14 percent) compared to Black people and White people (20 and 18 percent respectively).[23]

Access to LDCT is a major factor in screening rates, and lack of access is especially pronounced in rural and socioeconomically disadvantaged areas and populations.[120–123] One study found that unscreened patients had a lower annual household income than those who were screened.[116] Individuals with low socioeconomic status also face financial, social, and geographic barriers to accessing LCS and essential follow-up.[124] LCS utilization is also influenced by health insurance access, coverage, and costs as evidence by the fact that individuals with higher total out-of-pocket medical costs are less likely to adhere to annual LCS.[125,126] Similarly, there is evidence that a greater proportion of screened non-Hispanic Black respondents were of Medicare age and gaining access to Medicare coverage increased LCS in screening-eligible men.[127,128]

Patterns of LCS accessibility and utilization vary with geographical factors like total distance from screening facilities, regional differences tied to historical trends and priorities, and rural-urban environment differences that impact resources. One study found that five percent of the population eligible for LDCT does not have access to screening facilities within 40 miles and this is markedly higher among individuals living in micropolitan and rural counties at 17.1 percent and 24.5 percent.[123] Evidence generally indicates that a larger percentage of the rural population lacks access; however, some studies found that urban residents were less likely to be screened and less likely to be aware of screening.[38,123,129–132] LDCT screening rates also vary widely across states.[119,133] Several southern states with a high lung-cancer burden (e.g., Mississippi, West Virginia, and Arkansas) have relatively low rates of screening, whereas several northeastern states with lower lung cancer burden (e.g., Massachusetts, Vermont, and New Hampshire) had the some of the highest rates of LDCT screening. Kentucky is a notable exception as they have high lung cancer mortality and also one of the highest screening rates.[119,133]

Finally, veteran status is associated with increased odds of screening.[131] Veterans have higher smoking rates than their nonveteran peers, but there is also evidence that efforts by the Veterans Health Administration (VHA) hospitals have resulted in good LCS uptake with more than half of eligible VHA patients agree to undergo screening at eight demonstrations sites between 2013 and 2015.[134,135] Notably, VA-Partnerships to Increase Access to Lung Screening (VA-PALS), a multidisciplinary collaboration between clinicians and computer scientists within and outside the VA to increase access to high quality LCS, might contribute to higher rates of screening among vets.[131,136]

BARRIERS TO LDCT LCS UTILIZATION AND EFFORTS TO ADDRESS THEM

The most common barriers to utilization of LDCT for LCS are patient and clinician knowledge, perceived high false-positive rate leading to unnecessary procedures, patient refusal, time constraints, lack of transportation, concerns about cost or lack of insurance coverage, and difficulty using the electronic medical record (EMR) to determine and notify clinicians of eligible patients.[137] These barriers fall into two conceptual groups: (1) knowledge, attitudes, and beliefs; and (2) structural barriers to access.

Clinician and patient knowledge, attitudes, and beliefs

There is evidence that physicians support LDCT for LCS and that they believe the benefits outweigh the potential harms for high-risk patients.[138] Yet evidence also suggests that physicians' lack of knowledge about eligibility, screening guidelines, and CMS insurance coverage is an obstacle to referral of LDCT.[38,88,116,138–146] Several studies illustrate the mistaken belief among physicians that the USPSTF recommends screening with chest x-ray.[139,140,142] There is also evidence that many clinicians struggle to accurately identify all CMS eligibility criteria or correctly state the current guidelines.[21,137,138,147] One study found that the majority of physicians were unsure whether Medicare/Medicaid covered LDCT LCS, despite the fact that CMS had already issued their coverage determination.[138] This is concerning since a majority of physicians in that study also reported that they would recommend LDCT screening for high-risk patients if cost were not an issue.[138]

There is also evidence that clinicians' perceived patient barriers (e.g., lack of awareness, stress, anxiety, cost, and lack of insurance coverage) and concern about the potential for false positives are significant obstacles to lung cancer screening referrals.[138,140–144,147,148] Clinician knowledge levels may also be impacted by setting. One study found that academic-based clinicians achieved similar knowledge scores to community-based clinicians, both of which were significantly higher than the knowledge scores of health care professionals in safety net-based settings.[137] Similarly, another study found that almost all physicians reported that a computed tomography machine was available at a facility within 20 minutes of their practice, but nearly half were unsure of whether LDCT screening was offered at those facilities.[138] Finally, controlling for clinician characteristics (hospital affiliation, specialty, title, employment) and CMS eligibility provider knowledge scores, a higher provider knowledge score was associated with a higher likelihood of ordering a LDCT scan.[137]

Lack of knowledge or awareness about LDCT for LCS is also commonly reported by patients.[149–153] Multiple studies found that most eligible smokers had little or no knowledge about lung cancer screening and had never had a health care professional recommend it to them.[38,144,152,154,155] This is important as lack of knowledge can contribute to feelings of fear, fatalism, and stigma, which are also reported by patients as barriers to utilizing LDCT for LCS.[144,152,153,155–157] Findings from one review show that screening attendance is affected by fear of both diagnosis and screening procedure.[158] Similarly, one study found that the primary barrier to returning for subsequent annual screenings was receiving a negative or false-positive screening result.[151] Moreover, a generational history of discrimination and mistrust contributes to perceptions of stigma and challenges with patient–clinician communication.[39] As a result, underrepresented racial/ethnic populations and individuals with low socioeconomic status exhibit greater feelings of fatalism, nihilism, and futility associated with medical intervention, which may reduce pursuit of lung cancer screening.[155–157,159] Furthermore, there is some evidence of differences in total knowledge scores associated with race, with White participants having slightly higher total knowledge about screening when compared to Black participants.[148] In a separate study, Latinx patients were more likely to believe that lung cancer can be prevented, were less worried about developing lung cancer, and had a greater

willingness to be screened when educated about screening when compared with non-Latinx patients.[160]

Intervention to improve knowledge and awareness: Education, public awareness, and shared-decision-making

There is some evidence that educational efforts can increase both clinician and patient knowledge and awareness.[112,161–164] Some studies have demonstrated that group based learning, targeted education programs, and educational lectures can increase clinician knowledge about LCS, improve their ability to identify eligible patients, and increase referrals to LDCT; however, most interventions to increase LDCT LSC rates have targeted patient education with SDM.[112,161,162,164] This is likely because SDM counseling is required for reimbursement and recommended by federal agencies and national specialty societies to help patients in making informed decisions about LCS.[165,166]

There is significant variability in studies of and approaches to SDM for LCS; however, evidence from multiple reviews and studies demonstrate that decision aids, tools, and processes for SDM improve patient knowledge, reduce decisional conflict and regret, show acceptability to patients and clinicians, and increase LCS uptake and adherence.[96,110,167–172] Moreover, when effectively tailored to populations at higher risk for lung cancer, SDM can further promote health equity.[172,173] At the same time screening rates remain low and many clinicians cite major barriers to utilizing SDM, including time constraints, competing clinical demands and priorities, limited awareness about LCS guidelines, lack of skilled training in SDM, and insufficient resources to implement SDM.[164,174–176] One study found that clinicians were concerned about the feasibility of integrating yet another recommendation into routine practice, let alone the capacity to provide the high-volume, high-quality lung cancer screening and treatment centers required to support screening programs.[140] There are also concerns that SDM conversations are often too brief, prioritize exchanging information over patient preferences, focus on benefits over harms, and lack sufficient use of decision aids.[176,177] This underscores the need to both explore alternative methods of SDM which can minimize hands-on clinician time and expand beyond a sole focus on education interventions to incorporate multilevel targets when designing LCS interventions.[110,164]

Proposed approaches include integrating SDM and telehealth for LCS, prediction-augmented SDM tools, developing adaptable SDM training programs, developing novel SDM decision aids and tools, and establishing key SDM process and training quality measures.[172,178] For example, one study found that conducting SDM over the telephone could be a way to address logistical barriers, improve patient knowledge, and reduce fatalistic beliefs and distrust in the medical system.[179] Implementation should consider feasibility and that delivery should include patient-facing print, web, in-person, and video options.[96] Moreover SDM content and presentation methods should be developed collaboratively with screening-eligible adults.[180]

Structural Barriers: Time Constraints, Insurance Coverage, and Electronic Health Records (EHR)

Even when patients and clinicians are well informed about the risks and benefits of LDCT there are several structural barriers that may prevent them from pursuing or accessing LDCT. For instance, the EHR can be a useful tool to cue physicians to patients who are eligible for LDCT; however, that requires that the EHR contains detailed and accurate smoking history calculation and age.[21] Eligible individuals may be missed if they do not have a clinical encounter or if the EHR fails to capture and retain accurate cumulative pack-year calculations.[181] For example, one cross-sectional study found that imprecise smoking history data in the EHR resulted in identifying only 30 percent of potentially LCS eligible study respondents when searching for screen-eligible beneficiaries for

LCS.[182] Reliance on EHRs for referrals is complicated by the patchwork nature of the current health care system in the U.S. and by the underuse of health care services and cancer screening among people who smoke.[183,184]

Many physicians also referenced patient barriers like insurance coverage and cost as rational for why they did not bring up or recommend LDCT for LCS with the patients who might be eligible.[140] One study found that the most reported barriers to ordering screening included prior authorization requirements, lack of insurance coverage, and coverage denials.[175] Since 2015, LCS with LDCT has been covered under Medicaid; however, to qualify for reimbursement several criteria, including SDM counseling, must be met. This creates two interconnected barriers. First, the SDM requirement has been interpreted by some to be a time-consuming barrier to uptake.[179,185] Second, individual state-based decision-making rules and rejection of Medicaid expansion have limited access to LCS using LDCT, and in some cases, continues to leave eligible LCS candidates without a route to screening.[19,39,186,187] There is evidence that screening implementation is higher among individuals with insurance compared with uninsured subjects.[188] Yet, underrepresented racial/ethnic populations are more likely to be uninsured or ineligible because of foreign-born nativity or citizenship status.[39] More than half of those who qualify for lung cancer screening on the basis of USPSTF recommendations are estimated to have Medicaid or be uninsured.[146]

Structural barriers like lack of transportation, cost of screening, and time constraints (e.g., inability to get time off of work, inability to find child care, and other pressing issues) also limit access or a patient's reported willingness and/or ability to pursue LDCT for LCS.[144,149–152,158] For example, one study found decreased intention to screen when patients were required to pay for the test.[157]

Structural Interventions: Mobile LDCT, digital interventions, and patient navigation

Logistical barriers to access are some of the most reported by patients, particularly by marginalized individuals who often have higher rates of lung cancer and worse lung cancer mortality. The two primary approaches that have been used to address logistical barriers are those that either focus on bringing LDCT to underserved areas (e.g., mobile LDCT and telehealth) or on facilitating patient navigation (e.g., scheduling support, reminders, transportation).

For instance, mobile screening services might offer a potential solution to narrow healthcare disparities for marginalized populations.[125,189] There are some studies that show that mobile LDCT LCS platforms can lead to higher rates of LCS and early lung cancer detection, particularly in underserved populations. However, more research is needed to confirm the evidence and determine scalability.[190] Similarly, digital interventions, particularly decision aids and telehealth, have shown promise in improving knowledge and the quality of decision-making around LCS, but there are very few studies and the effects are small.[191] Ultimately, further research is needed to determine the evidence of effectiveness, feasibility, and scalability of mobile LDCT, digital decision aids, and telehealth interventions.

There is also evidence that centralized programs are more effective regarding screening rates, adherence to guidelines, and follow-up care, than decentralized programs.[192–195] However, centralized programs require considerably more investment and resources.[178,196] There is also substantial variation in practices utilized across centralized LCS program models, including the specific structures and practices that enhance LCS quality and effectiveness, which has not been sufficiently explored.[119,192,193,195,196] Often centralized programs employ processes that improve screening among underserved populations, including clinical reminders to identify eligible patients, providing educational materials, addressing barriers to accessing care such as insurance coverage and transportation, and patient navigation.[196,197] There is also some evidence that patient navigation

practices, including scheduling support, reminders, and transportation may improve LCS uptake and adherence, particularly in vulnerable populations.[198–201] Furthermore, the few interventions addressing social determinants of health in LCS have favorably resulted in increased screening rates.[202] While more evidence is still needed, it is likely that effective, equitable screening requires addressing barriers along several steps of the LCS continuum.[195,203]

CURRENT AMA POLICY

AMA Policy, H-185.936 "Lung Cancer Screening to be Considered Standard Care" addresses LDCT for LCS. It highlights the importance of insurance coverage, improving access, and the need to promote education and awareness about LDCT for LCS to patients and clinicians.

CONCLUSION

Lung cancer has significant health and economic impacts in the U.S., particularly since it is often diagnosed late when prognosis is poor.[1–3] Moreover, these effects are often more prevalent among marginalized individuals. However, there is strong evidence that LDCT LCS can result in earlier diagnosis and better health outcomes as well as emerging evidence of the potential to use LDCT for LCS to diagnosis CAC.[4–12] Despite the benefits of LDCT for LCS, rates remain low.[17–22] Most of the current interventions to improve LDCT LCS focus on either: (1) improving education or (2) addressing structural barriers. There is some evidence that education improves knowledge and awareness for both patients and clinicians, particularly through SDM. However, even with increased use of SDM, screening rates remain low, suggesting greater emphasis should be put on evaluating ways to improve SDM or on interventions that address structural barriers. Early efforts to bring LDCT to underserved areas (e.g., mobile LDCT and telehealth) or to facilitate patient navigation (e.g., scheduling support, reminders, transportation) are promising but there is a clear need for more research to confirm the evidence of effectiveness, feasibility, and scalability.

RECOMMENDATIONS

Your Council on Science and Public Health recommends that the following be adopted in lieu of Resolution 404-A-25 and the remainder of the report be filed.

That Policy H-185.936 "Lung Cancer Screening to be Considered Standard Care," be amended by addition to read as follows:

1. Our American Medical Association recommends that coverage of screening low-dose CT (LDCT) scans for patients at high risk for lung cancer by Medicare, Medicaid, and private insurance be a required covered benefit.
2. Our AMA will empower the American public with knowledge through an education campaign to raise awareness of lung cancer screening with low-dose CT scans in high-risk patients to improve screening rates and decrease the leading cause of cancer death in the United States.
3. Our AMA will work with interested national medical specialty societies and state medical associations to urge the Centers for Medicare & Medicaid Services and state Medicaid programs to increase access to low-dose CT screening for Medicaid patients at high risk for lung cancer by including it as a covered benefit, without cost-sharing or prior authorization requirements, and increasing funding for research and education to improve awareness and utilization of the screening among eligible enrollees.
4. Our AMA, in conjunction with other interested national specialty societies of expertise (e.g., ACP, AAFP, ACR), will create and share educational resources and training to help

physicians efficiently discuss and document low-dose computed tomography (LDCT) lung cancer screening during shared decision-making visits for high-risk populations.

5. Our AMA will promote physician education and awareness regarding the value of low-dose CT in detecting lung cancer, and will encourage education, technological innovation, and continued research around the detection of coronary artery calcification on low-dose CT performed as a part of a lung cancer screening program.
6. Our AMA will support efforts by key stakeholders in cardiology, pulmonology, oncology, and imaging specialties to research interventions to improve access to and utilization of lung cancer screening with low-dose CT scans in high-risk patients.

(Modify Current HOD Policy)

Fiscal note: Minimal

APPENDIX

Table 1. Lung Cancer Screening Guidelines

Organization (Year)	**Age**	**Pack years**	**Other**
American Academy of Thoracic Surgeons (2012)[204]	55-79	30	Currently smoke or quit <15 years ago

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 5-A-26

Subject: Removing Artificial Turf in Schools, Parks, and Public Places

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee D

Resolution 408-A-25, "Removing Artificial Turf in Schools, Parks and Public Places," was referred for study and asked the following:

> That our American Medical Association (AMA) recommend replacing artificial turf with natural, drought-tolerant and hardiness zone appropriate turfgrass in parks, sports fields and lawns when it is to be replaced; and be it further
>
> That our AMA support natural, drought-tolerant and hardiness zone appropriate turfgrass as the preferred choice on sports fields or lawns, in all public and private schools and colleges, as well as in city parks.

This report provides a summary of the available evidence on the positive and negative health impacts of artificial turf fields, the current landscape of legislative activity to limit artificial turf, and available evidence for disproportionate impacts on specific populations.

METHODS

English language reports were selected from searches of PubMed and Google Scholar databases using the search terms: "artificial turf" AND "health impacts", "artificial turf" AND "injury," and "artificial turf" AND "accessibility." Legal websites, such as LexisNexis, and Google were utilized to search for state and local legislation on artificial turf. Search terms included "[State name] ban or regulations on artificial turf" and "cities or counties in [State name] that have bans or regulations on artificial turf". Additional articles and sources were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies, such as the U.S. Environmental Protection Agency, and applicable professional and advocacy organizations were reviewed for relevant information.

BACKGROUND

Artificial turf is made by heating plastic resin (generally polyethylene and polypropylene) so it can be reshaped into a yarn-like substance to produce grass-like threads that sit on several layers that provide cushioning. Artificial turf was first introduced in the 1960s and was originally intended to provide cushioned recreational surfaces for urban schools that did not have natural grass play areas or found them difficult to maintain.[1] Artificial turf has gone through several technological phases since then. First generation artificial turf, commonly known as AstroTurf, gained notoriety when it was installed in the Houston Astrodome in 1966.[1] AstroTurf was composed of short, stiff nylon fibers layered over a compacted soil base, sometimes with a closed-cell foam cushion added beneath the carpet.

© 2026 American Medical Association. All rights reserved.

AstroTurf had significant technical limitations, aesthetic shortcomings, and was criticized for its abrasive textures, resulting in concerns about injuries. The second generation of artificial turf was developed in the late 1970s and included a shock-absorbing pad beneath the first-generation carpet with longer fibers compared to the first-generation turf. Additionally, in this evolution of artificial turf, infill materials were added, such as silica sand, which filled the spaces between the turf fibers, allowing them to stand upright. While the introduction of infill materials improved shock absorption, it caused painful abrasion injuries.[1,2]

For the current, or third generation, of artificial or synthetic turf, introduced in the late 1990s, the composition of artificial threads changed from polypropylene to polyethylene which increased the fiber length and decreased the risk of skin abrasion.[1] The artificial grass sits on several layers, including an infill layer made of rubber (generally recycled tire crumb), coconut fibers, cork, nutshells and sand, a backing layer to which the blades are sewn, a drainage layer, and sometimes additional padding layers.[2] Technological advances within the last five years in artificial turf aim to address existing issues with heat retention, environmental concerns, and injury risk, with the development of environmentally friendly materials, improved drainage, recyclability, and antimicrobial treatments, but these are very recent advances and most installations of artificial turf are using third generation synthetic turf as described above.[1,2]

Since its introduction in the 1960s, the use of artificial turf across the country has grown, with nearly 19,000 turf fields currently estimated to be in use across North America.[3] Proponents of artificial turf argue that it can be used in all weather conditions, it provides multi-use opportunities, that it can save water, reduce the need for toxic pesticides and fertilizers, uses recycled materials (i.e., rubber tires), and is less expensive.[4] Despite these purported advantages, many communities are concerned about the potential health impacts of artificial turf, leading some cities to ban them or reject installation of new fields.[5] The following summarizes the known health risks and environmental concerns of artificial turf versus natural turf as well as an overview of legislative activity on this subject. For easy reference, a comparison table summarizing the advantages and disadvantages between artificial turf and natural turf grass is provided in Table 1.

DISCUSSION

Environmental Health Concerns

Many chemicals found in synthetic turf fields have known health risks, including benzene, arsenic, volatile organic compounds, phthalates, and per- and polyfluoroalkyl substances (PFAS). A 2016 Environmental Protection Agency (EPA) literature review on recycled tire crumb used in artificial turf identified 350 unique chemical compounds, some of which have known adverse health impacts.[6] This EPA report stated that studies had not shown an elevated health risk from playing on artificial turf fields but acknowledged study limitations that did not allow for a comprehensive evaluation.[6] A 2024 follow-up report by the EPA, Centers for Disease Control and Prevention (CDC), and the Agency for Toxic Substances and Disease Registry (ATSDR) included pre- and post-activity biomonitoring data on polycyclic aromatic hydrocarbon (PAH) concentrations in approximately 160 study participants. PAHs represent a group of chemicals naturally found in fossil fuel-based products.[7] The 2024 EPA/CDC/ATSDR study did not report any significant differences in PAH concentrations based on turf type (i.e., synthetic versus natural).[7] This indicates that while there may be chemicals present in the artificial turf, that does not necessarily equate to increased exposure risk for users of artificial turf fields. However, beyond point of contact exposure, artificial turf has the potential to pollute local water systems, such as groundwater and nearby streams and water bodies.[3,8,9]

Artificial turf is also of concern as plastics break down into smaller pieces called microplastics. Microplastics are pieces of plastic that range in size but are less than 5 millimeters.[10] Microplastics have been found throughout the human body, including a recent finding of microplastics in the olfactory bulb of the brain.[11,12] While research on the health impacts of microplastics themselves in our body is still nascent, recent research found a four-fold increase in the risk of poor cardiovascular outcomes in patients with microplastics present in their carotid artery plaque.[13] Microplastics can also be viewed as "trojan horses" as they carry with them a complex array of chemicals which separate from the plastic and spread throughout our bodies via the circulatory system.[14] While health and safety information are lacking for most chemicals in plastic, at least four major categories of chemicals found in plastics have been more extensively studied in terms of health impacts. These include phthalates, bisphenols, PFAS, and flame-retardant additives.[15] The effects of these chemical additives are known to affect nearly every organ system in the body of people of all ages, but particularly young children.[16] More detailed information on the health and environmental impacts of plastics and microplastics can be found in the AMA Council on Science and Public Health Report, *Plastic Pollution Reduction*, adopted at the AMA House of Delegates 2025 Interim meeting.[17]

In comparison, the primary environmental concerns for natural turf fields include exposure to and environmental contamination from pesticides and water usage. Pesticide pollution negatively impacts water, soil, and the surrounding environment and has negative health impacts, particularly for workers regularly exposed via occupational applications (e.g., groundskeepers, landscapers, and farm workers).[18] Depending on the frequency and level of exposure, pesticides can result in both acute and long-term health consequences, including cancer, neurological disorders, and endocrine disruptions.[19] Pesticide exposure can also increase the incidence of respiratory issues and neurodegenerative diseases.[19] However, agricultural uses account for nearly 90 percent of total pesticide applications in the U.S. and thus the contribution of pesticides from use on recreational fields likely constitutes a relatively small portion of human and environmental exposure.[20]

In terms of water usage, natural grass turf is water-intensive and depending on the size of the field and local climate, may require substantial water resources per year. On the other hand, natural grass helps reduce runoff and mitigate flooding as it both stores water and slows down groundwater infiltration, although fields can flood with heavy rainfall.[18] Flooding has been demonstrated to be a challenge for artificial turf fields as well, sometimes requiring intensive repairs or total replacement after a flood event.[3] In a risk-benefit analysis of natural grass versus artificial turf, it was noted that the creation of the plastic used in artificial turf is so water intensive and because artificial turf may require water to cool it during hot weather, the purported water savings over the course of its useful life might be overstated.[2] Natural grass fields also offer several environmental benefits, including reducing surface temperatures, supporting biodiversity (depending on pesticide usage), reducing soil erosion, and acting as a carbon sink.[18]

Another important environmental consideration in the debate between artificial and natural turf is the disposal of artificial turf at the end of its useful life. One factor that proponents of third generation artificial turf market is that the infill uses recycled rubber tire crumb.[4] There are many challenges with disposing of rubber tire crumb, including that it contains a range of metals, semivolatile organic compounds, volatile organic compounds and bacteria that can leach into surrounding soil and water, contaminating local ecosystems.[21] Additionally, large concentrations of rubber tires in landfills pose a fire hazard as they are highly flammable and create toxic smoke when burned.[21] However, while artificial turf has been positively marketed as a way to help with the issue of rubber tire waste, the turf itself has a limited lifespan and poses its own waste management challenges. Artificial turf has an average life span of eight to ten years and disposal of turf is difficult, as it cannot be easily recycled.[22] Communities have struggled to find ways to

dispose of it, as in some cases municipal collection systems will not accept it and existing methods create additional environmental challenges.[2,22]

Heat-related Illness

In addition to the chemical exposure risk, artificial turf fields also retain more heat than natural grass as the synthetic materials absorb solar energy, creating localized 'heat islands.'[23] Artificial turf fields have been documented to reach temperatures between 160- 200 degrees Fahrenheit on warm, sunny days (over 90 degrees).[23] These extreme temperatures increase the risk of skin burns (first to third degree) and heat-related illness, such as heat stress, heat exhaustion, and heat stroke. These issues are increasingly of concern with warmer temperatures caused by climate change and have important implications for urban climate resilience. For example, the average number of heat waves experienced by U.S urban areas has increased from two per year in the 1960s to six per year in the 2010s.[24] Higher temperatures have resulted in higher rates of heat-related illness, particularly for young athletes; the prevalence of heat illnesses and heat-related deaths occurring in organized sports has increased among high school athletes.[18]

Injury Risk

Many different factors influence the risk of sports injury, including the type of activity, level of competition, weather conditions, individual characteristics, and playing surface. Even among synthetic turf fields, there is a range of turf surfaces and there have been changes to synthetic turf products over time, which make attribution of risk challenging. In terms of comparing lower extremity injury risk between natural and synthetic turf fields, a systematic review found similar overall injury rates in a majority of articles evaluating newer synthetic turf fields, but football players, particularly those at high levels of competition, were more likely to sustain a knee injury on artificial turf than on natural grass.[25] Another systematic review comparing injury rates between female and male soccer players on artificial turf versus natural turf found female soccer players had a significantly higher risk of anterior cruciate ligament injuries on artificial turf compared to natural turf.[26] Concerns over increased risk of knee injuries led the National Football League Players Association to call for the elimination of artificial turf fields in 2023.[27]

Other common injuries for competitive contact sports include head injuries and concussions. A systematic review on comparative risk of these types of injuries based on the type of playing field found rate ratios for head injury and concussion were less on artificial turf compared to natural grass fields, though the analysis was based on limited publications.[28] In subgroup analyses by sport type, effects were significant among rugby and American football but not significant for soccer.[28] These mixed findings indicate that the potential risk of sport injuries on artificial turf versus natural turf is complicated by many factors, including the type of sport, the type of injury studied, and the age (and likely maintenance) of the fields.

User Preferences and Recreational Opportunities

Anecdotally, artificial turf fields are believed to promote more physical activity as they provide consistent, year-around, and needed recreational fields to meet the needs of many competing community interests. Additionally, media accounts of local decision-making processes regarding the installation of turf fields reflect a high demand for recreational playing fields in communities with high levels of youth and adult sports leagues, hence why the durability and year-round ability to play on artificial turf fields is a compelling advantage for these communities.[3] However, research among a broad array of park users, including athletes, have demonstrated an overall preference for natural turf fields over artificial turf, with respondents to surveys on the issue indicating

environmental, aesthetic, heat, and perceived injury risk concerns associated with artificial turf in comparison to natural turf.[29–31]

Equity considerations

While underserved urban areas may have a lack of greenspace available for recreational uses, installing artificial turf in these same areas may inadvertently increase the urban heat island effect. Urban heat islands are a phenomenon where urban areas experience significantly warmer temperatures as compared to surrounding suburban and rural areas, due to a lack of greenspace, a higher proportion of concrete and asphalt surfaces, and radiative heating from buildings and cars.[32] Urban heat islands disproportionally impact communities that have been historically marginalized, especially Black communities, due to historical discriminatory practices like redlining and racialized zoning.[33] Urban heat islands can be exacerbated by artificial turf fields as they also retain and radiate heat.[2,23] Thus, installing artificial turf in communities that already are at greater risk of heat-related illnesses from exposure to urban heat may exacerbate existing inequities.

During testimony at the reference committee hearing on Resolution 408-A-25, delegates raised the question of whether the removal of artificial turf fields would have negative repercussions for users and athletes with disabilities, in particular those who use wheelchairs. There was no peer-reviewed evidence on differences in accessibility for users with disabilities between artificial turf and natural turf fields. While it is assumed artificial turf can provide good accessibility for those using wheelchairs due to its relatively smooth and even surface, it is critical that it meet the Americans with Disabilities Act requirements, be well installed, and consistently maintained to improve accessibility for all users.[34]

LEGISLATION

A few states have passed legislation that bans or restricts the installation of artificial turf and many of them are explicitly focused on banning artificial turf that contains PFAS chemicals. Colorado, for example, beginning January 1, 2026, bans the installation of artificial turf "that contains intentionally added PFAS chemicals" though it does not prohibit maintaining existing artificial turf that is installed before January 1, 2026.[35] Similarly, as of July 1, 2024, Vermont banned manufacturers from selling or distributing artificial turfs that have PFAS intentionally added or entered the product from the manufacturing or processing of the product that the manufacturer knew or should have been aware about.[36] As of January 1, 2025, Minnesota prohibited PFAS in a variety of products.[37] While artificial turf is not explicitly mentioned in that state statute, the Minnesota Pollution Control Agency noted that artificial turf falls under one of the explicitly mentioned categories.[38] Nevada has required "nonfunctional turf" to be removed before December 31, 2026.[39] Beginning January 1, 2029, artificial turf that contains intentionally added PFAS is not allowed to be sold in Rhode Island.[40] Maryland has required the Department of the Environment, in collaboration with several other groups and representatives, to conduct a study on the synthetic turf industry and report its findings to committees within the General Assembly by July 1, 2026.[41] Based on that report and the Department's findings, regulations and restrictions on artificial turf may be adopted.

In the absence of state-wide regulations, some cities have passed ordinances or rules regulating artificial turf.[42–45] Regulations can include a complete ban on the installation of new artificial turf, a ban on artificial turf in only some areas or lot types, requiring existing artificial turf to be replaced with natural grass by a certain year or once repairs cost a certain amount, or be a temporary ban. Temporary bans, typically referred to as moratoriums, often act as a pause on the installation of artificial turf so the community can further study the effects and possible alternatives to artificial

turf. An example of this was a proposed in Maine, but it was not enacted.[46] In locations without legislative activity, municipalities are educating residents about potential health risks. For example, the Board of Health in Amherst town, Massachusetts created advisements related to the health risks of artificial turf and hosted webinars about the issue even though they have no law or ordinance regulating the use or installation of artificial turf.[47,48] Table 2 highlights the types of regulations related to artificial turf, but this should not be considered a comprehensive list.

EXISTING AMA POLICY

AMA does not have existing policy on artificial turf but does have policy on the health harms of microplastics, supporting the use of ecologically sustainable products, as well as several policies on a few chemical additives common in artificial turf, including PFAS, and phthalates.[49–52] Additionally, AMA policy supports the creation and maintenance of existing public land and outdoor spaces for recreation and policy that aims to reduce the risk of concussion and other injuries in youth sports.[53,54]

CONCLUSION

While artificial turf has the potential to provide more reliable and consistent recreational fields for year-round activities, there are risks and disadvantages that communities should consider prior to its installation. These disadvantages include high costs of installation, increased human and environmental exposure to a wide array of chemicals, heat absorption and increased risk of heat-related illnesses for users during the summer, injury risks, and disposal challenges at the end of its useful life. While artificial turf may ease mobility constraints compared to natural grass, true accessibility remains broader in scope.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted in lieu of Resolution 408-A-25, and the remainder of the report be filed.

1. The American Medical Association (AMA) recommends well maintained, natural, drought-tolerant and hardiness zone appropriate turfgrass, with the use of integrated pest management to reduce potential chemical exposures, as the preferred choice on sports fields or lawns, in public and private schools and colleges, as well as in city parks.

2. Our AMA recommends municipalities conduct comprehensive risk-benefit analyses when deciding whether to replace natural turfgrass with artificial turf (or vice versa) to best meet the needs and concerns of their communities, including those with accessibility concerns.

3. The AMA encourages more research to address evidence gaps on the potential health risks of artificial turf fields. In particular, more research is needed on the release of chemicals from artificial turf, the level of exposure to turf users, and potential health impacts, as well as the differences in risk from heat-related illnesses and physical injuries on artificial turf versus natural turf.

(New HOD Policy)

Fiscal note: Minimal

Table 1. Natural Grass Fields vs. Synthetic Turf - A Summary of Advantages and Disadvantages

Natural Grass	Artificial Turf
Environmental impacts	
Advantages • Climate benefits. Natural grass contributes to carbon sequestration, reduces stormwater surface runoff, and helps maintain a healthier ecosystem by supplying oxygen, filtering stormwater, and absorbing heat. • No waste. Natural grass fields do not have an end of life and, therefore, do not create waste that must be recycled or disposed of. **Disadvantages** • Chemical Exposures. Natural grass athletic fields often require the use of pesticides to ensure playability. • Water Dependency. Natural grass athletic fields require consistent irrigation, particularly in drier climates.	**Advantages** • Water Conservation. Although water is used occasionally for cooling and cleaning synthetic turf, limited evidence is available for quantifying the amount of water used for these purposes. **Disadvantages** • Chemical Exposures. Synthetic turf fields can contain chemicals that may be harmful to human health and the environment. Chemicals can leach from the synthetic components of the turf into local water systems and research shows that some synthetic turf fields contain microplastics and potentially toxic chemicals, such as PFAS chemicals. • Waste. Currently, recyclability of the components of synthetic turf fields at the end of their usable life (~8 to 10 years) is questionable both due to limited information provided by companies that supply and maintain synthetic turf fields and because the complex construction of synthetic turf makes it challenging and costly to recycle. • Drainage. Synthetic turf does not pull water out of soil and release it into the air nor does it filter pollution to protect water quality of nearby waterways like natural grass can.
Maintenance and Costs	
Maintenance. Keeping natural grass up to the highest playing standards requires more consistent upkeep compared to a synthetic turf field. Natural grass requires regular mowing, watering, fertilizing, and pest control, which requires labor and incurs costs. This is especially true in climates that are not conducive to growing and maintaining grass. **Cost-Efficiency for Installation and Renovation**. The installation and renovation	**Maintenance.** Synthetic turf fields typically require less maintenance than natural grass fields as it does not require mowing, watering or fertilizing. Thus, required labor and maintenance costs are typically lower for synthetic turf fields. **Initial Cost.** The initial cost of installing synthetic turf can be relatively high, with costs varying depending on the type and quality of turf chosen. The replacement cost of synthetic turf can also be high.

cost of natural grass is typically lower than that of synthetic turf.	
Accessibility and Playability	
Advantages • Potential for Less Injuries. There are some studies that show that natural grass is a safer playing surface with fewer injuries to players compared to synthetic turf fields, however studies are inconclusive and limited. • Cooler Surface. Natural grass remains cooler than synthetic turf during hot weather, reducing the risk of heat-related injuries and making it more comfortable for athletes. **Disadvantages** • The overuse of a natural grass field can result in uneven and damaged playing surfaces, affecting the quality of gameplay and increasing the risk of injuries to players. Further, rainfall or moisture on natural grass fields can create a slick surface. • Weather Dependency. Use of natural grass fields can be heavily influenced by weather conditions. Fields are typically closed for use due to rain or extreme weather, which can disrupt scheduled events. Fields often cannot be used for several days after a big rainfall because use can significantly damage wet fields. • Limited Hours. Often, natural grass fields are not available for play during winter months because the field needs to "rest." In addition, hours of use must be limited throughout the rest of the year to maintain fields in playable condition.	**Advantages** • Year-Round and Consistent Usage. Synthetic turf fields are typically available for use year-round except when the ground is frozen. Additionally, turf provides more predictable play for athletes such as consistent player footing. • Durability/More Hours of Play. Synthetic turf can withstand heavy use and is less susceptible to wear and tear compared to natural grass. Fields are not susceptible to bald spots or other damage from overuse like natural grass fields, allowing for longer hours of play on synthetic turf field. However, more use can reduce its useful life. • Limited space: Synthetic turf fields are useful in environments with limited recreational fields as they can be used consistently throughout the year. • Permanent Marking. Field lines and markings for multiple sports can be permanently inlaid on synthetic turf fields, eliminating the need for continual re-striping with paint required for natural grass fields. **Disadvantages** • Potentially More Injuries. While more research is needed, data from several studies show that injuries are more prevalent for athletes on synthetic turf compared with natural grass. An increased risk of "turf burn" also increases players' susceptibility to antibiotic-resistant staph infections (i.e., MRSA). • Heat Issues. Synthetic turf can reach significantly greater temperatures than natural grass under the same weather conditions, which can increase the risk of heat-related illnesses for players, create

	uncomfortable play conditions, and result in skin burns if direct contact is made. • Limited Lifespan. Synthetic turf has a lifespan of typically eight to ten years. Lifespan can be impacted by local climate, maintenance, and use. • Movement of Infill. Synthetic turf infill requires proper depth and weight or it can move throughout the seasons, causing bulges and wrinkles in the surface that can be a hazard to players.

Table 2. Examples of artificial turf legislative/regulatory actions

California	A handful of cities in California have banned artificial turf and added restrictions on existing ones. In 2024, Millbrae prohibited the installation of synthetic grass and artificial turf.[43] Additionally, if existing synthetic grass or artificial turf is damaged or destroyed to a prescribed level, it must be replaced with "water-efficient natural landscaping." Similarly, San Marino recently banned installation of synthetic grass and artificial turf in most cases.[55] Exceptions are that the ban does not apply to facilities that are owned and used by schools and rear yards of residences under 100 square feet. Any existing artificial turf or synthetic grass that is damaged to the extent of 35 percent of its replacement cost must be removed and replaced with water-efficient natural landscaping. Additionally, all existing artificial turf, synthetic grass, artificial plants or artificial vegetation must be removed no later than October 31, 2030.
Connecticut	Westport has banned the creation of any new or replacement of playing fields using synthetic infill material (means ambient and cryogenic crumb rubber, coated crumb rubber, ethylene propylene diene monomer granules, and recycled footwear).[56]
Louisiana	In the historic districts of Louisiana, many preservation commissions have prohibited synthetic turf in front yards and have issued removal orders and fines for homeowners that have installed artificial turf without permission.[57]
Massachusetts	In 2022, Boston's mayor directed that no new artificial turfs are to be installed in the city of Boston.[42] Some other cities, such as Wayland and Concord, have passed a temporary ban on installing new artificial turf.[58,59]
New Jersey	The city of Belmar has a list of districts and locations where artificial turf is banned and has requirements that locations must meet before being allowed to install artificial turf.[60] This does not apply to designated sports fields on public property where the installation of artificial turf has been approved by the Borough's Governing Body.
Texas	Murphy city has banned homeowners from installing synthetic turf if it is visible from the street. However, if artificial turf was installed before August 1, 2014, it is not affected by this ban as it was grandfathered in.[44]
Utah	In Salt Lake City, artificial turf is not allowed in "areas that require landscaping" and any artificial turf that was installed before March 5, 2024

	must be removed by September 18, 2025. Previously, as early as 1995, Salt Lake City banned artificial turf in other specific areas.[45]

REPORT 6 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-26)
Mitigating Air and Noise Pollution from Aviation in Minority Communities Disproportionately Impacted and Vulnerable Communities

EXECUTIVE SUMMARY

BACKGROUND. Resolution 421-A-25 was referred by the American Medical Association (AMA) House of Delegates (HOD). The resolution asked that our AMA seek a study and report back providing recommendations at the federal level to reduce the adverse impact of air and noise pollution in disproportionately impacted and vulnerable communities from aviation. The resolution included specific recommendations for areas to study.

METHODS. English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: “aviation” AND “air pollution”, “aviation” AND “noise pollution,” and “aviation” AND “health equity.” Additional articles and relevant reports were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies, such as the Federal Aviation Administration (FAA) and United States (U.S.) Environmental Protection Agency (EPA), and websites for airport administration authorities were also reviewed for relevant information, particularly regarding current mitigation strategies utilized to reduce the adverse impacts of air and noise pollution form aviation.

DISCUSSION. Communities near airports and aviation corridors often face higher pollution exposure, compounded risks, and fewer resources for mitigation and therefore, aviation-related air and noise pollution contributes disproportionately to poor health outcomes in these communities. Evidence shows that aviation emissions contribute to adverse health outcomes, including respiratory and cardiovascular diseases, cognitive impairment, and cancer, while associated noise pollution increases risks for sleep disruption, mental health issues, and cardiovascular conditions. Despite technological advances and existing mitigation strategies, disparities in exposure persist, especially among low-income and minority neighborhoods near airports.

Both the EPA and the FAA play important roles in setting and enforcing standards around air and noise pollution from aircraft. The International Civil Aviation Organization, a United Nations agency serves as the global forum on issues related to international civil aviation. Aside from baseline federal standards, noise and air pollution management in the U.S. is largely dependent on the policies and regulations of local airports and municipalities. For example, airports develop their own noise compatibility programs to meet FAA requirements, which include land use strategies, operational procedures, and sometimes flight curfews. In general, as air pollution standards are set at the federal level, local airport policies and regulations focus more on noise pollution than air pollution, though some noise pollution reduction policies may also help reduce air pollution as well.

CONCLUSION. The expansion of commercial aviation continues to raise important concerns about air and noise pollution, particularly for communities near airports and other vulnerable groups. Ongoing policy, research, and legislative efforts are needed to address health and environmental concerns and to ensure strong protections are adopted for both affected communities and airport workers exposed to elevated levels of aviation pollution.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 6-A-26

Subject: Mitigating Air and Noise Pollution from Aviation in Minority Communities Disproportionately Impacted and Vulnerable Communities

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee D

Resolution 421-A-25 was referred by the American Medical Association (AMA) House of Delegates (HOD) and asked the following:

> That our AMA seek a study and report back providing recommendations at the federal level to reduce the adverse impact of air and noise pollution in disproportionately impacted and vulnerable communities from aviation, including the following areas:
> 1. Promotion of Sustainable Aviation Fuels: Advocate for the adoption of sustainable alternative jet fuels, which have been shown to decrease premature death rates in communities near airports and downwind.
> 2. Implementation of Noise Abatement Procedures: Encourage the use of flight paths and operational procedures that minimize noise impact on residential areas, particularly those inhabited by minority populations disproportionately impacted communities.
> 3. Investment in Noise Mitigation Infrastructure: Support the installation of soundproofing materials in homes, schools, and healthcare facilities located in high-noise areas to reduce the adverse health effects of noise pollution as well as non-combustion engines (i.e. solar or electric).
> 4. Community Engagement and Education: Foster partnerships with affected communities to raise awareness about the health impacts of air and noise pollution and involve them in decision-making processes regarding aviation operations.
> 5. Research and Monitoring: Advocate for ongoing research to monitor air and noise pollution levels in minority populations disproportionately impacted communities and study the effectiveness of implemented interventions.

METHODS

English language reports were selected from searches of the PubMed and Google Scholar databases using the search terms: “aviation” AND “air pollution”, “aviation” AND “noise pollution,” and “aviation” AND “health equity.” Additional articles and relevant reports were identified by manual review of the reference lists of pertinent publications. Web sites managed by federal agencies, such as the Federal Aviation Administration (FAA) and United States (U.S.) Environmental Protection Agency (EPA), and websites for airport administration authorities were also reviewed for relevant information, particularly in regard to current mitigation strategies utilized to reduce the adverse impacts of air and noise pollution form aviation.

BACKGROUND

Over the last fifty years, commercial air travel in the U.S. has seen substantial growth in both the number of flights and the expansion of airport facilities. The number of flights performed by U.S.

© 2026 American Medical Association. All rights reserved.

carriers has grown from roughly five million annual departures in the mid-1970s to well over nine million by 2025.[1,2] From a global perspective, airplane traffic has grown at an annual average rate of roughly five percent over the last 30 years.[3] Private jet travel has also increased, with 2025 seeing a record-setting number of private jet flights globally at nearly four million.[4] The Federal Aviation Administration (FAA) is the primary federal agency responsible for regulating airport and airplane activities in the U.S.

While the increase in commercial aviation has made it much easier and cheaper for individuals to travel both domestically and internationally, there are concerns from communities who live around airports or along major flight paths about both air and noise pollution. Aside from baseline federal standards, noise pollution management is largely dependent on local airport policies and regulations. This report primarily focuses on public health concerns regarding air and noise pollution from commercial aviation, as opposed to military aviation. There are important differences in terms of the type of jet fuel used for commercial and military aircraft and noise levels are highly dependent on the size and type of aircraft, with military aircraft (e.g., fighter jets) having significantly different noise profiles and fuel needs compared to commercial airplanes.

DISCUSSION

Air Pollution

As compared to the gasoline used in everyday vehicles, airplanes use different formulations of fossil fuels, enabling airplanes to travel at high speeds, for great distances, and at high elevations without freezing the fuel. There are two main categories of commercial aviation fuels: jet fuel and aviation gasoline (AVGAS).[5] Jet fuel is a kerosine-based fuel aviation fuel that tends to be heavier with a higher flash point and freezing point than standard kerosene and is used for most commercial aviation. AVGAS, as the name suggests, is a gasoline-based aviation fuel that is typically used on smaller aircraft.[5] Unlike gasoline used in motor vehicles which has been unleaded for many decades, AVGAS still contains some amount of lead as it is helpful to meet high octane performance requirements in jet engines.[6]

The combustion of fuel in airplanes releases particulate matter, nitrogen oxides, sulfur oxides, volatile organic compounds, and other air toxics.[7,8] Ultrafine particulate matter (UFP), a term to describe particles smaller than 100 nanometers, is particularly concerning as airplane engines release large amounts of UFP and particulates of this size are able to penetrate deep into lung tissue.[9] A 2021 systematic review on the impacts of commercial airplane activity on air quality near airports found consistent evidence that UFP matter is elevated in and around airports while other studies found elevated levels of black carbon (otherwise known as soot), polycyclic aromatic hydrocarbons, and other criteria pollutants regulated by the EPA (e.g., sulfur dioxide, lead, and nitrogen dioxide).[8,9] As a result of growing private jet travel, private jet flights are also a growing source of air pollution, particularly in the U.S., which is where an overwhelming majority of private flights occur.[10] There are numerous factors that impact actual exposure to aviation air pollution, including the size of the airport and volume of air traffic, distance from the source, the prevailing meteorological conditions - which include wind speed and direction, humidity, and temperature – as well as the type, age and size of operational aircraft.[9] However, it has been demonstrated that the highest concentrations of UFP are generally measured downwind of the aircraft, but more research is needed to understand dispersion processes and other environmental factors that affect emissions and exposure levels.[9]

Differentiating air pollution from aviation versus other mobile pollution sources can be challenging. The EPA uses tools such as the Air Toxics Screening Assessment, which provides a

snapshot of outdoor air quality and estimates air pollutant concentrations, to measure health risks at the census tract level, estimating both cancer and non-cancer hazards from aviation and other mobile sources.[11] Aviation-related air pollution has been demonstrated to be associated with significant adverse health impacts, particularly in nearby communities. Air pollutants from aviation elevate risks for respiratory diseases (e.g., asthma and chronic obstructive pulmonary disorder), cardiovascular disease, cancer, cognitive impairment, and premature mortality.[9,12,13] Another study found exposure to UFP from aircraft emissions *in Utero* was positively associated with preterm birth among pregnant mothers.[14] A 2015 study assessing the global health impacts of civil aviation emissions attributed about 16,000 premature deaths per year globally to aviation emissions.[15]

Noise pollution

Noise pollution from aviation operations is another public health concern, which was raised as early as the late 1960s and early 1970s.[16] The EPA defines noise pollution as unwanted or disturbing sounds that interfere with normal activities, such as conversation or sleep, and/or diminish one's quality of life.[17] Normal decibel (dBA) levels generally range between about 35 to 70, with 60 dBA benchmarked as the noise level of a typical conversation. Prolonged exposure to noises at 85 dBA or over can lead to potential hearing loss.[18] The noise of a jet engine taking off is somewhere in the range of 120 to 130 dBA (depending on your proximity to the sound) and is considered unsafe.[18] The European Environment Agency classifies environmental noise—including aircraft noise—as the third most significant environmental cause of ill health in Europe after air pollution and temperature-related factors, emphasizing the scale and seriousness of the issue for policy makers and public health authorities.[19]

Noise created from aviation operations is different and unique in a few ways from noise created by everyday transportation and traffic patterns. First, the frequency of aircraft noise is different from traffic noise as it is dominated by low-frequency engine hums, high-frequency jet whine, and the sound of propellers moving depending on the speed of the aircraft. Second, the temporal pattern of aircraft noise – isolated with quick onset and decay (i.e., a plane flying over) – is distinct from traffic noise which tends to create a continuous, persistent background noise.[20] There are several tools airports can use to understand aviation noise. Many airports monitor noise levels through the placement of monitors at strategic places across the airports.[20] Additionally, sound level contour maps use a combination of sound measurements and sound mapping software to better predict where the highest levels of sound will occur, which can help with mitigation planning.[20]

A 2022 Australian report based on survey data of nearly 2000 residents found that airplane noise was associated with negative impacts to sleep, mental distress, and that aircraft noise interfered with daily activities in their homes.[21] A consensus paper on the health impacts from aviation noise pollution reported similar detrimental effects, including mental health impacts, sleep disruption, adverse effects on academic performance of children, and increases the risk for cardiovascular disease of people living in the vicinity of airports.[20] Increased rates of anxiety, depression, and general feelings of annoyance have been reported in communities exposed to persistent aircraft noise.[22] Aircraft noise is a major cause of sleep disruption, leading to fatigue, cognitive impairment, reduced productivity, and long-term mental health effects.[23] Studies highlight impaired learning, memory, and reading comprehension among children attending schools located near airports with high noise exposure.[24–26] Lastly, chronic exposure to aviation noise has been found to increase the risk for hypertension, heart attacks, and stroke.[27–29] In their most recent report, published in 2025, the European Environment Agency estimated that chronic exposure to transport-related noise (of which aviation is included) in Europe contributes to 66,000 premature deaths annually in Europe, around 50,000 new cardiovascular disease cases, and over half a million children experience reading difficulties and about 63,000 experience behavioral issues.[19]

Equity considerations

Communities near airports and aviation corridors, which tend to be lower-income, minority communities, often face higher pollution exposure, compounded risks, and fewer resources for mitigation and therefore aviation-related air and noise pollution contributes disproportionately to poor health outcomes in these communities.[30] For example, communities living near airports may have less access to mitigation resources (e.g., air purifiers or home soundproofing) and live close to other emission sources such as major roads and highways.[31] With the U.S., research has highlighted that integrating socioeconomic factors with pollution data is critical for identifying and addressing disparities with air pollution exposure.[32–35]

The FAA had previously created guidance for environmental justice analyses that required consideration disproportion and adverse effects on low-income or minority populations for any airport development action or any airport action subject to FAA approval.[36] However, due to executive order and identified priorities under the current administration, environmental justice and climate impacts are no longer required as part of FAA environmental analyses.[37] The FAA must still comply with the National Environmental Policy Act, which requires appropriate environmental impact assessments for relevant actions directly undertaken by the FAA.[37]

Airport workers, in particular those working on the ground in the airport tarmac (i.e., where airplanes approach and leave the airport terminal), represent another vulnerable population as they are exposed to significantly higher levels of aviation-related air and noise pollution for longer periods of time. Aviation workers are often exposed to noise levels that exceed safe noise thresholds and chronic exposure to high noise levels can cause permanent hearing loss, sleep disturbances, and heightened stress, potentially leading to cardiovascular problems.[38–40] The Occupational Safety and Health Administration (OSHA) sets protection standards for airport workers and requires hearing protection, such as ear plugs, muffs, or both, when noise exposure exceeds the action levels, which is 85 decibels, and mandates proper ventilation and personal protective equipment to mitigate air quality hazards.[41] OSHA also requires employers to provide hearing conservation programs and training, medical surveillance, and access to resources to reduce exposure levels and safeguard worker health. However, airport workers are a largely understudied population and more research is needed.[42]

Strategies to mitigate air and noise pollution

Both the EPA and the FAA play important roles in setting and enforcing standards around air and noise pollution from aircraft. Under the Clean Air Act, the EPA sets national standards limiting emissions of pollutants such as hydrocarbons, carbon monoxide, nitrogen oxides, particulate matter, and lead which apply to aircraft engines used in commercial aviation.[7] While the EPA sets air pollution standards, the FAA administers compliance and certification requirements. States and local authorities cannot set independent aircraft emissions standards. For noise pollution regulation, originally the EPA was responsible for aviation noise standards under the Noise Control Act of 1972, which also established the EPA's Office of Noise Abatement and Control, but since the early 1980s, direct regulatory authority for aircraft noise standards has been under the FAA.[17,43] However, the EPA still provides technical input and coordinates with federal partners and the public on relevant studies and recommended practices.[17] As part of their responsibilities, the FAA regulates the maximum noise level that an aircraft can emit through requiring aircraft to meet noise certification standards.

The International Civil Aviation Organization (ICAO), a United Nations agency that serves as the global forum on issues related to international civil aviation, has studied various noise abatement

strategies and developed a 'balanced approach' system that identifies 18 policy measures aimed at reducing noise, which are categorized into four pillars: (1) reduction of noise a the source (i.e., aircraft design and technical requirements), (2) land-use planning and management (e.g., reduce noise-sensitive land use around airports, such as residential areas), (2) operational procedures that focus on noise abatement (e.g., preferential runways and flight paths away from residential areas), and (4) aircraft operating restrictions (e.g., airport curfews).[16,44] The most common policy measures implemented were noise abatement procedures, engine run-up restrictions, preferential runways, and airport curfews.[16] Fifty percent of airports in North America use one to four of these policy measures, and nearly forty percent use five to nine of these policy measures.[16]

Modern aircraft technology has achieved significant improvements in noise levels through technological advances and lighter materials, with current jet aircraft being much quieter than first models released in the 1960s and 1970s.[45,46] ICAO's Chapter 14 standard, introduced in 2013 and effective in 2024, requires new aircraft models to be at least seven decibels quieter than previous standards.[47,48] Additionally, the aviation industry has set ambitious targets, including the Advisory Council for Aviation Research and Innovation in Europe's FlightPath 2050 vision of a 65 percent reduction in noise emissions by 2050 compared to 2000 levels.[49]

Aside from baseline federal standards, in the U.S. noise and air pollution management is largely dependent on the policies and regulations of local airports and municipalities. For example, airports develop their own noise compatibility programs to meet FAA requirements, which include land use strategies, operational procedures, and sometimes flight curfews. In general, as air pollution standards are set at the federal level, local airport policies and regulations focus more on noise pollution than air pollution, though some noise pollution reduction policies may also help reduce air pollution as well. A table is provided in the Appendix outlining the policies and programs of several major U.S. airports. It is also worth noting that many of these airports, in addition to the programs and specifics listed in the chart, implement some form of voluntary curfew where planes are not allowed to enter or leave between late hours of the night and early hours of the morning.

The regulatory approach for airport noise mitigation in the U.S. is noticeably different from the European Union (EU), which is more centralized and requires uniform reporting and standardized mitigation efforts across EU member countries. The European Noise Directive, the primary regulatory framework for airport noise management, requires major airports (over 50,000 movements per year) to regularly assess and report noise levels.[50] These assessments are used to create noise maps and action plans for mitigation involving stakeholders that include airports, airlines, local authorities, and communities. Additionally, EU noise exposure thresholds are generally 55 dBA during the day and 50 dBA during the night, while the FAA applies a Day-Night Average Sound Level threshold of 65 dBA.[19,43] In summary, Europe has a centralized regulatory structure with lower noise threshold limits and more proactive land-use planning as part of their noise mitigation efforts. On the other hand, the U.S. has a more decentralized approach, higher federal noise thresholds, and mitigation measures that often depend on local airport initiatives that focus on operational procedures and operating restrictions.

From an air pollution perspective, one promising solution is the integration of and eventual transition to sustainable aviation fuel. Sustainable Aviation Fuel (SAF) refers to a class of liquid fuels produced from renewable or waste-derived sources—such as used cooking oil, non-food crops, agricultural residues, municipal solid waste, and even CO_2 direct air capture.[51] Studies show that SAF produces less PM, sulfur oxides, and aromatics compared to conventional jet fuel, especially during the landing and take-off cycle at airports.[52,53] Thus, shifting toward SAF could lower emissions of these pollutants and improve local air quality, particularly for airport-adjacent

communities and airport workers. While SAF generally produces fewer soot particles and less NOx, the specific reduction of different air pollutants will vary by fuel type and process pathway.

Lastly, another benefit of SAF is its lower greenhouse gas (GHG) emission profile. Currently, the EPA estimates that commercial airplanes and large business jets contribute 10 percent of U.S. transportation emissions, and account for three percent of the nation's total GHG emissions.[54] SAF has the potential to reduce lifecycle GHG emissions by up to 80 percent (and potentially more), but it depends on the feedstock and production process of the SAF.[55–57] The U.S., EU, and other regions have implemented policy supports like the SAF Grand Challenge and FEETS (Fuels Eligible for ETS Support) to close cost gaps and scale up SAF production, aiming for large-scale deployment by 2030 and 2050 for meaningful climate and health impact.[58] The European Union Aviation Safety Agency has a set a minimum supply mandate for sustainable aviation fuels in Europe, starting with two percent in 2025 and increasing to 70 percent by 2050.[55]

LEGISLATION

There were two proposed bills in the 2025-2026 Congressional legislative session that are relevant to mitigation of air and noise pollution from airplanes. The first, entitled the 'Aviation Noise and Emissions Mitigation Act' proposed to develop pilot grant programs through the EPA to research and collect data on aircraft, airport noise, and emissions in order to develop mitigation strategies.[59] The second, the 'Sound Insulation Treatment Repair and Replacement Program Act', which passed as part of the National Defense Authorization Act for Fiscal Year 2026 on December 18, 2025, established a pilot program at up to four large airports to fund projects to repair or replace failing sound insulation systems in nearby residential homes.[60,61]

CURRENT AMA POLICY

While AMA does not have specific policy on aviation related pollution, it has several existing policies, supporting federal regulation and action on air pollution, including policy H-135.998, "AMA Position on Air Pollution" and D-135.985, "Air Pollution and Public Health."[62,63] AMA also has policy, D-135.996, "Reducing Sources of Diesel Exhaust, " which has a similar threat profile to airplane jet fuel.[64] Additionally, AMA has policy recognizing noise pollution as a public health issue, supporting ongoing federal environmental justice initiative, and the importance of environmental determinants of disease.[65,66]

CONCLUSIONS

The expansion of commercial aviation continues to raise important concerns about air and noise pollution, particularly for communities near airports and other vulnerable groups. Evidence shows that aviation emissions contribute to adverse health outcomes, including respiratory and cardiovascular diseases, cognitive impairment, and cancer, while associated noise pollution increases risks for sleep disruption, mental health issues, and cardiovascular conditions. Despite technological advances and existing mitigation strategies, disparities in exposure persist, especially among low-income and minority neighborhoods near airports. Ongoing policy, research, and legislative efforts are needed to address health and environmental concerns and to ensure strong protections are adopted for both affected communities and airport workers exposed to elevated levels of aviation pollution.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted in lieu of Resolution 421-A-25, and the remainder of the report be filed.

Our American Medical Association:

1. Supports increased surveillance, monitoring and research of air and noise pollution exposure from aviation, specifically for vulnerable populations, airport workers and nearby communities.
2. Encourages studies on the effectiveness of different interventions to mitigate air and noise pollution exposure from aviation.
3. Encourages airports to implement policy measures identified under the 'balanced approach' system to minimize noise exposure in surrounding communities, which could include changes to common flight paths, flight curfews, land use planning and community engagement, sound-proof insulation projects in nearby communities, and further technological advances to reduce jet engine noise.
4. Supports the phase-in of sustainable aviation fuels to reduce air pollution and climate impacts associated with aviation. (New HOD Policy)

Fiscal note: Minimal

APPENDIX

San Francisco International Airport (SFO)	SFO was the first airport in the US to implement an extensive noise insulation program. They provide acoustic improvements to single family residential properties, at no cost to the homeowner, that are inside a specific noise contour based on noise mapping. Additionally, in 2020, the SFO Noise Office launched its Noise Action Plan that have five objectives: promote quieter planes, introduce and prioritize quieter procedures, maintain and encourage active community engagement, expand and improve our noise monitoring program, and active land-use planning and mitigation.[67,68]
Los Angeles International Airport (LAX)	LAX has in place a Preferential Runway Use Policy that, when applicable and safe, has planes depart and land on the ocean side (west) instead of over neighborhoods (east side). It also has a LAX Residential Sound Insulation Program to treat homes, free of cost to the homeowner, close to LAX and reduce the noise level by at least 5 decibels.[69,70]
Westchester County Airport (HPN)	HPN has a noise abatement program, with several sub-programs that are each designed to reduce the noise levels created by aircraft operations. As part of these efforts, they have noise monitoring systems and adopted special programs for helicopters and large aircrafts.[71]
Long Beach Airport (LGB)	In collaboration with city efforts, Long Beach has one of the strictest noise-controlled airports in the US. With its Noise Ordinance, it lays out maximum single event and cumulative noise exposure limits and the ability to fine aircrafts owners/operators for multiple violations of their noise ordinance.[72]
Santa Monica Airport (SMO)	The airport's Fly Neighborly Program has several features that help reduce noise pollution. Such features include departure paths to be over the Penmar Golf Course instead of neighborhoods and special procedures for helicopters. There is also an imposed maximum noise exposure limit of 95 decibels for any single noise event.[73]
Tweed New Haven Airport (HVN)	HVN has distributed nearly $12 million dollars in federal funding to soundproof nearby homes, with the most recent phase being completed in 2023. They also have an online platform that the community can access to see aircraft activity and noise levels.[74]
Seattle-Tacoma (SEA-TAC) International Airport	SEA-TAC International Airport operates one of the most comprehensive aircraft noise reduction programs, including a sound insulation program dating back to 1985 that has insulated over 9,400 single-family homes. Their SEA Stakeholder Advisory Round Table serves as a forum for discussion and practical aircraft noise reduction initiatives.[75]
Chicago O'Hare International Airport	Chicago O'Hare International Airport operates the Airport Noise Management System, a comprehensive system providing actual measurement of aircraft noise levels in neighborhoods and suburban communities around O'Hare and Midway airports. The system includes permanent noise monitors and connects directly to FAA air traffic control radar to collect aircraft flight tracks, recording more than 5 million data points daily.[76]

REPORT 10 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-26)
Standardizing Safety Requirements for Traditional and Rideshare Based Non-Emergency Medical Transportation

EXECUTIVE SUMMARY

INTRODUCTION. Resolution 508-A-25, referred by the House of Delegates (HOD), asked that our American Medical Association (AMA) study and report back with recommendations on appropriate minimum safety requirements/certifications (i.e., vehicle, Basic Life Support, Health Insurance Portability and Accountability Act) for non-emergency medical transportation (NEMT) and rideshare-based non-emergency medical transportation (RB-NEMT).

METHODS. English language articles were selected from searches of PubMed and Google Scholar using the search terms “non-emergency medical transport”, “rideshare-based non-emergency medical transport”, “Uber Health”, “Lyft Healthcare”, and “rideshare-based medical transportation AND HIPAA”. Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies; applicable organizations were also reviewed for relevant information.

BACKGROUND. NEMT enables millions of patients, especially Medicaid beneficiaries, older adults, people with disabilities, and rural residents—to reach medical care when no other options exist. As a mandatory Medicaid benefit, it supports preventive services, chronic disease management, and continuity of care, but long-standing challenges such as missed pickups, variable service quality, uneven safety practices across states, and persistent program-integrity issues continue to affect reliability and outcomes. RB-NEMT has emerged as a flexible, on-demand supplement that can improve responsiveness and reduce delays for ambulatory riders, particularly for discharges and last-minute or recovery rides. However, RB-NEMT operates under a very different regulatory structure: drivers are independent contractors without medical or mobility-assistance training, and vehicles lack the accessibility features needed for higher-acuity riders. As a result, RB-NEMT is appropriate only for riders requiring minimal assistance and for select trip types. Traditional NEMT is guided by federal and state safety expectations—Medicaid rules, ADA accessibility standards, HIPAA privacy requirements, and state-level driver, vehicle, and insurance regulations—but these are applied inconsistently nationwide. In contrast, RB-NEMT currently has no evidence-based minimum safety standards, highlighting an important gap in oversight and the need for further research.

CONCLUSION. This report discusses traditional NEMT and emerging rideshare-based NEMT (RB-NEMT) and the distinctive roles they play within the health care transportation system. The report also outlines how traditional NEMT is governed by longstanding federal and state safety expectations but continues to experience variability in implementation and operational challenges that affect reliability and quality. Although, RB-NEMT offers flexibility and responsiveness for certain riders and trip types, it operates within a different regulatory framework and lacks evidence-based minimum safety standards, with existing studies providing only limited guidance—primarily related to appropriate rider matching. Because of these differences and the gaps identified, the recommendations focus on three overarching needs: recognizing transportation as essential to equitable access to care; promoting greater consistency in the application of existing NEMT safety standards across states; and supporting further research to evaluate RB-NEMT safety risks and develop evidence-based minimum safety requirements before prescriptive operational standards can be responsibly established.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 10-A-26

Subject: Standardizing Safety Requirements for Traditional and Rideshare Based Non-Emergency Medical Transportation

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee D

Resolution 508-A-25, "Standardizing Safety Requirements for Traditional and Rideshare-Based Non-Emergency Medical Transportation," was introduced by the Medical Student Section and was referred. It asked the following:

> That our American Medical Association (AMA) study and report back with recommendations on appropriate minimum safety requirements/certifications (i.e., vehicle, Basic Life Support, Health Insurance Portability and Accountability Act) for non-emergency medical transportation (NEMT) and rideshare-based non-emergency medical transportation (RB-NEMT).

This report provides a review of the topic and makes policy recommendations.

BACKGROUND

Transportation is critical for access to medical care, with nearly six million Americans annually having transportation barriers impacting timely access to care including missed appointments.[1] Traditional non-emergency medical transport (NEMT) programs, typically funded through Medicare or Medicaid, provide essential transportation for vulnerable populations, including the elderly, disabled, and rural residents, via taxis, vans, or buses.[2] However, these services often suffer from reliability issues such as late arrivals and no-shows, which can disrupt continuity of care and increase health care costs.[3] In response to these limitations, rideshare-based NEMT (RB-NEMT) programs have emerged, leveraging platforms like Uber and Lyft to expand access.[4] These services have demonstrated improvements in appointment attendance, reduced wait times, and lower costs, while also enhancing patient satisfaction.[4] Despite these benefits, RB-NEMT drivers are typically independent contractors with minimal training in patient confidentiality, basic life support (BLS), or medical liability protocols.[4,5] This lack of standardized training and credentialing raises concerns about patient safety and quality of care.[4,5]

RB-NEMT proponents note that it is appealing because it may provide more flexibility for passengers; it is well suited for last-minute rides, like hospital discharges; and may reduce waiting times and cost.[6] Additionally, RB-EMT can better track rides and collect data, potentially addressing quality, fraud, waste, and abuse.[7] Conversely, critics of RB-NEMT note that issues include lower pay for drivers, lack of access in rural areas, inadequate driver screening, and safety issues for drivers and riders.[8] Because the NEMT population is more likely to be low-income, older adults, and individuals with disabilities, additional specialized training for drivers is needed.[9]

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms “non-emergency medical transport”, “rideshare-based non-emergency medical transport”, “Uber Health”, “Lyft Healthcare”, and “rideshare-based medical transportation AND HIPAA”. Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies; applicable organizations were also reviewed for relevant information.

DISCUSSION

Transportation is a fundamental component of accessing routine, nonemergency medical care.[10] Transportation challenges to health care are disproportionately experienced by individuals who are low-income, older adults, non-White, women, and less educated, many of whom are Medicaid enrollees.[11] An estimated 25 percent to 55 percent of Medicaid enrollees missed, arrived late to, or did not try to go to a health care appointment because of transportation issues.[10] Adults and children who missed medical appointments due to transportation issues had extensive comorbidities and a significantly higher prevalence of health conditions compared with those who missed care for other reasons.[12] Inconsistent care due to transportation challenges can negatively affect health and increase preventable emergency department visits, particularly for individuals with chronic conditions.[10] Missed appointments do not just cause delays in medical care. They also cost the U.S. health care system $150 billion annually.[13]

BACKGROUND ON NONEMERGENCY MEDICAL TRANSPORATION (NEMT)

What is NEMT?

NEMT is a system that provides individuals with transportation to medical and health-care services when they lack other means of transport.[14] As a mandatory Medicaid benefit, NEMT plays a central role in reducing transportation-related barriers and ensuring that beneficiaries, particularly those who are older, disabled, or managing chronic conditions, can reliably access needed care.[15,16] Although all states must offer NEMT, the scope of what is covered, how services are delivered, and the overall quality of transportation vary considerably across state programs.[4] States may differ in the number of trips they authorize, whether prior approval is required, and whether small copayments are allowed, reflecting differences in beneficiary needs, delivery systems, and geographic context.[17]

Medicaid has covered NEMT since the program’s creation in 1966, with federal authority grounded in 42 CFR § 440.170.[18,19] Congress later reinforced this requirement in the Consolidated Appropriations Act of 2021, explicitly recognizing transportation network companies (TNCs) as allowable NEMT providers.[20,21] Over time, states have adopted three primary approaches to administering NEMT: state-run fee-for-service systems, managed care arrangements in which health plans coordinate transportation directly or through subcontractors, and broker-based models where states contract with a dedicated transportation broker to manage the benefit.[4,19] States most commonly rely on the brokerage model, which research suggests may improve oversight, reduce fraud and abuse, and help contain costs, particularly in capitated arrangements where brokers have fewer incentives to oversupply trips.[22]

Because states retain significant flexibility in implementing NEMT, program structure and operational practices vary widely.[4,6,19] Some states impose extensive credentialing, documentation, or quality-assurance requirements, while others take a lighter regulatory approach. These

differences shape the beneficiary experience and influence program integrity, cost management, and access to care.[4,19,22] The federal requirement to provide transportation remains consistent across the country, but how NEMT is delivered, and how effectively it meets patients' needs, ultimately depends on state choices regarding administration, contracting, and service design.[4,21]

Types of NEMT services

People who rely on NEMT have a wide range of physical, cognitive, and functional abilities. To ensure that each individual receives transportation that matches their needs, NEMT services are commonly organized into four broadly recognized levels of assistance.[4] These levels reflect how much support a rider requires before, during, and after the trip.[4]

Hand-to-Hand (H2H). H2H service is intended for individuals who require continuous assistance throughout the transportation process or who must maintain a formal chain of custody.[4,23] This includes riders unable to travel independently whether due to cognitive, sensory, or significant physical impairments, and individuals who must be transferred directly between responsible adults.[4,23] Children, for example, typically fall under H2H because they require a parent, guardian, or caregiver to accompany them for the full duration of the trip.[4,23] The driver or attendant plays an active support role, ensuring the rider is safely handed off at both pickup and drop-off locations.[4,23]

Door-to-Door (D2D). D2D service is appropriate for individuals who can ambulate with some independence but still require light physical assistance from the driver.[4,23] This support may include walking with the rider from their front door to the vehicle, assisting with entering and exiting the vehicle, opening doors, fastening seatbelts, or helping stow mobility devices and belongings.[4,23] Assistance in this category does not involve lifting, securement, or continuous monitoring but instead provides the modest, task-specific help some riders need to safely complete the trip.[4,23]

Curb-to-Curb (C2C). C2C is suitable for riders who can reach the curb independently and enter the vehicle with little or no driver assistance.[4,23] The driver remains responsible for operating the vehicle safely and verifying the passenger's identity but does not accompany the rider to or from their residence or destination doors.[4,23] This service level is widely used for riders who remain ambulatory and do not require support beyond the immediate boarding process.[4,23]

Area-to-Area (A2A). A2A serves individuals who are fully ambulatory and can walk longer distances—for example, from their residence to a designated pickup point, such as a bus stop or centralized meeting area.[4,23] Unlike C2C riders, who may only be comfortable walking a short distance to the curb, A2A riders can travel farther and access transportation from non-residential pickup sites.[4,23] This service is frequently used in transit-rich or campus-style settings where stops are located away from individual homes.[4,23]

Assigning a rider to the correct service level requires considering functional ability, cognitive status, environmental factors, and safety needs.[4,23] These categories help transportation providers, care coordinators, and health plans determine the most appropriate and safe mode of travel.[4,23] However, no national dataset currently captures the number of individuals who fall into each service level, and the true distribution likely varies by state, geography, and beneficiary population.[4]

How are NEMT rides scheduled?

NEMT rides may be scheduled either by the individual or by a care provider, depending on the state, the beneficiary's insurance program, and the administrative model used for NEMT.[4,6] In most states, scheduling occurs through a broker or managed care organization that operates a call center

or dispatch system.[4,6] When a request is made, the broker first verifies the individual's eligibility for NEMT and determines whether the ride meets coverage criteria.[4,24] If approved, the broker then assigns the trip to an appropriate transportation provider within its network. The selection of a transportation mode is guided by several factors, including the rider's functional needs, the availability of transportation options (such as proximity to a bus stop), and environmental conditions like extreme heat or cold, which may influence safety or accessibility.[4,24] Scheduling decisions also consider whether the ride is planned in advance or a last-minute request, as well as system-level constraints such as cost or vehicle availability.[4,24] Once assigned, a trip may be direct, transporting a single passenger from pickup to drop-off, similar to rideshare or taxi service, or shared, with multiple passengers boarding and disembarking along the route, similar to paratransit operations.[4,15,24]

Benefits of NEMT

Access to NEMT plays a critical role in reducing barriers to care for Medicaid beneficiaries and other transportation-vulnerable populations.[25] Studies consistently demonstrate that providing reliable transportation is associated with increased use of preventive and primary care, reduced reliance on emergency departments and inpatient services, and more timely access to treatment for individuals with chronic health conditions.[1,26,27] Evidence also indicates that NEMT can generate meaningful cost savings for the health system.[4,8,28] Even when accounting for transportation costs, NEMT has been linked to reductions in avoidable hospitalizations and improved management of chronic diseases.[4,8,28] National estimates suggest that Medicaid finances approximately 103 million NEMT trips annually, at an average cost of $26–$29 per trip, underscoring the scale and relatively low per-ride expense of the benefit.[4,29]

Common issues with NEMT

NEMT has long faced operational and oversight challenges that affect both the reliability and integrity of the benefit. A 2016 Government Accountability Office (GAO) review identified persistent concerns about late or missed pickups, and such delays often resulted from complex routing patterns. For example, traditional NEMT trips may involve multiple passengers and numerous stops which can significantly lengthen travel times and reduce patient satisfaction.[30] The report also highlighted broader program-integrity vulnerabilities, including fraud, waste, inefficiencies, and insufficient oversight.[30] States reported difficulty verifying eligibility, confirming that the transportation mode matched patient needs, and ensuring that trip destinations were appropriate for covered services.[30] Investigations by the HHS Office of Inspector General (OIG) further revealed substantial improper payments: between 2005 and 2011, five states collectively paid an estimated $63 million for rides that did not meet NEMT requirements.[31] Additional issues included billing for multiple trips when only one was needed, billing for deceased beneficiaries, and inappropriate up-charging—for example, assigning a costly ambulance trip for routine dialysis transport when a lower-acuity mode would have sufficed.[30,31]

Together, these findings underscore the complexity of administering NEMT across multiple delivery models, each with different data systems, credentialing requirements, and oversight capabilities.[28,30,31] Variability across states and contractors can make it difficult to consistently ensure that drivers, vehicles, and trips meet program standards.[4,28,30,31] These well-documented challenges continue to shape federal and state efforts to strengthen screening, monitoring, and trip-validation processes across both traditional and emerging NEMT modalities.[28,30,31]

What safety standards exist for NEMT?

Current minimum safety standards for NEMT are shaped primarily by federal Medicaid requirements, the American Disabilities Act (ADA) accessibility regulations, and Health Insurance Portability and Accountability Act (HIPAA) privacy rules.[18,32–35] At the federal level, Medicaid's "transportation assurance" obligates states to ensure necessary transportation and describe how they will provide it, which forms the structural foundation for safety oversight in all NEMT programs.[36] Federal rules for managed care and Prepaid Ambulatory Health Plans (PAHPs) require states and contracted NEMT entities to meet selected standards related to enrollee rights, information disclosure, and operational capacity.[37–40] The ADA further establishes technical minimums for accessible transportation, such as lift specifications, securement systems, and equipment maintenance, which apply whenever NEMT providers transport riders with mobility disabilities.[33] HIPAA compliance is required when protected health information is transmitted for scheduling or coordinating NEMT, which increasingly affects rideshare-integrated NEMT programs.[32]

At the state level, minimum safety standards become more detailed and prescriptive, especially regarding driver qualifications, vehicle conditions, and insurance requirements.[41,42] Most states require criminal background checks, motor-vehicle-record screenings, exclusion (LEIE) checks, drug testing, and periodic re-credentialing.[42–44] Vehicle standards commonly include documented safety inspections, compliance with state transportation codes, adherence to ADA equipment requirements (for accessible vehicles), and routine preventive maintenance.[33,36,43] Insurance requirements typically mandate commercial auto liability, general liability, and workers' compensation, with specific minimum coverage levels defined by state Medicaid contracts or broker agreements.[43,45] These standards serve as the baseline for ensuring safety and provider accountability in traditional NEMT settings.[18,32,33,36–40,43–45]

However, reports have identified recurring vulnerabilities, such as use of unqualified drivers, improperly documented trips, and unsafe or uninspected vehicles, prompting states and brokers to require pre-trip eligibility verification, real-time GPS validation, incident reporting, and strict record-keeping.[30,31] Voluntary accreditation bodies such as the Non-Emergency Medical Transportation Accreditation Commission (NEMTAC) have also emerged, offering consensus standards for driver training, securement practices, quality assurance, and organizational safety culture, which states, brokers, and plans increasingly treat as benchmarks for high-quality NEMT.[46] It should be noted that the 2002-2025 NEMTAC Provider Standard draft is currently open for public comment.[47] The NEMTAC Provider Standard is a comprehensive, American National Standards Institute aligned draft framework designed to establish national, consensus-based safety and operational expectations for NEMT providers.[47] It outlines structured requirements across organizational management, operations, staffing, and compliance, with the goal of elevating service quality, improving safety, and supporting uniformity across diverse state Medicaid environments.[47]

BACKGROUND ON RIDESHARE BASED NONEMERGENCY MEDICAL TRANSPORATION (RB-NEMT)

What is RB-NEMT?

Rideshare-based non-emergency medical transportation (RB-NEMT) refers to the use of transportation network companies (TNCs), such as Uber and Lyft, to provide medical transportation for riders.[4,48,49] Over the past decade, rideshare platforms have expanded rapidly nationwide, creating new opportunities to supplement traditional NEMT services.[50] Their entry into the NEMT market was driven by several converging trends: the growing availability of TNC

services, increases in the Medicaid and Medicare Advantage populations, rising demand for transportation among older adults, and capacity constraints within traditional NEMT provider networks.[51,52] Lyft first entered the NEMT space in 2016, followed by Uber in 2018, integrating their platforms with brokers and health plans to deliver curb-to-curb transportation for eligible beneficiaries.[51,52]

In an RB-NEMT model, brokers or health plans schedule rides through dedicated TNC health-care platforms rather than through the consumer-facing app.[4] Riders do not need a smartphone to participate, and TNC drivers generally do not know they are transporting a Medicaid or medically referred passenger, only that the ride was pre-arranged through a third party.[4,53] Early evaluations, including pilot programs and industry analyses, suggest that RB-NEMT may reduce missed pickups, improve punctuality, and lower transportation costs, particularly for ambulatory riders.[4,54,55] For example, one health system reported substantial reductions in rider complaints and no-show rates, along with notable cost savings when compared with taxi-voucher programs.[4,56] While these findings draw from industry-sponsored work and may not be generalizable, they highlight the potential operational advantages of rideshare integration.[4,56]

State and federal policy around RB-NEMT continues to evolve, and important gaps remain between NEMT regulatory expectations and what TNCs are structurally designed to provide. For example, state NEMT rules often require driver training in CPR or first aid, routine drug testing, specific insurance coverage, or specialized vehicle licensing, requirements that do not align with the independent-contractor model used by TNCs.[4,42] Vehicles used in RB-NEMT may also lack features required for certain NEMT trips, such as wheelchair securement systems or state-mandated license plates.[4,9]

What types of NEMT services and rider are best for RB-NEMT?

Studies have found that RB-NEMT is most appropriate for individuals who require minimal to no physical assistance and can safely use curb-to-curb (C2C) or area-to-area (A2A) services.[4,54,55,57] While RB-NEMT is primarily suited for riders needing low-assistance service, studies have noted that it can also be effective for specific trip types that benefit from flexibility and rapid deployment. RB-NEMT is a strong option for inpatient and outpatient discharges, where timing is unpredictable and traditional NEMT often requires advance scheduling.[4,54,55,57] It is also well suited for last-minute appointments, recovery rides following a missed pickup, and off-hour or high-volume periods, when traditional fleets may be limited.[4,57] In rural areas, where NEMT access is often sparse, RB-NEMT can expand transportation availability when rideshare networks operate locally.[58] By assigning ambulatory riders and flexible trip types to RB-NEMT, health plans and brokers can preserve traditional NEMT's specialized vehicles and trained personnel for riders who require D2D or H2H support.[4,59] This targeted assignment improves overall system efficiency, helps address capacity constraints, and ensures that higher-acuity riders retain access to appropriately equipped and staffed transportation.[4,59]

What safety standards exist for RB-NEMT?

Current minimum safety standards for RB-NEMT are far less formalized than those governing traditional NEMT, but several expectations have emerged through multiple studies.[4] At present, the only widely supported minimum standard is rider-service matching, meaning RB-NEMT should be used exclusively for low-assistance riders (i.e., those who can safely use C2C or A2A transportation) and do not require physical assistance, medical monitoring, or specialized mobility equipment.[4,54,59] Evidence consistently shows that rideshare vehicles cannot safely accommodate motorized wheelchairs, scooters, or securement-dependent devices, and drivers lack required

training in passenger assistance or medical support.[4,54,55,59] In addition, states and brokers implementing RB-NEMT generally rely on platform-level safety controls (i.e., identity verification, GPS tracking, and basic background checks already required of rideshare drivers) rather than NEMT-specific safety certifications.[4,60]

Beyond rider suitability, the most consistent minimum safety expectations relate to privacy and data handling, not clinical or operational safety. Because arranging RB-NEMT requires the transmission of pickup and destination details that may constitute protected health information (PHI), RB-NEMT platforms must operate through HIPAA-aligned scheduling dashboards, with Business Associate Agreements (BAAs) executed between the rideshare intermediary and the covered entity.[4,61–63] For example, Uber Health notes that platforms restrict driver-visible information to the "minimum necessary" (i.e., name and pickup point) and maintain encrypted PHI storage separate from consumer rideshare systems.[64] However, there are no federally defined driver-training requirements, no RB-NEMT-specific vehicle standards, and no validated safety benchmarks for transporting medically vulnerable individuals through TNCs.[4] As multiple studies have emphasized, RB-NEMT safety standards remain largely undeveloped, with the current minimums driven by platform safeguards, state-level rider selection criteria, and HIPAA compliance.[4,33,57]

EXISTING AMA POLICY

The AMA has limited policy on non-emergency medical transportation. AMA Policy H-130.954, "Non-Emergency Patient Transportation Systems," states our AMA supports the education of physicians, first responders, and the public about the costs associated with inappropriate use of emergency patient transportation systems, and encourages the development of non-emergency patient transportation systems that are affordable to the patient, thereby ensuring cost effective and accessible health care for all patients.

CONCLUSION

NEMT plays a vital role in enabling timely access to health care, particularly for Medicaid beneficiaries, older adults, people with disabilities, and individuals living in rural or underserved communities.[1,12,28] For these populations, transportation is not simply a logistical need, but a foundational determinant of whether patients can obtain preventive services, maintain continuity of care, and effectively manage chronic conditions.[65] Traditional NEMT systems, delivered through state programs, brokers, and managed care plans, continue to serve riders who require specialized vehicles, trained personnel, or hands-on support.[4,19,22] However, despite their longstanding role in supporting access, these systems face persistent challenges in reliability, oversight, and operational consistency that can undermine their effectiveness.[30,31] In recent years, RB-NEMT has emerged as a flexible and on-demand complement to traditional models.[51,52] RB-NEMT may offer advantages such as rapid response times, broad geographic availability, and improved scheduling capacity for ambulatory riders and last-minute needs.[54,55] Yet this model operates within a fundamentally different regulatory structure. Rideshare vehicles are not equipped for mobility-device securement, and drivers, who function as independent contractors, are not trained to provide physical assistance or medical oversight.[4] As a result, RB-NEMT is appropriate only for certain riders and specific types of trips, and its safe integration requires careful matching of riders to service levels that align with vehicle capabilities and driver competencies.[4,54,55,59]

While traditional NEMT is guided by long-standing safety expectations grounded in federal Medicaid requirements, ADA accessibility standards, HIPAA privacy protections, and state-level driver, vehicle, and insurance regulations, these expectations are applied unevenly across states and

delivery models.[18,32,33,36–40,42,44,45,61–63] This variability underscores the need for greater consistency and coordination in how minimum safety standards are implemented for traditional NEMT. In contrast, RB-NEMT lacks comparable, evidence-based safety standards altogether. Existing studies provide clear guidance only on the importance of appropriate rider selection for RB-NEMT; beyond this, current research is insufficient to define validated safety requirements for driver training, vehicle specifications, or operational procedures.[4,60,64] Moreover, differences between state NEMT rules and TNC operating frameworks further complicate the development of uniform RB-NEMT safety expectations.[4,41,42]

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted in lieu of Resolution 508-A-25 and the remainder of the report be filed.

1. Our AMA acknowledges that transportation is a foundational component of health care access and supports policies that ensure vulnerable populations can obtain necessary medical care.
2. Our AMA supports efforts to promote greater consistency and coordination in the minimum safety standards that guide traditional non-emergency medical transportation across states and delivery models and encourages ongoing evaluation of these standards as transportation systems and patient needs evolve.
3. Our AMA acknowledges that rideshare-based non-emergency medical transportation (RB-NEMT) is an expanding component of medical transportation and supports continued research to assess safety risks and establish evidence-based minimum safety requirements to help ensure RB-NEMT can be integrated safely and appropriately into patient care. (New HOD Policy)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 401
(A-26)

Introduced by: Organized Medical Staff Section

Subject: Partnership with the Administration to Reduce Harmful Chemicals in Food and Align with European Safety Standards

Referred to: Reference Committee D

Whereas, the American Medical Association recognizes that food safety and the reduction of harmful chemical additives in the food supply represents a critical public health priority affecting millions of Americans; and

Whereas, the European Union has implemented more stringent regulations regarding food additives, artificial colors, preservatives, and other chemical substances, resulting in significantly lower exposure rates to potentially harmful compounds compared to the United States; and

Whereas, numerous peer-reviewed studies have linked certain food additives commonly used in the United States—including artificial food dyes, certain preservatives, and flavor enhancers—to adverse health outcomes including hyperactivity in children, allergic reactions, and potential carcinogenic effects; and

Whereas, the current U.S. food regulatory framework allows the use of over 3,000 food additives, many of which are prohibited or restricted in European markets due to safety concerns; and

Whereas, American families deserve access to food products that meet the same safety standards enjoyed by consumers in Europe and other developed nations; and

Whereas, the Trump Administration has expressed commitment to improving American health outcomes and reducing regulatory barriers that may impede food safety improvements; and

Whereas, collaboration between medical professionals and government agencies is essential to develop evidence-based policies that protect public health while supporting American food producers and manufacturers; therefore be it

RESOLVED, that our American Medical Association advocates for the establishment of a joint task force comprising AMA representatives, FDA officials, USDA personnel, and relevant administration appointees to:

1. Conduct a systematic review of food additives currently approved in the U.S. but banned or restricted in Europe
2. Evaluate the scientific evidence regarding health impacts of these substances
3. Develop a prioritized timeline for regulatory action on the most concerning additives
4. Create transition pathways for food manufacturers to adopt safer alternatives

(Directive to Take Action); and be it further

RESOLVED, that our AMA will monitor the implementation of any resulting food additive regulation policies and provide ongoing medical and scientific guidance to ensure reforms achieve meaningful public health improvements. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 3/25/26

RELEVANT AMA POLICY

Food Safety - Federal Inspection Programs H-150.967
Our American Medical Association encourages the FDA and the U.S. Department of Agriculture to continue their efforts to assure the safety of the food supply. Inspection of meat, poultry, and seafood should be viewed as one component of an overall program for improving food safety.
Citation: CSA Rep. L, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Reaffirmed: CSAPH Rep. 1, A-21

FDA Drug Safety Policies D-100.978
Our American Medical Association will monitor and respond, as appropriate, to the implementation of the drug safety provisions of the Food and Drug Administration Amendments Act of 2007 (FDAAA; P.L. 110-85) so that the Food and Drug Administration can more effectively ensure the safety of drug products for our patients.
Citation: Sub. Res. 505, A-08; Reaffirmed: CSAPH Rep. 1, A-21

Addressing the Health Impacts of Ultraprocessed Foods H-150.914
1. Our AMA supports and promotes public awareness and education about the differences between healthful foods and unhealthful ultraprocessed foods (UPF) and the benefits of minimally processed and unprocessed foods.
2. Our AMA supports federal, state, and local policies that promote and incentivize the production and distribution of healthier, affordable, minimally-processed and unprocessed foods.
3. Our AMA encourages the integration of nutrition education into all levels of medical education to empower clinicians to best counsel patients efficiently and effectively on reducing unhealthful UPF consumption.
4. Our AMA supports increased funding to the FDA for research into the health impacts of ultraprocessed foods and strategies to mitigate their risks.

Citation: Res. 430, A-25

Reform the US Farm Bill to Improve US Public Health and Food Sustainability H-150.932
Reform the US Farm Bill to Improve US Public Health and Food Sustainability: Our American Medical Association supports the creation of a new advisory board to review and recommend US Farm Bill budget allocations to ensure any government subsidies are only used to help produce healthy food choices and sustainable foods, and that advisory committee members include physicians, public health officials and other public health stakeholders.
Citation: Res. 215, A-13; Reaffirmed: BOT Rep. 09, A-23

Strategies to Reduce the Consumption of Food and Beverages with Added Sweeteners H-150.927
1. Our American Medical Association acknowledges the adverse health impacts of sugar-sweetened beverage (SSB) consumption and food products with added sugars, and support evidence-based strategies to reduce the consumption of SSBs and food products with added sugars, including but not limited to, excise taxes on SSBs and food products with added sugars, removing options to purchase SSBs and food products with added sugars in primary and secondary schools, the use of warning labels to inform consumers about the health consequences of SSB consumption and food products with added sugars, and the use of plain packaging.
2. Our AMA encourages continued research into strategies that may be effective in limiting SSB consumption and food products with added sugars, such as controlling portion sizes; limiting

options to purchase or access SSBs and food products with added sugars in early childcare settings, workplaces, and public venues; restrictions on marketing SSBs and food products with added sugars to children; and changes to the agricultural subsidies system.

3. Our AMA encourages hospitals and medical facilities to offer healthier beverages, such as water, unflavored milk, coffee, and unsweetened tea, for purchase in place of SSBs and apply calorie counts for beverages in vending machines to be visible next to the price.
4. Our AMA encourages physicians to
    a. counsel their patients about the health consequences of SSB consumption and food products with added sugars and replacing SSBs and food products with added sugars with healthier beverage and food choices, as recommended by professional society clinical guidelines.
    b. work with local school districts to promote healthy beverage and food choices for students.
5. Our AMA recommends that taxes on food and beverage products with added sugars be enacted in such a way that the economic burden is borne by companies and not by individuals and families with limited access to food alternatives.
6. Our AMA supports that any excise taxes are reinvested in community programs promoting health.
7. Our AMA will advocate for the end of tax subsidies for advertisements that promote among children the consumption of food and drink of poor nutritional quality, as defined by appropriate nutritional guiding principles.

Citation: CSAPH Rep. 03, A-17; Modified: Res. 429, A-22

Fast Food H-150.979
The AMA encourages fast food restaurants to reduce the saturated fat content of their foods, as well as to offer low fat alternatives to highly saturated fat foods.
Citation: Sub. Res. 123, A-86; Amended by Sunset Report, I-96; Reaffirmed: CSAPH Rep. 3, A-06; Reaffirmed: CSAPH Rep. 01, A-16

Increasing Awareness of Nutrition Information and Ingredient Lists H-150.948
Our American Medical Association supports legislation or rules requiring restaurants, retail food establishments, and vending machine operators that have menu items common to multiple locations, as well as all school and workplace cafeterias, especially those located in health care facilities, to have available for public viewing ingredient lists, nutritional information, and standard nutrition labels for all menu items.
Citation: Sub. Res. 411, A-04; Reaffirmed: A-07; Reaffirmed in lieu of Res. 413, A-09 and Res. 418, A-09; Modified: BOT Rep. 1, A-14; Modified: CSAPH Rep. 01, A-24

The Health Effects of High Fructose Syrup H-150.919

1. Our American Medical Association recognizes that at the present time, insufficient evidence exists to specifically restrict use of high fructose corn syrup (HFCS) or other fructose-containing sweeteners in the food supply or to require the use of warning labels on products containing HFCS.
2. Our AMA encourages independent research (including epidemiological studies) on the health effects of HFCS and other added sugars, and evaluation of the mechanism of action and relationship between fructose dose and response.
3. Our AMA in concert with the Dietary Guidelines for Americans, recommends that consumers limit the amount of added sugars in their diet.

Citation: CSAPH Rep. 8, A-23

Food Additives H-150.998
Our American Medical Association supports the passage of legislation that would amend the Food Additive Act to require evidence based upon scientifically reproducible studies of the association of food additives with an increased incidence of cancer in animals or humans at dosage levels related to the amounts calculated as normal daily consumption for humans before removal of an additive from the market.
Citation: Sub. Res. 4, A-776; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Modified: BOT Rep. 6, A-10; Reaffirmed; BOT Rep. 7, A-21

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 402
(A-26)

Introduced by: Oklahoma, American Association of Public Health Physicians, Mississippi, Tennessee

Subject: Strengthening Public Health Protections Against Raw Milk–Associated Illness

Referred to: Reference Committee D

Whereas, raw unpasteurized milk poses significant risks of foodborne illness from pathogens such as Campylobacter, Shiga toxin-producing E. coli, Salmonella, Listeria, avian influenza, Brucella, Tuberculosis, and others, even from herds appearing healthy[1,5,6]; and

Whereas, from 1998-2018, raw milk caused at least 202 U.S. outbreaks resulting in 2,645 illnesses, 228 hospitalizations, and severe complications including hemolytic uremic syndrome, Guillain-Barré syndrome, sepsis, and death[1,5]; and

Whereas, children under 5 years are at highest risk for severe outcomes, including long-term kidney damage and neurological harm, yet cannot advocate for themselves against parental or caregiver choices exposing them to these preventable dangers[2,5]; and

Whereas, pregnant individuals consuming raw milk risk transmitting Listeria to fetuses, leading to miscarriage, stillbirth, preterm birth, or neonatal sepsis, disproportionately affecting the most vulnerable pediatric populations[1,2,5]; and

Whereas, the New Mexico Department of Health warned New Mexicans to avoid raw dairy products following the death of a newborn from Listeria infection in February of 2026 [9]; and

Whereas, claims of nutritional superiority or health benefits from raw milk lack high-quality evidence, while pasteurization eliminates pathogens without reducing essential nutrients[4,6,7,8]; and

Whereas, major public health authorities including the FDA, CDC, and AAP strongly advise against raw milk consumption, particularly for children, pregnant people, and immuno-compromised individuals[1,2,5]; and

Whereas, our AMA policy H-150.980, Milk and Human Health, reaffirms the policy that all milk sold for human consumption should be required to be pasteurized; therefore be it

RESOLVED, that our American Medical Association oppose the consumption and distribution of raw unpasteurized milk and dairy products, for protection of everyone, including but not limited to those at risk for Listeria complications (New HOD Policy); and be it further

RESOLVED, that our AMA urge congress and state legislatures to prohibit interstate sale of raw unpasteurized milk, strengthening current FDA regulation (New HOD Policy); and be it further

RESOLVED, that our AMA collaborate with like-minded organizations, possibly the AAP, to jointly develop and disseminate cost-efficient public education initiatives on the risks of raw,

unpasteurized milk and dairy products for children, targeting parents, schools, and childcare providers (Directive to Take Action); and be it further

RESOLVED, that our AMA support and advocate for, in jurisdictions where the sale or distribution of unpasteurized raw milk products cannot be prohibited, the implementation of labeling requirements that clearly warn consumers of the specific health risks associated with consumption of raw milk products, for general public and for members of vulnerable populations (Directive to Take Action); and be it further

RESOLVED, that our AMA support banning raw milk in settings accessible to children, such as schools and daycare facilities. (New HOD Policy)

Fiscal Note: Major – $69,695. Joint development and dissemination of education initiatives.

Received: 4/7/26

RELEVANT AMA POLICY

Milk and Human Health H-150.980
The AMA reaffirms its policy that all milk sold for human consumption should be required to be pasteurized.

Food-Borne Illness H-440.904
Our AMA will work with appropriate federal agencies, medical specialty societies, and public health organizations to (1) educate physicians and the public on measures to prevent food-borne illness; and (2) ensure enforcement of existing regulations for the safe production, handling, and transportation of food items.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 403
(A-26)

Introduced by: New Jersey

Subject: AMA's continued support for COVID-19 vaccination in pregnant individuals and children

Referred to: Reference Committee D

Whereas, on May 27, 2025, the CDC removed its recommendation for COVID-19 vaccination in healthy pregnant individuals and children aged 6 months–17 years (1); and

Whereas, pregnancy is a recognized high-risk condition for severe COVID-19 illness and infants born to unvaccinated mothers are more vulnerable in the first six months of life (2); and

Whereas, the AMA has previously demonstrated that the COVID-19 vaccination during pregnancy is safe for both mother and infant with no increase in miscarriage, preterm birth, or adverse fetal outcomes (3); and

Whereas, existing AMA policy D-440.921 ("An Urgent Initiative to Support COVID-19 Vaccination and Information Programs") emphasizes the necessity to promote the integrity of COVID-19 vaccine information; and

Whereas, the AMA does not have existing policy explicitly recommending ongoing Covid-19 vaccination for healthy pregnant individuals and children aged 6 months through 17 years old; therefore be it

RESOLVED, that our American Medical Association calls on the U.S. Centers for Disease Control and Prevention, Health and Human Services, and the Department of Health and Human Services to restore explicit recommendations for COVID-19 vaccination of pregnant individuals and young children aged 6 months to 17 years. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/9/2026

RELEVANT AMA POLICY

An Urgent Initiative to Support COVID-19 Vaccination and Information Programs D-440.921
Our AMA will institute a program to promote the integrity of a COVID-19 vaccination information program by: (1) educating physicians on speaking with patients about COVID-19 infection and vaccination, bearing in mind the historical context of "experimentation" with vaccines and other medication in communities of color, and providing physicians with culturally appropriate patient education materials; (2) educating the public about up-to-date, evidence-based information regarding COVID-19 and associated infections as well as the safety and efficacy of COVID-19 vaccines, by countering misinformation and building public confidence; (3) forming a coalition of health care and public health organizations inclusive of those respected in communities of color committed to developing and implementing a joint public education program promoting the facts about, promoting the need for, and encouraging the acceptance of COVID-19 vaccination; (4) supporting ongoing monitoring of COVID-19 vaccines to ensure that the evidence continues to support safe and effective use of vaccines among recommended populations; (5) educating physicians and other healthcare professionals on means to disseminate accurate information and methods to combat medical misinformation online; and (6) supporting the public purchase and cost-free distribution and administration of COVID-19 booster vaccine doses.

Education and Public Awareness on Vaccine Safety and Efficacy H-440.830
1. Our AMA (a) encourages the development and dissemination of evidence-based public awareness campaigns aimed at increasing vaccination rates; (b) encourages the development of educational materials that can be distributed to patients and their families clearly articulating the benefits of immunizations and highlighting the exemplary safety record of vaccines; (c) supports the development and evaluation, in collaboration with health care providers, of evidence-based educational resources to assist parents in educating and encouraging other parents who may be reluctant to vaccinate their children; (d) encourages physicians and state and local medical associations to work with public health officials to inform those who object to immunizations about the benefits of vaccinations and the risks to their own health and that of the general public if they refuse to accept them; (e) will promote the safety and efficacy of vaccines while rejecting claims that have no foundation in science; (f) supports state policies allowing minors to override their parent's refusal for vaccinations; and encourages state legislatures to establish comprehensive vaccine and minor consent policies; and (g) will continue its ongoing efforts with other immunization advocacy organizations to assist physicians and other health care professionals in effectively communicating to patients, parents, policy makers, and the media that vaccines do not cause autism and that decreasing immunization rates have resulted in a resurgence of vaccine-preventable diseases and deaths.
2. Our AMA: (a) recognizes the substantial body of scientific evidence that has disproven a link between vaccines and autism; and (b) opposes the creation of a new federal commission on vaccine safety whose task is to study an association between autism and vaccines.

[1]AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 404
(A-26)

Introduced by: New Jersey

Subject: Develop Climate-Conscious Resources for Physicians

Referred to: Reference Committee D

Whereas, climate change poses a significant and immediate threat to public health, with impacts that include increased heat-related illnesses, respiratory conditions, vector-borne diseases, and disruptions to healthcare delivery; and

Whereas, the healthcare sector, including the U.S. healthcare system, is both affected by climate change and a significant contributor to greenhouse gas emissions; and

Whereas, physicians and other healthcare professionals play a vital role in advocating for environmentally sustainable practices within the healthcare system and in educating patients about the health impacts of climate change; and

Whereas, initiatives developed by a national foundation has been very successful at decreasing unnecessary tests, treatments, and procedures; and

Whereas, a national foundation has developed a comprehensive resource, broken down by specialty, focused on the intersection of climate change and healthcare, providing guidance, educational materials, and actionable recommendations to reduce the environmental impact of clinical practices; therefore be it

RESOLVED, that our American Medical Association support compiling and maintaining a resource for U.S. physicians, focused on education physicians and other healthcare professionals about the health impacts of climate change and the role of the healthcare sector in contributing to greenhouse gas emissions (New HOD Policy); and be it further

RESOLVED, that our AMA support providing practical, evidence-based recommendations for reducing the environmental footprint of clinical practices and healthcare systems (New HOD Policy); and be it further

RESOLVED, that our AMA support offering resources and tools to support physicians in advocating for environmentally sustainable policies and practices within their organization and communities (New HOD Policy); and be it further

RESOLVED, that our AMA facilitates collaboration and sharing of best practices among healthcare professionals and institutions committed to addressing climate change and promoting sustainability. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 405
(A-26)

Introduced by: New Jersey

Subject: Studying the Environmental Impact of Ambient Clinical Intelligence Use

Referred to: Reference Committee D

Whereas, ambient clinical intelligence is proving to be an important technology tool for strengthening the physician-patient relationship and reducing physician burnout; and

Whereas, the demand for ambient clinical intelligence tools is significantly increasing and has a projected growth of by 38.62% from 2025 to 2030; and

Whereas, the growth of data centers to support ambient clinical intelligence is also being built to accommodate demand and place a significant strain on the electrical grid with potential public health implications; and

Whereas, data centers, as part of their routine operation, account for 1% of global electricity usage and this percentage is predicted to grow to 21% by 2030; and

Whereas, training a single AI model can emit over 284,000 kg of carbon dioxide; and

Whereas, built data centers come with an additional environmental cost of soil damage in areas where mineral extraction is done, pollution from the manufacturing of data center components and electronic waste from retired hardware, which have grown to more than 50 pounds annually with only about 20% of it is recycled; and

Whereas the direct impact on public health and infrastructure caused by data centers have been quantified to be as high as $5.4 billion dollars in a 5-year period; therefore be it

RESOLVED, that our American Medical Association in collaboration with state medical societies, develop a framework to study the public health impact and ecological challenges posed by the growth of ambient clinical intelligence (Directive to Take Action); and be it further

RESOLVED, that our AMA support efforts to voluntarily report emissions, water use, and e-waste from data centers to allow for public health entities to anticipate care and coverage costs to affected populations (New HOD Policy); and be it further

RESOLVED, our AMA works with stakeholders to encourage state and federal legislatures to offer specific tax incentives to ambient clinical intelligence vendors to work toward using 100% sustainable energy sources (Directive to Take Action); and be it further

RESOLVED, our AMA works with other industry healthcare associations to help establish clear guidelines on the responsible disposal of AI-enabled medical devices as well as AI purposed hardware. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 406
(A-26)

Introduced by: Medical Society of New Jersey

Subject: Reduce Environmental Impact of Medical Journals

Referred to: Reference Committee D

Whereas, the U.S. healthcare system generates a tremendous amount of waste, contributing 8.5% of greenhouse gas emissions and producing 4 billion pounds of waste annually; and

Whereas, there are over 1 million physicians in the United States, each of whom receives, on average, multiple medical journals monthly; and

Whereas, these journals are commonly wrapped in low-density polyethylene (LDPE), a material that, according to the Environmental Protection Agency (EPA), contributed 500,000 tons to U.S. landfills in 2015; and

Whereas, plastics, including LDPE, have been found in human blood, stool, and urine, and are known to cause cell death, allergic reactions, and inflammation; and

Whereas, a majority of physicians in a recent study expressed a preference for digital formats over print versions of medical journals; therefore be it

RESOLVED, that our American Medical Association's medical journals be provided via electronic-only means by default, and that physicians and other recipients be required to opt in to receive print versions (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage specialty societies to require physicians to opt in to receive print versions of journals, with the default option being to receive electronic-only versions. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 407
(A-26)

Introduced by: American Association of Public Health Physicians

Subject: Colorectal Cancer in Alaskan Native Patients

Referred to: Reference Committee D

Whereas, colorectal cancer is on the rise among Americans younger than age 50[1]; and

Whereas, the United States (U.S.) Preventive Services Task Force (USPSTF) currently recommends that colorectal cancer screening begin at age 45 for average-risk adults[2]; and

Whereas, while incidence and mortality attributable to colorectal cancer has decreased among Americans, disparities have worsened among Alaskan Natives, with incidence exceeding 60 to 90 cases per 100,000 persons in this population–the highest worldwide[3,4]; and

Whereas, the age-adjusted incidence of colorectal cancer among Alaskan Natives exceeds that of the non-Hispanic white population across the entire adult lifecourse[5]; and

Whereas, from 2014–2018, the colorectal cancer incidence rate among the Alaska Native population (67.1/100,000) was over twice as high as the rate for the White population in Alaska (26.4/100,000), and over three times higher than the rate among Asian/Pacific Islander persons and Black persons in Alaska (20.3/100,000 and 17.1/100,000, respectively)[5]; and

Whereas, investigations of the troubling increase in colorectal cancer incidence and mortality among Alaskan Natives suggests contributions from genetic, environmental, social, and structural factors as key drivers of this disparity[5,6]; and

Whereas, in 2013, the Alaska Tribal Health System and Alaska Native Epidemiology Center (a federally-designated public health authority) recommended that persons with Alaska Native ancestry begin screening colonoscopies at age 40, which was driven by robust, powered epidemiological evidence in the Alaskan Native population[3,4,5-,8]; and

Whereas, uptake of this recommendation may be limited among physicians due to the USPSTF declining to implement a population-specific recommendation for this group due to low representation of Alaskan Natives in general population studies investigating colorectal cancer and supporting USPSTF recommendations[9]; and

Whereas, the Affordable Care Act links USPSTF recommendations, which currently conflict with those of the Alaska Tribal Health System and Alaska Native Epidemiology Center), and insurance coverage requirements, which may lead to denial of medically appropriate colorectal cancer screening in Alaskan Native patients[10]; and

Whereas, intensified efforts at the local, state, tribal, and federal level will be necessary to reduce the burden of early-onset colorectal cancer among Alaskan Natives, both living in and relocated out of Alaska, and the greater American public; and

Whereas, recommendations focused specifically on the Alaskan Native population with regards to colorectal cancer screening are not in conflict with the USPSTF position on colorectal screening in average-risk adults; and

Whereas, a quality evaluation of all rural and urban-setting colonoscopies conducted as part of the Alaska Native Tribal Health Center Colorectal Cancer Control Program funded by the U.S. Centers for Disease Control and Prevention from 2009 to 2015 (n = 6,704) reported comparable complication rates to the general U.S. population (0.5%)[7]; and

Whereas, colonoscopy is the preferred modality for colorectal cancer screening due to a high number of false-positive results associated with a high prevalence of Helicobacter pylori-associated hemorrhagic gastritis in the Alaskan Native population[7]; and

Whereas, greater investment in colorectal cancer prevention and control efforts may eventually lead to reduced mortality and population-level cancer stage migration; therefore be it

RESOLVED, that our American Medical Association advocates that the National Cancer Institute dedicate resources to the investigation of early-onset colorectal cancer in Americans younger than age 45 (Directive to Take Action); and be it further

RESOLVED, that our AMA will coordinate with interested national medical specialty societies, state medical associations, Alaska Native Corporations, and tribal governments to enhance physician education and awareness of the tribal public health authority recommendation to initiate preventive screening for colorectal cancer at age 40 in individuals with Alaska Native ancestry and advocate that these screenings be covered by all public and private payers, including the Indian Health Service and U.S. Centers for Medicare and Medicaid Services. These patients should also be counseled that the U.S. Preventive Services Task Force does not have a position on initiating colorectal cancer screening at age 40 in the Alaska Native population, and thus should be presented the risks and benefits associated with colonoscopy and medically appropriate screening alternatives. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/13/26

RELEVANT AMA POLICY

Advocating for the Implementation of Updated U.S. Preventive Services Task Force Recommendations for Colorectal Cancer Screening Among Primary Care Physicians and Major Payors by the AMA D-425.990

Our American Medical Association will coordinate with interested national medical specialty societies and state medical associations to enhance physician education and awareness of the US Preventive Services Task Force (USPSTF) guidelines to initiate preventive screening for colorectal cancer at age 45.

Clinical Preventive Services H-410.967

1. Our American Medical Association recommends the USPSTF guidelines to clinicians and medical educators as one resource for guiding the delivery of clinical preventive services. USPSTF recommendations should not be construed as AMA policy on screening procedures and should not take the place of clinical judgment and the need for individualizing care with patients; physicians should weigh the utility of individual recommendations within the context of their scope of practice and the situation presented by each clinical encounter.
2. Our AMA will continue to encourage the adoption of practice guidelines as they are developed based on the best scientific evidence and methodology available.
3. Our AMA will continue to promote discussion, collaboration, and consensus among expert groups and medical specialty societies involved in preparation of practice guidelines.

Improving Health Care of American Indians and Alaska Natives H-350.976

1. Our American Medical Association recommends that all individuals, special interest groups, and levels of government recognize the American Indian and Alaska Native people as full citizens of the US, entitled to the same equal rights and privileges as other US citizens.
2. Our AMA recommends that the federal government provide sufficient funds to support needed health services for American Indians and Alaska Natives.
3. Our AMA recommends that state and local governments give special attention to the health and health-related needs of non-reservation American Indians and Alaska Natives in an effort to improve their quality of life.
4. Our AMA recommends that American Indian and Alaska Native religious and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
5. Our AMA recognizes practitioners of Indigenous medicine as an integral and culturally necessary individual in delivering health care to American Indians and Alaska Natives.
6. Our AMA monitors Medicaid Section 1115 waivers that recognize the value of traditional American Indian and Alaska Native healing services as a mechanism for improving patient-centered care and health equity among American Indian and Alaska Native populations when coordinated with physician-led care.
7. Our AMA supports consultation with Tribes to facilitate the development of best practices, including but not limited to culturally sensitive data collection, safety monitoring, the development of payment methodologies, healer credentialing, and tracking of traditional healing services utilization at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA recommends strong emphasis be given to mental health programs for American Indians and Alaska Natives in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
9. Our AMA recommends a team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
10. Our AMA will continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.

11. Our AMA recommends that state and county medical associations establish liaisons with intertribal health councils in those states where American Indians and Alaska Natives reside.
12. Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian and Alaska Native health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians and Alaska Natives.
13. Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and Alaska Natives and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 408
(A-26)

Introduced by: American College of Obstetricians and Gynecologists, The American Association of Gynecologic Laparoscopists

Subject: Addressing Rural Maternal Morbidity and Mortality through Collaboration and Intersectionality

Referred to: Reference Committee D

Whereas, since 2020 there has been a 12% decrease in labor and delivery units in rural hospitals, with fewer than half of United States counties offering labor and delivery services and more than two closures per month over the last four years, according to the Center for Healthcare Quality and Payment Reform (CHQPR)[1]; and

Whereas, many additional rural hospitals are at risk of losing maternity care services due to financial losses associated with maintaining 24/7 staffing compared to reimbursement, with CHQPR estimating that more than 100 additional closures may occur in 2026[1]; and

Whereas, rural hospitals are at even greater risk of closure due to reductions in Medicaid and Affordable Care Act funding following enactment of H.R.1 in 2025; and

Whereas, birthing individuals in maternity care deserts, rural counties, and communities predominantly composed of American Indian and Alaska Native individuals experience extended travel distances and times to obtain maternity services, increasing the risk of preterm birth and out-of-hospital delivery; and

Whereas, closure of labor and delivery units places systemic strain on emergency medical services, medical transport services, and emergency rooms in hospitals without maternity care physicians, and life-threatening obstetric complications may occur in these settings; and

Whereas, over 80% of maternal deaths are preventable with appropriate prenatal, labor and delivery, and postpartum care;[3] and

Whereas, 60% of maternal deaths occur in the postpartum period (up to 12 months after birth,) the majority related to cardiovascular disease or behavioral health;[3] and

Whereas, there is a parallel between states with abortion restrictions and states with poor maternal health outcomes;[4] and

Whereas, rural communities experience significantly higher maternal mortality rates overall, and more than 70% of these deaths occur during the postpartum period;[5] and

Whereas, a 2023 study in the American Journal of Public Health reported that pregnant individuals residing in rural areas experience higher risk of ICU admission, and nearly twice the maternal mortality of those in urban areas;[6] therefore be it

RESOLVED, that our American Medical Association publish a focused report examining the intersection of maternal mortality disparities, access to rural pregnancy care, workforce shortages, and reproductive health policy variability, with recommendations to reduce preventable maternal deaths, including during the postpartum period (Directive to Take Action); and be it further

RESOLVED, that our AMA ensure that this report includes evidence-based recommendations to reduce preventable maternal mortality through the postpartum year, including strategies for optimized allocation of federal and state funding (Directive to Take Action); and be it further

RESOLVED, that our AMA collaborate with specialty societies and public health stakeholders to promote and disseminate innovative practice models—such as regional call-sharing systems, tele–maternal-fetal medicine support, and hospital–physician partnership structures—designed to reduce rural maternal morbidity and mortality, including during the postpartum period. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 409
(A-26)

Introduced by: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Subject: Eliminate PFAS and Glyphosate in our Food and Environment

Referred to: Reference Committee D

Whereas, the EPA in 2025 has allowed PFAS insecticides for use on US food crops (e.g. isocycloseram (insecticide) and cyclobutrifluram (fungicide), and these compounds are linked to serious health issues, including liver toxicity, cancer, and reproductive harm[1]; and

Whereas, PFAS do not break down easily, remain on the food crops, and contaminate both the soil and the water supply indefinitely endangering both human and environmental health[2]; and

Whereas, recently the US by presidential order is expanding and allowing glyphosate to be used on our food supply despite health warnings[3]; and

Whereas, Glyphosate has serious health risks including non-Hodgkin lymphoma, liver disease, metabolic disorders, and hormone disruption, with studies indicating neurotoxicity, developmental effects, and increased cancer risk by up to 41%[4, 5]; and

Whereas, the AMA has policy for PFAS danger to human health[6]; therefore be it

RESOLVED, that our American Medical Association promote a safe and healthy food supply and environment by advocating for removal of PFAS and Glyphosate chemicals from our food supply and environment. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

6. H-135.916

RELEVANT AMA POLICY

H-135.916 Per- and Polyfluoroalkyl Substances (PFAS) and Human Health

1. Our American Medical Association supports continued research on the impact of perfluoroalkyl and polyfluoroalkyl chemicals on human health.
2. Our AMA supports legislation and regulation seeking to address contamination, exposure, classification, and clean-up of PFAS substances.
3. Our AMA will advocate for states, at minimum, to follow guidelines presented in the Environmental Protection Agency's Drinking Water Health Advisories for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS), with consideration of the appropriate use of Minimal Risk Levels (MRLs) presented in the CDC/ATSDR Toxicological Profile for PFAS.
4. Our AMA will amplify physician and public education around the adverse health effects of PFAS chemicals and potential mitigation and prevention efforts. [Res. 901, I-19 Modified: Res. 428, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 410
(A-26)

Introduced by: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Subject: Light Pollution

Referred to: Reference Committee D

Whereas, the current AMA policy on adverse human health effects and environmental damage of light pollution and high blue wavelength is based on a Council on Science and Public Health (CSPH) report from 2012: (Report 4 of the CSPH (a-12) Light Pollution: Adverse Health Effects of Nighttime Lighting[1]; and

Whereas, AMA policy on disability glare remains intact and widely adopted from Resolution 516, A-09[2]; and

Whereas, the AMA policy on LED outdoor lighting is based on a CSPH report from 2016 CSAPH Report 2-A-16: Human and Environmental Effects of Light Emitting Diode (LED) Community Lighting[3]; and

Whereas, these documents remain as the AMA advice for nighttime lighting for communities and cities worldwide, and are frequently downloaded and used as expert opinion for many local towns and cities worldwide[4]; and

Whereas, significant new research and evidence have been reported over the past 10 years, we should now update our AMA policy on light at night and excess blue light night time emission[0]; and

Whereas, the suppression of melatonin from excess blue light wavelength especially at 479 nm as reported by Martin Moore-ede in “The Light Doctor” 2024 leads to numerous adverse human health effects well documented by many and numerous scientific publications, including in JAMA[5, 6, 9, 10]; and

Whereas, our current AMA policy from 2016 states outdoor lighting should be 3000K or less, that recommendation is outdated now, and many lighting companies continue to recommend 3000K outdoor lighting or even still 4000K in some cases[3]; and

Whereas, night street light dimming capabilities are now readily available and should be encouraged for minimal added cost per light fixture, for dimming streetlights late at night a time of a towns choosing that will further limit glare, further save energy usage during late night and early morning lighting times[7]; and

Whereas, significant advances in LED technology has been made, with 2700K lighting now readily available, and even 2200K or 2400K lighting now offered, with significantly lower blue light emission[8]; therefore be it

RESOLVED, that our American Medical Association update its outdoor lighting recommendations to be:

1. Most outdoor lighting including street lighting should be 2700K or lower
2. Exceptions for inner city high traffic regions could be made for 3000K when deemed necessary for public safety
3. For rural and residential areas, or locations with interest in environmentally friendly policy, strong considerations be given to use 2200K to 2400K outdoor lighting
4. AMA policy on shielding to prevent disability glare should remain unchanged and should have fully shielded light fixtures to limit emission to 10 degrees below the horizontal to limit glare
5. Consideration should be given for streetlight dimming technology on most streetlights for further energy savings at low traffic times and further glare reduction. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-135.932 Light Pollution: Adverse Health Effects of Nighttime Lighting

1. Our American Medical Association supports the need for developing and implementing technologies to reduce glare from vehicle headlamps and roadway lighting schemes, and developing lighting technologies at home and at work that minimize circadian disruption, while maintaining visual efficiency.
2. Our AMA recognizes that exposure to excessive light at night, including extended use of various electronic media, can disrupt sleep or exacerbate sleep disorders, especially in children and adolescents. This effect can be minimized by using dim red lighting in the nighttime bedroom environment.
3. Our AMA supports the need for further multidisciplinary research on the risks and benefits of occupational and environmental exposure to light-at-night.
4. Our AMA supports work environments operating in a 24/7 hour fashion have an employee fatigue risk management plan in place. [CSAPH Rep. 4, A-12Reaffirmation: A-22Reaffirmed: CSAPH Rep. 1, A-22Reaffirmed: BOT Rep. 30, A-24]

H-135.937 Advocating and Support for Light Pollution Control Efforts and Glare Reduction for Both Public Safety and Energy Savings

1. Our American Medical Association will advocate that all future outdoor lighting be of energy efficient designs to reduce waste of energy and production of greenhouse gases that result from this wasted energy use.
2. Our AMA supports light pollution reduction efforts and glare reduction efforts at both the national and state levels.
3. Our AMA supports efforts to ensure all future streetlights be of a fully shielded design or similar non-glare design to improve the safety of our roadways for all, but especially vision impaired and older drivers. [Res. 516, A-09 Reaffirmed: CSAPH Rep. 4, A-12 Reaffirmed: CSAPH Rep. 1, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 411
(A-26)

Introduced by: American Academy of Ophthalmology

Subject: Addressing the Myopia Epidemic, Public Education, and Insurance Coverage for Evidence-Based Myopia Control

Referred to: Reference Committee D

Whereas, uncorrected myopia (nearsightedness) is the leading cause of distance vision impairment globally; and

Whereas, myopia continues to increase among children worldwide and is projected to affect up to 50% of the world's population by 2050 with high myopia in 10%; and

Whereas, myopia and especially high myopia is associated with increased risk of serious ocular complications such as retinal detachment, myopic maculopathy, glaucoma, and choroidal neovascularization, which represent avoidable causes of visual impairment if myopia progression can be slowed; and

Whereas, peer-reviewed evidence demonstrates that interventions such as environmental/behavioral changes (e.g., increased outdoor time, reducing near work/excessive screen time), optical interventions (e.g., highly aspherical lenses, peripheral defocus contact lenses), and pharmacological treatment (e.g., low dose atropine drops) can slow the progression of myopia in children and adolescents, with other promising treatments under evaluation; and

Whereas, public awareness of myopia as a progressive condition and of the availability of these evidence-based interventions to reduce myopia progression remains limited, contributing to underutilization and preventable long-term morbidity; and

Whereas, despite its significant impact on health and morbidity, myopia is not consistently classified as a disease, including by the Centers for Medicare and Medicaid Services; and

Whereas, inconsistent insurance coverage for these evidence-based myopia-control treatments creates financial barriers for patients seeking early intervention, disproportionately affecting underserved populations; therefore be it

RESOLVED, that our American Medical Association recognize that myopia is a significant and increasing public health concern warranting public health outreach, improved screening in children, and prevention efforts (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for public education initiatives to increase awareness among patients, caregivers, educators, and policymakers about the risks of progressive myopia and the availability of evidence-based interventions shown to slow myopia progression (Directive to Take Action); and be it further

RESOLVED, that our AMA support efforts to formally classify myopia as a disease to ensure that patients can receive appropriate treatment and insurance coverage for the treatment of this medical condition (New HOD Policy); and be it further

RESOLVED, that our AMA support efforts to ensure comprehensive insurance coverage and reimbursement for evidence-based treatments demonstrated to slow myopia progression in pediatric and adolescent patients. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 412
(A-26)

Introduced by: New York

Subject: Guiding Principles of Pandemic Prevention, Preparedness and Response; Support for the World Health Organization Pandemic Agreement

Referred to: Reference Committee D

Whereas, Resolution WHA78.1, the “WHO Pandemic Agreement” was adopted at the Seventy-eighth World Health Assembly on May 20th, 2025; and

Whereas, the WHO Pandemic Agreement was negotiated, and subsequently adopted by 193 out of the 194 member states, with the sole exception being the United States of America; and

Whereas, on January 22nd, 2026, the United States of America withdrew its membership from the World Health Organization; and

Whereas, New York State and many other states were gravely affected by the COVID-19 Pandemic, and should uphold the highest level of scientific, medical and intergovernmental evidence and cooperation for the prevention, preparedness and response to future pandemics; and

Whereas, State level policies such as Medical Society of the State of New York’s “MSSNY Principles of Public Health During an Infectious Disease Outbreak” (260.875) have been a useful initial resource for guiding Pandemic Prevention, Preparedness and Response, but are not as extensive as the principles stated in the WHO Pandemic Agreement; and

Whereas, National level policies such as the American Medical Association’s “Pandemic Preparedness” (H-440.847), “Pandemic Ethics and the Duty of Care” (D-130.960), “AMA Role in Addressing Epidemics and Pandemics” (H-440.835)722, “Low Cost Drugs to Economically Disadvantaged Countries During Times of Pandemic Health Crises” (H-250.988) and “Pandemic Ethics and the Duty of Care” (H-140.821), speak to federal level guidance and limited international guidance, they do not speak to several more in-depth principles of pandemic preparedness regarding intergovernmental and international cooperation that is called for in the WHO Pandemic Agreement; and

Whereas, the American Medical Association is a member of the World Medical Association, and specific policy supporting the below guiding principles from the World Health Organization Pandemic Agreement would allow the American Medical Association to participate in debate and policy making in a more evidence-based way, given the present lack of commitment to these principles from the United States Federal Government; therefore be it

RESOLVED, that our American Medical Association support and adopt the following Articles of the World Health Organization Pandemic Agreement as our framework for Pandemic Prevention, Preparedness and Response:

Article 4, Pandemic prevention and surveillance;

- Article 5, One Health approach for Pandemic Prevention, Preparedness and Response;
- Article 6, Preparedness, readiness and health system resilience;
- Article 7, Health and care workforce;
- Article 8, Regulatory systems strengthening;
- Article 9, Research and development;
- Article 10, Sustainable and geographically diversified local production;
- Article 11, Transfer of technology and cooperation on related know-how for the production of pandemic-related health products;
- Article 12, Pathogen Access and Benefit-Sharing Systems;
- Article 13, Supply chain and logistics;
- Article 14, Procurement and distribution;
- Article 15, Whole-of-government and whole-of-society approaches;
- Article 16, Communication and public awareness;
- Article 17, International cooperation and support for implementation;
- Article 18, Sustainable financing; and be it further.

(Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 413
(A-26)

Introduced by: American Association of Public Health Physicians

Subject: Erosion of the Public Evidence Base for Health Policy

Referred to: Reference Committee D

Whereas, for many decades, the U.S. Centers for Disease Control and Prevention (CDC) have maintained surveillance systems for a wide range of diseases and other conditions to help guide public and private efforts to protect the health of all Americans and, in some cases, global health; and

Whereas, for almost all such diseases and conditions, the decision to monitor each one is based on the professional judgment of experts in the field and committees of outside experts and approved at an annual meeting where each states epidemiologist is represented; and

Whereas, for each of the diseases and conditions in this surveillance system, a decision for surveillance is based on consideration of the condition's public health importance, the utility of a surveillance system to guide disease control efforts, and – in some cases – the prospects for eliminating the disease or condition permanently; and

Whereas, experts predict that declining vaccination rates and other risk factors will lead to dramatic increases in vaccine-preventable disease morbidity, which must be promptly tracked, analyzed, and controlled in order to prevent further morbidity and mortality; and

Whereas, we are seeing the resurgence of vaccine-preventable disease such as pertussis[1], Haemophilus influenzae[2], and Neisseria meningitisi[3] in the United States; and

Whereas, CDC surveillance data from the 2024–2025 influenza season documented at least 43 million symptomatic illnesses, 560,000 hospitalizations, and 38,000 deaths, making it the most severe influenza season since 2017–2018 and underscoring the necessity of uninterrupted national surveillance systems to guide timely response[4]; and

Whereas, an audit published in Annals of Internal Medicine found that 46% of CDC databases previously updated at least monthly had halted updates by October 2025, with most pauses exceeding six months[5,6]; and

Whereas, the same audit found that paused databases disproportionately involved vaccination-related surveillance, including influenza, COVID-19, and RSV, while none of the currently updated databases covered vaccination topics[7]; and

Whereas, these pauses were unexplained, with no public notices, banners, or press releases provided by the CDC to justify or contextualize the interruptions[8]; and

Whereas, the Annals investigation warns that these widespread interruptions undermine evidence-based medicine, impede outbreak readiness, and erode public trust in federal public health leadership at a time when accurate information is crucial; and

Whereas, this pause appears to have been initiated solely at the federal level, without consultation with state, city, territorial, or other entities who also have responsibility for communicable and chronic disease control; and

Whereas, as of April 2026, the United States faces a prolonged respiratory syncytial virus (RSV) season[9]; and

Whereas, the convergence of paused surveillance, budget reductions, political interference, and declining childhood vaccination rates significantly endangers national health security; therefore be it

RESOLVED, that our American Medical Association urges the U.S. federal government to publicly disclose the causes of federal disease surveillance interruptions; to provide expeditious timelines for restoration of surveillance databases and analyses for all nationally notifiable diseases, including hiring and re-hiring of scientifically qualified and appropriately funded staff; and to adopt an adequate mandatory public notification protocol for any future pauses (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate Congressional oversight, including an annual report, assessing CDC surveillance performance; staffing adequacy; data transparency; and the impact of funding levels collectively on public health readiness and national security. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 414
(A-26)

Introduced by: American Association of Public Health Physicians

Subject: Restoring Balanced Scientific Perspective within the ACIP

Referred to: Reference Committee D

Whereas, in June 2025, our AMA adopted an emergency resolution, now codified as AMA Policy D-440.902, expressing alarm about then-recent developments in United States vaccine policy; and

Whereas, in July 2025, multiple medical specialty associations and public health organizations filed a lawsuit that among other issues argued that the voting members appointed in 2025 to the Advisory Committee on Immunization Practices (ACIP) panelists lacked the qualifications to recommend vaccinations and that their decisions endangered the health of Americans; and

Whereas, the undermining of United States vaccine and public health policy by Health and Human Services Secretary Robert F. Kennedy Jr. has continued and worsened since June 2025; and

Whereas, lapses in vaccine coverage for many vaccines result in preventable harm to vulnerable persons who cannot be vaccinated or in whom vaccines are less effective, to persons in whom these vaccines are less effective than in others, and to people both near and far who deserve protection from preventable diseases; and

Whereas, in a factually rich and carefully balanced Memorandum and Order issued on March 16, 2026, Federal Judge Brian Murphy reversed the appointment of the new, largely unqualified ACIP members; stayed the decisions purportedly made by this panel; and stayed other vaccine-related decisions made by the U.S. Department of Health and Human Services (HHS) and the U.S. Centers for Disease Control and Prevention (CDC) without consulting any version of the ACIP[1]; and

Whereas, Federal law specifies that, “Advisory committees requiring technical expertise should include persons with demonstrated professional or personal qualifications and experience relevant to the functions and tasks to be performed by the Committee[2]; and

Whereas, on April 6, 2026, HHS published in the federal register and published on CDC webpages changes to the ACIP Charter on membership of the voting members of the ACIP, moving from topical coverage to specialty area and geographical coverage, and changing the purpose and composition of ACIP[3]; and

Whereas, geographic representation cannot improve decision-making because the vaccine recommendations should apply nationwide to all individuals in similar circumstances, because Americans and their infections travel frequently and migrate from one region to another, and because regional population-level variations in the immunization schedule would complicate vaccine compliance determinations without any corresponding benefit; and

Whereas, this new charter appears intended to thwart physicians' claims for organizational-level relief from counterproductive and burdensome changes to physicians' counseling workload and to the difficulty of achieving community vaccine coverage; and

Whereas, this new charter eliminates the prior specification for experience in preventive medicine and health economics, among others[4]; and

Whereas, the proposed new ACIP charter, published on April 6, 2026, was not available for public comment as of April 10, 2026; therefore be it

RESOLVED that our American Medical Association amend Policy D-440.902 by addition and deletion to read as follows:

1. Our American Medical Association will continue~~initiate~~ sustained public advocacy in support of the ~~current~~previous Advisory Committee on Immunization Practices (ACIP) structure, including the liaison representative program, as outlined in ACIP's 2024 Charter and practiced until Spring 2025.
2. Our AMA will ~~immediately send a letter to the Secretary of Health and Human Services calling for an immediate reversal of the recent changes to the Advisory Committee on Immunization Practices~~ pursue all appropriate channels to reverse the 2025-2026 changes to ACIP's structure, membership, and operations.
3. Our AMA will ~~immediately send a letter to the Senate Committee on Health, Education, Labor, and Pensions (HELP) and~~ request an investigation into the actions of the U.S. Secretary of Health and Human Services regarding his administration of the Centers for Disease Control and Prevention and Advisory Committee on Immunization Practices.
4. Our AMA will continue to identify and evaluate alternative evidence-based vaccine advisory structures and invest resources in such initiatives, as necessary.

(Modify Current HOD Policy); and be it further

RESOLVED, that our AMA condemns the arbitrary and unilateral 2026 alterations to the ACIP charter, which appear to have been designed to subvert the authority of relevant Federal judges and to allow the appointment of unqualified committee members and liaisons to the Advisory Committee on Immunization Practices (ACIP) (New HOD Policy); and be it further

RESOLVED, that our AMA will collaborate with interested state and specialty societies to support litigation against changes to the ACIP charter, budget, operating principles and staffing which produce ongoing harm to the public's health, and many of which were adopted without adequate and meaningful opportunity for public comment (Directive to Take Action); and be it further

RESOLVED, that our AMA specifically notes the importance of representation from health economics experts, and from the medical specialty of Preventive Medicine, in vaccine policy development as was recognized in the original charter, but was eliminated in the most recent update of the charter. (New HOD Policy)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 415
(A-26)

Introduced by: Colorado, Washington, Utah, American College of Physicians

Subject: Advocacy for Restoration of the Endangerment Finding Regarding Greenhouse Gas Emissions

Referred to: Reference Committee D

Whereas, our American Medical Association supports the scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people; and

Whereas, our American Medical Association declares climate change a public health crisis that threatens the health and well-being of all individuals; and

Whereas, our American Medical Association supports initiatives to promote environmental sustainability and other efforts to halt global climate change; and

Whereas, the AMA's Declaration of Professional Responsibility identifies among physician "duties and responsibilities", to "Educate the public and polity about present and future threats to the health of humanity" and to "Advocate for social, economic, educational, and political changes that ameliorate suffering and contribute to human well-being"; and

Whereas, the endangerment finding is a conclusion by the U.S. Environmental Protection Agency (EPA) that certain greenhouse gases, such as carbon dioxide and methane, pose a threat to public health and welfare, allowing for federal regulation of these emissions under the Clean Air Act and has been a key legal basis for regulating greenhouse gas emissions; and

Whereas, on 2/12/2026, the EPA announced it had repealed the endangerment finding; and

Whereas, it is likely that multiple lawsuits to restore the endangerment finding will be filed; therefore be it

RESOLVED, that our American Medical Association encourage the Litigation Center to monitor lawsuits against the rescinding of the endangerment finding and to consider submitting amicus curiae briefs in those with a likelihood of success on behalf of the HOD (New HOD Policy); and be it further

RESOLVED, that our AMA advocate against the repeal of the endangerment finding and support its restoration (Directive to Take Action); and be it further

RESOLVED, that our AMA publicly state that repeal of the endangerment finding is a threat to public health and take appropriate action, to include collaboration with relevant associations and stakeholders, to ensure that the public is adequately educated. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 416
(A-26)

Introduced by: American Society for Clinical Pathology, American Society of Cytopathology, American Society of Dermatopathology, College of American Pathologists, National Association of Medical Examiners

Subject: Clinical Laboratory Workforce Shortage and Sustainability

Referred to: Reference Committee D

Whereas, medical laboratory professionals working in multiple disciplines throughout clinical, anatomic, and public health laboratories are indispensable, highly trained, and specialized members of the physician-medical director led health care team which generates critical diagnostic information that drives the majority of medical decisions across all clinical specialties; and

Whereas, the United States is experiencing a critical and worsening shortage of qualified clinical laboratory personnel due to workforce attrition, retirements, limited training program capacity, and insufficient recruitment, training only one third to one half of needed positions annually; and

Whereas, inadequate staffing in clinical laboratories can lead to delays in results, increased diagnostic errors, reduced access to specialized testing, and degraded quality of care, ultimately resulting in significant negative impacts on patient outcomes; and

Whereas, barriers to entering and remaining in the clinical laboratory workforce include limited awareness of the profession, insufficient compensation relative to educational requirements, lack of career advancement opportunities, and regulatory and reimbursement challenges; therefore be it

RESOLVED, that our American Medical Association recognize the unique and critical role of medical laboratory professionals in patient care and public health and the urgent need to address workforce shortages (New HOD Policy); and be it further

RESOLVED, that our AMA support advocacy efforts to sustain and strengthen clinical laboratory training and education programs, including assistance for faculty development and infrastructure, to address capacity and recruitment needs (Directive to Take Action); and be it further

RESOLVED, that our AMA collaborate with relevant stakeholders, including accrediting bodies, educational institutions, health care organizations, and professional societies, to promote awareness of clinical laboratory careers, as members of the physician-led health care team, among students and the public. AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 417
(A-26)

Introduced by: American College of Occupational & Environmental Medicine

Subject: Respiratory Protection for Wildland Firefighters

Referred to: Reference Committee D

Whereas, wildland firefighters are exposed to wildfire smoke containing fine particulate matter (PM2.5), carbon monoxide, aldehydes, benzene, acrolein, dioxins, and polycyclic aromatic hydrocarbons at levels linked to acute and chronic cardiopulmonary harm and cancer, yet most wildland fire suppression operations do not require respiratory protection; and

Whereas, federal interagency guidance has historically excluded mandatory respirator use during suppression, citing concerns related to heat burden and performance, despite evidence supporting the effectiveness of National Institute for Occupational Safety and Health (NIOSH)-approved filtering facepiece respirators, air-purifying respirators (APRs), and powered air-purifying respirators (PAPRs); and

Whereas, bandannas and non-certified masks provide no meaningful protection, while properly selected, fit-tested, and medically cleared respirator use can significantly reduce toxic inhalation risks in both wildland and wildland–urban interface (WUI) operations; and

Whereas, federal wildland firefighters now receive enhanced workers' compensation under the Federal Employees' Compensation Act (FECA) for certain cancers, chronic obstructive pulmonary disease, and sudden cardiac events, while many state, county, municipal, and volunteer firefighters face inconsistent presumptive coverage that may exclude smoke-related injuries; and

Whereas, NIOSH and peer-reviewed research confirm health risks from recurrent wildfire smoke exposure and emphasize the value of systematic health monitoring and respiratory protection for firefighters; and

Whereas, the most current edition of the National Fire Protection Association (NFPA) 1984 standard, developed with direct NIOSH participation, establishes performance standards for wildland firefighter respirators that address particulate, carbon monoxide, and toxic gas exposures while requiring heat resistance, storage integrity, and IP65 protection for powered units; therefore be it

RESOLVED, that our American Medical Association advocate for the adoption of evidence-based respiratory protection standards for wildland firefighting, including triggers based on PM2.5 or other exposure metrics, easy access to NFPA 1984-compliant, NIOSH-approved Class 2 or Class 3 respirators, and protocols that balance respiratory protection with heat and exertion demands (Directive to Take Action); and be it further

RESOLVED, that our AMA join the American College of Occupational and Environmental Medicine (ACOEM) in advocating for relevant federal and state fire agencies, forestry departments, and occupational safety organizations to research, develop, and field-test

lightweight, low-breathing-resistance (<=80 mm H_2O at 150 L/min) respirators and related controls better suited for prolonged wildland use (8 or more hours) (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for the creation of surveillance and longitudinal medical monitoring programs for wildland firefighters to support registries and studies evaluating respiratory protection effectiveness, acute and chronic health risks, and mitigation strategies. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/15/26

RELEVANT AMA POLICY

H-440.810: Availability of Personal Protective Equipment (PPE)

1. Our American Medical Association affirms that the medical staff of each health care institution should be integrally involved in disaster planning, strategy and tactical management of ongoing crises.
2. Our AMA supports evidence-based standards and national guidelines for PPE use, reuse, and appropriate cleaning/decontamination during surge conditions.
3. Our AMA will advocate that it is the responsibility of health care facilities to provide sufficient personal protective equipment (PPE) for all employees and staff, as well as trainees and contractors working in such facilities, in the event of a pandemic, natural disaster, or other surge in patient volume or PPE need.
4. Our AMA supports physicians and health care professionals and other workers in health care facilities in being permitted to use their professional judgement and augment institution-provided PPE with additional, appropriately decontaminated, personally-provided personal protective equipment (PPE) without penalty.
5. Our AMA supports the rights of physicians and trainees to participate in public commentary addressing the adequacy of clinical resources and/or health and environmental safety conditions necessary to provide appropriate and safe care of patients and physicians during a pandemic or natural disaster.
6. Our AMA will work with the HHS Office of the Assistant Secretary for Preparedness and Response to gain an understanding of the PPE supply chain and ensure the adequacy of the Strategic National Stockpile for public health emergencies.
7. Our AMA encourages the diversification of personal protective equipment design to better fit all body types, cultural expressions and practices among healthcare personnel.

[Res. 412, I20: Appended: Res. 414, A21: Modified: Res. 401, I-21]

H-440.813 Public Health Surveillance

1. Our American Medical Association recognizes public health surveillance as a core public health function that is essential to inform decision making, identify underlying causes and etiologies, and respond to acute, chronic, and emerging health threats.

2. Our AMA recognizes the important role that physicians play in public health surveillance through reporting diseases and conditions to public health authorities.
3. Our AMA encourages state legislatures to engage relevant state and national medical specialty societies as well as public health agencies when proposing mandatory reporting requirements to ensure they are based on scientific evidence and meet the needs of population health.
4. Our AMA recognizes the need for increased federal, state, and local funding to modernize our nation's public health data systems to improve the quality and timeliness of data.
5. Our AMA supports the CDC's data modernization initiative, including electronic case reporting, which alleviates the burden of case reporting on physicians through the automatic generation and transmission of case reports from electronic health records to public health agencies for review and action in accordance with applicable health care privacy and public health reporting laws.
6. Our AMA will advocate for incentives for physicians to upgrade their EHR systems to support electronic case reporting as well as incentives to submit case reports that are timely and complete.
7. Our AMA will share updates with physicians and medical societies on public health surveillance and the progress made toward implementing electronic case reporting.
8. Our AMA will advocate for increased federal coordination and funding to support the modernization and standardization of public health surveillance systems data collection by the Centers for Disease Control and Prevention and state and local health departments.
9. Our AMA supports data standardization that provides for minimum national standards, while preserving the ability of states and other entities to exceed national standards based on local needs and/or the presence of unexpected urgent situations.

[CSAPH Rep. 1, I-19: Reaffirmed: Res. 219, A-21: Appended: Alt. Res. 402, A-21: Modified: CSAPH Rep. 2, I-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 418
(A-26)

Introduced by: Women Physicians Section

Subject: Ensuring Access to Full HIV Post-Exposure Prophylaxis (PEP) Courses for Survivors of Sexual Assault

Referred to: Reference Committee D

Whereas, it is estimated that 1.2 million people in the United States are living with HIV, yet about 1 in 8 people do not know they have the disease[1]; and

Whereas, the CDC reported that 56% of new HIV diagnoses in 2022 were amongst people aged 13-24 years old[2]; and

Whereas, post-exposure prophylaxis (PEP) uses antiretroviral (ARV) medications to reduce the risk of human immunodeficiency virus (HIV) transmission when initiated within 72 hours of exposure[3]; and

Whereas, completion of a full 28-day HIV post-exposure prophylaxis (PEP) regimen is recommended to maximize effectiveness in preventing HIV infection[3]; and

Whereas, individual studies demonstrate variable uptake and completion rates, including acceptance rates near 59–62% in some settings and completion rates ranging from approximately 29% to 66% across cohorts[4,5,6,7]; and

Whereas, strategies such as dispensing medication before discharge, providing trauma-informed counseling, and ensuring coverage of the full PEP regimen have been identified as mechanisms to improve adherence and reduce barriers[3]; and

Whereas, financial barriers, insurance status, trauma-related decision-making challenges, and logistical barriers contribute to failure to initiate or complete prescribed PEP regimens[1,4,5,6]; and

Whereas, up to 69% of sexual assault survivors are between the ages of 12-34 years of age[10]; and

Whereas, survivors of sexual assault may be exposed to HIV, with estimated per-act transmission risks of approximately 0.1–0.2% for vaginal assault and 1–3% for anal assault when assailant HIV status is unknown, and trauma or concurrent sexually transmitted infections may increase transmission risk[8,9]; and

Whereas, sexual assault survivors experience some of the lowest PEP completion rates among exposure groups, with approximately 40% completing a full regimen in meta-analysis studies and substantially lower completion documented in some U.S. cohorts[3,4]; and

Whereas, sexual contact through unprotected intercourse with an infected partner remains the most common method of HIV spread[11]; and

Whereas, although HIV transmission after sexual assault is relatively uncommon, documented seroconversions have occurred and longitudinal studies demonstrate increased HIV acquisition risk among sexual assault survivors compared with unexposed populations[9,12,13]; and

Whereas, women account for approximately 18–19% of new HIV diagnoses in the United States, with persistent racial disparities disproportionately affecting Black women, underscoring the importance of equitable access to HIV prevention strategies following sexual assault[14]; and

Whereas, some jurisdictions, including New York State, now require hospitals to provide a full 28-day HIV PEP regimen to sexual assault survivors to reduce structural barriers to completion[15]; therefore be it

RESOLVED, that our American Medical Association encourages hospitals, health systems, and affiliated payers to consider policies ensuring provision of the full recommended course of HIV post-exposure prophylaxis for survivors of sexual assault (New HOD Policy); and be it further

RESOLVED, that our AMA amend H-20.900 "HIV, Sexual Assault, and Violence" as follows:

> Our AMA: (1) believes that HIV testing and Post-Exposure Prophylaxis (PEP) should be offered to all survivors of sexual assault who present within 72 hours of a substantial exposure risk, that these survivors should be encouraged to be retested ~~in six months~~ at recommended intervals consistent with current clinical guidelines if the initial test is negative, and that strict confidentiality of test results be maintained; and
>
> (2) supports: (a) education of physicians about the effective use of HIV Post-Exposure Prophylaxis (PEP) and the U.S. PEP Clinical Practice Guidelines, ~~and~~ (b) increased access to, and coverage for, PEP for HIV, as well as enhanced public education on its effective use, and (c) encourages hospitals, health systems, and affiliated payers to consider policies ensuring provision of the full recommended course of HIV post-exposure prophylaxis for survivors of sexual assault

(Modify Current HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

8.1 Routine Universal Screening for HIV

Physicians' primary ethical obligation is to their individual patients. However, physicians also have a long-recognized responsibility to participate in activities to protect and promote the health of the public. Routine universal screening of adult patients for HIV helps promote the welfare of individual patients, avoid injury to third parties, and protect public health.

Medical and social advances have enhanced the benefits of knowing one's HIV status and at the same time have minimized the need for specific written informed consent prior to HIV testing. Nonetheless, the ethical tenets of respect for autonomy and informed consent require that physicians continue to seek patients' informed consent, including informed refusal of HIV testing.

To protect the welfare and interests of individual patients and fulfill their public health obligations in the context of HIV, physicians should:

(a) Support routine, universal screening of adult patients for HIV with opt-out provisions.

(b) Make efforts to persuade reluctant patients to be screened, including explaining potential benefits to the patient and to the patient's close contacts.

(c) Continue to uphold respect for autonomy by respecting a patient's informed decision to opt out.

(d) Test patients without prior consent only in limited cases in which the harms to individual autonomy are offset by significant benefits to known third parties, such as testing to protect occupationally exposed health care professionals or patients.

(e) Work to ensure that patients who are identified as HIV positive receive appropriate follow-up care and counseling.

(f) Attempt to persuade patients who are identified as HIV positive to cease endangering others.

(g) Be aware of and adhere to state and local guidelines regarding public health reporting and disclosure of HIV status when a patient who is identified as HIV positive poses significant risk of infecting an identifiable third party. The doctor may, if permitted, notify the endangered third party without revealing the identity of the source person.

(h) Safeguard the confidentiality of patient information to the greatest extent possible when required to report HIV status.

[Issued: 2016]

H-20.920 HIV Testing

(1) General Considerations

a) Persons who suspect that they have been exposed to HIV should be tested so that appropriate treatment and counseling can begin for those who are seropositive;

b) HIV testing should be consistent with testing for other infections and communicable diseases;

c) HIV testing should be readily available to all who wish to be tested, including having available sites for confidential testing;

d) The physician's office and other medical settings are the preferred settings in which to provide HIV testing;

e) Physicians should work to make HIV counseling and testing more readily available in medical settings.

(2) Informed Consent Before HIV Testing

a) Our AMA supports the standard that individuals should knowingly and willingly give consent before a

voluntary HIV test is conducted, in a manner that is the least burdensome to the individual and to those administering the test. Physicians must be aware that most states have enacted laws requiring informed consent before HIV testing;
b) Informed consent should include the following information: (i) patient option to receive more information and/or counseling before deciding whether or not to be tested and (ii) the patient should not be denied treatment if they refuse HIV testing, unless knowledge of HIV status is vital to provide appropriate treatment; in this instance, the physician may refer the patient to another physician for care;
c) It is the policy of our AMA to review the federal laws including the Veteran's Benefits and Services Act, which currently mandates prior written informed consent for HIV testing within the Veterans Administration hospital system, and subsequently to initiate and support amendments allowing for HIVtesting without prior consent in the event that a health care provider is involved in accidental puncture injury or mucosal contact by fluids potentially infected with HIV in federally operated health care facilities;
d) Our AMA supports working with various state societies to delete legal requirements for consent to medically indicated HIV testing that are more extensive than requirements generally imposed for informed consent to medical care.
(3) HIV Testing Without Explicit Consent
a) Explicit consent should not always be required prior to HIV testing. Physicians should be allowed, without explicit informed consent, and as indicated by their medical judgment, to perform diagnostic testing for determination of HIV status of patients suspected of having HIV infection;
b) General consent for treatment of patients in the hospital should be accepted as adequate consent for the performance of HIV testing;
c) Model state and federal legislation should be developed to permit physicians, without explicit informed consent and as indicated by their medical judgment, to perform diagnostic testing for determination of HIV status of patients suspected of having HIV infection;
d) Our AMA will work with the Centers for Disease Control and Prevention, the American Hospital Association, the Federation, and other appropriate groups to draft and promote the adoption of model state legislation and hospital staff guidelines to allow HIV testing of a patient maintaining privacy, but without explicit consent, where a health care worker has been placed at risk by exposure to potentially infected body fluids; and to allow HIV testing, without any consent, where a health care worker has been placed at risk by exposure to body fluids of a deceased patient.
(4) HIV Testing Procedures
a) Appropriate medical organizations should establish rigorous proficiency testing and quality control procedures for HIV testing laboratories on a frequent and regular basis;
b) Physicians and laboratories should review their procedures to assure that HIV testing conforms to standards that will produce the highest level of accuracy;
c) Appropriate medical organizations should establish a policy that results from a single unconfirmed positive ELISA test never be reported to the patient as a valid indication of HIV infection;
d) Appropriate medical organizations should establish a policy that laboratories specify the HIV tests performed and the criteria used for positive, negative, and indeterminate test results;
e) Our AMA recommends that training for HIV blood test counselors encourage patients with an indeterminate Western blot to be advised that three-to-six-month follow-up specimens may need to be submitted to resolve their immune status. Because of the uncertain status of their contagiousness, it is prudent to counsel such patients as though they were seropositive until such time as the findings can be resolved.
(5) Routine HIV Testing
a) Routine HIV testing should include appropriate informed consent and pre-test and post-test counseling procedures;
b) State medical associations should work to create state laws that encourage hospitals and other medical facilities to initiate routine HIV testing programs; and
c) Supports coverage of and appropriate reimbursement for routine HIV testing by all public and private payers.
(6) Opt-out HIV Testing
a) Opt-out HIV testing should be provided with informed consent for individuals who may have come into contact with the blood, semen, or vaginal secretions of an infected person in a manner that has been shown to transmit HIV infection. Such testing should be encouraged for patients for whom the physician's knowledge of the patient's serostatus would improve treatment. Opt-out HIV testing should be regularly provided for the following types of individuals who give an informed consent: (i) patients at sexually

transmissible disease clinics; (ii) patients at drug abuse clinics; (iii) individuals who are from areas with a high incidence of AIDS or who engage in high-risk behavior and are seeking family planning services; and (iv) patients who are from areas with a high incidence of AIDS or who engage in high-risk behavior requiring surgical or other invasive procedures;
b) The prevalence of HIV infection in the community should be considered in determining the likelihood of infection. If opt-out HIV testing is not sufficiently accepted, the hospital and medical staff may consider requiring HIV testing.
(7) Mandatory HIV Testing
a) Our AMA opposes mandatory HIV testing of the general population;
b) Mandatory testing for HIV infection is recommended for (i) military personnel; (ii) donors of blood and blood fractions; breast milk; organs and other tissues intended for transplantation; and semen or ova for artificial conception;
c) All entrants into federal and state prisons should be offered HIV screening, but it should only be mandatory when risk factors are present;
d) Our AMA will review its policy on mandatory testing periodically to incorporate information from studies of the unintended consequences or unexpected benefits of HIV testing in special settings and circumstances.
(8) HIV Test Counseling
a) Pre-test and post-test voluntary counseling should be considered an integral and essential component of HIV testing. Full pre-test and post-test counseling procedures must be utilized for patients when HIV is the focus of the medical attention, when an individual presents to a physician with concerns about possible exposure to HIV, or when a history of high-risk behavior is present;
b) Post-test information and interpretation must be given for negative HIV test results. All negative results should be provided in a confidential manner accompanied by information in the form of a simple verbal or written report on the meaning of the results and the offer, directly or by referral, of appropriate counseling and potentially pre-exposure prophylaxis treatment;
c) Post-test counseling is required when HIV test results are positive. All positive results should be provided in a confidential face-to-face session by a professional properly trained in HIV post-test counseling and with sufficient time to address the patient's concerns about medical, social, and other consequences of HIV infection.
(9) HIV Testing of Health Care Workers
a) Our AMA supports routine voluntary HIV testing of physicians, health care workers, and students in appropriate situations;
b) Employers of health care workers should provide, at the employer's expense, serologic testing for HIV infection to all health care workers who have documented occupational exposure to HIV;
c) Our AMA opposes HIV testing as a condition of hospital medical staff privileges;
d) Physicians and other health care workers who perform exposure-prone patient care procedures should know their immune or infection status with respect to HIV.
(10) Counseling and Testing of Pregnant People for HIV
Our AMA supports the position that there should be universal HIV testing of all pregnant people, with patient notification of the right of refusal, as a routine component of perinatal care, and that such testing should be accompanied by basic counseling and awareness of appropriate treatment, if necessary. Patient notification should be consistent with the principles of informed consent.
(11) HIV Home Test Kits
a) Our AMA does not oppose HIV home collection test kits that are linked with proper laboratory testing and counseling services, provided their use does not impede public health efforts to control HIV disease;
b) Standardized data should be collected by HIV home collection test kit manufacturers and reported to public health agencies.
(12) College Students
Our AMA encourages undergraduate campuses to conduct confidential, free HIV testing with qualified staff and counselors.
[CSA Rep. 4, A-03; Appended: Res. 515, A-06; Reaffirmed: BOT Rep. 1, A-07; Appended: Res. 506, A-10; Modified: CSAPH Rep. 01, A-20; Modified: Speakers Rep. 02, I-24]

H-20.918 Maternal HIV Screening and Treatment to Reduce the Risk of Perinatal HIV Transmission
In view of the significance of the finding that treatment of HIV-infected pregnant people with appropriate antiretroviral therapy can reduce the risk of transmission of HIV to their infants, our AMA recommends the following statements:

(1) Given the prevalence and distribution of HIV infection among individuals in the United States, the potential for effective early treatment of HIV infection, and the significant reduction in perinatal HIV transmission with treatment of pregnant people with appropriate antiretroviral therapy, routine education about HIV infection and testing should be part of a comprehensive health care program for all individuals. The ideal would be for all people to know their HIV status before considering pregnancy.

(2) Universal HIV testing of all pregnant people, with patient notification of the right of refusal, should be a routine component of perinatal care. Basic counseling on HIV prevention and treatment should also be provided to the patient, consistent with the principles of informed consent.

(3) The final decision about accepting HIV testing is the responsibility of the patient. The decision to consent to or refuse an HIV test should be voluntary. When the choice is to reject testing, the patient's refusal should be recorded. Test results should be confidential within the limits of existing law and the need to provide appropriate medical care for patients and their infant.

(4) To assure that the intended results are being achieved, the proportion of pregnant people who have accepted or rejected HIV testing and follow-up care should be monitored and reviewed periodically at the appropriate practice, program or institutional level. Programs in which the proportion of patients accepting HIV testing is low should evaluate their methods to determine how they can achieve greater success.

(5) Pregnant people who are not seen by a health care professional for prenatal care until late in pregnancy or after the onset of labor should be offered HIV testing at the earliest practical time, but not later than during the immediate postpartum period.

(6) When HIV infection is documented in a pregnant person, proper post-test counseling should be provided. The patient should be given an appropriate medical evaluation of the stage of infection and full information about the recommended management plan for their own health. Information should be provided about the potential for reducing the risk of perinatal transmission of HIV infection to the infant through the use of antiretroviral therapy, and about the potential but unknown long-term risks to the patient and the infant from the treatment course. The final decision to accept or reject antiretroviral treatment recommended for the patient and their infant is the right and responsibility of the patient. When the serostatus is either unknown or known to be positive, appropriate counseling should also be given regarding the risks associated with breastfeeding for both her own disease progression and disease transmission to the infant.

(7) Appropriate medical treatment for HIV-infected pregnant people should be determined on an individual basis using the latest published Centers for Disease Control and Prevention recommendations. The most appropriate care should be available regardless of the stage of HIV infection or the time during gestation at which the patient presents for prenatal or intrapartum care.

(8) To facilitate optimal medical care for pregnant people and their infants, HIV test results (both positive and negative) and associated management information should be available to the physicians taking care of both individuals. Ideally, this information will be included in the confidential medical records. Physicians providing care for a pregnant person or their infant should obtain the appropriate consent and should notify the other involved physicians of the HIV status of and management information about the pregnant patient and their infant, consistent with applicable state law.

(9) Continued research into new interventions is essential to further reduce the perinatal transmission of HIV, particularly the use of rapid HIV testing for patients presenting in labor and those presenting in the prenatal setting who may not return for test results. The long-term effects of antiretroviral therapy during pregnancy and the intrapartum period for both pregnant patients and their infants also must be evaluated. For both infected and uninfected infants exposed to perinatal antiretroviral treatment, long-term follow-up

studies are needed to assess potential complications such as organ system toxicity, neurodevelopmental problems, pubertal development problems, reproductive capacity, and development of neoplasms.

(10) Health care professionals should be educated about the benefits of universal HIV testing, with patient notification of the right of refusal, as a routine component of prenatal care, and barriers that may prevent implementation of universal HIV testing as a routine component of prenatal care should be addressed and removed. Federal funding for efforts to prevent perinatal HIV transmission, including both prenatal testing and appropriate care of HIV-infected pregnant people, should be maintained.
[CSA Rep. 4, A-03; Reaffirmed: CEJA Rep. 3, A-10; Reaffirmed: CSAPH Rep. 01, A-20; Modified: Speakers Rep. 02, I-24]

H-80.998 Sexual Assault Survivor Services
Our AMA supports the function and efficacy of sexual assault survivor services, supports state adoption of the sexual assault survivor rights established in the Survivors' Bill of Rights Act of 2016, encourages sexual assault crisis centers to continue working with local police to help sexual assault survivors, and encourages physicians to support the option of having a counselor present while the sexual assault survivor is receiving medical care.
[Res. 56, A-83; Reaffirmed: CLRPD Rep. 1, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmed: CSAPH Rep. 1, A-15; Modified: Res. 202, I-17]

H-80.991 Coverage for Care for Sexual Assault Survivors
Our American Medical Association advocates for federal and state efforts to reduce financial barriers that limit sexual assault survivors' ability to seek physical and mental health care and social services after sexual assault, including funds to cover emergency, acute inpatient, and follow up services including testing, medications, and counseling without out-of-pocket costs for any patient.
[Res. 805, I-24]

H-20.900 HIV, Sexual Assault, and Violence
Our AMA: (1) believes that HIV testing and Post-Exposure Prophylaxis (PEP) should be offered to all survivors of sexual assault who present within 72 hours of a substantial exposure risk, that these survivors should be encouraged to be retested in six months if the initial test is negative, and that strict confidentiality of test results be maintained; and (2) supports: (a) education of physicians about the effective use of HIV Post-Exposure Prophylaxis (PEP) and the U.S. PEP Clinical Practice Guidelines, and (b) increased access to, and coverage for, PEP for HIV, as well as enhanced public education on its effective use.
[CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13; Modified: Res. 905, I-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 419
(A-26)

Introduced by: Women Physicians Section, American College of Lifestyle Medicine

Subject: Examining the Impact of Circadian Disruption from Shift Work During Pregnancy

Referred to: Reference Committee D

Whereas, circadian rhythm is centrally regulated by the suprachiasmatic nucleus of the hypothalamus and entrained by environmental light-dark cyclic inputs, enabling coordination of hormonal secretion, metabolic function, and physiologic homeostasis;[1] and

Whereas, light exposure during nighttime hours can desynchronize timing signals between the suprachiasmatic nucleus and peripheral cellular circadian rhythms;[2] and

Whereas, emerging evidence in occupational health, sleep medicine, and obstetrics suggests associations between circadian disruption and resulting perturbed melatonin cycles during pregnancy and adverse maternal and fetal outcomes, although existing evidence remains heterogeneous;[3] and

Whereas, a meta-analysis published under American Journal of Obstetrics and Gynecology reported "very low" certainty evidence suggesting higher rates of miscarriage among pregnant women with fixed night shifts in comparison to pregnant women who worked day shifts;[4] and

Whereas, rotating shifts have an association with preterm delivery and gestational hypertension;[4] and

Whereas, studies have demonstrated associations between maternal shift work and adverse neonatal outcomes, including psychological and behavioral problems;[3] and

Whereas, the timing of labor onset is determined by multifactorial physiologic processes, including sleep disruption and synchronicity between circadian rhythms and light exposure in pregnant physicians, which warrants further study;[2] and

Whereas, there is currently limited consensus guidance on scheduling accommodations for pregnant physicians and other health care workers exposed to shift work, leading to variability in institutional policies; and

Whereas, evidence-informed guidance may help support physician well-being, maternal health, and workforce sustainability while maintaining continuity of patient care; therefore be it

RESOLVED, that our American Medical Association supports the study of the impact of circadian disruption from shift work during pregnancy, including implications for maternal and fetal health (New HOD Policy); and be it further

RESOLVED, that our AMA encourages dissemination of evidence-informed approaches to scheduling and workplace accommodations for pregnant individuals as appropriate based on the findings of a report on circadian disruption from shift work during pregnancy. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-420.960 Effects of Work on Pregnancy
Our American Medical Association supports the right of employees to work in safe workplaces that do not endanger their reproductive health or that of their unborn children.

1. Our AMA supports workplace policies that minimize the risk of excessive exposure to toxins with known reproductive hazards irrespective of gender or age.
2. Our AMA encourages physicians to consider the potential benefits and risks of occupational activities and exposures on an individual basis and work with patients and employers to define a healthy working environment for pregnant people.
3. Our AMA encourages employers to accommodate increased physical requirements of pregnant people; recommended accommodations include varied work positions, adequate rest and meal breaks, access to regular hydration, and minimizing heavy lifting.
4. Our AMA acknowledges that future research done by interdisciplinary study groups composed of obstetricians/gynecologists, occupational medicine specialists, pediatricians, and representatives from industry can best identify adverse reproductive exposures and appropriate accommodations.

[CSA Rep. 9, A-99; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmation, A-12; Modified: CSAPH Rep. 1, A-22]

H-405.947 Compassionate Leave for Physicians, Medical Students, Medical Trainees, and Physician Residents and Fellows
Our American Medical Association urges:
a. medical schools, and the Liaison Committee on Medical Education and Commission on Osteopathic College Accreditation to incorporate and/or encourage development of compassionate leave policies. Such compassionate leave policies should consider inclusion of extensive travel and events impacting family planning, pregnancy, or fertility (including pregnancy loss, an unsuccessful round of intrauterine insemination or of an assisted reproductive technology procedure, a failed adoption arrangement, or a failed surrogacy arrangement). These policies should determine how compassionate leave may be incorporated with alternative, timely means of achieving curricular goals when absent from curricular components and to meet competency requirements necessary to complete a medical degree.
b. residency and fellowship training programs, their sponsoring institutions, and Accreditation Council for Graduate Medical Education to incorporate and/or encourage development of compassionate leave policies as part of the physician's standard benefit agreement. Such compassionate leave policies should consider appropriateness of coverage during extensive travel and events impacting family planning,

pregnancy, or fertility (including pregnancy loss, an unsuccessful round of intrauterine insemination or of an assisted reproductive technology procedure, a failed adoption arrangement, or a failed surrogacy arrangement). These policies should also include whether the leave is paid or unpaid, outline what obligations and absences must be made up, and determine how compassionate leave may be incorporated with alternative, timely means of achieving curricular goals when absent from curricular components and to meet competency requirements necessary to achieve independent practice and board eligibility for their specialty.

c. medical group practices to incorporate and/or encourage development of compassionate leave policies as part of the physician's standard benefit agreement. Such compassionate leave policies should consider appropriateness of coverage during extensive travel and events impacting family planning, pregnancy, or fertility (including pregnancy loss, an unsuccessful round of intrauterine insemination or of an assisted reproductive technology procedure, a failed adoption arrangement, or a failed surrogacy arrangement). These policies should also include whether the leave is paid or unpaid and what obligations and absences must be made up.

Our AMA encourages medical schools, residency and fellowship programs, specialty boards, specialty societies and medical group practices to incorporate into their compassionate leave policies a three-day minimum leave, with the understanding that no medical student or physician should be required to take a minimum leave.

Medical students and physicians who are unable to work beyond the defined compassionate leave period because of physical or psychological stress, medical complications of pregnancy loss, or another related reason should refer to their institution’s sick leave policy, family and medical leave policy, and other benefits on the same basis as other physicians who are temporarily unable to work for other reasons.

Our AMA supports the concept of equal compassionate leave for bereavement due to death or loss (e.g., pregnancy loss and other such events impacting fertility in a physician or their partner) as a benefit for physicians, medical students, medical trainees, and physician residents and fellows, regardless of gender or gender identity.

Staffing levels and scheduling are encouraged to be flexible enough to allow for coverage without creating intolerable increases in the workloads of other physicians, particularly those in residency programs.

These guidelines as above should be freely available online and in writing to all applicants to medical school, residency, or fellowship.

[Res. 309, I-22; Modified: CME Rep. 01, I-23]

H-135.932 Light Pollution: Adverse Health Effects of Nighttime Lighting

1. Our American Medical Association supports the need for developing and implementing technologies to reduce glare from vehicle headlamps and roadway lighting schemes, and developing lighting technologies at home and at work that minimize circadian disruption, while maintaining visual efficiency.
2. Our AMA recognizes that exposure to excessive light at night, including extended use of various electronic media, can disrupt sleep or exacerbate sleep disorders, especially in children and adolescents. This effect can be minimized by using dim red lighting in the nighttime bedroom environment.
3. Our AMA supports the need for further multidisciplinary research on the risks and benefits of occupational and environmental exposure to light-at-night.
4. Our AMA supports work environments operating in a 24/7 hour fashion have an employee fatigue risk management plan in place.

[CSAPH Rep. 4, A-12; Reaffirmation: A-22; Reaffirmed: CSAPH Rep. 1, A-22; Reaffirmed: BOT Rep. 30, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 420
(A-26)

Introduced by: Women Physicians Section

Subject: Expanding Support for Women Experiencing Homelessness

Referred to: Reference Committee D

Whereas, the rate of unsheltered homelessness among women has increased significantly more than men in recent years, especially among unhoused veterans, and over three-quarters of unhoused families are headed by women[1,2]; and

Whereas, women experiencing homelessness have higher rates of mortality, poor health, mental illness, substance use, victimization, and adverse birth outcomes, yet face reduced access to preventive, reproductive, specialty, and ongoing healthcare services[1-3,9]; and

Whereas, homelessness and associated distress is disproportionately experienced by people of color as well as LGBTQ+ populations, and nearly two-thirds of unhoused gay and transgender youth will attempt suicide[2-4]; and

Whereas, domestic violence is a leading cause of homelessness among women and families, with over half of LGBTQ survivors reporting homelessness as a result, yet referral rates to support services after positive screening remains low[2,6,7,8]; and

Whereas, homeless women who have experienced intimate partner violence are more likely to have medical and psychiatric conditions and less likely to access primary care compared to those who did not[2,6,7,8]; and

Whereas, the Violence Against Women Act, first enacted in 1994 and reauthorized in 2022 to protect survivors' access to safe housing and prevent housing discrimination, will be up for reauthorization again in 2027[11,12,13]; and

Whereas, women experiencing homelessness have high rates of chronic physical conditions, including asthma, anemia, bronchitis, hypertension, and ulcers, as well as mental health conditions, particularly substance use and depression[5,10]; and

Whereas, unhoused patients report provider bias, stigma, and disrespect as major barriers to care, often leading them to forgo needed services, compounded by insurance gaps, medication access challenges, and limited knowledge about where to seek care[2,3,5,10]; and

Whereas, programs such as Boston Healthcare for the Homeless, are establishing systems for trauma-informed, low-barrier care specifically for women at shelters and at female-only drop-in times, encompassing services from behavioral health to reproductive health to cancer screening, while providing a safe space to access therapeutic activities[14], therefore be it

RESOLVED, that our American Medical Association amend H-160.903 "Eradicating Homelessness" by addition and deletion as follows:

1. Our American Medical Association supports improving the health outcomes and decreasing the health care costs of treating the chronically homeless through clinically proven, high quality, and cost-effective approaches which recognize the positive impact of stable and affordable housing coupled with social services.
2. Our AMA recognizes that stable, affordable housing as a first priority, without mandated therapy or services compliance, is effective in improving housing stability and quality of life among individuals who are chronically-homeless and recognizes that women experiencing homelessness may face distinct health and safety risks that warrant tailored approaches.
3. Our AMA recognizes adaptive strategies based on regional variations, community characteristics and state and local resources are necessary to address this societal problem on a long-term basis.
4. Our AMA supports the use of physician-led, team-based street medicine programs, which travel to individuals who are unhoused or unsheltered and provide healthcare and social services, as well as funds, including Medicaid and other public insurance reimbursement, for their maintenance, and encourages attention to gender-specific health needs within such programs when feasible.
5. Our AMA recognizes the need for an effective, evidence-based national plan to eradicate homelessness.
6. Our AMA encourages the National Health Care for the Homeless Council to study the funding, implementation, and standardized evaluation of Medical Respite Care for homeless persons.
7. Our AMA will partner with relevant stakeholders to educate physicians about the unique healthcare and social needs of ~~homeless patients~~ individuals experiencing homelessness, including gender-specific health needs and the impact of domestic and intimate partner violence on housing instability, and the importance of holistic, cost-effective, evidence-based discharge planning, and physicians' role therein, in addressing these needs.
8. Our AMA encourages the development of holistic, cost-effective, evidence-based discharge plans for homeless patients who present to the emergency department but are not admitted to the hospital.
9. Our AMA encourages the collaborative efforts of communities, physicians, hospitals, health systems, insurers, social service organizations, government, and other stakeholders to develop comprehensive homelessness policies and plans that address the healthcare and social needs of homeless patients, including support for research to better understand health needs, barriers to care, and effective interventions among populations disproportionately affected by housing instability.
10. Our AMA:
    a. supports laws protecting the civil and human rights of individuals experiencing homelessness, and
    b. opposes laws and policies that criminalize individuals experiencing homelessness for carrying out life-sustaining activities conducted in public spaces that would otherwise be considered non-criminal activity (i.e., eating, sitting, or sleeping) when there is no alternative private space available.
11. Our AMA recognizes that stable, affordable housing is essential to the health of individuals, families, and communities, and supports policies that preserve and expand affordable housing across all neighborhoods.
12. Our AMA:
    a. supports training to understand the needs of housing-insecure individuals for those who encounter this vulnerable population through their

professional duties, including trauma-informed approaches and awareness of domestic violence as a contributor to housing instability;

b. supports the establishment of multidisciplinary mobile homeless outreach teams trained in issues specific to housing insecure individuals; and

c. will make available existing educational resources from federal agencies and other stakeholders related to the needs of housing-insecure individuals.

13. Our AMA encourages medical schools to implement physician-led, team-based Street Medicine programs with student involvement.

(Modify Current HOD Policy)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 421
(A-26)

Introduced by: Georgia

Subject: Improving Access to Care and Support for Patients with Inflammatory Bowel Disease in the United States

Referred to: Reference Committee D

Whereas, inflammatory bowel disease (IBD), encompassing Crohn's disease and ulcerative colitis, is a chronic, relapsing condition that requires early and accurate diagnosis as well as ongoing disease monitoring, including colonoscopy, to assess inflammation, guide therapy, and prevent complications[1]; and

Whereas, patients with long-standing IBD represent a high-risk population compared to the general colorectal cancer screening population, given their increased risk of colorectal cancer and need for more frequent surveillance colonoscopies[2],[3]; and

Whereas, a nationwide cohort study analyzing over 1.7 million IBD-related hospitalizations (2016–2021) demonstrated significant racial and ethnic disparities in IBD outcomes, with Black patients experiencing higher hospitalization rates and increased risks of complications such as perianal abscess and rectal bleeding compared to White patients[4]; and

Whereas, these disparities persist after adjusting for socioeconomic and hospital-related factors, suggesting that systemic inequities in access to timely diagnosis, specialist care, and advanced therapies contribute to worse outcomes and increased healthcare utilization[4]; and

Whereas, minority and uninsured patients with IBD, particularly Black and Hispanic individuals, are less likely to receive advanced biologic or novel therapies and are more likely to be treated with corticosteroids and opioids, which are associated with increased complications and poorer long-term outcomes[5],[6]; and

Whereas, interruptions in biologic therapy, often due to insurance instability or delays in prior authorization, can lead to loss of response through development of antidrug antibodies, necessitating therapy changes and increasing the risk of disease flares, hospitalizations, and complications[4]; and

Whereas, the high cost of biologic therapies represents a major component of IBD-related healthcare expenditures, while restrictive payer practices such as step therapy and prior authorization further delay access to effective treatment[7]; and

Whereas, colonoscopy is essential for both diagnosis and colorectal cancer surveillance in patients with long-standing IBD, as recommended by the American College of Gastroenterology and American Gastroenterological Association[2],[3]; and

Whereas, increasing public and provider awareness of low-cost or no-cost colonoscopy programs and expanding access for uninsured patients with IBD may improve early detection, reduce disease progression, and decrease long-term healthcare costs[4]; therefore be it

RESOLVED, that our American Medical Association support the development and implementation of standardized, scalable referral and patient navigation pathways for each state — through collaboration with the American Gastroenterological Association, the American College of Gastroenterology, the American Society for Gastrointestinal Endoscopy, the Crohn's & Colitis Foundation, state and local Departments of Public Health, Federally Qualified Health Centers, safety-net health systems, and community-based organizations — to connect patients with inflammatory bowel disease to timely and affordable colonoscopy services for diagnosis and surveillance, leveraging existing colorectal cancer screening and navigation models (New HOD Policy); and be it further

RESOLVED, that our AMA support educational initiatives and resource dissemination, developed in collaboration with appropriate partners—including patient advocacy organizations, professional societies, and health systems—to increase awareness among physicians regarding documentation requirements for Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) eligibility in patients with severe inflammatory bowel disease, in order to improve access to financial support and insurance coverage (New HOD Policy); and be it further

RESOLVED, that our AMA support policies that support nationwide efforts to expand equitable access to colonoscopy services for patients with inflammatory bowel disease and increase physician awareness of disability benefit eligibility as a mechanism to improve continuity of care and access to necessary medical services. (New HOD Policy)

Fiscal Note Minimal – less than $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 422
(A-26)

Introduced by: LGBTQ+ Section, Washington State Medical Association, California Medical Association

Subject: Expanding Access to High Resolution Anoscopy

Referred to: Reference Committee D

Whereas, Anal cancer incidence is markedly elevated among people living with HIV and other high-risk populations, including men who have sex with men, transgender women, individuals with prior vulvar high-grade squamous intraepithelial lesions (HSIL) or vulvar cancer, and solid organ transplant recipients, with incidence among men who have sex with men living with HIV approaching 89 per 100,000 person-years—more than tenfold higher than the general U.S. population[1]; and

Whereas, the ANCHOR trial demonstrated that treatment of anal HSIL reduces progression to anal cancer by 57%, establishing high-resolution anoscopy (HRA) with treatment as an evidence-based cancer prevention strategy[1]; and

Whereas, access to HRA in the United States is severely limited and geographically concentrated, with fewer than 200 HRA sites nationwide, nearly half located in five states (California, New York, Florida, Maryland, and Massachusetts), 17 states without any HRA site, several states with only a single site, and most services clustered in urban academic centers[2]; and

Whereas, national estimates indicate that more than 120,000 people living with HIV with abnormal screening results lack access to follow-up HRA through their HIV care facility, creating substantial disparities in cancer prevention access for rural, low-income, and marginalized populations[3]; and

Whereas, HRA services in the United States are variably housed across multiple specialties—including infectious diseases, colorectal surgery, obstetrics/gynecology, and others—and there is no uniformly standardized graduate medical education pathway or accreditation requirement for competency in HRA; international practice standards have emphasized the need for defined minimum competencies and formalized training evaluation, and existing certification programs reflect the substantial procedural experience required for proficiency, contributing to workforce variability and limited capacity to expand services rapidly[4–6]; and

Whereas, expanding equitable access to HRA requires coordinated efforts addressing reimbursement, workforce development, referral infrastructure, and integration into HIV and other high-risk care settings; therefore be it

RESOLVED, that our American Medical Association collaborate with relevant national medical specialty societies to promote development and dissemination of evidence-based and practical guidance, referral pathways, and implementation strategies to integrate anal cancer screening and HRA access into routine care for high-risk populations (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage and promote educational resources, training opportunities, and competency guidance related to high-resolution anoscopy developed by relevant medical specialty societies and other expert organizations in order to support expansion of patient access and an appropriately trained workforce (New HOD Policy); and be it further

RESOLVED, that our American Medical Association advocate at the federal and state levels for policies that expand equitable access to high-resolution anoscopy (HRA) for high-risk populations, including ensuring adequate reimbursement, reducing geographic disparities, and supporting workforce development (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage federal agencies, including the Health Resources and Services Administration (HRSA) and Centers for Medicare and Medicaid Services (CMS), to support funding mechanisms and demonstration programs that expand HRA capacity in HIV care settings, federally qualified health centers, and underserved communities. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

H-440.872 HPV Associated Cancer Prevention

1. Our American Medical Association;
a. strongly urges physicians and other health care professionals to educate themselves, appropriate patients, and patients' parents or caregivers when applicable, about HPV and associated diseases, the importance of initiating and completing HPV vaccination, as well as routine HPV related cancer screening; and
b. encourages the development and funding of programs targeted at HPV vaccine introduction and HPV related cancer screening in countries without organized HPV related cancer screening programs.
2. Our AMA will work with interested parties to intensify efforts to improve awareness and understanding about HPV and associated diseases in all individuals, regardless of sex, such as, but not limited to, cervical cancer, head and neck cancer, anal cancer, and genital cancer, the availability and efficacy of HPV vaccinations, and the need for routine HPV related cancer screening in the general public.
3. Our AMA supports legislation and funding for research aimed towards discovering screening methodology and early detection methods for other non-cervical HPV associated cancers.
4. Our AMA;
a. encourages the integration of HPV vaccination and appropriate HPV-related cancer screening into all appropriate health care settings and visits;
b. supports the availability of the HPV vaccine and routine cervical cancer screening to appropriate patient groups , including but not limited to low-income and pre-sexually active populations; and

c. recommends HPV vaccination for all groups for whom national medical specialty societies or the federal Advisory Committee on Immunization Practices recommends HPV vaccination.
5. Our AMA supports efforts by states to increase HPV vaccine availability and accessibility, and HPV vaccination rates through a combination of policies such as facilitating administration of HPV vaccinations in community-based settings including local health departments and schools, reminder-based interventions, school-entry requirements, and requirements for comprehensive and evidence-based sexual education.
6. Our AMA encourages collaboration with interested parties to make available human papillomavirus vaccination, according to ACIP recommendations as of May 1, 2025, and subsequent vaccine recommendations developed by national medical specialty societies, to people who are incarcerated for the prevention of HPV-associated cancers.
7. Our AMA advocate that racial, ethnic, socioeconomic, and geographic differences in high-risk HPV subtype prevalence be taken into account during the development, clinical testing, and strategic distribution of next-generation HPV vaccines.
8. Our AMA will encourage continued research into (a) interventions that equitably increase initiation of HPV vaccination and completion of the HPV vaccine series; (b) the impact of broad opt-out provisions on HPV vaccine uptake; and (c) the impact of the COVID-19 pandemic and vaccine misinformation on HPV vaccine uptake.
[Res. 503, A-07 Appended: Res. 6, A-12 Reaffirmed: CSAPH Rep. 1, A-22 Reaffirmation: A-22 Modified: Res. 916, I-22 BOT Action Sept. 2023 Modified: CSAPH Rep. 03, I-24 Appended: BOT Rep. 24, I-25]

H-460.913 Screening for HPV-Related Anal Cancer
1. Our American Medical Association supports continued research on the diagnosis and treatment of anal cancer and its precursor lesions, including the evaluation of the anal pap smear as a screening tool for anal cancer.
2. Our AMA's advocacy efforts to implement screening for anal cancer for high-risk populations.
3. Our AMA's national medical specialty organizations and other stakeholders in developing guidelines for interpretation, follow up, and management of anal cancer screening results.
[Res. 512, A-04 Reaffirmed: CSAPH Rep. 1, A-14 Appended: Res. 421, A-22]

H-465.994 Improving Rural Health
1. Our American Medical Association:
a. supports continued and intensified efforts to develop and implement proposals for improving rural health care and public health,
b. urges physicians practicing in rural areas to be actively involved in these efforts, and
c. advocates widely publicizing AMA's policies and proposals for improving rural health care and public health to the profession, other concerned groups, and the public.
2. Our AMA will work with other entities and organizations interested in public health to:
a. Encourage more research to identify the unique needs and models for delivering public health and health care services in rural communities.
b. Identify and disseminate concrete examples of administrative leadership and funding structures that support and optimize local, community-based rural public health.
c. Develop an actionable advocacy plan to positively impact local, community-based rural public health including but not limited to the development of rural public health networks, training of current and future rural physicians and public health professionals in core public health techniques and novel funding mechanisms to support public health initiatives that are led and managed by local public health authorities.
d. Advocate for adequate and sustained funding for public health staffing and programs
3. Our American Medical Association will work with relevant stakeholders to develop a national strategy to eliminate rural cancer disparities in screening, treatment, and outcomes and achieve health equity in cancer outcomes across all geographic regions.
4. Our AMA calls for increased federal and state funding to support research on rural cancer disparities and equity in care, access, and outcomes and development of interventions to address those disparities.
5. Our AMA advocates for evidence-based collaborative models for innovative telementoring/ teleconsultation between health care systems, academic medical centers, and community physicians to improve access to cancer screening, diagnosis, treatment, rehabilitation, and patient services in rural areas.

Rep. 06, A-18 Appended: Res. 433, A-19 Modified: CSAPH Rep. 2, A-22 Reaffirmed: CMS Rep. 09, A-23 Reaffirmed: Res. 724, A-23 Appended: Res. 919, I-24 Reaffirmed: Res. 237, I-25 Reaffirmed: CMS Rep. 03, I-25]

H-160.991 Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations
1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.
5. Our AMA supports preservation and maintenance of federal and state public funding for physicians and institutions engaged in clinical care, research, and medical education regarding LGBTQ+ populations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 423
(A-26)

Introduced by: LGBTQ+ Section

Subject: Expanding Access to HIV Pre-Exposure Prophylaxis (PrEP)

Referred to: Reference Committee D

Whereas, HIV pre-exposure prophylaxis (PrEP) is a highly effective biomedical intervention which, when taken as prescribed, can reduce the risk of sexual HIV acquisition by about 99% and has become a cornerstone of national HIV-prevention strategies [1-2]; and

Whereas, existing AMA policy (H-20.895, H-20.894, H-165.821) already supports education about PrEP, coverage of all approved PrEP regimens, removal of insurance barriers, inclusion of PrEP as a preventive essential health benefit, and expanded access through physician-led collaborative practice models but lack policy regarding ways to improve access and uptake in target populations [3]; and

Whereas, recent federal and state budget proposals, litigation targeting the preventive-services mandate, and the patchwork nature of federal, state, and private assistance programs have introduced substantial uncertainty and instability in PrEP medication and service funding, threatening continuity of care and jeopardizing progress toward ending the HIV epidemic [4-12]; and

Whereas, although overall PrEP use has increased in the United States, national surveillance repeatedly shows that only a minority of people with PrEP indications actually receive it, with particularly low uptake among cisgender women and people living in the Southern United States [13-14]; and

Whereas, profound disparities in PrEP awareness, access, and adherence persist among populations disproportionately affected by HIV - including women (particularly Black, Latina, Indigenous, transgender, and Southern women), as well as Black, Latino, Indigenous, and rural communities - despite overall growth in PrEP use nationally [13, 15-17] ; and

Whereas, transgender women face a disproportionate burden of HIV and, despite high levels of interest in PrEP, experience multiple barriers - including discrimination, lack of gender-affirming care, and limited provider knowledge - underscoring the need for tailored, affirming PrEP delivery models [17-18]; and

Whereas, women account for a substantial proportion of new HIV diagnoses globally and in the United States, and gendered power dynamics, reproductive coercion, intimate partner violence, economic dependence, and stigma can limit women's ability to negotiate condom use or disclose PrEP use, making PrEP access and autonomy over HIV prevention a critical reproductive health and bodily autonomy issue [19-20]; and

Whereas, many clinicians report limited training, time, or comfort in discussing sexual health and PrEP with patients - especially women, transgender and gender-diverse people, and people

in rural areas - highlighting the importance of integrating PrEP education into medical school curricula, graduate medical education, and continuing medical education [1,2, 21]; and

Whereas, the NIH Office of AIDS Research and the Office of Research on Women's Health have highlighted persistent HIV disparities among women and gender-diverse people, calling for women-centered prevention and care strategies across the lifespan—including improved access to PrEP, trauma-informed services, and integration of HIV prevention with sexual and reproductive health care [22]; and

Whereas, innovative PrEP delivery models - including telePrEP, same-day or rapid-start initiation, community-based and mobile services, pharmacy-based and home-based PrEP monitoring, and integration of PrEP into primary care, sexual-health clinics, substance-use-disorder treatment programs, and services for survivors of sexual assault - have been shown to reduce barriers, improve uptake, and reach populations underserved by traditional clinic-based models [21, 23]; and

Whereas, social determinants of health such as housing instability, lack of transportation, childcare responsibilities, limited paid leave, medical mistrust, and intersectional stigma (including racism, sexism, homophobia, and transphobia) continue to impede PrEP uptake and persistence, particularly for women and marginalized communities, and require coordinated policy and systems-level responses [4-13]; and

Whereas, legal and policy threats to coverage for preventive services, including PrEP, create confusion among payers, providers, and patients, and may have a chilling effect on prescribing or seeking PrEP unless strong medical and public health voices advocate for continued, reliable access [4-12]; and

Whereas, aligning AMA policy with evolving evidence and best practices to emphasize funding stability, equity-focused implementation, innovative delivery models, and attention to social determinants of health will strengthen ongoing AMA efforts to end the HIV epidemic and advance gender and racial health equity [1-3, 22]; therefore be it

RESOLVED, that our American Medical Association supports advocacy, research funding, and targeted programmatic support to address disparities in PrEP access among populations disproportionately affected by HIV, ensuring that strategies are tailored to the unique needs of these communities (New HOD Policy); and be it further

RESOLVED, that our AMA supports efforts to expand PrEP access to all individuals in alignment with evidence-based guidelines and shared decision making, including but not limited to innovative delivery models across various care settings and strategies to address social determinants of health that impede PrEP uptake such as housing instability, transportation barriers, and stigma. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-20.914 Discrimination and Criminalization Based on HIV Seropositivity

Our AMA:

(1) Remains cognizant of and concerned about society's perception of, and discrimination against, HIV-positive people;

(2) Condemns any act, and opposes any legislation of categorical discrimination based on an individual's actual or imagined disease, including HIV infection; this includes Congressional mandates calling for the discharge of otherwise qualified individuals from the armed services solely because of their HIV seropositivity;

(3) Encourages vigorous enforcement of existing anti-discrimination statutes; incorporation of HIV in future federal legislation that addresses discrimination; and enactment and enforcement of state and local laws, ordinances, and regulations to penalize those who illegally discriminate against persons based on disease;
(4) Encourages medical staff to work closely with hospital administration and governing bodies to establish appropriate policies regarding HIV-positive patients;
(5) Supports consistency of federal and/or state laws with current medical and scientific knowledge including avoidance of any imposition of punishment based on health and disability status;
(6) Encourages public education and understanding of the stigma created by HIV criminalization statutes and subsequent negative clinical and public health consequences; and
(7) will: (a) advocate for repeal of legislation that criminalizes non-disclosure of Human Immunodeficiency Virus (HIV) status for people living with HIV; and (b) work with other stakeholders to develop a program whose primary goal is to destigmatize HIV infection through educating the public, physicians, and other health care professionals on current medical advances in HIV treatment that minimize the risk of transmission due to viral load suppression and the availability of PrEP.

PrEP is an Essential Health Benefit H-165.821

1. Our American Medical Association supports the continued inclusion of Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) as a Preventive Essential Health Benefit under the Patient Protection and Affordable Care Act.

2. Our AMA will support and join legal efforts to overturn the judgment rendered in Braidwood v. Becerra in the U.S. District Court for the Northern District of Texas.

Pre-Exposure Prophylaxis (PrEP) for HIV H-20.895

1. Our American Medical Association will educate physicians, physicians-in-training, and the public about the effective use of pre-exposure prophylaxis for HIV and the US PrEP Clinical Practice Guidelines.
2. Our AMA supports the coverage of all approved PrEP regimens in all clinically appropriate circumstances.
3. Our AMA supports the removal of insurance barriers for all approved PrEP regimens, such as prior authorization, mandatory consultation with an infectious disease specialist, and other barriers that are not clinically relevant.
4. Our AMA advocates that individuals not be denied any insurance on the basis of PrEP use.
5. Our AMA encourages the discussion of and education about PrEP during routine sexual health counseling.

HIV, Sexual Assault, and Violence H-20.900

Our AMA: (1) believes that HIV testing and Post-Exposure Prophylaxis (PEP) should be offered to all survivors of sexual assault who present within 72 hours of a substantial exposure risk, that these survivors should be encouraged to be retested in six months if the initial test is negative, and that strict confidentiality of test results be maintained; and (2) supports: (a) education of physicians about the effective use of HIV Post-Exposure Prophylaxis (PEP) and the U.S. PEP Clinical Practice Guidelines, and (b) increased access to, and coverage for, PEP for HIV, as well as enhanced public education on its effective use.

Improving PrEP & PEP Access H-20.894

Our American Medical Association supports efforts to increase access to HIV pre-exposure prophylaxis (PrEP) and post-exposure prophylaxis (PEP) through the establishment of collaborative practice agreements between pharmacists and physicians, based on AMA's model legislation related to collaborative drug therapy management.
1. Our AMA supports a requirement that any pharmacy-associated prescription of PREP/PEP needs to be in accordance with the current CDC PREP/PEP clinical practice guidelines within the physician-led team.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:424
(A-26)

Introduced by: LGBTQ+ Section

Subject: Supporting Education and Access to Postexposure Doxycycline (DoxyPEP)

Referred to: Reference Committee D

Whereas, more than 2.2–2.4 million cases of chlamydia, gonorrhea, and syphilis are reported annually in the United States, with overall sexually transmitted infection (STI) morbidity remaining substantially higher than a decade ago and congenital syphilis increasing nearly 700% over ten years [1-3]; and

Whereas, these infections disproportionately affect adolescents and young adults, men who have sex with men (MSM), transgender women, and racial and ethnic minority populations, contributing to persistent health inequities [1-3]; and

Whereas, cisgender women and people who were assigned female at birth (transgender and gender diverse individuals) bear the highest global burden of STIs [4]; and

Whereas, bacterial STIs are associated with serious complications including pelvic inflammatory disease, infertility, chronic pelvic pain, increased HIV acquisition risk, and severe adverse fetal and neonatal outcomes from congenital syphilis [1, 3-6]; and

Whereas, traditional prevention strategies (abstinence, reduction in number of sexual partners, barrier protection, and routine testing) are not sufficient alone to address the current STI burden, particularly in populations facing structural and social barriers to care [7]; and

Whereas, randomized clinical trials among MSM and transgender women with recent bacterial STIs have demonstrated that doxycycline postexposure prophylaxis (DoxyPEP), dosed as 200 mg within 72 hours after condomless sex, reduces the combined incidence of gonorrhea, chlamydia, and syphilis by approximately two-thirds compared with standard care [8-10]; and

Whereas, in 2024, the Centers for Disease Control and Prevention issued clinical guidelines recommending that MSM and transgender women with a bacterial STI diagnosed in the past 12 months be counseled about and, after shared decision-making, be offered DoxyPEP as an ongoing, patient-managed STI prevention strategy [11]; and

Whereas, while cisgender women and people who were assigned female at birth are not explicitly listed in current clinical guidelines, guidelines could specifically address strategies for clinicians to discuss DoxyPEP with cisgender women and people who were assigned female at birth within the existing list of user education and support recommendations, or produce a shared decision-making toolkit as an appendix to guidelines to minimise this gap while awaiting further efficacy data [3, 12-14]; and

Whereas, existing AMA policies strongly support HIV pre-exposure prophylaxis (PrEP) and postexposure prophylaxis (PEP) through physician and trainee education, insurance coverage, and removal of access barriers, and support comprehensive, evidence-based sexual health education [15]; and

Whereas, AMA currently lacks explicit policy on the use, education, and coverage of DoxyPEP for bacterial STI prevention, despite emerging evidence and clinical guidance [15]; therefore be it

RESOLVED, that our AMA supports physician and trainee education on Postexposure Doxycycline (DoxyPEP) and other anti-microbial postexposure treatments (New HOD Policy); and be it further

RESOLVED, that our AMA supports prescribing and insurance coverage of Postexposure Doxycycline (DoxyPEP) for sexually transmitted infection (STI) prevention. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

PrEP is an Essential Health Benefit H-165.821

1. Our American Medical Association supports the continued inclusion of Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) as a Preventive Essential Health Benefit under the Patient Protection and Affordable Care Act.
2. Our AMA will support and join legal efforts to overturn the judgment rendered in Braidwood v. Becerra in the U.S. District Court for the Northern District of Texas.

Discrimination and Criminalization Based on HIV Seropositivity H-20.914

H-20.914 Discrimination and Criminalization Based on HIV Seropositivity
Our AMA:
(1) Remains cognizant of and concerned about society's perception of, and discrimination against, HIV-positive people;

(2) Condemns any act, and opposes any legislation of categorical discrimination based on an individual's actual or imagined disease, including HIV infection; this includes Congressional mandates calling for the discharge of otherwise qualified individuals from the armed services solely because of their HIV seropositivity;
(3) Encourages vigorous enforcement of existing anti-discrimination statutes; incorporation of HIV in future federal legislation that addresses discrimination; and enactment and enforcement of state and local laws, ordinances, and regulations to penalize those who illegally discriminate against persons based on disease;
(4) Encourages medical staff to work closely with hospital administration and governing bodies to establish appropriate policies regarding HIV-positive patients;
(5) Supports consistency of federal and/or state laws with current medical and scientific knowledge including avoidance of any imposition of punishment based on health and disability status;
(6) Encourages public education and understanding of the stigma created by HIV criminalization statutes and subsequent negative clinical and public health consequences; and
(7) will: (a) advocate for repeal of legislation that criminalizes non-disclosure of Human Immunodeficiency Virus (HIV) status for people living with HIV; and (b) work with other stakeholders to develop a program whose primary goal is to destigmatize HIV infection through educating the public, physicians, and other health care professionals on current medical advances in HIV treatment that minimize the risk of transmission due to viral load suppression and the availability of PrEP.

Pre-Exposure Prophylaxis (PrEP) for HIV H-20.895
1. Our American Medical Association will educate physicians, physicians-in-training, and the public about the effective use of pre-exposure prophylaxis for HIV and the US PrEP Clinical Practice Guidelines.
2. Our AMA supports the coverage of all approved PrEP regimens in all clinically appropriate circumstances.
3. Our AMA supports the removal of insurance barriers for all approved PrEP regimens, such as prior authorization, mandatory consultation with an infectious disease specialist, and other barriers that are not clinically relevant.
4. Our AMA advocates that individuals not be denied any insurance on the basis of PrEP use.
5. Our AMA encourages the discussion of and education about PrEP during routine sexual health counseling.

HIV, Sexual Assault, and Violence H-20.900
Our AMA: (1) believes that HIV testing and Post-Exposure Prophylaxis (PEP) should be offered to all survivors of sexual assault who present within 72 hours of a substantial exposure risk, that these survivors should be encouraged to be retested in six months if the initial test is negative, and that strict confidentiality of test results be maintained; and (2) supports: (a) education of physicians about the effective use of HIV Post-Exposure Prophylaxis (PEP) and the U.S. PEP Clinical Practice Guidelines, and (b) increased access to, and coverage for, PEP for HIV, as well as enhanced public education on its effective use.

Sexuality Education, Sexual Violence Prevention, Abstinence, and Distribution of Condoms in Schools H-170.968
1. Our American Medical Association supports the concept of sexuality education in the home, when possible, as well as developmentally appropriate sexuality education programming in the schools at all levels, at local option and direction.
2. Our AMA urges schools at all education levels to implement comprehensive, developmentally appropriate sexuality education programs that:
    a. are based on rigorous, peer reviewed science;
    b. incorporate sexual violence prevention;
    c. show promise for delaying the onset of sexual activity and a reduction in sexual behavior that puts adolescents at risk for contracting human immunodeficiency virus (HIV) and other sexually transmitted diseases and for becoming pregnant;
    d. include an integrated strategy for making condoms and other effective barrier protection methods available to students and for providing both factual information and skill-building related to reproductive biology, sexual abstinence, sexual responsibility, contraceptives including condoms, alternatives in birth control, and other issues aimed at prevention of pregnancy and sexual transmission of diseases;

e. utilize classroom teachers and other professionals who have shown an aptitude for working with young people and who have received special training that includes addressing the needs of LGBTQ+ youth;
f. appropriately and comprehensively address the sexual behavior of all people, inclusive of sexual and gender minorities;
g. include ample involvement of parents, health professionals, and other concerned members of the community in the development of the program;
h. are part of an overall health education program; and
i. include culturally competent materials that are language-appropriate for Limited English Proficiency (LEP) pupils;

3. Our AMA will continue to monitor future research findings related to emerging initiatives that include abstinence-only, school-based sexuality education, and consent communication to prevent dating violence while promoting healthy relationships, and school-based condom availability programs that address sexually transmitted diseases and pregnancy prevention for young people and report back to the House of Delegates as appropriate.
4. Our AMA will work with the United States Surgeon General to design programs that address communities of color and youth in high risk situations within the context of a comprehensive school health education program.
5. Our AMA opposes the sole use of abstinence-only education, as defined by the 1996 Temporary Assistance to Needy Families Act (P.L. 104-193), within school systems.
6. Our AMA endorses comprehensive family life education in lieu of abstinence-only education, unless research shows abstinence-only education to be superior in preventing negative health outcomes.
7. Our AMA supports federal funding of comprehensive sex education programs that stress the importance of preventing unwanted teenage pregnancy and sexually transmitted infections via comprehensive education, including contraceptive choices, abstinence, and safer sex, and opposes federal funding of community-based programs that do not show evidence-based benefits.
8. Our AMA extends its support of comprehensive family-life education to community-based programs promoting abstinence as the best method to prevent teenage pregnancy and sexually-transmitted diseases while also discussing the roles of condoms and birth control, as endorsed for school systems in this policy.
9. Our AMA supports the development of sexual education curriculum that integrates dating violence prevention through lessons on healthy relationships, sexual health, and conversations about consent.
10. Our AMA encourages physicians and all interested parties to develop best-practice, evidence-based, guidelines for sexual education curricula that are developmentally appropriate as well as medically, factually, and technically accurate.

Improving PrEP & PEP Access H-20.894

1. Our American Medical Association supports efforts to increase access to HIV pre-exposure prophylaxis (PrEP) and post-exposure prophylaxis (PEP) through the establishment of collaborative practice agreements between pharmacists and physicians, based on AMA's model legislation related to collaborative drug therapy management.
2. Our AMA supports a requirement that any pharmacy-associated prescription of PREP/PEP needs to be in accordance with the current CDC PREP/PEP clinical practice guidelines within the physician-led team.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 425
(A-26)

Introduced by: American College of Emergency Physicians

Subject: Prioritizing, Measuring, and Preventing Workplace Violence in Health Care

Referred to: Reference Committee D

Whereas, nearly 75% of all workplace assaults in the United States occur in health care and social service settings, reflecting a disproportionate burden of violence in these environments; and

Whereas, emergency departments are particularly vulnerable settings, with 91% of emergency physicians reporting that they or a colleague experienced workplace violence in the past year, 47% reporting physical assault, and 71% witnessing assaults against colleagues; and

Whereas, workplace violence threatens the physical and psychological safety of health care professionals and undermines the delivery of safe, effective patient care; and

Whereas, unsafe work environments contribute to workforce instability, with nearly one in five physicians reporting symptoms of depression and approximately 29% of health care workers intending to leave their jobs within two years; and

Whereas, current efforts to collect and report workplace violence data remain inconsistent across jurisdictions, limiting the ability to understand national trends and implement effective interventions; and

Whereas, health care workers may be dissuaded from reporting workplace violence due to concerns about institutional liability, reputational harm to health care organizations, normalization of violence (e.g., attribution to intoxication or illness), and fear of retaliation or lack of meaningful follow-up; and

Whereas, existing policy of our American Medical Association encourages the development of workplace violence prevention standards, supports research and funding to evaluate effective interventions, and promotes dissemination of best practices (H-515.957, D-515.983); and

Whereas, existing policy of our AMA encourages health care facilities to implement reporting tools, training programs, and institutional policies to reduce workplace violence (H-515.966); and

Whereas, current AMA policy addressing workplace violence is distributed across multiple policies and directives, creating fragmentation that may limit clarity, coordination, and effectiveness of advocacy efforts; therefore be it

RESOLVED, that our American Medical Association recognize workplace violence in health care as a national advocacy priority and expand existing AMA policy to support standardized reporting and data-driven prevention strategies (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for the development and implementation of standardized, mandatory reporting mechanisms for workplace violence incidents across all health care settings, with appropriate protections for patient and worker privacy (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for policies that remove barriers to reporting workplace violence, including protections against retaliation, reduction of disincentives related to institutional liability or reputational concerns, and the establishment of a culture in which all acts of violence against health care workers are recognized as unacceptable and reportable regardless of patient condition (Directive to Take Action); and be it further

RESOLVED, that our AMA support the aggregation and analysis of workplace violence data to inform research, benchmarking, and the development of national policies aimed at reducing violence in health care settings (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for the development, funding, and implementation of evidence-based, trauma-informed strategies to prevent workplace violence and protect the health care workforce (Directive to Take Action); and be it further

RESOLVED, that our AMA rescind existing policies H-515.957 (Preventing Violent Acts Against Health Care Providers), D-515.983 (Preventing Violent Acts Against Health Care Providers), and H-515.966 (Violence and Abuse Prevention in the Health Care Workplace). (Rescind HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 426
(A-26)

Introduced by: American College of Cardiology

Subject: Integrating Nutrition into Health Care Delivery to Reduce Cardiovascular Risk and Food Insecurity ("Food is Medicine")

Referred to: Reference Committee D

Whereas, diet-related chronic diseases—including cardiovascular disease, diabetes, and obesity—remain leading causes of morbidity, mortality, and health care expenditures in the United States; and

Whereas, food insecurity and poor diet quality disproportionately affect individuals with lower socioeconomic status and contribute to adverse cardiovascular outcomes and widening disparities; and

Whereas, "Food is Medicine" interventions—including medically tailored meals, medically tailored groceries, and produce prescription programs—have demonstrated improvements in health outcomes, reductions in hospitalizations, and lower health care costs; and

Whereas, the bipartisan Medically Tailored Home-Delivered Meals Demonstration Pilot Act (H.R. 5439 / S. 2834) would establish a Medicare pilot program to deliver medically tailored meals to patients with diet-related chronic disease and evaluate impacts on outcomes and costs; and

Whereas, bipartisan Congressional efforts, including a Fiscal Year 2027 Labor–HHS appropriations letter led by Jim McGovern (D-MA-02), Vern Buchanan (R-FL-16), Chellie Pingree (D-ME-01), and Emilia Sykes (D-OH-13), call for strengthening and expanding Food is Medicine initiatives and integrating nutrition into the U.S. health care system; and

Whereas, the American Medical Association has affirmed that "food is medicine" and is committed to advancing nutrition education, research, and policy efforts to improve chronic disease outcomes; and

Whereas, current clinical practice guidelines, including Section 4.1.2.1 of the recently published 2026 American College of Cardiology/American Heart Association lipid management guidelines, support plant-based dietary patterns across the lifespan for primary and secondary prevention of atherosclerotic cardiovascular disease; and

Whereas, despite strong evidence and guideline support, access to health-promoting foods remains limited for many patients due to cost, availability, and structural barriers; therefore be it

RESOLVED, that our American Medical Association recognizes Food is Medicine interventions—including medically tailored meals—as evidence-based strategies to improve health outcomes, reduce diet-related chronic disease, and address food insecurity (New HOD Policy); and be it further

RESOLVED, that our AMA supports federal efforts to integrate nutrition services into health care delivery as well as funding for Food is Medicine initiatives through the yearly Labor–HHS appropriations process (New HOD Policy); and be it further

RESOLVED, that our AMA encourages collaboration with relevant specialty societies, including the American College of Cardiology, and supports research, education, and implementation efforts to advance Food is Medicine interventions in clinical practice, with emphasis on improving cardiovascular outcomes, reducing health disparities, and lowering health care costs. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 427
(A-26)

Introduced by: Medical Student Section

Subject: Infant Feeding Options for HIV-Seropositive Individuals

Referred to: Reference Committee D

Whereas, human milk's composition of nutrients, along with its antimicrobial, anti-inflammatory, and immunoregulatory agents makes it uniquely ideal for human infants and has been associated with decreased incidence of lower respiratory infections, otitis media, SIDs, and overall neonatal and infant mortality [1-5]; and

Whereas, human milk also has proven decreased incidence of other later-onset diseases including but not limited to, obesity, Type 1 and Type 2 diabetes, and inflammatory bowel disease[6–9]; and

Whereas, breastfeeding has many health benefits for the lactating person, such as decreased incidence of several types of cancer, type 2 diabetes, and hypertension[10–12]; and

Whereas, despite its extensive proven benefits, there are extensive disparities in breastfeeding rates, particularly as the rates in non-Hispanic White and Hispanic populations are significantly higher than in non-Hispanic Black populations[13]; and

Whereas, evidence, including the multi-country PROMISE trial, places the transmission rate of HIV from parent to breastfeeding infants as less than 5%, and less than 1% for parents that have a suppressed viral load[16]; and

Whereas, due to the extensive benefits of breastfeeding for infants and the lactating parent, the newer evidence of low rates of transmission by parents adequately virally suppressed by ART has prompted greater discussion of infant feeding options; and

Whereas, the National Institutes of Health (NIH) recommends clinicians support the choice of HIV seropositive individuals to breastfeed if they are virally suppressed, or to formula/replacement feed[17]; and

Whereas, the American Academy of Pediatrics (AAP) supports breastfeeding among HIV seropositive individuals who desire to do so if criteria are met, including early ART initiation, sustained viral suppression, adherence to ART and infant prophylaxis, and reliable ART access[18]; and

Whereas, our AMA has adopted multiple policies supporting breastfeeding, including H-245.982 ("AMA Support for Breastfeeding") and D-310.950 ("Protecting Trainee's Breastfeeding Rights"); and

Whereas, AMA Policy H-20.916 currently advises clinicians to unequivocally counsel HIV seropositive patients against breastfeeding where alternative nutrition is available, which is inconsistent with evidence and recommendations; therefore be it

RESOLVED, that the American Medical Association amend Policy H-20.916, "Breastfeeding and HIV Seropositive People," by addition and deletion as follows:

Breastfeeding and HIV Seropositive People, H-20.916

Our American Medical Association believes that, where safe and alternative nutrition is widely available, HIV seropositive people should receive evidence-based, patient-centered counseling to support shared decision-making about infant feeding. Patients living with HIV who are using antiretroviral therapy (ART) and have a sustained undetectable viral load and who choose to breastfeed should be supported in this decision. ~~be counseled not to breastfeed and not to donate breast milk.~~ HIV testing of all human milk donors should be mandatory, and milk from HIV-infected donors should not be used for human consumption.

(Modify Current HOD Policy)

RELEVANT AMA POLICY

H-20.916 Breastfeeding and HIV Seropositive Individuals
Our American Medical Association believes that, where safe and alternative nutrition is widely available, HIV seropositive people should be counseled not to breastfeed and not to donate breast milk. HIV testing of all human milk donors should be mandatory, and milk from HIV-infected donors should not be used for human consumption. [CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13; Reaffirmed: CSAPH Rep. 8, A-23]

H-20.918 Maternal HIV Screening and Treatment to Reduce the Risk of Perinatal HIV Transmission
In view of the significance of the finding that treatment of HIV-infected pregnant people with appropriate antiretroviral therapy can reduce the risk of transmission of HIV to their infants, our AMA recommends the following statements:
(1) Given the prevalence and distribution of HIV infection among individuals in the United States, the potential for effective early treatment of HIV infection, and the significant reduction in perinatal HIV transmission with treatment of pregnant people with appropriate antiretroviral therapy, routine education about HIV infection and testing should be part of a comprehensive health care program for all individuals. The ideal would be for all people to know their HIV status before considering pregnancy.
(2) Universal HIV testing of all pregnant people, with patient notification of the right of refusal, should be a routine component of perinatal care. Basic counseling on HIV prevention and treatment should also be provided to the patient, consistent with the principles of informed consent.
(3) The final decision about accepting HIV testing is the responsibility of the patient. The decision to consent to or refuse an HIV test should be voluntary. When the choice is to reject testing, the patient's refusal should be recorded. Test results should be confidential within the limits of existing law and the need to provide appropriate medical care for patients and their infant.
(4) To assure that the intended results are being achieved, the proportion of pregnant people who have accepted or rejected HIV testing and follow-up care should be monitored and reviewed periodically at the appropriate practice, program or institutional level. Programs in which the proportion of patients accepting HIV testing is low should evaluate their methods to determine how they can achieve greater success.
(5) Pregnant people who are not seen by a health care professional for prenatal care until late in pregnancy or after the onset of labor should be offered HIV testing at the earliest practical time, but not later than during the immediate postpartum period.
(6) When HIV infection is documented in a pregnant person, proper post-test counseling should be provided. The patient should be given an appropriate medical evaluation of the stage of infection and full information about the recommended management plan for their own health. Information should be provided about the potential for reducing the risk of perinatal transmission of HIV infection to the infant through the use of antiretroviral therapy, and about the potential but unknown long-term risks to the patient and the infant from the treatment course. The final decision to accept or reject antiretroviral treatment recommended for the patient and their infant is the right and responsibility of the patient. When the serostatus is either unknown or known to be positive, appropriate counseling should also be given regarding the risks associated with breastfeeding for both her own disease progression and disease transmission to the infant.
(7) Appropriate medical treatment for HIV-infected pregnant people should be determined on an individual basis using the latest published Centers for Disease Control and Prevention recommendations. The most appropriate care should be available regardless of the stage of HIV infection or the time during gestation at which the patient presents for prenatal or intrapartum care.
(8) To facilitate optimal medical care for pregnant people and their infants, HIV test results (both positive and negative) and associated management information should be available to the physicians taking care of both individuals. Ideally, this information will be included in the confidential medical records. Physicians providing care for a pregnant person or their infant should obtain the appropriate consent and should notify the other involved physicians of the HIV status of and management information about the pregnant patient and their infant, consistent with applicable state law.
(9) Continued research into new interventions is essential to further reduce the perinatal transmission of HIV, particularly the use of rapid HIV testing for patients presenting in labor and those presenting in the prenatal setting who may not return for test results. The long-term effects of antiretroviral therapy during pregnancy and the intrapartum period for both pregnant patients and their infants also must be evaluated. For both infected and uninfected infants exposed to perinatal antiretroviral treatment, long-term follow-up

studies are needed to assess potential complications such as organ system toxicity, neurodevelopmental problems, pubertal development problems, reproductive capacity, and development of neoplasms.
(10) Health care professionals should be educated about the benefits of universal HIV testing, with patient notification of the right of refusal, as a routine component of prenatal care, and barriers that may prevent implementation of universal HIV testing as a routine component of prenatal care should be addressed and removed. Federal funding for efforts to prevent perinatal HIV transmission, including both prenatal testing and appropriate care of HIV-infected pregnant people, should be maintained. [CSA Rep. 4, A-03; Reaffirmed: CEJA Rep. 3, A-10; Reaffirmed: CSAPH Rep. 01, A-20; Modified: Speakers Rep. 02, I-24]

H-245.982 AMA Support for Breastfeeding
(1) Our AMA: (a) recognizes that breastfeeding is the optimal form of nutrition for most infants; (b) endorses the 2012 policy statement of American Academy of Pediatrics on Breastfeeding and the use of Human Milk, which delineates various ways in which physicians and hospitals can promote, protect, and support breastfeeding practices; (c) supports working with other interested organizations in actively seeking to promote increased breastfeeding by Supplemental Nutrition Program for Women, Infants, and Children (WIC Program) recipients, without reduction in other benefits; (d) supports the availability and appropriate use of breast pumps as a cost-effective tool to promote breast feeding; and (e) encourages public facilities to provide designated areas for breastfeeding and breast pumping; mothers nursing babies should not be singled out and discouraged from nursing their infants in public places.
(2) Our AMA: (a) promotes education on breastfeeding in undergraduate, graduate, and continuing medical education curricula; (b) encourages all medical schools and graduate medical education programs to support all residents, medical students and faculty who provide breast milk for their infants, including appropriate time and facilities to express and store breast milk during the working day; (c) encourages the education of patients during prenatal care on the benefits of breastfeeding; (d) supports breastfeeding in the health care system by encouraging hospitals to provide written breastfeeding policy that is communicated to health care staff; (e) encourages hospitals to train staff in the skills needed to implement written breastfeeding policy, to educate pregnant women about the benefits and management of breastfeeding, to attempt early initiation of breastfeeding, to practice "rooming-in," to educate mothers on how to breastfeed and maintain lactation, and to foster breastfeeding support groups and services; (f) supports curtailing formula promotional practices by encouraging perinatal care providers and hospitals to ensure that physicians or other appropriately trained medical personnel authorize distribution of infant formula as a medical sample only after appropriate infant feeding education, to specifically include education of parents about the medical benefits of breastfeeding and encouragement of its practice, and education of parents about formula and bottle-feeding options; and (g) supports the concept that the parent's decision to use infant formula, as well as the choice of which formula, should be preceded by consultation with a physician.
(3) Our AMA: (a) supports the implementation of the WHO/UNICEF Ten Steps to Successful Breastfeeding at all birthing facilities; (b) endorses implementation of the Joint Commission Perinatal Care Core Measures Set for Exclusive Breast Milk Feeding for all maternity care facilities in the US as measures of breastfeeding initiation, exclusivity and continuation which should be continuously tracked by the nation, and social and demographic disparities should be addressed and eliminated; (c) recommends exclusive breastfeeding for about six months, followed by continued breastfeeding as complementary food are introduced, with continuation of breastfeeding for 1 year or longer as mutually desired by mother and infant; (d) recommends the adoption of employer programs which support breastfeeding mothers so that they may safely and privately express breast milk at work or take time to feed their infants; and (e) encourages employers in all fields of healthcare to serve as role models to improve the public health by supporting mothers providing breast milk to their infants beyond the postpartum period.
(4) Our AMA supports the evaluation and grading of primary care interventions to support breastfeeding, as developed by the United States Preventive Services Task Force (USPSTF).
(5) Our AMA's Opioid Task Force promotes educational resources for mothers who are breastfeeding on the benefits and risks of using opioids or medication-assisted therapy for opioid use disorder, based on the most recent guidelines. [CSA Rep. 2, A-05Res. 325, A-05Reaffirmation A-07Reaffirmation A-12Modified in lieu of Res. 409, A-12 and Res. 410, A-12Appended: Res. 410, A-16Appended: Res. 906, I-17Reaffirmation: I-18]

D-310.950 Protecting Trainees' Breastfeeding Rights
(1) Our American Medical Association will work with appropriate bodies, such as the Accreditation Council for Graduate Medical Education (ACGME) and the Liaison Committee on Medical Education (LCME), to

include language in housestaff manuals or similar policy references of all training programs regarding protected times and locations for milk expression and secure storage of breast milk.
(2)Our AMA will work with appropriate bodies, such as the LCME, ACGME, and Association of American Medical Colleges (AAMC), to include language related to the learning and work environments for breastfeeding people in regular program reviews. [Res. 302, I-16Modified: Speakers Rep. 02, I-24].

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 428
(A-26)

Introduced by: Medical Student Section

Subject: Protecting Environmental Health Before, During, and After War

Referred to: Reference Committee D

Whereas, according to the World Health Organization (WHO), healthier environments could prevent almost one-quarter of the global burden of disease, as clean air, a stable climate, safe water, sanitation, and hygiene (WASH), safe use of chemicals, protection from radiation, healthy workplaces, sustainable agriculture, health-supportive cities, and preserved natural ecosystems are all prerequisites for good health;[1] and

Whereas, according to the UN Environment Programme (UNEP), heavy bombardment of populated areas contaminates soil, air, and groundwater from the munitions and the release of hazardous materials such as asbestos, industrial chemicals, and fuel, creating long-term environmental and health hazards;[2] and

Whereas, explosives use destroys water supplies and sanitation facilities, leading to pollution from sewage; in rural areas, bombing decreases soil quality and agricultural productivity by disrupting topography and altering drainage patterns; and unexploded remnants of war left behind continue to injure and kill civilians for years;[3] and

Whereas, the sinking of military vehicles during conflicts has caused long-term oil spills, including wrecks off of the Iraqi coast that release hydrocarbons into the Persian Gulf linked to cancer, anemia, organ damage, and neurological harm, contaminating Kuwaiti desalination plants that supply the majority of regional drinking water;[4] and

Whereas, the U.S. Department of Defense is the world's largest institutional consumer of oil and among the world's top greenhouse gas emitters, adding significantly to climate change;[3] and

Whereas, between 1961 and 1971, more than 91 million liters of Agent Orange, containing persistent environmental pollutants (POPs) that accumulate in food sources, were applied across 3.1 million hectares of Vietnam, exposing over 4 million people to toxic dioxins, leading to cancers, congenital disabilities, and intergenerational harm;[5,6] and

Whereas, more than 600 U.S. military sites have been designated as Superfund sites, reflecting widespread contamination of air, soil, and water by hazardous substances associated with defense activities;[7] and

Whereas, proximity to toxic waste and Superfund sites has been linked to increased risks of cancer, congenital anomalies, and other adverse health outcomes, with disproportionate impacts on low-income and minority communities;[8] and

Whereas, supporting evidence from the U.S. Environmental Protection Agency (EPA) Discharge Monitoring Reports documents releases of arsenic, cyanide, and lead by the Atlantic Fleet Weapons Training Facility on Vieques Island, Puerto Rico, into surrounding waters of the live

impact area, demonstrating that environmental pollution can lead to adverse neonatal outcomes;[9] and

Whereas, a 2023 Department of Defense brief acknowledged over 245 military bases where polyfluoroalkyl substances (PFAS), known endocrine disruptors, may have contaminated groundwater aquifers that serve as sources of drinking water;[10,11] and

Whereas, the Vanadium Corporation's recruitment of Navajo lands to mine uranium for atomic bombs, without informing local community members of the purpose or health risks, led to the Church Rock incident, the largest accidental release of radioactive material in U.S. history into the Rio Puerco, as well as elevated radiation-induced disease in Navajo communities including renal failure, hypertension, cancer, reduced fertility, and more;[12,13] and

Whereas, during and after conflicts, environmental governance, waste management, and ecosystem services often collapse, compounding exposure risks and intensifying future conflict risks;[14] and

Whereas, the American College of Occupation and Environmental Medicine has underscored that capacity building in environmental medicine, including training in taking exposure histories and reporting sentinel events (such as outbreaks of waterborne illness and clusters of toxic exposure), is necessary for clinicians seeing displaced and/or conflict-impacted populations;[15] and

Whereas, military greenhouse gas emissions were excluded from the 1997 Kyoto Protocol, and military emissions reporting under the 2015 Paris Agreement was made voluntary, resulting in systematic underestimation of warfare's climate toll;[16] and

Whereas, the UN General Assembly states that areas of environmental importance should be designated as protected zones in armed conflict;[17] and

Whereas, international law, including the Rome Statute of the ICC and the Geneva Conventions, prohibits methods of warfare that cause widespread, long-term, and severe environmental damage, recognizing such acts as war crimes;[18] therefore be it

RESOLVED, that our American Medical Association supports the inclusion of drinking water sources and sanitation facilities, agricultural land, fisheries, and nature reserves as protected zones during active conflict, weapons production, and military activities that the U.S. is involved in (New HOD Policy); and be it further

RESOLVED, that our AMA supports clean-up and restoration of, toxic exposures and environmental harm related to U.S. and U.S.-supported military activities, including armed conflict and weapons production, that lead to adverse health outcomes (New HOD Policy); and be it further

RESOLVED, that our AMA supports the development, availability, and use of continued medical education for clinicians to take exposure histories, counsel patients, and report sentinel events in displaced and conflict-affected populations impacted by environmental health harms. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

D-135.966 Climate Change as a Public Health Crisis

Our American Medical Association declares climate change a public health crisis that threatens the health and well-being of all individuals.

Our AMA will protect patients by advocating for policies that:

Limit global warming to no more than 1.5 degrees Celsius.

Reduce US greenhouse gas emissions aimed at a 50 percent reduction in emissions by 2030 and carbon neutrality by 2050.

Support rapid implementation and incentivization of clean energy solutions and significant investments in climate resilience through a climate justice lens.

Our AMA will consider signing on to the Department of Health and Human Services Health Care Pledge and making a commitment to lower its own greenhouse gas emissions.

Our AMA encourages the health sector to lead by example in committing to carbon neutrality by 2050.

Our AMA will develop a strategic plan for how we will enact our climate change policies including advocacy priorities and strategies to decarbonize physician practices and the health sector with report back to the House of Delegates at the 2023 Annual Meeting.

Our AMA supports the use of international, federal, regional, and state carbon pricing systems as an important tool to reduce global greenhouse gas emissions and achieve net-zero targets. Our AMA recommends that carbon dividends or energy subsidies for low-income households be a key component

of any established carbon pricing system, to reduce the potential economic burden on households with lower incomes. [Res. 420, A-22Appended: CSAPH Rep. 02, I-22Appended: BOT Rep. 11, I-24]

H-135.938 Global Climate Change and Human Health
Our American Medical Association supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change.
Our AMA supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies.

Recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes.
Recognizes the importance of physician involvement in policymaking at the state, national, and global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public.
Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability.
Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk.
Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change policy decisions related to health care and treatment.
Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training. [CSAPH Rep. 3, I-08Reaffirmation A-14Reaffirmed: CSAPH Rep. 04, A-19Reaffirmation: I-19Modified: Res. 424, A-22Modified: CSAPH Rep. 2, I-22]

H-135.991 Clean Air / Environmental Health
(1) The AMA supports setting the national primary and secondary ambient air quality standards at the level necessary to protect the public health. Establishing such standards at a level "allowing an adequate margin of safety," as provided in current law, should be maintained, but more scientific research should be conducted on the health effects of the standards currently set by the EPA.
(2) The AMA supports continued protection of certain geographic areas (i.e., those with air quality better than the national standards) from significant quality deterioration by requiring strict, but reasonable, emission limitations for new sources.
(4) The AMA believes that more research is needed on the causes and effects of acid rain, and that the procedures to control pollution from another state need to be improved.
(5) The AMA believes that attaining the national ambient air quality standards for nitrogen oxides and carbon monoxide is necessary for the long-term benefit of the public health. Emission limitations for motor vehicles should be supported as a long-term goal until appropriate peer-reviewed scientific data demonstrate that the limitations are not required to protect the public health. [BOT Rep. R, A-82Reaffirmed: CLRPD Rep. A, I-92Amended: CSA Rep. 8, A-03Reaffirmation I-06Reaffirmed in lieu of Res. 509, A-09Reaffirmation I-09Reaffirmation A-14Modified: CSAPH Rep. 01, A-24]

D-440.972 Safety from Nuclear Weapons and Medical Consequences of Nuclear War
1. Our AMA will support legislation that would protect public health and safety, should the testing of nuclear weapons by the United States be resumed.
2. Our AMA will urge the U.S. and all national governments to continue to work to ban and eliminate nuclear weapons and will collaborate with relevant stakeholders to increase public awareness and education on the topic of the medical and environmental consequences of nuclear war. [Res. 436, A-05Appended: Res. 524, A-15Reaffirmed: Res. 007, A-24]

D-135.962 Hazardous Pollutants and Heavy Metals
Our American Medical Association urges governmental agencies to establish and enforce limits for identified hazardous pollutants and heavy metals in our food, water, soil, and air.
Our AMA supports efforts to:
monitor the chronic effects of exposure to hazardous pollutants and heavy metals including at levels below regulation limits;
monitor the burden of toxicity in communities, especially near urban, Superfund, military bases, and industrial sites; and
educate individuals on the chronic effects of those exposures. [Res. 409, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 429
(A-26)

Introduced by: Medical Student Section

Subject: Adolescent Dating Violence Comprehensive Screening Tool Development

Referred to: Reference Committee D

Whereas, adolescent dating violence (ADV), also referred to as adolescent intimate partner violence, is a prevalent public health problem in the United States, with national surveys estimating that over 1 in 8 high school students reported experiencing physical violence, sexual violence, or both by someone they were dating in the past year, with trend analyses showing an overall increase in sexual dating violence between 2019 and 2021[1-3]; and

Whereas, psychological and emotional abuse is even more common, with over 60% of adolescent daters reporting such experiences in national surveys, and up to 75% reporting technology-assisted or cyber abuse from people they are dating[4,5]; and

Whereas, adverse childhood experiences (ACEs) increase vulnerability to, but are distinct from, adolescent dating violence, as ACEs typically precede ADV while ADV constitutes a separate form of interpersonal violence with unique risk factors and consequences[6-8]; and

Whereas, those who experience the intersectionality of identities such as racial/ethnic backgrounds, sexual orientation and gender identity, and underserved community status are disproportionately affected by adolescent dating violence; and

Whereas adolescents who experience dating violence are at significantly increased risk for depression, anxiety, suicidality, substance use, high risk sexual behaviors, future intimate partner violence, and significantly higher odds of emergency department utilization, independent of other risk factors[15-18]; and

Whereas, failure to routinely screen adolescents for dating violence in clinical and school settings leads to missed opportunities for early intervention, support, and referral to evidence-based services, perpetuating a cycle of recurrent victimization, perpetration, and chronic mental health and substance use disorders into adulthood[15-18]; and

Whereas, despite these risks, there is a lack of comprehensive, validated, and routinely used screening tools for adolescent dating violence in the United States as adult intimate partner violence screening instruments (HARK, HITS, E-HITS, PVS, WAST) have not been validated for adolescents and are rarely used in pediatric clinical practice—a gap recognized by the U.S. Preventive Services Task Force, despite encouragement from the American Academy of Pediatrics[19-21]; and

Whereas, while the MARSHA-C (Measure of Adolescent Relationship Harassment and Abuse – Compact) was developed with input from diverse youth and shows promising validity, its limited sample size, single online validation, lack of replication in clinical settings, and absence of cross-cultural or long-term outcome data mean it is not yet established for routine clinical use[29-32]; and

Whereas, a recent systematic review found a large degree of mistrust of available dating violence resources among African American and Latino youth, largely due to a lack of culturally sensitive interventions within these resources[32]; and

Whereas, current adult and adolescent dating violence prevention tools have been shown to reduce physical violence, but there has been a lack of statistically significant progress in reducing sexual violence, suggesting that new and more inclusive screening tools and interventions are needed[33]; therefore be it

RESOLVED, that our American Medical Association ask relevant stakeholders, including federal agencies, academic institutions, and professional societies, to support the development of validated, culturally sensitive, LGBTQ+ inclusive adolescent-specific screening tools for adolescent intimate partner violence that can be easily implemented in the clinic setting. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

Family and Intimate Partner Violence H-515.965

Our American Medical Association believes that all forms of family and intimate partner violence (IPV) are major public health issues and urges the profession, both individually and collectively, to work with other interested parties to prevent such violence and to address the needs of survivors. Physicians have a major role in lessening the prevalence, scope and severity of child maltreatment, intimate partner violence, and elder abuse, all of which fall under the rubric of family violence. To suppor physicians in practice, our AMA will continue to campaign against family violence and remains open to working with all interested parties to address violence in US society.

Our AMA believes that all physicians should be trained in issues of family and intimate partner violence through undergraduate and graduate medical education as well as continuing professional development. The AMA, working with state, county and specialty medical societies as well as academic medical centers and other appropriate groups such as the Association of American Medical Colleges, should develop and disseminate model curricula on violence for incorporation into undergraduate and graduate medical education, and all parties should work for the rapid distribution and adoption of such curricula. These curricula should include coverage of the diagnosis, treatment, and reporting of child maltreatment, intimate partner violence, and elder abuse and provide training on interviewing techniques, risk assessment, safety planning, and procedures for linking with resources to assist survivors. Our AMA supports the inclusion of questions on family violence issues on licensure and certification tests.

The prevalence of family violence is sufficiently high and its ongoing character is such that physicians, particularly physicians providing primary care, will encounter survivors on a regular basis. Persons in clinical settings are more likely to have experienced intimate partner and family violence than non-clinical populations. Thus, to improve clinical services as well as the public health, our AMA encourages physicians to:
Routinely inquire about the family violence histories of their patients as this knowledge is essential for effective diagnosis and care.
Upon identifying patients currently experiencing abuse or threats from intimates, assess and discuss safety issues with the patient before they leave the office, working with the patient to develop a safety or exit plan for use in an emergency situation and making appropriate referrals to address intervention and safety needs as a matter of course.
After diagnosing a violence-related problem, refer patients to appropriate medical or health care professionals and/or community-based trauma-specific resources as soon as possible.
Have written lists of resources available for survivors of violence, providing information on such matters as emergency shelter, medical assistance, mental health services, protective services and legal aid.
Screen patients for psychiatric sequelae of violence and make appropriate referrals for these conditions upon identifying a history of family or other interpersonal violence.
Become aware of local resources and referral sources that have expertise in dealing with trauma from IPV.
(Be alert to men presenting with injuries suffered as a result of intimate violence because these men may require intervention as either survivors or abusers themselves.
Give due validation to the experience of IPV and of observed symptomatology as possible sequelae.
Record a patient's IPV history, observed traumata potentially linked to IPV, and referrals made.
Become involved in appropriate local programs designed to prevent violence and its effects at the community level.
Within the larger community, our AMA:
Urges hospitals, community mental health agencies, and other helping professions to develop appropriate interventions for all survivors of intimate violence. Such interventions might include individual and group counseling efforts, support groups, and shelters.
Believes it is critically important that programs be available for survivors and perpetrators of intimate violence.
Believes that state and county medical societies should convene or join state and local health departments, criminal justice and social service agencies, and local school boards to collaborate in the development and support of violence control and prevention activities.
With respect to issues of reporting, our AMA strongly supports mandatory reporting of suspected or actual child maltreatment and urges state societies to support legislation mandating physician reporting of elderly abuse in states where such legislation does not currently exist. At the same time, our AMA opposes the adoption of mandatory reporting laws for physicians treating competent, non-elderly adult survivors of intimate partner violence if the required reports identify survivors. Such laws violate basic tenets of medical ethics. If and where mandatory reporting statutes dealing with competent adults are adopted, our AMA believes the laws must incorporate provisions that:
do not require the inclusion of survivors' identities;
allow competent adult survivors to opt out of the reporting system if identifiers are required;
provide that reports be made to public health agencies for surveillance purposes only;
contain a sunset mechanism; and
evaluate the efficacy of those laws. State societies are encouraged to ensure that all mandatory reporting laws contain adequate protections for the reporting physician and to educate physicians on the particulars of the laws in their states.
Substance abuse and family violence are clearly connected. For this reason, our AMA believes that:
Given the association between alcohol and family violence, physicians should be alert for the presence of one behavior given a diagnosis of the other. Thus, a physician with patients with alcohol problems should screen for family violence, while physicians with patients presenting with problems of physical or sexual abuse should screen for alcohol use.
Physicians should avoid the assumption that if they treat the problem of alcohol or substance use and abuse they also will be treating and possibly preventing family violence.
Physicians should be alert to the association, especially among female patients, between current alcohol or drug problems and a history of physical, emotional, or sexual abuse. The association is strong enough

to warrant complete screening for past or present physical, emotional, or sexual abuse among patients who present with alcohol or drug problems.
Physicians should be informed about the possible pharmacological link between amphetamine use and human violent behavior. The suggestive evidence about barbiturates and amphetamines and violence should be followed up with more research on the possible causal connection between these drugs and violent behavior.
The notion that alcohol and controlled drugs cause violent behavior is pervasive among physicians and other health care providers. Training programs for physicians should be developed that are based on empirical data and sound theoretical formulations about the relationships among alcohol, drug use, and violence. [CSA Rep. 7, I-00Reaffirmed: CSAPH Rep. 2, I-09Modified: CSAPH Rep. 01, A-19Modified: Speakers Rep. 02, I-24]

Education of Medical Students and Residents about Domestic Violence Screening H-295.912
Our American Medical Association will continue its support for the education of medical students and residents on domestic violence by advocating that medical schools and graduate medical education programs educate students and resident physicians to sensitively inquire about family abuse with all patients, when appropriate and as part of a comprehensive history and physical examination, and provide information about the available community resources for the management of the patient. [Res. 303, I-96Reaffirmed: CME Rep. 2, A-06Reaffirmed: CME Rep. 01, A-16]

Improving Screening and Treatment Guidelines for Intimate Partner Violence (IPV) Against Lesbian, Gay, Bisexual, Transgender, Queer/Questioning, and Other Individuals (LGBTQ) D-515.980
Our AMA will:
(1) promote crisis resources for LGBTQ patients that cater to the specific needs of LGBTQ survivors of IPV; (2) encourage physicians to familiarize themselves with resources available in their communities for LGBTQ survivors of IPV; (3) advocate for federal funding to support programs and services for survivors of IPV that do not discriminate against underserved communities, including on the basis of sexual orientation and gender identity; (4) encourage research on intimate partner violence in the LGBTQ community to include studies on the prevalence, the accuracy of screening tools, effectiveness of early detection and interventions, as well as the benefits and harms of screening; and (5) encourage the dissemination of research to educate physicians and the community regarding the prevalence of IPV in the LGBTQ population, the accuracy of screening tools, effectiveness of early detection and interventions, as well as the benefits and harms of screening. [Res. 903, I-17Modified: CSAPH Rep. 01, I-18]

Adverse Childhood Experiences and Trauma-Informed Care H-515.952
Our American Medical Association recognizes trauma-informed care as a practice that recognizes the widespread impact of trauma on patients, identifies the signs and symptoms of trauma, and treats patients by fully integrating knowledge about trauma into policies, procedures, and practices and seeking to avoid re-traumatization.
Our AMA supports:
evidence-based primary prevention strategies for Adverse Childhood Experiences (ACEs).
evidence-based trauma-informed care in all medical settings that focuses on the prevention of poor health and life outcomes after ACEs or other trauma at any time in life occurs.
efforts for data collection, research, and evaluation of cost-effective ACEs screening tools without additional burden for physicians.
efforts to educate physicians about the facilitators, barriers and best practices for providers implementing ACEs screening and trauma-informed care approaches into a clinical setting.
funding for schools, behavioral and mental health services, professional groups, community, and government agencies to support patients with ACEs or trauma at any time in life.
increased screening for ACEs in medical settings, in recognition of the intersectionality of ACEs with significant. increased risk for suicide, negative substance use-related outcomes including overdose, and a multitude of downstream negative health outcomes.
Our AMA supports the inclusion of ACEs and trauma-informed care into undergraduate and graduate medical education curricula.
Our AMA will collaborate with the CDC and other relevant interested parties to advocate for the inclusion of additional evidence-based categories to the currently existing Adverse Childhood Experiences (ACEs)

categories for the purposes of continuing to improve research into the health impacts of ACEs and how to mitigate them.

Our AMA will work with the CDC and other relevant interested parties to advocate for resources to expand research into ACEs and efforts to operationalize those findings into effective and evidence-based clinical and public health interventions.

Our AMA will support the establishment of a national ACEs response team grant to dedicate federal resources towards supporting prevention and early intervention efforts aimed at diminishing the impacts ACEs have on the developing child. [Res. 504, A-19Appended: CSAPH Rep. 3, A-21Appended: Res. 914, I-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 430
(A-26)

Introduced by: Medical Student Section, Oregon, Washington

Subject: Support Heavy Metal and Toxic Exposure Testing for Residents Affected by Wildfires

Referred to: Reference Committee D

Whereas, wildfires in the United States are increasing in frequency and intensity, driven in part by climate change, with the annual acreage burned doubling in recent decades[1]; and

Whereas, urban and suburban wildfires increasingly burn homes, vehicles, electronics, and industrial facilities, producing hazardous air, soil, and water contamination distinct from forest-only fires[2]; and

Whereas, toxic substances released by burning urban infrastructure include heavy metals such as lead, arsenic, mercury, and cadmium, as well as polycyclic aromatic hydrocarbons (PAHs), dioxins, and volatile organic compounds (VOCs)[3]; and

Whereas, wildfire smoke can travel hundreds of miles, exposing populations far beyond the burn zone to toxic pollutants, with documented effects on air quality across entire regions[4]; and

Whereas, wildfire smoke exposure is associated with increased hospital admissions for respiratory disease, cardiovascular events, and premature mortality, as well as with increased risk of some types of cancer[5-7]; and

Whereas, wildfire byproduct exposure is estimated to cause tens of thousands of hospitalizations and premature deaths each year, resulting in billions of dollars in health care costs and lost productivity nationwide[8-11]; and

Whereas, fire suppressants used to combat wildfires often themselves contain heavy metals contributing to environmental contamination[12]; and

Whereas, toxic heavy metals such as lead and cadmium persist in the environment long after fires are extinguished, contaminating soil, groundwater, and household dust[13,14]; and

Whereas, the CDC lowered the blood lead reference value for children in 2021, monitoring for mild or moderate environmental exposures and chronic exposure is associated with irreversible neurocognitive deficits in children, as well as hypertension, renal dysfunction, and adverse pregnancy outcomes[15-17]; and

Whereas, first responders, cleanup workers, utility crews, and residents can become exposed to harmful smoke during and after fires, and this exposure can be detected and quantified with post-incident urine testing for smoke byproducts (PAHs)[18]; and

Whereas some state public health agencies, in coordination with national agencies, have tested residents for heavy metal toxicity following wildfire, yet such testing is not standardized nor implemented after all wildfires[19,20]; therefore be it

RESOLVED, that our American Medical Association supports the development, dissemination, and implementation of voluntary post-wildfire toxicant exposure screening protocols, covering heavy metals, polycyclic aromatic hydrocarbons (PAHs), and other dangerous air pollutants and toxic substances, for wildfire-impacted individuals and communities, in coordination with appropriate public health and environmental agencies, universities, public health schools and societies (New HOD Policy); and be it further

RESOLVED, that our AMA support federal and state efforts, in partnership with public health and environmental agencies, to ensure access to environmental monitoring, mobile health services, medical follow-up, and treatment for individuals exposed to toxic substances during or after wildfire events, with particular attention to frontline, vulnerable and disproportionately impacted communities. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-135.938 Global Climate Change and Human Health
Our American Medical Association supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change.
Our AMA supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies.

Recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes.
Recognizes the importance of physician involvement in policymaking at the state, national, and global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public.
Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability.
Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk.
Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change policy decisions related to health care and treatment.
Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training. [CSAPH Rep. 3, I-08; Reaffirmation A-14; Reaffirmed: CSAPH Rep. 04, A-19; Reaffirmation: I-19; Modified: Res. 424, A-22; Modified: CSAPH Rep. 2, I-22]

D-135.962 Hazardous Pollutants and Heavy Metals
Our AMA (1) urges governmental agencies to establish and enforce limits for identified hazardous pollutants and heavy metals in our food, water, soil, and air. (2a) monitor the chronic effects of exposure to hazardous pollutants and heavy metals including at levels below regulation limits; (2b) monitor the burden of toxicity in communities, especially near urban, Superfund, military bases, and industrial sites; and (2c) educate individuals on the chronic effects of those exposures. [Res. 409, A-24]

H-60.924 Reducing Lead Poisoning
Our American Medical Association:
supports regulations and policies designed to protect young children from exposure to lead;
urges the Centers for Disease Control and Prevention to give priority to examining the current weight of scientific evidence regarding the range of adverse health effects associated with blood lead concentrations below the current "level of concern" in order to provide appropriate guidance for physicians and public health policy, and encourage the identification of exposure pathways for children who have low blood lead concentrations, as well as effective and innovative strategies to reduce overall childhood lead exposure;
encourages physicians and public health departments to screen children based on current recommendations and guidelines and to report all children with elevated blood levels to the appropriate health department in their state or community in order to fully assess the burden of lead exposure in children. In some cases this will be done by the physician, and in other communities by the laboratories;

promotes community awareness of the hazard of lead-based paints; and
urges paint removal product manufacturers to print precautions about the removal of lead paint to be included with their products where and when sold.
Our AMA will call on the United States government to establish national goals to: (a) ensure that no child has a blood lead level >5 µg/dL (>50 ppb) by 2021, and (b) eliminate lead exposures to pregnant people and children, so that by 2030, no child would have a blood lead level >1 µg/dL (10 ppb).
Our AMA will call on the United States government in all its agencies to pursue the following strategies to achieve these goals:
adopt health-based standards and action levels for lead that rely on the most up-to-date scientific knowledge to prevent and reduce human exposure to lead, and assure prompt implementation of the strongest available measures to protect pregnant people and children from lead toxicity and neurodevelopmental impairment;
identify and remediate current and potential new sources of lead exposure (in dust, air, soil, water and consumer products) to protect children before they are exposed;
continue targeted screening of children to identify those who already have elevated blood lead levels for case management, as well as educational and other services;
eliminate new sources of lead introduced or released into the environment, which may entail banning or phasing out all remaining uses of lead in products (aviation gas, cosmetics, wheel weights, industrial paints, batteries, lubricants, and other sources), and the export of products containing lead, and setting more protective limits on emissions from battery recyclers and other sources of lead emissions;
provide a dedicated funding stream to enhance the resources available to identify and eliminate sources of lead exposure, and provide educational, social and clinical services to mitigate the harms of lead toxicity, particularly to protect and improve the lives of children in communities that are disproportionately exposed to lead; and
establish an independent expert advisory committee to develop a long-term national strategy, including recommendations for funding and implementation, to achieve the national goal of eliminating lead toxicity in pregnant people and children, defined as blood lead levels above 1 µg/dL (10 ppb).
Our AMA supports requiring an environmental assessment of dwellings, residential buildings, or child care facilities following the notification that a child occupant or frequent inhabitant has a confirmed elevated blood lead level, to determine the potential source of lead poisoning, including testing the water supply.
Our AMA advocates for accessible testing of domestic water supplies, prioritizing testing for lead in potable water used by pregnant people, newborns and young children, and with the provision of accessible water filters in homes found to have elevated lead levels in potable water.
Our AMA supports increased funding for lead pipe replacement and other steps to eliminate lead from public and private drinking water supplies.
Our AMA promotes community awareness and education campaigns on the causes and risks of lead in drinking water and steps that can be taken to eliminate these risks.
Our AMA supports the development and use of searchable registries of housing units known to have unresolved lead in the drinking water due to lead connectors to water mains or other sources of lead in the drinking water in cities with significant public lead exposure.
Our AMA urges healthcare providers to increase screening for lead exposure, particularly in areas known to have lead pipes, and particularly in underserved areas.
Our AMA calls for research into innovative and cost-effective methods for elimination of lead in public and private water supplies and lead from lead pipe connectors to such water supplies. [CCB/CLRPD Rep. 3, A-14Appended: Res. 926, I-16Appended: Res. 412, A-17Modified: Res. 432, A-24Modified: Speakers Rep. 02, I-24]

D-135.992 Mercury Pollution
Our American Medical Association recognizes that the trading of air pollutants is potentially harmful for vulnerable populations.
Our AMA encourages state governments to be proactive in protecting citizens from harmful mercury emissions.
Our AMA encourages reduction in mercury use in manufacturing wherever possible, and recognize that more must be done using available and emerging technology to reduce mercury emissions.
Our AMA recommends increased vigilance, monitoring and tracking of mercury use and emissions in chlor-alkali facilities that use mercury in manufacturing processes.
Our AMA encourages the US government to assume a leadership role in reducing the global mercury burden and work toward promoting binding, health-protective international standards.

Our AMA supports the Environmental Protection Agency's national mercury emissions standards for cement kilns at limits based on the latest pollution control technology.
Our AMA supports modern and strict source monitoring of mercury emissions from cement plants. [CSAPH Rep. 1, I-06Appended: Res. 501, A-11Reaffirmation A-14Modified: CSAPH Rep. 01, A-24]

H-135.999 Federal Programs
The AMA believes that the problem of air pollution is best minimized through the cooperative and coordinated efforts of government, industry and the public. Current progress in the control of air pollution can be attributed primarily to such cooperative undertakings. The Association further believes that the federal government should play a significant role in these continuing efforts. This may be done by federal grants for (1) the development of research activity and (2) the encouragement of local programs for the prevention and control of air pollutants. [BOT Rep. M, A-63Reaffirmed: CLRPD Rep. C, A-88Reaffirmed: Sunset Report, I-98Reaffirmation I-06Reaffirmation I-07Reaffirmed: CSAPH Rep. 01, A-17]

H-135.923 AMA Advocacy for Environmental Sustainability and Climate
Our American Medical Associaiton supports initiatives to promote environmental sustainability and other efforts to halt global climate change.
Our AMA will incorporate principles of environmental sustainability within its business operations.
Our AMA supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities.
Our AMA supports a resilient, accountable health care system capable of delivering effective and equitable care in the face of changing health care demands due to climate change.
Our AMA encourages health care organizations to develop climate resilience plans, for the continuity of operations in an emergency, that take into account the needs of groups in their community that experience disproportionate risk of climate-related harm and ensure the necessary collaboration between different types of healthcare facilities.
Our AMA recognizes that climate resilience and mitigation efforts will be community-specific and supports physician engagement at the local level to promote community alliances for environmental justice and equity.
Our AMA supports the Joint Commission’s Sustainable Healthcare Certification, which supports health systems in pursuing decarbonization by establishing greenhouse gas (GHG) baseline emissions as well as measuring and documenting GHG reductions.
Our AMA supports the development of strategies and technologies to strengthen supply chain networks, including economic incentives for building climate and disaster resiliency and redundancy into new or updated facilities, increasing emergency stockpiles of key products, and incentivizing the innovation and adoption of reusable medical products to resist the impact of supply chain disturbances. [Res. 924, I-16Reaffirmation: I-19Modified: Res. 415, A-24Appended: Res. 907, I-24Appended: Res. 914, I-24]

H-135.973 Stewardship of the Environment
Our AMA encourages physicians to be spokespersons for environmental stewardship, including the discussion of these issues when appropriate with patients.
Our AMA encourages the medical community to cooperate in reducing or recycling waste.
Our AMA encourages physicians and the rest of the medical community to dispose of its medical waste in a safe and properly prescribed manner.
Our AMA supports enhancing the role of physicians and other scientists in environmental education.
Our AMA endorses legislation such as the National Environmental Education Act to increase public understanding of environmental degradation and its prevention.
Our AMA encourages research efforts at ascertaining the physiological and psychological effects of abrupt as well as chronic environmental changes.
Our AMA encourages international exchange of information relating to environmental degradation and the adverse human health effects resulting from environmental degradation.
Our AMA encourages and helps support physicians who participate actively in international planning and development conventions associated with improving the environment.
Our AMA encourages educational programs for worldwide family planning and control of population growth.
Our AMA encourages research and development programs for safer, more effective, and less expensive means of preventing unwanted pregnancy.
Our AMA encourages programs to prevent or reduce the human and environmental health impact from global climate change and environmental degradation.

Our AMA encourages economic development programs for all nations that will be sustainable and yet nondestructive to the environment.
Our AMA encourages physicians and environmental scientists in the United States to continue to incorporate concerns for human health into current environmental research and public policy initiatives.
Our AMA encourages physician educators in medical schools, residency programs, and continuing medical education sessions to devote more attention to environmental health issues.
Our AMA will strengthen its liaison with appropriate environmental health agencies, including the National Institute of Environmental Health Sciences (NIEHS).
Our AMA encourages expanded funding for environmental research by the federal government.
Our AMA encourages family planning through national and international support.
Our AMA recognizes that clinical quality and safety should not be sacrificed as strategies for reducing greenhouse gasses and waste.
Our AMA recognizes that animal-based agriculture is a significant contributor to greenhouse gas emissions and supports efforts to increase and promote plant-based menu options in hospital food services, for both health and environmental reasons.
Our AMA expects that health systems will provide transparency and avoid misleading the public regarding their greenhouse gas emissions, including but not limited to providing definitions used in the calculations of their net-zero emissions.
Our AMA opposes corporate “greenwashing,” or the act of making misleading statements about the environmental benefits of products and/or services.
Our AMA supports the development of locally managed and reliable electrical microgrids that operate independently from the larger electrical grid for hospitals and other health care facilities to use as a way to reduce reliance on diesel generation for back-up services while maintaining critical care functions during emergencies and supports grants being provided to independent practices to facilitate this development.
Our AMA supports the use of virtual health care, where appropriate, with reasonable reimbursement, as a strategy to reduce the carbon footprint of health care.
Our AMA supports financial assistance for health care entities, including community health centers, clinics, rural health centers, small- and medium-sized physician practices, transitioning to environmentally sustainable operations.
Our AMA supports the development of concise clinical guidelines and patient education materials to assist physician practices and patients to reduce adverse organizational and personal impacts on climate change.
Our AMA supports further research on the health- and climate-related effects of consuming plant-based and lab-grown meat. [CSA Rep. G, I-89Amended: CLRPD Rep. D, I-92Amended: CSA Rep. 8, A-03Reaffirmed in lieu of Res. 417, A-04Reaffirmed in lieu of Res. 402, A-10Reaffirmation I-16Modified: Res. 414, A-24Appended: Res. 420, A-25]

D-440.912 AMA Public Health Strategy
Our American Medical Association will distribute evidence-based information on the relationship between climate change and human health through existing platforms and communications channels, identify advocacy and leadership opportunities to elevate the voices of physicians on the public health crisis of climate change, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050.
Our AMA Board of Trustees will provide an update on loss of coverage and uninsurance rates following the return to regular Medicaid redeterminations and the en of the COVID-19 Public Health Emergency, the ensuing financial and administrative challenges experienced by physicians, physician practices, hospitals, and the healthcare system; and a report of actions taken by the AMA and recommendation for further action to address these issues at I-2023.
Our AMA Board of Trustees will provide a strategic plan or outline for the AMA's plan to address and combat the health effects of climate change at I-2023.
Our AMA Board of Trustees will provide an update on the efforts and initiatives of the AMA's gun violence task force at I-2023.
Our AMA will continue to support increased funding for public health infrastructure and workforce, which should include funding for preventative medicine related residency programs, to increase public health leadership in this country. [BOT Rep. 17, A-23Modified: BOT Rep. 05, I-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 431
(A-26)

Introduced by: Medical Student Section, American Association of Public Health Physicians

Subject: Supporting Transportation Infrastructure Reform for Public Health

Referred to: Reference Committee D

Whereas, the American Medical Association (AMA) recognizes robust transportation infrastructure as a fundamental social determinant of health that directly impacts patient access to medical facilities, pharmacies, and essential community services [1–4]; and

Whereas, in 2017, 5.8 million individuals in the United States delayed medical care due to a lack of transportation, with such barriers being responsible for 25% of all missed clinic appointments, representing a significant risk factor for long-term mortality among patients with chronic conditions [5–7]; and

Whereas, segments of transportation often have poor connectivity in the United States due to lack of suitable pedestrian infrastructure, with sidewalks having 45% less spatial access than roads, thus disproportionately disadvantaging individuals reliant on them, such as elderly, children, and individuals with disabilities [8]; and

Whereas, since the 1980s, U.S. transportation infrastructure has prioritized automobile access, allocating approximately 80% of federal transportation funding to highways and less than 20% to public transit infrastructure, while active transport networks face an estimated $7 billion funding shortfall, resulting in consistently underfunded, unaffordable, and unreliable accessible transportation options [3,9]; and

Whereas, current federal transportation formulas and design standards (e.g. reliance on vehicle miles traveled and road throughput), prioritize automobile speed over safety, incentivizing road designs that endanger pedestrians, cyclists, and transit users [6]; and

Whereas, vulnerable road users (e.g. cyclists, pedestrians) comprise approximately 20% of all traffic fatalities with pedestrian deaths reaching a 40-year high, yet many states have raised the allowable numbers of deaths and serious injuries among these users, with a disproportionate burden in marginalized communities [3,6]; and

Whereas, “Complete Streets” is a transportation policy approach that requires streets to be designed for safe access for pedestrians, bicyclists, public transportation, as well as motorists for users of all ages and abilities, incorporating robust pedestrian and cycling infrastructure, traffic calming measures, and public transport accommodations [10]; and

Whereas, access to sidewalks, bike lanes, and other active mobility infrastructure has been shown to significantly improve physical activity levels and health outcomes, with systematic reviews highlighting that walkability interventions reduce chronic disease burden and enhance equity in urban environments, as well as reduce pedestrian and biker fatalities [11-14]; and

Whereas the Federal Highway Administration released a report in March 2022 setting forth an initiative to adopt the Complete Streets design model in its approach to funding and designing most federally funded roads [15]; and

Whereas, the Complete Streets Act of 2025 has been introduced to Congress and the House of Representatives, requiring states to establish Complete Street programs and dedicating 5% of federal highway funding to providing technical assistance and incentives for their development, further promoting safer streets for all users [16,17]; therefore be it

RESOLVED, that our American Medical Association support street design strategies that 1.) facilitate the construction of integrated, multimodal transportation infrastructure; 2.) ensure safe and accessible travel for pedestrians, bicyclists, public transit users, and motorists of all ages and abilities; and 3.) place a special emphasis on addressing safety in underserved communities including but not limited to rural areas, low-income neighborhoods, and communities of color (New HOD Policy); and be it further

RESOLVED, that our AMA support reform of federal transportation funding formulas, to explicitly prioritize pedestrian safety metrics, transit accessibility, and health outcomes alongside vehicle miles traveled and level-of-service when calculating success of roads. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Health Promotion and Disease Prevention H-425.993
The AMA (1) reaffirms its current policy pertaining to the health hazards of tobacco, alcohol, accidental injuries, unhealthy lifestyles, and all forms of preventable illness; (2) advocates intensified leadership to promote better health through prevention; (3) believes that preventable illness is a major deterrent to good health and accounts for a major portion of our country's total health care expenditures; (4) actively supports appropriate scientific, educational and legislative activities that have as their goals: (a) prevention of smoking and its associated health hazards; (b) avoidance of alcohol abuse, particularly that which leads to accidental injury and death; (c) reduction of death and injury from vehicular and other accidents; and (d) encouragement of healthful lifestyles and personal living habits; (5) advocates that health be considered one of the goals in transportation planning and policy development including but not limited to the establishment, expansion, and continued maintenance of affordable, accessible, barrier-free, reliable, and preferably clean-energy public transportation; and (6) strongly emphasizes the important opportunity for savings in health care expenditures through prevention. [Presidential Address, A-82Reaffirmed: CLRPD Rep. A, I-92Reaffirmed: CSA Rep. 8, A-03Reaffirmed: BOT Rep. 8, I-06Reaffirmed: CSAPH Rep. 01, A-16Modified: Res. 923, I-19]

H-135.939 Green Initiatives and the Health Care Community
1. Our AMA supports responsible waste management and clean energy production policies that minimize health risks, including the promotion of appropriate recycling and waste reduction.
2. Our AMA supports the use of ecologically sustainable products, foods, and materials when possible.
3. Our AMA supports the development of products that are non-toxic, sustainable, and ecologically sound.
4. Our AMA supports building practices that help reduce resource utilization and contribute to a healthy environment.
5. Our AMA supports the establishment, expansion, and continued maintenance of affordable, accessible, barrier-free, reliable, and clean-energy public transportation.
6. Our AMA supports community-wide adoption of 'green' initiatives and activities by organizations, businesses, homes, schools, and government and health care entities.
7. Our AMA encourages pilot studies on the feasibility of urban ambulance fleets being replaced with renewably-powered vehicles when current petroleum-powered EMS ambulances become retired from service.

[CSAPH Rep. 1, I-08Reaffirmation A-09Reaffirmed in lieu of Res. 402, A-10Reaffirmed in lieu of: Res. 504, A-16Modified: Res. 516, A-18Modified: Res. 923, I-19Appended: Res. 406, A-25]

H-470.991 Promotion of Exercise
1. Our American Medical Association:
    a. supports the promotion of exercise, particularly exercise of significant cardiovascular benefit.
    b. encourages physicians to prescribe exercise to their patients and to shape programs to meet each patient's capabilities and level of interest.
2. Our AMA supports National Bike to Work Day and encourages active transportation whenever possible.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 432
(A-26)

Introduced by: Medical Student Section, American Psychiatric Association, American Academy of Child and Adolescent Psychiatry, American Academy of Addiction Psychiatry, American Academy of Psychiatry and the Law

Subject: Addressing Public Health Risks of Online Sports Betting

Referred to: Reference Committee D

Whereas, since the 2018 Murphy v National Collegiate Athletic Association ruling enabled state authorization of legalized mobile sports betting,33 states and the District of Columbia have enacted laws with others actively considering legislation;[1-4] and

Whereas, professional sports leagues and broadcasters such as the NFL have fueled growth of this industry through heavy advertising, ultimately contributing to a 750% increase in industry advertising expenditures between 2019 and 2021;[5,6] and

Whereas, consumer engagement continues to rise, with an estimated 68 million Americans wagering $23.1 billion on the 2024 Super Bowl alone, a 41% increase from the prior year;[7] and

Whereas, evidence indicates DFS participation can act as a gateway to sports betting and impulsive gambling, especially among adolescents and young adults, with recent studies documenting mental health problems and addictive behaviors among DFS players resembling those observed in sports bettors;[8,9] and

Whereas, young adults are the fastest growing group of sports bettors, with 58% of college students reporting sports betting in the past year, and studies show that early exposure increases the likelihood of developing gambling disorder which is associated with financial hardship, relationship strain, depression, suicidality, and substance use;[10-15] and

Whereas, national prevalence surveys of gambling disorder largely predate the 2018 Murphy v NCAA ruling, leaving a critical data gap in understanding the scope of gambling-related harm in the online era, especially among adolescents and young adults;[16] and

Whereas, evidence suggests that online sports bettors have double the rates of gambling disorder as compared to those who gamble in other forms, but the lack of data collection since the 2018 ruling obscures the true characterization of the effect of online betting;[17] and

Whereas, Daily Fantasy Sports (DFS) platforms operate in a legal gray area under the 2006 Unlawful Internet Gambling Enforcement Act, which classifies DFS as a game of skill rather than gambling; however, regulators have increasingly scrutinized DFS contests for their resemblance to sports wagering, with one sportsbook fined millions of dollars in 2025;[18-21] and

Whereas, state regulatory frameworks for online sports betting differ substantially, with wide inconsistencies in consumer protections, allocation of funds for responsible gaming initiatives, and the types of contests permitted for wagering;[22-24] and

Whereas, many state regulatory frameworks fail to require online sportsbooks to meet the Internet Responsible Gaming Standards (IRGS) and the consumer protection guidelines set by the National Council on Problem Gambling (NCPG), leaving major gaps in protections for individuals at risk of gambling disorder;[17, 22, 25, 26,] and

Whereas, the NCPG has developed a comprehensive package of responsible online gaming standards, grounded in evidence and expert consensus, that includes self-limiting tools, access to betting history, and readily available treatment resources, representing a strong framework for uniform consumer protection and harm reduction;[26] and

Whereas, voluntary self-exclusion has been shown to be an effective tool to curb gambling disorder, however current policies are not currently effective due to lack of advertisement, promotion, monitoring, staff training, and active engagement by operators;[27] and

Whereas, gambling is increasingly recognized as a public health concern, with recent federal initiatives such as the GRIT Act (2023) and SAFE Bet Act (reintroduced 2025) underscoring bipartisan recognition of gambling disorder as a national issue requiring updated epidemiological studies and a stronger understanding of consumer protections;[28-31] therefore be it

RESOLVED, that our American Medical Association support efforts to establish federal and state consumer protections for online gambling, including sports betting and daily fantasy sports, to reduce harms associated with gambling disorder and other related behaviors (New HOD Policy); and be it further

RESOLVED, that our AMA support epidemiological research to characterize the health impacts of online gambling, including sports betting and daily fantasy sports, with particular attention to adolescents, young adults, older adults, people with cognitive impairment, and other vulnerable populations. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-440.922 Gambling Disorder

The AMA: (1) encourages physicians to advise their patients of the addictive potential of gambling; (2) encourages states which operate gambling programs to provide a fixed percentage of their revenue for education, prevention, and treatment of gambling disorder; and (3) requests that states which operate gambling programs affix to all lottery tickets and display at all lottery counters a sign which states that gambling may become a gambling disorder and help is available through your local gambling hotline. [Res. 430, A-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 1, A-14; Modified: CSAPH Rep. 01, A-24]

H-275.939 Internet Gambling

Our AMA informs physicians and patients of the dangers of addiction associated with Internet gambling and supports prohibiting the availability of Internet gambling to children. [Res. 217, A-98; Reaffirmed: CSAPH Rep. 2, A-08; Modified: CSAPH Rep. 01, A-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 433
(A-26)

Introduced by: Texas Medical Association

Subject: Addressing the Epidemic of Fragility Fractures Through Improved Osteoporosis Screening and Treatment

Referred to: Reference Committee D

Whereas, fragility fractures—defined as fractures resulting from low-energy mechanisms such as a fall from standing height—represent a major and growing public health crisis, leading to significant morbidity, mortality, and health care costs; and

Whereas, fewer than 25% of patients who experience a fragility fracture currently receive appropriate osteoporosis evaluation or pharmacologic treatment within one year of their fracture; and

Whereas, timely screening with dual-energy X-ray absorptiometry and fracture-risk assessment lead to reduced incidence of subsequent fractures; and

Whereas, coordinated fracture liaison services and evidence-based osteoporosis care models have demonstrated substantial reductions in secondary fractures and the resultant long-term health care expenditures; and

Whereas, the growing population of aging Americans at risk for osteoporosis and fragility fractures places an increasing burden on the state's health care system, workforce, and economic resources; therefore be it

RESOLVED, that our American Medical Association recognize fragility fractures and untreated osteoporosis as a significant and urgent public health issue in the United States (New HOD Policy); and be it further

RESOLVED, that our AMA support expanded and evidence-based osteoporosis screening efforts, including improved access to dual-energy X-ray absorptiometry scanning and Fracture Risk Assessment Tool evaluations for at-risk populations (New HOD Policy); and be it further

RESOLVED, that our AMA encourage health systems, hospitals, and physician groups to develop and implement coordinated fracture liaison services and secondary fracture prevention programs (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for legislation or regulation for improved insurance coverage and payment policies for osteoporosis screening, diagnosis, pharmacologic treatment, and follow-up care (Directive to Take Action); and be it further

RESOLVED, that our AMA support nationwide public and physician education initiatives aimed at increasing awareness of osteoporosis risk factors, prevention, and the importance of post-fracture evaluation. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

H-425.981 Reimbursement of Screening Bone Densitometry

Our AMA: (1) advocates for the use of bone densitometry as an important tool in assessing fracture risk and in the diagnosis of osteoporosis; (2) advocates that a clinical evaluation accompany any bone mass measurement for the evaluation of fracture risk and osteoporosis; (3) advocates for the continued participation of the patient's physician in the diagnosis, treatment, and prevention of osteoporosis; (4) encourages private third party payers to provide coverage for bone mass measurement technology and services for those individuals at high risk of osteoporosis; and (5) will lobby Congress to add men undergoing testosterone-suppressing treatment for prostate cancer and men who are at high risk for any other reason to the list of beneficiaries receiving Medicare coverage of bone density testing to screen for osteoporosis.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 434
(A-26)

Introduced by: Private Practice Physicians Section

Subject: Vaccinations in Physician Offices

Referred to: Reference Committee D

Whereas, vaccination rates improve with physician recommendation; and

Whereas, Medicare Part B only covers influenza, pneumonia, hepatitis B, COVID, and occasionally TDAP vaccinations; and

Whereas, Medicare Part D covers all Advisory Committee on Immunization Practices (ACIP) recommended vaccines; therefore be it

RESOLVED, that our American Medical Association advocate for all Advisory Committee on Immunization Practices (ACIP)-recommended vaccines to be covered by Medicare Part B. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

Financing of Adult Vaccines: Recommendations for Action H-440.860

1. Our American Medical Association supports the concepts to improve adult immunization as advanced in the Infectious Diseases Society of America's 2007 document "Actions to Strengthen Adult and Adolescent Immunization Coverage in the United States," and support the recommendations as advanced by the National Vaccine Advisory Committee's 2008 white paper on pediatric vaccine financing.
2. Our AMA will advocate for the following actions to address the inadequate financing of adult vaccination in the United States: Provider-related
    a. Develop a data-driven rationale for improved vaccine administration fees.
    b. Identify and explore new methods of providing financial relief for adult immunization providers through, for example, vaccine company replacement systems/deferred payment/funding for physician inventories, buyback for unused inventory, and patient assistance programs.
    c. Encourage and facilitate adult immunization at all appropriate points of patient contact; e.g., hospitals, visitors to long-term care facilities, etc.
    d. Encourage counseling of adults on the importance of immunization by creating a mechanism through which immunization counseling alone can be reimbursed, even when a vaccine is not given.

Federal-related

a. Increase federal resources for adult immunization to:
    i. Improve Section 317 funding so that the program can meet its purpose of improving adult immunizations.
    ii. Provide universal coverage for adult vaccines and minimally, uninsured adults should be covered.

iii. Fund an adequate universal reimbursement rate for all federal and state immunization programs.

b. Optimize use of existing federal resources by, for example:
   i. Vaccinating eligible adolescents before they turn 19 years of age to capitalize on VFC funding.
   ii. Capitalizing on public health preparedness funding.
c. Ease federally imposed immunization burdens by, for example:
   i. Providing coverage for Medicare-eligible individuals for all vaccines, including new vaccines, under Medicare Part B.
   ii. Creating web-based billing mechanisms for physicians to assess coverage of the patient in real time and handle the claim, eliminating out-of-pocket expenses for the patient.
   iii. Simplifying the reimbursement process to eliminate payment-related barriers to immunization.
d. The Centers for Medicare & Medicaid Services should raise vaccine administration fees annually, synchronous with the increasing cost of providing vaccinations.

State-related

a. State Medicaid programs should increase state resources for funding vaccines by, for example:
   i. Raising and funding the maximum Medicaid reimbursement rate for vaccine administration fees.
   ii. Establishing and requiring payment of a minimum reimbursement rate for administration fees.
   iii. Increasing state contributions to vaccination costs.
   iv. Exploring the possibility of mandating immunization coverage by third party payers.
b. Strengthen support for adult vaccination and appropriate budgets accordingly.

Insurance-related

1. Provide assistance to providers in creating efficiencies in vaccine management by:
   i. Providing model vaccine coverage contracts for purchasers of health insurance.
   ii. Creating simplified rules for eligibility verification, billing, and reimbursement.
   iii. Providing vouchers to patients to clarify eligibility and coverage for patients and providers.
   iv. Eliminating provider/public confusion over insurance payment of vaccines by universally covering all Advisory Committee on Immunization Practices (ACIP)-recommended vaccines as of May 1, 2025, and national medical specialty society recommended vaccines.
      a. Increase resources for funding vaccines by providing first-dollar coverage for immunizations.
      b. Improve accountability by adopting performance measurements.
      c. Work with businesses that purchase private insurance to include all ACIP-recommended immunizations as of May 1, 2025, and national medical specialty society recommended vaccines as <b>partb> of the health plan.
      d. Provide incentives to encourage providers to begin immunizing by, for example:
         i. Including start up costs (freezer, back up alarms/power supply, reminder-recall systems, etc.) in the formula for reimbursing the provision of immunizations.
         ii. Simplifying payment to and encouraging immunization by nontraditional providers.
         iii. Facilitating coverage of vaccines administered in complementary locations (e.g., relatives visiting a resident of a long-term care facility).

Manufacturer-related

Market stability for adult vaccines is essential. Thus:

i. Solutions to the adult vaccine financing problem should not deter research and development of new vaccines.
ii. Solutions should consider the maintenance of vibrant public and private sector adult vaccine markets.
iii. Liability protection for manufacturers should be assured by including Vaccine Injury Compensation Program coverage for all ACIP recommend adult vaccines as of May 1, 2025, and national medical specialty society recommended adult vaccines.

iv. Educational outreach to both providers and the public is needed to improve acceptance of adult immunization.

3. Our AMA will conduct a survey of small- and middle-sized medical practices, hospitals, and other medical facilities to identify the impact on the adult vaccine supply (including influenza vaccine) that results from the large contracts between vaccine manufacturers/distributors and large non-government purchasers, such as national retail health clinics, other medical practices, and group purchasing programs, with particular attention to patient outcomes for clinical preventive services and chronic disease management.

Citation: CSAPH Rep. 4, I-08; Reaffirmed: I-10; Reaffirmed: I-12; Reaffirmed: I-14; Reaffirmed: CMS Rep. 3, I-20; Reaffirmed: A-22; Modified: BOT Rep. 24, I-25

Assuring Access to ACIP/AAFP/AAP-Recommended Vaccines H-440.875

1. All persons, regardless of economic and insurance status, receive all Advisory Committee on Immunization Practices (ACIP)-recommended vaccines as of May 1, 2025, or national medical specialty society recommended vaccines as soon as possible following publication of these recommendations.
2. Our AMA will continue to work with the federal government, Congress, and other stakeholders to improve liability protection for vaccine manufacturers and health care professionals who provide immunization services and to examine and improve compensation mechanisms for patients who were legitimately injured by a vaccine.
3. Our AMA will continue to work with the federal government, Congress, and other appropriate stakeholders to enhance public opinion of vaccines and to monitor and ensure the continued safety of existing and newly approved vaccines (including providing adequate resources for post-approval surveillance) so as to maintain and improve public confidence in the safety of vaccines.
4. Our AMA will work with appropriate stakeholders, including vaccine manufacturers, vaccine distributors, the federal government, medical specialty societies, and third party payers, to guarantee a robust vaccine delivery infrastructure (including but not limited to, the research and development of new vaccines, the ability to track the real-time supply status of recommended vaccines, and the timely distribution of recommended vaccines to providers).
5. Our AMA will work with appropriate federal and state agencies and private sector entities to ensure that state Medicaid agencies and private insurance plans pay health care professionals at least the approved Relative Value Unit (RVU) administration Medicare rates for payment when they administer recommended vaccines.
6. Our AMA will work with the Centers for Medicare and Medicaid Services (CMS) to address barriers associated with Medicare recipients receiving live zoster vaccine and the routine boosters Td and Tdap in physicians' offices.
7. Our AMA will work through appropriate state entities to ensure all health insurance plans rapidly include newly ACIP-recommended vaccines in their list of covered benefits, and to pay health care professionals fairly for the purchase and administration of ACIP-recommended vaccines.
8. Our AMA will urge Medicare to include Tdap (Tetanus, Diphtheria, Acellular Pertussis) under Medicare Part B as a national public health measure to help prevent the spread of Pertussis.
9. Until compliance of our AMA Policy H-440.875(6) is actualized to the AMA's satisfaction regarding the tetanus vaccine, our AMA will aggressively petition CMS to include tetanus and Tdap at both the "Welcome to Medicare" and Annual Medicare Wellness visits, and other clinically appropriate encounters, as additional "triggering event codes" (using the AT or another modifier) that allow for coverage and payment of vaccines to Medicare recipients.
10. Our AMA will aggressively petition CMS to include coverage and payment for any vaccinations administered to Medicare patients that are recommended by the ACIP, the US Preventive Services Task Force (USPSTF), or based on prevailing preventive clinical health guidelines, including those from national medical specialty societies.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-26)
Framework to Convey Evidence-Based Medicine in AI Tools Used in Clinical Decision Making

EXECUTIVE SUMMARY

BACKGROUND. Policy D-480.951 "Framework to Convey Evidence-Based Medicine in AI Tools Used in Clinical Decision Making," asked that our American Medical Association (AMA) collaborate with interested parties, including physicians, academic institutions, and industry leaders, to create a report with recommendations for how artificial intelligence (AI) tools used in clinical decision support convey transparency in the quality of medical evidence and the grading of medical evidence to physicians and advanced care practitioners so clinical recommendations can be accurately verified and validated.

METHODS. English-language reports, peer-reviewed articles, white papers, government publications, and grey literature were selected from PubMed and Internet search, using the terms "artificial intelligence", "augmented intelligence", "level of evidence", and "grading of evidence". Additional articles were identified by manual review of the references cited in these publications. Further information was obtained from the Internet sites of organizations that specialize in AI, large language models, and medical information. Additional collaboration with the AMA Center on AI and Digital Health and other key parties was utilized to incorporate broad information.

DISCUSSION. Transparency in AI refers to making the design, data sources, training process, and decision-making logic of AI systems understandable to key parties, encompassing both process-level elements and outcome-level explanations. Although explainability is essential, particularly in clinical contexts, meaningful explanation is challenging due to differences between algorithmic computation and human reasoning and must be balanced with safety, efficacy, and contextual expertise. Transparency can be supported through interpretable modeling techniques, documentation, user-centered explanation tools, and third-party evaluation frameworks, yet global standards remain fragmented across domains. Persistent challenges include the inherent opacity of complex deep-learning models, confabulations in generative systems, data biases, lack of consensus on explanation methods, proprietary limitations, and the risk that oversimplified explanations may inflate user trust without improving comprehension. These limitations complicate clinical applications: while AI could help keep evidence-based clinical guidelines current, its lack of transparency undermines reliability; similarly, integrating AI into medical education alongside established evidence-based medicine frameworks is difficult without clear mechanisms for interpretability and explanation.

CONCLUSION. AI-enabled decision support systems are reshaping how information is synthesized and applied across sectors, offering rapid analysis and evidence-informed recommendations that enhance, but do not replace, human expertise. In medicine, these tools may improve efficiency, workflow, and detection of high-risk conditions, yet their effect on patient outcomes remains undetermined due to limited long-term validation and ongoing concerns about transparency, bias, and explainability. Integrating principles of evidence-based medicine into AI design could strengthen trust and alignment with clinical standards, but major challenges persist, including opaque model reasoning, uneven transparency requirements, and risks of confabulation in generative systems. As clinical guidelines and medical education evolve to keep pace with rapid evidence generation, AI can support real-time updates and manage complex information if transparency, reliability, and user-centered design remain central. Ultimately, AI should augment human judgment, reinforce evidence-based practice, and support clinicians in delivering high-quality, patient-centered care.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 7-A-26

Subject:	Framework to Convey Evidence-Based Medicine in AI Tools Used in Clinical Decision Making
Presented by:	Padmini Ranasinghe, MD, MPH, Chair
Referred to:	Reference Committee E

American Medical Association (AMA) Policy D-480.951, "Framework to Convey Evidence-Based Medicine in AI Tools Used in Clinical Decision Making," which was adopted at the 2025 Annual Meeting by the AMA House of Delegates (HOD), and directs the following:

> That our American Medical Association collaborate with stakeholders, including physicians, academic institutions, and industry leaders, to create a report by A-26 with recommendations for how AI tools used in clinical decision support convey transparency in the quality of medical evidence and the grading of medical evidence to physicians and advanced care practitioners so clinical recommendations can be accurately verified and validated.

This report serves as the Council on Science and Public Health's (CSAPH's) findings and recommendations after collaboration with key parties and review of the evidence surrounding transparency of evidence-based medicine in augmented intelligence (AI) tools for clinical decision-making.

METHODS

English-language reports, peer-reviewed articles, white papers, government publications, and grey literature were selected from PubMed and Internet search, using the text terms "artificial intelligence", "augmented intelligence", "level of evidence", and "grading of evidence". Additional articles were identified by manual review of the references cited in these publications. Further information was obtained from the Internet sites of organizations that specialize in AI, large language models, and medical information. Additional collaboration with the AMA Center on AI and Digital Health and other key parties was utilized to incorporate broad information.

BACKGROUND

AI-enabled decision support systems are rapidly evolving across sectors such as health care, business, and industrial operations to assist human decision-making by synthesizing complex data, making predictions, and offering evidence-based recommendations. In health care, clinical decision support systems now move beyond traditional rule-based alerts to include real-time evidence synthesis and large language model assistance, helping clinicians interpret patient data, identify high-risk cases, and recommend guideline-aligned interventions while preserving human judgment in final decisions. For example, modern platforms are used for medical imaging alerting and triage in radiology, such as systems that analyze CT scans to flag critical findings and can reduce diagnostic turnaround times and associated mortality.[1]

© 2026 American Medical Association. All rights reserved.

AI decision support is also widely used in business and industry to forecast trends, optimize resource allocation, and support strategic planning through predictive analytics and prescriptive modeling integrated into enterprise systems.[2] These tools synthesize large datasets and provide decision frameworks that would be infeasible to process manually, improving strategic clarity and operational responsiveness.

Outcomes data for AI-assisted decision support shows promising signals with surveys indicating a growing adoption among clinicians with many reporting perceived improvements in care delivery, and some implementations have demonstrated measurable benefits such as enhanced guideline adherence and faster, more accurate identification of critical clinical events.[3] However, systematic evidence linking AI decision support directly to broad improvements in patient outcomes remains mixed, and many tools still lack validation across diverse real-world settings.[4]

Despite these advances, AI clinical decision support systems cannot replace human expertise - they are constrained by data quality, lack full transparency in reasoning, and are often assistive in nature rather than autonomous decision-makers.[5] In health care, opaque model logic and liability concerns persist. These limitations underscore ongoing challenges in trust, explainability, and regulation as AI continues to support rather than supplant human decision-making.[6]

Evidence-Based Medicine

Evidence-based medicine (EBM) is the cornerstone of clinical decision making in medical practice to provide the best patient outcomes. EBM utilizes rigorous scientific method and critical appraisal to organize and systematize the application of research and data to ground health care decisions.[7,8] By utilizing EBM, physicians are able to implement the most up-to-date scientific information into their practice while also building confidence in medical decisions and discussions with patients.

EBM application is a systematic process. EBM in clinical practice follows five steps: 1. Ask a searchable question; 2. Acquire information; 3. Appraise search results; 4. Apply the evidence in practice; and 5. Assess the provided care.[9] These five steps can be applied to each individual patient in each encounter and also to larger populations of patients in products such as clinical protocols and guidelines.[9] EBM is a key component in medical education to support evidence-based decision-making and these five steps are a framework for clinical teaching.

Levels of evidence play a vital role in evidence-based practice by providing a structured hierarchy for evaluating the quality and relevance of research. Typically illustrated as a pyramid, this framework helps clinicians make well-informed decisions by emphasizing studies with stronger methodologies and lower risk of bias (Appendix 1).[10] Grading systems translate the level of evidence into a commonly understood alphabetic system for hierarchical consumption and application (Appendix 2).[11,12] Clinical guidelines often utilize grading systems to demonstrate the strength of their recommendations based on the level of evidence used for their recommendations.[13,14] These grading systems help to support communication between patients and their physicians and ensure clear understanding of evidence-based practice for high quality care. There are multiple leveling or grading systems for use in EBM, each with their own challenges and drawbacks, particularly how the system can disadvantage certain study designs.[11] By understanding these levels, practitioners can ensure that their clinical decisions are grounded in the most reliable and rigorous evidence available. The integration of an EBM grading system into AI may support transparency but may be complex.

DISCUSSION

Transparency in AI refers to the accessibility and clarity of information about how an AI-enabled system is designed, trained, and makes decisions, such that key parties can understand and justify its behavior and outputs. At its core, transparency covers process-level elements (e.g., intended use, data sources, bias, model structure) and outcome-level explanations (e.g., why the system made a specific prediction), and is closely tied to explainability and interpretability as ethical principles in AI governance.[15,16]

The AMA's Council on Science and Public Health (CSAPH) Report 8-A-25, "Explainability of Artificial/Augmented Intelligence and Machine Learning Algorithms," underscores that while explainability is highly desirable (especially for augmented intelligence tools used in clinical care) it is also complex and nuanced, reflecting fundamental differences between algorithmic computation and human reasoning.[17] The report notes that explainability to build transparency is difficult to implement in practice and must be balanced with considerations such as safety, efficacy, and contextual expertise, and that explanations should be evaluated independently rather than relying solely on developer claims.[17]

Mechanisms

Building transparency includes embedding explainability into AI design (e.g., using inherently interpretable models or Explainable AI techniques like LIME and SHAP), documentation and reporting of data and model decisions, user-centered explanation interfaces, and third-party evaluation frameworks that assess explanation quality according to criteria like consistency, plausibility, fidelity, and usefulness.[18,19] At present, there is no single global standardization of transparency in AI; efforts such as principles in the EU AI Act and third-party explainability requirements in health care policy reflect emerging but fragmented standards across domains, and many organizations still lack universally accepted definitions or metrics for transparency.[20,21] Examples of how transparency is built into systems range from open-sourced models with clear documentation of training data and algorithms to clinical AI tools that generate feature attribution heatmaps showing which inputs most influenced a medical prediction, helping clinicians understand and verify outputs.[20] Ideas for improving transparency include adopting standardized explanation frameworks (e.g., model cards), multidisciplinary evaluation involving ethics and domain experts, embedding interpretability mechanisms during early model design, and enhancing communication tools so end users can meaningfully engage with AI reasoning.[22–25]

Challenges

Complex models like deep neural networks are often inherently opaque, presenting a black box problem that complicates transparency. A notable technical issue is "hallucinations" in generative AI, where models produce plausible sounding but incorrect outputs because they lack grounded reasoning tied to factual input data. Given that the industry standard term "hallucination" has specific behavioral health implications, we refer to this occurrence as a "confabulation" for this report.[26] Furthermore, transparency depends heavily on the quality and provenance of input data; datasets that are biased, incomplete, or poorly documented undermine meaningful explanation and increases the risk of misleading outputs.[27]

Many state-of-the-art AI models, especially deep learning and large transformer-based systems, are inherently highly complex and non-linear, with millions or even billions of parameters.[28] These internal representations do not map cleanly to human-understandable concepts, so tracing how an input leads to a specific output becomes extremely difficult even for the engineers who built them.

This "black box" opacity fundamentally limits transparency.[28] There is currently no universally accepted framework for what constitutes transparency or how to measure it reliably across applications. Some techniques produce local feature attributions, and others create surrogate models, but there is no consensus on which methods provide faithful or useful explanations.[29] This means that even when explanations are produced, they may be inconsistent, unvalidated, or misleading. There is no consensus on which methods provide faithful or useful explanations.

Many powerful AI systems are developed by private companies that protect their models and train data as trade secrets. This obscures key information about data provenance, processing steps, and architectural decisions, complicating independent audit or regulatory scrutiny.[30] Transparency is not only a technical issue but also a legal one. Even when explanation tools are used, they can inadvertently create a false sense of understanding. Explanations may oversimplify complex reasoning, leading users to over-trust AI outputs or misinterpret how decisions are reached. Some research suggests that explanations can increase human over-reliance on AI, even when AI is wrong, because explanations inflate perceived reliability without improving actual understanding.[31,32]

Generative AI models like large language models can produce outputs that are fluent and convincing but factually incorrect or fabricated, a phenomenon known as confabulation. Recognition of an AI confabulation is critical in the health care setting, where if not detected, it could cause harm to a patient.[33] These errors highlight a core transparency challenge: appearances of coherence does not guarantee truthfulness or logical validity, and users may mistake fluency for reliability.[34] Because confabulations emerge from the probabilistic nature of these models, they can be difficult to detect or explain post hoc.[20] Transparency is intimately tied to the quality and representativeness of input data. If training datasets are biased, incomplete, or poorly documented, explanations derived from these models may simply reflect those flaws, perpetuating hidden biases (e.g., demographic or cultural skew) that are difficult to uncover without transparent data reporting, and complicating ethical assessment and trust.[35]

Legal and governance frameworks for AI transparency are still evolving and vary significantly across jurisdictions.[30] Most health systems rely on vendor logs, institutional governance committees, and organizational policies to oversee how these technologies are used. Those approaches have worked reasonably well for earlier generations of clinical software. However, as the number of AI systems participating in clinical care grows, that model may outpace our ability to fully understand how these systems are involved in patient care. Regulatory uncertainty can discourage organizations from fully disclosing how their systems operate, and fragmented standards make cross-domain transparency difficult to implement consistently. Highly technical explanations may be accurate but remain incomprehensible to non-expert key parties, undermining transparency's goal of meaningful understanding for decision makers.[36]

As multiple AI systems begin to participate in a single patient visit, the profession will need visibility into that participation that is independent of vendor-controlled logs to preserve patient safety, physician accountability, and evidence-based care. Utilization of agentic AI is an emerging team member for many physicians working with AI in their clinical workflows.[37] If AI contributes to documentation, diagnostic suggestions, treatment recommendations, or other elements of the medical record, physicians and health systems need the ability to understand when those systems participated and how their outputs entered the clinical workflow. Maintaining that level of visibility will also help ensure that physicians remain aware of when AI contributes to patient care and that clear lines of human accountability for clinical decisions are preserved.

Current Upkeep of Clinical Recommendations and Training

Currently with AI, clinical guidelines support EBM in practice, with transparency of inputs and thorough analysis of the evidence for their recommendations. Typically clinical guidelines are developed and updated on a three to five year basis, with a latency period between when incorporation of newer evidence-based practice may lag.[38,39] With new research emerging daily, these time periods are at risk for quickly becoming outdated, with some research showing at least 20 percent of recommendations are outdated within three years of their publication.[40] AI poses possibility in this area with the ability to incorporate data inputs in a real time fashion, however without transparency or explainability capabilities, it is difficult to support clinical decision making in an evidence-based way.

Teaching EBM and training its implementation in practice is embedded into medical education. Originally as a mechanism to teach the skills necessary for information overload, something AI may be taking the workload of, EBM is an empirical approach for medical learners and practitioners to provide quality care and is highly embedded in medical education accreditation structures.[41,42] AI information and utility with best practices is emerging in medical education, similar to EBM decades ago.[42,43] With unclear transparency and explainability mechanisms, applying EBM structures and implementing them into medical education is challenging. Incorporating the intersection of EBM and AI tools, with their limitations and benefits of transparency and explainability, into medical education is prudent to prepare physicians for utilization of AI in their clinical decision-making.

CURRENT AMA POLICY

The AMA has extensive policy on AI in general. Several of these policies specifically discuss the need for transparency of AI used in clinical decision-making. Policy H-480.931, "Augmented Intelligence Development, Deployment, and Use in Health Care," outlined the regulatory landscape and AMA's historical role in AI governance. The section below briefly summarizes the most relevant portions of AMA policy.

H-480.931, "Assessing the Intersection Between AI and Health Care"

- Health care AI must be designed, developed, and deployed in a manner which is ethical, equitable, responsible, accurate, transparent, and evidence-based.
- Health care AI requires a risk-based approach where the level of scrutiny, validation, and oversight should be proportionate to the overall potential of disparate harm and consequences the AI system might introduce
- Clinical decisions influenced by AI must be made with specified qualified human intervention points during the decision-making process. A qualified human is defined as a licensed physician with the necessary qualifications and training to independently provide the same medical service without the aid of AI. As the potential for patient harm increases, the point in time when a physician should utilize their clinical judgment to interpret or act on an AI recommendation should occur earlier in the care plan. With few exceptions, there generally should be a qualified human in the loop when it comes to medical decision making capable of intervening or overriding the output of an AI model.
- Health care practices and institutions should not utilize AI systems or technologies that introduce overall or disparate risk that is beyond their capabilities to mitigate. Implementation and utilization of AI should avoid exacerbating clinician burden and should be designed and deployed in harmony with the clinical workflow and, in

institutional settings, consistent with AMA Policy H-225.940, "Augmented Intelligence and Organized Medical Staff."

- When to Disclose: Transparency in Use of Augmented Intelligence-Enabled Systems and Technologies That Impact Medical Decision Making at the Point of Care
- Decisions regarding transparency and disclosure of the use of AI should be based upon a risk- and impact-based approach that considers the unique circumstance of AI and its use case. The need for transparency and disclosure is greater where the performance of an AI-enabled technology has a greater risk of causing harm to a patient.
    - AI disclosure should align and meet ethical standards or norms.
    - Transparency requirements should be designed to meet the needs of the end users. Documentation and disclosure should enhance patient and physician knowledge without increasing administrative burden.
    - When AI is used in a manner which impacts access to care or impacts medical decision making at the point of care, that use of AI should be disclosed and documented to both physicians and/or patients in a culturally and linguistically appropriate manner. The opportunity for a patient or their caregiver to request additional review from a licensed clinician should be made available upon request.
    - When AI is used in a manner which directly impacts patient care, access to care, medical decision making, or the medical record, that use of AI should be documented in the medical record.
- The use of AI-enabled technologies by hospitals, health systems, physician practices, or other entities, where patients engage directly with AI, should be clearly disclosed to patients at the beginning of the encounter or interaction with the AI-enabled technology. Where patient-facing content is generated by AI, the use of AI in generating that content should be disclosed or otherwise noted within the content.
- Appropriate governance policies should be developed by health care organizations and account for and mitigate risks of:
    - Training data set limitations that could result in responses that are out of date or otherwise incomplete or inaccurate for all patients or specific populations.
- Mitigating Misinformation in AI-Enabled Technologies
    - AI developers should ensure transparency and accountability by disclosing how their models are trained and the sources of their training data. Clear disclosures are necessary to build trust in the accuracy and reliability of the information produced by AI systems.
    - Algorithms should be developed to detect and flag potentially false and misleading content before it is widely disseminated.
    - Developers of AI should have mechanisms in place to allow for reporting of mis- and disinformation generated or propagated by AI-enabled systems.
    - Developers of AI systems should be guided by policies that emphasize rigorous validation and accountability for the content their tools generate, and, consistent with AMA Policy H-480.939(7), are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.

D-480.954, "Explainability of Artificial/Augmented Intelligence and Machine Learning Algorithms"

- To maximize the impact and trustworthiness of augmented intelligence and machine-learning (AI/ML) tools in clinical settings, our AMA recognizes that:

        - Explainable AI with safety and efficacy data should be the expected form of AI tools for clinical applications, and exceptions should be rare and justified and require at minimum safety and efficacy data prior to their adoption or regulatory approval;
        - To be considered "explainable," an AI device's explanation of how it arrived at its output must be interpretable and actionable by a qualified human. Claims that an algorithm is explainable should be adjudicated only by independent third parties, such as regulatory agencies or appropriate specialty societies, rather than by declaration from its developer;
        - Explainability should not be used as a substitute for other means of establishing safety and efficacy of AI tools, such as through randomized clinical trials; and
        - Concerns of intellectual property (IP) infringement, when provided as rationale for not explaining how an AI device created its output, does not nullify a patient's right to transparency and autonomy in medical decision-making. While intellectual property should be afforded a certain level of protection, concerns of infringement should not outweigh the need for explainability for AI with medical applications.
    - Our AMA will collaborate with experts and interested parties to develop, and disseminate a list of definitions for key concepts related to medical AI and its oversight.

H-480.939, "Augmented Intelligence in Health Care"

- Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
- Payment and coverage for health care AI systems intended for clinical care must be conditioned on
    - clinical validation.
    - alignment with clinical decision-making that is familiar to physicians.
    - high-quality clinical evidence.
- There should be federal and state interagency collaboration with participation of the physician community and other key parties in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care key parties.

CONCLUSION

AI-enabled decision support systems are transforming how information is synthesized and applied across health care, business, and other sectors, offering rapid data analysis and evidence-informed recommendations that enhance, but do not replace, human expertise. In medicine, these tools show promise in improving efficiency, clinical workflow, and detection of high-risk conditions, yet their full impact on patient outcomes remains undetermined due to limited long-term validation and persistent concerns about transparency, bias, and explainability. EBM remains the foundation for trustworthy clinical decision-making and integrating its principles, such as graded evidence hierarchies and rigorous appraisal, into AI systems could strengthen confidence in integrating AI-enabled technologies into clinical care. However, significant challenges persist, including opaque model reasoning, inconsistent standards for transparency, a lack of transparency mandates in regulatory structures, and risks of confabulations in generative models. As clinical guidelines and medical education continue evolving to keep pace with rapid evidence generation, AI offers

substantial potential to support real-time updates and organize and analyze large amounts of information, provided that transparency, reliability, and user-centered design remain central. Ultimately, AI should be viewed as an augmenting tool that complements human judgment, reinforces evidence-based practice, and supports clinicians in delivering high-quality, patient-centered care.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted, and the remainder of the report be filed:

1. That our AMA will:
    a. Recognize and promote the importance of transparency and explainability of AI tools used in clinical decision support to ensure the quality of medical evidence and the grading of medical evidence including the sources are clearly conveyed to physicians so clinical recommendations and outputs can be accurately verified and validated as tools to assist physicians in making clinical decisions.
    b. Collaborate with medical specialty societies, relevant key parties, regulators, and AI developers to establish standards and develop a framework for evidence attribution, evaluation, and validation in AI clinical decision support systems.
    c. Encourage medical education key parties to incorporate training on the utility, limitations and interpretation of evidence-based medicine practices when using AI tools in clinical decision- making.
    d. Monitor best practices and policies of AI transparency and evidence-based recommendations to improve the quality and reliability of patient care. (Directive to Take Action)

2. Policy D-480.951, "Framework to Convey Evidence-Based Medicine in AI Tools Used in Clinical Decision Making," be rescinded as having been accomplished by this report. (Rescind AMA Policy)

Fiscal note: Minimal

Appendix 2. Level of Evidence and Grades of Recommendations[12]

Grade of Recommendation	Level of Evidence	Type of Study
A	1a	Systematic review of (homogeneous) randomized controlled trials
A	1b	Individual randomized controlled trials (with narrow confidence intervals)
B	2a	Systematic review of (homogeneous) cohort studies of "exposed" and "unexposed" subjects
B	2b	Individual cohort study / low-quality randomized control studies
B	3a	Systematic review of (homogeneous) case-control studies
B	3b	Individual case-control studies
C	4	Case series, low-quality cohort or case-control studies
D	5	Expert opinions based on non-systematic reviews of results or mechanistic studies

REPORT 8 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH
Increased Transparency Among Psychotropic Drug Administration in Prisons

EXECUTIVE SUMMARY

BACKGROUND. American Medical Association (AMA) Policy D-430.990, "Increased Transparency Among Psychotropic Drug Administration in Prisons," requests that our AMA "study issues surrounding the use of psychotropic medications in the carceral system, including inconsistencies in dosage, frequency, duration, allowed formularies, side effects, and oversight by a psychiatrist or another physician with expertise in mental illness."

METHODS. English-language reports, peer-reviewed articles, white papers, government publications, and grey literature were selected from PubMed and Internet search, using the text terms "psychotropic medication," "drug administration," "carceral," "correctional," "prison," and "jail." Additional articles were identified by manual review of the references cited in these publications. Further information was obtained from the Internet sites of organizations that specialize in carceral health care including the treatment of mental health disorders and medication management.

RESULTS. This report examines the administration of psychotropic medications in U.S. carceral settings, focusing on transparency, ethical standards, and continuity of care. Findings reveal significant variability in medication practices across federal and state prisons and jails, with limited standardized guidelines and oversight. While psychotropic medications are essential for managing mental health disorders, their use is often constrained by restrictive formularies, staffing shortages, and budget limitations that compromise continuity of care and equitable access to treatment. At the same time, rising prescription trends in jails underscore growing mental health needs, yet variability in policies and practices continues to create disparities. Policies governing involuntary medication lack uniformity, with many states omitting duration limits or independent review mechanisms, raising concerns about patient autonomy and due process. Overall, trends indicate a marked increase in psychotropic prescribing in jails over the past decade, particularly antipsychotics reflecting growing mental health needs but also highlighting systemic gaps in access, monitoring, and ethical safeguards.

CONCLUSION. Psychotropic medication use in carceral settings presents complex clinical, ethical, and operational challenges that demand greater transparency and evidence-based oversight. While these medications are essential for managing mental health disorders, their administration must adhere to rigorous standards of assessment, informed consent, and ongoing monitoring to prevent misuse as a means of control. Addressing these challenges will require policy reforms that strengthen oversight, standardize care protocols, expand affordable drug access, and ensure that carceral settings uphold constitutional and ethical obligations to provide safe, humane, and clinically appropriate treatment.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 8-A-26

Subject: Increased Transparency Among Psychotropic Drug Administration in Prisons

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee E

American Medical Association (AMA) Policy D-430.990, "Increased Transparency Among Psychotropic Drug Administration in Prisons," adopted at the 2025 Annual Meeting directs the following:

1. Our AMA will study issues surrounding the use of psychotropic medications in the carceral system, including inconsistencies in dosage, frequency, duration, allowed formularies, side effects, and oversight by a psychiatrist or another physician with expertise in mental illness.
2. Our AMA supports increased transparency from jails and prisons surrounding protocols pertaining to the administration of psychotropic medications, including components such as dosage, frequency, duration, allowed formularies, management of side effects, and requirements for oversight by a psychiatrist or another physician with expertise in mental illness.

This report examines the use of psychotropic medications in carceral settings (i.e., jails and prisons) including drug formulary considerations, evidence-based policies, as well as the legal right to health care for individuals in carceral settings.

METHODS

English-language reports, peer-reviewed articles, white papers, government publications, and grey literature were selected from PubMed and Internet search, using the text terms "psychotropic medication," AND "carceral," OR "correctional," OR "prison," OR "jail"; "drug administration," AND "carceral," OR "correctional," OR "prison," OR "jail". Additional articles were identified by manual review of the references cited in these publications. Further information was obtained from the Internet sites of organizations that specialize in carceral health care including the treatment of mental health disorders and medication management.

BACKGROUND

The U.S. has the largest incarcerated population in the world with over 2 million people in carceral settings.[1] Individuals in jails and prisons have a higher rate of chronic conditions, substance use, and mental health disorders when compared to the general population.[2] A national survey reported that in the U.S. "there are now more than three times more seriously mentally ill persons in jails and prisons than in hospitals;" some states, such as Arizona and Nevada, had almost 10 times more.[3] A 2019 report found that 52 percent of those arrested two or more times reported a substance use disorder in the past year and 25 percent of people with multiple arrests reported having a serious mental illness (See Appendix 1).[4] Mental health courts and other deflection

programs serve as a mechanism to link eligible individuals to court-supervised, community-based treatment. AMA policy is supportive of diversion programs including mental health courts and drug courts to direct people to treatment programs in the community, but these are outside of the scope of this report. Deflection programs, immigration detention, and juvenile detention centers are also beyond the scope of this report.

The most recent government report and survey of incarcerated individuals compiled information from 233 state and federal prisons, 358 jails, and 15 special facilities (military, Indian country, and Immigration and Customs Enforcement facilities).[5] Nearly a quarter (24 percent) of the prisoners who had ever been told they had a mental disorder had major depressive disorder, 18 percent had bipolar disorder, 13 percent had post-traumatic stress disorder (PTSD) or a personality disorder; and 9 percent had schizophrenia or another psychotic disorder.[5] With the exception of personality disorder, local jail inmates were more likely than state prisoners to have been told they had each type of mental health disorder.[5] Studies also indicate that 60–87 percent of people in carceral settings have co-occurring mental health and substance use disorders (CODs).[6,7] However, few existing specialized COD treatment programs have been developed for carceral settings, in part due to the lack of integrated treatment programs in carceral settings.[8] Appropriate psychotropic medications are an effective intervention for treating mental health disorders and are generally the standard of care, particularly for serious mental illness.

DISCUSSION

Mental Health Disorder Screening

Timely psychiatric assessment is essential to prevent psychiatric deterioration following arrest, yet formal guidelines remain limited.[10,11] Best practices recommend screening for high-risk conditions during medical intake and prioritizing rapid evaluation for individuals with serious mental illness, prior hospitalizations, or suicidal behavior.[11] National Commission on Correctional Health Care (NCCHC) standards note that "screening may be done by qualified mental health professionals or by mental health staff, and when the results are positive for mental health problems, the inmate must be referred to qualified mental health professionals (e.g., psychiatrist, psychologist, psychiatric nurse, psychiatric social worker) for further evaluation."[12,13] Research shows that individuals screened for mental health conditions at intake are significantly more likely to be evaluated by a medical professional, which in turn increases the likelihood of receiving consistent pharmacologic treatment for their condition.[9]

Psychotropic Medications

Psychotropic medications are drugs that alter neurotransmitter activity at synapses in the brain and are the cornerstone of treatment for mental health disorders. They are often used to treat and manage behavioral and psychiatric symptoms.[14] There are five major categories of psychotropic medications: (1) antipsychotic medications; (2) antidepressants; (3) anxiolytic medications; (4) stimulants; and (5) mood stabilizers (See Appendix 2 for common psychotropic medications).[15–17]

In addition to providing relief to specific symptoms of mental health disorders, psychotropic medications have adverse side effects including producing a sedative effect, tardive dyskinesia, muscular rigidity, seizures, depression, or increased risk of suicide.[15,33] Inappropriate administration of psychotropic medications can further impair functioning. Although advances in the psychopharmacological field have produced a new generation of psychotropic drugs that result in less adverse side effects, most prisons employ the older medications which are less expensive.[34,35]

Use and Prevalence of psychotropics in prisons and jails

Individuals in carceral settings often face significant barriers to receiving or continuing psychotropics for mental health conditions.[2] Barriers to receiving or continuing psychotropics include a shortage of qualified psychologists and psychiatrists, reliance on screening tools designed primarily for security risk rather than diagnostic accuracy, limited carceral budgets that prioritize only the most severe cases, and the high cost and logistical difficulties associated with off-site specialized programs.[9] Additionally, research on psychotropic medication use among those in carceral settings remains limited, partly because this population is a protected research class.

The prevalence of psychotropic prescribing in carceral settings is substantially elevated compared to the community, with recent data showing significant increases across all medication classes from 2013 to 2023, including a 249 percent increase in antipsychotic prescriptions.[18] Women in prison receive psychotropic medications at particularly high rates (47.9 percent), approximately six times higher than the general population.[19] There are multiple key considerations related to the use of psychotropic medications, particularly in carceral settings.

The states with the highest percentage of prison inmates receiving psychotropic medication report that approximately 20 percent of their inmates were on such medications.[20] In Louisiana, Maine, Nebraska and Wyoming at least one in four inmates participated in mental health therapy or counseling programs.[20] In Nebraska state prisons specifically, 56 percent of inmates suffer from a mental illness, 16 percent have a serious mental illness, and 25 percent of male inmates and 50 percent of female inmates are prescribed psychotropic medications.[21] Only three states, North Dakota, Rhode Island, and Wyoming, lack dedicated psychiatric facilities and instead place prisoners who require mental health treatment in state hospitals, prison infirmaries, or in special needs units within general confinement facilities.[20] However, this data is from 2000-2001 data, and there is a need for updated studies in a field where pharmacologic and administrative processes are rapidly progressing.

Recent data shows a shift towards the increased use of medications in jails. [23-24] An analysis of psychotropic prescribing trends in 34 jails over an 11-year period (2013–2023), based on data from more than 1.25 million detainees' health records, revealed a significant increase in medication use over time (See Appendix 3).[25] Similarly, a study that assessed prescription patterns for individuals before and after COVID-19 in 18 county and municipal jails found that prescription patterns in all major therapeutic drug classes steadily increased, with 10 percent more people prescribed at least one drug post COVID-19 in 2023, despite the jail census decreasing over this time.[26] Prescription increases were observed across central nervous system medications including antipsychotics, antidepressants, and antianxiety medications (See Appendix 4).[26]

Medication Administration, Continuity, and Monitoring

Psychotropics, particularly selective serotonin reuptake inhibitors (SSRIs) or selective norepinephrine reuptake inhibitors (SNRIs), can take up to 12 weeks of administration to achieve efficacy and conversely may cause significant withdrawal symptoms if abruptly stopped.[27] Continuity of psychotropic medications in carceral settings is less than optimal, with reports of more than 50 percent of those on psychotropics for mental health disorders not receiving them while in prison.[9] The NCCHC standard requires that individuals entering a correctional facility continue receiving their clinically indicated prescription medications without interruption, unless a qualified clinician determines a justified change.[28]

Coordination and continuity of care are often disrupted for a multitude of reasons in prisons and jails, such as inadequate screening, lack of health professional staff, and inmate refusal – this can

lead to the people in carceral settings being under prescribed psychotropic medications that they were previously prescribed.[9,29] Maintaining continuity of psychotropic medications in carceral settings is a persistent challenge. During intake, transfers, or initial health assessments, incarcerated individuals often cannot provide complete or accurate details about their medication history—such as drug names, dosages, and schedules.[10] Records from community providers and pharmacies rarely accompany them, and obtaining these records typically requires a signed release of information.[10] Intake staff may attempt to verify prescriptions by contacting community pharmacies, but delays are common. While electronic medical records can enhance communication, the lack of interagency agreements for sharing of information often delays verification of medications, diagnoses, and recent treatment dates.[10]

In jails, where stays are typically short, strategies such as "bridge orders" can help maintain continuity of care by temporarily continuing outpatient medications until a psychiatrist can conduct an evaluation.[11] These orders should be time-limited and supported by collateral information from pharmacies, community providers, or family members to ensure accuracy and expedite appropriate treatment.[11]

Administration of psychotropics often requires significant monitoring, such as electrolytes, renal function, and cardiac monitoring for safety.[30,31] Ongoing assessment of prescription effects are essential to evaluate therapeutic response, detect adverse effects, and adjust treatment plans as clinically indicated. Certain antipsychotics are subject to additional monitoring through Risk Evaluation and Mitigation Strategies (REMS) programs, a Food and Drug Administration (FDA) mandated safety program required for medications that carry serious risks.[32] These additional monitoring requirements limit access to these agents in carceral settings.

Continuity of care, including discharge planning, is equally important to reduce health risks. Discharge planning should include providing enough medication or refills until the patient sees a community provider, using affordable and widely available psychotropics, and considering long-acting formulations.[10] For those on parole, coordination with parole departments can make adherence to mental health treatment a condition of release.[10] Additionally, the release dates for people in local jails are often unpredictable posing significant challenges to discharge planning. These have the potential to be mitigated through bridge prescriptions, rapid medication verification, expedited linkage to care. Medicaid re-enrollment on discharge and telehealth handoffs to community healthcare providers can support the continuity of psychotropic care. When a lack of discharge planning and continuity of care are not executed well this can lead to increased risk of psychiatric decompensation, return to illicit substance use, overdose, and suicide.

Involuntary Administration

Incarceration does not alter the fundamental medical, ethical, or legal requirements for informed consent, and therefore the involuntary administration of psychotropic medications in carceral settings raises significant clinical and ethical concerns. Most available information on the use of psychotropic medications to control, rather than treat, incarcerated individuals comes from inmate self-reports and human rights organizations, as carceral institutions rarely disclose intentional use of psychotropic medications for coercion or control.[33] It is important to distinguish evidence-based psychiatric treatment, delivered to address a diagnosed mental health disorder, from pharmacologic behavioral management used primarily for institutional convenience or security. Chemical restraint, even when framed as treatment, is governed by distinct ethical and clinical standards and requires heightened justification, procedural safeguards, and oversight. Health conditions may result in behavior that puts patients at risk of harming themselves. In such situations, it may be

ethically justifiable for physicians to order the use of chemical or physical restraint to protect the patient (See Code of Medical Ethics 1.2.7 Use of Restraints and CSAPH Report 4, A-25).
An analysis of state Department of Corrections (DOC) and Federal Bureau of Prisons (BOP) policies related to mental health found that 35 out of the 36 states (97 percent) with publicly available information allowed the involuntary use of psychotropic medications in emergency situations; this correlates to 76 percent (one million) of the total incarcerated population in the U.S (See Appendix 5).[36] Additionally, state policies vary widely in both the allowable types and maximum duration of involuntary psychotropic medications; while some states specify these limits in statute or policy, others provide no guidance at all (See Appendix 6).[36] Many laws and policies lack mechanisms for independent review or appeals, effectively placing decisions about treatment in the hands of individuals who may not be mental health professionals.[36]

There are also ethical considerations as carceral facilities may justify involuntary sedation arguing that the policy is necessary for the safety of others in the prison environment.[37] The American Psychiatric Association (APA) states that non-emergency involuntary administration of psychotropic medication in jails presents a complex ethical dilemma, balancing beneficence—the obligation to alleviate suffering and restore functioning—against autonomy, the right of individuals to make decisions about their own care.[38] While such treatment can reduce symptoms, prevent harm of the prisoner and others, and improve outcomes such as reducing disciplinary infractions and facilitating legal resolution, it also carries significant risks.[38] Involuntary medication should only occur after reasonable attempts at voluntary engagement have failed, under strict procedural safeguards, and with adequate clinical oversight.[38] Where clinically appropriate, psychiatric hospitalization should remain an alternative to ensure patient safety and uphold ethical standards.[38]

Psychotropic administration challenges

There are variabilities in medication practices across carceral settings. A survey of 51 county jails in Missouri found that most jails (74 percent) never charged a fee for medication administration, while 22 percent always did, creating potential barriers for individuals without income or Medicaid eligibility.[23] While some states permit correctional officers to administer medications dispensed from the pharmacy, the NCCHC advises that these staff receive specialized training in security, accountability, side effects, and documentation.[10] In a state survey of 51 county jails in Missouri, 57 percent of jails could administer long-acting injectable antipsychotics, and 49 percent performed weekly lab tests.[23]

In the 51 Missouri jails, medication restrictions were common — 11 jails refused all controlled substances, 16 excluded benzodiazepines, and 20 excluded opioids.[23] Additional limitations included quetiapine, gabapentin, bupropion, and trazodone.[23] Many jails did not allow individuals to use their own medications upon discharge from psychiatric facilities.[23] Despite the benefits of LAIAs for treatment, oral medications were preferred due to cost and logistical challenges, especially in facilities lacking on-site medical staff.[23] It is important to note that this is a state specific example and the generalizability to other states is unknown. However, these findings highlight significant gaps in access and continuity of psychiatric care in jails, with financial and operational barriers limiting evidence-based treatment. [23]

Psychotropic drugs are rarely classified as “keep on person,” where incarcerated persons can maintain their own medications, due to concerns about adherence and misuse. Medication diversion represents a significant security concern, necessitating direct observation of medication administration and careful monitoring of controlled substances.[39] While certain state DOC settings have allowed lower-risk psychotropic medications to be self-administered on a case-by-case basis,

at least one system discontinued this practice after discovering that patients were "hoarding" medications for nonmedical purposes.[10]

Drug Formulary Considerations

Drug formularies in carceral settings play a critical role in incarcerated patients' access to psychotropic medications, imposing significant restrictions on treatment options, often to lower cost by providing older medications. Over one-quarter (28 percent) of jails have a formulary. For example, the California Correctional Health Care Services formulary bans or limits access to at least 14 commonly used psychiatric medications, including bupropion, quetiapine, gabapentin, and hydroxyzine.[40] While formulary restrictions can limit access to certain psychotropic medications, they may also serve clinical and security purposes, as some commonly restricted agents carry significant potential for misuse, underscoring that such policies can present both benefits and harms. A review of jail formularies in Texas revealed significant variability in practices, driven primarily by local decision-making rather than medication cost.[40] The Pharmacy and Therapeutics Committee in carceral settings oversees medication management by maintaining the formulary and reviewing requests for nonformulary medications.[10]

There are significant policy-level barriers to pharmaceutical purchasing in carceral systems, notably the restrictions on Medicaid coverage.[41,42] Few jails offer the same range of medications available in state hospitals, and omissions often include inexpensive and commonly used drugs. In some cases, facilities include costly antipsychotics while excluding essential, lower-cost options.[43] These inconsistencies highlight the absence of standardized formulary policies and raise concerns about equitable access to evidence-based psychiatric care as well as unnecessary elevations in cost.[43] Similar restrictions appear in the BOP national formulary, which also limits medications like fluoxetine and venlafaxine, two of the most commonly used antidepressant medications.[40] The BOP allows temporary use of nonformulary medications for up to four days if withholding them would pose a significant risk to the patient.[40] However, determinations of what constitutes a 'significant risk' are inherently subjective and treatment options may depend more on formulary rules than on clinical need or appropriateness of the medication, raising concerns about equitable access to care.[40]

Carceral Health Care Staff and Oversight

The composition of health care teams in carceral facilities varies by facility size and inmate population. Larger institutions often employ multidisciplinary teams, while smaller facilities may rely on a single clinician with specialty care delivered on-site through contracted physicians, telehealth, or off-site referrals. Despite financial incentives state prisons have lost 12 percent of their full-time workforce over the past decade, with most of the decline occurring during the pandemic, while local jails experienced a smaller but notable reduction (7 percent).[44] The APA recommends one prescriber for every 75 to 100 patients with serious mental illness on psychotropic agents in jails, and one prescriber for every 150 such patients in prisons.[45] However, many facilities face persistent staffing shortages utilizing psychologists in place of physicians. Physicians are needed for oversight and to prescribe psychotropic medications because safely managing these powerful drugs requires extensive medical training in physiology, pharmacology, diagnosis, and the management of complex comorbid conditions that psychologists and other non-medical professionals do not receive.[46]

CURRENT AMA POLICY

Our AMA maintains a broad set of policies relevant to this report, including support for diversion programs (H-100.955 "Support for Diversion Programs, Including Drug Courts, Mental Health Courts, Veterans Courts, Sobriety Courts, and Similar Programs"), support for the provision of adolescent health care within detention and correctional facilities (H-60.986, "Health Status of Detained and Incarcerated Youth"), and justice reinvestment initiatives (H-95.931, "AMA Support for Justice Reinvestment Initiatives").

Additional policies address drug safety and REMS (H-100.961, "The Evolving Culture of Drug Safety in the United States: Risk Evaluation and Mitigation Strategies (REMS)"), behavioral health emergency practices in carceral settings (H-345.969, "Carceral Systems and Practices in Behavioral Health Emergency Care"), prevention of unnecessary hospitalization or jail confinement (H-345.995, "Prevention of Unnecessary Hospitalization and Jail Confinement of the Mentally Ill"), and mental health crisis interventions (H-345.972, "Mental Health Crisis Interventions").

The AMA also supports access to health care while incarcerated (H-430.986, "Health Care While Incarcerated") and standards of care for correctional facilities (H-430.997, "Standards of Care for Inmates of Correctional Facilities"). Further policies include guidance on medications for opioid use disorder (H-430.987, Medications for Opioid Use Disorder in Correctional Facilities"), minimum requirements for medication formularies (H-110.958, "Minimum Requirements for Medication Formularies"), and best practices for acute care of patients in law enforcement or correctional custody (D-430.993, "Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections").

In efforts to improve the administration of psychotropic medications, in 2024 AMA released "Psychopharmacology How-To Guide," which offers primary care physicians practical strategies and evidence-based resources on when and how to treat patients with psychotropic medications if deemed medically necessary.[47] This is part of AMA's efforts to improve health care by overcoming obstacles to accessible and equitable treatment for patients' behavioral, mental, and physical health needs.

CONCLUSION

Psychotropic medication use in carceral settings presents complex clinical, ethical, and operational challenges that demand greater transparency and evidence-based oversight. While these medications are essential for managing mental health disorders, their administration must adhere to rigorous standards of screening and assessment, informed consent, and ongoing monitoring to prevent misuse and improve outcomes. Involuntary treatment, though sometimes clinically necessary, raises profound ethical concerns and procedural safeguards should be in place to balance beneficence with autonomy. Systemic barriers, including inconsistent formularies, staffing shortages, and opaque pharmaceutical purchasing processes, further compromise continuity of care and equitable access to psychotropic medications and treatment.

RECOMMENDATION

The Council on Science and Public Health recommends that the following be adopted, and the remainder of the report be filed:

1. That policy D-430.990, "Increased Transparency Among Psychotropic Drug Administration," be amended by addition and deletion to read as follows:

   A. ~~Our AMA will study issues surrounding the use of psychotropic medications in the carceral system, including inconsistencies in dosage, frequency, duration, allowed formularies, side effects, and oversight by a psychiatrist or another physician with expertise in mental illness.~~

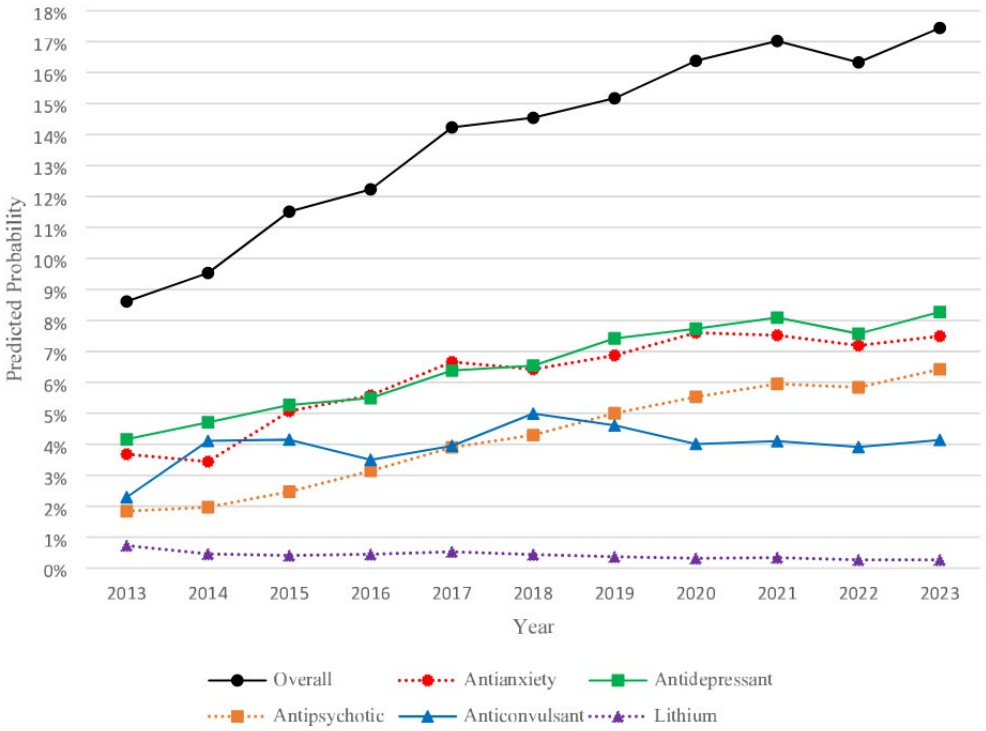
   Our AMA supports increased transparency from jails and prisons surrounding mental health care, including utilization ~~protocols pertaining to the administration~~ of psychotropic medications, and corresponding patient outcomes, potential harms, and system challenges. ~~including components such as dosage, frequency, duration, allowed formularies, management of side effects, and requirements for oversight by a psychiatrist or another physician with expertise in mental illness.~~

   B. Our AMA acknowledges the importance of continuity of care for mental health disorders in carceral settings and encourages incorporation of programs and procedures to promote evidence-based continuity of care, including bridge programs, medication verification protocols, access to qualified physicians, and post-release linkage to community clinics for continued care. (Modify Current HOD Policy)

2. That our AMA reaffirm the following HOD policies:

   H-130.932, "Pharmacological Intervention for Agitated Individuals in the Out-of-Hospital Setting;" H-430.997, "Standards of Care for Inmates of Correctional Facilities;" H-430.986, "Health Care While Incarcerated;" D-430.997, "Support for Health Care Services to Incarcerated Persons;" and H-110.958, "Minimum Requirements for Medication Formularies." (Reaffirm HOD Policy)

Fiscal Note: Minimal



APPENDIX 1. People with Multiple Arrests that have Serious Health Needs[4]

APPENDIX 2. Common Psychotropic Medications, Their Indications, and Considerations[30,31,48–57]

Class	Examples	Typical Dosing	Primary Indications	Key Side Effects	Monitoring
SSRIs	Sertraline, Escitalopram, Fluoxetine, Citalopram, Paroxetine	Sertraline: 50-200 mg/day; Escitalopram: 10-20 mg/day; Fluoxetine: 20-80 mg/day; Citalopram: 20-40 mg/day	Depression, anxiety disorders	GI symptoms, sexual dysfunction, hyponatremia, insomnia; Citalopram: QTc prolongation	Hyponatremia risk (especially with thiazides), bleeding risk with anticoagulants
SNRIs	Venlafaxine, Duloxetine, Desvenlafaxine	Venlafaxine: 150-375 mg/day; Duloxetine: 60-120 mg/day; Desvenlafaxine: 50 mg/day	Depression, anxiety, neuropathic pain	Hypertension, tachycardia, GI symptoms, sexual dysfunction, increased sweating	Blood pressure (especially venlafaxine >300 mg/day), lipids
Atypical Antidepressants	Bupropion, Mirtazapine, Trazodone	Bupropion: 300-450 mg/day; Mirtazapine: 15-45 mg/day; Trazodone: 150-500 mg/day	Depression, insomnia (trazodone)	Bupropion: insomnia, anxiety; Mirtazapine: sedation, weight gain; Trazodone: sedation, priapism	Bupropion: seizure risk; Trazodone: QTc, orthostatic hypotension
Tricyclic Antidepressants	Amitriptyline, Nortriptyline, Desipramine	Amitriptyline: 25-300 mg/day; Nortriptyline: 25-150 mg/day; Desipramine: 25-300 mg/day	Depression, neuropathic pain	Anticholinergic effects, sedation, weight gain, orthostatic hypotension, arrhythmias	ECG, avoid in ischemic heart disease; therapeutic drug levels for nortriptyline
Second-Generation Antipsychotics	Risperidone, Quetiapine, Aripiprazole, Olanzapine, Lurasidone	Risperidone: 0.25-6 mg/day; Quetiapine: 150-800 mg/day; Aripiprazole: 2-30 mg/day; Olanzapine: 5-20 mg/day	Schizophrenia, bipolar disorder, augmentation for depression	Metabolic syndrome (weight gain, hyperglycemia, dyslipidemia), sedation, EPS, hyperprolactinemia, QTc prolongation	Baseline and periodic: BMI/waist circumference (monthly x3, then at 6 mo, yearly), fasting glucose/HbA1c, lipids; AIMS for tardive dyskinesia
Mood Stabilizers	Lithium, Valproate	Lithium: 600-1,200 mg/day; Valproate: variable	Bipolar disorder, augmentation for depression	Lithium: tremor, polyuria, hypothyroidism, renal impairment; Valproate: weight gain, sedation, hepatotoxicity, teratogenicity	Lithium: levels (0.6-1.2 mEq/L), renal function, thyroid; Valproate: levels, LFTs, CBC
Stimulants	Methylphenidate, Amphetamines	Methylphenidate: variable; Amphetamines: variable	ADHD, narcolepsy	Decreased appetite, insomnia, cardiovascular effects, growth suppression in children	Blood pressure, heart rate, growth parameters in children
Anxiolytics/Hypnotics	Benzodiazepines, Z-drugs	Variable by agent	Anxiety, insomnia	Sedation, dependence, cognitive impairment, falls	Assess for dependence, falls risk in elderly

APPENDIX 3. Predicted Probabilities of Prescribed Psychotropic Medications by Year[25]

APPENDIX 4. Prevalence Estimates and Demography of Individuals Prescribed Select Pharmaceutical Agents / Products by Year[26]

	Year

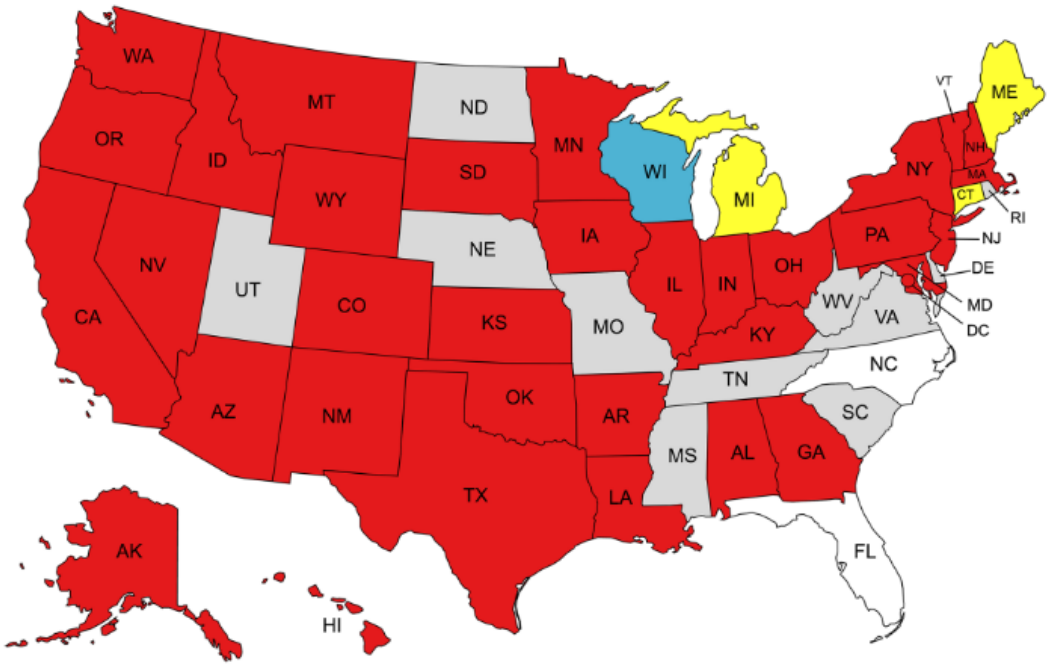
APPENDIX 5. State Policies on Emergency and Non-Emergency Administration of Psychotropic Medications[36]



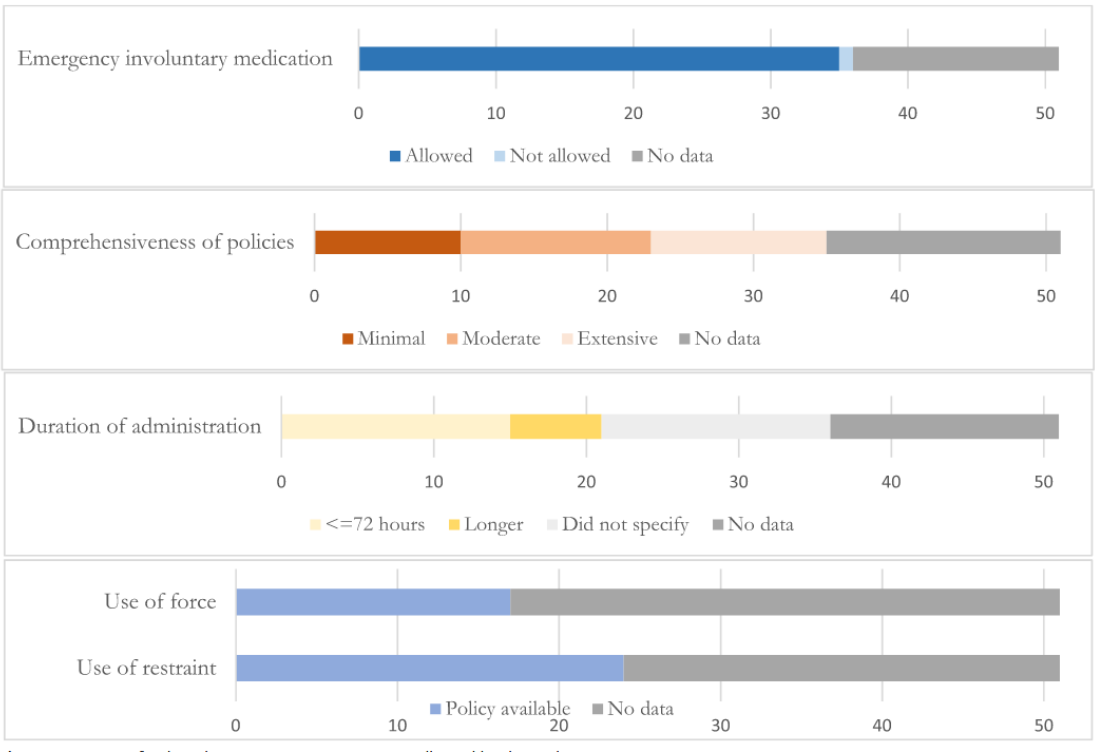


Fig. 1 Policies regarding emergency and non-emergency involuntary administration of psychotropic medication across the United States. Federal Bureau of Prisons is represented by District of Columbia (DC). Red = available policies on involuntary administration of psychotropic medication explicitly allow use in emergency situations, Blue = available policies on involuntary administration of psychotropic medication allow use in non-emergency situations, but do not specify use in emergency situations, Yellow = available policies on involuntary administration of psychotropic medication do not distinguish between emergency and non-emergency use, Gray = no policy data or insufficient data, White = excluded from analysis due to withdrawn policy or limited in scope. Source: Data collected by the authors; map created in mapchart.net

APPENDIX 6. Summary of State Policy Characteristics for the Use of Psychotropic Medications[36]

REPORT 9 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-26)
In Support of a National Drug Checking Registry

EXECUTIVE SUMMARY

BACKGROUND. Policy D-95.950, "In Support of a National Drug Checking Registry" as adopted by the House of Delegates at 2025 Annual Meeting and asked that our AMA "study the creation of a national drug-checking data system that would provide a mechanism whereby community-run drug-checking services may communicate their de-identified results, with legal protections, data use agreements, and user opt-in/opt-out mechanisms."

METHODS. English-language reports, peer-reviewed articles, white papers, government publications, and grey literature were selected from PubMed and Internet search, using the text terms "drug checking." Additional articles were identified by manual review of the references cited in these publications. Further information was obtained from the Internet sites of organizations that specialize in community drug checking, data collection, and legal protections of public health data.

DISCUSSION. Drug checking programs across the United States (U.S.) provide valuable, timely insights into the evolving illicit drug supply, using a range of technologies, from inexpensive test strips to advanced spectrometry, to detect adulterants including unexpected or novel psychoactive substances. These programs have demonstrated measurable effects on participant attitudes and intended behaviors, with many individuals reducing doses, modifying practices, consuming more slowly, using test shots, or disposing of contaminated substances after receiving unexpected results. Multiple states, including Michigan, Illinois, Rhode Island, and North Carolina, have shown that drug checking and dashboards are both feasible and valuable, providing timely insight into local drug markets and supporting more informed public health responses. As these systems continue to expand, the challenge is how to scale such models in ways that are ethical, safe, and responsive to the needs of diverse populations and stakeholders. This report highlights significant legal variability across states regarding the possession, distribution, and use of drug checking equipment, creating ongoing barriers to scaling these services nationally. Finally, existing data systems, funding structures, and public health frameworks illustrate both the usefulness of drug checking data and the need for stronger, more consistent protections, governance models, and infrastructure to support emerging statewide and multistate dashboards.

CONCLUSION. Despite their promise, national drug checking efforts face substantial feasibility barriers. Legal uncertainty, state by state variability in paraphernalia laws, and the persistent risk of criminalization complicate implementation and may deter program participation. Governance questions—including who oversees the data, how it may be used, and what protections prevent misuse—are particularly critical given the vulnerabilities of the communities served and the increasingly politicized landscape surrounding harm reduction strategies. To move forward responsibly, any national drug checking registry must be grounded in data protection standards, privacy compliance, deidentification, and ethical principles that minimize risks and ensure public health benefits are achieved without exacerbating harm.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 9-A-26

Subject: In Support of a National Drug Checking Registry

Presented by: Padmini Ranasinghe, MD, MPH, Chair

Referred to: Reference Committee E

Policy D-95.950, "In Support of a National Drug Checking Registry," was adopted by the House of Delegates at the 2025 Annual Meeting and directs the following:

> Our AMA will study the creation of a national drug-checking data system that would provide a mechanism whereby community-run drug-checking services may communicate their de-identified results, with legal protections, data use agreements, and user opt-in/opt-out mechanisms.

This report focuses on the value of drug checking tools and services, evidence for the use of drug checking, data protection measures, and ethical considerations.

METHODS

English-language reports, peer-reviewed articles, white papers, government publications, and literature were selected from PubMed and Internet search, using the text terms "drug checking." Additional articles were identified by manual review of the references cited in these publications. Further information was obtained from the Internet sites of organizations that specialize in community drug checking, data collection, and legal protections of public health data.

BACKGROUND

Despite decades of prohibition under the 1970 Controlled Substances Act, illicit drug use remains widespread in the United States (U.S).[1] People who use drugs (PWUD) often lack accurate information about the substances they ingest, inhale, insert and inject, increasing the likelihood of polydrug exposure and unexpected contact with potent adulterants such as fentanyl and its analogues. In this context, drug checking is a critical tool for improving safety by providing real-time insight into drug composition for PWUD, community outreach, researchers, and health care professionals.[2]

Drug checking, the use of technology to provide user insight into the contents of illicit drug products, is an overdose prevention strategy with an emerging evidence base.[3–8] There were 105,007 overdose deaths in 2023 and 80,135 in 2024, primarily from illicit drug use.[9] According to the European Union Drugs Agency, "drug-checking services…provid[e] information on the content of the samples as well as advice, and, in some cases, counselling or brief interventions."[10] Drug checking provides real-time, accurate information on street-level drug composition allowing PWUD to understand the composition of the substances they consume.

In addition to illicit substances, drug checking services are increasingly encountering regulated pharmaceuticals that are being diverted, compounded, or sold on the illicit market, including products such as hormones and GLP-1 medications. Studies on hormones are limited and often do not reflect the U.S. context, but they have documented counterfeit semaglutide products entering the U.S. through illegal online pharmacies. One investigation found that test-purchased semaglutide products from unregulated online vendors contained 7-14 percent purity (versus advertised 99 percent), delivered 29-39 percent more semaglutide than labeled, and showed evidence of endotoxin contamination.[11] The American Diabetes Association has warned that counterfeit products have made their way into the U.S. drug supply chain through online and unregulated sources.[12] Compounded GLP-1s (primarily semaglutide and tirzepatide) have proliferated through online vendors, with 79 websites identified selling these products, though these represent unregulated pharmaceutical products rather than illicit drugs.[13] A poison center study documented a sharp increase in GLP-1 exposures, predominantly from unintentional therapeutic errors, with some patients obtaining medications through online platforms and poorly regulated compounding sources.[14] These findings highlight that drug checking contends not only with illicit substances but also misrepresented or compounded regulated drugs, reinforcing the need for adaptable testing strategies capable of handling a diverse and unpredictable drug supply.

Drug Checking Technologies

There are a wide range of analytical instruments utilized in drug checking including immunoassay test strips, reagent tests, infrared absorption spectroscopy , Raman spectroscopy, surface-enhanced Raman spectroscopy (SERS), and gas chromatography mass spectrometry (GCMS). Each technology presents a unique balance of strengths and limitations, often requiring programs to weigh accuracy, portability, cost, required expertise, and environmental constraints when choosing testing mechanisms (See Appendix 1).

Drug checking technologies vary widely in complexity, sensitivity, and practical application, offering complementary strengths for identifying substances in an increasingly unpredictable drug supply. Basic tools such as immunoassay test strips and reagent tests are inexpensive, easy to use, portable, and well-suited for high volume or low resource environments, though they are limited by risks of false positives or negatives, lack of standardization, and their inability to detect concentration levels or all drug analogues.[15] More advanced spectroscopic methods, Fourier Transform Infrared Spectroscopy (FTIR), Infrared Raman (IR), and its enhanced form SERS, provide rapid, nondestructive identification of major components through chemical "fingerprinting," but their performance varies depending on sampling conditions, fluorescence interference, and instrument sensitivity, especially for trace substances.[15] At the highest level of analytical rigor, portable GCMS delivers highly accurate, trace-level detection and remains the gold standard for confirmatory testing, though it requires technical expertise, careful calibration, and laboratory grade procedures.[15] Together, these technologies illustrate the spectrum of tools available to meet diverse drug checking needs across community, clinical, and mobile settings.

Because each technology involves tradeoffs in cost, portability, speed, and training requirements, drug checking programs benefit from access to multiple technologies. A multi-instrument approach provides clear advantages by allowing verification across methods, increasing confidence when substances are detected by more than one technique. Rapid optical tools like test strips, IR and handheld Raman are sufficient for identifying major components or confirming drug classes, particularly in high population/dense settings such as music concerts and festivals. However, these portable methods struggle when active ingredients are at very low concentrations. In these cases, confirmatory laboratory-based analysis, often using mass spectrometry, remains essential for accurate trace-level detection and quantification. Ultimately, drug checking and an understanding,

© 2026 American Medical Association. All rights reserved.

of each technology's capabilities and constraints can deliver accurate, actionable, and timely information.[15]

Generalizability of Drug Checking Results

The hyper-variability of the unregulated drug supply necessitates a shift toward precision-based harm reduction. A Philadelphia-based program illustrated this by documenting two separate overdose clusters on the same block involving entirely different substances within a 15-minute window.[16] Rather than diminishing the value of the data, this case highlights why drug checking is an indispensable tool for real-time risk assessment. While geopolitical boundaries and historical data offer limited predictive power, drug checking fills a critical gap by providing the individualized, immediate information required to navigate a rapidly shifting supply environment.

DISCUSSION

Potential Health Care and Physician Utilization of Drug Checking Results

Drug checking has the potential to meaningfully inform health care practices by providing clinicians with timely, real-world insight into the rapidly shifting illicit and counterfeit drug supply. Because drug checking technologies can identify both major and trace components in substances, drug checking data can help clinicians better understand what their patients are likely exposed to and tailor clinical care accordingly. For physicians, access to drug checking results can improve the accuracy of overdose assessments, guide decisions about reversal and withdrawal management agents, anticipate polysubstance complications, and inform conversations about secondary prevention. These insights can also help clinicians counsel patients on adulterants that may not be apparent, especially given the rise of counterfeit and substandard regulated pharmaceuticals circulating alongside illicit drugs.

Beyond direct clinical care, drug checking can strengthen surveillance systems and bridge gaps between frontline health care, community-based programs, and public health agencies. Physicians who understand drug checking data may be better equipped to identify emerging trends, such as novel psychoactive substances or unexpected adulteration patterns, before they appear in traditional toxicology or mortality reporting, which often lags behind real-time trends. National efforts like National Drug Early Warning System (NDEWS) and state-level dashboards already demonstrate the value of integrating early warning systems to inform prevention and response strategies across health sectors.[17] As drug checking becomes more widespread, physicians may increasingly rely on these data to guide evidence-informed decision-making, advocate for safer drug supply interventions, and contribute to a more coordinated public health response.

Drug Checking Evidence and Outcomes

Drug checking programs have demonstrated measurable impacts on attitudes and intended behaviors among people who use drugs. Studies consistently show that when individuals receive unexpected or concerning test results—such as confirmation of fentanyl adulteration—they are more likely to express intentions to reduce their dose or avoid using the substance altogether. For example, a supervised injection site in Vancouver, BC reported that 36.3 percent of participants planned to reduce their drug dose after receiving concerning test results, and similar findings were observed in festival settings where unexpected results prompted users to reconsider their intended use.[18,19] However, attitude changes do not always translate into actual behavior change, highlighting the need for education and counseling to reinforce secondary harm prevention practices.[20]

© 2026 American Medical Association. All rights reserved.

Evidence on actual drug use behavior changes is mixed but generally positive. While some participants disposed of adulterated substances after testing, many continued to use them, often with modifications such as smaller doses, slower administration, or using with others present. For instance, in San Francisco, among those who received positive fentanyl test strip (FTS) results, 26.5 percent disposed of the substance, 30.1 percent reduced their use, and 43.4 percent made no changes.[21] Other programs reported adoption of risk reduction behaviors, such as keeping naloxone nearby or injecting a test shot, particularly among individuals who were previously unaware of adulteration. For example, a drug checking program at a syringe services site in the southeastern U.S. reported that 63 percent of FTS results were positive, and individuals who received a positive result were five times more likely to change their drug use behavior compared to those with negative results.[6] Additional positive behaviors included a willingness to share information about FTS and distribute them to peers at high risk of exposure.[22] These findings suggest that drug checking can change behavior, and reduce anticipated lethality, even though complete avoidance usually does not occur.

Legality of Drug Checking

In the absence of federal laws, the legality of drug checking is governed at the state-level. A 50 state survey on the legality of drug checking equipment found that state paraphernalia laws remain a major barrier to scaling drug checking initiatives.[23] Most of these laws are modeled after a DEA framework from the late 1970s which categorize nearly all items associated with illicit drug use as "drug paraphernalia." While enforcement against drug checking equipment (DCE) is rare, these statutes create confusion and may discourage the implementation and funding of drug checking programs.[23]

A review of laws across all 50 states, the District of Columbia, and Puerto Rico between 2021 and 2024 revealed persistent structural barriers that complicate the implementation of drug checking services.[8] The review concluded "…that all forms of DCE are legal to sell, give away, and possess in 20 states. Massachusetts and Michigan allow possession and free distribution of DCE but prohibit its sale. Six states allow possession of all DCE but restrict or prohibit both free distribution and sale. Thirteen states expressly allow the possession, free distribution, and sale of DCE only for specific drugs or with certain types of testing modalities—most commonly fentanyl and fentanyl test strips—while the same activities with all other forms of DCE remains illegal. Two states restrict possession of DCE to only fentanyl test strips, while allowing distribution or sale of DCE more generally. In five states and territories (Indiana, Iowa, North Dakota, Puerto Rico, and Texas) possession, free distribution, and sale of all drug checking equipment remains arguably a crime, typically because the law both defines paraphernalia as including testing equipment and criminalizes the possession of such paraphernalia."[23] The wide variation and criminalization of DCE hinders the ability to establish a national framework for drug checking.

Laws regarding the distribution of DCE by syringe exchange programs (SSPs) are at times legally unclear. In approximately six states, SSPs are permitted to distribute DCE even when such distribution is not otherwise permitted. [23] Good Samaritan laws in 39 states provide protection from criminal action related to DCE. [23] Recently, many states have modified their laws to increase access to DCE. Between August 2021 and August 2024, 37 states modified their laws to increase access to DCE including possession and distribution.[23] However, laws vary by state. [23] For example, the laws in Georgia, Kentucky, and Tennessee are limited to devices used to detect synthetic opioids, while laws in Alabama, Arizona, Florida, Louisiana, Mississippi, Missouri, and South Dakota apply only to objects used to test for fentanyl or fentanyl analogues. Those in Hawaii, and Oklahoma apply only to FTS.[23] In many states where DCE is not clearly legal, distribution occurs through health departments and other entities (Appendix 2).[23] These findings

© 2026 American Medical Association. All rights reserved.

underscore the need for federal and state-level action to provide legal protections for programs and people conducting services. Without such changes, efforts to establish a national drug checking data system will face significant legal and operational challenges.

Funding of Drug Checking Programs

Drug checking programs in the U.S are typically associated with universities, public health departments, and community-based organizations that often work together to publish data and dashboards regarding drugs in their communities. [24–28] Locally, community programs are either privately funded through grants or have grants with their local or state health department through federal funding sources such as Centers for Disease Control and Prevention (CDC). The current government grant funding for drug checking is through the CDC's Overdose Data to Action Local (OD2A: LOCAL) surveillance grants which, "fund jurisdictions to test drug products and/or drug paraphernalia to identify and track emerging public health threats in illicit drug markets so they can understand and respond to drug overdose outbreaks."[29] As of February 2026, 40 health departments are funded by OD2A: LOCAL program in 25 states.[30]

Opioid litigation settlement funds represent a major opportunity to support evidence-based secondary prevention strategies, including drug checking, by financing the infrastructure, workforce, laboratory capacity, and community-based services needed to detect emerging drug threats and reduce overdose deaths. As of November 2025, most states and several U.S. territories have enacted laws governing how opioid settlement funds may be used, while a smaller number rely on written policies, and others absorb the funds into their general budget without spending guidance or are overseen by established councils/committees to approve disbursements or provide recommendations.[31]

Data Protection Measures

Key components for national standards for data protection are adherence to the Health Insurance Portability and Accountability Act (HIPAA) of 1996, safeguarding personally identifiable health information (PII), under HIPAA, the privacy rule sets limits on how protected health information may be used or disclosed, The Security Rule established technical, administrative, and physical safeguards that organizations must implement to protect electronic health information, and The Health Information Technology for Economic and Clinical Health Data Act, which expands HIPAA's privacy and security protections, enhances breach-notification standards, and increases accountability for improper handling of personal health information.[32] These national protection standards are essential for some drug checking efforts because they ensure that sensitive health related information is handled safely, reducing the risk of criminal-legal consequences or misuse of data for people who use these services.

Drug checking and health information can contain highly sensitive details, which, if disclosed, could lead to stigma, reputational harm, and barriers to employment, insurance, or housing. To mitigate these risks, strong privacy protections and data security measures are essential. De-identification is a common strategy that removes direct identifiers, but it does not fully eliminate the risk of re-identification, especially when quasi-identifiers—such as gender or ZIP code—remain in the dataset.[33] De-identified information is commonly used in public health research to prevent information from being traced back to an individual. Although the likelihood of re-identification under HIPAA's Safe Harbor standard is very low (estimated at 0.04 percent), rare attributes can increase this risk.[33] Examples of the types of public health data, vulnerable populations associated with de-identified information, and federal laws governing disclosure are available in Appendix 3 and 4.

Drug Databases that Currently Exist

As of winter 2026, the CDC monitors drug overdoses through two primary systems: the Nonfatal Drug Overdose Surveillance and Epidemiology system, which tracks nonfatal overdoses using near–real-time syndromic emergency department data and finalized hospital discharge records, and State Unintentional Drug Overdose Reporting System, which collects detailed information on fatal overdoses from death certificates, medical examiner and coroner reports, autopsies, and toxicology results across 49 states and DC, together providing a comprehensive picture of both nonfatal and fatal overdose trends.[34,35]

Complementing these systems, the National Drug Early Warning System functions as a real-time national surveillance network that detects emerging drug threats by integrating traditional data sources with rapid signal indicators such as community reports, 911 dispatch data, wastewater analysis, darknet monitoring, and machine learning detection of new psychoactive substances, producing timely intelligence that fills critical gaps left by slower indicators like mortality and treatment data and offering a proactive framework for tracking shifts in drug availability, use patterns, and emerging risks.[17]

In some jurisdictions, useful information can be obtained from data systems covering emergency medical services; from poison centers; and from health departments that maintain records of drug "overdoses" and poisonings. These programs vary between states and within states, and specifics are beyond the scope of this report. Such relationships can enable the sharing of important and mutually helpful statistical data, but the confidentiality requirements of each service must be scrupulously respected. This focus on confidentiality is especially important for drug checking services, which depend entirely on voluntary cooperation from persons who use drugs and thus are especially reliant on their reputation for confidentiality.

Several states have developed online platforms to share drug checking data with the public and health professionals. For example, New York State provides a dedicated webpage through its Department of Health that publishes results from local drug checking programs, including information on substances detected and adulterant trends.[36] Washington State, through the University of Washington, offers a comprehensive drug checking data portal that aggregates results from community-based programs and highlights emerging substances and adulteration patterns.[37]

In addition to dashboards, there are also applications that have been created to allow drug sample collection reporting across programs. The StreetCheck app, developed by Brandeis University's Opioid Policy Research Collaborative and funded through the Massachusetts Department of Public Health, enables users to log test samples—from simple strips to advanced spectrometers—streamlining result delivery and reinforcing prevention messaging in real time.[38] However, users may face challenges without the technical familiarity needed for accurate reporting, whereas trained staff are equipped to ensure correct, complete, and reliable data entry.

There are also dashboards that show available data sent by multiple states. The University of North Carolina at Chapel Hill Street Drug Analysis Lab provides analytical chemistry services to support public health. The lab utilizes GC-MS to confirm chemical formulas of various drugs, enabling highly sensitive and definitive substance identification.[39] The lab is DEA-authorized to handle Schedule I–V controlled substances. As of January 15, 2026, the lab has analyzed 18,667 samples from 41 states, making it a key resource for monitoring drug composition and trends.[40]

The ToxIC SCANNED (Substance Checking and Analysis of New and Evolving Drug) Overdose Surveillance Program is funded by the White House Office of National Drug Control Policy to

© 2026 American Medical Association. All rights reserved.

address critical gaps in understanding the rapidly evolving illicit drug supply.[41] ToxIC SCANNED combines advanced laboratory toxicology, emergency department data, and national drug-checking data to provide real-time insights on geographic trends, patient characteristics, and clinical outcomes.[42] Using residual urine and serum specimens from routine emergency care, the program can identify over 1,200 drugs and metabolites, offering a comprehensive view of substances contributing to medical emergencies and overdoses.[42] This initiative builds on the ToxIC Core Registry, which comprises over 50 locations throughout the U.S., with several international sites also participating. [43] The majority of active U.S. medical toxicology practices and accredited fellowship programs contribute to this registry, creating a robust network for data collection and analysis.[43] By integrating multiple data streams, from biological specimens to seized drug analyses, ToxIC SCANNED delivers a snapshot of the changing drug market.[43] However, while this registry includes some community based drug checking programs, it does not capture all of them.

The Substance Abuse and Mental Health Administration recently affirmed support for education, naloxone, drug-checking supplies, and sharps disposal kits.[44]

CURRENT AMA POLICY

Our AMA supports a comprehensive drug policy approach that includes decriminalizing secondary prevention supplies to reduce health risks associated with drug use (H-95.900, "Supporting Harm Reduction"), eliminating criminal penalties for personal drug possession, and ensuring access to evidence based prevention, treatment, and supportive services tailored to community needs (H-95.901, "Drug Policy Reform"). Additionally, our AMA advocates for removing fentanyl test strips and other drug checking tools from the legal definition of drug paraphernalia, expanding civil and criminal immunity for their possession and distribution, and increasing access to drug checking supplies as a critical strategy to prevent drug related overdose (D-95.987, "Prevention of Drug-Related Overdose").

CONCLUSION

Multiple states have shown that drug checking and dashboards are both feasible and valuable, providing timely insight into local drug markets and supporting more informed public health responses. As these systems continue to expand, the challenge is no longer whether drug checking data can be collected, but how to scale such models in ways that are ethical, safe, and responsive to the needs of diverse populations and stakeholders. Despite their promise, national drug checking efforts face substantial feasibility barriers. Legal uncertainty, state by state variability in paraphernalia laws, and the persistent risk of criminalization complicate implementation and may deter program participation. Governance questions—including who oversees the data, how it may be used, and what protections prevent misuse—are particularly critical given the vulnerabilities of the communities served and the increasingly politicized landscape surrounding harm reduction strategies.

Given these considerations, strong data protection standards must form the foundation of any drug checking data initiative. Safeguards should include strict adherence to federal and state privacy requirements and ethical principles, rigorous deidentification protocols, and protections that minimize both individual and community-level risks of reidentification and to ensure that expanding public health surveillance data does not inadvertently perpetuate stigma, inequity, or harm. With these protections in place, a national framework has the potential to support public health goals while honoring the priorities and safety of the populations most affected.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted, and the remainder of the report be filed:

1. That our AMA: (1) supports drug checking that provides real-world insight into the rapidly shifting drug supply, which helps reduce harm among people who use drugs, better inform clinicians, and enhance public health surveillance efforts; (2) advocates for funding and legal authorization to support drug checking services at the local, county, state, and national level; and (3) will continue to monitor ongoing drug checking efforts. (New HOD Policy)

2. That our AMA reaffirm the following HOD policies: H-95.900, "Supporting Harm Reduction,"; H-95.901, "Drug Policy Reform," and D-95.987, "Prevention of Drug-Related Overdose," (Reaffirm HOD Policy)

Fiscal Note: Minimal

APPENDIX 3. Vulnerable Populations Associated with Different Types of Public Health Data

Centers for Disease Control and Prevention. Legal and Ethical Framework to Use Centers for Disease Control and Prevention Data for Patient-Centered Outcomes Research.

Degrees of identifiability	Explanation of terms	Examples	Possible vulnerable populations	CDC safeguards in addition to technical safeguards
Data with direct identifiers	Information that relates specifically to an individual. The inclusion of a name, Social Security number, or phone number, makes data identifiable.	US Zika Pregnancy Registry[79]	Pregnant women whose fetuses would be at high risk for complications	No access to individual-level data. Information is released to the public in an aggregate form.
Linkable or coded data	Data that is not identifiable, but can be linked to a named person with the use of a secure code.	HIV case reports[80]	Patients infected with HIV	Data is sent from the state health department to CDC using a Soundex code.
Data with indirect identifiers	Information that can be combined with other information to identify specific individuals. Information about location, race, and sex can identify an individual.	National ART Surveillance System (NASS)[81]	Egg donors, surrogate mothers, and children	Only onsite access allowed with a member of the ART team.
De-identified data	Direct and known indirect identifiers in any information are removed or obscured to minimize the risk of unintended disclosure of the identity of individuals.	National Program of Cancer Registry (NPCR) Cancer Surveillance System[82]	Individuals residing in areas with high incidence of certain cancers	Most of the de-identified datasets are publicly available.
Anonymized data	Direct and indirect identifiers have been irreversibly removed or altered so that re-identification is impossible.	NHANES Genetic Data Repository[83]	Patients belonging to minority ethnic groups	Anonymized data is available with a data use agreement.

APPENDIX 4. Federal Laws Governing Exposure of Health Data

Centers for Disease Control and Prevention. Legal and Ethical Framework to Use Centers for Disease Control and Prevention Data for Patient-Centered Outcomes Research.

Law	Provision(s) that allow disclosure of de-identified information	Criteria or standard for determining whether information is identifiable
Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104-191, implemented by the HIPAA Privacy Rule, 45 CFR Part 160 and Part 164.	The HIPAA Privacy Rule applies to protected health information (PHI). The Privacy Rule does not apply to health information that does not identify an individual and with respect to which there is no reasonable basis to believe that the information can be used to identify an individual. 45 CFR § 160.103, 45 §164.500.	Information may be de-identified by removing 18 identifiers specified in the Rule, provided that the covered entity does not have actual knowledge that the remaining information can be used alone or in combination with other reasonably available information to identify a subject (safe harbor de-identification). These identifiers include personal identifiers (such as name, address, telephone number, birth date, Social Security number) and non-personal identifiers (such as geographic information smaller than a state and dates directly associated with an individual). Alternatively, a covered entity may rely on a determination by a properly qualified statistician using accepted analytic techniques who determines that the risk is very small that the information could be used, alone or in combination with other reasonably available information, by an anticipated recipient to identify an individual who is a subject of the information (statistical de-identification). 45 CFR § 164.514.
Protection of Human Research Subjects (Common Rule), 45 CFR part 46, subpart A.	The Common Rule applies when an investigator conducting research **obtains** identifiable "private information" of a living individual (human subject) for use, study, or analysis. Private information must be **"individually identifiable"** for the Common Rule to apply. 45 CFR § 46.102(f).	Private information is individually identifiable when the identity of the subject is or may readily be ascertained by the investigator or associated with the information. 45 CFR § 46.102(f). Note: In its application of the law, the Office for Human Research Protections (OHRP) considers private information or specimens not to be individually identifiable when they cannot be linked to specific individuals by the investigator either directly or indirectly through coding systems. Examples of identifiers would include names, Social Security numbers, medical record numbers, or pathology accession numbers, or any other "code" that permits specimens or data to be linked to individually identifiable living individuals and perhaps also to associated medical information. https://humansubjects.nih.gov/from-applicants https://www.hhs.gov/ohrp/regulations-and-policy/guidance/research-involving-coded-private-information/index.html
Federal Privacy Act 5 U.S.C. § 552a.	The Federal Privacy Act establishes a code of fair information practices that governs the collection, maintenance, use, and dissemination of information about individuals that is maintained in systems of records by federal agencies. The Act protects a "record" of a U.S. citizen or alien lawfully admitted for permanent residence. A "record" includes any item, collection, or grouping of information about an individual that is maintained by a federal agency, including, but not limited to, his education, financial transactions, medical history, and criminal or employment history and that contains his name, or the identifying number, symbol, or other identifying particular assigned to the individual, such as a finger or voice print or a photograph. 5 U.S.C. § 552a(a)(4).	The law does not define or describe de-identification directly, but suggests that a record is de-identified by removing all "identifying particulars." 5 U.S.C. § 552a(a)(4).
Federal Assurance of Confidentiality, Section 308(d) of the Public Health Service Act, 42 U.S.C. § 242m.	This law prohibits use, release, and publication of information, if an establishment or person supplying the information or described in it is identifiable. Applies to information obtained in the course of health statistical, epidemiological, or other activities obtained in the course of certain activities undertaken or supported under the Public Health Service Act.	The law does not define or describe de-identification directly.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 501
(A-26)

Introduced by: Academic Physicians Section

Subject: Preregistration in Medical Research

Referred to: Reference Committee E

Whereas, the scientific method relies on the clear distinction between hypothesis generation (postdiction) and hypothesis testing (prediction) to maintain the credibility of research findings[1-3]; and

Whereas, current practices in medical research often fail to adequately differentiate these processes, leading to overconfidence in findings and the increased likelihood of irreproducible results due to hindsight bias and selective reporting[2-5]; and

Whereas, preregistration is a proven methodology that requires researchers to define and publicly document their research questions, study designs, and analysis plans before data collection or analysis begins, which helps clarify the distinction between exploratory and confirmatory research[1, 2-9]; and

Whereas, evidence suggests that preregistration improves the reproducibility, transparency, and credibility of research findings by reducing biases, clarifying the distinction between exploratory and confirmatory analyses, and mitigating the misuse of statistical inference methods such as null hypothesis significance testing[1, 2, 6, 7, 9]; and

Whereas, numerous platforms and frameworks now exist to facilitate preregistration across disciplines, including clinical trials, and its adoption has been associated with improved research practices, including increased detection of reporting biases and enhanced public trust in scientific findings[2, 6, 8]; and

Whereas, AMA policy H-460.941 supports preregistration; therefore be it

RESOLVED, that our American Medical Association amend policy H-460.941 by addition and deletion to read as follows:

Our AMA will:

(1) take every appropriate opportunity during the health system reform debate and implementation stages to educate the public, the Administration, and Congress about the importance of support for science and biomedical research and about the potential problems if these areas are not given sufficient consideration in health system reform;

(2) take steps to become the coordinating point for efforts, both within and outside of the Federation, to promote, enhance, and defend biomedical science;

(3) continue and expand its efforts to advocate for the primacy of science and biomedical research as the basis of quality medical care by working with and influencing both the private sector and the federal government, including the legislative, executive, and judicial branches;

(4) take necessary steps to monitor the scientific enterprise, establish programs and policies as appropriate, and initiate advocacy efforts as needed;

(5) consider and take the necessary steps to anticipate and establish guidelines to assist physicians and others in responding to the ethical issues emerging from the scientific revolution;

(6) increase its educational efforts to the public and to the profession to explain how science is critical to the future of the profession and to the future development of high quality medical care; and

~~(7) support preregistration in order to mitigate publication bias and improve the reproducibility of biomedical research.~~

(7) recognize the importance of preregistration as a cornerstone of rigorous and reproducible biomedical research:

(8) collaborate with relevant stakeholders to advocate for the integration of preregistration into medical research protocols, emphasizing its use for clinical trials, observational studies, and other research contexts;

(9) collaborate with relevant stakeholders to support efforts to provide training and resources for medical researchers to implement preregistration effectively, including access to standardized registries and education on preregistration practice; and

(10) collaborate with relevant stakeholders in the medical and scientific community to promote policies and incentives that align preregistration with the goals of career advancement, funding acquisition, and publication, fostering a culture of transparency and accountability in medical research.

(Modify Current HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 3/17/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 502
(A-26)

Introduced by: Washington

Subject: Support for Rapid Methadone Inpatient Stabilization and Linkage to Care

Referred to: Reference Committee E

Whereas, Opioid Use Disorder (OUD) impacts 2.5 million adults a year, and in 2021 only 22% of adults with OUD received medications to treat OUD[1]; and

Whereas, emergency department visits and hospitalizations for complications from untreated OUD are teachable moments and opportunities to initiate medications for opioid use disorder; and

Whereas, methadone is an effective treatment for withdrawal management and stabilization for OUD in the fentanyl era[2]; and

Whereas, the Washington state legislature approved a 2024 budget proviso to devote $2,000,000 of the opioid abatement settlement account to implement a rapid methadone inpatient stabilization pilot program designed by the Washington Society of Addiction Medicine (WSAM); and

Whereas, WSAM worked with the Washington State Health Care Authority to create a policy for rapid methadone inpatient stabilization for treatment of OUD in pregnant patients that includes higher-than-traditional doses given twice daily, and linkage to care at time of discharge along with dispensing of naloxone and 72 hours of methadone; and

Whereas, this innovative treatment strategy has demonstrated effectiveness with initial data[3] showing 100% methadone stabilization, 86% attending an opioid treatment program intake visit, and 57% remaining on methadone at 30 days post-discharge; therefore be it

RESOLVED, that our American Medical Association will endorse and advocate for implementation of a rapid methadone inpatient stabilization pathway for treatment of Opioid Use Disorder in pregnant patients, with higher-than-traditional doses given twice daily, and linkage to care at time of discharge along with dispensing an appropriate amount of naloxone and methadone. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

H-420.950 Substance Use Disorders During Pregnancy

1. Our American Medical Association supports brief interventions (such as engaging a patient in a short conversation, providing feedback and advice) and referral for early comprehensive treatment of pregnant individuals with opioid use and opioid use disorder (including naloxone or other overdose reversal medication education and distribution) using a coordinated multidisciplinary approach without criminal sanctions.
2. Our AMA acknowledges the health benefits of identifying substance use during pregnancy and opposes any efforts, including mandatory reporting laws, that imply a positive verbal substance use screen, a positive toxicology test, or the diagnosis of substance use disorder during pregnancy automatically represents child abuse or neglect.
3. Our AMA supports legislative and other appropriate efforts for the expansion and improved access to evidence-based treatment for substance use disorders during pregnancy.
4. Our AMA opposes the filing of a child protective services report or the removal of infants from their parent(s) solely based on a prenatal drug screen and/or biological test(s) for substance use without appropriate evaluation.
5. Our AMA advocates for appropriate medical evaluation prior to the removal of a child, which takes into account:
   a. the desire to preserve the individual's family structure;
   b. the patient's treatment status; and
   c. current impairment status when substance use is suspected or confirmed.
6. Our AMA advocates that state and federal child protection laws be amended so that pregnant people with substance use and substance use disorders are only reported to child welfare agencies when protective concerns are identified by the clinical team, rather than through automatic or mandated reporting of all pregnant people with a positive toxicology test, positive verbal substance use screen, diagnosis of a substance use disorder, or use of evidence-based treatments for substance use disorder.
7. Our AMA encourages ongoing research on the benefits and risks of universal screening for substance use during pregnancy including the impact of mandatory reporting laws, evaluation of patient outcomes, effectiveness across different age groups, optimal screening intervals, equity considerations, and efficacy of different screening tools.
8. Our AMA supports the development and dissemination of physician education and training on federal and state laws governing mandatory notification and reporting of substance use during pregnancy, and the benefits and consequences of screening implementation in health care settings on a state-by-state basis.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 503
(A-26)

Introduced by: Pennsylvania

Subject: Expansion of Psychedelic Assisted Therapy (PAT)

Referred to: Reference Committee E

Whereas, other psychedelic and/or psychotherapeutic compounds with novel uses, such as MDMA, have received Breakthrough Therapy designation from the U.S. Food and Drug Administration (FDA); and

Whereas, other psychedelic and/or psychotherapeutic compounds with novel uses such as ketamine are already being prescribed for various mood disorders, but often with little oversight or widely-recognized standard of care; and

Whereas, the American Medical Association has a vested and explicit interest in the safe, evidence-based practice of medicine; and therefore be it

RESOLVED, that our American Medical Association reaffirm policies H-120.917 and H-100.943. (Reaffirm HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 504
(A-26)

Introduced by: Delaware

Subject: Strengthening U.S. Rubber Glove Production and Purchase While Reducing Foreign Forced-Labor Dependence

Referred to: Reference Committee E

Whereas, rubber gloves have been in use since Dr. William Halsted from The Johns Hopkins Hospital had the Goodyear Rubber Products company produce thin gloves to protect the nursing staff from harsh chemicals and disinfectants in the late nineteenth century;[1] and

Whereas, rubber glove development evolved over time leading to gloves that are sturdy and protective for many health care workers and others involved in patient care in various inpatient and outpatient settings; and

Whereas, the Buy American Act (BAA) requires Federal agencies to prioritize the production and purchase of domestic, U.S. manufactured goods and materials for public use in the United States with the materials used in manufacturing present in the U.S. in sufficient and reasonably available commercial quantities of a satisfactory quality, creating a preference for purchasing and manufacturing domestically and restricting the purchase of supplies that are not domestic end products;[2] and

Whereas, the Buy American Act (BAA) provisions can be waived if the procuring agency determines the act to be inconsistent with the public interest or the cost of acquiring the domestic product is unreasonable; and

Whereas, the HIV/AIDS epidemic, the Asian financial crisis, and more recently the COVID-19 pandemic fueled a worldwide demand for rubber gloves in a variety of health care settings;[3] and

Whereas, demand for rubber gloves led to major rubber glove producers in Malaysia and Thailand, such as Top Glove and WRP, to employ children as young as eight years old and exploited migrants from Nepal, India, Myanmar, and Bangladesh by having them work in unsafe factories, work up to 160 hours of overtime, withhold salaries for months, utilize high recruitment fees that led to debt bondage, and confiscated passports;[4-15] and

Whereas, on July 15, 2020, United States Customs and Border Protection (CBP) issued a Withhold Release Order (WRO) that banned Top Glove-produced rubber gloves from import into the United States because the gloves were made by forced labor and under the WRO, the CBP seized several shipments of disposable gloves that originated in Malaysia;[16, 17] and

Whereas, on September 9, 2021, the Customs and Border Protection (CBP) issued a modification[18,19] of its forced labor findings on Top Glove, allowing imports to resume, with the CBP affirming that Top Glove had issued “more than $30 million in remediation payments to workers and [is] improving labor and living conditions at the company’s facilities”; and

Whereas, Smart Glove, a collective group of Malaysian glove makers, faced a U.S. ban in 2021 for debt bondage and other labor allegations;[20] and

Whereas, unfair labor practices and overall safety persist in major rubber glove companies in Malaysia, in particular;[21,22] and

Whereas, on January 26, 2026, the Centers for Medicare & Medicaid Services (CMS) issued an Advance Notice of Proposed Rulemaking seeking public input on strengthening the domestic supply chain for personal protective equipment (PPE) and essential medicines, exploring ways to reduce reliance on foreign-made medical supplies and enhance the nation's readiness for future emergencies while supporting American workers and manufacturers and also considering a "Secure American Medical Supplies" friendly designation earned by hospitals that demonstrate a commitment to domestic procurement;[23] and

Whereas, the Medical Society of Delaware has informed its federal Congressional Delegation requesting emphasis of the need for reliance on U..S. companies for more domestic rubber glove production than what is now the case and as prioritized by the Buy American Act to purchase domestic, U.S. manufactured goods and materials for public use;[24] now therefore be it

RESOLVED, that our American Medical Association advocate with the appropriate Federal agencies to prioritize production and procurement of domestically manufactured rubber gloves and their component materials consistent with the Buy American Act (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage health care systems, physicians and other health care professionals, and affiliated entities to source rubber gloves from U.S. manufacturers whenever feasible, with preference for products whose raw materials originate within the domestic supply chain (New HOD Policy); and be it further

RESOLVED, that our AMA promote rigorous supply chain transparency by urging federal regulators and relevant authorities to strengthen import enforcement, enhance due-diligence requirements, and conduct independent audits to ensure that imported rubber gloves meet appropriate ethical labor standards. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

H-440.810 Availability of Personal Protective Equipment (PPE)

(1) Our American Medical Association affirms that the medical staff of each health care institution should be integrally involved in disaster planning, strategy and tactical management of ongoing crises.
(2) Our AMA supports evidence-based standards and national guidelines for PPE use, reuse, and appropriate cleaning/decontamination during surge conditions.
(3) Our AMA will advocate that it is the responsibility of health care facilities to provide sufficient personal protective equipment (PPE) for all employees and staff, as well as trainees and contractors working in such facilities, in the event of a pandemic, natural disaster, or other surge in patient volume or PPE need.
(4) Our AMA supports physicians and health care professionals and other workers in health care facilities in being permitted to use their professional judgement and augment institution-provided PPE with additional, appropriately decontaminated, personally-provided personal protective equipment (PPE) without penalty.
(5) Our AMA supports the rights of physicians and trainees to participate in public commentary addressing the adequacy of clinical resources and/or health and environmental safety conditions necessary to provide appropriate and safe care of patients and physicians during a pandemic or natural disaster.
(6) Our AMA will work with the HHS Office of the Assistant Secretary for Preparedness and Response to gain an understanding of the PPE supply chain and ensure the adequacy of the Strategic National Stockpile for public health emergencies.
(7) Our AMA encourages the diversification of personal protective equipment design to better fit all body types, cultural expressions and practices among healthcare personnel.

[Res. 412, I-20; Appended: Res. 414, A-21; Modified: Res. 410, I-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 505
(A-26)

Introduced by: New York

Subject: Avoiding misuse of artificial intelligence (AI) in clinical practice

Referred to: Reference Committee E

Whereas, artificial intelligence(AI) is finding its way into the clinical practice of medicine; and Whereas, physicians, nurse, practitioners, physicians, assistance, CRNA's and other healthcare professionals have begun using AI to generate notes in an effort to become more efficient and save time in the care of patients; and

Whereas, physicians and other healthcare professionals become medically and legally responsible for the care of their own patients and the patients receiving care from non-physician professionals for whom they may be collaborating for or supervising; and

Whereas, the review of all documentation in the patient's medical record, whether entered by the physician or other healthcare professional, a scribe or AI is owned by the author who signed that documentation; and

Whereas, the possibility that there could be an error in the medical record specifically related to documentation generated by AI, that could become a medical or medical legal issue; therefore be it

RESOLVED, that prior to the use of Artificial Intelligence (AI) in the medical record, training in the use of AI is highly recommended and to include the benefits of AI, as well as the potential harms that could exist in an AI generated document (New HOD Policy); and be it further

RESOLVED, that any physician or healthcare professional, who chooses to use Artificial Intelligence (AI) in the creation of the medical record, understands that the accuracy of that record is completely the responsibility of that author. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 506
(A-26)

Introduced by: New York

Subject: Access To Gender Affirming Healthcare Including Clinical Trials

Referred to: Reference Committee E

Whereas, gender dysphoria in children and adolescents is a complex clinical condition that requires careful, individualized, and multidisciplinary evaluation involving medical, surgical, and mental health expertise; and

Whereas, the current scientific evidence regarding gender-affirming hormonal therapies and surgical procedures in minors remains limited and evolving, with a lack of robust, long-term data on physical health outcomes, mental health outcomes, fertility, sexual function, and regret; and

Whereas, existing studies related to gender-affirming surgery in pediatric populations are largely observational, involve small cohorts, and have relatively short follow-up periods, further limiting the ability to draw definitive conclusions regarding long-term safety and effectiveness; and

Whereas, more research is needed in order to properly address gender dysphoria in minors; therefore be it

RESOLVED, that our American Medical Association affirms that Gender affirming healthcare (GAHC) includes social, medical and surgical GAHC with a shared decision-making process involving the physician, patient and legal guardians (New HOD Policy); and be it further

RESOLVED, that our AMA calls for continued research including clinical trials regarding the evidence of the effectiveness of puberty blockers (GnRH analogs) on transgender and non-binary youth (New HOD Policy); and be it further

RESOLVED, that our AMA calls for the restoration of previously allocated federal, state and institutional funding for pediatric gender clinics, puberty blocker research protocols, and supportive mental health services. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 507
(A-26)

Introduced by: American College of Lifestyle Medicine, Underrepresented in Medicine Advocacy Section

Subject: Pairing Behavioral and Lifestyle Medicine Principles and Practice with Glucagon-like Peptide-1 (GLP-1) Receptor Agonists and Other Anti-obesity Medications

Referred to: Reference Committee E

Whereas, obesity is a chronic disease, requiring long-standing therapy, that has historically been difficult to ameliorate for long-term results other than with the modality of bariatric surgery; and

Whereas, obesity represents a worldwide pandemic with multiple, adverse sequelae, including type 2 diabetes and cardiovascular diseases; and

Whereas, over 74% of the U.S. population is either overweight or obese; and

Whereas, worldwide, 2.1 billion individuals suffer from obesity and these numbers are projected to grow to over 3.1 billion individuals by 2050; and

Whereas, in recent years, glucagon-like peptide-1 (GLP-1) receptor agonists were synthesized as a class of medication, mimicking a neural hormone (incretin) of the small intestine that regulates blood sugar, decreases appetite and promotes satiety as well as additional benefits that include cardiovascular and renal protections; and

Whereas, the GLP-1 receptor agonists trigger insulin release from the pancreas, block glucagon secretion which, in turn, blocks added glucose into the blood, slows emptying of the stomach, increases satiety, lowers blood pressure, improves lipid disorders, improves fatty liver disease, delays progression of diabetic related nephropathies and helps reduce cravings for toxic substances; and

Whereas, the GLP-1 receptor agonists have been prescribed specifically for the management of obesity and Type 2 Diabetes because they help lower blood sugar levels and promote satiety as a means of weight loss; and

Whereas, the most effective management of both obesity and Type 2 Diabetes requires the combination of healthy lifestyle choices, diet modifications. behavioral modifications and select medications hinge on how one modifies their lifestyle in the areas of exercise, diet, restorative rest, stress management, control of toxic exposures and supportive social interaction; and

Whereas, the GLP-1 receptor agonists can serve as a metabolic catalyst, helping regulate appetite, alleviate joint pain, and enhance mobility, which in turn supports the adoption of sustainable lifestyle changes; and

Whereas, optimizing lifestyle choices, achieved through durable behavioral modification, serves as a foundational component of whole person clinical care; informed by shared goal setting and key lifestyle domains such as nutrition, physical activity, restorative sleep, healthy stress management strategies, avoidance of harmful exposures, and prioritizing social relationships; and

Whereas, the American College of Lifestyle Medicine, The Obesity Society, The Obesity Medicine Association and the American Society for Nutrition recently issued its joint position statement on the use of GLP-1 receptor agonists for obesity indicating that such modalities be administered in conjunction with planned and monitored adaptations to the forementioned six lifestyle pillars, ergo - all clinicians prescribing GLP-1(RA)s for obesity management should establish a thoughtful plan of care that includes thorough nutritional and lifestyle counseling before, during and after the weight reduction period; and

Whereas, the World Health Organization recently issued its Guidelines on the use of GLP-1 receptor agonists to treat obesity, placing obesity in the same category as hypertension and diabetes, and recommending that (i) GLP-1 receptor agonist therapies be used by non-pregnant adults for long-term obesity treatment and improving metabolic health outcomes and (ii) that intensive behavioral interventions for lifestyle modifications be offered in conjunction with prescribed GLP-1 receptor agonist medications; and

Whereas, access to structured, evidence-based lifestyle intervention programs and trained inter-professional care teams varies significantly by geography, insurance coverage, and socioeconomic status, creating the potential for health disparities among patients prescribed GLP-1 receptor agonist therapy; therefore be it

RESOLVED, that our American Medical Association support, publicize, and advocate for the concomitant use of evidence-based, structured lifestyle and behavioral intervention programs, delivered with ongoing clinician and care-team support, in conjunction with the prescribed use of glucagon-like peptide-1 receptor agonists for obesity and other related, preventable disease states and illnesses (Directive to Take Action); and be it further

RESOLVED, that our AMA recognize and address potential health disparities associated with recommendations for structured lifestyle intervention programs accompanying glucagon-like peptide-1 receptor agonist’s therapy, and advocate for equitable access to evidence-based, clinician-supported lifestyle interventions across diverse care settings, including community-based, digital, hybrid, and safety-net models of care (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for coverage, reimbursement, and sustainable payment models that support the delivery of clinician-led, therapeutic, and structured lifestyle intervention programs as a component of glucagon-like peptide-1 receptor agonist’s therapy, particularly for underserved, rural, and historically marginalized populations, to mitigate disparities in access and outcomes. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

D-100.960 Creating a Registry of Potential Side Effects of GIP and GLP-1 Medications
Our AMA supports and calls for a registry of GIP and GLP-1 receptor agonists' side effects, as well as potential impacts on pregnancy. [Res. 516, A-25]

H-150.953 Obesity As a Major Public Health Problem
1. Our American Medical Association will urge physicians as well as managed care organizations and other third party payers to recognize obesity as a complex disorder involving appetite regulation and energy metabolism that is associated with a variety of comorbid conditions.
2. Our AMA will work with appropriate federal agencies, medical specialty societies, and public health organizations to educate physicians about the prevention and management of overweight and obesity in children and adults, including education in basic principles and practices of physical activity and nutrition counseling; such training should be included in undergraduate and graduate medical education and through accredited continuing medical education programs.
3. Our AMA will urge federal support of research to determine:
- the causes and mechanisms of overweight and obesity, including biological, social, and epidemiological influences on weight gain, weight loss, and weight maintenance;
- the long-term safety and efficacy of voluntary weight maintenance and weight loss practices and therapies, including surgery;
- effective interventions to prevent obesity in children and adults; and
- the effectiveness of weight loss counseling by physicians.

4. Our AMA will encourage national efforts to educate the public about the health risks of being overweight and obese and provide information about how to achieve and maintain a preferred healthy weight.
5. Our AMA will urge physicians to assess their patients for overweight and obesity during routine medical examinations and discuss with at-risk patients the health consequences of further weight gain; if treatment is indicated, physicians should encourage and facilitate weight maintenance or reduction efforts in their patients or refer them to a physician with special interest and expertise in the clinical management of obesity.
6. Our AMA will urge all physicians and patients to maintain a desired weight and prevent inappropriate weight gain.
7. Our AMA will encourage physicians to become knowledgeable of community resources and referral services that can assist with the management of overweight and obese patients.
8. Our AMA will urge the appropriate federal agencies to work with organized medicine and the

health insurance industry to develop coding and payment mechanisms for the evaluation and management of obesity.
9. Our AMA will urge all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs. [CSA Rep. 6, A-99 Reaffirmation A-09 Reaffirmed: CSAPH Rep. 1, A-09 Reaffirmation A-10 Reaffirmation I-10 Reaffirmation A-12 Reaffirmed in lieu of Res. 434, A-12 Reaffirmation A-13 Reaffirmed: CSAPH Rep. 3, A-13 Reaffirmation: A-19 Appended: Res. 806, I-23]

H-150.944 Combatting Obesity and Health
Our AMA supports and calls for a registry of GIP and GLP-1 receptor agonists side effects, as well as potential impacts on pregnancy. [Res. 413, A-07 Reaffirmation A-12 Reaffirmation A-13 Modified: CSAPH Rep. 03, A-17]

H-440.842 Recognition of Obesity as a Disease
Our AMA supports and calls for a registry of GIP and GLP-1 receptor agonists side effects, as well as potential impacts on pregnancy.[Res. 420, A-13 Reaffirmed: CSAPH Rep. 08, A-23]

H-440.801 Advocacy Against Obesity-Related Bias By Insurance Providers
A. Our American Medical Association will urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to:
- Revise their policies to ensure that bariatric surgery are covered for patients who meet the appropriate medical criteria.
- Eliminate criteria that place unnecessary time-based mandates that are not clinically supported nor directed by the patient's medical provider.
- Ensure that insurance policies in their states do not discriminate against potential metabolic surgery patients based on age, gender, race, ethnicity, socioeconomic status.
- Advocate for the cost-effectiveness of all obesity treatment modalities in reducing healthcare costs and improving patient outcomes.
- Reduce the prior authorization burden for the coverage of anti-obesity medications, to include not requiring a new prior authorization for every dose change.
- Allow a patient's physician to prescribe anti-obesity medication and have it covered by insurance, without a requirement that patients must receive the prescription only from contracted disease management companies.

B. Our AMA will support and provide resources to state delegations in their efforts to advocate for the reduction of bias against patients that suffer from obesity for the actions listed. [Res. 224, A-23 Appended: Res. 230, A-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 508
(A-26)

Introduced by: American College of Lifestyle Medicine

Subject: Aligning Consistency and Credibility Of Direct-To-Consumer Gut Microbiome Testing Services

Referred to: Reference Committee E

Whereas, the accurate and precise assessment of the gut microbiome has significant utility in the determination of gastrointestinal health and related at-risk prognoses of other bodily functions and conditions; and

Whereas, consumer interest in personal health has led to the development of, increasingly accessible, direct-to-consumer (DTC) gut microbiome testing services with varied analytical and clinical validities and consumer safety; and

Whereas, the quality, reliability and reproducibility of such testing services, prominently featured by media outlets, vary from more strictly regulated medical devices to more minimally regulated imprecise health and wellness products; and

Whereas, there are currently no regulatory-approved, DTC gut microbiome diagnostic tests in the U.S.; and

Whereas, such tests cannot diagnose a specific disease state; and

Whereas, our scientific knowledge corroborating the gut microbiome's relationship between structure and function is so limited that the French Society of Microbiology has advised against premature microbiome testing given the uncertainty of what is a "healthy" microbiome; and

Whereas, many of these DTC companies have extended their services beyond gut microbiome profiling to include: (i) microbe classifications as pathogenic or beneficial, (ii) comparing consumer microbiome profile to random comparative populations, (iii) postulating indices for gut microbiome health; (iv) advertising recommendations for lifestyle changes, dietary changes and/or adding dietary supplements sold by the same company (e.g., probiotics); and

Whereas, these DTC gut microbiome testing services have brought about a technological shift from methodic and standardized protocols with end-to end diagnostic testing (traditionally confined to clinical settings and trained medical professionals) to DTC at-home tests that do not undergo the same rigorous oversight per the analytical validation of traditional medical diagnostic tests that assure clinicians, patients and regulators of the reliability and actionability of reproducible test results; and

Whereas, a recent, double-blind-type study was carried out employing the services of seven commercial, DTC gut microbiome testing companies - with each company analyzing three identical, homogenous and stable gut products for a total of 21 identical samples — provided anonymously by the National Institute of Standards and Technology (NIST)— with the

surreptitious intent of assessing the precision and reproducibility of gut microbiome measurements within and across the seven companies; and

Whereas, the seven microbiome testing companies were unaware of this ongoing assessment until after all the samples had been processed and final reports received by the NIST; and

Whereas, uncontrolled variables, providing opportunity for the introduction of random bias, in the samples collection and microbiome sequencing methodologies between the seven companies included: (i) considerable variability in consumer protocols for sample collection, storage, stable temperature and shipping methods, (ii) variability in laboratory protocols for nucleic acid extraction, (iii) variabilities in sequencing technology and (iv) variabilities in bioinformatic analyses; and

Whereas, the common failing of poor comparability in the seven sets of results was methodologic variability, given the use of 21 identical homogenous samples voided the introduction of confounding factors such as biologic and composition heterogeneity, otherwise found in non-identical samples; and

Whereas, methodologic variability is the antithesis of reproducibility in scientific validation and may be extrapolated to align with an assumed, inconsistent precision of the samples' processing workflows; and

Whereas, the transparency, reliability and validity of the findings of these DTC gut microbiome testing services are paramount and critical in order for consumers to accurately prognosticate informed decisions regarding their health status and health care, rather than potentially risking unwarranted or unsafe lifestyle and healthcare decisions; and

Whereas, the findings of the seven testing services are returned to the consumer, most commonly, in the absence of clinical validity, i.e., validated diagnostic evidence, and instead rely upon inferred or correlative versus causative data; and

Whereas, the varied analytical conduct of the seven and similar kinds of testing companies would best be served and balanced by health industry and clinical users developing guidelines via a consensus document or minimum requirements to support test validity and consumer and clinician confidence; therefore be it

RESOLVED, that our American Medical Association develop policy that specifically addresses concerns about the design, use and oversight of commercial gut microbiome testing methods with regards to quality, reliability and reproducibility of results and assessments provided to lay consumers, upon which such consumers prognosticate informed decisions regarding their health status and subsequent health care (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for review and graded recommendation by the United States Preventive Services Task Force on the use of Direct-to-Consumer Gut Microbiome Testing Services with regard to quality, reliability, reproducibility and validity (Directive to Take Action); and be it further

RESOLVED, that our AMA work with the Consumer Protection Agency to establish transparent safe guards and evidence-based, scientific oversight of Direct-to-Consumer Gut Microbiome Testing Services for lay and professional clinical use. (Directive to Take Action)

Fiscal Note: (Assigned by HOD)

RELEVANT AMA POLICY

H-480.941 Direct-to-Consumer Laboratory Testing
1. Our American Medical Association will advocate for vigilant oversight of direct-to-consumer (DTC) laboratory testing by relevant state and federal agencies.
2. Our AMA will encourage physicians to educate their patients about the risks and benefits of DTC laboratory tests, as well as the risks associated with interpreting DTC test results without input from a physician or other qualified health care professional.[Res. 526, A-18 Reaffirmed: BOT Rep. 12, I-21 Reaffirmed: CSAPH Rep. 03, A-2]

D-480.987 Direct-to-Consumer Marketing and Availability of Genetic Testing
Our American Medical Association recommends that genetic testing be carried out under the personal supervision of a qualified health care professional.
1. Our AMA encourages individuals interested in obtaining genetic testing to contact a qualified healthcare professional for further information.
2. Our AMA will work with relevant organizations to develop criteria on what constitutes an acceptable advertisement for a direct-to-consumer genetic test.
3. Our AMA encourages the U.S. Federal Trade Commission, with input from the U.S. Food and Drug Administration and the Centers for Medicare and Medicaid Services, to require that direct-to-consumer advertisements for genetic testing are truthful and not misleading; such advertisements should include all relevant information regarding capabilities and limitations of the tests, and contain a statement referring patients to physicians to obtain further information;
4. Our AMA will work to educate and inform physicians regarding the types of genetic tests that are available directly to consumers, including information about the lack of scientific validity associated with some direct-to-consumer genetic tests, so that patients can be appropriately counseled on the potential harms. [Res. 502, A-04 Modified: BOT Rep. 7, A-08 Reaffirmed: CSAPH Rep. 4, A-10 Reaffirmed: Joint CMS/CSAPH Rep. 01, I-17 Reaffirmed: BOT Rep. 12, I-21]

9.6.8 Direct-to-Consumer Diagnostic Imaging Tests
Diagnostic imaging tests are sometimes marketed directly to consumers before they have been scientifically validated. This can help consumers prevent disease and promote health, but may also expose patients to risk without benefit, create conflicts of interests for physicians, and be abused for profits.
Individually, physicians who offer diagnostic imaging services that have not been scientifically validated and for which a patient has not been referred by another physician have an ethical obligation to:
(a) Perform a requested diagnostic imaging test only when, in the physician's judgment, the possible benefits of the service outweigh its risks.
(b) Recognizing that in agreeing to perform diagnostic imaging on request, the physician:
(i) establishes a patient-physician relationship, with all the ethical and professional obligations such relationship entails;
(ii) assumes responsibility for relevant clinical evaluation, including pre- and post-test counseling about the test, its results, and indicated follow-up. Physicians may choose to refer the patient for post-test

counseling to an appropriate physician who accepts the patient.
(c) Obtain the patient's informed consent. In addition to the usual elements of informed consent, the physician should disclose:
(i) that the diagnostic imaging test has not been validated scientifically;
(ii) the inaccuracies inherent in the proposed test;
(iii) the possibility of inconclusive results;
(iv) the likelihood of false positive and false negative results;
(v) circumstances that may require further assessments and additional cost.
(d) Ensure that the patient's interests are primary and place patient welfare above physician interests when the physician has a financial interest in the imaging facility.
(e) Ensure that any advertisements for the services are truthful and not misleading or deceptive, in keeping with ethics guidance and applicable law.
Collectively, physicians should:
(f) Advocate for the conduct of appropriate trials aimed at determining the predictive power of diagnostic imaging tests and their sensitivity and specificity for target populations.
(g) Develop suitable guidelines for specific diagnostic imaging tests when adequate scientific data become available. [Issued: 2016]

H-460.908 Genomic-Based Personalized Medicine
Our AMA: (1) acknowledges the increasingly important role of genomic-based personalized medicine applications in the delivery of care, and will continue to assist in informing physicians about relevant personalized medicine issues; (2) will continue to develop educational resources and point-of-care tools to assist in the clinical implementation of genomic-based personalized medicine applications, and will continue to explore external collaborations and additional funding sources for such projects; and (3) will continue to represent physicians' voices and interests in national policy discussions of issues pertaining to the clinical implementation of genomic-based personalized medicine, such as genetic test regulation, clinical validity and utility evidence development, insurance coverage of genetic services, direct-to-consumer genetic testing, and privacy of genetic information.[CSAPH Rep. 4, A-10 Reaffirmed: Joint CMS/CSAPH Rep. 01, I-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 509
(A-26)

Introduced by: LGBTQ+ Section

Subject: Preserving Gender-Affirming Surgical Care Access

Referred to: Reference Committee E

Whereas, gender-affirming surgeries (GAS) are medical procedures that involve altering an individual's physical appearance and function of their existing sexual characteristics to resemble those of their identified gender [1]; and

Whereas, GAS includes procedures for nonbinary, queer, cis-, and transgender individuals and include examples like top surgery (breast augmentation or mastectomy), bottom surgery (hysterectomy, and salpingectomy/oophorectomy, vaginoplasty, phalloplasty, or metoidioplasty), feminization or masculinization surgeries, and many others [2-3]; and

Whereas, unlike cis-gender-affirming surgery and care, nonbinary, queer, and trans-gender-affirming surgery and care have been considered controversial and received increased scrutiny and persecution in recent years [4-9]; and

Whereas, despite increased security, outcomes from GAS have noted high levels of surgical satisfaction, improved dysphoria, reduced mental health comorbidities, and improved quality of life [10-14]; and

Whereas, under the second Trump Administration, attacks on pediatric and adult gender-affirming care for nonbinary, queer, and transgender individuals have increased with an increase in legislation against GAS [4-9,15-21]; and

Whereas, on February 4, 2026, the AMA publicized a statement regarding gender-affirming surgery for patients under 19, following the American Society of Plastic Surgeons' statement change [22]; and

Whereas, this statement was a significant deviation from typical AMA statements, as it stepped into a specialty society space without active input from said specialty societies, nor did it involve AMA members with expertise in pediatric gender affirming surgery or inform AMA LGBTQ+ leaders of its publicization [23,24]; and

Whereas, the AMA has extensive policy supporting evidence-based gender affirming care [25]; and

Whereas, AMA policy H-185.927 states that "our AMA will work with state and specialty societies and other interested stakeholders to advocate for federal, state, and local laws and policies to protect access to evidence-based care for gender dysphoria and gender incongruence [and] oppose laws and policies that criminalize, prohibit, or otherwise impede the provision of evidence-based, gender-affirming care, including laws and policies that penalize parents and guardians who support minors seeking and/or receiving gender-affirming care"; and

Whereas, AMA policy H-185.927 further states that our AMA will work with aforementioned stakeholders to "support protections against violence and criminal, civil, and professional liability for physicians and institutions that provide evidence-based gender-affirming care and patients who seek and/or receive such care, as well as their parents and guardians"; and

Whereas, AMA policy H-160.991 states that "our AMA is committed to taking a leadership role in educating physicians on the current state of research in and knowledge of LGBTQ+ health… educating physicians to recognize the physical and psychological needs of LGBTQ+ patients… encouraging physicians to seek out local or national experts in the health care needs of LGBTQ+ people… and working with LGBTQ+ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ+ patients"; and

Whereas, AMA policy H-60.927 states that "our American Medical Association will partner with public and private organizations dedicated to public health and public policy to reduce lesbian, gay, bisexual, transgender, and questioning (LGBTQ+) youth suicide and improve health among LGBTQ+ youth"; and

Whereas, AMA policy H-65.965 states that "our American Medical Association continues to support the dignity of the individual, human rights and the sanctity of human life… reaffirms its longstanding policy that there is no basis for the denial to any human being of equal rights, privileges and responsibilities commensurate with individual capabilities and ethical character because of an individual's sex, sexual orientation, gender, gender identity or transgender status, … opposes any discrimination based on an individual's sex, sexual orientation, gender identity"; and

Whereas, the American Academy of Pediatrics "does not include a blanket recommendation for surgery for minors. The AAP continues to hold to the principle that patients, their families, and their physicians—not politicians—should be the ones to make decisions together about what care is best for them" [26]; and

Whereas, expert guidance from the World Professional Association for Transgender emphasizes individualized care for medical and surgical care for transgender and gender diverse youth, with longitudinal patient-physician-guardian relationships, comprehensive biopsychosocial assessment, thorough health information and informed consent, multidisciplinary care, and only recommending gender-affirming surgical care to adolescents when meeting diagnostic criteria of gender incongruence that is sustained and marked, adolescent demonstration of emotional and cognitive maturity to provide informed consent/assent, thorough exploration of reproductive effects and fertility preservation options, and at least 12mo of gender-affirming hormone therapy to achieve the desired surgical result [27]; and

Whereas, research indicates that the rate of undergoing gender-affirming surgery for transgender and gender diverse minors is 2.1 per 100,000 minors ages 15-17 years, 0.1 per 100,000 minors aged 13-14 years, and 0 among minors 12 and younger [#]; and

Whereas, of the gender-affirming surgical procedures identified in transgender and gender diverse minors, 92 of 95 (96.4%) were chest-related procedures, and of the 151 breast reductions performed on cisgender male and transgender/gender diverse minors, 97% were performed on cisgender male minors [28]; and

Whereas, as gender-affirming mastectomy is the predominant surgical procedure performed in this small subset of gender diverse adolescents in the US, research on gender-affirming

mastectomy in adolescents had a median age at time of referral was 16 years, the documented regret rate was 0.95%, due in part to unsupportive home and social environment, and the prevalence of any surgical complications and revisions were comparable to or lower than rates in adults [29]; and

Whereas, gender-affirming surgical care is provided at significantly higher rates to cisgender youth, yet current political efforts explicitly target such surgical care only when provided to transgender and gender diverse youth, making these political efforts discriminatory by sex and gender identity [4-9, 30-33,]; and

Whereas, the aforementioned statement is technically in line with AMA policy, though its media manipulation counters best practice and existing research, thus leading to harm related to the statement that contradicts AMA policy; therefore be it

RESOLVED, that our American Medical Association reaffirm and recognize that decisions regarding gender-affirming surgical care rest with physicians, patients, and families, and support evidence-based, patient-centered, shared decision-making for such care (New HOD Policy); and be it further

RESOLVED, that our AMA advocate and support funding and opportunities for gender-affirming care research across modalities and age ranges, ensuring that such research and guideline development meaningfully involve clinicians who provide this care, researchers who study affected populations, and members of the impacted communities to strengthen the evidence base and uphold scientific integrity (Directive to Take Action); and be it further

RESOLVED, that our AMA collaborate with relevant specialty societies and multidisciplinary experts to support education and promote educational resources for physicians and trainees on evidence-based, patient-centered, shared decision-making gender-affirming surgical and medical care. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/15/26

RELEVANT AMA POLICY

Support of Human Rights and Freedom H-65.965

1. Our American Medical Association continues to support the dignity of the individual, human rights and the sanctity of human life,
2. Our AMA reaffirms its long-standing policy that there is no basis for the denial to any human being of equal rights, privileges and responsibilities commensurate with individual capabilities and ethical character because of an individual's sex, sexual orientation, gender, gender identity or transgender status, race, religion, disability, ethnic origin, national origin or age.
3. Our AMA opposes any discrimination based on an individual's sex, sexual orientation, gender identity, race, appearance, religion, disability, ethnic origin, national origin or age and any other such reprehensible policies.
4. Our AMA recognizes that hate crimes pose a significant threat to the public health and social welfare of the citizens of the United States, urges expedient passage for appropriate hate crimes prevention legislation in accordance with our AMA's policy through letters to members of Congress; and registers support for hate crimes prevention legislation, via letter, to the President of the United States.

Clarification of Evidence-Based Gender-Affirming Care H-185.927

1. Our American Medical Association recognizes that medical and surgical treatments for gender dysphoria and gender incongruence, as determined by shared decision making between the patient and physician, are medically necessary as outlined by generally-accepted standards of medical and surgical practice.
2. Our AMA will work with state and specialty societies and other interested stakeholders to:
    a. advocate for federal, state, and local laws and policies to protect access to evidence-based care for gender dysphoria and gender incongruence;
    b. oppose laws and policies that criminalize, prohibit or otherwise impede the provision of evidence-based, gender-affirming care, including laws and policies that penalize parents and guardians who support minors seeking and/or receiving gender-affirming care;
    c. support protections against violence and criminal, civil, and professional liability for physicians and institutions that provide evidence-based, genderaffirming care and patients who seek and/or receive such care, as well as their parents and guardians; and
    d. communicate with stakeholders and regulatory bodies about the importance of gender-affirming care for patients with gender dysphoria and gender incongruence.
3. Our AMA will advocate for equitable, evidence-based coverage of gender-affirming care by health insurance providers, including public and private insurers.

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991

1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ

patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.

2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.
5. Our AMA supports preservation and maintenance of federal and state public funding for physicians and institutions engaged in clinical care, research, and medical education regarding LGBTQ+ populations.

Reducing Suicide Risk Among Lesbian, Gay, Bisexual, Transgender, and Questioning Youth Through Collaboration with Allied Organizations H-60.927

Our American Medical Association will partner with public and private organizations dedicated to public health and public policy to reduce lesbian, gay, bisexual, transgender, and questioning (LGBTQ) youth suicide and improve health among LGBTQ youth.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 510
(A-26)

Introduced by: North Carolina

Subject: Exosome and Peptide Use in Healthcare

Referred to: Reference Committee E

Whereas, Exosomes and Peptides are distinct regenerative tools: Exosomes serve as cellular "couriers" that deliver bioactive molecules to stimulate healing and regenerative processes, while Peptides are amino acid chains acting as targeted messengers to influence similar specific cellular functions as well; and

Whereas, Exosomes and Peptides can have many uses as they can contribute significantly to longevity, improved health and wound-healing processes through their antimicrobial, immunomodulatory and regenerative processes in all stages of aging and healing, including inflammation and wound healing; and

Whereas, currently there needs to be better guidance in the proper sourcing and use of Exosomes and Peptides, including supporting the manufacture of these substances domestically in the United States and transparent composition and strength of these products to guide proper dosing protocol; and

Whereas, the NDAA (National Defense Authorization Act) for FY2027 which includes funding for national defense, implements significant guidelines for buying equipment and products favoring “best value” over just lower cost, and includes provisions for improvements to healthcare for active military and veteran members is currently in a phase where amendments can be proposed and passed that can improve the healing of acute and chronic wounds as well as neurologic and psychological disease states that are a consequence of the service that these active Soldiers and Veteran members provide to defend our country and freedoms; therefore be it

RESOLVED, that our AMA take the lead in advising Congress, the FDA and our regulatory agencies in:

1) Categorizing Exosomes and Peptides by their longevity, wound healing and regenerative potentials.

2) Encouraging the manufacture and processing of Exosomes and Peptides in the United States.

3) Work with the FDA to reclassify Exosomes and Peptides to allow Physicians to order and dispense Exosomes and Peptides properly sourced in single dose syringes individualized to patients to treat appropriate patient medical concerns including wound healing, improved health and longevity.

4) Work with Congress to propose an amendment to the NDAA 2027 that addresses appropriate use of Exosomes and Peptides within the Armed Services and VA system to improve Soldier and Veteran Healthcare, especially in acute and chronic wound healing.

5) Encourage additional trials and testing of Exosome and Peptide use protocols to firmly establish their efficacy.

6) Refer this issue to the Council on Science and Public Health for study and report back at Interim 2026.
(Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/15/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 511
(A-26)

Introduced by: American Academy of Dermatology, American College of Mohs Surgery, Society for Investigative Dermatology

Subject: Preserving Specialty Access to Anti-Cancer Agents

Referred to: Reference Committee E

Whereas, certain health systems have implemented restrictive policies that limit the prescription and administration of anti-cancer agents exclusively to the specialty of medical oncology; and

Whereas, these policies may be couched in concern for proper care and disposal of these agents but in practice they can be motivated by limiting patient access to treatment options as a cost control measure; and

Whereas, such restrictions can create unnecessary barriers to patient care, delay treatment, and overlook the clinical expertise of other specialists who are highly trained in the management of specific malignancies; and

Whereas, different anti-cancer agents have significantly different levels of concern about care, use and disposal, particularly comparing large-volume intravenous solutions of cytotoxic agents with oral agents prescribed for patient self-administration at home; and

Whereas, physicians in diverse specialties have been instrumental in the development and clinical trials of breakthrough targeted therapies for a variety of malignancies;[1] and

Whereas, physicians in multiple specialties outside of medical oncology contribute to clinical innovation by actively enrolling patients in and conducting studies on chemotherapeutic[2-6] and immunotherapeutic[7] agents for the treatment of malignancies; and

Whereas, the safe handling, transportation, administration, and proper disposal of chemotherapeutic and immunotherapeutic agents are critical components of patient and healthcare worker safety that should be governed by targeted institutional protocols regardless of the prescribing physician's specialty; therefore be it

RESOLVED, that our American Medical Association support multidisciplinary, evidence-based cancer care models and oppose categorical specialty-based restrictions on physician prescribing and/or administering anti-cancer agents when the physician is appropriately trained in their use and institutional safety standards are met (New HOD Policy); and be it further

RESOLVED, that our AMA support appropriate, targeted policies and protocols related to the safe transportation, administration, and proper disposal of chemotherapeutic and other anti-cancer agents (New HOD Policy); and be it further

RESOLVED, that our AMA advocate against policies that restrict physician use of anti-cancer agents based solely on specialty designation rather than clinical competency, training, and patient need. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

Practice Parameters - Their Relevance to Physician Credentialing H-410.987
1. The term practice guidelines should be used to refer to strategies for patient management that are designed to assist physicians in clinical decision-making. The terms should not be used to refer to the criteria for professional training, skills and experience utilized in the granting of general or procedure-specific clinical privileges.
2. The documentation of adherence to, or intent to practice within, relevant practice guidelines should not be used as an additional criterion for the granting of general or procedure-specific clinical privileges unless and until a relationship between adherence to such practice guidelines and desired patient outcomes is adequately documented.
3. Practice guidelines developed by a particular medical specialty or specialties should not preclude the performance of the procedures or treatments addressed in that practice guideline by physicians not formally credentialed in that specialty or specialties. Individual character, training, competence, experience, and judgment should continue to be the criteria for granting general or procedure-specific clinical privileges.

Medical Specialty Board Certification Standards H-275.926
1. The term practice guidelines should be used to refer to strategies for patient management that are designed to assist physicians in clinical decision-making. The terms should not be used to refer to the criteria for professional training, skills and experience utilized in the granting of general or procedure-specific clinical privileges.
1. Our American Medical Association opposes any action, regardless of intent, that appears likely to confuse the public about the unique credentials of American Board of Medical Specialties (ABMS) or American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) board certified physicians in any medical specialty, or take advantage of the prestige of any medical specialty for purposes contrary to the public good and safety.
2. Our AMA opposes any action, regardless of intent, by organizations providing board certification for non-physicians that appears likely to confuse the public about the unique credentials of medical specialty board certification or take advantage of the prestige of medical specialty board certification for purposes contrary to the public good and safety.
3. Our AMA continues to work with other medical organizations to educate the profession and the public about the ABMS and AOA-BOS board certification process. It is AMA policy that when the equivalency of board certification must be determined, the certification program must first meet accepted standards for certification that include both a process for defining specialty-specific standards for knowledge and skills and offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. In addition, accepted standards, such as

those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination.
4. Our AMA opposes discrimination against physicians based solely on lack of ABMS or equivalent AOA-BOS board certification, or where board certification is one of the criteria considered for purposes of measuring quality of care, determining eligibility to contract with managed care entities, eligibility to receive hospital staff or other clinical privileges, ascertaining competence to practice medicine, or for other purposes. Our AMA also opposes discrimination that may occur against physicians involved in the board certification process, including those who are in a clinical practice period for the specified minimum period of time that must be completed prior to taking the board certifying examination.
5. Our AMA advocates for nomenclature to better distinguish those physicians who are in the board certification pathway from those who are not.
6. Our AMA encourages member boards of the ABMS to adopt measures aimed at mitigating the financial burden on residents related to specialty board fees and fee procedures, including shorter preregistration periods, lower fees and easier payment terms.
7. Our AMA encourages continued advocacy to federal and state legislatures, federal and state regulators, physician credentialing organizations, hospitals, and other interested parties to define physician board certification as the medical profession establishing specialty-specific standards for knowledge and skills, using an independent assessment process to determine the acquisition of knowledge and skills for initial certification and recertification.

Privileging for Ultrasound Imaging H-230.960
1. AMA affirms that ultrasound imaging is within the scope of practice of appropriately trained physicians;
2. AMA policy on ultrasound acknowledges that broad and diverse use and application of ultrasound imaging technologies exist in medical practice;
3. AMA policy on ultrasound imaging affirms that privileging of the physician to perform ultrasound imaging procedures in a hospital setting should be a function of hospital medical staffs and should be specifically delineated on the Department's Delineation of Privileges form; and
4. AMA policy on ultrasound imaging states that each hospital medical staff should review and approve criteria for granting ultrasound privileges based upon background and training for the use of ultrasound technology and strongly recommends that these criteria are in accordance with recommended training and education standards developed by each physician's respective specialty.

Protecting the Prescriptive Authority of Plenary Licensed Physicians D-120.920
1. Our American Medical Association will study the national prevalence and patterns of pharmacists refusing to fill valid prescriptions from plenary licensed physicians, including impact on patient outcomes and prescriber autonomy.
2. Our AMA will work with state medical boards, pharmacy boards, and appropriate federal agencies to protect the authority of plenary licensed physicians to prescribe all legal medications in accordance with their training and medical judgment.
3. Our AMA will reaffirm and publicize existing policy opposing unauthorized medication substitution, inappropriate pharmacy inquiries, and unauthorized treatment modification by pharmacists.
4. Our AMA supports legislation or regulatory action requiring pharmacists and pharmacy chains to either fill a valid prescription or immediately refer the patient to an alternative dispensing pharmacy, with notification to the prescribing physician.
5. Our AMA encourages interprofessional collaboration to clarify scope-of-practice boundaries, educate interested parties on the legal authority of plenary licensure, and promote policies that ensure timely patient access to physician led care.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution 512
(A-26)

Introduced by: Senior Physicians Section

Subject: Medical Cannabis Use in Older Adults

Referred to: Reference Committee E

Whereas, cannabis consumption among older adults (aged 65 years and above) has risen markedly over the past two decades in the United States, increasing from 0.4 percent in 2006 to 7 percent in 2023[1,2]; and

Whereas, medical cannabis is now legal in thirty-eight states, with recreational cannabis permitted in twenty-four states[3]; and

Whereas, the approval and expansion of state medical cannabis laws throughout the United States have greatly increased both the availability and use of cannabis, especially through medical cannabis programs; and

Whereas, recent studies suggest a higher incidence of dementia among individuals who use cannabis[4,5]; and

Whereas, cannabis may offer therapeutic benefits for managing agitation in dementia patients, potentially serving as an alternative to antipsychotic medications[6,7]; and

Whereas, greater transparency regarding both the potential benefits and adverse effects of cannabis use in older adults would be valuable to physicians, particularly given the current paucity of research that is focused on this population[8,9,10]; and

Whereas, adequate physician education regarding appropriate prescribing, therapeutic indications, and potential adverse effects is needed; therefore be it

RESOLVED, that our American Medical Association support the development and publication of educational resources on medical cannabis directed towards clinicians, including a virtual educational presentation that reviews the known effects of medical cannabis in older adults that highlights both its potential benefits and risks (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage expanded research into the therapeutic uses of cannabis in older adults—such as for managing agitation in individuals with cognitive impairment—as well as its possible adverse effects. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/16/26

RELEVANT AMA POLICY

D-95.949 Advocacy for More Protective Regulations on Distribution of Cannabis

1. Our AMA will advocate that any monies paid to the states, received as a result of a settlement or judgment, or other financial arrangement or agreement as a result of litigation for cannabis-related harms or violations of law, be used exclusively for research, education, prevention, and treatment of cannabis-related harms, as well as expanding physician training opportunities to provide clinical experience in the screening, diagnosis, and treatment of cannabis misuse and cannabis use disorder.
2. Our AMA supports legislation and/or regulation of all cannabis products that:
   a. prohibit cannabis use in all places that tobacco use is prohibited, including in hospitals and other places in which health care is delivered;
   b. apply the same marketing and sales restrictions that are applied to tobacco cigarettes, including prohibitions on television advertising, product placement in television and films, and the use of celebrity spokespeople as well as avenues for legal and financial penalties for marketing to youth;
   c. prohibit product claims of reduced risk or effectiveness as tobacco cessation tools;
   d. require the use of secure, child- and tamper-proof packaging and design, and safety labeling on all cannabis products;
   e. establish manufacturing and product (including e-liquids) standards for identity, strength, purity, packaging, and labeling with instructions and contraindications for use;
   f. require transparency and disclosure concerning product design, contents, and emissions; and
   g. prohibit the use of characterizing flavors that may enhance the appeal of such products to youth.
3. Our AMA encourages state medical associations to strengthen existing cannabis marketing and advertising restrictions, including consideration of prohibitions on marketing and advertising to children.
4. Our AMA supports the review of conditions that states have approved to authorize cannabis for medical use and recommend the removal of those conditions without scientifically valid and well-controlled clinical trials supporting the use of cannabis.

[BOT Rep. 21, A-25]

H-95.952 Cannabis and Cannabinoid Research

1. Our American Medical Association calls for further adequate and well-controlled studies of cannabis and related cannabinoids, including Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids (HDICs), in patients who have serious conditions for which preclinical, anecdotal, or controlled evidence suggests possible efficacy and the application of such results to the understanding and treatment of disease.
2. Our AMA urges that cannabis's status as a federal schedule I controlled substance be reviewed with the goal of facilitating the conduct of clinical research and development of cannabinoid-based medicines, and

alternate delivery methods. This should not be viewed as an endorsement of state-based medical cannabis programs, the legalization of cannabis, or that scientific evidence on the therapeutic use of cannabis meets the current standards for a prescription drug product.
3. Our AMA urges the National Institutes of Health (NIH), the Drug Enforcement Administration (DEA), and the Food and Drug Administration (FDA) to develop a special schedule and implement administrative procedures to facilitate grant applications and the conduct of well-designed clinical research involving cannabis and its potential medical utility. This effort should include:
a. disseminating specific information for researchers on the development of safeguards for cannabis clinical research protocols and the development of a model informed consent form for institutional review board evaluation;
b. sufficient funding to support such clinical research and access for qualified investigators to adequate supplies of cannabis for clinical research purposes;
c. confirming that cannabis of various and consistent strengths and/or placebo will be supplied by the National Institute on Drug Abuse to investigators registered with the DEA who are conducting bona fide clinical research studies that receive FDA approval, regardless of whether or not the NIH is the primary source of grant support.
4. Our AMA supports research to determine the consequences of long-term cannabis use, as well as the use of Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids, especially among youth, adolescents, pregnant people, and people who are breastfeeding.
5. Our AMA urges legislatures to delay initiating the legalization of cannabis for recreational use until further research is completed on the public health, medical, economic, and social consequences of its use.
6. Our AMA will advocate for urgent regulatory and legislative changes necessary to fund and perform research related to cannabis and cannabinoids.
7. Our AMA will create a Cannabis Task Force to evaluate and disseminate relevant scientific evidence to health care providers and the public.
[CSA Rep.10, I-97; Modified: CSA Rep. 6, A-01; Modified: CSAPH Rep.3, I-09; Modified in lieu of Res. 902; BOT Action in response to referred for decision: Res. 503, A-24 I-10; Reaffirmed in lieu of Res. 523, A-11; Reaffirmed in lieu of Res. 202, I-12; Reaffirmed: CSAPH Rep. 2, I-13; Modified: CSAPH Rep. 05, I-17; Reaffirmed in lieu of Res. 434, A-19; Appended: Res. 913, I-19; Reaffirmation: A-22; Reaffirmed: Res. 212, A-23; Reaffirmed: CSAPH Rep. 6 I-23; Modified: Speakers Rep. 02, I-24; BOT Action in response to referred for decision: Res. 503, A-24]

D-95.958 Marketing Guardrails for the "Over-Medicalization" of Cannabis Use

1. Our American Medical Association will send a formal letter to the Food and Drug Administration and Federal Trade Commission requesting more direct oversight of the marketing of cannabis for medical use.
2. Our AMA will generate a formal letter for use by state medical societies requesting more direct oversight by state government of the marketing of cannabis and Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids.
3. Our AMA will support and encourage federal, state, and private sector research on the effects of cannabis and Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids marketing to identify best practices in protecting vulnerable populations, as well as the benefits of safety campaigns such as preventing impaired driving or dangerous use.
4. Our AMA will encourage state regulatory bodies to enforce cannabis-related marketing laws as well as laws related to marketing of Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids and to publicize and make publicly available the results of such enforcement activities.
5. Our AMA will encourage social media platforms to set a threshold age of 21 years for exposure to cannabis, and Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids, advertising and marketing and improve age verification practices on social media platforms.
6. Our AMA will encourage regulatory agencies to research how marketing best practices learned from tobacco and alcohol policies can be adopted or applied to cannabis and Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids marketing.

7. Our AMA will support using existing AMA channels to educate physicians and the public on the health risks of cannabis and Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids to children and potential health risks of cannabis and Derived Psychoactive Cannabis Products (DPCPs) and Hemp-Derived Intoxicating Cannabinoids to people who are pregnant or lactating.
8. Our AMA will work with relevant stakeholders to strengthen cannabis marketing and advertising regulations, including efforts to ensure that packaging does not appeal to youth and marketing is restricted to prevent exposure to young audiences.
9. Our AMA opposes cannabis and cannabis-based product advertising that includes claims or statements that are not supported by peer-reviewed scientific evidence.
10. Our AMA will continue to monitor regulatory approaches to cannabis marketing.

[Res. 501, A-22; Modified: CSAPH Rep. 6, I-23; Appended: BOT Action in response to referred for decision Res. 508, A-24; Appended: CSAPH Rep. 01, I-24; BOT Action in response to referred for decision: Res. 503, A-24]

D-95.969 Cannabis Legalization for Medicinal Use

1. Our American Medical Association believes that scientifically valid and well-controlled clinical trials conducted under federal investigational new drug applications are necessary to assess the safety and effectiveness of all new drugs, including potential cannabis products, Derived Psychoactive Cannabis Products (DPCPs), and Hemp-Derived Intoxicating Cannabinoids for medical use.
2. Our AMA believes that cannabis for medicinal use should not be legalized through the state legislative, ballot initiative, or referendum process.
3. Our AMA will develop model legislation requiring the following warning on all cannabis products not approved by the U.S. Food and Drug Administration: "Marijuana has a high potential for abuse. This product has not been approved by the Food and Drug Administration for preventing or treating any disease process.
4. Our AMA supports legislation ensuring or providing immunity against federal prosecution for physicians who certify that a patient has an approved medical condition or recommend cannabis in accordance with their state's laws.
5. Our AMA believes that effective patient care requires the free and unfettered exchange of information on treatment alternatives and that discussion of these alternatives between physicians and patients should not subject either party to criminal sanctions.
6. Our AMA will, when necessary and prudent, seek clarification from the United States Justice Department (DOJ) about possible federal prosecution of physicians who participate in a state operated marijuana program for medical use and based on that clarification, ask the DOJ to provide federal guidance to physicians.
7. Our AMA encourages hospitals and health systems to:
    a. not recommend patient use of non-FDA approved cannabis or cannabis derived products within healthcare facilities until such time as federal laws or regulations permit its use.
    b. educate medical staffs on cannabis use, effects and cannabis withdrawal syndrome.

[CSAPH Rep. 05, I-17; Appended: Res. 211, A-18; Appended: CSAPH Rep. 3, I-19; Reaffirmed: Res. 212, A-23; BOT Action in response to referred for decision: Res. 503, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 513
(A-26)

Introduced by: Texas

Subject: Access, Affordability, and Safety of GLP-1 Receptor Agonists

Referred to: Reference Committee E

Whereas, GLP-1 receptor agonists (e.g. semaglutide, tirzepatide, liraglutide) are FDA-approved medications that have demonstrated significant benefit for patients with type 2 diabetes and obesity, improving glycemic control, reducing cardiovascular risk, and promoting clinically meaningful weight loss; and

Whereas, the American Diabetes Association's Standards of Medical Care in Diabetes recommend GLP 1 receptor agonists as a preferred therapeutic option for patients with type 2 diabetes who have established cardiovascular disease, high cardiovascular risk, or require additional weight reduction, thereby establishing their role in evidence-based treatment algorithms; and

Whereas, obesity and diabetes are major public health burdens in Texas, contributing to increased morbidity, mortality, and health care costs, particularly among underserved and high-risk populations; and

Whereas, despite their proven clinical effectiveness, GLP-1 receptor agonists are often placed on higher formulary tiers with restrictive prior authorization criteria and prohibitively high out-of-pocket costs, limiting patient access; and

Whereas, many Americans face high deductibles or lack insurance coverage, leading some to seek compounded versions of GLP-1 receptor agonists; and although compounding can expand access, these preparations are not FDA-approved, may vary in purity or potency, and should be subject to clear, consistent regulatory oversight to promote patient safety; and

Whereas, the current pricing of GLP-1 receptor agonists has contributed to rising health care costs for both public and private payers, with annual out-of-pocket expenses for uninsured patients often exceeding $12,000, while manufacturers of GLP-1 agents have reported combined global revenues exceeding $50 billion in 2024; and

Whereas, large health systems and self-funded employers across Texas have curtailed GLP-1 coverage due to cost, including the University of Texas System, whose monthly spending on GLP-1 medications rose from $1.5 million to more than $5 million over 18 months; and

Whereas, the free market has not succeeded in making these life-changing medications broadly affordable to the patients who need them most, and meaningful price reductions will likely require greater governmental oversight, negotiation, or regulatory intervention to promote fair pricing and equitable access; and

Whereas, while GLP-1 receptor agonists have proven benefits in the management of type 2 diabetes, their widespread adoption for obesity management is relatively new, with limited long-term data and potential for weight regain after discontinuation; and

Whereas, sustainable obesity management requires comprehensive approaches including nutrition, physical activity, behavioral support, and long-term follow-up to promote durable success; therefore be it

RESOLVED, that our American Medical Association advocate for legislation and/or regulation so that public and private health insurers provide GLP-1 receptor agonists for the treatment of type 2 diabetes and obesity at affordable formulary pricing, thereby reducing out-of-pocket costs for patients (Directive to Take Action); and be it further

RESOLVED, that our AMA support regulatory oversight and quality-assurance standards for compounding of GLP-1 receptor agonists to promote patient safety while maintaining access for those who cannot otherwise afford FDA-approved medications (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for pricing transparency and cost-containment strategies among manufacturers, payers, and policymakers to improve affordability and access to evidence-based obesity and diabetes treatments (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage the use of GLP-1 receptor agonists in accordance with evidence based clinical indications, within comprehensive care plans that include behavioral and lifestyle interventions. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

Addressing Adult and Pediatric Obesity D-440.954

1. Our American Medical Association will:
    a. Assume a leadership role in collaborating with other interested organizations, including national medical specialty societies, the American Public Health Association, the Center for Science in the Public Interest, and the AMA Alliance, to discuss ways to finance a comprehensive national program for the study, prevention, and treatment of obesity, as well as public health and medical programs that serve vulnerable populations.
    b. Encourage state medical societies to collaborate with interested state and local organizations to discuss ways to finance a comprehensive program for the study, prevention, and treatment of obesity, as well as public health and medical programs that serve vulnerable populations.
    c. Continue to monitor and support state and national policies and regulations that encourage healthy lifestyles and promote obesity prevention.
2. Our AMA, consistent with H-440.842, Recognition of Obesity as a Disease, will work with national specialty and state medical societies to advocate for patient access to and physician payment for the full continuum of evidence-based obesity treatment modalities (such as behavioral, pharmaceutical, psychosocial, nutritional, and surgical interventions).
3. Our AMA will work with interested national medical specialty societies and state medical associations to increase public insurance coverage of and payment for the full spectrum of evidence-based adult and pediatric obesity treatment.
4. Our AMA will:

a. work with state and specialty societies to identify states in which physicians are restricted from providing the current standard of care with regards to obesity treatment.
b. work with interested state medical societies and other stakeholders to remove out-of-date restrictions at the state and federal level prohibiting healthcare providers from providing the current standard of care to patients affected by obesity.

5. Our AMA will leverage existing channels within AMA that could advance the following priorities:
   - Promotion of awareness amongst practicing physicians and trainees that obesity is a treatable chronic disease along with evidence-based treatment options.
   - Advocacy efforts at the state and federal level to impact the disease obesity.
   - Health disparities, stigma and bias affecting people with obesity.
   - Lack of insurance coverage for evidence-based treatments including intensive lifestyle intervention, anti-obesity pharmacotherapy and bariatric and metabolic surgery.
   - Increasing obesity rates in children, adolescents and adults.
   - Drivers of obesity including lack of healthful food choices, over-exposure to obesogenic foods and food marketing practices.
6. Our AMA will conduct a landscape assessment that includes national level obesity prevention and treatment initiatives, and medical education at all levels of training to identify gaps and opportunities where AMA could demonstrate increased impact.
7. Our AMA will convene an expert advisory panel once, and again if needed, to counsel AMA on how best to leverage its voice, influence and current resources to address the priorities listed in item 5 above.

Advocacy Against Obesity-Related Bias by Insurance Providers H-440.801

1. Our American Medical Association will urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to:
   a. Revise their policies to ensure that bariatric surgery are covered for patients who meet the appropriate medical criteria.
   b. Eliminate criteria that place unnecessary time-based mandates that are not clinically supported nor directed by the patient's medical provider.
   c. Ensure that insurance policies in their states do not discriminate against potential metabolic surgery patients based on age, gender, race, ethnicity, socioeconomic status.
   d. Advocate for the cost-effectiveness of all obesity treatment modalities in reducing healthcare costs and improving patient outcomes.
   e. Reduce the prior authorization burden for the coverage of anti-obesity medications, to include not requiring a new prior authorization for every dose change.
   f. Allow a patient's physician to prescribe anti-obesity medication and have it covered by insurance, without a requirement that patients must receive the prescription only from contracted disease management companies.
2. Our AMA will support and provide resources to state delegations in their efforts to advocate for the reduction of bias against patients that suffer from obesity for the actions listed.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 514
(A-26)

Introduced by: Texas

Subject: Education, Screening, and Effective Treatment for Obstructive Sleep Apnea During Pregnancy

Referred to: Reference Committee E

Whereas, maternal morbidity and mortality are increasing despite quality improvements, with evidence showing there is a correlation between the prevalence of obstructive sleep apnea (OSA) and associated adverse pregnancy outcomes in the obstetrical population; and

Whereas, after controlling obesity and other potential confounders, OSA was associated with increased odds of pregnancy-related morbidities including preeclampsia, eclampsia, cardiomyopathy, and pulmonary embolism with more than fivefold increased odds of in hospital mortality; and

Whereas, during late pregnancy women with OSA had eight times the odds of having depressive symptoms; and

Whereas, OSA has been associated with adverse neonatal outcomes, such as preterm birth and growth restriction in some studies; and

Whereas, OSA in pregnancy continues to be underdiagnosed, resulting in missed opportunities to prevent adverse outcomes; and

Whereas, it is important to screen for OSA in women, and if clinically indicated, order a home sleep test which can be shipped to the patient's home and follow-up care can be provided via telemedicine until OSA resolves to improve maternal health; therefore be it

RESOLVED, that our American Medical Association adopt policy to screening and educating about obstructive sleep apnea:

That AMA supports obstructive sleep apnea screening to reduce negative outcomes
That AMA supports physician payment for obstructive sleep apnea screening and treatment.
That AMA advocates for more research on obstructive sleep apnea in pregnancy.
That AMA supports education about obstructive sleep apnea in pregnancy.

(New HOD Policy); and be it further

RESOLVED, that our AMA advocate for federal legislation aligning with this policy. Routine screening, early diagnosis, and effective treatment of obstructive sleep apnea are recommended in pregnant women, particularly during mid and late pregnancy. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

H-290.953 State Medicaid Coverage of Home Sleep Testing
Our American Medical Association supports efforts to expand access to and insurance coverage of physician-ordered home sleep testing, including for Medicaid beneficiaries, for the purpose of identifying sleep apnea and related sleep conditions.

H-35.963 Appropriate Use of Objective Tests for Obstructive Sleep Apnea
It is the policy of our AMA that: (1) ordering and interpreting objective tests aiming to establish the diagnosis of obstructive sleep apnea (OSA) or primary snoring constitutes the practice of medicine; (2) the need for, and appropriateness of, objective tests for purposes of diagnosing OSA or primary snoring or evaluating treatment efficacy must be based on the patient's medical history and examination by a licensed physician; and (3) objective tests for diagnosing OSA and primary snoring are medical assessments that must be ordered and interpreted by a licensed physician.

H-440.795 Obstructive Sleep Apnea
1. Our American Medical Association recognizes Obstructive Sleep Apnea (OSA) as a major public health issue.
2. Our AMA encourages a national public education campaign by appropriate federal agencies and relevant advocacy groups.
3. Our AMA encourages research into the association of OSA with metabolic, cardiovascular, respiratory, and other diseases.
4. Our AMA encourages that all physicians become knowledgeable about the diagnosis and management of OSA.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 515
(A-26)

Introduced by: Association for Clinical Oncology

Subject: Transparency in AI-Driven Adverse Determinations & Clinical Logic Disclosure

Referred to: Reference Committee E

Whereas, health plans increasingly utilize augmented intelligence (AI) and algorithmic black box tools to issue adverse determinations, often relying on datasets that fail to reflect monthly updates in oncology clinical guidelines (e.g., National Comprehensive Cancer Network, American Society of Clinical Oncology (ASCO)); and

Whereas, the ASCO 2025 Position Statement on AI in Prior Authorization explicitly calls for federal and state legislation mandating proper disclosure regarding the use of AI in coverage determinations; and

Whereas, current American Medical Association human-in-the-loop policy ensures a physician makes the final call, but does not mandate that the payer disclose the specific clinical logic or version history necessary for a physician to successfully appeal a denial; therefore be it

RESOLVED, that our American Medical Association advocate for federal and state regulations and legislation requiring health plans and third-party payers to provide physicians with the specific clinical logic, evidence-based sources, and version history of any augmented intelligence (AI) or algorithmic tools used in the issuance of an adverse determination (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate that any AI-driven or algorithmic tool used for clinical review must be transparently audited to ensure it reflects the most recent peer-reviewed clinical guidelines and recognized standards of care. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

H-480.939 Augmented Intelligence in Health Care
Our AMA will advocate that: Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: transparency; evidence of safety, efficacy, and equity; and level of automation. 2. AI is designed to enhance human intelligence and the patient-physician relationship rather than replace it. [Res. 611, A-19; Reaffirmed: 2025]

D-480.952 Ensuring Transparency and Accountability in Clinical Use of Augmented Intelligence
Our AMA recognizes the need for clear disclosure to the healthcare provider whenever artificial intelligence (AI) is used in the delivery of clinical care... [and] advocates that entities provide for clinically useful transparency, such as clear labeling of AI-generated outputs for end users, including disclosure of the algorithm's level of confidence in those outputs. [Council on Science and Public Health Rep. 02, A-24; Modified: June 2025]

H-320.939 Prior Authorization and Utilization Management Reform
Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician. [Sub. Res. 701, A-17; Reaffirmed: 2026]

LETTER TO STAKEHOLDERS

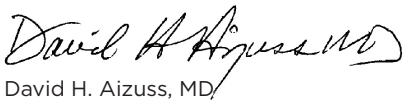
In a period of disruption and change across health care, it is increasingly clear that physician leadership is vital to the future of medicine.

Patients are navigating a system under strain. Physicians are facing mounting administrative burdens, workforce pressures, and an erosion of trust in science and medical expertise. And decisions that shape care—how it is delivered, paid for, regulated and transformed by technology—are being made every day. At this moment, physicians cannot afford to be observers of change. We must be its architects.

In 2025, with high-profile challenges to clinical guidelines, public health decisions and research priorities, the American Medical Association (AMA) stood firm in the belief that evidence must guide care. That commitment is foundational not only to the profession, but also to the trust patients place in their physicians.

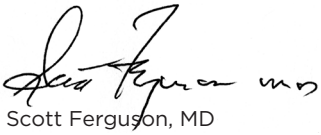
As the nation's largest and most trusted physician organization, the AMA brought together leaders across states, specialties and practice settings to confront some of the most pressing challenges in health care. We pushed back against threats to medical research, defended clinical autonomy, protected patient privacy and worked to remove barriers that often prevent patients from accessing high-quality care. At the same time, we advanced a new strategic vision for the organization centered on three imperatives: modernizing physician education and training, strengthening the physician workforce, and ensuring that clinical expertise leads the transformation of digital health.

That work was grounded in a simple but powerful belief that the future of medicine is not something physicians can wait for. It must be shaped—deliberately and collaboratively—by those who understand care best.



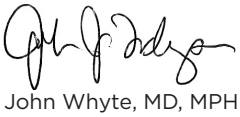
This ethos led to the AMA's creation of two physician-led initiatives in 2025, one focused on improving health outcomes locally and the other designed to embed physician expertise in the expansive world of health technology. The AMA's new Community Health Impact Lab grants are a $1 million investment to fund 20 physician-led initiatives to address health needs in the communities they serve. The AMA's new Center for Digital Health and AI was created to give physicians a platform to help establish ethical guardrails, shape policy and support workflow integration so that AI and other digital tools enhance care rather than complicate it. In public health and technology, physicians should not be reacting to change. They must lead.

In advocacy, the AMA partnered with dozens of state and specialty medical societies to defeat nearly 100 bills that would have placed patients at risk by expanding scope of practice by non-physicians beyond their appropriate training. We continued to press for Medicare payment reforms that reflect the true cost of delivering care. We advanced prior authorization reforms and made physician well-being a priority across the country.



In education, the AMA announced a $12 million investment in a new precision education grant program, designed to create personalized, data-driven learning experiences that better prepare physicians for modern clinical practice. From the moment students consider medicine to the day physicians retire, lifelong learning must evolve alongside the realities of care.

AMA's advocacy and mission activities were fueled by another strong year of financial performance and the reach of our voice online. AMA membership eclipsed 300,000 for the first time since the AMA began modern membership tracking, and the number of people reading, watching and listening to our content grew by 3% to more than 31 million.



At this consequential moment, medicine needs physicians to lead—together. By speaking with a unified voice, grounding decisions in clinical expertise, and embracing innovation with purpose, physicians can shape a future for medicine that better serves patients and strengthens our profession for generations to come.

DRIVING DIGITAL HEALTH WITH CLINICAL EXPERTISE

The rapid changes in digital health and augmented intelligence (AI) over the last few years accelerated even more in 2025.

As a growing number of physicians and health systems adopt AI tools, they're experiencing, first-hand, the potential for this technology to transform how they care for patients.

And yet, we've only scratched the surface of what's possible with AI and digital health. Going forward, it's going to be more important than ever that physicians be at the center of shaping, guiding and implementing these transformative technologies.

With the launch of the AMA Center for Digital Health and AI in 2025, we're taking the lead in this space. The new center is focusing on:

- **Policy and regulatory leadership:** Working with regulators, policymakers and technology leaders to shape benchmarks for safe and effective use of AI in medicine and digital health tools.
- **Clinical workflow integration:** Creating opportunities for doctors to shape AI and digital tools so they work within clinical workflows and enhance the patient and clinician experience.
- **Education and training:** Equipping physicians and health systems with the knowledge and tools to integrate AI efficiently and effectively into practice.

2 out of 3

physicians use AI-enabled tools in some form

84%

of physicians say EHR integration is key to advance adoption of AI tools

- **Collaboration:** Building partnerships across the tech, research, government and health care sectors to drive innovation aligned with patient needs.

Physicians are excited about the possibilities of AI, but they're also aware of how it still needs to evolve and the issues that must be addressed. Their voice must guide the development of AI in health care to ensure this technology supports physicians, improves patient care and changes medicine for the better.

AMPLIFYING PHYSICIAN VOICES

AND SHAPING POLICY

In 2025, the AMA worked to elevate the voices of physicians in Washington, D.C., and across the country—because physicians play a leading role in shaping the future of health care.

At the national level, the AMA continued its critical work to push for Medicare payment reform, fix prior authorization, promote physician-led care and more by:

- **Generating more than 100 million in earned media and ad impressions** and driving more than 100,000 emails last year alone from physicians and patients to their legislators about Medicare payment reform through our Fix Medicare Now grassroots campaign.

- Facilitating a commitment from AHIP and the Blue Cross Blue Shield Association to **lessen the burden of prior authorization** in 60 of their member plans.

- **Opposing legislation** that would expand pharmacists' scope of practice with respect to testing and treating patients for influenza, COVID-19, RSV and strep throat.

In partnership with state and specialty societies, AMA advocacy protected patients by:

- **Blocking more than 95 bills** that would have inappropriately expanded the scope of practice for physician assistants, pharmacists, optometrists and more.

- **Supporting the passage of more than 20 state laws** that reduce care delays caused by prior authorization.

620,000

contacts to Congress in total through FixMedicareNow.org

95+

scope of practice bills defeated nationwide

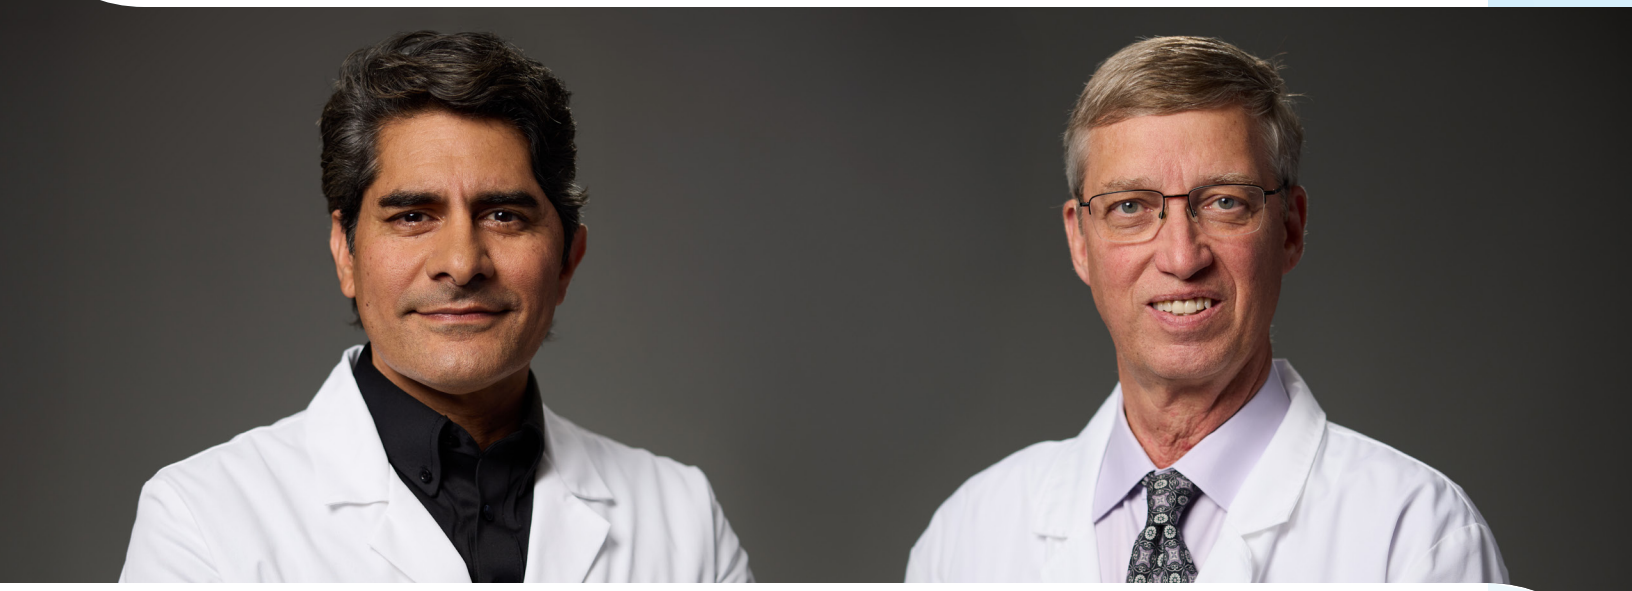
- **Increasing advocacy efforts with the Dr. Lorna Breen Heroes' Foundation** to verify that more than 40 state medical boards and more than 1,800 health systems (and others) removed stigmatizing mental health and substance use questions from their licensing and credentialing applications.

Whenever and wherever policymakers were discussing issues that impact patients and physicians, the AMA was there. For a comprehensive look at our accomplishments across the country, check out our 2025 State Advocacy Impact Report.

STANDING UP FOR SCIENCE
AND ELEVATING EXPERTS

In a year where public health was marked by near-constant change, the need for physician leadership was greater than ever—and the AMA answered the call.

We were a steady voice amidst uncertainty and doubt. We defended science and maintained that evidence should guide care decisions and public health policy. We did that by:



- **Amplifying expert voices** and opposing efforts to destabilize the nation's public health infrastructure.
- **Elevating science** and science-based policy through statements and social media—all backed by action.

The AMA will always ensure that the voice of physicians is heard loud and clear and stand resolute in our defense of science-based medicine.

"With measles outbreaks occurring in multiple states and spring break travel approaching, the AMA urges everyone who isn't already vaccinated to get themselves and their families vaccinated against measles now."

—Bruce A. Scott, MD
Immediate Past President, AMA

"In the wake of CDC budget cuts and the termination of hundreds of employees earlier this year, the AMA is deeply concerned that this turmoil leaves us highly susceptible to public health threats."

—Bobby Mukkamala, MD
President, AMA

TURNING PHYSICIANS INTO CATALYSTS FOR CHANGE

Administrative burdens like prior authorization aren't the only barriers physicians must overcome when treating patients.

For example, health disparities like food deserts or a lack of safe housing within communities can have as much impact on patients' health as anything that happens in the exam room.

That's why the AMA launched its first Community Health Impact Lab micro grants in 2025—as a way to invest in physicians who have ideas to address barriers they see in their communities with local, creative and measurable solutions.

LEADING CONVERSATIONS ON THE FUTURE OF CARE

For physicians to be architects of change, they need to be more than involved in conversations about the future of care. They need to be driving them.

The AMA's original reports, research, trusted analysis and resources help physicians stay informed and prepared to do exactly that.

In 2025, the AMA published a wide range of content that shared new insights on some of the biggest trends in health care and solutions to some of today's most pressing problems.

This research and other reports, like our annual survey on prior authorization and our update on the overdose epidemic, cement the AMA as the definitive voice of medicine and an authoritative resource for policymakers, journalists and academic institutions.

- **The AMA Community Health Impact Lab** is offering up to 20 grants of $50,000 each.
- Grants will help fund **physician-led, community-centered projects** that improve health outcomes among patient populations that often face obstacles to healthy living.

This initiative brings together the unique insights physicians have about the health challenges in their communities with the support they need to be a catalyst for change.

Recipients of the micro grants were notified in April of 2026. They will have 12 months to turn their ideas into action, with the AMA providing advice and coaching along the way.

MANAGEMENT'S DISCUSSION AND ANALYSIS

MANAGEMENT'S DISCUSSION AND ANALYSIS

Introduction

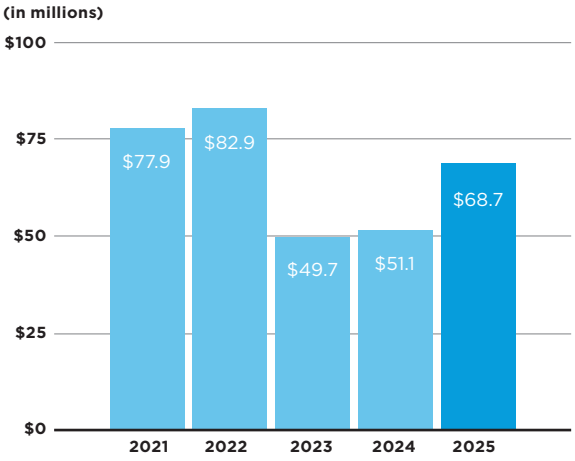
The objective of this section is to help American Medical Association (AMA) members and other readers of our financial statements understand management's views on the AMA's financial condition and results of operations. This discussion should be read in conjunction with the audited consolidated financial statements and notes to the consolidated financial statements.

Improving the health of the nation is at the core of the AMA's work. As the physicians' powerful ally in patient care, the AMA delivers on this mission by representing physicians with a unified voice in courts and legislative bodies across the nation, removing the largest governmental and private sector obstacles that interfere with optimal patient care, and driving the future of medicine to tackle the biggest challenges in health care and training the leaders of tomorrow. AMA's strategic focus is centered on advocacy, membership, financial performance, and operational excellence. Our advocacy; support for optimal health outcomes; putting physicians at the center of shaping, guiding and implementing technologies transforming medicine; growing our national and social media presence as well as several other new initiatives will ensure that our AMA achieves success.

2025 was a transformative year with a mid-year change in leadership driving the start of a transition toward our new priorities. At the same time, AMA continued efforts to re-build health care so that it works better for physicians and all those they serve: 1) reforming Medicare payment to promote thriving physician practices and innovation; 2) fixing prior authorization to reduce the burden on practices and minimize care delays for patients; 3) promoting physician-led care as health care teams working together—with physicians in the lead—is critical to having the best and safest outcomes for patients; 4) reducing physician burnout and addressing the stigma around mental health; and 5) working to ensure physician voices are integrated into the creation and refinement of all medical technology to make technology an asset to physicians, not a burden.

For example, through research, advocacy and education, the AMA continued to defend the practice of medicine against scope of practice expansions that threaten patient safety. AMA efforts helped deliver concrete results in protecting patients from inappropriate scope of practice expansions, providing grants for key state fights, and directly assisted in the defeat of almost 100 problematic bills. The AMA's Fix Medicare Now campaign delivered strong results with over 100 million earned media and ad impressions and more than 600 thousand contacts to Congress.

The results for both 2021 and 2022 included in this report were dramatically impacted by the COVID-19 pandemic. Early in 2020, the AMA, like all other organizations, recognized that there was substantial uncertainty about the effects and risk of COVID-19 on our funding, financial condition, and results of operations. As a result, AMA took steps to ensure that programmatic activities and employment levels would be protected during a sustained pandemic, knowing the potential for economic uncertainty. AMA lifted a freeze on hiring in the spring of 2021, but the level of open positions remained high through 2022 as the job market was very tight. Vacancies and limited travel for most of the three years garnered substantial savings that were temporary in nature resulting in unusually high operating income for AMA. Results began to normalize in 2023, although better than expected revenue growth and a slower ramp up than expected in operating expenses continue to drive a higher level of net operating income through 2025 than experienced in the past.



The AMA is committed to its responsibility of ensuring that the organization focuses its finite resources on its core mission activities while improving the quality and breadth of products and services for physicians and medical students. Our physicians' and medical students' voices are central to AMA's overall success.

The following pages discuss the 2025 consolidated financial results as compared to 2024. Additional detailed discussion of operating unit results is included in the section titled "Group Operating Results."

Consolidated financial results

Results from operations

Net operating results

As noted above, the hiring freezes and remote work during the pandemic and an unusually tight labor market that adversely impacted hiring and limited travel and in-person meetings through 2022 were major factors in spending levels running substantially less than budgets. Spending levels began to normalize in 2023 although open positions remained higher than previously experienced.

In both 2024 and 2025, revenue growth more than offset a continued increase toward normalized spending levels, resulting in continued unusually strong operating results when compared to historical levels.

Revenues

In 2025, total revenue increased $23.2 million over the prior year. Continued growth in AMA's royalties and investment income as well as improved coding book sales, membership dues and advertising revenue were partially offset by declines in print subscriptions and insurance commission revenue.

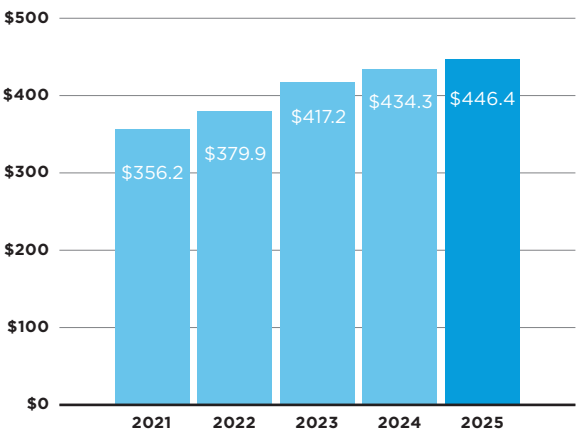
Consolidated investment income, which is dividend and interest income, net of management fees, increased in 2025, mainly due to a larger invested asset base. Market gains or losses are not included in investment income and are reported as non-operating results.

The number of AMA dues paying members increased by 11.5 percent in 2025, the 14th year of growth in the past 15 years. During that 15-year period, AMA dues paying membership increased by over 121,000. Dues revenue increased 1.5 percent in 2025 as much of the growth was in lower dues paying categories such as group memberships and sponsored memberships.

Most other revenue categories were largely unchanged for the year.

Cost of products sold and selling expenses

All variable expenses related to production, distribution and sale of periodicals, books, coding products, and licensed products are included in the cost of products sold and selling expense categories. Examples include paper, sales commissions, promotional activities, distribution costs, and third-party editorial costs.



In 2025, cost of products sold and selling expenses decreased $6.3 million from the prior year. Most of the decrease was due to reclassifying certain editorial costs to outside professional services, coupled with additional savings from eliminating distribution of print journals to a controlled population of physicians who were included in measuring journal readership scores, a key indicator for print ad placement.

Contribution to general and administrative expenses

Cost of products sold and selling expenses are deducted from revenues to determine the amount of money available for the general and administrative expenses of the organization. Contribution to general and administrative expenses measures the gross margin derived from revenue-producing activities.

The contribution to general and administrative expenses increased $29.5 million to $519 million in 2025, a combination of the $23.2 million revenue improvement coupled with the reduction in cost of products sold noted above.

General and administrative expenses

General and administrative expenses rose $12.1 million in 2025, or 2.8 percent, when compared to 2024. This was substantially less than the $44.9 million increase budgeted for 2025, with approximately $33 million of under budget spending in almost all categories of spending, with the largest variances in marketing and promotion and outside professional services.

Compensation and benefits increased $8.4 million in 2025, up 3 percent. Compensation, including temporary help, was $9.1 million higher in 2025, a 4.8 percent increase which was a function of annual merit increases and filling open positions. Fringe benefit costs increased $2.7 million in total primarily due to higher medical and payroll tax expenses. Incentive compensation decreased $3.2 million as certain key performance indicators were rated lower than the prior year.

Occupancy costs were down $2.3 million, driven by a reduction in rent expense. In late 2023, AMA negotiated an extension of the current headquarters lease in return for future contraction options and lease incentives. Most of the reduction in occupancy was related to rent abatement from the renegotiation and a reduction in real estate taxes due to a change in valuation of the building.

Travel and meeting costs increased by $2.5 million in 2025 due to holding several large biennial meetings such as the International Congress on Peer Review and Scientific Publication and the ChangeMedEd® National Conference, as well as inflationary cost pressures.

Technology costs were largely unchanged. As more technology moves to the cloud, costs associated with the technology platforms will be reflected in operating expense instead of capitalized as an asset and depreciated. This model has the benefit of reducing the need for in-house development expertise but also exposes AMA to more price risk from vendors.

Marketing and promotion costs decreased $2.5 million in 2025, as Advocacy had expanded its grassroots and media campaign activity on Medicare payment reform in 2024, but returned campaign spending back to previous levels in 2025.

Outside professional services increased $1.9 million in 2025, as a substantial decline in the use of outside consulting in the Core Mission Activities and Health2047 was offset by a reclassification of certain editorial costs from cost of products sold.

Other operating expenses increased $3.8 million in 2025 due primarily to recognizing a $4.5 million loss related to divesting most of Health2047's investment in an affiliate.

Operating results before income taxes

The AMA reported $72.6 million in pre-tax operating income in 2025 compared to $55.2 million in 2024. The current year results include over $23 million in revenue growth that was only partially offset by higher spending, the latter a continuation toward budgeted expense levels.

Income taxes

Taxes decreased $0.2 million in 2025 when compared to 2024, reflecting lower taxable income in one of the for-profit subsidiaries.

Net operating results

Net operating income was $68.7 million in 2025 compared to $51.1 million in 2024, as revenue growth was only partially offset by higher spending.

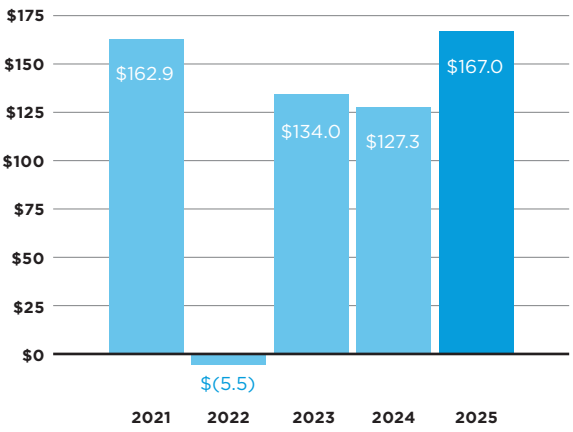
Non-operating items

The AMA reported a $113.8 million gain in the fair value of its portfolio during 2025. Additional portfolio performance information is discussed in the group operating results section.

As a result of an accounting standard for postretirement benefit plans, non-operating results include $6.1 million in postretirement plan interest expense in 2025 and $5.7 million of plan interest expense and recognized actuarial losses in 2024. In 2025, AMA also recognized a $2 million gain on the liquidation of a Health2047 spin out company.

Revenue in excess of expenses

Revenues exceeded expenses by $178.5 million in 2025, a combination of $68.7 million in operating income, a $113.8 million gain in fair value in the portfolio and $4 million in other non-operating expenses. In 2024, revenues exceeded expenses by $125.2 million, a combination of $51.1 million in operating income, a $79.7 million gain in fair value in the portfolio and $5.6 million in other non-operating expenses.



Accounting standards require organizations to recognize deferred actuarial losses and prior service credits or charges for defined benefit postretirement plans as a charge or credit to equity.

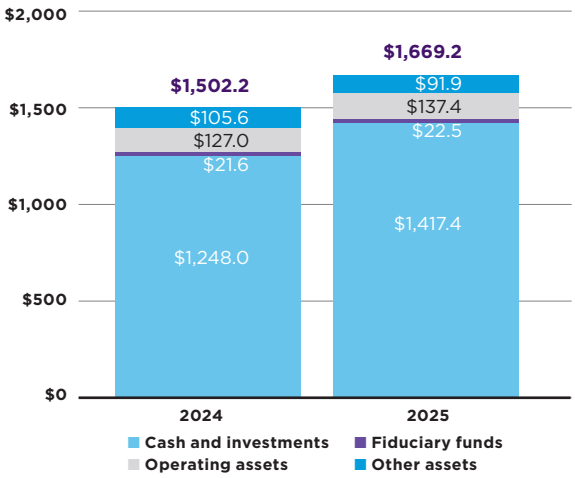
In 2025, AMA recorded an $11.4 million charge to equity reflecting an actuarial loss for the postretirement health care plan, net of income tax. A change increasing the initial health care cost trend in 2025 and adverse claims cost experience were the major drivers of the actuarial loss in 2025.

In 2024, AMA recorded a $2 million credit to equity reflecting an actuarial gain for the postretirement health care plan, net of a reclassification of actuarial gains to operating expense and income tax. The gain resulted primarily from a change in interest rates from 5 percent to 5.7 percent which reduced the present value of projected liabilities, offset by higher claims cost experience.

Change in total association equity

(in millions)

The AMA reported a $167 million increase in association equity in 2025. This reflects the amount by which revenues exceeded expenses, less the charge to equity for changes in defined benefit postretirement plans discussed above, as well as a slight decrease in donor-restricted equity.



The AMA reported a $127.3 million increase in association equity in 2024. This reflects the amount by which revenues exceeded expenses, plus the credit to equity for changes in defined benefit postretirement plans discussed above, as well as a slight increase in donor-restricted equity.

Financial position and cash flows

The AMA's assets include cash, cash equivalents, and investments; operating assets such as accounts receivable, inventory and prepaid expenses; fixed capital such as equipment, information technology hardware and software; and other assets. AMA assets are supported by association equity, operating liabilities, and deferred revenue.

Assets

(in millions)

The AMA's total assets increased $167 million in 2025. This includes a $169.4 million increase in cash and investments resulting from $58.7 million in free cash flow plus a $113.8 million gain in the fair value of investment securities less $3.1 million for investments in affiliates.

Fiduciary funds are premium payments from insurance customers not yet remitted to the carriers and funds held by the AMA for third parties for future use as approved by the third parties. This approximates the offsetting liability titled insurance premiums and other fiduciary funds payable.

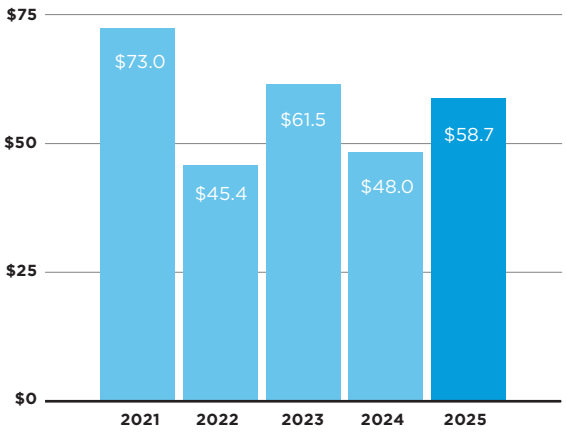
Operating assets increased $10.4 million in 2025, primarily due to increases in accounts receivable and prepaid software licensing expenses. Changes in operating assets from year to year are largely due to timing of cash flows.

Other assets include operating lease right-of-use assets, property and equipment, investment in affiliates and investments in mutual funds maintained in separate accounts designated for various non-qualified benefit plans that are not available for operations. The right-of-use assets declined by $9.2 million, which included $4.8 million in amortization of the asset and a $4.9 million reduction related to the early termination of the existing Washington D.C. office lease in anticipation of a 2026 move to a new space, offset by a $0.5 million increase for a new satellite office lease.

Property and equipment net book value decreased as new capital spending was exceeded by annual depreciation and amortization of existing capital assets.

Operating liabilities increased $1.4 million in 2025, led by an increase in the postretirement health care liability. This was largely offset by a $3.8 million decrease in accrued expenses and a $10.9 million reduction in the lease liability from cash payments exceeding rent expense and a reduction in liability due to terminating the existing Washington D.C. office lease. The new lease in D.C. will not begin until 2026.

Deferred revenue represents funds received during the year that will not be recognized as income until the following year or thereafter. These amounts vary, as well as accounts payable and accrued expenses, depending on the timing of cash receipts and payments.



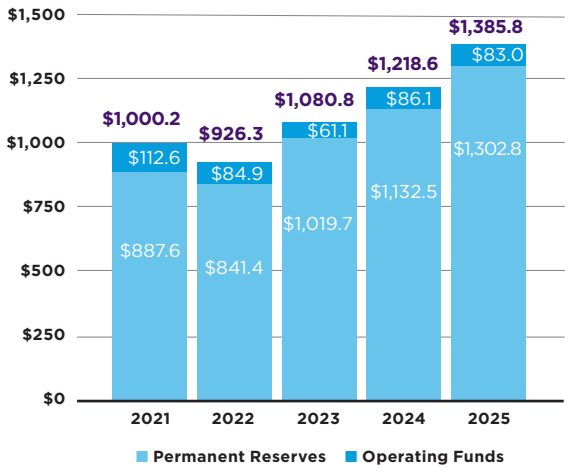
Cash flows

Cash, cash equivalents and donor-restricted cash increased $6.8 million and $3.5 million in 2025 and 2024, respectively. This comparison may cause misleading conclusions, as the change in cash and cash equivalents includes reductions for amounts invested in marketable securities, as well as cash inflows from non-operating activities.

Free cash flow measures the AMA's ability to fund operations, capital expenses and major programmatic initiatives from funds generated from operations. This measure excludes non-operating gains and losses.

Free cash

(in millions)



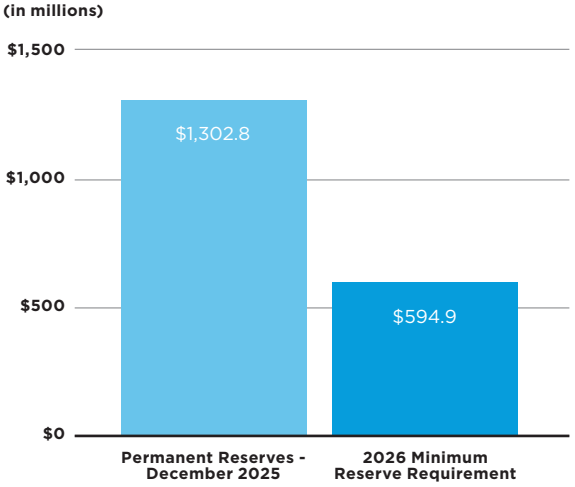
Free cash in 2025 totaled $58.7 million, $10.7 million greater than 2024, a result of higher cash operating income offset by changes in operating assets and liabilities.

Reserve portfolio

Reserves and operating funds

(in millions)

The reserve and operating fund portfolios above do not include cash and investments in the for-profit subsidiaries and reflect only the not-for-profit entity's cash and investment portfolio values.



As of year-end 2025, the reserve portfolio's value was $1,302.8 million compared to $1,132.5 million in 2024, a $170.3 million increase. That increase was mainly the result of a $112.8 million gain in the fair value of the reserve portfolio plus a $56 million transfer of 2024 excess operating funds to reserves. Operating funds totaled $83 million in 2025, down $3.1 million from 2024.

The AMA has established a required minimum reserve investment portfolio level that is adequate to cover 100 percent of annual general and administrative expenses (excluding grant expenses) plus an amount sufficient to pay long-term postretirement and lease liabilities (net of the right-of-use asset value). Operating funds, coupled with operating assets, are to be maintained at a level that allows payment of all operating liabilities.

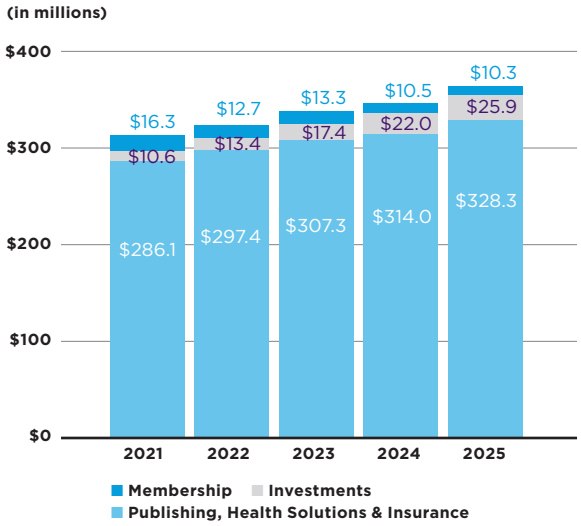
AMA's reserves provide the backbone for the organization's long-term viability and independence, currently operating as a quasi-endowment fund, with a goal of achieving levels that could generate adequate funding to ensure the long-term future of the organization. Building these reserves to function as an endowment fund will provide considerable protection against future loss of revenue and maintain AMA's independence over the long term.

Reserve portfolio funds also provide the AMA with the ability to fund major strategic spending initiatives not within the operating budget. Spending from reserve funds is limited to dollar- or time-limited initiatives and capped at the amount by which reserves exceed the minimum requirement. Reserves may not be used for ongoing operating expenses. The Board of Trustees must authorize any use of reserves.

Permanent reserves and minimum reserve requirement

Group operating results

The AMA is organized into various operating groups: Membership; Publishing, Health Solutions & Insurance; Core Mission Activities; Administration and Operations; Affiliated Organizations; Unallocated Overhead; and Health2047 (including subsidiary). Revenues and expenses directly attributed to those units are included in the group operating results.



A financial summary of group operating results is presented at the end of this section. The prior year financial results have been updated to be consistent with the current year reported results for each group.

Contribution margin (net expenses)

Contribution margin equals individual group revenues minus cost of products sold, selling expenses, and direct general and administrative expenses such as compensation, occupancy, travel and meetings, technology costs, and professional services.

Net expenses equals total spending, net of any revenue produced by the group, such as grants or other fee income. Total contribution margin and net expenses equals consolidated operating results before income taxes. The charts on the following pages separate groups with contribution margin from groups with net expenses.

Contribution margin

The contribution margin generated by Membership; Publishing, Health Solutions & Insurance; as well as Investments, provides the funding for all mission-related activities of the AMA as well as funding for all administration and support operations required to run the organization.

Membership

The Membership group's net membership dues revenue includes the gross dues revenue collected, reduced by any commissions paid to state societies, and equals the membership dues revenue reported on the statement of activities.

In 2025, AMA again reported an increase in the number of dues-paying members, up 11.5 percent from 2024. In 14 of the last 15 years, AMA has reported increases in the number of dues-paying members, a major accomplishment. Membership continues to focus on broad use of digital tools to engage physicians and retain them as lifelong members, group membership marketing, and expanding AMA's reach to physicians through important programmatic mission-based activities.

Dues revenue was $33 million, a $0.5 million increase from 2024. Although the number of post-training physician members increased substantially, most of the growth was in lower dues paying categories. Membership expenses are up $0.7 million from staffing expenses related to merit and open positions as well as higher membership solicitation costs. As a result, Membership's contribution margin decreased $0.2 million in 2025.

Publishing, Health Solutions & Insurance

Publications in the JAMA Network® include the *Journal of the American Medical Association* (*JAMA*®) and the JAMA Network specialty journals. In the last 11 years, the JAMA Network has launched four new journals: *JAMA Oncology* in 2015 and *JAMA Cardiology* in 2016, which are hybrid journals offering open access options for research articles; *JAMA Network Open* in 2018, a fully open access journal; and *JAMA Health Forum* in 2021, a peer-reviewed, open-access, online journal focused on health policy, health care systems, and global and public health.

Publishing revenues are derived from advertising, subscriptions, site licensing, reprints, electronic licensing, open access fees, and royalties. Publishing revenues increased $2.5 million in 2025, largely a function of a $1.4 million increase in open access fees resulting from pricing changes and a $1 million increase in advertising revenue and site licensing fees. Expenses in total rose $2.2 million during 2025, as the cost of filling open positions and merit increases were only partially offset by reduced production costs related to eliminating print journals. The contribution margin improved by $0.3 million to $0.4 million.

Health Solutions includes two major lines: Database Products, and Books and Digital Content.

Database Products includes royalties from licensed data sales and credentialing products revenue. Revenues increased in 2025, up $0.4 million when compared to 2024. Growth in credentialing revenues, including revenues from a new credentialing product, VeriCre™, drove the revenue improvement. VeriCre is a credentials wallet that streamlines credentialing by pre-filling physician applications with authoritative, verified AMA data, reducing administrative burden for physicians and medical staff professionals. Total expenses were up $1.6 million, of which $0.9 million relates to development of the new physician credentialing product. The remaining $0.7 million cost increase was driven by filling open positions, and technology projects. The resulting contribution margin declined by $1.2 million in 2025 to $51.4 million.

AMA-published books and coding products, such as coding books and tools, workshops, and licensed data files, make up the Books and Digital Content unit. Royalties, coding book sales, and digital content sales drove a $15.9 million revenue increase, as the market for electronic use of digital coding products continues to expand. A three percent price increase as well as phasing in previous pricing model changes were also factors. Expenses were down $0.5 million, driven by a reduction in professional services for projects related to content and product strategy, market research, and project management. The contribution margin increased by $16.4 million to $267.5 million.

The AMA has two active for-profit subsidiaries, the AMA Insurance Agency (Agency) and Health2047. The latter is discussed separately at the end of this discussion and analysis.

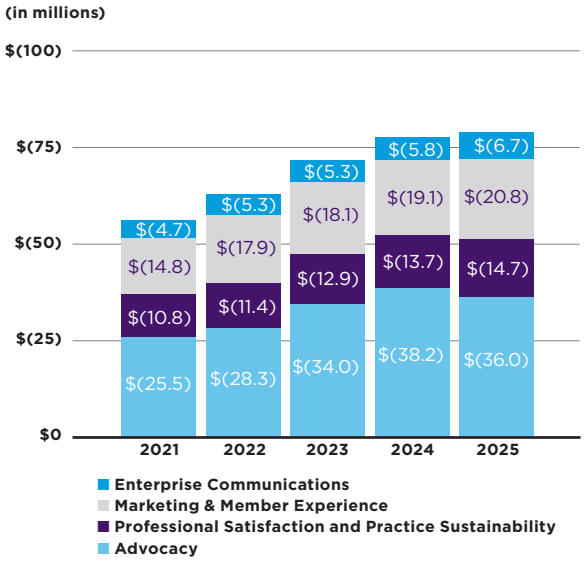
The Agency's revenue declined by $0.9 million in 2025, mainly due to lower interest income. A dividend from the Agency to AMA reduced the investible funds balance, with a resulting decline in investment income. The Agency, as broker, receives a commission on insurance policies sold, which declined slightly in 2025, flattening a trend of larger commission revenue declines in previous years. Expenses were down $0.4 million mainly due to staff and occupancy reductions. The contribution margin decreased to $13.3 million from $13.8 million in the prior year.

Other business operations net expenses were up $0.7 million in 2025 due to staffing and professional service expense increases.

In total, Publishing, Health Solutions & Insurance contribution margin was $328.3 million, up $14.3 million from 2024.

Investments (AMA-only)

AMA-only investment income includes dividend and interest earnings on the AMA's portfolio. Investment income in AMA's for-profit subsidiaries is included as part of the group results for Publishing, Health Solutions & Insurance and Health2047.



Investments' revenue was $26.7 million in 2025, a $3.8 million increase over the prior year. Dividend and interest income continued to improve in 2025, impacted in large part by an increased level of investible funds. The contribution margin increased by $3.9 million as expenses dropped slightly.

The net gain or loss on the market value of investments is not included in operating results but reported as a non-operating item. This amount is in addition to the investment income discussed above.

In 2025, AMA reported a net gain of $113.8 million. The total investment return, including investment income, on the reserve portfolios was 11.5 percent compared to a 15.7 percent gain in the composite benchmark index. A combination of factors caused the below benchmark performance including poor performance by a small cap manager that has been replaced and overall private equity market performance that substantially lagged the public market indices in the past year.

Net expenses

Core Mission Activities

Core Mission Activities include direct costs associated with the groups for Advocacy; Professional Satisfaction and Practice Sustainability (PS2); Marketing & Member Experience (MMX); Enterprise Communications, Medical Education (Med Ed); the AMA Ed Hub™; the Center for Optimal Health Outcomes (COHO), previously the Center for Health Equity; Health, Science & Ethics; and Improving Health Outcomes (IHO). The Integrated Health Model Initiative, focused on technology innovation, was closed in 2023. IHO activities have been folded into COHO, fully effective in 2026, to take advantage of synergies between the units. See the chart below for additional business unit results.

Advocacy includes federal and state level advocacy to enact laws and advance regulations on issues important to patients and physicians; economic, statistical and market research to support advocacy efforts; political education for physicians; grassroots advocacy; and maintaining relations with the federation of medicine. This ensures that AMA's critical voice is represented in federal and state courts around the country on a broad range of issues, working with state and federal policymakers to oppose legislation and laws that interfere with the practice of medicine and elevating the voice of physician leadership on critical issues of public health.

In 2025, the AMA worked to elevate the voices of physicians in Washington, D.C., and across the country—because physicians play a leading role in shaping the future of health care. At the national level, the AMA continued its critical work to push for Medicare payment reform, fix prior authorization, promote physician-led care and more.

AMA's Fix Medicare Now grassroots campaign and sustained advocacy led to more than 600,000 physicians and patients contacting legislators about Medicare payment reform. While AMA sought a permanent payment increase, the One Big Beautiful Bill Act included a 2.5 percent increase for 2026.

AMA secured a commitment from American's Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association to lessen the burden of prior authorization in 60 of their member plans and in partnership with state specialty societies supported passage of more than 20 state laws that reduce care delays caused by prior authorization.

AMA efforts in protecting patients from inappropriate scope of practice expansions, included opposing legislation that would expand pharmacists' scope of practice with respect to testing and treating patients for influenza, COVID-19, RSV and strep throat and, with constituent societies, blocked nearly 100 bills that would have inappropriately expanded the scope of practice for physician assistants, pharmacists, optometrists and more. The AMA had a major win when the National Council of Insurance Legislators adopted model legislation based in large part on AMA's state model bill.

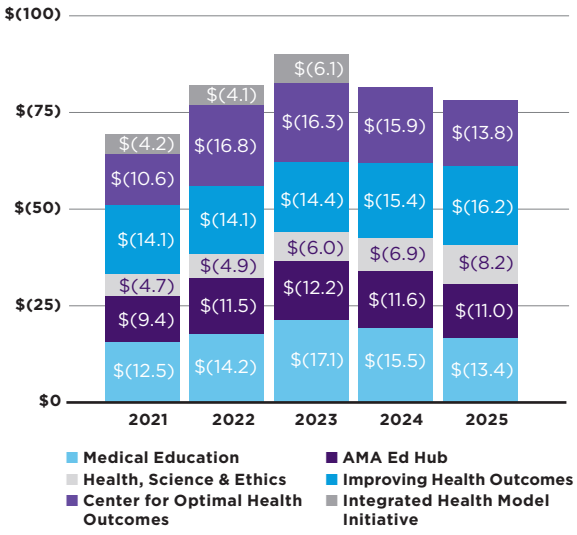
In 2025, Advocacy net spending decreased $2.2 million, due to the absence of a prior year increase in media and professional service costs for the Medicare reform campaign. As noted in AMA's annual budget, the use of these campaign funds would be dependent on the environment. The focus in 2026 is to expand AMA's advocacy efforts such as expanding the Scope of Practice grants to $1 million and increasing spending on a public-facing Medicare payment reform campaign.

PS2 includes three major streams of work: professional satisfaction/practice transformation, practice sustainability, and digital health, all designed to improve the day-to-day practice and professional experience of physicians and remove obstacles to care. The goals of this group are to promote successful models in both the public and private sectors. This includes expanding research of credible practice science, creating tools and other solutions to help guide physicians, care teams and health system leaders on developing and implementing strategies to optimize practice efficiencies, reduce burnout and improve professional well-being; ensuring the physician perspective is represented in the design, implementation and evaluation of new health care technologies; and shaping the evolution of payment models for sustainability and satisfaction. The work of the digital health unit will transfer to the newly created Center for Digital Health and AI in 2026.

In 2025, the PS2 resources such as the Joy in Medicine™ Health System Recognition Program, the Organizational Biopsy®, STEPS Forward®, webinars, podcasts, coaching and learning collaboratives increased the impact of PS2 efforts with physicians as measured by the number of physicians served and the assessment of high value reflected in post-engagement surveys.

The AMA Joy in Medicine Health System Recognition Program received a record number of applications in 2025 and recognized 109 health systems who met the evidence-based criteria, representing their commitment to organizational well-being. The Organizational Biopsy team partnered with 151 health care organizations to conduct well-being assessments in 2025. AMA STEPS Forward expanded its library and grew webinar attendees and podcast downloads substantially in 2025. AMA also co-sponsored the 2025 American Conference on Physician Health™ with the Mayo Clinic and Stanford Medicine, with a record number of attendees presenting a record high number of abstracts. In 2025, net expenses

increased $1 million, driven almost entirely by staffing increases.



MMX extends the reach and impact of AMA's mission and advocacy initiatives, builds and executes programs to grow and retain members and strengthens the AMA brand. MMX continues to take on increased oversight for managing the quality, timing and relevance of the experience physicians have at each point of interaction through AMA's digital publishing, health system engagement, and member programs. MMX creates or packages AMA's content into digital formats and distributes AMA resources and thought leadership to intended audiences through owned and paid channels, raising awareness of AMA initiatives, resources and accomplishments and elevating the voice of AMA and physicians. Key results in 2025 included the continuation of the "Why We Fight" campaign focused on reforming Medicare payment, fighting scope creep, fixing prior authorization, reducing physician burnout, and making technology work for physicians. MMX also focused on working collaboratively with key business units (PS2, IHO, COHO, Med Ed, Ed Hub) to expand delivery of mission value to existing and potential new health system partners and developing a pragmatic and growth-oriented marketing program for AMA's health equity work. AMA's audience of readers, watchers and listeners totaled over 31 million in 2025.

Net expenses increased $1.7 million in 2025, with increased spending on compensation and marketing and promotion to support delivery of AMA's message.

Ongoing responsibilities of the Enterprise Communications area include amplifying the work of individual operating units among their core audiences while providing consistency and alignment with the AMA narrative. Enterprise Communications distinctly communicates AMA's leading voice in science and evidence to embed equity, innovation, and advocacy across the AMA's strategic work throughout health care, driving thought leadership on priority issues in health care and digital health; securing speaking opportunities at marquee, high visibility events; publishing op-eds; and enhancing AMA visibility with national and social media opportunities. Net expenses were up $0.9 million in 2025, largely due to increased staffing costs and leveraging outside agency expertise to drive efficient and effective impact across all external channels.

Core Mission Activities (continued)

(in millions)

While the Accelerating Change in Medical Education (ACE) undergraduate medical school grants successfully concluded in 2018 and the five-year Reimagining Residency grants, designed to improve the transition from undergraduate to graduate medical education and to maintain and reinforce the positive changes initiated by the undergraduate consortium work, ended in 2024, AMA has continued to catalyze innovation in medical education through its ChangeMedEd® initiative. Building upon the learning and momentum gained from the two previous programs, the American Medical Association's efforts and focus have entered an important new phase, forming groundwork teams, issuing innovation grants and identifying select innovation sites to tackle the AMA's new priorities in competency-based medical education, precision education and workforce development.

This initiative has inspired a community of innovation in medical education that works collaboratively to create a workforce better prepared to meet the needs of patients and communities, driving change to reduce barriers to lifelong learning, advance health equity and improve patient outcomes. One of the key outcomes of the ACE consortium was the development of Health Systems Science, a foundational platform and framework for the study and understanding of how care is delivered, how health professionals work together to deliver that care, and how the health system can improve patient care and health care delivery.

In 2025, Med Ed expanded its efforts on precision education, a system that can leverage technology and data to improve education personalization and learning efficiency across the continuum, in support of students, residents, fellows, physicians, and ultimately the needs of patients. Innovation Grants were awarded to 13 sites applying precision education approaches in medical school, residency and continuing professional development. The AMA Transforming Lifelong Learning Through Precision Education (Precision Ed) portfolio, launched in 2025, will cultivate and promote democratization of the precision education ecosystem to offer individualized learning that aligns physician education with the needs of patients both now and in the future. The recipients of a four-year, $12 million Precision Education grant program were announced, and 11 teams were identified to receive these grants and join the ChangeMedEd Consortium. Med Ed is also responsible for defining or influencing standards for undergraduate, graduate and continuing medical education and providing support for the Council on Medical Education. Over 600 attendees took part in the flagship biennial conference, ChangeMedEd 2025, featuring 30 "blue sky" ideas on the application of AI in medical education.

Net expenses decreased $2.1 million in 2025, reflecting the end of the Reimagining Residency grant program in mid-2024. The Precision Ed grants will begin in 2026.

The AMA Ed Hub, formally launched in 2018, is a multi-sided platform providing physicians and other health care providers content and educational services that support lifelong professional development. The Ed Hub has unified the AMA education portfolio and integrated an increasing number of external content providers, launched new content sets, and established internal development plans enterprise wide, including the Health Equity Education Center and the UME Curricular Enrichment Program. The Ed Hub also gives physicians and other health professionals a streamlined way to earn, track and report continuing medical education activities spanning clinical, practice transformation and professionalism topics. In 2025, the AMA Ed Hub offered more than 9,000 education activities from AMA and over 80 partner organizations. A new Physician Education Program™ was developed in 2025 for physician members, curating member-only educational bundles. Net expenses were down $0.6 million in 2025 due largely to a reduced level of technology development and professional services as the Ed Hub platform has reached a stable state.

The Center for Health Equity (CHE) was created in response to a Board sponsored 2018 taskforce that identified a continuing and urgent need for the AMA to play a leading and public role in eliminating health care disparities and promoting health equity through all segments of our society. In late 2025, certain activities in IHO were sunsetted and others merged with CHE in this newly constituted business unit, renamed the Center for Optimal Health Outcomes (COHO), that will fully support the original goal to achieve optimal health for all by eliminating health inequities and improve health outcomes, particularly for marginalized and underrepresented communities.

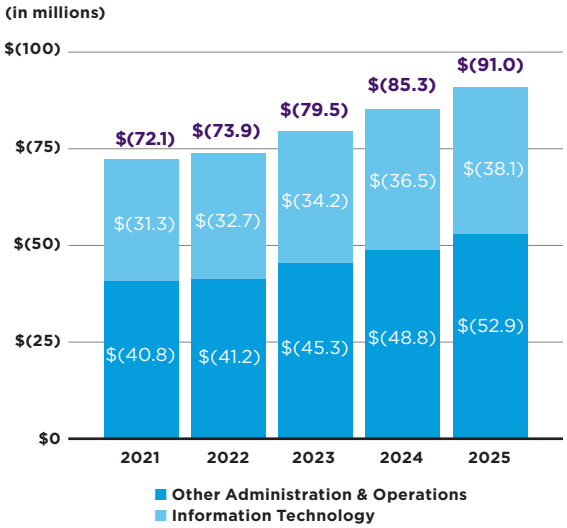
During 2025, CHE graduated the third cohort of the Medical Justice and Advocacy Fellowship with fellows presenting their capstone projects at the AMA Interim Meeting; convened the first hybrid meeting of the AMA's Disability Advisory Group and published the first educational module on improving disability inclusion in medicine and health care; and engaged with new policy audiences utilizing the Release the Pressure campaign as an entry point for discussions with lawmakers, engaging for the first time with the Congressional Black Caucus Foundation Annual Legislative Conference. CHE also continued its educational work and continued as an anchor partner in the West Side United Collaborative focusing on improving housing, job creation and local purchasing on Chicago's West Side.

Additionally, CHE and IHO began the transition to the new combined operating unit launching an innovative grant program for physician led community health projects, the Community Health Impact Lab (CHIL) micro grants. COHO (previously CHE) reported a $2.1 million net expense decline in 2025, due mainly to reduced use of outside professional services and a small decline in compensation due to open positions.

Health, Science & Ethics is involved in developing AMA policies on scientific, public health and ethical issues for the House of Delegates; providing leadership, subject matter expertise and scientifically sound content and evidence that underpins and informs both current and future AMA initiatives in areas such as infectious disease, drug policy and opioid prescribing; overseeing maintenance of the AMA Code of Medical Ethics and publication of the *AMA Journal of Ethics*®, AMA's online ethics journal, which was wound down in 2025; and managing the United States Adopted Names (USAN) program, responsible for selecting generic names for drugs by establishing logical nomenclature classifications based on pharmacological or chemical relationships (reported separately in group operating results).

In 2025, this group collaborated with Health AI Partnership and the Duke Institute for Health Innovation to develop physician education on the ethical use of AI, including publishing an ethics AI toolkit on the AMA Ed Hub; launched a new online portal to streamline and improve the application process for generic drug names; supported the Firearm Injury Prevention Task Force; and in collaboration with the Ad Council and a coalition of health care leaders, launched a new digital resource hub to empower physicians and other health care professionals to engage in conversations about firearm injury prevention. Net expenses increased $1.3 million in 2025, with increased staffing costs, a substantial marketing outlay to support flu vaccines and a write-off of technology assets related to closing the *AMA Journal of Ethics*.

As noted above, IHO was downsized substantially in late 2025, with certain activities sunsetted and others merged with the Center for Health Equity in the newly constituted business unit, COHO. IHO over the past several years developed empirically validated tools such as its AMA MAP™ Solutions (for hypertension control) and dashboards that, in conjunction with its well-established partnerships with the American Heart Association (AHA), Centers for Disease Control and Prevention (CDC), and the Ad Council, have created opportunities to focus on community health, in conjunction with the previously named Center for Health Equity.



The main focus during most of 2025 was on hypertension outcome goals using cloud-based MAP BP (a three-step program that works to diagnose and manage patients with hypertension) dashboards at health care organizations (HCOs), providing a visual representation of their performance on five key blood pressure metrics, including stratification by ethnicity, race and gender. The AMA and AHA recognized nearly 2,400 organizations that committed to improving blood pressure control rates by submitting data to the 2025 Target: BP Award Achievement. Over 38 million patients were served by 2,393 total eligible participating health care organizations across 49 U.S. states and territories. To advance the national Million Hearts® campaign, the AMA, in partnership with the CDC and AllianceChicago, engaged five Health Center Controlled Networks and 19 community health centers with an aim to prevent heart attacks and strokes in over 900,000 adult patients, with a focus on minority, rural and medically under-resourced communities.

In 2025, net expenses increased by $0.8 million, largely due to costs related to downsizing certain activities.

Governance

Governance includes the Board of Trustees and Officer Services (BOT), the House of Delegates (HOD) and Sections & International units. The Board of Trustees unit includes costs related to governance activities as well as expenses associated with support of the Core Mission Activities. The HOD, Sections & International unit includes costs associated with annual and interim meetings, groups, sections and other HOD activities, as well as costs associated with AMA's involvement in the World Medical Association. In 2025, Governance net spending was up $1.2 million, driven by costs for the new Emergency Assistance Program that provides grants to federation societies to fund certain delegate travel costs and higher overall travel and meeting costs for the BOT, HOD and Sections.

Administration and Operations

These units provide administrative and operational support for Publishing & Health Solutions, Membership, and Core Mission Activities, as well as other operating groups. Net expenses were up 6.7 percent in 2025, an increase of $5.7 million, due primarily to compensation costs from staff additions, filling open positions and merit increases; increased technology costs and outside legal fees.

Affiliated Organizations

Affiliated Organizations represent either grant or in-kind service support provided by the AMA to other foundations and societies. In some cases, the AMA is reimbursed for services provided. No net expenses were reported in 2025.

Unallocated Overhead

The net expenses in this area include costs not allocated back to operating units such as corporate insurance and actuarial services, employee incentive compensation, valuation allowances or other reserves. In 2025, these expenses total $28.1 million, down $7.5 million from 2024. Lower incentive and other compensation savings were the main factors in the decline, as well as savings from rent abatement obtained in the headquarters lease renegotiation.

Health2047 and Subsidiary

AMA owns a business formation and commercialization enterprise designed to enhance AMA's ability to define, create, develop, and launch, with partners, a portfolio of products and technologies that will have a profound impact on many aspects of the U.S. health care system and population health, with a central goal of helping physicians in practice. The AMA Board of Trustees approved the use of reserves to establish this subsidiary with plans to use third-party resources to assist in funding spinoffs with commercial potential in future years. These liquidity events generally occur somewhere between eight and twelve years after the initial spinoff.

Health2047's mission is to advance the AMA's core mission by developing early-stage companies that will attract third party investment as they mature to successful financial exits. Health2047 operates with two critical venture industry expectations: one that only a minority of early-stage start-up companies will reach maturity and consequently that it is important to aggressively manage investments and second that the industry expected timeframe for successful exit is between eight and twelve years.

To date thirteen spinout companies have been launched, nine of which continue to operate and are attracting outside interest and investment. Given the relative youth of Health2047, none of these spinout companies have yet achieved a final financial exit. The nine spinout companies reflect a wide range of physician centric solutions including Medicare Advantage for underserved populations, effective data extraction for health care enterprises, obesity phenotyping for precision medicine, cybersecurity situational awareness for health care, evidence-based point of care insight, a digital learning platform for medical and health professional schools, clinical-grade cognitive rehabilitation using AI-powered tools, and augmented intelligence applied to medical images.

Net expenses increased by $2.9 million in 2025, including the impact of a $4.5 million loss on the divestment of ownership in one company, partially offset by reduced use of consultants. In addition, Health2047 liquidated its investment in a subsidiary during 2025, recognizing a $2 million non-operating gain.

The summary of group operating results is included on the following page.

American Medical Association group operating results

Right-of-use assets obtained for lease obligation	$ 0.5	$ 3.1
Noncash investing activities		
Accounts payable for property and equipment additions	$ 0.5	$ 2.3

See accompanying notes to the consolidated financial statements.

AMERICAN MEDICAL ASSOCIATION AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

For the Years Ended December 31, 2025 and 2024
(Columnar amounts in millions)

1. Nature of operations

The American Medical Association (AMA) is a national professional association of physicians with approximately 322 thousand members. The AMA serves the medical community and the public through standard setting and implementation in the areas of science, medical education, improving health outcomes, health equity, delivery and payment systems, ethics, representation and advocacy, policy development, and image and identity building. The AMA provides information and services to hundreds of thousands of physicians and includes journal and book publishing, physician credentialing, database licensing, insurance and other professional services for physicians.

The AMA classifies all operating results as revenues and expenses in the consolidated statements of activities. Non-operating items include net realized and unrealized gains and losses on investments, defined benefit postretirement plan non-service expense and other non-recurring income or expense.

Donor-restricted association equity includes contributions restricted for use for a scope of practice program which are not available for general use by AMA.

2. Significant accounting policies

Consolidation policy

The accompanying consolidated financial statements include the accounts of the AMA and its subsidiaries, AMA Services, Inc., American Medical Assurance Company (AMACO) and Health2047 Inc. (collectively, the AMA).

AMACO, a reinsurer for physician medical professional liability coverage, ceased accepting new and renewal business in 1986 and began running off claims under existing contracts. Since 1986, AMACO pursued the commutation of various treaties and the final treaties were commuted in 2024, with all related exposures eliminated. AMACO obtained approval from the Illinois Insurance Commissioner for a plan of dissolution and implemented that plan in 2024, with no material impact on the consolidated financial results.

AMA, through its wholly owned subsidiary, Health2047 Inc. (Health2047), has investments in nine companies or limited partnerships as of December 31, 2025.

Health2047 controlled and consolidated the results of one company, First Mile Care, Inc., that was liquidated in 2025 resulting in recognizing a $2 million gain that is included in other non-operating income.

The equity method of accounting is used to account for investments in companies or limited partnerships in which the AMA has significant influence but not overall control. The investments are initially recorded at the original amounts paid for common and convertible preferred stock and subsequently adjusted for the AMA's share of undistributed earnings and losses from the underlying entities from the dates of formation. Each investment will be increased or reduced by any future additional contributions and distributions received, respectively. The cost method of accounting is used to account for investments in companies in which the AMA has neither significant influence nor overall control and where the fair value is not readily determinable.

The results of one company, Heal Security, Inc. (formed in February 2021) are accounted for under the equity method. At December 31, 2025, AMA ownership interest is 33.3% in Heal Security, Inc. and the book value of the investment, net of convertible debt, is $0.7 million.

In addition, at December 31, 2025, AMA has an ownership interest in eight companies or limited partnerships. The investments in these entities are accounted for using the cost method, as AMA holds less than a 20% ownership and does not exercise significant influence over the entities. This includes ownership interests of 2.7% in Zing Health Enterprises, LP (formed in May 2020), 16.3% in Medcurio Inc. (formed in February 2020), 19.2% in Phenomix Sciences, Inc. (formed in August 2020), 13.6% in Evidium, Inc. (formerly Recovery Exploration Technologies, Inc., formed in August 2021), 5% in Sitebridge Research, Inc. (formed in January 2021), 5.7% in Scholar Rx, Inc. (acquired in December 2022), 5.3% in IntellixAI, Inc. (acquired in 2023), and 3.5% in Cognitive Health Solutions, Inc. (acquired in 2025). The book value of the eight investments carried at cost at December 31, 2025 is $17.1 million. AMA divested the majority of its interest in SiteBridge Research, Inc. during 2025 and recognized a $4.5 million loss that is included in other operating expenses.

Health2047 had investments in nine companies or limited partnerships as of December 31, 2024. Health2047 controlled and consolidated the results of one company, First Mile Care. Inc.

At December 31, 2024, AMA ownership interest was 33.3% in Heal Security, Inc. and the book value of the investment, net of convertible debt, was $1 million.

In addition, at December 31, 2024, AMA had ownership interest of 2.9% in Zing Health Enterprises, LP, 16.4% in Medcurio Inc., 18.7% in Phenomix Sciences, Inc., 13.2% in Evidium, Inc., 18.4% in Sitebridge Research, Inc., 6% in Scholar Rx, Inc. and 5.4% in IntellixAI, Inc. The investments in these entities were accounted for using the cost method, as AMA held less than 20% ownership and did not exercise significant influence over the entities. The book value of the seven investments carried at cost at December 31, 2024 was $18.4 million.

Use of estimates

Preparation of consolidated financial statements in conformity with accounting principles generally accepted (GAAP) in the United States of America requires management to make estimates and assumptions that affect reported amounts of assets, liabilities, revenues and expenses as reflected in the consolidated financial statements. Actual results could differ from estimates.

Cash equivalents

Cash equivalents consist of liquid investments with original maturities of three months or less and are recorded at cost, which approximates fair value.

Fiduciary funds

One of the AMA's subsidiaries, the AMA Insurance Agency, Inc., in its capacity as an insurance broker, collects premiums from the insured and, after deducting its commission, remits the premiums to the underwriter of the insurance coverage. Unremitted insurance premiums are invested on a short-term basis and are held in a fiduciary capacity. The AMA also collects and holds contributions on behalf of a separate unincorporated entity with $2.4 million held at December 31, 2025 and December 31, 2024.

Inventories

Inventories, consisting primarily of books and paper for publications, are valued at the lower of cost or net realizable value.

Property and equipment

Property and equipment are carried at cost, less accumulated depreciation and amortization. Depreciation and amortization are computed using the straight-line method over the estimated useful lives of the assets. Furniture and office equipment, hardware and software are depreciated or amortized over three to 10 years. Leasehold improvements are depreciated over the shorter of the estimated useful lives or the remaining lease term.

Revenue recognition

Revenue is recognized upon transfer of control of promised products or services to customers in an amount that reflects the consideration that AMA expects to receive in exchange for those products or services. AMA enters into contracts that generally include only one product or service and as such, are distinct and accounted for as separate performance obligations. Revenue is recognized net of allowances for returns and any taxes collected from customers, which are subsequently remitted to governmental authorities.

Membership dues are deferred and recognized as revenue in equal monthly amounts during the applicable membership year, which is a calendar year.

Licensing and subscriptions to scientific journals, site licenses, newsletters or other online products are recognized as revenue ratably over the terms of the subscriptions or service period. Advertising revenue and direct publication costs are recognized in the period the related journal is issued. Book and product sales are recognized at the time the book or product is shipped or otherwise delivered to the customer. Royalties are recognized as revenue over the royalty term. Insurance brokerage commissions on individual policies are recognized as revenue on the date they become effective or are renewed, to the extent services under the policies are complete. Brokerage commissions or plan rebates on the group products are recognized as revenue ratably over the term of the contract as services are rendered.

Contract balances

AMA records a receivable when the performance obligation is satisfied and revenue is recognized. For agreements covering subscription or service periods, AMA generally records a receivable related to revenue recognized for the subscription, license or royalty period. For sales of books and products, AMA records a receivable at the time the product is shipped or otherwise delivered to the customer. These amounts are included in accounts receivable on the consolidated statements of financial position and the balance, net of allowance for doubtful accounts, was $111.9 million and $103.8 million as of December 31, 2025 and December 31, 2024, respectively.

The allowance for doubtful accounts reflects AMA's best estimate of probable losses inherent in the accounts receivable balance. The allowance is based on historical experience and other currently available evidence.

Payment terms and conditions vary by contract type, although terms generally include a requirement of payment within 30 to 60 days. Some annual licensing agreements carry longer payment terms. In instances where the timing of revenue recognition differs from the timing of invoicing, AMA has determined that these contracts generally do not include a significant financing component.

Prepaid dues by members are included as deferred membership dues revenue in the consolidated statements of financial position. Prepayments by customers in advance of the subscription, royalty or insurance coverage period are recorded as deferred subscriptions, licensing, insurance commissions and royalty revenue in the consolidated statements of financial position.

Income taxes

The AMA is an exempt organization as defined by Section 501(c)(6) of the Internal Revenue Code and is subject to income taxes only on income determined to be unrelated business taxable income. The AMA's subsidiaries are taxable entities and are subject to income taxes. See Note 10.

Changes in presentation

In 2025, AMA realigned its business units to reflect the current operations of the organization. As a result, the presentation of the functional expenses for 2024 in Note 15 has been updated to be consistent with the current presentation.

As of December 31, 2025, AMA expanded the disclosure of initial health care cost trend rates. As a result, the presentation of the initial health care cost trend rates for 2024 in Note 9 has been updated to be consistent with the current presentation.

3. New accounting standards update

In December 2023, Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) No. 2023-09, *Improvements to Income Tax Disclosures*. This requires an entity to report the amount of income taxes paid disaggregated by federal, state, and foreign taxes as well as the amount of income taxes paid disaggregated by individual jurisdictions in which income taxes paid is equal to or greater than five percent of total income taxes paid. The new standard is effective for AMA for annual periods beginning after December 15, 2025. The adoption of the standard will expand certain footnote disclosures but will not have an impact on the AMA's consolidated financial statements.

In September 2025, FASB issued ASU No. 2025-06, *Targeted Improvements to the Accounting for Internal-Use Software*. This applies to internal use software and replaces the current criteria for capitalization of software development costs with a framework that includes two criteria relating to management authorizing a commitment of funds

and meeting a probable to complete threshold. The new standard is effective for AMA for annual periods beginning after December 15, 2027. The adoption of the standard will not have a material impact on the AMA's consolidated financial statements.

4. Investments

Investments include marketable securities and venture capital private equity investments that are carried at fair value.

In determining fair value, the AMA uses various valuation approaches. The FASB's Accounting Standards Codification (ASC) Topic 820, *Fair Value Measurements and Disclosures*, establishes a hierarchy for inputs used in measuring fair value that maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that the most observable inputs be used when available. Observable inputs are inputs that market participants would use in pricing the asset based on market data obtained from sources independent of the organization. Unobservable inputs are inputs that would reflect an organization's assumptions about the assumptions market participants would use in pricing the asset developed based on the best information available in the circumstances. The hierarchy is broken down into three levels based on the observability of inputs as follows:

Level 1—Valuations based on quoted prices in active markets for identical assets that the organization has the ability to access. Since valuations are based on quoted prices that are readily and regularly available in an active market, valuation of these products does not entail a significant degree of judgment.

Level 2—Valuations based on one or more quoted prices in markets that are not active or for which all significant inputs are observable, either directly or indirectly.

Level 3—Valuations based on inputs that are unobservable and significant to the overall fair value measurement.

The availability of observable inputs can vary from instrument to instrument and is affected by a wide variety of factors, including, for example, the liquidity of markets and other characteristics particular to the transaction. To the extent that valuation is based on models or inputs that are less observable or unobservable in the market, the determination of fair value requires more judgment.

The AMA uses prices and inputs that are current as of the measurement date, obtained through a third-party custodian from independent pricing services.

A description of the valuation techniques applied to the major categories of investments measured at fair value is outlined below.

Exchange-traded equity securities are valued based on quoted prices from the exchange. To the extent these securities are actively traded, valuation adjustments are not applied and they are categorized in Level 1 of the fair value hierarchy.

Mutual funds are open-ended Securities and Exchange Commission (SEC) registered investment funds with a daily net asset value (NAV). The mutual funds allow investors to sell their interests to the fund at the published daily NAV, with no restrictions on redemptions. These mutual funds are categorized in Level 1 of the fair value hierarchy.

The fair value of corporate debt securities is estimated using recently executed transactions, market price quotations (where observable) or bond spreads. If the spread data does not reference the issuer, then data that reference a comparable issuer are used. Corporate debt securities are generally categorized in Level 2 of the fair value hierarchy.

U.S. government agency securities consist of two categories of agency issued debt. Non-callable agency issued debt securities are generally valued using dealer quotes. Callable agency issued debt securities are valued by benchmarking model-derived prices to quoted market prices and trade data for identical or comparable securities. Agency issued debt securities are categorized in Level 2 of the fair value hierarchy.

U.S. government securities are valued using quoted prices provided by a vendor or broker-dealer. These securities are categorized in Level 2 of the fair value hierarchy, as it is difficult for the custodian to accurately assess at a security level whether a quoted trade on a bond represents an active market.

Foreign and U.S. state government securities are valued using quoted prices in active markets when available. To the extent quoted prices are not available, fair value is determined based on interest rate yield curves, cross-currency basis index spreads, and country credit spreads for structures similar to the bond in terms of issuer, maturity, and seniority. These investments are generally categorized in Level 2 of the fair value hierarchy.

Investments also include investments in a diversified closed end private equity fund with a focus on buyout and secondary market opportunities in the United States and the European Union, as well as an investment in a venture capital fund focused on companies developing promising health care technologies that can be commercialized into revolutionary products and services that improve the practice of medicine and the delivery and management of health care. The investments are not redeemable and distributions are received through liquidation of the underlying assets of the funds. It is estimated that the underlying assets will be liquidated over the next four to ten years. The fair value estimates of these investments are based on NAV as provided by the investment managers. Unfunded commitments as of December 31, 2025, and December 31, 2024 totaled $77.5 million and $76.1 million, respectively.

The AMA manages its investments in accordance with Board-approved investment policies that establish investment objectives of real inflation-adjusted growth over the investment time horizon, with diversification to provide a balance between long-term growth objectives and potential liquidity needs.

The following table presents information about the AMA's investments measured at fair value as of December 31. In accordance with ASC Subtopic 820-10, investments that are measured at fair value using the NAV per share (or its equivalent) practical expedient have not been classified in the fair value hierarchy. The fair value amounts presented in this table are intended to permit reconciliation of the fair value hierarchy to the amounts presented in the consolidated statements of financial position.

	2025	2024
Level 1 – Quoted prices in active market for identical securities		
Equity securities	$ 694.2	$ 588.1
Fixed-income mutual funds	20.6	13.8
	714.8	601.9
Level 2 – Significant other observable inputs		
Debt securities		
Corporate	152.1	139.2
U.S. government and federal agency	286.4	275.9
Foreign government	47.9	39.4
U.S. state government	0.2	0.1
	486.6	454.6
Other investments measured at NAV – Private equity and venture capital funds	169.6	151.9
Investments	$ 1,371.0	$1,208.4

Interest and dividends are included in investment income as operating revenue while realized and unrealized gains and losses are included as a component of non-operating items.

Investment income consists of:

	2025	2024
Investment dividend and interest income	$ 33.5	$ 30.1
Management fees	(4.8)	(4.4)
	$ 28.7	$ 25.7

Investment non-operating items include:

	2025	2024
Realized gains on investments, net	$ 55.8	$ 69.8
Unrealized gains on investments, net	58.0	9.9
	$ 113.8	$ 79.7

5. Derivative instruments

AMA uses exchange-traded U.S. Treasury note future contracts in order to efficiently manage duration of fixed income investments in the portfolio. These transactions do not qualify for hedge accounting. The fair value of the futures contracts is recognized as part of investments in the consolidated statements of financial position and changes in the fair value of these futures contracts are recognized as a component of net gain or loss on investments included in non-operating items in the consolidated statements of activities. The fair values as of December 31, 2025 and December 31, 2024 and changes in fair value during 2025 and 2024 were not material.

6. Other assets

Other assets include investments in mutual funds maintained in separate accounts designated for various non-qualified benefit plans that are not available for operations. Mutual funds are open-ended SEC registered investment funds with a daily NAV. The mutual funds allow investors to sell their interests to the fund at the published daily NAV, with no restrictions on redemptions. These mutual funds are categorized in Level 1 of the fair value hierarchy. The investments totaled $12.6 million and $11.3 million as of December 31, 2025 and December 31, 2024, respectively.

7. Property and equipment

Property and equipment at December 31 consists of:

	2025	2024
Leasehold improvements	$ 36.3	$ 36.1
Furniture and office equipment	17.7	17.6
Information technology		
Hardware	12.2	11.4
Software	97.4	100.9
	163.6	166.0
Accumulated depreciation and amortization	(143.1)	(141.3)
Property and equipment, net	$ 20.5	$ 24.7

8. Retirement savings plan

The AMA has a 401(k) retirement and savings plan, which allows eligible employees to contribute up to 75 percent of their compensation annually, subject to Internal Revenue Service (IRS) limits. The AMA matches 100 percent of the first three percent and 50 percent of the next two percent of employee contributions. The AMA may, at its discretion, make additional contributions for any year in an amount up to two percent of the compensation for each eligible employee. Compensation is subject to IRS limits and excludes bonuses and severance pay. AMA matching and discretionary contribution expense totaled $10.3 million and $9.8 million in 2025 and 2024, respectively.

9. Postretirement health care benefits

The AMA provides health care benefits to retired employees who were employed on or prior to December 31, 2010. After that date, no individual can become a participant in the plan. Generally, qualified employees become eligible for these benefits if they retire in accordance with the plan provisions and are participating in the AMA medical plan at the time of their retirement. The AMA shares the cost of the retiree health care payments with retirees, paying approximately 60 to 80 percent of the expected benefit payments. The AMA has the right to modify or terminate the postretirement benefit plan at any time. Other employers participate in this plan and liabilities are allocated between the AMA and the other employers.

The AMA has applied for and received the federal subsidy to sponsors of retiree health care benefit plans that provides a prescription drug benefit that is actuarially equivalent to Medicare Part D under the *Medicare Prescription Drug, Improvement and Modernization Act of 2003*. In accordance with ASC Topic 958-715, *Compensation-Retirement Benefits*, the AMA initially accounted for the subsidy as an actuarial experience gain to the accumulated postretirement benefit obligation.

The postretirement health care plan is unfunded. In accordance with ASC Topic 958-715, the AMA recognizes this liability in its consolidated statements of financial position.

The following reconciles the change in accumulated benefit obligation and the amounts included in the consolidated statements of financial position at December 31:

	2025	2024
Benefit obligation at beginning of year	$ 108.8	$ 107.8
Service cost	0.3	0.5
Interest cost	6.1	5.5
Benefits paid	(4.6)	(4.4)
Participant contributions	1.2	1.2
Federal subsidy	0.2	0.2
Actuarial loss (gain)	12.0	(2.0)
Accrued postretirement benefit costs	$ 124.0	$ 108.8

The postretirement health care plan accumulated actuarial losses not yet recognized as a component of periodic postretirement health care expense, but included as an accumulated charge to equity are $18.4 million and $6.4 million at December 31, 2025 and December 31, 2024, respectively.

Actuarial assumptions used in determining the accumulated benefit obligation at December 31 are:

	2025	2024
Discount rate	5.6%	5.7%
Initial health care cost trend		
Pre-Medicare	9.3%	8.4%
Medicare eligible	8.6%	8.6%
Ultimate health care cost trend	4.0%	4.0%
Year that the rate reaches the ultimate trend rate	2050	2048

The change in the initial health care cost trend in 2025 and claims cost experience were the major driver of the $12 million actuarial loss in 2025. The change in the discount rate from 5.0% at the end of 2023 to 5.7% in 2024, offset by the impact of higher claims cost experience, was the major driver of the $2 million actuarial gain in 2024.

AMA recognizes postretirement health care expense in its consolidated statements of activities. The service cost component is included as part of compensation and benefits expense and the other components of expense are recognized as a non-operating item:

	2025	2024
Service cost	$ 0.3	$ 0.5
Non-service costs		
Interest cost	6.1	5.5
Amortization of actuarial loss	-	0.2
Total non-service costs	6.1	5.7
	$ 6.4	$ 6.2

Postretirement health care-related changes, other than periodic expense, that have been included as a charge or credit to unrestricted equity consist of:

	2025	2024
Actuarial (loss) gain arising during period	$ (12.0)	$ 2.0
Reclassification adjustment for recognition of actuarial loss	-	0.2
Change in association equity	$ (12.0)	$ 2.2

Actuarial assumptions used in determining postretirement health care expense are the same assumptions noted in the table above for determining the accumulated benefit obligation, except as follows:

	2025	2024
Discount rate	5.7%	5.0%
Initial health care cost trend		
Pre-Medicare	7.9%	8.1%
Medicare eligible	8.1%	8.2%

The following postretirement health care benefit payments are expected to be paid by the AMA, net of contributions by retirees and federal subsidies:

2026	$ 4.5
2027	5.0
2028	5.4
2029	5.8
2030	6.3
2031–2035	37.3

10. Income taxes

The provision for income taxes includes:

	2025	2024
Operating		
Current	$ 4.0	$ 4.8
Deferred	(6.5)	(5.2)
Valuation allowance	6.4	4.5
	3.9	4.1
Tax (benefit) expense related to credits or charges to equity		
Deferred	(0.6)	0.2
	$ 3.3	$ 4.3

As prescribed under ASC Topic 740, *Income Taxes*, the AMA determines its provision for income taxes using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for future tax effects of temporary differences between the consolidated financial statement carrying amounts of existing assets and liabilities and their respective tax basis.

The deferred tax benefit or expense from credits or charges to equity represents the estimated tax benefit from recording unrecognized actuarial losses and prior service credits for the postretirement health care plan, pursuant to ASC Topic 958-715.

Valuation allowances are provided to reduce deferred tax assets to an amount that is more likely than not to be realized. The AMA evaluates the likelihood of realizing its deferred tax assets by estimating sources of future taxable income and assessing whether or not it is likely that future taxable income will be adequate for the AMA to realize the deferred tax asset. The valuation allowance reflects the fact that deferred tax assets include future expected benefits largely related to net operating or capital losses where recoverability will not occur until future taxable income is generated, as well as retiree health care payments that may not be deductible due to a projected lack of taxable advertising income in future years. Increases or decreases in deferred tax assets, where future benefits are considered unlikely, will result in an equal and offsetting change in the valuation reserve. If the AMA were to make a determination in future years that these deferred tax assets would be realized, the related valuation allowance would be reduced and a benefit to earnings recorded.

Deferred income taxes recognized in the consolidated statements of financial position at December 31 include the following deferred tax assets and (liabilities):

	2025	2024
Net operating and capital loss carryforward	$ 37.3	$ 30.6
Benefit plans and compensation	6.7	6.0
Right-of-use assets	(1.4)	(1.9)
Lease liabilities	1.5	2.1
Other	0.3	0.5
	44.4	37.3
Valuation allowance	(40.2)	(33.8)
	$ 4.2	$ 3.5

Cash payments for income taxes were $3.7 million and $4.3 million in 2025 and 2024, respectively, net of refunds.

AMA's federal taxes are open to examination by taxing authorities from 2022 through 2025. AMA's state taxes are open to examination for various years depending on the jurisdiction.

11. Leases

AMA leases office space at a number of locations and the initial terms of the office leases range from four years to 15 years. Most office space leases have options to renew at then prevailing market rates, or, in one circumstance, early terminate or contract with appropriate notice and termination payments. As any renewal, termination, or contraction is at the sole discretion of AMA, and at this date is not certain, renewal and termination options are not included in the right-of-use asset (ROU asset) or lease liability. AMA also leases copiers and printers in several locations, with initial terms generally of four years.

The lease agreements do not contain variable lease payments, residual value guarantees or material restrictive covenants. All leases are classified as operating leases.

AMA leases do not provide an implicit interest rate and as such, AMA calculates the lease liability at lease commencement or remeasurement date as the present value of unpaid lease payments using an estimated incremental borrowing rate. The incremental borrowing rate represents the rate of interest that AMA estimates it would have to pay to borrow an amount equal to the lease payments on a collateralized basis over a similar term, based on information available at the time of commencement or remeasurement.

During 2025, AMA exercised an early termination option in the existing Washington, D.C. office. The ROU asset and lease liability were remeasured as of the modification date resulting in a $4.9 million decrease in both the ROU asset and corresponding lease liability. AMA then entered into a new lease agreement at a different Washington, D.C. location scheduled to commence in 2026. In addition, AMA entered into a new satellite office space lease which resulted in a $0.5 million increase in the ROU asset and corresponding lease liability.

During 2024, AMA entered into a new office space lease which resulted in a $3.1 million increase in the ROU asset and corresponding lease liability.

Operating lease costs totaled $9.1 million in 2025 and $8.9 million in 2024. Cash paid for amounts included in the measurement of lease liabilities totaled $9 million in 2025 and $11.5 million in 2024.

The remaining weighted-average lease term is 9.1 years and 9.9 years as of December 31, 2025 and December 31, 2024, respectively. The weighted-average discount rate used for operating leases is 7.1% and 6.9% for 2025 and 2024, respectively.

The maturity of lease liabilities as of December 31, 2025:

2026	$	4.0
2027		0.9
2028		4.5
2029		11.2
2030		10.7
2031 and beyond		53.7
Total lease payments		85.0
Less imputed interest		(28.5)
Present value of lease obligations	$	56.5

12. Financial asset availability and liquidity

AMA has a formal reserve policy that defines the reserve investment portfolios as pools of liquid net assets that can be accessed to mitigate the impact of undesirable financial events or to pursue opportunities of strategic importance that may arise, as well as provide a source of capital appreciation. The policy establishes minimum required dollar levels required to be held in the portfolios (defined as an amount equal to one-year's general and administrative operating expenses plus long-term liabilities). The policy also covers the use of dividend and interest income, establishes criteria for use of the funds and outlines the handling of excess operating funds on an annual basis.

Dividend and interest income generated from the reserve portfolios are transferred to operating funds monthly and used to fund operations. The formal reserve policy contemplates use of reserve portfolio funds for board approved time- or dollar-limited strategic outlays, to the extent that the reserve portfolio balances exceed the minimum amount established by policy. All surplus funds generated from operations annually (defined as operating cash plus other current assets minus current liabilities and deferred revenue at year end) are transferred to the reserve portfolios after year-end. The reserve policy does not cover the for-profit subsidiaries' activities.

AMA invests cash in excess of projected weekly requirements in short-term investments and money market funds. AMA does not maintain any credit facilities as the reserve portfolios provide ample protection against any liquidity needs.

The following reflects AMA's financial assets as of December 31 reduced by amounts not available for general use that have been set aside for long-term investing in the reserve investment portfolios or funds subject to donor restrictions. AMA's financial assets include cash, cash equivalents and donor restricted cash, short-term investments and long-term investments in the reserve portfolios.

	2025	2024
Financial assets	$ 1,417.4	$ 1,248.0
Less assets unavailable for general expenditures:		
Restricted by donor with purpose restrictions	-	(0.1)
Restricted by governing body primarily for long-term investing or for governing body approved outlays	(1,302.8)	(1,132.5)
Financial assets available to meet cash needs for general expenditures within one year	$ 114.6	$ 115.4

In addition to financial assets available to meet general expenditures over the next 12 months, the AMA operates under a policy that requires an annual budget surplus, excluding time- or dollar-limited strategic expenditures approved by the board, and anticipates generating sufficient revenue to cover general ongoing expenditures on an annual basis.

13. Contingencies

In the opinion of management, there are no pending legal actions for which the ultimate liability will have a material effect on the equity of the AMA.

14. Subsequent events

ASC Topic 855, *Subsequent Events*, establishes general standards of accounting for and disclosure of events that occur after the consolidated balance sheet date but before consolidated financial statements are issued or are available to be issued. For the year ended December 31, 2025, the AMA has evaluated all subsequent events through February 13, 2026, which is the date the consolidated financial statements were available to be issued, and concluded no additional subsequent events have occurred that would require recognition or disclosure in these consolidated financial statements that have not already been accounted for.

15. Functional expenses

The costs of providing program and other activities have been summarized on a functional basis in the consolidated statements of activities. Certain costs have been allocated among the Membership; Publishing, Health Solutions and Insurance; Core Mission Activities and other supporting services.

The expenses that are allocated and the method of allocation include the following: fringe benefits based on percentage of compensation and occupancy based on square footage. All other expenses are direct expenses of each functional area.

	Membership	Publishing, Health Solutions and Insurance	Investments (AMA only)	Core Mission Activities	Governance, Administration and Operations	Health2047 and Subsidiary	Total
Cost of products sold and selling expense	$ -	$ 17.4	$ -	$ -	$ -	$ -	$ 17.4
Compensation and benefits	7.9	77.3	-	91.7	103.5	7.4	287.8
Occupancy	0.6	5.1	-	6.6	4.2	1.0	17.5

2024 total expense	**$ 22.0**	**$ 130.8**	**$ 0.9**	**$ 148.8**	**$ 142.1**	**$ 13.4**	**$ 458.0**

INDEPENDENT AUDITOR'S REPORT

The Board of Trustees of American Medical Association

Opinion

We have audited the consolidated financial statements of American Medical Association (the "AMA") and subsidiaries, which comprise the consolidated statements of financial position as of December 31, 2025 and 2024, and the related consolidated statements of activities and cash flows for the years then ended, and the related notes to the consolidated financial statements (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the AMA as of December 31, 2025 and 2024, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the AMA and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the AMA's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of

expressing an opinion on the effectiveness of the AMA's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the AMA's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Deloitte & Touche LLP

REPORT OF THE BOARD OF TRUSTEES

BOT Report 04-A-26

Subject: AMA 2027 Dues

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee F

Our American Medical Association (AMA) last raised its dues in 1994. The AMA continues to invest in improving the value of membership. As our AMA's membership benefits portfolio is modified and enhanced, management will continuously evaluate dues pricing to ensure optimization of the membership value proposition.

RECOMMENDATION

2027 Membership Year

The Board of Trustees recommends no change to the dues levels for 2027, that the following be adopted and that the remainder of this report be filed:

Regular Members	$ 420
Physicians in Their Fourth Year of Practice	$ 315
Physicians in Their Third year of Practice	$ 210
Physicians in Their Second Year of Practice	$ 105
Physicians in Their First Year of Practice	$ 60
Physicians in Military Service	$ 280
Semi-Retired Physicians	$ 210
Fully Retired Physicians	$ 84
Physicians in Residency/Fellow Training	$ 45
Medical Students	$ 20

(Directive to Take Action)

Fiscal Note: Minimal

REPORT OF THE BOARD OF TRUSTEES

BOT Report 34-A-26

Subject: Discontinuation of AMA Citation for Distinguished Service

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee F

The Awards and Nominations Committee of the American Medical Association (AMA) Board of Trustees administers all AMA Awards. In 2025, the Board voted to discontinue the Citation for Distinguished Service, one of only two awards referenced in the Bylaws.

The Citation for Distinguished Service was created in 1948, with the first citation awarded in 1952. The Citation was intended to recognize individuals who were not part of the medical profession but who have "by their cooperation and aid in the advancement of medical science, medical education or medical care contributed to the achievement of the ideals of American medicine." The last AMA Citation for Distinguished Service was awarded in 2009 with no subsequent nominations. Due to the lack of interest, on recommendation of the Awards and Nominations Committee, the Board voted to discontinue the Citation. However, as the Award is referenced in the AMA Bylaws, a bylaw amendment is needed. The Board also wants to apprise the House of its decision and rationale for discontinuing it.

RECOMMENDATION

The Board of Trustees recommends that the following be adopted and the remainder of the report filed:

> That the AMA Bylaws be amended to eliminate reference to the Citation for Distinguished Service.

(Modify Bylaws)

Fiscal Note: Less than $500

REPORT OF THE HOUSE OF DELEGATES COMMITTEE ON THE COMPENSATION OF THE OFFICERS

Compensation Committee Report, A-2026

Subject: REPORT OF THE HOUSE OF DELEGATES COMMITTEE ON THE COMPENSATION OF THE OFFICERS

Presented by: Jessica Krant, MD, Chair

Referred to: Reference Committee F

At the 1998 Interim Meeting, the House of Delegates (HOD) established a House Committee on Trustee Compensation, currently named the Committee on Compensation of the Officers, (the "Committee"). The Officers are defined in the American Medical Association's (AMA) Constitution and Bylaws. (Note: under changes to the Constitution previously approved by the HOD, Article V refers simply to "Officer," which includes all 21 members of the Board among whom are President, President-Elect, Immediate Past President, Secretary, Speaker and Vice Speaker of the HOD, collectively referred to in this report as Officers.) The composition, appointment, tenure, vacancy process and reporting requirements for the Committee are covered under the AMA Bylaws. Bylaws 2.13.4.5 provides:

> The Committee shall present an annual report to the House of Delegates recommending the level of total compensation for the Officers for the following year. The recommendations of the report may be adopted, not adopted, or referred back to the Committee, and may be amended for clarification only with the concurrence of the Committee.

At A-00, the Committee and the Board jointly adopted the American Compensation Association's definition of total compensation which was added to the Glossary of the AMA Constitution and Bylaws. Total compensation is defined as the complete reward/recognition package awarded to an individual for work performance, including: (a) all forms of money or cash compensation; (b) benefits; (c) perquisites; (d) services; and (e) in-kind payments.

Since the inception of this Committee, its reports document the process the Committee follows to ensure that current or recommended Officer compensation is based on sound, fair, cost-effective compensation practices derived from research and use of independent external consultants, expert in Board compensation. Reports beginning in December 2002 documented the principles the Committee followed in creating its recommendations for Officer compensation.

METHODOLOGY

The Committee considered elements of Officer compensation that have not been updated recently to reflect increases in costs or changing expectations of specific Board Leadership roles. Two areas were identified for further research and discussion by the Committee: secretarial reimbursement maximums and allowances for airfare upgrades.

To support this review, the Committee recently commissioned Willis Towers Watson (WTW), a major compensation consulting firm with expertise in board compensation, to review the market practices for reimbursement of board members' secretarial expenses. The Committee also reviewed

© 2026 American Medical Association. All rights reserved.

historical adjustments to both secretarial reimbursement maximums and travel upgrade allowances and considered any changes to the secretarial needs and travel requirements for Board Leadership.

FINDINGS

Secretarial Expenses

WTW provided updated data regarding market practices for reimbursement of Board members' secretarial expenses from the 2025 PRM Not-for-Profit Survey, indicating the following:

> Secretarial expense reimbursement for Board members in not-for-profit organizations is a minority practice. WTW stated, as previously established, that the time commitment of AMA board members is significantly higher than other not-for-profit boards. Given the work of AMA board members and the time commitment, the secretarial needs of the AMA board members are different than a traditional not-for-profit board, supporting the need for reimbursement of secretarial expenses for AMA board members.
>
> When reimbursement is provided, practices are split between the benefit being capped and uncapped. Uncapped is more common. For example, the benefit is uncapped by 73 percent of organizations for the President and 71 percent of organizations for the President-elect. This represents a higher prevalence than reported in 2024.

The AMA maximum annual secretarial reimbursement is $15,000 for the Board President and $5,000 for the President-Elect, Chair, Chair-Elect, and Immediate Past President. These reimbursement maximums have not been updated since before the HOD Compensation Committee was established in 1999. Effective January 1, 2025, the secretarial reimbursement for all other Officers increased from $750 to $1,125.

The Committee also considered the increasing secretarial needs of the Speaker and Vice Speaker to determine if these positions should be moved to the $5,000 secretarial reimbursement maximum.

Travel Upgrade Allowance

The Committee considered the travel requirements of all Officers. Effective July 1, 2022, the annual travel upgrade allowance for the President, Immediate Past President and President Elect is $5,000 and the upgrade allowance for all other Officers is $2,500. The allowance can be used for airfare upgrades at the discretion of the Officer.

The Committee considered the increased travel requirements and travel costs for all Officers following the most recent increase in 2022 (post-COVID). The Committee also considered the increasing travel requirements of the Board Chair to determine if this position should be moved to the higher travel upgrade allowance for Board Presidents.

RECOMMENDATIONS

The Committee on Compensation of the Officers recommends the following changes to Officer compensation be adopted effective July 1, 2026, and the remainder of this report be filed:

1. That the maximum annual secretarial reimbursement for the Speaker and Vice Speaker is increased from $2,500 to $5,000 to reflect the increasing secretarial needs of these positions.

2. That the maximum annual secretarial reimbursement for non-leadership Officers is increased from $1,125 to $1,200 to reflect a modest cost-of-living adjustment.

3. That the travel upgrade allowance for the Presidents (President, Immediate Past President and President Elect) is increased from $5,000 to $6,000.

4. That the Board Chair is moved to the same travel upgrade allowance as Presidents.

5. That the travel upgrade allowance for all other Officers is increased from $2,500 to $3,000.

6. That the definition of the Secretarial Expenses be revised as follows:

   The AMA will provide a stipend of $15,000 to provide secretarial support at a designated location, other than the AMA, for the President during the Presidential year. Secretarial expenses are paid for the President-Elect, Chair, Chair-Elect, ~~and~~ Immediate Past President, Speaker and Vice Speaker to a maximum of $5,000 per officer. If the officer holds office for only one-half of the calendar year (January-June or June-December), expense reimbursement will be a maximum of $2,500 per officer. Secretarial expenses incurred by other officers in connection with their official duties are paid up to ~~$1125~~ $1,200 per year per general officer.

7. That the definition of Transportation be revised as follows:

   Air: AMA policy on reimbursement for domestic air travel for members of the Board is that the AMA will reimburse for coach fare only. The Presidents (President, Immediate Past President and President Elect) and Chair will each have access to an individual ~~$5,000~~ $6,000 term allowance (July 1 to June 30) and all other Officers will each have access to ~~$2,500~~ an individual $3,000 term allowance (July 1 to June 30) to use for upgrades as each deems appropriate, typically when traveling on an airline with non-preferred status. The unused portion of the allowance is not subject to carry forward or use by any other Officer and remains the property of the AMA.

   In rare instances it is recognized that short notice assignments may require up to first class travel because of the lack of availability of coach seating, and this will be authorized, when necessary, by the Board Chair, prior to travel. Business Class airfare is authorized for foreign travel on AMA business. (Also see Rule IV—Invitations, B–Foreign, for policy on foreign travel).

8. That the remainder of the report be filed.

   Fiscal Note: $23,350 additional expense on an annual basis

APPENDIX

Board Leadership Compensation

POSITION	**GOVERNANCE HONORARIUM**
President	$298,865
Immediate Past President	$290,659
President-Elect	$290,659
Chair	$285,886
Chair-Elect	$211,630
Speaker	$125,000
Vice Speaker	$115,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 601
(A-26)

Introduced by: Pennsylvania, Florida, New York, Texas

Subject: Board Chair Term Limits

Referred to: Reference Committee F

Whereas, the Bylaws of the American Medical Association (AMA) specify that the Chair of the Board of Trustees serves a one-year term, resulting in rapid turnover of board leadership; and

Whereas, leading governance authorities emphasize that effective board leadership requires continuity, stability, and sufficient tenure to oversee long term strategic initiatives; BoardSource recommends multi-year chair terms to preserve institutional memory, and the National Association of Corporate Directors (NACD) similarly advises extended leadership cycles to align governance with organizational strategy; and

Whereas, Dr. Richard LeBlanc, in The Handbook of Board Governance, notes that an adequately tenured board chair is essential for ensuring effective oversight of senior management, maintaining accountability structures, and stewarding long range organizational priorities; and

Whereas, the AMA's strategic initiatives, advocacy agenda, and oversight responsibilities span multiple years, making annual turnover in board leadership potentially disruptive to consistent governance and sustained evaluation of senior management performance; and

Whereas, many national nonprofit and professional associations have adopted longer or renewable board chair terms to strengthen leadership continuity, improve board effectiveness, and enhance oversight of executive performance; therefore be it

RESOLVED, that our American Medical Association commission an independent assessment by recognized nonprofit governance experts to evaluate best practices in board-chair term lengths, leadership continuity, and succession planning within large national nonprofit and professional membership organizations (Directive to Take Action); and be it further

RESOLVED, that our AMA examine how board-chair tenure and leadership succession structures influence the Board of Trustees' ability to provide consistent oversight of senior management, monitor multi-year strategic and operational performance goals, preserve institutional knowledge, and maintain accountability to the House of Delegates and AMA membership (Directive to Take Action); and be it further

RESOLVED, that our AMA provide the full report of the independent assessment, including benchmarking analyses and governance recommendations, to the House of Delegates no later than the 2027 Annual Meeting of the AMA (Directive to Take Action); and be it further

RESOLVED, that our AMA Board of Trustees review the findings of the independent assessment and present to the House of Delegates at the 2027 Annual Meeting specific recommendations regarding governance best practices for board-chair tenure and leadership

continuity, including any proposed amendments to the AMA Constitution and Bylaws for consideration by the House of Delegates. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/19/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 602
(A-26)

Introduced by: Oregon

Subject: Protection of Healthcare and Humanitarian Aid Personnel in Conflict Zones

Referred to: Reference Committee F

Whereas, in recent years, there has been a dramatic escalation of violence against healthcare personnel and humanitarian aid workers around the world[1, 11, 12]; and

Whereas we physicians live and work around the works in a global economy, either as volunteers or professionally or both, and many of us have families and roots in places of conflict[13-16]; and

Whereas, International Law as outlined in the updated Geneva Conventions, written as a response to wars in the 1900's, specifically consider attacking hospitals, medical schools, healthcare and humanitarian workers, and patients seeking and receiving treatment illegal and unethical[8, 9]; and

Whereas, according to UN and NGO reports, 2024 was the deadliest year on record, with 383 humanitarian workers killed. Attacks were documented in Gaza Myanmar, Ukraine, Sudan and Syria, where hospitals and clinics have been bombed, medical convoys obstructed, and health care providers detained or executed; and

Whereas in 2025, Médecins Sans Frontières (MSF) reported 1,348 attacks and WHO reported 1366 attacks on health-care facilities, and in 2026 to date, the WHO reports at least 313 attacks in Sudan, Iran, Lebanon, Israel and possibly Afghanistan[10-12]; and

Whereas, the deliberate targeting and obstruction of medical care—is referred to by some ethicists and human rights observers as "medicide"; and

Whereas, attacks on hospitals, forced displacement of populations, and the deliberate prevention of medical supply delivery have become systematic tactics in modern conflicts, in direct violation of International Humanitarian Law[1-12]; and

Whereas, these actions have resulted in catastrophic health outcomes for civilian populations and have undermined the safety and neutrality of medical and humanitarian missions globally; therefore be it

RESOLVED, that our American Medical Association will amend H-520.985 Protection of Healthcare and Humanitarian Aid Workers in all Areas of Armed Conflict by addition to read as follows:

a. Our American Medical Association supports peace in Israel and Palestine in order to protect civilian lives and healthcare personnel.

b. Our American Medical Association supports the safety of healthcare and humanitarian aid workers along with safe access to healthcare, healthcare facilities, and humanitarian aid for all civilians in areas of armed conflict.

c. Our American Medical Association condemns the use of all forms of violence, forced displacement, and obstruction of any aid and healthcare in any location against healthcare personnel, humanitarian aid workers, and healthcare institutions.

d. Our American Medical Association advocates for an absolute ban on targeting, detention, or attack of healthcare workers, humanitarian personnel, and their institutions, and demands the immediate release of any healthcare or humanitarian personnel held captive.

e. Our American Medical Association actively opposes the use of force or violent means to prevent, restrict, or interfere with the delivery of medical supplies, healthcare, or humanitarian aid, whether domestically or internationally.

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-520.985 Protection of Healthcare and Humanitarian Aid Workers

1. Our American Medical Association supports peace in Israel and Palestine in order to protect civilian lives and healthcare personnel.
2. Our AMA supports the safety of healthcare and humanitarian aid workers along with safe access to healthcare, healthcare facilities, and humanitarian aid for all civilians in areas of armed conflict. [Res. 603, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 603
(A-26)

Introduced by: New Jersey

Subject: Establish AMA Policy and Project to Compile and Distribute JAMA Patient Pages to Enhance Public Medical Literacy

Referred to: Reference Committee F

Whereas, medical literacy is essential for patients to make informed decisions about their care and improve health outcomes; and

Whereas, the Journal of the American Medical Association (JAMA) has published “JAMA Patient Pages” for years as a trusted source of accessible, evidence-based medical information for patients and the public; and

Whereas, these patient pages cover a wide range of common health conditions, preventive care measures, and treatment options, providing valuable guidance to patients in understandable language; and

Whereas, these patient pages cover a wide range of common health conditions, preventive care measures, and treatment options, providing valuable guidance to patients in understandable language; and

Whereas, existing JAMA Patient Pages represent a substantial, high-quality repository of patient education materials that could be more widely utilized to promote medical literacy; and

Whereas, easily accessible and well-organized patient education materials can support patients in managing their health, understanding treatment options, and fostering effective partnerships with physicians in their care and recovery; and

Whereas, making these patient pages available to the general public in a consolidated, searchable, and freely accessible format would enhance public understanding of medical issues and contribute to health equity by reducing disparities in medical literacy; and

Whereas, our American Medical Association has a long-standing commitment to advancing public health and promoting informed patient decision-making; therefore be it

RESOLVED, that our American Medical Association publized the existence and value of JAMA Patient Pages as a resource for public health education and medical literacy (Directive to Take Action); and be it further

RESOLVED, that our AMA shall compile and organize previously published JAMA Patient Pages into a publicly accessible database or repository for the purpose of improving medical literacy and fostering patient-physician partnerships (Directive to Take Action); and be it further

RESOLVED, that our AMA explores opportunities to promote awareness and utilization and ease of use of JAMA Patient Pages among patients, physicians and healthcare institutions. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 604
(A-26)

Introduced by: Michigan

Subject: Annual Scorecard to Evaluate the AMA's Impact

Referred to: Reference Committee F

Whereas, the American Medical Association (AMA) aims to promote the art and science of medicine and the betterment of public health; and

Whereas, it is important for the AMA to continuously evaluate its performance to align with evolving healthcare needs and priorities; and

Whereas, a transparent and systematic approach to measuring effectiveness can enhance trust and accountability among members and stakeholders; and

Whereas, there is a need for accountability and transparency in assessing the AMA's impact and effectiveness in achieving its goals; and

Whereas, a systematic and data-driven approach can provide valuable insights into the AMA's performance and areas for improvement; therefore be it

RESOLVED, that our American Medical Association consider implementing a comprehensive scorecard to measure its effectiveness in key areas including, but not limited to, the following specific metrics:

1. Medicare Impact: percent change in the Medicare Physician Fee Schedule;
2. Advocacy Impact: number of federal policies successfully influenced or implemented;
3. House of Delegates Impact: number of AMA policies translated into legislation or federal policy;
4. Financial Impact: percentage of revenue dedicated to advocacy; and,
5. Physician Engagement: total number of its member physicians directly engaged in advocacy efforts through contact with lawmakers (Directive to Take Action); and be it further

RESOLVED, that our AMA shall review metric definitions and targets and provide a report by the 2027 AMA Annual Meeting. Any future updates to metrics or targets shall be recommended via a report to the AMA House of Delegates so that the AMA HOD can approve final metrics and targets for the subsequent year before or during the AMA Interim Meeting immediately preceding the year the metrics and targets are to take effect (Directive to Take Action); and be it further

RESOLVED, that our AMA shall consider publishing the AMA's scorecard performance for the prior year by the end of the first month of the following year, starting in January 2028. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/10/26

RELEVANT AMA POLICY

Actions and Decisions by the AMA House and Policy Implementation G-600.071
1. AMA policy on House actions and decisions includes the following:
A. Other than CEJA reports and some CSAPH reports, the procedures of our AMA House allow for: (i) correcting factual errors in AMA reports, (ii) rewording portions of a report that are objectionable, and (iii) rewriting portions that could be misinterpreted or misconstrued, so that the "revised" or "corrected" report can be presented for House action at the same meeting whenever possible.
B. A negative vote by the House of Delegates on resolutions which restate AMA policy does not change the existing policy. AMA policy can only be amended by means of a positive action of the House specifically intended to change that policy.
C. Minor editorial changes to existing policies are allowed for accuracy, so long as such changes are reported to the House of Delegates so as to be transparent. Editorially amended policies, however, do not reset the sunset clock.

2. AMA policy on implementation of policy includes the following:
A. Our AMA House of Delegates shall be apprised of the status of adopted or referred resolutions and report recommendations and specific actions that have been taken on them over a one-year period. When situations preclude successful implementation of specific resolutions, the House and authors should be advised of such situations so that further or alternative actions can be taken if warranted.
B. Our AMA shall inform and afford an opportunity for each delegation to send a representative for any resolution introduced that is referred to a council or other body to the meeting at which that resolution will be considered. Our AMA shall incur no expense as a result of inviting the sponsors of resolutions to discuss their resolutions.
C. Any resolution which is adopted by our AMA House remains the policy of the Association until amended, rescinded or sunset by the House.

3. Except as noted herein and consistent with the AMA Bylaws, the Board of Trustees shall conduct the affairs of the Association in keeping with current policy actions adopted by the House of Delegates. The most recent policy actions shall be deemed to supersede contradictory past actions. In the absence of specifically applicable current statements of policy, the Board of Trustees shall determine what it considers to be the position of the House of Delegates based upon the tenor of past and current actions that may be related in subject matter. Such determinations shall be considered to be AMA policy until modified or rescinded at the next regular or special meeting of the House of Delegates. Further, the Board of Trustees has the authority in urgent situations to take those policy actions that the Board deems best represent the interests of patients, physicians, and the AMA. In representing AMA policy in critical situations, the Board will take into consideration existing policy. The Board will immediately inform the Speaker of the House of Delegates and direct the Speaker to promptly inform the members of the House of Delegates when the Board has taken actions which differ from existing policy. Any action taken by the Board which is not consistent with existing policy requires a 2/3 vote of the Board. When the Board takes action which differs from existing policy, such action must be placed before the House of Delegates at its next meeting for deliberation.

4. Our AMA will provide an online list of AMA Council and Board reports under development, including a staff contact for providing stakeholder input.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 605
(A-26)

Introduced by: Michigan

Subject: Review of Past Resolutions

Referred to: Reference Committee F

Whereas, the American Medical Association (AMA) is an organization charged to advocate on behalf of their members; and

Whereas, AMA members rely on the AMA House of Delegates to pass resolutions to that effect, and

Whereas, the AMA Board of Trustees is charged with ensuring these resolutions are implemented; and

Whereas, the AMA has not disseminated a detailed aggregate report to ensure the AMA membership is aware that the work of the House is being accomplished; therefore be it

RESOLVED, that our American Medical Association consider presenting, by the 2027 AMA Annual Meeting, a detailed and aggregate report that is easily accessible and includes the following data for the past 10 years; the total number of resolutions submitted and passed; the number of those resolutions specific to advocacy on the sustainability of medical practices; a breakdown of these resolutions by Annual and Interim meetings; and the percentage of resolutions that have been successfully implemented. The report shall be produced on an annual basis and included in the Annual meeting handbook. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/10/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 606
(A-26)

Introduced by: American Society of Plastic Surgeons; American Association for Hand Surgery; American Society for Aesthetic Plastic Surgery; American Society for Maxillofacial Surgeons; American Society for Reconstructive Microsurgery; Michigan State Medical Society; Missouri State Medical Association

Subject: Further Enabling AMA BOT Expediency for Actions, Advocacy, and Responses During Urgent Situations

Referred to: Reference Committee F

Whereas, our American Medical Association Board of Trustees is charged through its duties and privileges to conduct the affairs, work and activities of the AMA and to exercise broad oversight and guidance for the AMA with respect to the management systems of the AMA through its oversight of the AMA's Executive Vice President; and

Whereas, current policy G-600.071 and current practice yield authority to BOT on AMA action in urgent situations, and further allow the BOT to make a determination of what it deems best represent the interests of patients, physicians, and the AMA; and

Whereas, current policy does not yield primary authority to or allow the independent authority to AMA management on AMA action in urgent situations or the determination of what best represents the interests of patients, physicians, and the AMA; and

Whereas, notable major AMA efforts to lobby and negotiate with Congress have resulted in legislative packages that profoundly negatively impacted health system financing and physician reimbursement, [1-9] administrative burden in clinical settings, [1,2] and the widespread loss of coverage for patients; [8,9] and

Whereas, the results of these efforts suggest opportunity to strengthen the processes that underpin the BOT's (1) duty to implement the charges delivered by the House in its capacity as the legislative and policymaking body of the AMA, and (2) duty to oversee AMA management's management and direction of day-to-day duties of the AMA, including advocacy activities; and

Whereas, there is currently no clear AMA policy requiring the BOT to be informed or consulted, let alone appropriately directly involved, in times of direct negotiation with federal policymakers or their representatives on matters that have significant impact on the economic or clinical experience of patients or physicians; therefore be it

RESOLVED, that our American Medical Association amend G.600.071, "Actions and Decisions by the AMA House and Policy Implementation" to read as follows:

8. Our AMA shall develop such processes as the BOT deems appropriate to ensure the BOT is apprised on a weekly basis of AMA activity related to the policy actions and directives adopted by the House of Delegates that occurred through:
    a. the formal meetings and notable informal meetings with stakeholders and policymaking entities;
    b. the formal correspondence, comments, or testimony submitted by the AMA
    c. notable informal correspondence exchanged between AMA management and policymakers or other stakeholders;
    d. the relevant correspondence received from the leadership of entities in organized medicine, the federal government, or any other relevant sector; and
    e. any developments with respect to new or existing policy concepts, policy negotiations, or policy proposals on transformational national health policies.

9. Our AMA BOT will be directly informed and consulted prior to the onset of and throughout the course of any negotiations between AMA management and federal policymakers on transformational changes to national health policies, such as alteration of the methodology for reimbursing physicians under any component of the public sector payer apparatus or the sunsetting or creation of any program that is likely to impact more than half of all Medicare participating providers. (Modify Current HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

G-600.071 Actions and Decisions by the AMA House and Policy Implementation
1.AMA policy on House actions and decisions includes the following:

a. Other than CEJA reports and some CSAPH reports, the procedures of our AMA House allow for: (i) correcting factual errors in AMA reports, (ii) rewording portions of a report that are objectionable, and (iii) rewriting portions that could be misinterpreted or misconstrued, so that the "revised" or "corrected" report can be presented for House action at the same meeting whenever possible.

b. A negative vote by the House of Delegates on resolutions which restate AMA policy does not change the existing policy. AMA policy can only be amended by means of a positive action of the House specifically intended to change that policy.

c. Minor editorial changes to existing policies are allowed for accuracy, so long as such changes are reported to the House of Delegates so as to be transparent. Editorially amended policies, however, do not reset the sunset clock.

2. AMA policy on implementation of policy includes the following:

a. Our AMA House of Delegates shall be apprised of the status of adopted or referred resolutions and report recommendations and specific actions that have been taken on them over a one-year period. When situations preclude successful implementation of specific resolutions, the House and authors should be advised of such situations so that further or alternative actions can be taken if warranted.

b. Our AMA shall inform and afford an opportunity for each delegation to send a representative for any resolution introduced that is referred to a council or other body to the meeting at which that resolution will be considered. Our AMA shall incur no expense as a result of inviting the sponsors of resolutions to discuss their resolutions.

c. Any resolution which is adopted by our AMA House remains the policy of the Association until amended, rescinded or sunset by the House.

3. Except as noted herein and consistent with the AMA Bylaws, the Board of Trustees shall conduct the affairs of the Association in keeping with current policy actions adopted by the House of Delegates. The most recent policy actions shall be deemed to supersede contradictory past actions. In the absence of specifically applicable current statements of policy, the Board of Trustees shall determine what it considers to be the position of the House of Delegates based upon the tenor of past and current actions that may be related in subject matter. Such determinations shall be considered to be AMA policy until modified or rescinded at the next regular or special meeting of the House of Delegates.

4. In urgent situations, the Board of Trustees will exercise its authority to take appropriate action. The Board shall make decisions that it deems to best represent the interests of patients, physicians, and to advocate for science and public health. The Board will take into consideration existing AMA policy, recommendations from AMA policy staff, and input solicited or obtained from the House of Delegates or its Councils and Sections to inform its position on the interests of patients, physicians, and the AMA. The Board will immediately inform the Speaker of the House of Delegates and direct the Speaker to promptly inform the members of the House of Delegates when the Board has taken actions which differ from existing policy. Any action taken by the Board which is not consistent with existing policy requires a 2/3 vote of the Board. When the Board takes action which differs from existing policy, such action must be placed before the House of Delegates at its next meeting for deliberation.

5. Our AMA considers transformational occurrences, including public health phenomena, sudden changes to national health policies, and sudden disruptions of health and science funding, to be urgent situations worthy of AMA Board of Trustees advocacy and action.

6. Our AMA considers sudden federal funding cuts to foundational institutions of science research and public health to be urgent situations and requests the Board of Trustees take immediate action to respond responsibly, clearly, and expediently as an advocate for science, health care, and public health.

7. Our AMA will provide an online list of AMA Council and Board reports under development, including a staff contact for providing stakeholder input.
Our AMA will provide an online list of AMA Council and Board reports under development, including a staff contact for providing stakeholder input. HOD C- Article IV
The House of Delegates is the legislative and policymaking body of the Association. It is composed of elected representatives and others as provided in the Bylaws. The House of Delegates transacts all business of the Association not otherwise specifically provided for in this Constitution and Bylaws and elects the officers except as otherwise provided in the Bylaws. [Last modified 2017]

B-5.3 Duties and Privileges
In addition to the rights and duties conferred or imposed upon the Board of Trustees by law and custom and elsewhere in the Constitution and Bylaws, the Board of Trustees shall:

5.3.1 Management. Manage or direct the management of the property and conduct the affairs, work and activities of the AMA consistent with the policy actions and directives adopted by the House of Delegates, except as may be otherwise provided in the Constitution or these Bylaws.

5.3.1.1 The Board is the principal governing body of the AMA and it exercises broad oversight and guidance for the AMA with respect to the management systems and risk management program of the AMA through its oversight of the AMA's Executive Vice President.

5.3.1.2 Board of Trustee actions should be based on policies and directives approved by the House of Delegates. In the absence of specifically applicable House policies or directives and to the extent feasible, the Board shall determine AMA positions based on the tenor of past policy and other actions that may be related in subject matter.

5.3.2 Planning. Serve as the principal planning agent for the AMA.

5.3.2.1 Planning focuses on the AMA's goals and objectives and involves decision-making over allocation of resources and strategy development. Planning is a collaborative process involving all of the AMA's Councils, Sections, and other appropriate AMA components.

5.3.2.2 The House of Delegates and the Council on Long Range Planning and Development have key roles in identifying and making recommendations to the Board regarding important strategic issues and directions related to the AMA's vision, goals, and priorities.

5.3.3 Fulfillment of House of Delegates Charge. Review all resolutions and recommendations adopted by the House of Delegates to determine how to fulfill the charge from the House. Resolutions and recommendations pertaining to the expenditure of funds also shall be reviewed. If it is decided that the expenditure is inadvisable, the Board shall report, at its earliest convenience, to the House the reasons for its decisions.

5.3.3.1 In determining expenditure advisability, the Board will consider the scope of the proposed expenditure and whether it is consistent with the AMA's vision, goals, and priorities. Where the Board recommends that a proposed expenditure is not prudent and is inadvisable, the Board will present alternative actions, if feasible, in its report to the House.

5.3.4 Publication. Within the policies adopted by the House of Delegates, provide for the publication of The Journal of the American Medical Association and such specialty journals, periodicals, and other publications and electronic media information as it may deem to be desirable in the best interests of the public and the medical profession.

5.3.5 Election of Secretary. Select a Secretary from one of its members annually.

5.3.6 Selection of Executive Vice President. Select and evaluate an Executive Vice President.

5.3.6.1 The Executive Vice President is the chief executive officer of the AMA and as such is responsible for AMA management and performance in accordance with the vision, goals, and priorities of the AMA. The Executive Vice President is both a key leader for the organization and the bridge between AMA management and the Board of Trustees.

5.3.6.2 The Executive Vice President shall manage and direct the day-to-day duties of the AMA, including advocacy activities, and perform the duties commonly required of the chief executive officer of a corporation.

5.3.6.3 The Executive Vice President shall ensure that there is an active and effective risk management program.

5.3.6.4 No individual who has served as an AMA Officer or Trustee shall be selected or serve as Executive Vice President until 3 years following completion of the term of the AMA office.

5.3.7 Finances. Maintain the financial health of the AMA. The Board shall:

5.3.7.1 Oversee the development and approve the annual budget for the AMA, consistent with the AMA's vision, goals, and priorities.

5.3.7.2 Ensure that the AMA's resource allocations are aligned with the AMA's plan and budget.

5.3.7.3 Evaluate membership dues levels and make related recommendations to the House of Delegates.

5.3.7.4 Review and approve financial and business decisions that significantly affect the AMA's revenues and expenses.

5.3.7.5 Have the accounts of the AMA audited at least annually.

5.3.8 Financial Reporting. Make proper financial reports concerning AMA affairs to the House of Delegates at its Annual Meeting.

5.3.9 Appointment of Committees. Appoint such committees as necessary to carry out the purposes of the AMA.

5.3.9.1 An advisory committee will be constituted for purposes of education and advocacy.

5.3.9.1.1 It will have a governing council and a direct reporting relationship to the Board.

5.3.9.1.2 An advisory committee will not have representation in the House of Delegates.

5.3.9.1.3 An advisory committee will operate under a charter that will be subject to review and renewal by the Board at least every four years.

5.3.9.2 An ad hoc committee will be constituted as a special committee, workgroup or taskforce.

5.3.9.2.1 It will operate for a specific purpose and for a prescribed period of time.

5.3.10 Committee Vacancies. Fill vacancies in any committee where such authority is not delegated elsewhere by these Bylaws.

5.3.11 Litigation. Initiate, defend, settle, or otherwise dispose of litigation involving the interests of the AMA.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 607
(A-26)

Introduced by: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Subject: Shortening the AMA House of Delegates Endorsement Process and Timeline

Referred to: Reference Committee F

Whereas, the American Medical Association (AMA) distinguishes between "sponsorship," which is reserved for a candidate's home delegation or section, and "endorsement," which allows other groups to formally signal support for a candidate; and

Whereas, under current rules, groups wishing to endorse must submit their internal processes and criteria nearly two years in advance (e.g., November 2025 for June 2027 elections), creating a significant administrative barrier for both candidates and potential endorsing groups; and

Whereas, many caucuses, delegations, state and specialty societies, and AMA sections currently provide endorsements, yet many other eligible groups abstain due to the long gap between the endorsement window opening and the actual election; and

Whereas, potential endorsing groups have cited the extra work of conducting additional interviews so far in advance and a limited understanding of the tangible benefits of participation as reasons for declining to offer endorsements; and

Whereas, shortening the timeline would align the endorsement process more closely with the active campaign window, thereby increasing the relevance and recollection of endorsements and reducing campaign fatigue for both candidates and groups; therefore be it

RESOLVED, that our American Medical Association amend Policy G-610.090, "AMA Election Rules and Guiding Principles," by addition and deletion, effective immediate to the 2028 election endorsement cycle, to read as follows:

G-610.090 AMA Election Rules and Guiding Principles
...
XI. Endorsements

1. Our American Medical Association requires all groups that endorse candidates turn in information about their endorsement process, the deadline, and a staff contact for applications in a timely and streamlined manner, no later than 30 days prior to the start of the Interim Meeting preceding the Annual Meeting at which the election is to take place.

2. Our AMA will then post this information on the election website in a timely manner, with the information being easily digestible and accessible.

3. Our AMA will not allow any group that fails to provide this information in a timely manner to offer an endorsement during that election cycle.

4. Our AMA will create a specific period (similar to virtual elections) during which endorsements

may be sought, with the endorsement window opening at the commencement of the Interim Meeting immediately preceding the Annual Meeting at which the election is to take place. (Modify Current HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

RELEVANT AMA POLICY

G-610.090, AMA Election Rules and Guiding Principles
The Speaker and Vice Speaker of the House of Delegates are responsible for overall administration of our AMA elections, although balloting is conducted under the supervision of the chief teller and the Committee on Rules and Credentials. The Speaker and Vice Speaker will advise candidates on allowable activities and when appropriate will ensure that clarification of these rules is provided to all known candidates. The Speaker, in consultation with the Vice Speaker and the Election Committee, is responsible for declaring a violation of the rules.

Glossary of Election Terms

Active campaign window – Period of time after the Speaker's notice of the opening of active campaigning until the Election Session during the House of Delegates meeting at which elections are being held.

Active campaigning – Outreach by candidates or their surrogate(s), including but not limited to members of their campaign team, to members of the House of Delegates with the goal of being elected by the AMA House of Delegates.

Announced candidate – Person who has indicated their intention to run for elected position; announcement can be made only by sending an electronic announcement card to the Speakers via the HOD office by email to hod@ama-assn.org.

Campaign manager(s) – Person(s) identified by the candidate to the HOD Office as the person(s) responsible for running the campaign.

Campaign presentation – A written or verbal presentation about a campaign or a solicitation of votes for an AMA election to a non-sponsoring group. A candidate may attend and participate in the business of a non-campaign-related meeting or event of a non-sponsoring group or non-endorsing group, but the candidate shall not engage in campaigning of any kind.

Campaign team – Campaign manager(s) and/or staff identified by the candidate to the HOD Office.

Campaign-related – Any content that includes reference to an announced candidate in the context of their candidacy for an elected position within the AMA.

Digital – Relating to, using, or storing data or information in the form of digital signals; involving or relating to the use of computer technology; this includes, but is not limited to, social media and communication platforms.

Elected position(s) – Council or Officer position within the AMA elected by the House of Delegates of the AMA.

Endorsing group - Any group that wishes to endorse candidates other than the candidates they are eligible to sponsor. See definition of “Sponsoring Group.”

Endorse - Any public acknowledgement by a candidate or members of a group of the group’s support of a candidate. Internal discussions of support in a closed session of the group are not considered public for the purpose of this definition.

Featured – Identification of a candidate at an event by the host or organizer of the event, including but not limited to, written or verbal announcement of the candidate or their candidacy.

Sponsoring group

- Sponsoring group is an endorsing group that may offer endorsements to the delegate(s) and/or alternate delegate(s) representing that sponsoring group without the need to provide their endorsement process to the HOD Office.
- The association, society, AMA section, or other entity for which a prospective candidate serves as an AMA HOD delegate or alternate delegate as certified with the HOD office.
- The Section delegate and alternate delegate are the only individuals who may be sponsored by their respective AMA Section.
- Current trustees or Council members seeking re-election or election to president-elect may be sponsored by the delegation for which they served as an AMA HOD delegate or alternate delegate immediately prior to their election.
- Individuals may self-sponsor (self-nomination).

I. Guiding Principles
The following principles provide guidance on how House elections should be conducted and how the selection of AMA leaders should occur:

1. Our American Medical Association delegates should:
   a. avail themselves of all available background information about candidates for elected positions in our AMA.
   b. determine which candidates are best qualified to help the AMA achieve its mission.
   c. make independent decisions when voting for candidates.
2. Any electioneering practices that distort the democratic processes of House elections, such as vote trading for the purpose of supporting candidates, are unacceptable. This principle applies between as well as within caucuses and delegations.
3. Candidates for elected positions should comply with the requirements and the spirit of House of Delegates policy on campaigning and campaign spending.
4. Candidates and their sponsoring organizations should exercise restraint in campaign spending. Federation organizations should establish clear and detailed guidelines on the appropriate level of resources that should be allocated to the political campaigns of their members fo our AMA leadership positions.
5. Incumbency should not assure the re-election of an individual to an AMA leadership position.
6. Service in any AMA leadership position should not assure ascendancy to another leadership position.
7. Delegations and caucuses when evaluating candidates may provide information to their members encouraging open discussion regarding the candidates.
8. Delegations and caucuses should be a source of encouragement and assistance to qualified candidates. Nomination and endorsement should be based upon selecting the most qualified individuals to lead our AMA regardless of the number of positions up for election in a given race. Delegations and caucuses are reminded that all potential candidates may choose to run for office, with or without their endorsement and support.
9. Every state and specialty society delegation is encouraged to participate in a caucus, for the purposes of candidate review activities.

II. Guidelines for Candidacy for AMA Offices

1. Every effort should be made to have two or more candidates for each vacancy.
2. The Federation (in sponsoring candidates for leadership positions), the House of Delegates (in electing Council and Board members), and the Board, the Speakers, and the President (in appointing or nominating physicians for service on AMA Councils or in other leadership positions) should consider the need to enhance and promote diversity.

III. Candidate Announcement, Nominations and Open Positions

1. Individuals intending to seek election at the next Annual Meeting should make their intentions known to the Speakers by providing the Speaker's office with an electronic announcement "card" that includes any or all of the following elements and no more: the candidate's name, photograph, the office sought, the sponsoring group, if any, and a list of endorsing groups, if any. The Speakers will ensure that the information is posted on our AMA website in a timely fashion, generally on the morning of the last day of a House of Delegates meeting or upon adjournment of the meeting. Announcements that include additional information (e.g., a brief resume) will not be posted to the website. Printed announcements may not be distributed to members of the House by any method.
2. Announcement cards of all known candidates will be projected on the last day of the Annual and Interim Meetings of our House of Delegates and posted on the AMA website. Following each meeting, an "Official Candidate Notification" will be sent electronically to the House. It will include a list of all announced candidates and all potential newly opened positions which may open as a result of the election of any announced candidate. Additional notices will also be sent out with regular Speaker communications to the HOD and with the Speaker's notice of the opening of active campaigning which generally follows the April Board meeting.
3. Candidates may notify the HOD Office of their intention to run for potential newly opened positions, as well as any scheduled open positions on the elected councils or the Board of Trustees, at any time by submitting an announcement card to the House Office. They will then be included in all subsequent projections of announcements before the House, "Official Candidate Notifications," and in any campaign activity that had not yet been finalized. All previously announced candidates will continue to be included on each Official Candidate Notification. Any candidate may independently announce their candidacy after active campaigning is allowed, but no formal announcement from the HOD office will take place other than on Official Candidate Notifications.
4. The Federation and members of the House of Delegates will be notified of unscheduled potential newly opened positions that may become available as a result of the election of announced candidates. Candidates will be allowed to announce their intention to run for these positions.
5. If a potential newly opened position on the Board or a specified council does not open but there are other open positions for the same council or the Board, an election will proceed for the existing open seats. Candidates will be offered the opportunity to withdraw their nomination prior to the vote. If there are no scheduled open seats on the Board or specified council for which a potential newly opened position is announced and if the potential newly opened position does not open (ie., the individual with the unexpired term is not elected to the office they sought), no election for the position will be held. In the event that a prior election results in a newly opened position without a nominated candidate or more positions are open than nominated candidates, the unfilled positions would remain unfilled until the next annual meeting.
6. Our AMA believes that:
   a. specialty society candidates for our AMA House of Delegates elected offices should be listed in the pre-election materials available to the House as the representative of that society and not by the state in which the candidate resides.
   b. elected specialty society members should be identified in that capacity while serving their term of office.
   c. nothing in the above recommendations should preclude endorsement by any state delegation of the national specialty society candidate, if that state delegation should so choose.
7. Our AMA requires completion of conflict of interest forms by all candidates for election to our AMA Board of Trustees and councils prior to their election. Conflict of interest forms must be submitted after an individual has announced their candidacy and before the active campaign window begins or, if not previously announced, within 24 hours of the conclusion of the HOD

Opening Session. The HOD Office will post such information on the "Members Only" section of our AMA website before election by the House of Delegates, with links to the disclosure statements from relevant electronic documents.

8. Candidates will be provided with a copy of the current election rules and will be required to attest to abiding by them. Candidates are responsible for any and all actions or inaction undertaken on their behalf that is campaign related.

IV. Communications, Campaign Memorabilia and Literature

1. Active campaigning for an elected AMA position may not begin until the active campaign window opens as announced by the Speaker following the Spring Board of Trustees meeting immediately preceding the meeting at which the election is scheduled to take place.
2. An announced candidate may discuss their candidacy on an individual basis in private conversations after the announcement of candidacy until the active campaigning period begins. Prior to the active campaigning period, no other individual may discuss the candidacy except in private conversations with the announced candidate on an individual basis. This rule does not prohibit any candidate from discussions for the purpose of forming a campaign team or from a campaign team discussing a candidate or campaign strategy. This rule also does not prohibit persons not associated with a campaign from discussing candidates in private conversations.
3. An Election Manual containing information on all candidates for election shall continue to be developed annually, with distribution limited to publication on our AMA website, typically on the Web pages associated with the meeting at which elections will occur. The Election Manual will provide a link to the AMA Candidates' Page, but links to personal, professional or campaign related websites will not be allowed. The Election Manual provides an equal opportunity for each candidate to present the material they consider important to bring before the members of the House of Delegates and should relieve the need for the additional expenditures incurred in making non-scheduled telephone calls and duplicative mailings. The Election Manual serves as a mechanism to reduce the number of telephone calls, mailings and other messages members of the House of Delegates receive from or on behalf of candidates.
4. Our AMA Office of House of Delegates Affairs will provide an opportunity for all announced candidates to submit material to the HOD office which will then be sent electronically by the HOD Office in a single communication to all delegates and alternates. Parameters regarding content and deadlines for submission will be established by the Speaker and communicated to all announced candidates.
5. An AMA Candidates' Page will be created on our AMA website or other appropriate website to allow each candidate the opportunity to post campaign materials. Parameters for the site will be established by the Speaker and communicated to candidates.
6. Campaign expenditures and activities should be limited to reasonable levels necessary for adequate candidate exposure to the delegates. Campaign memorabilia and giveaways that include a candidate's name or likeness may not be distributed at any time.
7. Active campaigning via mass outreach to delegates by candidates or on behalf of the candidate by any method is prohibited. A reduction in the volume of telephone calls and personal electronic communication from candidates and on behalf of candidates is encouraged. No part of this rule shall be interpreted to limit developing or communicating within a campaign team. Electronic messages must include a simple mechanism to allow recipients to opt out of receiving future messages.
8. Printed and digital campaign materials may not be distributed to members of the House other than by the HOD office candidate email and on the AMA Candidates' Page.
9. Displays of campaign posters, signs, and literature in public areas of the venue at which Annual Meetings are held are prohibited because they detract from the dignity of the position being sought and are unsightly. Campaign posters may be displayed at a single campaign reception at which the candidate is featured. No campaign literature shall be distributed in the House of Delegates and no mass outreach electronic messages shall be transmitted after the opening session of the House of Delegates.
10. Campaign stickers, pins, buttons and similar campaign materials are disallowed. This rule will not apply for pins for AMPAC, the AMA Foundation, specialty societies, state and regional delegations and health related causes that do not include any candidate identifier. These pins

should be small, not worn on the badge and distributed only to members of the designated group. General distribution of any pin, button or sticker is disallowed.

11. Candidates and campaigns may not produce a personal campaign-related website or other digital campaign-related content. Candidates may not direct to personal or professional websites as a method of campaigning other than to the AMA Candidates' Page.

V. Group Dinners and Meetings

1. Candidates for our AMA office should not attend meetings of state medical societies unless officially invited and could accept reimbursement of travel expenses by the state society in accordance with the policies of the society.
2. At any AMA meeting convened prior to the time period for active campaigning, campaign-related expenditures and activities shall be discouraged. Large campaign receptions, luncheons, other formal campaign activities and the distribution of campaign literature and gifts are prohibited. It is permissible for candidates seeking election to engage in individual outreach meant to familiarize others with a candidate's opinions and positions on issues.
3. Each participant in group dinners, if attended by an announced candidate in a currently contested election, must pay their own share of the expenses, with the exception that societies and delegations may cover the expense for their own members. This rule would not disallow societies from paying for their own members or delegations gathering together with each individual or delegation paying their own expense. Gatherings of 4 or fewer delegates or alternates are exempt from this rule.

VI. Interview Rules

Candidates and interviewers must comply with the following rules:

1. Groups wishing to conduct interviews must designate their interviewing coordinator and provide the individual's contact information to the Office of House of Delegates Affairs. The Speaker's Office will collect contact information for groups wishing to conduct interviews as well as for candidates and their campaign teams and will provide the information to both groups. Groups must indicate whether they wish to interview in-person or virtually and for which contest by the deadlines designated by the speaker.
2. Any formal questioning of an announced candidate, excluding a written questionnaire, is an interview and subject to the rules for interviews.
3. Interviews may be arranged between the parties once active campaigning is allowed.
4. Groups conducting interviews with announced candidates for a given office must offer an interview to all announced candidates at the time the group's interview schedule is finalized.
   a. A sponsoring group may meet with an announced candidate who is a member of their group during the active campaign window without meeting with other candidates for the same office.
   b. Interviewing groups may, but are not required to, interview persons who become announced candidates during the active campaign window. Should an interview be offered to such a candidate, all other announced candidates for the same office (even those previously interviewed) must be afforded the same opportunity and medium.
   c. Any campaign-related presentation to an assembly by an announced candidate, with or without being followed by a discussion, question and answer session, or a vote of the assembly regarding the candidate, is an interview and subject to the rules on in-person interviews. No portion of this rule shall be interpreted to mean that a candidate acting in their current formal capacity would be unable to present or discuss matters pertaining to that formal capacity with any group.
5. Groups may elect to conduct interviews virtually or in-person.
6. In-person interviews may be conducted between Friday and Monday of the meeting at which elections will take place.
7. Virtual interviews are subject to the following constraints:
   a. Interviews may be conducted only during a 9-14 day window (preferably across two separate weekends) as designated by the Speaker beginning at least two weeks but not more than six (6) weeks prior to the scheduled Opening Session of the House of Delegates meeting

at which elections will take place.

b. Interviews conducted on weeknights must be scheduled between 5 pm and 10 pm or on weekends between 8am and 10 pm based on the candidate's local time, unless another mutually acceptable time outside these hours is arranged.

c. Caucuses and delegations scheduling interviews for candidates within the parameters above must offer alternatives to those candidates who have conflicts with the scheduled time.

8. Recording of interviews is allowed only with the knowledge and consent of the candidate.
9. Interviews are recommended to be recorded with consent of all participating individuals and disseminated to the interviewing group members when all are not able to be present for the interview.
10. Recordings of interviews may be shared only among members of the group conducting the interview.
11. A candidate is free to decline any interview request.
12. In consultation with the Election Committee, the Speaker, or where the Speaker is in a contested election, the Vice Speaker, may issue special rules for interviews to address unexpected situations.
13. The Speakers are encouraged to continue recorded virtual interviews of announced candidates in contested races, to be posted on the AMA website.

VII. Campaign Receptions

1. Our AMA will sponsor the AMA Candidate Reception which will be open to all candidates and all meeting attendees. Any candidate may elect to be "featured" at the AMA Candidate Reception. There will not be a receiving line at the AMA Candidate Reception. The rules regarding cash bars only at campaign receptions and limiting each candidate to be featured at a single reception will apply to the AMA Candidate Reception.
2. A state, specialty society, caucus, coalition, etc. may contribute to more than one party. However, a candidate may be featured at only one party, which includes: (a) being present in a receiving line, or (b) appearing by name or in a picture on a poster or notice in or outside of the party venue. At these events, alcohol may be served only on a cash or no-host bar basis.

VIII. Election Process

1. At the Opening Session of the Annual Meeting, officer candidates in a contested election will give a two-minute self-nominating speech, with the order of speeches determined by lot. No speeches for unopposed candidates will be given, except for president-elect. When there is no contest for president-elect, the candidate will ask a delegate to place their name in nomination, and the election will then be by acclamation. When there are two or more candidates for the office of president-elect, a two-minute nomination speech will be given by a delegate. In addition, the Speaker of the House of Delegates will schedule a debate in front of the AMA-HOD to be conducted by rules established by the Speaker or, in the event of a conflict, the Vice Speaker.
2. Nominating speeches for unopposed candidates for office, except for President-elect, will not be heard.
3. AMA elections will be held on Tuesday at each Annual Meeting.
4. Voting for all elected positions including runoffs will be conducted electronically during an Election Session to be arranged by the Speaker.
5. All delegates eligible to vote must be seated within the House at the time appointed to cast their electronic votes.
6. The final vote count of all secret ballots of the House of Delegates shall be made public and part of the official proceedings of the House.
7. The Speaker is encouraged to consider means to reduce the time spent during the HOD meeting on personal points by candidates after election results are announced, including collecting written personal points from candidates to be shared electronically with the House after the meeting or imposing time limits on such comments.

IX. Election Committee

1. In accordance with Bylaw 2.13.7, the Speaker shall appoint an Election Committee of 9 individuals for 1-year terms (maximum tenure of 4 consecutive terms and a lifetime maximum tenure of 8 terms) to report to the Speaker. These individuals would agree not to be directly involved in a campaign during their tenure and would be appointed from various regions, specialties, sections, and interest groups. The primary role of the committee would be to work with the Speakers to adjudicate any election complaint. Additional roles to be determined by the Speaker and could include monitoring election reforms, considering future campaign modifications and responding to requests from the Speaker for input on election issues that arise. The Speaker and Vice Speaker shall be full members of the Election Committee.

X. Campaign Complaint Reporting, Validation and Resolution Process

1. Campaign violation complaints should be directed to the Speaker, the Vice Speaker, or the AMA General Counsel and should include the following details:
    a. The name of the person(s) thought to have violated the rules
    b. The date of the alleged violation and the location if relevant
    c. The specific violation being alleged (i.e., the way the rules were violated)
    d. The materials, if any, that violate the rules; original materials are preferred over copies. Where necessary, arrangements for collection of these materials will be made.
2. A formal election complaint must be filed in writing by a HOD delegate or alternate delegate via the election website before the commencement of the election session at which the candidate is currently seeking election.
3. Campaign violation complaints will be investigated by the Election Committee or a subcommittee thereof with the option of including the Office of General Counsel or the Director of the House of Delegates.
    a. The Committee will collectively determine whether a campaign violation has occurred. As part of the investigation process the Election Committee or its subcommittee shall inform the candidate of the complaint filed and give the candidate the opportunity to respond to the allegation.
    b. If the complaint implicates a delegation or caucus, the Election Committee or its subcommittee shall inform the chair of the implicated delegation or caucus of the complaint filed and give the implicated delegation or caucus chair(s) the opportunity to answer to the allegation as a part of the investigative process.
    c. For validated complaints, the Committee will determine appropriate penalties, which may include an announcement of the violation by the Speaker to the House.
    d. Committee members with a conflict of interest may participate in discussions but must recuse themselves from decisions regarding the merits of the complaint or penalties.
    e. Deliberations of the Election Committee shall be confidential.
    f. The Speaker shall include a summary of the Election Committee's activities in "Official Candidate Notifications" sent to the House, following each meeting at which an election was held. Details may be provided at the discretion of the Election Committee and must be provided when the penalty includes an announcement about the violator to the House.
4. A record of all complaints and the results of the validation and the resolution processes, including penalties, shall be maintained by our AMA Office of General Counsel and kept confidential.
5. The Election Committee will review the Campaign Complaint Reporting, Validation and Resolution Process as implemented and make further recommendations to the House as necessary.

XI. Endorsements

1. Our American Medical Association requires all groups that endorse candidates turn in information about their endorsement process, the deadline, and a staff contact for applications in a timely and streamlined manner.
2. Our AMA will then post this information on the election website in a timely manner, with the information being easily digestible and accessible.
3. Our AMA will not allow any group that fails to provide this information in a timely manner to offer an endorsement during that election cycle.
4. Our AMA will create a specific period (similar to virtual elections) during which endorsements may be sought. [Speakers Rep. 3, I-23 Modified: Res. 609, A-24 Modified: CCB Rep. 3, A-24 Modified: Speakers Rep. 01, I-24 Modified: Speakers Rep. 02, I-24 Appended: Speakers' Rep. 02, I-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 608
(A-26)

Introduced by: American College of Occupational & Environmental Medicine, Iowa, Minnesota, Nebraska, North Dakota, South Dakota, American Academy of Physical Medicine & Rehabilitation, American Academy of Family Physicians

Subject: Reinstitution of AMA Guides Editorial Panel

Referred to: Reference Committee F

Whereas, our AMA established the AMA Guides Editorial Panel in 2019 in order to update the AMA Guides to the Evaluation of Permanent Impairment 6th edition (purple book) published in 2008[1]; and

Whereas, the AMA Guides Editorial Panel consisted of two co-chairs, ten voting members and five advisors, representing vast multispecialty and multidisciplinary perspectives on medical impairment ratings[2]; and

Whereas, the AMA Guides became a digital product to allow continuous and real time updates to the impairment evaluation process in order to bring the best science to establish fair and equitable impairment ratings[3]; and

Whereas, the AMA Guides Editorial Panel instituted updates to the chapters on mental health (2021), nervous system (2023), upper limb, lower limb and spine (2024), and pulmonary (2025) which have received wide support across multiple stakeholder groups[3]; and

Whereas, the goal of the AMA Guides Panel and as originally stated by the AMA was to institute a continuous evidence-based update to all chapters of the AMA Guides to the Evaluation of Permanent Impairment; and

Whereas, the AMA staff decided to discontinue the AMA Guides Editorial Panel at the end of 2025, thus ceasing the originally stated goal of a continuous update process, a decision that was not supported by the co-chairs or panel members; and

Whereas the non-updated chapters including pain, vision, cardiovascular system, digestive system, urinary and reproductive system, skin, hematopoietic system, and endocrine system have not been updated and are using outdated science and information that in many cases is 20-25 years old; and

Whereas, the AMA supports using the best available science and evidence basis for medical assessments; therefore be it

RESOLVED, that our American Medical Association re-institute the AMA Guides Editorial Panel to its original configuration and operating status (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage the AMA Guides Editorial Panel to continue its work on updating the chapters of the AMA Guides to the Evaluation of Permanent Impairment 6th edition

2025 that have yet to be addressed and to continue to bring current evidence based medicine and practices to the evaluation of permanent impairment. (Directive to Take Action)

Fiscal Note: Major - $271,952. Annual Editorial Panel funding.

Received: 4/14/26

RELEVANT AMA POLICY

Revising "Guides to the Evaluation of Permanent Impairment" H-365.987
It is the policy of the AMA: (1) to pursue the comprehensive revision and updating of the Guides to the Evaluation of Permanent Impairment with input from physicians in all appropriate specialty groups; and (2) to consider developing appropriate methods to facilitate the use of the Guides, including expansion of introductory instructions.

Physician's Role in Returning Patients to Their Jobs H-365.999
Our AMA:
(1) will promote the development of practice parameters, when appropriate, for use in the treatment of injured workers and encourages those experienced in the care of injured workers to participate in such development.
(2) will investigate support for appropriate utilization review guidelines for referrals, appropriate procedures and tests, and ancillary services as a method of containing costs and curbing overutilization and fraud in the workers' compensation system. Any such utilization review should be based on open and consistent review criteria that are acceptable to and have been developed in concert with the medical profession. Physicians with background appropriate to the care under review should have the ultimate responsibility for determining quality and necessity of care.
(3) encourages the use of the Guides to the Evaluation of Permanent Impairment. The correct use of the Guides can facilitate prompt dispute resolution by providing a single, scientifically developed, uniform, and objective means of evaluating medical impairment.
(4) encourages physicians to participate in the development of workplace health and safety programs. Physician input into healthy lifestyle programs (the risks associated with alcohol and drug use, nutrition information, the benefits of exercise, for example) could be particularly helpful and appropriate.
(5) encourages the use of uniform claim forms (CMS 1500, UB04), electronic billing (with appropriate mechanisms to protect the confidentiality of patient information), and familiar diagnostic coding guidelines (ICD-9-CM, CPT; ICD-10-CM, CPT), when appropriate, to facilitate prompt reporting and payment of workers' compensation claims.
(6) will evaluate the concept of Independent Medical Examinations (IME) and make recommendations concerning IME's (i) effectiveness; (ii) process for identifying and credentialing independent medical examiners; and (iii) requirements for continuing medical education for examiners.
(7) encourages state medical societies to support strong legislative efforts to prevent fraud in workers' compensation.
(8) will continue to monitor and evaluate state and federal health system reform proposals which propose some form of 24-hour coverage.
(9) will continue to evaluate these and other medical care aspects of workers' compensation and make timely recommendations as appropriate.
(10) will continue activities to develop a unified body of policy addressing the medical care issues associated with workers' compensation, disseminate information developed to date to the Federation and provide updates to the Federation as additional relevant information on workers' compensation becomes available.

(11) encourages physicians to advise their patients to return to work at the earliest date compatible with health and safety and recognizes that physicians can, through their care, facilitate patients' return to work.
(12) supports the adoption of the most current edition of the AMA Guides to the Evaluation of Permanent Impairment by all jurisdictions to provide fair and consistent impairment evaluations for patients and claimants including injured workers.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 609
(A-26)

Introduced by: New York

Subject: American Medical Association Board Chair Term Limits

Referred to: Reference Committee F

Whereas, the Bylaws of the American Medical Association (AMA) specify that the Chair of the Board of Trustees serves a one-year term, resulting in rapid turnover of board leadership; and

Whereas, leading governance authorities emphasize that effective board leadership requires continuity, stability, and sufficient tenure to oversee long-term strategic initiatives; BoardSource recommends multi-year chair terms to preserve institutional memory, and the National Association of Corporate Directors (NACD) similarly advises extended leadership cycles to align governance with organizational strategy; and

Whereas, Dr. Richard LeBlanc, in *The Handbook of Board Governance*, notes that an adequately tenured board chair is essential for ensuring effective oversight of senior management, maintaining accountability structures, and stewarding long-range organizational priorities; and

Whereas, the AMA's strategic initiatives, advocacy agenda, and oversight responsibilities span multiple years, making annual turnover in board leadership potentially disruptive to consistent governance and sustained evaluation of senior management performance; and

Whereas, many national nonprofit and professional associations have adopted longer or renewable board-chair terms to strengthen leadership continuity, improve board effectiveness, and enhance oversight of executive performance; therefore be it

RESOLVED, that our American Medical Association Board of Trustees commission an independent assessment by recognized nonprofit governance experts to evaluate best practices in board-chair term lengths, leadership continuity, and succession planning within large national nonprofit and professional membership organizations (Directive to Take Action); and be it further

RESOLVED, that this independent assessment examine how board-chair tenure and leadership succession structures influence the Board of Trustees' ability to provide consistent oversight of senior management, monitor multi-year strategic and operational performance goals, preserve institutional knowledge, and maintain accountability to the House of Delegates and American Medical Association membership (Directive to Take Action); and be it further

RESOLVED, that the Board of Trustees provide the full report of the independent assessment, including benchmarking analyses and governance recommendations, to the House of Delegates no later than the 2027 Annual Meeting of the American Medical Association (Directive to Take Action); and be it further

RESOLVED, that the Board of Trustees review the findings of the independent assessment and present to the House of Delegates at the 2027 Annual Meeting specific recommendations

regarding governance best practices for board-chair tenure and leadership continuity, including any proposed amendments to the American Medical Association Constitution and Bylaws for consideration by the House of Delegates. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 610
(A-26)

Introduced by: New York

Subject: Plant-Based Diets at AMA meetings

Referred to: Reference Committee F

Whereas, a substantial and growing body of scientific evidence demonstrates that dietary patterns emphasizing plant-based foods are associated with reduced risks of cardiovascular disease, type 2 diabetes, obesity, and certain cancers, as well as lower all-cause mortality; and

Whereas, these benefits are most consistently observed when diets emphasize whole grains, vegetables, fruits, legumes, and nuts, while limiting red and processed meats and ultra-processed foods; and

Whereas, emerging longevity research highlights that individuals who maintain preserved cognitive and physical function into advanced age often share common lifestyle patterns, including plant-forward dietary habits, metabolic health, and lower burden of chronic disease; and

Whereas, the concept of healthy aging emphasizes not merely increased lifespan, but preservation of function, independence, and quality of life, with diet representing a modifiable determinant of long-term physiological resilience; and

Whereas, well-planned plant-forward dietary patterns, including Mediterranean dietary models that incorporate minimal amounts of animal products, are associated with improved cardiometabolic health while supporting nutritional adequacy and sustainable long-term adherence; and

Whereas, dietary patterns higher in plant-based foods are also associated with significant benefits for planetary health, including reductions in greenhouse gas emissions, land use, water consumption, and environmental degradation; and

Whereas, research in behavioral economics demonstrates that small, non-coercive changes in choice architecture, such as increasing the availability and visibility of healthier options, can effectively promote beneficial behaviors while preserving individual autonomy; and

Whereas, the American Medical Association and the Medical Society of the State of New York have long emphasized prevention, population health, and physician leadership by example, and professional meetings provide an opportunity to model dietary patterns that support both healthy aging and sustainability; therefore be it

RESOLVED, that our American Medical Association encourages the use of evidence-based behavioral science strategies, such as choice architecture and nudging, to promote healthier dietary choices at professional gatherings, while respecting individual autonomy (New HOD Policy); and be it further

RESOLVED, that our American Medical Association recognizes the importance of modeling prevention through food choices at its own meetings, with an emphasis on increasing the plant-based food choice options which also contain minimal contributions from animal products, as an exemplary method for the promotion of individual and planetary health. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 611
(A-26)

Introduced by: Organized Medical Staff Section

Subject: Publicizing, Supporting, and Promoting (Appropriate) AMA Member Physicians and Physician Spouses as Candidates for Local and State Offices

Referred to: Reference Committee F

Whereas, medicine is under assault from all sides—from insurance companies to trial lawyers to onerous state and federal regulations; and

Whereas, the 118th United States Congress enacted 209 public laws, which contrasts with approximately 16,000 items of state legislation passed annually[1,2,3]; and

Whereas, we do not have enough physicians in political office on the local, state, or federal levels and in general there may be some benefit to supporting "medicine-friendly" physicians and physician spouses who run for political office; and

Whereas, our medical societies have political action committees, such as AMPAC for the AMA, to support "medicine-friendly" candidates running for office; and

Whereas, AMPAC holds an annual "Candidate Workshop" and "Campaign School" to support "medicine-friendly" candidates running for elected offices[4]; and

Whereas, there are few mechanisms to enable physician members of our state and national medical societies to network when running for state and federal office; and

Whereas, partly due to high educational debt loads, busy clinical schedules, challenges with work-life balance, and limited bandwidth to engage in political activity, physicians have traditionally had a low level of giving to candidates for local, state, and federal offices; and

Whereas, those of us who have more time than money could potentially help candidates for elected office with social media support (retweeting, likes, etc.) and/or volunteer time; and

Whereas, "medicine-friendly" candidates for political office would be interested in meeting potential donors, as well as individuals who may be willing to volunteer to support their campaigns with volunteer time and social media support; and

Whereas, there is currently no "central repository" that lists physicians or physician spouses running for state and federal office in the United States; and

Whereas, non-member physicians or physician spouses who are running for local, state, or federal office should also be encouraged to join the AMA, Alliance, and/or their state and specialty medical societies; and

Whereas, in this age of social media, it should be relatively easy to set up members-only websites with lists of appropriate physicians and physician spouses who are running for elected offices; and

Whereas, in the first version of this resolution submitted to the Missouri State Medical Association in 2024 two major concerns were raised: (1) potential legal implications, regarding coordination between state PACs, specialty society PACs and AMPAC, as well as (2) desire not to endorse physician candidates if they are not aligned with the policies of their state medical association and/or our AMA; and

Whereas, similar concerns were raised when a second version of this resolution was submitted to the Ohio State Medical Association (OSMA) in 2025, including:

- "An individual's campaign should do the work. Not every physician aligns with OSMA policy."
- "Promoting specific physician or spouses as candidates risk alienating OSMA members with differing political views."
- "It is more appropriate for OSMA to connect its members with opportunities to learn about candidacy";

and

Whereas, recent events in Minnesota highlight the courage of anyone running for (and/or holding) local or state elected office(s), as they and their families are constantly in the spotlight and potentially at risk; and

Whereas, given limited resources and bandwidth, it is likely that this proposal will need to be a collaborative effort between organized medicine and/or their respective political action committees; and

Whereas, it is unclear whether publicizing, supporting, and promoting such candidates should be a function of organized medicine (state and specialty societies and our AMA) versus their respective political action committees due to legal concerns, tax implications, etc.; and

Whereas, state and specialty societies or our AMA may also determine that certain physicians or physician spouses who are running for elected office may not merit recognition; and

Whereas, state and specialty societies or our AMA may also determine that certain words or actions of individuals running for elected office should merit removal from such lists; and

Whereas, there is already the National Council of State Legislatures and perhaps our AMA may wish to consider helping to organize a "National Convention of Physician and Physician Spouse State Legislators," perhaps in conjunction with the annual AMA State Advocacy Summit; therefore be it

RESOLVED, that our American Medical Association, to the extent permitted by applicable laws, collaborate with other interested organizations to facilitate opportunities for AMA physician-member and physician-spouse elected officials at the local and state levels to connect, exchange ideas, collaborate, and support each other to protect our patients and our practices, such as with a "National Meeting of Physician State Legislators" (Directive to Take Action); and be it further

RESOLVED, that our AMA study the:

1. Feasibility of collaborating with state medical societies and specialty societies to assess appropriate AMA physician members and physician spouses running for state and local offices and creating a “master list” to publicize, support, and promote those individuals, and
2. Opportunities to publicize this list widely to support appropriate physicians and physician spouses who are aligned with our priorities and encourage financial and social medial support of those candidates, with a report back at the 2027 Annual Meeting.

(Directive to Take Action).

Fiscal Note: Major - $252,348. Legal study, meeting planning and execution.

RELEVANT AMA POLICY

Encourage Physicians as Legislative Candidates G-640.025

1. Our American Medical Association will continue to identify, encourage, and support physicians to run as state and national legislative candidates.
2. Our AMA will not use AMA corporate treasury funds to engage in.

Citation: Res. 605, A-14; Consolidated with G-645.015: CCB/CLRDP Rep. 01, A-24

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 612
(A-26)

Introduced by: LGBTQ+ Section

Subject: Increasing Expert Guidance in AMA Statements

Referred to: Reference Committee F

Whereas, on February 4, 2026, the American Medical Association publicized a statement regarding gender-affirming surgery for patients under 19, following the American Society of Plastic Surgeons' statement[1]; and

Whereas, LGBTQIA+ people have endured harm at the hands of the American healthcare system and organized medicine since medicine became formalized in this country[2-3]; and

Whereas, LGBTQIA+ people are currently experiencing political harm at an alarming level, with particular targets on the backs of transgender and gender diverse people as well as LGBTQIA+ minors[4-7]; and

Whereas, the AMA is the largest organized medical group of physicians and trainees in the country, and AMA's public statements as a result carry significant weight; and

Whereas, due largely to governmental overreach and political and financial pressures, with influence by public statements made by AMA and ASPS, preemptive compliance has further restricted care for not only adolescents, but adults, as made evident by many hospitals discriminatorily withdrawing gender-affirming surgical and/or medical care from transgender and gender diverse people, while still preserving gender-affirming care for cisgender people; and

Whereas, AMA policies H-185.927, H-160.991, and H-60.927 state our AMA's clear policy positions to protect access to gender-affirming care, to work with relevant partners and stakeholders to preserve the safety of LGBTQ+ physicians, patients, and those physicians that provide care to LGBTQ+ people, to lead in education of LGBTQ+ health, and to oppose criminalization, prohibition, or impositions upon gender-affirming care, including the care of minors; and

Whereas, though the statement itself does not explicitly counter policy, the phrasing used and the allowance of continued media manipulation without correction for weeks unintentionally serves to contradict the AMA's robust policies and contribute to disinformation and sensationalized narratives that seek to allow governmental restrictions in access to gender-affirming care for transgender people; and

Whereas, these restrictions harm not only transgender people, but cisgender people, as seen by physicians who provide many services beyond gender-affirming care avoiding working in states that restrict this care, as well as families of cisgender children fleeing their states to ensure access to medications that are being erroneously prohibited over the undue politicization of vulnerable minorities[8-11]; and

Whereas, reliance on experts in gender-affirming care provision, research, and advocacy could have shaped the nuances of the statement to support threading of the needle; and

Whereas, regardless of intention, the AMA has a responsibility to own and address the harmful effects it may cause as an institution; and

Whereas, our American Medical Association has a responsibility to advocate for the health, safety, and wellbeing of LGBTQ+ people and other vulnerable populations regardless of political climate, based in existing AMA policies; therefore be it

RESOLVED, that our American Medical Association consult with multidisciplinary AMA section-identified experts when crafting specialist care focused statements, especially statements predominantly discussing care for vulnerable populations, to reduce the risk of harm to said populations. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

Clarification of Evidence-Based Gender-Affirming Care H-185.927

1. Our American Medical Association recognizes that medical and surgical treatments for gender dysphoria and gender incongruence, as determined by shared decision making between the patient and physician, are medically necessary as outlined by generally-accepted standards of medical and surgical practice.
2. Our AMA will work with state and specialty societies and other interested stakeholders to:
    a. advocate for federal, state, and local laws and policies to protect access to evidence-based care for gender dysphoria and gender incongruence;
    b. oppose laws and policies that criminalize, prohibit or otherwise impede the provision of evidence-based, gender-affirming care, including laws and policies that penalize parents and guardians who support minors seeking and/or receiving gender-affirming care;

   c. support protections against violence and criminal, civil, and professional liability for physicians and institutions that provide evidence-based, genderaffirming care and patients who seek and/or receive such care, as well as their parents and guardians; and
   d. communicate with stakeholders and regulatory bodies about the importance of gender-affirming care for patients with gender dysphoria and gender incongruence.
3. Our AMA will advocate for equitable, evidence-based coverage of gender-affirming care by health insurance providers, including public and private insurers.

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991

1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.
5. Our AMA supports preservation and maintenance of federal and state public funding for physicians and institutions engaged in clinical care, research, and medical education regarding LGBTQ+ populations.

Reducing Suicide Risk Among Lesbian, Gay, Bisexual, Transgender, and Questioning Youth Through Collaboration with Allied Organizations H-60.927

Our American Medical Association will partner with public and private organizations dedicated to public health and public policy to reduce lesbian, gay, bisexual, transgender, and questioning (LGBTQ) youth suicide and improve health among LGBTQ youth.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 613
(A-26)

Introduced by: LGBTQ+ Section

Subject: Preserving Institutional Equity and Inclusivity Efforts

Referred to: Reference Committee F

Whereas, health equity and inclusivity efforts are known to improve health outcomes, increase opportunities for minoritized populations, and enhance patient-physician relationships[1-5]; and

Whereas, AMA policies H-180.944, G-600.960, and D-295.963 clearly delineate the importance of equity and inclusivity work to benefit patients, trainees, and physicians, including that of the AMA itself; and

Whereas, AMA policy often directs the creation of resources to be made accessible to members and/or non-members; and

Whereas, equity and inclusivity work have been disappearing and reappearing altered from the AMA website, with hyperlinks that temporarily or permanently do not work without explanation of where this work has gone or for what purpose it has been modified, from documents and guidance on equity-focused language to EdHub resources on equity that were previously approved being suddenly considered out of line with EdHub materials to the rebranding and downsizing of the prior Center for Health Equity; and

Whereas, examples that have been either modified without explanation or removed temporarily or permanently as seen by faulty links, documented at the time of drafting this resolution, include the guide titled “Advancing Health Equity: A Guide to Language, Narrative, and Concepts”, the EdHub modules “Trauma-Informed Care for Trans and Gender Diverse Individuals” and the “Prioritizing Equity” video series items “Redistributive Justice", “Getting to Justice in Education”, “Moving Upstream”, “Political Determinants of Health”, with some being reinstated with modified titles and/or content[6-8]; and

Whereas, some AMA member contributors have been informed of changes, but it is variable based on topic, and this still neglects to address the loss of resources that members may rely on even if they who were not contributors to the work; and

Whereas, these changes are not in line with existing policy of the AMA and appear driven largely by shifting external priorities rather than true changes to the importance of equity and inclusivity in medicine, with variability in rationale being provided to contributors; therefore be it

RESOLVED, that our American Medical Association’s Board of Trustees ensure the restoration of resources that have been removed, with exceptions to archive rather than completely remove those resources that are out of date, being updated, or need to be removed for protection of parties involved in their creation (Directive to Take Action); and be it further

RESOLVED, that our AMA, when making changes to website resources, provide transparent communication and appropriate notice to all membership with forewarnings to members and staff involved in creation of those efforts that are being removed or altered or archived, even if

temporarily, and provide such communication retrospectively for those resources which have been modified already without AMA policy impetus to do so (Directive to Take Action); and be it further

RESOLVED, that our AMA only make changes up to and including removal to publicly available resources in line with policy changes. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Plan for Continued Progress Toward Health Equity H-180.944
Health equity, defined as optimal health for all, is a goal toward which our American Medical Association will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity.

Continuing Equity Education G-600.960
Our American Medical Association will establish an Open Forum on Health Equity, to be held at least annually at a House of Delegates Meeting, for members to directly engage in educational discourse and strengthen organizational capacity to advance and operationalize equity.

Continued Support for Diversity in Medical Education D-295.963
Our American Medical Association will publicly state and reaffirm its support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training.
Our AMA will prioritize our organization's efforts to bolster diversity, equity, and inclusion across the medical education continuum.

Sunset Mechanism for AMA Policy G-600.110
Sunset policies will be retained in the AMA historical archives.

Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted G-605.009
This task force, which will serve at the direction of our AMA Board of Trustees, will inform the Board to health guide organized medicine's response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 614
(A-26)

Introduced by: American Geriatrics Society

Subject: Inclusive Policy Language for Older Adults

Referred to: Reference Committee F

Whereas, the terms “seniors”, “elderly”, “aging dependents”, “old-old”, “young-old”, and similar “other-ing” terms stoke stereotypes of older adults; and

Whereas, during the AMA 2025 interim meeting there were resolutions that referenced older adults and used these terms; and

Whereas, the American Geriatrics Society and the AMA Manual of Style advise authors to avoid these “other-ing” terms because such terms connote discrimination and certain negative stereotypes that may undercut research-based recommendations for better serving us all as we age; and

Whereas, use of Inclusive Language in AMA Policy D-65.969 instructs the AMA to “ensure the use of the most updated, inclusive, equitable, respectful, non-stigmatizing, and person-first language and use such language in all future AMA policies and amendments”; therefore be it

RESOLVED, that our American Medical Association will instruct all future policy language to use terms for those over the age of 65 to be “older persons”, “older people”, “older adults”, “older patients”, “older individuals”, “persons 65 years and older”, “the older population”, or preferred terminology from a specific group of older adults (e.g., Native American elders), in order to avoid a connotation of discrimination and negative stereotypes. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Use of Inclusive Language in AMA Policy D-65.969
1. Our AMA, in consultation with relevant parties, including the AMA Center for Health Equity, will amend existing policies to ensure the use of the most updated, inclusive, equitable, respectful, non-stigmatizing, and person-first language and use such language in all future AMA policies and amendments.
2. Our AMA, in consultation with relevant parties, including the AMA Center for Health Equity, will identify other types of outdated language in AMA policies and devise a timely mechanism for editorial

changes, including both one-time updates and a protocol for editorial changes to language at the HOD Reference Committee recommendation stage and whenever a policy is amended, modified, appended, reaffirmed, or reviewed for sunset; and report back to the House of Delegates.
Res. 007, A-25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 615
(A-26)

Introduced by: Resident and Fellow Section

Subject: Condemnation of Attacks on Healthcare Workers and Facilities in Gaza

Referred to: Reference Committee F

Whereas, the American Medical Association (AMA) has longstanding policies that oppose violence against healthcare workers, including:

- H-515.982 Violent Acts Against Physician, which condemns acts of violence against physicians and healthcare professionals;
- H-515.950 Protecting Physicians and Other Healthcare Workers in Society, which addresses harassment, intimidation, and threats against healthcare personnel;
- H-520.998 Medical Neutrality, which supports medical neutrality under the Geneva Conventions and advocating for the protection of healthcare workers and the sick and wounded in all countries;
- D-65.993 War Crimes as a Threat to Physicians' Humanitarian Responsibilities, which recognizes that war crimes, including the deliberate targeting of healthcare workers, threaten physicians' humanitarian responsibilities; and

Whereas, in 2023 the AMA Board of Trustees released a statement regarding the conflict in Israel and Gaza, stating that medical neutrality must be observed, physicians and healthcare personnel on the frontlines of crises worldwide must be able to provide medical care without fear of persecution, and reiterated the physicians' humanitarian responsibilities include sanctioning and condemning the military targeting of healthcare facilities and personnel[1]; and

Whereas, the Safeguarding Health in Conflict Coalition's 2024 report documented numerous attacks on healthcare personnel in Gaza, including "double tap" strikes whereby healthcare workers were killed during rescue efforts, and reported that health facilities were raided at least 28 times in 2024, each raid involving mass arrests of healthcare workers, damage to infrastructure, and destruction of medical equipment[2]; and

Whereas, Gaza's only medical school has been destroyed during the recent conflict[4]; and

Whereas, at least 40 medical students have been killed, 60 detained, and hundreds more displaced[5]; and

Whereas, the World Health Organization has documented 697 attacks on hospitals in Gaza since October 2023[8]; and

Whereas, the United Nations Human Rights Office reported that at least 1,581 healthcare workers have been killed in Gaza since October 7, 2023[6]; and

Whereas, Physicians for Human Rights–Israel reported deliberate bombing and forced evacuations of hospitals, rendering them non-functional and dismantling essential services such as trauma care, surgery, dialysis, and maternal health, and documented the killing and detention of over 1,800 healthcare workers, including the killings of department heads at Al-

Shifa Hospital in internal medicine, obstetrics-gynecology, emergency care, pathology, radiology, and orthopedics[7]; and

Whereas, B'Tselem, The Israeli Information Center for Human Rights in the Occupied Territories, reported that only 17 of Gaza's 36 hospitals were functioning, that 2.5% of medical personnel in Gaza had been killed, and that medical professionals had been arrested, abused, and killed while in detention[6]; and

Whereas, as of July 2025, Healthcare Workers Watch reported that over 400 Palestinian healthcare workers, including at least 28 doctors, had been detained by Israeli forces since October 2023, with many held for over 400 days without charge[9]; and

Whereas, the aforesaid principles of medical neutrality have been repeatedly violated in Gaza since the AMA Board of Trustees' 2023 statement, with healthcare workers targeted, detained, and killed, hospitals bombed, and medical services obstructed, in direct contravention of AMA policy[1]; therefore be it

RESOLVED, that our American Medical Association recognize the deliberate targeting of healthcare workers, medical students, and healthcare facilities in Gaza as a violation of medical neutrality and AMA policy (New HOD Policy); and be it further

RESOLVED, that our AMA supports efforts to protect, release, and provide restitution to detained healthcare workers in Gaza. (New HOD Policy)

RELEVANT AMA POLICY

Humanitarian and Medical Aid Support to Ukraine D-65.984
1. Our American Medical Association will advocate for continuous support of organizations providing humanitarian missions and medical care to Ukrainian refugees in Ukraine, at the Polish-Ukrainian border, in nearby countries, and/or in the US. 2. Our AMA will advocate for an early implementation of mental health measures, including suicide prevention efforts, and address war-related trauma and post-traumatic stress disorder when dealing with Ukrainian refugees with special attention to vulnerable populations including but not limited to young children, their parents, pregnant people, and the elderly. 3. Our AMA will advocate for educational measures to enhance the understanding of war-related trauma in war survivors and promote broad protective factors (e.g., financial, employment, housing, and food stability) that can improve adjustment and outcomes for war-affected people, particularly when applied to vulnerable categories of people. [Res. 017, A-22Modified: Speakers Rep. 02, I-24]

Violent Acts Against Physicians H-515.982
1. Our American Medical Association condemns acts of violence against physicians involved in the legal practice of medicine. 2. Our AMA will continue to take an active interest in the apprehension and prosecution of those persons committing assaults on physicians as a result of the physician's acting in a professional capacity. 3. Our AMA will continue to monitor state legislative efforts on increased criminal penalties for assaults against health care providers. 4. Our AMA will continue to work with interested state and national medical specialty societies through all appropriate avenues, including state legislatures, when issues related to workplace violence inside and outside of the emergency department arise. [Res. 605, A-92; Reaffirmation I-99; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed in lieu of Res. 608, A-12; Modified: BOT Rep. 2, I-12; Reaffirmed in lieu of Res. 423, A-13; Reaffirmed: CSAPH Rep. 08, A-23]

Protecting Physicians and Other Healthcare Workers in Society H-515.950
1. Our American Medical Association acknowledges and will act to reduce the incidence of antagonistic actions against physicians as well as other health care workers including first responders and public health officials, outside as well as within the workplace, including physical violence, intimidating actions of word or deed, and cyber-attacks, particularly those which appear motivated simply by their identification as health care workers. 2. Our AMA will educate the general public on the prevalence of violence and personal harassment against physicians as well as other health care workers including first responders, and public health officials, outside as well as within the workplace. 3. Our AMA will work with all interested stakeholders to improve safety of health care workers including first responders and public health officials and prevent violence to health care professionals. [Res. 413, I-20; Reaffirmed: CSAPH Rep. 7, I-23]

Medical Neutrality H-520.998
Our American Medical Association supports medical neutrality, under the principles of the Geneva Convention, for all health care workers and the sick and wounded in all countries. [Sub. Res. 72, I-81; Reaffirmed: CLRPD Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CEJA Rep. 8, A-11; Reaffirmed in lieu of Res. 601, I-13; Reaffirmed: CEJA Rep. 05, A-23]

War Crimes as a Threat to Physicians' Humanitarian Responsibilities D-65.993
1. Our American Medical Association will implore all parties at all times to understand and minimize the health costs of war on civilian populations generally and the adverse effects of physician persecution in particular. 2. Our AMA will support the efforts of physicians around the world to practice medicine ethically in any and all circumstances, including during wartime, episodes of civil strife, or sanctions and condemn the military targeting of health care facilities and personnel and using denial of medical services as a weapon of war, by any party, wherever and whenever it occurs. 3. Our AMA will advocate for the protection of physicians’ rights to provide ethical care without fear of persecution. [BOT Action in response to referred for decision Res. 620, A-09; Modified: BOT Rep. 09, A-19; Modified: Res. 002, I-22; Reaffirmed: Res. 603, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 616
(A-26)

Introduced by: Resident and Fellow Section

Subject: Humanitarian and Medical Aid Support to Palestine

Referred to: Reference Committee F

Whereas, the Israel–Hamas conflict began on October 7, 2023, when Hamas-led militants launched a large-scale assault on southern Israel, resulting in the deaths of approximately 1,200 people and the abduction of around 251 hostages[1]; and

Whereas, since the conflict began, Gaza's Ministry of Health reports over 60,000 Palestinian deaths, mostly civilians, with independent estimates indicating the true toll may exceed 80,000 fatalities and an additional 160,660 are estimated to be wounded[2-4]; and

Whereas, data from an internal Israeli intelligence database suggests that at least 83% of Gazans killed were civilians, corroborating other reports that the dead are predominantly composed of civilians[5-8]; and

Whereas, the humanitarian crisis in Gaza includes widespread displacement, with nearly all of the 2.3 million residents internally displaced, alongside critical shortages in food, water, medicine, shelter, and the collapse of critical infrastructure, including medical facilities, educational institutions, and cultural centers[9-11]; and

Whereas, there are war-induced adversities affecting children that include but not limited to physical and/or mental health risks related to forced family separation, loss of access to school and healthcare, insecure access to food and shelter, and displacement from homes and Communities[12]; and

Whereas, war-related events cause significant mental health issues, particularly, depressive symptomatology among mothers further negatively affecting wellbeing of both mothers and their children[12]; and

Whereas, Gaza has the highest number of child amputees per capita anywhere in the world[13]; and

Whereas, the World Health Organization has documented hundreds of attacks on health care in Gaza since October 7, 2023, including strikes on hospitals, ambulances, and medical personnel, severely disrupting essential medical services[15]; and

Whereas, the UN Office of the High Commissioner for Human Rights has reported that at least 27 of Gaza's 38 hospitals have been struck, resulting in patient deaths, staff casualties, and the suspension of critical care[16]; and

Whereas, the International Committee of the Red Cross has condemned such strikes as unacceptable and detrimental to civilian care[20], while Physicians for Human Rights has recorded over 1,000 attacks on health workers, patients, ambulances, and infrastructure in the occupied

Palestinian territories since October 2023[21] and these sustained assaults have critically hampered the ability of physicians to practice medicine during wartime [22-23]; and

Whereas, our AMA has previously passed Humanitarian and Medical Aid Support to Ukraine D-65.984, a similar resolution to provide humanitarian and medical aid support to Ukraine[12]; therefore be it

RESOLVED, that our American Medical Association supports efforts to contribute funds to support the humanitarian crisis in Gaza (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for continuous support of organizations providing humanitarian missions and medical care to Palestinian refugees in Palestine, in nearby countries, and/or in the US (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for an early implementation of mental health measures and address war-related trauma and post-traumatic stress disorder when dealing with Palestinian refugees with special attention to vulnerable populations including but not limited to young children, their parents, pregnant people, and the elderly. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Humanitarian and Medical Aid Support to Ukraine D-65.984
1. Our American Medical Association will advocate for continuous support of organizations providing humanitarian missions and medical care to Ukrainian refugees in Ukraine, at the Polish-Ukrainian border, in nearby countries, and/or in the US. 2. Our AMA will advocate for an early implementation of mental health measures, including suicide prevention efforts, and address war-related trauma and post-traumatic stress disorder when dealing with Ukrainian refugees with special attention to vulnerable populations including but not limited to young children, their parents, pregnant people, and the elderly. 3. Our AMA will advocate for educational measures to enhance the understanding of war-related trauma in war survivors and promote broad protective factors (e.g., financial, employment, housing, and food stability) that can improve adjustment and outcomes for war-affected people, particularly when applied to vulnerable categories of people. [Res. 017, A-22; Modified: Speakers Rep. 02, I-24]

War Crimes as a Threat to Physicians' Humanitarian Responsibilities D-65.993
1. Our American Medical Association will implore all parties at all times to understand and minimize the health costs of war on civilian populations generally and the adverse effects of physician persecution in particular. 2. Our AMA will support the efforts of physicians around the world to practice medicine ethically in any and all circumstances, including during wartime, episodes of civil strife, or sanctions and condemn the military targeting of health care facilities and personnel and using denial of medical services as a weapon of war, by any party, wherever and whenever it occurs. 3, Our AMA will advocate for the protection of physicians' rights to provide ethical care without fear of persecution. [BOT Action in response to referred for decision Res. 620, A-09; Modified: BOT Rep. 09, A-19; Modified: Res. 002, I-22; Reaffirmed: Res. 603, A-24]

Protection of Healthcare and Humanitarian Aid Workers in all Areas of Armed Conflict H-520.985
1. Our American Medical Association supports peace in Israel and Palestine in order to protect civilian lives and healthcare personnel. 2. Our AMA supports the safety of healthcare and humanitarian aid workers along with safe access to healthcare, healthcare facilities, and humanitarian aid for all civilians in areas of armed conflict. [Res. 603, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 617
(A-26)

Introduced by: Resident and Fellow Section

Subject: Reevaluation of AMA Policy Regarding Support for Specific National Medical Associations in the World Medical Association

Referred to: Reference Committee F

Whereas, in 2007, the AMA adopted policy D-250.990 which states “Our AMA will oppose any efforts to expel the Israeli Medical Association from the World Medical Association”; and

Whereas, the AMA holds no such policy for any other member of the World Medical Association; and

Whereas, maintaining an unconditional stance on a country’s membership in the World Medical Association risks undermining the AMA’s credibility as an impartial global health leader, particularly when new evidence or circumstances may arise; and

Whereas, AMA should review and reevaluate policies related to international organizational memberships to ensure they reflect current facts, ethical standards, and the AMA’s commitment to human rights; therefore be it

RESOLVED, that our American Medical Association rescind AMA policy D-250.990 “Israeli Medical Association” which states “Our AMA will oppose any efforts to expel the Israeli Medical Association from the World Medical Association” (Rescind HOD Policy); and be it further

RESOLVED, that our AMA's position on business in the World Medical Association (WMA) related to applications for constituent membership, or discipline or termination for current constituent members shall be based on the prevailing evidence at the time. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/21/26/26

RELEVANT AMA POLICY

Israeli Medical Association D-250.990
Our AMA will oppose any efforts to expel the Israeli Medical Association from the World Medical Association. [Res. 613, A-07; Reaffirmed: CEJA Rep. 04, A-17]

Medical Neutrality H-520.998
Our American Medical Association supports medical neutrality, under the principles of the Geneva Convention, for all health care workers and the sick and wounded in all countries. [Sub. Res. 72, I-81; Reaffirmed: CLRPD Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CEJA Rep. 8, A-11; Reaffirmed in lieu of Res. 601, I-13; Reaffirmed: CEJA Rep. 05, A-23]

Human Rights and Health Professionals H-65.981
1. Our AMA opposes torture in any country for any reason; urges appropriate support for victims of torture; condemns the persecution of physicians and other health care personnel who treat torture victims. 2. Our AMA reiterates its endorsement of the World Medical Association Declaration of Tokyo: Guidelines for Physicians Concerning Torture and other Cruel, Inhuman or Degrading Treatment or Punishment in Relation to Detention and Imprisonment, which opposes participation by physicians in torture or other forms of cruel, inhuman or degrading procedures on detainees or prisoners. (https://World Medical Association Declaration of Tokyo) 3. Our AMA expresses its sympathy to those physicians who have been subject to imprisonment or torture because of their humanitarian efforts to improve the health of their patients. [Sub. Res. 615, A-97; Reaffirmed: Sub. Res. 12, A-04; Reaffirmed: Sub. Res. 10, A-05; Reaffirmed: CEJA Rep. 5, A-15; Consolidated with H-65.991: CCB/CLRPD Rep. 01, A-25]

Medical Care in Countries in Turmoil H-65.994
1. Our American Medical Association supports the provision of food, medicine and medical equipment to noncombatants threatened by natural disaster, military conflict or sanctions within their country through appropriate relief organizations. 2. Our AMA expresses its concern about the disappearance of physicians, medical students and other health care professionals, with resulting inadequate care to the sick and injured of countries in turmoil. 3. Our AMA urges appropriate organizations to transmit these concerns to the affected country's government. 4. Our AMA asks appropriate international health organizations to monitor the status of medical care, medical education and treatment of medical personnel in these countries, to inform the world health community of their findings, and to encourage efforts to ameliorate these problems. [Sub. Res. 133, A-83; Reaffirmed: CLRPD Rep. 1, I-93; Reaffirmed: CLRPD Rep. 1, A-05; Reaffirmed: CEJA Rep. 5, A-15; Modified: Res. 002, I-22]

Support of Human Rights and Freedom H-65.965
1. Our American Medical Association continues to support the dignity of the individual, human rights and the sanctity of human life, 2. Our AMA reaffirms its long-standing policy that there is no basis for the denial to any human being of equal rights, privileges and responsibilities commensurate with individual capabilities and ethical character because of an individual’s sex, sexual orientation, gender, gender identity or transgender status, race, religion, disability, ethnic origin, national origin or age. 3. Our AMA opposes any discrimination based on an individual’s sex, sexual orientation, gender identity, race, appearance, religion, disability, ethnic origin, national origin or age and any other such reprehensible policies. 4. Our AMA recognizes that hate crimes pose a significant threat to the public health and social welfare of the citizens of the United States, urges expedient passage for appropriate hate crimes prevention legislation in accordance with our AMA’s policy through letters to members of Congress; and registers support for hate crimes prevention legislation, via letter, to the President of the United States. [CCB/CLRPD Rep. 3, A-14; Reaffirmed in lieu of: Res. 001, I-16; Reaffirmation: A-17; Modified: Res. 013, A-22; Reaffirmed: BOT Rep. 5, I-22; Modified: Speaker Rep. 02, I-24]

Abuse of Medicine for Political Purposes H-65.993
The AMA opposes the use of the practice of medicine to suppress political dissent wherever it may occur. [Res. 127, A-83; Reaffirmed: CLRPD Rep. 1, I-93; Reaffirmed: CEJA Rep. 2, A-05; Reaffirmed: CEJA Rep. 5, A-15; Reaffirmed: CEJA Rep. 11, A-25]

Universal Access for Essential Public Health Services D-440.924
1. Our American Medical Association supports equitable access to the 10 Essential Public Health Services and the Foundational Public Health Services to protect and promote the health of all people in all communities. 2. Our AMA encourages state, local, tribal, and territorial public health departments to pursue accreditation through the Public Health Accreditation Board (PHAB). 3. Our AMA will work with appropriate stakeholders to develop a comprehensive list of minimum necessary programs and services to protect the public health of citizens in all state and local jurisdictions and ensure adequate provisions of public health, including, but not limited to clean water, functional sewage systems, access to vaccines, and other public health standards. 4. Our AMA will work with the National Association of City and County Health Officials (NACCHO), the Association of State and Territorial Health Officials (ASTHO), the Big Cities Health Coalition, the Centers for Disease Control and Prevention (CDC), and other related entities that are working to assess and assure appropriate funding levels, service capacity, and adequate infrastructure of the nation’s public health system, including for rural jurisdictions. [Res. 419, A-19;

Modified: CSAPH Rep. 2, A-22]

Protecting Physicians and Other Healthcare Workers in Society H-515.950
1. Our American Medical Association acknowledges and will act to reduce the incidence of antagonistic actions against physicians as well as other health care workers including first responders and public health officials, outside as well as within the workplace, including physical violence, intimidating actions of word or deed, and cyber-attacks, particularly those which appear motivated simply by their identification as health care workers. 2. Our AMA will educate the general public on the prevalence of violence and personal harassment against physicians as well as other health care workers including first responders, and public health officials, outside as well as within the workplace. 3. Our AMA will work with all interested stakeholders to improve safety of health care workers including first responders and public health officials and prevent violence to health care professionals. [Res. 413, I-20; Reaffirmed: CSAPH Rep. 7, I-23]

Health, In All Its Dimensions, Is a Basic Right H-65.960
1. Our American Medical Association acknowledges that enjoyment of the highest attainable standard of health, in all its dimensions, including health care is a basic human right. 2. Our AMA acknowledges that the provision of health care services as well as optimizing the social determinants of health is an ethical obligation of a civil society. [Res. 021, A-19; Reaffirmed: Res. 234, A-22]

Discriminatory Policies that Create Inequities in Health Care H-65.963
Our AMA will: (1) speak against policies that are discriminatory and create even greater health disparities in medicine; and (2) be a voice for our most vulnerable populations, including sexual, gender, racial and ethnic minorities, who will suffer the most under such policies, further widening the gaps that exist in health and wellness in our nation. [Res. 001, A-18]

Nondiscrimination in Responding to Terrorism H-65.978
1. Our American Medical Association affirms its commitment to work with appropriate agencies and associations in responding to terrorist attacks. 2. Our AMA opposes discrimination or acts of violence against any person on the basis of religion, culture, nationality, or country of education or origin in the nation's response to terrorism. [Res. 1, I-01; Modified: CSAPH Rep. 1, A-11; Reaffirmed: CEJA Rep. 1, A-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 618
(A-26)

Introduced by: Resident and Fellow Section

Subject: Ending AMA Investment in Weapons Manufacturers

Referred to: Reference Committee F

Whereas, global military spending reached $2.7 trillion in 2024, and is estimated to reach $6.6 trillion by 2035[1,2]; and

Whereas, more than half of the US military budget is spent on military contractors including weapons manufacturers, at a time when investments in health care, education, and research are declining[3]; and

Whereas, from 2020 to 2024, $771 billion in US military spending went to just five publicly-traded weapons manufacturers[3,4]; and

Whereas, attacks on health care facilities and personnel are rising to unprecedented levels, with over 2,500 incidents in 2023 and over 3,600 incidents in 2024[5]; and

Whereas, the arms industry has been labeled as a “commercial determinant of health”, with calls for divestment from the arms industry for health[6,7]; and

Whereas, financial ties to weapons manufacturers are fundamentally incompatible with the mission of physicians as healers who do no harm, and of the AMA’s mission to promote the betterment of public health; and

Whereas, the World Medical Association “believes that the development, manufacture and sale of weapons for use against human beings are abhorrent”[8]; and

Whereas, our AMA has previously labeled gun violence as a public health crisis (D-145.995); and

Whereas, our AMA has previously divested from tobacco manufacturers and the fossil fuel industry (H-135.921; H-500.975); therefore be it

RESOLVED, that our American Medical Association divest from all companies that derive a majority of their revenue from the manufacturing of weapons, cluster munitions, chemical, biological, or nuclear weapons, or key component of these weapons (Directive to Take Action); and be it further

RESOLVED, that our AMA report back to the House of Delegates at A-27 on what progress has been made towards divestment. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/21/266

RELEVANT AMA POLICY

AMA to Protect Human Health from the Effects of Climate Change by Ending its Investments in Fossil Fuel Companies H-135.921

1. Our American Medical Association will:
    a. choose for its commercial relationships, when fiscally responsible, vendors, suppliers, and corporations that have demonstrated environmental sustainability practices that seek to minimize their fossil fuels consumption.
    b. support efforts of physicians and other health professional associations to proceed with divestment, including to create policy analyses, support continuing medical education, and to inform our patients, the public, legislators, and government policy makers.
2. Our AMA:
    a. declares that climate change is an urgent public health emergency, and calls upon all governments, organizations, and individuals to work to avert catastrophe.
    b. urges all health and life insurance companies, including those that provide insurance for medical, dental, and long-term care, to work in a timely, incremental, and fiscally responsible manner to end all financial investments or relationships (divestment) with companies that generate the majority of their income from the exploration for, production of, transportation of, or sale of fossil fuels.
    c. will send letters to the nineteen largest health or life insurance companies in the United States to inform them of AMA policies concerned with climate change and with fossil fuel divestments, and urging these companies to divest. [BOT Rep. 34, A-18; Appended: Res. 607, A-22; Reaffirmed: CSAPH Rep. 2, I-22]

AMA Corporate Policies on Tobacco H-500.975

1. Our American Medical Association:
    a. continues to urge the federal government to reduce and control the use of tobacco and tobacco products;
    b. supports developing an appropriate body for coordinating and centralizing the Association's efforts toward a tobacco-free society; and
    c. will defend vigorously all attacks by the tobacco industry on the scientific integrity of AMA publications.
2. Our AMA will continue to use appropriate lobbying resources to support programs of anti-tobacco health promotion and advertising.
3. Our AMA's House of Delegates endorses the April 24, 1996, statement by the AMA Secretary-Treasurer that all physicians, health professionals, medical schools, hospitals, public health advocates, and citizens interested in the health and welfare of our children should review their personal and institutional investments and divest of any tobacco holdings (including mutual funds that include tobacco holdings); and specifically calls on all life and health insurance companies and HMOs to divest of any tobacco holdings.

4. Our AMA defines the Tobacco Industry as companies or corporate divisions that directly produce or purchase tobacco for production or market tobacco products, along with their research and lobbying groups, including the Council for Tobacco Research and the Smokeless Tobacco Research Council. A company or corporate division that does not produce or market tobacco products but that has a tobacco producing company as or among its owners will not be considered a prohibited part of the tobacco industry as long as it does not promote or contribute to the promotion, sale and/or use of tobacco products. If such promotional practices begin, the company will be placed on an "unacceptable for support" list.
5. Accordingly, it is the policy of our AMA:
    a. not to invest in tobacco stocks or accept financial support from the tobacco industry;
    b. to urge medical schools and their parent universities to eliminate their investments in corporations that produce or promote the use of tobacco and discourage them from accepting research funding from the tobacco industry;
    c. to likewise urge all scientific publications to decline such funded research for publication; and
    d. to encourage state and county medical societies and members to divest of any and all tobacco stocks.
6. Our AMA:
    a. encourages state and local medical societies to determine whether candidates for federal, state and local offices accept gifts or contributions of any kind from the tobacco industry, and publicize their findings to both their members and the public; and
    b. urges state and county medical societies and local health professionals along with their allies to support efforts to strengthen state and local laws that require public disclosure of direct and indirect expenditures to influence legislation or ordinances, given recent allegations about tobacco industry strategies.

[CSA Rep. 3, A-04; Reaffirmed: CSAPH Rep. 1, A-14; Reaffirmed: CSAPH Rep. 01, A-24]

Further Action to Respond to the Gun Violence Public D-145.992

1. Our American Medical Association will make readily accessible on the AMA website the comprehensive summary of AMA policies, plans, current activities, and progress regarding the public health crisis of firearm violence.
2. Our AMA will establish a task force to focus on gun violence prevention including gun-involved suicide.
3. Our AMA will support and consider providing grants to evidence-based firearm violence interruption programs in communities, schools, hospitals, and clinics.
4. Our AMA will collaborate with interested state and specialty societies to increase engagement in litigation related to firearm safety.
5. Our AMA will report annually to the House of Delegates on our AMA’s efforts relating to legislation, regulation, and litigation at the federal, state, and local levels to prevent gun violence.

[BOT Rep. 2, I-22 Reaffirmation: Res. 431, A-24]

Gun Violence as a Public Health Crisis D-145.995

1. Our American Medical Association will immediately make a public statement that gun violence represents a public health crisis which requires a comprehensive public health response and solution.
2. Our AMA will actively lobby Congress to lift the gun violence research ban.

[Res. 1011, A-16; Reaffirmation: A-18; Reaffirmation: I-18; Reaffirmed: Res. 921, I-22; Reaffirmed: CSAPH Rep. 11, A-24; Reaffirmation: Res. 431, A-24]

Firearms as a Public Health Problem in the United States - Injuries and Death H-145.997

1. Our American Medical Association recognizes that uncontrolled ownership and use of firearms, especially handguns, is a serious threat to the public's health inasmuch as the weapons are one of the main causes of intentional and unintentional injuries and deaths. Therefore our AMA:
    a. encourages and endorses the development and presentation of safety education programs that will engender more responsible use and storage of firearms;
    b. urges that government agencies, the CDC in particular, enlarge their efforts in the study of firearm-related injuries and in the development of ways and means of reducing such injuries and deaths;
    c. urges Congress to enact needed legislation to regulate more effectively the importation and interstate traffic of all handguns;

   d. urges the Congress to support recent legislative efforts to ban the manufacture and importation of nonmetallic, not readily detectable weapons, which also resemble toy guns; encourages the improvement or modification of firearms so as to make them as safe as humanly possible;
   e. encourages nongovernmental organizations to develop and test new, less hazardous designs for firearms;
   f. urges that a significant portion of any funds recovered from firearms manufacturers and dealers through legal proceedings be used for gun safety education and gun-violence prevention; and
   g. strongly urges US legislators to fund further research into the epidemiology of risks related to gun violence on a national level.
2. Our AMA will advocate for firearm safety features, including but not limited to mechanical or smart technology, to reduce accidental discharge of a firearm or misappropriation of the weapon by a non-registered user; and support legislation and regulation to standardize the use of these firearm safety features on weapons sold for non-military and non-peace officer use within the U.S.; with the aim of establishing manufacturer liability for the absence of safety features on newly manufactured firearms.
3. Our AMA will support research examining the major sources of illegally possessed firearms, as well as possible methods of decreasing their proliferation in the United States.
4. Our AMA will work with key stakeholders including, but not limited to, firearm manufacturers, firearm advocacy groups, law enforcement agencies, public health agencies, firearm injury victims advocacy groups, healthcare providers, and state and federal government agencies to develop evidence-informed public health recommendations to mitigate the effects of violence committed with firearms.
5. Our AMA will collaborate with key stakeholders and advocate for national public forums including, but not limited to, online venues, national radio, and televised/streamed in-person town halls, that bring together key stakeholders and members of the general public to focus on finding common ground, non-partisan measures to mitigate the effects of firearms in our firearm injury public health crisis.

Ban on Handguns and Automatic Repeating Weapons H-145.985

It is the policy of our American Medical Association to:

1. Support interventions pertaining to firearm control, especially those that occur early in the life of the weapon (e.g., at the time of manufacture or importation, as opposed to those involving possession or use). Such interventions should include but not be limited to:
   a. Mandatory inclusion of safety devices on all firearms, whether manufactured or imported into the United States, including built-in locks, loading indicators, safety locks on triggers, and increases in the minimum pressure required to pull triggers.
   b. Bans on the possession and use of firearms and ammunition by unsupervised youths under the age of 21.
   c. Bans of sales of firearms and ammunition from licensed and unlicensed dealers to those under the age of 21 (excluding certain categories of individuals, such as military and law enforcement personnel).
   d. The imposition of significant licensing fees for firearms dealers.
   e. The imposition of federal and state surtaxes on manufacturers, dealers and purchasers of handguns and semiautomatic repeating weapons along with the ammunition used in such firearms, with the attending revenue earmarked as additional revenue for health and law enforcement activities that are directly related to the prevention and control of violence in U.S. society.
   f. Mandatory destruction of any weapons obtained in local buy-back programs.
2. Support legislation outlawing the Black Talon and other similarly constructed bullets.
3. Our AMA support the right of local jurisdictions to enact firearm regulations that are stricter than those that exist in state statutes and encourage state and local medical societies to evaluate and support local efforts to enact useful controls.
4. Our AMA opposes “concealed carry reciprocity” federal legislation that would require all states to recognize concealed carry firearm permits granted by other states and that would allow citizens with

concealed gun carry permits in one state to carry guns across state lines into states that have stricter laws.

5. Our AMA supports the concept of gun buyback programs as well as research to determine the effectiveness of the programs in reducing firearm injuries and deaths.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 20-A-26

Subject:	Mitigating the Impact of Excessive Prior Authorization Processes; (Resolution 704-A-25, Resolve 2)
Presented by:	David H. Aizuss, MD, Chair
Referred to:	Reference Committee G

At the 2025 Annual Meeting, Resolution 704-A-25 was introduced by the Florida delegation. The House of Delegates adopted two of the resolve statements of the resolution resulting in Policy D-320.971, "Mitigating the Impact of Excessive Prior Authorization Processes", which states:

1. Our AMA will actively and urgently generate a prior authorization database collecting and analyzing data including metrics reflecting denial rates, care delays, impact on patient care, and associated cost adversely affecting patients and physicians across major health care insurers.
2. Our AMA will strengthen and expand the existing public awareness campaign including but not limited to social media, print media, and editorials to highlight the negative impacts **of** abusive and obstructive prior-authorization requirements on patient care, and educate physicians AND patients on their rights and available resources.

An additional resolve statement was referred and is the subject of this report. The referred resolve reads as follows:

RESOLVED, That our American Medical Association working with legal experts, determine whether and to what extent it may be appropriate to initiate and/or support a class action lawsuit against insurance companies based on the identified prior authorization data, and if so appropriate, collaborate with patient advocacy groups to support potential lawsuits.

BACKGROUND

Prior authorization is a process used by health insurers requiring physicians to receive approval from plans before certain prescribed medications, procedures, or treatments can be provided to patients. While intended to control costs and ensure medical necessity, prior authorization has become a significant administrative burden for physicians. Per the American Medical Association ("AMA") Prior Authorization Survey conducted in 2024[i], ninety-three percent of physicians report that prior authorization leads to delays in patient care, and eighty-two percent say it results in patients abandoning treatment due to these barriers.[ii] Most alarmingly, more than one-quarter of physicians report that such delays have resulted in serious adverse events for

© 2026 American Medical Association. All rights reserved.

patients—including hospitalization or death.[iii] In addition, the average weekly prior authorization workload for a single physician consumes 13 hours of physician and staff time, with 89 percent of physicians saying that prior authorization increases burnout. These findings underscore the urgent need for reform to reduce administrative friction and protect patient access to timely care.

Relevant Current AMA Policy

AMA Policy H-320.939, "Prior Authorization and Utilization Management Reform," supports the overall effort to mitigate the impact of prior authorization on patient care.

AMA Policy H-320.950, "Eliminating Precertification," advocates for utilization review efforts and preauthorization request to focus on statistical outliers and physicians whose claims have shown to be statistical outliers, respectively, rather than the physician population at large.

AMA Policy D-320.974, "Insurer Accountability When Prior Authorization Harms Patients," calls for increased legal accountability of insurers via (i) private right of action for patients to sue insurers that supersedes any other contractual provision, and (ii) the prohibition of mandatory pre-dispute arbitration clauses.

DISCUSSION

The referred Resolve clause, which is the subject of this report, calls for a possible class action lawsuit against insurance companies "based on the identified prior authorization data" collected pursuant to the now adopted policy. The AMA has not yet created the prior authorization database mandated under the new policy, as funding for this project was not available until January 2026. The Advocacy Group is issuing a request for proposal (RFP) for a feasibility study to assess the logistics, costs (both initial and long term), and overall return on investment in creating such a database. The vendor selected from the RFP process would prepare a robust report to inform the AMA's future decisions on the direction of this project. Given the current status of the database, the condition precedent to implementation of the class action under the Second Resolve has not transpired, and so the AMA lacks the necessary data to evaluate the suggested lawsuit.

While the lack of the prior authorization database is a barrier to assessing potential lawsuits, disregarding that obstacle the proposed class action would be a steep uphill climb. The AMA has long been and remains a staunch advocate for physicians and that includes, where appropriate, taking necessary legal action or submitting an *amicus curiae* ("a friend of the court") non-party brief in on-going legal matters. These briefs help inform courts and judges of points of information in lawsuits involving the healthcare industry and the wider, real-world impact of legal decisions. The AMA has, for years, searched for meritorious class action lawsuits against managed care companies; however, to bring such a case remains challenging – the reasons include:

© 2026 American Medical Association. All rights reserved.

Class Actions are Difficult to Bring

Class actions are inherently difficult to bring successfully. Rule 23 of the Federal Rule of Civil Procedure imposes multiple, demanding procedural and substantive requirements that plaintiffs must satisfy at an early stage of litigation. Proposed class representatives must establish all four prerequisites of Rule 23(a) – numerosity, commonality, typicality, and adequacy – each of which is technically complicated, closely scrutinized by courts,[iv] and often contested by defendants. These prerequisites are defined as follows:

- Numerosity: the class is so numerous that joinder of all members is impracticable.[v]
- Commonality: there are questions of law or fact common to the case.[vi]
- Typicality: the claims or defenses of the representative parties are typical of the claims or defenses of the class.[vii]
- Adequacy: the representative parties will fairly and adequately protect the interest of the class.[viii]
- Prior authorization disputes can be heavily individualized due to varied patient conditions, differing practices based on specialty, and varied insurance contracts, all of which undermine the "commonality" and "typicality" requirements for class certification.[ix]

Restrictions on Prior Authorization are Intended to Protect Patients

Restrictions on insurance companies' use of prior authorization are generally focused on protecting patients – not physicians. While physicians may incur harm because of prior authorization abuse, such harm could be considered only incidental to the harm caused to patients. Most of the prior authorization legislation enacted to date is intended to protect patients' access to care – addressing items such as response times, retrospective denial, clinical criteria, medical necessity, qualifications of reviewers, peer-to-peer review/appeals processes, and physician "gold carding" (a process where physicians with a proven track record of prior authorization approvals – often over 90 percent – are exempted from prior authorizations, and one of the few remedies that has a *direct* impact on physicians). [x] [xi] Similarly, the Centers for Medicare & Medicaid Services cited the barrier for care and disproportionate impact prior authorization may have on certain patient demographics for adopting rules requiring faster determinations and greater transparency in Medicare Advantage and Medicaid programs.[xii]

Most law and policy remedies are directed at enforcement by public officials—not at empowering physicians or their organizations to bring class actions. Physicians do not generally have a private right of action to bring a lawsuit under laws on prior authorization.[xiii] [xiv]

Other Considerations

Proving prior authorization abuse to sustain a class action suit would be difficult. An isolated case of abuse would be insufficient – a class action suit would need to rely on systematic abuse. Indirect and anecdotal evidence would be only a start. Prior authorization decisions are likely to vary, based on insurers, physicians, patients, and treatment settings. These variations can make it difficult to substantiate uniform, class-wide harm.

© 2026 American Medical Association. All rights reserved.

Further, physician network contracts almost always include provisions that (a) require pre-dispute arbitrations and (b) prohibit consolidation of claims, of which a class action would be an extreme example. Courts have routinely upheld network contract arbitration clauses in disputes between healthcare providers and payors.[xv]

CONCLUSION

This report does not conclusively determine that the contemplated class action would be impossible – only that it would be difficult. The AMA has searched for meritorious class actions against managed care organizations, and that effort continues.

RECOMMENDATIONS

The Board of Trustees recommends the following and the remainder of the report be filed:

1. That the referred resolve clause of Resolution 704-A-25 not be adopted.
2. That our AMA continue to actively monitor prior authorization legislation and litigation on a state and federal level and, where appropriate, take action to advance legislation and support litigation, respectively, that have a direct impact on reducing the burdens of prior authorization for physicians.
3. That existing AMA policies H-320.939, "Prior Authorization and Utilization Management Reform", D-320.974, "Insurer Accountability When Prior Authorization Harms Patients", and H-320.950, "Eliminating Precertification" be reaffirmed.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 22-A-26

Subject: Comprehensive AMA Policy Publication Regarding Employed Physicians

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee TBD

At the 2025 American Medical Association (AMA) Annual Meeting, the House of Delegates (HOD) adopted Policy D-225.971 "Comprehensive AMA Policy Publication Regarding Employed Physicians," which directs the AMA to "comprehensively review the current landscape of the employment of physicians for report back to the House of Delegates at Annual 2026, including but not limited to:

1. The changing context and expectations of different practice models;
2. Factors which have led to physicians increasingly choosing an employment practice model over independent practice;
3. The employed physician relationship with healthcare organizations, including those controlled by private equity; and
4. The evolution of collective bargaining by, and unionization of, physicians."

The policy separately directs the AMA to create a policy publication addressing various matters of relevance to employed physicians, such as employment contracting, compensation models, and maintaining professionalism and the primacy of the physician-patient relationship in an employment relationship. While that policy publication is not the subject of this informational report, this report additionally highlights various AMA resources that are responsive to the needs of employed physicians.

BACKGROUND

Practice model options

From an ownership and employment perspective, physicians have a range of practice models to choose from, each offering different levels of autonomy, financial opportunity, and administrative responsibility. At the most generalized level, these models include:

- Solo practice: Physicians have complete control and autonomy over their practice but bear all administrative duties and financial risk.

- Group practice partnership: Multiple physicians share ownership, distributing risks and workloads and providing a balance between independence and collaboration.

- Third-party-owned practice (including hospital, health system, private equity, or other corporate ownership): Physicians are employed, with reduced administrative burden but also often less autonomy.

© 2026 American Medical Association. All rights reserved.

While the term "physician employment" most commonly refers to working for an entity owned by a third party, physicians may also be employed by group practices (sometimes on a partnership track), governmental agencies, or non-profit organizations.

Trends in practice ownership and physician employment

The AMA's Physician Practice Benchmark Survey, conducted on a biennial basis since 2012, provides insight into trends in practice ownership and physician employment and factors driving these trends. Since the early 1980s, the share of physicians with an ownership share in their practice decreased from approximately 76 percent to 53.2 percent in 2012 to just 35.4 percent in 2024. Similarly, the share of physicians who worked in a practice that was owned by a hospital, hospital system, or health system, or were directly employed by or contracted with a hospital, increased from 29 percent in 2012 to 47 percent in 2024. An additional 6.5 percent of physicians reported practicing in settings owned by private equity groups in 2024, an increase from approximately 4.5 percent in both 2020 and 2022.[1]

AMA research highlights three key factors driving physicians to sell their independent practices or seek employment relationships:[2]

- Financial pressures: Large organizations are able to negotiate higher payment rates with insurers compared to smaller, independent practices. Lower reimbursements make it more difficult for private practices to remain sustainable, while employment offers greater financial stability.

- Access to resources: Hospitals and health systems can afford to invest in expensive medical equipment and advanced technology, often giving employed physicians better access to these resources than those in small independent practices.

- Administrative burden: The growing complexity of healthcare regulations and administrative requirements makes independent practice increasingly challenging. Employed settings provide administrative and regulatory support, alleviating some of this burden for physicians.

Members are encouraged to review the AMA's most recent Physician Practice Benchmark Survey for a comprehensive discussion of these and other practice trends.

Trends in physician unionization

While the number of physicians who are members of unions is small compared to the size of the profession, that share is growing. The AMA has estimated that between 2014 and 2019 the share of physicians who were union members increased from 5.7 percent to 7.2 percent.[3] This trend appears to be accelerating, as highlighted by a *JAMA* study analyzing trends in the number of petitions filed with the National Labor Relations Board to form unions with physician members; there were 44 such petitions filed between 2000 and 2022 – and an additional 33 filed in 2023-2024 alone.[4] The same study found that physicians are motivated to organize unions primarily due to "concerns about working conditions, physicians' autonomy, and voice in management, and the quality of patient care."[5]

Members are encouraged to review the AMA issue brief, Collective bargaining for physicians and physicians-in-training, for a comprehensive discussion of the topic. Members may also wish to review CLRPD Report 2-A-24, Scenarios on Collective Action and Physician Unions, which examined trends and factors in collective bargaining and physician unionization and implications for the AMA. Finally, see AMA ethical opinion 1.2.10, Political Action by Physicians, which addresses the ethical implications of unionization and collective bargaining.

DISCUSSION

Challenges of physician employment

Employment and practice ownership status do not change a physician's professional or ethical obligations. However, shifts in practice ownership, especially employment by third-party entities in which a physician has no ownership interest, introduce unique challenges and create complicated relationships between physicians and their employers. Notable challenges that may arise with physician employment include:

- Decreased clinical autonomy: Physicians may have less control over clinical decisions and daily operations due to complex leadership structures in larger organizations.

- Reduced influence in decision-making: Employment in larger organizations can limit opportunities for physicians to participate in high-level decisions affecting clinical practice or workplace operations.

- Alignment with organizational goals: Physicians must adapt to employer-set policies and values, which may differ from their own practice philosophies.

- Performance metrics and targets: Physicians may feel pressured to meet benchmarks set by employers, which can at times be perceived as emphasizing productivity or administrative tasks over individualized patient care.

- New administrative demands: Employment structures may simply replace the administrative demands of independent practice with a new set of administrative demands, adding to workload and impacting job satisfaction.

- Potential for burnout: These challenges can affect physician professional satisfaction and lead to burnout.[6]

Addressing the challenges of physician employment

While employment relationships often provide financial stability, access to resources, and operational advantages, they may also introduce challenges that affect satisfaction and well-being. These challenges can be reduced significantly in organizations that prioritize physician well-being. Therefore, when evaluating potential employers, physicians should look beyond compensation to consider an organization's commitment to physician well-being. Two key indicators of such commitment include:

- Has the organization conducted an AMA Organizational Biopsy®, or other biopsy assessment, to measure and take action to improve the health of the organization in areas

critical to physician well-being, such as organizational culture, practice efficiency, self-care, and retention?

- Has the organization applied for or received recognition through the AMA Joy in Medicine™ Health System Recognition Program for its efforts to combat burnout and promote a culture of wellness at the organizational level?

Weighing these factors carefully will help ensure physicians select a workplace that respects their professionalism while supporting their well-being, job satisfaction, and lasting career fulfillment. Members are encouraged to review the AMA STEPS Forward® module, What to Look for in Your First or Next Practice, to learn more.

Other AMA resources for employed physicians

The AMA offers a suite of practical tools and support to help employed physicians and health care organizations navigate challenges associated with physician employment:

- The AMA Annotated Model Physician-Group Practice Employment Agreement and the AMA Physicians' Guide to Hospital Employment Contracts provide comprehensive guidance for understanding, evaluating, and negotiating key terms and implications of physician employment contracts. Additionally, the AMA has published a six-part podcast series exploring contract negotiation.

- As a benefit of membership, AMA members receive a 20 percent discount on contract review packages and salary data from Resolve, an industry leader in physician employment contract review.

- The AMA Principles for Physician Employment, codified as AMA policy H-225.950, provide guidance to help physicians and their employers navigate unique challenges to professionalism and patient care arising from employment relationships, addressing issues such as conflicts of interest, advocacy for patients and the profession, contracting, medical staff relations, peer review, and payment agreements.

- The AMA Physician's Guide to Medical Staff Organization Bylaws is designed to assist medical staffs with drafting or amending medical staff bylaws and understanding how emerging issues in health care impact medical staff. Notably, the Guide addresses issues specific to employed physicians within the context of the medical staff, such as hearing rights for employed physicians.

- AMA STEPS Forward® is a collection of resources covering everything from time-saving strategies and preventing physician burnout to improving practice workflows, building a supportive organizational culture, and implementing digital health solutions that reduce technology-associated administrative burdens.

- The AMA Joy in Medicine® Health System Recognition Program is a prestigious AMA-granted distinction in recognition of an organization's demonstrated efforts to enhance physician well-being by resolving the root causes of work-related burnout.

- The AMA Organizational Biopsy® is an assessment tool and set of services developed by the AMA to assesses burnout levels within health care organizations to provide metrics that

can guide solutions and interventions that mitigate system-level burnout rates and improve physician well-being.

- The AMA issue brief, Collective bargaining for physicians and physicians-in-training, provides an overview of trends in physician unionization, examines the factors driving physicians to join unions, and discusses the implications of union membership for physicians and the broader healthcare system.

- The AMA Organized Medical Staff Section (OMSS) has convened an employed physician caucus to amplify the voice and issues of employed physicians in AMA policy development. Members may contact the OMSS (omss@ama-assn.org) to learn more.

The AMA is currently evaluating the most effective ways to organize its diverse and comprehensive resources for use by employed physicians and those considering employment opportunities. This curated collection ultimately will serve as the policy publication designated by Policy D-225.971, offering practical, real-time guidance for physicians as they navigate employment relationships and decisions.

CONCLUSION

The landscape of physician employment and practice ownership continues to change, with physicians increasingly employed by hospitals, health systems, and corporate-owned practices. As traditional practice ownership declines and trends toward employment and unionization increase, physicians are encountering new challenges related to clinical autonomy, professional identity, and workplace dynamics. The AMA remains committed to supporting employed physicians by providing educational resources, advocacy, and practical tools to successfully navigate these evolving environments.

RECOMMENDATION

The Board of Trustees recommends that the first directive of Policy D-225.971, Comprehensive AMA Policy Publication Regarding Employed Physicians, be rescinded as having been accomplished by this report and that the remainder of the report be filed.

RELEVANT AMA POLICY

D-225.971 Comprehensive AMA Policy Publication Regarding Employed Physicians

1. Our AMA will comprehensively review the current landscape of the employment of physicians for report back to the House of Delegates at Annual 2026, including but not limited to:
    a. The changing context and expectations of different practice models;
    b. Factors which have led to physicians increasingly choosing an employment practice model over independent practice;
    c. The employed physician relationship with healthcare organizations, including those controlled by private equity; and
    d. The evolution of collective bargaining by, and unionization of, physicians.
2. Our AMA will create a comprehensive policy publication, which will be an essential tool for employed physicians with guiding principles, rights, and responsibilities regarding, but not limited to, the following:
    a. Employment contracting;
    b. Different compensation models;
    c. Professional accountability to, and as a member of, the medical staff; and
    d. Primacy of the doctor-patient relationship within the context of employment.
3. Our AMA will have a comprehensive policy publication regarding employed physicians available to all physicians, in any employment model, and to all healthcare collaborators with the AMA who directly employ and/or have contracting arrangements with physicians.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 1-A-26

Subject: Council on Medical Service Sunset Review of 2016 House Policies

Presented by: Betty Chu, MD, MBA, Chair

Referred to: Reference Committee G

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association policies to ensure that our AMA's policy database is current, coherent, and relevant. Policy G-600.010 reads as follows, laying out the parameters for review and specifying the procedures to follow:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification; and (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Medical Service recommends that the House of Delegates policies that are listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

APPENDIX – Recommended Actions

APPENDIX – Recommended Actions

POLICY #	Title	Text	Recommendation
D-120.949	Ensuring the Safe and Appropriate Use of Compounded Medications	Our AMA will: (1) monitor ongoing federal and state evaluations and investigations of the practices of compounding pharmacies; (2) encourage the development of regulations that ensure safe compounding practices that meet patient and physician needs; and (3) report back on efforts to establish the necessary and appropriate regulatory oversight of compounding pharmacy practices.	Retain. Policy is relevant.
D-155.995	Containing Catastrophic Care Costs	Our AMA will: (1) in order to ensure that quality of care is not compromised, encourage physicians and the medical profession to become more engaged in the development and implementation of cost-containment policies and strategies, particularly those directed toward high-cost patients; (2) support additional research into the characteristics of the five percent of the patient population with the highest health care costs; (3) support greater evaluation of the use of disease management, case management, pay-for-performance, and end-of-life care programs for high-cost patients, so that their cost-containment impact and projected future savings can be better assessed; and (4) continue to inform the medical profession and the general public regarding issues impacting catastrophic care costs and the complexities therein.	Retain. Policy is relevant.
D-160.924	Hospital Discharge Communications	Our AMA will develop model guidelines for physicians to improve communications to other physicians, hospital staff and patients, and promote these guidelines to payers, hospitals and patients.	Retain. Policy is relevant.
D-160.926	A Guide to Selecting a Physician-Led Integrated System	Our AMA, in collaboration with the Integrated Physician Practice Section and appropriate partners within the House of Medicine, will accomplish the following by the 2017 Annual Meeting: 1. Develop a guide for physicians considering joining or aligning with a physician-led integrated system that addresses, but is not limited to the following: A. various models of integrated systems; B. metrics that help determine the extent to which an integrated system fulfills the definition of, and performs as, an integrated system; C. how to determine an organization's quality commitment/record; D. how to know if a particular system is the right fit;	Sunset. Directive was accomplished.

POLICY #	Title	Text	Recommendation
		E. what does a physician stand to gain/lose when joining such a system; and 2. The guide should also provide information to physicians in or considering solo and small practice on how they can align through Independent Practice Associations, Accountable Care Organizations, Physician Hospital Organizations, and other models to help them with the imminent movement to risk-based contracting and value-based care.	
D-160.928	Hierarchical Condition Category Coding	Our AMA will continue to work with the Centers for Medicare and Medicaid Services to refine risk adjustment in all alternative payment models and Medicare Advantage plans, particularly to revise risk-adjustment processes, to allow hierarchical condition category (HCC) codes to automatically follow the beneficiary from year-to-year to reflect chronic conditions that will never change.	Retain. Policy is relevant.
D-160.945	Communication Between Hospitals and Primary Care Referring Physicians	Our AMA: (1) advocates for continued Physician Consortium for Performance Improvement? (PCPI) participation in the American College of Physicians (ACP), the Society of General Internal Medicine (SGIM), and the Society of Hospital Medicine (SHM) work to develop principles and standards for care transitions that occur between the inpatient and outpatient settings; (2) advocates for timely and consistent inpatient and outpatient communications to occur among the hospital and hospital-based providers and physicians and the patient's primary care referring physician; including the physician of record, admitting physician, and physician-to-physician, to decrease gaps that may occur in the coordination of care process and improve quality and patient safety; (3) will continue its participation with the Health Information Technology Standards Panel (HITSP) and provide input on the standards harmonization and development process; (4) continues its efforts with The Joint Commission, the Centers for Medicare & Medicaid Services, and state survey and accreditation agencies to develop accreditation standards that improve patient safety and quality; and (5) will explore new mechanisms to facilitate and incentivize communication and tran smission of data for timely coordination of care (via telephone, fax, e-mail, or face-to-face communication) between the hospital-based physician and the primary physician.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
D-215.990	AMA Assistance for Members in Matters Pertaining to Physician-Hospital/Health System Relationships	1. As a benefit of membership our AMA will provide assistance, such as information and advice (but not legal opinions or representation), as appropriate to employed physicians, physicians in independent practice, and independent physician contractors in matters pertaining to their relationships with hospitals, health systems, and other similar entities, including, but not limited to, breach of contracts including medical staff bylaws, sham peer review, economic credentialing, and the denial of due process. 2. Our AMA encourages the Federation of Medicine and its members to provide assistance, such as information and advice (but not legal opinions or representation), as appropriate to employed physicians, physicians in independent practice, and independent physician contractors in matters pertaining to their relationships with hospitals, health systems, and other similar entities, including, but not limited to, breach of contracts including medical staff bylaws, sham peer review, economic credentialing, and the denial of due process.	Retain. Policy is relevant.
D-220.975	The Joint Commission Transparency	1. Our AMA Commissioners to The Joint Commission will be asked to advocate for a truly open and transparent comment process for all proposed changes to TJC standards. 2. It is AMA policy that: (a) all proposed changes to TJC standards resulting from field reviews be published along with clearly stated rationale(s) for each proposed change; (b) all proposed changes to TJC standards be published along with clearly stated identities of entity(ies) external to TJC that suggested the proposed changes to TJC; (c) all proposed changes to TJC standards that are modified by TJC as a result of comments received must provide clearly stated rationale(s) for each modified proposal, to include a clear and thorough analysis of the comment or comments upon which the modification(s) was based; and (d) all proposed changes to TJC standards that are adopted as final by TJC be published along with a clear and thorough analysis of all the field review.	Retain. Policy is relevant.
D-220.976	The Relationship Between The Joint Commission and Physicians	Our AMA will: (1) communicate to The Joint Commission (TJC) the concern regarding the unintended consequences of TJC's standards, and methods of communicating those standards to physicians; (2) advocate with TJC for direct communication to physicians' organizations about standards to be	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		adopted or modified, with at least six months available for open commentary and feedback; (3) advocate that this communication be timely and that it occur in print media as well as through e-mail; (4) advocate that TJC accreditation standards be made available to any licensed physician without hindrance; (5) advocate that TJC establish a process for any physician to provide feedback about TJC programs that affect that physician's practice; and (6) require that AMA TJC Commissioners meet with the Organized Medical Staff Section Governing Council to review TJC standards no less than twice per year.	
D-220.977	The Joint Commission - Evidence-Based Recommendations	Our AMA will: (1) work with The Joint Commission (TJC) to investigate the provision of a cost analysis for each new requirement; and (2) request that TJC provide an evidence-based evaluation to justify the expenditures for the recommendations it makes.	Retain. Policy is relevant.
D-225.975	De-Linkage of Medical Staff Privileges from Hospital Employment Contracts	Our AMA will develop resources to assist physicians transitioning from employment to independent practice.	Sunset. Directive was accomplished.
D-230.988	Fiduciary Credentialing	Our AMA will: (1) continue to encourage physicians who have experienced what they believe to be inappropriate hospital de-credentialing to contact their state medical association and the Litigation Center of the AMA and the State Medical Societies; and (2) explore the feasibility of participating in legal action designed to address arbitrary and abusive economic profiling of physicians.	Retain. Policy is relevant.
D-285.974	Possible Anti-Competitive and Ethical Implications of Integrated Hospital System Referral Expectations	Our AMA will continue to receive information on and monitor the issue of restrictions on referrals in all health care delivery settings.	Retain. Policy is relevant.
D-290.984	State Plan Amendments for Medicaid	Our AMA will: (1) promote mechanisms that provide the opportunity for public comment and legislative oversight prior to submission of the State Plan Amendments (SPAs) to the Centers for Medicare and Medicaid Services; and (2) serve as a repository of information relating to the outcomes of SPAs in different states, disseminate such information and educate	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		physicians about the impact of proposed changes to Medicaid via SPAs.	
D-315.983	Guiding Principles for the Collection, Use and Warehousing of Electronic Medical Records and Claims Data	Our AMA will continue to monitor the economic implications of the secondary sale and use of non-identifiable, aggregate data.	Retain. Policy is relevant.
D-330.909	Study the Costs of Administrative and Regulatory Burdens	Our AMA will perform or commission an analysis of the direct and indirect costs and documented benefits associated with significant administrative and regulatory requirements imposed by the Centers for Medicare & Medicaid Services~~, including but not limited to face-to-face documentation requirements, the Physician Quality Reporting System, and the Meaningful Use program~~.	Retain-in-part; amend by deletion as the policy is no longer limited to the Physician Quality Reporting System or the Meaningful Use program.
D-330.928	Strategies to Strengthen the Medicare Program	Our AMA: (1) will continue to study combining Parts A and B of the Medicare Trust Funds into a single program, and report back, clearly delineating the advantages and disadvantages of this action, including the effect on graduate medical education funding and of adding a means test to Medicare Part A; and (2) encourages the Centers for Medicare and Medicaid Services to explore the use of value-based, targeted benefit design to facilitate a more efficient and meaningful cost-sharing structure that will help align incentives for patients to seek appropriate and effective care.	Retain. Policy is relevant.
D-335.987	Erroneous Guidance by Medicare Carriers and Waiver of Audit and Refund Penalties	1. Our AMA will: (a) ask the Centers for Medicare and Medicaid Services to enforce the requirement that Medicare representatives who have given verbal guidance must immediately confirm that guidance in writing, requiring Medicare carriers to (i) closely monitor carrier representatives' compliance with the rule and (ii) penalize those representatives who do not comply; and (b) urge CMS to eliminate the rule that if a physician incurs a penalty having relied on erroneous guidance from a carrier representative, that penalty cannot be waived unless the physician's initial request was in	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		writing. 2. Whether or not CMS eliminates that rule, our AMA will ask CMS to require Medicare carriers to provide central e-mail and fax units, to which physicians can send all requests for coding and billing clarifications, and from which physicians can receive all carrier responses in "real time."	
D-345.986	Accurate Mental Status Reporting	Our American Medical Association encourages interested national medical specialty societies to develop recommendations regarding mental status information that should be transmitted when patients transition care settings.	Retain. Policy is relevant.
D-380.997	Private Contracting by Medicare Patients	1. It is the policy of the AMA: (a) that any patient, regardless of age or health care insurance coverage, has both the right to privately contract with a physician for wanted or needed health services and to personally pay for those services; (b) to pursue appropriate legislative and legal means to permanently preserve that patient's basic right to privately contract with physicians for wanted or needed health care services; (c) to continue to expeditiously pursue regulatory or legislative changes that will allow physicians to treat Medicare patients outside current regulatory constraints that threaten the physician/patient relationship; and (d) to seek immediately suitable cases to reverse the limitations on patient and physician rights to contract privately that have been imposed by CMS or the private health insurance industry. ~~**2. Our AMA strongly urge CMS to clarify the technical and statutory ambiguities of the private contracting language contained in Section 4507 of the Balanced Budget Act of 1997.**~~ 3. Our AMA reaffirms its position in favor of a pluralistic health care delivery system to include fee-for-service medicine, and will lobby for the elimination of any restrictions and physician penalties for provision of fee-for-service medicine by a physician to a consenting patient, including patients covered under Medicare.	Retain-in-part; **rescind clause (2)**, as the Centers for Medicare & Medicaid Services has developed extensive regulatory guidelines that have eliminated the technical and statutory ambiguities of the private contracting language contained in Section 4507 of the Balanced Budget Act of 1997.
D-390.974	Modes of Participation in Medicare and Their Impact on the Patient, the Physician, and the US Congress	Our AMA will: (1) continue working to identify politically viable modifications to the statutory language on private contracting that will make opting out a more reasonable choice for practicing physicians; and (2) educate physicians on the different options for participating in the Medicare program and provid e our members with the tools and information necessary to analyze the impact on their patients, their practice	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		, and the US Congress, of their choice of the three modes of relating to the Medicare program by: (a) opting out of Medicare; or (b) caring for Medicare patients in a fee-for-service relationship, making the decision to "accept assignment" on the basis of mutual needs of the patient and the physician; or (c) continuing as a "participating physician" in the Medicare program understanding that the physician is subject to the continued anticipated reductions in direct reimbursement and the ultimate inability to directly negotiate any fees on behalf of their practice. This may give Congress the wrong impression that there is no problem with continued fee reductions.	
D-390.985	Medicare Balance Billing	Our AMA will work on behalf of physicians to regain the right to balance bill Medicare patients for the full reasonable fees as they determine appropriate.	Retain. Policy is relevant.
D-450.953	Development of Quality Measures with Appropriate Exclusions and Review Processes	Our AMA will provide input on the Severe Sepsis and Sepsis Shock: Management Bundle measure during the National Quality Forum's (NQF) review of the measure in 2017, and ask the Centers for Medicare and Medicaid Services to redesign the measure.	Sunset. Directive was for action at the 2017 NQF meeting.
D-478.971	Electronic Health Records and Meaningful Use	Our AMA: (1) will continue to work with the Centers for Medicare and Medicaid Services and other relevant stakeholders to allow for partial credit for eligible professionals in the Meaningful Use and Merit-Based Incentive payment programs; and (2) will compile and continue to educate physicians on the available guidance related to different types of EHRs, system downtime, and technology failures, including mitigation strategies, continuity training solutions, and contracting solutions.	Retain. Policy is relevant.
D-480.970	Access and Equity in Telemedicine Payments	Our AMA will advocate that the Centers for Medicare & Medicaid Services pay for telemedicine services for patients who have problems accessing physician specialties that are in short supply in areas that are not federally determined ?shortage? areas, if that area can show a shortage of those physician specialists.	Retain. Policy is relevant.
D-60.980	Emergency Medical Services for Children (EMSC) Program	Our AMA (1) recognizes the importance of Emergency Medical Services for Children ((EMSC)); (2) advocates for full funding for the (EMSC) program in Congress; and (3) advocates for continuous passage of (EMSC) reauthorization legislation in Congress.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
D-70.957	Fixed Reimbursement to Physicians for Laboratory Services	Our AMA: (1) encourages physicians to become knowledgeable about the appropriate use of CPT modifier 26 in order to bill the professional component separately from the technical component for the interpretation of laboratory tests and clinical oversight of the laboratory; and (2) will advocate that Medicare and other third party payers provide appropriate coverage for the use of CPT modifier 26, as well as care plan oversight codes and prolonged services codes.	Retain. Policy is relevant.
D-70.958	Blended Payments	Our AMA will work with Congress to make it illegal for insurance companies to unilaterally change payments by "blending" levels.	Retain. Policy is relevant.
D-70.979	Preservation of ~~**Five**~~ Levels of Evaluation and Management Services	Our AMA will communicate to the Centers for Medicare and Medicaid Services and to private payers that the current levels of Evaluation and Management ser vices should be maintained and not compressed, with appropriate payment for each level.	Retain-in-part; **edit title to remove term "Five,"** as it is no longer accurate.
H-100.950	Addressing the Exploitation of Restricted Distribution Systems by Pharmaceutical Manufacturers	1. Our AMA will advocate with interested parties for legislative or regulatory measures that require prescription drug manufacturers to seek Food and Drug Administration and Federal Trade Commission approval before establishing a restricted distribution system. 2. Our AMA supports requiring pharmaceutical companies to allow for reasonable access to and purchase of appropriate quantities of approved out-of-patent drugs upon request to generic manufacturers seeking to perform bioequivalence assays. 3. Our AMA will advocate with interested parties for legislative or regulatory measures that expedite the FDA approval process for generic drugs, including but not limited to application review deadlines and generic priority review voucher programs.	Retain. Policy is relevant.
H-120.928	Pharmacy Use of Medication Discontinuation Messaging Function	Our AMA strongly encourages: (1) all software providers and those pharmaceutical dispensing organizations that create their own software to include the functionality to accept discontinuation message transmittals in their electronic prescribing software products; and (2) all dispensing pharmacies accepting medication prescriptions electronically to activate the discontinuation message transmittal functionality in their electronic prescribing support software.	Retain. Policy is relevant.
H-120.931	Access to Self-Administered Medications	1. Our AMA supports legislation that prohibits health insurance and pharmacy benefit management (PBM) companies from denying early prescription refills for solutions, ointments, gels, creams, nasal sprays, and other formulations that are difficult and/or imprecise to self-	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		administer. 2. Our AMA supports and encourages interested national medical specialty societies and other stakeholders to continue to advocate on the state level and work with health insurance and PBM companies to re-evaluate their refill policies on medications that are difficult and/or imprecise to self-administer to allow for early refills as needed.	
H-155.970	Cost-Cutting Decisions by Third Party Payers	Our AMA strongly opposes, and will take appropriate action as necessary to restrict, third party payer cost-containment strategies that jeopardize patient health and the quality of care.	Retain. Policy is relevant.
H-160.904	Increasing Collaboration Between Physicians and the Public to Address Problems in Health Care Delivery	Our American Medical Association will continue to consider and implement the most strategic and sustainable approaches to stay engaged with physician and non-physician stakeholders essential to our endeavor to improve the delivery of quality medical care.	Retain. Policy is relevant.
H-160.908	Payment Mechanisms for Physician-Led Team-Based Health Care	1. Our AMA advocates that physicians who lead team-based care in their practices receive the payments for health care services provided by the team and establish payment disbursement mechanisms that foster physician-led team-based care. 2. Our AMA advocates that payment models for physician-led team-based care should be determined by physicians working collaboratively with hospital and payer partners to design models best suited for their particular circumstances. 3. Our AMA advocates that physicians make decisions about payment disbursement in consideration of team member contributions, including but not limited to: a. Volume of services provided; b. Intensity of services provided; c. Profession of the team member; d. Training and experience of the team member; and e. Quality of care provided. 4. Our AMA advocates that an effective payment system for physician-led team-based care should: a. Reflect the value provided by the team and that any savings accrued by this value should be shared by the team; b. Reflect the time, effort and intellectual capital provided by individual team members; c. Be adequate to attract team members with the appropriate skills and training to maximize the success of the team; and	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		d. Be sufficient to sustain the team over the time frame that it is needed.	
H-160.937	The Promotion of Quality Telemedicine	1. The AMA adopts the following principles for the supervision of nonphysician providers and technicians when telemedicine is used: A. The physician is responsible for, and retains the authority for, the safety and quality of services provided to patients by nonphysician providers through telemedicine. B. Physician supervision (e.g. regarding protocols, conferencing, and medical record review) is required when nonphysician providers or technicians deliver services via telemedicine in all settings and circumstances. C. Physicians should visit the sites where patients receive services from nonphysician providers or technicians through telemedicine, and must be knowledgeable regarding the competence and qualifications of the nonphysician providers utilized. D. The supervising physician should have the capability to immediately contact nonphysician providers or technicians delivering, as well as patients receiving, services via telemedicine in any setting. E. Nonphysician providers who deliver services via telemedicine should do so according to the applicable nonphysician practice acts in the state where the patient receives such services. F. The extent of supervision provided by the physician should conform to the applicable medical practice act in the state where the patient receives services. G. Mechanisms for the regular reporting, recording, and supervision of patient care delivered through telemedicine must be arranged and maintained between the supervising physician, nonphysician providers, and technicians. H. The physician is responsible for providing and updating patient care protocols for all levels of telemedicine involving nonphysician providers or technicians. 2. The AMA urges those who design or utilize telemedicine systems to make prudent and reasonable use of those technologies necessary to apply current or future confidentiality and privacy principles and requirements to telemedicine interactions. 3. The AMA emphasizes to physicians their responsibility to ensure that their legal and ethical requirements with respect to patient confidentiality and data integrity are not	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		compromised by the use of any particular telemedicine modality. 4. The AMA advocates that continuing medical education conducted using telemedicine adhere to the standards of the AMA's Physician Recognition Award and the Accreditation Criteria of the Accreditation Council for Continuing Medical Education. 5. Our AMA supports the appropriate use of telemedicine in the education of medical students, residents, fellows and practicing physicians.	
H-160.966	Market Forces on Medical Practice	It is the policy of the AMA that (1) the ratcheting down of physician payment rates will not produce appreciable reductions in the rate of health care cost increase, since payment for physicians' services constitutes only about one-fifth of spending for health care; however, it may well reduce access to care as more physicians leave the area, retire, or in other ways change their practices; (2) at the same time, physician-directed peer review mechanisms must take the lead in fostering appropriate utilization of services and encouraging less hospital-intensive patterns of care where indicated; (3) the capture of a dominant or controlling share of the private health insurance market by any one payer can ultimately result in payer control of physicians' total remuneration; such control should be resisted through all legislative means available; (4) physicians must continue to initiate and publicize voluntary programs to accept assignment and/or other special arrangements for lower-income Medicare beneficiaries as a deterrent to legislation mandating assignment or banning balance billing for all Medicare enrollees regardless of economic status; and (5) it is equally incumbent on those developing state legislative and regulatory proposals to seek the advice of the health care professionals who will be affected by such proposals at the outset; without such input, the state will risk alienating those who provide the care and jeopardizing the health of its residents.	Retain. Policy is relevant.
H-165.851	Options for Implementing and Financing Tax Credits for Individually Selected and Owned Health Insurance	Our AMA supports incremental steps toward financing individual tax credits for the purchase of health insurance, including but not limited to capping the tax exclusion for employment-based health insurance.	Reconcile with Policies H-165.828 and H-165.865.

POLICY #	Title	Text	Recommendation
H-165.887	Development of Health Care Priorities	Our AMA supports efforts to move patients in public programs into the private sector, through the implementation of vouchers or other mechanisms, thereby enabling individual patients to participate in the prioritization of their health care services; and encourages state governments that are investigating the prioritization of health care services provided under Medicaid programs to consider other potential allocation methodologies including variable levels of funding tied to relative health benefit, beneficiary income, or other factors, for such services.	Retain. Policy is relevant.
H-180.968	Third Party Payer Credentialing	It is the policy of the AMA that third party payers should not exclude non-board-certified physicians as a class from participation in their programs, without regard to individual training, experience, and current competence.	Retain. Policy is relevant.
H-185.925	Addressing Discriminatory Health Plan Exclusions or Problematic Benefit Substitutions for Essential Health Benefits Under the Affordable Care Act	1. Our AMA supports improvements to the essential health benefits benchmark plan se lection process to ensure limits and exclusions do not impede access to health care and coverage. 2. Our AMA encourages federal regulators to develop policy to prohibit essential health benefits substitutions that do not exist in a state's benchmark plan and the selective use of exclusions or arbitrary limits that prevent high-cost claims or that encourage high-cost enrollees to drop coverage. 3. Our AMA encourages federal regulators to review current plans for discriminatory exclusions and submit any specific incidents of discrimination through an administrative complaint to Office for Civil Rights.	Retain. Policy is relevant.
H-185.926	Reproductive Health Insurance Coverage	Our AMA supports: (1) insurance coverage for fertility treatments regardless of marital status or sexual orientation when insurance provides coverage for fertility treatments; and (2) local and state efforts to promote reproductive health insurance coverage r egardless of marital status or sexual orientation when insurance provides coverage for fertility treatments.	Retain. Policy is relevant.
H-200.998	Tax Credit to Disadvantaged Area Medical Practices	Our AMA actively supports national and state legislation which would grant income tax credits to medical practices establishe d in disadvantaged communities and in areas of critical physician need.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
H-215.966	Evaluating Advertising	1. AMA policy is that organizations conferring titles/awards/rankings on hospitals should adopt the following criteria: a. Significant physician involvement in selection of criteria and methodology. b. Significant physician involvement in screening potential award winners. c. Significant physician involvement in on-site hospital review (if part of the ranking/title/award process). d. Significant physician involvement in the judging process and final selection of award winners. e. Evidenced based performance measures for selection. f. Public transparency and substantive information regarding all aspects including the leadership involved in the criteria, methodology, selection process. g. Disclosure of any conflicts of interest	Retain. Policy is relevant.
H-215.975	Uniform Standards for Not-For-Profit and For-Profit Hospitals	The AMA supports the concept that all hospitals be held to the same standards of care, community service, professional education and commitment to their respective communities.	Retain. Policy is relevant.
H-220.938	The Joint Commission Adherence to its Own Standards	The AMA Board of Trustees directs its Commissioners to The Joint Commissi on (TJC) to strongly advocate that TJC: (1) consistently enforce its standards regarding unilateral amendment of medical staff bylaws; (2) continue to cite hospitals for unilateral amendment of medical staff bylaws, rules and regulations, which may lead to loss of accreditation if the violation is not rectified within a specified time frame; and (3) cite hospitals for including provisions in their corporate bylaws that allow for the unilateral amendment of medical staff bylaws, rules and regulations, when state statutes do not require the governing body of the hospital to have such authority.	Retain. Policy is relevant.
H-220.975	Medical Staff Comment on The Joint Commission "Field Review of Proposed Standards"	Our AMA believes that all “Field Review of Proposed Standards” that are sent to hospitals should be sent simultaneously to the medical staff of said hospital, with their comments to be returned directly to The Joint Commission for its consideration.	Retain. Policy is relevant.
H-220.976	Bylaws Approval Time Limit	The AMA supports including a standard in The Joint Commission Accreditation Manual for Hospitals requiring that initial medical staff bylaws and subsequent amendments be approved or disapproved by the hospital	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		governing body within a reasonable period of time specified in the medical staff bylaws and, if the governing body fails to act within the time specified, the proposed changes should be deemed adopted.	
H-220.978	Hospital Medical Staff Representation on the Hospital Governing Body	The AMA supports amending The Joint Commission Leadership Standard LD.01.03.01 to provide for representation at all meetings of the governing body, with vote by one or more medical staff members nominated and elected by the medical staff, consistent with applicable state law.	Retain. Policy is relevant.
H-225.943	Mixed Medical Staffs	Our AMA affirms its unyielding support for the principle that the members of the organized medical staff must work collectively to improve patient care and outcomes, regardless of the employment status or practice setting of each individual member, and through its Organized Medical Staff Section and other appropriate channels, will provide guidance to medical staffs, including but not limited to effective medical staff leadership strategies and relevant updates to the *AMA Physician's Guide to Medical Staff Organization Bylaws*, that facilitate representation of and encourage participation in medical staff activities by community-based and independent physicians.	Retain. Policy is relevant.
H-225.944	Medical Staff Engagement at Critical Access Hospitals	Our AMA encourages all MD/DO(s) on staff at Critical Access Hospitals to contribute to the quality and safety of care provided in those organizations by participating in medical staff activities, including but not limited to credentialing and privileging activities.	Retain. Policy is relevant.
H-225.949	Medical Staff and Hospital Engagement of Community Physicians	1. Our AMA encourages medical staffs to develop medical staff membership categories for physicians who provide a low volume or no volume of clinical services in the hospital ("community physicians"). 2. Our AMA encourages medical staffs and hospitals to engage community physicians, as appropriate, in medical staff and hospital activities, which may include but need not be limited to: (a) medical staff duties and leadership; (b) hospital governance; (c) population health management initiatives; (d) transitions of care initiatives; and (e) educational and other professional and collegial events.	Retain. Policy is relevant.
H-225.984	Hospital Corporate Bylaws	The AMA encourages hospital medical executive committees to: (1) regularly examine the hospital/corporate bylaws, rules and regulations for any conflicts with the medical staff bylaws, rules and regulations or practices; (2) request that their hospital board of trustees/directors notify them of any proposed or	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		impending changes in the hospital/corporate bylaws; and (3) advise members/applicants of the medical staff of the effect of these hospital/corporate bylaws, rules and regulations.	
H-225.986	Physician Economic Incentive Program	The AMA: (1) opposes physician economic incentives that conflict with patients' welfare; and (2) believe the physician must remain the patient's advocate in the patient's relationship with the hospital.	Retain. Policy is relevant.
H-230.963	Limitations of Membership on Multiple Hospital Medical Staffs	Our AMA: (1) supports the principle that a hospital may not limit a physician's participation or medical staff privileges at the hospital based in whole or in part on the physician's membership or participation at a different hospital or hospital system or on the medical staff membership or participation of a partner, associate or employee of the physician at a different hospital or hospital system; (2) opposes hospitals placing limitations on medical staff privileges or participation at a hospital based in whole or in part on the physician's membership or participation at a different hospital or hospital system or on the medical staff membership or participation of a partner, associate or employee of the physician at a different hospital or hospital system; and (3) opposes hospitals placing limitations on medical staff privileges or participation at a hospital based in whole or in part on the physician (or a partner, associate or employee of the physician) having a financial relationship with another hospital/health system.	Retain. Policy is relevant.
H-230.984	Peer Review of the Performance of Hospital Medical Staff Physicians	The AMA (1) encourages state and local medical associations to establish procedures and committees for monitoring, upon the request of the medical staff, the effectiveness of hospital medical staff peer review; and (2) supports working with the AHA and other appropriate organizations to devise methods to encourage the development of such programs.	Retain. Policy is relevant.
H-230.997	Recertification and Hospital or Health Plan Network Privileges	(1) The fact that a board-certified practitioner fails to undergo the recertification examination shall not be adequate reason to modify or withhold hospital privileges or health plan network status from a physician. (2) Modification or withholding of hospital privileges or health plan network status shall be purely on the basis of assessment of performance.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
H-235.968	Physician Review of Medical Staff Activities	The AMA recommends that hospital medical staffs have a policy that would allow minutes of medical staff committees, except minutes concerning peer review or corrective action information, be made available for review by medical staff members in the medical staff office; and recommends that the medical executive committee approve all reports, policies and recommendations from medical staff clinical departments and committees and have a process to distribute significant changes to the members of the medical staff.	Retain. Policy is relevant.
H-235.970	Conflict of Interest Issues and Medical Staff Leaders	Our AMA encourages medical staffs to adopt and incorporate into their bylaws medical staff conflict of interest policies that reflect the following principles: 1. Disclosure of potential conflicts. Candidates for election or appointment to medical staff leadership positions should disclose in writing to the medical staff, prior to the date of election or appointment, any personal, professional or financial affiliations or relationships of which they are reasonably aware, including employment or contractual relationships, which could foreseeably result in a conflict of interest with their acting on behalf of the medical staff. Elected or appointed medical staff leaders should disclose potential conflicts in writing to the medical staff whenever they arise. 2. Management of conflicts. When conflicts of interest exist, elected or appointed medical staff leaders should, as appropriate, recuse themselves from the deliberative process and/or abstain from voting on the matter to which the conflict relates. The medical staff should establish a process for disqualification from the deliberative process and/or from voting on the matter at hand for any elected or appointed medical staff leader with an identified conflict who fails to disclose the interest or who fails to recuse himself or herself from the deliberative process and/or from voting on the matter to which the conflict relates, as appropriate.	Retain. Policy is relevant.
H-235.985	Medical Executive Committee Composition	The AMA's policy states that the medical staff shall govern itself by the bylaws, rules and regulations which define the Medical Staff Executive Committee, whose members are selected in accordance with criteria and standards established by the medical staff, consistent with applicable state law.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
H-260.964	Reimbursement for Clinical Lab Work	Our AMA supports the concept that a professional fee should be paid directly to the appropriate physician for clinical laboratory work, regardless of payer source.	Retain. Policy is relevant.
H-260.998	Laboratory Services Contracted by a Physician	Our AMA believes that: (1) laboratories should bill and collect from patients or third-party payers for laboratory services; (2) attending physicians are entitled to fair compensation for professional services rendered; and (3) bills for laboratory services performed by attending physicians should show the location where services were rendered and a description of such services.	Retain. Policy is relevant.
H-280.951	Quality of Care and Staffing in Nursing Homes	Our AMA will support the policy that staffing levels in nursing homes should appropriately address: (1) the acuity of the patient population; (2) the functional level of the patient and the services provided; (3) the existence of shortages for certain types of staff in some geographic locations and temporary shortages due to events such as employee illness or termination; and (4) the quality, education, and training of staff.	Retain. Policy is relevant.
H-280.953	Physicians Visits Under Medicare Skilled Nursing Facility Prospective Payment System	Our AMA will: (1) work with the Centers for Medicare and Medicaid Services (CMS) and The Joint Commission (TJC) to ensure that physician visits to nursing homes and skilled nursing facilities be based on the physician's determination of appropriate care for each patient; (2) work with CMS to ensure that its Medicare carriers implement these policies in a uniform way; and (3) advocate that physician assessments necessary to comply with both the prospective payment system (PPS) as well as TJC requirements be recognized and reimbursed.	Retain. Policy is relevant.
H-285.941	Managed Care Consensus Bill	The AMA continues to support the enactment of comprehensive legislation that addresses the wide range of patient protection and physician fairness issues, such as disclosure of health plan information to enrollees and prospective enrollees, utilization review and grievance procedures, due process in physician selective contracting decisions, and physician involvement in health plan medical policies.	Retain. Policy is relevant.
H-285.950	Managed Care Organizations' Use of Physicians to Provide Second Opinions to Physicians Providing Emergency Services	The AMA adopts the following principles to guide the use by managed care plans of physicians employed or contracted with to specifically provide second opinions to physicians providing emergency services. The AMA encourages managed care plans to follow these guidelines when employing or contracting with physicians to provide second opinions to physicians providing emergency services. (1) All managed care plans shall disclose to their	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		enrollees and prospective enrollees any plan requirements or the existence of contractual arrangements whereby physicians are required to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities. (2) The required use of physicians to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities shall not impede the immediate diagnosis and therapy of acute cardiac, trauma, and other critical patient situations for which delay may result in death or an increase in severity of illness. (3) Any physician with a contractual arrangement to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities shall be licensed to practice medicine and actively practicing emergency medicine in the same state in which the second opinion is provided. (4) Any physician with a contractual arrangement to provide second opinions to physicians providing emergency services regarding the care provided to patients presenting at emergency departments or facilities shall have active staff privileges in any facility in which the second opinion is provided. (5) To the degree possible, patients presenting at an emergency department or facility should be involved in the decisions regarding the treatment, referral, and follow-up care for their condition. (6) In the event of disagreements over second opinions, final decisions regarding the treatment, referral, and follow-up care provided to patients presenting at emergency departments or facilities shall be made by the attending emergency physician or other appropriate physicians on staff at the facility.	
H-285.967	Distribution of Premiums Collected by Managed Care Companies	The AMA develop and support appropriate legislation to require managed care plans to publish, on an annual basis, relevant operating and financial information.	Retain. Policy is relevant.
H-285.971	Population Based Practices in Managed Care Systems	The AMA recommends to all managed care plans that they: (1) develop population based programs for prevention, health risk assessments, and health's status improvement; (2) adopt a process to measure clinical quality provided to patients and demonstrate how quality in their system	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		of care is improving; (3) develop programs which assure that communicable and environmentally induced health problems are followed up by physicians within the plan in cooperation with competent health department personnel; and (4) manage these programs in concert with established standards of preventive medicine and public health.	
H-285.983	Organized Medical Staffs in Medical Delivery Systems	The AMA supports expanding the concept of physician governance of medical delivery systems by recommending that: (1) Medical delivery systems establish self-governing medical staffs similar, if not identical, to those in hospitals; (2) The principles of self-governance should include, but not be limited to: (a) the development of medical staff bylaws which cannot be unilaterally changed by the governing board of a medical delivery system; (b) physician election of representatives to the governing board and other appropriate committees of medical delivery systems including credentialing, privileging, quality assurance and utilization review committees; (c) due process protections for physicians credentialed by a medical delivery system; and (d) full indemnification by medical delivery systems of physicians who, in good faith, serve as members of credentialing, quality assurance and utilization review committees of medical delivery systems; and (3) Policy of the AMA is that the establishment of guidelines, review of decisions, and the adjudication of patient care quality issues in managed care plans must be performed by participating practicing physicians.	Retain. Policy is relevant.
H-290.973	Medicaid Citizenship Documentation	Our AMA strongly advocates that a state Medicaid agency's record of payment for the birth of an individual in a US hospital is satisfactory documentary evidence of both identity and citizenship.	Retain. Policy is relevant.
H-315.972	HIPAA Business Associate Contracting, Domestic and Foreign, and Foreign Outsourcing	1. Our AMA encourages physicians who have entered or who are considering entering a business associate agreement (BAA) to undertake careful due diligence regarding the business associate and to consider with legal counsel the inclusion of contractual provisions such as: a. strong confidentiality clauses; b. required steps to mitigate any harmful effects of wrongful use or disclosure of protected health information (PHI); c. assurance that, upon the contract's termination, all PHI is returned to the covered entity, and no copies are retained by the business associate, except as required for legal or audit purposes; d. indemnification of the covered entity against	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		any losses caused by a business associate; e. the business associate's procurement of specified types of liability insurance which may either protect the covered entity or enable the business associate to meet its indemnity; f. posting a surety bond (a.k.a. performance bond) to ensure faithful performance of the BAA by the business associate; or g. physicians should take care that the original contract should contain provisions addressing the costs involved with the return and maintenance of the PHI at or after the end of the contract term. 2. Our AMA supports legislation and/or regulation requiring all third parties who receive and maintain clinical information from a clinician to make those data available to the clinician in usable form at the end of the business relationship.	
H-320.941	Eliminate Fail First Policy in Addiction Treatment	Our AMA will advocate for the elimination of the "fail first" policy implemented at times by some insurance companies and managed care organizations for addiction treatment.	Retain. Policy is relevant.
H-320.943	Medicare and Insurance Takeback Procedures	Our AMA: (1) will advocate to ensure that when a patient hospitalization is retrospectively found not to meet criteria for inpatient admission, then the take back amount be only the difference between the cost of the admission and the cost of necessary observation for that patient stay; and (2) will advocate to ensure that, for any care provided to hospital patients who have Medicare, managed Medicare, or commercial insurance, hospitals have the option to rebill denied inpatient claims as outpatient claims, when a physician using clinical judgment makes a prospective decision to admit a patient who is later not found to meet admission criteria.	Retain. Policy is relevant.
H-320.987	Second Opinions When Required by Carrier	The AMA believes that second opinions for medical or surgical services and procedures are best provided by physicians who have the training, experience or skills which provide the necessary information base to assess the need for or advisability of a specific medical or surgical intervention.	Retain. Policy is relevant.
H-320.989	Third Party Utilization Review Programs	Our American Medical Association recommends that hospital medical staffs, prior to approving the written plan for utilization review, ensure the inclusion of provisions that require the hospital to seek formal review and recommendations from the medical staff concerning "any qualified outside organization" that is going to contract with the hospital to perform review activities specified in the plan, prior to entering into the contract.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
H-320.990	Standardization of Mandatory Second Surgical Opinion Programs	The AMA urges third party payers who require second opinions to inform their subscribers so that they understand the requirements of such programs.	Retain. Policy is relevant.
H-320.991	Hospital Preadmission Review/Certification	The AMA believes that the following principle should be applied in evaluating any preadmission review program, so as to minimize any detrimental impacts on quality or accessibility of care: There should be direct and continuing communications to physicians and insured~~s~~ **patients** regarding prior authorization requirements.	Retain-in-part; amend by deletion and addition to make the policy consistent with language used in other AMA policies.
H-330.879	Providers and the Annual Wellness Visit	1. Our AMA supports that the Medicare Annual Wellness Visit (AWV) is a benefit most appropriately provided by a physician or a member of a physician-led health care team that establishes or continues to provide ongoing continuity of care. 2. Our AMA supports that, at a minimum, any clinician performing the AWV must enumerate all relevant findings from the visit and make provisions for all appropriate follow-up care. 3. Our AMA supports that the Centers for Medicare & Medicaid Services (CMS) provide a means for physicians to determine whether or not Medicare has already paid for an AWV for a patient in the past 12 months. 4. Our AMA encourages CMS to educate Medicare enrollees, that, in choosing their primary care physician, they are encouraged to make their AWVs with their primary care physician in order to facilitate continuity and coordination of their care.	Retain. Policy is relevant.
H-330.880	Virtual Supervision of "Incident to" Services	1. Our AMA supports pilot programs in the Medicare program to enable virtual supervision of "incident to" services that require direct supervision if they are developed with specialty society input and abide by the following principles: A. The physician billing "incident to" must fulfill other requirements of direct supervision of "incident to" services, including first seeing the patient and initiating the course of treatment, and providing subsequent services at a rate that shows active participation in and management of the course of treatment. B. The extent of supervision provided by the physician should conform to the applicable medical practice act in the state where the patient receives services. C. Non-physician practitioners and employees providing "incident to" services must follow existing requirements for the provision of	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		"incident to" services, including abiding by state licensure laws and state medical practice laws and requirements in the state in which the patient receives services. D. The delivery of "incident to" services must be consistent with state scope of practice laws. E. Virtual supervision of "incident to" services must require the supervising physician to be connected through real-time audio and video technology with the room in which the "incident to" service is provided, to ensure that the physician is immediately able to provide assistance and direction during the provision of the service. F. Virtual supervision of "incident to" services must follow evidence-based practice guidelines, to the degree they are available, to ensure patient safety, quality of care and positive health outcomes. G. Physicians providing virtual supervision of "incident to" services should visit the sites in person where patients receive procedures from non-physician practitioners or employees. H. Physicians providing virtual supervision of "incident to" services must establish protocols for arranging for emergency services, including having an agreement with a physician at the site at which "incident to" services are provided, to ensure the provision of immediate assistance. I. Patients receiving "incident to" services that are virtually supervised must have access to the certification, licensure and/or board certification qualifications of the health care practitioners who are providing and supervising the care in advance of their visit. J. Patients receiving "incident to" services that are virtually supervised must have a choice of provider, as is required for all medical services. 2. Our AMA encourages national medical specialty societies to develop best practices and protocols for virtual supervision of "incident to" services, including specifying which services and procedures would not qualify for this practice.	
H-330.899	Medicare Pharmaceutical Benefit	Our AMA utilizes the following principles in evaluating legislative proposals for the addition of a Medicare pharmaceutical benefit: (1) Any pharmaceutical benefit should be fully funded by additional budgetary allocations, separate from existing budget provisions. The benefit should provide for adequate accounting so that drug program expenditures can be tracked separately from all other expenditures. (2) The pharmaceutical benefit should be targeted to reduce hardship for those with low-incomes	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		and those with catastrophic costs. (3) Any legislation should provide a pharmaceutical benefit that is equal across geographic regions. (4) A pharmaceutical benefit should be designed in a way that allows for benefits options under both the traditional Medicare fee-for-service program and any version of the Medicare program that relies on the private marketplace. Different levels of drug benefits for different products would be permissible. (5) A pharmaceutical benefit should include a tiered deductible and co-payment structure that encourages economically responsible behavior. (6) Any pharmaceutical benefit should be designed to prevent adverse selection. (7) Any pharmaceutical benefit should be designed in a manner that prevents interference with clinical decision-making and physician prescribing decisions. (8) Any pharmaceutical benefit should be designed in a manner that minimizes the administrative burden placed on physicians. (9) Any pharmaceutical benefit should be designed in a manner that ensures beneficiary access to local pharmacies, and not be limited to mail order pharmacies. (10) In the implementation of any Medicare drug benefit, employers are highly encouraged to preserve existing coverage, and for Medicare beneficiaries with existing drug coverage, any Medicare benefit should be supplemental to and coordinated with that existing coverage.	
H-330.934	Sharing Demographic Medicare Data with Other Public Entities by CMS	The AMA supports continued provision of aggregate anonymous demographic information to state and local health agencies where its use will promote community health and improve utilization of health care dollars, as long as adequate safeguards to protect individual privacy are preserved.	Retain. Policy is relevant.
H-330.937	Local Medical Policy of Medical Payers	AMA policy states that when payers apply local medical policies to physicians in remote areas from where the local medical policy was originally developed, this local medical policy must be widely disseminated to the physicians in those areas along with ~~**printed**~~ explanations to the practitioners involved.	Retain-in-part; amend by deletion as printing is no longer the standard and if maintained, it becomes the expectation.
H-340.913	Peer Review by Actively Practicing Physicians	The AMA continues to urge CMS to assure that under the Medicare review process only actively practicing physicians in the same specialty and similar practice settings be allowed to perform Medicare reviews.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
H-345.980	Advocating for Reform in Payment of Mental Health and Substance Use Disorder Services	Our American Medical Association advocates that funding levels for public sector mental health and substance use disorder services not be decreased in the face of governmental budgetary pressures, especially because private sector payment systems are not in place to provide accessibility and affordability for mental health a nd substance use disorder services to our citizens.	Retain. Policy is relevant.
H-375.964	IOM Report on QIO Program	Our AMA opposes the removal of medical review responsibilities from the QIO scope of work and further opposes conversion of contracts to national or regional contractors.	Retain. Policy is relevant.
H-385.909	The Rights of Patients, Providers and Facilities to Contract for Non-Covered Services	Our AMA will: (1) engage in efforts to convince the Centers for Medicare & Medicaid Services to abstain from inappropriate bundling in situations in which functional and aesthetic considerations should be considered separately; and (2) actively oppose further regulations that would interfere with the rights of patients, providers, and facilitie s to privately contract for non-covered services.	Retain. Policy is relevant.
H-385.910	Physician Communications and Care Coordination During Patient Hospitalization	Our AMA will continue to advocate that third party payers establish separate physician payments for interprofessional consultative services related to the care of hospitalized patients.	Retain. Policy is relevant.
H-385.924	Support for State Medical Association Economic Research, Development and Planning	The AMA urges state medical associations to establish bureaus or departments of economic research, development and planning to study, develop and disseminate data concerning the economic aspects of medical practice. The AMA continues to assist state associations in collecting such data and to act as a clearinghouse for data so gathered. The AMA encourages state medical associations to designate representatives to deal energetically with third party agencies and programs, utilizing the concept of usual, customary or reasonable charges.	Retain. Policy is relevant.
H-385.991	Balance Billing	Our AMA supports the right of the physician to balance bill a patient for any care given, regardless of method of payment, where permissible by law or contractual agreement.	Retain. Policy is relevant.
H-390.836	Support for Seamless Physician Continuity of Care	Our AMA encourages physicians who encounter contractual difficulties with Medicare Advantage (MA) plans to contact their Centers for Medicare & Medicaid Services (CMS) Regional office.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
H-390.839	Requiring Secondary and Supplemental Insurers to Medicare to Follow Medicare Payments	Our AMA will support payment by secondary insurers of the balance of the approved Medicare payment in an amount bringing Medicare and secondary payments up to the full allowance of the secondary insurer for services covered by the secondary insurer.	Retain. Policy is relevant.
H-390.854	Freedom of Choice	(1) The AMA will seek appropriate cases to challenge the legality and constitutionality of Medicare restrictions on non-participating physicians' medical practice and on patient freedom of choice by such mechanisms as limitations on balance billing and prohibitions on private "opt out" arrangements between physicians and patients. (2) The AMA will strongly resist such restrictions being extended to other payers in national health care reform legislation.	Retain. Policy is relevant.
H-390.977	Reimbursement for Diagnostic Studies Identified as Surgical Procedures	(1) The AMA supports the concept of separate payment by private and public payers for the services of physicians who perform diagnostic procedures separately and apart from surgical therapy. (2) The AMA supports the concept of one inclusive fee or payment to a physician by private and public payers for diagnostic surgical procedures performed in conjunction with and as a part of surgical therapy and encourages payers to utilize for payment purposes a coding system which can recognize the greater complexity or extent of the service which may be rendered. (3) The AMA urges physicians billing third parties to ensure that all services provided are completely described or coded on the appropriate claim form(s).	Retain. Policy is relevant.
H-405.993	Median Physician Income	The AMA encourages all who prepare reports on physician income to include not simply "mean" (average) data, but also "median" data and quartile distributions, which are far more representative of actual physician income profiles and are better reflections of medical care costs.	Retain. Policy is relevant.
H-406.999	Goal of Health Care Data Collection	The AMA (1) continues to advocate that health care data collected by government and third-party payers be used for education of both consumers and providers; and (2) believes that government, third party payers and self-insured companies should make physician-specific utilization information **from carefully selected studies** available to medical societies.	Retain-in-part; amend by addition to fulfill the intent of Board Report W-A-92, the origin of this policy.
H-410.970	Use of Practice Parameters	Our AMA: (1) urges organizations that have developed practice parameters to recognize that practice parameters are educational tools, not mechanisms to determine reimbursement or credentialing, to assist physicians in clinical decision making and are not replacements for	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		clinical decision making. Physicians must retain autonomy to vary from practice parameters without retribution in order to provide the quality of care that meets the individual needs of their patients; (2) encourages physicians to be cost conscious and to exercise discretion, consistent with good medical care, when implementing practice parameters; and (3) encourages physician organizations developing practice parameters to include appropriate explanatory disclaimers to ensure that practice parameters are used in a manner that is consistent with AMA policy.	
H-410.997	Practice Parameters and Review Criteria	Our AMA believes that variations from medical practice guidelines and parameters are not, except in very limited circumstances, per se indicators of quality or medical necessity problems. Only where a variation involves provision of a service or procedure deemed by the preponderance of medical opinion to be inappropriate in any clinical situation should it be used as a per se indicator for judgments regarding quality or payment denials. Otherwise, variations from the guidelines and parameters should constitute only a signal for further peer-to-peer considerations relative to quality or payment issues.	Retain. Policy is relevant.
H-450.929	CMS Emergency Department Patient Experience of Care Survey (EDPEC)	Our AMA will monitor the development of ~~**the**~~ Centers for Medicare and Medicaid Services' ~~**E**~~**e**mergency ~~**D**~~**d**epartment ~~**P**~~**p**atient ~~**E**~~**e**xperience of ~~**C**~~**c**are ~~**(EDPEC)**~~ ~~**S**~~**s**urvey**s** and advocate for fair and reliable reporting that accurately reflects the quality of care provided by physicians and/or hospitals.	Retain-in-part; amend by deletion and addition to reflect the fact that while the initial CMS EDPEC survey has been completed, subsequent surveys are ongoing.
H-450.930	Developing Measures for Good Access to Care	1. Our AMA will collaborate with the appropriate organizations to support specialty-designed measures of access to care that ensure physicians have the measures they need to be successful under the Medicare Access and Chip Reauthorization Act (MACRA). 2. Our AMA encourages the Centers for Medicare and Medicaid Services (CMS) to use specialty society-developed access to care measures for the Clinical Practice Improvement incentives rather than CMS-generated measures of access.	Retain. Policy is relevant.
H-450.937	Medical Care Outside the United States	1. Our AMA advocates that employers, insurance companies, and other entities that facilitate or incentivize medical care outside the US adhere to the following principles:	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		A. Medical care outside of the US must be voluntary. B. Financial incentives to travel outside the US for medical care should not inappropriately limit the diagnostic and therapeutic alternatives that are offered to patients, or restrict treatment or referral options. C. Patients should only be referred for medical care to institutions that have been accredited by recognized international accrediting bodies (e.g., the Joint Commission International or the International Society for Quality in Health Care). D. Prior to travel, local follow-up care should be coordinated and financing should be arranged to ensure continuity of care when patients return from medical care outside the US. E. Coverage for travel outside the US for medical care must include the costs of necessary follow-up care upon return to the US. F. Patients should be informed of their rights and legal recourse prior to agreeing to travel outside the US for medical care. G. Access to physician licensing and outcome data, as well as facility accreditation and outcomes data, should be arranged for patients seeking medical care outside the US. H. The transfer of patient medical records to and from facilities outside the US should be consistent with HIPAA guidelines. I. Patients choosing to travel outside the US for medical care should be provided with information about the potential risks of combining surgical procedures with long flights and vacation activities. 2. Our AMA supports efforts that allow for the reporting and tracking of quality and safety issues associated with medical procedures performed abroad.	
H-450.941	Pay-For-Performance, Physician Economic Profiling, and Tiered and Narrow Networks	1. Our AMA will collaborate with interested parties to develop quality initiatives that exclusively benefit patients, protect patient access, do not contain requirements that permit third party interference in the patient-physician relationship, and are consistent with AMA policy and Code of Medical Ethics, including Policy H-450.947, which establishes the AMA's Principles and Guidelines for Pay-for-Performance and Policy H-406.994, which establishes principles for organizations to follow when developing physician profiles, and that our AMA actively oppose any pay-for-performance program that does not meet all the principles set forth in Policy H-450.947.	Retain-in-part; **rescind clause (4)**, as time frame for reporting directive has passed. Additionally, in 2018 the AMA published a thorough guide, including model contract language, titled: Evaluating Pay-for-Performance Contracts.

POLICY #	Title	Text	Recommendation
		2. Our AMA strongly opposes the use of tiered and narrow physician networks that deny patient access to, or attempt to steer patients towards, certain physicians primarily based on cost of care factors. 3. Our AMA pledges an unshakable and uncompromising commitment to the welfare of our patients, the health of our nation and the primacy of the patient-physician relationship free from intrusion from third parties. ~~**4. Because there are reports that pay-for-performance programs may pose more risks to patients than benefits, our AMA will prepare an annual report on the risks and benefits of pay-for-performance programs, in general and specifically the largest programs in the country including Medicare, for the House of Delegates over the next three years, beginning at the 2007 Interim Meeting. This report should shall clearly delineate between private pay-for-performance programs and voluntary public pay-for-reporting and other related quality initiatives.**~~ 5. Our AMA will continue to work with other medical and specialty associations to develop effective means of maintaining high quality medical care which may include physician accountability to robust, effective, fair peer review programs, and use of specialty-based clinical data registries. 6. As a step toward providing the Centers for Medicare and Medicaid Services (CMS) with data on special populations with higher health risk levels and developing variable incentives in achieving quality, our AMA will continue to work with CMS to encourage and support pilot projects, such as the Physician Quality Reporting Initiative (PQRI), by state and specialty medical societies that are developed collaboratively to demonstrate effective incentives for improving quality, cost-effectiveness, and appropriateness of care. 7. Our AMA will advocate that physicians be allowed to review and correct inaccuracies in their patient specific data well in advance of any public release, decreased payments, or forfeiture of opportunity for additional compensation.	
H-450.943	Effects of Pay-for-Performance on Minority Health Disparities	Our American Medical Association urges that physicians with expertise in eliminating racial and ethnic health disparities be involved in the design, implementation and evaluation of pay-for-performance programs.	Retain. Policy is relevant.
H-450.999	Practice Evaluation	(1) Our AMA urges state and local medical societies to consider developing public	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		information programs to inform consumers about existing quality assurance activities. (2) Our AMA encourages increased use of office or hospital outpatient facilities, and use of these facilities for diagnostic testing prior to hospitalization whenever medically feasible, and where quality of service can be assured.	
H-460.896	Stem Cell Tourism	Our AMA (a) encourages the study of appropriate guidance for physicians to use when advising patients who seek to engage in stem cell tourism and how to guide them in risk assessment, (b) encourages further research on stem cell tourism, and (c) urges physicians to educate themselves on these issues.	Retain. Policy is relevant.
H-475.991	Postoperative Care - Responsibility and Reimbursement	Our AMA: (1) continues to support repeal of the federal law which allows reimbursement to optometrists for the unsupervised/independent provision of postoperative care; and (2) reaffirms its position that physicians performing surgery have an ethical and professional responsibility to continue the care of their individual patients through the post-surgical recovery and healing period, or to arrange coordination of such care, especially in those situations where there is a reasonable expectation that another physician will provide postoperative surgical care.	Retain. Policy is relevant.
H-475.996	Revision of AMA Surgical Screening Criteria	The AMA (1) urges national medical specialty societies to review all criteria sets in use within the QIO program to determine whether sections applicable to the practice of their members are in need of revision and, if they are, to develop recommendations for change; (2) encourages state medical societies to organize specialty specific liaison activities between specialty groups and their respective QIOs in order to address particular issues that may arise concerning the development or application of criteria; and (3) supports continued efforts to collect information on screening criteria sets and to evaluate the process by which they are being applied.	Retain. Policy is relevant.
H-480.953	Interoperability of Medical Devices	Our AMA believes that intercommunication and interoperability of electronic medical devices could lead to important advances in patient safety and patient care, and that the standards and protocols to allow such seamless intercommunication should be developed fully with these advances in mind. Our AMA also recognizes that, as in all technological advances, interoperability poses safety and medico-legal challenges as well. The development of standards and production of interoperable equipment protocols should strike the proper balance to achieve	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
		optimum patient safety, efficiency, and outcome benefit while preserving incentives to ensure continuing innovation.	
H-480.968	Telemedicine	The AMA: (1) encourages all national specialty societies to work with their state societies to develop comprehensive practice standards and guidelines to address both the clinical and technological aspects of telemedicine; (2) will assist the national specialty societies in their efforts to develop these guidelines and standards; and urges national private accreditation organizations (e.g., URAC and JCAHO) to require that medical care organizations which establish ongoing arrangements for medical care delivery from remote sites require practitioners at those sites to meet no less stringent credentialing standards and participate in quality review procedures that are at least equivalent to those at the site of care delivery.	Retain. Policy is relevant.
H-70.914	Opposing Coverage Decisions Based Solely on ICD-10 Code Specificity	Our AMA opposes limitations in coverage for medical services based solely on diagnostic code specificity.	Retain. Policy is relevant.
H-70.918	Medicare Evaluation and Management Medical Decision Making Guidelines	It is AMA policy that: (1) all Medicare contractors disclose any Medical Decision Making tool or **~~score sheet~~** **algorithm** used in audits; (2) all Medicare contractors have a **clearly defined** process to resolve conflicts of interpretation on Medical Decision Making ~~tools and/or score sheets~~ between practicing physicians and contractor clinical auditors; and (3) any Medical Decision Making tool or **~~score sheet~~** **algorithm** must be based on the **~~factors for arriving at complexity, as defined in~~** **instructions for Medical Decision Making as** outlined in CPT Guidelines that accompany the CPT **~~Book~~** **Code Set**.	Retain-in-part; amend by deletion and addition to update this policy to align with current CPT guidelines.
H-70.958	Medicare ICD-10 Coding Requirements	Our AMA will: (1) request that the Centers for Medicare & Medicaid Services ensure that its Medicare carriers fully understand and implement the distinction between coding to the "highest level of specificity" within a code category, and that coding for the condition(s) to the "highest degree of certainty" for that visit. For this purpose, symptoms, signs, abnormal test results or other reason for the visit are appropriate and acceptable diagnoses; and (2) will use all appropriate vehicles to communicate to physicians the correct method to report ICD-10-CM codes to describe diagnoses and other reasons for the physician-patient encounter.	Retain. Policy is relevant.

POLICY #	Title	Text	Recommendation
H-70.960	Documentation Requirements for Physician Care Plan Oversight	The AMA will (1) continue to work with CMS so that CPT codes 99375 and 99376, for Care Plan Oversight, are recognized for payment to all physicians; (2) the AMA CPT Editorial Panel will consider revising the Care Plan Oversight codes to more accurately reflect medical practice; (3) will work with CMS to develop documentation requirements that are more consistent with standard medical practice and are not time based; and (4) the CPT Editorial Panel will continue to monitor CMS's implementation of documentation requirements.	Sunset; policy obsolete with advent of the Chronic Care Management (99490, 99491; 99437, 99439) and Complex Chronic Care Management (99487, 99489) CPT codes.
H-75.984	Increasing Availability and Coverage for Immediate Postpartum Long-Acting Reversible Contraceptive Placement	1. Our AMA: (a) recognizes the practice of immediate postpartum and post pregnancy long-acting reversible contraception placement to be a safe and cost effective way of reducing future unintended pregnancies; and (b) supports the coverage by Medicaid, Medicare, and private insurers for immediate postpartum long-acting reversible contraception devices and placement, and that these be billed separately from the obstetrical global fee. 2. Our AMA encourages relevant specialty organizations to provide training for physicians regarding (a) patients who are eligible for immediate postpartum long-acting reversible contraception, and (b) immediate postpartum long-acting reversible contraception placement protocols and procedures.	Retain. Policy is relevant.
H-85.957	Encouraging Standardized Advance Directives Forms Within States	Our AMA encourages each state society to develop a standardized form of advance directives for use by physicians and other health care providers as a template to discuss end-of-life care with their patients.	Retain. Policy is relevant.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 4-A-26

Subject: Expanding Medicare Coverage of Medical Nutrition Therapy

Presented by: Betty Chu, MD, MBA, Chair

Referred to: Reference Committee G

Resolution 116, "Medicare Coverage of Registered Dietician and Certified Nutrition Support Specialist Visits Beyond Type 2 Diabetes and Renal Disease," was introduced by the Senior Physicians Section at the 2025 Annual Meeting and was referred. It asks the following:

> RESOLVED, that our American Medical Association (AMA) support legislation for Medicare coverage for registered dietitian or certified nutrition support specialist visits referred by physicians for conditions such as obesity, pancreatic insufficiency, hyperlipidemia, irritable bowel syndrome, small intestinal bacterial overgrowth, gout, and allergies, recognizing that other significant chronic conditions can also benefit from tailored dietary interventions; and be it further;
>
> RESOLVED, that our AMA specify that payment for registered dietician or certified nutrition support specialist services should be made separately from Medicare physician services (i.e. outside the Medicare physician fee schedule) to avoid having a negative impact on the conversion factor that would impact payment for all physician services.

This report discusses the Medicare Physician Fee Schedule (MPFS), provides a summary of medical nutrition therapy (MNT) Medicare coverage, and includes several policy recommendations.

BACKGROUND

Since 1992, Medicare payment for physicians' services has been valued through the MPFS.[1] Payment rates are based on resources required to furnish services, which are assigned relative value units (RVUs) under the Resource-Based Relative Value Scale (RBRVS) considering three types of inputs: clinician work, practice expense, and professional liability insurance.[2] Annual updates to the MPFS include statutorily-required updates to the conversion factor under the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA).[3]

Under current law, the projected cost of all changes to the MPFS must be budget neutral and may not raise or lower total Medicare spending by more than $20 million per year.[4] Thus, the evaluated change of RVUs or the introduction of new services are accompanied by offsets to the fees for other services.[5,6] The budget neutrality requirement is a provision of the Social Security Act which dates to the founding of the RBRVS legislation and has not been updated since passage. The Centers for Medicare & Medicaid Services administers the statute's budget neutrality requirement with a percentage adjustment.[7] The actual payment rate for each service is determined by multiplying its value under the RBRVS by a conversion factor.[8] Budget neutrality adjustments are accomplished by raising or lowering that conversion factor. If new services or higher payments are

© 2026 American Medical Association. All rights reserved.

added to the MPFS, an offsetting cut (a negative adjustment) must be made to other service payments to keep total spending balanced.[9] Beginning in 2026, there will be two separate conversion factors: one for qualifying alternative payment model (APM) participants (QPs) and one for physicians and practitioners who are not QPs.[10] QPs are those that meet thresholds for participation in an Advanced APM – features that ensure accountability for quality and cost of care.[11]

MEDICAL NUTRITION THERAPY

Medical nutrition therapy (MNT) is a form of treatment that utilizes nutrition education and behavioral counseling to prevent or manage a medical condition.[12] A Registered Dietitian Nutritionist (RDN), credentialed by the Commission on Dietetic Registration (CDR), collaborates with an individual and, in some cases, members of their medical team to identify health needs and personal goals. RDNs must hold at least a master's degree, complete an Accreditation Council for Education in Nutrition and Dietetics accredited program with specific coursework, and finish 1,000 hours of supervised practice in health care facilities, community agencies, or food service corporations. Additionally, an RDN must pass a national registration exam administered by the CDR. Further, many states require licensure to practice and ongoing professional development to maintain credentialling. The RDN can act as part of a medical team, in various practice settings, such as hospitals, physician offices, private practice and other health care facilities. An RDN can build a nutrition plan that maximizes micro- and macronutrient intake while optimizing health status.[13,14,15,16] MNT typically has four steps: nutrition assessment, nutrition diagnosis, plan, and monitoring and evaluation.[17] The tailored personalized nutrition plan includes: 1) dietary changes, 2) education, 3) supplements, and 4) advanced nutrition support which includes, in severe cases, tube feeding (enteral) or intravenous nutrition (parenteral). MNT also comes in two types – standard MNT and diabetic self-management training – which may be offered either alone or together. For patients with diabetes, MNT is usually most effective when the practitioner delivers both types together.

MNT can provide significant benefits by offering personalized nutrition plans to improve chronic disease management (e.g., diabetes, heart disease, obesity, kidney disease, cancer), reduce symptoms, lower health risks, improve lab markers (e.g., blood sugar, lipids, blood pressure), boost energy, support weight management, and decrease overall health care costs by reducing hospitalization and medications.[18] MNT can also nourish a patient's body when the digestive system is not working effectively or efficiently. MNT can help a patient learn ways to build physical activity into their daily routine, take an active role in their health care, and overcome barriers to nutritious eating. Twenty-five systematic reviews published between 2017 and 2024 indicate that MNT is likely effective in improving a range of health outcomes in adults with pre-diabetes, type 1 diabetes, type 2 diabetes, obesity, pre-hypertension, hypertension, dyslipidemia, chronic kidney disease, head and neck cancer, and chronic obstructive pulmonary disease compared with no MNT or standard care.[19]

Current systematic reviews demonstrate that MNT interventions provided by RDNs may be clinically effective for adults with overweight or obesity, malnutrition , and chronic obstructive pulmonary disease.[20] Additionally, in a pooled analysis, MNT interventions lowered low-density lipoprotein cholesterol, total C, triglycerides, fasting blood glucose, hemoglobin A1c, and body mass index (BMI) compared to a control group.[21] Cost effectiveness and economic savings of MNT for dyslipidemia showed improved quality-adjusted life years and cost savings from reduced medication use.[22] It was concluded that multiple MNT sessions by an RDN are clinically effective and cost beneficial in patients with dyslipidemia and cardiometabolic risk factors.[23]

While there are benefits to MNT, there are also potential disadvantages. For instance, MNT is a time burden with high drop-out rates for patients engaging in therapy.[24] Relatedly, while telehealth has grown in use overall, face-to-face visits tend to be the most widely used mode of service for MNT and can pose a burden for patients, RDNs, and clinical operations.[25] Furthermore, though nurses, community health workers, and primary care physicians can play a significant role in the nutritional counseling of patients, it is not always the case that they are involved. In many states, MNT can be provided without the supervision or order (prescription) of a physician, making it difficult for patients to receive integrated care.

There are also broader concerns about access to effective, safe, and integrated MNT. Currently, there is only consistent insurance coverage for nutrition care for adults with type 2 diabetes and chronic kidney disease in outpatient settings.[26] Though evidence indicates that MNT can improve outcomes, practitioners may hesitate to refer clients due to high out-of-pocket costs. The lack of coverage for MNT may be a detriment to clients with lower incomes who may have more health issues, but who are less likely to be able to afford nutrition care.[27] Shortages of health care workers, including RDNs, are also a widespread concern, particularly in areas that are rural or lack sufficient resources.[28] Additionally, a lack of appropriate coverage for services may lead hospitals to have too few RDNs on staff, leading to more patients being served per RDN and less effective care as a result.

MEDICARE COVERAGE OF MEDICAL NUTRITION THERAPY

Medicare covers MNT for patients who meet certain eligibility criteria, such as those with diabetes, kidney disease, and post-36 months after a kidney transplant.[29] Services included are nutrition assessments, therapy, counseling, and follow-up visits.[30] Medicare does not provide coverage for MNT for patients with pancreatic insufficiency, hyperlipidemia, irritable bowel syndrome, small intestinal bacterial overgrowth, gout, and allergies. However, Medicare provides coverage for medically necessary diagnosis and treatment, which can include physician visits, diagnostic tests, screenings, prescription medications, and procedures for each of the outlined conditions. While Medicare does not cover MNT for patients with obesity, it does cover obesity screenings and behavioral counseling for those with a BMI of thirty or greater.[31] Medicare covers behavioral therapy if a primary care physician or other primary care practitioner provides the counseling in a primary care setting, where personalized prevention plans can be coordinated with other care. Intensive Behavioral Therapy (IBT) is a structured counseling program, primarily for obesity, that uses behavioral techniques (e.g., cognitive behavioral therapy, goal setting, dietary advice) with a health care provider (e.g., physician, dietitian, therapist) to promote lasting weight loss through diet, exercise, and mindset changes.[32] IBT focuses on changing habits and thoughts around food and activity, offering support and strategies for healthier lifestyles.[33] Studies surrounding IBT have been shown to be effective in inducing a 10 percent weight loss, which is sufficient to significantly improve health. While weight loss maintenance was shown to be difficult for most participants, long-term outcomes have the potential to be improved through various methods, including prolonging contact between patients and providers or combining lifestyle modification with pharmacotherapy.[34]

As previously discussed, the projected cost of all changes to the MPFS must be budget neutral and may not raise or lower total Medicare spending by more than $20 million per year. Therefore, additional coverage of MNT for patients with the conditions listed above would necessitate offsets to the fees for other services. Furthermore, paying for additional coverage for Medicare beneficiaries outside the MPFS may not be advisable as it could create access challenges for Medicare beneficiaries, disrupt coordination in team-based and value-based care models, and introduce uncertainty around payment authorization, valuation, and operational implementation.

Finally, paying for these services outside of the MPFS could set a precedent affecting other non-physician providers currently paid through the MPFS.

AMA ADVOCACY & RESOURCES

In statements to the U.S. Senate Committee on Health, Education, Labor and Pensions, Subcommittee on Primary Health & Retirement Security, and the U.S. House of Representatives Committee on Ways and Means, Subcommittee on Health, the AMA expressed support for expanded coverage and access to intensive behavioral and nutritional interventions including MNT. In these statements, the AMA urged Congress to expand Medicare coverage for MNT to include additional diet-related health conditions beyond diabetes and renal disease. In a 2021 letter to the Centers for Medicare & Medicaid Services on the 2022 MPFS rule, the AMA commented on the importance of requiring registered dieticians and nutritional professionals to report back to the physician at the onset of the therapy and periodically during the course of treatment.

AMA POLICY

Policy D-440-954 broadly outlines the role that the AMA will take in the study, prevention, and treatment of obesity, which includes increasing public insurance of and payment for the full spectrum evidence-based adult and pediatric obesity treatment, working with national medical specialty societies and state medical associations to address out-of-date restrictions prohibiting physicians from treating obesity, and advocating for patient access to and physician payment for the full continuum of evidence-based obesity treatment modalities (such as behavioral, pharmaceutical, psychosocial, nutritional, and surgical interventions).

Policy H-150.953 urges physicians and managed care organizations and other third-party payers to recognize obesity as a complex disorder and all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs.

Policy H-390.849 states that the AMA will advocate for the development and adoption of physician payment reforms that adhere to its outlined principles, opposes bundling of payments in ways that limit medically necessary care, and supports payment methodologies that redistribute Medicare payments among providers based on outcomes. Additionally, Policy H-390.849 highlights that the AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.

Policy H-385.905 supports legislation that ensures Medicare physician payment is sufficient to safeguard beneficiary access to care, replaces or supplements budget neutrality in MIPS with incentive payments, or implements positive annual physician payment updates.

Policy H-400.972 broadly outlines the AMA policy on and recommended principles guiding Medicare physician payment reform.

Policy H-160.906 defines the role that physicians should have within team-based health care as well as guidelines and a model in the development of physician-led team-based health care.

DISCUSSION

The Council acknowledges the value of visits with and treatment from an RDN, especially for patients who are aging or those who have chronic health conditions. At the same time, the Council

understands the scope of practice concerns surrounding MNT and the central role that physicians must play in such treatments. Accordingly, the Council supports the use of MNT – delivered by a RDN, as defined in §1861(v)(2) of the Social Security Act and credentialed by the CDR and in ongoing collaboration with the patient's physician. Furthermore, while the Council supports expanded coverage for these services, it should be accompanied by physician oversight of care teams consistent with Policy H-160.906, which defines the role that physicians have within team-based health care and provides guidelines and a model in the development of physician-led team-based health care.

On balance, and consistent with previous AMA statements and advocacy efforts, the Council supports expansion of Medicare coverage and access to intensive behavioral and nutritional interventions including medical nutrition therapy for diet-related health conditions exempted from budget neutrality. The Council recognizes that expansion of nutritional services impacts the MFPS but believes the value of this therapy warrants its inclusion. At the same time, the Council acknowledges the negative impacts of budget neutrality on payment and encourages reform of the MFPS to eliminate this effect. As outlined in the AMA Medicare Basics Series, the threshold required by budget neutrality unfairly restricts payment for physicians as well as access to care for patients. Therefore, the Council recommends reaffirming Policy H-385.905, which supports legislation that ensures Medicare physician payment is sufficient to safeguard beneficiary access to care, replacing or supplement budget neutrality in the Merit-based Incentive Payment System (MIPS) with incentive payments, or implementing positive annual payment updates. We also acknowledge that broader reform of the MPFS is important and, as such, recommend reaffirming Policy H-400.972, which outlines the AMA policy on and recommended principles guiding Medicare physician payment reform.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 116-A-25 and the remainder of the report be filed:

1. That our American Medical Association (AMA) recognize the benefits and support the use of medical nutrition therapy (MNT) – delivered by a Registered Dietitian Nutritionist, as defined in §1861(v)(2) of the Social Security Act and credentialed by the Commission on Dietetic Registration and in ongoing support with the patient's physician – for the purpose of managing and treating chronic health conditions for which there is evidence of efficacy. (New HOD Policy)
2. That our AMA support the expansion of Medicare coverage and exemption from budget neutrality for evidence-based intensive behavioral and nutritional interventions, including medical nutrition therapy(MNT). (New HOD Policy)
3. That our AMA reaffirm Policy H-160.906, which defines the role that physicians should have within team-based health care as well as guidelines and a model in the development of physician-led team-based health care. (Reaffirm HOD Policy).
4. That our AMA reaffirm Policy H-385.905, which supports legislation that ensures Medicare physician payment is sufficient to safeguard beneficiary access to care, replaces or supplements budget neutrality in Merit-based Incentive Payment System with incentive payments, or implements positive annual physician payment updates. (Reaffirm HOD Policy)
5. That our AMA reaffirm Policy H-400.972, which outlines the AMA policy on and recommended principles guiding Medicare physician payment reform. (Reaffirm HOD Policy)

Fiscal Note: Minimal

Council on Medical Service Report 4-A-26
Expanding Medicare Access to Medical Nutrition Therapy (MNT)
Policy Appendix

Obesity as a Major Public Health Problem H-150.953

1. Our American Medical Association (AMA) will urge physicians as well as managed care organizations and other third-party payers to recognize obesity as a complex disorder involving appetite regulation and energy metabolism that is associated with a variety of comorbid conditions.
2. Our AMA will work with appropriate federal agencies, medical specialty societies, and public health organizations to educate physicians about the prevention and management of overweight and obesity in children and adults, including education in basic principles and practices of physical activity and nutrition counseling; such training should be included in undergraduate and graduate medical education and through accredited continuing medical education programs.
3. Our AMA will urge federal support of research to determine:
    a. the causes and mechanisms of overweight and obesity, including biological, social, and epidemiological influences on weight gain, weight loss, and weight maintenance;
    b. the long-term safety and efficacy of voluntary weight maintenance and weight loss practices and therapies, including surgery;
    c. effective interventions to prevent obesity in children and adults; and
    d. the effectiveness of weight loss counseling by physicians.
4. Our AMA will encourage national efforts to educate the public about the health risks of being overweight and obese and provide information about how to achieve and maintain a preferred healthy weight.
5. Our AMA will urge physicians to assess their patients for overweight and obesity during routine medical examinations and discuss with at-risk patients the health consequences of further weight gain; if treatment is indicated, physicians should encourage and facilitate weight maintenance or reduction efforts in their patients or refer them to a physician with special interest and expertise in the clinical management of obesity.
6. Our AMA will urge all physicians and patients to maintain a desired weight and prevent inappropriate weight gain.
7. Our AMA will encourage physicians to become knowledgeable of community resources and referral services that can assist with the management of overweight and obese patients.
8. Our AMA will urge the appropriate federal agencies to work with organized medicine and the health insurance industry to develop coding and payment mechanisms for the evaluation and management of obesity.
9. Our AMA will urge all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs.

(CSA Rep. 6, A-99; Reaffirmation A-09; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmation A-10; Reaffirmation I-10; Reaffirmation A-12; Reaffirmed in lieu of Res. 434, A-12; Reaffirmation A-13; Reaffirmed: CSAPH Rep. 3, A-13; Reaffirmation: A-19; Appended: Res. 806, I-23)

Physician Payment Reform H-390.849

1. Our American Medical Association will advocate for the development and adoption of physician payment reforms that adhere to the following principles:
    a. Promote improved patient access to high-quality, cost-effective care.
    b. Be designed with input from the physician community.

c. Ensure that physicians have an appropriate level of decision-making authority over bonus or shared-savings distributions.
d. Not require budget neutrality within Medicare Part B.
e. Be based on payment rates that are sufficient to cover the full cost of sustainable medical practice.
f. Ensure reasonable implementation timeframes, with adequate support available to assist physicians with the implementation process.
g. Make participation options available for varying practice sizes, patient mixes, specialties, and locales.
h. Use adequate risk adjustment methodologies.
i. Incorporate incentives large enough to merit additional investments by physicians.
j. Provide patients with information and incentives to encourage appropriate utilization of medical care, including the use of preventive services and self-management protocols.
k. Provide a mechanism to ensure that budget baselines are reevaluated at regular intervals and are reflective of trends in service utilization.
l. Attribution processes should emphasize voluntary agreements between patients and physicians, minimize the use of algorithms or formulas, provide attribution information to physicians in a timely manner, and include formal mechanisms to allow physicians to verify and correct attribution data as necessary.
m. Include ongoing evaluation processes to monitor the success of the reforms in achieving the goals of improving patient care and increasing the value of health care services.

2. Our AMA opposes bundling of payments in ways that limit medically necessary care, including institutional post-acute care, or otherwise interfere with a physician's ability to provide high quality care to patients.
3. Our AMA supports payment methodologies that redistribute Medicare payments among providers based on outcomes (including functional improvements, if appropriate), quality and risk-adjustment measures only if measures are scientifically valid, reliable, and consistent with national medical specialty society- developed clinical guidelines/standards.
4. Our AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.
5. Our AMA supports the development of a public-private partnership for the purpose of validating statistical models used for risk adjustment.

(CMS Rep. 6, A-09; Reaffirmation A-10; Appended: Res. 829, I-10; Appended: CMS Rep. 1, A-11; Appended: CMS Rep. 4, A-11; Reaffirmed in lieu of Res. 119, A-12; Reaffirmed in lieu of Res. 122, A-12; Modified: CMS Rep. 6, A-13; Reaffirmation I-15; Reaffirmation: A-16; Reaffirmed in lieu of: Res. 712, A-17; Reaffirmed: BOT Action in response to referred for decision: Res. 237, I-17; Reaffirmation: A-19; Reaffirmed: BOT Action in response to referred for decision Res. 111, A-19; Reaffirmed: BOT Action in response to referred for decision Res. 132, A-19; Reaffirmed: Res. 212, I-21; Reaffirmed: Res. 240, A-22; Reaffirmation: A-22; Modified: CMS Rep. 04, A-23; Reaffirmed: Res. 214, A-23; Reaffirmation: A-23; Reaffirmed in lieu of: Res. 225, A-25; Reaffirmed: Res. 226, A-25)

Merit-based Incentive Payment System (MIPS) Update H-385.905
Our American Medical Association supports legislation that ensures Medicare physician payment is sufficient to safeguard beneficiary access to care, replaces or supplements budget neutrality in MIPS with incentive payments, or implements positive annual physician payment updates.

(BOT Rep. 13, I-20; Reaffirmed: Res. 212, I-21; Reaffirmed: Res. 220, I-24)

Physician Payment Reform H-400.972

1. It is the policy of our American Medical Association to take all necessary legal, legislative, and other action to redress the inequities in the implementation of the RBRVS, including, but not limited to:
    a. Reduction of allowances for new physicians.
    b. The non-payment of EKG interpretations.
    c. Defects in the Geographic Practice Cost Indices and area designations.
    d. Inappropriate Resource-Based Relative Value Units.
    e. The deteriorating economic condition of physicians' practices disproportionately affected by the Medicare payment system.
    f. The need for restoration of the RBRVS conversion factor to levels consistent with the statutory requirement for budget neutrality.
    g. The inadequacy of payment for services of assistant surgeons.
    h. The loss of surgical-tray benefit for many outpatient procedures (Reaffirmed by Rules & Credentials Cmt., A-96);
2. Seek an evaluation of:
    a. Stress factors (i.e., intensity values) as they affect the calculation of the Medicare Payment Schedule, seeking appropriate, reasonable, and equitable adjustments.
    b. Descriptors (i.e., vignettes) and other examples of services used to determine RBRVS values and payment levels and to seek adjustments so that the resulting values and payment levels appropriately pertain to the elderly and often infirm patients.
3. Evaluate the use of the RBRVS on the calculation of the work component of the Medicare Payment Schedule and to ascertain that the concept for the work component continues to be an appropriate part of a resource-based relative value system.
4. Seek to assure that all modifiers, including global descriptors, are well publicized and include adequate descriptors.
5. Seek the establishment of a reasonable and consistent interpretation of global fees, dealing specifically with preoperative office visits, concomitant office procedures, and/or future procedures.
6. Seek from CMS and/or Congress an additional comment period beginning in the Fall of 1992.
7. Seek the elimination of regulations directing patients to points of service.
8. Support further study of refinements in the practice cost component of the RBRVS to ensure better reflection of both absolute and relative costs associated with individual services, physician practices, and medical specialties, considering such issues as data adequacy, equity, and the degree of disruption likely to be associated with any policy change.
9. Take steps to assure that relative value units in the Medicare payment schedule, such as nursing home visits, are adjusted to account for increased resources needed to deliver care and comply with federal and state regulatory programs that disproportionately affect these services and that the Medicare conversion factor be adjusted and updated to reflect these increased overall costs.
10. Support the concepts of HR 4393 (the Medicare Geographic Data Accuracy Act of 1992), S 2680 (the Medicare Geographic Data Accuracy Act of 1992), and S 2683 (Medicare Geographic Data Accuracy Act) for improving the accuracy of the Medicare geographic practice costs indices (GPCIs) and work with CMS and the Congress to assure that GPCIs are updated in as timely a manner as feasible and reflect actual physician costs, including gross receipt taxes.
11. Request that CMS refine relative values for particular services on the basis of valid and reliable data and that CMS rely upon the work of the AMA/Specialty Society RVS Updating

Committee (RUC) for assignment of relative work values to new or revised CPT codes and any other tasks for which the RUC can provide credible recommendations.
12. Pursue aggressively recognition and CMS adoption for Medicare payment schedule conversion factor updates of an index providing the best assurance of increases in the monetary conversion factor reflective of changes in physician practice costs, and to this end, to consider seriously the development of a ”shadow” Medicare Economic Index.
13. Continue to implement and refine the Payment Reform Education Project to provide member physicians with accurate and timely information on developments in Medicare physician payment reform.
14. Take steps to assure all relative value units contained in the Medicare Fee Schedule are adjusted as needed to comply with ever-increasing federal and state regulatory requirements.

(Sub. Res. 109, A-92; Reaffirmed: I-92; Reaffirmed by CMS Rep. 8, A-95 and Sub. Res. 124, A-95; Reaffirmation A-99 and Reaffirmed: Res. 127, A-99; Reaffirmation A-02; Reaffirmation A-06; Reaffirmation I-07; Reaffirmed: BOT Rep. 14, A-08; Reaffirmation A-09; Reaffirmed: CMS Rep. 01, A-19; Reaffirmed: Res. 212, I-21; Reaffirmed: Res. 802, I-24)

Addressing Adult and Pediatric Obesity D-440.954

1. Our American Medical Association will:
    a. Assume a leadership role in collaborating with other interested organizations, including national medical specialty societies, the American Public Health Association, the Center for Science in the Public Interest, and the AMA Alliance, to discuss ways to finance a comprehensive national program for the study, prevention, and treatment of obesity, as well as public health and medical programs that serve vulnerable populations.
    b. Encourage state medical societies to collaborate with interested state and local organizations to discuss ways to finance a comprehensive program for the study, prevention, and treatment of obesity, as well as public health and medical programs that serve vulnerable populations.
    c. Continue to monitor and support state and national policies and regulations that encourage healthy lifestyles and promote obesity prevention.
2. Our AMA, consistent with H-440.842, Recognition of Obesity as a Disease, will work with national specialty and state medical societies to advocate for patient access to and physician payment for the full continuum of evidence-based obesity treatment modalities (such as behavioral, pharmaceutical, psychosocial, nutritional, and surgical interventions).
3. Our AMA will work with interested national medical specialty societies and state medical associations to increase public insurance coverage of and payment for the full spectrum of evidence-based adult and pediatric obesity treatment.
4. Our AMA will:
    a. work with state and specialty societies to identify states in which physicians are restricted from providing the current standard of care with regards to obesity treatment.
    b. work with interested state medical societies and other stakeholders to remove out-of-date restrictions at the state and federal level prohibiting healthcare providers from providing the current standard of care to patients affected by obesity.
5. Our AMA will leverage existing channels within AMA that could advance the following priorities:
    - Promotion of awareness amongst practicing physicians and trainees that obesity is a treatable chronic disease along with evidence-based treatment options.
    - Advocacy efforts at the state and federal level to impact the disease obesity.
    - Health disparities, stigma and bias affecting people with obesity.

- Lack of insurance coverage for evidence-based treatments including intensive lifestyle intervention, anti-obesity pharmacotherapy and bariatric and metabolic surgery.
- Increasing obesity rates in children, adolescents and adults.
- Drivers of obesity including lack of healthful food choices, over-exposure to obesogenic foods and food marketing practices.

6. Our AMA will conduct a landscape assessment that includes national level obesity prevention and treatment initiatives, and medical education at all levels of training to identify gaps and opportunities where AMA could demonstrate increased impact.
7. Our AMA will convene an expert advisory panel once, and again if needed, to counsel AMA on how best to leverage its voice, influence and current resources to address the priorities listed in item 5 above.

(BOT Rep. 11, I-06; Reaffirmation A-13; Appended: Sub. Res. 111, A-14; Modified: Sub. Res. 811, I-14; Appended: Res. 201, A-18; BOT Action in response to referred for decision: Res. 415, A-22; Modified: Res. 818, I-22)

Models / Guidelines for Medical Health Care Teams H-160.906

1. Our AMA defines 'physician-led' in the context of team-based health care as the consistent use by a physician of the leadership knowledge, skills and expertise necessary to identify, engage and elicit from each team member the unique set of training, experience, and qualifications needed to help patients achieve their care goals, and to supervise the application of these skills.

2. Our AMA supports the following elements that should be considered when planning a team-based care model according to the needs of each physician practice:

Patient-Centered:
a. The patient is an integral member of the team.
b. A relationship is established between the patient and the team at the onset of care, and the role of each team member is explained to the patient.
c. Patient and family-centered care is prioritized by the team and approved by the physician team leader.
d. Team members are expected to adhere to agreed-upon practice protocols.
e. Improving health outcomes is emphasized by focusing on health as well as medical care.
f. Patients' access to the team, or coverage as designated by the physician-led team, is available twenty-four hours a day, seven days a week.
g. Safety protocols are developed and followed by all team members.

Teamwork:
h. Medical teams are led by physicians who have ultimate responsibility and authority to carry out final decisions about the composition of the team.
i. All practitioners commit to working in a team-based care model.
j. The number and variety of practitioners reflects the needs of the practice.
k. Practitioners are trained according to their unique function in the team.
l. Interdependence among team members is expected and relied upon.
m. Communication about patient care between team members is a routine practice.
n. Team members complete tasks according to agreed-upon protocols as directed by the physician leader.

Clinical Roles and Responsibilities:
o. Physician leaders are focused on individualized patient care and the development of

treatment plans.

p. Non-physician practitioners are focused on providing treatment within their scope of practice consistent with their education and training as outlined in the agreed upon treatment plan or as delegated under the supervision of the physician team leader.

q. Care coordination and case management are integral to the team's practice.

r. Population management monitors the cost and use of care, and includes registry development for most medical conditions.

Practice Management:

s. Electronic medical records are used to the fullest capacity.

t. Quality improvement processes are used and continuously evolve according to physician-led team-based practice assessments.

u. Data analytics include statistical and qualitative analysis on cost and utilization, and provide explanatory and predictive modeling.

v. Prior authorization and precertification processes are streamlined through the adoption of electronic transactions.

(CMS Rep. 6, A-14; Reaffirmed: CMS Rep. 07, A-16; Reaffirmed: CMS Rep. 05, A-17)

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 6-A-26

Subject:	Study of Practice Models for Physicians Performing Procedures Across State Lines
Presented by:	Betty Chu, MD, MBA, Chair
Referred to:	Reference Committee G

Resolution 711, "Study of Practice Models for Physicians Working Across State Lines," was introduced by the Oklahoma delegation at the 2025 Annual Meeting and was referred. It asks the following:

> RESOLVED, that our American Medical Association (AMA) undertake a thorough review of the practice models for physicians relying on transfer agreements between corporate health care entities, rather than physician-to-physician backup agreements for backup coverage, their rates of expected and unexpected complications, the impact of this model on local patients and on local physician medical liability costs; and be it further
>
> RESOLVED, that our AMA should collect and analyze data regarding patient outcomes, complications, and continuity of care issues associated with licensed physicians who primarily practice out of state without appropriate backup agreements; and be it further
>
> RESOLVED, that our AMA's study should include an extensive review of the impact this practice model has on physicians thrust into cross coverage without adequate handoff or fore-knowledge of the patient, impact on physician malpractice costs, patient safety, and physician well-being in our country.

This report focuses on physicians traveling out of state or to another area distant from their home practice, performing a procedure in an ambulatory surgical center (ASC) or office-based laboratory (OBL) and subsequently leaving the area or state. The report recommends the adoption of a new set of related policy principles.

BACKGROUND

An itinerant surgeon travels to a distant site from their home practice, performs surgery, and departs after completing the procedure, often leaving the postoperative care of the patient to another physician or member of the care team. Many believe that in order for this practice to be ethical, a surgeon must perform appropriate preoperative assessments and postoperative follow-up care or delegate this care to a physician familiar with the patient and trained in the same specialty as the surgeon performing the procedure. It should be noted that patients in rural settings can benefit from services provided by itinerant surgeons, granting them access to specialists they would otherwise have to travel long distances to see. Recent data from peer reviewed sources was not available on the impact of itinerant surgeons on patient outcomes or physician liability and/or malpractice. Studies on surgical workforce in the United States almost always omitted the effect of

© 2026 American Medical Association. All rights reserved.

itinerant surgeons. In cases where itinerant surgery was taken into account, data on the impact of this arrangement was inconclusive.

ASCs are regulated health care facilities providing outpatient surgical care for patients who do not require an overnight stay, including preventive and diagnostic treatments. ASC procedures are often paid at rates 35-50 percent lower than those for comparable procedures performed at hospital outpatient departments and thus may be considered more cost efficient.[1] Examples of procedures performed at ASCs include hemodialysis thrombectomy, arteriovenous fistula creation, iliac artery intervention, venous stents, ports, and pacemaker and defibrillator installations. OBLs are similar non-hospital outpatient facilities, typically offering less complex procedures, including endovascular procedures, diagnostic health catheterization, and peripheral angiograms and/or interventions.

ASCs account for over 60 percent of outpatient procedural care and represent a $30 billion market.[2] In recent years, ASCs have become an attractive target for private equity investment. The shift to outpatient surgical procedures presents lucrative opportunities for investors without having to directly acquire a hospital facility. Empirical evidence on quality of care in ASCs after private equity acquisition is still limited and relies on a small number of studies, which to date have not found significant changes in short-term quality metrics though they do show substantial changes in charges and payer mix.[3] A recent study found that private equity-owned ASCs do not increase surgical volume but do raise prices significantly – charging nearly 50 percent more per case within 4-5 years.[4]

RELEVANT POLICY

Policy H-475.984 establishes Core Principles on Office-Based Surgery. Most relevant to this report is Core Principle #4, which states that physicians performing office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia must have admitting privileges at a nearby hospital, or a transfer agreement with another physician who has admitting privileges at a nearby hospital or maintains an emergency transfer agreement with a nearby hospital.

The AMA Code of Ethics discusses related issues in Opinions 2.3.6, Surgical Co-Management, 1.1.3, Patient Rights, and 11.2.3, Contracts to Deliver Health Care Services. Opinion 2.3.6 states that physicians engaging in the practice of surgical co-management should do so following all ethical and legal guidelines, working with the patient to designate one physician to be responsible for ensuring that care is delivered in a coordinated and appropriate manner, and obtaining patient consent for the surgical co-management arrangement. This consent should include the disclosure of significant aspects of the arrangement, such as qualifications of clinicians, services each clinician will provide, and billing arrangements. Opinion 1.1.3 states that patients should be able to expect that their physician will cooperate in coordinating medically indicated care with other health care professionals. Further, the physician will not discontinue treating them when further treatment is medically indicated without giving them sufficient notice and reasonable assistance in making alternative arrangements for care. Finally, Opinion 11.2.3 states that prior to entering into contracts to deliver health care services, physicians should consider the proposed contract to assure themselves that the terms do not create conflicts of interest or compromise their ability to fulfill their ethical and professional obligations to patients.

The American College of Surgeons (ACS) has its own policy and ethics statements regarding itinerant surgeons and surgical co-management.[6] Other surgical specialty societies such as the American Academy of Ophthalmology, American Society of Plastic Surgeons, and American Academy of Otolaryngology-Head and Neck Surgery also have policies or statements that outline

situations where itinerant surgery may be permissible. While these vary, they all generally indicate that the ultimate responsibility for arranging an appropriate level of continuity of care falls upon the operating surgeon.[7,8,9]

DISCUSSION

The lack of available data on patient outcomes and physician liability and/or malpractice makes it difficult to accurately gauge the impact of itinerant surgeons and their work at ASCs across state lines. One can surmise that there may be negative impacts on patients who need follow-up care or burdens on physicians who may be required to provide that care, but there are no data to indicate that is the case.

There are varying opinions on the ethics of itinerant surgery. Despite some criticisms, it may be the most appropriate way to provide specialty surgical care in rural areas or other places with a shortage of specialty surgeons. Ethics statements from the AMA and ACS state that surgeons who perform elective surgery at a practice that is distant from their home have a professional obligation to also perform preoperative assessments and postoperative follow-up care. There is leeway, however, if perioperative care is designated to another physician who is equivalently qualified to continue caring for the patient, as long this arrangement is agreed to ahead of the procedure by all parties, including the patient.

While the original resolution mentioned corporate entities, the recommendations made by the Council are not specific to ownership type (e.g., private equity, physician-owned) as there is no evidence to date that ownership of an ASC has an impact on itinerant surgeon arrangements or outcomes for patients. When compared to non-private equity-owned ASCs, those owned by private equity did not have statistically significant differences in the probability of a patient having an unplanned hospital visit (i.e., complications during or post-surgery).[5]

The principles outlined in the recommendations below can be applied generally and highlight important considerations for those considering the practice of itinerant surgery. Of utmost importance is continuity of care for the patient and having both backup and transfer agreements in place with local physicians who are able to provide the necessary follow-up care, both in case of emergencies and to ensure proper healing and recovery. Itinerant surgery may not be appropriate in all cases, but the Council believes that it may be acceptable in certain circumstances, specifically providing planned specialty surgical care to areas of shortage. The Council concurs with the ethical standards reviewed and agrees that in cases where itinerant surgery is the best option, physicians should follow appropriate guidelines and ethical and legal standards.

As written, the original resolve clauses have challenges to their feasibility but raise an important concern. Additionally, recent data could not be found to quantify the impact of the concerns raised in the original resolution. However, the Council believes there is a gap in AMA policy regarding the practice of itinerant surgeons and thus presents a set of guidelines for physicians performing procedures across state lines, specifically at ASCs and OBLs, to address the issues raised in Resolution 711-A-25.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 711-A-25 and the remainder of the report be filed.

1. That our American Medical Association (AMA) supports the following principles for physicians employed by ambulatory surgical centers (ASC) or office-based laboratories (OBL) who may travel from their primary practice location to provide patient care:
    a. A transfer agreement with a physician or physician group licensed in the patient's state should be arranged to address in-person care needs that may arise from a patient receiving care from a physician who primarily practices out of state or out of the immediate area or from a physician with no admitting privileges to the local hospital.
    b. A referral system with a local physician, physician practice, or other facility for appropriate treatment should be established if a patient's conditions or symptoms are beyond the scope of services provided by the ASC or OBL.
    c. Transfer agreements and backup plans should be coordinated between physicians.
        i. In the event an institution coordinates these arrangements (i.e., a hospital system, an ASC, or an OBL), a physician that would be among those receiving the patient must give explicit consent to the agreement to provide follow-up care.
        ii. When patient transfer is required, a direct hand off of the patient and patient records should be completed.
        iii. Transfer and referral agreements should be evidence-based and risk-based to balance access to care and patient safety.
    d. Protocols for ensuring continuity of care with physicians in the local community should be established.
    e. Consent from the patient regarding preoperative assessment and postoperative care should be obtained prior to the provision of any procedure, with clarity on which physician will be providing care during each step of the process.
    f. Physicians entering into these arrangements should ensure that they are in keeping with ethical standards and legal requirements.

    (New HOD Policy)

2. That our AMA reaffirm Policy H-475.984, which lists Core Principles for Office-Based Surgery Regulations, with a focus on Core Principle #4 which states that physicians performing office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia must have admitting privileges at a nearby hospitals or a transfer agreement with another physician who has admitting privileges at a nearby hospital, or to maintain an emergency transfer agreement with a nearby hospital. (Reaffirm HOD Policy)

Fiscal Note: Minimal

Council on Medical Service Report 6-A-26
Study of Practice Models for Physicians Working Across State Lines
Policy Appendix

Office-Based Surgery Regulation, H-475.984
Our American Medical Association supports the following Core Principles on Office-Based Surgery:

Core Principle #1: Guidelines or regulations for office-based surgery should be developed by states according to levels of anesthesia defined by the American Society of Anesthesiologists (ASA) excluding local anesthesia or minimal sedation. (American Society of Anesthesiologists. Continuum of depth of sedation. Available at: https://www.asahq.org/standards-and-guidelines/guidelines-for-office-based-anesthesia, https://www.asahq.org/standards-and-guidelines/continuum-of-depth-of-sedation-definition-of-general-anesthesia-and-levels-of-sedationanalgesia).

Core Principle #2: Physicians should select patients for office-based surgery using moderate sedation/analgesia, deep sedation/analgesia or general anesthesia by criteria including the ASA Physical Status Classification System and so document. (American Society of Anesthesiologists. ASA physical status classification system. Available at: https://www.asahq.org/standards-and-guidelines/asa-physical-status-classification-system).

Core Principle #3: Physicians who perform office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia should have their facilities accredited by The Joint Commission, Accreditation Association for Ambulatory Health Care (AAAHC), American Association for Accreditation of Ambulatory Surgical Facilities (AAAASF), American Osteopathic Association (AOA), or by a state recognized entity, such as the Institute for Medical Quality (IMQ), or be state licensed and/or Medicare certified.

Core Principle #4: Physicians performing office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia must have admitting privileges at a nearby hospital or a transfer agreement with another physician who has admitting privileges at a nearby hospital, or maintain an emergency transfer agreement with a nearby hospital.

Core Principle #5: States should follow the guidelines outlined by the Federation of State Medical Boards (FSMB) regarding informed consent. (Report of the Special Committee on Outpatient [Office-Based] Surgery. (Med. Licensure Discipline. 2002; 88:-160-174).

Core Principle #6: For office surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia, states should consider legally privileged adverse incident reporting requirements as recommended by the FSMB and accompanied by periodic peer review and a program of Continuous Quality Improvement. (Report of the Special Committee on Outpatient (Office-Based) Surgery. https://www.fsmb.org/siteassets/advocacy/policies/outpatient-office-based-surgery.pdf).

Core Principle #7: Physicians performing office-based surgery using moderate sedation/analgesia, deep sedation/analgesia or general anesthesia must obtain and maintain board certification by one of the boards recognized by the American Board of Medical Specialties, American Osteopathic Association, or a board with equivalent standards approved by the state medical board within five years of completing an approved residency training program. The procedure must be one that is

generally recognized by that certifying board as falling within the scope of training and practice of the physician providing the care.

Core Principle #8: Physicians performing office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia may show competency by maintaining core privileges at an accredited or licensed hospital or ambulatory surgical center, for the procedures they perform in the office setting. Alternatively, the governing body of the office facility is responsible for a peer review process for privileging physicians based on nationally recognized credentialing standards.

Core Principle #9: For office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia, at least one physician who is credentialed or currently recognized as having successfully completed a course in advanced resuscitative techniques (e.g., ATLS, ACLS, or PALS), must be present or immediately available with age- and size-appropriate resuscitative equipment until the patient has met the criteria for discharge from the facility. In addition, other medical personnel with direct patient contact should at a minimum be trained in Basic Life Support (BLS).

Core Principle #10: Physicians administering or supervising moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia should have appropriate education and training.
(BOT Action in response to referred for decision BOT Rep. 23, A-03; Modified: CMS Rep. 4, A-13; Modified: CCB/CLRPD Rep. 1, A-23)

E-2.3.6 Surgical Co Management
Surgical co-management refers to the practice of allotting specific responsibilities of patient care to designated clinicians. Such arrangements should be made only to ensure the highest quality of care.

When engaging in this practice, physicians should:
(a) Allocate responsibilities among physicians and other clinicians according to each individual's expertise and qualifications.
(b) Work with the patient and family to designate one physician to be responsible for ensuring that care is delivered in a coordinated and appropriate manner.
(c) Participate in the provision of care by communicating with the coordinating physician and encouraging other members of the care team to do the same.
(d) Obtain patient consent for the surgical co-management arrangement of care, including disclosing significant aspects of the arrangement such as qualifications of clinicians, services each clinician will provide, and billing arrangement.
(e) Obtain informed consent for medical services in keeping with ethics guidance, including provision of all relevant medical facts.
(f) Employ appropriate safeguards to protect patient confidentiality.
(g) Ensure that surgical co-management arrangements are in keeping with ethical and legal restrictions.
(h) Engage another caregiver based on that caregiver's skill and ability to meet the patient's needs, not in the expectation of reciprocal referrals or other self-serving reasons, in keeping with ethics guidance on consultation and referrals.
(i) Refrain from participating in unethical or illegal financial agreements, such as fee-splitting.

AMA Principles of Medical Ethics: I,II,IV,V,VI
The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law.
(Issued: 2016)

E-1.1.3 Patient Rights
The health and well-being of patients depends on a collaborative effort between patient and physician in a mutually respectful alliance. Patients contribute to this alliance when they fulfill responsibilities they have, to seek care and to be candid with their physicians, for example.

Physicians can best contribute to a mutually respectful alliance with patients by serving as their patients' advocates and by respecting patients' rights. These include the right:

(a) To courtesy, respect, dignity, and timely, responsive attention to his or her needs.
(b) To receive information from their physicians and to have opportunity to discuss the benefits, risks, and costs of appropriate treatment alternatives, including the risks, benefits and costs of forgoing treatment. Patients should be able to expect that their physicians will provide guidance about what they consider the optimal course of action for the patient based on the physician's objective professional judgment.
(c) To ask questions about their health status or recommended treatment when they do not fully understand what has been described and to have their questions answered.
(d) To make decisions about the care the physician recommends and to have those decisions respected. A patient who has decision-making capacity may accept or refuse any recommended medical intervention.
(e) To have the physician and other staff respect the patient's privacy and confidentiality.
(f) To obtain copies or summaries of their medical records.
(g) To obtain a second opinion.
(h) To be advised of any conflicts of interest their physician may have in respect to their care.
(i) To continuity of care. Patients should be able to expect that their physician will cooperate in coordinating medically indicated care with other health care professionals, and that the physician will not discontinue treating them when further treatment is medically indicated without giving them sufficient notice and reasonable assistance in making alternative arrangements for care.

AMA Principles of Medical Ethics: I,IV,V,VIII,IX
The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law.
(Issued: 2016)

E-11.2.3 Contracts to Deliver Health Care Services
Prioritizing profits over patients is incompatible with physicians' ethical obligations. No part of the health care system that supports or delivers patient care should place profits over such care. Physicians have a fundamental ethical obligation to put the welfare of patients ahead of other considerations, including personal financial interests. This obligation requires that before entering into contracts to deliver health care services, physicians consider carefully the proposed contract to assure themselves that its terms and conditions do not create untenable conflicts of interest or compromise their ability to fulfill their ethical and professional obligations to patients. Those physicians who enter into contracts with corporate entities, such as private equity firms, management service organizations, professional services corporations, insurance companies, or pharmaceutical benefit managers, who act within their capacity as a physician, even as administrators or intermediaries, also have a duty to uphold the ethical obligations of the medical profession.

Ongoing evolution in the health care system continues to bring changes to medicine, including changes in reimbursement mechanisms, models for health care delivery, restrictions on referral and use of services, clinical practice guidelines, and limitations on benefits packages. While these

changes are intended to enhance quality, efficiency, and safety in health care, they can also put at risk physicians' ability to uphold professional ethical standards and can impede physicians' freedom to exercise independent professional judgment and tailor care to meet the needs of individual patients.

As physicians seek capital to support their practices or enter into various differently structured contracts to deliver health care services—with group practices, hospitals, health plans, investment firms, or other entities—they should be mindful that while some arrangements have the potential to promote desired improvements in care, other arrangements have the potential to put patients' interests at risk and to interfere with physician autonomy.

When contracting with entities, or having a representative do so on their behalf, to provide health care services, physicians should:

(a) Carefully review the terms of proposed contracts, preferably with the advice of legal and ethics counsel to assure themselves that the arrangement:

(i) minimizes conflict of interest with respect to proposed reimbursement mechanisms, financial or performance incentives, restrictions on care, or other mechanisms intended to influence physicians' treatment recommendations or direct what care patients receive, in keeping with ethics guidance;

(ii) does not compromise the physician's own financial well-being or ability to provide high-quality care through unrealistic expectations regarding utilization of services or terms that expose the physician to excessive financial risk;

(iii) ensures the physician can appropriately exercise professional judgment;

(iv) includes a mechanism to address grievances and supports advocacy on behalf of individual patients;

(v) is transparent and permits disclosure to patients;

(vi) enables physicians to have significant influence on, or preferably outright control of, decisions that impact practice staffing;

(vii) prohibits the corporate practice of medicine.

(b) Negotiate modification or removal of any terms that unduly compromise physicians' ability to uphold ethical or professional standards.

When entering into contracts as employees, preferably with the advice of legal and ethics counsel, physicians should:

(c) Advocate for contract provisions to specifically address and uphold physician ethics and professionalism.

(d) Advocate that contract provisions affecting practice align with the professional and ethical obligations of physicians and negotiate to ensure that alignment.

(e) Advocate that contracts do not require the physician to practice beyond their professional capacity and provide contractual avenues for addressing concerns related to good practice, including burnout or related issues.

(f) Not enter into any contract that would require the physician to violate their professional ethical obligations.

When contracted by a corporate entity involved in the delivery of health care services, physicians should:

(g) Terminate any contract that requires the physician to violate their professional ethical obligations and report any known or suspected ethical violations through the appropriate oversight mechanisms.

AMA Principles of Medical Ethics: I,II,III,V,VI,VIII,IX
The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law.
(Issued: 2016)

REPORT 7 OF THE COUNCIL ON MEDICAL SERVICE (A-26)
Private Insurance Coverage of Anti-Obesity Medications

EXECUTIVE SUMMARY

Resolution 230-A-25, "Advocating to Expand Private Insurance Coverage of Anti-Obesity Medications," was introduced by the Endocrine Society, American Association of Clinical Endocrinology, American Society for Reproductive Medicine, American Society for Metabolic and Bariatric Surgery, Obesity Medicine Association, and American College of Physicians. The resolution asked that existing Policy H-440.801 be amended. Subclauses 1f and 1h were adopted while Subclauses 1e and 1g were referred. These referred subclauses ask the following:

> RESOLVED, that our American Medical Association (AMA) amend policy H-440.801, Advocacy Against Obesity-Related Bias by Insurance Providers, by addition to read as follows:
> 1. Our AMA will urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to:
>   e. Eliminate coverage exclusions for the pharmacologic treatment of obesity.
>   g. Support and cover chronic treatment with anti-obesity medications to maintain weight loss.

This report discusses the persistence of obesity, the marketplace and coverage of anti-obesity medications (AOMs), guidelines for the treatment of obesity, and includes several policy recommendations. Obesity is a chronic, progressive disease and a global public health challenge. While seven medications are currently approved for weight loss, the next generation of AOMs will enter the market within the next few years and are considered more effective with fewer side effects. Despite an increasing body of evidence to suggest that AOMs are effective treatments, coverage for obesity remains limited. The World Health Organization and Institute for Clinical and Economic Review recently released reports providing guidance on the use of glucagon-like peptide-1 (GLP-1) medications, strategies to guide market action, policy solutions, and federal policy interventions to improve access. Furthermore, the regulatory environment has been dynamic, with GLP-1s included in the Trump Administration's priority to lower prescription drug prices.

The Council on Medical Service recommends new policy supporting potential innovative payment arrangements and pilot programs which allow for demonstration projects that cover emerging medications which aid in obesity management. The Council also recommends the long-term coverage of AOMs to maintain weight loss through consistent drug pricing, formulary tiering, benefit structures, and coverage criteria in private insurance and employer-sponsored insurance to offset cost variability. Furthermore, the Council recommends equitable access to comprehensive disease management, health promotion, and prevention interventions targeting the general population and those who are at elevated risk for obesity. Additionally, the Council recommends reaffirming Policy H-110.997 and Policy H-110.959 to emphasize the AMA's support for affordable access to prescription drugs. The Council also recommends reaffirming Policy H-110.987 to highlight the AMA's support to ensure that drug prices are affordable to patients and Policy D-330.954 and Policy D-110.987 to underscore the AMA's support and recognition for the Centers for Medicare & Medicaid Services (CMS) to negotiate pharmaceutical pricing for all applicable medications covered by CMS and efforts to increase pharmacy benefit manager transparency and regulation. Lastly, the Council recommends reaffirming Policy H-150.953 to highlight the AMA's recognition of obesity as a complex health disorder.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 7-A-26

Subject: Private Insurance Coverage of Anti-Obesity Medications

Presented by: Betty Chu, MD, MBA, Chair

Referred to: Reference Committee G

Resolution 230-A-25, "Advocating to Expand Private Insurance Coverage of Anti-Obesity Medications," was introduced by the Endocrine Society, American Association of Clinical Endocrinology, American Society for Reproductive Medicine, American Society for Metabolic and Bariatric Surgery, Obesity Medicine Association, and American College of Physicians. The resolution asked that existing Policy H-440.801 be amended. Subclauses 1f and 1h were adopted, while Subclauses 1e and 1g were referred. These referred subclauses ask the following:

> RESOLVED, that our American Medical Association (AMA) amend policy H-440.801, Advocacy Against Obesity-Related Bias by Insurance Providers, by addition to read as follows:
>
> 1. Our AMA will urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to:
>
> e. Eliminate coverage exclusions for the pharmacologic treatment of obesity.
>
> g. Support and cover chronic treatment with anti-obesity medications to maintain weight loss.

This report discusses the persistence of obesity, the emerging marketplace and coverage of anti-obesity medications (AOMs), guidelines for the treatment of obesity, and includes several policy recommendations.

BACKGROUND

Defined by the World Health Organization (WHO) as a chronic, progressive, and relapsing disease, obesity is a global public health challenge affecting more than one billion people worldwide and contributing to millions in preventable deaths each year. In the United States (U.S.), the prevalence of obesity among adults increased from 34.7 million (19.3 percent) in 1990 to 107 million (42.5 percent) in 2022.[1,2] Adults with severe obesity accounted for 9.2 percent (over twenty-two million by total population) in 2020.[3] By 2035, an estimated 46.9 percent of the adult population (126 million) will be categorized as obese.[4] The percentage of U.S. children and adolescents affected by obesity has more than tripled from 1965 (5 percent) to 2018 (19 percent).[5] Obesity is costly to the U.S. health care system, with an estimated $172 billion annually attributed in medical costs, representing 5 to 7 percent of all health care expenditures.[6] Despite obesity being a significant chronic disease for all populations, prevalence varies by race and ethnicity. In 2022, non-Hispanic Black females were estimated to have the highest prevalence of obesity, at 56.9 percent followed by Hispanic females at 49.4 percent.[7] The increasing prevalence of obesity also varied by race and ethnicity. For instance, obesity has risen least for non-Hispanic Black males, with an increase in prevalence from 22.0 percent in 1990 to 40.4 percent in 2022.[8] Additionally, there are state-level differences, with prevalence highest in Midwestern and Southern states and variance by age, with

obesity prevalence highest among middle-aged adults and large increases in the youngest adult ages, especially for females.[9]

While the WHO defines obesity as having a body mass index (BMI) of 30.0 or higher in adults, the Lancet Commission recently announced a new definition that moves beyond BMI to classify it as a chronic disease.[10] Obesity is associated with and can result in an increased risk of comorbidities such as hypertension, diabetes, hypercholesterolemia, coronary heart disease, gallbladder disease, osteoarthritis, certain cancers, and liver disease. Severe obesity, defined as having a BMI of 40 or higher, can shorten life expectancy by up to 14 years, similar to smoking.[11] Moderately obese and severely obese individuals are estimated to have 14 to 25 percent more visits to their physicians, respectively, with visits to primary physicians to be 38 percent higher for those who are obese.[12]

Previously, obesity was thought to be an imbalance between energy intake and expenditure. However, recent research has suggested that genetic, physiological, and behavioral factors play a significant role.[13] Variations in genes that affect metabolic processes, appetite regulation, body fat distribution, and environmental factors such as geography, food and physical activity environment, and socioeconomic status are consequential in the development of obesity.[14] While traditional strategies focused on individual behavior have been insufficient, prevention efforts targeting obesity-related noncommunicable diseases have never been more important. For instance, prevention efforts can include the promotion of healthy eating, active lifestyles, and early intervention to reduce risks of diabetes, heart disease, and cancer. People with obesity continue to face social stigma with weight bias and discrimination persisting as significant factors in understanding the impact of and providing treatment through pharmacological methods.[15] Additionally, weight bias has led to delays in diagnosis and treatment and contributes to poorer health outcomes leading to a profound effect on all aspects of patients' lives and those of their families.[16]

Multiple public health interventions, such as school nutrition and exercise programs, taxes on unhealthy foods, and health system requirements for nutritional counseling programs[17] have had limited success, requiring health care to evolve to meet the needs of the population more adequately. Currently, comprehensive care for obesity includes nutrition therapy, physical therapy, behavioral counseling, and pharmacotherapy.[18] There are multiple methods for treating obesity including lifestyle modifications (e.g., diet, physical activity, and behavioral modifications), medications, and bariatric surgery, usually in combination.[19]

ANTI-OBESITY MEDICATIONS

Initially developed for the treatment of type-2 diabetes, GLP-1 receptor agonist and glucose-dependent insulinotropic polypeptides (GIP)/GLP-1 dual agonist therapies have emerged as potential AOMs. By targeting mechanisms that reduce appetite and enhance satiety along with other physiological effects, GLP-1 medications provide a complementary treatment to traditional behavioral interventions and important innovations to address obesity.[20] Additionally, clinical benefits associated with GLP-1 therapies have demonstrated improvements for major cardiovascular events, heart failure with preserved ejection fraction, diabetes prevention, systolic blood pressure and low-density lipoprotein cholesterol, obstructive sleep apnea, peripheral artery disease, kidney disease, metabolic dysfunction-associated steatohepatitis, and neurodegenerative diseases.[21] Similar results can be seen for patients with diabetes: improved glycemic control, significant weight loss, cardiovascular risk reduction, renal and liver production, a reduced need for other medications, lowered blood pressure, and improved cholesterol profiles.[22] The pleiotropic effects are beneficial for patients with multiple chronic conditions, especially for older patients, because it can help reduce polypharmacy and increase adherence to pharmacological treatments.[23]

There has also been emerging evidence to suggest their utility in treating neurodegenerative diseases, reducing stroke risk, liver disease, and substance use disorders.[24] However, there are potential unintended consequences through the long-term use of GLP-1 medications. For instance, there is emerging clinical and paraclinical evidence that suggests that the agents may contribute to a reduction in skeletal muscle mass, potentially exacerbating or precipitating sarcopenic obesity, particularly in older or frail individuals with limited muscular reserves.[25] Therefore, the preservation of muscular health through nutritional support, exercise, and pharmacological therapies are important supplementary treatments, especially for older patients.

At the time this report was written, there were seven medications approved for weight loss by the Food & Drug Administration (FDA), with varying effectiveness and occurrences of side effects. Earlier generations of obesity medications had lower degrees of effectiveness with higher incidences of side effects. Appendix A highlights the FDA approved GLP-1 medications for the treatment of obesity. There may be potential benefits to prescribing and administering earlier generations of AOMs.[26] For instance, access to second generation AOMs remains limited because of restricted insurance coverage and high out-of-pocket costs. While Wegovy® and Zepbound® are listed at $16,188 and $12,720 per year, respectively, Qsymia and Contrave are $1,465 and $2,095, respectively.[27] Additionally, significant shortages of GLP-1 medications can make it difficult to prescribe the second generation of AOMs and further inhibit access for certain patients. Furthermore, some patients may be nonresponders to semaglutide (or tirzepatide) or have difficulty tolerating GLP-1 based medications.[28] Some patients may require multiple medications in addition to semaglutide or tirzepatide to achieve significant weight loss or second generation AOMs might be too powerful and result in too much weight loss, loss of lean muscle mass, and concern of increased frailty.[29]

The next generation of AOMs are set to enter the market within the next several years–with 40 manufacturers in the process of developing GLP-1 drugs and 16 AOMs expected to be approved from 2026 to 2029–and are considered more effective with fewer side effects.[30] Similarly, non-GLP-1 medications are part of this emerging market and include melanocortin-4 receptor agonists, amylin analogs, and mitochondrial uncouplers.[31] Non-GLP-1 medications can be appealing for patients who do not respond to GLP-1s or have specific metabolic needs. Some of these new medications provide an oral alternative targeting similar pathways without requiring injections, thereby improving accessibility and patient adherence. Further, the dosing schedule for some of these new medicines is easily adherable. The emergence of these medications, their efficacy, favorable effects on metabolism and obesity-related complications, and recognition of obesity as a chronic health condition, has led to a rapid expansion in their use. GLP-1-based prescriptions among people without diabetes have risen by 700 percent between 2019 to 2023.[32] Pervasive media attention has led some to theorize whether AOMs could be a potential solution to the obesity epidemic. In December 2025, Novo Nordisk released a pill version of Wegovy® and, in less than three weeks, 150,000 prescriptions were filled.[33] According to the manufacturer, most prescriptions are from new patients and 9 out of 10 paid out of pocket.[34]

Pervasive media attention has also led GLP-1s to being used off-label for non-obese patients to lose small amounts of weight.[35] While GLP-1s are being used off-label by individuals who do not meet obesity criteria, there are significant considerations required in prescribing an AOM. There is a marked difference between AOMs being prescribed for chronic, long-term use and for short-term use without the guidance of a medical professional. Compounded versions of the GLP-1 injectables were made available in early 2022 when brand name versions were in short supply. Under Section 503A and 503B of the Federal Food, Drug, and Cosmetic (FD&C) Act, compounded drugs are allowed when the brand-name drug is on the FDA's official Drug Shortages list. While the FDA provides some flexibility, the agency may act if an outsourcing facility continues to fill new orders

for more than 60 days after the drug has been removed from the Drug Shortages list. In the case of GLP-1 medications, the FDA removed the injectables from the list in February 2025 but allowed a brief window for compounders to wind down operations with 503A pharmacies allowed to continue until April 22, 2025 and 503B outsourcing facilities until May 22, 2025.[36] Despite the timeline, and the FDA warning telehealth companies against illegal marketing of compounded GLP-1s, Hims & Hers™ was still offering its versions of injectable weight-loss drugs until March 2026 when it struck a deal with Novo Nordisk to sell Wegovy® at a discounted rate.[37,38]

Treatment discontinuation of tirzepatide and semaglutide remains high and is a significant issue as it is associated with increased risks of cardiovascular events and mortality. Randomized trials, such as SURMOUNT-4, demonstrate that discontinuation of pharmacotherapy leads to weight re-gain reinforcing the chronic nature of obesity treatment.[39] Cost or insurance-related (insurance denial, expiration of manufacturer discount coupon, or out-of-pocket cost) hurdles were cited as the most common reason, by half of respondents (47.6 percent).[40] Side effects were the second most cited reason with 14.6 percent of respondents. For comparison, side effects and efficacy are cited as the most common reason for treatment discontinuation of medication for chronic medical conditions.[41] In general, high-risk, non-oral medications for conditions like diabetes, asthma, and glaucoma often have higher initial discontinuation rates.[42] Furthermore, younger patients, those with comorbidities, and patients who are non-White may have higher rates of discontinuation.[43]

COVERAGE OF ANTI-OBESITY MEDICATIONS

Despite an increasing body of evidence to suggest that emerging AOMs are effective treatments, coverage of GLP-1s for obesity treatment remains limited. Indeed, coverage is sparse for individuals through Medicaid, Affordable Care Act (ACA) Marketplace plans, and those who work in large employer firms, and coverage in Medicare for treatment of obesity is, for now, prohibited.[44,45,46] While all Medicaid programs cover GLP-1s for the treatment of diabetes, coverage is optional for the treatment of obesity. As of October 2025, 16 state Medicaid programs covered GLP-1s for obesity treatment, 11 states cover GLP-1s for weight loss under their state employee health plan, and five provide coverage under both programs.[47] Some of these Medicaid programs, however, have already announced they will discontinue coverage or restrict those who can qualify. North Carolina Medicaid, for example, ended coverage of GLP-1s for obesity in October 2025, citing shortfalls in state funding.[48] Additionally, California, New Hampshire and South Carolina will end coverage at the beginning of 2026.[49] Further, starting next year, Michigan Medicaid will limit coverage to people who are "morbidly obese," (BMI of 40 or higher).[50] Lastly, Pennsylvania, Rhode Island and Wisconsin are also considering new restrictions.[51]

Private insurance coverage is often based on the insurance plan or employer decision to include the benefit; even if the coverage is offered, its initial and continued coverage is restricted by stringent prior authorization criteria. As of 2025, 39.4 percent of individuals with private insurance and 45.1 percent of individuals with employee sponsored insurance had at least one GLP-1 medication covered by their plan.[52] Drugs solely approved to treat obesity have minimal to no coverage on most ACA Marketplace formularies. Among ACA Marketplace plans with these drugs on formulary, prior authorization is required by most plans (greater than 98 percent).[53] Step therapy, a utilization management tool that requires patients to try and fail lower cost medications before coverage is provided for more expensive medications, is less commonly used, with 1 in 4 marketplace plans requiring it.[54] Quantity limits are imposed in most plans among those including these drugs.[55] With such a high demand for and short supply of GLP-1 agonists, some patients have taken to procuring them from alternative sources, such as online vendors, medical spas, or compounding pharmacies selling products not evaluated by the FDA, some of which may contain different ingredients.[56] The FDA is increasing enforcement against compounded GLP-1 drugs, as

many shortages have been resolved, removing the exemption that allowed pharmacies to create copies of branded drugs.[57] The agency is targeting companies, including telehealth providers, for selling non-FDA-approved, mass-marketed "copycat" versions that pose safety risks.[58]

Despite a notable increase in employers covering GLP-1 medications for weight loss, the high costs associated with obesity medications raise significant concerns. While recognizing their benefit, many employers are considering scaling back coverage due to their high cost and higher than expected use. Approximately 34 percent of non-elderly people with employer-sponsored health insurance (36.2 million) have a body mass that would medically qualify them for GLP-1 drugs.[59] The share of firms with 5,000 or more workers covering these medications for weight loss increased significantly (from 28 percent in 2024 to 43 percent in 2025).[60] However, only 19 percent of firms with 200 or more workers cover GLP-1 drugs for weight loss in their largest health plan in 2025.[61] Furthermore, for those firms that cover GLP-1s for weight loss, about a third require enrollees to meet with a dietician, case manager, therapist, or participate in a lifestyle program.[62]

While insurance coverage of GLP-1 medications for obesity remains lower than other medications, there is a roadmap to broader access with comparable treatments. Bariatric surgery coverage has evolved from a rarely covered, high-risk procedure in the early 1990s to a widely accepted, insurance-covered treatment for severe obesity. Driven by improved safety and proven metabolic benefits, a major milestone occurred when the Centers for Medicare & Medicaid Services (CMS) expanded Medicare coverage in 2006 for patients with specific comorbidities.[63] Currently, bariatric surgery is generally covered for obesity when deemed medically necessary, a specific BMI threshold is met with obesity-related comorbidities like diabetes and sleep apnea. Additionally, coverage requires documentation of failed, previous weight loss attempts, a supervised diet program, and mental health evaluations.[64]

Rebates for GLP-1 medications are widespread and, as of 2025, are estimated to be 40 percent or higher for major products like Wegovy® and Zepbound®.[65] They are most readily used by pharmacy benefit managers (PBMs) to secure formulary placement, reducing high list prices to lower net costs for payers. The rebates are a primary tool used to secure preferred coverage on insurer formularies, with some discounts at 50 percent.[66] Additionally, states received substantial rebates for brand-name GLP-1s, with usage growing and accounting for eight percent of Medicaid prescription drug spending before rebates in 2024.[67] However, these manufacturer-to-payer rebates do not always translate directly into lower out-of-pocket costs for individual users and frequently rely on copay assistance coupons to manage costs.

PBMs play a central, controversial role in the high cost of GLP-1 medications. By controlling access via formularies and negotiating large, often opaque rebates, PBMs are criticized for favoring higher-priced drugs for larger rebates and, therefore, keeping net costs high for employers.[68,69] PBMs argue their negotiating power is used to counterbalance high list prices set by manufacturers, sometimes securing lower out-of-pocket costs for members. However, limited transparency makes it difficult to distinguish how and if the discounts are passed on to employers or patients.[70] PBMs can also implement strict utilization controls including mandatory prior authorization, step therapy, and BMI requirements to limit access and manage costs.[71] While utilization controls can be useful, it is argued that PBMs may use unfair criteria or a patient facing restricted access despite it being a clinically appropriate treatment.

A study from 2025 showed that there was significant disparities in AOM prescription rates based on gender, race/ethnicity, age, insurance type, insurance carrier, and adjusted gross income (AGI).[72,73] For instance, Black patients, Hispanic individuals, and those of other racial or ethnic backgrounds had lower prescription rates, compared with white patients.[74] Furthermore, men had

lower rates than women and, compared with privately insured individuals those with Medicaid, traditional Medicare, Medicare Advantage, self-paying, and other insurance types had lower rates of prescription.[75] Lastly, those with the highest level of income had the highest prescription rate compared to those with the lowest income.[76] Patients filling their prescription differed as well, though less significantly than those receiving an AOM prescription. While Hispanic patients were less likely to fill their prescription compared with White patients, Black patients had similar filling rates.[77] Patients who were older or women were more likely to fill their prescription higher odds of AOM fill.[78] Furthermore, Medicaid, traditional Medicare and Medicare Advantage insurance types were associated with lower odds of AOM fill, compared with private insurance category.[79] Interestingly, insurance carriers or AGI did not produce any significant difference in filling rates.[80]

WORLD HEALTH ORGANIZATION GUIDELINES ON THE USE OF GLP-1 THERAPIES[81]

In December 2025, and in response to requests from its member nations, the WHO published an evidence-informed guideline on the use of GLP-1 therapies in the treatment of obesity in adults. The guideline outlines a strategic foundation to help countries accelerate their response to the obesity crisis, brings together the current evidence base, details the development process, and distills the implications for expanding equitable access to these medications while shaping a more comprehensive ecosystem for obesity management. In the report, two practice statements were outlined with partnering recommendations. First, obesity was recognized as chronic, complex disease that requires lifelong care beginning in clinical assessment and early diagnosis. It was recommended that in adults living with obesity, GLP-1 receptor agonists or GIP/GLP-1 dual agonists may be used as long-term treatment for obesity. Second, people living with obesity should receive context-appropriate counselling on behavioral and lifestyle changes as an initial step toward more structured behavioral interventions. Thus, it was recommended that in adults living with obesity who are prescribed GLP-1 receptor agonists or GIP/GLP-1 dual agonists, intensive behavioral therapy may be provided as a co-intervention within a comprehensive multimodal clinical algorithm.

The guideline emphasizes the importance of fair access to GLP-1 therapies and preparing health systems for use of obesity medicines. Without deliberate policies, the WHO suggests access to GLP-1 therapies could exacerbate existing health disparities. Additionally, in September 2025, the WHO added GLP-1 therapies to its Essential Medicines List for managing type 2 diabetes in high-risk groups.[82] With the guideline, the WHO issues conditional recommendations for using therapies to support people living with obesity, as part of a comprehensive approach that includes healthy diets, regular physical activity, and support from health professionals.

INSTITUTE FOR CLINICAL AND ECONOMIC REVIEW REPORT: AFFORDABLE ACCESS TO GLP-1 OBESITY MEDICATIONS[83]

In April 2025, the Institute for Clinical and Economic Review (ICER) released the report Affordable Access to GLP-1 Obesity Medications: Strategies to Guide Market Action and Policy Solutions. In the report, ICER presented potential strategies to guide market action, policy solutions, and federal policy interventions to improve access to GLP-1 medications, and AOMs in general.

Five market strategies were suggested, informed by ICER's interviews with different stakeholders and their advantages and limitations are outlined for each option in Appendix B. For instance, temporary coverage denial was a solution, suggesting that some purchasers and insurers have concluded that they do not have the budget flexibility to provide coverage for GLP-1s for treatment of obesity at current prices. For those that are seeking a more affordable and long-term way to provide coverage for expensive drugs, such as GLP-1s, purchasers and insurers may apply enhanced utilization and could include coverage criteria. Some coverage criteria included BMI and clinical comorbidities, additional clinical or genetic factors, and/or duration of coverage. Another suggestion was that managing the network of clinical providers may improve results while controlling costs. While some purchasers may consider temporary non-coverage of GLP-1 drugs, another solution may be to utilize alternative payment arrangements to help individuals afford treatment. The last market solution that the report outlined was carve-out programs. Many purchasers or payers are delegating obesity management to a comprehensive program offered by a PBM or to an independent obesity management company.

Five federal policy interventions were suggested as potential policy reforms that the federal government could enact to address access to GLP-1 medications and the overall cost of obesity treatment. One potential policy reform was increased access through coverage of obesity drugs in Medicare. While the Trump Administration announced the coverage of GLP-1 medications for the treatment of obesity, federal law still bans Medicare from covering weight-loss drugs and requires a pilot program to evaluate coverage. At a federal level, in lieu of Medicare coverage of GLP-1s for obesity, another way to broaden coverage would be to ask the United States Preventive Services Task Force to evaluate GLP-1s and deem them as preventive treatments worthy of a rating of "A" or "B" that creates a mandate for coverage by all private insurers with no patient cost sharing. The third cited policy reform was reducing costs through aggressive drug price negotiation by the federal government. The Trump Administration, as will be outlined, recently negotiated the price for GLP-1 medications covered through Medicare and Medicaid. Additionally, the federal government negotiated during its second round of Medicare's Drug Price Negotiation Program, created by the Inflation Reduction Act (IRA) of 2022, which included diabetes and obesity drugs Ozempic® and Wegovy®. The fourth reform was to reduce costs through federal subsidies for private insurance coverage of obesity treatments. The federal government, it is suggested, could negotiate significant price concessions like the affordable prices that were negotiated for COVID-19 vaccines and treatments during the pandemic in exchange for federal subsidies to private insurers. Along with negotiating lower prices through the IRA process, the fifth intervention is to require that drugmakers license GLP-1 drugs to generic manufacturers for the express purpose of providing more affordable versions for public payers, including state Medicaid programs and state employee health plans.

RECENT REGULATORY ACTIVITY

In May 2025, the Trump Administration issued Executive Order No. 14297, Delivering Most-Favored-Nation Prescription Drug Pricing to American Patients which instructed drug

manufacturers to reduce the prices of brand-name drugs to match the lowest price among selected high-income countries as part of its aim to deliver its most-favored-nation (MFN) drug pricing.[84] In November 2025, the Trump Administration announced an agreement with pharmaceutical manufacturers Eli Lilly and Novo Nordisk to offer their weight-loss drugs for individuals receiving Medicare and Medicaid as part of its MFN policy.[85] As part of this plan, the Medicare price for Ozempic®, Wegovy®, Mounjaro®, and Zepbound® will be $245, with Wegovy® and Zepbound® covering patients with obesity and related comorbidities for the first time. Further, in December 2025, CMS published its voluntary Better Approaches to Lifestyle and Nutrition for Comprehensive hEalth (BALANCE) Model.[86] The BALANCE Model will allow CMS to negotiate drug pricing and coverage terms with manufacturers of GLP-1 medications on behalf of state Medicaid agencies and Medicare Part D plan sponsors. Medicaid agencies can join the model beginning in May 2026, and Part D plans in January 2027. However, as previously mentioned, federal law still bans Medicare from coverage of weight-loss drugs and will require demonstration programs and waivers to proceed. Furthermore, it is unclear whether states will find the model appealing. For instance, due to recent budget cuts, many states are facing tighter budget constraints. Additionally, it is unknown how the new lower costs compare to the net prices state Medicaid programs already pay after rebates. Lastly, state interest in expanding coverage of obesity drugs has been waning due to their significant budgetary impact and sustainability.

Legal challenges and negative feedback from stakeholders led to the withdrawal of prior proposals introduced during the first Trump Administration: International Pricing Index (IPI) Model and MFN Model. The IPI Model sought to lower drug costs and reduce out-of-pocket costs for patients. CMS solicited public comments on options considered for testing changes to payment for separately payable Medicare Part B drugs to align with international prices more closely. Similarly, the proposed MFN Model negotiated for the lowest price that drug manufacturers received in other similar countries for high-cost Medicare Part B drugs. While both were withdrawn, these policies provided the outline for the Trump Administration's second attempt to lower prescription drug costs.

While Novo Nordisk and Eli Lilly have committed to lowering the prices for private insurance and group health plans, it is unclear how the negotiated prices will affect them. The agreement does not include pricing obligations in the commercial market. Some experts suggest price reductions will transition over to group health plans and private insurance, while others believe manufacturers will make up the difference by lowering rebates or increasing prices. Others have expressed concern over MFN policies, suggesting that price controls trade short-term benefits for long-term risk. Further, while the Trump Administration has indicated its desire to codify MFN pricing, it is unclear if Congress will be agreeable citing concern potential threats to medical innovation, reduced access to new medicines, and increased government intervention in the health care market.

In November 2025, CMS announced the prices that the federal government negotiated during its second round of Medicare's Drug Price Negotiation Program (MDPNP), created by the IRA, which included Ozempic® and Wegovy®.[87] According to a spokesperson for CMS, MFN prices will supersede MDPNP prices and that MFN drug prices will supersede "maximum fair prices" negotiated under the IRA where there is a conflict.

Finally, the Trump Administration launched TrumpRx in February 2026 – a government run, direct to consumer website designed to deliver MFN prices directly from manufacturers. Not all medications will be available, with five manufacturers participating and 40 of the nation's highest-cost brand-name drugs listed on the website. For instance, not all AOM are available for purchase - Wegovy® and Zepbound® are listed while Saxenda® is not. Details are still emerging, and questions remain regarding who will benefit.

AMA POLICY

Policy H-110.997 supports programs whose purpose is to contain the rising costs of prescription drugs, most notably that: all patients have access to all prescription drugs necessary to treat their illnesses and physicians have the freedom to prescribe the most appropriate drug and method of delivery. Additionally, Policy H-110.997 encourages physicians to stay informed about the availability and therapeutic efficacy of generic drugs, to consider the prescribing of the least expensive drug product, and to become familiar with the price in their community of the medications they prescribe.

Policy H-110.959 supports efforts to ensure that patients have affordable access to medications and encourages all payers to establish a reasonable and affordable cap on patient out-of-pocket prescription costs.

Policy H-110.987 encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies, encourages the Federal Trade Commission actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition, and supports legislation to shorten the exclusivity period for biologics.

Policy D-110.987 supports the active regulation of PBMs under state departments of insurance, supports improved transparency of PBM operations, and details that the AMA will develop model state legislation addressing the state regulation of PBMs, which shall include provisions to maximize the number of PBMs under state regulatory oversight.

Policy H-150.953 urges physicians and managed care organizations and other third-party payers to recognize obesity as a complex disorder and all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs.

Policy D-330.954 supports federal legislation which gives the Secretary of the Department of Health and Human Services (HHS) the authority to negotiate contracts with manufacturers of covered Part D drugs, works toward eliminating Medicare prohibition on drug price negotiation, and prioritizes the AMA's support for CMS to negotiate pharmaceutical pricing for all applicable medications covered by CMS.

Finally, Policy H-440.801, which is amended by Resolution 230, urges state delegations to directly advocate for their insurance agencies and insurance providers to, most notably: allow a patient's physician to prescribe anti-obesity medication and have it covered by insurance and reduce the prior authorization burden for the coverage of anti-obesity medications.

DISCUSSION

The Council recognizes the changing landscape of AOMs, their role in the treatment of obesity, and the emergence of GLP-1s as a "game-changing" pharmacological treatment for patients with obesity, diabetes, and comorbid conditions. Their clinical efficacy is clear, but they are expensive. Although many employer-sponsored insurance or private insurance plans do not cover GLP-1 medications for the treatment of obesity, that could change in the future as there have been several developments toward improved affordability and access. Starting in July 2026, Medicare will significantly expand coverage for GLP-1 medications for patients with obesity and comorbid conditions. Patients will have access to these drugs with copays capped at $50 per month,

supported by the short-term demonstration program acting as a bridge to the broader BALANCE model launching in 2027 which will also serve as a pilot program for state Medicaid programs. Moreover, the proliferation of direct-to-consumer marketplaces, which bypass traditional insurance and retail pharmacies, offer lower list prices and enhance medication access. Likewise, the recently approved pill versions of Wegovy® ¬and soon to be approved non-peptide GLP-1 called Orforglipron® ¬ enhance affordability. Additionally, the emergence of more effective AOMs set to enter the marketplace within the next few years will improve their affordability and access. Furthermore, while some states have rescinded coverage of GLP-1 medications for the treatment of obesity, the demand for AOMs and potential payment structures lessening variability may improve access organically.

Nonetheless, the Council recognizes the importance of more immediate coverage and the potential value of the market strategies and policy reforms outlined in the ICER report. Therefore, the Council recommends several new policies to supplement AOM affordability and access. The Council recommends support for innovative payment arrangements and pilot programs consistent with several recently announced Medicare and Medicaid demonstrations intended to increase the affordability of GLP-1 medications.

It also is becoming more evident that patients with chronic obesity may need to take these medications long-term. As such, the Council supports the long-term coverage of AOMs to maintain weight loss through consistent drug pricing, formulary tiers, and benefit structures. The Council also acknowledges pharmacological treatment may not be effective, in some cases, without concurrent disease management treatment which may not be accessible for all patients. With that in mind, the Council supports equitable access to comprehensive disease management, nutritional therapies, health promotion, and prevention interventions targeting the general population, those who are at elevated risk for obesity, and patients being treated for obesity.

Medication affordability and access continue to be significant concerns for many patients, including those that need AOMs for chronic obesity. As such, the Council recommends reaffirming Policy H-110.987, which supports efforts to ensure drug prices are affordable to patients, and Policy H-110.959, which encourages all payers to establish a reasonable and affordable cap on patient out-of-pocket prescription drug spending in a manner that does not increase patient premiums. The Council also recognizes the contribution of PBMs to high drug costs and their lack of clarity on rebate driven formularies. Therefore, the Council recommends reaffirming Policy D-110.987, which supports efforts to increase PBM transparency and regulation. Additionally, the Council notes that negotiating for Medicare drug prices is crucial to reducing high out-of-pocket costs for seniors and lowering government health care spending. Thus, the Council recommends reaffirming Policy D-330.954, which supports CMS negotiating pharmaceutical pricing for all applicable medications covered by CMS and indicates the AMA's support for federal legislation giving the Secretary of HHS the authority to negotiate contracts with manufacturers of covered Medicare Part D drugs. The Council appreciates the important role of the physician in the treatment of chronic obesity and, as such, recommends reaffirming Policy H-110.997, which supports programs whose purpose is to contain the rising costs of prescription drugs, physicians having the freedom to prescribe the most appropriate drug and method of delivery, and encourages all physicians to become familiar with the price in their community of the medications they prescribe.

Lastly, the Council recognizes the complexity, prevalence, and impact of obesity and, therefore, recommends reaffirming Policy H-150.953, which recognizes obesity as a complex health disorder, urges all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs, and appropriate federal agencies

work with organized medicine to develop coding and payment mechanisms for the evaluation and management of obesity.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Subclauses 1e and 1g of Resolution 230-A-25, and the remainder of the report be filed:

1. That our American Medical Association (AMA) support:
    a. Potential innovative payment arrangements to help individuals afford treatment for emerging anti-obesity medications (AOMs);
    b. Pilot programs which allow for demonstration projects that cover emerging medications which aid in obesity management, such as glucagon-like peptide-1 and glucose-dependent insulinotropic polypeptide-based medications;
    c. The long-term coverage of AOMs to maintain weight loss through consistent drug pricing, formulary tiering, benefit structures, and coverage criteria in private insurance and employer-sponsored insurance to offset cost variability;
    d. Equitable access to comprehensive disease management, nutritional therapies, health promotion, and prevention interventions targeting the general population, those who are at elevated risk for obesity, and patients being treated for obesity. (New HOD Policy)

2. That our AMA reaffirm Policy H-110.987, which supports efforts to ensure drug prices are affordable to patients. (Reaffirm HOD Policy)

3. That our AMA reaffirm Policy D-110.987, which supports efforts to increase PBM transparency and regulation. (Reaffirm HOD Policy)

4. That our AMA reaffirm Policy H-110.959, which supports efforts to ensure patients have affordable access to medications and encourages all payers to establish a reasonable and affordable cap on patient out-of-pocket prescription drug spending in a manner that does not increase patient premiums. (Reaffirm HOD Policy)

5. That our AMA reaffirm Policy H-110.997, which supports programs whose purpose is to contain the rising costs of prescription drugs, that all patients have access to all prescription drugs necessary to treat their illnesses, and physicians have the freedom to prescribe the most appropriate drug and method of delivery. (Reaffirm HOD Policy)

6. That our AMA reaffirm Policy D-330.954, which supports Centers for Medicare & Medicaid Services (CMS) negotiating pharmaceutical pricing for all applicable medications covered by CMS, AMA working toward the elimination Medicare prohibition on drug price negotiation, and indicates the AMA's support for federal legislation giving the Secretary of the Department of Health and Human Services the authority to negotiate contracts with manufacturers of covered Part D drugs. (Reaffirm HOD Policy)

7. That our AMA reaffirm Policy H-150.953, which recognizes obesity as a complex health disorder, urge all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs, and

appropriate federal agencies work with organized medicine to develop coding and payment mechanisms for the evaluation and management of obesity**.** (Reaffirm HOD Policy)

Fiscal Note: Minimal

Appendix A
GLP-1 Obesity Medications Approved by the FDA

Drug	Effectiveness	FDA Approval Indication	Year Approved
Liraglutide (Saxenda®) GLP-1 Receptor Agonist Daily subcutaneous injection	63% lost at least 5% reduction of body weight	Adjunct to a reduced-calorie diet and increased physical activity for chronic weight management in: 1) Adult patients with an initial body mass index (BMI) of •30 kg/m2 or greater (obese), or •27 kg/m2 or greater (overweight) in the presence of at least one weight-related comorbid condition; 2) Pediatric patients aged 12 years and older with body weight above 60 kg and an initial BMI corresponding to 30 kg/m2 for adults (obese) by international cut-offs	2014
Semaglutide (Wegovy®) GLP-1 Receptor Agonist Weekly subcutaneous injection	80% lost at least 5% reduction of body weight	GLP-1 receptor agonist indicated in combination with a reduced calorie diet and increased physical activity: •to reduce the risk of major adverse cardiovascular events in adults with established cardiovascular disease and either obesity or overweight • to reduce excess body weight and maintain weight reduction long term in: 1) Adults and pediatric patients aged 12 years and older with obesity; 2) Adults with overweight in the presence of at least one weight-related comorbid condition	2021
Semaglutide (Wegovy®) GLP-1 Receptor Agonist Once-daily oral administration	76% lost at least 5% reduction of body weight	GLP-1 receptor agonist indicated in combination with a reduced calorie diet and increased physical activity: • chronic weight management in adults with obesity (BMI ≥ 30) or overweight (BMI ≥ 27) with weight-related conditions; • reduced calorie diet/exercise to lower cardiovascular risk in adults with established heart disease and to treat MASH	2025
Tirzepatide (Zepbound®) Combined GLP-1/GIP Receptor Agonist	85% lost at least 5% reduction of body weight	GIP receptor and GLP-1 receptor agonist indicated as an adjunct to a reduced-calorie diet and increased physical activity for chronic weight management in indicated in combination with a reduced-calorie diet and increased physical activity:	2023

Weekly subcutaneous injection		• to reduce excess body weight and maintain weight reduction long term in adults with obesity or adults with overweight in the presence of at least one weight-related comorbid condition. • to treat moderate to severe obstructive sleep apnea (OSA) in adults with obesity.	

Appendix B
Potential Strategies to Guide Market Action: Institute for Clinical and Economic Review (ICER) Report

1) Temporary Coverage Denial: Some purchasers and insurers have concluded that they do not have the budget flexibility to provide coverage for GLP-1s for treatment of obesity at current prices. Some purchasers believe that, within a year or two, providers will be more efficient and effective, more will be known about how to maintain long-term use of all AOMs, and competition may bring lower pricing.
    a. Advantages: For purchasers with high employee turnover and limited resources, this perspective can provide a compelling argument for holding off on providing coverage until the landscape changes. Additionally, individuals may be able and willing to bear the cost of GLP-1 drugs outside of insurance, although much of that access was made possible through far less expensive, and less reliable, compounded versions.
    b. Limitations: Clinical trials have demonstrated relatively rapid reductions in cardiac events among patients with existing cardiac conditions after treatment initiation and, therefore, temporary non-coverage may be untenable for those with serious medical conditions. Additionally, the broader societal goal of reducing disparities in access to effective treatments for obesity across socioeconomic and racial categories may make temporary non-coverage insupportable. Furthermore, there is an equity concern about requiring people with one medical condition to bear the financial burden alone when most costs of other conditions are covered by insurance.
2) Enhanced Prior Authorization and Formulary Management: For those seeking a more affordable and long-term way to provide coverage for expensive drugs, such as GLP-1s, purchasers and insurers may apply enhanced utilization and could include coverage criteria. Some coverage criteria included BMI and clinical comorbidities, additional clinical or genetic factors, and/or duration of coverage. Two additional formulary management options were suggested: covering only a single GLP-1 drug; or step therapy through earlier AOMs.
    a. Advantages: Using more restrictive BMI and comorbidity thresholds for coverage can be seen as a principled, evidence-based approach to targeting coverage to those individuals at highest risk for short-term adverse events and who therefore stand to benefit most from treatment.
    b. Limitations: Coverage criteria narrower than the FDA label language can be criticized by clinicians and patients as being inappropriately restrictive. For example, BMI, the main patient characteristic being used for limiting coverage eligibility, is an imperfect measure of obesity-related health risks. Additionally, data from clinical trials suggest that patients stopping GLP-1 treatment often regain much or all the weight lost. Furthermore, some patients who merit treatment will face delays or other barriers to effective care.
3) Network Management: Managing the network of clinical providers may improve results while controlling costs. Some options include - open prescribing with attendant tighter utilization management could allow all primary care providers to prescribe GLP-1 drugs as part of their practice, limiting prescribing by a curated expert network with lighter or no utilization management, or carve-out clinical care and prescribing to external weight loss management firms.
    a. Advantages: Open prescribing maximizes access to the most effective obesity treatment, thereby reducing disparities in access across socioeconomic, racial, and other categories. In addition, integrating GLP-1 prescribing into primary care helps keep medication use coordinated across other clinical conditions, such as diabetes and

hypertension. Limited prescribing has the opposite advantages of an open prescribing model. Setting up a "Centers of Excellence" approach to obesity medication prescribing maximizes the likelihood of appropriate comprehensive care for patients with obesity, including the use of GLP-1 drugs.

   b. Limitations: The drawbacks of open prescribing begin with the likelihood that a certain proportion of GLP-1 drugs will be prescribed for patients who could do well with other, less expensive AOMs. Combining open prescribing with tight utilization management criteria is one way to try to provide wide access without producing high rates of inappropriate use. Negatives to limited prescribing are that there are nowhere near enough obesity specialists to manage the number of people seeking GLP-1 treatment and long waiting lists would result.

4) Innovative Payment Arrangements: While some purchasers may consider temporary non-coverage of GLP-1 drugs, another solution may be to utilize alternative payment arrangements to help individuals afford treatment. For instance, performance agreements by linking rebates to a weight goal, to a particular percentage weight loss target, or to adherence to treatment are an option. Other options include volume-based rebates and subscription models.
   a. Advantages: Performance agreements sometimes include aligned patient incentives to maintain adherence or to achieve clinical goals. Additionally, subscription models guarantee financial certainty for purchasers but also guarantee recurring revenue for manufacturers.
   b. Limitations: There are many reasons that patients might not reach their goal, whether from lack of drug availability, ineffectiveness of the drug, side effects, or financial barriers. Furthermore, some performance agreements have little study on their efficacy.
5) Carve Out Programs: Many purchasers or payers are delegating obesity management to a comprehensive program offered by a PBM or to an independent obesity management company. The common features of these programs are a national network of clinical experts who engage with patients virtually, clinical algorithms that help identify patients for whom less expensive treatment options are appropriate, an integration of interventions on diet and activity as part of lifestyle management, and a per member per month payment model, often with guarantees on adherence to medication use and overall cost reductions.
   a. Advantages: Carve-out companies can bring not only clinical expertise but a more comprehensive approach to ensuring that all patients receive individualized care, including appropriate lifestyle management interventions
   b. Limitations: One challenge is the distribution of rebate dollars - rebates from GLP-1 manufacturers in many cases go directly to the carve-out program and not to the purchaser. Additionally, carving out obesity care runs the risk of creating a lack of coordination with the care for other conditions. Lastly, obesity carve-out companies have been using compounded versions of GLP-1 drugs as another way to achieve lower overall costs of care.

Council on Medical Service Report 7-A-26
Private Insurance Coverage of Anti-Obesity Medications
Policy Appendix

Advocacy Against Obesity-Related Bias by Insurance Providers H-440.801

1. Our American Medical Association will urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to:
    a. Revise their policies to ensure that bariatric surgery are covered for patients who meet the appropriate medical criteria.
    b. Eliminate criteria that place unnecessary time-based mandates that are not clinically supported nor directed by the patient's medical provider.
    c. Ensure that insurance policies in their states do not discriminate against potential metabolic surgery patients based on age, gender, race, ethnicity, socioeconomic status.
    d. Advocate for the cost-effectiveness of all obesity treatment modalities in reducing healthcare costs and improving patient outcomes.
    e. Reduce the prior authorization burden for the coverage of anti-obesity medications, to include not requiring a new prior authorization for every dose change.
    f. Allow a patient's physician to prescribe anti-obesity medication and have it covered by insurance, without a requirement that patients must receive the prescription only from contracted disease management companies.
2. Our AMA will support and provide resources to state delegations in their efforts to advocate for the reduction of bias against patients that suffer from obesity for the actions listed.

(Res. 224, A-23; Appended: Res. 230, A-25)

Obesity as a Major Public Health Problem H-150.953

1. Our American Medical Association will urge physicians as well as managed care organizations and other third party payers to recognize obesity as a complex disorder involving appetite regulation and energy metabolism that is associated with a variety of comorbid conditions.
2. Our AMA will work with appropriate federal agencies, medical specialty societies, and public health organizations to educate physicians about the prevention and management of overweight and obesity in children and adults, including education in basic principles and practices of physical activity and nutrition counseling; such training should be included in undergraduate and graduate medical education and through accredited continuing medical education programs.
3. Our AMA will urge federal support of research to determine:
    a. the causes and mechanisms of overweight and obesity, including biological, social, and epidemiological influences on weight gain, weight loss, and weight maintenance;
    b. the long-term safety and efficacy of voluntary weight maintenance and weight loss practices and therapies, including surgery;
    c. effective interventions to prevent obesity in children and adults; and
    d. the effectiveness of weight loss counseling by physicians.
4. Our AMA will encourage national efforts to educate the public about the health risks of being overweight and obese and provide information about how to achieve and maintain a preferred healthy weight.
5. Our AMA will urge physicians to assess their patients for overweight and obesity during routine medical examinations and discuss with at-risk patients the health consequences of further weight gain; if treatment is indicated, physicians should encourage and facilitate weight maintenance or reduction efforts in their patients or refer them to a physician with special interest and expertise in the clinical management of obesity.

6. Our AMA will urge all physicians and patients to maintain a desired weight and prevent inappropriate weight gain.
7. Our AMA will encourage physicians to become knowledgeable of community resources and referral services that can assist with the management of overweight and obese patients.
8. Our AMA will urge the appropriate federal agencies to work with organized medicine and the health insurance industry to develop coding and payment mechanisms for the evaluation and management of obesity.
9. Our AMA will urge all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs.

(CSA Rep. 6, A-99; Reaffirmation A-09; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmation A-10; Reaffirmation I-10; Reaffirmation A-12; Reaffirmed in lieu of Res. 434, A-12; Reaffirmation A-13; Reaffirmed: CSAPH Rep. 3, A-13; Reaffirmation: A-19; Appended: Res. 806, I-23)

Prescription Medication Price Negotiation H-110.959

1. Our AMA supports efforts to ensure that patients have affordable access to medications.
2. Our AMA encourages all payers, both public and private, in efforts to establish a reasonable and affordable cap on patient out-of-pocket prescription drug spending in a manner that does not increase patient premiums.
3. Our AMA opposes drug payment methodologies that result in physician practices being paid at less than the cost of acquisition, inventory, storage, and administration of relevant drugs and other necessary related clinical services.

(CMS Rep. 06, A-25; Reaffirmed: CMS Rep. 04, I-25)

Cost of Prescription Drugs H-110.997

1. Our American Medical Association supports programs whose purpose is to contain the rising costs of prescription drugs, provided that the following criteria are satisfied:
    a. physicians must have significant input into the development and maintenance of such programs;
    b. such programs must encourage optimum prescribing practices and quality of care;
    c. all patients must have access to all prescription drugs necessary to treat their illnesses;
    d. physicians must have the freedom to prescribe the most appropriate drug(s) and method of delivery for the individual patient; and
    e. such programs should promote an environment that will give pharmaceutical manufacturers the incentive for research and development of new and innovative prescription drugs.
2. Our AMA reaffirms the freedom of physicians to use either generic or brand name pharmaceuticals in prescribing drugs for their patients and encourages physicians to supplement medical judgments with cost considerations in making these choices.
3. Our AMA encourages physicians to stay informed about the availability and therapeutic efficacy of generic drugs and will assist physicians in this regard by regularly publishing a summary list of the patient expiration dates of widely used brand name (innovator) drugs and a list of the availability of generic drug products.
4. Our AMA encourages expanded third party coverage of prescription pharmaceuticals as cost effective and necessary medical therapies.
5. Our AMA will monitor the ongoing study by Tufts University of the cost of drug development and its relationship to drug pricing as well as other major research efforts in this area and keep the AMA House of Delegates informed about the findings of these studies.

6. Our AMA encourages physicians to consider prescribing the least expensive drug product (brand name or FDA A-rated generic).
7. Our AMA encourages all physicians to become familiar with the price in their community of the medications they prescribe and to consider this along with the therapeutic benefits of the medications they select for their patients.

(BOT Rep. O, A-90; Sub. Res. 126 and Sub. Res. 503, A-95; Reaffirmed: Res. 502, A-98; Reaffirmed: Res. 520, A-99; Reaffirmed: CMS Rep. 9, I-99; Reaffirmed: CMS Rep.3, I-00; Reaffirmed: Res. 707, I-02; Reaffirmation A-04; Reaffirmed: CMS Rep. 3, I-04; Reaffirmation A-06; Reaffirmed in lieu of Res. 814, I-09; Reaffirmed in lieu of Res. 201, I-11; Reaffirmed in lieu of: Res. 207, A-17; Reaffirmed: BOT Rep. 14, A-18; Reaffirmed: CMS Rep. 04, I-24)

Pharmaceutical Costs H-110.987

1. Our AMA encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.
2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.
3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.
4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
7. Our AMA supports legislation to shorten the exclusivity period for biologics.
8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
10. Our AMA supports:
    a. drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by 10% or more each year or per course of treatment and provide justification for the price increase;
    b. legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and
    c. the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of 10% or more each year or per course of treatment.
11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.

12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.
13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation.

(CMS Rep. 2, I-15; Reaffirmed in lieu of: Res. 817, I-16; Appended: Res. 201, A-17; Reaffirmed in lieu of: Res. 207, A-17; Modified: Speakers Rep. 01, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Appended: BOT Rep. 14, A-19; Reaffirmed: Res. 105, A-19; Appended: Res. 113, I-21; Reaffirmed in lieu of: Res. 810, I-22; Reaffirmed: Res. 801, I-23; Reaffirmed: Res. 801, I-23; Reaffirmed: CMS Rep. 04, I-24; Reaffirmed: CMS Rep. 06, A-25)

The Impact of Pharmacy Benefit Managers on Patients and Physicians D-110.987

1. Our AMA supports the active regulation of pharmacy benefit managers (PBMs) under state departments of insurance.
2. Our AMA will develop model state legislation addressing the state regulation of PBMs, which shall include provisions to maximize the number of PBMs under state regulatory oversight.
3. Our AMA supports requiring the application of manufacturer rebates and pharmacy price concessions, including direct and indirect remuneration (DIR) fees, to drug prices at the point-of-sale.
4. Our AMA supports efforts to ensure that PBMs are subject to state and federal laws that prevent discrimination against patients, including those related to discriminatory benefit design and mental health and substance use disorder parity.
5. Our AMA supports improved transparency of PBM operations, including disclosing:
- Utilization information;
- Rebate and discount information;
- Financial incentive information;
- Pharmacy and therapeutics (P&T) committee information, including records describing why a medication is chosen for or removed in the P&T committee's formulary, whether P&T committee members have a financial or other conflict of interest, and decisions related to tiering, prior authorization and step therapy;
- Formulary information, specifically information as to whether certain drugs are preferred over others and patient cost-sharing responsibilities, made available to patients and to prescribers at the point-of-care in electronic health records;
- Methodology and sources utilized to determine drug classification and multiple source generic pricing; and
- Percentage of sole source contracts awarded annually.
6. Our AMA encourages increased transparency in how DIR fees are determined and calculated.

(CMS Rep. 05, A-19; Reaffirmed: CMS Rep. 6, I-20; Reaffirmed: CSAPH Rep. 02, I-24; Reaffirmed: CMS Rep. 06, A-25; Reaffirmed: CMS Rep. 04, I-25)

Prescription Drug Prices and Medicare D-330.954

1. Our American Medical Association will support federal legislation which gives the Secretary of the Department of Health and Human Services the authority to negotiate contracts with manufacturers of covered Part D drugs.
2. Our AMA will work toward eliminating Medicare prohibition on drug price negotiation.

3. Our AMA will prioritize its support for the Centers for Medicare & Medicaid Services to negotiate pharmaceutical pricing for all applicable medications covered by CMS.

(Res. 211, A-04; Reaffirmation I-04; Reaffirmed in lieu of Res. 201, I-11; Appended: Res. 206, I-14; Reaffirmed: CMS Rep. 2, I-15; Appended: Res. 203, A-17; Reaffirmed: CMS Rep. 4, I-19; Reaffirmed: CMS Rep. 3, I-20; Reaffirmed: Res. 113, I-21; Reaffirmed: CMS Rep. 4, A-22; Reaffirmed in lieu of: Res. 810, I-22)

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 9-A-26

Subject: Nonprofit Status

Presented by: Betty Chu, MD, MBA, Chair

Referred to: Reference Committee G

Resolution 221, "Nonprofit Status," was introduced by the New York delegation at the 2025 Interim Meeting and was referred. It asks the following:

> RESOLVED, that our American Medical Association advocate that the granting and maintenance of health care entities not-for-profit status be reassessed by both the state legislature and the U.S. Congress.

Resolution 221-I-25 was referred largely due to concerns about vague language and the potential for unintended consequences. The Reference Committee report noted that technical questions regarding federal and state tax law should be considered to ensure that the American Medical Association (AMA) does not advocate for an outcome with harmful consequences. This report provides a review of the topic and recommendation to modify current AMA policy.

BACKGROUND

Nonprofit hospitals account for 58 percent of community hospitals in the United States and most of these hospitals are part of a larger health system.[1] Tax-exempt nonprofit hospitals operate as 501(c)(3) organizations, which by definition must be organized and operated exclusively for specific tax-exempt purposes and must have the following characteristics determined by the Internal Revenue Service (IRS): 1) no part of their net earnings is allowed to benefit any private shareholder or individual; 2) no substantial part of their activities can consist of carrying on propaganda or otherwise attempting to influence legislation; and 3) the organization should not participate or intervene in any political campaign on behalf of (or in opposition to) any candidate for public office.[2]

Additional requirements were added following the passage of the Affordable Care Act and are codified in Section 501(r) of the Internal Revenue Code. To retain 501(c)(3) tax-exempt status, nonprofit entities must:

- Establish a financial assistance policy (FAP) that describes who is eligible for charity care, the level of assistance provided, and how patients can apply. The FAP must be easily accessible to patients and translated into the languages commonly spoken in the community served by the hospital or health care organization.
- Cap charges to patients eligible for charity care based on fee-for-service Medicare rates, Medicaid rates, and/or commercial plan rates.
- Conduct a community health needs assessment (CHNA) every three years and adopt an implementation strategy to address those needs.

© 2026 American Medical Association. All rights reserved.

- Make reasonable efforts to determine if a patient is eligible for charity care before engaging in certain debt collection practices, including selling the patient's debt to third parties, reporting the debt to credit agencies, and taking legal action to control a patient's financial assets.[3]

Furthermore, to qualify as a 501(c)(3) tax-exempt organization, a nonprofit hospital must demonstrate that it has provided benefits to a class of people that is broad enough to benefit the community and operate to serve a public rather than a private interest. The IRS requires a tax-exempt hospital to annually file Form 990 Schedule H to provide the public with information on its policies and activities and the community benefits that its facilities provide. Schedule H broadly categorizes community benefit spending as charity care, unreimbursed costs for providing services to patients insured by government programs (Medicare and Medicaid), subsidized health services, community health improvement services and community benefit operations, research, health professions education, and financial and in-kind contributions to community groups.[4]

The IRS does not currently define specific types of services and activities that a hospital must undertake to qualify for a tax exemption. Instead, the IRS provides guidance on the types of activities that can demonstrate community benefits. IRS implementation of the Internal Revenue Code can give tax-exempt hospitals broad latitude to determine the nature and amount of community benefits they provide. Representatives from tax-exempt hospitals have shared that this provides needed flexibility in demonstrating community benefits. For example, a hospital located in a rural community may be the only hospital within hundreds of miles, making its existence the primary benefit to the community.[5] However, that lack of clarity also creates a challenge for the IRS in administering tax law. For example, a hospital could, in theory, maintain a tax exemption by operating an emergency room open to all and accepting patients on Medicare and Medicaid, which are common among hospitals while spending little to no money on charity care or other community benefits. As a result, reporting is inconsistent on many community benefit factors. Several years ago, the Government Accountability Office recommended that the IRS update Form 990 to ensure that the information demonstrating which community benefits a hospital is providing is clear and easily understood by Congress and the public. While the IRS has made minor adjustments to the form, it continues to allow hospitals to describe their community benefits in narrative form. Additionally, according to IRS officials, hospitals with little to no community benefit expenses may warrant an audit; however, the IRS was unable to provide evidence that it conducted reviews specifically related to hospital's community benefits.[6]

Because there is no explicit definition of what constitutes a community benefit, policymakers and others can reach different conclusions on whether a nonprofit hospital meets the requirements to maintain tax-exempt status or fails to do so. According to one 2024 study, 24 percent of nonprofit hospitals received more tax benefits than they spent on community benefits, but noted that the characteristics and location of nonprofit hospitals influenced the provision and composition of community benefits.[7] Some analyses on nonprofit hospital community benefits omit spending on Medicaid shortfall which can significantly impact the total amount of hospital-reported spending on community benefits. The IRS includes Medicaid shortfall as a community benefit on Form 990 Schedule H; therefore, many hospitals continue to report this amount and include it in calculations on community benefit spending. However, the calculation of Medicaid shortfall may not be reported in a standardized manner. Shortfall could be calculated using a hospital's charge master file, which may not accurately represent the actual cost of care.

Conversely, the lack of an explicitly defined list of appropriate community benefit activities can provide flexibility for nonprofit hospitals to report activities and spending based on their individual communities' needs or the focus of the hospital itself. For example, a nonprofit academic medical

center may report higher spending on medical education and research, while a children's hospital may report higher spending on Medicaid shortfall due to serving many patients on Medicaid and/or the Children's Health Insurance Program. Those advocating for more stringent guidelines from the IRS argue that the vague requirements allow for reporting of activities and spending that do not show clear community benefit. However, when interviewed, hospital executives argue that the lack of clarity leads many of their organizations to omit spending because they are not sure it would qualify under the IRS guidelines, which can result in underreporting on community impact. Examples of excluded spending include hiring local contractors, increasing supplier diversity, or building a new office or facility to improve health care access.[8]

The estimated value of tax exemption for nonprofit hospitals is estimated to be $28 billion, split between $14.4 billion from exempted federal taxes and $13.7 billion from exempted state and local taxes. According to KFF, the $28 billion total estimated value of tax exemption exceeded the total estimated charity care costs of $16 billion for nonprofit hospitals.[9] Twenty-eight states mandate some form of reporting on community benefit spending by nonprofit hospitals, although this varies significantly from state to state and the impacts on spending and community health outcomes are mixed. While states with reporting requirements often saw increases in total spending on community benefits from nonprofit hospitals, there was less spending on charity care specifically, as spending was spread across several different categories. Nonprofit hospitals in states with reporting requirements spent 0.95 percent more on total community benefits (including Medicaid shortfall) than nonprofit hospitals in states without reporting requirements.[10]

AMA POLICY

Council on Medical Service Report 1-I-24, Nonprofit Hospital Charity Care Policies, addressed a similar request to the one made in Resolution 221-I-25. CMS Report 1-I-24 generated Policy H-155.954, which states that the AMA advocates: 1) that all nonprofit hospitals be required to screen patients for charity care eligibility and other financial assistance program eligibility prior to billing; 2) to encourage debt collectors to ensure a patient has been screened for financial assistance eligibility before pursuing that patient for outstanding debt, provide an appeals process for those patients not screened previously or deemed ineligible, and require the hospital to reassume the debt account if an appeal is successful; 3) for the development of minimum standards for nonprofit hospital financial assistance eligibility programs which are publicly accessible; 4) for a standardized definition of what is considered a "community benefit" when evaluating community health improvement activities; 5) for the development of transparent, publicly available, standardized data set on community benefit including consideration of charity care-to-expense ratios; and 6) for governmental oversight of nonprofit hospitals and enforcement of federal and/or state guidelines and standards for community benefit requirements including the ability to enact penalties and/or loss of tax-exempt status.

Policy H-215.975 states that the AMA supports the concept that all hospitals be held to the same standards of care, community service, professional education and commitment to their respective communities.

DISCUSSION

The Council believes that nonprofit hospitals are not interchangeable, as each is part of a community with unique needs. For example, a large nonprofit health system that operates hospitals in multiple states is very different from a critical access hospital in a small rural town. While both are technically 501(c)(3) nonprofit hospitals, it should not be expected that these entities have the same resources to manage additional reporting requirements or other administrative burdens that

may result from increased scrutiny on maintaining tax-exempt status. Furthermore, as they likely serve distinct communities, they may have different interpretations of what constitutes a community benefit tailored to the needs of their respective communities. Some studies the Council reviewed questioned the inclusion of Medicaid shortfall as a category for community benefit spending. However, reimbursement for Medicaid shortfall can have a huge impact on small critical access hospitals, and in some cases may allow the hospital to stay open to provide care to a community that may not have access to another hospital nearby.

The Reference Committee heard mixed, but largely negative testimony on Resolution 221-I-25 and recommended referral of this item due to concerns about vague language and the potential for unintended consequences. Reference Committee testimony on Resolution 221-I-25 cautioned that requiring new federal or state documentation mandates could divert limited resources from patient care to compliance activities, force safety-net institutions to consider reductions in force or service closures, and/or accelerate conversion or acquisition by for-profit or private equity-backed systems, leading to greater market consolidation and diminished local control. The Council agrees with this assessment and, thus, is not recommending a definition of what should be considered a community benefit. In addition to being beyond the scope of the AMA, it is a nuanced issue where more flexibility is likely beneficial, especially for smaller nonprofit hospitals that may have limited resources. Instead, the Council recommends advocating for consistency and transparency when defining these benefits to allow policymakers and the public to assess nonprofit hospital spending on community benefits more clearly.

Physician employment by hospitals and health systems has been rising steadily in recent years. In 2024, 47 percent of physicians were directly employed by a hospital, contracted directly with a hospital, or employed by a hospital-owned practice.[11] Given that physicians employed by hospitals or health systems comprise nearly one-half of the medical community, finding a balanced solution for addressing the level of community benefits provided by nonprofit hospitals is crucial. As the AMA represents all physicians, the Council does not want to unintentionally burden those employed by hospitals or health systems by placing additional mandates on their employers. However, the Council does understand the importance of holding nonprofit hospitals accountable for faithfully maintaining their tax-exempt status.

Accordingly, the Council continues to support the recommendations in CMS Report 1-I-24 and offers amendments to Policy H-155.954, which are intended to clarify and strengthen the AMA's position on this issue. The amendments offered call for increased transparency and consistency in governmental oversight of nonprofit hospitals, so physicians and the public are better aware of efforts undertaken by nonprofit hospitals and health systems to improve the health of their communities and justify their tax-exempt status as 501(c)(3) organizations. In addition, the Council recommends adding a new clause that encourages nonprofit hospitals to share results from their federally-required CHNA, including progress that has been made since the previous assessment and areas in need of improvement. This recommendation aims to achieve transparency and consistency regarding benefits nonprofit hospitals provide their communities. It also provides an opportunity for nonprofit hospitals to work with other individuals and/or organizations in their community on projects where progress can be furthered. AMA policy supports efforts to reduce administrative burdens in health care; therefore, although the Council does not recommend increasing the level of mandated reporting by nonprofit hospitals on community benefit efforts, it does encourage nonprofit hospitals to share accomplishments within their communities, including but not limited to CHNA results.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 221-I-25 and the remainder of the report be filed.

1. That our American Medical Association amend Policy H-155.954 by addition and deletion to read as follows:

NONPROFIT HOSPITAL ~~CHARITY CARE~~ POLICIES, H-155.954

1. Our American Medical Association (AMA) advocates that all nonprofit hospitals be required to screen patients for charity care eligibility and other financial assistance program eligibility prior to billing.
2. Our AMA advocates to encourage debt collectors to ensure a patient has been screened for financial assistance eligibility before pursuing that patient for outstanding debt, provide an appeals process for those patients not screened previously or deemed ineligible, and require the hospital to reassume the debt account if an appeal is successful.
3. Our AMA advocates for the development of minimum standards for nonprofit hospital financial assistance eligibility programs which are publicly accessible.
4. Our AMA advocates for a standardized definition of what is considered a "community benefit" when evaluating community health improvement activities and eligibility for nonprofit status.
5. Our AMA advocates for the development of ~~a~~ transparent, publicly available, standardized data sets and/or reports on nonprofit hospital community benefit spending, including consideration of charity care-to-expense ratios.
6. Our AMA advocates for transparency and consistency regarding ~~the expansion of~~ governmental oversight of nonprofit hospitals, ~~and~~ enforcement of federal and/or state guidelines, and standards for community benefit requirements and reporting, including the ability to enact penalties and/or loss of tax-exempt status.
7. Our AMA encourages nonprofit hospitals to publicly share the results from assessments, such as the Community Health Needs Assessment (CHNA), including progress that has been made since the previous assessment, as well as areas where there is room for improvement. (Modify Current HOD Policy)

Fiscal Note: Minimal

Council on Medical Service Report 9-A-26
Nonprofit Status
Policy Appendix

Nonprofit Hospital Charity Care Policies, H-155.954
1. Our American Medical Association (AMA) advocates that all nonprofit hospitals be required to screen patients for charity care eligibility and other financial assistance program eligibility prior to billing.
2. Our AMA advocates to encourage debt collectors to ensure a patient has been screened for financial assistance eligibility before pursuing that patient for outstanding debt, provide an appeals process for those patients not screened previously or deemed ineligible, and require the hospital to reassume the debt account if an appeal is successful.
3. Our AMA advocates for the development of minimum standards for nonprofit hospital financial assistance eligibility programs which are publicly accessible.
4. Our AMA advocates for a standardized definition of what is considered a "community benefit" when evaluating community health improvement activities.
5. Our AMA advocates for the development of a transparent, publicly available, standardized data set on community benefit including consideration of charity care-to-expense ratios.
6. Our AMA advocates for the expansion of governmental oversight of nonprofit hospitals and enforcement of federal and/or state guidelines and standards for community benefit requirements including the ability to enact penalties and/or loss of tax-exempt status.
(CMS Rep. 01, I-24)

Uniform Standards for Not-For-Profit and For-Profit Hospitals, H-215.975
The AMA supports the concept that all hospitals be held to the same standards of care, community service, professional education and commitment to their respective communities.
(Res. 705, A-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmed: CMS Rep. 01, A-16)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 701
(A-26)

Introduced by: Private Practice Physicians Section

Subject: The Crisis in the Availability of Primary Care: Halt the Required Participation of Small Practices in Value-Based Payment (VBP) Models

Referred to: Reference Committee G

Whereas, the COVID-19 pandemic revealed the strength of U.S. physicians' professionalism and intrinsic motivation as physicians (and other healthcare professionals) learned rapidly and did what needed to be done—no performance measures or financial incentives from value-based programs (VBPs) were required to prompt their efforts; and

Whereas, VBP models risk undermining these strengths and our greatest resource for improving care[1]; and

Whereas, VBP model metric reporting and demoralizing score boosting tasks coupled with the burden of an average of 7.3 hours in electronic health records per eight hours of scheduled patients have led to a "burnout" epidemic among primary care clinicians[2, 3, 4]; and

Whereas, the work of VBP programs was acknowledged by the Centers for Medicare & Medicaid Services as they relieved physicians of reporting requirements "so the healthcare delivery system can direct its time and resources toward caring for patients"[5]; and

Whereas, in 2024, compliance costs of the Merit-Based Incentive Payment System resulted in penalties for 32 percent of small practices and 46 percent of solo practitioners[6]; and

Whereas, free medical education appears ineffective at encouraging students to pursue primary care as evidenced by 2024 data showing U.S. medical school graduates filled only 35 percent of categorical internal medicine residency positions and non-U.S. citizen international graduates filled 30 percent[7]; and

Whereas, worrisomely, a 2023 Elsevier survey revealed that over half of U.S. medical students envisioned their education as a stepping stone to careers outside direct patient care[8]; and

Whereas, the Pay Primary Care Providers Act, currently before the 119th Congress, seeks to increase primary care physician reimbursement in hopes of bolstering primary care but also seeks to move more physicians and patients into VBP arrangements (capitation); and

Whereas, these measures are not expected to save money and doubling down on VBP models will exacerbate the exodus of physicians from primary care fields[9,10]; and

Whereas, it is evident that relying on physician resilience, dedication, adjustments to VBP programs, streamlining reporting requirements (Data-Driven Performance System proposed by the AMA), team-based care, efforts to increase the number of students pursuing primary care, optimizing technology, forthcoming advances promised by artificial intelligence, and even

increasing compensation for primary care physicians are insufficient to address the crisis in the availability of primary care physicians; and

Whereas, ignoring this crisis will, ultimately, relegate our patients to a lower standard of care, as numerous county and state health commissioners support independent practice by physician assistants and nurse practitioners to alleviate the shortage of primary care physicians; and

Whereas, the consensus opinion is that the vast majority of VBP models have failed to reduce healthcare expenditures or improve the quality of life meaningfully with considerable evidence that they have resulted in the opposite—increasing costs and declining quality of care[11,12,13,14]; and

Whereas, small independent practices (ten or fewer physicians) have 33 percent fewer preventable hospital admissions and lower per-beneficiary spending than larger practices, thus removing obstacles to their survival is an efficient way to lower costs and improve the quality of care[15,16,17]; therefore be it

RESOLVED, that our American Medical Association will advocate for the immediate discontinuation of required participation in value-based programs (VBP) arrangements for practices with ten or fewer physicians, regardless of practice revenue. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Value-Based Insurance Design H-185.939

Our American Medical Association supports flexibility in the design and implementation of value-based insurance design (VBID) programs, consistent with the following principles:

a. Value reflects the clinical benefit gained relative to the money spent. VBID explicitly considers the clinical benefit of a given service or treatment when determining cost-sharing structures or other benefit design elements.
b. Practicing physicians must be actively involved in the development of VBID programs. VBID program design related to specific medical/surgical conditions must involve appropriate specialists.
c. High-quality, evidence-based data must be used to support the development of any targeted benefit design. Treatments or services for which there is insufficient or inconclusive evidence about their clinical value should not be included in any targeted benefit design elements of a health plan.
d. The methodology and criteria used to determine high- or low-value services or treatments must be transparent and easily accessible to physicians and patients.
e. Coverage and cost-sharing policies must be transparent and easily accessible to physicians and patients. Educational materials should be made available to help patients and physicians understand the incentives and disincentives built into the plan design.
f. VBID should not restrict access to patient care. Designs can use incentives and disincentives to target specific services or treatments, but should not otherwise limit patient care choices.
g. Physicians retain the ultimate responsibility for directing the care of their patients. Plan designs that include higher cost-sharing or other disincentives to obtaining services designated as low-value must include an appeals process to enable patients to secure care recommended by their physicians, without incurring cost-sharing penalties.
h. Plan sponsors should ensure adequate resource capabilities to ensure effective implementation and ongoing evaluation of the plan designs they choose. Procedures must be in place to ensure VBID coverage rules are updated in accordance with evolving evidence.
i. VBID programs must be consistent with AMA Pay for Performance Principles and Guidelines (Policy H-450.947), and AMA policy on physician economic profiling and tiered, narrow or restricted networks (Policies H-450.941 and D-285.972).

Opposed Replacement of the Merit-Based Incentive Payment System with the Voluntary Value Program D-395.998

1. Our AMA will oppose the replacement of the Merit-Based Incentive Payment System (MIPS) with the Voluntary Value Program (VVP) as currently defined.
2. Our AMA will study the criticisms of the Merit-Based Incentive Payment System (MIPS) program as offered by proponents of the VVP to determine where improvement in the MIPS program needs to be made.
3. Our AMA will continue its advocacy efforts to improve the MIPS program, specifically requesting: (a) true EHR data transparency, as the free flow of information is vital to the development of meaningful outcome measures; (b) safe harbor protections for entities providing clinical data for use in the MIPS program; (c) continued infrastructure support for smaller practices that find participation particularly burdensome; (d) adequate recognition of and adjustments for socioeconomic and demographic factors

that contribute to variation in patient outcomes as well as geographic variation; and (e) limiting public reporting of physician performance to those measures used for scoring in the MIPS program.
4. Our AMA will determine if population measures are appropriate and fair for measuring physician performance.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 702
(A-26)

Introduced by: Pennsylvania

Subject: Physicians Who Do Not Practice in Hospital Setting

Referred to: Reference Committee G

Whereas, in order to address payment issues associated with unfair insurance panels, our AMA created policy D-230.981 which states:

1. Our American Medical Association advocates for legislation, regulation, or other interventions to prevent health insurers from threatening hospitals with payment cuts, administrative fee imposition, network termination, or other negative financial policies, if an out of network physician is involved in the treatment or care of a patient at that hospital.
2. Our AMA will collaborate with specialty societies and state medical societies oppose unfair and/or coercive business practices which undermine patient access and/or physician practices.; and

Whereas, in response to this AMA policy some insurance payers in Pennsylvania adopted insurance requirements of some other states, to require that their network physicians have hospital privileges; and

Whereas, this imposes an unreasonable burden on physicians who do not work in hospital settings; and

Whereas, when a hospital ceases operations, a physician credentialled only at that hospital may lose their network status jeopardizing access to care for their patients; therefore be it

RESOLVED, that our American Medical Association amend D-230-981 as follows:

1. Our American Medical Association advocates for legislation, regulation, or other interventions to prevent health insurers from threatening hospitals with payment cuts, administrative fee imposition, network termination, or other negative financial policies, if an out of network physician is involved in the treatment or care of a patient at that hospital.
2. Our AMA will collaborate with specialty societies and state medical societies oppose unfair and/or coercive business practices which undermine patient access and/or physician practices.
3. <u>Our AMA advocate that hospital privileges not be a requirement for insurance network participation.</u>

(Modify Current HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/9/26

RELEVANT AMA POLICY

D-230.981 Oppose Unfair Hospital Privilege Decision Based on Insurance Plan Participation

1. Our American Medical Association advocates for legislation, regulation, or other interventions to prevent health insurers from threatening hospitals with payment cuts, administrative fee imposition, network termination, or other negative financial policies, if an out of network physician is involved in the treatment or care of a patient at that hospital.
2. Our AMA will collaborate with specialty societies and state medical societies oppose unfair and/or coercive business practices which undermine patient access and/or physician practices.

Res. 238, I-25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 703
(A-26)

Introduced by: Obesity Medicine Association

Subject: Parity in Pricing for Anti-Obesity Medications

Referred to: Reference Committee G

Whereas, our American Medical Association recognizes obesity as a disease state with multiple pathophysiological aspects requiring a range of interventions to advance obesity treatment and prevention; and

Whereas, our AMA has elevated obesity to be one of its public health priorities, advocating for the creation of a multidisciplinary federal task force to better recognize and treat obesity as a chronic disease; and

Whereas, existing AMA policy (H-150.953) urges all payers to ensure coverage parity for evidence-based treatment of obesity, including FDA-approved medications without exclusions or additional carve-outs; and

Whereas, in spite of this policy, the majority of private insurers do not cover anti-obesity medication treatments, and patients are accessing these treatments purchasing directly from pharmaceutical manufacturers; and

Whereas, AMA policy (H-440.801) explicitly supports allowing a patient's established physician to prescribe anti-obesity medication and have it covered by insurance, without requiring that patients receive the prescription only from contracted disease management companies; and

Whereas, pharmaceutical manufacturers have recently agreed to sell GLP-1 anti-obesity medications to telehealth companies at a reduced cost; and

Whereas, these discounted pricing structures threaten established doctor-patient relationships by inappropriately incentivizing patients to abandon their regular physicians to pursue care with telehealth companies solely to access lower medication prices; and

Whereas, obesity medicine practices are increasingly being driven out of business due to patient diversion to closed networks by insurers, as well as patients seeking coverage through med spas or by filling out online forms; and

Whereas, this diversion contradicts current AMA policy, which explicitly advocates for allowing a patient's established physician to prescribe anti-obesity medication and have it covered by insurance, without the requirement that patients must receive their prescription only from contracted disease management companies; and

Whereas, offering preferential pricing for customers of online sales models further degrades the ability of patients to receive continuous, comprehensive obesity care from their primary care or established obesity medicine physician; therefore be it

RESOLVED, that our American Medical Association actively oppose preferential pricing strategies by pharmaceutical manufacturers that offer discounted medications exclusively to telehealth or online providers, as such practices undermine the established physician-patient relationship and the continuity of care. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/13/26

RELEVANT AMA POLICY

Advocacy Against Obesity-Related Bias by Insurance Providers (H-440.801):
This policy supports allowing a patient's established physician to prescribe anti-obesity medications and have them covered by insurance, without requiring that patients receive the prescription exclusively from contracted disease management companies. (Res. 224, A-23; Appended: Res. 230, A-25)

Obesity as a Major Public Health Problem (H-150.953):
This policy urges all payers to ensure coverage parity for the evidence-based treatment of obesity, which includes FDA-approved medications without exclusions or additional carve-outs. (CSA Rep. 6, A-99; Reaffirmation A-09; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmation A-10; Reaffirmation I-10; Reaffirmation A-12; Reaffirmed in lieu of Res. 434, A-12; Reaffirmation A-13; Reaffirmed: CSAPH Rep. 3, A-13; Reaffirmation: A-19; Appended: Res. 806, I-23)

Recognition of Obesity as a Disease (H-440.842):
This policy formally establishes that the AMA recognizes obesity as a disease state with multiple pathophysiological aspects that require a range of interventions to advance treatment and prevention. (BOT Rep. 11, I-06; Reaffirmation A-13; Appended: Sub. Res. 111, A-14; Modified: Sub. Res. 811, I-14; Appended: Res. 201, A-18; BOT Action in response to referred for decision: Res. 415, A-22; Modified: Res. 818, I-22)

Recognizing and Taking Action in Response to the Obesity Crisis (D-440.980):
This directive elevates obesity to one of the AMA's primary public health priorities and advocates for a multidisciplinary federal task force to better recognize and treat obesity as a chronic disease. (Res. 405, A-03; Reaffirmation A-04; Reaffirmation A-07; Appended: Sub. Res. 315, A-15; Modified: CME Rep. 03, A-17; Modified - BOT Action in response to referred for decision: Res. 403, A-21; Appended: Res. 427, A-25)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 704
(A-26)

Introduced by: Mississippi

Subject: Advocating Against Automatic Refill Requests

Referred to: Reference Committee G

Whereas, multiple studies show the tremendous financial and human resource burden imposed upon physician practices by health insurance companies; and

Whereas, while filling medications is foundational to Prescription Drug Adherence (PDA), it does not guarantee that a patient will take the medication as prescribed; and

Whereas, patients must have regular visits with physicians (as well as laboratory studies) in order to safely continue medication orders; and

Whereas, non-patient-initiated refill requests are burdensome to the physician and often unnecessary; and

Whereas, non-patient-initiated refill requests could cause physicians to errantly approve a medication without an appropriate history, exam, and pertinent laboratory studies; therefore be it

RESOLVED, that our American Medical Association communicate effectively with large pharmacy chains and conglomerates for the purpose of explaining the unnecessary administrative burden of automatic, non-patient-initiated refill requests and petitioning them to require all medication refill requests use a patient directed “opt-in” approach (Directive to Take Action); and be it further

RESOLVED, that our AMA petition the Centers for Medicare and Medicaid Services to restrict participating pharmacies from sending medication refill requests to physicians unless the patient “opts-in” to using the refill request. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/13/26

RELEVANT AMA POLICY

D-120.984 Streamlining the Process for Prescription Refills
Our American Medical Association will work with the American Pharmacists Association, the National Community Pharmacists Association, and the National Association of Chain Drug Stores to streamline the process for prescription refills in order to reduce administrative burdens on physicians and pharmacists and to improve patient safety. [Sub Res. 522, A-03 Reaffirmed: BOT Rep. 8, A-11 Reaffirmed: CSAPH Rep. 1, A-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 705
(A-26)

Introduced by: American Academy of Family Physicians

Subject: Recognizing Physicians as Sexual Assault Forensic Examiners

Referred to: Reference Committee G

Whereas, there is a national shortage in Sexual Assault Forensic Examiners, resulting in delays in care for sexual assault survivors[1]; and

Whereas, rural areas and tribal communities have the largest gap in sexual assault examiner coverage[2,3]; and

Whereas, he standard of care as listed in the Department of Justice's "A National Protocol for Sexual Assault Medical Forensic Examinations Adults/Adolescents" Third Edition (2024) states: "Clinicians, in the context of the medical forensic examination, may be registered nurses, advanced practice nurses, physician assistants or physicians, depending on factors such as local protocols, support for specialized clinical programs, and available education."[4]; and

Whereas, the American College of Emergency Physicians' 2022 Model of the Clinical Practice of Emergency Medicine includes "Sexual assault examination" within the section Procedures And Skills Integral To The Practice Of Emergency Medicine[5]; and

Whereas, physicians, including family medicine physicians, emergency medicine physicians, and pediatricians are part of the workforce that comprises Sexual Assault Medical Forensic Examiners; therefore be it

RESOLVED, that our American Medical Association Policy H-80.999 "Sexual Assault Survivors" be amended from "Our AMA will advocate for increased patient access to Sexual Assault Nurse Examiners, and other trained and qualified clinicians, in the emergency department for medical forensic examinations." to "Our AMA will advocate for increased patient access to Sexual Assault Forensic Examiners in the emergency department for medical forensic examinations," (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA Policy H-80.999 be amended from "Our AMA supports the implementation of a national database of Sexual Assault Nurse Examiner and Sexual Assault Forensic Examiner providers." to "Our AMA supports the implementation of a national database of Sexual Assault Medical Forensic Examiners." (Modify Current HOD Policy)

Fiscal Note: Minimal – less than $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 706
(A-26)

Introduced by: New York

Subject: Discharge Summaries from Skilled Nursing Facilities

Referred to: Reference Committee G

Whereas, when patients transition between different settings, i.e. community to hospital, hospital to skilled nursing facility (SNF), and SNF to community, the quality of care and patient safety can be compromised due to high rates of medication errors, incomplete/inaccurate information transfer, and lack of follow-up care (1,2,3,4,5,6), and

Whereas, published recommendations for optimization of transitions of care including a 2016 best practice consensus from SGIM-AMDA-AGS (7) includes a recommendation that SNFs transmit a formal discharge summary to the patient's outpatient PCP within 72 hours of patient discharge from SNF; and

Whereas, the Centers for Medicare and Medicaid Services (CMS) has issued a policy regulation (8) in 2017 requiring SNFs to create a discharge summary that includes but is not limited to a recapitulation of the resident's stay that includes, but is not limited to, diagnoses, course of illness/treatment or therapy, medications/ Medication Reconciliation and pertinent lab, radiology, and consultation results, to improve follow-up care; therefore be it

RESOLVED, that our American Medical Association educate their members as to Centers for Medicare and Medicaid Services (CMS) Policy (8) regarding skilled nursing facilities' (SNF) responsibility to create and timely deliver a comprehensive patient discharge summary to a patient's outpatient primary care physician (PCP). (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 707
(A-26)

Introduced by: New York

Subject: Malpractice Insurance for Employed Physicians

Referred to: Reference Committee G

Whereas, an increasing percentage of physicians are employed by a variety of corporate structures; and

Whereas, employers often select “claims-made” malpractice insurance policies to reduce expenses; and

Whereas, the gold standard for malpractice coverage is an “occurrence” policy, which provide coverage for any incident that occurs during the policy period, regardless of when the claim is filed; and

Whereas, a claims-made policy requires the purchase of a costly “tail” policy after leaving employment to maintain coverage for prior acts, and the cost of this tail coverage may be prohibitive; therefore be it

RESOLVED, that our American Medical Association support a requirement for employers to purchase only occurrence malpractice insurance policies for their employed physicians, fellows and residents. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 708
(A-26)

Introduced by: New York

Subject: Oppose Imposition of Fees on Physicians for Electronic Payment Transfers

Referred to: Reference Committee G

Whereas, AMA Advocacy has on multiple occasions asked for halfway measures, and instead of asking to ban VCC (virtual credit cards) on ERA transactions, it has asked for "further study at an NCVHS meeting"; and

Whereas, AMA advocacy, well aware that CMS "Guidance" does not carry the weight of law as has been pointed out to it on numerous occasions at the AMA PPPS meeting and AMA meetings, has asked CMS recently for more of the same, well aware that another Guidance will provide zero benefit to physicians; and

Whereas, "Guidance" issued by federal agencies does not carry the weight of law and is "non-enforceable, which is well-known to any attorney vaguely familiar with the Administrative Law (and it states so on the bottom of every Guidance issued by CMS), however despite that being pointed out the AMA Advocacy, the AMA persists in asking CMS to do what is illegal: enforce a non-enforceable "Guidance" in June 10, 2025 letter to CMS, instead of asking CMS for what is really needed, a legally sound regulation issued in an APA (Administrative procedure act compliant manner with 60 day notice and comment period; and

Whereas, AMA Advocacy adopted the talking points of Visa, MasterCard, Zelis, and UHC that "virtual credit cards" are legal, whereas there is no legal basis for such assertion, as they have never been adopted or proposed to be adopted under an APA-compliant process; therefore be it

RESOLVED, that our American Medical Association asks Centers for Medicare & Medicaid Services (CMS) to issue a legally-binding rules compliant with the Administrative Procedure Act with a notice and comment period preventing the use of virtual credit cards or imposition of electronic funds transfer (EFT) fees, or any fees on Health Insurance Portability and Accountability Act (HIPAA) standard electronic transactions. (Directive to Take Action)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 709
(A-26)

Introduced by: New York

Subject: Requiring Transparency and Accountability When Insurers and Third-Party Administrators Require Utilization Review, Thereby Practicing Medicine

Referred to: Reference Committee G

Whereas, health plans require preauthorization for certain tests, procedures, consultations, treatments, and medications, and such determinations may affect patient diagnosis, treatment, and outcomes; and

Whereas, physicians requesting preauthorization are required to identify themselves to insurance utilization review entities, including providing their National Provider Identifier (NPI); and

Whereas, under the Health Insurance Portability and Accountability Act (HIPAA), physicians must verify the identity and authority of individuals requesting access to a patient's protected health information when those individuals are not already known to them; and

Whereas, utilization review and peer-to-peer review processes may involve physicians making determinations that directly affect patient care, yet in some instances such reviewers do not disclose their identity to the requesting physician; therefore be it

RESOLVED, that our American Medical Association seek legislation and/or regulation regarding insurance company utilization reviewers to require the person charged with authorization decisions to provide their full name, specialty and National Provider Identifier (NPI), in order to maintain transparency, fulfill the requirements of the Health Insurance Portability and Privacy Act (HIPAA), and allow for accountability should the decision be called into question (Directive to Take Action); and be it further

RESOLVED, that our American Medical Association seek legislation and/or regulation regarding utilization review so that the reviewing physician be licensed in New York State and therefore, accountable to New York State authorities for the consequences of these clinically important decisions (Directive to Take Action); and be it further

RESOLVED, that our American Medical Association amend their Policy H-285-939, subsection (2) to amended to read as follows:

That medical directors of insurance entities be held accountable and liable for medical decisions regarding contractually covered medical services <u>including prior authorizations</u>.

(2) that medical directors of insurance entities be held accountable and liable for medical decisions regarding contractually covered medical services; and (3) that our AMA continue to undertake federal and state legislative and regulatory measures necessary to bring about this accountability.
(Modify Current HOD Policy)

Fiscal Note: Moderate – between $10,000 - $50,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 710
(A-26)

Introduced by: American Society for Metabolic and Bariatric Surgery, Society of American Gastrointestinal and Endoscopic Surgeons, Obesity Medical Association, American Academy of Sleep Medicine, American Association of Clinical Endocrinology, Medical Student Section

Subject: Parity in Access to Evidence-Based Obesity Treatment

Referred to: Reference Committee G

Whereas, the American Medical Association recognized obesity as a disease state with multiple pathophysiological aspects in 2013 (H-440.842) and elevated obesity as a top-tier public health priority in 2025 (D-440.980); and

Whereas, the prevalence of obesity among adults in the United States has risen from 30.5% in 1999–2000[1] to 41.9% in 2017–2020[2], and current estimates exceed 42%, with severe obesity (BMI ≥40) affecting approximately 9.7% of the adult population[3]; and

Whereas, the prevalence of obesity among children and adolescents in the United States is approximately 19.7%[4], having tripled since 1980, and affected youth face increased lifetime risk of type 2 diabetes, cardiovascular disease, and psychosocial harm, yet pediatric obesity treatment faces many of the same coverage barriers as adult treatment; and

Whereas, obesity is a root cause of more than 200 comorbid conditions[5] including type 2 diabetes, cardiovascular disease, certain cancers, obstructive sleep apnea, and nonalcoholic fatty liver disease, and is estimated to contribute to approximately 300,000 excess and premature deaths annually in the United States[6]; and

Whereas, the annual economic cost of obesity in the United States is estimated to exceed $260 billion in direct medical costs and lost productivity[7], representing a significant burden on the healthcare system, employers, and patients; and

Whereas, despite the AMA's recognition of obesity as a chronic disease more than a decade ago, a systematic and pervasive failure of payers to provide equitable coverage for evidence-based obesity treatments persists[8], creating a treatment access crisis unlike that faced by patients with any other AMA-recognized chronic disease; and

Whereas, Medicare Part D has historically excluded coverage of anti-obesity medications under Section 1927(d)(2) of the Social Security Act, and while a proposed CMS reinterpretation and a CMMI pilot program announced in 2025 represent incremental progress[9], no statutory fix has been enacted and millions of Medicare beneficiaries remain without reliable access to FDA-approved anti-obesity medications; and

Whereas, only approximately 25 states have implemented some form of taxpayer-funded coverage for anti-obesity medications[10], and coverage in the ACA individual and small-group marketplace remains virtually nonexistent, with fewer than 1% of plans covering GLP-1 receptor agonists for weight management as of 2024[11]; and

Whereas, utilization of anti-obesity medications among eligible individuals is estimated at only 0.5% overall and 0.27% among individuals from historically underserved populations[8], demonstrating a significant access gap that disproportionately affects communities of color, rural populations, and those with lower socioeconomic status; and

Whereas, bariatric and metabolic surgery remains severely underutilized, with fewer than 1% of eligible patients receiving surgery[12], due in part to burdensome prior authorization requirements and exclusionary insurance plan design; and

Whereas, a 2024 AMA survey found that 93% of physicians reported that prior authorization delays patients' access to necessary care[13], with practices completing an average of 39 prior authorization requests per physician per week, imposing a particularly acute burden in the treatment of obesity; and

Whereas, some insurers terminate coverage of obesity treatments when a patient's BMI improves below a threshold, which is clinically analogous to discontinuing insulin when hemoglobin A1c normalizes and fundamentally contradicts the AMA's recognition of obesity as a chronic disease requiring ongoing management[14]; and

Whereas, no other chronic disease recognized by the AMA, including hypertension, type 2 diabetes, or hyperlipidemia, is subject to comparable systematic exclusion from insurance coverage or to the requirement that patients demonstrate failure of lifestyle modification before receiving pharmacologic or procedural treatment[15]; and

Whereas, the continued rise in obesity prevalence since 2013, combined with persistently low utilization of evidence-based treatments across all modalities, indicates that existing policy has not yet achieved the systemic changes necessary to close the gap between the AMA's recognition of obesity as a chronic disease and equitable patient access to treatment; therefore be it

RESOLVED, that our American Medical Association promote policies and recommend to all public and private health insurance plans to provide coverage parity for evidence-based obesity treatments, including chronic weight management medications, bariatric and metabolic surgery, intensive behavioral therapy, dietary counseling and medical nutrition therapy, equivalent to coverage provided for other chronic diseases such as type 2 diabetes and cardiovascular disease, without exclusionary carve-outs, annual or lifetime caps specific to obesity, or "fail first"/step therapy requirements not applied to comparable chronic conditions (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for federal legislation to permanently repeal the Medicare Part D statutory exclusion of anti-obesity medications (Section 1927(d)(2) of the Social Security Act), and further advocate that all state Medicaid programs be required to include FDA-approved anti-obesity medications on their formularies as a condition of federal matching funds (Directive to Take Action); and be it further

RESOLVED**,** that our AMA oppose as discriminatory any insurance practice that terminates, reduces, or restricts coverage for evidence-based obesity treatment on insurer-defined weight loss targets, body mass index (BMI) thresholds, or other arbitrary metrics that are not aligned with individualized, evidence-based clinical decision-making as well as advocate for federal and state regulation prohibiting such practices (New HOD Policy); and be it further

RESOLVED, that our AMA oppose, in the absence of supporting clinical evidence, any mandatory supervised weight loss period as a prerequisite for bariatric or metabolic surgery coverage, and advocate for the elimination of such requirements at the federal and state level. (New HOD Policy)

RELEVANT AMA POLICY

H-440.842 Recognition of Obesity as a Disease H-440.842

Our American Medical Association recognizes obesity as a disease state with multiple pathophysiological aspects requiring a range of interventions to advance obesity treatment and prevention.
Res. 420, A-13, Reaffirmed: CSAPH Rep. 08, A-23

D-440.980 Recognizing and Taking Action in Response to the Obesity Crisis

1. Our American Medical Association will advocate for the creation of a multidisciplinary federal task force, including representation from the medical profession, to review the public health impact of obesity and recommend measures to:
    a. Better recognize and treat obesity as a chronic disease.
    b. Confront the epidemic of obesity and its root causes, particularly among populations with disproportionally high incidence.

2. Our AMA will actively pursue, in collaboration and coordination with programs and activities of appropriate agencies and organizations, the creation of a "National Obesity Awareness Month".
3. Our AMA will strongly encourage through a media campaign the re-establishment of meaningful physical education programs in primary and secondary education as well as family-oriented education programs on obesity prevention.
4. Our AMA will promote the inclusion of education on obesity prevention and the medical complications of obesity in medical school and appropriate residency curricula.
5. Our AMA will make Council on Medical Education Report 3, A-17, Obesity Education, available on the AMA website for use by medical students, residents, teaching faculty, and practicing physicians.
6. Our AMA elevates obesity to be one of its public health priorities.

Res. 405, A-03; Reaffirmation, A-04; Reaffirmation, A-07; Appended: Sub. Res. 315, A-15; Modified: CME Rep. 03, A-17; Modified – BOT, Action in response to referred for decision: Res. 403, A-21; Appended: Res. 427, A-25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 711
(A-26)

Introduced by: Ohio

Subject: Oppose Denials Based on Origin of Referral

Referred to: Reference Committee G

Whereas, patients may see another clinician in a primary care group for an acute problem or visit; and

Whereas, referrals may be made by multiple members of a care team; and

Whereas, denials for surgery are happening when the referring clinician does not match the primary care clinician listed with the insurer; and

Whereas, the medical necessity or timeliness is irrelevant to the approval; and

Whereas, denials delay care and harm patients; therefore be it

RESOLVED, that our American Medical Association advocate against prior authorization denials based solely upon the referring physician or appropriately licensed clinician. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/15/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 712
(A-26)

Introduced by: American Academy of Dermatology, American College of Mohs Surgery, Society for Investigative Dermatology

Subject: Addressing the Commoditization of Medicine Through Recognition of the Full Scope of Physician Work and Contributions

Referred to: Reference Committee G

Whereas, employed physicians now often find themselves under substantial pressure to meet benchmarks and productivity targets established by hospitals, health systems, and other physician employers; and

Whereas, relentless focus on productivity metrics has been associated with physician burnout, emotional exhaustion, moral distress, and workforce attrition, all of which may threaten patient access to timely, high-quality care; and

Whereas, many commonly used productivity systems and metrics emphasize quantifiable outputs while underrecognizing the substantial administrative, educational, and operational work, as well as other essential responsibilities, that physicians are expected to perform for hospitals, health systems, and other employers that rely on and benefit from these contributions; and

Whereas, such work may include in-basket management, care coordination, quality reporting, teaching, research, administrative leadership, supervision, and other activities that are essential to patient care delivery but may not be fully reflected in physician productivity benchmarks, creating tension between institutional productivity expectations and physicians' broader professional obligations as employed clinicians; and

Whereas, increasing pressure to meet productivity benchmarks has occurred at the same time as expanding clinical and administrative demands, often without corresponding physician time, support, or recognition; and

Whereas, physician workforce sustainability and patient access are better supported when physician expectations and performance assessments more accurately reflect the full scope of work required in modern medical practice; therefore be it

RESOLVED, that our American Medical Association advocate that health systems, hospitals, other physician employers, and third-party payors recognize that the profession of medicine is not a commoditized entity, is fundamentally anchored in the patient-physician relationship, and should not be reduced solely to productivity measures (Directive to Take Action); and be it further

RESOLVED that our AMA encourage employers of physicians to utilize productivity benchmarks, performance expectations, and compensation structures that recognize and integrate the full scope of physician work, including clinical, administrative, educational, and

operational responsibilities that may not be fully captured by traditional productivity metrics (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for regulatory, employer, and practice models that provide both employed and independent physicians with appropriate time, resources, compensation, support, and recognition for non-billable work that is essential to patient care, physician well-being, and health system function. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/15/26

RELEVANT AMA POLICY

D-400.982 AMA Efforts on Medicare Payment Reform
1. Our American Medical Association will increase media awareness around the 2024 AMA Annual meeting about the need for Medicare Payment Reform, eliminating budget neutrality reductions, and instituting annual cost of living increases.
2. Our AMA will step up its public relations campaign to get more buy-in from the general public about the need for Medicare payment reform.
3. Our AMA will increase awareness to all physicians about the efforts of our AMA on Medicare Payment Reform.
4. Our AMA will advocate for abolition of all MIPS penalties in light of the current inadequacies of Medicare payments.
[BOT Rep. 12, A-24 Reaffirmed: Res. 220, I-24]

D-385.945 Advocacy and Action for a Sustainable Medical Care System
1. Our American Medical Association will declare Medicare physician payment reform as an urgent advocacy and legislative priority for our AMA.
2. Our AMA will prioritize significant increases in funding for federal and state advocacy budgets specifically allocated to achieve Medicare physician payment reform to ensure that physician payments are updated annually at least equal to the annual percentage increase in the Medicare Economic Index.
3. Our AMA Board of Trustees will report back to the House of Delegates at each annual and interim meeting on the progress of our AMA in achieving Medicare payment reform until predictable, sustainable, fair physician payment is achieved.
[Res. 214, A-23 Reaffirmed in lieu of: Res. 225, A-25]

D-400.981 Increasing Transparency of AMA Medicare Payment Reform Strategy
1. Our American Medical Association will provide a summary of findings and actionable recommendations from both internal and external advocacy consultants regarding Medicare payment reform. The report must primarily focus on barriers identified, gaps in the current strategy, and specific recommendations for improving and accelerating advocacy efforts.
2. Our AMA will share with its members comprehensive reports on
our Medicare payment reform advocacy efforts, including consultant findings on major barriers, strategy gaps, and recommendations for improvement, at both the Interim and Annual Meetings beginning at I-25, and more frequently as legislative dynamics dictate.
[Res. 233, A-25]

D-310.968 Physician and Medical Student Burnout
1. Our American Medical Association recognizes that burnout, defined as emotional exhaustion, depersonalization, and a reduced sense of personal accomplishment or effectiveness, is a problem among residents, fellows, and medical students.
2. Our AMA will work with other interested groups to regularly inform the appropriate designated institutional officials, program directors, resident physicians, and attending faculty about resident, fellow,

and medical student burnout (including recognition, treatment, and prevention of burnout) through appropriate media outlets.
3. Our AMA will encourage partnerships and collaborations with accrediting bodies (e.g., the Accreditation Council for Graduate Medical Education and the Liaison Committee on Medical Education) and other major medical organizations to address the recognition, treatment, and prevention of burnout among residents, fellows, and medical students and faculty.
4. Our AMA will encourage further studies and disseminate the results of studies on physician and medical student burnout to the medical education and physician community.
5. Our AMA will continue to monitor this issue and track its progress, including publication of peer-reviewed research and changes in accreditation requirements.
6. Our AMA encourages the utilization of mindfulness education as an effective intervention to address the problem of medical student and physician burnout.
7. Our AMA will encourage medical staffs and/or organizational leadership to anonymously survey physicians to identify local factors that may lead to physician demoralization.
8. Our AMA will continue to offer burnout assessment resources and develop guidance to help organizations and medical staffs implement organizational strategies that will help reduce the sources of physician demoralization and promote overall medical staff well-being.
9. Our AMA will continue to:
1. address the institutional causes of physician demoralization and burnout, such as the burden of documentation requirements, inefficient work flows and regulatory oversight.
2. develop and promote mechanisms by which physicians in all practices settings can reduce the risk and effects of demoralization and burnout, including implementing targeted practice transformation interventions, validated assessment tools and promoting a culture of well-being.
3. Our AMA supports physicians who are caregivers to alleviate physician burnout.
[CME Rep. 8, A-07 Modified: Res. 919, I-11 Modified: BOT Rep. 15, A-19 Reaffirmation: A-22 Reaffirmed: Res. 802, I-24 Appended: Res. 305, I-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 713
(A-26)

Introduced by: North American Neuromodulation Society

Subject: Reducing Prior Authorization Delays to Improve Access to Neuromodulation and Non-Opioid Pain Therapies

Referred to: Reference Committee G

Whereas, chronic pain affects approximately 20% of adults in the United States and represents a leading cause of disability and healthcare utilization[1]; and

Whereas, neuromodulation therapies, including peripheral nerve stimulation, spinal cord stimulation, and other device-based interventions, are evidence-based, minimally invasive, non-opioid treatment options for chronic nociceptive and neuropathic pain[2,3]; and

Whereas, timely initiation of neuromodulation therapies is critical to achieving optimal clinical outcomes, particularly for therapies designed to modulate neural circuits early in the disease course[4]; and

Whereas, prior authorization requirements imposed by insurance providers frequently result in delays in access to medically necessary, evidence-based pain treatments[5]; and

Whereas, a prospective multicenter observational cohort study of patients undergoing temporary peripheral nerve stimulation demonstrated that insurance authorization delays were independently associated with reduced odds of achieving clinically meaningful pain relief at both 60 days and 12 months[6]; and

Whereas, increasing delays in authorization were associated with progressively lower treatment response rates, even after adjustment for demographic and clinical variables[6]; and

Whereas, administrative delays in care are associated with worsened patient outcomes, prolonged disability, and increased reliance on less effective or higher-risk treatments, including opioids[7]; and

Whereas, variability in payer coverage policies, including recent updates by Aetna to provide national coverage for select neuromodulation therapies, highlights an inconsistent and evolving reimbursement landscape across insurers[8,9]; and

Whereas, inconsistent prior authorization requirements across payers contribute to inequities in access to evidence-based, non-opioid pain treatments; therefore be it

RESOLVED, that our American Medical Association advocate for the reduction of prior authorization requirements for evidence-based neuromodulation therapies and other non-opioid pain treatments when clinically indicated (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for standardized, transparent, and expedited prior authorization processes across payers, including response timelines that do not exceed 72

hours for non-urgent requests and 24 hours for urgent requests (Directive to Take Action); and be it further

RESOLVED, that our AMA work with public and private insurers to ensure that coverage policies for neuromodulation therapies and other non-opioid pain treatments are evidence-based, consistent across payers, and minimize administrative barriers to care (Directive to Take Action); and be it further

RESOLVED, that our AMA support policies and legislation aimed at reducing administrative delays that negatively impact patient outcomes and access to non-opioid pain care (New HOD Policy); and be it further

RESOLVED, that our AMA encourage further research on the impact of insurance-related delays on clinical outcomes, healthcare disparities, and cost-effectiveness in neuromodulation and pain management therapies (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for appropriate reimbursement and equitable access to neuromodulation therapies and other evidence-based, non-opioid pain treatments regardless of insurance type or socioeconomic status. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

RELEVANT AMA POLICY

D-320.970 Advocating Against Prior Authorization for In-Person Visits with Physicians
Our AMA advocates against health insurance plan policies that require prior authorization for in-person visits with a physician. [Res. 708, A-25]

H-320.939 Prior Authorization and Utilization Management Reform
Our American Medical Association will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation, Prior Authorization Physician Survey and other PA research, and the AMA Prior Authorization Toolkit, which is aimed at reducing PA administrative burdens and improving patient access to care. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes, including the

extent to which these processes contribute to patient harm. Our AMA will advocate for health plans to minimize the burden on patients, physicians, and medical centers when updates must be made to previously approved and/or pending prior authorization requests. [CMS Rep. 08, A-17; Reaffirmation I-17; Reaffirmed: Res. 711, A-18; Appended: Res. 812, I-18; Reaffirmed in lieu of: Res. 713, A-19; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: Res. 811, I-19; Reaffirmed: CMS Rep. 4, A-21; Appended: CMS Rep. 5, A-21; Reaffirmation A-22]

H-120.988 Patient Access to Treatments Prescribed by Their Physicians
Our American Medical Association confirms its strong support for the autonomous clinical decision-making authority of a physician and that a physician may lawfully use an FDA approved drug product or medical device for an off-label indication when such use is based upon sound scientific evidence or sound medical opinion; and affirms the position that, when the prescription of a drug or use of a device represents safe and effective therapy, third party payers, including Medicare, should consider the intervention as clinically appropriate medical care, irrespective of labeling, should fulfill their obligation to their beneficiaries by covering such therapy, and be required to cover appropriate 'off-label' uses of drugs on their formulary. Our AMA strongly supports the important need for physicians to have access to accurate and unbiased information about off-label uses of drugs and devices, while ensuring that manufacturer-sponsored promotions remain under FDA regulation. Our AMA supports the dissemination of generally available information about off-label uses by manufacturers to physicians. Such information should be independently derived, peer reviewed, scientifically sound, and truthful and not misleading. The information should be provided in its entirety, not be edited or altered by the manufacturer, and be clearly distinguished and not appended to manufacturer-sponsored materials. Such information may comprise journal articles, books, book chapters, or clinical practice guidelines. Books or book chapters should not focus on any particular drug. Dissemination of information by manufacturers to physicians about off-label uses should be accompanied by the approved product labeling and disclosures regarding the lack of FDA approval for such uses, and disclosure of the source of any financial support or author financial conflicts. Physicians have the responsibility to interpret and put into context information received from any source, including pharmaceutical manufacturers, before making clinical decisions (e.g., prescribing a drug for an off-label use). Our AMA strongly supports the addition to FDA-approved labeling those uses of drugs for which safety and efficacy have been demonstrated. Our AMA supports the continued authorization, implementation, and coordination of the Best Pharmaceuticals for Children Act and the Pediatric Research Equity Act. [Res. 30, A-88; Reaffirmed: BOT Rep. 53, A-94; Reaffirmed and Modified: CSA Rep. 3, A-97; Reaffirmed and Modified: Res. 528, A-99; Reaffirmed: CMS Rep. 8, A-02; Reaffirmed: CMS Rep. 6, A-03; Modified: Res. 517, A-04; Reaffirmation I-07; Reaffirmed: Res. 819, I-07; Reaffirmation A-09; Reaffirmation I-10; Modified: BOT Rep. 5, I-14; Reaffirmed: Res. 505, A-15; Reaffirmed: CMS Rep. 6, I-20; Reaffirmed: Res. 509, I-20; Reaffirmation: I-22; Reaffirmed: CSAPH Rep. 01, A-23; Reaffirmed: CSAPH Rep. 02, A-23; Reaffirmed: CSAPH Rep. 02, A-24]

H-120.922 Improved Access and Coverage to Non-Opioid Modalities to Address Pain
Our American Medical Association will advocate for increased access and coverage of non-opioid treatment modalities including pharmaceutical pain care options, interventional pain management procedures, restorative therapies, behavioral therapies, physical and occupational therapy, and other evidence-based therapies recommended by the patient’s physician. Our AMA will advocate for non-opioid treatment modalities being placed on the lowest cost-sharing tier for the indication of pain so that patients have increased access to evidence-based pain care as recommended by the HHS Interagency Pain Care Task Force; and Our AMA will encourage the manufacturers of pharmaceutical pain care options to seek United States Food and Drug Administration approval for additional indications related to non-opioid pain management therapy. [Res. 218, A-19; Reaffirmed: CSAPH Rep. 01, A-23; Reaffirmed: Res. 830, I-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 714
(A-26)

Introduced by: American Academy of Emergency Medicine

Subject: Physician Case Log Portability

Referred to: Reference Committee G

Whereas, physician case logs documenting clinical encounters and procedures are routinely required for medical licensure, hospital credentialing, and the obtainment and renewal of hospital clinical privileges; and

Whereas, hospitals, billing companies, management groups, and health systems typically maintain exclusive custody and control of physician case logs through proprietary medical record systems; and

Whereas, advances in health information technology permit rapid, secure, and reliable deidentification of patient information in compliances with federal privacy standards; and

Whereas, delay or refusal to release physician case logs can delay or prevent a physician from obtaining licensure and employment; and

Whereas, such delays disproportionately affect physicians leaving unsafe and unethical work environments which further impairs physician well-being; and

Whereas, delays in credentialing and privileging result in measurable economic harm to physicians; and

Whereas, there is currently no uniform, enforceable national standard governing timelines, format, and remedies for the release of physician case logs; therefore be it

RESOLVED, that our American Medical Association advocates for federal and state policies requiring physician employers, regardless of type of employment, to provide physicians, free of charge, with complete and accurate copies of their case logs in a deidentified, electronically transferrable, nonproprietary format when requested to do so (Directive to Take Action); and be it further

RESOLVED, that such polices establish a mandatory and enforceable timeline for production of case logs, not to exceed five (5) business days (Directive to Take Action); and be it further

RESOLVED, that procedures are in place for the immediate transfer of case logs to all physicians upon dissolution of the physician employer for any reason. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 715
(A-26)

Introduced by: Private Practice Physicians Section

Subject: Oppose the Legal Position that Virtual Credit Cards are a Legal Method of Payment under HIPAA

Referred to: Reference Committee G

Whereas, the AMA General Counsel acknowledged that the AMA members are free to advocate for any issue as they wish, and the House of Delegates is free to pass policy that serves the physician interests; and

Whereas, virtual credit cards are a perennial problem to physician practices, causing significant administrative burnout and imposing high costs, collectively greater than $10 billion per year; and

Whereas, virtual credit cards have not been adopted as a legal payment method for health plans to make electronic payments to physicians under HIPAA and their status is at best legally contested; and

Whereas, the Centers for Medicare and Medicaid Services (CMS), under lobbying from the virtual credit card industry including Mastercard and Zelis, decided to take a contested position advocated by Mastercard and UnitedHealthcare Vpay that virtual credit cards are a legal way for paying physicians by health plans, however CMS has never promulgated a proposed rule under the Administrative Procedure Act to promulgate such policy as required by law; and

Whereas, CMS, incredulously and contrary to the law and under lobbying from Zelis, United Healthcare Optum Vpay, Echohealth, and Mastercard took the position that even as the law states that physicians are entitled to get healthcare payments via the adopted standard no-cost ACH EFT, CMS decided that health plans are free to send the first payment through non-standard electronic payment formats; and

Whereas, health plans allegedly coordinate with virtual credit card industry vendors to require fees from physicians for getting paid by ACH EFT, a federally recognized low-cost payment method, but CMS accepted vendor arguments that vendors can impose administrative costs on physicians by forcing physicians to fill out the same form 700 times to enroll in the same electronic transaction for every plan that is administered by virtual credit card companies or pay 2.5 percent of revenue while HIPAA mandates lowering administrative costs; and

Whereas, for any legally unsettled and contested issue, the American Medical Association is legally free to take a position that is most favorable to its members and the legality of virtual credit cards is such an issue; therefore be it

RESOLVED, that our American Medical Association will advocate that a vendor or clearinghouse that offers a multi-payer platform may not create separate payer-specific enrollment mechanisms into standard adopted HIPAA transactions (Directive to Take Action); and be it further

RESOLVED, that our AMA will advocate that a health plan may not use a vendor for electronic transactions that unnecessarily create duplicate administrative work for physician practices by creating a separate mechanism of enrollment in the same standard transaction for different health plans. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

RELEVANT AMA POLICY

Virtual Credit Card Payments H-190.955

1. Our American Medical Association will educate its members about the use of virtual credit cards by third party payers, including the costs of accepting virtual credit card payments from third party payers, the beneficiaries of the administrative fees paid by the physician practice inherent in accepting such payments and the lower cost alternative of electronic funds transfer via the Automated Clearing House.
2. Our AMA will advocate for advance disclosure by third-party payers of transaction fees associated with virtual credit cards and any rebates or other incentives awarded to payers for utilizing virtual credit cards.
3. Our AMA supports transparency, fairness, and provider choice in payers' use of virtual credit card payments, including: advanced physician consent to acceptance of this form of payment; disclosure of transaction fees; clear information about how the provider can opt out of this payment method at any time; and prohibition of payer contracts requiring acceptance of virtual credit card payments for network inclusion.

Update the status of Virtual Credit card policy, EFT fees, and lack of Enforcement of Administrative Simplification Requirements by CMS D-190.965

Our American Medical Association will report at the Annual 2026 Meeting on the progress of, and action items for implementation of AMA Policies D-190.970, H-190.955, and D-190.968.

Citation: Res. 819, I-25

Amend Virtual Credit Card and Electronic Funds Transfer Fee Policy D-190.968

1. Our American Medical Association will advocate for legislation or regulation that would prohibit the use of virtual credit cards (VCCs) for electronic health care payments.
2. Our AMA will advocate on behalf of physicians and plainly state that it is not advisable or beneficial for medical practices to get paid by VCCs.
3. Our AMA will engage in legislative and regulatory advocacy efforts to address the growing and excessive electronic funds transfer (EFT) add-on service fees charged by payers when paying physicians, including advocacy efforts directed at:
    a. The issuance of Centers for Medicare & Medicaid Services (CMS) regulatory guidance affirming physicians' right to choose and receive timely basic EFT payments without paying for additional services.
    b. CMS enforcement activities related to this issue.
    c. Physician access to a timely no fee EFT option as an alternative to VCCs.

Citation: Res. 819, I-23

CMS Administrative Requirements D-190.970

1. Our American Medical Association will forcefully advocate that the Centers for Medicare and Medicaid Services (CMS) investigate all valid allegations of HIPAA Administrative simplification requirements thoroughly and offers transparency in its processes and decisions as required by the Administrative Procedure Act (APA).
2. Our AMA will forcefully advocate that the CMS resolve all complaints related to the non-compliant payment methods including opt-out virtual credit cards, charging processing fees for electronic claims and other illegal electronic funds transfer (EFT) fees.
3. Our AMA will communicate its strong disapproval of the failure by the CMS Office of Burden Reduction to effectively enforce the HIPAA administrative simplification requirements as required by the law and its failure to impose financial penalties for non-compliance by health plans.
4. Our AMA will through legislation, regulation or other appropriate means, advocate for the prohibition of health insurers charging physicians and other providers to process claims and make payment.
   Citation: Res. 229, I-21; Reaffirmed: A-22

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 716
(A-26)

Introduced by: Private Practice Physicians Section

Subject: Equal Opportunity for Payment for "On Call" Duty

Referred to: Reference Committee G

Whereas, a primary goal of the American Medical Association is enhancing the satisfaction and sustainability of medical practice; and

Whereas, traditionally, physicians were expected to be "on call" to the hospital for a minimum amount of time as a responsibility of being on the medical staff, but in recent decades, the shift to employing many physicians by a hospital included coverage duties which by definition is paid as a part of the salary of the employed physician; and

Whereas, additionally, some independent physicians are paid for "on call" duties to ensure access to a given specialty, yet others (not in short supply) are not[1]; and

Whereas, the duty to be "on call" for consultation at the hospital carries an opportunity cost of being unable to schedule or participate in other activities, quite apart from any patient care that may eventuate; and

Whereas, the independent physician may bill for direct patient care, but that does not cover the opportunity cost of simply being "on call;" and

Whereas, in at least one state (Massachusetts), that the nature of the relationship of the physician to the institution has changed in recent decades is acknowledged by policy ratified by the Massachusetts Medical Society that advocates that "hospitals engage community/independent specialty physicians on the medical staff for observation, inpatient and emergency department coverage and that the parties negotiate mutually satisfactory payment terms and service agreements for such service"[2]; and

Whereas, guidelines for such negotiation start with equitable payment for service; therefore be it

RESOLVED, that our American Medical Association will work with relevant stakeholders to advocate that all physicians, whether employed or independent, should be paid for "on call" responsibilities, whether or not patient care is separately billed. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

On-Call Physicians H-130.948

Our AMA:
(1) strongly encourages physicians and hospitals to work collaboratively to develop solutions based on adequate compensation or other appropriate incentives as the preferred method of ensuring on-call coverage and will monitor and oppose any state legislative or regulatory efforts mandating emergency room on-call coverage as a requirement for medical staff privileges and state licensure that are not supported by the state medical association;
(2) advocates that physician on-call coverage for emergency departments be guided by the following principles:
(a) The hospital and physicians should jointly share the responsibility for the provision of care of emergency department patients.
(b) Every hospital that provides emergency services should maintain policies to ensure appropriate on-call coverage of the emergency department by medical staff specialists that are available for consultation and treatment of patients.
(c) The organization and function of on-call services should be determined through hospital policy and medical staff by-laws, and include methods for monitoring and assuring appropriate on-call performance.
(d) Physicians should be provided adequate compensation for being available and providing on-call and emergency services.
(e) Hospital medical staff by-laws and emergency department policies regarding on-call physicians' responsibilities must be consistent with Emergency Medical Treatment and Active Labor Act (EMTALA) requirements.
(f) Medical staffs should determine and adopt protocols for appropriate, fair, and responsible medical staff on-call coverage.
(g) Hospitals with specialized emergency care capabilities need to have a means to ensure medical staff responsibility for patient transfer acceptance and care.
(h) Hospitals that lack the staff to provide on-call coverage for a particular specialty should have a plan that specifies how such care will be obtained.
(i) The decision to operate or close an emergency department should be made jointly by the hospital and medical staff;
(3) supports the enforcement of existing laws and regulations that require physicians under contract with health plans to be adequately compensated for emergency services provided to the health plans' enrollees; and
(4) supports the enactment of legislation that would require health plans to adequately compensate out-of-plan physicians for emergency services provided to the health plans' enrollees or be subject to significant fines similar to the civil monetary penalties that can be imposed on hospitals and physicians for violation of EMTALA.

On-Call Coverage Models D-130.965
Our American Medical Association will compile and make available to the physician community various examples of on-call solutions intended to avoid subjecting physicians to unrealistic and unduly burdensome on-call demands, and educate AMA physician members regarding these options.
Citation: Res. 722, A-13; Reaffirmed: CMS Rep. 01, A-23

On-Call and Emergency Services Pay D-130.963
Our AMA will develop and make available policy guidance for physicians to negotiate with hospital medical staffs to support physician compensation for on call and emergency services.
Citation: Res. 818, I-17

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 717
(A-26)

Introduced by: Private Practice Physicians Section

Subject: Advocacy for a Failure-Proof National Centralized Electronic Transaction Clearinghouse

Referred to: Reference Committee G

Whereas, the United States healthcare system is complex with over 2.5 million ERISA-covered group plans in 2021 according to the U.S. Department of Labor, plus over 4,000 Medicare Advantage and Medicaid managed care plans and even more venders connecting to more than one million physician practices and other provider in 1-to-1 connections making automation neither possible nor feasible; and

Whereas, health plan identifiers (HPID), a standardized national identifier for each of the greater than 2.5 million health plans was mandated by HIPAA but never implemented causing numerous administrative problems, including the inability of the Centers for Medicaid and Medicare Services (CMS) to administer the No Surprises Act and confusion as to who is getting healthcare claims and who is paying with a health plan such as Kaiser Permanente having up to five different payer IDs for the same plan, pending on the clearinghouse used; and

Whereas, true interoperability at scale is impossible with standardization and a unique health plan ID; and

Whereas, the AMA has existing policy ("Promoting Electronic Data Interchange" H-190.978) that calls for a national electronic transaction clearinghouse that "continues to facilitate the rapid development of uniform, industry-wide, easy-to-use, low cost means for physicians to exchange electronic claims and eligibility information and remittance advice with payers and others in a manner that protects confidentiality of medical information and to assist physicians in the transition to electronic data interchange;" and

Whereas, for the CMS Prior Authorization rule, CMS advised that healthcare providers pull out their rotary phones to "connect electronically to health plans," an insane idea for implementation of a modern interconnectivity technology; therefore be it

RESOLVED, that our American Medical Association advocate for implementation of the standard national health plan identifier (HPID) that all transactions must be communicated directly with the health plan (Directive to Take Action); and be it further

RESOLVED, that our AMA advocates for the implementation of a national centralized electronic healthcare transaction clearinghouse that would allow physician practices, other providers, health plans, clearinghouses, health IT vendors, state and federal regulators, digital health products, and consumer apps to maintain only one standard direct connection through which all electronic transactions can flow seamlessly, securely, and at low cost to any other participant guided by a transaction ID and a standard identifier such as a health plan identifier (HPID) and/or national provider identifier (NPI). (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

RELEVANT AMA POLICY

Promoting Electronic Data Interchange H-190.978

1. Our American Medical Association:
    1. adopts the following policy principles to encourage greater use of electronic data interchange (EDI) by physicians and improve the efficiency of electronic claims processing:
        a. Public and private payers who do not currently do so should cover the processing costs of physician electronic claims and remittance advice.
        b. Vendors, claims clearinghouses, and payers should offer physicians a full complement of EDI transactions (e.g., claims submission; remittance advice; and eligibility, coverage and benefit inquiry).
        c. Vendors, clearinghouses, and payers should adopt American National Standards Institute (ANSI) Accredited Standard's Committee (ASC) Insurance Subcommittee (X12N) standards for electronic health care transactions and recommendations of the National Uniform Claim Committee (NUCC) on a uniform data set for a physician claim.
        d. All clearinghouses should act as all-payer clearinghouses (i.e., accept claims intended for all public and private payers).
        e. Practice management systems developers should incorporate EDI capabilities, including electronic claims submission; remittance advice; and eligibility, coverage and benefit inquiry into all of their physician office-based products.
        f. States should be encouraged to adopt AMA model legislation concerning turnaround time for "clean" paper and electronic claims.
        g. Federal legislation should call for the acceptance of the Medicare National Standard Format (NSF) and ANSI ASC X12N standards for electronic transactions and NUCC recommendations on a uniform data set for a physician claim. This legislation should also require that:
            i. any resulting conversions, including maintenance and technical updates, be fully clarified to physicians and their office staffs by vendors, billing agencies or health insurers through educational demonstrations.
            ii. that all costs for such services based on the NSF and ANSI formats, including educational efforts be fully explained to physicians and/or their office staffs during negotiations for such contracted services.
2. continues to encourage physicians to develop electronic data interchange (EDI) capabilities and to contract with vendors and payers who accept American National Standards Institute (ANSI) standards and who provide electronic remittance advice as well as claims processing.
3. continues to explore EDI-related business opportunities.
4. continues to facilitate the rapid development of uniform, industry-wide, easy-to-use, low cost means for physicians to exchange electronically claims and eligibility information and remittance advice with payers and others in a manner that protects confidentiality of medical information and to assist physicians in the transition to electronic data interchange.
5. continues its leadership roles in the NUCC and WEDI.
6. through its participation in the National Uniform Claim Committee, will work with third party payers to determine the reasons for claims rejection and advocate methods to improve the efficiency of electronic claims approval.

Citation: BOT Rep. 9, A-96, Amended: CMS Rep. TT, I-96; Appended: Sub. Res. 702, A-00; Modified: CMS Rep. 6, A-10; Reaffirmed: I-13; Reaffirmed: A-22

Administrative Simplification in the Physician Practice D-190.974

1. Our American Medical Association strongly encourages vendors to increase the functionality of their practice management systems to allow physicians to send and receive electronic standard transactions directly to payers and completely automate their claims management revenue cycle and will continue to strongly encourage payers and their vendors to work with the AMA and the Federation to streamline the prior authorization process.
2. Our AMA will continue its strong leadership role in automating, standardizing and simplifying all administrative actions required for transactions between payers and providers.
3. Our AMA will continue its strong leadership role in automating, standardizing, and simplifying the claims revenue cycle for physicians in all specialties and modes of practice with all their trading partners, including, but not limited to, public and private payers, vendors, and clearinghouses.
4. Our AMA will prioritize efforts to automate, standardize and simplify the process for physicians to estimate patient and payer financial responsibility before the service is provided, and determine patient and payer financial responsibility at the point of care, especially for patients in high-deductible health plans.
5. Our AMA will continue to use its strong leadership role to support state and specialty society initiatives to simplify administrative functions.
6. Our AMA will continue its efforts to ensure that physicians are aware of the value of automating their claims cycle.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 05-A-26

Subject: Update on Corporate Relationships

Presented by: David H. Aizuss, MD, Chair

PURPOSE

The purpose of this informational report is to update the House of Delegates (HOD) on the results of the Corporate Review process from January 1 through December 31, 2025.

A summary of corporate activities that associate the American Medical Association (AMA) name or logo with a company, non-Federation association or foundation, or include commercial support, reviewed and recommended by the Corporate Review Team (CRT) during 2025 are outlined on Appendix A.

BACKGROUND

At the 2002 Annual Meeting, the HOD approved revised principles to govern the AMA's corporate relationships, HOD Policy G-630.040 "Principles on Corporate Relationships." These guidelines for AMA corporate relationships were incorporated into the corporate review process, are reviewed regularly, and were reaffirmed at the 2012 and 2022 Annual Meetings. The AMA Corporate Review Team is responsible for reviewing AMA projects to ensure they fit within these guidelines.

YEAR 2025 RESULTS

In 2025, 105 activities were considered and approved through the Corporate Review process. Of the 105 activities recommended for approval, 57 were conferences or events, seven were educational content or grants, 29 were collaborations or affiliations, five were member programs and seven were business arrangements/licensing programs. See Appendix B for details.

CONCLUSION

The Board of Trustees (BOT) periodically evaluates the CRT review process to balance risk assessment with the need for external collaborations that advance the AMA's strategic focus.

Appendix A

CORPORATE REVIEW PROCESS OVERVIEW

The Corporate Review Team (CRT) includes senior managers from across the organization including Advocacy; the Center for Optimal Health Outcomes; Health, Science and Ethics; Enterprise Communications; Finance; Federation Relations; Health Solutions, Marketing and Member Experience; Medical Education; Office of the General Counsel; Professional Satisfaction/Practice Sustainability; and Publishing.

The CRT evaluates each project submitted to determine fit or conflict with AMA Corporate Guidelines, covering:

- Type, purpose, and duration of the activity;
- Audience;
- Company, association, foundation, or academic institution involved (due diligence reviewed);
- Source of external funding;
- Use of the AMA name and logo;
- Editorial control/copyright;
- Exclusive or non-exclusive nature of the arrangement;
- Status of single and multiple supporters; and
- Risk assessment for AMA.

The CRT reviews and makes recommendations regarding the following types of activities that utilize the AMA name and logo:

- Industry-supported digital, print, or conference projects directed to physicians or patients that do not adhere to Accreditation Council for Continuing Medical Education (ACCME) Standards and Essentials.
- AMA sponsorship of external events.
- Independent and company-sponsored foundation supported projects.
- AMA licensing and publishing programs. (These corporate arrangements involve licensing AMA products or information to corporate or non-profit entities in exchange for a royalty and involve the use of AMA's name, logo, and trademarks. This does not include database or Current Procedural Terminology (CPT ®) licensing).
- Member programs such as new affinity or insurance programs and member benefits.
- Third-party relationships such as joint ventures, business partnerships, or co-branding programs directed to members or other stakeholders.
- Non-profit association collaborations outside the Federation. The CRT reviews all non-profit association projects (Federation or non-Federation) that involve corporate sponsorship.
- Collaboration with academic institutions in cases where there is corporate sponsorship.

For the above specified activities, if the CRT recommends approval, the project may proceed without any additional approval. However, the Executive Committee of the Board must review and approve CRT recommendations for the following AMA activities:

- Any activity directed to the public with external funding.
- Single-sponsor activities that do not meet ACCME Standards and Essentials.
- Activities involving risk of substantial financial penalties for cancellation.
- Upon request of a dissenting member of the CRT.
- Any other activity upon request of the CRT.

All Corporate Review recommendations are summarized annually for information to the Board of Trustees (BOT). The BOT informs the HOD of all corporate arrangements at the Annual Meeting.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 06-A-26

Subject: AMA Performance, Activities and Status in 2025

Presented by: David H. Aizuss, MD, Chair

Policy G-605.050, "Annual Reporting Responsibilities of the AMA Board of Trustees," calls for the Board of Trustees to submit a report at the American Medical Association (AMA) Annual Meeting each year summarizing AMA performance, activities, and status for the prior year.

INTRODUCTION

The American Medical Association (AMA) is the largest and most influential organization representing the voices of hundreds of thousands of physicians, residents, and medical students across the United States. The AMA advocates for policies that improve access to quality care, strengthen the patient-physician relationship, promote physician autonomy and wellbeing, advance science and technology, and uphold the high medical ethics of the profession. The AMA's mission is to promote the art and science of medicine and the betterment of public health.

Amplifying physician voices and shaping policy

In 2025, the AMA worked to elevate the voices of physicians in Washington, D.C. and across the country to ensure that physician clinical experience and expertise guide the policy changes and technological advances that are critical to medicine's future. At the national level, the AMA continued to push to reform the Medicare reimbursement system, fix prior authorization, promote physician-led care and more by:

- Generating more than $100 million in earned media and ad impressions and driving more than 600,000 physicians and patients to contact their legislators about Medicare payment reform through our FixMedicareNow grassroots campaign.
- Securing a commitment from America's Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association to lessen the burden of prior authorization in 60 of their member plans.
- Opposing legislation that would expand pharmacists' scope of practice with respect to testing and treating patients for influenza, COVID-19, RSV, and strep throat.

In partnership with state and specialty societies, AMA advocacy protected patients by:

- Blocking nearly 100 bills that would have inappropriately expanded the scope of practice for physician assistants, pharmacists, optometrists and more.
- Providing support and resources to help enact 22 prior authorization bills that sought to decrease reporting requirements, reduce delays in patient care, and improve transparency.
- Partnering with the Dr. Lorna Breen Heroes' Foundation to verify that 40 state medical boards and more than 1,800 health systems (and others) removed stigmatizing mental health questions from their credentialing applications.

© 2026 American Medical Association. All rights reserved.

The AMA secured an important win for patients when the National Council of Insurance Legislators adopted model legislation that was substantially based on the AMA's state model bill addressing prior authorization.

The AMA was a critical voice for physicians on key legal issues, including the implementation of the No Surprises Act (*TMA v. HHS*), scope of practice challenges (*Palmer v. Bonta*), and e-cigarette regulation (*FDA v. R.J. Reynolds Vapor*), among other matters vital to physicians.

The AMA continues to serve as a lead plaintiff in a major antitrust case against MultiPlan, a data analytics company accused of creating a price-fixing conspiracy with the largest commercial health insurance companies in the country. The AMA successfully opposed MultiPlan's motion to dismiss the suit, and the case is proceeding with discovery.

In a year of high-profile challenges to public health and public health institutions, physician leadership was more important than ever. The AMA provided steadfast leadership during uncertainty, defended science, and advocated for evidence — not politics — to guide care decisions and public health policy. We accomplished this by:

- Publicly challenging decisions that would weaken recommendations and undermine public confidence in life-saving childhood vaccinations.
- Reaffirming decades of scientific research that showed no link between vaccines and autism.
- Releasing information graphics to clear up confusion around vaccine misinformation and facilitate honest conversations between physicians and patients.

In 2025, as the AMA continued to elevate the voice of physicians and defend science-based medicine—earning 95 billion media impressions valued at $912 million—Dr. John Whyte was welcomed as the new Executive Vice President and CEO, further strengthening the organization's leadership and impact.

Driving the future of medicine

The rapid growth of digital health and augmented intelligence (AI) accelerated in 2025, with more physicians and health systems experiencing their transformative potential. Going forward, it's crucial for physicians to lead the way in shaping and implementing these technologies.

With the launch of the AMA Center for Digital Health and AI in 2025, we are taking the lead in this space. The AMA's new Center for Digital Health and AI was created to give physicians a platform to help establish ethical guardrails, shape policy and support workflow integration so that AI and other digital tools enhance care rather than complicate it. The new center is focusing on:

- Policy and regulatory leadership: Working with regulators, policymakers and technology leaders to shape benchmarks for safe and effective use of AI in medicine and digital health.
- Clinical workflow integration: Creating opportunities for doctors to shape AI and digital tools so they work within clinical workflows and enhance the patient and clinician experience.
- Education and training: Equipping physicians and health systems with the knowledge and tools to integrate AI efficiently and effectively into practice.
- Collaboration: Building partnerships across the tech, research, government and health care sectors to drive innovation aligned with patient needs.

The AMA launched a four-year, $12 million grant program, Transforming Lifelong Learning Through Precision Education, to advance medical education using data and AI. Nearly 200 applications were received, and 11 grants were awarded to over 80 institutions for projects spanning diverse learners, competencies, settings, and technologies.

AMA hosted the ChangeMedEd® 2025 conference in Chicago, attracting 600 attendees and featuring over 140 presentations, 120 posters, and 60 breakout sessions. Thirty "blue sky" AI ideas were presented, with three selected to receive $20,000 AMA grants for further development. Post-conference surveys showed 97% of respondents viewed AMA as a leader in medical education innovation, and 93% plan to apply conference concepts in their work within the next year.

The AMA reported outcomes from its six-year, $20 million Reimagining Residency program, which significantly improved residency training. Highlights include system-wide adoption of interprofessional principles—leading to shorter stays, lower costs, and better patient satisfaction—new national OB/GYN residency selection standards, and better alignment of education and workforce needs in NC, CA, and OR. The program's impact includes:

- 343 residency programs
- ~10,700 medical students
- ~10,400 residents/fellows
- ~2,400 faculty

In 2025, AMA Ed Hub™ offered more than 9000+ education activities from the AMA and 80+ partner organizations. With 570,000+ registered users, Ed Hub experienced all-time highs in user engagement in 2025:

- 4.6 million visitor sessions
- 750,000 courses completed

Partnering with MMX, Ed Hub leveraged educational initiatives to drive membership growth and value. This collaboration launched the AMA Physician Education Program (PEP) for group physicians, introduced curated members-only bundles, and increased Ed Hub's contribution to membership conversion by over 47%, resulting in more than 5,000 new members.

VeriCre™ gained solid adoption with over 120 customers across 600 sites nationwide, streamlining credentialing and boosting efficiency. Its secure "physician wallet" lets physicians easily manage and share credentials via integration with third-party software.

AMA launched the Value-Based Care Workgroup to enhance the role of Current Procedural Terminology (CPT®) in value-based care, reinforcing the code set's long-term relevance and integrity. The Workgroup secured CPT Editorial Panel approval for updated care management code language—reflecting modern, physician-led, team-based care—for inclusion in the 2027 code set.

The AMA enhanced its CPT Educational Content platform and launched CPT Refresh/Refresh Premium, creating a modern digital system to streamline coding and reduce physician burnout. The platform handled over 21 million API calls this year, a 20 percent increase in content production—delivering over 200 in-depth CPT educational resources to meet evolving healthcare needs.

JAMA Network launched JAMA+ Women's Health, a new digital resource designed to elevate the visibility and accessibility of trusted, peer-reviewed content that advances health care for women.

Removing obstacles that interfere with patient care

Administrative barriers like prior authorization are just one challenge physicians face. Health disparities—such as food deserts and unsafe housing—can affect patient health as significantly as clinical care.

The AMA launched its first Community Health Impact Lab micro grants in 2025 to invest in physicians who have ideas to address barriers they see in their communities with local, creative and measurable solutions.

- The AMA Community Health Impact Lab is offering up to 20 grants of $50,000 each.
- Grants will help fund physician-led, community-centered projects that improve health outcomes among patient populations who often face obstacles to healthy living in their communities.

This initiative empowers physicians to address community health challenges and drive change, backed by AMA support. Micro grant recipients will be notified in April 2026 and have 12 months to implement their ideas, with guidance from the AMA throughout.

The AMA Joy in Medicine® Health System Recognition Program received a record number of applications in 2025 and honored its largest group of organizations to date (109) bringing the total recognized cohort to 164. This represents a 76 percent increase over 2024.

The AMA's Organizational Biopsy® team partnered with 151 health care organizations—a 32 percent year-over-year increase—to conduct well-being assessments. This growth was supported by the development of innovative tools, such as the Organizational Biopsy Assessment and Resource Calculator, which supported data-driven decisions. These scalable tools also established repeatable usability testing frameworks for other AMA digital products.

The 5th American Conference on Physician Health™, co-sponsored with Mayo Clinic and Stanford Medicine, achieved record attendance and presented the highest number of abstracts to date.

AMA STEPS Forward® enhanced its content library and achieved substantial growth in engagement, with webinar attendance increasing by 180 percent year-over-year and podcast downloads rising by 13 percent year-over-year.

The AMA, in partnership with The Kennedy Forum, introduced the Mental Health Parity Index—a transformative tool that measures market-level violations of mental health parity laws by commercial health plans, helping state and federal regulators strengthen enforcement.

Leading the charge to improve health outcomes

With firearm injuries now the leading cause of death among U.S. children and teens, the AMA's Firearm Injury Prevention Task Force, the Ad Council, and health care leaders launched a digital resource hub to support clinicians in firearm injury prevention conversations. The launch generated 20 media articles, over 60,000 press release engagements, 51 partner social posts, and 8.5 million potential impressions across media and social channels.

The AMA created the Center for Optimal Health Outcomes (COHO), merging the areas of Improving Health Outcomes and the Center for Health Equity. COHO's work will be focused externally, centered on these interconnected pillars:

- Empower Physicians and Health Systems to Address Social Determinants of Health
- Transform Medical Education
- Foster Collaborative Action and Health System and Community-Centered Solutions
- Advance Data-Driven Approaches and Research

The AMA and AHA recognized nearly 2,400 organizations committed to improving blood pressure control through the 2025 Target: BP Achievement Awards. A total of 2,393 eligible organizations across 49 states and territories served over 38 million patients.

To support the Million Hearts campaign, the AMA partnered with the Centers for Disease Control and Prevention (CDC) and Alliance Chicago, engaging 5 Health Center Controlled Networks and 19 community health centers to prevent heart attacks and strokes in over 900,000 adults—focusing on minority, rural, and medically underserved communities.

In 2025, the AMA strengthened its commitment to West Side United with an additional $3 million multi-year investment as an Anchor Mission Partner, contributing to a combined $177 million mobilized for local housing, financing, purchasing, and job creation initiatives. The AMA also provided $250,000 in direct support to West Side United to boost community engagement.

Membership

The AMA reached a historic milestone of more than 303,000 dues-paying members, the highest level in AMA history, representing the largest year-over-year increase on record at 11.5%. Growth among dues-paying physicians was especially strong, increasing 21% year over year, setting another record and reinforcing the AMA's growing relevance and value to practicing physicians.

EVP Compensation

During 2025, pursuant to his employment agreement, total cash compensation paid to James L. Madara, MD, as AMA Executive Vice President through June 2025 included $720,739 in salary and $1,339,047 in incentive compensation for 2024, reduced by $1,565 in pre-tax deductions. Other taxable amounts per the contract were: an $81,000 contractual payment in lieu of deferred compensation; $24,102 in imputed earnings for life insurance, and $1,350 paid for parking.

Dr. Madara remained on the payroll through December 2025 to provide transition support. Total compensation during this period was $476,499 in salary, reduced by $1,564 in pre-tax deductions. Other taxable amounts per the contract were: $24,102 in imputed earnings for life insurance, $1,350 paid for parking and $1,100 for health club dues.

During 2025, pursuant to his employment agreement, total cash compensation paid to John J. Whyte, MD included $787,500 in salary and a $150,000 sign-on bonus, reduced by $6,204 in pre-tax deductions. Other taxable amounts per the contract were as follows: $2,860 imputed earnings for life insurance, $525 for a cell phone stipend, $1,820 paid for parking. $1,458 paid for health club dues and $11,686 for travel expenses to and from the Chicago office. Dr. Whyte's employment began on June 1, 2025.

For additional information about AMA activities and accomplishments, please see the "AMA 2025 Annual Report."

REPORT OF THE BOARD OF TRUSTEES

BOT Report 07-A-26

Subject: Annual Update on Activities and Progress in Tobacco Control: March 2025 through February 2026

Presented by: David H. Aizuss, MD, Chair

This report summarizes trends and news on tobacco usage, policies, and tobacco control advocacy activities from March 2025 through February 2026. The report is written pursuant to American Medical Association (AMA) Policy D-490.983, "Annual Tobacco Report."

TOBACCO USE AT A GLANCE

The United States has continued to see decreases in tobacco use. Adult tobacco use dropped from 19.3 percent in 2022 to 16.4 percent in 2023.[1] Furthermore, current tobacco use among middle and high schoolers dropped from 10 percent in 2023 to 8.1 percent in 2024.[2] However, tobacco product use remains the leading cause of preventable disease and death in the United States.[3] There is limited availability of detailed information about tobacco trends in the last year because: (1) 2025 National Youth Tobacco Survey (NYTS) data collection was suspended midstream with the dismantling of the Office of Smoking and Health (OSH) and (2) there are few published analyses of 2025 National Health Interview Survey (NHIS) data.[4]

According to the 2024 Behavioral Risk Factor Surveillance System (BRFSS), 11percent of adults report current smoking, with the highest rates among Indian and Alaskan Native individuals (22 percent) and the lowest rates among Hawaiian/Pacific Islanders and Hispanic individuals (5 percent and 10 percent respectively).[5] Recent data from the Monitoring the Future study shows that in 2025, past 30-day nicotine use (e.g., cigars, cigarettes, hookah, vaping, nicotine pouches, smokeless tobacco) among 12th graders increased from 17 percent in 2024 to 22 percent in 2025—though little change occurred among 8th and 10th graders. This reflected small, cumulative increases across multiple tobacco products rather than a dominant change in any single drug. In 2025, lifetime use of nicotine pouches increased in all grades and vaping nicotine in the past 30 days increased in 10th and 12th grades.[6]

Adult Tobacco Use

In 2022, NHIS found that cigarettes were the most commonly used tobacco product among adults, followed by electronic cigarettes (e-cigarettes), cigars, smokeless tobacco, and pipes.[7] E-cigarettes were the second most commonly used tobacco product among U.S. adults.[8] E-cigarette use is increasing amongst adults, with 4.5 percent of adults using e-cigarettes in 2019 and 6.5 percent in 2023.[9] Among adults who smoke e-cigarettes, younger adults are more likely to report having never smoked cigarettes.[10] In 2022, 66% of adults aged 18-24 reported never smoking

cigarettes, compared to 21.6% of adults aged 25-44 years and 11.3% of adults aged 45-64 years.[11]

Youth Tobacco Use

E-cigarettes are the most used tobacco product among youth in the United States.[12] In 2024, 5.9 percent(1.63 million) of middle and high school students reported currently using e-cigarettes.[13] This was a decrease from 7.7 percent in 2023.[14] Among students who reported currently using e-cigarettes, 87.6 percent used flavored e-cigarettes, 38.4 percent used an e-cigarette on at least 20 of the last 30 days, and 26.3 percent used an e-cigarette every day.[15] E-cigarettes remained the most used tobacco product among kids, and nicotine pouches were the second most used tobacco product.[16] Separate data from the CDC Foundation found that nicotine pouch use among youth ages 13-20 increased by nearly fourfold from 2022 to 2025. [17]

Effects of Tobacco Use

Smoking combustible tobacco products can cause many diseases, including cancer, cardiovascular disease, and lung disease.[18] Cigarette smoking kills more than 480,000 Americans each year.[19] Cigarette smoking costs the United States more than $600 billion in 2018, including more than $240 billion in healthcare spending and nearly $372 billion in lost productivity.[20] Similarly, smokeless tobacco puts users at risk for cancers of the mouth, esophagus, and pancreas.[21] Regardless of whether a tobacco product is combustible, use of tobacco products can expose users to toxic substances and lead to nicotine addiction.[22]

NOTABLE FEDERAL ADMINISTRATIVE ACTIONS

The Centers for Disease Control and Prevention (CDC)'s Office on Smoking and Health (OSH) was the federal government's primary mechanism for meeting its obligations to prevent and reduce tobacco by educating the public about the dangers of smoking and tobacco use. [23] On April 1, 2025, nearly all OSH staff and contractors were terminated.[24]

The OSH was also responsible for the *Tips from Former Smokers* media campaign, which was also terminated. [25] The *Tips* campaign featured real people from diverse backgrounds living with serious long-term health effects from smoking and secondhand smoke exposure.[26] From 2012-2018, the *Tips* campaign helped approximately one million people successfully quit smoking, prevented an estimated 129,000 early deaths, and contributed to $7.3 billion in savings on smoke-related healthcare costs.[27] The termination of the campaign left at least $65 million in congressionally directed tobacco prevention and cessation funding unused in 2025.[28]

On April 1, 2025, a significant number of staff at the U.S. Food and Drug Administration (FDA)'s Center for Tobacco Products (CTP) were terminated or otherwise removed.[29] The CTP oversees the implementation of the Family Smoking Prevention and Tobacco Control Act and is entirely funded by tobacco industry user fees.[30,31] Some of CTP's responsibilities include setting performance standards, reviewing premarket applications for new and modified risk tobacco products, requiring new warning labels, and establishing and enforcing advertising and promotion restrictions.[32] While some staff have been rehired, the restructuring has reduced the

Center's capacity to enforce tobacco restrictions and thoroughly review tobacco product applications.[33,34] Furthermore, several actions from the Center for Tobacco Products actions will facilitate easier access to tobacco and nicotine products in the U.S. including: (1) authorizing the sale of 20 different Zyn products, (2) setting up a fast-track review process for premarket tobacco applications for nicotine pouches and (3) authorizing additional menthol flavored e-cigarettes for sale.[35]

Millions of dollars in federal grants from the CDC to state and local health departments were delayed in 2025.[36] The CDC typically directs the money it receives from Congress to state and local health departments.[37] With the start of the new administration, the White House began to apportion money to CDC on a month-by-month basis.[38] As a result, funds for state programs to prevent and reduce tobacco use were delayed by months.[39] The delay caused extensive changes to several state tobacco control programs, including reductions in quitline or phone counseling services for tobacco users.[40]

EFFORTS TO ADDRESS TOBACCO CONTROL

Changes to State Cigarette Taxes

In 2025, Indiana increased its cigarette tax by $2.00 per pack, bringing its state cigarette tax to $2.995.[41] Maine increased its cigarette tax by $1.50 per pack, bringing its state cigarette tax to $3.50 per pack.[42] Hawaii and New Jersey also passed small increases to their state cigarette taxes.

On the other hand, Alabama passed a reduction in its tax on heated tobacco products.[43] This is a policy that has been pushed by Phillip Morris International (PMI) as its *IQOS* heated tobacco products re-enter the U.S. market.[44] Heated tobacco products heat tobacco sticks, rather than ignite it.[45] According to PMI, the produced aerosol is a healthier alternative to smoking.[46] While heated tobacco products generally emit lower levels of harmful ingredients than regular cigarettes, there is limited research on their short- and long-term health effects.[47]

Funding for State Tobacco Prevention and Cessation Programs

Tobacco prevention and cessation programs are highly cost-effective.[48] For example, California's long-running tobacco control program has saved the state an estimated $155 in healthcare costs for every $1 invested.[49] Additionally, state tobacco prevention and cessation programs allow resources to be targeted to alleviate disparities in tobacco use and outcomes.[50] In fiscal year 2026, 12 states have registered funding increases of nearly $1 million or more.[51]

AMA LITIGATION CENTER

The AMA Litigation Center continues to be active in state and federal courts around the country in matters involving tobacco control and regulation of flavored electronic nicotine delivery systems (ENDS). In April 2025, the United States Supreme Court issued a favorable decision in *FDA v. Wages and White Lion Investments*, which reversed a Fifth U.S. Circuit Court of Appeals ruling in favor of ENDS manufacturers and sellers. If the Court upheld the lower court

ruling, companies could have marketed products that were clearly designed to appeal to children, with names such as “Jimmy the Juice Man Peachy Strawberry”, “Suicide Bunny Mother’s Milk and Cookies”, “Pink Lemonade”, “Iced Pineapple Express” and “Killer Kustard Blueberry.” The FDA had denied the companies’ applications for premarket approval of the tobacco products. The companies challenged the agency’s decision, arguing that the FDA did not give them fair notice about the evidentiary and comparative requirements used during the application stage and that the agency had changed its position on scientific evidence. The AMA joined several Federation members and anti-smoking partners in a brief explaining the harm caused by these products. The brief urged the court to conclude that the FDA was correct in how it determined that the companies should not be able to market the flavored e-cigarette liquids. The Supreme Court ruled that the FDA did not act in an arbitrary and capricious manner when it denied the companies’ applications and remanded the case to the Fifth Circuit to review other legal arguments.

The AMA continues to join amicus briefs supporting the FDA's efforts to regulate the marketing and sale of flavored products. In January 2026, the AMA joined several Federation members and anti-smoking organizations in a brief to the Sixth Circuit on *Breeze Smoke LLC v. FDA*. Under the Family Smoking Prevention and Tobacco Control Act, the FDA must approve marketing plans before companies can go forward with them. The companies must demonstrate, among other things, that marketing the product would be “appropriate for the protection of public health”. The FDA denied flavored e-cigarette makers their request to market certain products. E-cigarette companies sought review of the FDA’s decision, claiming the administration did not consider certain evidence they submitted about the products’ potential public health benefits, such as reduced harm compared to smoking and marketing plans to curb youth uptake of vaping. They also claim, among other things, that the FDA essentially put a ban on marketing these products without a formal rulemaking process. In the brief, the AMA and others said the FDA followed the law and that the decision to not allow the marketing to move forward was the right one for public health.

Additionally, the AMA has filed briefs supporting state and local regulation of flavored tobacco products and will continue to look for ways to support tobacco control in the courts.

AMA ADVOCACY

In June 2025, the AMA sent a letter to the White House Office of National Drug Control Policy (ONDCP) to comment on the areas under consideration for the Administration’s 2026 drug policy priorities. The AMA expressed that it shares the Administration's goal to prevent the initiation of drug use before it starts—particularly among youth and adolescents. The AMA advocated for increased study of why youth and adolescent use of some illicit substances, such as tobacco, may be decreasing so that we can better understand and build on those best practices. The AMA also urged ONDCP’s help to support and/or identify opportunities to not only increase access to effective treatment for nicotine and other substance use, but also to support efforts to increase access to comprehensive mental health care, behavioral health counseling and medications that suppress cravings and withdrawal symptoms.

In July 2025, the AMA sent a letter to the Massachusetts legislature in support of House Bill 2562 and Senate Bill 1568, which would prohibit the sale of tobacco products to individuals born on or after January 1, 2006.

In August 2025, several AMA staff participated in the National Conference on Tobacco or Health (NCOTH) in Chicago. This included speaking in a panel presentation on "The Impact of the Public Health Community on Tobacco Litigation" by Lenoard Nelson.

In October 2025, the AMA signed onto a letter to the Food and Drug Administration commenting on the Proposed Rulemaking on a Tobacco Product Standard for Nicotine Yield of Cigarettes and Certain Other Combusted Tobacco Products, urging the agency to finalize a comprehensive rule that will reduce nicotine levels in combustible tobacco products.

Also in October 2025, the AMA signed onto a letter to the chief appropriators in Congress urging them to reject proposals to dramatically cut funding for tobacco prevention programs carried out by the CDC and to maintain adequate funding for such programs instead. On February 3, 2026, Congress enacted the Consolidated Appropriations Act, 2026, which provided level funding for CDC's tobacco prevention activities, a significant victory.

REPORT 9 OF THE BOARD OF TRUSTEES (A-26)
American Medical Association Optimal Health Outcomes Annual Report
(Informational)

EXECUTIVE SUMMARY

Background: At the 2018 Annual Meeting, the House of Delegates (HOD) adopted the recommendations of Policy D-180.981 directing our American Medical Association (AMA) to "develop an organizational unit, e.g., a Center or its equivalent, to facilitate, coordinate, initiate, and track AMA health equity activities" and instructing the "Board to provide an annual report to the House of Delegates regarding AMA's health equity activities and achievements." The HOD provided additional guidance via Policy H-180.944: "Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity." HOD policy was followed by creation of the AMA Center for Health Equity ("Center") in April 2019, the AMA's Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity for 2021-2023 ("Plan") in May 2021, and the successor 2024-2025 AMA Organizational Strategic Plan to Advance Health Equity in June 2024. In 2022, updated Policy H-65.946 specified that this report will also include "updates on [the AMA's] comprehensive diversity and inclusion strategy." This report marks the seventh AMA Optimal Health Outcomes Report.

Discussion: The AMA has continued its efforts over recent years to further embed equity and improve health outcomes. The 2024-2025 iteration of the Plan served as a guide for the work. This report outlines the activities conducted by our AMA during calendar year 2025, divided into four pillars, demonstrating relevance, impact, and thought leadership: (1) Community Health Impact, (2) Health Systems Engagement, (3) Policy Development and (4) Data and Research.

Conclusion: This report highlights only a portion of the work accomplished and lessons learned in 2025. AMA staff have devoted countless hours to learning how they can collaborate in advancing health outcomes and applying those insights within and beyond the organization. The AMA remains committed to driving progress toward improving health outcomes.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 09-A-26

Subject: American Medical Association Optimal Health Outcomes Annual Report

Presented by: David H. Aizuss, MD, Chair

BACKGROUND

At the 2018 Annual Meeting, the House of Delegates (HOD) adopted Policy D-180.981, directing our American Medical Association (AMA) to "develop an organizational unit, e.g., a Center or its equivalent, to facilitate, coordinate, initiate, and track AMA health equity activities" and instructing the "Board to provide an annual report to the House of Delegates regarding AMA's health equity activities and achievements." The HOD provided additional guidance via Policy H-180.944: "Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity." HOD policy was followed by creation of the AMA Center for Health Equity (Center) in April 2019, the AMA's Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity for 2021-2023 (Plan) in May 2021, and the successor 2024-2025 Plan in June 2024. In 2022, updated Policy H-65.946 specified that this report will also include "updates on [the AMA's] comprehensive diversity and inclusion strategy." Towards the end of 2025, the AMA made the decision to rebrand and reframe its work in the pursuit of improving health outcomes; merging the Center for Health Equity and the Improving Health Outcomes (IHO) business unit into the Center for Optimal Health Outcomes (COHO) with the goal of building on the momentum established by the Center for Health Equity to engage communities in addressing health disparities and leveraging IHO staff's clinical expertise, health system engagement, and community health organization partnerships. This report marks the seventh AMA Optimal Health Outcomes Annual Report.

DISCUSSION

Our AMA has committed to advancing health outcomes and embedding equity across the organization and beyond. In 2025, the Center continued to collect enterprise-wide equity related work and track progress across all the AMA's Business Units (BU). This report outlines the activities conducted by our AMA during calendar year 2025, divided into the four COHO pillars, demonstrating relevance, impact, and thought leadership: (1) Community Health Impact, (2) Health Systems Engagement, (3) Policy Development and (4) Data and Research.

Community Health Impact

The following are some of the relevant accomplishments toward community health impact during 2025:

- At the 2025 Annual and Interim HOD meetings, several reports, resolutions, and education sessions were presented, including the Council on Ethical and Judicial Affair report: "Laying the First Steps Towards a Transition to a Financial and Citizenship Need Blinded Model for Organ Procurement and Transplantation." The Council on Science and Public Health presented various reports on topics such as: Addressing Social Determinants of Health Through Closed Loop

Referral Systems, Disaffiliation from Honor Medical Societies due to Perpetuation of Racial Inequities in Medicine, Explainability of Artificial/Augmented Intelligence and Machine Learning Algorithms and Addressing the Health Issues Unique to Minority Communities in Rural Areas. Additionally, at the 2025 HOD Annual Meeting, the AMA hosted the Health Equity Open Forum: Leveraging the National Release the Pressure Campaign to Address Heart Disease focused on showcasing effective clinical practices and community-driven initiatives led by coalitions to advance heart health. A total of 68 physicians attended, including six past presidents of the National Medical Association (NMA).

- The AMA launched the Community Health Impact Lab micro grants that will award a total of $1 million to support 20 physician-led initiatives aimed at improving health outcomes in their communities. The grants will help physicians make a difference at the local level on critical issues like food insecurity, caregiver support, maternal health and much more. The awardees will be announced in 2026.
- The AMA committed an additional $3 million multi-year investment as a West Side United Anchor Mission Partner, contributing to a combined $177 million financial mobilization for projects on Chicago's west side, including housing, loans, local purchasing, and job creation and provided $250,000 in direct support to West Side United to strengthen engagement and programming capacities.
- In its sixth year, the AMA continued to promote the annual Ad Council's flu vaccination national media campaign with new English/Spanish public service advertisements (PSAs) encouraging people to get vaccinated against seasonal flu to protect themselves and their community.
- The AMA conducted 44 burnout assessments at federally qualified health centers (FQHCs) and/or community health centers, all organizations serving patients from predominantly and historically underserved communities. Several participating FQHCs were recognized through the AMA's Joy in Medicine® Health System Recognition Program. In addition, AMA staff had the opportunity to shadow professionals at an FQHC located in Chicago's south side (Alivio Medical Center) and met with its leadership team to learn more about community needs and challenges. Lessons learned by staff were used to inform and expand the reach and impact of the AMA's work.
- The AMA, in collaboration with The Kennedy Forum and Third Horizon, launched a new open-access visual interactive mapping tool, the Mental Health Parity Index (MHPI). The tool allows physicians, patients, policymakers, and other stakeholders to assess how well commercial insurance plans are performing with regard to mental health parity laws. Specifically, this new tool analyzes commercial insurance plans based on access, coverage and payment for mental health and substance-use services as compared with physical health services using data published by individual insurance plans. The tool was piloted in Illinois, and the aim is to expand nationally.
- The AMA and the Ad Council, in collaboration with a coalition of health care leaders, launched a new digital injury prevention resource hub at Agree To Agree to empower physicians and other health care professionals to confidently engage patients in conversations related to firearm injury prevention. The digital resource hub features the national Agree to Agree campaign's videos, fact sheets, toolkits and conversation guides for clinicians to help patients and their families understand the risks associated with unsecured firearms and best practices for secure storage to help reduce firearm related injuries and deaths.
- The AMA launched a structured private practice incubator program to support a select group of physicians through the process of starting their own practice called the Independent Practice Incubator (IPI). The IPI was launched as a pilot program to test the market and to be available for physicians who might lack financial resources to engage with consultants or other external partners. As part of the application, the participants were asked if there were any special

populations that they were interested in serving upon the opening of their practices; a number of those in the program look to start their own practices to focus on underserved communities.

- AMA STEPS Forward® continued to hold events, reaching a wider audience of attendees, while maintaining discounted attendance for FQHCs and safety-net providers. The bootcamps offer evidence-based time management and team-based care strategies to provide quality patient care. In 2025, an updated STEPS Forward resource page was created to specifically guide and support FQHCs and safety-net providers on the AMA site.
- New STEPS Forward® content helped address determinants of health and differences in health outcomes. For example, 2025 STEPS Forward® podcast content included nine optimal health outcomes-related episodes, including (1) Screening for Prediabetes: Pearl of the Month, (2) How to Take a Patient-Centered Approach to Cancer Care, (3) Help for Patients with Uncontrolled Hypertension: Pearl of the Month, (4) One Federally Qualified Health Center's Journey to Joy in Medicine and (5) A Lifeline for Moms: Providing Whole Person Care in Maternal Health Settings.
- In 2025, the AMA content on optimal health outcomes experienced a 50 percent increase in engagement from 2024, reaching three million website users. The AMA completed 16 website accessibility improvements across its websites. As part of the AMA's efforts to complement and enhance physician professional development, the AMA launched the AMA Physician Education Program (PEP) to provide a flexible and robust continued learning experience specifically curated for physicians. Topics covered range from optimizing health outcomes, quality and safety, well-being, leadership development and more.
- On the AMA Ed Hub™ site, the AMA published 128 new optimal health outcomes-related activities and renewed 101, with user engagements reaching over 300,000. Notably, the AMA, in partnership with the Docs with Disabilities Initiative, completed filming for a nine-part webinar series titled *Caring for People with Disabilities* with publication on the AMA Ed Hub™ planned for 2026. Additionally, the AMA hosted the new podcast episode Microplastics Infiltrate Our Bodies: How Can Physicians Help? which explores the impact of microplastics on public health and reducing practice exposure to microplastics.
- Our AMA continued to follow the Enterprise Social Responsibility (ESR) team's community engagement framework to build meaningful relationships with local organizations. In 2025, the ESR team hosted 51 community engagement events across 16 community organizations, including Erie Neighborhood House, Gardeneers, MyBlock MyHood MyCity, Nourishing Hope, Imagine Englewood if, Pilsen Food Pantry and Cardz for Kidz. This year two new community partnerships were established with Growing Home and Project Linus to support their work to address the social determinants of health and move toward community health impact.
- The AMA offered internships and fellowships to various groups. As an example, AMA IT hosted 29 Chicago Public School high school student interns from historically underrepresented backgrounds and provided students with the opportunity to visit the AMA, engage with AMA IT professionals and learn about the AMA's history and its role in promoting national health and well-being. Additionally, the JAMA Network manuscript editing teams offered a summer medical editing internship designed for third- and fourth-year college students to gain exposure to medical editing and publishing as a career. The JAMA Editorial Fellowship Program also welcomed ten early career academic physicians and nurses in the fully remote fellowship program, intended to engage around editorial decision-making and enhance scientific communication skills. Lastly, the AMA continued the Summer Health Law Internship for a rising third-year law student, with a focus on differences in health outcomes and law.
- The AMA's Release the Pressure (RTP) campaign focused on addressing and improving heart health among those with the highest burden of hypertension by encouraging them to prioritize their blood pressure. The AMA Foundation, the Minority Health Institute, the National Medical Association (NMA), the American Heart Association (AHA), and the Association of Black

Cardiologists (ABC) were engaged through RTP. RTP had a presence at conferences and conventions, including the NMA Colloquium on African American Health and the Congressional Black Caucus Foundation's 54th Annual Legislative Conference, engaging over 113 physicians.

Updates on the AMA's diversity and inclusion strategy included a number of efforts and initiatives:

- Internally, our AMA supports initiatives to enhance employee experience, engagement and well-being, anchored in four strategic areas: (1) Foundational Infrastructure, (2) Access and Fairness, (3) Skills-Based Learning and (4) Inclusive Culture and Climate. In 2025, the AMA consulted an external vendor to conduct the 2025 Employee Engagement Survey to provide current insights into employee experience, including critical engagement index metrics. Results will guide strategies to improve inclusion outcomes.
- The AMA continues to foster inclusion and belonging across the organization through nine Employee Resource Groups (ERGs) that organize intersectional programming designed to advance inclusive learning, cultivate community, and support personal and professional development of members through the following events: book clubs, volunteering, panels, and professional development workshops. All ERGs are open to all employees.
- Staff continued to surpass their individual, voluntary learning goals, averaging more than 20 hours of flexible learning across related health topics in 2025. Within BUs, staff have led educational activities and events to strengthen community engagement and improve community health outcomes. For example, the AMA's Education Center held monthly learning sessions focused on optimal health outcomes and inclusion, offering over 15 hours toward individual learning goals. Additionally, the AMA's Health Solutions unit engaged in bias and engagement training which focused on employee inclusion. As part of this training, all staff completed a self-paced 90-minute course titled Breaking Bias Foundations from Be More with Anu. Furthermore, 19 AMA staff members also completed the three day in-person BRAVE leadership training that centers a trauma-responsive approach for leaders to enhance inclusion and retention of staff.

Health Systems Engagement

The following are some of the relevant accomplishments toward health systems engagement during 2025:

- The AMA and the American Heart Association (AHA) recognized nearly 2,400 organizations that committed to improving blood pressure control rates by submitting data to the 2025 Target: BP Achievement Awards. Over 38 million patients were served by 2,393 total eligible participating health care organizations across 49 U.S. states and territories.
- To advance improvements in maternal health, the AMA developed four new tools and resources to help health care organizations and clinical care teams improve blood pressure monitoring and management during pregnancy and postpartum period, including two AMA MAP HTN™ educational resources for patients and clinical teams.
- To advance the national Million Hearts campaign, the AMA, in partnership with the CDC and Alliance Chicago, engaged five Health Center Controlled Networks and 19 community health centers with an aim to prevent heart attacks and strokes in over 900,000 adult patients, with a focus on minority, rural and medically under-resourced communities.
- Over 100 health care organizations used AMA solutions to help their physicians and care teams improve cardiovascular disease in patients. Through this collaboration, more than 4.1 million patients with hypertension were reached and over 2.3 million patients with hypertension were impacted to achieve improved blood pressure control; 39 percent of which, where data was available, were from historically underserved communities.
- In 2025, the AMA launched the new two-year AMA Transforming Lifelong Learning Through Precision Education portfolio to accelerate seamless lifelong learning and advance educational

equity. As part of the portfolio, the AMA will award a total of $12 million in education grant funding to a total of 11 selected grant teams, each receiving $1.1 million over four years. Grantees represent more than 80 institutions, including medical schools, residency programs, health systems, and specialty societies across the country. The selected grant teams will join the ChangeMedEd Consortium, which focuses on advancing precision medical education.

- The AMA published playbooks and other educational resources for physicians, practices and health systems, such as one of the AMA STEPS Forward® toolkits https://edhub.ama-assn.org/steps-forward/module/2830076 focused on quality improvement goals for practices. This STEPS Forward for Smaller Practices toolkit offers guidance on how a practice can better understand its patient population and community by examining population data, as well as intersectionality of identities.
- In 2025, the AMA hosted its sixth episode of the National Health Equity Grand Rounds webinar series, *Creating Conditions Vital to Health: Health Care's Role in Economic Progress,* at Rush Medical Center's Rubschlager Building in Chicago. Health care leaders discussed how health systems can invest in their communities to address vital conditions and improve health outcomes for all. This event engaged 19 health care organizations, and a total of 362 physicians joined the conversation.
- Three new collaborators joined the AMA's Ed Hub™ in 2025, including the Institute for Exceptional Care, Cleveland Clinic Center for Continuing Education and University of Washington. These organizations will be contributing to equity-focused content on the AMA Ed Hub™ site and expand AMA high-impact learning.
- The AMA's 2025 media sponsorships focused on reaching diverse audiences, supporting events with the National Association of Hispanic Journalists and the Asian American Journalists Association.
- In 2025, the AMA concluded the first cohort of the Equitable Professional Societies Learning Network aimed to help 17 state and specialty societies gain the knowledge, skills, resources and tools to operationalize structural changes for optimal health outcomes.
- The third cohort of the Medical Justice in Advocacy Fellowship, an educational initiative in collaboration with Morehouse School of Medicine's Satcher Health Leadership Institute, culminated at the 2025 Interim meeting of the House of Delegates, where 10 physician leaders were celebrated and presented their optimal health outcomes project concepts. The fourth cohort of the Medical Justice in Advocacy Fellowship will begin in 2026.
- AMA staff continued to be present throughout 2025 at underrepresented physician convenings to grow and foster relationships, as well as learn about health care priorities of these groups. Staff participated in various conferences to support building alliances, learning about the context necessary for restorative practice and incorporating context into the AMA's own work. These conferences included: National Hispanic Medical Association 28th Annual Conference, National Medical Association 123rd Annual Convention and Scientific Assembly and National Colloquium on African American Health, Association of American Indian Physicians 53rd Annual Meeting and Health Conference, National Council of Asian Pacific Islander Physician's He Huliau i ka Pono Conference, GLMA's 43rd Annual Conference on LGBTQ+ Health, among others. Staff gained insights into incorporating inclusive practices into the AMA's work.
- The AMA's Truth, Healing, and Reconciliation Taskforce (TRHT) focused on organizational transformation within and beyond the AMA toward restorative justice to promote truth, reconciliation and healing in medicine and medical education. In 2025, the TRHT taskforce concluded after two years having engaged six professional societies, three health care organizations and two institutions. There was a total of six education sessions focused on restorative justice in medicine with a total of 285 physicians in attendance across all sessions.
- As part of The AMA Foundation's Optimal Health Outcomes Accelerator fund, the AMA completed work toward the Equity and Justice in Medical Education (EJME) collaborative grant

focused on promoting equitable practices and diversity in the admissions process by forging more productive relationships between the AMA and underrepresented physician and student organizations. A total of six convenings were held to foster collaboration between participants with the hope of developing common approaches that will leverage collective influence. The participating organizations included: the National Medical Association, National Hispanic Medical Association, Association of American Indian Physicians, National Council of Asian Pacific Islander Physicians, Asian Pacific American Medical Student Association, Latino Medical Student Association, Association of Native American Medical Students and Student National Medical Association.

Policy Development

The following are some of the relevant accomplishments toward policy development during 2025:

- Optimal health outcomes-related policy priorities can be seen throughout the AMA's engagement with Congress, the Administration, state legislatures, and other policymakers, in the form of advocacy letters, presentations and testimony to state legislatures, national and state medical organizations and countless additional opportunities that engaged organized medicine and policymakers. In 2025, the AMA continued to actively voice support for:
    - International medical graduates;
    - Migration and refugee population health and safety;
    - Nutrition programs expansion and culturally respectful dietary guidelines;
    - Medicaid coverage expansion;
    - Medicaid and Children's Health Insurance Program coverage extension;
    - Maternal and child health programs;
    - Protecting reproductive health;
    - Advancing data privacy principles and protecting the abuse/misuse of sensitive health data;
    - Protections for physicians who seek care for wellness and burnout;
    - Student loan accessibility and adequacy;
    - Increased funding for graduate medical education;
    - Telehealth flexibilities in Medicare;
    - Reducing the prior authorization burden on patients; and
    - Addressing quality and administrative barriers in Medicare Advantage and other insurance plans.
- The AMA continues to amplify voices of historically underrepresented individuals through its litigation efforts. Litigation efforts in 2025 ranged across topics including preventive care costs under the Affordable Care Act (ACA), smoking cessation efforts and regulations, access to health care and protecting the patient-physician relationship, among others. The AMA's work in the courts helped achieve favorable outcomes in several litigation efforts in addition to supporting state medical societies' efforts.
- The AMA's Office of International Relations (OIR) reviewed the World Medical Association's (WMA) policies through an optimal health outcomes lens. The AMA contributed to the revision of the WMA's Statement on Trans People, supported the reaffirmation of the WMA's resolution on human rights violation against Uighur People in China, and contributed to the WMA's Statement on Ageing, advocating for aging physicians' contributions.
- The AMA continued to update internal practices in line with inclusion efforts. For example, the AMA continues to work toward identifying and replacing offensive terminology across the enterprise through institutional level policy. The AMA conducted a comprehensive search for outdated terms within its IT systems and has embarked on instituting these updates to replace harmful language.

Research

The following are some of the relevant accomplishments toward research during 2025:

- The AMA continues to be a partner on the National Quality Forum's Advancing Collection of Standardized Symptoms Data. The initiative aims to engage physicians in data standard development by standardized patient symptom data across care settings to improve diagnosis, measurement and quality of care. The initiative focuses on improving patient-focused outcomes.
- In 2025, the AMA Guides to the Evaluation of Permanent Impairment Sixth Edition updated its pulmonary function chapter in accordance with existing AMA policies on race as a social construct and national standards of care. Specifically, a race-neutral approach to pulmonary function test interpretation algorithms was implemented by reporting and interpreting results using average reference equations rather than using race-based calculations. An additional update was the acknowledgement that pulse oximetry can have measurement errors in people with dark skin pigmentation and a call to mitigate these errors whenever possible.
- AMA staff co-authored more than 30 peer reviewed publications, including papers in Journal of the National Medical Association, JAMA Network Open, New England Journal of Medine and Journal of General Internal Medicine, as well as contributed to the American College of Cardiology and American Heart Association Joint Committee on Clinical Practice Guidelines.
- The AMA Journal of Ethics published optimal health outcomes-related issues such as Surgical Care of Incarcerated Patients (April 2025), Private Equity in Health Care (May 2025), Rural US Emergency Medical Services (July 2025) and Screening Children for Structural Drivers of Health (September 2025).
- The JAMA Network continued curating and sharing digital content relating to health outcomes across its publications, distributed to more than 13,000 subscribers. As an example, the JAMA Network launched the JAMA+ Women's Health, a new digital resource aimed to elevate the visibility and accessibility of trusted, peer-reviewed content that advances health care for women across the globe. Recognizing that women's health is comprehensive, JAMA+ Women's Health showcases rigorous studies that include or focus exclusively on women from across JAMA and the 12 JAMA Network journals. Furthermore, the AMA contributed to the JAMA publication Toward a Safer World by 2040, capturing proceedings from the JAMA Summit on Firearm Violence, charting an innovative roadmap toward reduction in firearm harms by 2040.
- The JAMA Network held its quarterly Equity, Diversity, and Inclusion (EDI) editor meetings to support EDI related concerns and share best practices across the network. Additionally, JAMA Network published a Research Letter titled *Equity, Diversity, and Inclusion Concerns from JAMA Network Peer Reviewers*, which discussed results related to EDI framing, methods, terminology and language concerns gathered across all JAMA Network journals' peer reviewer forms. Results were also presented at the 2025 Peer Review Congress.
- Diverse representation among AMA publications remained a goal in 2025. The AMA updated 30 illustrations for the 2026 CPT Professional book to reflect all populations. Input was gathered from internal and external reviewers. This progress is contributing to the AMA's five-year plan to update over 100 CPT Professional book illustrations to depict authentic and diverse individuals.
- The AMA integrated equitable practices across its market and user experience research by aligning research questions with AMA's data privacy practices, ensuring populations of focus were appropriately represented and considering vendors based on their expertise and experience working with participants involved in the research. Additionally, the AMA conducted a market assessment to analyze how other organizations have diversified medical illustrations in their materials.

CONCLUSION

This report highlights only a portion of the work accomplished in 2025. AMA staff continued to make great strides and fulfilled their Business Unit annual goals. Staff devoted countless hours to learning how they can collaborate to improve health outcomes and apply those insights within and beyond the organization.

REPORT 10 OF THE BOARD OF TRUSTEES (A-26)
AMA Efforts on Medicare Payment Reform

EXECUTIVE SUMMARY

At the 2023 Annual Meeting, the American Medical Association (AMA) House of Delegates adopted Policy D-385.945, "Advocacy and Action for a Sustainable Medical Care System," and amended Policy D-390.922, "Physician Payment Reform and Equity," declaring Medicare physician payment reform an urgent advocacy priority and directing the Board of Trustees to report regularly on progress toward achieving a predictable, sustainable, and fair physician payment system. In addition, the House adopted Policy D-400.981 at the 2025 Annual Meeting, calling for greater transparency regarding the AMA's Medicare payment reform strategy and requiring regular updates to the House on advocacy efforts, barriers to reform, and opportunities to strengthen the strategy. This report responds to those directives and provides an update on the AMA's ongoing efforts to advance Medicare physician payment reform.

The current Medicare physician payment system continues to place significant financial strain on physician practices. The calendar year 2025 Medicare Physician Fee Schedule (MPFS) included a 2.83 percent reduction in physician payment rates, continuing a pattern of recurring cuts that has persisted for several years. Although Congress provided a temporary 2.5 percent update for 2026, statutory updates under the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) remain well below the rate of growth in physician practice costs placing increasing pressure on physician practices and raising concerns about patient access to care.

The AMA has advanced a comprehensive advocacy strategy focused on several key reforms: establishing permanent annual payment updates tied to the Medicare Economic Index, modernizing outdated budget neutrality requirements that trigger destabilizing payment reductions, improving the Merit-based Incentive Payment System to reduce administrative burden, and expanding opportunities for physician participation in advanced alternative payment models. The AMA has pursued these priorities through sustained legislative advocacy, engagement with federal policymakers and advisory bodies, collaboration with state medical associations and national medical specialty societies across the Federation, and extensive grassroots, media, and public outreach efforts.

In parallel, the AMA has begun implementing a strategic review of its Medicare payment reform advocacy in response to House policy calling for greater transparency. This review will assess barriers to reform, evaluate opportunities to strengthen current advocacy efforts, and identify recommendations to accelerate progress toward achieving a rational Medicare physician payment system.

While recent congressional actions have provided limited short-term relief, meaningful structural reform remains necessary to stabilize physician payment and protect patient access to care. The AMA will continue working with Congress, the Administration, and Federation partners to advance policies that ensure payment adequacy, reduce administrative burden, and support physician participation in innovative care delivery models.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 10-A-26

Subject: AMA Efforts on Medicare Payment Reform

Presented by: David H. Aizuss, MD, Chair

At the 2023 American Medical Association (AMA) Annual Meeting of the House of Delegates (HOD), the HOD adopted Policy D-385.945, "Advocacy and Action for a Sustainable Medical Care System" and amended Policy D-390.922, "Physician Payment Reform and Equity." Together, they declare Medicare physician payment reform as an urgent advocacy and legislative priority, call on the AMA to implement a comprehensive advocacy campaign, and for the Board of Trustees (the Board) to report back to the HOD at each Annual and Interim meeting highlighting the progress of our AMA in achieving Medicare payment reform until a predictable, sustainable, fair physician payment system is achieved. In addition, the House adopted Policy D-400.981 "Increasing Transparency of AMA Medicare Payment Reform Strategy" at the Annual 2025 House of Delegates Meeting, which calls on the AMA to:

1. Provide a summary of findings and actionable recommendations from both internal and external advocacy consultants regarding Medicare payment reform. The report must primarily focus on barriers identified, gaps in the current strategy, and specific recommendations for improving and accelerating advocacy efforts.

2. Share with its members comprehensive reports on our Medicare payment reform advocacy efforts, including consultant findings on major barriers, strategy gaps, and recommendations for improvement, at both the Interim and Annual Meetings beginning at I-25, and more frequently as legislative dynamics dictate.

The Board has prepared the following report to provide an update on AMA activities for the year to date. (Note: This report was prepared in March based on approval deadlines and more recent developments may not be reflected herein.)

AMA ACTIVITIES ON MEDICARE PHYSICIAN PAYMENT REFORM

The AMA's Medicare physician payment reform efforts were initiated early in 2022, following the development of a set of principles outlining the "Characteristics of a Rational Medicare Payment System" which were endorsed by 124 state medical associations and national medical specialty societies. These principles identified strategies and goals to: (1) ensure financial stability and predictability for physician practices; (2) promote value-based care; and (3) safeguard access to high quality care.

Subsequently, the AMA worked with Federation organizations to identify four general strategies to reform the Medicare payment system, including:

- Automatic annual payment updates based on the Medicare Economic Index (MEI);
- Updated policies governing when and how budget neutrality adjustments are made;

© 2026 American Medical Association. All rights reserved.

- Simplified and clinically relevant policies under the Merit-based Incentive Payment System; and
- Greater opportunities for physician practices that want to transition to advanced alternative payment models (APMs).

At the heart of the AMA's unwavering commitment to reforming the Medicare physician payment system lie four central pillars that highlight our strategic approach: legislative advocacy; regulatory advocacy; Federation engagement; and grassroots, media, and outreach initiatives. Grounded in principles endorsed by a unified medical community, our legislative efforts drive the advancement of policies that foster payment stability and promote value-based care. We actively champion reform through regulatory channels, tirelessly engaging with crucial agencies such as the Centers for Medicare & Medicaid Services (CMS) and the White House to address impending challenges and ensure fair payment policies. Our Federation engagement fosters unity and consensus within the broader medical community, pooling resources and strategies to amplify our collective voice. Lastly, our continued grassroots, media, and outreach efforts bridge the gap between policymakers and the public, ensuring our mission is well-understood and supported from all quarters. Together, these pillars fortify our endeavors to achieve a more rational Medicare physician payment system that truly benefits all.

Legislative Advocacy

Physicians continue to face significant financial instability under the current Medicare physician payment system. The calendar year (CY) 2025 Medicare Physician Fee Schedule finalized a 2.83 percent reduction in physician payment rates, continuing a pattern of recurring cuts that has persisted for several years.

In response to sustained advocacy from the AMA, Federation partners, and the broader physician community, Congress included a provision in the One Big Beautiful Bill Act (OB3) providing a 2.5 percent Medicare physician update for 2026 to partially mitigate these reductions.

While this action provided temporary relief, it addressed only a portion of the cut and did not resolve the structural flaws that continue to destabilize Medicare physician payment.

Beginning in 2026, statutory updates of 0.25 percent for most physicians and 0.75 percent for qualifying participants in advanced alternative payment models take effect under MACRA, but these updates are not tied to inflation and fall far short of projected increases in practice costs.

CMS estimates that the MEI, which measures changes in physician practice costs, will increase by 2.7 percent in 2026, further widening the gap between payment and the cost of delivering care.

As a result, Medicare physician payments have effectively declined by approximately 33 percent since 2001 when adjusted for inflation in practice costs.

During this period, physician practices have experienced significant increases in expenses related to staffing, technology, regulatory compliance, and facility costs. This growing imbalance is placing increasing pressure on physician practices across the country. Small, rural, and independent practices are particularly vulnerable to continued payment instability.

When practices are forced to close, consolidate, or limit the number of Medicare patients they can treat, access to care is threatened for millions of seniors and patients with disabilities.

Expanding the physician workforce alone will not solve these access challenges if newly trained physicians enter a Medicare system that remains financially unsustainable.

Fixing the broken Medicare physician payment system therefore remains one of the AMA's highest legislative priorities. The AMA continues to work closely with congressional leaders and Federation partners to move beyond the annual cycle of payment cuts and temporary patches and instead enact durable structural reforms that stabilize physician payment and support patient access to care.

As a result of sustained advocacy by the AMA and the physician community, bipartisan legislation has been introduced that reflects elements of the AMA-developed framework—Characteristics of a Rational Medicare Physician Payment System. The AMA continues to urge Congress to advance several key reforms designed to modernize the Medicare physician payment system and restore long-term stability.

The current Medicare physician payment system is characterized by stagnant base payments, the absence of permanent annual inflationary updates, and excessive administrative burdens. Unlike hospitals and other Medicare providers, physicians do not receive automatic inflationary adjustments tied to rising practice costs. This pattern of recurring reductions and structural instability is undermining the financial viability of physician practices nationwide.

To address these challenges, the AMA continues to advocate for several core legislative reforms designed to stabilize and modernize Medicare physician payment.

Medicare Reform: Automatic Annual Inflation-Based Updates

First, the AMA continues to advocate for the establishment of a permanent annual inflationary update for physician services tied to the MEI to ensure that Medicare physician payments more accurately reflect the real costs of delivering care. Unlike hospitals and other Medicare providers, physicians do not receive automatic inflationary adjustments, leaving practices increasingly vulnerable as staffing, technology, compliance, and other operational expenses continue to rise. In the previous Congress, H.R. 2474, the Strengthening Medicare for Patients and Providers Act, would have provided a permanent MEI-based update and garnered more than 170 bipartisan cosponsors. The AMA continues to support similar legislation, including H.R. 6160 introduced in the 119th Congress, which would establish a permanent MEI-based update and help restore stability and predictability to Medicare physician payment.

Medicare Payment Reform: Budget Neutrality

Second, the AMA continues to advocate for modernization of Medicare's budget neutrality requirements to prevent destabilizing payment reductions that occur when services are revalued or new services are added to the physician fee schedule. Current statutory thresholds and inaccurate utilization projections frequently trigger across-the-board reductions in physician payments, contributing to instability in the Medicare physician payment system. The AMA supports legislative efforts to raise the budget neutrality threshold and improve the accuracy and transparency of utilization estimates for newly unbundled services assigned projected utilization. Legislation introduced in the previous Congress, H.R. 6371, the Provider Reimbursement Stability Act, provides a framework for updating these outdated statutory requirements. The AMA continues to work with congressional leaders to advance legislation that would modernize budget neutrality policies and promote greater predictability in Medicare physician payment.

Medicare Payment Reform: Revising the MIPS Program

Third, the AMA continues to advocate for meaningful reforms to the Merit-based Incentive Payment System (MIPS) to reduce administrative burden and better align performance measurements with meaningful improvements in patient outcomes. While MIPS was intended to promote value and quality within the Medicare program, its current structure imposes significant reporting requirements that disproportionately affect small, rural, and independent physician practices, often without demonstrable improvements in quality of care. The AMA is working with Federation organizations on the introduction and advancement of legislative and regulatory reforms that streamline reporting requirements, improve measure relevance, and reduce unnecessary administrative complexity so that physicians can devote more time and resources to patient care rather than compliance activities.

119th Congress AMA Advocacy Highlights

In early 2025, Representatives Greg Murphy, MD, (R-NC) and Jimmy Panetta (D-CA) introduced H.R. 879, the Medicare Patient Access and Practice Stabilization Act, bipartisan legislation designed to address the 2.83 percent Medicare physician payment cut that took effect on January 1, 2025, and to provide a positive payment update to help stabilize physician practices. The legislation reflected growing bipartisan concern about the financial pressures facing physician practices and the potential impact of continued payment instability on patient access to care.

The AMA worked closely with the bill sponsors and congressional physician leaders to support the legislation and ensure it reflected the real-world costs of delivering care and the operational challenges facing physician practices. The bill quickly became a focal point for physician advocacy, drawing broad support across the physician community. More than 120 bipartisan House members cosponsored the legislation, and over 80 physician organizations, including all 50 state medical associations, joined a coalition letter urging Congress to act.

Although H.R. 879 was not ultimately enacted as a standalone measure, the legislation played an important role in elevating Medicare physician payment reform as a priority issue for Congress. The bill helped frame the policy debate around the need for immediate relief from payment cuts while reinforcing the broader call for structural reforms to stabilize the Medicare physician payment system and protect patient access to care.

Alternative Payment Model (APM) Progress and H.R. 7148

H.R. 7148, the Consolidated Appropriations Act, 2026, included several important AMA-supported provisions restoring incentives for participation in advanced Alternative Payment Models (APMs). Specifically, the legislation reinstated APM incentive payments at 3.1 percent for the 2026 performance year (2028 payment year) and reduced the Qualifying Participant (QP) revenue threshold from 75 percent back to 50 percent for the same performance year. These changes help restore meaningful incentives for physician participation in value-based care and reduce barriers that had limited participation following the expiration of the original APM bonus and the automatic increase in the QP threshold in 2025.

The law also includes several Medicare extenders that expire at the end of 2026. As a result, Congress will again need to address key Medicare payment policies, creating an opportunity for the AMA to continue advancing broader Medicare physician payment reforms, including efforts to secure a physician payment update for 2027.

National Advocacy Conference – February 2026

At the February 2026 National Advocacy Conference (NAC), the following lawmakers expressed the need for Medicare physician payment reform: Senator Peter Welch (D-VT) and Representatives Greg Murphy (R-NC), Kim Schrier (D-WA), Mariannette Miller-Meeks (R-IA), John Joyce (R-PA), Jill Tokuda (D-HI), and Steven Horsford (D-NV). More than 500 physician advocates attended NAC and participated in Capitol Hill meetings and distributed advocacy kits urging lawmakers to support legislation that:

- Provides annual inflationary updates tied to practice costs
- Reforms budget neutrality
- Improves MIPS
- Expands APM options

These reforms were framed as essential to preserving patient access to care by stabilizing physician practices and thereby ensuring America's seniors have timely access to high-quality care.

Grassroots, Media, and Outreach

The AMA has maintained a continuous drumbeat of grassroots contacts through its Physicians Grassroots Network, Patients Advocacy Network, and its Very Influential Physicians program. Op-eds have been placed in various publications from AMA leaders, as well as from "grasstops" contacts in local newspapers. Digital advertisements are running targeted specifically to publications read on Capitol Hill, and media releases have been issued to highlight significant developments.

The AMA has a dedicated Medicare payment reform web site, www.FixMedicareNow.org, which includes a range of AMA-developed advocacy resource material, updated payment graphics, and a new "Medicare basics" series of papers describing in plain language specific challenges presented by current Medicare payment policies and recommendations for reform.

To support the Medicare legislation cited above, the AMA has been engaged in a major grassroots campaign to engage patients and physicians in our lobbying efforts. The following statistics from January through the end of December 2025 result from the Fix Medicare Now campaign and engagement with the Physician Grassroots Network and Patients Action Network.

- 103+ million in earned media and ad impressions
- 3.9+ million media and ad engagements
- 944,000+ pageviews
- 910,000+ site users
- 100,000+ contacts to Congress
- 260+ third-party media placements and grass top contacts made in key Congressional districts

Senate Legislation and H.R. 1

In April 2025, Senator Roger Marshall (R-KS) introduced the Senate companion bill, S. 1640. AMA advocacy staff were highly involved in drafting this legislation, ensuring it was responsive to the real-time 2025 Medicare cuts.

Separately, H.R. 1, the One Big Beautiful Bill (OBBB) initially included strong Medicare physician payment reform provisions, including a 75 percent MEI update for 2026 and a permanent annual update of 10 percent of MEI thereafter. These provisions marked the first time since MACRA in 2015 that physician payment updates would be permanently built into baseline Medicare rates.

The AMA advocacy team was instrumental in the development and inclusion of these House-passed Medicare provisions. Section 44304, which linked the update to inflation in practice costs using the MEI, reflected AMA policy and decades of advocacy, and was recently echoed in recommendations by the Medicare Payment Advisory Commission (MedPAC).

These provisions passed the House of Representatives. However, the Senate scaled the proposal back to a temporary 2.5 percent update for 2026.

The final version of H.R. 1, passed by the Senate, retained only the temporary one-year 2.5 percent conversion factor update—with no permanent, inflation-adjusted fix. Still, the inclusion of any update represented forward movement and provides important momentum for continued advocacy in the 119th Congress.

Federation Engagement

The AMA continues to work closely with state medical associations and national medical specialty societies to build alignment around shared principles for Medicare physician payment reform. Through ongoing coordination with Federation partners, the AMA has strengthened advocacy efforts, reinforced consistent policy messaging, and demonstrated broad physician support for legislative solutions that stabilize Medicare physician payment and protect patient access to care.

At the same time, the AMA continues to advance several legislative initiatives aimed at addressing structural challenges within the Medicare physician payment system. AMA advocacy staff are working closely with House Ways and Means Committee Chairman Jason Smith (R-MO) and Representative Greg Murphy, MD, (R-NC) on the reintroduction of updated legislation to reform Medicare's budget neutrality policies. As part of this effort, bipartisan staff from the relevant House and Senate committees of jurisdiction recently participated in a technical assistance briefing with CMS, confirming that the proposed reforms could be implemented operationally. The AMA is also working to secure bipartisan support for the legislation, including Democratic cosponsors from the Ways and Means and Energy and Commerce Committees.

In parallel, the AMA is advancing legislation to reform MIPS. This proposal was developed through a physician-led Medicare MIPS working group convened by the AMA and reflects extensive collaboration among physician organizations to identify practical reforms that reduce administrative burden, improve fairness, and preserve incentives for high-quality care. The AMA is currently working with congressional offices and physician organizations to finalize the legislation and build support for its introduction.

Advocacy with MedPAC and Looking Forward

The AMA continues to engage with MedPAC as it evaluates the adequacy of Medicare physician payment and develops recommendations to Congress. During its December 2025 meeting, MedPAC discussed a potential recommendation to update Medicare physician payment rates in 2027 by current law plus 0.5 percent, which would result in an update of approximately 1.25 percent for clinicians participating in advanced alternative payment models and 0.75 percent for

other physicians. However, the cost of providing care is expected to increase by approximately 2.1 percent, meaning that such a recommendation would allow the gap between physician payment and practice cost inflation to continue widening.

In recent comments submitted following the meeting, the AMA urged MedPAC to recommend that Congress update physician payment in 2027 by the full increase in the MEI. The AMA emphasized that aligning physician payment updates with practice cost inflation is necessary to improve payment stability, preserve private physician practices, and maintain patient access to care.

The AMA also highlighted MedPAC data showing emerging access challenges for Medicare beneficiaries. In 2025, 29 percent of beneficiaries reported waiting six or more weeks to see a new primary care physician and 31 percent reported similar waits to see a new specialist. At the same time, growth in spending under the Medicare Physician Fee Schedule has remained modest compared to other components of Medicare Part B, with physician fee schedule spending per beneficiary increasing far more slowly than overall Part B spending in recent years.

The AMA will continue working with MedPAC to ensure that its recommendations to Congress reflect the growing gap between physician payment and practice cost inflation and the potential implications for patient access to care.

Call to Action

Congress must urgently address a broken Medicare payment system that places enormous financial pressure on physicians and threatens access to care. The AMA continues to urge lawmakers to:

- Enact a positive update to keep up with inflation; and
- Implement a long-term fix that ensures payment adequacy and stability, including reforms to budget neutrality and MIPS and expanded APM options.

Physician practices have lost 33 percent to inflation since 2001. Physician ownership of practices has also collapsed, dropping from 61 percent in 2001 to under 50 percent in 2016. This erosion threatens the viability of community-based care.

Fixing this system will remove a major financial stressor for physicians, protect patient access, and stabilize our health care infrastructure. The House-passed provisions of H.R. 1 provide a critical foundation for comprehensive reform. Ensuring regular, adequate payment updates is vital to practice sustainability, advancing value-based care models, and safeguarding access to care for Medicare beneficiaries—especially in rural and underserved communities, where practices treat four times as many Medicare patients as those in metropolitan areas.

As physicians across the country continue to share their stories and advocate for reform, there is hope that our united efforts will eventually break through the political and financial barriers that have hindered progress. The AMA will continue to fight tirelessly until a sustainable, fair, and effective Medicare physician payment system is achieved.

STRATEGIC REVIEW OF MEDICARE PAYMENT REFORM ADVOCACY

In response to Policy D-400.981, the AMA is conducting a comprehensive review of its Medicare payment reform advocacy strategy. This effort includes evaluating opportunities to engage external advocacy consultants and refining internal processes to identify barriers, assess strategic gaps, and develop targeted recommendations to strengthen ongoing reform efforts. While this work is

ongoing at the time this report was prepared, the AMA remains committed to advancing this review and will provide an update at the 2026 Interim Meeting.

CONCLUSION

The AMA will continue to press Congress to address the structural flaws in the Medicare physician payment system and enact reforms that ensure stability for physician practices and protect patient access to care. While progress has been made through sustained advocacy and engagement with policymakers, meaningful reform will require continued legislative action.

The AMA will remain actively engaged with Congress, the Administration, and Federation partners to advance policies that stabilize Medicare physician payment, reduce administrative burden, and support physician participation in innovative care delivery models. Continued engagement from physicians across the Federation will remain essential as these efforts move forward.

REPORT 11 OF THE BOARD OF TRUSTEES (A-26)
AMA Public Health Strategy Update

EXECUTIVE SUMMARY

BACKGROUND: Policy D-440.922, "Full Commitment by our AMA to the Betterment and Strengthening of Public Health Systems," adopted by House of Delegates at I-21 directed our American Medical Association (AMA) to develop an organization-wide strategy on public health including ways in which the AMA can strengthen the health and public health system infrastructure and report back regularly on progress. Policy D-145.992, "Further Action to Respond to the Gun Violence Public Health Crisis" has called for the AMA to report annually to the House of Delegates on our AMA's efforts relating to legislation, regulation, and litigation at the federal, state, and local levels to prevent gun violence. This informational report is an effort to provide regular updates on the status of the AMA's mission critical public health work to the HOD.

DISCUSSION

In the last year, there have been many changes in the federal administration and changes to policies and funding levels, as well as scientific advisory committees that threaten to weaken our public health infrastructure, undermine science and evidence-based practice, which will result in increasing health inequities. The intent of this report is to share the work that the AMA has done to advance our current public health priorities, which are as follows:

1. Promote evidence-based clinical and community preventive services.
2. Respond to public health crises impacting physicians, patients, and the public. This includes:
    - addressing the threat of climate change,
    - preventing firearm injuries and deaths,
    - preparing for emerging and remerging infectious disease threats, and
    - ending the nation's drug overdose epidemic.
3. Strengthen the health system through improved collaboration between medicine and public health.
4. Combat the spread of misinformation and disinformation.

CONCLUSION

The AMA continues to advance its mission, to promote the art and science of medicine and the betterment of public health. The highlighted accomplishments in this report capture the work accomplished from March of 2025 – March of 2026 related to the AMA's current public health priorities. In the current environment, AMA continues efforts to maintain AMA's standing as a trusted source of information for physicians and the public and to help protect the nation's health.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 11-A-26

Subject: AMA Public Health Strategy Update

Presented by: David H. Aizuss, MD, Chair

Policy D-440.922, "Full Commitment by our AMA to the Betterment and Strengthening of Public Health Systems" adopted by House of Delegates (HOD) at I-21 directed our American Medical Association (AMA) to:

> develop an organization-wide strategy on public health including ways in which the AMA can strengthen the health and public health system infrastructure and report back regularly on progress.

Policy D-145.992, "Further Action to Respond to the Gun Violence Public Health Crisis" has also called for the AMA to report annually to the House of Delegates on our AMA's efforts relating to legislation, regulation, and litigation at the federal, state, and local levels to prevent gun violence.

This informational report is an effort to provide regular updates on the status of the AMA's mission critical public health work to the HOD.

DISCUSSION

What is Public Health?

Since its founding in 1847, the AMA's mission has been "to promote the art and science of medicine and the betterment of public health." According to the Centers for Disease Control and Prevention (CDC), public health is "the science and art of preventing disease, prolonging life, and promoting health through the organized efforts and informed choices of society, organizations, public and private communities, and individuals."[1] Public health promotes and protects the health of people and the communities where they live, learn, work and play.[2] Public health practice is a different field than clinical medicine with different motivating values, responsibilities, and goals.[3] While a doctor treats people who are sick, those working in public health try to prevent people from getting sick or injured in the first place. A public health professional's duty is to the community rather than an individual patient.

Connection with Health Equity

It is important to acknowledge that health equity is a central concept in public health and is essential to improving the health of populations. The AMA's health equity strategy recognizes that structural and social drivers of health inequities shape a person's and community's capacity to make healthy choices, noting that downstream opportunities provided by the health care system and individual-level factors are estimated to only contribute 20 percent to an individual's overall health and well-being, while upstream opportunities of public health and its structural and social drivers account for 80 percent of impact on health outcomes.[4] Progress towards the AMA's health

© 2026 American Medical Association. All rights reserved.

equity strategy is reported in the Board of Trustees (BOT) annual health equity report. (See BOT Report 9-A-26, "American Medical Association Health Equity Annual Report.")

AMA PUBLIC HEALTH AND PREVENTION ACTIVITIES

1. Promote evidence-based clinical and community preventive services.

A. Serve as a liaison to the U.S. Preventive Services Task Force (USPSTF), the Advisory Committee on Immunization Practices (ACIP), and the Community Preventive Services Task Force (CPSTF) and support the dissemination of recommendations to physicians.

Last year saw major disruptions to federal advisory committees whose goal is to develop recommendations for clinical and community preventive services, this included the longest government shutdown in history in the fall of 2025. CPSTF did not convene at their normally scheduled times to discuss evidence-based recommendations in 2025. CPSTF met for the first time in February 2026 after nearly a year and a half of not convening.

In early 2025, the structure of the USPSTF was being challenged in the courts. On June 27, 2025, the U.S. Supreme Court ruled in *Kennedy v. Braidwood Management, Inc.* that the structure of the USPSTF was constitutional. The Court upheld the Affordable Care Act's (ACA) requirement that private insurers cover USPSTF "A" and "B" rated preventive services without cost-sharing. The Supreme Court also confirmed the HHS Secretary's authority to remove and appoint members of the task force.

The USPSTF did not convene at their normally scheduled times in July and November of 2025. The USPSTF was expected to meet early March of 2026, but that meeting was postponed. Task Force recommendations are not being published on a regular basis and there are concerns about staffing support for the task force within the Agency for Healthcare Research and Quality given reductions in force at the agency.

- On July 27, 2025, the AMA sent a letter to the Secretary of the Department of Health and Human Services (HHS), expressing deep concern with the reports of his intention to remove all of the members of the USPSTF and commit to the long-standing process of regular meetings to ensure their important work can continue without interruption.

The ACIP has continued to meet, but the removal and replacement of all ACIP members, as well as changes to the vaccine recommendations have been extremely concerning. The following list represents the AMA's response to the changes to ACIP:

- On June 9, 2025, the AMA issued a statement on the removal of the 17 sitting members of ACIP and noting that it undermines trust in a process that has saved countless lives.
- On June 12, 2025, the AMA issued a statement on new members of the ACIP selected without transparency and proper vetting.
- On June 13, 2025, the AMA sent a letter to Senate leadership regarding the actions by HHS to terminate the appointments of the 17 voting members of the ACIP and urged an inquiry into the circumstances surrounding the decision to remove and replace all sitting members.
- On June 18, 2025, the AMA sent a letter to HHS expressing significant concern regarding the recent action to terminate the entirety of the membership of the ACIP.

- On August 1, 2025, ACIP medical society liaison organizations issued a joint statement regarding their removal from ACIP vaccine workgroups.
- On September 19, 2025, the AMA issued a statement on ACIP's new MMRV vaccine recommendations.
- Oct. 15, 2025, the AMA joined an amicus brief in the case of *AAP vs. Kennedy* calling for government recommendations regarding the COVID-19 vaccine to reflect the full body of medical evidence and to follow the statutorily process for the provision of vaccine guidance.
- On December 5, 2025, the AMA issued a statement on ACIP vote to weaken the birth-dose recommendation for the hepatitis B vaccine.
- On December 15, 2025, the AMA issued a statement on the CDC hepatitis B birth dose decision.
- On January 5, 2026: the AMA issued a statement on changes to the childhood vaccine schedule.
- On January 23, 2026, the AMA issued a statement on the ACIP chair's comments on polio, routine vaccinations.

The AMA House of Delegates voted in November of 2025 to amend AMA policies to support ACIP recommendations as of May 1, 2025, as well as subsequent recommendations by national medical specialty societies. AMA statements in support of evidence-based vaccine recommendations were as follows:

- On June 25, 2025, the AMA and 79 medical societies issued a joint statement backing vaccination against respiratory viruses.
- On October 30, 2025, the AMA issued a statement urging vaccination in advance of respiratory virus season.
- On January 26, 2026, the AMA formally endorsed the 2026 AAP childhood and adolescent immunization scheduled, which recommends routine, comprehensive immunization from birth through 18 years.
- On February 3, 2026, the AMA urged the public to get vaccinated against measles as cases rise and the U.S. at real risk of losing its measles elimination status.
- On February 10, 2026, the AMA and the Vaccine Integrity Project announced the launch of a structured, evidence-based review process to assess vaccine safety and effectiveness for the 2026-2027 respiratory season. The review will focus on immunizations for influenza, COVID-19, and respiratory syncytial virus (RSV) and will help inform the recommendations developed by national medical specialty societies.

B. Help prevent cardiovascular disease (CVD) by addressing major risk factors (work led by the Center for Optimal Health Outcomes team)

The AMA is committed to improving the health of the nation and reducing the burden of chronic diseases. Our primary focus is preventing cardiovascular disease (CVD), the leading cause of death in the U.S., accounting for one in four deaths among adults.[5] Two major risk factors for CVD are hypertension and type 2 diabetes.

- To prevent CVD and address related health inequities, the AMA is developing and disseminating CVD prevention solutions in collaboration with health care and public health leaders. These solutions educate clinical care teams and patients, guide health care organizations (HCOs) in clinical quality improvement and promote policy changes to remove barriers to care. The AMA disseminates these solutions through strategic alliances

with various organizations including the CDC, the American Heart Association (AHA), and West Side United in Chicago.

- The AMA MAP ™ Hypertension clinical quality improvement program was designed to improve hypertension management and control. The free program has demonstrated effectiveness in a variety of health care settings from large health care organizations (HCO) to community health centers. Participating HCOs are provided with clinical based practice facilitation and a personalized dashboard with performance metrics.[6] The AMA MAP ™ set of solutions is expanding to include management for other cardiovascular disease risk factors, including cholesterol, prediabetes, and post-partum hypertension.
- AMA MAP™ houses a suite of tools and resources designed to help organizations build and integrate diabetes prevention strategies into their organizations. AMA has worked with more than 80 health care organizations across the country to increase identification and management of patients with prediabetes.
- The AMA was awarded a multi-year CDC grant to implement three projects aimed at improving the quality of cardiovascular disease-related preventive care in Community Health Centers/Federally Qualified Health Centers. The funding will allow AMA to scale its existing quality improvement program. The goal is to help 500,000 patients achieve blood pressure control.
- Additionally, the AMA, in collaboration with the AHA, developed Target: BP™, which recognizes organizations that have achieved milestones in their commitments to improving blood pressure control.
- The AMA established the U.S. Blood Pressure Validated Device Listing (VDL)—a trusted resource for clinicians, care teams, and patients alike. The VDL features blood pressure devices independently validated for clinic accuracy.

C. Counseling Patients on Nutrition to Promote a Healthy Diet

The AMA strongly supports the role of physicians in counseling patients on healthy diets and nutrition. The AMA has made it a priority to help physicians translate nutrition science into practical advice for patients, recognizing that dietary choices are key drivers of chronic diseases such as heart disease, diabetes, and obesity.

- On May 30, 2025, the AMA sent a letter to the Food and Drug Administration (FDA) on the proposed rule entitled "Food Labeling: Front-of-Package Nutrition Information." The letter noted support for requiring most foods to display a nutrition facts information box on the principal display panel regarding the relative levels of saturated fat, sodium, and added sugars in a serving of food.
- On August 15, 2025, the AMA commented on the Alcohol and Tobacco Tax and Trade Bureau's (ATTB) proposed rule entitled "Alcohol Facts Statements in the Labeling of Wines, Distilled Spirits, and Malt Beverages." The letter indicated the AMA's strong support for the creation of an alcohol facts statement, which will lead to greater consumer understanding about the associated dietary and health impacts of consuming alcoholic products.
- On September 29, 2025, the AMA responded to a Request for Information (RFI) from the FDA and the U.S. Department of Agriculture (USDA) titled "Ultra-Processed Foods; Request for Information." The letter shared concern about the risks posed by ultra-processed foods (UPFs) and agreed that a uniform definition of UPFs could benefit research, policymaking, and members of the public seeking to make informed and healthy nutrition choices.

- On January 7, 2026, the AMA released a press statement applauding the Administration's new Dietary Guidelines for spotlighting the highly processed foods, sugar-sweetened beverages, and excess sodium that fuel heart disease, diabetes, obesity, and other chronic illnesses.
- On March 5, 2026, the AMA joined the Department of Health and Human Services (HHS) and the U.S. Department of Education at a convening of leaders from 53 of the nation's top medical schools across 31 states to announce commitments to meaningful nutrition training beginning in the next academic year.
- On March 24, 2026, the AMA announced the launch of a nutrition education initiative to equip physicians and medical students with practical, evidence-based knowledge and tools to help patients live healthier lives. The program will feature webinars, roundtables, and additional resources on the AMA Ed Hub™. This work is part of an ongoing effort by the AMA to advance nutrition education across the medical education continuum and elevate nutrition as a core component of patient care.

D. Screening and Reducing Risk for Dementia *(CDC funded)*

To advance the "Navigating Brain Health and Dementia Project," the AMA has completed and continues to advance the following activities and deliverables:

- The AMA completed a needs assessment to better understand the current knowledge, daily practices, challenges, and training needs of physicians and other health care professionals in the prevention, screening, diagnosis, and treatment of Alzheimer's disease and related dementias (ADRD). The findings from the needs assessment are being used to inform the development of educational materials and were submitted as an abstract to the 2026 Alzheimer's Association International Conference. A peer-reviewed publication is also being drafted.
- The AMA convened a work group of clinicians and researchers with subject matter expertise in ADRD research, clinical care, and education to provide feedback and guidance on the development of educational materials. The workgroup has participated in monthly meetings, provided feedback on the design and interpretation of a needs assessment, contributed topic and content ideas for upcoming CME modules and short videos, and will serve as subject matter experts on three upcoming webinars.
- The AMA will host three webinars on ADRD in March, April, and May of 2026. The webinar topics focus on (1) Detection and Diagnosis of Dementia in Primary Care, (2) Lifestyle Approaches to Promote Brain Health: Maintaining Cognitive Health Over the Life Course, and (3) Building a Stronger Brain Health Care Team.
- There are also two continuing medical education (CME) modules in development. The first is comprised of three mini modules focused on (1) Recognizing Cognitive Concerns in Primary Care Settings, (2) Choosing and Applying Diagnostic Aids for Cognitive Impairment and Dementia, and (3) Communicating Results of Cognitive Assessments and Next Steps. A second module will focus on post-diagnosis care.

E. Improving the implementation of routine screening for HIV, STI, Viral Hepatitis and latent tuberculosis (LTBI). *(CDC funded)*

The AMA continues to work on the "Promoting HIV, Viral Hepatitis, STDs and LTBI Screening in Hospitals, Health Systems and Other Healthcare Settings" project. The scope of this project has included developing, piloting and launching a toolkit that outlines ways to increase routine screening for HIV, STIs, viral hepatitis and LTBI. The toolkit contains two different sets of

strategies – one targeted to community health centers (CHCs) and a second to emergency departments (EDs). In the past year the AMA has been working to scale the adoption and implementation of the quality improvement strategies in the toolkit across CHCs and EDs.

- The toolkit was launched to the public in March 0f 2024.[7] Since its launch, the toolkit has had over 27,000 page views, over 18,000 views of the launch series webinars and over 1,400 downloads of the PDF toolkit.
- In 2025, 15 CHCs and EDs from across the country were selected to participate in a 6-month Community of Practice (CoP). The AMA hosted five 30-minute tele-mentoring sessions to advance quality improvement strategies within the toolkit. The AMA also hosted six 60-minute office hour sessions where CoP members could discuss their challenges in implementing routine screening.
- The AMA also identified three national organizations to promote the routine screening toolkit to their members during 2025 (Alliance Chicago, Society of Academic Emergency Medicine, and the National Coalition of STD Directors).
- In 2026, the AMA is expanding to host a CoP that is open to any CHC or ED that wants to start or expand routine screening for these infectious diseases. A work group of four experts is meeting monthly to shape the hour-long office hours. Once again, the office hours will serve as a safe place for clinicians to share their challenges and get assistance with everything from patient education to care team workflow to EMR optimization.
- The toolkit will be expanded in 2026 with webinars focusing on improving routine screening in specific populations with a focus on patients with substance use disorders, patients who are pregnant, and rural populations.
- In addition to the work on the routine screening toolkit, the AMA has also received funding from the CDC to explore barriers in accessing preventive medications including pre-exposure prophylaxis (PrEP) and post-exposure prophylaxis (PEP) for HIV and doxycycline post-exposure prophylaxis (doxy PEP) for STIs to inform the development of tools and resources to help overcome these barriers.
- The AMA worked with a vendor to conduct two discussion groups looking at barriers to PrEP and doxy PEP prescribing. Five SMEs and three non-SMEs gave their thoughts on current challenges and potential solutions. The AMA will develop a work group to use these findings to develop targeted education and resources to improve access to these interventions.

F. Promote evidence-based preventive services to the public.

While the AMA's primary audience has historically been physicians, there are limited instances where the AMA has partnered on public information campaigns on select priority issues. This work has been made possible through partnerships with other health-related organizations and the Ad Council. The AMA will explore opportunities for future campaigns on an ongoing basis.

Get My Flu Shot. The Ad Council and the AMA have partnered since the 2020-2021 flu season through an annual campaign to motivate more people to get vaccinated against seasonal influenza (flu) to protect themselves and their loved ones. During a severe season, flu has resulted in as many as 41 million illnesses and 710,000 hospitalizations among the U.S. population. This year's campaign features a public service announcement (PSA) titled "No Time for Flu" that illustrates how getting sick with flu does not just mean feeling ill—it could significantly disrupt the lives of individuals and their families. The Get My Flu Shot campaign PSAs were launched nationwide to reach people with the message that a flu shot can help you stay healthy, reduce risk of severe outcomes, such as hospitalization and death, and avoid missing work, school, or special moments with family and friends. PSAs are available to run in English and Spanish across all platforms, in donated time and space throughout flu season. The campaign ads direct audiences to

GetMyFluShot.org for more information, including where to get a flu vaccine in their area. Some highlights from the 2025-26 flu campaign are as follows:

- The donated media value for the current flu season reached $1.49 million. The most support has come from TV ($1,024,041), closely followed by digital ($468,499).
- A media tour was held on December 9, 2025, featuring three spokespeople from the AMA included 30 interviews in English and Spanish. Over 100 placements were secured across TV, radio, and digital, with a reach of 45.1 million digital impressions and 1.1 million broadcast impressions.
- Across both Black and Hispanic audiences, respondents aware of the PSAs are significantly more likely to report receiving a flu vaccine (65 percent), compared to not-aware respondents (48 percent), based off our most recent December 2025 tracking survey.

2. Responding to public health crises impacting physicians, patients, and the public.

The AMA's public health work has also been focused on preparing for and responding to public health crises. These crises are often associated with significant health risk for patients, raising concerns among physicians. However, these crises are unlikely to be solved in a clinical setting alone. The AMA's response to public health crises is typically focused on (1) ensuring physicians and trainees have the data and resources needed; (2) identifying evidence-based policies and interventions; (3) elevating the voices of physician leaders through AMA channels and platforms; and (4) convening and collaborating with stakeholders to advance priority policies and interventions.

A. Address the public health crisis of climate change.

At the 2022 Annual Meeting of the House of Delegates, policy was adopted declaring "climate change a public health crisis that threatens the health and well-being of all individuals." Since the A-25 meeting, AMA has accomplished the following activities and continues to follow the strategy to address climate change and health adopted at the I-24 HOD meeting:[9]

- The AMA continues to make climate change and sustainability education available via the Ed Hub™ from a variety of sources including the UC Center for Climate, Health, and Equity, Stanford Medicine, AMA Journal of Ethics, the Journal of the American Medical Association (JAMA), and the American Public Health Association (APHA).
- In 2025, the AMA organized a three-part webinar series on climate and health, which is available on AMA's Ed Hub. The three webinars covered the hidden health impacts of climate change, planning for climate resilience in the health care sector, and decarbonizing health care.
- The AMA is in the process of developing a CME module for physicians and trainees on climate change and health. The focus of the module is to bring awareness to physicians about the impact of climate change on the nation's health and to empower physicians to begin conversations with their patients about how climate change is affecting their health and what they can do about it.
- In December 2024, AMA developed and distributed a survey to physicians to assess perceptions on climate change and health, including the level of importance and relevance of climate change to physicians, understanding day-to-day effects of climate change that physicians may be experiencing or anticipating experiencing in the future, and exploring what the AMA's role should be in supporting physicians on climate change. Findings from this survey were presented at the APHA 2025 Annual Conference (November 2025) and an

abstract on the survey findings has also been accepted at National Association of City and County Officials annual conference (April 2026). A publication intended for a peer-review journal is drafted with intended publication in 2026.

- AMA staff moderated a panel discussion entitled "Clinician and Health System Responses to Extreme Weather," at the inaugural Illinois Extreme Weather and Health summit, held on November 12-13, 2025, in Chicago, IL.
- The AMA continues to engage in the Medical Society Consortium on Climate and Health (MSCCH), which brings together associations representing over 600,000 clinical practitioners.[12] The AMA sits on the executive committee of this group and through the MSCCH the AMA represents the U.S. to the Global Climate and Health Alliance. Additionally, the AMA was a sponsor of the MSCCH Annual Convention, held in March 2026 in Arlington, VA.
- The AMA is a member and sponsor of the National Academy of Medicine (NAM) Action Collaborative on Achieving a Climate Resilient and Sustainable Health Sector (Climate Collaborative) and is represented on the Steering Committee and served as a co-lead of the Health Care Delivery Workgroup (Phase 1 and 2). The Health Care Delivery Workgroup focused on three deliverables in Phase 2, which included:
    - Hosting the "Building Momentum to Act on Health Care Decarbonization" Webinar Series**.** All recordings, slides, and resources have been published. We also developed a 1-page overview summarizing key findings and takeaways from the series.
    - Developing a list of Key Actions for Health Professionals to Advance Sustainable Health Care (Health Professionals Shortlist), which has been published.
    - Developing a Climate Journey Map: Clinical Pathway, which was published. We are continuing to review new resource submission monthly with Journey Map updates published on a quarterly basis.
    - The Committee's Phase 3 work will focus on redefining quality through climate action and building the evidence.
- Additionally, the AMA participates in the American Lung Association's Healthy Air Partners campaign, which is a coalition of 40 national public health, medical, nursing and health care organizations engaged in healthy air advocacy efforts.[13] The Coalition is united in its calling for strong federal laws and policies to slash air pollution and address climate change, recognizing climate change can affect air quality, and certain air pollutants can affect climate change. The AMA also became a member of the newly formed Alliance for Heat Resilience and Health, which includes over a dozen national organizations working in collaboration to advance protective standards, proactive emergency plans, and local and state-based engagement around extreme heat.
- In terms of advocacy efforts, the AMA joined with partners or submitted comments separately on the following:
    - On February 4, 2026, the AMA joined 19 medical and health organizations in a letter opposing the National Highway Traffic Safety Administration's proposed weakening of fuel efficiency standards for vehicles and light trucks.
    - On September 22, 2025, the AMA joined 120+ medical and health organizations in a letter opposing the EPA's proposed repeal of the 2009 Greenhouse Gas Endangerment Finding and Greenhouse Gas Vehicle Standards.
        - The AMA provided testimony to the EPA affirming the importance of the Greenhouse Gas Endangerment finding and noting the public health impacts of climate change.
    - On August 7, 2025, sent a letter opposing the EPA's proposed rule to repeal Greenhouse Gas Emissions Standards for Fossil Fuel-Fired Electric Generating Units.

B. Prevent firearm injuries and deaths.

In the 1980's the AMA recognized firearms as a serious threat to the public's health as weapons are one of the main causes of intentional and unintentional injuries and deaths. At the 2016 Annual Meeting, following the Pulse nightclub shooting, policy was adopted declaring that "gun violence represents a public health crisis which requires a comprehensive public health response and solution." Since that time firearm injuries and deaths have increased, and disparities have widened.[15]

- The AMA continues to convene its Firearm Injury Prevention task force, which is charged with advising the AMA Board of Trustees on the role of organized medicine in firearm injury prevention and developing resources for physicians and trainees on firearm injury prevention to increase counseling of high-risk patients and awareness of available interventions. The AMA task force was extended by the AMA Board of Trustees for an additional 2-year term from December 2025 – December 2027.
- Task force members have participated in *AMA Update* video and podcast episodes on the health system role in firearm injury prevention (featuring the American Pediatric Surgical Association representative) and Extreme Risk Protection Orders (featuring the Society of Critical Care Medicine representative and the Johns Hopkins Center for Gun Violence Solutions).
- On November 25, 2025, the updated CME module "Health Care Strategies for Firearm Injury Prevention" was published on the Ed Hub™. This interactive module contains updated data on the epidemiology of firearm morbidity and mortality in the U.S. and helps physicians understand how to effectively counsel patients and communicate about reducing the risk of firearm injury and death.

Agree to Agree. The AMA is collaborating with the Ad Council on the Agree to Agree initiative, which is focused on finding common ground to reduce the impact of firearm violence on children and teens across all communities in the U.S. This campaign launched in early 2025 and is focused on reaching distinct audiences, including parents and those with children in their lives who have a vested interest in protecting our youth and health care professionals who witness the impact of firearm violence firsthand. The initiative will expand to provide additional resources and tools to reach specific audiences and communities with the goal of addressing all forms of firearm violence as part of our comprehensive approach to combating this complex crisis. "Agree to disagree" is a phrase that ends a conversation, the goal of this campaign is to start a conversation.

- On Thursday, March 6, 2025, AMA participated in a Washington Post Live conversation about how gun violence has impacted communities around the country, initiatives to find common ground, and efforts to bolster public safety and health.
- On October 23, 2025, the Ad Council in partnership with the American Medical Association, through the work of the task force and a coalition of health care and business leaders, launched new firearm injury prevention creative and an expanded digital resource hub for health care professionals at AgreeToAgree.org/Healthcare. The resource hub provides links to educational materials to support physicians having effective conversations about firearm injury prevention with patients, parents, other health care professionals and community members.
- In the first year of the Agree to Agree campaign, it has:
    - Received 35.4 million in total donated media resulting in 2.4 billion impressions.
    - Reached 69.5 percent of the audience in first 4 months of campaign launch, according to a Nielsen One study.

- All three impact goals were met. Respondents aware of the campaign advertising are significantly more likely than those not aware to: (1) know firearm injuries are the leading cause of death for youth, (2) believe they have a role to play, and (3) report having had a conversation about preventing youth firearm injury and deaths.
- Agree to Agree was number one for share of voice for the Gun Violence Safety category for 2025.

C. Respond to emerging and remerging infectious disease threats and prepare for future pandemics.

Infectious diseases continue to evolve and advance throughout the U.S. Pathogens that were once geographically limited are now advancing beyond traditional borders. Measles, which was once eliminated in the U.S., continues to surge with 2,284 confirmed cases in 2025. The U.S. is on pace to surpass that number in 2026, with 1,362 cases already reported as of March 12, 2026. The AMA is relied upon as a source of information by physicians and patients, the AMA must maintain the ability to respond and share information and advocate for physicians, patients, and the public in line with AMA policies.

- The AMA is currently maintaining resources pages on multiple pathogens including dengue, measles, respiratory syncytial virus, Bordetella pertussis, oropouche virus and more. We continue to create additional infectious disease related resources for physicians on the AMA website to help ensure the continued availability of information should other sources not remain available.
- The AMA is a collaborator in Project Firstline, the CDC's National Training Collaborative for Healthcare Infection Control. Project Firstline offers educational resources in a variety of formats to meet the diverse learning needs and preferences of the health care workforce. Over the past year, the AMA has partnered with the CDC on four webinars. The recordings are available on the AMA Ed Hub™:
  - "Measles on the Rise: How to Prepare and Respond in Your Clinic"
  - "Overcoming Infection Prevention and Control Challenges in Rural Health Care"
  - "Preventing and Responding to Respiratory Infections and Outbreaks in Long-Term Care"
  - "Pertussis: Trends, Treatment, and Prevention"
- On October 22, 2025, the AMA partnered with the CDC on a Clinician Call to bring attention to the rise in West Nile virus cases, specifically in neuroinvasive disease. It highlighted a case where West Nile virus was transmitted via solid organ transplants. This webinar highlighted the AMA's ability to quickly develop, promote and execute a webinar based on a current infectious diseases threat.

D. End the nation's drug overdose epidemic.

Ending the nation's drug overdose epidemic will require increased physician leadership, a greater emphasis on overdose prevention and treatment, and better coordination and amplification of the efforts and best practices already occurring across the country.

- The AMA makes education available to physicians on this topic via the AMA Ed Hub™ to help physicians gain critical knowledge around acute and chronic pain management, substance use treatment, overdose prevention, and pain treatment to meet regulatory requirements. Courses are developed by AMA as well as by other partners.

  - In 2025, the AMA developed and disseminated physician education, "Safer Prescribing of Opioids for Pain Management: Bridging Guidelines and Practice Through Interactive Learning" to support physician's improving their opioid prescribing. This education received two Brandon Hall Group Educational Awards for Leaders in Education Technology – Best E-learning, Blended, Flipped Classroom Solution and Learning and Development Technology Award – Best Advance in Education Delivered Through Technology.
  - In 2025, the AMA developed additional episodes of the physician education podcast series on "The Opioid Overdose Epidemic." Podcast episodes feature experts who shared relevant research, insights, and experience to help physicians of all specialties in addressing the opioid overdose epidemic. In 2025, podcast engagement included 26,757 downloads, with a high interest in the following topics: "Opioid Prescribing and Appropriate Pain Management,"" Opioid Overdose Prevention," and "Opioid Use Disorder Treatment."
  - In the past year, the AMA supported the content for the physician education series module "Practical Guidance for Pain Management." This content was made available to help physicians meet the DEA's MATE Act requirements, effective as of June 27, 2023.
- The AMA continues to convene the Substance Use and Pain Care Task Force, which supports and guides the development of the annual Overdose Epidemic Report on the overdose epidemic outlining current data, policy, updates, clinical accomplishments and what still needs to be done.[21] This group meets on a quarterly basis throughout the year to engage with stakeholders and experts with emerging barriers, challenges and development of solutions
- The AMA is also a member of the Providers Clinical Support System (PCSS), which is made up of a coalition of major health care organizations all dedicated to addressing this health care crisis and is led by the American Academy of Addiction Psychiatry. PCSS provides evidence-based training and resources to give health care providers the skills and knowledge they need to treat patients with opioid use disorders and chronic pain.[20]
- The AMA is a sponsor of the National Academy of Medicine, Action Collaborative on Combatting Substance and Opioid Crises. The Action Collaborative is committed to proactively driving structural change by developing, curating, and implementing multi-sector solutions designed to reduce substance misuse and improve outcomes for individuals, families, and communities affected by addiction.
- The AMA was awarded funding from the CDC in 2024 and continued work to develop and implement a clinician toolkit focused on the recommendations and guiding principles of the 2022 Clinical Practice Guideline for Prescribing Opioids for Pain that is specifically tailored to community health centers (CHCs). During the two-year project period, the AMA will partner with the National Association of Community Health Centers to develop an actionable toolkit resource for clinicians and will implement the toolkit resource in CHCs. The toolkit will provide an extensive, multidisciplinary, evidence-based educational experience for clinicians working in CHCs that is unique and sensitive to the needs of CHCs while also preparing them to serve as content experts and agents of change for their local healthcare communities regarding pain care.
- The AMA continues to be a data resource for stakeholders, policymakers, clinicians, and researchers with its "End The Epidemic" website and data dashboard. This website maintains up to date resources for stakeholders to utilize and an interactive data dashboard to highlight regional differences and trends of the drug overdose epidemic.
- The AMA released its 2025 Substance Use and Treatment: Progress, Policy and Future Directions Report showing increases in polysubstance use, naloxone access for life-saving

intervention, and policy promoting evidence-based care but underscoring ongoing challenges as the nation's drug overdose epidemic continues.

3. Strengthen the health system through improved collaboration between medicine and public health.

The AMA is collaborating with leading health care organizations to strengthen the interface between public health and health care. In November 2023, AMA and health care partners announced the Common Health Coalition: Together for Public Health, a partnership between AMA and four other leading healthcare organizations, including: AHIP (formerly America's Health Insurance Plans), Alliance of Community Health Plans, American Hospital Association , and Kaiser Permanente.[22] The Common Health Coalition is focused on translating the hard-won lessons and successes of the COVID-19 pandemic response into actionable strategies that will strengthen the partnership between our health care and public health systems.

- The Coalition's founding members have called on health care and public health organizations across the country to consider joining this effort. Interested organizations can learn more and take steps to join us by visiting the website, https://commonhealthcoalition.org/.
- As of 2025, the Common Health Coalition has grown to more than 300 member organizations across over 45 U.S. states and territories.
- The 2026 Common Health Challenge is focused on Regional Action Networks or collaborations between health care and public health organizations working across geographic borders and sectors to tackle shared health priorities, improving outcomes for patients and communities through sustained efforts in areas such as chronic disease reduction and interoperable data sharing. Through catalyst awards, the Coalition will fund vanguard organizations that demonstrate a strong capacity to strengthen partnership between health care and public health in their community.

In addition, the AMA took the following actions:

- On August 1, 2025, the AMA issued a leadership viewpoint noting that slashing the National Institutes of health funding imperils the foundation of medical research, which has played a critical role in improving the nation's health.
- On August 28, 2025, the AMA issued a press statement noting that the removal of CDC Director Susan Monarez and the resignations of other senior CDC leaders are highly alarming at a challenging moment for public health. In the wake of CDC budget cuts and the termination of hundreds of employees earlier this year, the AMA is deeply concerned that this turmoil leaves us highly susceptible to public health threats.

4. Combat the spread of misinformation and disinformation.

The AMA remains engaged in external collaborations to address mis- and disinformation, such as the Coalition for Trust in Health & Science.

- The Coalition for Trust in Health and Science's vision is for all people to have equitable access to accurate, understandable, and relevant information to make personally appropriate health choices and decisions. The AMA is an active member, engaging with leadership and participating in programming.

- The AMA was an active participant in the Mitigating Medical Misinformation Workgroup, but that group has decided to meet less frequently and incorporate its work into the broader Coalition for Trust in Health & Science.
- On March 5, 2026, the AMA issued a statement on the new survey findings from the Annenberg Public Policy Center, which highlight a widening trust gap in the nation's health information landscape and underscore the importance of trusted medical voices grounded in science. The survey found that physicians and medical organizations remain among the most trusted sources of public health information, with about 73 percent of Americans expressing confidence in the American Medical Association (AMA). Overall, by a two-to-one margin, those polled said they would accept AMA's recommendations (35 percent) over the CDC's (16 percent) if the two bodies issued conflicting statements on vaccine safety. The findings come at a time when confidence in federal health agencies has unfortunately declined, even as Americans continue to rely heavily on physicians and medical experts for credible, evidence-based information about health and disease prevention.

The AMA will continue to evaluate opportunities to work with the Ad Council and other health-related organizations on future evidence-based public information campaigns.

CONCLUSION

The current political environment has elevated the critical importance of AMA's role of promoting and disseminating evidence-based public health policy and content. The AMA continues to advance its mission, to promote the art and science of medicine and the betterment of public health. The highlighted accomplishments in this report capture a fraction of the work accomplished from March of 2025 – March of 2026 related to the AMA's public health strategy. The AMA will continue to engage on these critical issues to maintain the organization as a trusted source of information for physicians and the public and to help protect the health of the nation.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 16-A-26

Subject: Demographic Report of the House of Delegates and AMA Membership

Presented by: David H. Aizuss, MD, Chair

This informational report, "Demographic Report of the House of Delegates and AMA Membership," is prepared pursuant to Policy G-600.035, "House of Delegates Demographic Report," which states:

> A report on the demographics of our AMA House of Delegates will be issued annually and include information regarding age, gender, race/ethnicity, education, life stage, present employment, and self-designated specialty.

In addition, this report includes information pursuant to Policy G-635.125, "AMA Membership Demographics," which states:

> Stratified demographics of our AMA membership will be reported annually and include information regarding age, gender, race/ethnicity, education, life stage, present employment, and self-designated specialty.

This document compares the House of Delegates (HOD) with the entire American Medical Association (AMA) membership and with the overall United States physician and medical student population. Medical students are included in all references to the total physician population throughout this report to remain consistent with the bi-annual Council on Long Range Planning and Development report. In addition, residents and fellows endorsed by their states to serve as sectional delegates and alternate delegates are included in the appropriate comparisons for the state and specialty societies. For the purposes of this report, AMA-HOD includes both delegates and alternate delegates.

DATA SOURCES

Lists of delegates and alternate delegates are maintained in the Office of House of Delegates Affairs and are based on official rosters provided by the relevant society. The lists used in this report reflect 2025 year-end delegation rosters.

Data on individual demographic characteristics are taken from the AMA Physician Professional Data, which provides comprehensive demographic, medical education, and other information on all United States and international medical graduates (IMGs) who have undertaken residency training in the United States. Data on AMA membership and the total physician and medical student population are taken from the Masterfile and are based on 2025 year-end information.

Some key considerations must be kept in mind regarding the information captured in this report. Vacancies in delegation rosters mean that the total number of delegates credentialed for the November 2025 Interim Meeting is less than the 733 allocated and the number of alternate delegates credentialed is nearly always less than the full allocation. As such, the total number of

© 2026 American Medical Association. All rights reserved.

delegates and alternate delegates credentialed for the 2025 Interim Meeting is 1186 rather than the 1466 allotted. Race and ethnicity information, which is provided directly by physicians, is missing for approximately 10 percent of AMA members and approximately 22 percent of the total United States physician and medical student population, limiting the ability to draw firm conclusions. Efforts to improve AMA data on race and ethnicity are part of Policy D-630.972. Improvements have been made in collecting data on race and ethnicity, resulting in a decline in reporting race/ethnicity as unknown in the HOD and the overall AMA membership.

CHARACTERISTICS OF AMA MEMBERSHIP AND DELEGATES

Table 1 presents basic demographic characteristics of AMA membership and HOD Delegates & Alternates along with corresponding figures for the entire physician and medical student population.

Data on physicians' and students' current activities appear in Table 2. This includes life stage as well as present employment and self-designated specialty.

Table 1: Basic Demographic Characteristics of AMA Members & HOD Delegates & Alternates, December 2025

	AMA Members	All Physicians and Medical Students	HOD Delegates & Alternates (credentialed)
Total	322,123	1,612,618	1,186
Mean age (years)	46.6	52.7	53.9
Age distribution			
Under age 40	51.12%	31.52%	20.07%
40-49 years	13.31%	16.92%	19.14%
50-59 years	10.82%	15.10%	19.90%
60-69 years	8.62%	14.51%	22.93%
70 or more	16.13%	21.95%	17.96%
Gender			
Male	57.23%	60.74%	57.59%
Female	41.98%	38.57%	42.24%
Unknown	0.79%	0.69%	0.17%
Race/ethnicity			
American Indian or Alaskan Native	0.15%	0.17%	0.59%
Asian	17.50%	16.04%	16.10%
Black or African American	4.96%	4.36%	5.99%
Hispanic, Latino, or Spanish Origin	4.22%	4.31%	3.29%
Middle Eastern or North African	0.08	0.02%	0.00%
Multi-Race/Ethnicity	6,87%	5.19%	3.37%
Native Hawaiian or Other Pacific Islander	0.04%	0.03%	0.00%
White	45.08%	47.11%	58.77%
Other	1.64%	1.64%	1.60%
Unknown	19.47%	21.14%	10.29%
Education			
US or Canada	80.47%	77.49%	90.47%
IMG	19.53%	22.51%	9.53%

	AMA Members	All Physicians and Medical Students	HOD Delegates & Alternates (credentialed)
Life Stage			
Student2	17.18%	9.08%	5.73%
Resident2	26.61%	11.09%	8.09%
Young (under 40 or first 8 years in practice)	12.01%	15.53%	8.52%
Established (40-64)	24.01%	35.05%	48.82%
Senior (65+)	20.20%	29.25%	28.84%
Present Employment			
Self-employed solo practice	4.97%	6.40%	9.19%
Two physician practice	1.22%	1.67%	1.60%
Group practice	28.61%	39.91%	41.57%
HMO	0.25%	0.13%	0.76%
Medical school	0.74%	1.18%	3.12%
Non-government hospital	3.58%	4.55%	7.67%
State or local government hospital	3.28%	5.04%	9.95%
US government	0.69%	1.30%	2.28%
Locum Tenens	0.12%	0.16%	0.34%
Retired/Inactive	9.77%	13.16%	7.93%
Resident/Intern/Fellow	26.61%	11.09%	8.09%
Student	17.18%	9.08%	5.73%
Other/Unknown	2.97%	6.32%	1.77%
Specialty			
Family Medicine	9.21%	11.12%	11.64%
Internal Medicine	22.18%	22.67%	20.49%
Surgery	12.36%	12.47%	18.72%
Pediatrics	5.93%	8.45%	4.22%
OB/GYN	4.88%	4.32%	6.91%
Radiology	3.32%	4.14%	4.89%
Psychiatry	4.28%	5.04%	4.22%
Anesthesiology	3.62%	4.27%	2.95%
Pathology	1.61%	2.02%	2.28%
Other specialty	15.41%	16.42%	17.96%
Students	17.18%	9.08%	5.73%

Appendix

Specialty classification using physician's self-designated specialties.

Major Specialty Classification	AMA Physician Masterfile Classification
Family Practice	General Practice, Family Practice
Internal Medicine	Internal Medicine, Allergy, Allergy and Immunology, Cardiovascular Diseases, Diabetes, Diagnostic Laboratory Immunology, Endocrinology, Gastroenterology, Geriatrics, Hematology, Immunology, Infectious Diseases, Nephrology, Nutrition, Medical Oncology, Pulmonary Disease, Rheumatology
Surgery	General Surgery, Otolaryngology, Ophthalmology, Neurological Surgery, Orthopedic Surgery, Plastic Surgery, Colon and Rectal Surgery, Thoracic Surgery, Urological Surgery
Pediatrics	Pediatrics, Pediatric Allergy, Pediatric Cardiology
Obstetrics/Gynecology	Obstetrics and Gynecology
Radiology	Diagnostic Radiology, Radiology, Radiation Oncology
Psychiatry	Psychiatry, Child Psychiatry
Anesthesiology	Anesthesiology
Pathology	Forensic Pathology, Pathology
Other Specialty	Aerospace Medicine, Dermatology, Emergency Medicine, General Preventive Medicine, Neurology, Nuclear Medicine, Occupational Medicine, Physical Medicine and Rehabilitation, Public Health, Other Specialty, Unspecified

REPORT OF THE BOARD OF TRUSTEES

BOT Report 18-A-26

Subject: Report on the Preservation of Independent Medical Practice

Presented by: David H. Aizuss, MD, Chair

At its 2022 Annual Meeting, the House of Delegates (HOD) adopted Policy D-405.988, "The Preservation of Independent Medical Practice," directing the American Medical Association (AMA) to issue a report every two years describing AMA efforts to support independent physician practice.

The policy affirms the AMA's support for private practice, recognizes its importance to physician autonomy and professional sustainability, and acknowledges the value independent practices provide to patients and communities.

This report details AMA activities since the 2024 Annual Meeting to preserve and strengthen independent medical practice. It reflects both the governance structures established to ensure durable representation of independent physicians within the AMA and the specific policy, advocacy, and programmatic outcomes advanced through those structures.

DISCUSSION

During this reporting period, AMA's support for independent medical practice has focused on three interrelated areas of work:

- ensuring independent physicians have an organized, durable voice in AMA policy development;
- creating consistent, direct engagement channels through which independent physicians can surface operational challenges and share practice-level strategies; and
- delivering tools, education, structured advocacy, and practice resources that address the day-to-day realities of operating an independent practice.

Providing a voice for independent physicians in AMA policy development

The Private Practice Physicians Section (PPPS) remains the primary mechanism through which independent physicians engage in the AMA policymaking process. Established by action of the HOD in 2020 and operational since 2021, the Section functions as a stable governance unit with defined leadership roles, regular business meetings, and repeatable policy workflows aligned with the HOD policymaking cycle.

As of March 2026, PPPS includes approximately 425 certified members representing a broad range of specialties, practice sizes, and geographic regions. Continued membership growth reflects sustained demand for a forum focused on the policy and operational concerns of independent physicians.

© 2026 American Medical Association. All rights reserved.

PPPS convenes formal business meetings in conjunction with each AMA Annual and Interim Meeting of the HOD to:

- surface practice-level issues identified by members;
- review emerging regulatory, payer, and market developments affecting independent practices;
- draft and refine policy proposals; and
- coordinate Section positions on HOD items of business.

Since the 2024 Annual Meeting, the HOD has adopted 15 PPPS-originated resolutions in some manner. This record reflects sustained policy engagement by independent physicians and substantive consideration of those issues by the HOD. Several adopted resolutions illustrate the tangible impact of PPPS-driven advocacy:

- Resolution 229-I-24, Supporting Penalties on Insurers Who Fail to Pay Doctors, directed the AMA to advocate for penalties against insurers that fail to pay physicians within required timeframes after physicians prevail in the federal Independent Dispute Resolution process, addressing delayed payment practices that create financial strain for independent practices.
- Resolution 714-A-25, Root Cause Analysis of the Causes of the Decline of Private Medical Practice, directed the AMA to conduct a comprehensive analysis of the economic, regulatory, educational, and market forces contributing to the decline of private practice, formally committing the AMA to evidence-based examination of consolidation and practice closure trends.
- Resolution 715-A-25, Grace Period for Timely Filing Due to Technology Failures Regardless of Cause, directed the AMA to advocate for relief from timely filing limits when claims processing failures occur due to large-scale technology disruptions, protecting practices from denials caused by circumstances beyond physician control.
- Resolution 810-I-25, Opposing Unilateral Downcoding of Physician Services by Insurance Companies, directed the AMA to oppose insurer-initiated downcoding of evaluation and management services, reaffirm CPT® and E/M guidelines as the national standard, and pursue regulatory, legislative, educational, and, where appropriate, legal strategies to address such practices.

Together, these policies reflect a consistent focus on insurer accountability, payment fairness, administrative due process, and the structural sustainability of independent medical practice.

Outreach and engagement with independent physicians

Beyond formal HOD activity, PPPS convenes recurring engagement forums intentionally aligned with the HOD policymaking cycle to support timely policy development and review.

Each year, the Section hosts two primary engagement events:

- a spring virtual Town Hall meeting aligned with preparations for the AMA Annual Meeting; and
- a fall engagement and policy discussion aligned with the AMA Interim Meeting.

The PPPS Town Hall meeting has become a signature engagement forum for independent physicians. It provides a regularly occurring venue for peer-to-peer exchange on business operations, payer and contracting challenges, regulatory compliance, staffing, and practice sustainability. These sessions also function as an early signal-gathering mechanism, informing PPPS policy priorities and resolution development.

Issues surfaced through these engagement forums are carried forward into PPPS business meetings, translated into policy proposals where appropriate, and used to shape educational programming and resource referrals. Additionally, PPPS is developing member committees focused on practice sustainability and advocacy to extend engagement between meetings and provide additional opportunities for member input and collaboration.

Advocacy in support of independent practice

In parallel with PPPS contributions to AMA policy development and practice support initiatives, the AMA has continued to engage in advocacy actions that directly affect independent physicians. Prime examples of these efforts include:

- Fixing our nation's unsustainable Medicare payment system will remain a top AMA advocacy priority until meaningful reform is achieved. Physicians are urged to join the fight for reform by visiting FixMedicareNow.org which coordinates grassroots action on AMA priority Medicare Payment Reform bills. The campaign has generated more than 103 million earned media and ad impressions, 3.9+ million media and ad engagements, and 100,000+ contacts to Congress, as well as a combined 235+ third-party media placements and grasstops contacts made in key Congressional districts in 2025 alone.
- AMA submitted comment letters to the Centers for Medicare & Medicaid Services on the CY 2025 Medicare Physician Fee Schedule Proposed Rule and the CY 2026 Medicare Physician Fee Schedule Proposed Rule, addressing physician payment adequacy, proposed conversion factor reductions, and administrative burden associated with Medicare participation.
- AMA engaged in federal advocacy related to prior authorization reform, including physician-facing implementation issues arising from the CMS Interoperability and Prior Authorization Final Rule (CMS-0057-F). Advocacy focused on prior authorization timelines, transparency requirements, and payer compliance obligations with implications for independent practice operations. Further AMA advocacy to reform prior authorization includes supporting federal legislation; collaborating with influential policy organizations such as the National Conference of Insurance Legislators and the National Association of Insurance Commissioners; and partnering with patient advocacy groups to advance key measures. The AMA also provided testimony and influenced recommendations from an advisory council convened by the Department of Labor to consider regulatory changes to how employer-sponsored health plans governed by ERISA use prior authorization and manage claims and appeals procedures. AMA also worked closely with over 20 states that enacted prior authorization reform legislation in 2025.
- Following the February 2024 Change Healthcare cyber-event, the AMA issued public statements and advocacy communications and engaged with federal agencies and payers regarding widespread claims processing disruptions, timely filing requirements, and payment relief for affected physician practices. These efforts sought to mitigate financial harm to independent practices caused by large-scale system failures beyond physician control.
- AMA has advocated for fair contracting and out-of-network payments including engaging in litigation to force implementation of the No Surprises Act (NSA) as Congress intended, advocating to regulators and Congress to ensure independent dispute resolution awards under the NSA are paid, and in the required timely manner, by insurers to physicians, and

sounding the alarms on health insurer practices that bypass the NSA and threaten the sustainability of independent practices. AMA has also supported the No Surprises Act Enforcement Act in the House and Senate.

- The AMA has continued federal and state legislative advocacy on insurer administrative practices, and accountability measures including releasing a state model bill on insurer downcoding practices, physician-led team-based care, physician wellness, advancing technology including augmented intelligence, access to care, and medical liability consistent with adopted House of Delegates policy. In addition, AMA has participated in legal advocacy, including amicus curiae activity, in matters affecting physician reimbursement and practice viability.

Collectively, these advocacy efforts reflect the execution of AMA policy positions through regulatory, legislative, communication, and legal channels that shape the operating environment for independent medical practices.

Promoting resources for the advancement of independent practice

The AMA has continued to invest in practical resources designed to support the operational and financial sustainability of independent medical practices.

The AMA STEPS Forward® initiative remains a central platform for this work, offering open-access, practice-focused tools through the AMA Ed Hub™. These resources include implementation guides, templates, webinars, podcasts, and continuing medical education opportunities addressing staffing, workflow design, regulatory compliance, patient engagement, and practice operations. Independent practice-specific offerings include the 7 STEPS to Starting a Private Practice guide and the Private Practice Playbook, which provides adaptable templates such as patient intake forms, administrative policies, and employee documentation.

Building on these resources, in 2025 the AMA launched the Independent Practice Incubator through the STEPS Forward® Innovation Academy. The incubator is a structured, cohort-based program designed for physicians planning to establish office-based, physician-owned independent practices. The program integrates asynchronous learning, live virtual sessions with subject-matter experts, and peer collaboration, covering business planning, legal and regulatory considerations, credentialing and contracting, staffing and human resources, revenue fundamentals, and patient acquisition and retention. The incubator spanned approximately 12 months and culminated in the development of a comprehensive business proposal, providing participants with a structured pathway from early concept through implementation readiness. Learning and content from the incubator will inform more structured, more widely available AMA Private Practice Accelerator events in the future.

PPPS also uses its Annual and Interim Meeting convenings to provide issue-focused education and operational peer exchange. Programming is member-informed and aligned with the same pipeline that drives PPPS policy development, ensuring that issues raised by members translate into both policy action and practical guidance supported by existing AMA resources.

Finally, the AMA has published a curated collection of education modules, "Thriving in Private Practice," to help physicians effectively build and manage a private medical practice. The collection includes 7.5 hours of learning content on topics including payer contracting and audits, human resources, marketing and branding, and revenue cycle management.

CONCLUSION

The AMA remains attentive to ongoing changes in the physician practice environment, including consolidation pressures, workforce instability, and increasing administrative complexity that disproportionately affect independent practices.

Through durable representation in the AMA policymaking process, measurable policy outcomes driven by independent physicians, documented regulatory, legislative, and legal advocacy, recurring engagement aligned with the AMA meeting cycle, and sustained investment in practical tools and programs, the AMA has continued to provide tangible support for independent medical practice. These efforts establish a strong foundation for continued work to ensure that independent physicians remain a viable and integral part of the nation’s health care system.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 26-A-26

Subject: AMA Ethics Fellowships

Presented by: David H. Aizuss, MD, Chair

At the 2025 Interim Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted Policy D-300.971, "Upholding Professional Integrity and Ethical Leadership," which states the following:

1. Our American Medical Association is committed to sustaining accessible, physician-led education and discourse on the ethical challenges in medicine.

2. Our AMA will develop and publicize opportunities for medical ethics engagement and learning across the association.

3. Our AMA will continue to advance and fund opportunities for editorial fellowships in ethics for trainees and early-career physicians commensurate to the AMA Journal of Ethics Editorial Fellowship.

4. Our AMA will report back on its progress and advancement for medical ethics engagement and editorial fellowships for trainees and early-career physicians at Annual 2026.

This report is submitted as information to the House of Delegates about a new ethics opportunity at the AMA.

NEW ETHICS FELLOWSHIP

Building on the *AMA Journal of Ethics*' record of engagement with the next generation of physicians, a new ethics fellowship, crafted to retain key elements that were valued by past journal editorial fellows, was recently launched. Key aspects of the new fellowship program are as follows:

- Every April, a "Call for Ethics Fellows," seeking applications from medical students, resident physicians, and fellows in U.S.-based accredited MD or DO programs, will be posted and promoted though AMA membership and communication channels.

- Fellowship applications will propose a timely and important medical ethics topic and how it can be explored through a multimedia approach such as video or podcast.

- Fellows will also secure a faculty mentor who will work along with AMA Ethics staff to help them conceptualize the topic, refine questions to be addressed, and identify experts to be featured. It is worth noting that this opportunity to collaborate with subject matter experts in their home institution (and the AMA) was routinely highlighted in Dean's letters

© 2026 American Medical Association. All rights reserved.

of previous journal editorial fellows and became an insightful point of conversation during medical students' residency interviews.

- Up to six Fellows will be selected in response to the annual Call with each Fellow receiving a $2,500 honorarium. The number of Fellows per year may increase over time to meet growing interest and available resources.

- All selected Fellows will meet in Chicago for a working conference with reasonable travel expenses covered by the AMA. Led and facilitated by AMA staff this Chicago meeting will provide a valuable opportunity for the Fellows to learn from and work with their peers to further refine and develop their multimedia content outline.

- Multimedia production will be handled within the AMA. The finalized multimedia content with CME credit will be published on the AMA EdHub platform.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 30-A-26

Subject: AMA Reimbursement of Necessary HOD Business Meeting Expenses for Delegates and Alternates

Presented by: David H. Aizuss, MD, Chair

At the 2024 Interim Meeting, the House of Delegates adopted Policy D-600.951, Reimbursement of Necessary Business Meeting Expenses for Delegates and Alternates. This informational report responds to the first directive of the policy:

1. Our American Medical Association will issue a report at the 2025 Annual Meeting, and each meeting thereafter, identifying the number of delegates and alternate delegates supported by the grants and the total amount provided under our AMA House of Delegates Emergency Assistance Program (HOD EAP).

In 2025, AMA received requests from 21 societies to participate in the HOD EAP program. Three societies did not meet the criteria outlined in the policy adopted by the House. The EAP awarded grants to the remaining 18 federation societies.

Each qualifying society was required to submit a grant funding request form for each of the 2025 Annual and Interim Meetings indicating the number of delegates and alternates, regional medical student delegates and sectional resident and fellow delegates to be funded for each organization. Fifty percent of the requested amount was paid prior to the meeting with the remainder paid out based on verified actual attendance following the meeting.

For example, if a qualifying association had requested grant funding for four delegates and four alternates, two regional medical student delegates and one sectional resident delegate, that society would be eligible for grant money for 11 attendees or $16,500. The initial payment would have been calculated and paid at 50 percent of the requested amount or $8,250. Assuming only nine of those included in the initial request attended the meeting, the total grant would be recalculated at $1,500 times nine attendees or $13,500 and the final payment would be the difference between the recalculated grant amount and the first installment payment or $5,250. This was to ensure that grant funding is used solely for actual delegates and alternate delegates attending the meeting.

Based on grant funding requests, a total of $420,000 was made available for the 2025 Annual Meeting and 50 percent or $210,000 was paid to societies in advance of the meeting. After verification of actual attendance, a total number of delegates and alternate delegates attending the meeting from the 18 approved societies was 246, including 14 sectional residents and 16 regional students and the grant amounts paid for the Annual Meeting totaled $368,400.

For the November 2025 Interim Meeting, a total of $331,200 was made available and 50 percent or $165,600 was paid to societies in advance of the Interim Meeting. After the verification of actual attendance, the total number of delegates and alternate delegates attending the meeting was 243, including 13 sectional resident/fellows and 18 regional students and the total grant amounts paid for the Interim Meeting was $285,100. It should be noted that total funding for an organization was

© 2026 American Medical Association. All rights reserved.

capped at $100,000 for the year and final payments were adjusted so that no society exceeded this cap.

In 2026, AMA received 24 requests to participate in the EAP program. Three organizations did not meet the criteria for the program. The EAP program will award grants to the remaining 21 federation societies which may potentially fund up to $872,200 for 315 delegates and alternates, 22 regional medical students and 15 sectional resident and fellow delegates and alternates for both the Annual and Interim Meetings. Funding requests are currently in process for the 2026 Annual Meeting.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 31-A-26

Subject: Establishing an Advisory Committee on AI/AN Affairs

Presented by: David H. Aizuss, MD, Chair

At the 2025 AMA Annual Meeting, the House of Delegates (HOD) adopted Policy D-615.976, "Advisory Committee on Tribal Affairs," which directs the AMA to:

> Our AMA will establish and report back at the 2025 Interim Meeting on the formation of a Task Force on Tribal Affairs composed of AMA members who themselves identify as American Indian and Alaska Native (AI/AN), close professional relationships with AI/AN communities (e.g., members of Association of Native American Medical Students and Association of American Indian Physicians), or have direct experience working with AI/AN communities at Indian Health Service federal direct-care, Tribally-operated and/or Urban Indian Health Programs (I/T/U) to advise the Board of Trustees on how to implement policy specific to AI/AN communities and that the Task Force report back at the 2026 Annual Meeting with recommendations for the establishment of an Advisory Committee to ensure sustained attention to tribal health equity and Indigenous physician representation.
>
> Our AMA will promote and foster educational opportunities for AMA members and the medical community to better understand the contributions of AI/AN communities to medicine and public health, including cultivating a rich understanding and appreciation of AI/AN perspectives on health and wellness."

At the 2025 AMA Interim Meeting, the Board of Trustees presented an informational report, BOT Report 17, indicating that that Board was taking the necessary steps to form an Advisory Committee on American Indian and Alaska Native (AI/AN) Affairs and would report back at the 2026 Annual Meeting. This follow-up report is informational.

At its November 2025 meeting, the Board approved a charter for a new Advisory Committee on AI/AN Affairs. Under this charter, the Advisory Committee will advise the Board and AMA management on policy and advocacy matters pertaining to AI/AN medical students, physicians, and patients, and otherwise contribute to AMA initiatives related to this population.

The charter creates a seven-member Advisory Committee composed of:

- One medical student member,
- One resident or fellow member,
- One young physician member,
- Three physician members at-large (non-medical student/resident/fellow), and
- One physician representative of the Association of American Indian Physicians (non-medical student/resident/fellow).

© 2026 American Medical Association. All rights reserved.

Advisory Committee members are appointed by the Board, prioritizing candidates who:

- Have close professional relationships with AI/AN communities; and/or
- Have direct experience working with AI/AN communities through Indian Health Service programs, tribally operated programs, Urban Indian Health Programs, or other programs serving AI/AN communities.

The Board appointed the following members to the inaugural Advisory Committee, which will convene for the first time in conjunction with the 2026 AMA Annual Meeting:

- Medical student member: Mateo Perez
- Resident/fellow member: William Swain, MD
- Young physician member: Hannah Catherine Wenger, MD
- Member at-large: Janice Heaton-Sheufelt, MD (Vice Chair)
- Member at-large: Donald Warne, MD
- Member at-large: Siobhan Wescott, MD (Chair)
- AAIP Representative: Thomas “Blair” Matheson, MD

REPORT OF THE BOARD OF TRUSTEES

BOT Report 32-A-26

Subject: Disability Advisory Group

Presented by: David H. Aizuss, MD, Chair

At the 2021 Interim Meeting of the American Medical Association (AMA) House of Delegates (HOD) BOT Report 19-I-21, "Advocacy for Physicians and Medical Students with Disabilities," was adopted.

The policy states: Our AMA will: (1) establish an advisory group composed of AMA members who themselves have a disability to ensure additional opportunities for including physicians and medical students with disabilities in all AMA activities; (2) promote and foster educational and training opportunities for AMA members and the medical community at large to better understand the role disabilities can play in the healthcare work environment, including cultivating a rich understanding of so-called invisible disabilities for which accommodations may not be immediately apparent; (3) develop and promote tools for physicians with disabilities to advocate for themselves in their own workplaces, including a deeper understanding of the legal options available to physicians and medical students to manage their own disability-related needs in the workplace; and (4) communicate to employers and medical staff leaders the importance of including within personnel policies and medical staff bylaws protections and reasonable accommodations for physicians and medical students with visible and invisible disabilities.

This informational report provides the progress of the advisory group.

The Disability Advisory Group (DAG) has provided strategic guidance, subject matter expertise, and community outreach to ensure AMA policies and initiatives meaningfully address the needs of physicians, trainees, and patients with disabilities. The group currently includes 12 members with diverse representations, including disability type, career stage, and other identity factors—and incorporates input from external subject matter experts. The DAG has two active workgroups, one focused on education related to disability in medicine, and a second focused on strengthening accommodations in workplaces, educational institutions, and AMA meetings for physicians, trainees, and students with disabilities. With regular meetings and communication to the BOT through the two Board liaisons and other mechanisms, the DAG operates collaboratively to inform AMA efforts, always aligned with the organization's broader mission of supporting physicians and students, and optimizing health outcomes for all patients.

Current estimates suggest people with disabilities (PWD) are underrepresented in the physician workforce, with only 4.6 percent of medical students[1] and 3.1 percent of physicians[2] reporting a disability, compared to an estimated 26.7 percent of the adult U.S. population in 2022.[3] Federal law (the Americans with Disabilities Act[4]) requires public entities and employers to provide equal access and accommodations for PWD, ensuring non-discrimination and accessibility in services, programs, facilities, and employment opportunities. Data is not yet available regarding the prevalence of disability among AMA members; however, members of the DAG identified challenges to fully participating in AMA meetings due to unmet accessibility needs.

In addition to accessibility challenges, knowledge gaps regarding disability are shaped by the way disability is taught in medical education. Because training often emphasizes the medical model

(framing disability primarily as a health problem to be solved),[5] health care professionals' attitudes and practices may overlook other important factors. The biopsychosocial model of disability considers not only medical aspects, but also personal, social, environmental, and cultural contexts, offering a more complete understanding of disability.[6] This more expansive approach to disability is also supported by the World Health Organization.[7] Given this, the DAG identified the need to create additional educational resources for medical students and physicians to address ableism in medical training and improve quality of care for PWD.

DISCUSSION

2024-2025 ACCOMPLISHMENTS

In its first 18 months, the DAG collaborated with AMA staff, Board members, and aligned organizations (e.g., the Association of American Medical Colleges (AAMC) and the Docs With Disabilities Initiative (DWDI) to create educational content as well as operational and policy recommendations to improve disability inclusion in medicine and optimize health outcomes for people with disabilities (PWD).

Workplace Inclusion Workgroup

The Workplace Inclusion Workgroup reflected on gaps in accommodations for PWD experienced at past HOD meetings, and suggested changes to improve access for physicians and staff with diverse needs. Members of the working group collaborated closely with the staff to enact some of these changes in 2025.

Numerous strategies to improve access for physicians and others with disabilities were undertaken. For example, power strips were made accessible through the end of HOD meetings to ensure PWD can charge communication and mobility equipment as needed. The physical layouts of meeting venues were reviewed and adjusted to better accommodate wheelchairs; at the 2025 Annual and Interim meetings, for example, ramps were added to ensure access to all podiums. Specific areas for wheelchair users were also marked in reference committee meetings to ensure access, and microphone placements were reviewed and adjusted to allow wheelchair users and others with limited mobility to access them. Pressure sensors were added in front of microphones to communicate when someone approaches; this ensures Speakers are aware of all individuals waiting to speak, including PWD who may not be as easily seen as non-disabled physicians (e.g., when using a wheelchair). In addition to improving physical access at meetings, virtual spaces and digital content were reviewed and adjusted. For example, the font size and text color in presentations were updated to meet current web content accessibility guidelines, improving access for people with visual disabilities. Based on input from the DAG, the Meeting Services team supported the addition of live captioning and American Sign Language interpreters for 2025 meetings. There has been improvement in data collection and feedback regarding experiences of PWD as HOD attendees; however, this is currently collected in an ad hoc manner. Feedback mechanisms could be formalized for future meetings.

Education Workgroup

A dedicated education workgroup has advanced several initiatives to improve disability inclusion in medicine, both for physicians with disabilities and in providing better care for patients with disabilities. Informed by input from members of the DAG, expert interviews, and collaboration with key external organizations, staff is developing and platforming foundational educational

modules to address gaps in physician education around ableism in health care. These resources aim to help learners identify ableism, understand its impact, and foster more equitable health outcomes for PWD.

The DAG members contributed to designing multiple live educational events, including at the HOD Annual meeting in 2024 (recording platformed as enduring educational content here) and a panel discussion on disability inclusion in medical education at the 2025 Interim HOD meeting, both of which offer free CME. An interactive foundational module, "Disability Inclusion: Addressing Ableism in Medical Education and Health Care" was built in close collaboration with the DAG and published on EdHub in late 2025.[8]

2026 PRIORITIES

In 2026 and beyond, staff will continue the work initiated by the DAG. The DAG has identified opportunities to collaborate with other organizations (e.g., AAMC) to address challenges, e.g., the revision of technical standards that may inadvertently exclude students with disabilities from participating in medical education and training. Opportunities remain to review and suggest improvements to AMA policy and procedures as the Board considers how to address ableism in organizational policies and practices.

Workplace Inclusion Workgroup

While much has been accomplished with input from the DAG, work remains to ensure that AMA meeting spaces are inclusive of PWD. In 2026, the DAG Workplace Inclusion Workgroup will continue to collaborate with staff to improve accessibility and inclusion at AMA meetings, particularly the Annual meetings in Chicago. Key areas of exploration and focus will include: increasing time between sessions for PWD to move between rooms; creating a mechanism to signal that someone needs more time to reach a microphone before giving testimony; and involving DAG members or other PWD in 1) pre-meeting planning, 2) on-site accessibility assessments in hotels, and 3) venue selection for future sites. The workgroup will also continue to work to suggest feasible support for accommodating service animals and personal care assistants and propose funding mechanisms to support PWD attendees. They will continue to work with the Council on Long Range Planning and Development (CLRPD) to identify strategies through which the AMA can better understand the prevalence of disability and accommodation needs among HOD attendees and AMA members more broadly. Lastly, the workgroup aims to develop and share a model accessibility guide, with suggested operational improvements for varied workplace and educational settings.

Education Workgroup

Additional educational projects underway for 2026 publication include content to increase disability inclusion and improve care for PWD. Interactive modules to ensure a more inclusive environment for students and physicians with disabilities are being created in collaboration with the DWDI, focusing on addressing ableism in medical school admissions and residency selection. Furthermore, a video-based educational series is in development in collaboration with the University of Colorado's Anschutz School of Medicine. This series will equip clinicians with strategies to improve care for PWD and overcome common barriers in clinical settings.

CONCLUSION

The AMA Board of Trustees has determined that the DAG will continue for an additional two years and will continue the meeting cadence set forth in the original DAG Charter. The AMA Board of Trustees thanks the current DAG Members for all their work since the DAG was made effective on August 15, 2024. The AMA Board of Trustees will call for nominations for a new group of AMA members, whose AMA membership is active and in good standing, to serve on the DAG for the next two years (2026-2028). Current DAG members may reapply to serve during the 2026-2028 term. AMA staff will work with the new DAG membership to continue to improve the experience and inclusion of PWD by continuing to create educational and training content, developing policy recommendations, establishing inclusion practices in AMA-led spaces, and working in consultation with other aligned national organizations such as the AAMC, the Accreditation Council for Graduate Medical Education, DWDI and other relevant organizations to improve accommodations for, and inclusion of, PWD, in organized medicine.

Fiscal Note: To be determined

REPORT 33 OF THE BOARD OF TRUSTEES (A-26)
Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted

EXECUTIVE SUMMARY

American Medical Association (AMA) Policy G-605.009 entitled, "Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted," instructs the AMA to establish a task force to, "help guide organized medicine's response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources." AMA Policy D-605.982 entitled, "Accountability for G-605.009: Requesting A Task Force to Preserve the Patient-Physician Relationship Task Force Update and Guidance," requires the Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted (Task Force) to provide an annual report to the House of Delegates (HOD) at each Annual Meeting. Accordingly, this report highlights the Task Force's activities to date.

In 2024, the Task Force was formed by the AMA Board of Trustees (the Board) and began work to carry out the directives adopted by the HOD. There are 29 physician members serving on the Task Force: 11 representing national medical specialty societies, 10 representing AMA Councils, seven representing state medical associations, and one representing the Board. Staff from the respective medical associations are also invited to support their assigned physician members in Task Force activities.

To date, the Task Force has held six virtual meetings, four in-person meetings, and three informational sessions. The in-person meetings' agendas covered topics in legal issues, payment and reimbursement for gender-affirming care in adult patients, medical education and training, and public health and health outcomes. The discussions at these meetings generated numerous projects, including a web-based resource hub, research and resources on workforce impact, messaging and strategy research, the development of state law guides, support for the adoption of institution-level guidance, collaboration with prosecutors, and support for residents and medical students.

Subject: Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted

Presented by: David H. Aizuss, MD, Chair

This report provides an update on the activities of the American Medical Association (AMA) Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted (the Task Force) in accordance with Policies G-605.009, D-5.998, and D-605.982. (Note: Because of approval deadlines, this report was prepared in February and may not include more recent developments.)

BACKGROUND

Policy G-605.009, "Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted," was adopted at the 2022 Annual Meeting of the AMA House of Delegates (HOD). Policy G-605.009 instructs that:

1. Our AMA will convene a task force of appropriate AMA councils and interested state and medical specialty societies, in conjunction with the AMA Center for Health Equity, and in consultation with relevant organizations, practices, government bodies, and impacted communities for the purpose of preserving the patient-physician relationship.
2. This task force, which will serve at the direction of our AMA Board of Trustees, will inform the Board to help guide organized medicine's response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources on issues including but not limited to:
    a. Health equity impact, including monitoring and evaluating the consequences of abortion bans and restrictions for public health and the physician workforce and including making actionable recommendations to mitigate harm, with a focus on the disproportionate impact on under-resourced, marginalized, and minoritized communities;
    b. Practice management, including developing recommendations and educational materials for addressing reimbursement, uncompensated care, interstate licensure, and provision of care, including telehealth and care provided across state lines;
    c. Training, including collaborating with interested medical schools, residency and fellowship programs, academic centers, and clinicians to mitigate radically diminished training opportunities;
    d. Privacy protections, including best practice support for maintaining medical records privacy and confidentiality, including under HIPAA, for strengthening physician, patient, and clinic security measures, and countering law enforcement reporting requirements;
    e. Patient triage and care coordination, including identifying and publicizing resources for physicians and patients to connect with referrals, practical support, and legal assistance;

f. Coordinating implementation of pertinent AMA policies, including any actions to protect against civil, criminal, and professional liability and retaliation, including criminalizing and penalizing physicians for referring patients to the care they need; and
g. Anticipation and preparation, including assessing information and resource gaps and creating a blueprint for preventing or mitigating bans on other appropriate health care, such as gender affirming care, contraceptive care, sterilization, infertility care, and management of ectopic pregnancy and spontaneous pregnancy loss and pregnancy complications.

Adopted during the AMA 2022 Interim Meeting, Policy D-5.998, "Support for Physicians Practicing Evidence-Based Medicine in a Post Dobbs Era," added a requirement for an annual report of the Task Force. Policy D-5.998(1) instructs that:

1. Our AMA Task Force developed under HOD Policy G-605.009, "Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted," will publish a report with annual updates with recommendations including policies, strategies, and resources for physicians who are required by medical judgment and ethical standards of care to act against state and federal laws.

At the AMA 2023 Interim Meeting, the HOD amended Policy G-605.009, adding the creation of an ad hoc committee on payment and reimbursement issues in gender affirming care to the Task Force's directives. Specifically, the amendment instructs that:

1. Our American Medical Association will appoint an ad hoc committee or task force, composed of physicians from specialties who routinely provide gender-affirming care, payers, community advocates, and state Medicaid directors and/or insurance commissioners, to identify issues with physician payment and reimbursement for gender-affirming care and recommend solutions to address these barriers to care.

At the AMA 2024 Interim Meeting, the HOD amended Policy G-605.009, adding that the Task Force:

h. Work with interested parties to encourage the development of institution-level guidance and protection for physicians practicing in states with restrictions potentially interfering with the patient-physician relationship.

Also at the AMA 2024 Interim Meeting, the HOD adopted Policy D-605.982, "Accountability for G-605.009: Requesting A Task Force to Preserve the Patient-Physician Relationship Task Force Update and Guidance," which states:

1. Our American Medical Association's Task Force, to Preserve the Patient-Physician Relationship, will present annual updates on their findings at AMA Annual Meetings until the objectives have been completed.

Then at the AMA 2025 Annual Meeting, the HOD adopted Policy D-5.995, "Protecting Access to Emergency Abortion Care Under EMTALA," which states:

2. Our AMA task force established under AMA Policy G-605.009, "Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate

Care Is Banned or Restricted," will provide ongoing recommendations and updates on navigating conflicting state and federal regulations on emergency pregnancy care.

DISCUSSION

Task Force Formation

As directed by the HOD and in response to the 2022 U.S. Supreme Court's landmark decision in *Dobbs v. Jackson Women's Health Organization*, which held that the U.S. Constitution does not confer a constitutional right to abortion and returned the authority to regulate abortion to the states and the subsequent enactment of abortion bans in half the states, the AMA Board of Trustees' (the Board) formed the Task Force in June of 2023. With the formation of the Task Force and consistent with AMA Policies G-605.009 and D-5.998, as noted above, the Board instructed that the Task Force would advise the Board of new and emerging threats to the provision of evidence-based medical care and appropriate and innovative responses to protect access to care and to preserve the role of the patient-physician relationship as a central element in medical decision-making.

In accordance with the specific language of AMA Policies G-605.009 and D-5.998, in September 2023, the Chairs of the AMA Councils on Legislation, Medical Service, Medical Education, Science and Public Health, and Ethics and Judicial Affairs each appointed two Council members to serve on the Task Force. As a result, 10 Council representatives serve on the Task Force. At that time, the Chair of the Board, Willie Underwood III, MD, MSc, MPH, appointed Madelyn E. Butler, MD, AMA Trustee, and Maryanne C. Bombaugh, MD, MBA, MSc, member of the Executive Committee for the AMA Council on Legislation, to serve as Co-Chairs of the Task Force.

In addition, and in accordance with the underlying policy, in the spring of 2024, AMA invited 10 state medical associations and 13 national medical specialty societies to appoint a physician representative to serve on the Task Force. The organizations were selected based on their expertise, experience, and response to an AMA survey fielded in November 2022 (which was described in detail in the 2023 report of the Task Force) that asked about priorities and capacity to engage on the issues identified in Policy G-605.009.

Seven state medical associations and 11 national medical specialty societies nominated a physician representative to serve on the Task Force. The participating national medical specialty societies include:

- American Academy of Child and Adolescent Psychiatry
- American Academy of Dermatology
- American Academy of Family Physicians
- American Academy of Pediatrics
- American College of Emergency Physicians
- American College of Obstetricians & Gynecologists
- American College of Physicians
- American Psychiatric Association
- American Society for Reproductive Medicine
- American Society of Clinical Oncology
- The Endocrine Society

The participating state medical associations include:

- California Medical Association
- Idaho Medical Association
- The Maryland State Medical Society (MedChi)
- Massachusetts Medical Society
- Pennsylvania Medical Society
- Texas Medical Association
- Medical Society of Virginia

In total, there are 29 physician members on the Task Force.

Overview of Task Force Meetings

As the Task Force formed, staff across the AMA conducted environmental scans and gaps analyses of the issues identified in Policy G-605.009. These landscape analyses identified implementation-focused practice and advocacy resources on issues including health equity, practice management, medical education, privacy, and legal issues and identified potential resource gaps. The landscape analyses were presented to Council representatives monthly, beginning in January of 2024 and concluding in May of 2024. The landscape analyses were used (and will continue to be used) to identify key topics of discussion for meetings of the Task Force and were distributed to all Task Force members prior to the first in-person meeting of the Task Force.

Since its inception in spring of 2024, the Task Force has held six virtual meetings, four in-person meetings, and three informational sessions. The virtual meetings were held in May 2024, December 2024, January 2025, May 2025, October 2025, and December 2025. This total does not include additional virtual meetings conducted with Task Force subcommittees or project teams. In-person meetings were held in July 2024, February 2025, July 2025, and February 2026. The informational sessions were held at the AMA 2024 Interim Meeting in November 2024, the AMA 2025 Annual Meeting in June 2025, and the AMA 2025 Interim Meeting in November 2025.

<u>Virtual Task Force Meetings</u>

In 2024, the Task Force held two virtual meetings for all members of the Task Force. The Task Force held a virtual kick-off meeting in May 2024, in which the Task Force Co-Chairs laid out the Task Force's scope, deliverables, and calendar for upcoming meetings. In December 2024, the Task Force held a meeting to discuss the remarks given at the informational session at the 2024 Interim Meeting of the HOD and discuss ongoing Task Force projects.

In 2025, the Task Force held virtual meetings on a quarterly basis. First, in January 2025, the Task Force met to review research conducted into strategy and messaging. (Note: Additional details about the research discussed in the January meeting are provided later in this report.) Then, in May of 2025, the Task Force met to discuss emerging research into the impact of abortion bans and restrictions on the workforce. Then, at the Task Force's fifth virtual meeting in October of 2025, the Task Force met to review and provide feedback on the resource hub the Task Force developed. (Note: Additional details about the resource hub created by the Task Force are provided later in this report.) Finally, at the Task Force's sixth virtual meeting in December 2025, the Task Force met to discuss American College of Obstetricians & Gynecologists (ACOG)'s project to develop and implement state-specific guidance and protocols at institutions in states banning or restricting abortion. (Note: Additional details about the project discussed in the December meeting are provided later in this report.)

In addition to the six virtual meetings with all members of the Task Force, numerous virtual meetings for various Task Force subcommittees and project teams were also held to coordinate ongoing projects, prepare for upcoming meetings with external stakeholders, and ensure that project milestones were met.

In-Person Task Force Meetings

Over the course of two years, the Task Force held four all-day, in-person meetings at the AMA Headquarters in Chicago. These meetings were structured to focus the Task Force's attention on the specific aspects of abortion care impact by *Dobbs* and gender-affirming care, as laid out in AMA Policy G-605.009. Nationally recognized experts in legal issues, payment and reimbursement for gender-affirming care in adult patients, medical education and training, and public health and health outcomes equipped Task Force members with the latest information, research, data, and resources. These presentations and discussions supplemented Task Force members clinical expertise, supporting discussions to identify relevant resource gaps and opportunities to fill them.

The Task Force held its first in-person meeting in July 2024 in Chicago. The in-person meeting focused on legal issues in abortion care and featured a range of speakers and presenters on topics all relating to legal issues in abortion care including, abortion-related litigation activity across the country, legal resources for physicians, the Emergency Medical Treatment and Active Labor Act (EMTALA), and shield law protections for abortion care providers. Following each presentation, Task Force members asked questions and discussed issues and concerns. During a working lunch, Task Force members were asked to strategize and identify resource gaps and potential deliverables for the Task Force regarding advocacy, health equity, medical education and workforce, legal issues, practice issues, and public health. The exercise generated numerous ideas for action. At the conclusion of the day, as directed by the Board and in accordance with Policies G-605.009 and D-5.998, which instructed the Task Force to identify and create implementation-focused practice and advocacy resources, the Task Force discussed existing resources and limitations of those resources, and identified gaps where resources need to be developed.

In accordance with the amendment to Policy G-605.009 adopted at the AMA 2023 Interim Meeting, in summer of 2024 the Task Force formed a subcommittee to focus on payment and reimbursement issues in gender-affirming care for adults. Members of the subcommittee represent the following nine organizations:

- AMA Board of Trustees
- AMA Council on Legislation
- AMA Council on Ethical and Judicial Affairs
- American Academy of Child and Adolescent Psychiatry
- American Academy of Dermatology
- American Psychiatric Association
- American Society for Reproductive Medicine
- The Endocrine Society
- Idaho Medical Association

AMA staff conducted a landscape analysis on payment and reimbursement issues that hinder access to gender-affirming care in adults, which, like the landscape analyses on abortion, identified existing resources and gaps in those resources and helped inform discussion during in-person meetings. The subcommittee met in August 2024 to identify issues in payment and reimbursement

for gender-affirming care in adults and plan the topics, structure, and agenda for the Task Force's meeting in February 2025 dedicated to these issues.

One of the issues identified by the subcommittee was challenges arising from CPT® coding for gender-affirming care in adults. As such, the subcommittee collaborated with the LGBTQ+ Section to field a survey to better understand these coding challenges. The input from this survey aided the Task Force's discussion of coding issues during its February 2025 meeting.

As directed by AMA Policy, the Task Force met in February of 2025 in Chicago to "identify issues with physician payment and reimbursement for gender-affirming care and recommend solutions to address these barriers to care." The meeting featured a range of speakers on topics all involving payment and reimbursement limitations and administrative challenges that impede access to gender-affirming care for adults, including challenges stemming from limited or non-specific billing codes, inadequate provider networks, low reimbursement rates, discriminatory laws and policies, and state and federal efforts to restrict or criminalize access to gender-affirming care. Speakers included physicians who provide gender-affirming care to adult patients, attorneys, coding experts, a state insurance regulator, and a Medicaid expert. The meeting was structured to allow ample time after each presentation for Task Force members to ask questions of the presenters and discuss barriers to care with one another. These discussions focused on the current landscape and highlighted potential pain points for physicians and patients. Much of the discussion also centered around recent federal executive orders to prohibit federal funding of services for minors and the impact those policies could have on care for other populations. In the last session of the meeting, as directed by the Board and consistent with Policy G-605.009, which instructs the Task Force to recommend solutions to these barriers to care, the Task Force members discussed opportunities and strategies for improving access to care and alleviating administrative burden, including working towards creating more specific CPT codes, where appropriate, continuing to advocate against criminalization, and supporting physicians who care for transgender and gender diverse patients. This discussion was informed by Task Force members' perspectives as clinicians, the speaker presentations, and discussions throughout the meeting.

In July 2025, the Task Force held its third in-person meeting. Featuring nine speakers across four sessions, the meeting's agenda focused on the impact of medical care restrictions on medical education, training, and the physician workforce. In the first session of the morning, speakers from the Accreditation Council on Graduate Medical Education (ACGME) examined program requirements, challenges facing training programs, and the impact of abortion restrictions on clinical training. The meeting's second session explored opportunities to expand clinical training options for trainees, including how programs are adapting to the post-*Roe* environment and how the legislative landscape is impacting clinical training in gender-affirming care. During the meeting's third session, Task Force members heard from a resident and two medical students about the challenges they are facing, how abortion care restrictions are impacting residents and medical students' educational opportunities, and how the current legislative landscape is affecting LGBTQ+ residents and medical students' medical education. In the meeting's last session, speakers from the American Association of Medical Colleges (AAMC) discussed the impact of abortion restrictions on medical schools and the physician workforce pipeline, highlighting research into changes in residency applications in states with abortion restrictions. During the final session of the meeting, as directed by the Board and in accordance with Policies G-605.009 and D-5.998, which instruct the Task Force to identify and create implementation-focused practice and advocacy resources, the Task Force discussed existing resources and limitations of those resources, and identified gaps where resources need to be developed.

The Task Force held its fourth and final all-day, in-person meeting in February of 2026. The goal of the Task Force's fourth meeting was to examine the intersection of abortion and public health and identify and evaluate available resources to help physicians and medical students navigate those issues. Invited speakers across four discussions and presentations focused the conversation on various facets of public health or health care delivery and the challenges faced by physicians, medical students, and patients in that space. The meeting's agenda included a discussion on the current political and legal landscape, a presentation on *Dobbs'* impact on health care delivery and health outcomes, a presentation on issues and disparities in medication abortion access, and a presentation on the impact of *Dobbs* on medical liability and population health. Following each presentation, the Task Force asked questions of the presenter, discussed the issues raised, and discussed resources available or needed to support physicians and medical students.

Informational Sessions

In accordance with AMA policy, which directs the Task Force to present updates of its findings including policies, strategies, and resources, the Task Force hosted a series of informational sessions at Annual and Interim meetings of the HOD. These informational sessions served to facilitate engagement with AMA Delegates, Alternate Delegates, and representatives from the AMA Sections and to elevate important voices that are not members of the Task Force.

The Task Force hosted its first informational session at the AMA's 2024 Interim Meeting. At the session, the Task Force co-chairs presented on the Task Force's directives, scope, and activities in 2024. Following the presentation, selected representatives from the AMA's Sections were invited to provide remarks about their experience with laws restricting or banning reproductive health care. The representatives' remarks focused on state laws' impacts on patient care, career and family decisions, educational opportunities, fears for patient outcomes, and, overall, increased physician stress and anxiety. The selected speakers from the AMA Sections represented:

- Women Physicians Section
- Medical Student Section
- Resident and Fellow Section
- Young Physicians Section
- Minority Affairs Section
- LGBTQ+ Section
- Private Practice Physician Section
- Organized Medicine Staff Section
- Academic Physicians Section
- International Medical Graduates Section
- Senior Physician Section

After the representatives from AMA's Sections spoke, AMA Delegates, Alternate Delegates, and other interested parties were invited to ask questions or provide remarks on issues being considered by the Task Force that had not been addressed by previous speakers. These speakers focused their remarks on requests for more communication about the Task Force's work and opportunities for future engagement with the Task Force.

Then at the Annual Meeting of the HOD in June of 2025, the Task Force hosted its second informational session. The purpose of the informational session was to continue engagement with the AMA Delegates, Alternate Delegates, Council members, representatives from AMA Sections and other interested parties. During the informational session, the Task Force showcased some of the research and resources it has developed to support physicians navigating the post-*Roe* legal

landscape. The highlighted resources included a presentation on messaging strategy and a presentation on the legal assistance available from the Abortion Defense Network. (Note: Additional details about the messaging strategy and the legal assistance resources are provided later in this report.) In addition, the informational session included a question-and-answer portion to provide an opportunity to ask questions of the Task Force and an opportunity to share perspectives on its work. The perspectives shared by Delegates, Alternate Delegates, representatives from AMA Sections and other interested parties at the informational session were informative, shaping how the Task Force approached its ongoing work.

Once again at the Interim meeting of the HOD in November of 2025, the Task Force hosted a third informational session to facilitate resource-sharing and engagement with AMA Delegates, AMA Alternate Delegates, Council members, representatives from AMA Sections, and other interested parties. At this informational session, the Task Force launched its website: the Reproductive Health Resource Navigator, which is a resource hub for physicians navigating abortion bans and restrictions. (Note: The Reproductive Health Resource Navigator is available at https://www.rhrnavigator.org/. Additional details about the Reproductive Health Resource Navigator are provided later in this report.) Following a demonstration and overview of the website, invited speakers gave presentations on resources their organizations offer to physicians, residents, and medical students. Repeatedly in conversations with AMA Sections and other interested parties, the Task Force has heard about the need for legal assistance for physicians navigating the post-*Roe* legal landscape. In response, at the informational session the Task Force hosted the Abortion Defense Network to present on the legal assistance, representation, and legal defense funding that they provide to physicians navigating the post-*Roe* legal landscape. Then during their presentation, the Ryan Residency Training Program examined the current clinical training landscape and discussed their efforts to provide out-of-state clinical training opportunities to residents in states with abortion bans and restrictions.

In the last portion of the informational session, attendees were invited to ask questions of the presenters and share their perspectives on the work of the Task Force. This engagement from attendees was extremely important to the Task Force and ensured that the perspectives and experiences from members of the HOD and AMA Sections are considered in the work of the Task Force. These remarks highlighted important requests and concerns for the Task Force to address in its work. As it contemplates its work in 2026, the Task Force reaffirms its commitment to ensuring underrepresented voices continue to be uplifted through its work.

Task Force Outreach

In addition to the informational sessions, the Task Force conducted outreach with any interested AMA Sections, AMA Councils, and specialty groups in the lead up to the past three HOD meetings and met with the groups at their request. As part of this outreach, the Task Force met with AMA's Council on Legislation, Council on Medical Service, and ACOG's delegation to the HOD. In addition, these meetings facilitated open communication and provided a forum for valuable dialogue with AMA Sections, including the AMA Women Physicians Section, AMA LGBTQ+ Section, AMA Academic Physicians, and AMA Medical Students Section. The perspectives shared during these meetings were critical in shaping the Task Force's work and ensuring that pressing needs, requests, and concerns are addressed. For example, as part of this engagement and to address concerns raised during these discussions, the Task Force partnered on a survey with the LGBTQ+ Section that focused on physician well-being and informed the development of well-being resources.

Ongoing Projects of the Task Force

As a result of reproductive care resource gaps identified by the Task Force, and at the direction of the Board, AMA staff has undertaken a series of projects and initiated partnerships and collaborations to fill those gaps.

Reproductive Health Resource Navigator

In accordance with the directive to identify and create implementation-focused practice and advocacy resources, the Task Force recommended that AMA develop a website, the Reproductive Health Resource Navigator, to serve as a resource hub for physicians navigating abortion bans and restrictions. The AMA agreed that this was a priority and supported the funding of its development. The website is publicly available at https://www.rhrnavigator.org/. The Reproductive Health Resource Navigator houses more than 300 resources developed by the Task Force, AMA, state medical associations and national medical specialty societies, and external organizations. The resources address legal considerations, clinical care, practice management, medical education, and patient resources and are organized in by topic in a searchable format. In accordance with the directive in Policy D-5.995 to provide resources to assist physicians navigating conflicting state and federal regulations on emergency pregnancy care, the site also includes guidance on complying with EMTALA obligations. Additionally, legal representation resources and physician well-being resources are highlighted for site visitors.

Public Opinion Research and Messaging

To support coordinated advocacy, effective engagement, and in accordance with the directive to guide organized Medicine's response to abortion restrictions, the Task Force recommended AMA commission qualitative public opinion research using surveys, in-depth interviews, and focus groups. The research helped explain how different messages, language, and tone resonate across key constituent audiences and build a more compelling narrative for reproductive health advocacy grounded in a strategic messaging foundation. The research provided insight for Task Force members and their organizations on physicians' and the public's perception of the current reproductive health care landscape and will inform strategy for the Task Force going forward. The Task Force met in January 2025 to review the research findings. Findings were also shared with Task Force member organizations and other Federation of Medicine partners.

Research on the Workforce Impact

To better understand how abortion bans and restrictions impact the physician workforce and to carry out the directive that the Task Force monitor workforce impacts, the Task Force recommended AMA conduct research on the impact of abortion bans and restrictions on the physician workforce and again, the AMA agreed to fund this research. Accordingly, AMA staff initiated a research project examining the impact of abortion restrictions on the physician workforce and where physicians choose to practice. The research and mapping project was completed in spring 2025 and the findings were presented to Task Force members during its virtual meeting in May of 2025.

Legal Assistance and Resources for Physicians

In accordance with the directive to publicize resources for physicians to connect with legal assistance and to protect physicians against civil or criminal prosecution, the Task Force worked with the AMA to support the Abortion Defense Network (ADN) and their network of attorneys and

law firms that provide legal advice and representation to physicians navigating the post-*Roe* legal landscape. ADN's resources are available to physicians and other health care providers at www.abortiondefensenetwork.org. Their resources include 26 in-depth "Know Your State's Abortion Laws" guides for medical professionals, which aim to provide clarification on what conduct is permitted and what the law requires in states with abortion restrictions. The partnership between the Task Force and ADN resulted in 10 additional state law guides (Alabama, Arizona, Mississippi, Montana, Nevada, New Hampshire, North Dakota, South Dakota, Virgina, and West Virgina). The guides cover state laws and professional guidelines on numerous facets of reproductive health care, including medication abortion, contraception, and obligations under EMTALA. The state law guides are available on the ADN's website at https://abortiondefensenetwork.org/resources/providers/.

In addition to their written legal resources, ADN connects physicians and others involved in providing abortion care with personalized legal advice and financial assistance. The Task Force urged AMA to support greater physician access to legal assistance, representation, and legal defense funding to physicians navigating the post-*Roe* legal landscape. AMA agreed and provided financial assistance to ADN. Physicians and medical professionals seeking personalized legal assistance can contact ADN using their online form at https://abortiondefensenetwork.org/get-in-touch/. After submitting the form, physicians and medical professionals can expect a response from an attorney within 24 hours. ADN's legal assistance is typically provided *pro bono*. In instances where additional legal funding assistance for a civil or administrative action is needed, physicians and medical professionals may be able to access legal defense funds through ADN.

Through 2025 and 2026, AMA staff has continued regular meetings with ADN to discuss opportunities to collaborate, publicize, and promote ADN's legal services and resources. In addition, these meetings have covered the development of additional ADN resources, including "Know Your Rights" one-pagers and resources related to EMTALA.

Institution-level Guidance

In accordance with a directive adopted at the 2024 Interim Meeting instructing the Task Force to work with interested parties to encourage the development of institution-level guidance, the Task Force is collaborating with ACOG to promote adoption of state-specific, institution-level guidance for managing pregnancy-related medical emergencies in states with abortion restrictions. Using sample protocols drafted by ACOG with support from Lawyers for Good Government, this initiative clarifies institutional policies on abortion to ensure pregnant patients receive appropriate medical care in compliance with state law.

The institutional guidance project is a joint initiative of ACOG and Lawyers for Good Government, with support from the Society for Maternal-Fetal Medicine and the AMA. At ACOG's request, the AMA added a statement of support to ACOG's protocol materials. ACOG also requested the AMA help make connections with individuals and organizations who could help support adoption of the protocol. To further the initiative, the AMA's role has been to support the targeted and intentional promotion of the project, identify champions to advance the protocols at their own institutions, and connect ACOG to relevant state-level contacts. To accomplish this, the AMA facilitated convenings and information sharing with relevant state medical associations, the AMA's Organized Medical Section, and the AMA's Integrated Physician Practice Section. AMA is eager to continue supporting ACOG in the implementation of this project and looks forward to the continued collaboration.

Collaboration with Elected Prosecutors and District Attorneys

To gain clarity on how abortion bans may be enforced against physicians, and in accordance with AMA policy to protect against civil, criminal, and professional liability and retaliation, the Task Force identified an opportunity to engage with an organization representing elected prosecutors and district attorneys nationwide. The AMA agreed that this would be a productive use of time and resources and, as a result, in March of 2025, seven Task Force members participated in a full day convening with elected prosecutors from around the country. The convening helped professionals on each side understand the others' perspectives, processes, and challenges, and brainstorm strategies to mitigate risk of prosecution for physicians providing abortion care under exceptions in state law. Following the March meeting, a local convening modeled after the national meeting was held. This meeting convened local prosecutors, state legislators, and local physician leaders.

Continuing the collaboration, a new group of seven Task Force members attended a second convening with the national prosecutors' group in December of 2025. As a result of this meeting, the Task Force and participating prosecutors are planning two upcoming webinars to educate both prosecutors and physicians. Specifically, one webinar will educate physicians about the criminal prosecution process and relevant legal standards; the other webinar will educate prosecutors about pregnancy complications and the incompatibility between abortion laws and clinical practice. This work is on-going. (Note: This report was prepared in February and may not include more recent developments.) The AMA is continuing to collaborate with prosecutor groups to educate the prosecution field and establish collaborative relationships to help inform prosecutorial actions.

Support for Residents and Medical Students

As a result of the Task Force's discussions on challenges and barriers facing medical students and residents, and in accordance with AMA policy to mitigate radically diminished training opportunities, AMA staff initiated several projects and collaborations to support residents and medical students navigating bans and restrictions on abortion. The Task Force recommended that the AMA provide financial assistance to facilitate out-of-state training opportunities. The AMA agreed and helped fund the UCSF Ryan Residency Training Program in order to provide financial assistance to enable residents in ban states to travel to out-of-state institutions for abortion training, support for institutions who receive out-of-state residents, and build capacity within the Ryan Residency Training Program to further support institutional partnerships to ensure availability of abortion training.

All OB-GYN residency programs are required by ACGME to provide training in abortion care. In states where abortion is banned or severely restricted, residency programs cannot fulfill this requirement without sending residents to external sites. Many institutions, particularly in the South and Midwest, report that they lack resources or face legal or policy barriers to funding residents' travel, leaving residents personally responsible for those costs. The AMA's financial assistance for resident travel costs help to fill that gap, ensuring that residents are able to accept temporary placement and gain competency in managing abortion, miscarriage, and pregnancy complications.

A critical barrier to maintaining out-of-state training partnerships is the strain placed on the clinical sites that host visiting residents. These receiving institutions must absorb significant administrative, supervisory, and logistical burdens, from processing temporary licenses, malpractice coverage, and onboarding requirements to adjusting clinic schedules and supervision ratios to accommodate additional trainees. Many are safety-net or academic centers already operating at capacity. The Ryan Program will provide direct financial and technical support to these host institutions, helping offset the costs of integrating visiting residents while preserving high-quality training for all

learners. By supporting receiving institutions, the contribution will help ensure these cross-state partnerships remain sustainable for receiving institutions.

While short-term funding for resident placements is urgently needed, the Ryan Program's broader infrastructure helps make those rotations possible. The Ryan Program serves as the central convener and technical resource for residency programs navigating legal, logistical, and educational complexities in the post-*Dobbs* environment. The AMA's funding helped enable the program to expand and formalize these efforts by developing standardized affiliation agreements, refining compliance and risk-management tools, facilitating communication between sending and receiving sites, and building the capacity of faculty and program administrators to manage these cross-state collaborations effectively. This investment ensures that the national system for arranging out-of-state training is scalable and sustainable for the future.

Lastly, in response to the Task Force's discussions on moral distress, trainee mental health, and the need to support medical student well-being, the AMA published two issue briefs on moral distress in medical students, available resources, and AMA policies to support medical student well-being. These issue briefs are available at https://www.ama-assn.org/system/files/Issue-brief-moral-distress.pdf and https://www.ama-assn.org/system/files/issue-brief-med-student-resources.pdf.

The Task Force continues to consider additional deliverables to support physicians navigating state laws restricting or banning abortion.

CONCLUSION

The Board, through the Task Force, will continue to implement Policies G-605.009 and D-5.998, monitor and prepare for new and emerging threats to the provision of evidenced-based medical care, and work to protect access to care and preserve the role of the patient-physician relationship as a central element in medical decision-making.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 1-A-26

Subject: Introducing CCB Reports 2-7 concerning Bylaw 2, House of Delegates

Presented by: Jerry P. Abraham, MD, MPH, Chair

The Council on Constitution and Bylaws (CCB) submitted CCB Report 3-I-25 to the House of Delegates (HOD) for consideration. The report drew extensive testimony in the online reference committees. The Reference Committee on Ethics and Bylaws in its preliminary report had difficulty with a report this complex and nuanced, particularly as online testimony included various amendments. After reviewing the preliminary report that contained 21 recommendations, CCB reviewed the extensive online testimony, proposed amendments, and the preliminary reference committee report, and submitted a revised report reflecting some of the testimony and amendments in the hopes that the revised report would be easier to manage at the reference committee hearing. Ultimately, after extensive debate on multiple aspects of the report, the HOD referred the report back to CCB for a report at A-26, along with Resolution 10-I-25. The resolution from the Medical Student (MSS) and the Resident and Fellow (RFS) Sections asked that the bylaws be amended to explicitly allow these sections to appoint rather than elect individuals to serve as temporary delegates and alternate delegates to fill vacancies and absences.

Admittedly, CCB Report 3-I-25 was a lengthy report that touched on a myriad of topics, many of which were nuanced. As the Council discussed appropriate follow-up, it determined that to make its proposed amendments more easily digestible and manageable for HOD members and the reference committee at A-26, it was preferable to issue a series of shorter reports, each focusing on a distinct issue addressed in CCB 3-I-25 and Resolution 10-I-25. For each report, the Council has also included the final clean bylaw language if the report is adopted. Included as an appendix to this report is a clean copy of the affected provisions of Bylaw 2 (Appendix B) if CCB 2-7 reports were adopted. Additionally, the Council has included as an appendix (Appendix A) a taxonomy of the existing and amended bylaw changes, and the source CCB report of those changes. Lastly, Appendix C includes a chart with links to the Bylaws of all entities with HOD representation for easy reference.

Report topics are as follows:

- CCB Report 2, HOD Representation and Composition
  - This report provides some amended language to emphasize the inclusive nature of the HOD.
- CCB Report 3, Rights & Privileges of HOD Members
  - This report explicitly sets forth the rights and privileges afforded to delegates paralleling existing bylaw language that articulates the rights and privileges of the alternate delegates, ex officio members, official observers, and temporary delegates.
- CCB Report 4, Credentialing of HOD Delegates and Alternate Delegates
  - This report identifies the appropriate credentialing authority for all entities represented in the HOD, respecting the unique nature of the section HOD delegates and alternates, medical student regional delegates and alternates and the resident and fellow sectional

© 2026 American Medical Association. All rights reserved.

delegates and alternates. The updated term ‘credentialing’ replaces ‘certification’ which refers to a process that is no longer utilized. Lastly, some existing language is clarified for accuracy and consistency.

- CCB Report 5, Inclusion of Medical Students and Resident/ Fellow Physicians in HOD Delegations
  - This report reinstates language proposed for deletion in CCB 3-1-25, language which states that a medical student or a resident/fellow may be hold a constituent association delegation seat. It also establishes an equivalent ability for the national medical specialty societies and professional interest medical associations to seat a medical student or a resident/fellow as delegation members.
- CCB Report 6, Medical Student Regional Delegates and Alternate Delegates and Resident and Fellow Sectional Delegates
  - This report addresses the bylaws associated with the medical student regional delegates and alternate delegates and resident and fellow sectional delegates and alternate delegates, including their eligibility for election, the mechanism by which they are elected, and their unique seating assignment in the HOD.
- CCB Report 7, HOD Delegate and Alternate Delegate Vacancies and Meeting Absences
  - This report eliminates the confusing distinction between a substitute delegate and a temporary substitute delegate and specifies the process by which a vacancy may be filled after the credentialing deadline, and the process to fill an open seat due to a meeting absence. This report also addresses Resolution 10-I-25 by granting the sections the ability to credential a temporary delegate or temporary alternate delegate when there are no available elected alternate delegates.

The Council hopes that by separating these complex and nuanced issues the AMA Bylaws will be amended in accordance with the will of the HOD.

TAXONOMY OF AMA BYLAWS SECTION 2 IMPACTED BY CCB REPORTS 2-7 (Provisions 2.0.1 through 2.10)

CCB 2, HOD Representation and Composition
CCB 3, Rights & Privileges of HOD Members
CCB 4, Credentialing of HOD Delegates and Alternate Delegates
CCB 5, Inclusion of Medical Students and Resident/Fellow Physicians in HOD Delegations
CCB 6, Medical Student Regional Delegates and Alternate Delegates and Resident and Fellow Sectional Delegates and Alternate Delegates
CCB 7, HOD Delegate and Alternate Delegate Vacancies and Meeting Absences

Existing Bylaws	**Amended Bylaws**	**Source of Proposed Amended Bylaws and Comments**
2.0.1 Composition and Representation	**2.0.1 Composition and Representation**	**CCB 3** – Incorporates language on alternate delegates (previously section 2.8) into this section for completeness; new text specifies the rights and privileges of delegates.
2.0.1.1 Qualifications of Members of the House of Delegates	2.0.1.1 Qualifications of Members of the House of Delegates	**CCB 2** – Emphasizes inclusion of medical students and residents and fellows; spells out the rights and privileges of delegates.
2.0.1.2 Representation	2.0.1.2 Representation	**CCB 2** – Acknowledges resident and fellows and medical students are represented in the HOD
2.0.1.2.1 Consideration	2.0.1.2.1 Consideration	**CCB 2** – Acknowledges a need to consider the perspective of medical students in addition to the perspectives of their patients, their sponsoring organizations and their physician constituents.
(formerly 2.8)	2.0.1.3 Alternate Delegates	**CCB 2** – Acknowledges each society is allotted an alternate delegate for each delegate, with the alternate delegate needing to meet the criteria of 2.0.1.1 and be credentialed in accordance with how the delegate is credentialed.
(formerly 2.8.5 and 2.8.6)	2.0.1.3.1 Rights and Privileges.	**CCB 3** – Deletes redundant and obsolete language; edits for accuracy.

(formerly 2.8.6 and 2.8.6)	2.0.1.3.2 Alternate Delegate Seated for a Delegate	**CCB 3** – Deletes redundant and obsolete language; edits for accuracy; specifies the rights of an alternate delegate seated for a delegate.
(formerly 2.10.7)	2.0.1.4 Unique Representation	**CCB 2** – Retitled to address representation by an individual of only a single society
(New)	2.0.1.5 Registration	**CCB 2** – Specifies the need for every attendee to register for HOD meetings
2.0.1.3 Autonomy	2.0.1.6 Autonomy	**CCB 2** – Numbering change
2.1 Constituent Associations	**2.1 Constituent Association Delegations**	**CCB 2** – Edits for consistent terminology across all represented societies
2.1.1 Apportionment	2.1.1 Apportionment	**CCB 2** – Edits for accuracy; acknowledges the inclusion of AMA member medical students and residents in membership count
2.1.1.1 Effective Date	2.1.1.1 Effective Date	**CCB 2** – Incorporates language from former 2.10.1
2.1.2 Selection	2.1.2 Selection	**CCB 5** – Edits for accuracy
2.1.3 Certification	2.1.3 Credentialing	**CCB 4** – Edits for accuracy
2.1.4 Term	2.1.4 Term	**CCB 2** – Edits for completeness and accuracy
2.1.5 Vacancies	2.1.5 Vacancies	**CCB 7** – Edits for completeness and accuracy delegates
2.1.6 Resident/Fellow Physician and Medical student Delegates	2.16. Resident and Fellow Physician and Medical Student Delegates and Alternate Delegates	**CCB 5** – Edits for accuracy and to parallel language for medical student regional delegates and alternate delegates
2.1.6.1 Term	2.1.6.1 Term	**CCB 5** – Edits for accuracy
2.1.6.2 No Restriction on Selection	2.1.6.2 No Restriction on Selection	**CCB 5** – Edits for accuracy
2.1.7 Application by a Constituent Association for Representation in the House of Delegates	2.1.7 Application by a Constituent Association for Representation in the House of Delegates	No changes
2.2 National Medical Specialty Societies.	**2.2. National Medical Specialty Society Delegations**	**CCB 2** – Edits for consistent terminology across all represented societies
2.2.1 Apportionment	2.2.1 Apportionment	**CCB 2** – Edits for accuracy; acknowledges the inclusion of AMA member residents and fellows in apportionment membership count.
2.2.1.1 Effective Date	2.2.1.1 Effective Date	**CCB 2** – Incorporates language from existing 2.10.1
2.2.2 Selection	2.2.2 Selection	**CCB 5** – Edits for accuracy

2.2.3 Certification	2.2.3 Credentialing	**CCB 4** – Edits for accuracy
2.2.4 Term	2.2.4 Term	**CCB 2** – Edits for completeness and accuracy
2.2.5 Vacancies	2.2.5 Vacancies	**CCB 7** – Edits for completeness and accuracy delegates
(New)	2.2.6 Resident and Fellow Physician and Medical Student Delegates and Alternate Delegates	**CCB 5** – Acknowledges a specialty society can credential a medical student or resident/fellow
(New)	2.2.6.1 Term	**CCB 5** – Acknowledges a specialty society can credential a medical student or resident/fellow for a one year term
(New)	2.6.2.2 No Restriction on Selection.	**CCB 5** – Acknowledges a specialty can credential a medical student or resident/fellow for a (full) two-year term
2.3 Medical Student Regional Delegates	**2.3. Medical Student Regional Delegates and Alternate Delegates**	**CCB 6** – Edits for consistent terminology across all represented societies
2.3.1 Qualifications	2.3.1 Qualifications	**CCB 6 –** Edits for accuracy. Existing language from 2.3.3 on the need for endorsements included here for completeness.
2.3.2 Apportionment	2.3.2 Apportionment	**CCB 6** – Edits for accuracy
2.3.2.1 Effective Date	2.3.2.1 Effective Date	**CCB 6 –** Edits for accuracy
2.3.3 Election	2.3.3 Election	**CCB 6** – Edits for accuracy and to eliminate redundancy; clarifies that the student members of Regions elect the delegates and alternate delegates at the section's business meeting in conjunction the Interim HOD meeting, with elected students assuming their office at the subsequent next HOD meeting.
2.3.4 Certification	2.3.4 Credentialing	**CCB 4** – Edits for accuracy
2.3.5 Term	2.3.5 Term	**CCB 7** – Deletes redundant language related to credentialing
2.3.6 Vacancies	2.3.6 Vacancies	**CCB 7** – Edits for completeness and accuracy delegates
(formerly 2.10.8)	2.3.7 Medical Student Seating	**CCB 6** – Included here for completeness; edits for accuracy.
2.4 Delegates from the Resident and Fellow Section	**2.4 Resident and Fellow Sectional Delegates and Alternate Delegates**	**CCB 6** – Edits for consistent terminology across all represented societies

2.4.1 Qualifications	2.4.1 Qualifications	**CCB 6 –** Edits for accuracy Existing language from 2.4.3 on the need for endorsements included here for completeness.
2.4.2 Apportionment	2.4.2 Apportionment	**CCB 6** – Edits for accuracy
2.4.2.1 Effective Date	2.4.2.1 Effective Date	**CCB 6** – Edits for accuracy
2.4.3 Election	2.4.3 Elections	**CCB 6** – Edits for accuracy and to eliminate redundancy; clarifies that elections are held at the section's business meeting held in conjunction with the Interim HOD meeting, with elected residents and fellows assuming their office at the subsequent HOD meeting.
2.4.4 Certification	2.4.4 Credentialing	**CCB 4**—Edits for accuracy
2.4.5 Term	2.4.5 Term	**CCB 6** – Edits for accuracy
2.4.6 Vacancies	2.4.6 Vacancies	**CCB 7** – Edits for completeness and accuracy
(formerly 2.10.9)	2.4.7 Resident and Fellow Seating	**CCB 6** – Included here for completeness; edits for accuracy,
2.5 Speaker and Vice Speaker Additional Delegate	**2.5 Speaker and Vice Speaker Additional Delegates**	**CCB 3** – Edits for consistency and accuracy
2.5.1 Status of Speaker and Vice Speaker	2.5.1 Rights and Privileges	**CCB 3** – Retitled Rights & Privileges
2.5.2 Term	2.5.2 Term	No changes
2.6 Other Delegates	**2.6 Other Delegates and Alternate Delegates**	**CCB 2** – Edits for consistent terminology across all represented societies
2.6.1 Certification	2.6.1 Credentialing	**CCB 4** – Edits for accuracy
2.6.2 Term	2.6.2 Term	**CCB 2** – Edits for completeness and accuracy; **CCB 4** – Deletes language redundant to that in 2.6.1.
(new)	2.6.2.1 Resident/Fellow Physician and Medical Student Delegates	**CCB 5** – Acknowledges ability of these groups to credential a medical student or resident/fellow
(new)	2.6.2.1.1	**CCB 5 –** Acknowledges these groups can credential a medical student or resident/fellow for a one year term
(new)	2.6.2.1.2	**CCB 5** – Acknowledges these groups can credential a medical student or resident/fellow for a (full) two-year term

2.6.3 Vacancies	2.6.3 Vacancies	**CCB 7** – Edits for completeness and accuracy delegates
	2.6.4 No Restriction on Selection	**CCB 5** – Acknowledges a medical student or resident and fellow physician may serve a full two-year term
2.7 Ex Officio Members	**2.7 Ex Officio Members**	No changes
2.7.1 Rights and Privileges	2.7.1 Rights and Privileges	No changes
2.8 Alternate Delegates	**---**	**CCB 2** – Incorporated into new 2.0.1.3 with edits for completeness and accuracy
2.8.1 Qualifications	---	**CCB 3** – Deleted as existing language was incorporated in updated delegation language for each represented society
2.8.2 Certification	---	**CCB 3** – Existing language was incorporated in updated delegation language for each represented society
2.8.3 Term	---	**CCB 3** – Existing language was incorporated in updated delegation language for each represented society
2.8.4 Vacancies	---	**CCB 3** – Existing language was incorporated in updated delegation language for each represented society
2.8.5 Rights and Privileges	(now 2.0.1.3.1)	**CCB 3** – Alternate delegate status retitled as rights and privileges; combined with 2.8.6. with edits for accuracy.
2.8.6 Status	(now 2.0.1.3.2)	**CCB 3** – see above
---	**2.8 Additional Alternate Delegates (new heading)**	**CCB 3** – New Heading
(formerly 2.10.5)	2.8.1 Constituent Association President	**CCB 3** – Edits for accuracy
(formerly 2.10.6)	2.8.2 National Medical Specialty Society or Professional Interest Medical Association President	**CCB 3** –Edits for accuracy
2.9 Official Observer	**2.9 Official Observer**	No changes
2.9.1 Rights and Privileges	2.10.1 Rights and Privileges	No changes
2.10 Registration and Seating of Delegates	**2.10 Temporary Delegates and Alternate Delegates**	**CCB 7** – Retitled
2.10.1 Notification	---	**CCB 2** – Eliminates redundant language
2.10.2 Credentials	---	**CCB 7** – Eliminates redundant language
2.10.3 Lack of Credentials	---	**CCB 7** – Eliminates redundant language

2.10.4 Substitute		**CCB 7** – Incorporated into new 2.10.2
2.10.4.1 Temporary Substitute Delegates	---	**CCB 7** – Deletes obsolete language
(new)	2.10.1 Temporary Delegates	**CCB 7** – A credentialing authority may credential a temporary delegate
(new)	2.10.1.1	**CCB 7** – A delegate not credentialed by the credentialing deadline may be credentialed as a temporary delegate
(new)	2.10.1.2	**CCB 7** – An alternate delegate may be credentialed as a temporary delegate when the delegate is unavailable
(new)	2.10.1.3	**CCB 7** – A temporary alternate delegate may be credentialed as a temporary delegate when an delegate is unavailable
(new)	2.10.1.4	**CCB 7** – Temporary delegates must be credentialed the day before an AMA election in order to vote
(new)	2.10.2 Temporary Alternate Delegates	**CCB 7** – A credentialing authority may credential a temporary delegate
(new)	2.10.2.1	**CCB 7** – An alternate delegate not credentialed by the credentialing deadline may be credentialed as a temporary alternate delegate
(new)	2.10.2.2	**CCB 7 -**– An entity's member may be credentialed as a temporary alternate delegate when an alternate delegate is unavailable
(new)	2.10.2.3 Temporary Medical Student Regional Alternate Delegate	**CCB 7** – A medical student may be credentialed as a temporary regional alternate delegate when a regional alternate delegate is unavailable.
(new)	2.10.2.4 Temporary Resident and Fellow Sectional Alternate Delegate	**CCB 7** – A resident and fellow may be credentialed as a temporary sectional alternate delegate when a sectional alternate delegate is unavailable.
2.10.5 Constituent Association President	(now 2.8.1)	**CCB 3** –Language now under new heading Additional Alternate Delegates for better organization

2.10.6 National Medical Specialty Society or Professional Interest Medical Association President	(now 2.8.2)	**CCB 3** – Language now under new heading Additional Alternate Delegates for better organization
2.10.7 Representation	(now 2.0.1.3)	**CCB 2** –Incorporated into 2.0.1.3 for completeness
2.10.8 Medical Student Seating	(now 2.3.7)	**CCB 6** – Incorporated under the bylaws governing medical student regional delegates and alternate delegates
2.10.9 Resident and Fellow Seating	(now 2.4.7)	**CCB 6** – Incorporated under the bylaws governing resident and fellow sectional delegates and alternate delegates

CLEAN LANGUAGE FROM AMA BYLAWS SECTION 2, HOUSE OF DELEGATES (IF THE HOD ADOPTS THE RECOMMENDATIONS IN CCB REPORTS 2 THROUGH 7):

2—House of Delegates

2.0.1 Composition and Representation. The House of Delegates is composed of delegates selected by recognized constituent associations and specialty societies, and other delegates as provided in this bylaw. A delegate may introduce resolutions into the House of Delegates, speak and debate on the floor of the House, offer an amendment to a pending matter, make motions, vote on items of business and vote in elections.

2.0.1.1 Qualification of Members of the House of Delegates. Members of the House of Delegates must be active members of the AMA, including resident and fellow physicians and medical students, and of the entity they represent.

2.0.1.2 Representation. The representational role of the delegates is multi-dimensional and includes:

a. Advocacy for patients to improve the health of the public and the health care system.

b. Representation of the perspectives of the delegate's sponsoring organization to the House of Delegates.

c. Representation of the delegate's physician and medical student constituents in the decision-making process of the House of Delegates.

d. Representation of the AMA and the House of Delegates to physicians, medical associations, and others, including resident and fellow physicians and medical students.

e. Solicitation of input from and provision of feedback to constituents.

2.0.1.2.1 Consideration. In considering business, delegates should take into consideration the perspectives of their patients, their sponsoring organizations, and their medical student or physician constituents. In voting on matters before the House of Delegates, delegates should vote on the basis of what is best for patients and quality medical care.

2.0.1.3 Alternate Delegates. Each organization represented in the House of Delegates is allotted an alternate delegate for each of its delegates entitled to be seated in the House of Delegates. Alternate delegates must meet the criteria specified in Bylaw 2.0.1.1 and be similarly credentialed per the Bylaws that govern credentialing for the delegates representing their organization. Terms for alternate delegates shall be the same as for the delegates.

2.0.1.3.1–Rights and Privileges. The alternate delegate is not a "member of the House of Delegates" as that term is used in these Bylaws. Accordingly, an alternate delegate may not introduce resolutions into the House of Delegates~~,~~ or vote in any election conducted by the House of Delegates. An alternate delegate is

not eligible for nomination or election as Speaker or Vice Speaker of the House of Delegates.

2.0.1.3.2 Alternate Delegate Seated for a Delegate. At the request of their corresponding delegate, an alternate delegate may be seated for them on the floor of the House of Delegates. The alternate delegate must display their corresponding delegate's temporary credential (salmon badge). While seated for a delegate, the alternate delegate may speak and debate on the floor of the House, offer an amendment to a pending matter, make motions, and vote. The alternate delegate must immediately relinquish their position on the floor of the House of Delegates at the request of-their corresponding delegate.

2.0.1.4 Unique Representation. No delegate or alternate delegate may be credentialed or seated at any meeting to represent more than one organization in the House of Delegates.

2.0.1.5 Registration. All attendees of a House of Delegates meeting must register for the meeting.

2.0.1.6 Autonomy. The participation of any organization in the House of Delegates is voluntary. Policy actions of the AMA do not in themselves bind an organization or subject it to any obligation that it does not voluntarily assume.

2.1 Constituent Association Delegations. Constituent associations are recognized medical associations of states, commonwealths, districts, territories, or possessions of the United States. Each recognized constituent association granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment. Only one constituent association from each U.S. state, commonwealth, territory, or possession shall be granted representation in the House of Delegates.

2.1.1 Apportionment. The apportionment of delegates from each constituent association is one delegate and one alternate delegate for each 1,000 (or fraction thereof), active members of the AMA including medical students and residents and fellows within the jurisdiction of each constituent association, as recorded by the AMA as of December 31 of each year.

2.1.1.1 Effective Date. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year. In January of each year, the AMA shall notify each organization of the number of seats in the House of Delegates to which it is entitled during the current year.

2.1.1.1.1 Retention of Delegate. If the membership information as recorded by the AMA as of December 31 warrants a decrease in the number of delegates representing a constituent association, the constituent association shall be permitted to retain the same number of delegates, without decrease, for one additional year, if it promptly files with the AMA a written plan of intensified AMA membership development activities among its members. At the end of the one year grace period, any applicable decrease will be implemented.

2.1.2 Selection. Each constituent association shall select and adjust the number of delegates and alternate delegates to conform with the number of seats authorized under this bylaw.

2.1.3 Credentialing. The president or chief executive officer of each constituent association, or their designee, shall provide the AMA Office of House of Delegates Affairs with the names and contact information of their delegates and alternate delegates at least 45 days prior to each meeting of the House of Delegates. These appropriately identified individuals shall be duly credentialed for that meeting only.

2.1.4 Term. Delegates and alternate delegates from constituent associations shall be selected for two-year terms and assume office on the date set by the constituent association, provided that such seats are authorized pursuant to these Bylaws. Constituent associations entitled to more than one delegate and one alternate delegate shall select them so that half the number, as near as may be, are selected each year. One-year terms may be provided but only to the extent and for such time as is necessary to accomplish this proportion.

2.1.5 Vacancies. The delegate or alternate delegate selected to fill a vacancy before the credentialing deadline shall assume office immediately after selection and serve for the remainder of that term.

2.1.6 Resident/Fellow Physician and Medical Student Delegates and Alternate Delegates. A constituent association may designate one or more of its delegate and alternate delegate seats to be filled by a resident/fellow physician member or a medical student member.

2.1.6.1 Term. Such resident/fellow physician or medical student delegate or alternate delegate shall serve for a one-year term.

2.1.6.2 No Restriction on Selection. Nothing in this bylaw shall preclude a resident/fellow physician or medical student member from being selected to fill a full two-year term as a delegate or alternate delegate from a constituent association as provided in Bylaw 2.1.4.

2.1.7 Application by a Constituent Association for Representation in the House of Delegates. A constituent association seeking representation in the House of Delegates shall submit an application to the AMA. The Board of Trustees shall make a recommendation to the House of Delegates as to the proposed constituent association's qualifications for representation, based on all the current guidelines for representation in the House of Delegates.

2.2 National Medical Specialty Society Delegations. The number of delegates representing national medical specialty societies shall equal the number of delegates representing the constituent societies. Each national medical specialty society granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment. The total number of apportioned to national medical specialty societies under Bylaw 2.2.1 shall be adjusted to be equal to the total number of delegates apportioned to constituent societies under sections 2.1.1 using methods specified in AMA policy.

2.2.1 Apportionment. The apportionment of delegates from each specialty society represented in the AMA House of Delegates is one delegate and alternate delegate for each 1,000, or fraction thereof, physician specialty society members, including residents and fellows, as of December 31 of each year who are eligible to serve on committees or the governing

body, are active members of the AMA and are members in good standing and current in payment of applicable dues of both the specialty society and the AMA.

2.2.1.1 Effective Date. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year. In January of each year, the AMA shall notify each organization of the number of seats in the House of Delegates to which it is entitled during the current year.

2.2.2 Selection. Each specialty society shall select and adjust the number of delegates and alternate delegates to conform with the number of seats authorized under this bylaw.

2.2.3 Credentialing. The president or chief executive officer of each specialty society, or their designee, shall provide the AMA Office of House of Delegates Affairs with the names and contact information of their delegates and alternate delegates at least 45 days prior to each meeting of the House of Delegates. These appropriately identified individuals shall be duly credentialed for that meeting only.

2.2.4 Term. Delegates and alternate delegates from specialty societies shall be selected for two-year terms, and shall assume office on the date set by the specialty society provided that such seats are authorized pursuant to these Bylaws. Specialty societies entitled to more than one delegate and alternate delegate shall select them so that half the number, as near as may be, are selected each year. One-year terms may be provided but only to the extent and for such time as is necessary to accomplish this proportion.

2.2.5 Vacancies. The delegate or alternate delegate selected to fill a vacancy before the credentialing deadline shall assume office immediately after selection and serve for the remainder of that term.

2.2.6 Resident/Fellow Physician and Medical Student Delegates and Alternate Delegates. A national medical specialty society may designate one or more of its delegate and alternate delegate seats to be filled by a resident/fellow physician member or a medical student member.

2.2.6.1 Term. Such resident/fellow physician or medical student delegate or alternate delegate shall serve for a one-year term.

2.2.6.2 No Restriction on Selection. Nothing in this bylaw shall preclude a resident/fellow physician or medical student member from being selected to fill a full two-year term as a delegate or alternate delegate from a specialty association as provided in Bylaw 2.2.4.

2.3 Medical Student Regional Delegates and Alternate Delegates. In addition to the delegate and alternate delegate representing the Medical Student Section, medical student regional delegates and regional alternate delegates shall be apportioned and elected as provided in this bylaw.

2.3.1 Qualifications. Medical student regional delegates and alternate delegates must be active medical student members of the AMA. In addition, medical student regional delegates and alternate delegates must be members of and have received written endorsement from the constituent association where their educational program is located. The Medical Student Region in which the endorsing society is located determines the student's region,

and a medical student may only serve as a regional delegate, alternate delegate or a temporary delegate or temporary alternate delegate for that region.

2.3.2 **Apportionment.** The total number of medical student regional delegates and alternate delegates is based on one delegate and one alternate delegate for each 2,000 active medical student members of the AMA, as recorded by the AMA on December 31 of each year. Each Medical Student Region, as defined by the Medical Student Section, is entitled to one delegate and one alternate delegate for each 2,000 active medical student members of the AMA in an educational program located within the jurisdiction of the Medical Student Region. Any remaining medical student regional delegates and alternate delegates shall be apportioned one delegate and one alternate delegate per region(s) with the greatest number of active AMA medical student members in excess of a multiple of 2,000. If two Regions have the same number of active AMA medical student members, ties will be broken by lottery by the Medical Student Section Governing Council.

2.3.2.1 **Effective Date.** In January of each year the AMA shall notify the chair of the Medical Student Section Governing Council and the Director of the Medical Student Section of the number of seats in the House of Delegates to which each Medical Student Region is entitled. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year.

2.3.3 **Election.** Medical student regional delegates and alternate delegates shall be elected by the medical student representatives to the appropriate Medical Student Region in accordance with rules adopted by the Medical Student Section and approved by the Board of Trustees. Regional delegates and alternate delegates shall be elected at the Business Meeting of the Medical Student Section held in conjunction with the Interim Meeting of the House of Delegates. Regional delegates and alternate delegates shall assume office at the subsequent meeting of the House of Delegates.

2.3.4 **Credentialing.** The chair of the Medical Student Section Governing Council or the director of the Medical Student Section, or their designee, shall provide the AMA Office of House of Delegates Affairs with the names and contact information of the delegates and alternate delegates for each Medical Student Region elected in accordance with 2.3.3. Credentialing must occur at least 45 days prior to each meeting of the House of Delegates. These appropriately identified individuals shall be duly credentialed for that meeting only.

2.3.5 **Term.** Medical student regional delegates and alternate delegates shall be elected for one-year terms.

2.3.6 **Vacancies.** A medical student who fills a vacancy before the credentialing deadline as a medical student regional delegate or alternate delegate must be from the same medical student region as the vacating student and must be elected by that region. A medical student regional delegate or alternate delegate who fills such a vacancy shall assume office immediately after ~~s~~election and serve for the remainder of that term.

2.3.7 **Medical Student Regional Delegate Seating.** Each medical student regional delegate shall be seated with the student's endorsing constituent association. Alternate delegates, temporary delegates, or temporary alternate delegates shall be assigned to the original medical student regional delegate's seat location during the time they are seated for the original delegate.

2.4 Resident and Fellow Sectional Delegates and Alternate Delegates. In addition to the delegate and alternate delegate representing the Resident and Fellow Section, resident and fellow physician delegates and alternate delegates shall be apportioned and elected in a manner as provided in this bylaw.

2.4.1 Qualifications. Resident and fellow sectional delegates and alternate delegates must be active members of the Resident and Fellow Section of the AMA. In addition, resident and fellow sectional delegates and alternate delegates must be members of and have written endorsement from a society or organization currently seated in the HOD, in a capacity appropriate to their level of training.

2.4.2 Apportionment. The apportionment of delegates from the Resident and Fellow Section is one delegate and alternate delegate for each 2,000 active resident and fellow physician members of the AMA, as recorded by the AMA on December 31 of each year.

2.4.2.1 Effective Date. In January of each year, the AMA shall notify the chair of the Resident and Fellow Section Governing Council and the Director of the Resident and Fellow Section of the number of seats in the House of Delegates to which the Resident and Fellow Section is entitled. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year.

2.4.3 Election. Resident and fellow sectional delegates and alternate delegates shall be elected by the Resident and Fellow Section in accordance with rules adopted by the Section and approved by the Board of Trustees. Sectional delegates and alternate delegates shall be elected at the Business Meeting of the Resident and Fellow Section held in conjunction with the Interim Meeting of the House of Delegates. Sectional delegates and alternate delegates shall assume office at the subsequent meeting of the House of Delegates.

2.4.4 Credentialing. The chair of the Resident and Fellow Section Governing Council or director of the Resident and Fellow Section, or their designee, shall provide the AMA Office of House of Delegates Affairs the names and contact information of the resident and fellow sectional delegates and alternate delegates elected in accordance with 2.4.3. Credentialing of delegates and alternate delegates must occur at least 45 days prior to each meeting of the House of Delegates. These appropriately identified individuals shall be duly credentialed for that meeting only.

2.4.5 Term. Resident and fellow sectional delegates and alternate delegates shall be elected for one-year terms.

2.4.6 Vacancies. A resident or fellow who fills a vacancy for a resident and fellow sectional delegate or alternate delegate before the credentialing deadline must be elected by the Resident and Fellow Section and shall assume office immediately after ~~s~~election and serve for the remainder of the term.

2.4.7 Resident and Fellow Sectional Delegate Seating. Each resident and fellow sectional delegate shall be seated with the physician's endorsing society or organization. In the case where a delegate has been endorsed by multiple entities, the delegate must choose, prior to the election, with which delegation the delegate wishes to be seated. Alternate sectional delegates, temporary delegates, or temporary alternate delegates shall be

assigned to the original resident and fellow sectional delegate's seat location during the time they are seated for the original delegate.

2.5 Speaker and Vice Speaker Additional Delegates. Upon election of the Speaker and Vice Speaker of the House of Delegates from among the members of the House of Delegates, the organizations represented by the delegates elected to be Speaker and Vice Speaker of the House of Delegates shall be entitled to an additional delegate for the term of service of the Speaker and Vice Speaker. The additional delegates so selected shall have the full rights and privileges of delegates in the House of Delegates.

2.5.1 Rights and Privileges. Upon their election, the Speaker and Vice Speaker shall continue to be members of the House of Delegates, with all of the rights and privileges of members of the House of Delegates. They shall be entitled to vote in the House of Delegates. The Speaker and Vice Speaker, as members of the House of Delegates, shall be eligible to be nominated for re-election to the office of Speaker and Vice Speaker of the House of Delegates.

2.5.2 Term. The delegates selected pursuant to this bylaw to serve during the term of service of the Speaker and Vice Speaker shall serve one-year terms consistent with the term of the Speaker and Vice Speaker. The organization represented by the delegate shall determine the tenure of the individual selected to serve.

2.6 Other Delegates and Alternate Delegates. Each of the following is entitled to a delegate and an alternate delegate: AMA Sections; the Surgeons General of the United States Army, United States Navy, United States Air Force, and United States Public Health Service; the Chief Medical Director of the Department of Veterans Affairs; the National Medical Association; the American Medical Women's Association; the American Osteopathic Association; and professional interest medical associations granted representation in the House of Delegates.

2.6.1 Credentialing. The president, chief executive officer, AMA Section chair or director, or other authorized individual of each entity described in Bylaw 2.6 shall provide the AMA Office of House of Delegates Affairs with the names and contact information of their respective delegate and alternate delegate at least 45 days prior to each meeting of the House of Delegates. These appropriately identified individuals shall be duly credentialed for that meeting only.

2.6.2 Term. Delegates and alternate delegates from these entities shall be selected for two-year terms, and shall assume office on the date set by the entity.

2.6.2.1 Resident/Fellow Physician and Medical Student Delegates. These entities may designate their delegate and/or alternate delegate seat to be filled by a resident/fellow physician member or a medical student member.

2.6.2.1.1 Term. Such resident/fellow physician or medical student delegate or alternate delegate shall serve for a one-year term.

2.6.2.1.2 No Restriction on Selection. Nothing in this bylaw shall preclude a resident/fellow physician or medical student member from being selected to fill a full two-year term as a delegate or alternate delegate from a specialty association as provided in Bylaw 2.6.2.

2.6.3 Vacancies. The delegate or alternate delegate selected to fill a vacancy before the credentialing deadline shall assume office immediately after selection and serve for the remainder of that term.

2.7 Ex Officio Members. The current Officers (except Speaker and Vice Speaker), the Past Presidents, Past Trustees of the AMA, and the Chairs of Councils of the AMA who are not delegates shall be ex officio members of the House of Delegates.

2.7.1 Rights and Privileges. Ex officio members have the right to speak and debate on the floor of the House of Delegates, but do not have the right to introduce business, introduce an amendment, make a motion, or vote.

2.8 Additional Alternate Delegates.

2.8.1 Constituent Association President. The current president of a constituent association may also be credentialed as an additional alternate delegate at the discretion of each constituent association.

2.8.2 National Medical Specialty Society or Professional Interest Medical Association President. The current president of a national medical specialty society or a professional interest medical association may also be credentialed as an additional alternate delegate at the discretion of each national medical specialty society or professional interest medical association.

2.9 Official Observer. National organizations may apply to the Board of Trustees for official observer status in the House of Delegates. Applicants must demonstrate compliance with guidelines for official observers adopted by the House of Delegates, and the Board of Trustees shall make a recommendation to the House of Delegates concerning the application. The House of Delegates will make the final determination on the conferring of official observer status.

2.9.1 Rights and Privileges. Organizations with official observer status are invited to send one representative to observe the actions of the House of Delegates at all meetings of the House of Delegates. Official observers have the right to speak and debate on the floor of the House of Delegates upon invitation from the Speaker. Official observers do not have the right to introduce business, introduce an amendment, make a motion, or vote.

2.10 Temporary Delegates and Alternate Delegates.

2.10.1 Temporary Delegates. The credentialing authority of any entity represented in the House of Delegates may credential a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.1 When there is no delegate credentialed by the 45-day credentialing deadline, a delegate who was appropriately selected via the entity's rules may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.2 When there is no appropriately selected delegate available an alternate delegate may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.3 When there is no appropriately selected alternate delegate available a temporary alternate delegate may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.4 Temporary delegates must be credentialed the day before an AMA election in order to vote in that election.

2.10.2 Temporary Alternate Delegates. The credentialing authority of any entity represented in the House of Delegates may credential a temporary alternate delegate, who shall be eligible to serve at that meeting only.

2.10.2.1 When there is no alternate delegate credentialed by the 45-day credentialing deadline, an alternate delegate who was appropriately selected via the entity's rules may be credentialed as a temporary alternate delegate for that meeting only.

2.10.2.2 When there is no appropriately selected alternate delegate available, a member of the entity who is also an AMA member may be credentialed as a temporary alternate delegate, who shall be eligible to serve at that meeting only.

2.10.2.3 Temporary Medical Student Regional Alternate Delegate. The credentialing authority for the Medical Student Section may credential a member of the Medical Student Section who has a written endorsement from their constituent association and who is from the same Medical Student Region as the absent alternate delegate as a medical student regional temporary alternate delegate. This individual shall be eligible to serve at that meeting only.

2.10.2.4 Temporary Resident and Fellow Sectional Alternate Delegate. The credentialing authority for the Resident and Fellow Section may credential a member of the Resident and Fellow Section who has a written endorsement from an entity represented in the House of Delegates as a resident and fellow sectional temporary alternate delegate. This individual shall be eligible to serve at that meeting only.

The following chart provides a link to the Bylaws that provide more details about each entity represented in the HOD:

Represented Entity	**Relevant Bylaw**	**Selection Mode**
Constituent Association	2.1.2	Selected
National Medical Specialty Society	2.2.2	Selected
Medical Student Regional Delegates and Alternates Delegates	2.3.3	Elected. Bylaw 7.3.4.3 specifies the timing of the elections.
Resident and Fellow Sectional Delegates and Alternate Delegates	2.4.3	Elected. Bylaw 7.1.6.2 specifies the timing of the election.
AMA Sections (MSS, RFS, YPS, SPS, APS, OMSS, IMGS, UMAS, IPPS, WPS, PPPS, LGBTQ+ Section)	2.6	Election (with election method and mechanism for filling vacancies contained in the rules of each Section as approved by the Board of Trustees).
Federal Services	2.6	Selected
National Medical Association	2.6	Selected
American Medical Women's Association	2.6	Selected
American Osteopathic Association	2.6	Selected
Professional Interest Medical Association	2.6	Selected

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

CEJA Report 04-A-26

Subject: Carceral Systems and Practices in Behavioral Health Emergency Care

Presented by: Rebecca Brendel, MD, Chair

Policy D-345.970(3), "Carceral Systems and Practices in Behavioral Health," was adopted at the 2025 AMA Annual Meeting, and directs the following:

> 3. Our AMA asks the Council on Ethical and Judicial Affairs to study this topic to provide clearer guidance for healthcare professionals regarding interactions with law enforcement while caring for patients and shackling of youth and adults in carceral custody, with particular attention to the removal of.

The medical care of persons in legal custody presents a range of complex ethical considerations for physicians and other health professionals. When caring for individuals in legal custody, physicians may face competing obligations arising from institutional circumstances such as security requirements or law enforcement involvement.

In response to the directive in D-345.970(3), the Council on Ethical and Judicial Affairs (CEJA) is studying these issues to determine whether additional guidance in the AMA *Code of Medical Ethics* is warranted. A forthcoming Council report will examine the ethical considerations associated with the treatment of persons in legal custody.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

CEJA Report 06-A-26

Subject: Judicial Function of the Council on Ethical and Judicial Affairs – Annual Report

Presented by: Rebecca Brendel, MD, Chair

At the 2003 Annual Meeting, the Council on Ethical and Judicial Affairs (CEJA) presented a detailed explanation of its judicial function. This undertaking was motivated in part by the considerable attention professionalism has received in many areas of medicine, including the concept of professional self-regulation.

CEJA has authority under the Bylaws of the American Medical Association (AMA) to disapprove a membership application or to take action against a member. The disciplinary process begins when a possible violation of the Principles of Medical Ethics or illegal or other unethical conduct by an applicant or member is reported to the AMA. This information most often comes from statements made in the membership application form, a report of disciplinary action taken by state licensing authorities or other membership organizations, or a report of action taken by a government tribunal.

The Council rarely re-examines determinations of liability or sanctions imposed by other entities. However, it also does not impose its own sanctions without first offering a hearing to the physician. CEJA can impose the following sanctions: applicants can be accepted into membership without any condition, placed under monitoring, or placed on probation. They also may be accepted, but be the object of an admonishment, a reprimand, or censure. In some cases, their application can be rejected. Existing members similarly may be placed under monitoring or on probation, and can be admonished, reprimanded or censured. Additionally, their membership may be suspended or they may be expelled. Updated rules for review of membership can be found at https://www.ama-assn.org/governing-rules.

Beginning with the 2003 report, the Council has provided an annual tabulation of its judicial activities to the House of Delegates. In the appendix to this report, a tabulation of CEJA's activities during the most recent reporting period is presented.

11	Members placed on Probation/Monitoring during reporting interval
8	Members placed on Probation without reporting to Data Bank
12	Probation/Monitoring concluded satisfactorily during reporting interval
0	Memberships suspended due to non-compliance with the terms of probation
30	Physicians on Probation/Monitoring at any time during reporting interval who paid their AMA membership dues
9	Physicians on Probation/Monitoring at any time during reporting interval who did not pay their AMA membership dues

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Opinion 01-A-26

Subject: Amendment to Opinion 1.1.1 "Patient-Physician Relationships"

Presented by: Rebecca Brendel, MD, Chair

At the 2025 Interim Meeting, the American Medical Association House of Delegates adopted the recommendations of Council on Ethical and Judicial Affairs Report 01-I-25, "Amendment to Opinion 1.1.1 "Patient-Physician Relationships." The Council issues this Opinion, which will appear in the next version of AMA PolicyFinder and the online edition of the *Code of Medical Ethics*.

E-1.1.1 – Patient-Physician Relationships

The practice of medicine, and its embodiment in the clinical encounter between a patient and a physician, is fundamentally a moral activity that arises from the imperative to care for patients and to alleviate suffering. The relationship that emerges between a patient and a physician must be based on trust. The physician's obligation to be trustworthy entails additional ethical duties such as a commitment to act for the good of patients; to uphold respect for patients as persons; to develop good communication skills; and to be professionally competent. This trust is fostered by physicians' ethical responsibilities to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare. When external influences negatively impact this trust, or the patient-physician relationship directly, physicians individually and collectively should advocate for changes to ameliorate the situation and promote a more hospitable environment in which patient-physician relationships may flourish.

A patient-physician relationship commences when a physician begins to serve a patient's medical needs. The contexts that may lead to a patient-physician relationship vary: they generally occur as a response to a request by a patient or a patient's surrogate, but can also include certain contractual, legally mandated, or emergency settings without the explicit request or consent of the patient.

While the patient-physician relationship may involve one patient and one physician in today's complex health care system, such relationships often involve multiple members of a care team, patient family members and surrogates. The core values of the patient-physician relationship, however, remain unchanged. How these values are implemented will depend on many factors, including the setting, the needs of the patient, the duration of the relationship, and the training, expertise, and experience of the physician, and will necessarily reflect the myriad ways that

* Opinions of the Council on Ethical and Judicial Affairs will be placed on the Consent Calendar for informational reports, but may be withdrawn from the Consent Calendar on motion of any member of the House of Delegates and referred to a Reference Committee. The members of the House may discuss an Opinion fully in Reference Committee and on the floor of the House. After concluding its discussion, the House shall file the Opinion. The House may adopt a resolution requesting the Council on Ethical and Judicial Affairs to reconsider or withdraw the Opinion.

patients and physicians interact. While every patient-physician relationship will be different and will change over time, the fundamental importance of establishing and sustaining trust through respect for persons, good communication, and professional competency will always be crucial at every layer, node, and time of the relationship. It is the duty of physicians, therefore, to uphold these values and support patients and the primacy of the patient-physician relationship to the best of their ability in all practice settings and at all times. (I, II, III, V, VI, VIII, IX)

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Opinion 02-A-26

Subject: Research Involving Pregnant and Lactating Individuals

Presented by: Rebecca Brendel, MD, Chair

At the 2025 Interim Meeting, the American Medical Association House of Delegates adopted the recommendations of Council on Ethical and Judicial Affairs Report 03-I-25, "Ethical Impetus for Research in Pregnant and Lactating Individuals." The Council issues this Opinion, which will appear in the next version of AMA PolicyFinder and the online edition of the *Code of Medical Ethics*.

E-7.3.4.1 Research Involving Pregnant and Lactating Individuals

Research involving pregnant and lactating individuals, including but not limited to, research regarding interventions intended to benefit pregnant or lactating individuals and/or their fetuses or nursing infants, must balance the health and safety of individuals who participate and the well-being of their fetuses or nursing infant against the desire to develop new and innovative therapies. Although it is important to carefully consider potential fetal risks involved when pregnant and lactating individuals participate in research, it is critical to realize that large scale exclusion from participation by these individuals has also precluded potential benefits and in some cases resulted in harm for this group. The paucity of data on safe and effective medical treatment during pregnancy and breastfeeding has resulted in physicians and patients choosing between pursuing medical interventions with uncertain risks to themselves and their fetuses or nursing infants, or foregoing the interventions altogether, which might itself cause harm due to undertreatment of medical conditions.

Understanding both the potential risks of participation and of non-participation, physicians conducting research must obtain the informed, voluntary consent of pregnant or lactating individuals, and adhere to general principles for ethical conduct of research as in all human participant's research. In addition, physicians conducting research should:

(a) Include pregnant and lactating individuals in research for which they would otherwise be eligible in order to establish a greater knowledge base, produce relevant data, and promote respect for individuals.

(b) Consider excluding pregnant and lactating individuals only when a study poses a substantial risk of significant harm to them or their fetuses or nursing infants, and:

* Opinions of the Council on Ethical and Judicial Affairs will be placed on the Consent Calendar for informational reports, but may be withdrawn from the Consent Calendar on motion of any member of the House of Delegates and referred to a Reference Committee. The members of the House may discuss an Opinion fully in Reference Committee and on the floor of the House. After concluding its discussion, the House shall file the Opinion. The House may adopt a resolution requesting the Council on Ethical and Judicial Affairs to reconsider or withdraw the Opinion.

© 2026 American Medical Association. All rights reserved.

i. specify why the research excludes pregnant and lactating individuals;

ii. seek alternative research methodologies to rectify gaps in knowledge.

(c) Where scientifically appropriate and available, base studies that include pregnant and lactating individuals on well-designed, ethically sound, existing research with nonhuman animals or nongravid human participants to better assess potential risks.

(d) Minimize risks to the fetus or nursing infant to the greatest extent possible, especially when the research is not conducted primarily to investigate potential benefit for fetuses or nursing infants, but rather for the development of important biomedical knowledge that cannot be obtained by any other means. (I, III, V)

REPORT 2 OF THE COUNCIL ON MEDICAL SERVICE (A-26)
Study of the Federal Employees Health Benefits Program (FEHBP)

EXECUTIVE SUMMARY

At the 2025 Annual Meeting, the House of Delegates adopted Policy D-185.906, which directs the American Medical Association (AMA) to conduct a thorough study of the Federal Employees Health Benefits Program (FEHBP) to understand its successes, failures, strengths and weaknesses, and compare it with AMA Policy H-165.881 to see whether it might be an appropriate model to achieve private and public health system reform. This report, which is presented for information to the House of Delegates, discusses key features of the FEHBP, its role in health reform efforts, and relevant AMA policy.

The FEHBP provides health insurance coverage to more than eight million civilian federal workers, retirees, and their dependents (non-federal employees are ineligible) and is the largest employer-sponsored insurance program in the country. For decades, the FEHBP has been viewed by many as a highly successful program that offers robust health plan competition and choice. Other advantages include its comprehensive benefits package, generous federal contributions, and continuity of coverage into retirement. Limitations include the FEHBP's high and increasing costs as well as its limited eligibility.

Although various health reformers from across the political spectrum have pointed to the FEHBP as a model, health system reform proposals that are based on the FEHPB have diminished in recent years, perhaps due to the availability of exchange plan coverage under the Affordable Care Act and/or because the program is less competitive and more costly than it once was. The FEHBP is largely consistent with Policy H-165.881 as well as AMA policies emphasizing pluralism, choice, competition, and other essential health reform principles. Of note, AMA Policy H-165.846 supports using the FEHBP as a standard for assessing meaningful coverage. The Council emphasizes that this is only one such standard, and that the principles and guidelines embedded throughout AMA policy form the basis by which the AMA will continue to evaluate an array of health reform approaches, including proposals that may build upon the FEHBP or incorporate some of its features. That said, we do not necessarily view the FEHBP as the most promising solution to achieving universal coverage, primarily due to the program's limited eligibility and rising costs. We also believe that allowing the public to access FEHBP coverage would severely disrupt the program's risk pool, which has been key to its success over the years. Because the Council did not identify gaps in existing AMA policy that would preclude assessment of future reform proposals that are based in part or in full on the FEHBP, we make no policy recommendations at this time.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 2-A-26

Subject: Study of the Federal Employees Health Benefits Program (FEHBP)

Presented by: Betty Chu, MD, MBA, Chair

At the 2025 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted Policy D-185.906, "Study of the Federal Employee Health Benefit Plan [sic] (FEHBP)," which asks the following:

> Our AMA will conduct a thorough study of the FEHBP to understand the successes and failures, strengths and weaknesses of the program and determine how the FEHBP compares with AMA policy H-165.881 to see whether it might be an appropriate model to achieve private and public health system reform, with a report back to the A-26 Meeting of our House of Delegates.

Under Policy H-165.881, our AMA will continue to actively pursue strategies for expanding patient choice in the private sector by advocating for greater choice of health plans by consumers, equal-dollar contributions by employers irrespective of an employee's health plan choice, and expanded individual selection and ownership of health insurance where plans are truly accountable to patients. This report, which is presented as information to the HOD, discusses the FEHBP and its advantages, limitations, and consistency with AMA health reform policy.

BACKGROUND

The FEHBP provides health insurance coverage to approximately 8.2 million civilian federal workers, retirees, and their dependents, or roughly 2.4 percent of the U.S. population.[1] As such, it is the largest employer-sponsored insurance (ESI) program in the country.[2] Established in 1960, in an era when many large private employers had begun offering health benefits, the intent of the FEHBP was to provide better benefits to federal employees, help them understand and compare plan options, and organize annual enrollment.[3]

Administered by the U.S. Office of Personnel Management (OPM), the FEHBP is governed by federal law that authorizes OPM to contract with qualified health insurers to offer a variety of plan types, primarily including fee-for-service (FFS) plans (most of which have a preferred provider organization [PPO] component), health maintenance organization (HMO) plans, and high-deductible health plans.[4] Similar to other private health plans, FEHBP offerings must comply with Affordable Care Act (ACA) benefits rules and requirements regarding minimum essential benefits, prohibitions on annual and lifetime limits, and other consumer protections enshrined in the 2010 law. Even so, the FEHBP is subject to fewer Department of Health and Human Services regulations than ACA marketplace, Medicare, or Medicaid plans and likewise receives less attention from Congress, interest groups, and health policy stakeholders.[5]

The basic rules of the FEHBP are outlined in federal statute and regulations, which give OPM relatively broad authority to administer the program and contract with plans.[6] In a typical cycle, OPM sends a "call letter" to insurers in the spring and then meets with each carrier to negotiate

© 2026 American Medical Association. All rights reserved.

premiums, benefits, and payments for the next plan year.[7] The administrative structure of the FEHBP has been described as "diffuse," in that OPM works in coordination with the many health plans with which it contracts as well as more than a hundred federal agency employment offices.[8] Enrollment in the FEHBP is managed by federal agency personnel offices that oversee participation in accordance with OPM rules and procedures. The intent is to help workers enroll in coverage; unlike other federal health programs, OPM as the administrator does not engage in public purchasing or provider rate setting.[9]

Like other types of ESI, both the federal government and enrollees contribute towards the costs of FEHBP coverage. The federal government's share of premiums, known as the "fair share" formula and governed by statute, is intended to keep federal contributions consistent, regardless of the plan selected by an employee.[10] Generally, the government pays about 72 percent of the average premium across all plans (sometimes more, sometimes less) and will pay no more than 75 percent of a particular plan's premium.[11]

Premiums are designed to cover health care costs, plans' administrative expenses and profits, and OPM's administrative costs.[12] In reviewing health plans to be offered under the FEHBP, OPM considers the ability of plans to provide reasonable access to and choice of primary and specialty medical care throughout the service area. Participating health plans must be open to all workers, and no one can be denied coverage due to pre-existing conditions. OPM policy states that all participating carriers must be committed to the following:

1. Ensuring enrollees have access to good health care benefits;
2. Striving to keep premiums affordable;
3. Ensuring enrollees have access to quality provider networks;
4. Providing competitive health care choices for consumers;
5. Strengthening information for consumers so they can be more involved and responsible for their own health care decisions;
6. Being well managed and financially secure;
7. Providing efficient and effective contract administration;
8. Ensuring the timely and accurate submission of actuarial data and financial accounting information;
9. Maintaining compliance with laws, regulations, contract requirements and administrative guidance at all times; and
10. Guaranteeing that enrollee and government resources are protected.[13]

Importantly, eligibility for the FEHBP is limited to civilian federal employees, federal retirees, White House staff, and cabinet members. Per the ACA, members of Congress and their staffs are required to purchase coverage through an ACA exchange in order to receive a government contribution. Similar to other ESI programs, FEHBP-eligible individuals can enroll themselves and their family members in FEHBP plans within 60 days of being hired; during an open enrollment period; or within a specific timeframe of experiencing a qualified live event, such as a marriage, divorce or the birth or adoption of a new baby.[14] According to OPM, the FEHBP enrollee population reflects the demographics of the federal workforce: the median age of active employees is 47; approximately 42 percent of enrollees in the FEHBP and Postal Service Health Benefits Program are over the age of 50; and around 11 percent are younger than 30. When retiree demographics are considered together with the active workforce, the average age of FEHBP enrollees is around 60.[15]

Advantages of the FEHBP

Policy D-185.906 directed the AMA to study the successes and strengths of the FEHBP, which we describe as "advantages." For decades, the FEHBP has been viewed by many as a highly successful program. When compared to other types of coverage, its advantages include the following:
Robust, structured choice of plans: The FEHBP provides a broad range of plan options to enrollees, generally between 10 and 20 plans in each geographic market,[16] and—in 2026—offers a total of 132 plan options from 47 participating insurers.[17] Despite having a catalogue of available plans that is more robust than plan choices available at many private workplaces, only about five percent of FEHBP enrollees opt to change plans in a given year.[18] Moreover, the FEHBP has become more concentrated over the years such that, in 2015, Blue Cross Blue Shield (BCBS) had become the largest carrier for FEHBP enrollees in 98 percent of all U.S. counties.[19] This concentration translates to decreased competition and gives BCBS plans considerable influence when it comes to pricing of FEHBP plans. Of note, in 2025 approximately two-thirds of federal workers were enrolled in BCBS plans.[20]

Comprehensive benefits package and patient protections: Most FEHBP plans offer comprehensive coverage, including preventive services at no cost when received from a preferred provider. Notably, GLP-1 medications are currently covered by FEHBP. Additionally, there are no waiting periods or coverage restrictions based on pre-existing conditions.

Generous federal contributions: Federal contributions towards FEHBP plans are not based on employee income. Rather, the federal government pays 72 to 75 percent of the average premium across all plans with employees responsible for the remainder. In comparison, according to KFF's Employer Health Benefits Survey (which includes data from both public and private employers) in 2025 employers contributed on average 84 percent of single coverage premiums and 74 percent of family plan premiums.[21]

Continuity of coverage: Unlike most private employer plans, the FEHBP provides continuity of coverage to federal workers and retirees. FEHBP enrollees are able to maintain their coverage when transitioning to other federal jobs/agencies, and can continue FEHBP coverage into retirement. Because many private employers no longer offer retiree health coverage, continuity of coverage into retirement should be considered a particularly valuable FEHBP perk.

Less attention from Congress, regulators: Unlike other federal health programs, the FEHBP is somewhat insulated from policymakers and stakeholders and receives less attention from Congress and regulators than other federal health programs. In Congress, the program falls under the jurisdiction of the House Oversight and Accountability Committee and Senate Committee on Homeland Security and Government Affairs instead of the health and tax committees that oversee most Congressional health care matters.

Limitations of the FEHBP

Limitations of the FEHBP include the following:

High and Increasing costs: The main shortcoming of the FEHBP is that its health coverage is expensive, and costs are rising. In 2026, employees and retirees are expected to contribute 12.3 percent more, on average, towards their premiums after incurring a 13.5 percent increase in premium contributions in 2025.[22] The average premium increase overall in 2026 is 10.2 percent, down from 11.2 percent in 2025, while the federal contribution increased 9.2 percent in 2026, down from 10.1 percent in 2025.[23] The program's recent double-digit increases may generally be

higher than premium cost increases at many private firms, whose average premium contributions vary by firm size, industry, and other factors.

OPM has stated that premium increases this year are due in part to an aging workforce; the use of expensive prescription medications, especially GLP-1 drugs; and increased behavioral health spending. [24,25] Health policy experts have also highlighted higher hospital prices as a contributor.[26] OPM states that it routinely compares FEHBP premium costs to other large employers, although detailed benchmarking was not included in its benefits highlights for the current plan year. In last year's benefits highlights, OPM asserted that the FEHBP's overall average premium increase (11.2 percent) was similar to premium increases at comparable large employers, citing the California Public Employees' Retirement System —the second largest purchaser of public employee health benefits (after the federal government)—which saw average premiums increase by 10.8 percent.[27] OPM also cited the Large Employer Health Strategy Survey, conducted by the Business Group on Health, which found that large employers projected an average premium increase of eight percent for plan year 2025.[28]

Limited eligibility: An obvious but important drawback of the FEHBP as a reform model is its eligibility parameters, which limit enrollment to federal employees and retirees and their dependents, thus ensuring the overall stability of its risk pool.

Choice overload: Too much choice and not enough information to help guide enrollee decision-making may make it difficult for some federal employees to understand how different plans could impact their costs and access to care. Choice overload has also been cited as a challenge in other insurer markets, including ACA exchanges.

Susceptibility to changes in administration priorities: Given the White House's oversight of federal agencies, including OPM, the FEHBP may be more susceptible to changes intended to align the program with administration priorities. For example, coverage for some gender-affirming care for people of all ages was removed from the FEHBP following an executive order by President Trump.[29]

ROLE OF THE FEHBP IN HEALTH REFORM EFFORTS

Various health reformers have pointed to the FEHBP as a model almost since its inception, although considerations of the program were more frequent during the pre-ACA era and less so in recent years. Of note, proposals from across the political spectrum have been based in part on the FEHBP's framework, including the *Healthy Americans Act*—proposed in 2007 and 2009 by Senators Wyden and Bennett to establish universal health care—and the *FEHBP for All Act*, first introduced in 2011 by Representative Darrell Issa to repeal the ACA and open up the FEHBP to everyone. Importantly, the Issa bill kept the traditional FEHBP program intact to prevent adverse selection from negatively affecting the risk pool.

The FEHBP as a Model for National Health Insurance

In the 1990s, calls for the public to be able to purchase the same health coverage as members of Congress, who prior to the ACA were typically enrolled in the FEHBP, led to an array of proposals to open the FEHBP to the public and treat it as national health insurance. Back then, the FEHBP was widely praised as providing excellent coverage at low administrative cost. Not surprisingly, federal employees and their unions vehemently opposed such legislation, which they believed would significantly increase their premium costs. Moreover, the complexities involved in implementing such proposals became apparent when, for example, the OPM director at the time

commented that the FEHBP is "a wonderful working model, but it cannot be instantly duplicated."[30] More modest proposals to open the FEHBP to uninsured people and/or small businesses were also debated, and President Clinton's health package—released in 1995—included a provision allowing small businesses to buy into the program.[31]

The FEHBP as a Model for Restructuring Medicare

Also in the 1990s, several proposals to restructure the Medicare program based in part on the FEHBP were considered by various stakeholders because, at that time, the FEHBP was viewed as more successful than Medicare at controlling spending while offering robust choice and achieving high participant satisfaction.[32] In 1995, Stuart Butler and a colleague from the Heritage Foundation proposed reforming Medicare by adopting the FEHBP's choice and competition features and by, among other things, transforming it from an entitlement to a defined contribution program (though the FEHBP is not strictly a defined contribution model) and providing vouchers that enrollees could put towards a private plan of their choosing.[33] A few years later, a provision in the Balanced Budget Act of 1997, called Medicare+Choice, established Medicare Part C by authorizing the participation of private plans, thus launching the initial phase of what is now known as Medicare Advantage (MA).[34] The Medicare Modernization Act of 2003 further modified plan payments in Part C and established the Part D prescription drug program, which also incorporated the FEHBP's "managed competition" structure.[35,36]

The FEHBP as a Model for the ACA, Public Option Proposals

The idea of the FEHBP as a model for national health insurance was also debated in the years leading up to passage of the ACA, although some analysts cautioned against opening it up to non-federal workers in order to prevent disrupting the program's stable risk pool. In the end, President Obama rejected calls to open the FEHBP to the public in favor of carefully-designed insurance exchanges.[37]

The ACA also adopted some protections that had previously been provided to FEHBP enrollees, such as the prohibition on coverage restrictions based on health status. In 2009, a spinoff of the FEHBP that would authorize OPM with overseeing national health plans (outside of the FEHBP) was discussed as a potential replacement for the public option that was included in legislation passed by the House of Representatives. However, neither a public option nor an FEHBP spinoff-type option was included in the Senate bill or final ACA package.

Leveraging health plan FEHBP participation to address counties lacking individual market insurers (known as bare counties) was a key component of a bipartisan proposal to improve the ACA in 2017. This proposal would have required, as a condition of continued participation in the FEHBP, the two largest FEHBP insurers in a county to offer at least one silver plan through the federal exchange in all counties that would otherwise be bare.

In an effort to build upon the ACA's existing structure, a new coverage option for exchanges that would allow the public to enroll in the FEHBP has also been suggested.[38] Perhaps due to feasibility and/or cost concerns as well as existing FEHBP eligibility restrictions, such proposals have not gained much traction. Instead, most proposals put forward in Congress to establish a public option on ACA exchanges have been tied to Medicare or Medicaid payment rates in order to keep costs down, since the intent of a public option is to offer good coverage that costs less than other competing plans. Likewise, at the time this report was written, none of the states implementing a public option had adopted an approach that would allow the public to enroll in either the FEHBP or state employee health plan. Instead, public option laws in Washington, Colorado, and Nevada aim

to lower premiums and decrease overall health costs by either capping provider payments (Washington), establishing premium reduction targets (Nevada), or both—setting premium targets with the authority to reduce provider payments if the targets are not met (Colorado).[39] Several other states have considered various public option proposals and may, in the future, explore leveraging their state's employee benefits plan to increase available exchange plan offerings.

AMA POLICY

Longstanding policy (Policy H-165.846) has supported using federal guidelines, such as those under the FEHBP, as a standard for assessing meaningful health insurance coverage. As previously noted, Policy H-165.881 states that our AMA will continue to actively pursue strategies for expanding patient choice in the private sector by advocating for greater choice of health plans by consumers, equal-dollar contributions by employers irrespective of an employee's health plan choice, and expanded individual selection and ownership of health insurance where plans are truly accountable to patients. Additional policies referencing the FEHBP include:

- Policy H-165.825, which supports requiring the largest two FEHBP insurers in counties that lack a marketplace plan to offer at least one silver-level marketplace plan as a condition of FEHBP participation. To clarify, this policy would not allow individuals to buy-in to FEHBP plans. Rather, individuals in otherwise bare counties would have the choice of at least two silver plans that abide by ACA requirements, offered by the two largest FEHBP insurers in their county.

- Policy H-180.961, which encourages the National Association of Insurance Commissioners to develop standards and a uniform disclosure format applicable to health plans and policies offered in the general insurance market, taking into consideration the benefit definitions and disclosure format used by plans participating in the FEHBP.

Policies addressing ESI, including Policies H-165.828 and H-165.843, are also relevant to the FEHBP as it is the largest ESI provider in the country. For decades, AMA policy has advocated for the promotion of individually selected and owned health insurance using refundable and advanceable tax credits that are inversely related to income so that patients with the lowest incomes receive the largest credits (e.g., Policies H-165.920 and H-165.865). Additional AMA health reform policies relevant to this report include:

- Policy H-165.838, which states that insurance coverage options offered in a health insurance exchange should be self-supporting; have uniform solvency requirements; not receive special advantages from government subsidies; include payment rates established through meaningful negotiations and contracts; not require provider participation; and not restrict enrollees' access to out-of-network physicians. This policy further commits the AMA to achieving health reforms that include numerous components, including health insurance coverage for all Americans; insurance market reforms that expand choice of affordable coverage and eliminate denials for pre-existing conditions; and assurance that health care decisions will remain in the hands of patients and their physicians, not insurance companies or government officials.

- Policy H-165.823, which advocates for a pluralistic health care system—which may include a public option—that focuses on increasing equity and access, is cost-conscious, and reduces burden on physicians. This policy establishes standards for supporting a public option and for supporting auto-enrollment in health insurance coverage.

- Policy H-165.985, which reaffirms core AMA health reform principles, including free market competition; freedom of patients to select and change physicians or health plans; freedom of physicians to choose whom they will serve, to establish their fees at a level which they believe fairly reflect the value of their services, and to participate or not participate in a particular plan or method of payment; and full and clear information to consumers on the provisions and benefits offered by alternative medical care and health benefit plans, so that the choice of a source of medical care delivery is an informed one.

DISCUSSION

Although the FEHBP has often been cited as a model for providing robust health plan competition and choice at reasonable cost, the Council finds that expanding the program broadly is not a viable strategy for increasing coverage and patient choice. Proposals incorporating the FEHBP in health system reforms have diminished in recent years, possibly due to the availability of exchange plan coverage under the ACA and/or because the FEHBP is less competitive and more costly than it once was. In comparing the FEHBP to other types of coverage, the Council found that the structure of the FEHBP does not substantially differ from the ACA marketplace or large employer plans, though the catalog of FEHBP plan options may be larger in some areas, its risk pool may be more stable than that of the ACA market, and FEHBP coverage may be continued into retirement. Unlike the 1960s when the FEHBP was created, most health plans must now meet certain standards and requirements, which has narrowed the differences between the FEHBP and other coverage types.

FEHBP consumer protections and benefit packages are generally comprehensive, as evidenced by the FEHBP's coverage of GLP-1 medications for obesity; however, they are not necessarily more generous than some large private employer offerings. In terms of cost, true comparisons between the FEHBP and other types of coverage would require detailed analysis at the local level; however, the Council points to recent double-digit increases in federal worker premium costs. Of note, the Council also recognizes that significant federal workforce reductions since 2025 may impact the FEHBP as soon as next year in ways that are not yet understood. For example, it is not clear how the FEHBP risk pool will be affected and whether some carriers may opt to exit the program in areas like Washington, DC that have experienced substantial decreases in staffing.

The Council believes that the FEHBP is largely consistent with Policy H-165.881 as well as AMA policies emphasizing pluralism, choice, competition, and other essential health reform principles. In particular, the FEHBP provides a broad array of competing plan options and a standardized employer contribution, both of which encourage consumer choice and plan competition. That said, we do not necessarily view the FEHBP as the most promising solution to achieving universal coverage, primarily due to its limited eligibility and rising costs. Additionally, premium contributions for federal workers are not tied to their household incomes; rather, the federal government pays between 72 and 75 percent of worker premiums, amounts that do not increase or decrease based on income. This feature of the FEHBP could be viewed as inconsistent with AMA policy advocating for the use of tax credits that are inversely related to income, so that patients with the lowest incomes receive the largest credits.

After studying the FEHBP as a reform model and hearing from a program expert, the Council concluded that opening up the FEHBP to the public would seem unwise in that it would severely disrupt the program's stable risk pool, which has been one of the keys to its success over the years. Though an expanded FEHBP would provide generous coverage and a robust choice of plans, FEHBP plans are relatively expensive and the costs of an expanded or open program would be high, potentially making it less affordable. That said, future reforms may continue to adopt certain features of the FEHBP, just as the ACA, MA, and Part D programs have done.

The Council also underscores that AMA Policy H-165.846—first adopted in 1997 and most recently reaffirmed in 2019—supports using the FEHBP as a standard for assessing meaningful coverage. We emphasize that this is only one such standard, and that the principles and guidelines embedded throughout the AMA's large compendium of policy form the basis by which the AMA will continue to evaluate and engage in advocacy around a broad array of health reform approaches, including proposals that may build upon the FEHBP or incorporate some of its features.

CONCLUSION

Having decided against recommending new AMA policy supportive of expanding eligibility for the FEHBP to non-federal workers—which would threaten that program's sustainability—the Council did not identify gaps in existing AMA policy that would preclude assessment of future reform proposals that are based in part or in full on the FEHBP. Therefore, the Council makes no policy recommendations at this time.

Council on Medical Service Report 2-A-26
Study of the Federal Employees Health Benefits Program (FEHBP)
Policy Appendix

Expanding Choice in the Private Sector H-165.881
Our American Medical Association (AMA) will continue to actively pursue strategies for expanding patient choice in the private sector by advocating for greater choice of health plans by consumers, equal-dollar contributions by employers irrespective of an employee's health plan choice and expanded individual selection and ownership of health insurance where plans are truly accountable to patients. (BOT Rep. 23, A-97; Reaffirmed BOT Rep. 6, A-98; Reaffirmation A-02; Reaffirmed: CMS Rep. 4, A-12; Reaffirmation: A-19)

Adequacy of Health Insurance Coverage Options H-165.846
1. Our AMA supports the following principles to guide in the evaluation of the adequacy of health insurance coverage options:
A. Any insurance pool or similar structure designed to enable access to age-appropriate health insurance coverage must include a wide variety of coverage options from which to choose.
B. Existing federal guidelines regarding types of health insurance coverage (e.g., Title 26 of the US Tax Code and Federal Employees Health Benefits Program [FEHBP] regulations) should be used as a reference when considering if a given plan would provide meaningful coverage.
C. Provisions must be made to assist individuals with low-incomes or unusually high medical costs in obtaining health insurance coverage and meeting cost-sharing obligations.
D. Mechanisms must be in place to educate patients and assist them in making informed choices, including ensuring transparency among all health plans regarding covered services, cost-sharing obligations, out-of-pocket limits and lifetime benefit caps, and excluded services.
2. Our AMA advocates that the Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) program be used as the model for any essential health benefits package for children.
3. Our AMA: (a) opposes the removal of categories from the essential health benefits (EHB) package and their associated protections against annual and lifetime limits, and out-of-pocket expenses; and (b) opposes waivers of EHB requirements that lead to the elimination of EHB categories and their associated protections against annual and lifetime limits, and out-of-pocket expenses. (CMS Rep. 7, A-07; Reaffirmation I-07; Reaffirmation A-09; Reaffirmed: Res. 103, A-09; Reaffirmation I-09; Reaffirmed: CMS Rep. 3, I-09; Reaffirmed: CMS Rep. 2, A-11; Appended: CMS Rep. 2, A-11; Reaffirmed in lieu of Res. 109, A-12; Reaffirmed: CMS Rep. 1, I-12; Reaffirmed: CMS Rep. 3, A-13; Reaffirmed in lieu of Res. 812, I-13; Reaffirmed: CMS Rep. 6, I-14; Reaffirmed: CMS Rep. 6, I-15; Appended: CMS Rep. 04, I-17; Reaffirmed in lieu of: Res. 101, A-19)

Medical Care for Patients with Low Incomes H-165.855
It is the policy of our American Medical Association that:
1. states be allowed the option to provide coverage to their Medicaid beneficiaries who are nonelderly and nondisabled adults and children with the current Medicaid program or with premium tax credits that are refundable, advanceable, inversely related to income, and administratively simple for patients, exclusively to allow patients and their families to purchase coverage through programs modeled after the state employee purchasing pool or the Federal Employee Health Benefits Program (FEHBP) with minimal or no cost-sharing obligations based on income. Children qualified for Medicaid must also receive Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) program benefits and have no cost-sharing obligations.

2. in order to limit patient churn and assure continuity and coordination of care, there should be adoption of 12-month continuous eligibility across Medicaid, Children's Health Insurance Program, and exchange plans.
3. to support the development of a safety net mechanism, allow for the presumptive assessment of eligibility and retroactive coverage to the time at which an eligible person seeks medical care.
4. tax credit beneficiaries should be given a choice of coverage, and that a mechanism be developed to administer a process by which those who do not choose a health plan will be assigned a plan in their geographic area through auto-enrollment until the next enrollment opportunity. Patients who have been auto-enrolled should be permitted to change plans any time within 90 days of their original enrollment.
5. state public health or social service programs should cover, at least for a transitional period, those benefits that would otherwise be available under Medicaid, but are not medical benefits per se.
6. as the nonelderly and nondisabled populations transition into needing chronic care, they should be eligible for sufficient additional subsidization based on health status to allow them to maintain their current coverage.
7. our American Medical Association encourages the development of pilot projects or state demonstrations, including for children, incorporating the above recommendations. (Modify Current HOD Policy)
8. our AMA should encourage states to support a Medicaid Physician Advisory Commission to evaluate and monitor access to care in the state Medicaid program and related pilot projects. (CMS Rep. 1, I-03; Reaffirmed in lieu of Res. 105, A-06; Reaffirmation I-07; Modified: CMS Rep. 1, A-12; Reaffirmed in lieu of Res. 101, A-13; Reaffirmed: CMS Rep. 02, A-16; Reaffirmation: A-18;Reaffirmed: Joint CMS/CSAPH Rep. 1, I-21; Reaffirmed: CMS Rep. 3, A-22; Reaffirmed: CMS Rep. 5, I-23)

Ensuring Marketplace Competition and Health Plan Choice H-165.825
Our AMA will: (1) support health plans offering coverage options for individuals and small groups competing on a level playing field, including providing coverage for pre-existing conditions and essential health benefits; (2) oppose the sale of health insurance plans in the individual and small group markets that do not guarantee: (a) pre-existing condition protections and (b) coverage of essential health benefits and their associated protections against annual and lifetime limits, and out-of-pocket expenses, except in the limited circumstance of short-term limited duration insurance offered for no more than three months; and (3) support requiring the largest two Federal Employees Health Benefits Program (FEHBP) insurers in counties that lack a marketplace plan to offer at least one silver-level marketplace plan as a condition of FEHBP participation. (CMS Rep. 03, A-18; Reaffirmed: CMS Rep. 01, I-20)

Defining Levels of Health Insurance Coverage H-180.961
Our AMA strongly encourages the National Association of Insurance Commissioners to develop standards and a uniform disclosure format applicable to health plans and policies offered in the general insurance market, taking into consideration the benefit definitions and disclosure format used by plans participating in the Federal Employees Health Benefits Plan program; and supports the enactment of federal and/or state legislation requiring the use by health plans of standardized uniform disclosure formats that have had appropriate input by medical organizations. (CMS Rep. 9, A-97; Reaffirmed: CMS Rep. 2, I-01; Reaffirmation I-07; Reaffirmed: CMS Rep. 01, A-17)

Health Insurance Affordability H-165.828

1. Our AMA supports modifying the eligibility criteria for premium credits and cost-sharing subsidies for those offered employer-sponsored coverage by lowering the threshold that determines whether an employee's premium contribution is affordable to the level at which premiums are capped for individuals with the highest incomes eligible for subsidized coverage in Affordable Care Act (ACA) marketplaces.
2. Our AMA supports legislation or regulation, whichever is relevant, to fix the ACA's "family glitch," thus determining the eligibility of family members of workers for premium tax credits and cost-sharing reductions based on the affordability of family employer-sponsored coverage and household income.
3. Our AMA encourages the development of demonstration projects to allow individuals eligible for cost-sharing subsidies, who forego these subsidies by enrolling in a bronze plan, to have access to a health savings account (HSA) partially funded by an amount determined to be equivalent to the cost-sharing subsidy.
4. Our AMA supports capping the tax exclusion for employment-based health insurance as a funding stream to improve health insurance affordability, including for individuals impacted by the inconsistency in affordability definitions, individuals impacted by the "family glitch" and individuals who forego cost-sharing subsidies despite being eligible.
5. Our AMA supports additional education regarding deductibles and cost-sharing at the time of health plan enrollment, including through the use of online prompts and the provision of examples of patient cost-sharing responsibilities for common procedures and services.
6. Our AMA supports efforts to ensure clear and meaningful differences between plans offered on health insurance exchanges.
7. Our AMA supports clear labeling of exchange plans that are eligible to be paired with a Health Savings Account (HSA) with information on how to set up an HSA.
8. Our AMA supports the inclusion of pregnancy as a qualifying life event for special enrollment in the health insurance marketplace.
9. Our AMA supports that the ACA eligibility firewall not apply to individuals offered employer-sponsored coverage whose household incomes are at or below 200 percent of the federal poverty level, so they can receive federal premium tax credits and cost-sharing assistance if they opt to enroll in a marketplace health plan as an affordable alternative to their employer-based plan.
10. Our AMA supports incrementally lifting the ESI firewall with continual monitoring and consideration of insurance marketplace stability, if and only if there is documentation that marketplace insurance pays sufficiently to ensure physician practice sustainability, and other relevant parameters, with the goal of maximizing the number of individuals able to freely choose the health insurance plan that is best for themselves and their families.
11. Our AMA supports any incremental lifting of the firewall must be paired with a pause to review the relevant parameters, and the ability to pause permanently, or reverse if disruptive effects are detected.
12. Our AMA advocates that physician payments by health insurers participating in the ACA marketplace be sustainable, reflect the full cost of practice and the value of the care provided, include inflation-based updates, and pay fair and equitable rates. (CMS Rep. 8, I-15; Reaffirmed in lieu of: Res. 121, A-16; Reaffirmation: A-17; Reaffirmed: CMS Rep. 09, A-19; Reaffirmed: CMS Rep. 02, A-19; Reaffirmed in lieu of: Res. 101, A-19; Reaffirmed: CMS Rep. 01, I-20; Reaffirmed: CMS Rep. 2, I-20; Modified: CMS Rep. 3, I-21; Appended: Res. 701, I-21; Reaffirmed: Res. 826, I-24; Appended: CMS Rep. 02, A-25)

Trends in Employer-Sponsored Health Insurance H-165.843
Our AMA encourages employers to:
a. promote greater individual choice and ownership of plans;
b. implement plans to improve affordability of premiums and/or cost-sharing, especially expenses for employees with lower incomes and those who may qualify for affordable care act marketplace plans based on affordability criteria, while promoting meaningful coverage and the application of vital consumer and provider protections, such as prompt pay and network adequacy requirements;
c. provide employees with user-friendly information regarding their eligibility for subsidized ACA marketplace plans based on their offer of employer-sponsored insurance;
d. provide employees with information regarding available health plan options, including the plan's cost, network breadth, and prior authorization requirements, which will help them choose a plan that meets their needs;
e. offer information and decision-making tools to assist employees in developing and managing their individual health care choices;
f. support increased fairness and uniformity in the health insurance market; and
g. promote mechanisms that encourage their employees to pre-fund future costs related to retiree health care and long-term care. (CMS Rep. 4, I-07; Reaffirmed: CMS Rep. 01, A-17; Modified: CMS Rep. 02, A-25)

Individual Health Insurance H-165.920
Our AMA:
(1) affirms its support for pluralism of health care delivery systems and financing mechanisms in obtaining universal coverage and access to health care services;
(2) recognizes incremental levels of coverage for different groups of the uninsured, consistent with finite resources, as a necessary interim step toward universal access;
(3) actively supports the principle of the individual's right to select a health insurance plan and actively support ways in which the concept of individually selected and individually owned health insurance can be appropriately integrated, in a complementary position, into the Association's position on achieving universal coverage and access to health care services. To do this, our AMA will:
(a) Continue to support equal tax treatment for payment of health insurance coverage whether the employer provides the coverage for the employee or whether the employer provides a financial contribution to the employee to purchase individually selected and individually owned health insurance coverage, including the exemption of both employer and employee contributions toward the individually owned insurance from FICA (Social Security and Medicare) and federal and state unemployment taxes;
(b) Support the concept that the tax treatment would be the same as long as the employer's contribution toward the cost of the employee's health insurance is at least equivalent to the same dollar amount that the employer would pay when purchasing the employee's insurance directly;
(c) Study the viability of provisions that would allow individual employees to opt out of group plans without jeopardizing the ability of the group to continue their employer sponsored group coverage; and
(d) Work toward establishment of safeguards, such as a health care voucher system, to ensure that to the extent that employer direct contributions made to the employee for the purchase of individually selected and individually owned health insurance coverage continue, such contributions are used only for that purpose when the employer direct contributions are less than the cost of the specified minimum level of coverage. Any excess of the direct contribution over the cost of such coverage could be used by the individual for other purposes;

(4) will identify any further means through which universal coverage and access can be achieved;
(5) supports individually selected and individually-owned health insurance as the preferred method for people to obtain health insurance coverage; and supports and advocates a system where individually-purchased and owned health insurance coverage is the preferred option, but employer-provided coverage is still available to the extent the market demands it;
(6) supports the individual's right to select a health insurance plan and to receive the same tax treatment for individually purchased coverage, for contributions toward employer-provided coverage, and for completely employer provided coverage;
(7) supports immediate tax equity for health insurance costs of self-employed and unemployed persons;
(8) supports legislation to remove paragraph (4) of Section 162(l) of the US tax code, which discriminates against the self-employed by requiring them to pay federal payroll (FICA) tax on health insurance premium expenditures;
(9) supports legislation requiring a “maintenance of effort” period, such as one or two years, during which employers would be required to add to the employee's salary the cash value of any health insurance coverage they directly provide if they discontinue that coverage or if the employee opts out of the employer-provided plan;
(10) encourages through all appropriate channels the development of educational programs to assist consumers in making informed choices as to sources of individual health insurance coverage;
(11) encourages employers, unions, and other employee groups to consider the merits of risk-adjusting the amount of the employer direct contributions toward individually purchased coverage. Under such an approach, useful risk adjustment measures such as age, sex, and family status would be used to provide higher-risk employees with a larger contribution and lower-risk employees with a lesser one;
(12) supports a replacement of the present federal income tax exclusion from employees’ taxable income of employer-provided health insurance coverage with tax credits for individuals and families, while allowing all health insurance expenditures to be exempt from federal and state payroll taxes, including FICA (Social Security and Medicare) payroll tax, FUTA (federal unemployment tax act) payroll tax, and SUTA (state unemployment tax act) payroll tax;
(13) advocates that, upon replacement, with tax credits, of the exclusion of employer-sponsored health insurance from employees’ federal income tax, any states and municipalities conforming to this federal tax change be required to use the resulting increase in state and local tax revenues to finance health insurance tax credits, vouchers or other coverage subsidies; and
(14) believes that refundable, advanceable tax credits inversely related to income are preferred over public sector expansions as a means of providing coverage to the uninsured.
(15) Our AMA reaffirms our policies committed to our patients and their individual responsibility and freedoms consistent with our United States Constitution.
