MEMORANDUM FROM THE SPEAKER OF THE HOUSE OF DELEGATES

- **All Delegates, Alternate Delegates and others receiving this material are reminded that it refers only to items to be considered by the House.**

- **No action has been taken on anything herein contained, and it is informational only.**

- **Only those items that have been acted on finally by the House can be considered official.**

- **REMINDER*: Only the Resolve portions of the resolutions are considered by the House of Delegates. The Whereas portions or preambles are informational and explanatory only.***

AMA
AMERICAN MEDICAL ASSOCIATION

UNDERSTANDING THE RECORDING OF AMERICAN MEDICAL ASSOCIATION POLICY

Current American Medical Association (AMA) policy is catalogued in PolicyFinder, an electronic database that is updated after each AMA House of Delegates (HOD) meeting and available online. Each policy is assigned to a topical or subject category. Those category headings are alphabetical, starting with "abortion" and running to "women"; the former topic was assigned the number 5, and "women" was assigned 525. Within a category, policies are assigned a 3 digit number, descending from 999, meaning that older policies will *generally* have higher numbers within a category (eg, 35.999 was initially adopted before 35.984). A policy number is not affected when it is modified, however, so a higher number may have been altered more recently than a lower number. Numbers are deleted and not reused when policies are rescinded.

AMA policy is further categorized into one of four types, indicated by a prefix:

- "H" – for statements that one would consider positional or philosophical on an issue
- "D" – for statements that direct some specific activity or action. There can be considerable overlap between H and D statements, with the assignment made on the basis of the core nature of the statement.
- "G" – for statements related to AMA governance
- "E" – for ethical opinions, which are the recommendations put forward in reports prepared by the Council on Ethical and Judicial Affairs and adopted by the AMA-HOD

AMA policy can be accessed at https://policysearch.ama-assn.org/policyfinder.

The actions of the AMA-HOD in developing policy are recorded in the *Proceedings*, which are available online as well. Annotations at the end of each policy statement trace its development, from initial adoption through any changes. If based on a report, the annotation includes the following abbreviations:

BOT – Board of Trustees
CCB – Council on Constitution and Bylaws
CEJA – Council on Ethical and Judicial Affairs
CLRPD – Council on Long Range Planning and Development
CME – Council on Medical Education
CMS – Council on Medical Service
CSAPH – Council on Science and Public Health

If a resolution was involved, "Res" is indicated. The number of the report or resolution and meeting (A for Annual; I for Interim) and year (two digits) are also included (eg, BOT Rep. 1, A-14 or Res. 319, I-12).

AMA policy is recorded in the following categories, and any particular policy is recorded in only a single category.

5.000 Abortion	10.000 Accident Prevention/Unintentional Injuries
15.000 Accident Prevention: Motor Vehicles	20.000 Acquired Immunodeficiency Syndrome
25.000 Aging	30.000 Alcohol and Alcoholism
35.000 Allied Health Professions	40.000 Armed Forces
45.000 Aviation Medicine	50.000 Blood
55.000 Cancer	60.000 Children and Youth
65.000 Civil and Human Rights	70.000 Coding and Nomenclature
75.000 Contraception	80.000 Crime
85.000 Death and Vital Records	90.000 Disabled
95.000 Drug Abuse	100.000 Drugs
105.000 Drugs: Advertising	110.000 Drugs: Cost
115.000 Drugs: Labeling and Packaging	120.000 Drugs: Prescribing and Dispensing
125.000 Drugs: Substitution	130.000 Emergency Medical Services
135.000 Environmental Health	140.000 Ethics
145.000 Firearms: Safety and Regulation	150.000 Foods and Nutrition

155.000 Health Care Costs	160.000 Health Care Delivery
165.000 Health Care/System Reform	170.000 Health Education
175.000 Health Fraud	180.000 Health Insurance
185.000 Health Insurance: Benefits and Coverage	190.000 Health Insurance: Claim Forms and Claims Processing
195.000 Health Maintenance Organizations	200.000 Health Workforce
205.000 Health Planning	210.000 Home Health Services
215.000 Hospitals	220.000 Hospitals: Accreditation Standards
225.000 Hospitals: Medical Staff	230.000 Hospitals: Medical Staff - Credentialing and Privileges
235.000 Hospitals: Medical Staff - Organization	240.000 Hospitals: Reimbursement
245.000 Infant Health	250.000 International Health
255.000 International Medical Graduates	260.000 Laboratories
265.000 Legal Medicine	270.000 Legislation and Regulation
275.000 Licensure and Discipline	280.000 Long-Term Care
285.000 Managed Care	290.000 Medicaid and State Children's Health Insurance Programs
295.000 Medical Education	300.000 Medical Education: Continuing
305.000 Medical Education: Financing and Support	310.000 Medical Education: Graduate
315.000 Medical Records and Patient Privacy	320.000 Medical Review
330.000 Medicare	335.000 Medicare: Carrier Review
340.000 Medicare: PRO	345.000 Mental Health
350.000 Minorities	355.000 National Practitioner Data Bank
360.000 Nurses and Nursing	365.000 Occupational Health
370.000 Organ Donation and Transplantation	373.000 Patients
375.000 Peer Review	380.000 Physician Fees
383.000 Physician Negotiation	385.000 Physician Payment
390.000 Physician Payment: Medicare	400.000 Physician Payment: Medicare - RBRVS
405.000 Physicians	406.000 Physician-Specific Health Care Data
410.000 Practice Parameters	415.000 Preferred Provider Arrangements
420.000 Pregnancy and Childbirth	425.000 Preventive Medicine
430.000 Prisons	435.000 Professional Liability
440.000 Public Health	445.000 Public Relations
450.000 Quality of Care	455.000 Radiation and Radiology
460.000 Research	465.000 Rural Health
470.000 Sports and Physical Fitness	475.000 Surgery
478.000 Technology - Computer	480.000 Technology - Medical
485.000 Television	490.000 Tobacco Use, Prevention and Cessation
495.000 Tobacco Products	500.000 Tobacco: AMA Corporate Policies and Activities
505.000 Tobacco: Federal and International Policies	510.000 Veterans Medical Care
515.000 Violence and Abuse	520.000 War
525.000 Women	600.000 Governance: AMA House of Delegates
605.000 Governance: AMA Board of Trustees and Officers	610.000 Governance: Nominations, Elections, and Appointments
615.000 Governance: AMA Councils, Sections, and Committees	620.000 Governance: Federation of Medicine
625.000 Governance: Strategic Planning	630.000 Governance: AMA Administration and Programs
635.000 Governance: Membership	640.000 Governance: Advocacy and Political Action

LIST OF MATERIALS INCLUDED IN THIS HANDBOOK (A-26)

Resolutions and reports have been collated by referral according to reference committee assignment. In the listing below, referral is indicated by letter following the title of the report. Resolutions have been numbered according to referrals (i.e., those referred to the Reference Committee on Ethics and Bylaws begin with 001, Reference Committee B begins with 201, etc.).

The informational reports contain no recommendations and will be filed on Saturday, June 6, unless a request is received for referral and consideration by a Reference Committee (similar to the use of a consent calendar).

1. **Memorandum from the Speaker**

2. **Understanding the Recording of American Medical Association Policy**

3. **Declaration of Professional Responsibility - Medicine's Social Contract with Humanity**

4. **Delegate / Alternate Delegate Job Description, Roles, and Responsibilities**

5. **Seating Allocation and Seating Chart for the House of Delegates**

6. **Hotel Maps**

7. **Official Call to the Officers and Members of the AMA**
   - **Officials of the Association and AMA Councils**
   - **Ex Officio Members of the HOD**
   - **SSS Representatives**
   - **Listing of Delegates and Alternate Delegates**

8. **Reference Committee Schedule and Room Assignments**

9. **Note on Order of Business**

10. **Summary of Fiscal Notes**

11. **List of Resolutions by Sponsor**

FOLLOWING COLLATED BY REFERRAL

12. **Report(s) of the Board of Trustees - David H. Aizuss, MD, Chair**

01	Annual Report	F
02	New Specialty Organizations Representation in the House of Delegates	E&B
03	2025 Grants and Donations	Info. Report
04	AMA 2027 Dues	F
05	Update on Corporate Relationships	Info. Report
06	AMA Performance, Activities and Status in 2025	Info. Report
07	Annual Update on Activities and Progress in Tobacco Control: March 2025 through February 2026	Info. Report

08	Council on Legislation Sunset Review of 2016 House Policies	B
09	American Medical Association Optimal Health Outcomes Annual Report	Info. Report
10	AMA Efforts on Medicare Payment Reform	Info. Report
11	AMA Public Health Strategy Update	Info. Report
12	The Uniform Health-Care Decisions Act	B
13	Reducing Risk of Federal Investigation or Prosecution for Prescribing Controlled Substances for Legitimate Medicaid Purposes	B
14	Binding Arbitration in Health Insurance Contracts	B
15	Protecting the Prescriptive Authority of Plenary Licensed Physicians	B
16	Demographic Report of the House of Delegates and AMA Membership	Info. Report
17	Supporting the Integration of Blood Pressure Variability Data in Electronic Medical Records Report	D
18	Report on the Preservation of Independent Medical Practice	Info. Report
19	Root Cause Analysis of the Causes of the Decline of Private Medical Practice	B
20	Mitigating the Impact of Excessive Prior Authorization Processes	G
21	Abolishing Venue Shopping	B
22	Comprehensive AMA Policy Publication Regarding Employed Physicians	G
23	Liberalized Remorse Period for Medicare Advantage Plan Insureds	A
24	AMA Advocacy to Mitigate Medicaid Cuts	B
25	Federal Legislation to Prohibit the Corporate Practice of Medicine	B
26	AMA Ethics Fellowships	Info. Report
27	Update the Status of Virtual Credit Card Policy, EFT Fees, and Lack of Enforcement of Administrative Simplification Requirements by CMS	B
28	Accountability in the Use of Augmented Intelligence for Prior Authorization	B
29	Educational Materials Regarding Ultra-processed Foods	D
30	AMA Reimbursement of Necessary HOD Business Meeting Expenses for Delegates and Alternates	Info. Report
31	Establishing an Advisory Committee on AI/AN Affairs	Info. Report
32	Disability Advisory Group	Info. Report
33	Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted	Info. Report
34	Discontinuation of AMA Citation for Distinguished Service	F

13. Report(s) of the Council on Constitution and Bylaws - Jerry P. Abraham, MD, MPH, Chair

01	Introducing CCB Reports 2-7 concerning Bylaw 2, House of Delegates	Info. Report
02	HOD Representation and Composition	E&B
03	Rights & Privileges of HOD Members	E&B
04	Credentialing of HOD Delegates and Alternate Delegates	E&B
05	Inclusion of Medical Students and Resident/Fellow Physicians in HOD Delegations	E&B
06	Medical Student Regional Delegates and Alternate Delegates and Resident and Fellow Sectional Delegates and Alternate Delegates in the HOD	E&B
07	HOD Delegate and Alternate Delegate Vacancies and Meeting Absences	E&B
08	Business Meetings of the AMA Sections	E&B

09	Continuity of AMA Resident and Fellow Section Governing Council Leadership	E&B

14. Report(s) of the Council on Ethical and Judicial Affairs - Rebecca Brendel, MD, Chair

01	Guidelines on Chaperones for Sensitive Exams	E&B
02	Managing Conflict of Interest Inherent in New Payment Models—Patient Disclosure	E&B
03	Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization	E&B
04	Carceral Systems and Practices in Behavioral Health Emergency Care	Info. Report
05	CEJA's Sunset Review of 2016 House Policies	E&B
06	Judicial Function of the Council on Ethical and Judicial Affairs – Annual Report	Info. Report

15. Opinion(s) of the Council on Ethical and Judicial Affairs - Rebecca Brendel, MD, Chair

01	Amendment to Opinion 1.1.1 "Patient-Physician Relationships"	Info. Report
02	Research Involving Pregnant and Lactating Individuals	Info. Report

16. Report(s) of the Council on Medical Education - Kelly Caverzagie, MD, MPH, Chair

01	Council on Medical Education Sunset Review of 2016 House of Delegates' Policies	C
02	Examining ABMS Processes for New Boards	C
03	Support for the Establishment of Indigenous-Led Medical Schools in the United States	C
04	Reflecting the Values and Priorities of Tribal Communities in Indigenous-Led Medical Schools in the United States	C

17. Report(s) of the Council on Medical Service - Betty Chu, MD, MBA, Chair

01	Council on Medical Service Sunset Review of 2016 House Policies	G
02	Study of the Federal Employees Health Benefits Program (FEHBP)	Info. Report
03	Improving Patient Access to Pharmacies and Medications in Pharmacy Deserts	A
04	Expanding Medicare Coverage of Medical Nutrition Therapy	G
05	Inclusion of Discounted Prescription Medication in Patient Cost-Sharing	A
06	Study of Practice Models for Physicians Performing Procedures Across State Lines	G
07	Private Insurance Coverage of Anti-Obesity Medications	G
08	Rural Health Transformation Program Update & Workforce Challenges	A
09	Nonprofit Status	G

18. Report(s) of the Council on Science and Public Health - Padmini Ranasinghe, MD, MPH, Chair

01	Sunset Review of 2016 House Policies	D
02	Setting Standards for Forensic Toxicology Laboratories Used in Litigation	D
03	Public Health Implications of Food Subsidies	D
04	Improving Public Awareness of Lung Cancer Screening and CAD in Chronic Smokers	D
05	Removing Artificial Turf in Schools, Parks, and Public Places	D
06	Mitigating Air and Noise Pollution from Aviation in Minority Communities Disproportionately Impacted and Vulnerable Communities	D
07	Framework to Convey Evidence-Based Medicine in AI Tools Used in Clinical Decision Making	E
08	Increased Transparency Among Psychotropic Drug Administration in Prisons	E
09	In Support of a National Drug Checking Registry	E
10	Standardizing Safety Requirements for Traditional and Rideshare Based Non-Emergency Medical Transportation	D

19. Report(s) of the HOD Committee on Compensation of the Officers - Jessica Krant, MD, Chair

01	Report of the House of Delegates Committee on the Compensation of the Officers	F

20. Resolutions

001	Ethical Guidance on Postmortem Sample Collection for Genetic Testing	E&B
002	Physician Workload and Scheduling	E&B
003	Artificial Intelligence to Bolster Physician-Led Team-Based Care	E&B
004	Ethical Reproductive Care for Individuals with Intellectual and Developmental Disabilities	E&B
005	Impersonation of a Physician	E&B
006	Investigating Moral Injury Related to Organ Procurement Practices	E&B
007	Supporting Privacy in the Use of Artificial Intelligence Based Scribe Software	E&B
008	Senior Physicians Improving Patient Access	E&B
009	Preserving Access to Care for Undocumented Individuals	E&B
010	Fatigue Mitigation: Supporting Fully-Funded Transportation for Trainee Physicians After Extended or Overnight Shifts	E&B
101	Revise the Use of Language Stigmatizing Obesity in ICD-10 Code E66.01“Morbid (Severe) Obesity Due to Excess Calories”	A
102	Study for EMTALA Relief in Psychiatric Facilities	A
103	Supporting Non-Insurance Directed Sales of Pharmaceuticals to Patients to Improve Access and Reduce Costs	A
104	Improving Choice, Competition, and Affordability in the ACA Marketplaces	A
105	Oppose Medicare Advantage Auto Enrollment	A
106	Insurance Coverage for Scalp Cooling (Cold Capping) Therapy	A
107	Oversight of Medicare Advantage Plan	A
108	Ensuring Physician Input in the Development of CMMI Models	A
109	Insurance Coverage for Pediatric Intracranial Neuromodulation for Drug-Resistant Epilepsy	A
110	Medicaid Coverage for Incarcerated Individuals	A
111	Advocating for Insurance Coverage of Scalp Cooling Therapy to Prevent Chemotherapy-Induced Alopecia	A

112	Ensuring Coverage and Access to Adult Strabismus Surgery	A
113	Health Insurance Coverage of Hearing Devices and Related Services	A
114	Opposing Alternative Funding Programs	A
115	Patient Continuity Protections During Payer, PBM Changes	A
116	Study of Cost Implications of Medicaid Managed Care Organizations Compared with State-Administered Medicaid Programs	A
117	Universal Out of Network Benefits	A
118	Addressing Proposals to Implement International Reference Pricing for Physician-Administered Drugs	A
201	Prohibit and Regulate 7-Hydroxymitragynine (7-OH) Kratom Products to Protect Public Health and Youth Safety	B
202	Using and Defining "Unsupervised Practice of Medicine"	B
203	Support for Independent Evaluation of Outcomes Associated with Unsupervised Nurse Practitioner Practice	B
204	D-400.982 Revision	B
205	Repeal of the Merit-Based Incentive Payment System (MIPS)	B
206	Overall Hospital Quality Star Ratings / CMS Star Ratings	B
207	Addressing Rural Maternity Care Deserts Through the Conrad 30 Waiver Program	B
208	Incorporating Critical Medical Treatment Planning into Emergency/Disaster Preparedness	B
209	Protecting Mental Health Treatment Privacy in Legal Proceedings	B
210	Eliminating Prescription Drug Adherence (PDA) as a Quality Metric Tied to Physician Ratings or Compensation	B
211	Preventing Hospital-Based 340B Programs from Unfairly Competing with Independent Physicians	B
212	Protecting Patient Access to Clinical Trials and Mitigating Administrative Disruptions to NIH Funding	B
213	Prohibiting Pharmacy Benefit Managers from Owning Pharmacies	B
214	Medical Student Loans Should Not Be Capped	B
215	Oppose Medicare Efficiency Adjustments	B
216	Protecting Healthcare as a Sensitive Location	B
217	Ensuring Proportional Accountability for Hospital Expenditures Attributed to Medicare ACOs	B
218	Opposing the Practice of Jury Anchoring in Medical Liability Cases	B
219	Incorporating Evidence-Based Lifestyle Medicine into Rural Health Transformation Programs	B
220	Reverse CMS Cuts to Facility-Based Practice Expense Payments for Physicians	B
221	Universal Newborn Congenital Cytomegalovirus Screening	B
222	Advocating for a Centralized Medicare Enrollment Platform to Preserve Patient Choice Between Traditional Medicare and Medicare Advantage	B
223	Ensuring Due Process, Transparency, and Human Clinical Oversight in the Use of Artificial Intelligence for Health Insurance Coverage and Eligibility Determinations	B
224	Clarity of Signage: Distinguishing Urgent Cares From Emergency Rooms	B
225	Requiring Periodic Face-to-Face Visits By Board-Certified Specialists Who Delegate Visits to Non-Physician Practitioners for Nursing Home Patients	B

226	Impact of a Proposed $100,000 H-1B Visa Fee on the NRMP Match, the Physician Workforce, and the U.S. Health Care System	B
227	Standby Capacity Payments and Health IT for Hospitals in Rural Areas	B
228	Department of Defense Health Care Investment at Military Bases in Maternity Care Health Professional Shortage Areas	B
229	Physicians are not Providers	B
230	Exemption of International Medical Graduates from Presidential Proclamations Restricting Entry into the United States	B
231	Protecting and Promoting Long Term Care Workforce Amidst Immigration Challenges	B
232	Banning Flavored Cannabis E-Cigarettes	B
233	Banning Synthesized, Purified or Derivative Products from Kratom	B
234	Physician Unity in Advocacy Regarding Physician Reimbursement	B
235	Establishing Healthcare Monitoring and Accountability in Immigration Detention Facilities	B
236	Extending and Expanding the AMA Task Force to Preserve the Patient-Physician Relationship to Ensure Access and Regulatory Clarity in Gender-Affirming Care	B
237	Guaranteed 30-Day Transition Fill of Currently Prescribed Insulin at the Beginning of Each Year Plan	B
238	Prohibiting the Independent Practice of Medicine by Artificial Intelligence	B
239	Medicare Administrative Contractor Policy Modification	B
240	Ending Private Equity Dividend Recapitalization in Healthcare	B
241	Strengthening Our AMA Efforts Toward CPOM Prohibition	B
242	Reducing Emergency Department Boarding through Payment Reform	B
243	Standardizing Medical Frailty to Streamline Medicaid Community Engagement & Work Exemptions	B
244	Eliminate Administrative Barriers to Appeal Wrongful Denials	B
245	State Regulation of Non-Preempted “Non-Central Matters” of ERISA Plans—Rutledge v. PCMA	B
246	Artificial Intelligence Scope of Practice	B
247	Comprehensive ERISA Reform	B
301	Expanding Resident and Fellow Exposure to Diverse Healthcare Practice Models to Fulfill ACGME Core Competencies	C
302	Excessive Cost of Multi-State DEA Licensure	C
303	Allowing Options for Certification Maintenance	C
304	Increasing the Use of Retired Physicians in Teaching Students and Residents	C
305	Leadership by Physicians for Physicians in Graduate Medical Education (GME)	C
306	Competency-Based Portfolio Assessment of Medical Students, Interns, Residents, and Fellows	C
307	Recognizing Advocacy as a Component of Faculty Appointment and Promotion in Academic Medicine	C
308	Impact of Federal and State Restrictive Actions on Gender-Affirming Care on Medical Education and Physician Workforce Development	C
309	Osteoporosis Education, Awareness, and Musculoskeletal Health Optimization	C
310	Increasing Capacity and Access to Maternal Health Services in Rural Areas	C

311	Changing the Paradigm of Medical Student Debt to address the Geriatric Physician Shortfall	C
312	Advocating for Equitable Application Review in a Single Match System	C
313	Evaluation of Situational Judgement Tests in Medical School Admissions	C
314	Promoting Sex- and Gender-Inclusive Diagnostic Practices, Language, and Patient Education	C
315	Expanding the Native Hawaiian Health Scholarship Program Eligibility	C
316	Addressing Transitions Within GME Regarding Orientation Standards	C
317	Support for Intern, Resident, and Fellow Jeopardy Pay and Additional Compensation for Gaps in Trainee Coverage	C
401	Partnership with the Administration to Reduce Harmful Chemicals in Food and Align with European Safety Standards	D
402	Strengthening Public Health Protections Against Raw Milk–Associated Illness	D
403	AMA's continued support for COVID-19 vaccination in pregnant individuals and children	D
404	Develop Climate-Conscious Resources for Physicians	D
405	Studying the Environmental Impact of Ambient Clinical Intelligence Use	D
406	Reduce Environmental Impact of Medical Journals	D
407	Colorectal Cancer in Alaskan Native Patients	D
408	Addressing Rural Maternal Morbidity and Mortality through Collaboration and Intersectionality	D
409	Eliminate PFAS and Glyphosate in our Food and Environment	D
410	Light Pollution	D
411	Addressing the Myopia Epidemic, Public Education, and Insurance Coverage for Evidence-Based Myopia Control	D
412	Guiding Principles of Pandemic Prevention, Preparedness and Response	D
413	Erosion of the Public Evidence Base for Health Policy	D
414	Restoring Balanced Scientific Perspective within the ACIP	D
415	Advocacy for Restoration of the Endangerment Finding Regarding Greenhouse Gas Emissions	D
416	Clinical Laboratory Workforce Shortage and Sustainability	D
417	Respiratory Protection for Wildland Firefighters	D
418	Ensuring Access to Full HIV Post-Exposure Prophylaxis (PEP) Courses for Survivors of Sexual Assault	D
419	Examining the Impact of Circadian Disruption from Shift Work During Pregnancy	D
420	Expanding Support for Women Experiencing Homelessness	D
421	Improving Access to Care and Support for Patients with Inflammatory Bowel Disease in the United States	D
422	Expanding Access to High Resolution Anoscopy	D
423	Expanding Access to HIV Pre-Exposure Prophylaxis (PrEP)	D
424	Supporting Education and Access to Postexposure Doxycycline (DoxyPEP)	D
425	Prioritizing, Measuring, and Preventing Workplace Violence in Health Care	D
426	Integrating Nutrition into Health Care Delivery to Reduce Cardiovascular Risk and Food Insecurity ("Food is Medicine")	D
427	Infant Feeding Options for HIV-Seropositive Individuals	D
428	Protecting Environmental Health Before, During, and After War	D

429	Adolescent Dating Violence Comprehensive Screening Tool Development	D
430	Support Heavy Metal and Toxic Exposure Testing for Residents Affected by Wildfires	D
431	Supporting Transportation Infrastructure Reform for Public Health	D
432	Addressing Public Health Risks of Online Sports Betting	D
433	Addressing the Epidemic of Fragility Fractures Through Improved Osteoporosis Screening and Treatment	D
434	Vaccinations in Physician Offices	D
501	Preregistration in Medical Research	E
502	Support for Rapid Methadone Inpatient Stabilization and Linkage to Care	E
503	Expansion of Psychedelic Assisted Therapy (PAT)	E
504	Strengthening U.S. Rubber Glove Production and Purchase While Reducing Foreign Forced-Labor Dependence	E
505	Avoiding misuse of artificial intelligence (AI) in clinical practice	E
506	Access To Gender Affirming Healthcare Including Clinical Trials	E
507	Pairing Behavioral and Lifestyle Medicine Principles and Practice with Glucagon-like Peptide-1 (GLP-1) Receptor Agonists and Other Anti-obesity Medications	E
508	Aligning Consistency and Credibility Of Direct-To-Consumer Gut Microbiome Testing Services	E
509	Preserving Gender-Affirming Surgical Care Access	E
510	Exosome and Peptide Use in Healthcare	E
511	Preserving Specialty Access to Anti-Cancer Agents	E
512	Medical Cannabis Use in Older Adults	E
513	Access, Affordability, and Safety of GLP-1 Receptor Agonists	E
514	Education, Screening, and Effective Treatment for Obstructive Sleep Apnea During Pregnancy	E
515	Transparency in AI-Driven Adverse Determinations & Clinical Logic Disclosure	E
601	Board Chair Term Limits	F
602	Protection of Healthcare and Humanitarian Aid Personnel in Conflict Zones	F
603	Establish AMA Policy and Project to Compile and Distribute JAMA Patient Pages to Enhance Public Medical Literacy	F
604	Annual Scorecard to Evaluate the AMA’s Impact	F
605	Review of Past Resolutions	F
606	Further Enabling AMA BOT Expediency for Actions, Advocacy, and Responses During Urgent Situations	F
607	Shortening the AMA House of Delegates Endorsement Process and Timeline	F
608	Reinstitution of AMA Guides Editorial Panel	F
609	American Medical Association Board Chair Term Limits	F
610	Plant-Based Diets at AMA meetings	F
611	Publicizing, Supporting, and Promoting (Appropriate) AMA Member Physicians and Physician Spouses as Candidates for Local and State Offices	F
612	Increasing Expert Guidance in AMA Statements	F
613	Preserving Institutional Equity and Inclusivity Efforts	F
614	Inclusive Policy Language for Older Adults	F
615	Condemnation of Attacks on Healthcare Workers and Facilities in Gaza	F

616	Humanitarian and Medical Aid Support to Palestine	F
617	Reevaluation of AMA Policy Regarding Support for Specific National Medical Associations in the World Medical Association	F
618	Ending AMA Investment in Weapons Manufacturers	F
701	The Crisis in the Availability of Primary Care: Halt the Required Participation of Small Practices in Value-Based Payment (VBP) Models	G
702	Physicians Who Do Not Practice in Hospital Setting	G
703	Parity in Pricing for Anti-Obesity Medications	G
704	Advocating Against Automatic Refill Requests	G
705	Recognizing Physicians as Sexual Assault Forensic Examiners	G
706	Discharge Summaries from Skilled Nursing Facilities	G
707	Malpractice Insurance for Employed Physicians	G
708	Oppose Imposition of Fees on Physicians for Electronic Payment Transfers	G
709	Requiring Transparency and Accountability When Insurers and Third-Party Administrators Require Utilization Review, Thereby Practicing Medicine	G
710	Parity in Access to Evidence-Based Obesity Treatment	G
711	Oppose Denials Based on Origin of Referral	G
712	Addressing the Commoditization of Medicine Through Recognition of the Full Scope of Physician Work and Contributions	G
713	Reducing Prior Authorization Delays to Improve Access to Neuromodulation and Non-Opioid Pain Therapies	G
714	Physician Case Log Portability	G
715	Oppose the Legal Position that Virtual Credit Cards are a Legal Method of Payment under HIPAA	G
716	Equal Opportunity for Payment for “On Call” Duty	G
717	Advocacy for a Failure-Proof National Centralized Electronic Transaction Clearinghouse	G

DECLARATION OF PROFESSIONAL RESPONSIBILITY: MEDICINE'S SOCIAL CONTRACT WITH HUMANITY

Preamble

Never in the history of human civilization has the well-being of each individual been so inextricably linked to that of every other. Plagues and pandemics respect no national borders in a world of global commerce and travel. Wars and acts of terrorism enlist innocents as combatants and mark civilians as targets. Advances in medical science and genetics, while promising great good, may also be harnessed as agents of evil. The unprecedented scope and immediacy of these universal challenges demand concerted action and response by all.

As physicians, we are bound in our response by a common heritage of caring for the sick and the suffering. Through the centuries, individual physicians have fulfilled this obligation by applying their skills and knowledge competently, selflessly and at times heroically. Today, our profession must reaffirm its historical commitment to combat natural and man-made assaults on the health and well-being of humankind. Only by acting together across geographic and ideological divides can we overcome such powerful threats. Humanity is our patient.

Declaration

We, the members of the world community of physicians, solemnly commit ourselves to:

1. Respect human life and the dignity of every individual.

2. Refrain from supporting or committing crimes against humanity and condemn all such acts.

3. Treat the sick and injured with competence and compassion and without prejudice.

4. Apply our knowledge and skills when needed, though doing so may put us at risk.

5. Protect the privacy and confidentiality of those for whom we care and breach that confidence only when keeping it would seriously threaten their health and safety or that of others.

6. Work freely with colleagues to discover, develop, and promote advances in medicine and public health that ameliorate suffering and contribute to human well-being.

7. Educate the public and polity about present and future threats to the health of humanity.

8. Advocate for social, economic, educational, and political changes that ameliorate suffering and contribute to human well-being.

9. Teach and mentor those who follow us for they are the future of our caring profession.

We make these promises solemnly, freely, and upon our personal and professional honor.

Adopted by the House of Delegates of the American Medical Association
in San Francisco, California on December 4, 2001

Delegate/Alternate Delegate Job Description, Roles and Responsibilities

At the 1999 Interim Meeting, the House of Delegates adopted as amended Recommendation 16 of the final report of the Special Advisory Committee to the Speaker of the House of Delegates. This recommendation included a job description and roles and responsibilities for delegates and alternate delegates. The description and roles and responsibilities were last modified at the 2024 Interim Meeting by Speakers' Report 02. The modified job description, qualifications, and responsibilities are listed below.

Delegates and Alternate Delegates should meet the following job description and roles and responsibilities:

Job Description and Roles and Responsibilities of AMA Delegates/Alternate Delegates

Members of the AMA House of Delegates serve as an important communications, policy, and membership link between the AMA and grassroots physicians. The delegate/alternate delegate is a key source of information on activities, programs, and policies of the AMA. The delegate/alternate delegate is also a direct contact for the individual member to communicate with and contribute to the formulation of AMA policy positions, the identification of situations that might be addressed through policy implementation efforts, and the implementation of AMA policies. Delegates and alternate delegates to the AMA are expected to foster a positive and useful two-way relationship between grassroots physicians and the AMA leadership. To fulfill these roles, AMA delegates and alternate delegates are expected to make themselves readily accessible to individual members by providing the AMA with their addresses, telephone numbers, and e-mail addresses so that the AMA can make the information accessible to individual members through the AMA web site and through other communication mechanisms. The qualifications and responsibilities of this role are as follows:

A. Qualifications
- Active member of the AMA.
- Elected or selected by the principal governing body or the membership of the sponsoring organization.
- The AMA encourages that at least one member of each delegation be involved in the governance of their sponsoring organization.

B. Responsibilities
- Regularly communicate AMA policy, information, activities, and programs to constituents so they will be recognized as the representative of the AMA.
- Relate constituent views and suggestions, particularly those related to implementation of AMA policy positions, to the appropriate AMA leadership, governing body, or executive staff.
- Advocate constituent views within the House of Delegates or other governance unit, including the executive staff.
- Attend and report highlights of House of Delegates meetings to constituents, for example, at hospital medical staff, county, state, and specialty society meetings.
- Serve as an advocate for patients to improve the health of the public and the health care system.
- Cultivate promising leaders for all levels of organized medicine and help them gain leadership positions.
- Actively recruit new AMA members and help retain current members.

SEATING ALLOCATION – 2026 ANNUAL MEETING

ADDICTION MEDICINE - 3
American Society of Addiction Medicine (ASAM) – 3
Trustee (Dr. Levin) – 1
Delegates - 2

AMGA - 1
American Medical Group Association (AMGA) - 1

ANESTHESIOLOGY - 11
American Society of Anesthesiologists (ASA) - 9
Former President (Dr. Ehrenfeld) - 1
Delegates – 8
American Society of Regional Anesthesia and Pain Medicine (ASRAPM) - 2

Holley See, DO, Tulsa, OK (Endorsed by Oklahoma State Medical Association)
Amanda Kahn, MD, Pennsylvania, PA (Endorsed by Pennsylvania Medical Society)
Nidhi K. Reddy, MD, Chicago, IL (Endorsed by Society for Vascular Surgery)

Regional Medical Students with Endorsing Society

Delegates

Elizabeth Dawson, Little Rock, AR (Endorsed by Arkansas Medical Society)
Preston Dang, Mission Viejo, CA (Endorsed by California Medical Association)
Isabel Nguyen, Pomona, CA (Endorsed by California Medical Association)
Phanisri Tummala, San Jose, CA (Endorsed by California Medical Association)
Karina Patel, Irvine, CA (Endorsed by Connecticut State Medical Society)
Ami Dave, Suwanee, GA (Endorsed by Florida Medical Association)
Sami Muslmani, Chicago, IL (Endorsed by Illinois State Medical Society)
Layla Ahmadi, Haute, IN (Endorsed by Indiana State Medical Association)
Katherine M. Yu, Iowa City, IA (Endorsed by Iowa Medical Society)
Ella Wright, Overland Park, KS (Endorsed by Kansas Medical Society)
Varun Kota, Saco, ME (Endorsed by Maine Medical Association)
Isabel Ball, Somerville, MA (Endorsed by Massachusetts Medical Society)
Kyle Smith, Port Orange, FL (Endorsed by Medical Association of Georgia)
Chelsea Chen, Short Hills, NJ (Endorsed by Medical Society of New Jersey)
Akhil Mahant, Rochester, NY (Endorsed by Medical Society of the State of New York)
Yumna Rahman, Richmond, VA (Endorsed by Medical Society of Virginia)
Mason Tuttle, Kansas City, MO (Endorsed by Missouri State Medical Association)
Jessy Silfer, Cleveland, OH (Endorsed by Ohio State Medical Association)
Lily Robistow, Owasso, OK (Endorsed by Oklahoma State Medical Association)
Denise Ocampo, Hummelstown, PA (Endorsed by Pennsylvania Medical Society)
Kayla Jernigan, Greenville, SC (Endorsed by South Carolina Medical Association)
Paneeta Mohapatra, Memphis, TN (Endorsed by Tennessee Medical Association)
Mary Conley, Fort Worth, TX (Endorsed by Texas Medical Association)
Laura Hult, Salt Lake Cty, UT (Endorsed by Utah Medical Association)
Patrick Hewes, Spokane, WA (Endorsed by Washington State Medical Association)
Mitchell Nelson, Charleston, WV (Endorsed by West Virginia State Medical Association)

Alternate Delegates

Allison Kelley, Aurora, CO (Endorsed by Colorado Medical Society)
Daniel Brocke, Hartford, CT (Endorsed by Connecticut State Medical Society)
Zhuochen Yuan, Miami, FL (Endorsed by Florida Medical Association)
Isaac Meng, Indianapolis, IN (Endorsed by Indiana State Medical Association)
Sara Armstrong, Overland Park, KS (Endorsed by Kansas Medical Society)
Lillian Cain, Worcester, MA (Endorsed by Massachusetts Medical Society)
Grace Johnson, Boston, MA (Endorsed by Massachusetts Medical Society)
Kareena Dash, Alpharetta, GA (Endorsed by Medical Association of Georgia)
Krisha Darji, Deptford, NJ (Endorsed by Medical Society of New Jersey)
Myra Moghal, New York, NY (Endorsed by Medical Society of the State of New York)
Vignesh Senthilkumar, Charlottesville, VA (Endorsed by Medical Society of Virginia)
Saad Ramsha, Leesburg, VA (Endorsed by Mississippi State Medical Association)
Druv Bhagavan, St Louis, MO (Endorsed by Missouri State Medical Association)
Joel Dumonsau, Omaha, NE (Endorsed by Nebraska Medical Association)
Austin Osborn, Omaha, NE (Endorsed by Nebraska Medical Association)
Micah Char, Las Vegas, NV (Endorsed by Nevada State Medical Association)
Jordon Ma, Chino Hills, CA (Endorsed by Nevada State Medical Association)
Rehet Chugh, Fresno, CA (Endorsed by New Mexico Medical Society)
Shalmali Bhadkamkar, Toledo, OH (Endorsed by Ohio State Medical Association)
Kelly Delano, Crescent Spgs, KY (Endorsed by Ohio State Medical Association)
Sarah Boliek, Corvallis, OR (Endorsed by Oregon Medical Association)
Samyukta Karthik, State College, PA (Endorsed by Pennsylvania Medical Society)
Camryn Briggs, Bluffton, SC (Endorsed by South Dakota State Medical Association)
Nate Tamez, Harrogate, TN (Endorsed by Tennessee Medical Association)
Camille Bourgeois, Houston, TX (Endorsed by Texas Medical Association)
Sanjay Neerukonda, Houston, TX (Endorsed by Texas Medical Association)

Reference Committee Hearing Room Assignments
Saturday, June 6

15 minutes after HOD second session close		**Room**
A	Medical Service	Regency A

G	Medical Practice	Regency B

AMERICAN MEDICAL ASSOCIATION
HOUSE OF DELEGATES

2026 Annual Meeting
Notes on Orders of Business

Grand Ballroom, Hyatt Regency Chicago

FIRST SESSION, Friday, June 5, 6:00pm

SECOND SESSION, Saturday, June 6, 12:00pm

THIRD SESSION, Monday, June 8, 9:00am

FOURTH SESSION, Tuesday, June 9, 9am (or 15 minutes after elections conclude) - 3:00pm

NOTE: The Inauguration of Willie Underwood III, MD, MSc, MPH, as the 181st President of the American Medical Association, will be held at 5:00pm in the Crystal Ballroom of the Hyatt Regency Chicago.

FIFTH SESSION, Wednesday, June 10, 8:30am – completion of business

Summary of Fiscal Notes (A-26)

Report(s) of the Board of Trustees

01	Annual Report	Minimal
02	New Specialty Organizations Representation in the House of Delegates	Minimal
03	2025 Grants and Donations	
04	AMA 2027 Dues	Minimal
05	Update on Corporate Relationships	
06	AMA Performance, Activities and Status in 2025	
07	Annual Update on Activities and Progress in Tobacco Control: March 2025 through February 2026	
08	Council on Legislation Sunset Review of 2016 House Policies	Minimal
09	American Medical Association Optimal Health Outcomes Annual Report	
10	AMA Efforts on Medicare Payment Reform	
11	AMA Public Health Strategy Update	
12	The Uniform Health-Care Decisions Act	Minimal
13	Reducing Risk of Federal Investigation or Prosecution for Prescribing Controlled Substances for Legitimate Medicaid Purposes	Minimal
14	Binding Arbitration in Health Insurance Contracts	Minimal
15	Protecting the Prescriptive Authority of Plenary Licensed Physicians	Minimal
16	Demographic Report of the House of Delegates and AMA Membership	
17	Supporting the Integration of Blood Pressure Variability Data in Electronic Medical Records Report	Major
18	Report on the Preservation of Independent Medical Practice	
19	Root Cause Analysis of the Causes of the Decline of Private Medical Practice	Minimal
20	Mitigating the Impact of Excessive Prior Authorization Processes	Minimal
21	Abolishing Venue Shopping	Minimal
22	Comprehensive AMA Policy Publication Regarding Employed Physicians	Minimal
23	Liberalized Remorse Period for Medicare Advantage Plan Insureds	Minimal
24	AMA Advocacy to Mitigate Medicaid Cuts	Minimal
25	Federal Legislation to Prohibit the Corporate Practice of Medicine	Minimal

Summary of Fiscal Notes (A-26)

26	AMA Ethics Fellowships	
27	Update the Status of Virtual Credit Card Policy, EFT Fees, and Lack of Enforcement of Administrative Simplification Requirements by CMS	Minimal
28	Accountability in the Use of Augmented Intelligence for Prior Authorization	Minimal
29	Educational Materials Regarding Ultra-processed Foods	Minimal
30	AMA Reimbursement of Necessary HOD Business Meeting Expenses for Delegates and Alternates	
31	Establishing an Advisory Committee on AI/AN Affairs	
32	Disability Advisory Group	
33	Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care is Banned or Restricted	
34	Discontinuation of AMA Citation for Distinguished Service	Minimal

Report(s) of the Council on Constitution and Bylaws

01	Introducing CCB Reports 2-7 concerning Bylaw 2, House of Delegates	
02	HOD Representation and Composition	
03	Rights & Privileges of HOD Members	
04	Credentialing of HOD Delegates and Alternate Delegates	
05	Inclusion of Medical Students and Resident/Fellow Physicians in HOD Delegations	
06	Medical Student Regional Delegates and Alternate Delegates and Resident and Fellow Sectional Delegates and Alternate Delegates in the HOD	
07	HOD Delegate and Alternate Delegate Vacancies and Meeting Absences	
08	Business Meetings of the AMA Sections	
09	Continuity of AMA Resident and Fellow Section Governing Council Leadership	

Report(s) of the Council on Ethical and Judicial Affairs

01	Guidelines on Chaperones for Sensitive Exams	Minimal
02	Managing Conflict of Interest Inherent in New Payment Models—Patient Disclosure	Minimal
03	Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization	Minimal
04	Carceral Systems and Practices in Behavioral Health Emergency Care	

05	CEJA's Sunset Review of 2016 House Policies	Minimal
06	Judicial Function of the Council on Ethical and Judicial Affairs – Annual Report	

Opinion(s) of the Council on Ethical and Judicial Affairs

01	Amendment to Opinion 1.1.1 "Patient-Physician Relationships"	
02	Research Involving Pregnant and Lactating Individuals	

Report(s) of the Council on Medical Education

01	Council on Medical Education Sunset Review of 2016 House of Delegates' Policies	Minimal
02	Examining ABMS Processes for New Boards	Minimal
03	Support for the Establishment of Indigenous-Led Medical Schools in the United States	Major - $100,000 Non-staff travel and meeting expenses
04	Reflecting the Values and Priorities of Tribal Communities in Indigenous-Led Medical Schools in the United States	Major - $80,000 Non-staff travel and meeting expenses

Report(s) of the Council on Medical Service

01	Council on Medical Service Sunset Review of 2016 House Policies	
02	Study of the Federal Employees Health Benefits Program (FEHBP)	
03	Improving Patient Access to Pharmacies and Medications in Pharmacy Deserts	Minimal
04	Expanding Medicare Coverage of Medical Nutrition Therapy	Minimal
05	Inclusion of Discounted Prescription Medication in Patient Cost-Sharing	Minimal
06	Study of Practice Models for Physicians Performing Procedures Across State Lines	Minimal
07	Private Insurance Coverage of Anti-Obesity Medications	Minimal
08	Rural Health Transformation Program Update & Workforce Challenges	Minimal
09	Nonprofit Status	Minimal

Report(s) of the Council on Science and Public Health

01	Sunset Review of 2016 House Policies	
02	Setting Standards for Forensic Toxicology Laboratories Used in Litigation	Modest
03	Public Health Implications of Food Subsidies	Minimal

Summary of Fiscal Notes (A-26)

04	Improving Public Awareness of Lung Cancer Screening and CAD in Chronic Smokers	Minimal
05	Removing Artificial Turf in Schools, Parks, and Public Places	Minimal
06	Mitigating Air and Noise Pollution from Aviation in Minority Communities Disproportionately Impacted and Vulnerable Communities	Minimal
07	Framework to Convey Evidence-Based Medicine in AI Tools Used in Clinical Decision Making	Minimal
08	Increased Transparency Among Psychotropic Drug Administration in Prisons	Minimal
09	In Support of a National Drug Checking Registry	Minimal
10	Standardizing Safety Requirements for Traditional and Rideshare Based Non-Emergency Medical Transportation	Modest

Report(s) of the HOD Committee on Compensation of the Officers

01	Report of the House of Delegates Committee on the Compensation of the Officers	

Resolutions

001	Ethical Guidance on Postmortem Sample Collection for Genetic Testing	Minimal
002	Physician Workload and Scheduling	Modest
003	Artificial Intelligence to Bolster Physician-Led Team-Based Care	Moderate
004	Ethical Reproductive Care for Individuals with Intellectual and Developmental Disabilities	Minimal
005	Impersonation of a Physician	Modest
006	Investigating Moral Injury Related to Organ Procurement Practices	Modest
007	Supporting Privacy in the Use of Artificial Intelligence Based Scribe Software	Modest
008	Senior Physicians Improving Patient Access	Modest
009	Preserving Access to Care for Undocumented Individuals	Modest
010	Fatigue Mitigation: Supporting Fully-Funded Transportation for Trainee Physicians After Extended or Overnight Shifts	Minimal
101	Revise the Use of Language Stigmatizing Obesity in ICD-10 Code E66.01“Morbid (Severe) Obesity Due to Excess Calories”	Modest
102	Study for EMTALA Relief in Psychiatric Facilities	Modest

Summary of Fiscal Notes (A-26)

103	Supporting Non-Insurance Directed Sales of Pharmaceuticals to Patients to Improve Access and Reduce Costs	Moderate
104	Improving Choice, Competition, and Affordability in the ACA Marketplaces	Modest
105	Oppose Medicare Advantage Auto Enrollment	Minimal
106	Insurance Coverage for Scalp Cooling (Cold Capping) Therapy	Minimal
107	Oversight of Medicare Advantage Plan	Moderate
108	Ensuring Physician Input in the Development of CMMI Models	Minimal
109	Insurance Coverage for Pediatric Intracranial Neuromodulation for Drug-Resistant Epilepsy	Modest
110	Medicaid Coverage for Incarcerated Individuals	Modest
111	Advocating for Insurance Coverage of Scalp Cooling Therapy to Prevent Chemotherapy-Induced Alopecia	Moderate
112	Ensuring Coverage and Access to Adult Strabismus Surgery	Modest
113	Health Insurance Coverage of Hearing Devices and Related Services	Minimal
114	Opposing Alternative Funding Programs	Modest
115	Patient Continuity Protections During Payer, PBM Changes	Moderate
116	Study of Cost Implications of Medicaid Managed Care Organizations Compared with State-Administered Medicaid Programs	Modest
117	Universal Out of Network Benefits	Modest
118	Addressing Proposals to Implement International Reference Pricing for Physician-Administered Drugs	Moderate
201	Prohibit and Regulate 7-Hydroxymitragynine (7-OH) Kratom Products to Protect Public Health and Youth Safety	Minimal
202	Using and Defining “Unsupervised Practice of Medicine”	Moderate
203	Support for Independent Evaluation of Outcomes Associated with Unsupervised Nurse Practitioner Practice	Modest
204	D-400.982 Revision	Moderate
205	Repeal of the Merit-Based Incentive Payment System (MIPS)	Moderate
206	Overall Hospital Quality Star Ratings / CMS Star Ratings	Modest
207	Addressing Rural Maternity Care Deserts Through the Conrad 30 Waiver Program	Minimal

208	Incorporating Critical Medical Treatment Planning into Emergency/Disaster Preparedness	Modest
209	Protecting Mental Health Treatment Privacy in Legal Proceedings	Modest
210	Eliminating Prescription Drug Adherence (PDA) as a Quality Metric Tied to Physician Ratings or Compensation	Modest
211	Preventing Hospital-Based 340B Programs from Unfairly Competing with Independent Physicians	Modest
212	Protecting Patient Access to Clinical Trials and Mitigating Administrative Disruptions to NIH Funding	Moderate
213	Prohibiting Pharmacy Benefit Managers from Owning Pharmacies	Modest
214	Medical Student Loans Should Not Be Capped	Minimal
215	Oppose Medicare Efficiency Adjustments	Modest
216	Protecting Healthcare as a Sensitive Location	Moderate
217	Ensuring Proportional Accountability for Hospital Expenditures Attributed to Medicare ACOs	Moderate
218	Opposing the Practice of Jury Anchoring in Medical Liability Cases	Minimal
219	Incorporating Evidence-Based Lifestyle Medicine into Rural Health Transformation Programs	Modest
220	Reverse CMS Cuts to Facility-Based Practice Expense Payments for Physicians	Moderate
221	Universal Newborn Congenital Cytomegalovirus Screening	Modest
222	Advocating for a Centralized Medicare Enrollment Platform to Preserve Patient Choice Between Traditional Medicare and Medicare Advantage	Moderate
223	Ensuring Due Process, Transparency, and Human Clinical Oversight in the Use of Artificial Intelligence for Health Insurance Coverage and Eligibility Determinations	Moderate
224	Clarity of Signage: Distinguishing Urgent Cares From Emergency Rooms	Modest
225	Requiring Periodic Face-to-Face Visits By Board-Certified Specialists Who Delegate Visits to Non-Physician Practitioners for Nursing Home Patients	Minimal
226	Impact of a Proposed $100,000 H-1B Visa Fee on the NRMP Match, the Physician Workforce, and the U.S. Health Care System	Moderate
227	Standby Capacity Payments and Health IT for Hospitals in Rural Areas	Moderate
228	Department of Defense Health Care Investment at Military Bases in Maternity Care Health Professional Shortage Areas	Moderate

Summary of Fiscal Notes (A-26)

229	Physicians are not Providers	Moderate
230	Exemption of International Medical Graduates from Presidential Proclamations Restricting Entry into the United States	Moderate
231	Protecting and Promoting Long Term Care Workforce Amidst Immigration Challenges	Modest
232	Banning Flavored Cannabis E-Cigarettes	Modest
233	Banning Synthesized, Purified or Derivative Products from Kratom	Modest
234	Physician Unity in Advocacy Regarding Physician Reimbursement	Modest
235	Establishing Healthcare Monitoring and Accountability in Immigration Detention Facilities	Minimal
236	Extending and Expanding the AMA Task Force to Preserve the Patient-Physician Relationship to Ensure Access and Regulatory Clarity in Gender-Affirming Care	Major - To Be Determined
237	Guaranteed 30-Day Transition Fill of Currently Prescribed Insulin at the Beginning of Each Year Plan	Minimal
238	Prohibiting the Independent Practice of Medicine by Artificial Intelligence	Moderate
239	Medicare Administrative Contractor Policy Modification	Moderate
240	Ending Private Equity Dividend Recapitalization in Healthcare	Moderate
241	Strengthening Our AMA Efforts Toward CPOM Prohibition	Minimal
242	Reducing Emergency Department Boarding through Payment Reform	Modest
243	Standardizing Medical Frailty to Streamline Medicaid Community Engagement & Work Exemptions	Moderate
244	Eliminate Administrative Barriers to Appeal Wrongful Denials	Moderate
245	State Regulation of Non-Preempted “Non-Central Matters” of ERISA Plans—Rutledge v. PCMA	Major - $127,219 Legal analysis, creation of educational programming/module
246	Artificial Intelligence Scope of Practice	Moderate
247	Comprehensive ERISA Reform	Moderate
301	Expanding Resident and Fellow Exposure to Diverse Healthcare Practice Models to Fulfill ACGME Core Competencies	Minimal
302	Excessive Cost of Multi-State DEA Licensure	Minimal
303	Allowing Options for Certification Maintenance	Minimal

Summary of Fiscal Notes (A-26)

304	Increasing the Use of Retired Physicians in Teaching Students and Residents	Minimal
305	Leadership by Physicians for Physicians in Graduate Medical Education (GME)	Minimal
306	Competency-Based Portfolio Assessment of Medical Students, Interns, Residents, and Fellows	Minimal
307	Recognizing Advocacy as a Component of Faculty Appointment and Promotion in Academic Medicine	Minimal
308	Impact of Federal and State Restrictive Actions on Gender-Affirming Care on Medical Education and Physician Workforce Development	Minimal
309	Osteoporosis Education, Awareness, and Musculoskeletal Health Optimization	Modest
310	Increasing Capacity and Access to Maternal Health Services in Rural Areas	Minimal
311	Changing the Paradigm of Medical Student Debt to address the Geriatric Physician Shortfall	Minimal
312	Advocating for Equitable Application Review in a Single Match System	Modest
313	Evaluation of Situational Judgement Tests in Medical School Admissions	Modest
314	Promoting Sex- and Gender-Inclusive Diagnostic Practices, Language, and Patient Education	Minimal
315	Expanding the Native Hawaiian Health Scholarship Program Eligibility	Minimal
316	Addressing Transitions Within GME Regarding Orientation Standards	Minimal
317	Support for Intern, Resident, and Fellow Jeopardy Pay and Additional Compensation for Gaps in Trainee Coverage	Minimal
401	Partnership with the Administration to Reduce Harmful Chemicals in Food and Align with European Safety Standards	Modest
402	Strengthening Public Health Protections Against Raw Milk–Associated Illness	Major - $69,695 Development and dissemination of education initiatives
403	AMA's continued support for COVID-19 vaccination in pregnant individuals and children	Minimal
404	Develop Climate-Conscious Resources for Physicians	Moderate
405	Studying the Environmental Impact of Ambient Clinical Intelligence Use	Modest
406	Reduce Environmental Impact of Medical Journals	Modest
407	Colorectal Cancer in Alaskan Native Patients	Modest

Summary of Fiscal Notes (A-26)

408	Addressing Rural Maternal Morbidity and Mortality through Collaboration and Intersectionality	Modest
409	Eliminate PFAS and Glyphosate in our Food and Environment	Minimal
410	Light Pollution	Minimal
411	Addressing the Myopia Epidemic, Public Education, and Insurance Coverage for Evidence-Based Myopia Control	Modest
412	Guiding Principles of Pandemic Prevention, Preparedness and Response	Minimal
413	Erosion of the Public Evidence Base for Health Policy	Modest
414	Restoring Balanced Scientific Perspective within the ACIP	Minimal
415	Advocacy for Restoration of the Endangerment Finding Regarding Greenhouse Gas Emissions	Modest
416	Clinical Laboratory Workforce Shortage and Sustainability	Modest
417	Respiratory Protection for Wildland Firefighters	Modest
418	Ensuring Access to Full HIV Post-Exposure Prophylaxis (PEP) Courses for Survivors of Sexual Assault	Minimal
419	Examining the Impact of Circadian Disruption from Shift Work During Pregnancy	Minimal
420	Expanding Support for Women Experiencing Homelessness	Minimal
421	Improving Access to Care and Support for Patients with Inflammatory Bowel Disease in the United States	Minimal
422	Expanding Access to High Resolution Anoscopy	Modest
423	Expanding Access to HIV Pre-Exposure Prophylaxis (PrEP)	Minimal
424	Supporting Education and Access to Postexposure Doxycycline (DoxyPEP)	Minimal
425	Prioritizing, Measuring, and Preventing Workplace Violence in Health Care	Modest
426	Integrating Nutrition into Health Care Delivery to Reduce Cardiovascular Risk and Food Insecurity (“Food is Medicine”)	Minimal
427	Infant Feeding Options for HIV-Seropositive Individuals	Minimal
428	Protecting Environmental Health Before, During, and After War	Minimal
429	Adolescent Dating Violence Comprehensive Screening Tool Development	Modest
430	Support Heavy Metal and Toxic Exposure Testing for Residents Affected by Wildfires	Minimal

Summary of Fiscal Notes (A-26)

431	Supporting Transportation Infrastructure Reform for Public Health	Minimal
432	Addressing Public Health Risks of Online Sports Betting	Minimal
433	Addressing the Epidemic of Fragility Fractures Through Improved Osteoporosis Screening and Treatment	Modest
434	Vaccinations in Physician Offices	Modest
501	Preregistration in Medical Research	Modest
502	Support for Rapid Methadone Inpatient Stabilization and Linkage to Care	Modest
503	Expansion of Psychedelic Assisted Therapy (PAT)	Modest
504	Strengthening U.S. Rubber Glove Production and Purchase While Reducing Foreign Forced-Labor Dependence	Modest
505	Avoiding misuse of artificial intelligence (AI) in clinical practice	Minimal
506	Access To Gender Affirming Healthcare Including Clinical Trials	Minimal
507	Pairing Behavioral and Lifestyle Medicine Principles and Practice with Glucagon-like Peptide-1 (GLP-1) Receptor Agonists and Other Anti-obesity Medications	Modest
508	Aligning Consistency and Credibility Of Direct-To-Consumer Gut Microbiome Testing Services	Modest
509	Preserving Gender-Affirming Surgical Care Access	Moderate
510	Exosome and Peptide Use in Healthcare	Moderate
511	Preserving Specialty Access to Anti-Cancer Agents	Modest
512	Medical Cannabis Use in Older Adults	Modest
513	Access, Affordability, and Safety of GLP-1 Receptor Agonists	Modest
514	Education, Screening, and Effective Treatment for Obstructive Sleep Apnea During Pregnancy	Modest
515	Transparency in AI-Driven Adverse Determinations & Clinical Logic Disclosure	Modest
601	Board Chair Term Limits	Moderate
602	Protection of Healthcare and Humanitarian Aid Personnel in Conflict Zones	Minimal
603	Establish AMA Policy and Project to Compile and Distribute JAMA Patient Pages to Enhance Public Medical Literacy	Minimal
604	Annual Scorecard to Evaluate the AMA’s Impact	Minimal

Summary of Fiscal Notes (A-26)

605	Review of Past Resolutions	Modest
606	Further Enabling AMA BOT Expediency for Actions, Advocacy, and Responses During Urgent Situations	Modest
607	Shortening the AMA House of Delegates Endorsement Process and Timeline	Minimal
608	Reinstitution of AMA Guides Editorial Panel	Major - $271,952 Annual Editorial Panel funding
609	American Medical Association Board Chair Term Limits	Moderate
610	Plant-Based Diets at AMA meetings	Modest
611	Publicizing, Supporting, and Promoting (Appropriate) AMA Member Physicians and Physician Spouses as Candidates for Local and State Offices	Major - $252,348 Legal study, meeting planning and execution
612	Increasing Expert Guidance in AMA Statements	Modest
613	Preserving Institutional Equity and Inclusivity Efforts	Minimal
614	Inclusive Policy Language for Older Adults	Minimal
615	Condemnation of Attacks on Healthcare Workers and Facilities in Gaza	Minimal
616	Humanitarian and Medical Aid Support to Palestine	Minimal
617	Reevaluation of AMA Policy Regarding Support for Specific National Medical Associations in the World Medical Association	Minimal
618	Ending AMA Investment in Weapons Manufacturers	Moderate
701	The Crisis in the Availability of Primary Care: Halt the Required Participation of Small Practices in Value-Based Payment (VBP) Models	Minimal
702	Physicians Who Do Not Practice in Hospital Setting	Minimal
703	Parity in Pricing for Anti-Obesity Medications	Moderate
704	Advocating Against Automatic Refill Requests	Modest
705	Recognizing Physicians as Sexual Assault Forensic Examiners	Minimal
706	Discharge Summaries from Skilled Nursing Facilities	Minimal
707	Malpractice Insurance for Employed Physicians	Minimal
708	Oppose Imposition of Fees on Physicians for Electronic Payment Transfers	Modest

Summary of Fiscal Notes (A-26)

709	Requiring Transparency and Accountability When Insurers and Third-Party Administrators Require Utilization Review, Thereby Practicing Medicine	Moderate
710	Parity in Access to Evidence-Based Obesity Treatment	Modest
711	Oppose Denials Based on Origin of Referral	Minimal
712	Addressing the Commoditization of Medicine Through Recognition of the Full Scope of Physician Work and Contributions	Minimal
713	Reducing Prior Authorization Delays to Improve Access to Neuromodulation and Non-Opioid Pain Therapies	Moderate
714	Physician Case Log Portability	Modest
715	Oppose the Legal Position that Virtual Credit Cards are a Legal Method of Payment under HIPAA	Moderate
716	Equal Opportunity for Payment for “On Call” Duty	Modest
717	Advocacy for a Failure-Proof National Centralized Electronic Transaction Clearinghouse	Moderate

RESOLUTIONS – BY SPONSOR (A-26)

Sponsor	No.	Title
Academic Physicians Section	226	Impact of a Proposed $100,000 H-1B Visa Fee on the NRMP Match, the Physician Workforce, and the U.S. Health Care System

REPORT OF THE BOARD OF TRUSTEES

BOT Report 02-A-26

Subject: New Specialty Organizations Representation in the House of Delegates

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

The Board of Trustees (BOT) and the Specialty and Service Society (SSS) considered the applications of the American Association of Hip and Knee Surgeons, the American Epilepsy Society, and the American Society of Neuroimaging for national medical specialty organization representation in the American Medical Association (AMA) House of Delegates (HOD). The applications were first reviewed by the AMA SSS Rules Committee and presented to the SSS Assembly for consideration.

The applications were considered using criteria developed by the Council on Long Range Planning and Development and adopted by the HOD (Policy G-600.020). (Exhibit A)

Organizations seeking admission were asked to provide appropriate membership information to the AMA. That information was analyzed to determine AMA membership, as required under criterion three. A summary of this information is attached to this report as Exhibit B.

In addition, organizations must submit a letter of application in a designated format. This format lists the above-mentioned guidelines followed by each organization's explanation of how it meets each of the criteria.

Before a society is eligible for admission to the HOD, it must participate in the SSS for three years. These organizations have actively participated in the SSS for more than three years.

Review of the materials and discussion during the SSS meeting at the November 2025 Interim Meeting indicated that the American Association of Hip and Knee Surgeons, the American Epilepsy Society, and the American Society of Neuroimaging meet the criteria for representation in the HOD.

RECOMMENDATION

Therefore, the Board of Trustees recommends that the American Association of Hip and Knee Surgeons, the American Epilepsy Society, and the American Society of Neuroimaging be granted representation in the AMA House of Delegates and that the remainder of the report be filed. (Directive to Take Action)

Fiscal Note: Less than $500

APPENDIX
Exhibit A

GUIDELINES FOR REPRESENTATION IN & ADMISSION TO THE HOUSE OF DELEGATES:

National Medical Specialty Societies

1) The organization must not be in conflict with the constitution and bylaws of the American Medical Association by discriminating in membership on the basis of race, religion, national origin, sex, or handicap.

2) The organization must (a) represent a field of medicine that has recognized scientific validity; and (b) not have board certification as its primary focus, and (c) not require membership in the specialty organization as a requisite for board certification.

3) The organization must meet one of the following criteria:

   - 1,000 or more AMA members;
   - At least 100 AMA members and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA; or
   - Have been represented in the House of Delegates at the 1990 Annual Meeting and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA.

4) The organization must be established and stable; therefore, it must have been in existence for at least 5 years prior to submitting its application.

5) Physicians should comprise the majority of the voting membership of the organization.

6) The organization must have a voluntary membership and must report as members only those who are current in payment of applicable dues are eligible to participate on committees and the governing body.

7) The organization must be active within its field of medicine and hold at least one meeting of its members per year.

8) The organization must be national in scope. It must not restrict its membership geographically and must have members from a majority of the states.

9) The organization must submit a resolution or other official statement to show that the request is approved by the governing body of the organization.

10) If international, the organization must have a US branch or chapter, and this chapter must be reviewed in terms of all of the above guidelines.

RESPONSIBILITIES OF NATIONAL MEDICAL SPECIALTY ORGANIZATIONS

1. To cooperate with the AMA in increasing its AMA membership.

2. To keep its delegate to the House of Delegates fully informed on the policy positions of the organizations so that the delegate can properly represent the organization in the House of Delegates.

3. To require its delegate to report to the organization on the actions taken by the House of Delegates at each meeting.

4. To disseminate to its membership information to the actions taken by the House of Delegates at each meeting.

5. To provide information and data to the AMA when requested.

Exhibit B - Summary Membership Information

Organization	**AMA Membership of Organization's Total Eligible Membership**
American Association of Hip and Knee Surgeons	784 of 3,672 (21%)
American Epilepsy Society	389 of 1,961 (20%)
American Society of Neuroimaging	101 of 230 (43%)

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 2-A-26

Subject: HOD Representation and Composition

Presented by: Jerry P. Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

The AMA House of Delegates (HOD) is the policy-making body of our American Medical Association (AMA). It is democratically structured and comprised of delegates from constituent associations (state medical societies), national medical specialty societies, professional interest medical associations, the Federal services, the AMA Sections, medical student regional representatives, resident and fellow sectional representatives and other groups with HOD representation. A complete list of those represented societies is online, as is the 2026 apportionment of delegates for each. Additionally, groups represented in the HOD are invited to identify one alternate delegate for each delegate apportioned to the group.

There is parity of representation between the constituent associations and the national medical specialty societies. Each constituent association is apportioned one delegate and one alternate delegate for each 1,000 (or fraction thereof) active members of the AMA, including medical students and residents and fellows. The national medical specialty societies then receive that same number of delegates and alternate delegates and those positions are apportioned back to the individual specialty societies according to AMA Policy G-600.027. Each AMA Section and professional interest medical association granted representation in the HOD receives one delegate and one alternate delegate regardless the size of its membership. There are also two groups in our House of Delegates – medical student regional delegates and resident and fellow sectional delegates, whose apportionment is codified in the AMA Bylaws (Bylaw 2.3.2 and 2.4.2) and which is based on medical student and resident and fellow AMA membership.

While the HOD treats all delegations equally, they are constituted differently. In general, the Bylaws do not prescribe the process by which most organizations represented in the House of Delegates choose their delegates and alternate delegates. These groups have organizational autonomy and can fill their delegation positions however they choose so long as the individuals are AMA active members and members of the organization, and have autonomy when it comes to how they fill unfilled positions or vacancies. Medical students and resident and fellow physicians are eligible for service on an organization's delegation as either a delegate or an alternate delegate so long as they are AMA members and members of the organization. CCB Reports 5 and 7 provide additional details.

The Council has prepared this report to propose Bylaw amendments that further emphasize the inclusive nature of the HOD, with further nuances addressed in other A-2026 CCB reports.

© 2026 American Medical Association. All rights reserved.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following Bylaws amendments (shown in red and amended by insertion or ~~deletion~~) be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

2—House of Delegates

2.0.1 Composition and Representation. ***

2.0.1.1 Qualification of Members of the House of Delegates. Members of the House of Delegates must be active members of the AMA, including resident and fellow physicians and medical students, and of the entity they represent.

2.0.1.2 Representation. The representational role of the delegates is multi-dimensional and includes:

a. Advocacy for patients to improve the health of the public and the health care system.

b. Representation of the perspectives of the delegate's sponsoring organization to the House of Delegates.

c. Representation of the delegate's physician and medical student constituents in the decision-making process of the House of Delegates.

d. Representation of the AMA and the House of Delegates to physicians, medical associations, and others, including resident and fellow physicians and medical students.

e. Solicitation of input from and provision of feedback to constituents.

2.0.1.2.1 Consideration. In considering business, delegates should take into consideration the perspectives of their patients, their sponsoring organizations, and their medical student or physician constituents. In voting on matters before the House of Delegates, delegates should vote on the basis of what is best for patients and quality medical care.

***

2.0.1.3 ~~2.8~~ Alternate Delegates. Each organization represented in the House of Delegates ~~may select~~ is allotted an alternate delegate for each of its delegates entitled to be seated in the House of Delegates. Alternate delegates must meet the criteria specified in Bylaw 2.0.1.1 and be similarly credentialed per the Bylaws that govern credentialing for the delegates representing their organization. Terms for alternate delegates shall be the same as for the delegates.

~~2.10.7~~

2.0.1.4 **Unique Representation.** No delegate or alternate delegate may be credentialed or seated at any meeting to represent more than one organization in the House of Delegates.

2.0.1.5 **Registration.** All attendees of a House of Delegates meeting must register for the meeting.

~~2.0.1.3~~

2.0.1.6 **Autonomy.** The participation of any organization in the House of Delegates is voluntary. Policy actions of the AMA do not in themselves bind an organization or subject it to any obligation that it does not voluntarily assume.

2.1 **Constituent Association~~s~~ Delegations.** Constituent associations are recognized medical associations of states, commonwealths, districts, territories, or possessions of the United States. Each recognized constituent association granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment. Only one constituent association from each U.S. state, commonwealth, territory, or possession shall be granted representation in the House of Delegates.

2.1.1 **Apportionment.** The apportionment of delegates from each constituent association is one delegate and one alternate delegate for each 1,000 (or fraction thereof), active members of the AMA including medical students and residents and fellows within the jurisdiction of each constituent association, as recorded by the AMA as of December 31 of each year.

2.1.1.1 **Effective Date.** Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year. ~~**2.10.1. Notification**~~ In January of each year, the AMA shall notify each organization of the number of seats in the House of Delegates to which it is entitled during the current year.

***

2.1.4 **Term.** Delegates and alternate delegates from constituent associations shall be selected for two ~~2~~-year terms and assume office on the date set by the constituent association, provided that such seats are authorized pursuant to these Bylaws. Constituent associations entitled to more than one delegate and one alternate delegate shall select them so that half the number, as near as may be, are selected each year. One-year terms may be provided but only to the extent and for such time as is necessary to accomplish this proportion.

***

2.2 **National Medical Specialty Societ~~y~~~~ies~~ Delegations.** The number of delegates representing national medical specialty societies shall equal the number of delegates representing the constituent societies. Each national medical specialty society granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment. The total number of apportioned to national medical specialty societies under Bylaw 2.2.1 shall be adjusted to be equal to the

total number of delegates apportioned to constituent societies under sections 2.1.1 using methods specified in AMA policy.

2.2.1 Apportionment. The apportionment of delegates from each specialty society represented in the AMA House of Delegates is one delegate and alternate delegate for each 1,000, or fraction thereof, physician specialty society members, including residents and fellows, as of December 31 of each year who are eligible to serve on committees or the governing body, are active members of the AMA and are members in good standing and current in payment of applicable dues of both the specialty society and the AMA.

2.2.1.1 Effective Date. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year. ~~**2.10.1. Notification.**~~ In January of each year, the AMA shall notify each organization of the number of seats in the House of Delegates to which it is entitled during the current year.

***

2.2.4 Term. Delegates and alternate delegates from specialty societies shall be selected for two ~~2~~-year terms, and shall assume office on the date set by the specialty society provided that such seats are authorized pursuant to these Bylaws. Specialty societies entitled to more than one delegate and alternate delegate shall select them so that half the number, as near as may be, are selected each year. One-year terms may be provided but only to the extent and for such time as is necessary to accomplish this proportion.

***

2.6 Other Delegates and Alternate Delegates. Each of the following is entitled to a delegate and an alternate delegate: AMA Sections; the Surgeons General of the United States Army, United States Navy, United States Air Force, and United States Public Health Service; the Chief Medical Director of the Department of Veterans Affairs; the National Medical Association; the American Medical Women's Association; the American Osteopathic Association; and professional interest medical associations granted representation in the House of Delegates.

***

2.6.2 Term. Delegates and alternate delegates from these entities shall be selected for two ~~2~~-year terms, and shall assume office on the date set by the entity. ***

(Modify Bylaws)

CLEAN BYLAW LANGUAGE IF ADOPTED

2—House of Delegates

2.0.1 Composition and Representation. ***

2.0.1.1 Qualification of Members of the House of Delegates. Members of the House of Delegates must be active members of the AMA, including resident and fellow physicians and medical students, and of the entity they represent.

2.0.1.2 Representation. The representational role of the delegates is multi-dimensional and includes:

a. Advocacy for patients to improve the health of the public and the health care system.

b. Representation of the perspectives of the delegate's sponsoring organization to the House of Delegates.

c. Representation of the delegate's physician and medical student constituents in the decision-making process of the House of Delegates.

d. Representation of the AMA and the House of Delegates to physicians, medical associations, and others, including resident and fellow physicians and medical students.

e. Solicitation of input from and provision of feedback to constituents.

2.0.1.2.1 Consideration. In considering business, delegates should take into consideration the perspectives of their patients, their sponsoring organizations, and their medical student or physician constituents. In voting on matters before the House of Delegates, delegates should vote on the basis of what is best for patients and quality medical care.

***

2.0.1.3 Alternate Delegates. Each organization represented in the House of Delegates is allotted an alternate delegate for each of its delegates entitled to be seated in the House of Delegates. Alternate delegates must meet the criteria specified in Bylaw 2.0.1.1 and be similarly credentialed per the Bylaws that govern credentialing for the delegates representing their organization. Terms for alternate delegates shall be the same as for the delegates.

2.0.1.4 Unique Representation. No delegate or alternate delegate may be credentialed or seated at any meeting to represent more than one organization in the House of Delegates.

2.0.1.5 Registration. All attendees of a House of Delegates meeting must register for the meeting.

2.0.1.6 Autonomy. The participation of any organization in the House of Delegates is voluntary. Policy actions of the AMA do not in themselves bind an organization or subject it to any obligation that it does not voluntarily assume.

2.1 Constituent Association Delegations. Constituent associations are recognized medical associations of states, commonwealths, districts, territories, or possessions of the United States. Each recognized constituent association granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment. Only one constituent association from each U.S. state, commonwealth, territory, or possession shall be granted representation in the House of Delegates.

2.1.1 Apportionment. The apportionment of delegates from each constituent association is one delegate and one alternate delegate for each 1,000 (or fraction thereof), active members of the AMA including medical students and residents and fellows within the jurisdiction of each constituent association, as recorded by the AMA as of December 31 of each year.

2.1.1.1 Effective Date. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year. In January of each year, the AMA shall notify each organization of the number of seats in the House of Delegates to which it is entitled during the current year.

***

2.1.4 Term. Delegates and alternate delegates from constituent associations shall be selected for two-year terms and assume office on the date set by the constituent association, provided that such seats are authorized pursuant to these Bylaws. Constituent associations entitled to more than one delegate and one alternate delegate shall select them so that half the number, as near as may be, are selected each year. One-year terms may be provided but only to the extent and for such time as is necessary to accomplish this proportion.

***

2.2 National Medical Specialty Society Delegations. The number of delegates representing national medical specialty societies shall equal the number of delegates representing the constituent societies. Each national medical specialty society granted representation in the House of Delegates is entitled to delegate representation based on the number of seats allocated to it by apportionment. The total number of apportioned to national medical specialty societies under Bylaw 2.2.1 shall be adjusted to be equal to the total number of delegates apportioned to constituent societies under sections 2.1.1 using methods specified in AMA policy.

2.2.1 Apportionment. The apportionment of delegates from each specialty society represented in the AMA House of Delegates is one delegate and alternate delegate for each 1,000, or fraction thereof, physician specialty society members, including residents and fellows, as of December 31 of each year who are eligible to serve on committees or the governing body, are active members of the AMA and are members in good standing and current in payment of applicable dues of both the specialty society and the AMA.

2.2.1.1 Effective Date. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year. In January of each year, the AMA shall notify each organization of the number of seats in the House of Delegates to which it is entitled during the current year.

***

2.2.4 Term. Delegates and alternate delegates from specialty societies shall be selected for two-year terms, and shall assume office on the date set by the specialty society provided that such seats are authorized pursuant to these Bylaws. Specialty societies entitled to more than one delegate and alternate delegate shall select them so that half the number, as near as may be, are selected each year. One-year terms may be provided but only to the extent and for such time as is necessary to accomplish this proportion.

***

2.6 Other Delegates and Alternate Delegates. Each of the following is entitled to a delegate and an alternate delegate: AMA Sections; the Surgeons General of the United States Army, United States Navy, United States Air Force, and United States Public Health Service; the Chief Medical Director of the Department of Veterans Affairs; the National Medical Association; the American Medical Women's Association; the American Osteopathic Association; and professional interest medical associations granted representation in the House of Delegates.

***

2.6.2 Term. Delegates and alternate delegates from these entities shall be selected for two-year terms, and shall assume office on the date set by the entity.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 3-A-26

Subject: Rights & Privileges of HOD Members

Presented by: Jerry P. Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

At I-25 the House of Delegates (HOD) referred Council on Constitution and Bylaws (CCB) Report 3-I-25 for report back at A-26. Because CCB Report 3-I-25 was long and complex, the Council opted to separate the issues it addressed into several focused reports.

This report presents new language to specifically address the rights of those delegates and alternate delegates who are affiliated with the House of Delegates as well as relevant HOD procedures. Current Bylaws address the rights and privileges of Ex Officio Members (of the House) [Bylaw 2.7], Rights of Official Observers (to the House) [Bylaw 2.9.1], the Rights of the Speakers [Bylaw 2.5, 4.4 and 4.5], Rights of Temporary Substitute Delegates [Bylaw 2.10.4.1] and the rights of Alternate Delegates [Bylaw 2.8], but provides no language explicitly addressing the rights and privileges of delegates. This report provides that language as well as additional amended language to address the rights and privileges of alternate delegates. It also relocates existing provisions acknowledging that a constituent association president or national medical specialty society or professional interest medical association president may be credentialed as an additional alternate delegate for the societies they represent. In doing so and in eliminating redundant text, some renumbering has occurred.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following Bylaws amendments and deletions (shown in red and amended by insertion or ~~deletion~~) be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

2—House of Delegates

***

2.0.1 Composition and Representation. The House of Delegates is composed of delegates selected by recognized constituent associations and specialty societies, and other delegates as provided in this bylaw. A delegate may introduce resolutions into the House of Delegates, speak and debate on the floor of the House, offer an amendment to a pending matter, make motions, vote on items of business and vote in elections.

***

2.0.1.1 Qualification of Members of the House of Delegates. ***

The current president of a national medical specialty society or a professional interest medical association may also be credentialed as an additional alternate delegate at the discretion of each national medical specialty society or professional interest medical association.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 4-A-26

Subject: Credentialing of HOD Delegates and Alternate Delegates

Presented by: Jerry P. Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

At I-25 the House of Delegates (HOD) referred Council on Constitution and Bylaws (CCB) Report 3-I-25 for report back at A-26. Because CCB Report 3-I-25 was long and complex, the Council opted to separate the issues it addressed into several focused reports.

This report presents amended language to more accurately address the appropriate credentialing authority for all groups with representation in the HOD, including the credentialing authorities for the AMA Section delegates and alternate delegates, the regional medical student delegates and alternate delegates and the resident and fellow sectional delegates and alternate delegates.

As noted in referred CCB Report 3-I-25, the Council looked at the disparate provisions that govern the credentialing of delegates and alternate delegates and noted several outmoded provisions and inaccuracies. The term "certification" referred to an obsolete process whereby each group represented in the HOD manually completed a form listing their delegates and alternate delegates and then certified the accuracy of that information. While the Council understands that the term certification may have varying implications or significance for different purposes and delegations, the term "credentialing" more appropriately reflects the current process.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following Bylaws amendments and deletions (shown in red and amended by insertion or ~~deletion~~) be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

2.1.3 ~~**Certification**~~ **Credentialing.** The president or chief executive officer of each constituent association, or ~~the president's~~ their designee, shall provide ~~certify to~~ the AMA Office of House of Delegates Affairs with the names and contact information of their delegates and alternate delegates ~~from their respective associations. Certification must occur~~ at least 45 days prior to each meeting ~~the Annual or Interim Meeting~~ of the House of Delegates. These appropriately identified individuals shall be duly credentialed for that meeting only.

***

2.2.3 ~~**Certification**~~ **Credentialing.** The president or chief executive officer of each specialty society, or ~~the president's~~ their designee, shall provide ~~certify to~~ the AMA Office of House of Delegates Affairs with the names and contact information of their delegates and alternate delegates ~~from their respective societies. Certification must occur~~ at least 45 days

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 5-A-26

Subject:	Inclusion of Medical Students and Resident/Fellow Physicians in HOD Delegations
Presented by:	Jerry P. Abraham, MD, MPH, Chair
Referred to:	Reference Committee on Ethics and Bylaws

At I-25 the House of Delegates (HOD) referred Council on Constitution and Bylaws (CCB) Report 3-I-25 for report back at A-26. Because CCB Report 3-I-25 was long and complex, the Council opted to separate the issues it addressed into several focused reports.

Previously the Council had recommended deletion of Bylaw 2.1.6 that acknowledged the ability of a constituent association to include a medical or resident and fellow physician on its delegation. The Council had recommended deletion as constituent associations are autonomous and thus may select a delegate by a mechanism of its choice. However, there was significant testimony opposing deletion of that language with additional testimony supporting equivalent language for the national medical specialty societies.

This report presents updated language to reflect the HOD's will. The report also recognizes the ability of a professional interest medical association and other groups to similarly fill its delegate or alternate delegate positions with a resident/fellow physician member and/or a medical student member. Lastly, the Council acknowledges its awareness that its amended language refers to "resident/fellow physician" rather than "resident and fellow physician" as is used in other Bylaw provisions but believes the usage of "resident/fellow" is appropriate here.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following Bylaws amendments and deletions (shown in red and amended by insertion or ~~deletion~~) be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

2.1.2 **Selection.** Each constituent association shall select and adjust the number of delegates and alternate delegates to conform with the number of seats authorized under this bylaw.

***

2.1.6 **Resident/Fellow Physician and Medical Student Delegates and Alternate Delegates.** A constituent association may designate one or more of its delegate and alternate delegate seats to be filled by a resident/fellow physician member or a medical student member.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 6-A-26

Subject:	Medical Student Regional Delegates and Alternate Delegates and Resident and Fellow Sectional Delegates and Alternate Delegates in the HOD
Presented by:	Jerry P. Abraham, MD, MPH, Chair
Referred to:	Reference Committee on Ethics and Bylaws

At I-25 the House of Delegates (HOD) referred Council on Constitution and Bylaws (CCB) Report 3-I-25 for report back at A-26. Because CCB Report 3-I-25 was long and complex, the Council opted to separate the issues it addressed into several focused reports.

This report covers the general parameters that govern the medical student regional delegates and alternate delegates and resident and fellow sectional delegates and alternate delegates with some proposed changes for clarity, consistency and accuracy.

BACKGROUND

Specific Requirements of the Medical Student Regional and Resident and Fellow Sectional Delegations

The medical student regional delegates and alternate delegates and the resident and fellow sectional delegates and alternate delegates are governed by long-existing American Medical Association (AMA) Bylaw provisions. The HOD in granting additional representation to medical students and residents and fellows adopted language prescribing that these representatives must be endorsed by a society represented in the HOD and be elected by their peers. The bylaws further specify that medical student regional delegates and alternate delegates require an endorsement from the constituent society in which their medical school is located and may only represent their Medical Student Region, as defined in the Medical Student Internal Operating Procedures. Similarly, there are limitations on the number of resident and fellow sectional delegates and alternate delegates that may be elected with endorsement from a single state or specialty, with those details contained in the rules (internal operating procedures) of the Resident and Fellow Section.

Current bylaws also direct that the apportionment of the medical student regional and resident and fellow sectional delegates and alternates is determined in January but does not take effect until the following January, one year later. This timing is important as it allows for the election of medical student regional and resident and fellow sectional delegates to take place in November, in conjunction with the Interim meeting. These elected delegates are then reported to the Office of the House of Delegates prior to the development of the HOD seating chart which occurs in January of each year, directly after the apportionment process for the HOD is completed. Other bylaw provisions specify that the medical student regional delegates are seated with their endorsing constituent society and the resident and fellow sectional delegates are seated with their endorsing society, hence the need to identify elected medical student regional and resident and fellow sectional delegates prior to developing the HOD seating chart for the year. These seats remain with the original delegate's endorsing society for the duration of that delegate's term (1 year). Alternate

© 2026 American Medical Association. All rights reserved.

delegates or temporary delegates will be seated in this primary delegate's seat, even if they are from a different state within the Medical Student Region or from a different state or specialty than the original resident and fellow sectional delegate. Therefore, the Council moved the existing language that governs the seating of the medical student regional delegates and the resident and fellow sectional delegates under the heading for the medical student regional and the resident and fellow sectional delegations.

The bylaw clarifications offered in this report do not change existing rules that govern the apportionment, election, or seating of the medical student regional or resident and fellow sectional delegates and alternate delegates. The rules that govern the filling of vacancies or meeting absences in these positions are discussed in CCB 7.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following Bylaws amendments and deletions (shown in red and amended by insertion or ~~deletion~~) be adopted, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

2.3 Medical Student Regional Delegates and Alternate Delegates. In addition to the delegate and alternate delegate representing the Medical Student Section, medical student regional delegates and regional alternate delegates shall be apportioned and elected as provided in this bylaw.

2.3.1 Qualifications. Medical student regional delegates and alternate delegates must be active medical student members of the AMA. In addition, medical student regional delegates and alternate delegates must be members of and have received written endorsement from the~~ir endorsing~~ constituent association where their educational program is located. The Medical Student R~~r~~egion in which the endorsing society is located determines the student's region, and a medical student may only serve as a regional delegate, alternate delegate or a~~ny~~ temporary delegate or temporary alternate delegate ~~form of substitute (pursuant to Bylaws 2.8.5 or 2.10.4) only~~ for that region.

2.3.2 Apportionment. The total number of ~~M~~medical ~~S~~student ~~R~~regional delegates and alternate delegates is based on one delegate and one alternate delegate for each 2,000 active medical student members of the AMA, as recorded by the AMA on December 31 of each year. Each Medical Student Region, as defined by the Medical Student Section, is entitled to one delegate and one alternate delegate for each 2,000 active medical student members of the AMA in an educational program located within the jurisdiction of the Medical Student Region. Any remaining ~~M~~medical ~~S~~student ~~Section~~ ~~R~~regional delegates and alternate delegates shall be apportioned one delegate and one alternate delegate per region(s) with the greatest number of active AMA medical student members in excess of a multiple of 2,000. If two R~~r~~egions have the same number of active AMA medical student members, ties will be broken by lottery by the Medical Student Section Governing Council.

2.3.2.1 Effective Date. In January of each year the AMA shall notify the chair of the Medical Student Section Governing Council and the director of the Medical Student Section of the number of seats in the House of Delegates to which each Medical Student Region is entitled. Such apportionment

shall take effect on January 1 of the following year and shall remain effective for one year.

2.3.3 Election. Medical student regional delegates and alternate~~s~~ delegates shall be elected by the medical student representatives to the appropriate Medical Student ~~Section~~ Region in accordance with rules ~~procedures~~ adopted by the Medical Student Section and approved by the Board of Trustees. ~~Each elected delegate and alternate delegate must receive written endorsement from their constituent association in accordance with procedures adopted by the Medical Student Section and approved by the Board of Trustees.~~ Regional d~~D~~elegates and alternate delegates shall be elected at the Business Meeting of the Medical Student Section held in conjunction with ~~prior to~~ the Interim Meeting of the House of Delegates. Regional d~~D~~elegates and alternate delegates shall ~~be seated~~ assume office at the subsequent ~~next Annual Meeting~~ meeting of the House of Delegates.

***

2.3.5 Term. Medical s~~S~~tudent r~~R~~egional delegates and alternate delegates shall be elected for one-year terms ~~and shall assume office on the date set by the Medical Student Section Governing Council~~.

***

2.3.7
~~2.10.8~~ Medical Student Regional Delegate Seating. Each medical student regional delegate shall be seated with the student's endorsing constituent association. Alternate delegates, ~~substitute~~ temporary delegates, or temporary alternate delegates shall be assigned to the original medical student regional delegate's seat location during the time they are seated for the original delegate.

2.4 ~~Delegates from the~~ Resident and Fellow Sectional Delegates and Alternate Delegates. In addition to the delegate and alternate delegate representing the Resident and Fellow Section, resident and fellow physician delegates and alternate delegates shall be apportioned and elected in a manner as provided in this bylaw.

2.4.1 Qualifications. Resident and fellow sectional ~~D~~delegates and alternate delegates ~~from the Resident and Fellow Section~~ must be active members of the Resident and Fellow Section of the AMA. In addition, resident and fellow sectional ~~physician~~ delegates and alternate delegates must be members of and have written endorsement from an ~~their endorsing~~ organization currently seated in the HOD, in a capacity appropriate to their level of training.

2.4.2 Apportionment. The apportionment of delegates from the Resident and Fellow Section is one delegate and alternate delegate for each 2,000 active resident and fellow physician members of the AMA, as recorded by the AMA on December 31 of each year.

2.4.2.1 Effective Date. In January of each year, the AMA shall notify the chair of the Resident and Fellow Section Governing Council and the director of the Resident and Fellow Section of the number of seats in the House of Delegates to which the Resident and Fellow Section is entitled. Such

apportionment shall take effect on January 1 of the following year and shall remain effective for one year.

2.4.3 Election. Resident and fellow sectional ~~D~~delegates and alternate delegates shall be elected by the Resident and Fellow Section in accordance with rules adopted by the Section and approved by the Board of Trustees. Sectional delegates and alternate delegates shall be elected at the Business Meeting of the Resident and Fellow Section held in conjunction with the Interim Meeting of the House of Delegates. Sectional delegates and alternate delegates shall assume office at the subsequent meeting of the House of Delegates. ~~Each delegate and alternate delegate must receive written endorsement from a society or organization currently seated in the House of Delegates and in accordance with procedures adopted by the Resident and Fellow Section and approved by the Board of Trustees.~~

***

2.4.5 Term. Resident and fellow sectional ~~D~~delegates and alternate delegates ~~from the Resident and Fellow Section~~ shall be elected for one-year terms ~~and shall assume office on the date set by the Resident and Fellow Section Governing Council~~.

***

~~**2.10.9**~~

2.4.7 Resident and Fellow Sectional Delegate Seating. Each ~~delegate from the R~~resident and ~~F~~fellow ~~S~~sectional delegate shall be seated with the physician's endorsing society or organization. In the case where a delegate has been endorsed by multiple entities, the delegate must choose, prior to the election, with which delegation the delegate wishes to be seated. Alternate sectional delegates, ~~substitute~~ temporary delegates, or temporary alternate delegates shall be assigned to the original resident and fellow sectional delegate's seat location during the time they are seated for the original delegate.

(Modify Bylaws)

CLEAN BYLAW LANGUAGE IF ADOPTED

2.3 Medical Student Regional Delegates and Alternate Delegates. In addition to the delegate and alternate delegate representing the Medical Student Section, medical student regional delegates and regional alternate delegates shall be apportioned and elected as provided in this bylaw.

2.3.1 Qualifications. Medical student regional delegates and alternate delegates must be active medical student members of the AMA. In addition, medical student regional delegates and alternate delegates must be members of and have received written endorsement from the constituent association where their educational program is located. The Medical Student Region in which the endorsing society is located determines the student's region, and a medical student may only serve as a regional delegate, alternate delegate or a temporary delegate or temporary alternate delegate for that region.

2.3.2 Apportionment. The total number of medical student regional delegates and alternate delegates is based on one delegate and one alternate delegate for each 2,000 active medical student members of the AMA, as recorded by the AMA on December 31 of each year. Each Medical Student Region, as defined by the Medical Student Section, is entitled to one delegate and one alternate delegate for each 2,000 active medical student members of the AMA in an educational program located within the jurisdiction of the Medical Student Region. Any remaining medical student regional delegates and alternate delegates shall be apportioned one delegate and one alternate delegate per region(s) with the greatest number of active AMA medical student members in excess of a multiple of 2,000. If two Regions have the same number of active AMA medical student members, ties will be broken by lottery by the Medical Student Section Governing Council.

2.3.2.1 Effective Date. In January of each year the AMA shall notify the chair of the Medical Student Section Governing Council and the Director of the Medical Student Section of the number of seats in the House of Delegates to which each Medical Student Region is entitled. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year.

2.3.3 Election. Medical student regional delegates and alternate delegates shall be elected by the medical student representatives to the appropriate Medical Student Region in accordance with rules adopted by the Medical Student Section and approved by the Board of Trustees. Regional delegates and alternate delegates shall be elected at the Business Meeting of the Medical Student Section held in conjunction with the Interim Meeting of the House of Delegates. Regional delegates and alternate delegates shall assume office at the subsequent meeting of the House of Delegates.

***

2.3.5 Term. Medical student regional delegates and alternate delegates shall be elected for one-year terms.

***

2.3.7 Medical Student Regional Delegate Seating. Each medical student regional delegate shall be seated with the student's endorsing constituent association. Alternate delegates, temporary delegates, or temporary alternate delegates shall be assigned to the original medical student regional delegate's seat location during the time they are seated for the original delegate.

2.4 Resident and Fellow Sectional Delegates and Alternate Delegates. In addition to the delegate and alternate delegate representing the Resident and Fellow Section, resident and fellow physician delegates and alternate delegates shall be apportioned and elected in a manner as provided in this bylaw.

2.4.1 Qualifications. Resident and fellow sectional delegates and alternate delegates must be active members of the Resident and Fellow Section of the AMA. In addition, resident and fellow sectional delegates and alternate delegates must be members of and have written endorsement from an organization currently seated in the HOD, in a capacity appropriate to their level of training.

2.4.2 Apportionment. The apportionment of delegates from the Resident and Fellow Section is one delegate and alternate delegate for each 2,000 active resident and fellow physician members of the AMA, as recorded by the AMA on December 31 of each year.

2.4.2.1 Effective Date. In January of each year, the AMA shall notify the chair of the Resident and Fellow Section Governing Council and the Director of the Resident and Fellow Section of the number of seats in the House of Delegates to which the Resident and Fellow Section is entitled. Such apportionment shall take effect on January 1 of the following year and shall remain effective for one year.

2.4.3 Election. Resident and fellow sectional delegates and alternate delegates shall be elected by the Resident and Fellow Section in accordance with rules adopted by the Section and approved by the Board of Trustees. Sectional delegates and alternate delegates shall be elected at the Business Meeting of the Resident and Fellow Section held in conjunction with the Interim Meeting of the House of Delegates. Sectional delegates and alternate delegates shall assume office at the subsequent meeting of the House of Delegates.

***

2.4.5 Term. Resident and fellow sectional delegates and alternate delegates shall be elected for one-year terms.

***

2.4.7 Resident and Fellow Sectional Delegate Seating. Each resident and fellow sectional delegate shall be seated with the physician's endorsing society or organization. In the case where a delegate has been endorsed by multiple entities, the delegate must choose, prior to the election, with which delegation the delegate wishes to be seated. Alternate sectional delegates, temporary delegates, or temporary alternate delegates shall be assigned to the original resident and fellow sectional delegate's seat location during the time they are seated for the original delegate.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 7-A-26

Subject: HOD Delegate and Alternate Delegate Vacancies and Meeting Absences

Presented by: Jerry P. Abraham, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

The House of Delegates (HOD) referred Council on Constitution and Bylaws (CCB) Report 3-I-25 and Resolution 10-I-25 to CCB for a report back at A-26. CCB Report 3-I-25 proposed numerous bylaw amendments, including deletion of references to substitute delegates and temporary substitute delegates. In that report, the Council had alternatively proposed the term, "temporary delegates and alternate delegates," to denote those individuals who were credentialed to fill an unfilled seat or a delegation vacancy after the credentialing deadline, which is a uniform 45 days for all groups with HOD representation. As CCB Report 3-I-25 noted, the distinction between existing bylaw language that characterized alternate delegates, substitute delegates, substitute alternate delegates, temporary substitute delegates, and temporary substitute alternate delegate was confusing.

Resolution 10-I-25, submitted by the Medical Student Section (MSS) and the Resident and Fellow Section (RFS) asked for the following actions:

- That our AMA Bylaws be amended to explicitly affirm the ability of the RFS to appoint substitute resident and fellow sectional delegates and alternate delegates as well as temporary substitute resident and fellow sectional delegates in accordance with procedures adopted by the Section as all other delegations to the House of Delegates are able to and without being held to a higher threshold of election; and

- That our AMA Bylaws be amended to explicitly affirm the ability of the MSS to appoint substitute medical student regional delegates and alternate delegates as well as temporary substitute medical student regional delegates and alternate delegates in accordance with procedures adopted by the Section as all other delegations to the House of Delegates are able to and without being held to a higher threshold of election.

BACKGROUND

Alternate delegates are considered active members of their delegation and typically share meeting duties equally with delegates. While the traditional purpose of an alternate delegate is to be seated in the House at a delegate's request, in practice, delegations often routinely seat their alternates for the portion of the meeting covering a reference committee for which the alternate delegate was primarily responsible or for other designated times to better allow for this division of labor. Seating of alternates is accomplished via the exchange of the delegate's temporary credential (salmon card) — see CCB Report 3-A-26 (Bylaw 2.0.1.3.2). This standard practice is widely used and understood by members of the House. However, it should not be confused with the recredentialing of an alternate delegate as a temporary delegate which is reserved for delegate absences from all or the

© 2026 American Medical Association. All rights reserved.

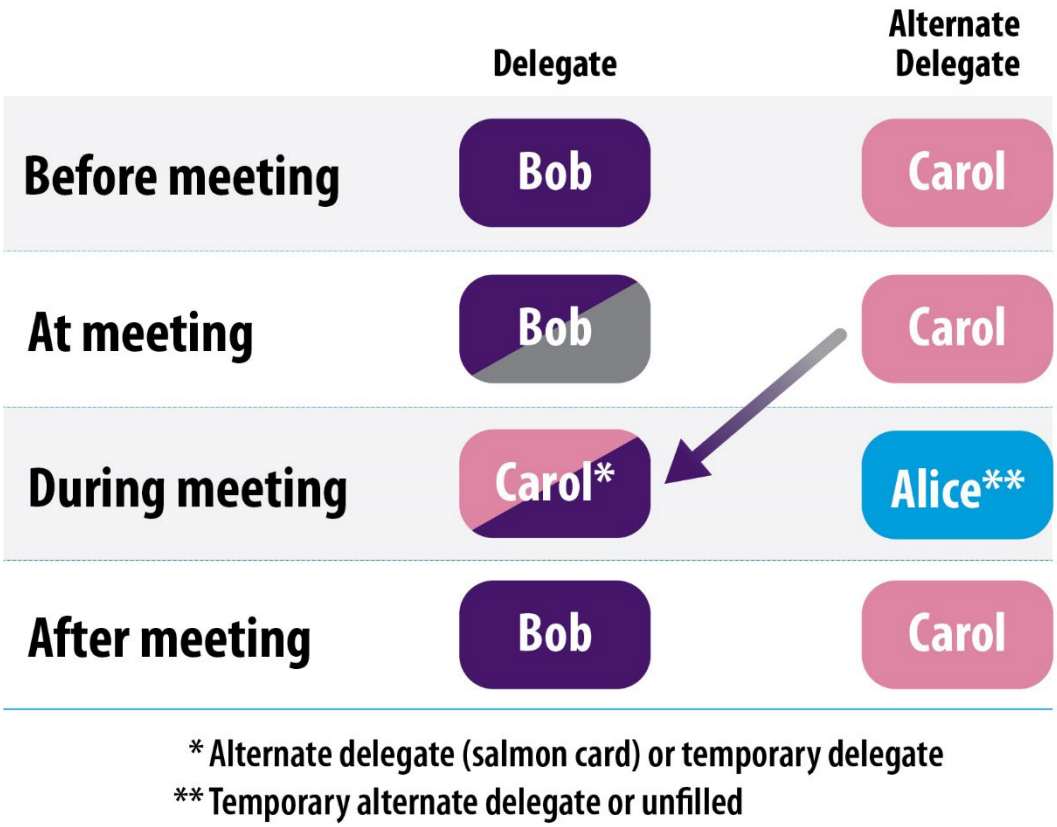
remainder of a meeting. Furthering this confusion is the fact that all individuals who miss the 45-day credentialing deadline for the meeting are credentialed as temporary delegates or alternate delegates for that meeting, even though they may be the duly selected individuals from that HOD entity.

In their testimony on CCB Report 3-I-25 and Resolution 10-I-25, medical students and residents and fellows cited challenges associated with school, work and family responsibilities, which often equate to an inability to attend both their Section meeting and an entire HOD meeting. They mentioned the need to hold a leadership position to secure funding to support their attendance in whole or in part, and they noted that attending the meeting in an "official capacity" such as a temporary alternate delegate may allow an excused absence from their training program. The Council heard that many medical students, residents and fellows stay for the HOD meetings for mentorship and leadership development opportunities and comprise a pool of potential temporary alternate delegates who could be appointed rather than elected. The Council noted that these "extra" medical students and residents and fellows in attendance at meetings are occasionally asked to fill temporary positions in constituent associations, national medical societies, or other groups represented in the House for which they are an eligible member. Such situations fully comport with the AMA Bylaws that allow constituent, national medical specialty society, professional interest medical associations and other groups autonomy in how to fill positions. The difficulty lies in credentialing these available individuals to fill unfilled medical student regional or resident and fellow sectional alternate delegate positions. This stems from long-existing Bylaws that require medical student regional delegates and alternates and resident and fellow sectional delegates and alternates to be elected by their respective sections and endorsed by an organization represented in the HOD.

EXAMPLES AND TERMINOLOGY

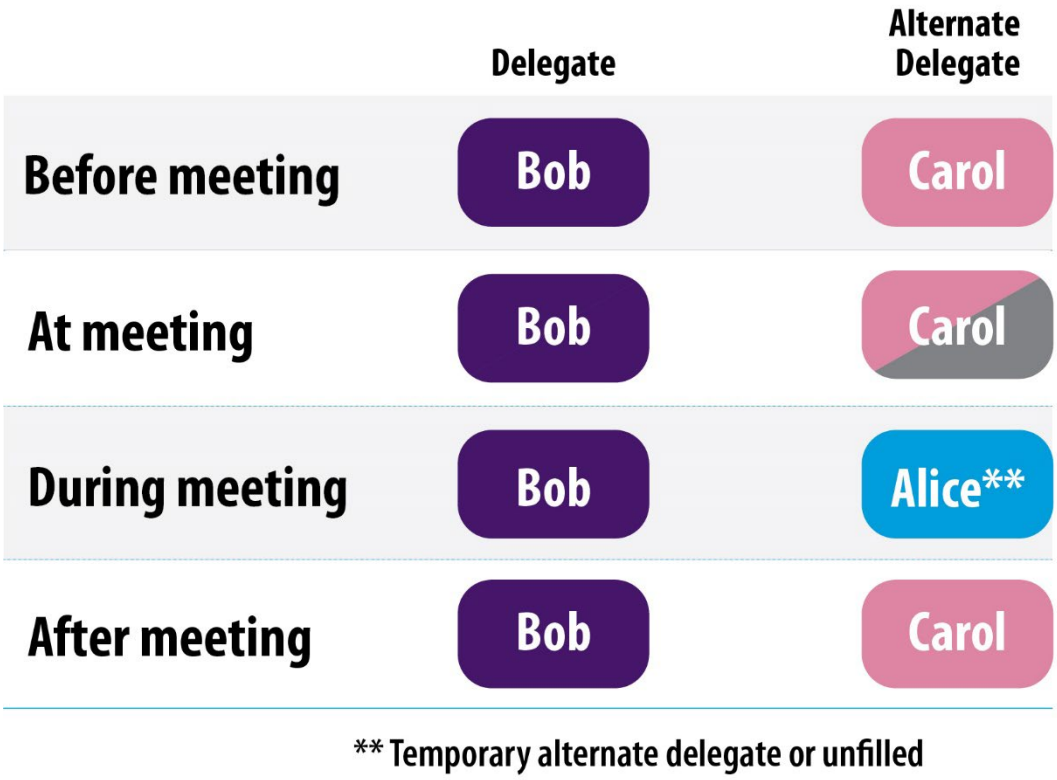
As a starting point, the Council discussed at length various scenarios that may occur before and after the credentialing deadline and proposed some definitions for clarity. These definitions will be included in the glossary of the Bylaws and cited in the House of Delegates Reference Manual: Procedures, Policies and Practices:

- ***Vacancy*** – A vacancy is a permanent loss of a position for the remainder of the term. Vacancies are addressed throughout the Bylaws where the composition of the HOD is defined.



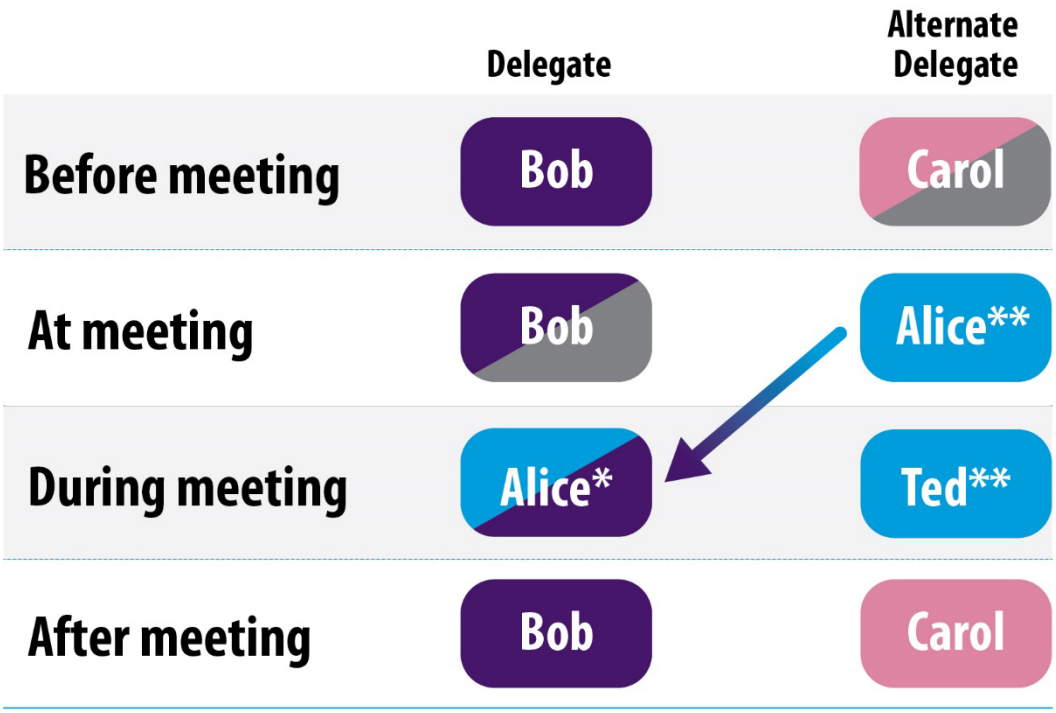
- ***Meeting Absence*** – A meeting absence occurs when a credentialed delegate or alternate delegate is unable to attend a meeting of the HOD, or a portion thereof. A remedy for a meeting absence is the credentialing of a temporary delegate or temporary alternate delegate.

Vacancies are typically addressed by filling the position via the procedures as defined by the entity represented in the House of Delegates. This may be via selection of a new individual to complete the term or to start a new term per the entity's internal rules.



Example A: ***A Medical Association Chooses Bob as its Delegate for a 2-year Term.***
Bob duly attends an HOD meeting as a delegate but must resign shortly thereafter. The medical association then chooses, via its established procedures for filling vacancies, Carol to serve as delegate for the remainder of Bob's term.

Meeting Absences are addressed via the appointment of temporary delegates and temporary alternate delegates who fill positions that become open transiently, with the original holder of the position expected to fulfill the term. This includes occasions when the duly selected individuals were not credentialed by the 45-day credentialing deadline.



Example B*: Bob, the Delegate, Leaves the Meeting.*
A medical association has chosen Bob as its delegate and Carol as its alternate delegate. They are credentialed by the 45-day deadline. Alice, a member of the association and the AMA, attends the meeting but is not serving as a delegate or alternate delegate. Bob must leave the meeting before it concludes. Carol, the alternate delegate, may function as the delegate using Bob's salmon card, but she may not vote in elections. Alternatively, the medical association may choose to recredential her as a temporary delegate. If Carol is recredentialed as a temporary delegate, her alternate delegate position opens. This position may be left open or may be filled by credentialing a temporary alternate delegate. In this instance, the medical association chooses to credential Alice as a temporary alternate delegate for that meeting only. Following the meeting, Bob and Carol resume their roles for the remainder of their terms.

Example C*: Carol, the Alternate Delegate, Leaves Meeting.*
Bob and Carol are the medical association's credentialed delegate and alternate delegate for an HOD meeting, but Carol has to leave the meeting early. Carol's position may remain unfilled for the rest of the meeting or the association may choose to credential Alice as the temporary alternate delegate for that meeting only. Following the meeting, Bob and Carol resume their roles for the remainder of their terms.

Example D: *Bob Must Leave and Carol is Absent for the Meeting.*
Bob and Carol are the medical association's credentialed delegate and alternate delegate for an HOD meeting. Carol learns she is unable to attend, so the medical association chooses to credential Alice as a temporary alternate delegate. At the meeting, Bob learns he must leave urgently. Alice may function as the delegate using Bob's salmon card, but she may not vote in elections. Alternatively, the medical association may choose to credential her as a temporary delegate. If so, the alternate delegate position could remain unfilled, or the association could credential Ted, another eligible association member in attendance, as the temporary alternate delegate. Following the meeting, Bob and Carol resume their roles for the remainder of their terms.

CONCLUSION

The Council offers definitions of vacancy and meeting absences to clarify these two instances whereby an open seat needs to be permanently versus temporarily filled, along with the protocol to fill each. This report also standardizes the terminology governing temporary delegates and alternate delegates and clarifies the eligibility order of individuals who may be credentialed in these positions.

Lastly, this report fulfills the request of Resolution 10-I-25 by providing the necessary bylaw changes to allow for credentialing by appointment of a temporary medical student regional alternate delegate and a temporary resident and fellow sectional alternate.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following Bylaw amendments and deletions (shown in red and amended by insertion or ~~deletion~~) be adopted and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of delegates present and voting following a one-day layover.

2.1.5 Vacancies. The delegate or alternate delegate selected to fill a vacancy before the credentialing deadline shall assume office immediately after selection and serve for the remainder of that term.

***

2.2.5 Vacancies. The delegate or alternate delegate selected to fill a vacancy before the credentialing deadline shall assume office immediately after selection and serve for the remainder of that term.

***

2.3.6 Vacancies. A medical student who ~~The delegate selected to~~ fills a vacancy before the credentialing deadline as a medical student regional delegate or alternate delegate must be from the same Medical Student Region as the vacating student, must be endorsed by the appropriate endorsing constituent association, and must be elected by the appropriate electorate. A medical student regional delegate or alternate delegate who fills such a vacancy shall assume office immediately after ~~s~~election and serve for the remainder of that term.

***

2.4.6 Vacancies. A resident or fellow who ~~The delegate selected to~~ fills a vacancy for a resident and fellow sectional delegate or alternate delegate before the credentialing deadline must be elected by the Resident and Fellow Section and must be endorsed by an entity represented in the House of Delegates. A resident and fellow sectional delegate or alternate delegate who fills a vacancy shall assume office immediately after ~~s~~election and serve for the remainder of the term.

***

2.6.3 Vacancies. The delegate or alternate delegate selected to fill a vacancy before the credentialing deadline shall assume office immediately after selection and serve for the remainder of that term.

2.10 ~~Registration and Seating of Delegates.~~ Temporary Delegates and Alternate Delegates.

~~**2.10.4 Substitute Delegates.**~~

2.10.1 Temporary Delegates. The credentialing authority of any entity represented in the House of Delegates may credential a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.1 When there is no delegate credentialed by the 45-day credentialing deadline, a delegate who was appropriately selected via the entity's rules may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.2 When there is no appropriately selected delegate available an alternate delegate may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.3 When there is no appropriately selected alternate delegate available a temporary alternate delegate may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.4 Temporary delegates must be credentialed the day before an AMA election in order to vote in that election.

2.10.2 Temporary Alternate Delegates. The credentialing authority of any entity represented in the House of Delegates may credential a temporary alternate delegate, who shall be eligible to serve at that meeting only.

2.10.2.1 When there is no alternate delegate credentialed by the 45-day credentialing deadline, an alternate delegate who was appropriately selected via the entity's rules may be credentialed as a temporary alternate delegate for that meeting only.

2.10.2.2 When there is no appropriately selected alternate delegate available, a member of the entity who is also an AMA member may be credentialed as a temporary alternate delegate, who shall be eligible to serve at that meeting only.

2.10.2.3 Temporary Medical Student Regional Alternate Delegate. The credentialing authority for the Medical Student Section may credential a member of the Medical Student Section who has a written endorsement from their constituent association and who is from the same Medical Student Region as the absent alternate delegate as a medical student regional temporary alternate delegate. This individual shall be eligible to serve at that meeting only.

2.10.2.4 Temporary Resident and Fellow Sectional Alternate Delegate. The credentialing authority for the Resident and Fellow Section may credential a member of the Resident and Fellow Section who has a written endorsement from an entity represented in the House of Delegates as a resident and fellow sectional temporary alternate delegate. This individual shall be eligible to serve at that meeting only.

***

~~**2.10.1 Notification.** In January of each year, the AMA shall notify each organization of the number of seats in the House of Delegates to which it is entitled during the current year.~~

~~**2.10.2 Credentials.** A delegate or alternate delegate may only be seated if there is certification on file stating that the delegate or alternate delegate has been properly selected to serve in the House of Delegates.~~

~~**2.10.3 Lack of Credentials.** A delegate or alternate delegate may be seated without the certificate defined in Bylaw 2.10.2 provided proper identification as the delegate or alternate delegate selected by the respective entity is established, and so certified to the AMA.~~

***

~~**2.10.4.1 Temporary Substitute Delegate.** A delegate whose credentials have been accepted by the Committee on Rules and Credentials and whose name has been placed on the roll of the House of Delegates shall remain a delegate until final adjournment of that meeting of the House of Delegates. However, if the delegate is not able to remain in attendance, that delegate's place may be taken during the period of~~

~~absence by an alternate delegate, or a substitute alternate delegate selected in accordance with Bylaw 2.10.4 if an alternate delegate is not available. The person who takes the place of the delegate must have certification on file and shall be known as a temporary substitute delegate. Such temporary substitute delegate shall have all of the rights and privileges of a delegate while serving as a temporary substitute delegate, including the right to vote in the House of Delegates and to vote in any election conducted by the House of Delegates. The temporary substitute delegate shall not be eligible for nomination or election as Speaker or Vice Speaker of the House of Delegates.~~

2.10 Temporary Delegates and Alternate Delegates.

/

2.10.1 Temporary Delegates. The credentialing authority of any entity represented in the House of Delegates may credential a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.1 When there is no delegate credentialed by the 45-day credentialing deadline, a delegate who was appropriately selected via the entity's rules may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.2 When there is no appropriately selected delegate available an alternate delegate may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.3 When there is no appropriately selected alternate delegate available a temporary alternate delegate may be credentialed as a temporary delegate, who shall be eligible to serve in the House of Delegates at that meeting only.

2.10.1.4 Temporary delegates must be credentialed the day before an AMA election in order to vote in that election.

2.10.2 Temporary Alternate Delegates. The credentialing authority of any entity represented in the House of Delegates may credential a temporary alternate delegate, who shall be eligible to serve at that meeting only.

2.10.2.1 When there is no alternate delegate credentialed by the 45-day credentialing deadline, an alternate delegate who was appropriately selected via the entity's rules may be credentialed as a temporary alternate delegate for that meeting only.

2.10.2.2 When there is no appropriately selected alternate delegate available, a member of the entity who is also an AMA member may be credentialed as a temporary alternate delegate, who shall be eligible to serve at that meeting only.

2.10.2.3 Temporary Medical Student Regional Alternate Delegate. The credentialing authority for the Medical Student Section may credential a member of the Medical Student Section who has a written endorsement from their constituent association and who is from the same Medical Student Region as the absent alternate delegate as a medical student regional temporary alternate delegate. This individual shall be eligible to serve at that meeting only.

2.10.2.4 Temporary Resident and Fellow Sectional Alternate Delegate. The credentialing authority for the Resident and Fellow Section may credential a member of the Resident and Fellow Section who has a written endorsement from an entity represented in the House of Delegates as a resident and fellow sectional temporary alternate delegate. This individual shall be eligible to serve at that meeting only.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 8-A-26

Subject: Business Meetings of the AMA Sections

Presented by: Jerry P. Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

In preparing its reports for the A-26 meeting of the House of Delegates and in reviewing updates to Section rules for approval by the Board, the Council has learned that existing AMA Bylaw language is confusing and constraining when referring to the Business Meetings of the AMA Sections. Some Sections have multiple business meetings prior to each meeting of the House of Delegates with components such as a virtual reference committee and elections that are accomplished electronically.

The Council has prepared this report to ensure that the AMA Bylaws remain accurate. An additional editorial change has been incorporated to reflect Bylaw 7.0.7 that states that "all rules, regulations, and procedures adopted by each Section shall be subject to the approval of the Board of Trustees".

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following Bylaw amendments and deletions (shown in red and amended by insertion or ~~deletion~~) be adopted and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

7.0.6 Business Meeting. There shall be a Business Meeting of members of each Section~~. The Business Meeting shall be held on a day~~ prior to each ~~Annual and Interim~~ ~~M~~meeting of the House of Delegates.

7.0.6.1 Purpose. The purposes of the Business Meeting shall be:

7.0.6.1.1 To hear such reports as may be appropriate.

7.0.6.1.2 To consider other business and vote upon such matters as may properly come before the meeting.

7.0.6.1.3 To adopt resolutions for submission by the Section to the House of Delegates.

7.0.6.1.4 To hold elections.

© 2026 American Medical Association. All rights reserved.

7.0.6.2 Meeting Procedure.

7.0.6.2.1 The Business Meeting shall be open to all members of the AMA.

7.0.6.2.2 Only duly selected representatives who are AMA members shall have the right to vote at the Business Meeting.

7.0.6.2.3 The Business Meeting shall be conducted pursuant to rules of procedure adopted by the ~~Governing Council~~ Section and approved by the Board of Trustees. The rules of procedure may specify the rights and privileges of Section members, including any limitations on participation or vote.

(Modify Bylaws)

CLEAN BYLAW LANGUAGE IF ADOPTED

7.0.6 Business Meetings. There shall be a Business Meeting of members of each Section prior to each meeting of the House of Delegates.

7.0.6.1 Purpose. The purposes of the Business Meeting shall be:

7.0.6.1.1 To hear such reports as may be appropriate.

7.0.6.1.2 To consider other business and vote upon such matters as may properly come before the meeting.

7.0.6.1.3 To adopt resolutions for submission by the Section to the House of Delegates.

7.0.6.1.4 To hold elections.

7.0.6.2 Meeting Procedure.

7.0.6.2.1 The Business Meeting shall be open to all members of the AMA.

7.0.6.2.2 Only duly selected representatives who are AMA members shall have the right to vote at the Business Meeting.

7.0.6.2.3 The Business Meeting shall be conducted pursuant to rules of procedure adopted by the Section and approved by the Board of Trustees. The rules of procedure may specify the rights and privileges of Section members, including any limitations on participation or vote.

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 9-A-26

Subject: Continuity of AMA Resident and Fellow Section Governing Council Leadership

Presented by: Jerry P. Abraham, MD, MPH, Chair

Referred to: Reference Committee on Ethics and Bylaws

At the 2025 Interim Meeting of the House of Delegates Policy D-600.950 was adopted and called for an amendment to the AMA Bylaws to allow the section's Immediate Past Chair to serve in that position even if they no longer meet the membership definition of either a resident (Bylaw 7.1.1.1) or a fellow (Bylaw 7.1.1.2). Bylaw 7.1.2 states that "If any officer or Governing Council member ceases to meet the membership requirements of Bylaw 7.1.1 prior to the expiration of the term for which elected, the term of such officer or member shall terminate and the position shall be declared vacant." Bylaw 7.1.2 further provides a grace period for a Governing Council member who completes residency or fellowship within 90 days prior to an Annual Meeting. What 7.1.2 does not address, however, is an immediate past chair who during their six-month term as a nonvoting ex officio member and who completes their residency or fellowship between the Annual and the Interim Meeting. Currently, that Immediate Past Chair would be unable to continue their service on the RFS Governing Council.

The Council presents the appropriate Bylaw changes to allow the Immediate Past Chair to fulfill their term on the RFS Governing Council.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following amendments to the Bylaws (shown in red and amended by insertion or ~~deletion~~) be adopted, that Policy D-600.950 be sunset, and that the remainder of the report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting following a one-day layover.

7.1 Resident and Fellow Section. The Resident and Fellow Section is a fixed Section.

7.1.1 Membership. All active resident/fellow physician members of the AMA shall be members of the Resident and Fellow Section.

7.1.1.1 Definition of a Resident. For purposes of membership in the Resident and Fellow Section, the term Resident shall be applied to any physicians who meet at least one of the following criteria:

a) Members who are enrolled in a residency approved by the Accreditation Council for Graduate Medical Education.
b) Members who are active duty military or public health service residents required to provide service after their internship as general medical

© 2026 American Medical Association. All rights reserved.

officers (including underseas medical officers or flight surgeons) before their return to complete a residency.
c) Members who are serving, as their primary occupation, in a structured educational, vocational, or research program of at least one year to broaden competency in a specialized field prior to completion of their residency.

7.1.1.2 Definition of a Fellow. For purposes of membership in the Resident and Fellow Section, the term Fellow shall be applied to any physicians who have completed a residency and meet at least one of the following criteria:

a) Members who are serving in fellowships approved by the Accreditation Council for Graduate Medical Education.
b) Members who are serving, as their primary occupation, in a structured clinical, educational, vocational, or research training program of at least six months to broaden competency in a specialized field.

7.1.2 Cessation of Eligibility. If any officer or Governing Council member ceases to meet the membership requirements of Bylaw 7.1.1 prior to the expiration of the term for which elected, the term of such officer or member shall terminate and the position shall be declared vacant. If the officer or member completes residency or fellowship within 90 days prior to an Annual Meeting, the officer or member shall be permitted to continue to serve in office until the completion of the Annual Meeting. An immediate past chair who completes residency or fellowship during their term as immediate past chair shall be permitted to serve as a nonvoting ex officio member of the Governing Council for the remainder of their immediate past chair term.

(Modify Bylaws)

RELEVANT AMA POLICY

D-600.950, Amendment to AMA Bylaws to Enable Continuity of Leadership. Our American Medical Association will amend AMA Bylaw 7.1.2 to allow the Resident and Fellow Section (RFS) Immediate Past Chair to serve in the position even if they have graduated from the RFS.

CLEAN BYLAW LANGUAGE IF ADOPTED

7.1 Resident and Fellow Section. The Resident and Fellow Section is a fixed Section.

7.1.1 Membership. All active resident/fellow physician members of the AMA shall be members of the Resident and Fellow Section.

7.1.1.1 Definition of a Resident. For purposes of membership in the Resident and Fellow Section, the term Resident shall be applied to any physicians who meet at least one of the following criteria:

a) Members who are enrolled in a residency approved by the Accreditation Council for Graduate Medical Education.
b) Members who are active duty military or public health service residents required to provide service after their internship as general medical officers (including underseas medical officers or flight surgeons) before their return to complete a residency.
c) Members who are serving, as their primary occupation, in a structured educational, vocational, or research program of at least one year to broaden competency in a specialized field prior to completion of their residency.

7.1.1.2 Definition of a Fellow. For purposes of membership in the Resident and Fellow Section, the term Fellow shall be applied to any physicians who have completed a residency and meet at least one of the following criteria:

a) Members who are serving in fellowships approved by the Accreditation Council for Graduate Medical Education.
b) Members who are serving, as their primary occupation, in a structured clinical, educational, vocational, or research training program of at least six months to broaden competency in a specialized field.

7.1.2 Cessation of Eligibility. If any officer or Governing Council member ceases to meet the membership requirements of Bylaw 7.1.1 prior to the expiration of the term for which elected, the term of such officer or member shall terminate and the position shall be declared vacant. If the officer or member completes residency or fellowship within 90 days prior to an Annual Meeting, the officer or member shall be permitted to continue to serve in office until the completion of the Annual Meeting. An immediate past chair who completes residency or fellowship during their term as immediate past chair shall be permitted to serve as a nonvoting ex officio member of the Governing Council for the remainder of their immediate past chair term.

REPORT 01 OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS (A-26)
Guidelines on Chaperones for Sensitive Exams

EXECUTIVE SUMMARY

In this report, the Council on Ethical and Judicial Affairs considers the appropriate use of chaperones for sensitive exams, and, in general, how to create safe environments for all patients while maintaining professional boundaries. The report recommends revising Opinion 1.2.4, "Use of Chaperones" to reflect current best practices for sensitive exams. New recommendations include: (1) adoption of an "opt-out" approach for sensitive exams in routine circumstances; (2) guidance for when a physician may require a chaperone even if the patient declines; and (3) guidance for sensitive examinations and persons who cannot give informed consent, including children and adolescents.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 01-A-26

Subject: Guidelines on Chaperones for Sensitive Exams

Presented by: Rebecca Brendel, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Policy D-140.950, "Guidelines on Chaperones for Sensitive Exams," was adopted at the 2022 Interim Meeting and reads as follows:

> Our American Medical Association will ask the Council on Ethical and Judicial Affairs to consider amending E-1.2.4, "Use of Chaperones in the *Code of Medical Ethics*," to ensure that it is most in line with the current best practices for adult and pediatric populations and potentially considers the following topics:
>
> a. Opt-out chaperones for breast, genital, and rectal exams.
> b. Documentation surrounding the use or not-use of chaperones.
> c. Use of chaperones for patients without capacity.
> d. Asking patients' consent regarding the gender of the chaperones and attempting to accommodate that preference as able.
> e. Use of chaperone at physician request when physician deems necessary.

To fulfil this directive, the Council on Ethical and Judicial Affairs (CEJA) submitted Report 7, "Guidelines on Chaperones for Sensitive Exams," for consideration at the 2025 Annual Meeting. The report was referred with concerns expressed that the report did not adequately address certain issues such as physician safety, the economic hurdles of training and staffing chaperones, and challenges related to varying clinical scenarios, such as those posed by rural hospitals. This report includes recommendations that address these concerns.

BACKGROUND

Conducting sensitive examinations in an ethically and clinically sound manner requires physicians to be responsive to both the distinctive characteristics of the individual patient and to the boundaries appropriate to the patient-physician relationship. While a sensitive exam is typically understood as one involving any examination of, or procedure involving, the genitalia, breasts, perianal region or the rectum, physicians should be aware that a patient's personal history, including their cultural background and beliefs or identity may broaden their definition of what constitutes a sensitive examination or procedure[1]. Efforts to provide a comfortable and considerate atmosphere for the patient during sensitive exams are part of respecting patients' dignity. These efforts may include providing appropriate gowns, private facilities for undressing, sensitive use of

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council

© 2026 American Medical Association. All rights reserved.

draping, and clearly explaining various components of the physical examination. They also include the use of chaperones regardless of the gender of the physician or patient[2].

A chaperone is a trained professional who serves as support and a witness for a patient during an exam or procedure[1]. If the chaperone is trained to do so, they may also assist the provider with equipment and specimen handling. The use of chaperones is appropriate in a variety of specialties and clinical settings[3]. Several states have implemented legal mandates ranging in stringency from requiring that physicians offer a chaperone for sensitive examinations, to constituting any exam without a chaperone of a patient's genitals or breasts by a physician of the opposite gender as professional misconduct[4]. Physicians should therefore make themselves aware of local regulations when they consider their chaperone policy.

Having chaperones present can help prevent misunderstandings between the patient and physician and can protect the integrity of the patient-physician relationship. A fair and effective policy on the use of chaperones must balance: (1) concern for both physician and patient safety, dignity, and vulnerability; (2) respect for patient preferences; and (3) the ethical responsibility to maintain clear professional boundaries.

In most instances, only an authorized member of the health care team should serve as a chaperone and understand the responsibilities of the role. Broadly speaking, chaperones should be provided with information regarding[18]:

- Expected components of the procedures they will be observing;
- Ways to ensure patient comfort during the examination or procedure;
- Appropriate gowning or draping for privacy;
- Suitable positioning in the room such that they can assess the nature of the contact between physician and patient;
- How to intervene or stop an examination or procedure if they are concerned that the patient is distressed or that inappropriate contact has occurred;
- Reporting mechanisms for concerns and non-compliance with established chaperone policy.

Expert consensus is that individuals for whom patient care is not a routine part of their ordinary duties (such as front desk or office support staff) should not function as chaperones[1,17]. It may be appropriate for medical students, residents, and fellows to perform the duties of a chaperone, provided that special attention is paid to how these duties may be impacted by the power imbalance inherent in the trainee-supervisor relationship. Trainees should be provided with information about their role serving as a chaperone, sufficient knowledge about the procedure or interaction they will be observing, and how to report any concerns without repercussions, fear of retaliation, or other professional disadvantages.

The standard approach is to have healthcare staff (such as nurses, medical assistants or physician assistants) act as chaperones, provided they are fully trained in the responsibilities of the role. Occupying a dual role as chaperone and member of the care team is acceptable when the two sets of responsibilities do not conflict and are well understood by everyone involved. "Parents and other untrained individuals" should not act as chaperones, except in the case of young children[3,17].

Chaperones may feel uncertain or hesitant about intervening during an examination or procedure, or about reporting misconduct. To establish expectations for the role of chaperones, institutions and practices should set policies for both physicians and chaperones in advance. They should also agree

on methods of communication to signal patient distress or chaperone concerns while examinations or procedures are in progress[3].

Concerns may arise regarding the additional resources needed to implement current best practices for the use of chaperones. In particular, physicians may be concerned that these resources will be diverted away from patient care. Despite these valid concerns, it has been established that "most patients regard the offer of a chaperone as a sign of respect," and further, that chaperones can help minimize physician misconduct, which has significant detrimental effects on patient well-being, the patient-physician relationship, and the integrity of the profession as a whole[1,10]. In light of these considerations, limited resources or additional costs do not ethically justify the failure to regularly employ chaperones for sensitive examinations and procedures, and/or to make them available in other situations at the patient's or physician's request.

ETHICS ISSUES

The ethical concerns related to the use of chaperones for sensitive examinations center around the trust and trustworthiness of the patient-physician relationship. The use of a chaperone is meant to uphold respect for patients as persons and is intended as a means to recognize and protect patients' dignity, vulnerability, and autonomy. Chaperones are also important for minimizing risks to physicians as well, such as verbal or physical harassment. In addition to concerns for patient and physician safety, the need for chaperones raises other ethical concerns, such as how to appropriately train, fund, and staff chaperones. This can be particularly challenging in limited resource settings, such as rural hospitals, highlighting that ethical necessities may at times conflict with practical realities, and that the need for a chaperone is always contextually situated, making it difficult to establish clinical guidance that is able to cover all possible scenarios.

DISCUSSION

Medical examinations and procedures often require the patient to put aside their norms regarding modesty and give consent to being heard, seen, and touched in ways they would not usually allow. Therefore, it is critical to show respect to patients and foster trustworthiness. The presence of a chaperone reinforces the professional nature of the clinical interaction, with the goal of providing reassurance that the patient's experiences and concerns and the boundaries of the clinical encounter are being respected[1]. Having chaperones present can also help prevent misunderstandings between patients and physicians by clarifying expectations and facilitating communication about the examination. Chaperones should be familiar with the elements of sensitive examinations and procedures, know how to properly observe them, and know when to intervene if they have concerns. When used in this manner, chaperones may augment a patient's sense of safety by assuring the patient that the interventions are appropriate. Additionally, having a third-party present who can attest to what occurred during the encounter may protect physicians from false allegations of misconduct[1].

Mandatory, Opt-in, and Opt-Out Chaperone Policies

There are three types of chaperone policies: opt-in, opt-out, and mandatory.

- An opt-in policy is one in which patients are *automatically offered* a chaperone for sensitive examinations and procedures (the patient is informed that they can request a chaperone).

- An opt-out policy is one in which a chaperone *is automatically provided* for all sensitive examinations and procedures (the patient is provided a chaperone, though the patient is given the option to decline, so long as the physician agrees a chaperone is not needed).
- A mandatory policy is one in which a chaperone must be present during all sensitive examinations or procedures, or else the examination or procedure will not be performed.

Currently, the AMA *Code of Medical Ethics* recommends an opt-in policy, which states that physicians should "adopt a policy that patients are free to request a chaperone and communicate that policy to patients" and that a patient's request should always be honored (Opinion 1.2.4). Under the opt-in model, the default is to proceed with the examination or procedure without a chaperone unless an explicit request for one is made by the patient. This opt-in approach provides less protection for both the patient and physician than a mandatory or opt-out approach, since the responsibility to ask for the chaperone belongs to the patient. The difficulty with this type of policy is that it assumes the patient feels empowered to ask for a chaperone without fear of damaging the patient-physician relationship or causing inconvenience or annoyance[3]. Additionally, evidence suggests that patients may not request a chaperone because they think it may insinuate that their physician is untrustworthy[10,11] and only a small percentage of patients feel comfortable asking for a chaperone when none was explicitly offered[12].

By contrast, under an opt-out policy, patients do not need to make a specific request because the policy makes it standard practice to have chaperones present for sensitive examinations. Specifically, chaperones are made available and routinely present during sensitive exams, unless the patient refuses. Opt-out policies are effective at protecting both the physician and the patient since, by default, they make it the norm to have a third-party present as a witness to sensitive exams or procedures.

Although the opt-out approach offers patients more protection, in some cases, this approach may introduce problems with obtaining informed consent. For instance, once a chaperone is brought into the examination room, a patient may be reluctant to object since this is presented as the usual way things are done. Some patients also may not realize they have a choice regarding the presence of a chaperone[13]. Under ordinary circumstances, remaining silent should not be understood as valid consent.

Both opt-in and opt-out policies can create challenges in part because patients' requests and/or consent for use of a chaperone take place directly in the treatment room. For this reason, it has been suggested that patients' preferences regarding chaperones should be solicited by front desk staff or other intake staff as a routine part of the check-in procedure[11,4]. This is an opportunity to provide materials explaining the purpose of the chaperone and to inform patients of the standard policy while allowing patients to express their preferences in a low-pressure environment. However, regardless of where and how consent for the use of a chaperone is solicited and obtained, physicians should keep in mind that what is most important during "the process of obtaining informed consent is equalizing the patient's ability to say *yes* or *no*"[6].

Documentation of Chaperone Use

Regardless of the chaperone policy implemented in a particular setting, the medical record should document the presence or absence of a chaperone for each sensitive examination[1,3,11]. For all examinations or procedures in which a chaperone is present, the medical record should reflect whether the patient requested a chaperone explicitly or whether one was present as a matter of policy. Additionally, the name of the chaperone present and any patient preferences regarding the use of a chaperone should also be documented. Note that there is a range of acceptable practices for

recording chaperone information and therefore, the extent of documentation, including what precise data to include, varies among medical specialties.

Patients with Diminished or Lacking Decisional Capacity

It is widely agreed that patients who are unable to give informed consent should always have a chaperone present for sensitive examinations and procedures. These patients might be unconscious, sedated, or have cognitive impairments or severe mental illness[9,2,3]. When treating adult patients who have diminished capacity or lack capacity to consent, it is imperative to have a trusted companion, social worker, caregiver, or group home escort present alongside the chaperone, to ease any potential patient distress[3]. It should be made clear that chaperones are mandatory in these circumstances.

Patient Preferences Regarding Chaperones

With regard to patients' preference for specific characteristics of a chaperone (such as gender or religious affiliation), physicians should be respectful of the patient's values and preferences while also being mindful not to accede to discriminatory or disruptive patient demands. Disrespectful, derogatory, or prejudiced language or conduct, or prejudiced requests for accommodation of personal preferences on the part of either patients or physicians can undermine trust and compromise the integrity of the patient-physician relationship while also creating an "environment that strains relationships among patients, physicians, and the health care team." (Opinion 1.1.2) Discriminatory requests should not typically be accommodated, and accommodation should only occur after careful weighing of the circumstances. Patients' preferences, if nondiscriminatory, should be respected, documented, and upheld within reason and feasibility.

The Use of a Chaperone at Physician Request

There may be times when the physician deems the use of a chaperone necessary. In such cases, if the patient declines, the American College of Obstetricians and Gynecologists (ACOG) suggests that the physician should explain that "the chaperone is an integral part of the clinical team whose role includes assisting with the examination and protecting the patient and the physician. Any concerns the patient has regarding the presence of a chaperone should be elicited and addressed if feasible"[1]. Ideally, these conversations will be a process of joint decision-making between the patient and the physician. If the patient declines a chaperone when the physician determines having a chaperone present is clinically indicated, every effort should be made to accommodate the preferences of the patient, consistent with the requirements of patient safety, physician safety, and the maintenance of professional boundaries. Physicians should inquire about specific concerns the patient may have and suggest ways these might be addressed in a mutually acceptable manner. Physicians should engage the patient in a detailed discussion of how care might be provided in a way that maintains a comfortable and respectful environment before deciding that they cannot perform the exam or procedure. If the examination is ultimately performed without the use of a chaperone, the rationale should be documented[1]. As a last resort, if the patient and physician cannot come to an agreement, then the physician may defer the examination or procedure and refer the patient to another clinician. In this situation, patients should be provided with "reasonable assistance in making alternative arrangements" so they can receive care in a timely fashion (Opinion 1.1.3).

The Use of a Chaperone without Patient Consent in Exceptional Circumstances

In some situations, insisting on a chaperone when the patient declines may violate the patient's autonomy and therefore be impermissible. However, physicians may proceed with the use of a chaperone without the expressed consent of the patient in the following circumstances:

- When it is an emergency and failure to proceed rapidly would result in an immediate risk to the patient's life or long-term health, or
- In cases where the integrity of the patient-physician relationship is at risk, such as when a patient's behavior compromises (or has previously threatened or crossed) professional boundaries, or the physician has reason to believe such a boundary violation or other unsafe situation is likely to occur.[14]

Pediatric & Adolescent Patients

Appropriate use of chaperones for pediatric and adolescent patient populations is distinct from adult patients because they have different needs and sensitivities. Normally, a parent or guardian may act as the chaperone for young pediatric patients (from newborns to age 11)[15]. In cases where a parent or guardian is unavailable or their presence would interfere with the examination (such as in cases of suspected abuse), another chaperone should be present[15]. Should a parent or guardian decline the physician's request that a chaperone be present in such situations, it may nevertheless be appropriate for the physician to insist that a chaperone be present for the sake of patient safety.

Addressing the needs of adolescent patients (age 12-17) is more complex. Since many adolescents are "preoccupied with their changing bodies, self-conscious about their appearance, and longing for increased privacy," any examination that requires them to remove their clothes could be distressing[12]. Physicians should not assume that their own definitions of a sensitive examination reflect the understanding of the individual teenage patient[16]. Research shows that 60-70 percent of female adolescents would like the option of a chaperone for both standard and sensitive examinations. Only 21 percent indicated that they would ask for a chaperone if one was not offered, and substantially more female adolescents wanted a chaperone for sensitive examinations if they had a chaperone in the past[12].

Many adolescents want a parent to act as chaperone instead of a healthcare professional, although in general as their age increases their preference for a non-parent chaperone also increases[16]. Some adolescents do not wish to have chaperones, indicating that it would be more embarrassing, awkward, or uncomfortable to have an additional person in the room[11].

As such, when treating adolescents, the best policy is to explain the role of chaperone in detail and then solicit their preferences. It is also important to ask whether they wish to have their family member or guardian in the room, either in addition to, or instead of, the healthcare professional acting as chaperone. Since adolescents may not have prior experience with chaperones, it is probably not sufficient to have them fill out a form at intake. Instead, their options should be presented during a conversation (and, if they wish, with a parent or guardian present) so a decision can be made together. Their preferences are also likely to change over time, so this conversation will need to be revisited.

As noted in Opinion 2.2.1 "Pediatric Decision Making," the "more mature a minor patient is […] the stronger the ethical obligation to seek minor patients' assent." This obligation extends to their assent for the presence of a chaperone, as well as their preferences for who the chaperone will be and the gender of the chaperone. In general, physicians and parents/guardians should respect a

minor's refusal to assent to a chaperone (except under the exceptions outlined above when a physician may either insist or may decline to proceed with the examination for emergency or safety reasons).

Policies around the use of chaperones for adolescents are separate from issues of parental consent for treatment. Physicians should be aware that in some jurisdictions, "the law permits minors to receive confidential services relating to contraception, or to pregnancy testing, prenatal care and delivery services" or to prevent, diagnose, or treat sexually transmitted disease without parental consent and/or notification (Opinion 2.2.2). Once the legally required consent has been obtained, the minor patient's preferences concerning use of chaperones can be discussed[17].

ETHICS ANALYSIS

There is a power imbalance embedded in the patient-physician relationship. Patients make themselves vulnerable to the physician both by permitting procedures and examinations to be conducted on their bodies and by disclosing private information to the physician during the course of the clinical encounter. The physician guides the care that the patient receives and should adopt practices within the clinical encounter to foster trustworthiness. The presence of a trained chaperone during sensitive examinations contributes to establishing trust between physician and patient, as knowing that the encounter has been witnessed provides everyone involved with reassurance that the encounter was professional and safe.

Appropriate use of chaperones during sensitive examinations and procedures is meant to protect both the physician and the patient. Having a chaperone present can increase trust between the physician and patient, contribute to the comfort and safety of the patient, and help maintain the patient's dignity. The use of chaperones can also help protect the physician against accusations of misconduct that arise from misunderstandings or that are intentionally false.

Chaperones are responsible for upholding the patient's privacy and confidentiality; however, because physicians are obligated to "seek to protect privacy in all settings to the greatest extent possible" (Opinion 3.1.1), opportunities should be provided for private conversation with the patient without the chaperone present. In addition, physicians should minimize inquiries or taking a patient's history during a chaperoned examination or procedure. If a patient shares information with the chaperone that is relevant to patient care but requests that this not be disclosed to the physician, the chaperone should make it clear that they cannot maintain confidentiality when doing so would endanger the health of the patient. The chaperone may also encourage the patient to either raise the issue with the physician themselves or obtain permission from the patient to communicate the information to the physician separately.

What is considered a sensitive examination or procedure can vary widely among patients. In order to foster trust between the patient and physician and to set appropriate professional boundaries for sensitive examinations and procedures, various factors affecting the particular patient should be considered, including history of trauma, sexual orientation, gender identity, personal beliefs, and cultural norms and expectations.

Since patients may not disclose their history of sexual assault or previous negative healthcare experiences, trauma-informed care (sometimes alternatively described as "healing centered engagement")[5] should be employed for all examinations, including those not usually understood as sensitive. A trauma-informed framework "assumes that all people have experienced trauma, are experiencing it, or may experience it in the future"[6]. This approach is focused on creating "safety, empowerment and trustworthiness" in the clinical encounter[7].

For sexual and gender minority patients, their lived experiences, perspectives and current health needs should guide physicians in jointly identifying which examinations and procedures should be treated as sensitive[7]. Likewise, some patients may have personal or religious beliefs or may adhere to cultural norms that they wish to have respected in the clinical encounter. This may necessitate tailoring the conditions and understanding of what are defined as sensitive exams to the patient's level of comfort and concepts of appropriateness. One way for physicians to provide a consistently safe and respectful environment for all patients is to be open to broadening the range of circumstances in which a chaperone is used.

The presence of a chaperone also promotes patient safety by acting as a deterrent to inappropriate behavior[1]. Patients may be more comfortable with someone of a particular gender being present because that person can better understand the kinds of embarrassment or discomfort associated with their sensitive exam and so may be better equipped to provide support[8].

While opt-in chaperone policies have historically been regarded as adequate, this is no longer the case for some specialties. There is evidence that a shift to opt-out policies will better protect both patients and physicians in many settings. ACOG argues that given "the profoundly negative effect of sexual misconduct on patients and the medical profession and the association between misconduct and the absence of a chaperone" regular use of chaperones is necessary to assure patients and the public that significant "efforts are being made to create a safe environment for all patients"[1]. Because physician misconduct undermines the integrity of the profession as a whole, there is strong reason to adopt policies that reduce it. Similarly, the American College Health Association supports the adoption of opt-out chaperone policies and recommends that every medical institution have a policy regarding sensitive examinations "to protect patients' safety and minimize risk associated with the performance of these exams" that should include the presence of a chaperone for such exams[18].

Physicians deserve to work in an environment where false allegations of misconduct or misunderstandings between physicians and patients do not compromise either their professional reputation or the relationships of trust that they have established with their patients. Likewise, patients deserve to be treated in an environment that supports their agency and improves the quality of their experience, without being expected to make a special request. These goals are best promoted through the implementation of an opt-out policy for the use of chaperones during sensitive exams. Therefore, the presence of chaperones should be standard during sensitive exams and procedures. In other situations, it is recommended that chaperones be made available if the patient requests one. While not mandatory for every clinical encounter, patients should be made aware that they have a right to request a chaperone for any examination. Finally, physicians should honor patients' preferences for a chaperone even when a trusted companion is present.

CONCLUSION

Policies surrounding the appropriate use of chaperones for sensitive examinations and procedures have evolved in recent years. New standards specify that the use of chaperones should be standard for all sensitive exams and procedures and that chaperones should be made available in all situations when the patient requests one. Use of chaperones should not be influenced by the gender of the physician or patient. Chaperones should receive information regarding the responsibilities of their role, and patient preferences concerning chaperones should be documented. Chaperones must be made aware of appropriate mechanisms for reporting unprofessional conduct in keeping with ethics guidance and without fear of retaliation. Reporting mechanisms that do not expose chaperones to retaliation must also be established in order for the new standards to serve the purpose of protecting both the physician and the patient. As far as possible, lines of authority in the

reporting process should be removed from the immediate employment and clinical supervisory hierarchy of the reporter[3]. Multiple pathways for patient reporting should be established, including an anonymous option, and this information should be communicated clearly to patients. When a patient reports a concern about misconduct, this must not adversely affect their care. While there are valid concerns related to funding, training, and staffing chaperones, these challenges do not supersede the ethical obligation to provide a chaperone to patients during sensitive examinations and procedures. If physicians feel that they cannot uphold this ethical obligation, they should work with their administrators and specialty associations to remedy the situation.

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends the following be adopted and the remainder of the report be filed:

1. Opinion 1.2.4 "Use of Chaperones" be amended by deletion and addition as follows:

   Chaperones should be authorized members of the health care team. All chaperones should understand the responsibilities of the role and be aware of mechanisms for reporting unprofessional conduct in keeping with ethics guidance and without fear of retaliation. Physicians should establish clear expectations that chaperones will uphold professional and legal standards of privacy and confidentiality.

   Respecting patient boundaries and promoting patient dignity requires providing a safe and therapeutic clinical encounter during sensitive examinations and procedures while also empowering patients. ~~Efforts to provide a comfortable and considerate atmosphere for the patient and the physician are part of respecting patients' dignity.~~ Such ~~These~~ efforts ~~may~~ include measures that promote patient privacy, such as providing appropriate gowns, private facilities for undressing, sensitive use of draping, clearly explaining various components of the physical examination, and the use of ~~having~~ a chaperone~~ available~~. While a sensitive exam is typically understood as one involving any examination of, or procedure involving, the genitalia, breasts, perianal region or the rectum, physicians should be aware that a patient's personal history, beliefs or identity may broaden their definition of what constitutes a sensitive examination or procedure.

   Having a chaperone~~s~~ present ~~also~~ during a sensitive exam helps protect the integrity of the patient-physician relationship ~~prevent misunderstandings between patient and physician~~. Physicians should, as always, be mindful of any applicable legal or regulatory requirements regarding the use of chaperones. Additionally, Physicians should:

   (a) Provide a chaperone for all sensitive exams, regardless of patient capacity, unless the delay in obtaining a chaperone would result in significant harm to the patient.

   (b) Allow patients to decline the presence of a chaperone, unless the physician deems a chaperone necessary for the exam.

      i. If the patient and physician cannot come to an agreement, then the physician may defer non-emergent examinations or procedures and refer the patient to another clinician.

      ii. In emergency situations, the physician may proceed in providing care with the presence of a chaperone and document the rationale.

~~(c) Have an authorized member of the health care team serve as a chaperone. Physicians should establish clear expectations that chaperones will uphold professional standards of privacy and confidentiality.~~

~~(d) In general, use a chaperone even when a patient's trusted companion is present.~~

~~(e)~~(c) Minimize inquiries or history taking ~~of a sensitive nature~~ while a chaperone is present.

(d) Make a reasonable effort to accommodate the expressed preferences of the patient regarding the characteristics of their chaperone, consistent with the interests of patients, physicians, and the maintenance of professional boundaries.

(e) Allow a parent or guardian to act as the chaperone for young pediatric patients. If a parent or guardian is unavailable, or their presence may interfere with the examination, another chaperone should be present. For adolescent patients, it is appropriate to use a chaperone either in addition to, or instead of, a family member or guardian as determined during shared decision making between patient and physician.

All outpatient practices and inpatient services should have a policy regarding sensitive examinations and procedures that includes the use of chaperones to protect patients and minimize risk.

For non-sensitive examinations and procedures, patients may request a chaperone, and reasonable efforts should be made to make one available upon request.

(Modify HOD/CEJA Policy)

2. Policy D-140.950 be rescinded as it has been accomplished by this report. (Rescind AMA Policy)

Fiscal Note: minimal

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 02-A-26

Subject:	Managing Conflict of Interest Inherent in New Payment Models—Patient Disclosure
Presented by:	Rebecca Brendel, MD, Chair
Referred to:	Reference Committee on Ethics and Bylaws

AMA policy D-140.946, "Managing Conflict of Interest Inherent in New Payment Models," adopted at the 2025 Annual Meeting, and asks the following:

> Our AMA will produce a report with the aim of updating our *Code of Medical Ethics* to include guidance on disclosure of financial arrangements between physicians and healthcare facilities, employers, or payors that are potentially against patients' best interests.

This report is submitted for the information of the House of Delegates in fulfillment of the above directive and outlines relevant opinions in the *Code of Medical Ethics* that address ethical issues related to physician disclosure of financial arrangements.

BACKGROUND

Health care in the United States is currently undergoing a transition in the way systems approach payment and reimbursement for health care services. While, traditionally, health care payment has been based on the volume of services provided (fee-for-service models), alternative models of payment (such as value-based care models) are increasingly being adopted throughout the U.S. due to concerns regarding the lack of equity and focus on patient-centered care that has become endemic with fee-for-service models.[1] Many health care organizations welcome this transition, though proponents of fee-for-services models assert that value-based care also has issues and that we are better off realigning incentives within fee-for service models.[2] Other major shifts in the health care payment landscape include the rise of venture capital and private equity firms' increasing investment in, and acquisition of, physician practices and hospitals;[3] new and emerging technologies, such as personalized medicine and the use of AI tools within medicine, which are adding new complications to financial and reimbursement models;[4,5] and payments to physicians from industry, which remain pervasive despite evidence that such payments may influence clinical decision-making and negatively impact trust in the patient-physician relationship (though payments vary widely both within and between specialties).[6] As financial arrangements between physicians and healthcare facilities, employers, and payors continue to evolve, physicians must strive to ensure that such payment models and financial incentives do not conflict with or prohibit them from upholding their ethical and professional obligations to patients.

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council

ETHICS ISSUES

Physicians have an ethical obligation to prioritize patient welfare over financial incentives; thus, payment models potentially create dual loyalties and conflicts of interest if they encourage physicians to prioritize costs and revenue over patient care. A primary mechanism to protect patients, physicians, and trust in the institution of medicine is through the disclosure of any financial arrangements or other similar factors that could impact patient care. As payment models and financial arrangements become increasingly complex and challenging for patients to understand, there is an ever greater need for physicians to be aware of and understand their ethical obligations related to the appropriate disclosure of these financial arrangements, including how to uphold professionalism, informed consent, transparency, and quality care.

ETHICS ANALYSIS & RELEVANT *CODE* OPINIONS

The AMA's *Code of Medical Ethics* is not blind to the potential dangers posed by payment models and financial incentives. Opinion 11.2.1, "Professionalism in Health Care Systems," acknowledges that such models "can create conflicts of interest among patients, health care organizations, and physicians. They can encourage undertreatment and overtreatment, as well as dictate goals that are not individualized for the particular patient."[7] The opinion provides specific guidelines for physicians in leadership positions within health care organizations, and for the profession as a whole, on how organizational structures, payment models, and decision-support tools should be implemented to minimize the risk of unethical behavior.

The *Code* includes several other opinions that provide guidance to physicians related to financial arrangements and the importance of disclosing such arrangements. Opinion 11.2.2, "Conflicts of Interest in Patient Care," states that physicians must never "place their own financial interests above the welfare of their patients" and that regardless of the economic interests of any health care entity, if such interests "are in conflict with patient welfare, patient welfare takes priority."[8] This foundational ethical obligation of physicians to prioritize patient care over profits is echoed in Opinion 11.2.3, "Contracts to Deliver Health Care Services."[9] The opinion includes recommendations for physicians to thoroughly review contract terms, avoid conflicts of interest, ensure financial stability, maintain clinical independence, and ensure transparency.

With regards to the importance of maintaining transparency, Opinion 11.2.4, "Transparency in Health Care," states that "physicians have an obligation to inform patients about all appropriate treatment options, the risks and benefits of alternatives, and other information that may be pertinent, including the existence of payment models, financial incentives, and formularies".[10] The opinion also states that physicians should "[d]isclose any financial and other factors that could affect the patient's care."[10] In essence, this opinion makes it clear that financial disclosure, including disclosure of payment models or other financial incentives that may impact patient care, is a fundamental ethical responsibility for physicians. Additionally, the notion regarding the importance of disclosure is supported by Opinion 2.1.1, "Informed Consent," which highlights the value of transparent communication in fostering trust and shared decision-making. Taken together, these opinions require that physicians inform patients of all medically appropriate treatment options and that they disclose existing financial incentives or payment models that impact care decisions.[11]

CONCLUSION

The increasing corporatization of medicine, and the associated consolidation of health care entities, has been met by the emergence of new payment models in response to these changes. Despite shifts in payment models, it is crucial to recognize that any payment model has the potential to create conflicts of interest. Important steps to minimize such risks include prioritizing patient care above financial interests, supporting transparency through financial disclosure, and practicing informed consent and shared decision-making, as outlined in the *Code of Medical Ethics*.

RECOMMENDATION

The Council on Ethical and Judicial affairs recommends that Policy D-140.946 be rescinded as having been accomplished by this report.

Fiscal Note: Minimal

REPORT 03 OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS (A-26)
Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization

EXECUTIVE SUMMARY

In adopting Policy H-405.946, "Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization," the House of Delegates requested that the Council on Ethical and Judicial Affairs (CEJA) "review the advisory restricting collective action in section 1.2.10 of its *Code of Medical Ethics* to allow for more flexibility on the part of physicians who have exhausted other non-disruptive methods for reform."

Although not all collective actions by physicians may impact clinical practice, the practical issue for consideration is whether disruptive collection actions by physicians, such as but not limited to strikes, may be permissible. The ethical dilemma is whether physicians can prioritize patient welfare over their own self-interest while engaging in tactics that have the potential to harm patients in the short term, even if the ultimate goal of the action is proposed to be long-term patient benefit. To respond to these issues, CEJA recommends amending Opinion 1.2.10, "Political Action by Physicians," to more clearly articulate that disruptive collective actions that would likely harm patients are to be avoided; however, this does not mean that all forms of disruptive collective action must be avoided. Disruptive actions may be considered if non-disruptive actions fail, though such actions should not directly compromise patient care and the aim of such actions should be to improve patient care and not primarily for physician self-interest.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 03-A-26

Subject: Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization

Presented by: Rebecca Brendel, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Council on Ethical and Judicial Affairs (CEJA) Report 8, "Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization," was introduced by CEJA at the 2025 Annual Meeting and was referred. CEJA Report 08-A-25 responded to Policy H-405.946, "Supporting Efforts to Strengthen Medical Staffs Through Collective Actions and/or Unionization," which was adopted at the 2023 Annual Meeting and asks the following:

1. Our American Medical Association will reevaluate the various efforts to achieve collective actions and/or unionization for physicians nationally.

2. Our AMA will request CEJA to review the advisory restricting collective action in section 1.2.10 of its Code of Medical Ethics to allow for more flexibility on the part of physicians who have exhausted other non-disruptive methods for reform.

The House testified against the word "could" in recommendation (c) of CEJA Report 8-A-25, noting that its use is too broad, nonspecific, and might restrict physicians' ability to take collective action. CEJA appreciates that the use of "could" created an insurmountable bar, and so as a result, in recognition of physicians' fiduciary duties and the need for physician advocacy, CEJA has reached a balance by changing "could" to "would likely" in recommendation (c) for greater clarity. At the 2025 Interim Meeting, the House again referred the report and voiced comments directing CEJA to edit specific language, this time requesting that the use of "could" in recommendation (e) be amended to mirror the new language of "would likely" in recommendation (c).

While in the I-25 report, recommendation (c) pertains to all forms of collective actions, recommendation (e) is specific to disruptive collective actions that could directly compromise patient care. This report defines a disruptive collective action by physicians as any collective action that disrupts the day-to-day workflow of physicians within the health care systems in which they practice. Disruptive collective actions are thus more likely than non-disruptive actions to cause harm to patients and therefore necessitate a higher ethical burden to be justified, as outlined in recommendations (d) and (e). The Council has discussed the different language used in the I-25 report recommendations and believes that the use of "could directly" in recommendation (e) best describes the reality of disruptive collective actions and correctly reflects physicians' ethical obligations. However, to help clarify this hierarchy of ethical burden, recommendations (c), (d), and (e) of the I-25 report have been reorganized as subsections i, ii, and iii, respectively, under

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

recommendation (b) in this report. Recommendation (e), now iii, has also been revised to better reflect physicians' primary ethical obligation to patient welfare (ahead of other considerations including their own self-interest or obligations to others) and the potential for disruptive collective actions that could directly compromise patient care to interfere with this duty. The Council also wishes to highlight that the use of "should" is not a prohibition and does not mean physicians must never engage in such actions. The recommendations presented in this report do not prohibit physicians from striking but rather lay out the ethical obligations under which such disruptive collective actions could take place.

BACKGROUND

The consolidation of hospitals and physician practices in recent years has led to a shift in the practice of medicine away from the independent practice model to one in which physicians increasingly find themselves working as employees. In 2012, only 5.6 percent of physicians were directly employed by hospitals, with 23.4 percent of physician-owned practices having some hospital ownership; however, by 2022, a total of 74 percent of practicing physicians were employed, including 52.1 percent of physicians employed by hospitals or health systems and 21.8 percent employed by other corporate entities.[1] Paralleling this increase in corporate intrusion into medicine has been the rise of unionization within the profession. While the number of physicians who are members of a union is relatively small, and mostly among house officers, their ranks saw an approximately 26 percent increase in just five years from 2014–2019.[2] As of 2021, an estimated 5.9 percent of practicing physicians were union members, with union contracts covering 8.1 percent of practicing physicians.[1] Currently, two of the main physician unions are the Federation of Physicians and Dentists and the Union of American Physicians and Dentists.

As the financing, organization, and leadership of the health care system change, the practice environment increasingly makes it challenging for physicians to provide the kind of care patients want and deserve. Physicians are now increasingly held to strict performance metrics that many feel are more about meeting corporate financial goals than they are about providing quality patient care. As a recent New York Times article puts it, "longer-term consolidation of health care companies has left workers feeling powerless in big bureaucracies. They say the trend has left them with little room to exercise their professional judgment."[3] There is a growing sense among physicians that current working conditions are increasingly compromising the patient–physician relationship, physicians' health, and medical professionalism, driving burnout, moral injury, and retirement from medicine.

Unions are seen by some as a mechanism for physicians to exert influence on corporate health systems where physicians have less autonomy than in private practices.[4] Unions' power for collective bargaining comes from their ability to organize members to take collective action. Unionization, however, is not the only means by which physicians can organize and take collective action. Hospitals' organized medical staff has been a means by which physicians have exercised authority over decision making and culture, but the authority and scope of responsibility of the organized medical staff has been limited.[5] While employed physicians in large systems have not typically explored re-invigorating the organized medial staff, this remains an alternative means by which physicians can reclaim lost authority and exercise collective action.[5]

Physicians may undertake many forms of collective action, both in the public arena and within health care institutions. Public actions include, but are not limited to, public advocacy, media campaigns, lobbying, negotiation, and litigation. Collective actions in the clinical setting increasingly are being considered as additional forms of collective action, particularly to effect change in specific clinical environments. Some of these are not disruptive, such as negotiation with

administrators. Disruptive actions are also being considered, such as picketing, refusal to comply with corporate directives deemed unethical, withholding billing, work slowdowns, or striking. A primary concern surrounding the use of these disruptive collective actions by physicians in the clinical setting is that some of these actions may impact patient care and thus be in direct conflict with physicians' professional and ethical duties to not abandon patients and to prioritize patient care above self-interest.[6]

Relevant Laws

In 1935, Congress passed the National Labor Relations Act (NLRA), amended in 1947 through the Taft-Hartley Act, which guarantees private sector employees the right to unionize, engage in collective bargaining, and take collective actions such as strikes.[1] The NLRA covers most private sector employees but does not cover independent contractors, supervisors, or managers. Part-time physicians working as independent contractors, physicians in private practice, and physicians considered to serve a supervisory role, such as medical directors or tenured medical faculty, are currently excluded.[2]

When Congress passed the 1974 amendments to the NLRA, which extended coverage to nonprofit hospitals, it added Section 8(g), requiring health care employee unions to give at least a ten-day notice before engaging in any strike or picketing to ensure that hospitals have sufficient time to make appropriate arrangements for the continuity of patient care in the event of a work stoppage.[2]

Laws prohibiting the corporate practice of medicine are an under-appreciated mechanism for physicians to use in reclaiming clinical authority. Most states have had laws dating to the 1880s that prohibit the corporate practice of medicine, but little attention has been paid to the potential use of such laws to prevent health care institutions from infringing upon the clinical decision-making authority that properly belongs to physicians.[7]

Relevant AMA Policy Provisions

In 2019, the AMA modified two relevant policies: H-385.973 "Collective Negotiations" and H-385.976 "Physician Collective Bargaining."[8,9] Both support the right of physicians to engage in collective bargaining and express the AMA's commitment to work for the expansion of which physicians are eligible for that right under federal law. This includes supporting efforts to narrow the definition of supervisors such that more physicians are protected under the NLRA.
Though not policy, the AMA's Advocacy Resource Center has also issued a recent Issue Brief: "Collective bargaining for physicians and physicians in training" that outlines AMA policy on physician unions and collective bargaining, including the interpretation that the AMA's position is that "physicians should refrain from the use of the strike as a bargaining tactic, although in rare circumstances, individual or grassroots actions, such as brief limitations of personal availability, may be appropriate as a means of calling attention to needed changes in patient care."[2]

Relevant Code *Provisions*

The AMA *Code of Medical Ethics* Opinion 1.1.1, "Patient-Physician Relationships," states that the core tenets of the clinical encounter for the physician are "to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare." This foundational opinion emphasizes the primary ethical duties of physicians to prioritize patient care and regard their responsibility to the patient as paramount. The Principles enumerated in the Code also indicate that such duties extend

beyond the bedside and that physicians have a responsibility to seek changes to laws that are contrary to the best interests of the patient.

Opinion 1.2.10, "Political Action by Physicians," currently states that not only *can* physicians seek to change policies or laws that they find contrary to the best interest of patients but they in fact *have* an ethical duty to do so, though they also "have a responsibility to do so in ways that are not disruptive to patient care."[10] While the opinion states that "[s]trikes and other collective actions […] should not be used as a bargaining tactic", it also adds that "[i]n rare circumstances, briefly limiting personal availability may be appropriate as a means of calling attention to the need for changes in patient care."[10] However, this permissibility must be balanced by the opinion's first directive that physicians participating in advocacy activities should "[e]nsure that the health of patients is not jeopardized and that patient care is not compromised."[10]

This is in line with Opinion 1.1.6, "Quality," which states that "[a]s professionals dedicated to promoting the well-being of patients, physicians individually and collectively share the obligation to ensure that the care patients receive is safe, effective, patient centered, timely, efficient, and equitable."[11] Taken together, by stating that "physicians have an ethical responsibility to seek change" at times (Opinion 1.2.10) and that they also have an "obligation to ensure" quality care (Opinion 1.1.6), these opinions highlight the fact that certain conditions may arise that actually demand action be taken by physicians to improve patient care.

Opinion 9.3.1, "Physician Health & Wellness," similarly outlines that physicians have a responsibility to take action when their own health or wellness is compromised.[12] The opinion stipulates that physicians have a responsibility both individually and collectively to ensure and promote health and wellness among physicians, and that when their health or wellness is compromised, individual physicians should fulfill this responsibility by "taking measures to mitigate the problem."[12] Physician health and wellness is necessary for effective healing and the provision of quality care, and collective action may be an appropriate means of securing institutional conditions that are conducive to patient health and well-being.

Additional Relevant Policy

The World Medical Association recommends that physicians adopt the following guidelines regarding collective action:

1. Physicians who take part in collective action are not exempt from their ethical or professional obligations to patients.
2. Even when the action taken is not organized by or associated with the Constituent Member, the Constituent Member should ensure that the individual physician is aware of and abides by their ethical obligations.
3. Whenever possible, physicians should press for reforms through non-violent public demonstrations, lobbying and publicity or informational campaigns, and/or through negotiation or mediation.
4. If involved in collective action, Constituent Members should act to minimize the harm to the public and ensure that essential and emergency health services, and the continuity of care, are provided throughout a strike. Further, Constituent Members should advocate for measures to review exceptional cases. If involved in collective action, Constituent Members should provide continuous and up-to-date information to their patients and the general public with regard to the demands of the conflict and the actions being undertaken. The general public must be kept informed in a timely manner about any strike actions and the restrictions they may have on health care.[13]

ETHICAL ISSUE

What are the ethical considerations regarding participation in collective labor action by physicians? Since certain collective actions can be disruptive, they present a potential risk to patient care and thus create a dilemma for physicians, particularly when collective actions may create immediate risks to patients, even if intended as a means to improve patient care in the long term. What collective actions by physicians are ethically permissible must be examined to ensure that the primacy and quality of patient care are protected. The core ethical issue is whether physicians who embrace tactics used by organized labor will also still be able to embrace their role as professionals.

REVIEW OF RELEVANT LITERATURE

While not all collective actions by physicians may impact clinical practice, disruptive actions such as strikes result in practical challenges to clinical care. This report defines a disruptive collective action by physicians as any collective action that disrupts the day-to-day workflow of physicians within the health care systems in which they practice. Some of these actions may have the potential to decrease quality of care and cause patient harm.

The normative ethics literature on the use of collective actions by physicians is generally cautious about collective actions that present a risk to patients, such as striking. A common stance is that, provided adequate precautions are taken to minimize the risk to patients, the primary goal of the collective action is to improve patient care, and the disruptive action is considered only as a last resort after all other means have been exhausted, physician strikes may be ethically justifiable.[6,13,18,19,20] However, strikes and other disruptive collective actions become ethically problematic when they are done for any reason other than for improving patient care, such as for increasing physicians' income.[6,18]

One line of argument in favor of permitting disruptive collective actions that might harm patients, such as strikes, is to suggest that physicians are, and have always been, workers like any other set of workers, and that claims of professionalism that would place physicians in a special position of privilege in recognition of a higher set of ethical standards have always been a mere pretense. On this view, there is nothing intrinsically "special" about medicine as opposed to any other form of work. There are some limits on what forms of collective action may be undertaken that are due to the critical nature of the service physicians provide, but there is no reason to maintain the fiction that they cannot engage in strikes or job actions because they are professionals called to put patient interest ahead of self-interest. The ethical question thus becomes how to draw limits on the scope of permissible collective action that recognizes physicians as laborers with all the rights of laborers, while drawing limits that protect the public from harm.

A second line of argument is a variation on this first line of argument—asserting that while medicine is ideally construed as a profession with intrinsically special rights and obligations, one must now, however reluctantly, accept the de-professionalization of physicians as a socioeconomic and historical fact. On this view, physicians have been forced out of their professional status by changes in the financing and organization of health care and the only available means of asserting power now is through unionization and the means of negotiation that have been used for the last two centuries by other workers in resolving disputes with their employers. Again, the operative ethical question becomes one of setting limits on these actions in accord with the vital nature of the service physicians provide.

A third line of argument attempts to reconcile a conception of physicians as professionals, obligated to place patient interest above self-interest, with an understanding that, under certain circumstances (such as those experienced by house officers and, increasingly, physicians employed in large health care systems), there is a *de facto* imbalance in power between the administrators and the employed physicians. They argue on consequentialist grounds that if impediments to good patient care are sufficiently serious, and the goal of a disruptive collective action (such as a strike) is to improve patient care in the long run, then if potential harm to patients in the short-run is minimized, the action is undertaken only as a last resort, and the goal of improving patient care through the action is foreseeably achievable, such an action could be justified.[6,19] These commentators reject the idea that a disruptive collective action with the potential to harm patients could be ethically and justifiably undertaken solely to advance the welfare of physicians. However, they generally recognize that the motives for such actions will often be mixed, and admit that the argument that physician welfare could be sought as the primary (or even secondary) goal of a strike but justified as a necessary means for achieving patient welfare in the long run might either be self-deceived, or, at least, difficult for the public to believe.[6,19,21]

Others have held that strikes by physicians are almost never justifiable.[22-24] Strikes by physicians raise serious questions at the heart of what it means to be a physician. As Pellegrino has written:

> Whatever justification they may have, strikes or "slow downs" by segments of the profession have seriously damaged the image of medicine as a profession dedicated to service above its own interests. One of the distinguishing features of the medical profession has thus been compromised by physicians themselves. Those who choose to pursue self-interest, as union members may, cannot at the same time demand a superior moral position in society.[22]

Contrary to the arguments favoring physicians strikes, opponents have appealed to the principle that the duty to promote the good of the patient is always paramount, and that strikes will always harm patients, at least to a modest degree. In fact, they argue, this is the point of the strike—to disrupt care, inconvenience, or possibly harm patients, even if minimally, in order to pressure administrators into acceding to the demands of the striking physicians. Even granting that the ultimate aim of the strike is to improve patient care in the long run, patients will be harmed in the short run, and this conflicts with the profession's ancient duty to protect patients from harm.

Moreover, opponents take issue with the consequentialist argument that some patients could justifiably be exposed to potential harms now for the sure benefit of others in the future. They argue that a primary principle of ethics is that persons should always be treated as ends in themselves and never as means only. Physician strikes, by their nature, instrumentalize some patients, using their potential harm as means of achieving physicians' ends, even if those ends are justifiable and good.

Additionally, the effect of strikes on public trust in the profession must be considered. Trust is the glue that holds the patient-physician relationship together. The sense that one's own health as a patient could in any way be jeopardized or used as a bargaining tool might lead to public distrust in the profession.

While there is not a substantive body of empirical research on the effects of physician strikes on patient outcomes, there are some data. Although the majority of available empirical evidence shows that strikes have minimal impact on patient care,[25-28] much of the data are of relatively poor quality, are at risk of bias, and suffer from a lack of generalizability.[26,27] Furthermore, most studies examine patient mortality as the primary outcome of interest, which has limitations as an indicator

of deleterious change in patient health outcomes.[25] Importantly, a 2019 study found a slight increase in 30-day readmission rates for Black patients on strike days in the UK, suggesting that the ways in which strikes impact staffing are unlikely to affect all patient groups equally, with minority groups more likely to experience worse care when hospital systems are under strain[28]. This observation has critical importance in determining care for vulnerable populations when considering collective actions. Additionally, there is a lack of crucial research on how collective actions by physicians impact patient perceptions of and trust in both the medical profession and health care institutions. Reports of strongly negative public perceptions during a recent physicians' strike in Korea, while not systematic, suggest a note of caution.[29]

ETHICAL ANALYSIS

In its review of Opinion 1.2.10, "Political Action by Physicians," CEJA has examined the ethics of collective actions by physicians. While the practical issue for consideration is whether disruptive collection actions by physicians, such as but not limited to strikes, may be permissible, the ethical dilemma is whether physicians can, in fact, fully understand themselves as professionals called to prioritize patient welfare over their own self-interest while engaging in tactics that have the potential to harm patients in the short term, even if the ultimate goal of the action is proposed to be long-term patient benefit.

Historically, physicians retained strong independence in clinical practice, and self-regulation permitted this professionalism to flourish. However, the growth of the health care sector has seen an increase in the complexity of health care systems, the transition to a majority physician employment structure, and as a result, a loss of physician independence and control in clinical practice. This bureaucratization has led physicians to seek other non-physicians to run the administrative aspects of their practices, and decreasing margins has led physicians to seek capital infusions and buyouts from private equity firms and venture capitalists, further driving the financialization of medicine and the employment of physicians.

The result is a general loss of control over practice conditions that have driven dissatisfaction, burnout, and early retirement from the profession. However, the issue is not necessarily employment itself, but the associated loss of independence of clinical practice and control over the clinical environment, which many today see as the de-professionalization of medicine.

For those seeking to maintain and restore physician authority and independence, the primary avenue has been to pursue legal and political actions, such as lobbying (either independently or through medical associations). However, with the change towards physician employment, physicians are now considering the use of tools that laborers have historically relied on for negotiating, such as legally permissible collective actions, in their attempts to improve patient care. This acceptance of the tools of organized labor, however, is in tension with medicine's self-understanding and public representation of itself as a profession with distinct privileges granted by society in recognition of its commitment to a distinctive set of ethical duties. Certainly, some forms of collective action are not likely to violate the norms of medical professionalism[30]. Disruptive collective actions, however, which have the potential to disrupt the day-to-day workflow of physicians, decrease quality of care, and cause harm to patients, seem prima facie to violate the medical profession's fundamental duty to do no harm and care for patients. Any disruptive collective action that causes harm to patients is inherently inconsistent with the responsibilities and duties of physicians.

Disruptive collective actions that create the potential for harm to patients, even minimally, and even if undertaken for the purpose of improving the care of other patients in the future, are

therefore to be avoided. This does not mean, however, that all forms of disruptive collective action must be avoided. Certain forms of disruptive action, such as collective refusal to comply with administrative directives that are understood as antithetical to good patient care or otherwise incompatible with the norms of professional ethics, may be ethically justified. Other forms of disruptive action that are aimed at disrupting administrative processes such as billing but do not disrupt service to patients, might also be justified. Disruptive actions should only be undertaken, however, as a last resort when good faith negotiations have broken down and the aim of the action is to improve patient care.

CONCLUSION

Physicians must uphold their central ethical and professional responsibilities to patients when considering collective actions. When considering disruptive collective actions, physicians should take into account that the care of current patients must be continued and not compromised; urgent, emergent and otherwise needed medical care must still be provided; and all other non-disruptive actions that do not negatively impact patients must first be exhausted. Additionally, the primary goal of the action must be to improve patient care and not solely physician self-interest. To protect the integrity of the profession, patients and the public should also be informed well in advance and be continuously updated with respect to the demands being made and the actions being undertaken, with the terms for resolving disruptive actions made public and open to scrutiny and discussion. Whether all these conditions can ever be met in a physician strike or work slowdown remains an open question.

Physicians thinking about participating in disruptive collective actions therefore must first consider their professional responsibilities and obligations.

RECOMMENDATIONS

The Council on Ethical and Judicial Affairs recommends that the following be adopted and the remainder of the report be filed:

1. That Opinion 1.2.10 be amended by addition and deletion with a change in title as follows:

   Advocacy and Collective Actions by Physicians ~~Political Action by Physicians~~

   Like all Americans, physicians enjoy the right to advocate for change in law and policy, in the public arena, and within their institutions. Indeed, physicians have an ethical responsibility to seek change when they believe the requirements of law, ~~or~~ policy, or practice are contrary to the best interests of patients. However, advocacy actions should not put the wellbeing of patients in jeopardy.

   Collective action is one means by which physicians can advocate for patients, the health of communities, the profession, and their own health. Physicians have a responsibility to avoid disruption to patient care when engaging in any collective action. When considering collective actions that have the potential to be disruptive, whether aimed at changing the policies of government, the private sector, or their own institutions, there are additional considerations that should be addressed. These include avoiding harm to patients, minimizing the impact of actions on patient access to care, maintaining trust in the patient-physician relationship, fulfilling the responsibility to improve patient care, avoiding mental and physical harms to physicians,

promoting physician wellbeing, upholding the values and integrity of the profession, and considering alternative measures that could reasonably be expected to achieve similar results with less potential effect on patient and physician wellbeing.

When considering participation ~~Physicians who participate~~ in advocacy activities, including collective actions:

(a) ~~Ensure that the health of patients is not jeopardized, and that patient care is not compromised.~~ Physicians should recognize that, in pursuing their primary commitment to patients, physicians can, and at times may have an obligation to, engage in collective political action to advocate for changes in law and institutional policy aimed at promoting patient care and wellbeing.

(b) ~~Avoid using disruptive means to press for reform. Strikes and other collective actions may reduce access to care, eliminate or delay needed care, and interfere with continuity of care and should not be used as a bargaining tactic. In rare circumstances, briefly limiting personal availability may be appropriate as a means of calling attention to the need for changes in patient care. Physicians should be aware that some actions may put them or their organizations at risk of violating antitrust laws or laws pertaining to medical licensure or malpractice.~~ Physicians may also engage in collective action to advocate for changes within their institutions, including changes in patient care practices, physician work conditions, health and wellbeing, and/or institutional culture that negatively affect patient care.

(i) Physicians should refrain from collective action that would likely jeopardize the health of patients or compromise patient care.

(ii) Physicians may, if non-disruptive actions fail, consider engaging in disruptive forms of collective action that do not compromise patient care, with the primary objective to improve patient care and outcomes by calling attention to and/or making needed changes in practices, protocols, incentives, expectations, structures, and/or institutional culture.

(iii) Physicians should avoid disruptive collective actions that could directly compromise patient care, including strikes, due to their potential to undermine physicians' primary duty to patient welfare, and should not use such actions primarily for physician self-interest.

(c) Physicians should avoid forming workplace or other alliances, such as unions, with ~~workers~~ colleagues and others who do not share physicians' primary and overriding commitment to patients.

(d) Physicians should refrain from using ~~undue influence or pressure colleagues~~ punitive or coercive means to force others to participate in advocacy activities or collective actions, or to penalize others ~~and should not punish colleagues, overtly or covertly,~~ for deciding not to participate in such activities.

2. That Policy H-405.946(2) be rescinded as having been accomplished by this report. (Rescind AMA Policy)

Fiscal Note: Minimal

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 05-A-26

Subject: CEJA's Sunset Review of 2016 House Policies

Presented by: Rebecca Brendel, MD, Chair

Referred to: Reference Committee on Ethics and Bylaws

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. This policy reads as follows, laying out the parameters for review and specifying the needed procedures:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

* Reports of the Council on Ethical and Judicial Affairs are assigned to the reference committee on Ethics and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

© 2026 American Medical Association. All rights reserved.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends that the House of Delegates policies that are listed in the Appendix to this report be acted upon in the manner indicated and the remainder of this report be filed. (Directive to Take Action)

Fiscal Note: Minimal

APPENDIX – RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
D-370.985	Organ Donation	Our AMA will study potential models for increasing the United States organ donor pool.	Retain; remains relevant.
G-600.130	Meeting Calendar and Locations	AMA policy on the meeting calendar for the House includes the following: (1) Our AMA should make reasonable efforts to avoid scheduling future Annual Meetings that conflict with Father's Day weekend; (2) The Interim Meeting of the House of Delegates will be held in the second or third week in November; and (3) Our AMA supports scheduling more meetings in Washington, DC, specifically including Interim Meetings of the House on a rotating schedule as frequently as practicable. Our AMA believes, however, that it would not be financially prudent to hold all Interim Meetings in Washington, DC, nor would such a decision be equitable for other regions of the country.	Retain; remains relevant.
H-140.840	Filming Patients for News or Entertainment	American Medical Association policy is that efforts to disguise a patient (such as blurring the face, changing the voice, or any other technique)?do not substitute for the need to obtain consent, as outlined in AMA Ethical Opinion E-5.045, for publication of any material related to the treatment of a patient.	Retain as amended: American Medical Association policy is that efforts to disguise a patient (such as blurring the face, changing the voice, or any other technique)~~?~~do not substitute for the need to obtain consent, as outlined in ~~AMA Ethical Opinion E-5.045~~ the AMA Code of Medical Ethics Opinions 3.1.3 and 3.1.4, for publication of any material related to the treatment of a patient

H-140.966	Decisions Near the End of Life	Our AMA believes that: (1) The principle of patient autonomy requires that physicians must respect the decision to forgo life-sustaining treatment of a patient who possesses decision-making capacity. Life-sustaining treatment is any medical treatment that serves to prolong life without reversing the underlying medical condition. Life-sustaining treatment includes, but is not limited to, mechanical ventilation, renal dialysis, chemotherapy, antibiotics, and artificial nutrition and hydration. (2) There is no ethical distinction between withdrawing and withholding life-sustaining treatment. (3) Physicians have an obligation to relieve pain and suffering and to promote the dignity and autonomy of dying patients in their care. This includes providing effective palliative treatment even though it may foreseeably hasten death. More research must be pursued, examining the degree to which palliative care reduces the requests for euthanasia or assisted suicide. (4) Physicians must not perform euthanasia or participate in assisted suicide. A more careful examination of the issue is necessary. Support, comfort, respect for patient autonomy, good communication, and adequate pain control may decrease dramatically the public demand for euthanasia and assisted suicide. In certain carefully defined circumstances, it would be humane to recognize that death is certain and suffering is great. However, the societal risks of involving physicians in medical interventions to cause patients' deaths is too great to condone euthanasia or physician-assisted suicide at this time. (5) Our AMA supports continued research into and education concerning pain management.	Retains; remains relevant.

H-160.999	Statements on the Medical Profession	Whether definitely stated or not, it is the position of the AMA that all conditions or principles adopted by the Association concerning the position of the medical profession, in any form of medical practice, are set forth primarily in order to maintain such standards as are essential to the maintenance of the best medical care and the protection of the health of all members of the community.	Retain; remains relevant.
H-175.993	Fraudulent Health Practices	The AMA favors providing information and educational materials to the public and the profession on fraudulent health practices.	Retain; remains relevant.
H-230.966	Physician Appeals Mechanism for Denial of Academic Appointment	Hospital governing boards and hospital medical staffs through their Bylaws must remain responsible for medical staff selection. In situations in which hospital medical staff privileges are granted by contract on the condition of an academic appointment, the physician must be made aware of and agree to the linkage. Under those circumstances when a physician may lose an academic appointment after full and fair due process, no further action is required for revocation of hospital medical staff privileges.	Retain; remains relevant.
H-270.960	Inappropriate Legislative Mandates of eGFR Calculations	Our AMA supports the position that (1) the estimated Glomerular Filtration Rate Calculation (eGFR) calculation, when appropriate and feasible, is a clinically useful calculation that should be promoted in the medical community in a scientific manner as a calculation that does NOT require state legislation or state law that would create an inflexible, politically-based mandate for the practice of medicine that, in general, can be deleterious to patient care; and (2) legislation mandating the eGFR calculation improperly and detrimentally prescribes medical decision-making to the extent that it deprives a physician of the ability to make appropriate, patient-specific clinical judgments regarding the performance of the calculation.	Retain; remains relevant.

H-275.990	Clinical Diagnostic Electromyography	1. Clinical diagnostic electromyographic examinations--involving the selection of the muscles to be studied, modifying the examination as the data unfold, inserting the needle electrodes, recording of and interpreting the data thereby obtained, describing the findings, and the rendering of a diagnostic opinion based upon an integration of the clinical history, physical examination features, other pertinent clinical data and the electromyographic findings--is the practice of medicine and should be performed only by a fully licensed physician qualified by reason of education, training, and experience in these procedures. 2 Non-physician health care professionals should not expand their scope of practice to include performing needle electromyography. 3. Physicians should not prepare reports and submit claims on needle electromyographic studies that they did not perform or personally supervise. 4. State boards of medical examiners should investigate and take appropriate action whenever cases involving the performance of clinical electromyographic examinations by unqualified persons contrary to the state medical practice acts are brought to their attention.	Retain; remains relevant.
H-370.964	Surrogate Consent for Living Organ Donation	Our AMA opposes the practice of surrogate consent for living organ donation from patients in a persistent vegetative state.	Retain; remains relevant.
H-450.928	Physician Decision Making	Our AMA advocates that treating and attending physicians, regardless of employment status, must maintain overall leadership in decisions affecting the health care received by patients in order to ensure quality of the care given to patients.	Retain; remains relevant.
H-450.990	Physician Information for Credentialing	Our AMA: (1) affirms that it is the ethical duty of a physician to share truthfully quality care information regarding a colleague when requested by an authorized credentialing body; and (2) believes that legal immunity for submitting or sharing truthful and accurate information on quality care should be provided to physicians by appropriate legislation.	Retain; remains relevant.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 001
(A-26)

Introduced by: American College of Medical Genetics and Genomics, Medical Student Section

Subject: Ethical Guidance on Postmortem Sample Collection for Genetic Testing

Referred to: Reference Committee on Ethics and Bylaws

Whereas, postmortem genetic testing (PMGT), or molecular autopsy, of blood and/or fresh tissue is an increasingly recognized tool for identifying genetic causes in cases of sudden unexplained death[1,2,7,14]; and

Whereas, PMGT is clinically useful in identifying pathogenic variants and determining familial risk for conditions such as thoracic aortic aneurysm and dissection, inherited arrhythmogenic syndromes (such as cardiomyopathies and channelopathies), and sudden infant death syndrome or sudden unexplained death in childhood[2,12,13]; and

Whereas, PMGT allows for targeted cascade testing of relatives to identify potential carriers, implement preventative measures and surveillance (such as lifestyle modifications and regular imaging), and provide families with psychological benefits and closure following sudden unexplained deathD[1,3-6]; and

Whereas, leading specialty societies including the American College of Medical Genetics and Genomics, the Asia Pacific Heart Rhythm Society, Heart Rhythm Society, European Heart Rhythm Society, Latin American Heart Rhythm Society, the American Heart Association, and the National Association of Medical Examiners, recommend postmortem collection and storage of blood and/or tissue for PMGT in cases of sudden unexplained death, however more guidance on informed consent, privacy, and storage would be helpful for healthcare professionals, patients, and families [4,7,8,9,11,15,16]; and

Whereas, our American Medical Association (AMA) Code of Ethics has established Opinion 4.1.1 (“Genetic Testing & Counseling”), Opinion 3.2.2 (“Confidentiality Postmortem”), and Opinion 4.1.4 (“Forensic Genetics”), which collectively emphasize physicians’ ethical responsibilities to protect the genetic information of patients and their biological relatives while utilizing genetic testing to help diagnose and predict future health risks, but there is no clear statement on the ethics of collecting, storing, and sharing genetic information after death[10]; therefore be it

RESOLVED, that our American Medical Association study the ethical responsibility of physicians in the collection and storage of postmortem biological samples for genetic testing and research when clinically indicated and aligned with existing specialty guidelines. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/3/26

RELEVANT AMA POLICY

4.1.1 Genetic Testing & Counseling

Genetic testing can provide valuable information to support informed decision making about personal health risks and care options as well as reproductive choices. The fact that genetic information carries implications for others to whom the individual is biologically related raises ethical challenges of balancing confidentiality against the well-being of others.

Because genetic contribution to disease can be complex and highly variable, interpreting findings and helping patients understand the implications for their health and health care requires special skill and attention. Genetic testing is most appropriate when the results of testing will have meaningful impact on the patient's care. Physicians should not encourage testing unless there is effective therapy available to prevent or ameliorate the condition tested for. Whether a genetic test is performed to help diagnose an existing health condition, or to predict future health risks, or to provide information for managing a disease, it is important that the patient receives appropriate counseling. Physicians who order genetic tests (individually or as part of a multi-test panel or large-scale sequencing) or who offer clinical genetic services should: (a) Have appropriate knowledge and expertise to counsel patients about heritable conditions, risks for disease, and implications for health management, and to interpret findings of individual genetic tests or collaborate with other health care professionals who can provide these services, such as licensed genetic counselors. (b) Adhere to standards of nondirective counseling and avoid imposing their personal moral values or judgment on the patient. (c) Discuss with the patient: (i) what can and cannot be learned from the proposed genetic test(s) and reasons for and against testing, including the possibility of incidental findings. Physicians should ascertain whether the patient wishes to be informed about findings unrelated to the goal of testing; (ii) medical and psychological implications for the individual's biological relatives; (iii) circumstances under which the physician will expect the patient to notify biological relatives of test findings; and (iv) that the physician will be available to assist in

communicating with relatives. (d) Obtain the individual's informed consent for the specific test or tests to be performed. (e) Ensure that appropriate measures are taken to protect the confidentiality of the patient's and their biological relatives' genetic information. [Issued: 2016]

H-480.944 Improving Genetic Testing and Counseling Services
Our AMA supports: (1) appropriate utilization of genetic testing, pre- and post-test counseling for patients undergoing genetic testing, and physician preparedness in counseling patients or referring them to qualified genetics specialists; (2) the development and dissemination of guidelines for best practice standards concerning pre- and post-test genetic counseling; and (3) research and open discourse concerning issues in medical genetics, including genetic specialist workforce levels, physician preparedness in the provision of genetic testing and counseling services, and impact of genetic testing and counseling on patient care and outcomes. [Res. 913, I-16]

H-185.919 Payment and Coverage for Genetic/Genomic Precision Medicine
Our AMA encourages public and private payers to adopt processes and methodologies for determining coverage and payment for genetic/genomic precision medicine that: (a) Promote transparency and clarity; (b) Involve multidisciplinary stakeholders, including genetic/genomic medicine experts and relevant national medical specialty societies; (c) Describe the evidence being considered and methods for updating the evidence; (d) Provide opportunities for comment and review as well as meaningful reconsiderations; and (e) Incorporate value assessments that consider the value of genetic/genomic tests and therapeutics to patients, families and society as a whole, including the impact on quality of life and survival. Our AMA encourages coverage and payment policies for genetic/genomic precision medicine that are evidence-based and take into account the unique challenges of traditional evidence development through randomized controlled trials, and work with test developers and appropriate clinical experts to establish clear thresholds for acceptable evidence for coverage. Our AMA will work with interested national medical specialty societies and other stakeholders to encourage the development of a comprehensive payment strategy that facilitates more consistent coverage of genetic/genomic tests and therapeutics that have clinical impact. Our AMA encourages national medical specialty societies to develop clinical practice guidelines incorporating precision medicine approaches that support adoption of appropriate, evidence-based services. Our AMA supports continued research and evidence generation demonstrating the validity, meaningfulness, short-term and long-term cost-effectiveness and value of precision medicine. [Joint CMS / CSAPH Rep. 01, I-17 Reaffirmed: CMS Rep. 06, A-18 Reaffirmed: CMS Rep. 06, A-19]

H-85.954 Importance of Autopsies
Our AMA: (b) promotes the use of updated autopsy protocols for medical research, particularly in the areas of cancer, cardiovascular, occupational, and infectious diseases; (e) requests The Joint Commission to consider amending the Accreditation Manual for Hospitals to require that the complete autopsy report be made part of the medical record within 30 days after the postmortem; (f) supports the formalization of methods of reimbursement for autopsy in order to identify postmortem examinations as medical prerogatives and necessary medical procedures; (h) promotes the incorporation of updated postmortem examinations into risk management and quality assurance programs in hospitals. [CCB/CLRPD Rep. 3, A-14; Reaffirmed: CCB/CLRPD Rep. 01, A-24]

4.1.2 Genetic Testing for Reproductive Decision Making
Genetic testing can provide information to help prospective parents make informed decisions about childbearing. Genetic testing to inform reproductive decisions was once recommended only for women/couples whose family history or medical record indicated elevated risk for a limited set of genetically mediated conditions. As procreation among individuals of diverse ancestries becomes more common and tests for more conditions become more accurate and less costly, the relevance of broad preconception, pre-implantation, or prenatal genetic screening grows stronger. Physicians may ethically provide genetic testing to inform reproductive decision making when the patient requests, but may also wish to offer broad screening to all persons who are considering having a child. Physicians who provide reproductive health care that includes genetic testing should:(c) Obtain the individual's informed consent to the specific test or tests to be performed. Physicians should ascertain whether the person wishes to be informed about incidental findings.(d) Inform the individual about any abnormal findings for the tests ordered and discuss the severity of the associated health condition, likelihood of clinical manifestation (penetrance), age at onset, and other factors relevant to a decision about childbearing.(e) Respect an

individual's decision to terminate or continue a pregnancy when testing reveals a genetic abnormality in the fetus, in accordance with applicable law. [Issued 2016]

D-460.996 Medical Genetics
Our AMA will join with the American College of Medical Genetics and other professional and lay organizations to: (1) Publicize the resources and services offered by medical genetics professionals to other medical specialties; and (2) advocate for federal funding specifically targeted to the development and stable support of a clinical genetics infrastructure commensurate with the application of new genetic knowledge to the prevention and treatment of human disease. [Res. 527, A-99; Modified and Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: CSAPH Rep 01, A-19]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 002
(A-26)

Introduced by: Florida, the American Academy of Emergency Medicine

Subject: Physician Workload and Scheduling

Referred to: Reference Committee on Ethics and Bylaws

Whereas, excessive patient volumes and overly demanding scheduling requirements can undermine patient safety, contribute to clinician burnout, and increase the risk of medical errors, with evidence demonstrating a significant association between physician burnout and self-reported medical errors[1]; and

Whereas, high workload, time pressure, and inefficient practice environments are well-established drivers of physician burnout and are associated with decreased quality of care and adverse patient outcomes[2,3,4]; and

Whereas, physicians face substantial cumulative workload beyond direct patient care, including documentation and administrative tasks, which further compress time available for safe and thorough patient care[5,6]; and

Whereas, workload, fatigue, and time pressure are recognized contributors to medical error and patient safety events[7]; and

Whereas, our AMA Code of Medical Ethics Opinion 1.1.6, *Quality*, affirms that physicians have an ethical obligation to provide safe, effective, and high-quality care, which may be compromised under conditions of excessive workload; and

Whereas, our AMA Code of Medical Ethics Opinion 1.1.1, *Patient-Physician Relationships*, requires physicians to place patient welfare above external influences, including administrative or financial pressures that may drive unsafe scheduling practices; and

Whereas, our AMA Code of Medical Ethics Opinion 9.3.1, Physician Health and Wellness, states that when physician health or wellness is compromised, the safety and effectiveness of patient care may also be compromised; and

Whereas, our AMA's policy and advocacy efforts on physician well-being support reducing system-level drivers of burnout and promoting flexibility and autonomy in practice conditions; therefore be it

RESOLVED, that our American Medical Association adopt policy affirming that physicians have the professional right and authority to decline, modify, or limit patient volume expectations, scheduling mandates, and staffing conditions that compromise patient safety or their ability to provide safe, thorough, and patient-centered care (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for and support state and federal legislation or regulation that ensures local practicing physicians direct and control the development and implementation

of patient scheduling protocols, workload standards, patient panel limits, and clinical staffing models within their practices and health systems, based on clinical complexity, time required for direct and indirect care, and safe practice standards rather than productivity or revenue targets. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

AMA Code of Medical Ethics Opinion 1.1.6 – Quality
As professionals dedicated to promoting the well-being of patients, physicians individually and collectively share the obligation to ensure that the care patients receive is safe, effective, patient centered, timely, efficient, and equitable.
While responsibility for quality of care does not rest solely with physicians, their role is essential. Individually and collectively, physicians should actively engage in efforts to improve the quality of health care by:

a. Keeping current with best care practices and maintaining professional competence.
b. Holding themselves accountable to patients, families, and fellow health care professionals for communicating effectively and coordinating care appropriately.
c. Using new technologies and innovations that have been demonstrated to improve patient outcomes and experience of care, in keeping with ethics guidance on innovation in clinical practice and stewardship of health care resources.
d. Monitoring the quality of care they deliver as individual practitioners—e.g., through personal case review and critical self-reflection, peer review, and use of other quality improvement tools.
e. Demonstrating commitment to develop, implement, and disseminate appropriate, well- defined quality and performance improvement measures in their daily practice.
f. Participating in educational, certification, and quality improvement activities that are well designed and consistent with the core values of the medical profession.

AMA Code of Medical Ethics Opinion 1.1.1 – Patient-Physician Relationships
The practice of medicine, and its embodiment in the clinical encounter between a patient and a physician, is fundamentally a moral activity that arises from the imperative to care for patients and to alleviate suffering. The relationship that emerges between a patient and a physician must be based on trust. The physician's obligation to be trustworthy entails additional ethical duties such as a commitment to act for the good of patients; to uphold respect for patients as persons; to develop good communication skills; and to be professionally competent. This trust is fostered by physicians' ethical responsibilities to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical

judgment on patients' behalf, and to advocate for their patients' welfare. When external influences negatively impact this trust, or the patient-physician relationship directly, physicians individually and collectively should advocate for changes to ameliorate the situation and promote a more hospitable environment in which patient-physician relationships may flourish.

A patient-physician relationship commences when a physician begins to serve a patient's medical needs. The contexts that may lead to a patient-physician relationship vary: they generally occur as a response to a request by a patient or a patient's surrogate, but can also include certain contractual, legally mandated, or emergency settings without the explicit request or consent of the patient.

While the patient-physician relationship may involve one patient and one physician, in today's complex health care system, such relationships often involve multiple members of a care team, patient family members, and surrogates. The core values of the patient-physician relationship, however, remain unchanged. How these values are implemented will depend on many factors, including the setting, the needs of the patient, the duration of the relationship, and the training, expertise, and experience of the physician, and will necessarily reflect the myriad ways that patients and physicians interact. While every patient-physician relationship will be different and will change over time, the fundamental importance of establishing and sustaining trust through respect for persons, good communication, and professional competency will always be crucial at every layer, node, and time of the relationship. It is the duty of physicians, therefore, to uphold these values and support patients and the primacy of the patient-physician relationship to the best of their ability in all practice settings and at all times.

AMA Code of Medical Ethics Opinion 9.3.1, Physician Health and Wellness
When physician health or wellness is compromised, so may the safety and effectiveness of the medical care provided. To preserve the quality of their performance, physicians have a responsibility to maintain their health and wellness, broadly construed as preventing or treating acute or chronic diseases, including mental illness, disabilities, and occupational stress.

To fulfill this responsibility individually, physicians should:

(a) Maintain their own health and wellness by:

(i) following healthy lifestyle habits;

(ii) ensuring that they have a personal physician whose objectivity is not compromised.

(b) Take appropriate action when their health or wellness is compromised, including:

(i) engaging in honest assessment of their ability to continue practicing safely;

(ii) taking measures to mitigate the problem;

(iii) taking appropriate measures to protect patients, including measures to minimize the risk of transmitting infectious disease commensurate with the seriousness of the disease;

(iv) seeking appropriate help as needed, including help in addressing substance abuse. Physicians should not practice if their ability to do so safely is impaired by use of a controlled substance, alcohol, other chemical agent or a health condition.

Collectively, physicians have an obligation to ensure that colleagues are able to provide safe and effective care, which includes promoting health and wellness among physicians.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 003
(A-26)

Introduced by: American Academy of Ophthalmology

Subject: Artificial Intelligence to Bolster Physician-Led Team-Based Care

Referred to: Reference Committee on Ethics and Bylaws

Whereas, a randomized quality improvement study found that large language model–generated plain language summaries of ophthalmologist encounter notes improved comprehension and clarity for non-ophthalmology clinicians, enhancing interdisciplinary communication; and

Whereas, a cohort study demonstrated that an artificial intelligence deterioration model–enabled intervention, when paired with a collaborative nurse-physician workflow, was associated with an absolute reduction in escalations of care, including rapid response activation, ICU transfer, or cardiopulmonary arrest; and

Whereas, a study of artificial intelligence–enabled collaborative team workflows—one for advance care planning and the other for reducing unplanned escalations of care—found that these workflows reduced misalignment of risk perception and increased coordination between physicians and non-physician team members in performing needed clinical interventions; and

Whereas, physicians are uniquely qualified to lead coordinated care teams, which is the best way to support high-quality care and lower costs; and

Whereas, artificial intelligence is an emerging tool to reinforce the effectiveness of physician-led teams by enhancing collaboration with non-physician clinicians, improving communication, and aligning care around physician judgment; therefore be it

RESOLVED, that our American Medical Association make efforts to educate physicians on evidence-based artificial intelligence (AI) tools that can strengthen collaboration with non-physician clinicians through improved interdisciplinary communication, decision support, and workflow integration (Directive to Take Action); and be it further

RESOLVED, that our AMA support the development and dissemination of best practices for AI integration into physician-led care teams, with emphasis on safety monitoring, transparency, cyber hygiene, and preserving physician leadership in clinical decision-making (New HOD Policy); and be it further

RESOLVED, that our AMA encourage further research on AI interventions that demonstrate how AI can enhance physician-led team effectiveness, reduce misalignment of clinical risk perception, and improve coordination of care. (New HOD Policy)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/14/26

RELEVANT AMA POLICY

D-480.952 Ensuring Transparency and Accountability in Clinical Use of Augmented Intelligence
Our AMA recognizes the need for clear disclosure to the healthcare provider whenever artificial intelligence (AI) is used in the delivery of clinical care, in order to ensure the safe, transparent, and accountable use of AI-generated content in clinical and public-health settings.
1. Our AMA advocates that entities developing or deploying artificial-intelligence systems—including, but not limited to, generative AI, foundation models, neural networks, and other machine-learning approaches—in healthcare:
a. establish and maintain a risk-based governance approach proportionate to the system's intended use and potential harm;
b. implement relevant security measures and privacy protections;
c. provide for clinically useful transparency, such as clear labeling of AI-generated outputs for end users, including disclosure of the algorithm's level of confidence in those outputs; and
d. implement risk management approaches throughout the AI lifecycle with particular emphasis on appropriate monitoring of the system for safety, clinical effectiveness, accuracy, and reliability, to help ensure ethical and regulatory alignment across all deployment contexts. [Res. 507, A-25]

D-480.954 Explainability of Artificial/Augmented Intelligence and Machine Learning Algorithms
1. To maximize the impact and trustworthiness of augmented intelligence and machine-learning (AI/ML) tools in clinical settings, our AMA recognizes that:
a. Explainable AI with safety and efficacy data should be the expected form of AI tools for clinical applications, and exceptions should be rare and justified and require at minimum safety and efficacy data prior to their adoption or regulatory approval;
b. To be considered "explainable," an AI device's explanation of how it arrived at its output must be interpretable and actionable by a qualified human. Claims that an algorithm is explainable should be adjudicated only by independent third parties, such as regulatory agencies or appropriate specialty societies, rather than by declaration from its developer;
c. Explainability should not be used as a substitute for other means of establishing safety and efficacy of AI tools, such as through randomized clinical trials; and
d. Concerns of intellectual property (IP) infringement, when provided as rationale for not explaining how an AI device created its output, does not nullify a patient's right to transparency and autonomy in medical decision-making. While intellectual property should be afforded a certain level of protection, concerns of infringement should not outweigh the need for explainability for AI with medical applications.
2. Our AMA will collaborate with experts and interested parties to develop and disseminate a list of definitions for key concepts related to medical AI and its oversight. [CSAPH Rep. 08, A-25]

H-310.898 Increasing Education on Physician-Led Care and Advocacy in Residency Training
Our AMA will develop, provide, expand upon, and promote the educational resources in the AMA GME Competency Education Program, as well as toolkits and workshops that residency programs can implement to teach residents about physician-led care, advocacy strategies, and how to effectively engage with health care policymakers and organizations.
Our AMA encourages residency programs to promote opportunities for residents and trainees to engage in real-world advocacy efforts at the local, state, and national levels, in collaboration with state societies and other medical organizations. [Res. 309, A-25]

G-615.998 Creation of an AMA Council with a Focus on Digital Health Technologies and AI
Our American Medical Association will establish a task force by I-24 focused on digital health, technology, informatics, and augmented/artificial intelligence with the potential to transition this task force to a new council and report back A-25 on this transition.
Our AMA Task Force on AI, Digital Health, and Informatics will work toward an informed recommendation on the long-term model for HOD input with a report back at the 2026 Interim meeting. [Res. 606, A-24; Appended: BOT Rep. 24-25]

H-160.912 The Structure and Function of Interprofessional Health Care Teams
Our American Medical Association defines 'team-based health care' as the provision of health care services by a physician-led team of at least two health care professionals who work collaboratively with each other and the patient and family to accomplish shared goals within and across settings to achieve coordinated, high-quality, patient-centered care.
1. Our AMA will advocate that the physician leader of a physician-led interprofessional health care team be empowered to perform the full range of medical interventions that they are trained to perform.
2. Our AMA will advocate that all members of a physician-led interprofessional health care team be enabled to perform medical interventions that they are capable of performing according to their education, training and licensure and the discretion of the physician team leader in order to most effectively provide quality patient care.
3. Our AMA adopts the following principles to guide physician leaders of health care teams:
a. focus the team on patient and family-centered care.
b. make clear the team's mission, vision and values.
c. direct and/or engage in collaboration with team members on patient care.
d. be accountable for clinical care, quality improvement, efficiency of care, and continuing education.
e. foster a respectful team culture and encourage team members to contribute the full extent of their professional insights, information and resources.
f. encourage adherence to best practice protocols that team members are expected to follow.
g. manage care transitions by the team so that they are efficient and effective, and transparent to the patient and family.
h. promote clinical collaboration, coordination, and communication within the team to ensure efficient, quality care is provided to the patient and that knowledge and expertise from team members is shared and utilized.
i. support open communication among and between the patient and family and the team members to enhance quality patient care and to define the roles and responsibilities of the team members that they encounter within the specific team, group or network.
j. facilitate the work of the team and be responsible for reviewing team members' clinical work and documentation.
k. review measures of 'population health' periodically when the team is responsible for the care of a defined group.
4. Our AMA encourages independent physician practices and small group practices to consider opportunities to form health care teams such as through independent practice associations, virtual networks or other networks of independent providers.
5. Our AMA will advocate that the structure, governance and compensation of the team should be aligned to optimize the performance of the team leader and team members. [Joint CME-CMS Rep., I-12; Reaffirmation I-13; Reaffirmed: CMS Rep. 1, 1-15; Reaffirmed: BOT Action in response to referred for decision: Res. 718, A-17; Reaffirmed: CMS Rep. 1, 1-23; Modified: Speakers Rep. 02, I-24]

H-295.857 Augmented Intelligence in Medical Education
Our AMA encourages:
(1) accrediting and licensing bodies to study how AI should be most appropriately addressed in accrediting and licensing standards;
(2) medical specialty societies and boards to consider production of specialty-specific educational modules related to AI;
(3) research regarding the effectiveness of AI instruction in medical education on learning and clinical outcomes;
(4) institutions and programs to be deliberative in the determination of when AI-assisted technologies should be taught, including consideration of established evidence-based treatments, and including consideration regarding what other curricula may need to be eliminated in order to accommodate new

training modules;
(5) stakeholders to provide educational materials to help learners guard against inadvertent dissemination of bias that may be inherent in AI systems;
(6) the study of how differences in institutional access to AI may impact disparities in education for students at schools with fewer resources and less access to AI technologies;
(7) enhanced training across the continuum of medical education regarding assessment, understanding, and application of data in the care of patients;
(8) the study of how disparities in AI educational resources may impact health care disparities for patients in communities with fewer resources and less access to AI technologies;
(9) institutional leaders and academic deans to proactively accelerate the inclusion of nonclinicians, such as data scientists and engineers, onto their faculty rosters in order to assist learners in their understanding and use of AI; and
(10) close collaboration with and oversight by practicing physicians in the development of AI applications. [BOT Rep.41, A-18; Reaffirmed: CMS Rep.97, A-24; Reaffirmed: CSAPH Rep. 08, A-25]

H-390.843 Physician-Led, Single and Multi-Specialty, Organized Group Practice Models
1. Our AMA recognizes that physician-led, single and multi-specialty group practices, integrated delivery systems, and other organized systems of care demonstrating the following attributes: (a) efficient provision of services, (b) organized system of care, (c) quality measurement and improvement activities, (d) care coordination, (e) use of IT and evidence-based medicine, (f) compensation practices that promote all aforementioned attributes, and (g) accountability, are credible models for providing coordinated, comprehensive, accountable, cost-effective, patient-centered care.
2. Our AMA will continue its involvement in activities that support physicians in all practice settings to implement solutions and strategies that can improve practice efficiency, helping them achieve improved quality at an affordable cost. [Sub. Res. 212, I-13; Appended: BOT Rep. 21, A-15; Reaffirmed: CMS Rep. 01, A-25]

H-480.940 Augmented Intelligence in Health Care
As a leader in American medicine, our American Medical Association has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.
To that end our AMA will seek to:
1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians' professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
b. is transparent;
c. conforms to leading standards for reproducibility;
d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
e. safeguards patients' and other individuals' privacy interests and preserves the security and integrity of personal information.
5. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
6. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI. [BOT Rep. 41, A-18; Reaffirmed: CMS Rep. 07, A-24; Reaffirmed: CSAPH Rep. 08, A-25]

H-480-931 Augmented Intelligence Development, Deployment, and Use in Health Care
1. General Governance
a. Health care AI must be designed, developed, and deployed in a manner which is ethical, equitable, responsible, accurate, transparent, and evidence-based.
b. Use of AI in health care delivery requires clear national governance policies to regulate its adoption and utilization, ensuring patient safety, and mitigating inequities. Development of national governance

policies should include interdepartmental and interagency collaboration.
c. Compliance with national governance policies is necessary to develop AI in an ethical and responsible manner to ensure patient safety, quality, and continued access to care. Voluntary agreements or voluntary compliance is not sufficient.
d. AI systems should be developed and evaluated with a specific focus on mitigating bias and promoting health equity, ensuring that the deployment of these technologies does not exacerbate existing disparities in health care access, treatment, or outcomes.
e. Health care AI requires a risk-based approach where the level of scrutiny, validation, and oversight should be proportionate to the overall potential of disparate harm and consequences the AI system might introduce [See also Augmented Intelligence in Health Care H-480.939 at (1)]
f. AI risk management should minimize potential negative impacts of health care AI systems while providing opportunities to maximize positive impacts.
g. Clinical decisions influenced by AI must be made with specified qualified human intervention points during the decision-making process. A qualified human is defined as a licensed physician with the necessary qualifications and training to independently provide the same medical service without the aid of AI. As the potential for patient harm increases, the point in time when a physician should utilize their clinical judgment to interpret or act on an AI recommendation should occur earlier in the care plan. With few exceptions, there generally should be a qualified human in the loop when it comes to medical decision making capable of intervening or overriding the output of an AI model.
h. Health care practices and institutions should not utilize AI systems or technologies that introduce overall or disparate risk that is beyond their capabilities to mitigate. Implementation and utilization of AI should avoid exacerbating clinician burden and should be designed and deployed in harmony with the clinical workflow and, in institutional settings, consistent with AMA Policy H-225.940 - Augmented Intelligence and Organized Medical Staff.
i. Medical specialty societies, clinical experts, and informaticists are best positioned and should identify the most appropriate uses of AI-enabled technologies relevant to their clinical expertise and set the standards for AI use in their specific domain. [See Augmented Intelligence in Health Care H-480.940 at (2)]
2. When to Disclose: Transparency in Use of Augmented Intelligence-Enabled Systems and Technologies That Impact Medical Decision Making at the Point of Care
a. Decisions regarding transparency and disclosure of the use of AI should be based upon a risk- and impact-based approach that considers the unique circumstance of AI and its use case. The need for transparency and disclosure is greater where the performance of an AI-enabled technology has a greater risk of causing harm to a patient.
i. AI disclosure should align and meet ethical standards or norms.
ii. Transparency requirements should be designed to meet the needs of the end users. Documentation and disclosure should enhance patient and physician knowledge without increasing administrative burden.
iii. When AI is used in a manner which impacts access to care or impacts medical decision making at the point of care, that use of AI should be disclosed and documented to both physicians and/or patients in a culturally and linguistically appropriate manner. The opportunity for a patient or their caregiver to request additional review from a licensed clinician should be made available upon request.
iv. When AI is used in a manner which directly impacts patient care, access to care, medical decision making, or the medical record, that use of AI should be documented in the medical record.
b. AI tools or systems cannot augment, create, or otherwise generate records, communications, or other content on behalf of a physician without that physician's consent and final review.
c. When AI or other algorithmic-based systems or programs are utilized in ways that impact patient access to care, such as by payors to make claims determinations or set coverage limitations, use of those systems or programs must be disclosed to impacted parties.
d. The use of AI-enabled technologies by hospitals, health systems, physician practices, or other entities, where patients engage directly with AI, should be clearly disclosed to patients at the beginning of the encounter or interaction with the AI-enabled technology. Where patient-facing content is generated by AI, the use of AI in generating that content should be disclosed or otherwise noted within the content.
3. What to Disclose: Required Disclosures by Health Care Augmented Intelligence-Enabled Systems and Technologies
a. When AI-enabled systems and technologies are utilized in health care, the following information should be disclosed by the AI developer to allow the purchaser and/or user (physician) to appropriately evaluate the system or technology prior to purchase or utilization:

i. Regulatory approval status.
ii. Applicable consensus standards and clinical guidelines utilized in design, development, deployment, and continued use of the technology.
iii. Clear description of problem formulation and intended use accompanied by clear and detailed instructions for use.
iv. Intended population and intended practice setting.
v. Clear description of any limitations or risks for use, including possible disparate impact.
vi. Description of how impacted populations were engaged during the AI lifecycle.
vii. Detailed information regarding data used to train the model:
1. Data provenance.
2. Data size and completeness.
3. Data timeframes.
4. Data diversity.
5. Data labeling accuracy.
viii. Validation Data/Information and evidence of:
1. Clinical expert validation in intended population and practice setting and intended clinical outcomes.
2. Constraint to evidence-based outcomes and mitigation of “hallucination”/“confabulation” or other output error.
3. Algorithmic validation.
4. External validation processes for ongoing evaluation of the model performance, e.g., accounting for AI model drift and degradation.
5. Comprehensiveness of data and steps taken to mitigate biased outcomes.
6. Other relevant performance characteristics, including but not limited to performance characteristics at peer institutions/similar practice settings.
7. Post-market surveillance activities aimed at ensuring continued safety, performance, and equity.
ix. Data Use Policy:
1. Privacy.
2. Security.
3. Special considerations for protected populations or groups put at increased risk.
x. information regarding maintenance of the algorithm, including any use of active patient data for ongoing training.
xi. Disclosures regarding the composition of design and development team, including diversity and conflicts of interest, and points of physician involvement and review.
b. Purchasers and/or users (physicians) should carefully consider whether or not to engage with AI-enabled health care technologies if this information is not disclosed by the developer. As the risk of AI being incorrect increases risks to patients (such as with clinical applications of AI that impact medical decision making), disclosure of this information becomes increasingly important. [See also Augmented Intelligence in Health Care H-480.939]
4. Generative Augmented Intelligence
a. Generative AI should: (a) only be used where appropriate policies are in place within the practice or other health care organization to govern its use and help mitigate associated risks; and (b) follow applicable state and federal laws and regulations (e.g., HIPAA-compliant Business Associate Agreement).
b. Appropriate governance policies should be developed by health care organizations and account for and mitigate risks of:
i. Incorrect or falsified responses; lack of ability to readily verify the accuracy of responses or the sources used to generate the response.
ii. Training data set limitations that could result in responses that are out of date or otherwise incomplete or inaccurate for all patients or specific populations.
iii. Lack of regulatory or clinical oversight to ensure performance of the tool.
iv. Bias, discrimination, promotion of stereotypes, and disparate impacts on access or outcomes.
v. Data privacy.
vi. Cybersecurity.
vii. Physician liability associated with the use of generative AI tools.
c. Health care organizations should work with their AI and other health information technology (health IT) system developers to implement rigorous data validation and verification protocols to ensure that only accurate, comprehensive, and bias managed datasets inform generative AI models, thereby safeguarding equitable patient care and medical outcomes. [See Augmented Intelligence in Health Care H-480.940 at

(3)(d)]
d. Use of generative AI should incorporate physician and staff education about the appropriate use, risks, and benefits of engaging with generative AI. Additionally, physicians and healthcare organizations should engage with generative AI tools only when adequate information regarding the product is provided to physicians and other users by the developers of those tools.
e. Clinicians should be aware of the risks of patients engaging with generative AI products that produce inaccurate or harmful medical information (g., patients asking chatbots about symptoms) and should be prepared to counsel patients on the limitations of AI-driven medical advice.
f. Data and prompts contributed by users should primarily be used by developers to improve the user experience and AI tool quality and not simply increase the AI tool's market value or revenue generating potential.
5. Physician Liability for Use of Augmented Intelligence-Enabled Technologies
a. Current AMA policy states that liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. [See Augmented Intelligence in Health Care H-480.939]
i. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
ii. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
iii. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.
b. When physicians do not know or have reason to know that there are concerns about the quality and safety of an AI-enabled technology, they should not be held liable for the performance of the technology in question.
c. Liability protections for physicians using AI-enabled technologies should align with both current and future AMA medical liability reform policies.
6. Data Privacy and Augmented Intelligence
a. Entity Responsibility:
i. Entities, e.g., AI developers, should make information available about the intended use of generative AI in health care and identify the purpose of its use. Individuals should know how their data will be used or reused, and the potential risks and benefits.
ii. Individuals should have the right to opt-out, update, or request deletion of their data from generative AI tools. These rights should encompass AI training data and disclosure to other users of the tool.
iii. Generative AI tools should not reverse engineer, reconstruct, or reidentify an individual's originally identifiable data or use identifiable data for nonpermitted uses, e.g., when data are permitted to conduct quality and safety evaluations. Preventive measures should include both legal frameworks and data model protections, e.g., secure enclaves, federated learning, and differential privacy.
b. User Education:
i. Users should be provided with training specifically on generative AI. Education should address:
1. Legal, ethical, and equity considerations.
2. Risks such as data breaches and re-identification.
3. Potential pitfalls of inputting sensitive and personal data.
4. The importance of transparency with patients regarding the use of generative AI and their data.
[See H-480.940, Augmented Intelligence in Health Care, at (4) and (5)]
7. Augmented Intelligence Cybersecurity
a. AI systems must have strong protections against input manipulation and malicious attacks.
b. Entities developing or deploying health care AI should regularly monitor for anomalies or performance deviations, comparing AI outputs against known and normal behavior.
c. Independent of an entity's legal responsibility to notify a health care provider or organization of a data breach, that entity should also act diligently in identifying and notifying the individuals themselves of breaches that impact their personal information.
d. Users should be provided education on AI cybersecurity fundamentals, including specific cybersecurity risks that AI systems can face, evolving tactics of AI cyber attackers, and the user's role in mitigating threats and reporting suspicious AI behavior or outputs.

8. Mitigating Misinformation in AI-Enabled Technologies
a. AI developers should ensure transparency and accountability by disclosing how their models are trained and the sources of their training dat Clear disclosures are necessary to build trust in the accuracy and reliability of the information produced by AI systems.
b. Algorithms should be developed to detect and flag potentially false and misleading content before it is widely disseminated.
c. Developers of AI should have mechanisms in place to allow for reporting of mis- and disinformation generated or propagated by AI-enabled systems.
d. Developers of AI systems should be guided by policies that emphasize rigorous validation and accountability for the content their tools generate, and, consistent with AMA Policy H-480.939(7), are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
e. Academic publications and journals should establish clear guidelines to regulate the use of AI in manuscript submissions. These guidelines should include requiring the disclosure that AI was used in research methods and data collection, requiring the exclusion of AI systems as authors, and should outline the responsibility of the authors to validate the veracity of any referenced content generated by AI.
f. Education programs are needed to enhance digital literacy, helping individuals critically assess the information they encounter online, particularly in the medical field where mis- and disinformation can have severe consequences.
9. Payor Use of Augmented Intelligence and Automated Decision-Making Systems
a. Use of automated decision-making systems that determine coverage limits, make claim determinations, and engage in benefit design should be publicly reported, based on easily accessible evidence-based clinical guidelines (as opposed to proprietary payor criteria), and disclosed to both patients and their physician in a way that is easy to understand.
b. Payors should only use automated decision-making systems to improve or enhance efficiencies in coverage and payment automation, facilitate administrative simplification, and reduce workflow burdens. Automated decision-making systems should never create or exacerbate overall or disparate access barriers to needed benefits by increasing denials, coverage limitations, or limiting benefit offerings. Use of automated decision-making systems should not replace the individualized assessment of a patient's specific medical and social circumstances and payors' use of such systems should allow for flexibility to override automated decisions. Payors should always make determinations based on particular patient care needs and not base decisions on algorithms developed on "similar" or "like" patients.
c. Payors using automated decision-making systems should disclose information about any algorithm training and reference data, including where data were sourced and attributes about individuals contained within the training data set (e.g., age, race, gender). Payors should provide clear evidence that their systems do not discriminate, increase inequities, and that protections are in place to mitigate bias.
d. Payors using automated decision-making systems should identify and cite peer-reviewed studies assessing the system's accuracy measured against the outcomes of patients and the validity of the system's predictions.
e. Any automated decision-making system recommendation that indicates limitations or denials of care, at both the initial review and appeal levels, should be automatically referred for review to a physician (a) possessing a current and valid non-restricted license to practice medicine in the state in which the proposed services would be provided if authorized and (b) be of the same specialty as the physician who typically manages the medical condition or disease or provides the health care service involved in the request prior to issuance of any final determination. Prior to issuing an adverse determination, the treating physician must have the opportunity to discuss the medical necessity of the care directly with the physician who will be responsible for determining if the care is authorized.
f. Individuals impacted by a payor's automated decision-making system, including patients and their physicians, must have access to all relevant information (including the coverage criteria, results that led to the coverage determination, and clinical guidelines used).
g. Payors using automated decision-making systems should be required to engage in regular system audits to ensure use of the system is not increasing overall or disparate claims denials or coverage limitations, or otherwise decreasing access to care. Payors using automated decision-making systems should make statistics regarding systems' approval, denial, and appeal rates available on their website (or another publicly available website) in a readily accessible format with patient population demographics to report and contextualize equity implications of automated decisions. Insurance regulators should consider requiring reporting of payor use of automated decision-making systems so that they can be

monitored for negative and disparate impacts on access to care. Payor use of automated decision-making systems must conform to all relevant state and federal laws. [BOT Rep. 01, I-24; Reaffirmed: CSAPH Rep.08, A-25; Reaffirmed in lieu of the first resolve: Res. 226, A-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 004
(A-26)

Introduced by: Women Physicians Section

Subject: Ethical Reproductive Care for Individuals with Intellectual and Developmental Disabilities

Referred to: Reference Committee on Ethics and Bylaws

Whereas, individuals with intellectual and developmental disabilities (IDD) represent a diverse population with varying levels of decision-making capacity, and many retain meaningful ability to participate in reproductive healthcare decisions;[1–3] and

Whereas, decision-making capacity is task-specific, meaning individuals with IDD may have the ability to provide informed consent for certain reproductive decisions even if they require support or guardianship for other aspects of daily living;[4–6] and

Whereas, supported decision-making frameworks enable individuals with IDD to make their own healthcare choices with assistance in understanding information, communicating preferences, and evaluating options, without transferring decision-making authority;[4–6] and

Whereas, historical abuses—including forced sterilization and coercive contraception—have disproportionately targeted people with disabilities, particularly women, people of color, and LGBTQ+ individuals, resulting in long-standing mistrust and ongoing reproductive injustice;[7–10] and

Whereas, national clinical organizations, including the American College of Obstetricians and Gynecologists, have identified patients with disabilities as a population facing persistent and significant barriers to reproductive healthcare—including inaccessible clinical environments, communication challenges, and legal complexities surrounding permanent contraception—and have issued dedicated guidance to address these inequities, underscoring the urgency of strengthening protections for autonomy and valid consent for individuals with intellectual and developmental disabilities;[11] and

Whereas, forced sterilization of people with disabilities remains legally permissible in 31 states, as acknowledged in recent federal resolutions, and several states have recently debated legislation either restricting or expanding guardians' authority to consent to sterilization or long-acting contraception on behalf of individuals with IDD, including New York Senate Bill S3357 (2025–2026);[10,15–17] and

Whereas, multiple states have recently enacted or introduced supported decision-making (SDM) laws that recognize the right of people with disabilities to make their own healthcare decisions with assistance, with at least 39 states and the District of Columbia adopting SDM statutes or court-recognized frameworks;[4–6,18] and

Whereas, ethical contraceptive care requires maximizing patient agency, providing accessible communication, and avoiding paternalistic or convenience-based decision-making by caregivers or clinicians;[4–6,12–14] therefore be it

RESOLVED, that our American Medical Association affirm that individuals with intellectual and developmental disabilities (IDD) have the right to meaningful participation in all reproductive healthcare decisions to the maximum extent of their abilities (New HOD Policy); and be it further

RESOLVED, that our AMA amend H-90.968 “Medical Care of Persons with Disabilities” by addition to read as follows:

1. Our American Medical Association encourages:
    a. clinicians to learn and appreciate variable presentations of complex functioning profiles in all persons with disabilities including but not limited to physical, sensory, developmental, intellectual, learning, and psychiatric disabilities and chronic illnesses.
    b. medical schools and graduate medical education programs to acknowledge the benefits of education on how aspects in the social model of disability (e.g. ableism) can impact the physical and mental health of persons with disabilities.
    c. medical schools and graduate medical education programs to acknowledge the benefits of teaching about the nuances of uneven skill sets, often found in the functioning profiles of persons with developmental disabilities, to improve quality in clinical care.
    d. education of physicians on how to provide and/or advocate for developmentally appropriate and accessible medical, social and living support for patients with disabilities so as to improve health outcomes.
    e. medical schools and residency programs to encourage faculty and trainees to appreciate the opportunities for exploring diagnostic and therapeutic challenges while also accruing significant personal rewards when delivering care with professionalism to persons with profound disabilities and multiple co-morbid medical conditions in any setting.
    f. medical schools and graduate medical education programs to establish and encourage enrollment in elective rotations for medical students and residents at health care facilities specializing in care for the disabled.
    g. cooperation among physicians, health & human services professionals, and a wide variety of adults with disabilities to implement priorities and quality improvements for the care of persons with disabilities.
2. Our AMA seeks:
    a. legislation to increase the funds available for training physicians in the care of individuals with disabilities, and to increase the reimbursement for the health care of these individuals.
    b. insurance industry and government reimbursement that reflects the true cost of health care of individuals with disabilities.
3. Our AMA entreats health care professionals, parents, and others participating in decision-making to be guided by the following principles:
    a. All people with disabilities, regardless of the degree of their disability, should have access to appropriate and affordable medical and dental care throughout their lives.
    b. An individual’s medical condition and welfare must be the basis of any medical decision. Our AMA advocates for the highest quality medical care for persons with profound disabilities; encourages support for health care facilities whose primary mission is to meet the health care needs of persons with profound disabilities; and informs physicians that when they are presented with an opportunity to care for patients with profound disabilities, that there are resources available to them.

4. Our AMA will collaborate with appropriate stakeholders to create a model general curriculum/objective that
    a. incorporates critical disability studies.
    b. includes people with disabilities as patient instructors in formal training sessions and preclinical and clinical instruction.
5. Our AMA recognizes the importance of managing the health of children and adults with developmental and intellectual disabilities as a part of overall patient care for the entire community.
6. Our AMA supports efforts to educate physicians on health management of children and adults with intellectual and developmental disabilities, as well as the consequences of poor health management on mental and physical health for people with intellectual and developmental disabilities.
7. Our AMA encourages the Liaison Committee on Medical Education, Commission of Osteopathic College Accreditation, and allopathic and osteopathic medical schools to develop and implement a curriculum on the care and treatment of people with a range of disabilities.
8. Our AMA encourages the Accreditation Council for Graduate Medical Education and graduate medical education programs to develop and implement curriculum on providing appropriate and comprehensive health care to people with a range of disabilities.
9. Our AMA encourages the Accreditation Council for Continuing Medical Education, specialty boards, and other continuing medical education providers to develop and implement continuing programs that focus on the care and treatment of people with a range of disabilities.
10. Our AMA will advocate that the Health Resources and Services Administration include persons with disabilities as a medically underserved population.
11. Specific to people with developmental and intellectual disabilities, a uniquely underserved population, our AMA encourages:
    a. Medical schools and graduate medical education programs to acknowledge the benefits of teaching about the nuances of uneven skill sets, often found in the functioning profiles of persons with developmental and intellectual disabilities, to improve quality in clinical education.
    b. Medical schools and graduate medical education programs to establish and encourage enrollment in elective rotations for medical students and residents at health care facilities specializing in care for individuals with developmental and intellectual disabilities.
    c. Cooperation among physicians, health and human services professionals, and a wide variety of adults with intellectual and developmental disabilities to implement priorities and quality improvements for the care of persons with intellectual and developmental disabilities.
    d. <u>Clinicians to obtain direct, task-specific informed consent from individuals with IDD whenever they demonstrate capacity for the decision at hand</u> and, when <u>legally required, the consent of a guardian or other authorized decision-maker.</u>

(Modify Current HOD Policy); and be it further

RESOLVED, that our AMA support clinician education on disability-competent reproductive care, including accessible communication strategies, historical context, and best practices for ethical contraceptive counseling for individuals with IDD. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

H-90.967 Support for Persons with Intellectual Disabilities

Our American Medical Association encourages appropriate government agencies, non-profit organizations, and specialty societies to develop and implement policy guidelines to provide adequate psychosocial resources for persons with intellectual disabilities, with the goal of independent function when possible.

[Res. 01, A-16]

H-65.965 Support of Human Rights and Freedom

1. Our American Medical Association continues to support the dignity of the individual, human rights and the sanctity of human life,
2. Our AMA reaffirms its long-standing policy that there is no basis for the denial to any human being of equal rights, privileges and responsibilities commensurate with individual capabilities and ethical character because of an individual's sex, sexual orientation, gender, gender identity or transgender status, race, religion, disability, ethnic origin, national origin or age.
3. Our AMA opposes any discrimination based on an individual's sex, sexual orientation, gender identity, race, appearance, religion, disability, ethnic origin, national origin or age and any other such reprehensible policies.

4. Our AMA recognizes that hate crimes pose a significant threat to the public health and social welfare of the citizens of the United States, urges expedient passage for appropriate hate crimes prevention legislation in accordance with our AMA's policy through letters to members of Congress; and registers support for hate crimes prevention legislation, via letter, to the President of the United States.

[CCB/CLRPD Rep. 3, A-14; Reaffirmed in lieu of: Res. 001, I-16; Reaffirmation: A-17; Modified: Res. 013, A-22; Reaffirmed: BOT Rep. 5, I-22; Modified: Speaker Rep. 02, I-24]

D-330.900 Support for Medicare Coverage of Contraceptive Methods

Our AMA will work with the Centers for Medicare and Medicaid Services and other stakeholders to include coverage for all US Food and Drug Administration-approved contraceptive methods for contraceptive and non-contraceptive use for all patients covered by Medicare, regardless of eligibility pathway (age or disability).

[Res. 117, A-19]

H-510.984 Infertility Benefits for Veterans

1. Our American Medical Association supports lifting the congressional ban on the Department of Veterans Affairs (VA) from covering in vitro fertilization (IVF) costs for veterans who have become infertile due to service-related injuries.
2. Our AMA encourages interested stakeholders to collaborate in lifting the congressional ban on the VA from covering IVF costs for veterans who have become infertile due to service-related injuries.
3. Our AMA encourages the Department of Defense (DOD) to offer service members fertility counseling and information on relevant health care benefits provided through TRICARE and the VA at pre-deployment and during the medical discharge process.
4. Our AMA supports efforts by the DOD and VA to offer service members comprehensive health care services to preserve their ability to conceive a child and provide treatment within the standard of care to address infertility due to service-related injuries.
5. Our AMA supports additional research to better understand whether higher rates of infertility in servicewomen may be linked to military service, and which approaches might reduce the burden of infertility among service women.
6. Our AMA will work with interested organizations to encourage TRICARE to cover:
    1. Fertility preservation procedures (cryopreservation of sperm, oocytes, or embryos) for medical indications, for active-duty military personnel and other individuals covered by TRICARE.
    2. Gamete preservation for active-duty military personnel and activated reservist military personnel.
7. Our AMA supports expansion of reproductive health insurance coverage to all active-duty service members and veterans eligible for medical care regardless of service-connected disability, marital status, gender or sexual orientation.

[CMS Rep. 01, I-16; Appended: Res. 513, A-19; Appended: Res. 101, A-22; Appended: Res. 801, I-22; Reaffirmed: Res. 005, I-14]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 005
(A-26)

Introduced by: Indiana

Subject: Impersonation of a Physician

Referred to: Reference Committee on Ethics and Bylaws

Whereas, the impersonation of a licensed physician poses a serious threat to public health and patient safety, leading to potential misdiagnoses, improper treatments, and fraudulent medical practices; and

Whereas, there have been documented cases nationwide of individuals fraudulently representing themselves as physicians, leading to physical, emotional, and financial harm to patients; and

Whereas, organizations in our state offering care to pregnant people often are mistaken as medical facilities staffed by medical providers; and

Whereas, the unauthorized practice of medicine undermines the integrity of the medical profession and erodes public trust in legitimate healthcare providers; and

Whereas, Indiana Code § 35-44.1-2-6 currently addresses impersonation of public servants, but does not explicitly include licensed physicians within its scope unless they are acting in a governmental capacity; and

Whereas, Indiana Code § 25-22.5-8.2 currently makes it a felony to unlawfully practice medicine or osteopathic medicine; and

Whereas, existing state and federal penalties for impersonating a physician may not adequately deter such fraudulent behavior, and stronger legal repercussions are necessary to prevent and penalize such offenses; and

Whereas, many states have enacted strict laws to address medical impersonation, and Indiana should align its policies with the most stringent protections for public safety; therefore be it

RESOLVED, that our American Medical Association recognizes physician impersonation as a significant threat to public health and patient safety; supports the creation and enforcement of state laws prohibiting such conduct; encourages clear public reporting mechanisms through state medical boards; and promotes improved coordination among regulatory bodies to prevent and address impersonation of licensed physicians. (New HOD Policy)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 006
(A-26)

Introduced by: Indiana

Subject: Investigating Moral Injury Related to Organ Procurement Practices

Referred to: Reference Committee on Ethics and Bylaws

Whereas, Indiana is primarily served by the Indiana Donor Network, an organ procurement organization (OPO) designated as Tier 3 by the Centers for Medicare and Medicaid Services (CMS) in 2023, reflecting performance below national benchmarks for organ recovery and utilization[1]; and

Whereas, Indiana physicians have raised concerns regarding OPO conduct, including aggressive donation approaches, inappropriate timing of family interactions, and lapses in transparency; practices that may compromise the therapeutic alliance with patients and families at the end of life; and

Whereas, significant incidents have further eroded physician confidence in the OPO system, including a 2016 probation by the Organ Procurement and Transplantation Network (OPTN) for documentation and quality deficiencies[2], a 2020 incident involving the accidental disposal of two viable kidneys[3], and a 2024 investigative report revealing misuse of OPO-owned aircraft for non-clinical travel[4]; and

Whereas, physicians in Indiana have experienced ethical distress and professional conflict during organ procurement, including inappropriate pressure to withdraw care to align with transplant timelines and the need to manage family trauma resulting from OPO missteps. These circumstances result in emotional strain and professional dissonance consistent with the clinical definition of moral injury; and

Whereas, moral injury, distinct from burnout, is defined as psychological harm resulting from being forced to act against one's ethical or professional values[5, 6]; and

Whereas, current American Medical Association (AMA) policy does not address physician moral injury arising from organ procurement practices, nor are there standardized institutional mechanisms for recognizing or addressing these harms[7]; therefore be it

RESOLVED, that our American Medical Association study the national scope and causes of physician moral injury related to organ procurement, and to develop ethical guidelines and best practices that prioritize patient dignity and physician integrity in organ procurement practices. (Directive to Take Action)

RELEVANT AMA POLICY

Ethical Procurement of Organs for Transplantation H-370.967
Our AMA will continue to monitor ethical issues related to organ transplantation and develop additional policy as necessary. [BOT Rep. 13, A-08; Reaffirmed: CEJA Rep. 06, A-18]

Endorsement of the Uniform Anatomical Gift Act (2006) H-370.968
Our AMA endorses the Uniform Anatomical Gift Act of 2006, and urges all constituent state medical societies to work with donation stakeholders, including organ procurement organizations, eye banks, tissue banks, and other donation-related organizations, toward persuading their state legislatures to adopt UAGA (2006) in place of earlier versions of the UAGA. [BOT Action in response to referred for decision Res. 901, I-06; Reaffirmed: BOT Rep. 06, A-16]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 007
(A-26)

Introduced by: Indiana

Subject: Supporting Privacy in the Use of Artificial Intelligence Based Scribe Software

Referred to: Reference Committee on Ethics and Bylaws

Whereas, artificial intelligence (AI)-based scribe software is rapidly being integrated into clinical workflows with the goal of enhancing documentation efficiency and reducing physician administrative burden; and

Whereas, such technologies often rely on real-time or asynchronous data capture, which may include sensitive conversations between physicians and patients and raise concerns about the privacy of both parties; and

Whereas, current regulatory frameworks, including HIPAA, may not be sufficient enough to cover the legality of third-party AI scribe systems; and

Whereas, the storage, processing, and transmission of physician speech data by AI vendors may lack sufficient transparency, oversight, and limits on duration and secondary use, posing potential risks to personal and professional autonomy, workplace surveillance, and unauthorized profiling; and

Whereas, Indiana physicians have the right to practice in an environment that protects their privacy and ensures informed consent regarding the collection and usage of their data by AI systems; and

Whereas, the Indiana State Medical Association (ISMA) supports responsible innovation in medical technology that aligns with the ethical principles of autonomy, transparency, data minimization, and accountability; therefore be it

RESOLVED, that our American Medical Association pursue federal regulation of artificial intelligence (AI) scribe technologies that protects clinician and patient privacy by mandating informed consent, opt-in for secondary use, data minimization, and federal vendor accountability. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Study of Minimum Competencies and Scope of Medical Scribe Utilization D-478.967
Our American Medical Association will monitor the medical scribe industry periodically to identify important trends and will continue to review and promote strategies that help improve physician practice workflow. [BOT Rep. 20, A-17]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 008
(A-26)

Introduced by: Senior Physicians Section

Subject: Senior Physicians Improving Patient Access

Referred to: Reference Committee on Ethics and Bylaws

Whereas, the SPS Governing Council seeks to advance initiatives that benefit patients, practicing physicians, and semi-retired or retired physicians alike; and

Whereas, the U.S. healthcare system faces persistent challenges, including physician workforce shortages that increase workloads and affect care delivery; and

Whereas, patients as well are experiencing excessive wait times for new physician appointments, and for obtaining expedited clinic visits for recently discharged patients; and

Whereas, many communities across the nation include a substantial number of semi-retired and retired physicians who can offer valuable expertise, experience and flexibility; and

Whereas, these seasoned physicians are well-positioned to provide initial consultations, to help ensure necessary previsit laboratory testing before patients see their primary physician, and help to facilitate prompt follow-up visits after recently hospital discharges through in-person or telehealth visits; and

Whereas, in some communities, programs exist that enable timely follow-up after hospital discharge, and some that introduce a patient to a new practice before seeing a new primary care physician, by involving late-career physicians (both semi-retired and retired)[1,2]; therefore be it

RESOLVED, that our American Medical Association look for innovative approaches to help alleviate the workload of actively practicing physicians while at the same time providing late-career physicians with opportunities for fulfilling part-time work (Directive to Take Action); and be it further

RESOLVED, that our American Medical Association study programs [such as WIN CUBED[1]] that enable timely follow-up after hospital discharge or ambulatory services by providing meaningful part-time work opportunities to late-career physicians (both semi-retired and retired). (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

D-160.905 Improvements to Patient Flow in the U.S. Healthcare System
Our American Medical Association will work with relevant stakeholders and propose recommendations to appropriate entities to improve patient flow and access to care throughout multiple environments in the U.S. healthcare system.
[Res. 709, A-24]

11.1.3 Allocating Limited Health Care Resources
Physicians' primary ethical obligation is to promote the well-being of their patients. Policies for allocating scarce health care resources can impede their ability to fulfill that obligation, whether those policies address situations of chronically limited resources, such as ICU (intensive care unit) beds, medications, or solid organs for transplantation, or "triage" situations in times of scarcity, such as access to ventilators during an influenza pandemic.

As professionals dedicated to protecting the interests of their patients, physicians thus have a responsibility to contribute their expertise to developing allocation policies that are fair and safeguard the welfare of patients.

Individually and collectively through the profession, physicians should advocate for policies and procedures that allocate scarce health care resources fairly among patients, in keeping with the following criteria:

(a) Base allocation policies on criteria relating to medical need, including urgency of need, likelihood and anticipated duration of benefit, and change in quality of life. In limited circumstances, it may be appropriate to take into consideration the amount of resources required for successful treatment. It is not appropriate to base allocation policies on social worth, perceived obstacles to treatment, patient contribution to illness, past use of resources, or other non-medical characteristics.
(b) Give first priority to those patients for whom treatment will avoid premature death or extremely poor outcomes, then to patients who will experience the greatest change in quality of life, when there are very substantial differences among patients who need access to the scarce resource(s).
(c) Use an objective, flexible, transparent mechanism to determine which patients will receive the resource(s) when there are not substantial differences among patients who need access to the scarce resource(s).
(d) Explain the applicable allocation policies or procedures to patients who are denied access to the scarce resource(s) and to the public.

AMA Principles of Medical Ethics: I,VII

The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law.
[Issued: 2016]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 009
(A-26)

Introduced by: Resident and Fellow Section

Subject: Preserving Access to Care for Undocumented Individuals

Referred to: Reference Committee on Ethics and Bylaws

Whereas, the American Medical Association (AMA) recognizes migrant status as a determinant of health (D-60.966, H-65.938), and opposes measures that ostracize migrants from healthcare services (D-440.927) or positions of employment (H-65.932); and

Whereas, our AMA opposes proposed rules, regulations, or policies that would deter immigrants from accessing healthcare (D-440.927) and opposes the criminalization of healthcare providers and systems who provide services to undocumented individuals (H-440.876); and

Whereas, the One Big Beautiful Bill (OBBB) imposed sweeping Medicaid changes including reduced Medicaid reimbursement through the Federal Medical Assistance Percentages (FMAPs), and imposed penalties for states extending Medicaid coverage to undocumented individuals;[1,2] and

Whereas, several states including Illinois, California, and Minnesota have rolled back, frozen enrollment, or ended coverage for undocumented individuals in response to fiscal pressures exacerbated by OBBB[3,4,5,6]; and

Whereas, Massachusetts, one of the only states with a primarily state-funded safety net program for undocumented immigrants has expanded funding despite national trends to the opposite[2]; and

Whereas, in 2019, approximately 20% of all uninsured individuals were undocumented with approximately 50% of all undocumented individuals lacking insurance[7]; therefore be it

RESOLVED, that our American Medical Association study the impacts of the One Big Beautiful Bill on Medicaid-expansion and health safety net programs and insurance coverage for undocumented people with recommendations to improve healthcare coverage for undocumented individuals with a report back. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

Opposition to Criminalization of Medical Care Provided to Undocumented Immigrant Patients H-440.876

1. Our AMA opposes; a. any policies, regulations or legislation that would criminalize or punish physicians and other health care providers for the act of giving medical care to patients who are undocumented immigrants; b. any policies, regulations, or legislation requiring physicians, other health care providers, and healthcare entities to collect and report data regarding an individual patient's legal resident status; c. proof of citizenship as a condition of providing health care; and d. withholding federal funds if health care institutions fail to comply with policies which mandate collection of a patient's immigration status. [Res. 920, I-06; Reaffirmed and Appended: Res. 140, A-07; Modified: CCB/CLRPD Rep. 2, A-14; Modified: BOT Rep. 09, A-24; Modified: Res. 011, A-25]

Options to Maximize Coverage under the AMA Proposal for Reform H-165.823

1. That our American Medical Association advocates for a pluralistic health care system, which may include a public option, that focuses on increasing equity and access, is cost-conscious, and reduces burden on physicians.
2. Our AMA will advocate that any public option to expand health insurance coverage must meet the following standards:
    a. The primary goals of establishing a public option are to maximize patient choice of health plan and maximize health plan marketplace competition.
    b. Eligibility for premium tax credit and cost-sharing assistance to purchase the public option is restricted to individuals without access to affordable employer-sponsored coverage that meets standards for minimum value of benefits.
    c. Physician payments under the public option are established through meaningful negotiations and contracts. Physician payments under the public option must be higher than prevailing Medicare rates and at rates sufficient to sustain the costs of medical practice.
    d. Physicians have the freedom to choose whether to participate in the public option. Public option proposals should not require provider participation and/or tie physician participation in Medicare, Medicaid and/or any commercial product to participation in the public option.
    e. The public option is financially self-sustaining and has uniform solvency requirements.
    f. The public option does not receive advantageous government subsidies in comparison to those provided to other health plans.
    g. The public option shall be made available to uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid – having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credits – at no or nominal cost.

3. Our AMA supports states and/or the federal government pursuing auto-enrollment in health insurance coverage that meets the following standards:
    a. Individuals must provide consent to the applicable state and/or federal entities to share their health insurance status and tax data with the entity with the authority to make coverage determinations.
    b. Individuals should only be auto-enrolled in health insurance coverage if they are eligible for coverage options that would be of no cost to them after the application of any subsidies. Candidates for auto-enrollment would, therefore, include individuals eligible for Medicaid/Children's Health Insurance Program (CHIP) or zero-premium marketplace coverage.
    c. Individuals should have the opportunity to opt out from health insurance coverage into which they are auto-enrolled.
    d. Individuals should not be penalized if they are auto-enrolled into coverage for which they are not eligible or remain uninsured despite believing they were enrolled in health insurance coverage via auto-enrollment.
    e. Individuals eligible for zero-premium marketplace coverage should be randomly assigned among the zero-premium plans with the highest actuarial values.
    f. Health plans should be incentivized to offer pre-deductible coverage including physician services in their bronze and silver plans, to maximize the value of zero-premium plans to plan enrollees.
    g. Individuals enrolled in a zero-premium bronze plan who are eligible for cost-sharing reductions should be notified of the cost-sharing advantages of enrolling in silver plans.
    h. There should be targeted outreach and streamlined enrollment mechanisms promoting health insurance enrollment, which could include raising awareness of the availability of premium tax credits and cost-sharing reductions, and establishing a special enrollment period.
4. Our AMA:
    a. will advocate that any federal approach to cover uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid--having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credit eligibility--make health insurance coverage available to uninsured individuals who fall into the coverage gap at no or nominal cost, with significant cost-sharing protections.
    b. will advocate that any federal approach to cover uninsured individuals who fall into the coverage gap provide states that have already implemented Medicaid expansions with additional incentives to maintain their expansions.
    c. supports extending eligibility to purchase Affordable Care Act (ACA) marketplace coverage to undocumented immigrants and Deferred Action for Childhood Arrivals (DACA) recipients, with the guarantee that health plans and ACA marketplaces will not collect and/or report data regarding enrollee immigration status.
    d. recognizes the potential for state and local initiatives to provide coverage to immigrants without regard to immigration status.
5. Our American Medical Association supports federal and state efforts to provide subsidies for undocumented immigrants to purchase health insurance, including by extending eligibility for premium tax credits and cost-sharing reductions to purchase Affordable Care Act (ACA) plans.

[CMS Rep. 1, I-20; Appended: CMS Rep. 3, I-21; Reaffirmation: A-22; Reaffirmed: CMS Rep. 3, A-22; Reaffirmed: Res. 122, A-22; Modified: Res. 813, I-22; Reaffirmed: CMS Rep. 5, I-23; Appended: Res. 817, I-24]

Reducing the Harmful Impacts of Immigration Status on Health H-65.932

1. Our AMA supports protecting the human right to seek asylum.
2. Our AMA supports pathways to citizenship for undocumented immigrants who entered the US as minors, including Deferred Action for Childhood Arrivals (DACA), temporary protected status (TPS) recipients, and Dreamers.
3. Our AMA supports family reunification pathways for children and adult immigrants from other countries if their parent/guardian, spouse, or child/dependent has documented status in the U.S.
4. Our AMA supports deferral of deportation (and if applicable, employment authorization, driver's licenses, and identification documents) for people with disabilities and significantly limiting chronic illness, people who work in healthcare and social care, and relatives of people with documented or DACA status, and people without violent felonies.

5. Our AMA supports federal and state efforts to remove immigration enforcement from workplaces and employment consideration, including the removal of E-Verify mandates. [Res. 004, A-25]

Guiding Principles for the Healthcare of Migrants H-65.938

1. Our American Medical Association advocates for the development of adequate policies and / or legislation to address the healthcare needs of migrants and asylum seekers in cooperation with relevant legislators and stakeholders based on the following guiding principles, adapted from the High-level meeting of the Global Consultation on Migrant Health, i.e. the "Colombo Statement."
2. Our AMA recognizes that migration status is a social determinant of health.
3. Our AMA affirms the importance of multi-sectoral coordination and inter-country engagement and partnership in enhancing the means of addressing health aspects of migration.
4. Our AMA recognizes that the enhancement of migrants' health status relies on an equitable and non-discriminatory access to and coverage of health care and cross-border continuity of care at an affordable cost avoiding severe financial consequences for migrants, as well as for their families.
5. Our AMA recognizes that investment in migrant health provides positive dividends compared to public health costs due to exclusion and neglect, and therefore underscore the need for financing mechanisms that mobilize different sectors of society, innovation, identification and sharing of good practices in this regard.
6. Our AMA recognizes that the promotion of the physical and mental health of migrants as defined by the following select objectives from the World Health Organization's 72nd World Health Assembly, Global action plan on promoting the health of refugees and migrants, 2019-2023, is accomplished by
    a. Ensuring that essential components, such as vaccination of children and adults and the provision of health promotion, disease prevention, timely diagnosis and treatment, rehabilitation and palliative services for acute, chronic and infectious diseases, injuries, mental and behavioral disorders, and sexual and reproductive health care for women, are addressed.
    b. Improving the quality, acceptability, availability and accessibility of health care services, for instance by overcoming physical, financial, information, linguistic and other cultural barriers, with particular attention to services for chronic conditions and mental health, which are often inadequately addressed or followed up during the migration and displacement process, and by working to prevent occupational and work-related diseases and injuries among migrant workers and their families by improving the coverage, accessibility and quality of occupational and primary health care services and social protection systems.
    c. Ensuring that the social determinants of migrants' health are addressed through joint, coherent multisectoral actions in all public health policy responses, especially ensuring promotion of well-being for all at all ages, and facilitating orderly, safe, and responsible migration and mobility of people, including through implementation of planned and well-managed migration policies, as defined in the Sustainable Development Goals of the United Nations.
    d. Ensuring that information and disaggregated data at global, regional and country levels are generated and that adequate, standardized, comparable records on the health of migrants are available to support policy-makers and decision-makers to develop more evidence-based policies, plans and interventions.
    e. Providing accurate information and dispelling fears and misperceptions among migrant and host populations about the health impacts of migration and displacement on migrant populations and on the health of local communities and health systems. [Res. 016, A-24]

Consideration of the Health and Welfare of U.S. Minor Children in Deportation Proceedings Against Their Undocumented Parents D-60.966

Our AMA: (1) supports that the mental health, physical well-being, and welfare of U.S. citizen minors should be taken into consideration in determining whether undocumented parents of U.S. citizen minors may be detained or deported; and (2) will work with local and state medical societies and other relevant stakeholders to address the importance of considering the health and welfare of U.S. citizen minors in cases where the parents of those minors are in danger of detention or deportation. [Res. 016, A-17]

Immigration Status in Medicaid and CHIP D-440.911

Our American Medical Association advocates for the removal of eligibility criteria based on immigration status from Medicaid and CHIP. [Res. 210, I-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 010
(A-26)

Introduced by: Resident and Fellow Section

Subject: Fatigue Mitigation: Supporting Fully-Funded Transportation for Trainee Physicians After Extended or Overnight Shifts

Referred to: Reference Committee on Ethics and Bylaws

Whereas, fatigue and sleep deprivation among intern, resident, and fellow physicians are well-documented contributors to motor vehicle accidents, threatening not only physician safety but also patient and public safety[1,2]; and

Whereas, extended work hours and overnight shifts remain common in graduate medical education, leaving trainee physicians chronically vulnerable to fatigue-related harm when traveling to and from clinical sites[3]; and

Whereas, the literature shows that driving while fatigued after an overnight or extended shift impairs sustained attention and vigilance to a degree comparable to alcohol intoxication, substantially increasing the risk of motor vehicle accidents[4-5]; and

Whereas, the Accreditation Council for Graduate Medical Education (ACGME) recognizes physician well-being as a critical institutional responsibility and mandates strategies to mitigate fatigue[6]; and

Whereas, ACGME policy 6.16 explicitly requires that "the program, in partnership with its Sponsoring Institution, must ensure adequate sleep facilities and safe transportation options for residents who may be too fatigued to safely return home"[7]; and

Whereas, implementation of this policy remains inconsistent across residency and fellowship programs nationwide, leaving many trainee physicians (who often have limited financial resources) without access to safe, reliable, and funded transportation when fatigued; and

Whereas, a study of a university-affiliated general surgery residency program demonstrated that a low-cost rideshare reimbursement initiative significantly reduced residents' self-reported frequency of falling asleep or nearly falling asleep while driving, illustrating a clear, evidence-based intervention[8]; and

Whereas, some residency and fellowship programs, such as those at the University of California, Los Angeles, provide fully-funded rideshare access for travel to and from the hospital surrounding shifts[9]; and

Whereas, such resources are neither consistently available nor equitably funded nationwide, creating gaps in the safety of trainee physicians and underscoring the need for coordinated action at the national level; therefore be it

RESOLVED, that our American Medical Association supports the provision of fully-funded transportation options (including, but not limited to, rideshares and taxis) for intern, resident, and

fellow physicians after extended or overnight shifts as a core fatigue mitigation strategy, with costs not borne by trainees. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/21/26

RELEVANT AMA POLICY

Residents and Fellows' Bill of Rights H-310.912
With regard to benefits, residents and fellows must be fully informed of and should receive: Quality and affordable comprehensive medical, mental health, dental, and vision care for residents and their families, as well as retirement plan options, professional liability insurance and disability insurance to all residents for disabilities resulting from activities that are part of the educational program. An institutional written policy on and education in the signs of excessive fatigue, clinical depression, substance abuse and dependence, and other physician impairment issues. Confidential access to mental health and substance abuse services. A guaranteed, predetermined amount of paid vacation leave, sick leave, family and medical leave and educational/professional leave during each year in their training program, the total amount of which should not be less than six weeks. Leave in compliance with the Family and Medical Leave Act. The conditions under which sleeping quarters, meals and laundry or their equivalent are to be provided. [CME Rep. 8, A-11; Appended: Res. 303, A-14; Reaffirmed: Res. 915, I-15; Appended: CME Rep. 04, A-16; Modified: CME Rep. 06, I-18; Appended: Res. 324, A-19; Modified: Res. 304, A-21; Modified: Res. 305, A-21; Modified: BOT Rep. 18, I-21; Reaffirmation: A-22; Reaffirmed in lieu of: Res. 307, I-22; Modified: CME Rep. 05, I-23; Reaffirmed: CME Rep. 02, A-24; Modified: Res. 304, I-24]

Resident/Fellow Clinical and Educational Work Hours H-310.907
Our American Medical Association adopts the following Principles of Resident/Fellow Clinical and Educational Work Hours, Patient Safety, and Quality of Physician Training:

1. Our AMA supports the 2017 Accreditation Council for Graduate Medical Education (ACGME) standards for clinical and educational work hours (previously referred to as "duty hours").
2. Our AMA will continue to monitor the enforcement and impact of clinical and educational work hour standards, in the context of the larger issues of patient safety and the optimal learning environment for residents.
3. Our AMA encourages publication and supports dissemination of studies in peer-reviewed publications and educational sessions about all aspects of clinical and educational work hours, to

include such topics as extended work shifts, handoffs, in-house call and at-home call, level of supervision by attending physicians, workload and growing service demands, moonlighting, protected sleep periods, sleep deprivation and fatigue, patient safety, medical error, continuity of care, resident well-being and burnout, development of professionalism, resident learning outcomes, and preparation for independent practice.

4. Our AMA endorses the study of innovative models of clinical and educational work hour requirements and, pending the outcomes of ongoing and future research, should consider the evolution of specialty- and rotation-specific requirements that are evidence-based and will optimize patient safety and competency-based learning opportunities.
5. Our AMA encourages the ACGME to:
    a. Decrease the barriers to reporting of both clinical and educational work hour violations and resident intimidation.
    b. Ensure that readily accessible, timely and accurate information about clinical and educational work hours is not constrained by the cycle of ACGME survey visits.
    c. Use, where possible, recommendations from respective specialty societies and evidence-based approaches to any future revision or introduction of clinical and educational work hour rules.
    d. Broadly disseminate aggregate data from the annual ACGME survey on the educational environment of resident physicians, encompassing all aspects of clinical and educational work hours.
6. Our AMA recognizes the ACGME for its work in ensuring an appropriate balance between resident education and patient safety, and encourages the ACGME to continue to:
    a. Offer incentives to programs/institutions to ensure compliance with clinical and educational work hour standards.
    b. Ensure that site visits include meetings with peer-selected or randomly selected residents and that residents who are not interviewed during site visits have the opportunity to provide information directly to the site visitor.
    c. Collect data on at-home call from both program directors and resident/fellow physicians; release these aggregate data annually; and develop standards to ensure that appropriate education and supervision are maintained, whether the setting is in-house or at-home.
    d. Ensure that resident/fellow physicians receive education on sleep deprivation and fatigue.
7. Our AMA supports the following statements related to clinical and educational work hours:
    a. Total clinical and educational work hours must not exceed 80 hours per week, averaged over a four-week period (Note: “Total clinical and educational work hours” includes providing direct patient care or supervised patient care that contributes to meeting educational goals; participating in formal educational activities; providing administrative and patient care services of limited or no educational value; and time needed to transfer the care of patients).
    b. Scheduled on-call assignments should not exceed 24 hours. Residents may remain on-duty for an additional 4 hours to complete the transfer of care, patient follow-up, and education; however, residents may not be assigned new patients, cross-coverage of other providers’ patients, or continuity clinic during that time.
    c. Time spent in the hospital by residents on at-home call must count towards the 80-hour maximum weekly hour limit, and on-call frequency must not exceed every third night averaged over four weeks. The frequency of at-home call is not subject to the every-third-night limitation, but must satisfy the requirement for one-day-in-seven free of duty, when averaged over four weeks.
    d. At-home call must not be so frequent or taxing as to preclude rest or reasonable personal time for each resident.
    e. Residents are permitted to return to the hospital while on at-home call to care for new or established patients. Each episode of this type of care, while it must be included in the 80-hour weekly maximum, will not initiate a new “off-duty period.”
    f. Given the different education and patient care needs of the various specialties and changes in resident responsibility as training progresses, clinical and educational work hour requirements should allow for flexibility for different disciplines and different training levels to ensure appropriate resident education and patient safety; for example, allowing exceptions for certain disciplines, as appropriate, or allowing a limited increase to the total number of clinical and educational work hours when need is demonstrated.

g. Resident physicians should be ensured a sufficient duty-free interval prior to returning to duty.
h. Clinical and educational work hour limits must not adversely impact resident physician participation in organized educational activities. Formal educational activities must be scheduled and available within total clinical and educational work hour limits for all resident physicians.
i. Scheduled time providing patient care services of limited or no educational value should be minimized.
j. Accurate, honest, and complete reporting of clinical and educational work hours is an essential element of medical professionalism and ethics.
k. The medical profession maintains the right and responsibility for self-regulation (one of the key tenets of professionalism) through the ACGME and its purview over graduate medical education, and categorically rejects involvement by the Centers for Medicare & Medicaid Services, The Joint Commission, Occupational Safety and Health Administration, and any other federal or state government bodies in the monitoring and enforcement of clinical and educational work hour regulations, and opposes any regulatory or legislative proposals to limit the work hours of practicing physicians.
l. Increased financial assistance for residents/fellows, such as subsidized child care, loan deferment, debt forgiveness, and tax credits, may help mitigate the need for moonlighting. At the same time, resident/fellow physicians in good standing with their programs should be afforded the opportunity for internal and external moonlighting that complies with ACGME policy.
m. Program directors should establish guidelines for scheduled work outside of the residency program, such as moonlighting, and must approve and monitor that work such that it does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
n. The costs of clinical and educational work hour limits should be borne by all health care payers. Individual resident compensation and benefits must not be compromised or decreased as a result of changes in the graduate medical education system.
o. The general public should be made aware of the many contributions of resident/fellow physicians to high-quality patient care and the importance of trainees' realizing their limits (under proper supervision) so that they will be able to competently and independently practice under real-world medical situations.

8. Our AMA is in full support of the collaborative partnership between allopathic and osteopathic professional and accrediting bodies in developing a unified system of residency/fellowship accreditation for all residents and fellows, with the overall goal of ensuring patient safety.
9. Our AMA will actively participate in ongoing efforts to monitor the impact of clinical and educational work hour limitations to ensure that patient safety and physician well-being are not jeopardized by excessive demands on post-residency physicians, including program directors and attending physicians.

[CME Rep. 5, A-14Modified: CME Rep. 06, I-18Reaffirmation: A-22]

Fatigue, Sleep Disorders, and Motor Vehicle Crashes H-15.958

1. Our American Medical Association recognizes sleepiness behind the wheel as a major public health issue and continues to encourage a national public education campaign by appropriate federal agencies and relevant advocacy groups.
2. Our AMA recommends that the National Institutes of Health and other appropriate organizations support research projects to provide more accurate data on the prevalence of sleep-related disorders in the general population and in motor vehicle drivers, and provide information on the consequences and natural history of such conditions.
3. Our AMA recommends that the U.S. Department of Transportation (DOT) and other responsible agencies continue studies on the occurrence of highway crashes and other adverse occurrences in transportation that involve reduced operator alertness and sleep.
4. Our AMA encourages continued collaboration between the DOT and the transportation industry to support research projects for the devising and effectiveness- testing of appropriate countermeasures against driver fatigue, including technologies for motor vehicles and the highway environment.

5. Our AMA urges responsible federal agencies to improve enforcement of existing regulations for truck driver work periods and consecutive working hours and increase awareness of the hazards of driving while fatigued. If changes to these regulations are proposed on a medical basis, they should be justified by the findings of rigorous studies and the judgments of persons who are knowledgeable in ergonomics, occupational medicine, and industrial psychology.
6. Our AMA recommends that physicians:
    a. become knowledgeable about the diagnosis and management of sleep-related disorders.
    b. investigate patient symptoms of drowsiness, wakefulness, and fatigue by inquiring about sleep and work habits and other predisposing factors when compiling patient histories.
    c. inform patients about the personal and societal hazards of driving or working while fatigued and advise patients about measures they can take to prevent fatigue-related and other unintended injuries.
    d. advise patients about possible medication-related effects that may impair their ability to safely operate a moto vehicle or other machinery.
    e. inquire whether sleepiness and fatigue could be contributing factors in motor vehicle-related and other unintended injuries.
    f. become familiar with the laws and regulations concerning drivers and highway safety in the state(s) where they practice.
7. Our AMA encourages all state medical associations to promote the incorporation of an educational component on the dangers of driving while sleepy in all drivers education classes (for all age groups) in each state.
8. Our AMA recommends that states adopt regulations for the licensing of commercial and private drivers with sleep-related and other medical disorders according to the extent to which persons afflicted with such disorders experience crashes and injuries.
9. Our AMA reiterates its support for physicians' use of E-codes in completing emergency department and hospital records, and urges collaboration among appropriate government agencies and medical and public health organizations to improve state and national injury surveillance systems and more accurately determine the relationship of fatigue and sleep disorders to motor vehicle crashes and other unintended injuries.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 23-A-26

Subject: Liberalized Remorse Period for Medicare Advantage Plan Insureds

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee A

Resolution 117-A-25, "Liberalized Remorse Period for Medicare Advantage Plan Insureds," was introduced by the Mississippi delegation and was referred. It asked the following:

> RESOLVED, that our American Medical Association advocate for the Centers for Medicare Services to expand the period that Medicare Advantage (MA) plan insureds can leave their MA plan and obtain coverage by traditional Medicare part B and D plans from the current policy of January through March to any month for any reason with plan changes becoming effective on the first day of the next month (Directive to Take Action); and be it further
>
> RESOLVED, that our AMA prepare a "tool-kit" for both patients and physicians to help patients make an informed choice regarding their Medicare coverage options.

The rationale that the sponsors provided for changing Medicare policy on MA disenrollment is that the health care system is increasingly complicated, expensive, and difficult for the average adult to navigate, and that health insurance costs and coverage options vary greatly, even within the same company. Patients covered by MA plans often experience "buyer's remorse" after March of each year due to unanticipated health crises that increase their need for health care resources and make traditional Medicare a better option for their care. Testimony on the resolution supported its intent but expressed concern about the complexity of the issue, particularly that allowing people to disenroll from their MA plan at any time for any reason could disrupt the stability of medical groups and health plans, with negative impacts for both patients and physicians.

BACKGROUND

There are two standard Medicare enrollment periods annually. From October 15 to December 7, beneficiaries can switch from traditional Medicare to an MA plan, change from one MA plan to another, change from MA to traditional Medicare, and/or change or drop their Part D prescription drug plan. Changes made during this Medicare Annual Enrollment Period take effect on January 1 of the subsequent year. Then, during the MA Open Enrollment Period from January 1 to March 31, beneficiaries enrolled in MA can switch to a different MA plan or to traditional Medicare, with changes taking effect on the first of the month following receipt of the change request.

In addition to these two standard enrollment periods, there are Special Enrollment Periods for which beneficiaries can become eligible due to many reasons. These include whether the beneficiary moves or their circumstances change, such as admission to or discharge from a nursing facility. They also include coverage changes such as losing Medicaid eligibility or being offered coverage from a union or employer, as well as plan changes such as the plan ending its Medicare contract or CMS ending its contract with the plan or sanctioning the plan. Other factors that make beneficiaries eligible for a Special Enrollment Period

© 2026 American Medical Association. All rights reserved.

are if they are in an MA plan with a relatively low star rating and/or want to enroll in a five-star plan, as well as if their choice was based on bad information. Other important reasons that beneficiaries can change their Medicare coverage are if there is a significant change in the plan's provider network or if they chose their MA plan based on incorrect information about the network. For example, CMS recently adopted an AMA recommendation that MA plans include their physician directories on the Medicare Plan Finder. The agency then determined that beneficiaries who choose a plan based on incorrect information in the Medicare Plan Finder about their physician being in-network are eligible for a Special Enrollment Period.

There is also a Special Enrollment Period for beneficiaries who previously had traditional Medicare and a Medigap supplemental plan but later decide to enroll in MA. Medigap plans cannot be used with MA, and beneficiaries only have a guaranteed right to reenroll in their Medigap plan for 12 months after they disenroll and join MA. Beneficiaries have up to 12 months, therefore, after enrolling in an MA plan, to switch back to traditional Medicare, reenroll in Medigap, and choose a Medicare Part D prescription drug plan. Also, any Medicare beneficiary who enrolls in MA when they first become eligible for Medicare can switch from MA to traditional Medicare during the 12-month period following their initial enrollment in MA and have a right to enroll in a Medigap plan.

AMA POLICY

Three existing AMA policies are most relevant to the issues raised in Resolution 117-A-25. Policy H-330.866 supports annual open enrollment periods and guaranteed lifetime enrollment eligibility for Medigap plans, as well as advocating for federal "guaranteed issue" protections, allowing beneficiaries the freedom to switch from MA to traditional Medicare without facing prohibitive barriers. Policy H-285.982 includes the recommendation discussed above that MA plans be required to update their physician network directories and make them accessible on the Medicare Plan Finder. This policy also calls for CMS to develop a plan to effectively communicate with patients about network access and any changes to the network that may directly or indirectly impact patients, including updating the Medicare Plan Finder website. To improve beneficiaries' understanding of the differences between MA and traditional Medicare, Policy H-330.867 required the AMA to create educational materials such as an infographic to compare the two types of health care coverage.

DISCUSSION

Beneficiaries do not receive clear and objective information about the Medicare program and how to choose their Medicare coverage, either when they initially become eligible for the program or during the Medicare Annual Enrollment Period. They may choose to enroll in an MA plan without knowing what it means to have a network, whether their physician(s) is in the plan's network, or whether the network will be able to offer the types of care they may need at a location and cost that is accessible to them. Many beneficiaries who choose MA believe they will have lower out-of-pocket costs in MA. Although this is possible as MA plans have out-of-pocket spending limits that traditional Medicare does not, the limits can be as high as $9,250 for in-network services and $13,900 for combined in- and out-of-network services. Beneficiaries with a Medigap supplemental policy may not understand that they cannot use their Medigap coverage for copayments once they enroll in MA, nor that the MA cost-sharing for services like chemotherapy could be just as expensive in MA as in regular Medicare Part B. Most tests, referrals, admissions, procedures, and therapies are available in traditional Medicare without prior authorization, but prior authorization requirements are pervasive in MA. (There is prior authorization for many medications whether patients are in MA or in traditional Medicare with a standalone Part D prescription drug plan.)

Besides not being familiar with how MA plans work and how they differ from traditional Medicare, beneficiaries are highly unlikely to be fully informed about their options for disenrolling from MA and switching to traditional Medicare, changing MA plans, reenrolling in a Medigap policy, or the many circumstances that qualify them for a Special Enrollment Period. The Board of Trustees (Board) believes that this information gap is a serious problem and agrees with the sponsors of Resolution 117-A-25 that certain barriers to disenrolling from MA should be removed. Ideally, beneficiaries should be able to obtain good information about MA plans before they enroll in them. Providing good information beforehand may lessen the number of beneficiaries who later need to find a way to disenroll from an MA plan. It is important to ensure that beneficiaries can make fully informed decisions about their Medicare enrollment from the beginning. They should not have to contend with the disruption involved in changing plans and likely finding a new physician multiple times because they were not educated about access to care, potential cost-sharing liability, and the implications for their Medigap policy before they signed up.

Most discussions of the information people receive as they approach the age of Medicare eligibility and around the annual enrollment periods focus on the information that is provided through marketing representatives or the online Medicare Plan Finder. The Board believes that the federal government should take a stronger role in educating people about Medicare and the complex decisions involved in choosing the type of Medicare Part A, B, C, and D coverage that will best meet their needs. The current CMS Administrator took an important step in this direction when he made a video about these choices as he approached 65 himself, but CMS needs to do more.

Your Board also agrees with the testimony on Resolution 117-A-25 that allowing everyone with Medicare to disenroll from MA at any time and return to traditional Medicare would be complex and could have unintended adverse consequences for medical groups and patients. Although many people are likely unaware of it, as noted above Medicare policy already allows two categories of beneficiaries who want to disenroll from MA and switch to traditional Medicare to do so during their first 12 months in the MA plan: those who signed up for MA when they first enrolled in Medicare and those who disenrolled from their Medigap plan and want to return to it. It would be better if all beneficiaries could disenroll from MA and switch to traditional Medicare during the first 12 months they are in MA, even if they did not have a Medigap plan. We believe this would fill a gap in current Medicare policy without causing as much disruption as would the policy proposed in Resolution 117-A-25.

RECOMMENDATIONS

The Board of Trustees recommends that the following be adopted in lieu of Resolution 117-A-25 and the remainder of the report be filed:

1) That our American Medical Association (AMA) urge the Centers for Medicare & Medicaid Services to create a comprehensive strategy to educate people approaching the age of Medicare eligibility and for annual enrollment periods about key aspects of Medicare affecting choices between traditional Medicare and Medicare Advantage (MA) plans. (Directive to Take Action)
2) That our AMA support a Medicare policy that allows beneficiaries who enroll in MA for the first time to disenroll for any reason and return to traditional Medicare within the first 12 months of enrollment in the plan. (New HOD Policy)
3) That our AMA reaffirm Policy H-330.866, “Medigap Patient Protections.” (Reaffirm HOD Policy)

Fiscal note: Less than $500

REPORT 3 OF THE COUNCIL ON MEDICAL SERVICE (A-26)
Improving Patient Access to Pharmacies and Medications in Pharmacy Deserts

EXECUTIVE SUMMARY

At the 2025 Annual Meeting, the House of Delegates referred Resolution 113-A-25, which asks that the American Medical Association (AMA) support efforts to expand telepharmacy, advocate for equitable pharmacy reimbursement, and study the impact of preferred pharmacy networks with the goal of mitigating access issues for patients in pharmacy deserts.

The Council on Medical Service reviewed information on the current state of pharmacies across the United States and the elements involved in their ability to succeed. Currently, pharmacies are facing a closure crisis, leading to many communities being deemed "pharmacy deserts," or areas in which residents do not have adequate access to a pharmacy. Pharmacies face a number of issues in remaining financially viable. Low reimbursement rates from payers are often driven by pharmacy benefit manager (PBM) negotiations resulting in rates that do not cover the full acquisition and operating costs associated with a drug. Further, many PBMs are vertically integrated with payers and/or large chain pharmacies leading to a highly concentrated market and, often, resulting in anticompetitive practices or PBMs excluding small/community pharmacies from preferred pharmacy networks. The Council reviewed the literature and considered a variety of information on a number of potential solutions to support pharmacies and reduce pharmacy deserts. First, the Council reviewed alternative dispensing methods, such as telepharmacy, remote dispensing, and mail order dispensing. Both telepharmacy and remote dispensing allow patients who cannot access a full-service pharmacy to access pharmacist services via the internet. Further, mail order pharmacy services allow patients, especially those with managed chronic conditions, to receive a convenient supply of medication delivered to their home. Although these types of prescription dispensing have been shown to be beneficial to patients and pharmacies, challenges remain when there is not reliable access to broadband, patients lack safe mail delivery methods, and the prescription is not shelf-stable or is needed urgently. Second, the Council explored legislative and regulatory solutions, including PBM regulation and boosted reimbursement rates. These types of regulations have shown promise, especially at the state level, in ensuring pharmacies receive reimbursement adequate for operations and limiting untoward PBM practices. Finally, the Council reviewed federal, state and non-governmental incentive-based solutions. Similar to programs designed to attract physicians to underserved areas, these programs are designed to make operating a pharmacy in an underserved area more possible and, in some cases, advantageous for pharmacists.

Based on its review of the issue, the Council recommends the adoption of new AMA policy that supports efforts to ensure that pharmacy reimbursement rates are adequate to cover the actual costs related to obtaining and dispensing medications. The Council also recommends policy that supports the establishment of a minimum preferred pharmacy network adequacy standard and recognizes and encourages payer coverage of telepharmacy and remote dispensing when specific criteria are met. Furthermore, the Council recommends new policy that supports payer and PBM practices that promote fair market competition, patient choice, and support the financial viability of independent and community pharmacies. In addition to new policies, the Council recommends the reaffirmation of Policy H-120.989, which outlines appropriate mail order pharmacy practices and recognizes it as a legitimate drug dispensing method, and Policy D-110.987, which outlines advocacy efforts related to PBM regulation towards increased transparency.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 3-A-26

Subject: Improving Patient Access to Pharmacies and Medications in Pharmacy Deserts

Presented by: Betty Chu, MD, MBA, Chair

Referred to: Reference Committee A

Resolution 113, "Improving Patient Access to Pharmacies and Medications in Pharmacy Deserts," was introduced by the Ohio delegation at the 2025 Annual Meeting and was referred. It asks the following:

> RESOLVED, that our American Medical Association (AMA) support efforts to expand telepharmacy as a potential solution to pharmacy deserts; and be it further;
>
> RESOLVED, that our AMA advocate for equitable reimbursement rates for pharmaceuticals between Medicare, Medicaid, and private insurers to ensure sustainable pharmacy operations in rural and underserved areas; and be it further;
>
> RESOLVED, that our AMA study and address the impact of preferred pharmacy networks on patient access to pharmacy services, particularly in pharmacy deserts, with attention to supporting independent pharmacies.

This report reviews the state of pharmacies and pharmacy access in the United States, economic issues faced by pharmacies, and solutions to improve pharmacy access. Additionally, it provides an overview of related AMA policies and offers a number of recommendations.

BACKGROUND

Pharmacies are key to ensuring that patients have access to the medications prescribed by their physicians. For many people, pharmacies are their most frequent contact with the health care system, as evidence shows that patients visit pharmacies 1.5-2 times more frequently than other health care providers.[1] However, over the last 15 years, pharmacies have been closing at an alarming rate. Between 2010 and 2021, 29 percent of all pharmacies across America closed.[2] In 2024, 2,200 pharmacies closed, meaning an average of six pharmacies closed each day.[3] As an example of the magnitude of the issue, in 2025, Rite Aid, a major pharmacy retailer across the United States, filed its second bankruptcy in two years and ceased all operations. This resulted in approximately 2,200 Rite Aid pharmacies closing between the initial bankruptcy filing in May 2023 and October 2025.[4]

These closures highlight an overarching trend among not only chain pharmacies, but also local/independent pharmacies. Estimates show that independent pharmacies make up about 35 percent of all pharmacies nationally and meet the needs of over 15 million Americans.[5] These pharmacies are also closing rapidly, approximately one per day.[5] Historically, independent community pharmacies have closed at a higher net rate than chain pharmacies. However, in recent years more independent pharmacies have also been opening, which has lowered their net closure

© 2026 American Medical Association. All rights reserved.

rate. This more recent trend may indicate that independent pharmacies have a higher "churn rate," meaning that while they may open more frequently, they are unable to stay in business and end up closing or selling to a chain. Notably, while there is an increase in independent pharmacies opening, they do not seem to be opening in communities that are low-income or which currently lack access to pharmacies.[6,7] This is particularly important as research demonstrates that individuals who live in rural areas, are 65 years or older, or live in a low-income household are more likely to rely on independent pharmacies for access to prescriptions.[8] As these pharmacies often lack the bargaining power that bigger chain pharmacies have, they may struggle to stay open, exacerbating the access problems within vulnerable communities.[7]

As a result of these closures, pharmacy deserts have been growing. While there is no single universally accepted definition of a pharmacy desert, the term generally refers to communities that do not have easy access to a pharmacy. The term was originally coined in 2014 and relied on census tracts to identify communities that had a "high poverty rate" and no pharmacies within one mile in urban areas or 10 miles in rural areas.[9] In 2025, researchers expanded on this definition by introducing a pharmacy vulnerability index. This index takes a slightly different approach in identifying deserts, defining them as areas where the travel time to the nearest pharmacy is longer than the travel time to the nearest supermarket, accounting for the region and urbanicity levels.[10] Importantly, geographic distance is not the only issue that many patients face in accessing pharmacies, as lack of public transportation and limited pharmacy hours can greatly exacerbate access issues.[3,9] This vulnerability index led to the concept of "keystone pharmacies," or pharmacies that if closed would create a pharmacy desert. Based on this definition, nearly 18 percent of the United States population currently lives in pharmacy deserts and another nearly nine percent live in areas served by a keystone pharmacy.[10] Individuals who reside in rural communities are disproportionately represented when assessing communities served by keystone pharmacies, while pharmacy deserts seem to be equally distributed across urbanicity when incorporating national population statistics.[9,10] Thus, while more rural communities are at risk to become pharmacy deserts, the problem also exists in some urban and suburban communities.

In both suburban and urban settings, individuals living in pharmacy deserts are more likely to be a part of a racial and/or ethnic minority.[8,9] When controlling for setting (urban vs rural), predominately Black and Hispanic communities faced the largest decline in pharmacies, with nearly five percent fewer pharmacies than non-predominately Black/Hispanic communities.[11] However, in rural settings, White individuals are more likely to reside in a pharmacy desert or in areas served by a keystone pharmacy. This is likely explained by the fact that more White individuals live in rural areas. Regardless of the racial makeup of the community, pharmacies in communities with poverty rates higher than 20 percent had significantly higher risks of pharmacy closure.[10,11] Further, many communities considered pharmacy deserts are also considered medically underserved, meaning they do not have adequate access to physicians or non-physician practitioners, which exacerbates the issue.[10,11] Pharmacy deserts are not just an issue of convenience, as patients living in them are less likely to be able to access their medications and as a result, unable to access their treatments.[9,10] While not driven solely by pharmacy access issues, they likely contribute to medication nonadherence which results in avoidable health care spending, including millions of dollars due to unnecessary hospitalizations each year.[12] Further, disparities among racial and ethnic communities are prevalent across both access and utilization of prescription medications. Since these disparities are not entirely explained by access to medical professionals, health insurance coverage, or medication cost, researchers posit that this additional driving factor to this disparity may be pharmacy deserts.[13,14]

PHARMACY ECONOMICS

Prior to the modern insurance paradigm, pharmacy economics were straightforward, as pharmacists acquired the goods and set prices based on supply and demand. Pharmacies buy a drug at a price set by the drug manufacturer and the consumer purchases it with the markup determined by the pharmacy. However, with the advent of prescription drug insurance, the patient-pharmacist connection became less direct as payers were inserted in the middle, shifting pharmacist focus to volume to keep pharmacies economically viable.[15] The inception of the Medicare Modernization Act in 2003, which created Medicare Part D and the contemporary business model used by pharmacy benefit managers (PBMs), further complicated pharmacy reimbursement and what was necessary to stay in business.[15] Payment paradigms become increasingly complicated when payers, PBMs, and discount programs are involved in the transaction.[16,17] If a patient is utilizing insurance, the plan typically pays for the bulk of a covered drug at the set reimbursement rate with the pharmacy, usually negotiated by a PBM. Often the patient is responsible for some out-of-pocket (OOP) payment that is paid directly to the pharmacy. In theory, the combination of the patient OOP payment and the payer reimbursement should cover the drug and dispensing costs for the pharmacy. However, in practice, pharmacy reimbursement does not fully cover acquisition and operating costs.[17] Moreover, another concerning issue arises when a non-integrated pharmacy deals with a PBM that is vertically integrated as it can result in anticompetitive practices.[18,19] Several mergers and acquisitions across the pharmacy and PBM/payer markets, as well as insurers creating their own PBMs, have led to large vertically integrated firms operating across these three product markets.[20] Estimates show that five of the six largest PBMs are vertically integrated with both insurers and pharmacies, indicating high concentration in PBM markets.[19,21] Research shows that nearly 80 percent of prescription claims are processed by the three largest PBMs.[17,18]

Furthermore, not only are the largest PBMs vertically integrated with insurers, but these firms also often either own or have preferred network agreements with a significant number of pharmacies.[17,18,19] Preferred pharmacy networks are similar to “in-network providers” in concept. PBMs negotiate an agreement with a pharmacy or pharmacy chain on behalf of insurers for discounted rates for beneficiaries.[21] This can be beneficial for patients if they have access to pharmacies that are within the preferred network. Patients who utilize these pharmacies can save money on their prescription costs. For example, among Medicare Part D plans, preferred pharmacies can reduce patient spending by two percent.[21] However, preferred pharmacy networks can limit patient choice and, in cases when patients are unable to access a preferred pharmacy, lead to higher OOP costs.[21] Since PBMs have a large share of market power, downward pressure is put on non-integrated pharmacies, lowering reimbursement rates. Often exacerbating the closures of small, independent pharmacies as they cannot sustain the reduction in reimbursement or patients when they are redirected to preferred network pharmacies.[19,22]

Even pharmacies in preferred networks can experience financial strain emanating from inadequate reimbursement rates. In many cases, on behalf of insurers, PBMs have significantly reduced pharmacy reimbursement rates, sometimes resulting in pharmacies dispensing medications at a deficit.[23,24] Additionally, pharmacies are often hit with Direct and Indirect Renumeration (DIR) fees.[23] These fees are retroactive and result from a payer attempting to recoup a portion of their payment after a transaction is completed. This can be harmful for any pharmacy, but it is particularly problematic for small or independent pharmacies that do not have the same funding or volume as larger retail chains. While there have been some recent reform efforts from the Centers for Medicare & Medicaid Services (CMS) related to DIR fees, the solutions presented have not been comprehensive and do not address all payer types.[24] Further, programs like 340B, intended to make drugs more affordable for patients, can make it difficult for non-340B pharmacies to compete. Specifically, 340B program hospital and clinic pharmacies can purchase medication for a

price much lower than most other pharmacies can offer, which they can then sell at rates significantly lower than non-340B pharmacies or at more favorable markups.[21]

While the process of reimbursement does not dramatically differ between a vertically integrated pharmacy and an independent pharmacy, the results vary greatly. Smaller, independent pharmacies are generally not vertically integrated with PBMs and/or payers, and thus lack the bargaining power to negotiate and are often excluded from preferred pharmacy networks.[23,25] As a result, independent pharmacies often receive worse reimbursement rates and/or a loss of patients as PBMs and payers steer patients towards vertically integrated and preferred pharmacy networks.[23,25] These issues have led to significant losses in gross margins for pharmacies.[23] Gross margins are the total revenue of a business minus the cost of the goods that are sold. These margins fund business growth and innovation. Research shows that even though pharmacies are dispensing more prescriptions toward increasing revenue, gross margins are decreasing.[23] For example, Walgreens experienced a 33 percent decrease between 2015 and 2024 in gross margins per 30-day prescription. Additionally, non-prescription drug purchases, which can bolster margins, also decreased seven percent. This drop in gross margins is a direct result of PBM and payer reimbursement rates becoming increasingly tighter.[23] As a result, it has become increasingly difficult to run a financially successful pharmacy. For more information on drug pricing and PBMs, please reference CMS Report 5-A-19: The Impact of Pharmacy Benefit Managers on Patients and Physicians; CMS Report 4-I-19: Additional Mechanisms to Address High and Escalating Pharmaceutical Prices; CMS Report 6-A-25: Prescription Medication Price Negotiation; and CMS Report 6-A-24: Economics of Prescription Medication Prior Authorization.

POTENTIAL SOLUTIONS

Pharmacy-Based Solutions

There are a number of potential pharmacy-based solutions that could work towards improving pharmacy access and, since no solution will independently fix the entirety of the problem, it is important to explore them together. One such potential solution, particularly in existing pharmacy deserts, is the expansion of telepharmacy, which generally consists of a remote pharmacist providing traditional services, such as prescription review, prescription verification, and patient consultation, via the internet.[26] Individuals who do not have convenient access to a pharmacy or may not be able to travel to a pharmacy could benefit most from telepharmacy services. In practice, telepharmacy has shown promise in addressing access issues and reducing operating costs, as they operate with increased efficiency.[27] This has shown improved patient outcomes and medication adherence while reducing unnecessary medical visits and hospitalizations.[28]

To better address the needs for more emergent prescriptions, some settings have begun to implement remote dispensing. This type of dispensing is often included as a method of telepharmacy but is unique in that there is an immediacy in dispensing.[29] In remote dispensing set ups, a pharmacist at a central location will supervise dispensing at a number of remote sites. Patients have the ability to speak with the pharmacist to verify the prescription, review drug utilization, and complete any necessary drug counseling. Pharmacy technicians will typically be on-site and manage the physical portions of dispensing. This means that patients have access to medications immediately, which can be crucial if a patient has acute care needs.[29] Some providers or payers have even recently begun to implement prescription kiosks or “drug vending machines,” that are enabled by remote dispensing.[30,31] These kiosks allow clinicians to send prescriptions for shelf-stable medications for both acute and chronic care needs and, upon dispensing, patients have the ability to engage pharmacists via videoconferencing built into the kiosk.[30,31]

Further, mail order pharmacy services are another potential part of the solution. While similar to telepharmacy and remote dispensing, mail order pharmacy services do not always entail real-time interaction between the patient and pharmacists.[32] These services are typically operated through a patient's PBM and mail prescriptions directly to the patient's home. While there can be variety in medications provided, the vast majority of mail order prescriptions are sent as a 90-day supply, thus making this method of delivery most appropriate for well-managed chronic conditions and/or maintenance medications and not as useful for acute prescription needs, like an antibiotic.[32] While there are clear potential benefits to the expansion of telepharmacy, remote dispensing, and mail-order pharmacy services, there are also significant barriers. Communities that are more likely to be in a pharmacy desert are also less likely to have access to reliable broadband as there are significant disparities in access to broadband in rural communities and in majority Black and Hispanic neighborhoods.[33,34] Additionally, the necessary technological investment, both initially and ongoing, can be overwhelming for many pharmacies. Telepharmacy services require significant technological infrastructure and security which is complex and can be prohibitively expensive.[28] Of note, while not a required aspect, many of these solutions include an enhanced clinical role for pharmacists.[27] The AMA has long opposed scope of practice expansions that would allow pharmacists to practice medicine—which includes making a diagnosis or prescribing medications—without appropriate physician supervision.[35]

In both mail order and telepharmacy services, there can be issues with both communication and promptness of medication delivery. Specifically, a patient may not be able to fill some prescriptions via telepharmacy or mail order. If the pharmacies are not accurately communicating, the dispensing pharmacist may not have adequate information to do a full medication utilization review.[34,36] This could lead to missing patient education on potential drug interactions or adverse drug interactions that could have been prevented had full information been available.[34,36] Further, there can be complications with patients receiving the medication in a timely manner. Research shows that in a significant number of cases; patients have to wait several days between the telepharmacy consultation and receipt of the medication and mail order prescriptions typically take about a week to be delivered. This could be a significant issue if a patient needs medication to treat an acute condition. For example, patients prescribed antibiotics are often unable to wait days or a week for the prescription without significant consequences to their health. Likewise, delivery delays can impact medication adherence when chronic medications are delayed to the point where patients run out of their medications. Importantly, some newer delivery models are able to deliver medications in one to two days, so it is possible that this delivery window will continue to be reduced.[36] Pharmacists surveyed also voiced significant concern that not only could this delay result in incorrect medication usage, but medications could be damaged or inaccurate when delivered via mail or should a patient not have a secure location to receive mail. Further, this delivery method is significantly more complicated for medications that are temperature or light sensitive.[36] This could be partially addressed by the aforementioned medication kiosks that allow for immediate dispensing, but this would only be an option for shelf-stable medications. Due to these issues, telepharmacy and mail order pharmacy services may not be a safe or viable solution for situations when a drug has specific instructions and/or need to be accessed rapidly, but could serve communities struggling to access non-emergent pharmacy services.[34,36]

Legislative & Regulatory Solutions

At a minimum, pharmacies must be reimbursed in a manner that allows them to remain open and accessible in communities across the United States. It is essential that payers reimburse pharmacies in a manner that is fair and covers the actual costs of obtaining and dispensing the medication. Similar to physician practices that dispense medications, it is not possible for pharmacies to provide medications at a deficit and remain financially viable.[23] To ensure that reimbursement is

fair and equitable, it will be important to address the role of PBMs and vertical integration between payers, PBMs, and pharmacies/pharmacy chains. While the dissolution of existing integration is exceptionally challenging, it may be beneficial to work towards the prevention of further integration. A January 2026 Congressional hearing highlighted the importance of this issue and came with assurances from Congress that oversight on this issue would continue. The Consolidated Appropriations Act of 2026, signed into law in early February 2026, includes provisions that will work to regulate PBMs and promote a more sustainable environment for pharmacies.[37] Further, at the end of January 2026, the Department of Labor proposed a new rule that would require increased transparency in PBM practices. Specifically, the new rule, if implemented, would require that PBMs disclose rebates and payments from drug manufacturers, any compensation received when the drug cost paid by the insurer exceeds the pharmacy reimbursement, and any payments recouped from pharmacies connected to drugs dispensed in the PBM managed plan.[38] Along with this rule, a February 2026 Federal Trade Commission (FTC) settlement with vertically integrated PBMs, demonstrated additional commitments to not only transparency, but also providing more reasonable reimbursement to pharmacies.

While PBM regulation is essential to improving pharmacy reimbursement, and as a result improving pharmacy access, some states have begun to implement innovative new payment methods. For example, in 2022, Ohio Medicaid worked to revamp the system all together. After an investigation showed that two major PBMs charged patients $224 million more than they paid the pharmacies, the state ended its working relationship between Medicaid and multiple PBMs.[39] Instead, Ohio Medicaid contracted its own PBM, Ohio Medicaid's Single Pharmacy Benefit Manager (SPBM).[40] As a part of this program the state mandates dispensing fees based on surveys sent to pharmacists that are designed to determine the actual cost of dispensing and ensure reimbursement covers the full cost. Additionally, the implementation of the Ohio SPBM has allowed the state to better oversee the PBM and prevent untoward business practices that may occur.[39,40] In the first two years of its implementation, the SPBM overhaul has boosted pharmacy dispensing fees by over 1,200 percent and has reportedly saved $140 million.[41] While this model does seem to hold promise, it has not been without opposition. PBMs and associated groups have tied up many of the most promising aspects of the Ohio legislation and regulation in extensive legal battles that were ongoing at the time this report was written. Further, some state legislators and regulators have called the initial results of this program into question and voiced potential concern with data privacy in the SPBM.[41,42] Additionally, the feasibility to implement a similar program on a national level is complicated by the fact that Medicaid programs vary greatly between states.[42] Further, implementation in the Medicare or commercial markets would likely face significantly greater legal challenges. While the SPBM as implemented in Ohio may not be the perfect solution, most agree that it has seemed to make significant improvements and should be considered as a model option.[42] Other states have begun to implement legislation that works to mitigate some of the issues that are faced by pharmacies. For example, Alabama SB 252 increased Medicaid reimbursement rates and set a standard per-prescription dispensing fee. Further, Illinois HB 1697 and California SB 41 work to eliminate spread pricing and practices designed to steer patients towards PBM affiliated pharmacies.

Incentive Based Solutions

In addition to regulatory or legislative solutions, some states have worked to provide pharmacies serving underserved communities with monetary support via grants. For example, Illinois offers the Pharmacy Support Program to pharmacies serving underserved areas in an effort to improve access to pharmacies and pharmacy services. Further, private organizations and associations have stepped in to provide support and funds for pharmacies operating in pharmacy deserts. For example, the National Community Pharmacists Association announced the Rural Pharmacy Ownership

Accelerator, which is a program designed to prepare pharmacy owners to open and operate pharmacies in rural areas.[43] The American Pharmacist Association has offered a variety of grants that have, among other things, offered seed money for pharmacists to open or expand practice in underserved communities.[44] Additionally, some PBMs have begun to offer programs to support independent pharmacies operating in underserved areas. For example, the Sustaining Pharmacy Access and Rural Care (SPARC) Program was recently launched by LucyRx, an independent PBM that boasts increased transparency from competitors. The SPARC program works to increase reimbursement rates, expand community services, and advocate for legislative reforms.[45] While this program could be beneficial for pharmacies in that it provides enhanced reimbursement rates, core tenants of the program work to expand pharmacist scope of practice to both prescribe and to provide preventive care. Although these tenants of the program conflict with AMA policy, the program's increased reimbursement to independent pharmacies serving underserved communities demonstrates a potential solution coming from the private sector.[45]

It also may be advantageous to implement incentive programs to support pharmacies in pharmacy deserts. Similar to programs designed to attract physicians to practice in medically underserved communities, these programs could provide some kind of supplemental payment for pharmacies operating in these areas.[2] While this would require a substantial investment from state and/or federal governments, it could be transformative for pharmacies serving these communities. Grants or programs that provide financial support have the potential to assist pharmacies in remaining open, however it is important to qualify that these types of solutions will not remedy the issue in the long-term.

Across all potential solutions, it is important to remember that no single solution will be successful in isolation. To make significant improvements in pharmacy access, it will be essential to ensure that solutions are designed and implemented holistically and in tandem. Additionally, it is important to ensure that pharmacy and pharmacist organizations and associations lead efforts to improve pharmacy access. While the AMA should continue to offer support, these organizations are experts in pharmacy and pharmacy practice and AMA efforts should be integrated with their solutions.

AMA POLICY AND ADVOCACY

To support alternative dispensing methods, Policy H-120.989 outlines AMA support for mail service pharmacies as a legitimate alternative and outlines the criteria that should be met to ensure that these pharmacies remain beneficial for patients. Policy H-120.936 supports the establishment of national guidelines that work towards safe and timely delivery of medications via the mail. Policy H-120.962 expands these guidelines to ensure that mail order pharmacies remain accessible and affordable for patients and do not charge egregious additional fees. Policy H-120.940 ensures that mail order and online pharmacies adequately communicate with electronic prescribing systems and do not interfere with physician prescribing. Additionally, Policy H-120.956 focuses on internet prescribing and outlines not only efforts to ensure that these platforms are accessible to physicians and advantageous to patients but also to support appropriate pharmaceutical bodies in accreditation.

In addition to mail and internet-based pharmacies, the AMA has extensive policy to ensure that patients have access to the medications prescribed by their physician without interference from payers or PBMs. Policies H-110.991, H-110.990, and H-110.959 are all designed to ensure that patients have timely and affordable access to the medications as prescribed by their physician. Policy H-120.943 outlines AMA efforts to ensure that patients have access not only to affordable medications, but also quantities that are adequate and do not face arbitrary limits. To combat harmful PBM practices, Policies D-120.988, H-120.924, and H-110.963 limit PBM and payer

intrusion in prescription access, increase transparency, and hold these bodies accountable should patient harm occur. Policy H-125.986 outlines the importance of ensuring that payment for prescriptions is adequate to cover the full cost of prescription medications for both pharmacies and physicians/physician practices. Policy D-160.920 outlines efforts to track and work against the vertical integration between payers, PBMs, and pharmacies. This policy outlines efforts to communicate concerns and advocate for change with federal and state legislators and regulators. To further combat poor PBM practices, Policy H-110.957 outlines AMA opposition to spread pricing and discusses efforts to prohibit it on a federal and state level. Policy D-110.987 focuses on efforts to increase transparency in PBM practices, specifically in relation to patient impact and pharmacy payment. To support the aforementioned policies, the AMA also advocates for improved medication access and against PBM harms via the grassroots site TruthinRx. This campaign works to educate and influence patients, physicians, and legislators about harmful payer and PBM practices/policies. Additionally, efforts have been made at the state and federal levels to advocate for legislation to limit PBM and payer harmful practices. The AMA supported these federal PBM reforms as well as the health policy wins included in the Consolidated Appropriations Act of 2026.

Finally, the AMA has policies designed to ensure that pharmacists do not practice beyond the scope of their training. Policy H-35.961 outlines the inappropriateness of pharmacists working to verify the medical rationale or diagnosis behind a treatment/prescription. Policy D-35.987 outlines AMA efforts to monitor and oppose pharmacist scope of practice expansions that constitute the practice of medicine, for which pharmacists are not trained. To further combat these scope expansions, the AMA Advocacy Resource Center has worked to block and mitigate a significant number of bills in states across the country.

DISCUSSION

Pharmacy access is key to ensuring patients have access to the full spectrum of health care. However, across the country millions of Americans are living in areas deemed pharmacy deserts or areas served only by a keystone pharmacy. This can have significant downstream impacts on patient health outcomes and introduce stress on the health care system as a whole. When patients are unable to fill their medications, they are unable to adhere to treatment plans prescribed by their physician. As a result, patients have increased risk of poor health outcomes and are more likely to experience increases in the severity or onset of new health issues. Pharmacies are closing at a rapid rate, an issue that is even more severe in rural areas and communities of color. Individuals living in majority-minority communities are more likely to rely on independent pharmacies, which are closing in these communities. Although there are some promising numbers in terms of how many pharmacies, especially independent pharmacies, are opening these new businesses tend not to open in underserved areas.

Pharmacy access is adversely impacted due to a combination of poor reimbursement rates, PBM interference, and increasingly stringent preferred pharmacy networks. Pharmacies, even those that are a part of a large chain, have seen significant drops in gross revenue over the last several years. Even though pharmacy volume may be increasing, the rates of reimbursement are so low that the gross revenue continues to decrease. While this trend is seen in large pharmacy chains, it is even more significant for smaller and independent pharmacies. These pharmacies lack the market power to be able to negotiate reimbursement rates and are often excluded from preferred pharmacy networks. As a result, prices are higher for patients and pharmacy margins are shrinking. To combat these issues, the Council recommends the adoption of two new policies. First, the Council recommends policy that supports efforts to ensure pharmacy reimbursement across payer types covers the actual cost of obtaining and dispensing each prescription. Second, the Council recommends that policy be adopted to ensure preferred in-person pharmacy network adequacy. In

line with existing network adequacy policy, this policy would work to ensure that a minimum preferred network standard be enforced across payers and bolster independent pharmacy inclusion when possible. In conjunction, these two policies could work to support existing pharmacies in continuing ongoing operations.

In an effort to improve pharmacy access, innovative alternative delivery and practice methods, and legislative and regulatory changes have been implemented or proposed. These dispensing methods allow patients to have access to a pharmacist via telecommunication and receive their medication either by mail or in-person. Some health systems have even begun to implement these practices in kiosk or "vending machine" form for shelf stable medications. These practices build on existing mail order dispensing where patients are sent drugs, typically maintenance medications, via the mail. Although these methods are promising, there is some concern with pharmacy communication, medication management, and prescription accuracy. However, with appropriate guardrails, the Council believes that these dispensing methods could work in conjunction with other strategies to decrease the number of pharmacy deserts. Accordingly, the Council recommends the adoption of new policy that recognizes these dispensing methods, supports their coverage, and outlines appropriate guardrails. These guidelines ensure that pharmacists practice in their defined scope, medications are delivered timely, accurately, and without major cost increases, and that existing community pharmacies are not displaced. Further, the Council recommends the reaffirmation of Policy H-120.989, which outlines appropriate guidelines for mail order pharmacies and recognizes their legitimacy as a component to improving pharmacy access.

In addition to alternative dispensing methods, governmental and non-governmental organizations have implemented changes and made investments to support improvements to pharmacy access. States have taken the opportunity to implement regulatory and legislative changes dictating fairer reimbursement rates, dispensing fees that cover actual costs, and the reining in of PBMs. The federal government has introduced legislation and regulations that target PBMs in an effort to promote their transparency. Some states along with private organizations and associations have also stepped in to provide grants and support to pharmacists operating pharmacies in deserts. To support these, and future innovative efforts, the Council recommends the adoption of new policy that not only encourages innovation, but also the associated regulatory changes necessary to implement them. To limit anticompetitive practice by PBMs or payers, the Council recommends the adoption of new policy that supports fair market competition in order to support the financial health of full-service independent/community pharmacies. Finally, to further address PBM interference, the Council recommends the reaffirmation of Policy D-110.987, which outlines AMA efforts to advocate for active regulation of PBMs, with a particular focus on increasing transparency and regulation.

RECOMMENDATIONS

The Council on Medical Service recommends that the following recommendations be adopted in lieu of Resolution 113-A-25, and the remainder of the report be filed:

1. Our American Medical Association (AMA) supports efforts to ensure that pharmacy reimbursement by all payers covers the actual cost of obtaining and dispensing the medication, including necessary staffing and operational costs. (New HOD Policy)

2. Our AMA supports the establishment and enforcement of a minimum preferred pharmacy network adequacy standard requiring all health plans to contract with sufficient numbers of pharmacies, including, when possible, independent pharmacies, such that patient medications or medical products are accessible without unreasonable travel or delay. (New HOD Policy)

3. Our AMA recognizes telepharmacy and remote dispensing as avenues to improve access to prescription medications and supports their expansion and encourages payer coverage when the following criteria are met:
    a. Services are provided by pharmacists within a clearly defined scope of practice that does not constitute the practice of medicine without appropriate physician supervision.
    b. Medications are delivered to patients accurately and in a timely manner.
    c. Communication between pharmacy systems is maintained to ensure an accurate medication list so that patients are educated on all their medications with key safety information.
    d. Patients are not subjected to increased cost-sharing or major shipping and handling fees to receive their medications.
    e. Existing community pharmacies are not displaced. (New HOD Policy)

4. Our AMA supports the development of innovative programs designed to improve access to pharmacies and the appropriate regulatory changes to allow for these programs to be implemented while ensuring high-quality, physician-led care in alignment with AMA policy. (New HOD Policy)

5. Our AMA supports practices by payers/insurers or pharmacy benefit managers (PBMs) that promote fair market competition, patient access and choice of pharmacy, and supports the financial viability of full-service independent/community pharmacies. (New HOD Policy)

6. That our AMA reaffirm Policy H-120.989, which recognizes mail order pharmacy services as legitimate method for drug distribution and outlines its appropriate use. (Reaffirm HOD Policy)

7. That our AMA reaffirm Policy D-110.987, which outlines AMA advocacy and support for PBM regulation. (Reaffirm HOD Policy)

Fiscal Note: Minimal

Council on Medical Service Report 3-A-26
Improving Patient Access to Pharmacies and Medications in Pharmacy Deserts
Policy Appendix

Mail Service Pharmacy H-120.989

1. Our American Medical Association (AMA) believes that MSP is an established alternative method of distributing drugs in the United States.
2. Our AMA believes that controlled studies in the 1970s support the fact that MSPs are less vulnerable to drug diversion than retail pharmacies. Although numerous concerns about lack of safety and drug diversion have been expressed in trade publications and newsletters, documented controlled data regarding these concerns are minimal. There is no evidence of lack of safety in the peer-reviewed controlled-study literature. Presently, the practice of obtaining drugs from mail service pharmacies appears to be relatively safe.
3. Our AMA believes that mail service pharmacy for prescription drugs is probably most appropriate for patients who have a well-established diagnosis, who have long-term chronic illnesses, whose disease is relatively stable and in whom the dose and dosage schedule is well regulated, who are isolated because of geographic or personal reasons, who have a drug history profile on record, who have been adequately informed about their medication, and who continue to see their physician regularly. Certainly, MSP is not best utilized for medications that are to be used acutely. Further, there must be assurance that generic substitution occur only by order of the prescribing physician.
4. Our AMA believes that any purported price savings from the use of MSP is difficult to assess, since studies are generally limited to regional and limited patient populations.
5. Our AMA believes that physicians have the responsibility to prescribe reasonable amounts of prescription medications based on the diagnosis and needs of their patients. Physicians must not be influenced by purely economic reasons, but they must take into account the patient's ability to pay and be aware of the guidelines recommended by particular health benefit programs for drugs. (BOT Rep. I, I-87; Reaffirmed: Sunset Report, I-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmed: BOT Rep. 8, A-11; Reaffirmed: CSAPH Rep. 1, A-21)

Improve Safety of Mail-Ordered Medication H-120.936

Our American Medical Association supports the establishment of national guidelines for mail-order pharmacies to ensure that medications reach patients in a safe and timely manner with full potency, and that when medication is damaged or loses potency during shipment, it should be replaced by the pharmacy at no cost to the patient. (Res. 917, I-14; Reaffirmed: CSAPH Rep. 01, I-24)

National Mail Order Pharmacy Practices H-120.962

1. Our American Medical Association insists that mail-order pharmacy companies respect the prescribing authority of physicians and dispense prescription medications only in the amounts prescribed; and recommends that mail order pharmacy companies charge only a reasonable and small shipping and handling fee per shipment in order not to encourage patients to request amounts of medications greater than those warranted by their physician's best judgment.
2. Our AMA opposes charging patients more than one co-pay for multiple prescriptions of the same or varying doses of a long-term medication within a 90-day period when evidence-based medicine dictates that less than 90-day prescriptions should be written during the initialization and dose stabilization of a newly prescribed long-term medication or during change in dosing of a long-term medication currently being taken. (Sub. Res. 506, I-96; Reaffirmed: CSAPH Rep. 3, A-06; Appended: Res. 121, A-07; Reaffirmed: BOT Rep. 8, A-11; Reaffirmation A-14; Modified: CSAPH Rep. 01, A-24)

Mail Order Pharmacies and Interface with Current Pharmacy Hubs H-120.940

1. Our American Medical Association (AMA) will work with mail order pharmacies to make sure that such pharmacies adopt interfaces with current pharmacy hubs and physician electronic prescribing systems at no cost to physicians.
2. Our AMA will advocate for penalties and/or incentives for mail order pharmacies to encourage the adoption of a functional system to automate the prescribing process through interfaces with physicians electronic prescribing systems. (Res. 708, A-10; Reaffirmed: BOT Rep. 8, A-11; Reaffirmed: CSAPH Rep. 1, A-21)

Internet Prescribing H-120.956

1. Our AMA supports the use of the Internet as a mechanism to prescribe medications with appropriate safeguards to ensure that the standards for high quality medical care are fulfilled.
2. Our AMA will work with state medical societies in urging state medical boards to ensure high quality medical care by investigating and, when appropriate, taking necessary action against physicians who fail to meet the local standards of medical care when issuing prescriptions through Internet web sites that dispense prescription medications.
3. Our AMA will work with the Federation of State Medical Boards and others in endorsing or developing model state legislation to establish limitations on Internet prescribing.
4. Our AMA will continue to work with the National Association of Boards of Pharmacy and support their digital pharmacy accreditation program so that physicians and patients can easily identify legitimate Internet pharmacy practice sites.
5. Our AMA will work with federal and state regulatory bodies to close down Internet web sites of companies that are illegally promoting and distributing (selling) prescription drug products in the United States.
6. Our AMA will keep pace with changes in technology by continually updating standards of practice on the Internet. (BOT Rep. 35, A-99; Reaffirmed: BOT Rep. 3, I-04; Reaffirmed: Sub. Res. 522, A-05; Modified: CSAPH Rep. 1, A-15; Modified: CSAPH Rep. 01, A-25)

Price of Medicine H-110.991

Our AMA: (1) advocates that pharmacies be required to list the full retail price of the prescription on the receipt along with the co-pay that is required in order to better inform our patients of the price of their medications; (2) will pursue legislation requiring pharmacies, pharmacy benefit managers and health plans to inform patients of the actual cash price as well as the formulary price of any medication prior to the purchase of the medication; (3) opposes provisions in pharmacies' contracts with pharmacy benefit managers that prohibit pharmacists from disclosing that a patient's co-pay is higher than the drug's cash price; (4) will disseminate model state legislation to promote drug price and cost transparency and to prohibit "claw backs"; (5) supports physician education regarding drug price and cost transparency, manufacturers' pricing practices, and challenges patients may encounter at the pharmacy point-of-sale; and (6) work with relevant organizations to advocate for increased transparency through access to meaningful and relevant information about medication price and out-of-pocket costs for prescription medications sold at both retail and mail order/online pharmacies, including but not limited to Medicare's drug-pricing dashboard. (CMS Rep. 6, A-03; Appended: Res. 107, A-07; Reaffirmed in lieu of: Res. 207, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Reaffirmation: A-19; Appended: Res. 126, A-19)

Cost Sharing Arrangements for Prescription Drugs H-110.990
Our AMA:
1. believes that cost-sharing arrangements for prescription drugs should be designed to encourage the judicious use of health care resources, rather than simply shifting costs to patients;
2. believes that cost-sharing requirements should be based on considerations such as: unit cost of medication; availability of therapeutic alternatives; medical condition being treated; personal income; and other factors known to affect patient compliance and health outcomes;
3. supports the development and use of tools and technology that enable physicians and patients to determine the actual price and patient-specific out-of-pocket costs of individual prescription drugs, taking into account insurance status or payer type, prior to making prescribing decisions, so that physicians and patients can work together to determine the most efficient and effective treatment for the patient's medical condition;
4. supports public and private prescription drug plans in offering patient-friendly tools and technology that allow patients to directly and securely access their individualized prescription benefit and prescription drug cost information; and
5. believes payers should not establish a higher cost-sharing requirement exclusively for prescription drugs approved for coverage under a medical exceptions process. (CMS Rep. 1, I-07; Reaffirmation A-08; Reaffirmed: CMS Rep. 1, I-12; Reaffirmed in lieu of Res. 105, A-13; Reaffirmed in lieu of: Res. 205, A-17; Reaffirmed in lieu of: Res. 207, A-17; Reaffirmed: CMS Rep. 07, A-18; Appended: CMS Rep. 2, I-21; Reaffirmed: Res. 113, A-23; Appended: CMS Rep. 01, A-23)

Prescription Medication Price Negotiation H-110.959
1. Our AMA supports efforts to ensure that patients have affordable access to medications.
2. Our AMA encourages all payers, both public and private, in efforts to establish a reasonable and affordable cap on patient out-of-pocket prescription drug spending in a manner that does not increase patient premiums.
3. Our AMA opposes drug payment methodologies that result in physician practices being paid at less than the cost of acquisition, inventory, storage, and administration of relevant drugs and other necessary related clinical services. (CMS Rep. 06, A-25)

Adequate Prescription Medication Supply H-120.943
1. Our AMA urges health plans to: (a) define a month's supply as a minimum of 31 days and three month's supply as a minimum of 93 days, so that patients are not shorted on their one-month or three-month supply of prescription drugs; and (b) allow prescription refills to provide the appropriate number of doses for the time period specified by the physician.
2. Our AMA will advocate and support advocacy at the state and federal levels against arbitrary prescription limits that restrict access to medically necessary treatment by limiting the dose, amount or days of the first or subsequent prescription for patients with pain related to a cancer or terminal diagnosis. (Res. 510, A-07; Reaffirmed: CMS Rep. 04, A-16; Appended: Res. 918, I-16)

Inappropriate Actions by Pharmacies and Pharmacy Benefit Managers D-120.988
Our AMA, in cooperation with pharmacy benefit managers, pharmacy companies, and other drug retailing organizations, shall develop model procedures that physicians may use when prescribing off-formulary pharmaceuticals that are medically indicated and that these procedures be in compliance with the Health Insurance and Portability and Accountability Act of 1996. (Res. 528, A-02; Reaffirmation I-04; Reaffirmation A-06; Reaffirmed: CSAPH Rep. 01, A-16)

Evaluating Actions by Pharmacy Benefit Manager and Payer Policies on Patient Care H-120.924
Our AMA will: (1) urge the National Association of Boards of Pharmacy, Federation of State Medical Boards (FSMB), and National Association of Insurance Commissioners (NAIC) to support having national pharmacy chains, health insurance companies,
and pharmacy benefits managers (PBMs) testify at state-level public hearings by state medical/pharmacy boards and state departments of insurance, on whether the pharmacy chains, health insurance companies, and PBMs' policies to restrict the prescribing/dispensing of opioid analgesics are in conflict with state insurance laws or state laws governing the practice of medicine and pharmacy; and (2) oppose specific dose or duration limits on pharmacologic therapy that are not supported by medical evidence and clinical practice. (BOT Rep. 17, A-18; Reaffirmed: 235, I-18)

Third-Party Pharmacy Benefit Administrators H-110.963
1. Our American Medical Association recommends that third-
party pharmacy benefit administrators that contract to manage the specialty pharmacy portion of drug formularies be included in existing pharmacy benefit manager (PBM) regulatory frameworks and statutes, and be subject to the same licensing, registration, and transparency reporting requirements.
2. Our AMA will advocate that third-party pharmacy benefit administrators be included in future PBM oversight efforts at the state and federal levels. (Res. 820, I-22; Reaffirmed: CMS Rep. 06, A-24)

Pharmaceutical Benefits Management Companies H-125.986
Our AMA:
(1) encourages physicians to report to the Food and Drug Administration's (FDA) MedWatch reporting program any instances of adverse consequences (including therapeutic failures and adverse drug reactions) that have resulted from the switching of therapeutic alternates;
(2) encourages the Federal Trade Commission (FTC) and the FDA to continue monitoring the relationships between pharmaceutical manufacturers and PBMs, especially with regard to manufacturers' influences on PBM drug formularies and drug product switching programs, and to take enforcement actions as appropriate;
(3) pursues congressional action to end the inappropriate and unethical use of confidential patient information by pharmacy benefits management companies;
(4) states that certain actions/activities by pharmacy benefit managers and others constitute the practice of medicine without a license and interfere with appropriate medical care to our patients;
(5) encourages physicians to routinely review their patient's treatment regimens for appropriateness to ensure that they are based on sound science and represent safe and cost-effective medical care;
(6) supports efforts to ensure that reimbursement policies established by PBMs are based on medical need; these policies include, but are not limited to, prior authorization, formularies, and tiers for compounded medications; and
(7) encourages the FTC and FDA to monitor PBMs' policies for potential conflicts of interests and anti-trust violations, and to take appropriate enforcement actions should those policies advantage pharmacies in which the PBM holds an economic interest. (BOT Rep. 9, I-97; Appended: Res. 224, I-98; Appended: Res. 529, A-02; Reaffirmed: Res. 533A-03; Reaffirmation I-08; Reaffirmation A-10; Reaffirmed: Alt. Res. 806, I-17; Modified: Res. 242, A-18; Reaffirmed: CMS Rep. 08, A-19; Reaffirmed: CMS Rep. 06, A-24)

Opposing Pharmacy Benefit Manager Spread Pricing H-110.957

1. Our AMA opposes the use of spread pricing by Pharmacy Benefit Managers (PBMs).
2. Our AMA will advocate for federal and state legislation and regulation that prohibits the use of spread pricing by PBMs.
3. Our AMA supports policies requiring PBMs to use transparent, pass-through pricing models that ensure fair and consistent reimbursement to pharmacies, physicians, and patients. (Res. 121, A-25)

AMA Response to Pharmacy Intrusion Into Medical Practice H-35.961

Our American Medical Association deems inappropriate inquiries from pharmacies to verify the medical rationale behind prescriptions, diagnoses, and treatment plans to be an interference with the practice of medicine and unwarranted. (CSAPH Rep. 8, A-23)

Health Insurance Company Purchase by Pharmacy Chains D-160.920

Our AMA will: (1) continue to analyze and identify the ramifications of the proposed CVS/Aetna or other similar merger in health insurance, pharmacy benefit manager (PBM), and retail pharmacy markets and what effects that these ramifications may have on physician practices and on patient care; (2) continue to convene and activate its AMA-state medical association and national medical specialty society coalition to coordinate CVS/Aetna-related advocacy activity; (3) communicate our AMA's concerns via written statements and testimony (if applicable) to the U.S. Department of Justice (DOJ), state attorneys general and departments of insurance; (4) work to secure state level hearings on the merger; and (5) identify and work with national antitrust and other legal and industry experts and allies. (BOT Action in response to referred for decision Res. 234, I-17)

Evaluation of the Expanding Scope of Pharmacists' Practice D-35.987

1. Our American Medical Association will re-evaluate the expanding scope of practice of pharmacists in America and develop additional policy to address the proposed new services provided by pharmacists that may constitute the practice of Medicine.
2. Our AMA will continue to collect and disseminate state specific information in collaboration with state medical societies regarding the current scope of practice for pharmacists in each state; studying if and how each state is addressing these expansions of practice.
3. Our AMA will develop model state legislation to address the expansion of pharmacist scope of practice that is found to be inappropriate or constitutes the practice of medicine, including but not limited to the issue of interpretations or usage of independent practice arrangements without appropriate physician supervision and work with interested states and specialties to advance such legislation.
4. Our AMA opposes federal and state legislation allowing pharmacists to independently prescribe or dispense prescription medication without a valid order by, or under the supervision of, a licensed doctor of medicine, osteopathy, dentistry or podiatry.
5. Our AMA opposes federal and state legislation allowing pharmacists to dispense medication beyond the expiration of the original prescription.
6. Our AMA opposes the inclusion of Doctors of Pharmacy (PharmD) among those health professionals designated as a "Physician" by the Centers for Medicare & Medicaid Services. (Res. 219, A-11; Appended: Res. 218, A-12; Reaffirmed: BOT Rep. 9, A-22)

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 5-A-26

Subject: Inclusion of Discounted Prescription Medication in Patient Cost-Sharing

Presented by: Betty Chu, MD, MBA, Chair

Referred to: Reference Committee A

Resolution 710, "Requiring Insurances to Apply Discounted Cost Medication to the Patient's Deductible," was introduced by the New York delegation at the 2025 Interim Meeting and was referred. It asks the following:

> RESOLVED, that our American Medical Association (AMA) advocate for legislation or other appropriate means to ensure that all payment made by patients for prescription medications outside of their insurance coverage (such as pharmaceutical discount programs) count towards that patient's annual deductible and out of pocket maximum.

In response, this report reviews patient cost-sharing, patient assistance programs, and their impact on patients and physicians. Further, it provides an overview of related AMA policies and offers a recommendation for new House of Delegates (HOD) policy.

BACKGROUND

Cost-sharing is broadly defined as the portion of health care costs that a patient pays out-of-pocket (OOP). These costs are typically inclusive of deductibles, coinsurance, and copayment ("copay").[1] Deductibles are the amount that a beneficiary must pay before the insurance plan covers the costs of care. While specific amounts vary plan to plan, once a deductible is met the patient is then only responsible for a copay or coinsurance.[2] Plans that have lower deductibles typically have higher monthly premiums and plans with higher deductibles typically have lower monthly premiums. Some plans have separate deductibles for prescription drugs and often family plans include separate individual and family deductibles.[2] In addition to deductibles, many plans have an OOP maximum, which is the most a beneficiary would have to pay for covered services annually.[3] With passage of the Affordable Care Act (ACA), the vast majority of payers are required to cover preventive services fully, even prior to a deductible being met.[4] After a beneficiary's deductible is met, OOP costs are typically defined as either coinsurance or a copay.[2] Coinsurance is defined as the percentage of a covered service paid by the patient while a copay is a fixed amount paid by the patient.[5,6]

Importantly, there are several costs for which patients are responsible that are not included in deductible nor OOP maximum calculations. Specifically, payments made in relation to monthly premiums, out-of-network provider fees, non-covered treatments, over the counter medications, costs that exceed payer set allowable amounts, and some prescription discount programs are often not included in a plan's calculation of patient cost-sharing.[2,3] Out-of-network care can often incur increased OOP spending, with variation from plan to plan as to what services, or how much of a service is covered out-of-network. In an effort to control costs, most plans also have an OOP maximum or limit. Typically, care that is not billed initially to the insurance company is also excluded, such as medications or physician services paid with cash.

© 2026 American Medical Association. All rights reserved.

There is significant variability, especially among private payers, in the actual set amounts for each type of cost-sharing. Among ACA Marketplace plans, the average deductible for a single individual is just under $3,000. However, there is significant variation with some plans offering deductibles as low as $80 for low-income beneficiaries who qualify, to nearly $7,500 for bronze plans.[6] Although there is variation between states, the average deductible for a single person who has coverage through an Employer Sponsored Insurance (ESI) plan is just over $2,000.[7] Both Marketplace and ESI plans typically have a copay between $20-$40 for primary care visits and $40-$100 for specialty care visits once a deductible is met. When these plans include coinsurance, this rate typically averages around 20 percent.[8] For marketplace and ACA-compliant ESI plans, OOP maximums cannot exceed $10,600 per person or $21,200 per family. While more uncommon in private health insurance plans, Medicare sets deductibles and OOP maximums separately for prescription drug and non-drug related costs. Medicare Part D, which covers prescription drugs, has an annual OOP maximum of $2,100 and a prescription drug deductible of $615 as established by the Inflation Reduction Act.[9] Medicare Part D coinsurance and copay rates vary based on drug costs (e.g., generic drugs typically have lower patient OOP costs than brand name drugs).[10,11] While Medicaid OOP costs vary by state, federal regulation currently caps total OOP spending at no more than five percent of a family's annual income and includes exemptions for certain groups, like young children and pregnant individuals, and situations, like emergency care and family planning.[12] For prescription medications, among Medicaid beneficiaries making less than 150 percent of the Federal Poverty Limit, copays cannot exceed eight dollars.[12] For a more detailed breakdown of these costs and how they are typically collected, please reference CMS Report 2-I-23.

PATIENT ASSISTANCE PROGRAMS

In the United States, prescription medications are often tied to significant OOP costs for patients. Research has shown that nearly a quarter of adults with insurance reported a necessary prescription was either not covered or required a "very high" copay.[13] For individuals with chronic conditions, like diabetes, cancer, arthritis, or HIV, this can be especially problematic as generic drugs are often not available for these diagnoses. While the biologic and specialty drug market has increased access to name-branded drugs, patients often incur exceptionally high costs to obtain them.[14] Although this is an issue cited across all insurance types, Medicare beneficiaries reported the issue more frequently than those with other types of insurance coverage.[13,14] This often results in cost-related nonadherence, meaning patients delay or skip, refilling a prescription and/or take smaller doses. Patients who are unable to adhere to their treatment plans are more likely to experience poor health outcomes, harmful side effects, and/or unsuccessful treatment outcomes.[15] Current estimates show that about 15 percent of patients demonstrate cost-related nonadherence behaviors.[15] As a result of challenges with OOP costs, patient assistance programs (PAPs) have become relatively common. These programs can be offered through the government, drug manufacturers, non-profit organizations, and/or as discount or coupon cards.

For individuals who are beneficiaries of government funded insurance plans, there are PAPs offered by state and federal governments when medications are prohibitively expensive. For example, Medicare beneficiaries who meet certain annual income and resource limits qualify for the "Extra Help" or Low-Income Subsidy which limits OOP payments beyond the larger Medicare limits.[16] To qualify for this program, individuals must be dual-eligible and enrolled in a Medicaid drug coverage plan, make less than $2,015 per month, and have total assets below $18,090. Individuals who are also enrolled in Medicaid, Supplemental Security Income, or a Medicare Savings Program automatically qualify. For these beneficiaries, all generic drugs have an associated copay of just over $5 and all name-brand drugs have a copay of just under $13. If beneficiaries also qualify for Medicaid, these copays can be as low as $1.60 for generics and $4.90 for name-brand drugs.[17] In addition to federal programs, nearly every state has a program designed to cover the cost of prescriptions not covered by Medicare Part D plans. In addition, most states have State Pharmaceutical Assistance Programs (SPAPs). These programs are designed to reduce the cost of medication related spending for targeted populations, often those who have an income

under a set level, are under/uninsured, have a specific diagnosis, and/or those over 65 years of age.[18] For example many, but not all, states have a specific program designed to ensure that individuals with HIV/AIDS are able to access the necessary medications. Additional SPAPs are designed to center around seniors who are unable to access medications, while others are more general and apply to broader populations. For example, Alabama has one SPAP designed to assist in accessing HIV/AIDs medications (Alabama AIDS Drugs Assistance Program) and another designed to support seniors (SenioRx) who cannot afford their medications.[18]

Beyond SPAPs, 13 states offer some kind of discount program that is often available to a wider population. Some states, such as Arizona, offer discount cards to any state resident via CoppeRx/Arizona Rx, while other states have more specified requirements. For example, California's Discount Program is exclusive to Medicare recipients and Vermont's program, Health Vermonters, is exclusive to those who meet an income threshold and do not have prescription coverage.[18] Oregon and Washington State combined their drug assistance programs into ArrayRx, formerly the Northwest Prescription Drug Consortium, which not only provides a discount card program to residents in those states, but also pure-pass through pharmacy benefit manager (PBM) services and a group purchasing organization.[19] The initial joint efforts of Washington and Oregon allowed for the program to increase its investments and impacts, which has been furthered with the more recent inclusion of Arizona, Connecticut, Nevada. Estimates from this program's discount card show that patients who utilize these cards save between 18 and 80 percent when filling their prescription at a retail pharmacy.[18,19] In February 2026, the federal government launched TrumpRx, which is described as offering the "cheapest prices in the world" for the negotiated drugs. As of the launch of the website, 43 medications were included with intentions to grow this number.[20] While this website has been publicized as a major cost saver for patients who need the included medications, initial reviews are mixed.[20,21] First, the site does not allow patients to utilize their health insurance, meaning that for individuals with prescription drug coverage, the level of savings may be limited. Second, approximately half of the drugs included on the site have generic alternatives that are less expensive than the name brand drugs.[21,20,21,22]

While successful government assistance programs can be exceptionally helpful for those who qualify, many people do not meet the qualifications. Therefore, private organizations and companies have stepped in to offer assistance. Many drug manufacturers, especially those of very high-cost drugs, offer PAPs. In addition, drug manufacturers and companies have developed business models to provide direct-to-consumer dispensing, avoiding PBMs and retail pharmacies at a lower cost, but also require forgoing the use of insurance. Although some programs are only offered to patients who are uninsured or underinsured, other programs are open to all recipients of a drug.[23] These programs can be in the form of copay assistance, discounts to the price of the medication, and/or offsetting of associated costs like transportation or infusion services. However, in many cases patients must navigate an application process that is often demanding.[23,24] Even so, for some patients these programs provide the only means to access their prescription(s). In addition to the aforementioned manufacturer-based programs, many non-profit organizations exist designed to help patients access their medications, often in relation to a specific diagnosis or family of diagnoses.[24] For example, the Patient Access Network (PAN) Foundation works to provide grants to patients with a variety of diagnoses that are considered chronic, rare, and/or life-threatening.[25]

In addition to both government and non-governmental assistance programs, coupon or discount cards have grown in accessibility and popularity across the country. These cards are primarily based on three types of discounts: manufacturer, pharmacy-specific, and prescription coupon. Manufacturer discount cards are submitted by the patient to the pharmacy and the manufacturer then pays the difference between the patient payment and actual cost. For example, if a patient paid $50 when using the discount card on a medication that typically costs $100 OOP, the manufacturer would reimburse the pharmacy the remaining $50.[26] Pharmacy-specific discount cards are unique to a pharmacy and generally allow patients to pay a

lower price on a medication, typically a generic medication, but do not work in conjunction with insurance coverage. While these types of cards are particularly beneficial to uninsured patients, they also can be beneficial to those with insurance coverage, as it is not uncommon for the discounted rate to be less than the copay or coinsurance rate for a patient who is fully insured.[26] Prescription discount (or coupon) cards are similar but apply to multiple pharmacies. These cards are driven by private, for-profit companies that negotiate with PBMs to secure discounts on specific medications. When these cards, such as GoodRx, America's Pharmacy, or SingleCare, are used a portion of the transaction is split between the PBM and card company, and the remainder goes to the pharmacy in the form of payment.[26,27] With the widespread use of discount cards and coupons, many payers became concerned that their benefit designs would be altered and profits lessened. As a result, some plans made changes to how OOP costs are calculated, often not counting patient payments made via coupons or discount cards toward annual cost sharing in order to maintain benefit designs and profits.[27,28] Further, some plans utilize copay accumulators to maximize their profits. In these systems, when a patient relies on a coupon to afford medications, the value is not included toward the OOP costs. Therefore, when the coupon is exhausted and/or expires, the patient is subjected to paying the full deductible along with a copay/coinsurance. In this system, the payer ends up with the majority of the benefit from the coupon, as they are able to shift many of the costs back to the patient. Alternatively, payers may implement a copay maximizer program. These programs apply the coupon evenly across the year, meaning that the patient may be responsible for a smaller monthly copay in addition to the coupon. This can be problematic as plan beneficiaries that utilize copay maximizers often do not meet their annual deductible and may end up spending more on health care costs.[27,28] This is particularly problematic for patients with high-deductible health plans (HDHP) as they are much less likely to meet the deductible.[27]

As a result of increasing PAP availability, Alternative Funding Programs (AFPs) have grown significantly. AFPs are designed to assist beneficiaries in navigating the PAP application process and are relied upon when a plan sponsor, such as an employer, does not want to pay for an expensive drug. Specifically, ESI plans preemptively determine that a medication, typically a high-cost specialty prescription, is "non-essential" and as a result they are removed from the formulary making the patient "un/underinsured" for that medication and AFPs step in to assist patients in negotiating the PAP process. While these programs may seem to be beneficial to patients, AFPs can result in significant ethical concerns and impact patients negatively.[29] Specifically, there have been concerns raised that the use of AFPs may conflict with consumer protection laws/regulations via the ACA, the Employee Retirement Income Security Act, and/or the Health Insurance Portability and Accountability Act. For example, under the ACA, prescription drugs are considered an essential health benefit (EHB) and, as a result, they must be covered. By deeming a prescription "non-essential," there is some concern that the ACA EHB clause is violated. Further, there is significant concern that these programs are exploiting PAPs and causing ethical issues by incorrectly labeling patients as "underinsured" when their health plan pushes them into using an AFP.[29] This could lead to not only patients who are truly un/underinsured not being able to receive support but may unduly burden patients who are not deemed eligible for support even with assistance from the AFP. A full overview of AFPs can be found in this AMA issue brief.[29]

LEGISLATION AND REGULATION

To address the issues raised by copay accumulator programs, some states have implemented legislation and/or regulation to require health plans to include reductions in OOP expenses for prescription drugs in cost-sharing calculations.[30] States vary in their requirements but generally necessitate that insurance plans include a combination of third-party payments, financial assistance, discounts, and/or product vouchers in cost-sharing totals. However, many states have faced challenges in implementing these laws due to conflicts with HDHP requirements and health savings account (HSA) eligibility. Specifically, there is concern that the credit for financial assistance, prior to meeting a deductible, could cause a beneficiary to be ineligible to contribute to their HSA. In other words, to maintain HSA eligibility, beneficiaries must

meet a statutory deductible before discounts or coupons can be applied to cost-sharing calculations.[30,31] States have generally managed to work around this requirement by broadening legislation language or allowing for exceptions to ensure that those with HDHP/HSA plans are not ruled ineligible.[30]

As of the writing of this report, 25 states, the District of Columbia, and Puerto Rico have laws aimed at addressing copay accumulator adjustments by insurers and PBMs. While states vary in the specifics of their legislation, many focus on a basic requirement for all payments to be included in copay calculations. In most states, the requirements apply to all state regulated plans, meaning that some plans may be exempt. For example, Illinois, via the Managed Care Reform and Patient Rights Act, requires that any state regulated health plan must count third party payments, financial assistance, discounts, product vouchers, or any other reduction in OOP expenses on prescription drugs toward cost-sharing totals.[32] Kentucky law prohibits state regulated payers and PBMs from excluding payments via coupons, discounts, or vouchers when calculating cost-sharing. The law does allow for the use of copay accumulators when a generic alternative is available with an exception if the prescriber deems the brand-name drug is medically necessary or approved by insurance.[33,34] Texas requires that health plans and PBMs apply any third-party payment, financial assistance, discount, product voucher, or other reduction in OOP expenses be included in calculations for deductibles, copays, cost-sharing responsibility, or OOP maximum. Further, Texas law shares the Kentucky exemption when a name-brand drug is medically necessary or approved by insurance.[34]

At the federal level, the Centers for Medicare & Medicaid Services (CMS) released a 2021 rule that allowed health plans to use accumulator adjustments but deferred to states for regulation. However, this rule was challenged in 2023 and it was determined that copay accumulators are only permissible among CMS-regulated plans if allowed by state regulations and for name branded drugs that have a generic alternative.[35] An additional CMS final rule clarified that among ACA Marketplace plans, drugs that are considered EHBs have a limit on annual cost sharing protected by ACA consumer protections.[36] While not yet released, the Department of Labor and the Department of Health and Human Services have indicated plans to release rules outlining similar standards that will apply to broader health plans and self-insured group plans.[35]

AMA POLICY AND ADVOCACY

The AMA has existing policy on copay accumulators, as Policy D-110.986 outlines AMA intent to develop model state legislation and support federal and state efforts to ban co-pay accumulator policies. As a result of this policy, the AMA has joined the All Co-pays Count coalition and adopted their model legislation. This model legislation is available to all states and is endorsed by over 30 organizations and advocacy groups. The model legislation outlines the issue and ensures that OOP spending is included in cost-sharing calculations. Related Policy H-125.977 advocates that OOP expenses be calculated toward Medicare Part D coverage gap calculations and that assistance programs be available to all individuals regardless of insurance type or coverage. Policy D-110.982 goes further and supports advocacy on the "ethical dilemma" that is presented when patients are able to obtain medication or equipment at a price lower than their insurance offers due to discount cards or cash prices. In addition, Policy D-110.983 outlines educational efforts on AFPs and the negative impacts they have and advocacy to limit AFPs via regulation or legislation. Of note, when legislation supporting the inclusion of these discounted OOP payments in cost-sharing calculations was introduced, the AMA expressed its support (House Testimony, Senate Testimony, House Letter).

In addition to policies oriented towards cost-sharing/copays and OOP spending, the AMA has extensive policy designed to improve the affordability of prescription drugs. Policies H-110.980 and H-110.987 demonstrate efforts to ensure that patients have access to affordable medications. These policies discuss AMA standards for drug affordability, process transparency, and patient access. Policy

H-110.986 discusses AMA support for adding value metrics into drug prices. In conjunction with the aforementioned policies that address all payer types, Policy D-330.954 specifically focuses on managing prescription drug prices in Medicare and outlines support for price negotiation. Along with aforementioned D-110.986, Policies D-120.988 and D-120.934 target PBMs and the need for increased regulation and transparency. Specifically, Policy D-120.934 outlines AMA steps to ensure that PBMs do not prevent physicians from appropriately treating patients and Policy D-120.988 details prevention of appropriate treatment by PBMs. Combined with its grassroots advocacy campaign TruthinRx, the AMA has sent a significant number of letters to legislators, regulators, and payers working to regulate PBMs and make prescription drugs affordable. Finally, the AMA voiced support for the PBM regulations passed in the Consolidated Appropriations Act of 2026.

DISCUSSION

Patient OOP spending is typically utilized to calculate cost-sharing amounts. For example, patients will usually need to spend a certain amount OOP to achieve their deductible amount. Once met, the payer will pay a larger share of the accrued health care costs. While this generally remains the same with prescription drug spending, the introduction of PAPs has complicated the process. PAPs can take a wide variety of forms and may be sponsored by governmental and non-governmental organizations. Due to the high, and rising costs of prescription drugs in the United States, patients continue to search for methods to make their medications more affordable. For those who qualify, government and private programs can help to reduce costs. For others, drug manufacturer discounts and support programs can assist in affordability. However, these programs often have specific eligibility qualifications that many do not meet, and as a result many have begun to utilize coupons/discount cards.

While PAPs are generally beneficial to patients, payers and PBMs may employ these programs for their own financial gains. Further, the utilization of these discount cards has complicated cost-sharing calculations, as much of this spending now happens outside of insurance. For example, some accumulator adjustment programs allow for health insurers and/or PBMs to duplicate payments, in a sense “double dipping,” by accepting compensation or reimbursement from both the PAP and the patient’s OOP spending. While not all insurance companies or PBMs participate in this practice, it seems to be becoming more widespread and is harmful to patients. To take further advantage of the situation, AFPs have begun to materialize. These programs are often viewed as predatory and harmful to not only the patients that they directly serve, but also to those patients who may not be able to access the PAPs. Additionally, these AFPs may circumvent federal and state legislation and regulation. To combat the payer and PBM tactics and ensure that patient cost-sharing calculations are based on actual OOP spending, some states have recently moved to implement legislation, the impact of which has yet to be seen. To support these efforts, the Council recommends the adoption of new policy that supports that all OOP spending submitted to the payer by the patient, or on behalf of the patient, be included in calculations for cost-sharing.

RECOMMENDATION

The Council on Medical Service recommends that the following recommendation be adopted in lieu of Resolution 710-A-25, and the remainder of the report be filed:

1. Our American Medical Association supports efforts to ensure that all payers and pharmacy benefit managers include any out-of-pocket prescription drug spending related to a covered benefit submitted by the patient, or on behalf of the patient, in cost-sharing, and/or out-of-pocket spending calculations. (New HOD Policy)

Fiscal Note: Minimal

Council on Medical Service Report 5-A-26
Inclusion of Discounted Prescription Medication in Patient Cost-Sharing
Policy Appendix

Co-Pay Accumulators D-110.986
Our AMA will develop model state legislation regarding Co-Pay Accumulators for all pharmaceuticals, biologics, medical devices, and medical equipment, and support federal and state legislation or regulation that would ban co-pay accumulator policies, including in federally regulated ERISA plans. (Res. 205, I-19; Appended: Res. 212, I-20)

Non-Formulary Medications and the Medicare Part D Coverage Gap H-125.977
1. Our American Medical Association will advocate for the inclusion of out of pocket, non-formulary, prescription medication expenses in calculating a patient's contributions toward the Medicare Part D coverage gap, after which coverage resumes.
2. Our AMA will advocate for economic assistance, including coupons (and other discounts), for patients, whether they are enrolled in government health insurance programs, enrolled in commercial insurance plans, or are uninsured. (Res. 826, I-14; Reaffirmation I-15; Reaffirmation: I-17; Reaffirmation: A-22)

Ethical Pricing Procedures that Protect Insured Patients D-110.982
1. Our American Medical Association advocates for policies that limit the cost of a medications or durable medical equipment to an insured patient with coverage to the lower range of prices that a non-covered patient can achieve at cash price either before or after application of a non-manufacturer's free discount card (such as GoodRx).
2. Our AMA will write a letter to lawmakers and other pertinent stakeholders describing the ethical dilemma of the medication pricing process and how it adversely affects insured patients. (Res. 012, A-24)

Alternative Funding Programs D-110.983
Our American Medical Association will educate employers, benefits administrators, and patients on alternative funding programs (AFPs) and their negative impacts on patient access to treatment and will advocate for legislative and regulatory policies that would address negative impacts of AFPs. (Res. 707, A-24)

Additional Mechanisms to Address High and Escalating Pharmaceutical Prices H-110.980
1. Our American Medical Association will advocate that the use of arbitration in determining the price of prescription drugs meet the following standards to lower the cost of prescription drugs without stifling innovation:
    a. The arbitration process should be overseen by objective, independent entities.
    b. The objective, independent entity overseeing arbitration should have the authority to select neutral arbitrators or an arbitration panel.
    c. All conflicts of interest of arbitrators must be disclosed and safeguards developed to minimize actual and potential conflicts of interest to ensure that they do not undermine the integrity and legitimacy of the arbitration process.
    d. The arbitration process should be informed by comparative effectiveness research and cost-effectiveness analysis addressing the drug in question.
    e. The arbitration process should include the submission of a value-based price for the drug in question to inform the arbitrator's decision.
    f. The arbitrator should be required to choose either the bid of the pharmaceutical manufacturer or the bid of the payer.

   g. The arbitration process should be used for pharmaceuticals that have insufficient competition; have high list prices; or have experienced unjustifiable price increases.
   h. The arbitration process should include a mechanism for either party to appeal the arbitrator's decision.
   i. The arbitration process should include a mechanism to revisit the arbitrator's decision due to new evidence or data.
2. Our AMA will advocate that any use of international price indices and averages in determining the price of and payment for drugs should abide by the following principles:
   a. Any international drug price index or average should not be used to determine or set a drug's price, or determine whether a drug's price is excessive, in isolation.
   b. The use of any international drug price index or average should preserve patient access to necessary medications.
   c. The use of any international drug price index or average should limit burdens on physician practices.
   d. Any data used to determine an international price index or average to guide prescription drug pricing should be transparent and updated regularly.
3. Our AMA supports the use of contingent exclusivity periods for pharmaceuticals, which would tie the length of the exclusivity period of the drug product to its cost-effectiveness at its list price at the time of market introduction. (CMS Rep. 4, I-19; Reaffirmed: CMS Rep. 3, I-20; Modified: CMS Rep. 4, A-22)

Pharmaceutical Costs H-110.987

1. Our AMA encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.
2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.
3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.
4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
7. Our AMA supports legislation to shorten the exclusivity period for biologics.
8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
10. Our AMA supports:
    a. drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by 10 percent or more each year or per course of treatment and provide justification for the price increase;

b. legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and
c. the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of 10 percent or more each year or per course of treatment.

11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.
12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.
13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation. (CMS Rep. 2, I-15; Reaffirmed in lieu of: Res. 817, I-16; Appended: Res. 201, A-17; Reaffirmed in lieu of: Res. 207, A-17; Modified: Speakers Rep. 01, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Appended: BOT Rep. 14, A-19; Reaffirmed: Res. 105, A-19; Appended: Res. 113, I-21; Reaffirmed in lieu of: Res. 810, I-22; Reaffirmed: Res. 801, I-23; Reaffirmed: Res. 801, I-23; Reaffirmed: CMS Rep. 04, I-24; Reaffirmed: CMS Rep. 06, A-25)

Incorporating Value into Pharmaceutical Pricing H-110.986

1. Our American Medical Association supports value-based pricing programs, initiatives and mechanisms for pharmaceuticals that are guided by the following principles:
   a. value-based prices of pharmaceuticals should be determined by objective, independent entities;
   b. value-based prices of pharmaceuticals should be evidence-based and be the result of valid and reliable inputs and data that incorporate rigorous scientific methods, including clinical trials, clinical data registries, comparative effectiveness research, and robust outcome measures that capture short- and long-term clinical outcomes;
   c. processes to determine value-based prices of pharmaceuticals must be transparent, easily accessible to physicians and patients, and provide practicing physicians and researchers a central and significant role;
   d. processes to determine value-based prices of pharmaceuticals should limit administrative burdens on physicians and patients;
   e. processes to determine value-based prices of pharmaceuticals should incorporate affordability criteria to help assure patient affordability as well as limit system-wide budgetary impact; and
   f. value-based pricing of pharmaceuticals should allow for patient variation and physician discretion.

2. Our AMA supports the inclusion of the cost of alternatives and cost-effectiveness analysis in comparative effectiveness research.
3. Our AMA supports direct purchasing of pharmaceuticals used to treat or cure diseases that pose unique public health threats, including hepatitis C, in which lower drug prices are assured in exchange for a guaranteed market size. (CMS Rep. 05, I-16; Reaffirmed in lieu of: Res. 207, A-17; Reaffirmed: CMS-CSAPH Rep. 01, A-17; Reaffirmed: CMS Rep. 07, A-18; Reaffirmed: CSAPH Rep. 2, I-19; Reaffirmed: CMS Rep. 4, I-19; Reaffirmed: CMS Rep. 6, I-20; Reaffirmed: Res. 113, A-23)

Prescription Drug Prices and Medicare D-330.954

1. Our American Medical Association will support federal legislation which gives the Secretary of the Department of Health and Human Services the authority to negotiate contracts with manufacturers of covered Part D drugs.
2. Our AMA will work toward eliminating Medicare prohibition on drug price negotiation.

3. Our AMA will prioritize its support for the Centers for Medicare & Medicaid Services to negotiate pharmaceutical pricing for all applicable medications covered by CMS. (Res. 211, A-04; Reaffirmation I-04; Reaffirmed in lieu of Res. 201, I-11; Appended: Res. 206, I-14; Reaffirmed: CMS Rep. 2, I-15; Appended: Res. 203, A-17; Reaffirmed: CMS Rep. 4, I-19; Reaffirmed: CMS Rep. 3, I-20; Reaffirmed: Res. 113, I-21; Reaffirmed: CMS Rep. 4, A-22; Reaffirmed in lieu of: Res. 810, I-22)

Inappropriate Actions by Pharmacies and Pharmacy Benefit Managers D-120.988
Our AMA, in cooperation with pharmacy benefit managers, pharmacy companies, and other drug retailing organizations, shall develop model procedures that physicians may use when prescribing off-formulary pharmaceuticals that are medically indicated and that these procedures be in compliance with the Health Insurance and Portability and Accountability Act of 1996. (Res. 528, A-02; Reaffirmation I-04; Reaffirmation A-06; Reaffirmed: CSAPH Rep. 01, A-16)

Evaluating Actions by Pharmacy Benefit Manager and Payer Policies on Patient Care D-120.934
1. Our American Medical Association will take steps to implement AMA Policies H-120.947 and D-35.981 that prescriptions must be filled as ordered by physicians or other duly authorized/licensed persons, including the quantity ordered.
2. Our AMA will work with pharmacy benefit managers, payers, relevant pharmacy associations, and stakeholders to: (a) identify the impact on patients of policies that restrict prescriptions to ensure access to care and urge that these policies receive the same notice and public comment as any other significant policy affecting the practice of pharmacy and medicine; and (b) prohibit pharmacy actions that are unilateral medical decisions.
3. Our AMA will report back at the 2018 Annual Meeting on actions taken to preserve the purview of physicians in prescription origination. (Res. 233, I-17; Reaffirmed: CMS Rep. 05, A-23)

REPORT 8 OF THE COUNCIL ON MEDICAL SERVICE (A-26)
Rural Health Transformation Program Update & Workforce Challenges

EXECUTIVE SUMMARY

As a follow-up to CMS Report 3-I-25, Payment Models to Sustain Rural Hospitals, the Council initiated this report to provide an update on the Rural Health Transformation (RHT) program and discuss workforce challenges faced by physicians in rural settings.

In an attempt to address funding concerns in rural settings resulting from the disproportional impact of cuts to Medicare, Medicaid, and the Affordable Care Act in H.R. 1, a one-time $50 billion RHT program was created. Three-quarters of funding will be distributed across five years, based on state applications, Centers for Medicare & Medicaid Services (CMS)-evaluated state need, and CMS-scoring of state initiatives and policies. The other one-quarter of funding will be distributed based on state policy and application alignment with the administration's stated goals and agenda. While the RHT program is a significant investment in rural health, it remains to be seen if the program is able to not only make up for deficits but support improvements for rural Americans. In addition to reviewing information on the RHT program, the Council reviewed information related to workforce challenges that are faced by rural physicians. Rural communities face significant challenges in both attracting and retaining physicians. Issues such as a lack of infrastructure, complicated certification/training opportunities, and physician burnout significantly increase the challenges faced in rural communities. Further, international medical graduates and rural-born or rural-trained medical students have been shown to be more likely to practice in rural settings, and thus programs to support and incentivize these physicians towards rural settings could bolster the rural physician workforce.

Based on its review of the RHT program and rural workforce issues, the Council recommends the adoption of four new policies. First, policy to closely monitor and educate physicians and legislators regarding the RHT program and similar initiatives. Second, policy to support the development and funding of programs designed to both implement and expand telehealth in rural settings. Third, policy to support efforts to ensure that physicians practicing in rural settings have access to continuing medical education and professional development requirements. Fourth, policy to support the expansion of programs designed to support or define physician shortage areas to include specialties necessary for the functioning of a rural medical practice or hospital. Finally, the Council recommends the reaffirmations of Policy H-465.994, which outlines efforts to support rural health solutions, Policy D-200.980, which details strategies to bolster the physician workforce in underserved areas, and Policy H-465.988, which focuses on supporting the physician workforce through education and practice-based solutions.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 8-A-26

Subject: Rural Health Transformation Program Update & Workforce Challenges

Presented by: Betty Chu, MD, MBA, Chair

Referred to: Reference Committee A

As a follow-up to CMS Report 3-I-25, Payment Models to Sustain Rural Hospitals, the Council on Medical Service initiated this report which provides an update on the federal Rural Health Transformation (RHT) program and discusses workforce recruitment and retention in rural settings. Further, this report reviews relevant American Medical Association (AMA) policy and offers recommendations to support the physician workforce in rural settings.

Given the complexity of rural health, the Council will continue to monitor and, as appropriate, initiate future reports on aspects of rural health which may include topics such as scope of practice, federal designation, Medicare Advantage, alternative payment models, immigration pathways for physicians intending to practice in rural settings, and/or educational pathways to bolster the rural physician workforce.

BACKGROUND

While the vast majority of land in the United States (U.S.) is considered rural, only 20 percent of Americans live in these areas.[1] Vermont has the highest percentage of rural residents, with over 66 percent living in rural areas while California has the lowest percentage of rural residents, with just under six percent of the state residing in rural areas.[1,2] Rural communities tend to have older residents with higher rates of chronic illness, lower rates of adequate health insurance coverage, and less access to health care. Specifically, rural Americans have higher rates of heart disease, cancer, stroke, unintentional injury, suicide, maternal and infant mortality, and drug overdose mortality than non-rural Americans.[1,2] These issues are exacerbated by the fact that 80 percent of rural Americans live in communities that are considered medically underserved.[2] Rural communities face a number of demographic, environmental, economic, and social factors that often result in residents facing significant barriers to receiving health care.[1,2] For example, rural physicians/practices often do not receive adequate payment to sustain care, struggle to maintain or qualify for governmental support, lack the infrastructure to support potential solutions, and struggle to recruit and retain an adequate health care workforce.[1,2] Additional details on the state of rural health can be found in CMS Report 9-A-21, Addressing Payment and Delivery in Rural Hospitals, CMS Report 9-A-23, Federally Qualified Health Centers and Rural Health, and CMS Report 3-I-25, Payment Models to Sustain Rural Hospitals.

In rural settings, hospitals and medical practices face a unique challenge in that payments often do not cover the actual cost of care. Some federal programs do bolster Medicare payment rates to offset a portion of the discrepancy. However, these programs are primarily focused on hospitals that meet specific criteria, meaning that physician practices and non-designated hospitals are not eligible to receive these additional funds.[3] Moreover, even for those hospitals that are able to receive special designation, the increased Medicare payment rates are often not enough to cover the deficits from other payers.[3] Medicare Advantage (MA) plans have proven to be particularly

© 2026 American Medical Association. All rights reserved.

problematic for those practicing in rural settings as protections found in traditional Medicare do not carry over to MA plans and issues with payment can be even worse than with other payers.[4,5] Importantly, Medicaid also makes up a relatively significant portion of the rural payer mix, with 41 states adopting some kind of Medicaid expansion program, decreasing the number of uninsured rural patients. To assist in mitigating the cost discrepancies, Medicaid provides supplemental payments to match Medicare payment rates.[6] However, this is not available in all practice settings nor enough to cover all deficits.[6] Additionally, these deficits are often exacerbated by uninsured or underinsured patients. More detailed information on rural payment and payer mix can be found in CMS Report 6-I-23 and CMS Report 3-I-25.

As previously mentioned, rural Americans are more likely than their urban or suburban counterparts to lack adequate health insurance coverage, meaning that rural providers are often faced with a greater amount of uncompensated care.[7] While this has been mitigated in many states that have chosen to implement Medicaid expansion, which with the inception of the Affordable Care Act (ACA) and after legal battles, allowed states to voluntarily expand the populations that qualify for Medicaid access. In states that chose to expand, the rates of uninsured individuals dropped sharply, with some research demonstrating nearly 15 percent lower rates of uninsured residents when compared to states that did not choose to expand Medicaid.[7] The impact on rural residents was even stronger as nearly one quarter of rural adults and almost half of rural children are enrolled in their state Medicaid program.[7] However, the recently passed H.R. 1 (or the "One Big Beautiful Bill Act") is anticipated to have a negative impact on Medicaid coverage eligibility, including expansion access, as well as other types of insurance and payment rates.[7,8]

Experts anticipate that over 10 million Americans will lose health insurance coverage as a result of the changes in H.R. 1 and that, across payer type, beneficiaries will face significant increases in premium costs.[8,9] It is projected that in a majority of states, this premium increase will be more significant for rural Americans. Specifically, analyses have shown that on top of the 18 percent increase for all private health plans, rural Americans will face a 107 percent premium increase compared to the 89 percent premium increase for urban residents.[8,9] Additionally, rural residents who utilize the ACA Health Insurance Marketplace Exchange ("Marketplace") to secure insurance coverage are anticipated to experience premium increases that are 28 percent higher than urban residents, primarily driven by the lack of extension of previously available tax credits designed to help make coverage affordable.[8,9] This is problematic as rural communities rely more heavily on affordable Marketplace plans to obtain health insurance.[8,9] Further, due to additional challenges around rural employment and coverage determination logistics in rural settings, it is anticipated that the Medicaid work requirements outlined in H.R. 1 will disproportionately impact rural communities.[9,10] According to the Centers for Medicare & Medicaid Services (CMS), there have not been actual cuts to Medicaid or other public coverage options, but rather that these expenditures were "slowed" and that any reduction in funding is focused on reductions of waste and/or fraud. However, rural health leaders and researchers have explained that these policy changes have already resulted in funding reductions negatively impacting rural health facilities and will likely continue to disproportionately impact rural providers and the communities they serve.[11] Experts, providers, and patients have voiced significant concern that these coverage losses have the potential to significantly worsen the landscape of rural health through increased financial stress on vulnerable rural hospitals and practices.

RURAL HEALTH TRANSFORMATION (RHT) PROGRAM UPDATE

In an attempt to address concerns around funding reductions, H.R. 1 included a one-time $50 billion program designated for rural health transformation.[10,12] While the RHT program is clearly a significant investment in rural health, it is anticipated that it will not make up for the projected

losses to rural hospitals and providers as a result of policy changes due to H.R. 1. It is projected that changes made to the ACA, Medicare, and Medicaid will result in rural hospitals loosing $137 billion over the next 10 years, meaning that even with the rural health fund, rural hospitals are anticipated to lose $87 billion over the next decade due to patients who will lose coverage through Medicare, Medicaid, and/or Marketplace plan changes.[10,12,13] The deficit created by the cuts resulting from the passage of H.R. 1, and other policy decisions such as the expiration of the enhanced ACA tax credits, is likely to cause financial problems for rural hospitals and other health care providers beyond what is potentially solved by the dollars dispersed through the RHT program.[10,13]

The RHT program has been launched, and all 50 states have applications that have been preliminarily approved by CMS. Three-quarters of the funds in this program are designated to be divided between all states, with half distributed equally across states that have approved applications and a quarter allocated based on CMS-evaluated state need.[10,12,13] The final one quarter of funding, $12.5 billion, will be distributed based on CMS scoring of state policy, state initiatives, and other factors yet to be released.[13,14] CMS has indicated that $8 billion of these funds, distributed in the first few years of the program, will be based on a qualitative review of the proposed initiatives in the RHT program applications. Thirty percent of these funds will be distributed later based on state policies, or progress towards state policies, that align with the "Make America Healthy Again" (MAHA) agenda.[13,14] The final $750 million will be distributed based on other factors that have not yet been announced but may include the quality of Medicaid data reporting or dual eligible integrated care plans.[12,13,14,15] While the actual formula has not been released, the notice of funding for this program outlines discretion for CMS to award states higher levels of funding if policies align with the federal administration's priorities. As a result, some states are pledging to implement policies that align with MAHA stated goals in an attempt to garner a greater amount of the discretionary portion of the RHT program funds. Of concern, a number of RHT program applications include specific reference for movement toward licensure expansion for non-physician practitioners.[14] For example, some applications expand the ability of pharmacists to test and treat and/or allow for non-physician advanced practice providers to practice independently. While it is likely that these programs could have some positive impacts on the communities they serve, it remains important that the provision of medical services occur within the purview of a physician-led team.

At the end of 2025, CMS announced initial RHT program awards for Fiscal Year 2026 (FY26). State awards ranged from $154,249,106 for Connecticut to $281,319,361 for Texas. A full list of state funding awards for FY26 can be found in Appendix A. The assessment of more subjective elements of applications, such as state alignment with the "MAHA agenda" or the "quality" of reporting, has not been made public. As a result, the full picture of actual funding for states is yet to be seen. Should awards be evenly distributed across states, each would receive $750 million over five years. However, as was evidenced by the FY26 funding announcement, experts anticipate there will be significant variance in awards.[13,14] Researchers project that actual awards could range from $550 million in Rhode Island to over $1 billion in Texas. This discrepancy could be further exacerbated by the discretionary $12.5 billion portion of the fund that will be determined by CMS assessment of state policy and legislation.[12,13,14,15] It is anticipated that Texas, California, New Mexico, Montana, and Alaska will receive the largest portions of the needs-based funding. Since rural population numbers are not fully taken into account, payment per rural resident is anticipated to vary greatly across states.[12,13,14,16] For example, although it is anticipated to receive a high proportion of funding, Texas is projected to receive only $240 per rural resident while Rhode Island is projected to receive over $22,000 per rural resident -- both of which are significant deviations from the nationwide projected average of $590 per rural resident.[13,14,15]

In addition to potential significant funding discrepancies between states, the ambiguity of the fund allocation may mean that rural health care providers may not receive the full allocated funds.[10,12,13,14] For example, states are given the ability to direct funding towards urban and suburban settings with the approval of CMS.[10,12,13,14] Further, the administration has outlined intentions to "claw back" funding dispersed via the RHT program should states not successfully implement the intended program(s) in the allotted timeline. The program grants state a limited timeline, at most five years, to implement the initiatives outlined in applications. States and national rural health advocacy organizations have voiced significant concerns that this timeline is not reasonable and, as a result, funding that is given to many states may end up being taken back by the federal government.[17] Not only do states have a limited timeline to implement these policies, the program's notice of funding outlined a potential risk to state funding beyond the first year if states do not demonstrate outcomes deemed sufficient by CMS. For many states this means that new policies will need to be implemented that align with stated MAHA/administration goals and should these policies not be implemented, funding beyond the first year may be limited or reduced. Further, the funding from this program is limited to the next five years, but the reductions in Medicare, Medicaid, and ACA funding or coverage are ongoing. As a result, after the RHT program is finished, the impacts of the cuts are likely to remain and rural health providers/facilities will be without additional support to mitigate the cuts.[18] While the RHT program will likely help mitigate some of the funding reductions faced in rural settings, the level of compensation may be inadequate and the potential for politicization of available funds may result in many rural residents loosing access to crucial health care.

RURAL WORKFORCE CHALLENGES

As shrinking funding and payment has stretched hospitals and health care providers across the country, the United States is facing a growing physician shortage that it is exacerbated in rural communities. Specifically, research suggests that in the next decade rural communities may face a 23 percent decline in physicians compared to just nine percent in non-rural settings.[19] Further, studies show that rural communities have, on average, 236 fewer physicians per 100,000 people when compared to urban areas.[20] These shortages are not due to any single factor, but rather a combination of hospital/practice closures, lack of new physicians, practice challenges, and issues with infrastructure. Further, despite programs designed to support rural hospitals, many are struggling to stay open as challenges continue to grow.[22,23] In recent years, the number of rural hospitals operating at a deficit has grown nearly seven percent.[22] Today, half of all rural hospitals are operating at a deficit. In some states, such as Kansas and Wyoming, the problem is even worse with over 80 percent of rural hospitals operating in a deficit.[22,23] Even among rural hospitals that have chosen to affiliate with larger health systems, 42 percent are operating at a deficit.[22,23,24] More than 140 rural hospitals have closed since 2010 and a third of the remaining rural hospitals are financially vulnerable, placing access to emergency and inpatient care at risk for millions of rural residents. This is leading to many rural hospitals being forced to close or reduce services. For example, between 2011 and 2021, nearly 25 percent of all rural obstetric and gynecologic units were closed and access to chemotherapy decreased at a similar rate.[25,26] While not exclusively responsible, these hospital closures have increased the rural physician shortage.

Infrastructure

Beyond hospital closures, the chronic lack of investment in rural infrastructure has resulted in many rural communities lacking basic infrastructure necessary to support community growth or maintain an adequate physician workforce. These communities often lack resources such as updated roads, utilities, broadband access, schools, and sanitation necessary to attract and retain businesses and bolster economies.[27] As infrastructure becomes less maintained, businesses close or

reduce employee hours, and as a result, communities shrink in size. The issue is often cyclical; a community economy is not enough to sustain a physician and/or hospital, but when a physician or hospital leaves a community, it hurts the economy as well.[28,29] This remains true for physician practices as evidence shows that each physician supports, on average, 17.1 jobs and generates approximately $3.2 million in economic output across their full career.[28] Across physician offices and hospitals, residents of rural census tracts, rural residents live three to four times further away from hospitals than those in urban or suburban areas.[30] When patients do travel these greater distances, they often encounter roads that are difficult to pass due to poor upkeep, difficult terrain, and/or dangerous weather. Additionally, poor system infrastructure, like faulty sanitation systems or lack of clean water, can lead to poorer health outcomes for rural residents.[27] For example, for some towns in Mississippi, estimates show that nearly 40 percent of children have chronic stomach problems due to parasitic infections linked to raw sewage in drinking water from failing infrastructure.[31]

Not only do these issues of infrastructure directly impact patient health and health outcomes, but they also indirectly impact physician workforce. Communities that do not have adequate infrastructure are less likely to be attractive for new physicians and can be detrimental in retaining the existing physician workforce.[27,32,33] Additionally, the lack of infrastructure often makes potential solutions, to mitigate the rural health crisis nearly impossible to implement. For example, telehealth has promise to bolster rural health care networks; however, nearly a quarter of rural Americans lack access to high-speed internet, compared to only 1.5 percent of urban Americans.[27] Further, rural practices and hospitals may be less likely to be able to offer competitive pay and/or benefits exacerbating challenges to both recruit and retain workforce.[27,31,32,34]

Physician Recruitment and Retention

Data suggest that the vast majority of medical students and trainees do not intend to practice in rural communities.[35] While research has demonstrated that students who are from a rural community are more likely to return to a rural setting to practice, the number of rural medical students has been declining. Estimates show that less than five percent of medical students report they are from a rural background, meaning that this cannot be the single solution to bolstering the rural physician workforce.[35] Along with rural-born trainees, international medical graduates (IMGs) can be an important element in the rural physician workforce. In addition to obtaining the appropriate visa to practice in the United States, these physicians must obtain an Education Commission on Foreign Medical Graduates certification, pass appropriate exams, and complete their residency in the United States. IMGs are essential to meeting the health care needs of Americans across the country, but especially in underserved and rural communities.[36] Research shows that IMGs make up nearly a quarter of all practicing physicians in America and represent a disproportionate amount of physicians in rural and underserved settings.[37]

While states vary widely in proportions of practicing IMGs, likely due to differing visa legislation and regulation, nationwide estimates continually demonstrate that IMGs are vital to ensuring that rural Americans have access to physicians.[38] This became a greater challenge for many hiring facilities with the implementation of a new H-1B visa fee and changes to the visa lottery process. Historically, the visa lottery process was randomized, but the Department of Homeland Security (DHS) recently implemented a weighting system based on higher skill and pay positions. Further, a $100,000 fee is now attached to all H-1B petitions, which for many rural facilities is an insurmountable and/or unsustainable figure. A number of health care advocacy organizations, including the AMA, have urged DHS and the Trump administration to implement a fee exemption for health care professionals. In March 2026, a bipartisan bill (H.R. 7961; H-1Bs for Physicians and the Healthcare Workforce Act) was introduced and if passed would exempt physicians and

health care professionals from the aforementioned $100,000 filing fee attached to new H-1B petitions. However, at the time that this report was written, this legislation has not passed Congress and no such exception has been put in place.[38,39]

With physician burnout rate at a high across the nation, it is no surprise that rural physicians also face burnout.[36] Rural physicians are frequently the only, or one of the few physicians in their area and as a result they are often asked to do more with fewer resources.[27,40] Heavier clinical workloads and professional isolation in rural practice environments may contribute to physician burnout and can make recruitment and retention more difficult for rural communities.[27,40] Further, physicians practicing in rural areas may find it more challenging to complete continuing professional development (CPD) requirements.[41] While neither physician burnout nor the challenges around certification and CPD requirements is solely responsible for rural physician shortages, each contributes to the challenges that rural health employers have in both recruiting and retaining physicians.

POTENTIAL SOLUTIONS

While there is no single solution that will solve the health care problems faced by rural communities, there are some actions that could be taken to work toward improvement. One promising element toward progress is the support and expansion of telehealth services.[42] Telehealth and associated remote patient care could be a lifesaving stopgap while the larger access issues are being addressed.[41,42] Telehealth has been associated not only with better patient outcomes, both in health and satisfaction, but also with shorter wait times and reductions in delays of care and diagnosis/treatment.[44] Research shows that patients treated by rural hospitals utilizing telehealth are more likely to receive stroke care within the crucial "golden hour" for treatment. Additionally, physician satisfaction is higher and physicians, particularly specialists, are less likely to report burnout when their practice utilizes telehealth.[42,44] However, for telehealth implementation to be successful in rural areas, there would need to be an increase in access to reliable high-speed broadband in rural communities.[43] Another challenge related to the implementation of telehealth is the cost for hospitals and practices. Estimates for initial startup costs in rural hospitals range from $17,000 to $50,000 with annual subscription fees over $50,000. For many rural hospitals and practices, this is an insurmountable amount of money.[42] While many of the applications submitted to the RHT program include an element of telehealth, it is yet to be seen if the funds distributed by the program will be sufficient to implement and/or sustain telehealth programs in these communities.[14]

Experts agree that in addition to encouraging rural-born medical students to return to rural practice as physicians, it is equally important to expose non-rural-born medical students to these communities. For example, the University of Washington School of Medicine's Rural Underserved Opportunities Program allows medical students to rotate through rural care settings in five states during their first two years of medical education. This program has shown that their students who train in rural sites are twice as likely to return to practice as physicians in rural areas.[45] Other programs, such as the Family Medicine Rural Residency Program, can be found across the country and are designed to expose physicians to a variety of rural practice settings during their residency. Specifically, this program includes both inpatient and outpatient rotations at a hospital which is the only one in the county.[46] These programs, sometimes referred to as "Grow Your Own Doctor" programs, can be instrumental in ensuring that medical students and residents are more likely to return to rural medical practice for their career.

Further, loan forgiveness programs continue to provide an incentive for physicians to practice in rural communities.[43,47] The Health Resources and Services Administration (HRSA) offers a number

of funding programs designed to attract new physicians to rural areas. For example, the State Loan Repayment Program and the National Health Service Corps (NHSC) both provide loan repayment and scholarships to physicians providing primary care in provider shortage areas. The Indian Health Service (IHS) Loan Repayment Program offers similar benefits to physicians/trainees who commit to practicing in IHS settings. Further, many states allocate funds designed to expand these programs and/or provide additional incentives to physicians.[48] Research shows that loan repayment/forgiveness-based retention programs are generally successful for health care workers.[49] For example, as many as two-thirds of physicians who committed to working in these communities as a result of a loan repayment or forgiveness program are still practicing in the community more than eight years later.[50] However, some research suggests that if a physician's overall loan amount is too high, the repayment or forgiveness programs may not be as attractive. In total, experts proport these types of programs as a promising aspect to mitigate the rural physician shortage, but not the single solution.[51]

To facilitate the success of these programs, it also is essential that there are a sufficient number of residency slots in rural areas. Notably, the Rural Residency Planning and Development Program has introduced over 500 new residency slots in rural areas, allowing repayment programs to have the space to function and more physicians to be trained in rural settings.[52] Beyond loan-based programs, general recruitment strategies have been shown to be successful in recruiting physicians to rural communities. For example, programs such as housing assistance, relocation support, flexible scheduling, and mentorship/peer support can be impactful in both attracting and retaining physicians. Specifically, experts posit that providing rural physicians with creative staffing solutions can not only attract physicians but support them in remaining in rural communities.[53] Locum tenens programs, or programs that fill open positions via temporary contract, can provide a stop-gap measure to ensure that rural hospitals have the staffing necessary to remain open.[53]

As previously mentioned, IMGs are an essential component to reducing physician shortages. However, in order for these physicians to practice in the United States, they must be able to secure the appropriate visa and/or waivers.[54] Often this means that physicians must secure a J-1 or H-1 visa and/or a Conrad 30 waiver. Research demonstrates that more IMGs practice in states with more relaxed Conrad 30 requirements, such as an expanded visa cap. This can be incredibly beneficial in reducing the physician shortage faced in rural communities as IMGs are also more likely to practice in rural settings.[36,54] Further, studies show no evidence of U.S.-trained physicians being "crowded out" of jobs as little to no changes in the proportion of domestically trained physicians were found.[36] This research seems to suggest that the expansion of slots for these visa and waiver programs may allow for IMGs to help meet the health needs of rural communities. Further, it is important to not only attract physicians to rural settings, but to support those who have chosen to practice there. Specifically, to ensure that physicians are able to meet licensure and CPD requirements, programs like the Interstate Medical Licensure Compact are working to streamline licensure.[55,56] This program ensures that physicians are able to expedite licensure requirements in order to practice in underserved areas. These kinds of programs are helpful in ensuring that physicians can also be available to practice telehealth and promote the aforementioned benefits of those programs.[55,56]

To further support and attract rural-practicing physicians the federal government created the Health Professional Shortage Area (HPSA) designation and assigned particular benefits. While HPSAs are not exclusive to rural settings, there is frequent overlap. HPSAs are a geographic, population, and/or facility that has a shortage of primary, dental, or mental health care providers.[57] Geographic HPSAs, most common for rural settings, are areas where the entire population is experiencing a shortage of providers. Population HPSAs are defined as a shortage of providers for a specific population in a geographic area. For example, unhoused or migrant farm workers in a set area.

Facility defined HPSAs include set facilities that serve a population or geographic area facing a provider shortage.[57] While not an exhaustive list, Federally Qualified Health Centers, Indian Health Facilities/Hospitals, and Rural Health Clinics often meet the criteria to be defined as a facility HPSA. Currently, there are just under 8,500 primary care HPSA designations across type, which is inclusive of over 92 million people.[58] Physicians practicing in HPSAs are able to access a number of incentives, the most significant of these incentives are related to scholarships/loans, immigration, and payment bonuses. Specifically, physicians are able to access NHSC scholarships and loan repayment, the J-1 visa waiver program which expedites the immigration process, and, assuming the physician serves Medicare beneficiaries, a quarterly Medicare bonus payment. While research has not demonstrated an improvement in physician workforce across all types of HPSAs, it has shown that this designation seems to make significant improvements in rural settings, demonstrating more favorable patient-physician ratios.[58,59] Specifically, after a HPSA designation significant increases in primary care physicians were shown resulting in, rural HPSAs having an average of 5.4 more primary care physicians than non-HPSA rural settings.[59] While primary care is essential to overall health, it is also important that rural communities have access to specialty physicians when the need arises. Further, for a rural hospital to remain fully functional, there must be an ability to attract and retain physicians beyond primary care. The success of the HPSA designation in rural primary care could indicate that an expansion to other specialties may similarly bolster the rural physician workforce. While none of these solutions alone will solve the health care problems faced by rural communities, the solutions mentioned above have been shown to have an impact and are specific, practical, and realistically achievable.

AMA POLICY AND ADVOCACY

The AMA has an extensive body of policy related to rural health, with some policies specifically focused on physician workforce. Broadly, Policies H-465.997 and H-465.978 outline the AMA's stance on rural health disparities and efforts to work toward improvement in access and quality of rural health care both independently and in conjunction with relevant state medical associations and national medical specialty societies. Policy H-465.994 outlines AMA efforts to plan and promote improvements in rural health through private and public support. Beyond policies designed to generally promote rural health improvements there is a large group of policies dedicated to bolstering the rural physician workforce. Policies, H-465.988, H-200.972, and H-300.983 outline efforts centered in education to not only encourage physicians to consider rural care but also to ensure they are able to continue their training once practicing in these settings. Policies H-200.945, D-465.997, and H-330.864 address the physician workforce shortage in general, but also specific strategies to recruit and retain physicians in rural areas. Policies H-465.980, H-465.994, H-420.946, and H-350.937 outline strategies to advocate for better access to rural health care generally and with a specific focus on OB/GYN care through the implementation of networks, and focusing on minorities in rural communities. Further, Policy H-465.981 outlines AMA efforts to support rural physician practices and to begin to address limits on HPSA benefits, supports the expansion of the associated Medicare payment bonus to rural counties that meet a set poverty threshold beyond formal HPSA designation.

While telehealth is mentioned in a number of the aforementioned policies related to rural health, Policy H-478.980 specifically outlines AMA advocacy to support access to broadband services in rural communities. Policy H-480.937 outlines the AMA's stance and advocacy efforts related to the implementation of telehealth and related health technologies. In addition to telehealth, the AMA has policy, D-200.982, related to the implementation of educational programs designed to create and support pathways for students who intend to practice in rural settings. The AMA has been active in this area and successfully advocated for extensions of telehealth flexibilities that were initially implemented during the COVID-19 pandemic.[43]

To address physician workforce, Policy H-200.949 details support for physician and trainee incentives to practice in underserved rural areas while Policy H-200.954 outlines AMA efforts to work to alleviate the overall physician shortage. The AMA policy is clear in support of expanded residency slots. Specifically, aforenoted Policies H-200.949 and H-200.954 outline support within the context of the physician workforce while Policies H-310.943 and D-305.967 focus more specifically on the residency program structure and sustainability. Finally, Policies H-255.965, H-255.961, and D-255.969 all outline AMA advocacy and support for IMGs and visa processes for international physicians to be able to practice in the United States. Related, the AMA has voiced supported for recently introduced legislation that would remove the increased J-1 visa fee. Importantly, the AMA also has a robust body of policy related to prevention of scope creep and the promotion of care within a physician-led team. Specifically, Policies H-35.966 and D-160.995 call out protection of physician licensure and medical care within a physician-led team.

DISCUSSION

Rural Americans deserve high-quality and readily accessible health care; however, due to a complex combination of factors, including workforce challenges, rural access to care is in crisis. The RHT program was designed as an infusion of funds into rural settings but comes with a number of challenges and restrictions that may limit the positive impact of the program. Further, the dollars designated for the RHT program may not offset the projected losses that rural providers face due to cuts to Medicare, Medicaid, and the ACA. As a result, hospitals and rural physicians have voiced significant concern regarding their ability to continue to provide care for their rural patients. To address these concerns, the Council recommends the adoption of new policy that supports ongoing AMA efforts to monitor the RHT program and similar initiative to educate physicians and legislators on the associated opportunities and challenges. While the AMA has supported and developed educational materials, Council reports, and, informational sessions on the RHT, the adoption of this policy will enshrine theses these efforts and ensure their continuance. Further, the Council recommends the reaffirmation of Policy H-465.994, which outlines efforts to work towards improvements in rural health. Specifically, this policy outlines efforts to improve funding, develop evidence-based action plans, and to support innovative care models.

Rural communities also face significant challenges in recruiting and retaining a physician workforce large enough to meet population needs. The cause of workforce challenges is not monolithic, as many factors including a lack of infrastructure investment and certification/training opportunities, complicate physician workforce in rural communities. Many of the solutions that could contribute to remedying this problem are also complicated by the intricate nature of the issue. For example, while telehealth has been promoted as a part of the solution to improving access to physicians in rural communities, rural communities are less likely to have access to the reliable broadband necessary for successful telehealth implementation. Additionally, rural practices and hospitals are less likely to have the necessary capital to establish or continue these programs. In order to address this, the Council recommends the adoption of new policy supporting funding for telehealth implementation and improvement in rural settings. Further, the Council notes recently reaffirmed Policy H-478.980 outlines AMA advocacy for reliable broadband in rural settings to address health disparities.

Internationally trained physicians could also serve to improve rural health workforces, yet the solution faces barriers to success. Although IMG physicians have been shown to be more likely to practice in rural settings, the complicated immigration and certification process in the U.S. can introduce barriers to this solution. Another promising potential solution is educational pathways that promote rural health practice. Through medical school and residency experiences in rural communities, physicians are introduced to the benefits of practice in these settings and are more

likely to return. Similarly, programs that help to pay off or forgive student loans have shown to be successful in attracting and retaining talent. In order to both support IMG's ability to practice in the rural United States and to promote U.S.-trained physicians in rural practice, the Council recommends the reaffirmation of Policy D-200.980 which outlines support for scholarship, loan repayment or forgiveness programs, and the expansion of visas for IMGs. Specifically, this policy supports collaborative efforts to secure funding and advocate for the retention and expansion of relevant programs such as the NHSCs and the Conrad 30 visa. Further, the Council recommends the reaffirmation of Policy H-465.988 which outlines educational strategies to attract and retain physicians to rural settings. This policy details efforts to ensure that appropriate training slots are available for medical students and residents, that education is delivered in a manner that is accessible, and that funding is maintained or expanded to secure these program efforts.

In order to ensure that physicians who choose to practice in rural settings are able to continue, opportunities to meet licensure and CPD requirements in rural settings must be enhanced. Therefore, the Council recommends new policy designed to ensure that practicing rural physicians have accessible opportunities to meet continuing education and CPD requirements. Finally, the promise shown by both defining and incentivizing rural practice via the HPSA in bolstering the rural primary care physician workforce could indicate an area of advocacy to expand the success to physician specialties. Thus, the Council recommends the adoption of new policy that indicates AMA support for the expansion of programs that define and support physician shortage areas to include specialties in an effort to ensure that rural medical practices and hospitals can attract the full spectrum of physicians necessary.

RECOMMENDATIONS

The Council on Medical Service recommends that the following recommendations be adopted and the remainder of the report be filed:

1. That our American Medical Association (AMA) monitor legislative and regulatory proposals related to the rural health transformation program or similar rural health initiatives to educate physicians and policymakers regarding the potential opportunities and challenges associated with such programs. (New HOD Policy)

2. That our AMA support the development of funding avenues designated to support costs associated with telehealth in rural hospitals and medical practices. (New HOD Policy)

3. That our AMA support the development and implementation of programs that ensure physicians practicing in rural settings have access to opportunities to meet continuing medical education and continuing professional development requirements. (New HOD Policy)

4. That our AMA encourage the expansion of programs designed to define physician shortage areas and support physicians working in these areas to include specialties necessary to the functioning of a rural medical practice or hospital. (New HOD Policy)

5. That our AMA reaffirm Policy H-465.994, which details efforts to support, promote, and innovate solutions to improve rural health. (Reaffirm HOD Policy)

6. That our AMA reaffirm Policy D-200.980, which outlines support for various strategies to bolster the physician workforce in underserved areas, including rural communities. (Reaffirm HOD Policy)

7. That our AMA reaffirm Policy H-465.988, which specifies strategies and efforts to improve the physician workforce that focus on education and practice solutions. (Reaffirm HOD Policy)

Fiscal Note: Minimal

Council on Medical Service Report 8-A-26
Rural Health Transformation Fund Update & Workforce Challenges
Policy Appendix

Improving Rural Health H-465.994

1. Our American Medical Association (AMA):
    a. supports continued and intensified efforts to develop and implement proposals for improving rural health care and public health,
    b. urges physicians practicing in rural areas to be actively involved in these efforts, and
    c. advocates widely publicizing AMA's policies and proposals for improving rural health care and public health to the profession, other concerned groups, and the public.
2. Our AMA will work with other entities and organizations interested in public health to:
    a. Encourage more research to identify the unique needs and models for delivering public health and health care services in rural communities.
    b. Identify and disseminate concrete examples of administrative leadership and funding structures that support and optimize local, community-based rural public health.
    c. Develop an actionable advocacy plan to positively impact local, community-based rural public health including but not limited to the development of rural public health networks, training of current and future rural physicians and public health professionals in core public health techniques and novel funding mechanisms to support public health initiatives that are led and managed by local public health authorities.
    d. Advocate for adequate and sustained funding for public health staffing and programs
3. Our American Medical Association will work with relevant stakeholders to develop a national strategy to eliminate rural cancer disparities in screening, treatment, and outcomes and achieve health equity in cancer outcomes across all geographic regions.
4. Our AMA calls for increased federal and state funding to support research on rural cancer disparities and equity in care, access, and outcomes and development of interventions to address those disparities.
5. Our AMA advocates for evidence-based collaborative models for innovative telementoring/ teleconsultation between health care systems, academic medical centers, and community physicians to improve access to cancer screening, diagnosis, treatment, rehabilitation, and patient services in rural areas. (Sub. Res. 72, I-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CEJA Rep. 06, A-18; Appended: Res. 433, A-19; Modified: CSAPH Rep. 2, A-22; Reaffirmed: CMS Rep. 09, A-23; Reaffirmed: Res. 724, A-23; Appended: Res. 919, I-24)

Educational Strategies for Meeting Rural Health Physician Shortage H-465.988

1. In light of the data available from the current literature as well as ongoing studies being conducted by staff, our American Medical Association (AMA) recommends that:
    a. Our AMA encourage medical schools and residency programs to develop educationally sound rural clinical preceptorships and rotations consistent with educational and training requirements, and to provide early and continuing exposure to those programs for medical students and residents.
    b. Our AMA encourage medical schools to develop educationally sound primary care residencies in smaller communities with the goal of educating and recruiting more rural physicians.
    c. Our AMA encourage state and county medical societies to support state legislative efforts toward developing scholarship and loan programs for future rural physicians.

d. Our AMA encourage state and county medical societies and local medical schools to develop outreach and recruitment programs in rural counties to attract promising high school and college students to medicine and the other health professions.
e. Our AMA urge continued federal and state legislative support for funding of Area Health Education Centers (AHECs) for rural and other underserved areas.
f. Our AMA continue to support full appropriation for the National Health Service Corps Scholarship Program, with the proviso that medical schools serving states with large rural underserved populations have a priority and significant voice in the selection of recipients for those scholarships.
g. Our AMA support full funding of the new federal National Health Service Corps loan repayment program.
h. Our AMA encourage continued legislative support of the research studies being conducted by the Rural Health Research Centers funded by the National Office of Rural Health in the Department of Health and Human Services.
i. Our AMA continue its research investigation into the impact of educational programs on the supply of rural physicians.
j. Our AMA continue to conduct research and monitor other progress in development of educational strategies for alleviating rural physician shortages.
k. Our AMA reaffirm its support for legislation making interest payments on student debt tax deductible.
l. Our AMA encourage state and county medical societies to develop programs to enhance work opportunities and social support systems for spouses of rural practitioners.

2. Our AMA will work with state and specialty societies, medical schools, teaching hospitals, the Accreditation Council for Graduate Medical Education (ACGME), the Centers for Medicare and Medicaid Services (CMS) and other interested stakeholders to identify, encourage and incentivize qualified rural physicians to serve as preceptors and volunteer faculty for rural rotations in residency.
3. Our AMA will:
    a. work with interested stakeholders to identify strategies to increase residency training opportunities in rural areas with a report back to the House of Delegates; and
    b. work with interested stakeholders to formulate an actionable plan of advocacy with the goal of increasing residency training in rural areas.
4. Our AMA will encourage ACGME review committees to consider adding exposure to rural medicine as appropriate, to encourage the development of rural program tracks in training programs and increase physician awareness of the conditions that pose challenges and lack of resources in rural areas.
5. Our AMA will encourage adding educational webinars, workshops and other didactics via remote learning formats to enhance the educational needs of smaller training programs. (CME Rep. C, I-90; Reaffirmation A-00; Reaffirmation A-01; Reaffirmation I-01; Reaffirmed: CME Rep. 1, I-08; Reaffirmed: CEJA Rep. 06, A-18; Appended: Res. 956, I-18; Appended: Res. 318, A-19; Modified: CME Rep. 3, I-21; Reaffirmation: I-22; Reaffirmed: BOT Rep. 11, A-23; Reaffirmed: Res. 215, I-24; Reaffirmed: BOT Rep. 07, I-24)

Rural Health Physician Workforce Disparities D-465.997
Our AMA will monitor the status and outcomes of the 2020 Census to assess the impact of physician supply and patient demand in rural communities. (CME Rep. 3, I-21)

Improving Rural Health H-465.994
1. Our American Medical Association:

   a. supports continued and intensified efforts to develop and implement proposals for improving rural health care and public health,
   b. urges physicians practicing in rural areas to be actively involved in these efforts, and
   c. advocates widely publicizing AMA's policies and proposals for improving rural health care and public health to the profession, other concerned groups, and the public.
2. Our AMA will work with other entities and organizations interested in public health to:
   a. Encourage more research to identify the unique needs and models for delivering public health and health care services in rural communities.
   b. Identify and disseminate concrete examples of administrative leadership and funding structures that support and optimize local, community-based rural public health.
   c. Develop an actionable advocacy plan to positively impact local, community-based rural public health including but not limited to the development of rural public health networks, training of current and future rural physicians and public health professionals in core public health techniques and novel funding mechanisms to support public health initiatives that are led and managed by local public health authorities.
   d. Advocate for adequate and sustained funding for public health staffing and programs
3. Our American Medical Association will work with relevant stakeholders to develop a national strategy to eliminate rural cancer disparities in screening, treatment, and outcomes and achieve health equity in cancer outcomes across all geographic regions.
4. Our AMA calls for increased federal and state funding to support research on rural cancer disparities and equity in care, access, and outcomes and development of interventions to address those disparities.
5. Our AMA advocates for evidence-based collaborative models for innovative telementoring/ teleconsultation between health care systems, academic medical centers, and community physicians to improve access to cancer screening, diagnosis, treatment, rehabilitation, and patient services in rural areas. (Sub. Res. 72, I-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CEJA Rep. 06, A-18; Appended: Res. 433, A-19; Modified: CSAPH Rep. 2, A-22; Reaffirmed: CMS Rep. 09, A-23; Reaffirmed: Res. 724, A-23; Appended: Res. 919, I-24)

Improving Healthcare of Minority Communities in Rural Areas H-350.937

1. Our AMA encourages health promotion, access to care, and disease prevention through educational efforts and publications specifically tailored to minority communities in rural areas.
2. Our AMA encourages enhanced understanding by federal, state and local governments of the unique health and health-related needs, including mental health, of minority communities in rural areas in an effort to improve their quality of life.
3. Our AMA encourages the collection of vital statistics and other relevant demographic data of minority communities in rural areas.
4. Our AMA will advise organizations of the importance of minority health in rural areas.
5. Our AMA will channel existing policy for telehealth to support improved broadband internet access in minority communities in rural areas to increase the availability of telemedicine where clinically appropriate.
6. Our AMA supports minority health in rural areas through programming, equity initiatives, and other representation efforts.
7. Our AMA encourages the development of strategies and mechanisms for communities to share resources and best practices to serve their rural minority populations. (Res. 433, A-24; Modified: CSAPH Rep. 07, A-25)

Addressing Equity in Telehealth and Health Technology H-480.937

1. Our American Medical Association recognizes access to broadband internet as a social determinant of health.
2. Our AMA encourages initiatives to measure and strengthen digital literacy, with appropriate education programs, and with an emphasis on programs designed with and for historically marginalized and minoritized populations.
3. Our AMA encourages telehealth solution and service providers to implement design functionality, content, user interface, and service access best practices with and for historically minoritized and marginalized communities, including addressing culture, language, technology accessibility, and digital literacy within these populations.
4. Our AMA supports efforts to design and to improve the usability of existing electronic health record (EHR) and telehealth technology, including voice-activated technology, with and for those with difficulty accessing technology, such as older adults, individuals with vision impairment and individuals with other mental or physical disabilities.
5. Our AMA encourages hospitals, health systems and health plans to invest in initiatives aimed at designing access to care via telehealth with and for historically marginalized and minoritized communities, including improving physician and non-physician provider diversity, offering training and technology support for equity-centered participatory design, and launching new and innovative outreach campaigns to inform and educate communities about telehealth.
6. Our AMA supports expanding physician practice eligibility for programs that assist qualifying health care entities, including physician practices, in purchasing necessary services and equipment in order to provide telehealth services to augment the broadband infrastructure for, and increase connected device use among historically marginalized, minoritized and underserved populations.
7. Our AMA supports efforts to ensure payers allow all contracted physicians to provide care via telehealth.
8. Our AMA opposes efforts by health plans to use cost-sharing as a means to incentivize or require the use of telehealth or in-person care or incentivize care from a separate or preferred telehealth network over the patient's current physicians.
9. Our AMA will advocate that physician payments should be fair and equitable, regardless of whether the service is performed via audio-only, two-way audio-video, or in-person.
10. Our AMA encourages the development of improved solutions to incorporate structured advance care planning (ACP) documentation standards that best meet the requisite needs for patients and physicians to easily store and access in the EHR complete and accurate ACP documentation that maintains the flexibility to capture unique, patient-centered details.
11. Our AMA encourages hospitals, health systems, and physician practices to provide a method other than electronic communication for patients who are without technological proficiency or access. (CMS Rep. 7, A-21; Reaffirmation: A-22; Reaffirmed: Res. 213, A-23; Reaffirmation: A-23; Modified: BOT Rep. 06, I-24)

Closing of Residency Programs H-310.943

1. Our American Medical Association:
    a. encourages the Accreditation Council for Graduate Medical Education (ACGME) to address the problem of non-educational closing or downsizing of residency training programs.
    b. reminds all institutions involved in educating residents of their contractual responsibilities to the resident.
    c. encourages the ACGME and the various Residency Review Committees to reexamine requirements for "years of continuous training" to determine the need for implementing waivers to accommodate residents affected by non-educational closure or downsizing.

   d. will work with the American Board of Medical Specialties Member Boards to encourage all its member boards to develop a mechanism to accommodate the discontinuities in training that arise from residency closures, regardless of cause, including waiving continuity care requirements and granting residents credit for partial years of training.
   e. urges residency programs and teaching hospitals be monitored by the applicable Residency Review Committees to ensure that decreases in resident numbers do not place undue stress on remaining residents by affecting work hours or working conditions, as specified in Residency Review Committee requirements.
   f. opposes the closure of residency/fellowship programs or reductions in the number of current positions in programs as a result of changes in GME funding.
   g. will work with the Centers for Medicare and Medicaid Services (CMS), ACGME, and other appropriate organizations to advocate for the development and implementation of effective policies to permit graduate medical education funding to follow the resident physician from a closing to the receiving residency program (including waivers of CMS caps), in the event of temporary or permanent residency program closure.
2. Our AMA will work with the Centers for Medicare and Medicaid Services (CMS) to establish regulations that protect residents and fellows impacted by program or hospital closure, which may include recommendations for:
   a. Notice by the training hospital, intending to file for bankruptcy within 30 days, to all residents and fellows primarily associated with the training hospital, as well as those contractually matched at that training institution who may not yet have matriculated, of its intention to close, along with provision of reasonable and appropriate procedures to assist current and matched residents and fellows to find and obtain alternative training positions that minimize undue financial and professional consequences, including but not limited to maintenance of specialty choice, length of training, initial expected time of graduation, location and reallocation of funding, and coverage of tail medical malpractice insurance that would have been offered had the program or hospital not closed.
   b. Revision of the current CMS guidelines that may prohibit transfer of funding prior to formal financial closure of a teaching institution.
   c. Improved provisions regarding transfer of GME funding for displaced residents and fellows for the duration of their training in the event of program closure at a training institution.
   d. Protections against the discrimination of displaced residents and fellows consistent with H-295.969.
3. Our AMA will work with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, National Resident Matching Program, Educational Commission for Foreign Medical Graduates, Centers for Medicare and Medicaid Services, and other relevant stakeholders to identify a process by which displaced residents and fellows may be directly represented in proceedings surrounding the closure of a training hospital or program.
4. Our AMA will work with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, National Resident Matching Program, Educational Commission for Foreign Medical Graduates, Centers for Medicare and Medicaid Services, and other relevant stakeholders to:
   a. Develop a stepwise algorithm for designated institutional officials and program directors to assist residents and fellows with finding and obtaining alternative training positions;
   b. Create a centralized, regulated process for displaced residents and fellows to obtain new training positions; and

c. Develop pathways that ensure that closing and accepting institutions provide liability insurance coverage to residents, at no cost to residents. (Sub. Res. 328, A-94; Appended by CME Rep. 11, A-98; Reaffirmed: CME Rep. 7, A-06; Appended: Res. 926, I-12; Modified: CME Rep. 1, A-15; Appended: Res. 310, I-19; Modified: CME Rep. 3, I-20; Reaffirmed: CME Rep. 01, I-22)

International Medical Graduate Employment H-255.965
Our American Medical Association will support federal legislation that reduces the administrative burden and streamlines the process of hiring International Medical Graduates. (Res. 203, I-22)

Expedited H-1B Pathways for International Medical Graduate Physicians in the USA H-255.961
Our American Medical Association supports the continuance of premium processing and other mechanisms that expedite H-1B visa applications and renewals for International Medical Graduate physicians. (Res. 222, A-25)

Urgent Advocacy to Restore J-1 Visa Processing for International Medical Graduate Physicians D-255.969
1. Our American Medical Association publicly advocates to resume the scheduling of new J-1 visa appointments affecting International Medical Graduates.
2. Our AMA will issue urgent advocacy communications to Congress, the Department of Homeland Security, the Department of State, and other relevant agencies, calling for the immediate resumption of J-1 visa processing for International Medical Graduates.
3. Our AME will collaborate with key parties, including program directors, Designated Institutional Officers, medical schools, and healthcare organizations to monitor the impact of visa appointment suspensions on patient care and physician workforce stability.
4. Our AMA will work proactively and transparently to reverse policies harmful to IMGs and mitigate future disruptions, emphasizing the essential contributions of International Medical Graduates to healthcare delivery in the United States. (Res. 237, A-25)

Recognizing and Remedying Payment System Bias As a Factor in Rural Health Disparities H-465.978
1. Our American Medical Association recognizes that systemic bias in healthcare financing has been one of many factors leading to rural health disparities and will advocate for elimination of these biases through payment policy reform to help reduce the shortage of rural physicians and eliminate health inequities in rural America.
2. Our AMA will, as part of our current advocacy for telehealth reform, specify that geographic payment equity be required in any telehealth legislation. (Res. 20, I-21, Reaffirmed: CMS Rep. 6, I-23)

Diversity in the Physician Workforce and Access to Care D-200.982
1. Our American Medical Association will continue to advocate for programs that promote diversity in the US medical workforce, such as pipeline programs to medical schools.
2. Our AMA will continue to advocate for adequate funding for federal and state programs that promote interest in practice in underserved areas, such as those under Title VII of the Public Health Service Act, scholarship and loan repayment programs under the National Health Services Corps and state programs, state Area Health Education Centers, and Conrad 30, and also encourage the development of a centralized database of scholarship and loan repayment programs.
3. Our AMA will continue to study the factors that support and those that act against the choice to practice in an underserved area, and report the findings and solutions at the 2008 Interim

Meeting. (CME Rep. 7, A-08; Reaffirmation A-13; Reaffirmation: A-16; Reaffirmed: CME Rep. 5, A-21; Reaffirmation: Res. 240, A-24; Reaffirmed: Res. 308, I-25)

Increasing Access to Broadband Internet to Reduce Health Disparities H-478.980
Our American Medical Association will advocate for the expansion of broadband and wireless connectivity to all rural and underserved areas of the United States while at all times taking care to protecting existing federally licensed radio services from harmful interference that can be caused by broadband and wireless services. (Res. 208, I-18; Reaffirmed: CMS Rep. 7, A-21; Reaffirmation: A-22; Reaffirmed: CMS Rep. 2, A-22; Reaffirmed: CSAPH Rep. 2, A-22; Reaffirmed: Res. 112, A-25)

Appendix A
Rural Health Transformation Program FY26 Funding

State	FY26 Award Amount
Alabama	$203,404,327
Alaska	$272,174,856
Arizona	$166,988,956
Arkansas	$208,779,396
California	$233,639,308
Colorado	$200,105,604
Connecticut	$154,249,106
Delaware	$157,394,964
Florida	$209,938,195
Georgia	$218,862,170
Hawaii	$188,892,440
Idaho	$185,974,368
Illinois	$193,418,216
Indiana	$206,927,897
Iowa	$209,040,064
Kansas	$221,898,008
Kentucky	$212,905,591
Louisiana	$208,374,448
Maine	$190,008,051
Maryland	$168,180,838
Massachusetts	$162,005,238
Michigan	$173,128,201
Minnesota	$193,090,618
Mississippi	$205,907,220
Missouri	$216,276,818
Montana	$233,509,359
Nebraska	$218,529,075
Nevada	$179,931,608
New Hampshire	$204,016,550
New Jersey	$147,250,806
New Mexico	$211,484,741
New York	$212,058,208
North Carolina	$213,008,356
North Dakota	$198,936,970
Ohio	$202,030,262
Oklahoma	$223,476,949
Oregon	$197,271,578

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 101
(A-26)

Introduced by: Washington

Subject: Revise the Use of Language Stigmatizing Obesity in ICD-10 Code E66.01“Morbid (Severe) Obesity Due to Excess Calories”

Referred to: Reference Committee A

Whereas, weight bias is prevalent in health care settings, particularly for patients with obesity, and has been well-documented to be associated with an increased stress response, increased health care avoidance, and poorer health outcomes for patients[1]; and

Whereas, person-centered care is a core tenet of primary care specifically and health care generally; and

Whereas, the ICD-10 code E66.01 “morbid (severe) obesity due to excess calories” has been perceived by patients to be stigmatizing and perpetuates biased language in medicine; and

Whereas, less stigmatizing language is included in E66.811-E66.813 (obesity, class 1-3); and

Whereas, the ICD-10 code E66.01 is frequently the only code payers use for risk-adjusted payments to physicians; therefore be it

RESOLVED, that our American Medical Association will advocate to the Centers for Medicare & Medicaid Services and other payors for equivalent, risk-adjusted payment for alternate codes with more patient-centered, neutral, and non-stigmatizing language in place of ICD-10 code E66.01. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 3/13/26

RELEVANT AMA POLICY

D-65.969 Use of Inclusive Language
Our AMA, in consultation with relevant parties, including the AMA Center for Health Equity, will amend existing policies to ensure the use of the most updated, inclusive, equitable, respectful, non-stigmatizing, and person-first language and use such language in all future AMA policies and amendments.

Our AMA, in consultation with relevant parties, including the AMA Center for Health Equity, will identify other types of outdated language in AMA policies and devise a timely mechanism for editorial changes, including both one-time updates and a protocol for editorial changes to language at the HOD Reference Committee recommendation stage and whenever a policy is amended, modified, appended, reaffirmed, or reviewed for sunset; and report back to the House of Delegates.

D-70.942 Restricting Derogatory and Stigmatizing Language of ICD-10 Codes
Our American Medical Association will collaborate with the Centers for Disease Control and Prevention and the National Center for Health Statistics ICD-10 Coordination and Maintenance Committee to advocate for the World Health Organization to adopt destigmatizing terminology in ICD-10 and future ICD codes and to eliminate existing stigmatizing diagnostic synonyms.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 102
(A-26)

Introduced by: Pennsylvania

Subject: Study for EMTALA Relief in Psychiatric Facilities

Referred to: Reference Committee A

Whereas, Emergency Medical Treatment and Labor Act (EMTALA) is a federal law enacted in 1986 to ensure public access to emergency medical services regardless of a patient's ability to pay; and

Whereas, EMTALA requires hospitals to provide a medical screening examination to anyone requesting treatment for an emergency medical condition; and

Whereas, if an emergency condition is identified, the hospital must stabilize the patient before transferring or discharging them; and

Whereas, the original EMTALA bill had exempted psychiatric hospital facilities, but various exemptions were inadvertently lost in the legislative process without specific explanation; and

Whereas, EMTALA prevents hospitals from refusing treatment or transferring patients based on their insurance status or ability to pay; and

Whereas, many free-standing psychiatric hospitals are used by local law enforcement for any disruptive person in police custody, or by emergency departments that transfer intoxicated patients; and

Whereas, this unfairly burdens free-standing psychiatric facilities; therefore be it

RESOLVED, that our American Medical Association perform a study to determine whether it would be appropriate to seek EMTALA relief, exemption, or modifications for exclusively psychiatric hospital facilities. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:103
(A-26)

Introduced by: Florida, Oklahoma, Medical Student Section

Subject: Supporting Non-Insurance Directed Sales of Pharmaceuticals to Patients

Referred to: Reference Committee A

Whereas, the United States spent an estimated $650 billion on prescription drugs in 2023 after discounts, with approximately one-third of that total—$215 billion—flowing to PBMs, wholesalers, and pharmacies rather than manufacturers, reflecting the substantial financial impact of intermediaries in the drug supply chain[1]; and

Whereas, patients frequently face high out-of-pocket costs for essential medications due to formulary exclusions, prior authorization barriers, and pricing practices driven by PBMs and insurance intermediaries, including the use of high list prices that increase patient cost-sharing even when net prices fall, a dynamic well-documented in analyses of PBM rebate structures[2,3]; and

Whereas, PBM compensation models tied to drug list prices have been shown to incentivize higher list prices and steer patients toward more expensive medications, with research indicating that delinking PBM compensation from list prices could reduce national drug spending by nearly $100 billion annually[1, 4]; and

Whereas, a growing number of Americans—including those without comprehensive insurance—use alternative platforms to obtain FDA-approved medications prescribed by licensed physicians, including coupon-based retail programs for generic and name brand drug, (e.g., GoodRx, Trump Rx), direct-to-consumer pharmacies (e.g., Mark Cuban Cost Plus Drugs), and direct manufacturer-to-patient programs (e.g., Lilly Direct, Pfizer for All), in order to reduce medication costs[5]; and

Whereas, these platforms often provide prices substantially lower than insurance-based retail prices, in part because they bypass PBM-driven markups and rebate structures, and without such platforms many patients would be unable to obtain necessary therapies[6]; and

Whereas, the American Medical Association has long-standing policies supporting access to affordable prescription drugs, reducing financial barriers for patients, and promoting transparency in pharmaceutical pricing[7]; therefore be it

RESOLVED, that our American Medical Association advocate for legislation and regulation to ensure that when a patient with health insurance purchases an FDA-approved prescription medication pursuant to a valid prescription through a lawful cash-pay, coupon-based, direct-to-consumer pharmacy, or direct manufacturer-to-patient sales platform, the patient's out-of-pocket payment for that medication shall be credited toward the patient's deductible and annual out-of-pocket maximum to the same extent as if the medication had been obtained through the patient's insurance-arranged pharmacy or distribution channel (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate that health insurers, pharmacy benefit managers, pharmacies, and affiliated distribution entities should match the lowest available bona fide patient price for the same drug, strength, dosage form, and quantity available through a valid prescription, whether offered through the patient's insurance benefit, a coupon-based retail program, a direct-to-consumer pharmacy, or a direct manufacturer-to-patient sales channel (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate that patients and prescribing physicians receive transparent point-of-sale disclosure of the patient's expected out-of-pocket cost through the insurance benefit and any lower lawful cash or direct-purchase price available for the prescribed medication. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/9/26

AMA Policies H-110.987, H-125.979, H-125.991

RELEVANT AMA POLICY

Pharmaceutical Costs H-110.987

1. Our AMA encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.
2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.
3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.
4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
7. Our AMA supports legislation to shorten the exclusivity period for biologics.
8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
10. Our AMA supports:
    a. drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by 10% or more each year or per course of treatment and provide justification for the price increase;

   b. legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and
   c. the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of 10% or more each year or per course of treatment.
11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.
12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.
13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation.

    CMS Rep. 2, I-15 Reaffirmed in lieu of: Res. 817, I-16 Appended: Res. 201, A-17 Reaffirmed in lieu of: Res. 207, A-17 Modified: Speakers Rep. 01, A-17 Appended: Alt. Res. 806, I-17 Reaffirmed: BOT Rep. 14, A-18 Appended: CMS Rep. 07, A-18 Appended: BOT Rep. 14, A-19 Reaffirmed: Res. 105, A-19 Appended: Res. 113, I-21 Reaffirmed in lieu of: Res. 810, I-22 Reaffirmed: Res. 801, I-23 Reaffirmed: Res. 801, I-23 Reaffirmed: CMS Rep. 04, I-24 Reaffirmed: CMS Rep. 06, A-25

Additional Mechanisms to Address High and Escalating Pharmaceutical Prices H-110.980

1. Our American Medical Association will advocate that the use of arbitration in determining the price of prescription drugs meet the following standards to lower the cost of prescription drugs without stifling innovation:
   a. The arbitration process should be overseen by objective, independent entities.
   b. The objective, independent entity overseeing arbitration should have the authority to select neutral arbitrators or an arbitration panel.
   c. All conflicts of interest of arbitrators must be disclosed and safeguards developed to minimize actual and potential conflicts of interest to ensure that they do not undermine the integrity and legitimacy of the arbitration process.
   d. The arbitration process should be informed by comparative effectiveness research and cost-effectiveness analysis addressing the drug in question.
   e. The arbitration process should include the submission of a value-based price for the drug in question to inform the arbitrator's decision.
   f. The arbitrator should be required to choose either the bid of the pharmaceutical manufacturer or the bid of the payer.
   g. The arbitration process should be used for pharmaceuticals that have insufficient competition; have high list prices; or have experienced unjustifiable price increases.
   h. The arbitration process should include a mechanism for either party to appeal the arbitrator's decision.
   i. The arbitration process should include a mechanism to revisit the arbitrator's decision due to new evidence or data.
2. Our AMA will advocate that any use of international price indices and averages in determining the price of and payment for drugs should abide by the following principles:
   a. Any international drug price index or average should not be used to determine or set a drug's price, or determine whether a drug's price is excessive, in isolation.
   b. The use of any international drug price index or average should preserve patient access to necessary medications.
   c. The use of any international drug price index or average should limit burdens on physician practices.
   d. Any data used to determine an international price index or average to guide prescription drug pricing should be transparent and updated regularly.
3. Our AMA supports the use of contingent exclusivity periods for pharmaceuticals, which would tie the length of the exclusivity period of the drug product to its cost-effectiveness at its list price at the time of market introduction.

   CMS Rep. 4, I-19 Reaffirmed: CMS Rep. 3, I-20 Modified: CMS Rep. 4, A-22

Private Health Insurance Formulary Transparency H-125.979

1. Our American Medical Association will work with pharmacy benefit managers, health insurers, and pharmacists to enable physicians to receive accurate, real-time formulary data at the point of prescribing.
2. Our AMA supports legislation or regulation that ensures that private health insurance carriers declare which medications are available on their formularies by October 1 of the preceding year, that formulary information be specific as to generic versus trade name and include copay responsibilities, and that drugs may not be removed from the formulary nor moved to a higher cost tier within the policy term.
3. Our AMA will develop model legislation:
    a. requiring insurance companies to declare which drugs on their formulary will be covered under trade names versus generic.
    b. requiring insurance carriers to make this information available to consumers by October 1 of each year.
    c. forbidding insurance carriers from making formulary deletions within the policy term.
4. Our AMA will promote the following insurer-pharmacy benefits manager - pharmacy (IPBMP) to physician procedural policy: In the event that a specific drug is not or is no longer on the formulary when the prescription is presented, the IPBMP shall provide notice of covered formulary alternatives to the prescriber promptly so that appropriate medication can be provided to the patient within 72 hours.
5. Drugs requiring prior authorization, shall be adjudicated by the IPBMP within 72 hours of receipt of the prescription.
6. Our AMA
    a. promotes the value of online access to up-to-date and accurate prescription drug formulary plans from all insurance providers nationwide.
    b. supports state medical societies in advocating for state legislation to ensure online access to up-to-date and accurate prescription drug formularies for all insurance plans.
7. Our AMA will continue its efforts with the National Association of Insurance Commissioners addressing the development and management of pharmacy benefits.
8. Our AMA will develop model state legislation on the development and management of pharmacy benefits.

Drug Formularies and Therapeutic Interchange H-125.991

It is the policy of the AMA:

(1) That the following terms be defined as indicated:
(a) Formulary: a compilation of drugs or drug products in a drug inventory list; open (unrestricted) formularies place no limits on which drugs are included whereas closed (restrictive) formularies allow only certain drugs on the list;
(b) Formulary system: a method whereby the medical staff of an institution, working through the pharmacy and therapeutics committee, evaluates, appraises, and selects from among the numerous available drug entities and drug products those that are considered most useful in patient care;
(c) Pharmacy & Therapeutics (P&T) Committee: an advisory committee of the medical staff that represents the official, organizational line of communication and liaison between the medical staff and the pharmacy department; its recommendations are subject to medical staff approval;
(d) Therapeutic alternates: drug products with different chemical structures but which are of the same pharmacological and/or therapeutic class, and usually can be expected to have similar therapeutic effects and adverse reaction profiles when administered to patients in therapeutically equivalent doses;
(e) Therapeutic interchange: authorized exchange of therapeutic alternates in accordance with previously established and approved written guidelines or protocols within a formulary system; and
(f) Therapeutic substitution: the act of dispensing a therapeutic alternate for the drug product prescribed without prior authorization of the prescriber.

(2) That our AMA reaffirms its opposition to therapeutic substitution (dispensing a therapeutic alternate without prior authorization) in any patient care setting.

(3) That drug formulary systems, including the practice of therapeutic interchange, are acceptable in inpatient hospital and other institutional settings that have an organized medical staff and a functioning Pharmacy and Therapeutics (P&T) Committee, provided they satisfy the following standards:

(a) The formulary system must:
(i) have the concurrence of the organized medical staff;
(ii) openly provide detailed methods and criteria for the selection and objective evaluation of all available pharmaceuticals;
(iii) have policies for the development, maintenance, approval and dissemination of the drug formulary and for continuous and comprehensive review of formulary drugs;
(iv) provide protocols for the procurement, storage, distribution, and safe use of formulary and non-formulary drug products;
(v) provide active surveillance mechanisms to regularly monitor both compliance with these standards and clinical outcomes where substitution has occurred, and to intercede where indicated;
(vi) have enough qualified medical staff, pharmacists, and other professionals to carry out these activities;
(vii)provide a mechanism to inform the prescriber in a timely manner of any substitutions, and that allows the prescriber to override the system when necessary for an individual patient without inappropriate administrative burden;
(viii) provide a mechanism to assure that patients/guardians are informed of any change from an existing outpatient prescription to a formulary substitute while hospitalized, and whether the prior medication or the substitute should be continued upon discharge from the hospital;
(ix) include policies that state that practitioners will not be penalized for prescribing non-formulary drug products that are medically necessary; and
(x) be in compliance with applicable state and federal statutes and/or state medical board requirements.

(b) The P&T Committee must:
(i) objectively evaluate the medical usefulness and cost of all available pharmaceuticals (reliance on practice guidelines developed by physician organizations is encouraged);
(ii) recommend for the formulary those drug products which are the most useful and cost-effective in patient care;
(iii) conduct drug utilization review (DUR) activities;
(iv) provide pharmaceutical information and education to the organization's (e.g., hospital) staff;
(v) analyze adverse results of drug therapy;
(vi) make recommendations to ensure safe drug use and storage; and
(vii) provide protocols for the timely procurement of non-formulary drug products when prescribed by a physician for the individualized care of a specific patient, when that decision is based on sound scientific evidence or expert medical judgment.
(c) The P&T Committee's recommendations must be approved by the medical staff;
(d) Within the drug formulary system, the P & T Committee shall recommend, and the medical staff must approve, all drugs that are subject to therapeutic interchange, as well as all processes or protocols for informing individual prescribing physicians; and
(e) The act of providing a therapeutic alternate that has not been recommended by the P&T Committee and approved by the medical staff is considered unauthorized therapeutic substitution and requires immediate prior consent by the prescriber; i.e., authorization for a new prescription.
(4) That drug formulary systems in any outpatient setting shall operate under a P&T Committee whose recommendations must have the approval of the medical staff or equivalent body, and must meet standards comparable to those listed above. In addition:
(a) That our AMA continues to insist that managed care and other health plans identify participating physicians as their "medical staff" and that they use such staff to oversee and approve plan formularies, as well as to oversee and participate on properly elected P&T Committees that develop and maintain plan formularies;
(b) That our AMA continues to insist that managed care and other health plans have well-defined processes for physicians to prescribe non-formulary drugs when medically indicated, that this process impose minimal administrative burdens, and that it include access to a formal appeals process for physicians and their patients; and

(c) That our AMA strongly recommends that the switching of therapeutic alternates in patients with chronic diseases who are stabilized on a drug therapy regimen be discouraged.
(5) That our AMA encourages mechanisms, such as incentive-based formularies with tiered co-pays, to allow greater choice and economic responsibility in drug selection, but urges managed care plans and other third party payers to not excessively shift costs to patients so they cannot afford necessary drug therapies.

Generic Drugs H-125.984
Our AMA believes that: (1) Physicians should be free to use either the generic or brand name in prescribing drugs for their patients, and physicians should supplement medical judgments with cost considerations in making this choice.

(2) It should be recognized that generic drugs frequently can be less costly alternatives to brand-name products.

(3) Substitution with Food and Drug Administration (FDA) "B"-rated generic drug products (i.e., products with potential or known bioequivalence problems) should be prohibited by law, except when there is prior authorization from the prescribing physician.

(4) Physicians should report serious adverse events that may be related to generic substitution, including the name, dosage form, and the manufacturer, to the FDA's MedWatch program.

(5) The FDA, in conjunction with our AMA and the United States Pharmacopoeia, should explore ways to more effectively inform physicians about the bioequivalence of generic drugs, including decisional criteria used to determine the bioequivalence of individual products.

(6) The FDA should fund or conduct additional research in order to identify the optimum methodology to determine bioequivalence, including the concept of individual bioequivalence, between pharmaceutically equivalent drug products (i.e., products that contain the same active ingredient(s), are of the same dosage form, route of administration, and are identical in strength).

(7) The Congress should provide adequate resources to the FDA to continue to support an effective generic drug approval process.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 104
(A-26)

Introduced by: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont, Medical Student Section

Subject: Improving Choice, Competition, and Affordability in the ACA Marketplaces

Referred to: Reference Committee A

Whereas, the Affordable Care Act (ACA) established state-based Health Insurance Marketplaces, providing coverage to over 21 million people through regulated exchanges with private insurers, and organizes plans into metal tiers (bronze, silver, gold, platinum) that cover varying proportions of healthcare costs (60%, 70%, 80%, and 90%, respectively)[1-2]; and

Whereas, tax credits that help pay for ACA plan premiums ("premium tax credits") are available to US citizens and lawfully present immigrants who purchase Marketplace coverage with income greater than 100% of the Federal Poverty Level, but are ineligible for public coverage (e.g. Medicaid, TRICARE, CHIP), and are not offered affordable employer-sponsored health insurance[3-5]; and

Whereas, ACA premium tax credits provide substantial savings of $5,534 per year on average to qualifying enrollees[6]; and

Whereas, premium tax credits are calculated by comparing an enrollee's income to the premium of the second-lowest cost silver plan, which acts as a "benchmark plan"; for example, if the benchmark plan has a monthly premium of $1000 but the enrollee should only be paying $250 based on their income, the enrollee provides a premium tax credit of $750 that can be applied to the premium of any plan on the Marketplace[7]; and

Whereas, increasing the benchmark plan to the second-lowest cost gold plan could increase premium tax credits and reduce out-of-pocket costs for most enrollees[8,9]; and

Whereas, the premium tax credit can only be applied to the portion of a plan's premium that covers Essential Health Benefits (EHBs), which are federally-defined health benefits that exclude essential healthcare services like dental benefits, routine eye exams, and certain forms of long-term care[10,11]; and

Whereas, when a patient's premium tax credit exceeds the premium for the selected plan, the difference is lost, leading to reduced financial support for lower-income enrollees selecting cheaper plans[10]; and

Whereas, limiting premium tax credit application to EHBs significantly limits plan choice and competition in the ACA Marketplaces, and artificially limits access to care for benefits that are not considered EHBs[12-15]; and

Whereas, addressing these inefficiencies in the ACA Marketplaces would expand competition and choice while improving affordability for patients, moving the United States closer to universal, equitable health coverage; therefore be it

RESOLVED, that our American Medical Association support expanding choice and competition on ACA Marketplaces, including by allowing ACA premium tax credits to be applied to the entire premium for qualifying Marketplace health plans, including the portion of the premium attributable to benefits that are not considered Essential Health Benefits (New HOD Policy); and be it further

RESOLVED, that our AMA support improving the benchmark plan on the ACA Marketplaces from the second-lowest cost silver plan to at least the second-lowest cost gold plan. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

Individual Health Insurance H-165.920
Our AMA will: (3) actively supports the principle of the individual's right to select his/her health insurance plan and actively support ways in which the concept of individually selected and individually owned health insurance can be appropriately integrated, in a complementary position, into the Association's position on achieving universal coverage and access to health care services. (4) will identify any further means through which universal coverage and access can be achieved; (14) believes that refundable, advanceable tax credits inversely related to income are preferred over public sector expansions as a means of providing coverage to the uninsured. [BOT Rep. 41, I-93; CMS Rep. 11, I-94; Reaffirmed by

Sub. Res. 125 and Sub. Res. 109, A-95; Amended by CMS Rep. 2, I-96; Amended and Reaffirmed by CMS Rep. 7, A-97; Reaffirmation A-97; Reaffirmed: CMS Rep. 5, I-97; Res. 212, I-97; Appended and Amended by CMS Rep. 9, A-98; Reaffirmation I-98; Reaffirmation I-98; Res. 105 & 108, A-99Reaffirmation A-99; Reaffirmed: CMS Rep. 5 and 7, I-99; Modified: CMS Rep. 4, CMS Rep. 5, and Appended by Res. 220, A-00Reaffirmation I-00; Reaffirmed: CMS Rep. 2, I-01; Reaffirmed CMS Rep. 5, A-02; Reaffirmation A-03; Reaffirmed: CMS Rep. 1 and 3, A-02; Reaffirmed: CMS Rep. 3, I-02; Reaffirmed: CMS Rep. 3, A-03; Reaffirmation I-03Reaffirmation A-04; Consolidated: CMS Rep. 7, I-05; Modified: CMS Rep. 3, A-06; Reaffirmed in lieu of Res. 105, A-06; Reaffirmation A-07Appended and Modified: CMS Rep. 5, A-08; Modified: CMS Rep. 8, A-08; Reaffirmation A-10; Reaffirmed: CMS Rep. 9, A-11; Reaffirmation A-11; Reaffirmed: Res. 239, A-12; Appended: Res. 239, A-12; Reaffirmed: CMS Rep. 6, A-1; 2Reaffirmed: CMS Rep. 9, A-14; Reaffirmed in lieu of: Res. 805, I-17]

Improving Affordability in the Health Insurance Exchanges H-165.824
1. Our American Medical Association will: (a) support adequate funding for and expansion of outreach efforts to increase public awareness of advance premium tax credits. (b) support expanding eligibility for premium tax credits up to 500 percent of the federal poverty level. (c) support providing young adults with enhanced premium tax credits while maintaining the current premium tax credit structure which is inversely related to income. (d) encourage state innovation, including considering state-level individual mandates, auto-enrollment and/or reinsurance, to maximize the number of individuals covered and stabilize health insurance premiums without undercutting any existing patient protections. 2. Our AMA supports: (a) eliminating the subsidy "cliff", thereby expanding eligibility for premium tax credits beyond 400 percent of the federal poverty level (FPL). (b) increasing the generosity of premium tax credits. (c) expanding eligibility for cost-sharing reductions. (d) increasing the size of cost-sharing reductions. [CMS Rep. 02, A-18; Appended: CMS Rep. 02, A-19; Reaffirmed: CMS Rep. 3, I-21]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 105
(A-26)

Introduced by: New York

Subject: Oppose Medicare Advantage Auto Enrollment

Referred to: Reference Committee A

Whereas, Medicare Advantage plans are promoted as providing more benefits to seniors while discounting the restrictions placed on seniors, such as narrow networks and prior authorizations; and

Whereas, seniors currently have the choice to review or change coverage annually during open enrollment; and

Whereas, there are efforts to have seniors auto enrolled in such programs, requiring them to opt out to remain in traditional Medicare actively; and

Whereas, one such plan, HR 3467, introduced by Rep. David Schweikert (R-Ariz), would automatically place seniors into the lowest premium Medicare Advantage plan in their zip code and lock them in for three years; and

Whereas, any bill that forces auto enrollment would hurt those most in need, people with cognitive impairments, low digital literacy, or limited access to trusted advisors; therefore be it

RESOLVED, that our American Medical Association oppose efforts to force Medicare recipients to be auto enrolled into Medicare Advantage plans, thus making Medicare Advantage plans the default option. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 106
(A-26)

Introduced by: Women Physicians Section

Subject: Insurance Coverage for Scalp Cooling (Cold Capping) Therapy

Referred to: Reference Committee A

Whereas, chemotherapy-induced alopecia is one of the most distressing side effects of cancer treatment, contributing to depression, anxiety, altered body image, diminished sense of sexuality, social isolation, and reduced self-esteem, all of which significantly impair patient quality of life; and

Whereas, chemotherapy-induced alopecia can also compromise patient privacy by making a cancer diagnosis visibly apparent; and

Whereas, scalp cooling ("cold capping") is an FDA-approved therapy that significantly reduces the risk of chemotherapy-induced alopecia without compromising oncologic outcomes; and

Whereas, a meta-analysis of 501 patients demonstrated a 43% reduction in the risk of chemotherapy-induced alopecia after the use of scalp cooling; and

Whereas, a systematic review and meta-analysis of 1,959 patients receiving scalp cooling compared with 1,238 patients not receiving scalp cooling found no increase in the incidence of scalp metastases; and

Whereas, the robust body of evidence has led the National Comprehensive Cancer Network® (NCCN) to designate scalp cooling as a Category 2A recommendation, reflecting broad consensus for its use as an evidence-based intervention; and

Whereas, reimbursement for scalp cooling is inconsistent across insurance plans and geographic regions, resulting in many patients being forced to pay thousands of dollars out-of-pocket for this therapy; and

Whereas, these financial barriers affect all patients but disproportionately burden women, who are more likely to undergo chemotherapy for breast cancer and who experience greater psychosocial impact from visible hair loss due to societal expectations; and

Whereas, in 2024, New York passed Senate Bill S2063A to require private insurance companies to cover scalp cooling for chemotherapy patients; and

Whereas, in 2025, Louisiana enacted House Bill HB35 requiring coverage of integrative cancer treatments, including acupuncture, cryotherapy, and scalp cooling systems when recommended by nationally recognized cancer treatment guidelines; and

Whereas, these state-level actions demonstrate growing legislative recognition of scalp cooling as an essential component of comprehensive cancer care and establish scalable policy models

for improving equitable access to evidence-based supportive oncology interventions nationwide; and

Whereas, equitable access to supportive cancer care interventions, including scalp cooling, is integral to comprehensive cancer treatment and survivorship care; therefore be it

RESOLVED, that our American Medical Association supports insurance coverage for scalp cooling ("cold capping") for patients undergoing chemotherapy in order to minimize cost-sharing and ensure equitable access to this evidence-based intervention. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/15/26

RELEVANT AMA POLICY

H-55.966 Cancer Survivorship Program Coverage
Our AMA recognizes cancer survivorship and cancer rehabilitation as a critical component of comprehensive cancer care and supports insurance coverage for prevention and early detection of new primary cancers and recurrences, as well as for medical care services and supportive care services, including, but not limited to, genetic screening and testing, counseling for those with known pathogenic variants (mutations) as well as discussion of fertility options before and after cancer treatment, aimed at managing the long-term consequences and sequelae of cancer and its treatment.

1. Our AMA advocates for work with key stakeholders to achieve adequate coverage for cancer survivorship and cancer rehabilitation care.

[Res 119, A-25]

H-55.969 Survivorship Care Plans

1. Our American Medical Association supports the voluntary use of survivorship care plans for cancer survivors when deemed appropriate by a patient's treating physician and supports reimbursement for physician preparation of survivorship care plans for patients.

[Res 108, A-15; Reaffirmation: A-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 107
(A-26)

Introduced by: Indiana

Subject: Oversight of Medicare Advantage Plan

Referred to: Reference Committee A

Whereas, the original Medicare option established in 1965, hereafter referred to as “Traditional Medicare” (TM) decreases healthcare spending and increases access to care for seniors and persons with disabilities[1]; and

Whereas, the newer Medicare Advantage (MA) program, established in 1999, allows private health insurance companies, hereafter referred to as “MA Organizations” (MAOs), to “manage” Medicare plans[2]; and

Whereas, roughly 50% of all Medicare-eligible citizens in Indiana, ~700,000 individuals, are enrolled in a Medicare Advantage (MA) plan--an increase from 40% in 2021 and 21% in 2013[3]; and

Whereas, MA plans offer more limited healthcare provider networks compared to TM, with average coverage limited to 46% of physicians in a respective county compared to over 98% of physicians who accept TM[4]; and

Whereas, MA enrollees require prior authorization for a significantly greater number of services than those enrolled in TM, with 99% of MA enrollees requiring prior authorization for necessary services such as hospital admissions and skilled nursing facilities, which starkly contrasts with the limited services requiring prior authorization in TM[5, 6]; and

Whereas, 13% of total prior authorization denials and 18% of denied payment claims issued by MA organizations would have been approved under the coverage rules of TM[5, 7, 8]; and

Whereas, repeated claims denials by MAOs have subjected patients to delays in medical care, put community and rural hospitals at risk of closure, and led some hospitals to terminate contracts with MAOs, further compromising patients' provider networks under MA plans[9, 10]; and

Whereas, federal payments to MA plan enrollees are high and annual costs were found to be $321 higher per MA enrollee than if the same enrollee had been covered by TM[11, 12]; and

Whereas, MA insurance plans have higher rates of overhead or administrative costs (13% to 18.5%) compared to TM (2%) and have a higher overhead and profit margins than even the individual market (12.3%)[13, 14]; and

Whereas, the Medicare Payment Advisory Commission (MedPAC) estimates that the current system of benchmarks and risk-adjustments has resulted in MA enrollees costing 6% more than if they had been covered by TM, a difference that is estimated to be $27 billion in 2023 alone[16]; and

Whereas, MedPAC has recommended that the Centers for Medicare & Medicaid Services (CMS) reform the current benchmark payment system to more closely align with spending within TM[17] and changes based on MedPAC recommendations are projected to reduce total Medicare spending by an estimated $82 billion dollars by 2029[11]; and

Whereas, MAOs charge taxpayers a minimum of $88 billion per year, for supplementary benefits which often attract enrollees, however, a CBO analysis completed in 2019 found that adding dental, hearing, and vision benefits to TM and Medicaid would only cost a combined $84 billion in the most expensive year of its implementation[18]; and

Whereas, the American Medical Association (AMA) has adopted Medicare Advantage Policies D-285.959 and H-330.867 to prevent access to care limitations and improve risk-adjustment for MA enrollees[17, 18]; therefore be it

RESOLVED, that our American Medical Association support equivalence in treatment and prior-authorization guidelines between Medicare Advantage plans and Traditional Medicare (New HOD Policy); and be it further

RESOLVED, that our AMA support and seek legislation that proprietary criteria shall not supersede the professional judgment of the patient's physician when determining Medicare and Medicare Advantage patient eligibility for procedures and admissions (Directive to Take Action); and be it further

RESOLVED, that our AMA support the revision of Medicare Advantage risk adjustment formulas to ensure that claims data is based on the actual cost of providing care (New HOD Policy); and be it further

RESOLVED, that our AMA lobby in support of Medicare Payment Advisory Commission recommendations to develop an improved risk adjustment model and change the current benchmark policy to one that bases federal payments to Medicare Advantage organizations and Medicare Advantage payments to physicians/healthcare centers on more accurate fee-for-service-derived benchmarks (Directive to Take Action); and be it further

RESOLVED, that our AMA support the allocation of federal funds to study how financial savings generated through enactment of Medicare Payment Advisory Commission recommendations and AMA policies for reform of the Medicare Advantage program can be used to improve Traditional Medicare. (New HOD Policy)

Fiscal Note: Moderate – between $10,000 - $50,000

RELEVANT AMA POLICY

Prevent Medicare Advantage Plans from Limiting Care D-285.959

1. Our American Medical Association will ask the Centers for Medicare and Medicaid Services to further regulate Medicare Advantage Plans so that the same treatment and authorization guidelines are followed for both fee-for-service Medicare and Medicare Advantage patients, including admission to inpatient rehabilitation facilities.
2. Our AMA will advocate that proprietary criteria shall not supersede the professional judgment of the patient's physician when determining Medicare and Medicare Advantage patient eligibility for procedures and admissions.

[Res. 706, A-21]

Medicare Advantage Plans H-330.867

1. Our American Medical Association encourages that Medicare Advantage risk adjustment formulas be revised so that claims data is based on the actual cost of providing care.
2. Our AMA will provide or create educational materials such as an infographic to compare Traditional Medicare and Medicare Advantage plans so that patients are able to make informed choices that best meet their health care needs.

[Res. 103, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 108
(A-26)

Introduced by: Integrated Physician Practice Section

Subject: Ensuring Physician Input in the Development of CMMI Models

Referred to: Reference Committee A

Whereas, AMA policy is against mandatory and for voluntary CMMI models[1,2]; and

Whereas, AMA policy advocates for CMMI models that serve specialties and policies not served by current models[3]; and

Whereas, the Physician-Focused Payment Model Technical Advisory Committee (PTAC), which was created by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), was intended to improve the efficiency and effectiveness of healthcare using proposed solutions from frontline stakholders[4]; and

Whereas, to date, there have been no PTAC recommended models that have been tested or implemented by CMMI[5,6]; and

Whereas, CMMI has not been transparent about why PTAC recommended models are rejected for testing or implementation[7]; and

Whereas, CMMI has recently introduced a number of models including: WISeR, which for the first time placed prior authorization requirements in traditional Medicare, ACCESS, which creates a payment paradigm for digital health tools, and LEAD, which is set to succeed ACO REACH[8,9,10]; and

Whereas, “CMMI models, in aggregate, are not generating direct savings to Medicare” with some models generating substantial losses while some others do generate net savings[11]; therefore be it

RESOLVED, that our American Medical Association seek meaningful and transparent involvement of physicians who could potentially be participants in Center for Medicare and Medicaid Innovation (CMMI) models throughout the model development process, prior to approval for testing or implementation. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

CMMI Payment Reform Models D-385.950

Our AMA will: (1) continue to advocate against mandatory Center for Medicare and Medicaid Innovation (CMMI) demonstration projects; (2) advocate that the Centers for Medicare and Medicaid Services seek innovative payment and care delivery model ideas from physicians and groups such as medical specialty societies to guide recommendation of the Physician-Focused Payment Model Technical Advisory Committee (PTAC) and work of the CMMI to propose demonstration projects that are voluntary and can be appropriately tested; and (3) advocate that CMMI focus on the development of multiple pilot projects in many specialties, which are voluntary and tailored to the needs of local communities and the needs of different specialties.
Citation: Res. 213, A-21

Demonstration Project Regarding Medicare Part D H-330.894

1. Our American Medical Association will continue its policy of promoting beneficiary choice and market based options in the context of the Medicare prescription drug benefit program (Part D).
2. Our AMA encourages the development of voluntary models under the auspices of the CMS Innovation Center (CMMI) to test the impact of offering Medicare beneficiaries additional enhanced alternative health plan choices that offer lower, consistent, and predictable out-of-pocket costs for select prescription drugs.

Citation: BOT Action in response to referred for decision Res. 142, A-07; Reaffirmed: CMS Rep. 01, A-17; Appended: CMS Rep. 4, A-22

Expanding AMA Payment Reform Work and Advocacy to Medicaid and Other Non-Medicare Payment Models for Pediatric Health Care and Specialty Populations H-385.901

1. Our American Medical Association supports appropriate demonstration projects, carve outs, and adjustments for pediatric patients and services provided to pediatric patients within the payment reform arena.
2. Our AMA will extend ongoing payment reform research, education, and advocacy to address the needs of specialties and patient populations not served by current CMMI models or other Medicare-focused payment reform efforts.
3. Our AMA will support and work with national medical specialty societies that are developing alternative payment models for specific conditions or episodes, target patient populations including pediatric populations, and medical and surgical specialties and continue to advocate that the Centers for Medicare and Medicaid Services, including the Center for Medicare and

Medicaid Innovation; state Medicaid agencies; and other payers implement physician-developed payment models.

4. Our AMA will consider improved Medicaid payment rates to be a priority given the critical impact these payment rates have on patient care and patient access to care.
5. Our AMA will support and collaborate with state and national medical specialty societies and other interested parties on the development and adoption of physician-developed alternative payment models for pediatric health care that address the distinct prevention and health needs of children and take long-term, life-course impact into account.

Citation: Res. 817, I-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 109
(A-26)

Introduced by: American Association of Neurological Surgeons, Congress of Neurological Surgeons

Subject: Insurance Coverage for Pediatric Intracranial Neuromodulation for Drug-Resistant Epilepsy

Referred to: Reference Committee A

Whereas, patients, particularly pediatric patients, experience drug-resistant epilepsy, resulting in detrimental cognitive impairment[1,2], developmental delay[2–4], poor quality of life5, and increased mortality[6,7]; and

Whereas, patients who experience drug-resistant epilepsy and have failed all other therapies are candidates for stereotactic intracranial neuromodulation; and

Whereas, intracranial neuromodulation is a community standard for adult[8–11] and pediatric[12–15] patients with drug-resistant epilepsy that have failed other surgical interventions, including seizure focus resection, corpus callosotomy, vagal nerve stimulation, or cerebral hemispherectomy, or are deemed not to be candidates for surgical resection; and

Whereas**,** as many as 1 in 5 children suffer from chronic pain, with more girls than boys, and significant numbers of patients with refractory headache, back, and other pain[17]; and

Whereas**,** children who experience chronic pain and epilepsy are often denied insurance access to evidence-based neuromodulation therapies that are often available to adults because there are often multiple prospective and retrospective case series demonstrating the effectiveness of these treatments in pediatric patients, but a paucity of randomized studies in this population; and

Whereas, the American Association of Neurological Surgeons (AANS) and the Congress of Neurological Surgeons (CNS) has published a position statement supporting the “off-label” use of neuromodulation in drug-resistant epilepsy in children[16]; therefore be it

RESOLVED, that our American Medical Association advocate for insurance coverage of intracranial neuromodulation as an acceptable treatment for appropriate pediatric patients with drug-resistant epilepsy (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for insurance coverage of chronic pain neuromodulation therapies such as intracranial, spinal cord and peripheral stimulation, as acceptable treatment for appropriate pediatric patients with chronic refractory pain. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

H-120.988 - Patient Access to Treatments Prescribed by Their Physicians

1. Our American Medical Association confirms its strong support for the autonomous clinical decision-making authority of a physician and that a physician may lawfully use an FDA approved drug product or medical device for an off-label indication when such use is based upon sound scientific evidence or sound medical opinion; and affirms the position that, when the prescription of a drug or use of a device represents safe and effective therapy, third party payers, including Medicare, should consider the intervention as clinically appropriate medical care, irrespective of labeling, should fulfill their obligation to their beneficiaries by covering such therapy, and be required to cover appropriate 'off-label' uses of drugs on their formulary.
2. Our AMA strongly supports the important need for physicians to have access to accurate and unbiased information about off-label uses of drugs and devices, while ensuring that manufacturer-sponsored promotions remain under FDA regulation.
3. Our AMA supports the dissemination of generally available information about off-label uses by manufacturers to physicians. Such information should be independently derived, peer reviewed, scientifically sound, and truthful and not misleading. The information should be provided in its entirety, not be edited or altered by the manufacturer, and be clearly distinguished and not appended to manufacturer-sponsored materials. Such information may comprise journal articles, books, book chapters, or clinical practice guidelines. Books or book chapters should not focus on any particular drug. Dissemination of information by manufacturers to physicians about off-label uses should be accompanied by the approved product labeling and disclosures regarding the lack of FDA approval for such uses, and disclosure of the source of any financial support or author financial conflicts.
4. Physicians have the responsibility to interpret and put into context information received from any source, including pharmaceutical manufacturers, before making clinical decisions (e.g., prescribing a drug for an off-label use).

5. Our AMA strongly supports the addition to FDA-approved labeling those uses of drugs for which safety and efficacy have been demonstrated.
6. Our AMA supports the continued authorization, implementation, and coordination of the Best Pharmaceuticals for Children Act and the Pediatric Research Equity Act. [Res. 30, A-88Reaffirmed: BOT Rep. 53, A-94Reaffirmed and Modified by CSA Rep. 3, A-97Reaffirmed and Modified by Res. 528, A-99Reaffirmed: CMS Rep. 8, A-02Reaffirmed: CMS Rep. 6, A-03Modified: Res. 517, A-04Reaffirmation I-07Reaffirmed: Res. 819, I-07Reaffirmation A-09Reaffirmation I-10Modified: BOT Rep. 5, I-14Reaffirmed: Res. 505, A-15Reaffirmed: CMS Rep. 6, I-20Reaffirmed: Res. 509, I-20Reaffirmation: I-22Reaffirmed: CSAPH Rep. 01, A-23Reaffirmed: CSAPH Rep. 02, A-23Reaffirmed: CSAPH Rep. 02, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 110
(A-26)

Introduced by: Senior Physicians Section

Subject: Medicaid Coverage for Incarcerated Individuals

Referred to: Reference Committee A

Whereas, medical coverage for current Medicaid patients is suspended during incarceration, even for short-term periods; and

Whereas, county jails often lack sufficient resources to provide continuity of care, including current medications for individuals with chronic medical and psychiatric conditions; and

Whereas, a significant portion of incarcerated individuals are age 65 and over, and many of these individuals suffer from chronic conditions that require continuation of long-term medications; and

Whereas, abruptly stopping or altering established medication regimens can result in serious health complications, both during incarceration and upon release; therefore be it

RESOLVED, that our American Medical Association advocate such that Medicaid programs ensure continued financial coverage for ongoing medications during incarceration, in order to prevent adverse and potentially irreversible health outcomes resulting from the discontinuation of established and evidence-based medication therapies. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/16/26

RELEVANT AMA POLICY

H-430.986 Health Care While Incarcerated

1. Our American Medical Association advocates for adequate payment to health care providers, including primary care and mental health, and addiction treatment professionals, to encourage improved access to comprehensive physical and behavioral health care services to juveniles and adults throughout the incarceration process from intake to re-entry into the community.
2. Our AMA advocates and requires a smooth transition including partnerships and information sharing between correctional systems, community health systems and state insurance programs to provide access to a continuum of health care services for juveniles and adults in the correctional system, including correctional settings having sufficient resources to assist incarcerated persons' timely access to mental health, drug and residential rehabilitation facilities upon release.

3. Our AMA encourages state Medicaid agencies to accept and process Medicaid applications from juveniles and adults who are incarcerated.
4. Our AMA encourages state Medicaid agencies to work with their local departments of corrections, prisons, and jails to assist incarcerated juveniles and adults who may not have been enrolled in Medicaid at the time of their incarceration to apply and receive an eligibility determination for Medicaid.
5. Our AMA advocates for states to suspend rather than terminate Medicaid eligibility of juveniles and adults upon intake into the criminal legal system and throughout the incarceration process, and to reinstate coverage when the individual transitions back into the community.
6. Our AMA advocates for Congress to repeal the "inmate exclusion" of the 1965 Social Security Act that bars the use of federal Medicaid matching funds from covering healthcare services in jails and prisons.
7. Our AMA advocates for Congress and the Centers for Medicare & Medicaid Services (CMS) to revise the Medicare statute and rescind related regulations that prevent payment for medical care furnished to a Medicare beneficiary who is incarcerated or in custody at the time the services are delivered.
8. Our AMA advocates for necessary programs and staff training to address the distinctive health care needs of women and adolescent females who are incarcerated, including gynecological care and obstetrics care for individuals who are pregnant or postpartum.
9. Our AMA will collaborate with state medical societies, relevant medical specialty societies, and federal regulators to emphasize the importance of hygiene and health literacy information sessions, as well as information sessions on the science of addiction, evidence-based addiction treatment including medications, and related stigma reduction, for both individuals who are incarcerated and staff in correctional facilities.
10. Our AMA supports:
    a. linkage of those incarcerated to community clinics upon release in order to accelerate access to comprehensive health care, including mental health and substance use disorder services, and improve health outcomes among this vulnerable patient population, as well as adequate funding;
    b. the collaboration of correctional health workers and community health care providers for those transitioning from a correctional institution to the community;
    c. the provision of longitudinal care from state supported social workers, to perform foundational check-ins that not only assess mental health but also develop lifestyle plans with newly released people; and
    d. collaboration with community-based organizations and integrated models of care that support formerly incarcerated people with regard to their health care, safety, and social determinant of health needs, including employment, education, and housing.
11. Our AMA advocates for the continuation of federal funding for health insurance benefits, including Medicaid, Medicare, and the Children's Health Insurance Program, for otherwise eligible individuals in pre-trial detention.
12. Our AMA advocates for the prohibition of the use of co-payments to access healthcare services in correctional facilities.
13. Our AMA encourages the following qualifications for the Director and Assistant Director of the Health Services Division within the Federal Bureau of Prisons:
    a. MD or DO, or an international equivalent degree with at least five years of clinical experience at a Bureau of Prisons medical facility or a community clinical setting;
    b. knowledge of health disparities among Black, American Indian and Alaska Native, and people of color, including the pathophysiological basis of the disease process and the social determinants of health that affect disparities; and
    c. knowledge of the health disparities among individuals who are involved with the criminal justice system.
14. Our AMA will collaborate with interested parties to promote the highest quality of health care and oversight for those who are involved in the criminal justice system by advocating for health administrators and executive staff to possess credentials and experience comparable to individuals in the community in similar professional roles.
15. Our AMA advocates for readily accessible gender-affirming care to meet the distinct healthcare needs of transgender and gender diverse people in the carceral system, including but not limited

to gender-affirming surgical procedures and the continuation or initiation of hormone therapy without disruption or delay.

16. Our AMA strongly supports carceral facilities and youth detention centers managed by the Bureau of Indian Affairs Division of Corrections be eligible for designation as Health Professional Shortage Areas and the assignment of U.S. Public Health Service Commissioned Corps officers to these facilities.
17. Our AMA advocates for the development, staffing, and operation of sustainable, on-site medical and behavioral health services, including evidence-based and culturally-appropriate addiction treatment, for incarcerated American Indian and Alaska Native persons.
18. Our AMA strongly supports routine audits and inspection of facilities managed by the Bureau of Indian Affairs Division of Correction, ensuring that these facilities abide by all standards and guidelines outlined by the National Commission on Correctional Health Care.

[CMS Rep. 02, I-16; Appended: Res. 417, A-19; Appended: Res. 420, A-19; Modified: Res. 216, I-19; Modified: Res. 503, A-21; Reaffirmed: Res. 229, A-21, Modified: Res. 127, A-22; Appended: Res. 244, A-23; Appended: Res. 429, A-23; Reaffirmed: BOT Rep.05, I-24; Appended: Res. 916, I-24; Appended: Res. 918, I-24]

D-430.990 Increased Transparency Among Psychotropic Drug Administration in Prisons

1. Our AMA will study issues surrounding the use of psychotropic medications in the carceral system, including inconsistencies in dosage, frequency, duration, allowed formularies, side effects, and oversight by a psychiatrist or another physician with expertise in mental illness.
2. Our AMA supports increased transparency from jails and prisons surrounding protocols pertaining to the administration of psychotropic medications, including components such as dosage, frequency, duration, allowed formularies, management of side effects, and requirements for oversight by a psychiatrist or another physician with expertise in mental illness.

[Res. 511, A-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 111
(A-26)

Introduced by: Illinois

Subject: Advocating for Insurance Coverage of Scalp Cooling Therapy to Prevent Chemotherapy-Induced Alopecia

Referred to: Reference Committee A

Whereas, chemotherapy-induced alopecia (CIA) is one of the most visible and distressing side effects of cancer treatment, impacting patient quality of life, body image, and mental health[1, 2]; and

Whereas, scalp cooling therapy – also known as cold cap therapy – has been shown to significantly reduce the risk of CIA among patients receiving specific chemotherapy regimens for solid tumors[3]; and

Whereas, the U.S. Food and Drug Administration (FDA) has cleared several scalp cooling systems (e.g., DigniCap and Paxman) as safe and effective medical devices to reduce hair loss in patients undergoing chemotherapy[4]; and

Whereas, studies demonstrate that patients who utilize scalp cooling report improved emotional well-being and reduced psychological distress during cancer treatment[5]; and

Whereas, access to scalp cooling therapy is currently limited by a lack of insurance coverage, leading to out-of-pocket costs ranging from $1,500 to $3,000 per treatment course, exacerbating healthcare disparities among socioeconomically disadvantaged populations[6]; and

Whereas, the state of New York passed Bill A38-A/S2063-A, signed into law on December 13, 2024, requiring insurance coverage for scalp cooling systems, thereby setting a precedent for legislative action[7,8]; and

Whereas, in the Summary of Panel Actions issued on October 18, 2024, the American Medical Association (AMA) approved three CPT® Category I codes for mechanical scalp cooling, recognizing scalp cooling as an established, medically appropriate service and reinforcing its clinical significance; the new codes will be effective January 1, 2026, and included in the CPT® 2026 code set[9]; and

Whereas, the issuance of CPT® Category I codes reflects the growing acceptance of scalp cooling therapy within standard medical practice and strengthens the justification for insurance coverage by both public and private payers[9]; therefore, be it

RESOLVED, that our American Medical Association advocate for all payers to provide insurance coverage for scalp cooling systems for patients receiving chemotherapy who are at risk of chemotherapy-induced alopecia (Directive to Take Action); and be it further

RESOLVED, that our AMA engage in continued national advocacy to promote broad and equitable access to scalp cooling therapy through public and private health insurance plans (Directive to Take Action); and be it further

RESOLVED, that our AMA collaborate with relevant dermatology organizations (such as the American Academy of Dermatology), oncology organizations (such as the American Society of Clinical Oncology), and other appropriate medical societies and patient advocacy groups to advance public awareness and legislative action supporting insurance coverage for scalp cooling therapy. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/18/26

RELEVANT AMA POLICY

Symptomatic and Supportive Care for Patients with Cancer H-55.999
Our AMA recognizes the need to ensure the highest standards of symptomatic, rehabilitative, and supportive care for patients with both cured and advanced cancer. The Association supports clinical research in evaluation of rehabilitative and palliative care procedures for the cancer patient, this to include such areas as pain control, relief of nausea and vomiting, management of complications of surgery, radiation and chemotherapy, appropriate hemotherapy, nutritional support, emotional support, rehabilitation, and the hospice concept. Our AMA actively encourages the implementation of continuing education of the practicing American physician regarding the most effective methodology for meeting the symptomatic, rehabilitative, supportive, and other human needs of the cancer patient. CSA Rep. H, I-78; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A00; Reaffirmed: Sub. Res. 514, I-00; Modified: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20

Quality Cancer Care Preservation Act H-330.897
Our AMA continues to support existing policy principles in evaluating legislative language on matters relating to Medicare reimbursement for physician acquisition and administration of prescription drugs. BOT Action in response to referred for decision Res. 129, A-03; Reaffirmed: BOT Rep. 28, A-13; Reaffirmation A-15

Survivorship Care Plans H-55.969
Our American Medical Association supports the voluntary use of survivorship care plans for cancer survivors when deemed appropriate by a patient's treating physician and supports reimbursement for physician preparation of survivorship care plans for patients. Res. 108, A-15; Reaffirmation: A-18

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 112
(A-26)

Introduced by: Illinois Delegation

Subject: Ensuring Coverage and Access to Adult Strabismus Surgery

Referred to: Reference Committee A

Whereas, adult strabismus affects approximately 1 in 25 adults (~4% prevalence), making it a common condition with significant functional consequences[1]; and

Whereas, adults with strabismus experience increased rates of falls, fractures, and musculoskeletal injuries due to impaired depth perception and binocular dysfunction, confirming strabismus as a functional and safety-relevant medical condition[2]; and

Whereas, the psychosocial and quality-of-life impact of adult strabismus is well documented, including impaired communication, reduced employability, and diminished social functioning[3], and research shows substantial improvement in daily functioning after surgical correction[4]; and

Whereas, adult strabismus surgery improves critical visual functions, including binocular summation, stereopsis, and fusion, leading to measurable improvements in functional vision and safety[5,6]; and

Whereas, the American Academy of Ophthalmology (AAO) Adult Strabismus Preferred Practice Pattern affirms that adult strabismus surgery is a medically necessary intervention for restoring binocular vision, alleviating diplopia, expanding visual fields, treating abnormal head posture, and improving psychosocial well-being[7]; and

Whereas, the American Association for Pediatric Ophthalmology and Strabismus (AAPOS) Adult Strabismus Surgery Policy Statement 2025 reiterates that adult strabismus causes substantial functional, psychosocial, and safety burdens, and that surgery reliably improves diplopia, restores fusion, expands visual fields, and improves quality of life (AAPOS, 2025); therefore be it

RESOLVED, that our American Medical Association advocate for national insurer recognition of adult strabismus surgery as medically necessary, and to oppose insurer policies that misclassify such surgery as cosmetic. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/18/26

RELEVANT AMA POLICY

Coverage for Strabismus Surgery H-185.957

Our American Medical Association supports legislation that requires all third party payers that cover surgical benefits to cover all strabismus surgery where medically indicated.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 113
(A-26)

Introduced by: Medical Student Section

Subject: Health Insurance Coverage of Hearing Devices and Related Services

Referred to: Reference Committee A

Whereas, of the approximately 28.8 million adults in the United States who could benefit from hearing devices, fewer than 20% use them, demonstrating a significant gap in utilization[1]; and

Whereas, research has shown that working-age adults (18-64 years) with untreated hearing loss experience adverse outcomes compared to those with normal hearing, including a 40% higher risk of death even after adjusting for confounding factors, greater social-situational limitations, higher rates of psychological distress, and an increased risk of dementia[2-5]; and

Whereas, the use of hearing aids has been shown to decrease difficulties in communication and social interaction among individuals after initiating use, and compared to adults with untreated hearing loss, adults who use hearing aids have decreased mortality, psychological distress, and risk of dementia[2,4,6,7]; and

Whereas untreated hearing loss among working-age adults has been associated with an estimated $193.8 billion in lost population income and $28.6 billion in unrealized federal tax revenue annually, while the use of hearing aids has been estimated to mitigate individual income loss of up to $22,000 per year[8]; and

Whereas, hearing devices and related audiological services, including diagnostic testing, fitting, and regular replacements, are inconsistently covered across private insurance plans and are typically excluded under Medicaid, making them inaccessible to many low-income adults[9-11]; and

Whereas, out-of-pocket costs for hearing aids and related services are unaffordable for 77% of Americans with functional hearing loss, and consumer surveys demonstrate that willingness to adopt hearing aids would more than double if insurance contributed to or fully covered the cost[10]; and

Whereas, adults with similar degrees of hearing loss and at least partial health insurance coverage for hearing aids are significantly more likely to acquire these devices than those without coverage, indicating that out-of-pocket cost is a barrier to adoption[16]; and

Whereas, adults with untreated hearing loss incur approximately $3,536 more in total healthcare spending over an 18-month span compared to those without hearing loss, while the average cost of hearing aids and related services is estimated to be $2,500, demonstrating that modest investments in coverage can yield meaningful healthcare savings[10,13]; therefore be it

RESOLVED, that our American Medical Association support public and private health insurance coverage of hearing services and devices, including digital hearing aids and routine replacements, for hearing-impaired adults aged 18-64. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Hearing Aid Coverage H-185.929

Our American Medical Association supports public and private health insurance coverage that provides all hearing-impaired infants and children access to appropriate physician-led teams and hearing services and devices, including digital hearing aids.
Our AMA supports hearing aid coverage for children that, at minimum, recognizes the need for replacement of hearing aids due to maturation, change in hearing ability and normal wear and tear.
Our AMA encourages private health plans to offer optional riders that allow their members to add hearing benefits to existing policies to offset the costs of hearing aid purchases, hearing-related exams and related services.
Our AMA supports coverage of hearing tests administered by a physician or physician-led team as part of Medicare's Benefit.
Our AMA supports policies that increase access to hearing aids and other technologies and services that alleviate hearing loss and its consequences for the elderly.
Our AMA encourages increased transparency and access for hearing aid technologies through itemization of audiologic service costs for hearing aids.
Our AMA supports the availability of over-the-counter hearing aids for the treatment of mild-to-moderate hearing loss.
Our AMA supports physician and patient education on the proper role of over the counter hearing aids, including the value of physician-led assessment of hearing loss, and when they are appropriate for patients and when there are possible cost-savings.
Our AMA encourages the United States Preventive Services Task Force to re-evaluate its determination not to recommend preventive hearing services and screenings in asymptomatic adults over age 65 in consideration of new evidence connecting hearing loss to dementia.
Our AMA works with interested state medical associations to support coverage of hearing exams, hearing aids, cochlear implants, and aural rehabilitative services by appropriate physician-led teams, in Medicaid and CHIP programs and any new public payers. [CMS Rep. 6, I-15 Appended: Res. 124, A-19 Appended: CMS Rep. 02, A-23 Reaffirmed: CMS Rep. 02, A-23 Reaffirmed: Res. 102, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 114
(A-26)

Introduced by: Medical Student Section, Florida, Oklahoma, South Carolina, Tennessee

Subject: Opposing Alternative Funding Programs

Referred to: Reference Committee A

Whereas, Alternative Funding Programs (AFPs) are employer- or third-party vendor- benefit designs that exclude expensive medications from insurance formularies and instead require beneficiaries to enroll in manufacturer/charitable assistance programs or cover the costs themselves, thereby shifting liability outside the insurance benefit[1,10]; and

Whereas, AFPs divert limited manufacturer and charitable patient assistance funds away from uninsured and underinsured populations for whom they were intended, raising concerns about equity and sustainability of charitable assistance programs[2]; and

Whereas, in *AbbVie v. Payer Matrix*, AbbVie alleges that AFP models are misrepresenting insured patients as uninsured in a “fraudulent and deceptive scheme” to access manufacturer assistance funds, demonstrating increasing legal and regulatory scrutiny over these programs[17]; and

Whereas, as AFP adoption has grown rapidly, many patients are unaware of enrollment until coverage is denied, unexpected medical bills arrive, or medications are suddenly switched, disrupting continuity of care and undermining the physician-patient relationship[5,7]; and

Whereas, patients routed through AFPs experience significant barriers to care, including average treatment delays of 68 days to therapy, with 88% reporting associated stress or anxiety and 24% reporting worsening of their condition[6]; and

Whereas, AFPs have raised concerns regarding compliance under federal statutes, including the Affordable Care Act, the Employee Retirement Income Security Act, HIPAA, and the Anti-Kickback Statute, due to benefit misclassification, unauthorized data-sharing, and misaligned financial incentives[8,9]; and

Whereas, AFPs often circumvent Affordable Care Act regulations by reclassifying the medications as non-essential health benefits, which shifts cost liability onto patients or undermine cost-sharing safeguards by preventing copay from counting toward deductibles/out-of-pocket limits[10]; and

Whereas, copay adjustment programs, which seek to limit plan sponsor exposure to prescription drug costs by raising patient out of pocket costs, have been addressed by a growing number of state bans, so AFPs have emerged as a loophole achieving a similar effect, evading existing bans and regulations to continue affecting patient costs[3,4,16]; and

Whereas, national patient and provider organizations, including the CancerCare-led Alternative Funding Task Force, PAN Foundation, and Alliance for Patient Access, have publicly opposed AFPs and urged federal action to treat covered prescription drugs as essential health benefits

across markets and to prohibit plan designs that require enrollment in third-party assistance as a condition of coverage[11,12,13,14]; therefore be it

RESOLVED, that our American Medical Association oppose the use of Alternative Funding Programs (AFPs) and similarly functioning benefit designs and advocate for federal and state legislation and regulation prohibiting their use. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

D-110.983 Alternative Funding Programs
Our American Medical Association will educate employers, benefits administrators, and patients on alternative funding programs (AFPs) and their negative impacts on patient access to treatment and will advocate for legislative and regulatory policies that would address negative impacts of AFPs. [Res. 707, A-24]

H-165.846 Adequacy of Health Insurance Coverage Options
1. Our AMA supports the following principles to guide in the evaluation of the adequacy of health insurance coverage options:
A. Any insurance pool or similar structure designed to enable access to age-appropriate health insurance coverage must include a wide variety of coverage options from which to choose.
B. Existing federal guidelines regarding types of health insurance coverage (e.g., Title 26 of the US Tax Code and Federal Employees Health Benefits Program [FEHBP] regulations) should be used as a reference when considering if a given plan would provide meaningful coverage.
C. Provisions must be made to assist individuals with low-incomes or unusually high medical costs in obtaining health insurance coverage and meeting cost-sharing obligations.
D. Mechanisms must be in place to educate patients and assist them in making informed choices, including ensuring transparency among all health plans regarding covered services, cost-sharing obligations, out-of-pocket limits and lifetime benefit caps, and excluded services.
2. Our AMA advocates that the Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) program be used as the model for any essential health benefits package for children.
3. Our AMA: (a) opposes the removal of categories from the essential health benefits (EHB) package and their associated protections against annual and lifetime limits, and out-of-pocket expenses; and (b) opposes waivers of EHB requirements that lead to the elimination of EHB categories and their associated protections against annual and lifetime limits, and out-of-pocket expenses. [CMS Rep. 7, A-07; Reaffirmation I-07, Reaffirmation A-09; Reaffirmed: Res. 103, A-09; Reaffirmation I-09; Reaffirmed: CMS Rep. 3, I-09; Reaffirmed: CMS Rep. 2, A-11; Appended: CMS Rep. 2, A-11; Reaffirmed in lieu of Res. 109, A-12; Reaffirmed: CMS Rep. 1, I-12; Reaffirmed: CMS Rep. 3, A-13; Reaffirmed in lieu of Res. 812, I-13; Reaffirmed: CMS Rep. 6, I-14; Reaffirmed: CMS Rep. 6, I-15; Appended: CMS Rep. 04, I-17; Reaffirmed in lieu of: Res. 101, A-19]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 115
(A-26)

Introduced by: Association for Clinical Oncology, American Society of Hematology, American College of Rheumatology

Subject: Patient Continuity Protections During Payer, PBM Changes

Referred to: Reference Committee A

Whereas, specialized and complex chronic treatment regimens rely on strict adherence to clinical cycles where even a 14-day gap in therapy can result in irreversible loss of disease control, yet patients often face sudden disruptions when their payer or pharmacy benefit manager (PBM) undergoes corporate mergers, acquisitions, or contract changes; and

Whereas, these involuntary switches frequently result in the immediate cancellation of existing prior authorizations or forced non-medical switching to new preferred formularies—practices specifically opposed by the Association for Clinical Oncology 2026 Advocacy Priorities and the American Society of Hematology 2024 Access to Hematology Care in an Age of Innovation Policy Statement; and

Whereas, current AMA policy supports authorization longevity but does not explicitly mandate transition-of-care protections during corporate health plan or PBM restructuring; therefore be it

RESOLVED, that our American Medical Association seek federal and state legislation and regulation mandating a minimum 90-day transition-of-care grace period for patients with chronic or life-threatening conditions during which their existing treatment plan, including prior authorizations and formulary status, must be honored without interruption (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate that these 90-day protections specifically apply to instances where a patient's health plan or pharmacy benefit manager undergoes structural changes, including but not limited to corporate mergers, acquisitions, or pharmacy benefit manager contract transitions, to prevent non-medical switching and ensure continuity of care. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

RELEVANT AMA POLICY

H-320.939 Prior Authorization and Utilization Management Reform
Our American Medical Association will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation... 2. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician. 3. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes. [CMS Rep. 08, A-17; Reaffirmed: A-26]

H-125.991 Drug Formularies and Therapeutic Interchange
It is the policy of the AMA that drug formulary systems, including the practice of therapeutic interchange, are acceptable in inpatient hospital and other institutional settings... provided they satisfy the following standards: (viii) provide a mechanism to assure that patients/guardians are informed of any change from an existing outpatient prescription to a formulary substitute... 2. That our AMA continues to insist that managed care and other health plans have well-defined processes for physicians to prescribe non-formulary drugs when medically indicated, that this process impose minimal administrative burdens, and that it include access to a formal appeals process. [Res. 505, A-12; Reaffirmed: 2025]

H-125.979 Private Health Insurance Formulary Transparency
Our AMA will work with pharmacy benefit managers, health insurers, and pharmacists to enable physicians to receive accurate, real-time formulary data at the point of prescribing. 2. Our AMA supports legislation or regulation that ensures that private health insurance carriers declare which medications are available on their formularies by October 1 of the preceding year... and forbidding insurance carriers from making formulary deletions within the policy term. [CMS Rep. 5, A-09; Reaffirmed: 2024]

D-110.987 The Impact of Pharmacy Benefit Managers on Patients and Physicians
Our AMA supports the active regulation of pharmacy benefit managers (PBMs) under state departments of insurance. 2. Our AMA will develop model state legislation addressing the state regulation of PBMs, which shall include provisions to maximize the number of PBMs under state regulatory oversight. 3. Our AMA supports improved transparency of PBM operations, including disclosing... records describing why a medication is chosen for or removed in the P&T committee's formulary. [CMS Rep. 5, A-19; Reaffirmed: 2025]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:116
(A-26)

Introduced by: American Academy of Pediatrics

Subject: Study of Cost Implications of Medicaid Managed Care Organizations Compared with State-Administered Medicaid Programs

Referred to: Reference Committee A

Whereas, the Medicaid program provides health coverage to more than 80 million Americans and represents one of the largest sources of public health care spending in the United States;[1] and

Whereas, states administer Medicaid through multiple delivery models, including state-administered fee-for-service programs, primary care case management models, and contracts with private managed care organizations (MCOs);[2] and

Whereas, as of recent federal analyses, the majority of Medicaid beneficiaries receive coverage through Medicaid managed care plans operated by private insurers under contracts with state governments;[3] and

Whereas, Medicaid managed care programs are often intended to improve care coordination, increase budget predictability for states, and promote efficient use of health care services;[4] and

Whereas, While the shift to MCOs has increased budget predictability for states, the evidence about the impact of managed care on access to care and costs is both limited and mixed;[5] and

Whereas, federal oversight agencies have identified challenges in evaluating the total costs of Medicaid managed care programs due to variations in state reporting practices and contract structures;[6] and

Whereas, physicians and health systems participating in Medicaid managed care programs frequently report significant administrative burdens associated with plan participation, including prior authorization requirements, credentialing processes, network contracting, and claims administration;[7] and

Whereas, a clearer understanding of the total fiscal and administrative implications of Medicaid managed care compared with state-administered Medicaid models would inform policymakers, physicians, and patients as states consider program design and oversight; therefore be it

RESOLVED, That our American Medical Association study and report back to the HOD at I-26 on Medicaid managed care organizations and state-administered Medicaid programs, including:

- The comparative fiscal implications of programs administered through Medicaid managed care organizations versus those administered directly by states, including administrative costs, medical expenditures, and program oversight costs.
- Whether Medicaid managed care arrangements result in net cost savings, increased costs, or cost neutrality compared with state-administered models.
- The administrative impact of Medicaid managed care participation on physicians and health systems, including prior authorization requirements, network contracting, and claims administration. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/21/26

RELEVANT AMA POLICY

Monitoring Medicaid Managed Care H-290.985

As managed care plans increasingly become the source of care for Medicaid beneficiaries, Our American Medical Association advocates the same policies for the conduct of Medicaid managed care that our AMA advocates for private sector managed care plans. In addition, our AMA advocates that the following criteria be used in federal and/or state oversight and evaluation of managed care plans serving Medicaid beneficiaries, and insists upon their use by the Federation in monitoring the implementation of managed care for Medicaid beneficiaries:

1. Adequate and timely public disclosure of pending implementation of managed care under a state program, so as to allow meaningful public comment.
2. Phased implementation to ensure availability of an adequate, sufficiently capitalized managed care infrastructure and an orderly transition for beneficiaries and providers.
3. Geographic dispersion and accessibility of participating physicians and other providers.
4. Education of beneficiaries regarding appropriate use of services, including the emergency department.
5. Availability of off-hours, walk-in primary care.
6. Coverage for clinically effective preventive services.
7. Responsiveness to cultural, language and transportation barriers to access.
8. In programs where more than one plan is available, beneficiary freedom to choose their plan, enforcement of standards for marketing/enrollment practices, and clear and comparable disclosure of plan benefits and limitations including financial incentives on providers.
9. Beneficiary freedom to choose and retain a given primary physician within the plan, and to request a change in physicians when dissatisfied.
10. Significant participating physician involvement and influence in plan medical policies, including development and conduct of quality assurance, credentialing and utilization review programs.
11. Ability of plan participating physicians to determine how many beneficiaries and the type of medical problems they will care for under the program.
12. Adequate identification of plan beneficiaries and plan treatment restrictions to out-of-plan physicians and other providers.
13. Intensive case management for high utilizers and realistic financial disincentives for beneficiary misuse of services.
14. Treatment authorization requirements and referral protocols that promote continuity rather than fragment the process of care.
15. Preservation of private right of action for physicians and other providers and beneficiaries.
16. Ongoing evaluation and public reporting of patient outcomes, patient satisfaction and service utilization.
17. Full disclosure of plan physician and other provider selection criteria, and concerted efforts to qualify and enroll traditional community physicians and other existing providers in the plan.
18. Absence of gag rules.
19. Fairness in procedures for selection and deselection.

20. Realistic payment levels based on costs of care and predicted utilization levels.
21. Payment arrangements that do not expose practitioners to excessive financial risk for their own or referral services, and that tie any financial incentives to performance of the physician group over significant time periods rather than to individual treatment decisions.
22. Our AMA urges CMS to direct those state Medicaid agencies with Medicaid managed care programs to disseminate data and other relevant information to the state medical associations in their respective states on a timely and regular basis.

Mandatory Enrollment of Medicare-Medicaid Patients in Managed Care Plans H-290.984
The AMA, in keeping with its support for free market competition among all modes of health care delivery and financing, strongly opposes mandatory enrollment of Medicare and/or Medicaid patients in managed care plans.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 117
(A-26)

Introduced by: Private Practice Physicians Section

Subject: Universal Out of Network Benefits

Referred to: Reference Committee A

Whereas, private health insurers have deliberately used their regional monopoly powers to push unacceptably low rates on physicians, thus creating artificially narrow networks; and

Whereas, such practice creates the appearance of physician shortages and lack of access to physicians in a reasonable time, all to the sole benefit and profit of insurers; and

Whereas, before insurers created restrictive networks, healthcare costs and premiums were much lower; and

Whereas, laws that require insurers to allow patients to seek an out-of-network physician when appropriate will always be entirely inadequate because insurers will always determine that a patient does not need an out-of-network physician; and

Whereas, the now frequent need to wait months to see a physician would largely resolve if patients all had out-of-network benefits and could see any practicing physician; and

Whereas, many states are now taking the absurd step of trying to allow nurses and physician assistants to practice medicine independently because there aren't enough in-network doctors available to care for patients; and

Whereas, the practice of creating and restricting networks has coincided with a massive increase of overall healthcare costs, not a savings; and

Whereas, the single and only beneficiary of insurance policies that offer no out-of-network benefits are the insurance companies themselves, to no clear public advantage; therefore be it

RESOLVED, that our American Medical Association will advocate for state and federal laws and regulations that require all insurers to offer plans that include out-of-network benefits. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

Out-of-Network Care H-285.904

1. Our American Medical Association adopts the following principles related to unanticipated out-of-network care:
    a. Patients must not be financially penalized for receiving unanticipated care from an out-of-network provider.
    b. Insurers must meet appropriate network adequacy standards that include adequate patient access to care, including access to hospital-based physician specialties. State regulators should enforce such standards through active regulation of health insurance company plans.
    c. Insurers must be transparent and proactive in informing enrollees about all deductibles, copayments and other out-of-pocket costs that enrollees may incur.
    d. Prior to scheduled procedures, insurers must provide enrollees with reasonable and timely access to in-network physicians.
    e. Patients who are seeking emergency care should be protected under the "prudent layperson" legal standard as established in state and federal law, without regard to prior authorization or retrospective denial for services after emergency care is rendered.
    f. Out-of-network payments must not be based on a contrived percentage of the Medicare rate or rates determined by the insurance company.
    g. Minimum coverage standards for unanticipated out-of-network services should be identified. Minimum coverage standards should pay out-of-network providers at the usual and customary out-of-network charges for services, with the definition of usual and customary based upon a percentile of all out-of-network charges for the particular health care service performed by a provider in the same or similar specialty and provided in the same geographical area as reported by a benchmarking database. Such a benchmarking database must be independently recognized and verifiable, completely transparent, independent of the control of either payers or providers and maintained by a non-profit organization. The non-profit organization shall not be affiliated with an insurer, a municipal cooperative health benefit plan or health management organization.
    h. Independent Dispute Resolution (IDR) should be allowed in all circumstances as an option or alternative to come to payment resolution between insurers and physicians.
2. Our AMA will advocate for the principles delineated in Policy H-285.904 for all health plans, including ERISA plans.
3. Our AMA will advocate that any legislation addressing surprise out of network medical bills use an independent, non-conflicted database of commercial charges.

Citation: Res. 108, A-17; Reaffirmed: A-18; Appended: Res. 104, A-18; Reaffirmed in lieu of: Res. 225, I-18; Reaffirmed: A-19; Reaffirmed: Res. 210, A-19; Appended: Res. 211, A-19; Reaffirmed: CMS Rep. 5, A-21; Modified: Res. 236, A-22; Reaffirmed: CMS Res. I-23; Reaffirmed: CMS Rep. 3, I-23; Reaffirmed: CMS Rep. 08, A-24

Patient Access to Covered Benefits Ordered by Out-of-Network Physicians D-285.958

1. Our American Medical Association will develop model legislation to protect patients managed by out-of-network physicians by prohibiting insurance plans from denying payment for covered services, including imaging, laboratory testing, referrals, medications, and other medically-necessary services for patients under their commercial insurance, based solely on the network participation of the ordering physician while preserving evidence based high quality care and healthcare affordability.
2. Our AMA will collaborate with other physician organizations to develop resources, toolkits, and education to support out-of-network care models.

Citation: Res. 245, A-24

Out-of-Network Care D-285.962
Our AMA will develop model state legislation addressing the coverage of and payment for unanticipated out-of-network care.
Citation: Res. 108, A-17

Out of Network Coverage Denials for Physician Prescriptions and Ordered Services D-285.963
Our American Medical Association will pursue regulation or legislation to prohibit any insurer from writing individual or group policies which deny or unreasonably delay coverage of medically necessary prescription drugs or services based on network distinctions of the licensed health care provider ordering the drug or service.
Citation: Res. 119, A-15

Out of Network Restrictions of Physicians H-285.907
Our American Medical Association opposes the denial of payment for a medically necessary prescription of a drug or service covered by the policy based solely on the network participation of the duly licensed physician ordering it.
Citation: Res. 126, A-15

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 118
(A-26)

Introduced by: American College of Rheumatology

Subject: Addressing Proposals to Implement International Reference Pricing for Physician-Administered Drugs

Referred to: Reference Committee A

Whereas, emerging state proposals to implement international reference pricing (IRP) seek to cap reimbursement for physician-administered drugs without ensuring alignment with acquisition costs; and

Whereas, such policies would risk creating negative margins for physician practices; and

Whereas, such misalignment between reimbursement and acquisition cost may force physicians, particularly in community-based and independent practices, to limit or cease offering in-office therapies; and

Whereas, a limitation or cessation of in-office therapies would reduce patient access to timely and appropriate care; and

Whereas, these policies may disproportionately impact patients with complex and chronic conditions by shifting care to higher-cost or less accessible settings; and

Whereas, international reference pricing models in other countries typically include broader health system policies and negotiation mechanisms not present in state-based proposals; and

Whereas, the American Medical Association (AMA) has established policy that any use of international price indices must preserve patient access to medications and limit burdens on physician practices; and

Whereas, existing AMA policy does not include specific advocacy goals to reduce the potential financial and administrative burdens of international reference pricing on physician practices; therefore be it

RESOLVED, that our American Medical Association remain committed to the position that international price indices or averages should not be used in isolation to set or determine prescription drug prices or payments (New HOD Policy); and be it further

RESOLVED, that our AMA work with state medical societies and specialty societies to educate policymakers on the risks of misaligned reimbursement under international reference pricing models and to promote approaches that reduce drug costs without jeopardizing patient access or practice sustainability (Directive to Take Action); and be it further

RESOLVED, that our AMA amend policy H-110.980 by addition to read as follows:

1. Our American Medical Association will advocate that the use of arbitration in determining the price of prescription drugs meet the following standards to lower the cost of prescription drugs without stifling innovation:
    a. The arbitration process should be overseen by objective, independent entities.
    b. The objective, independent entity overseeing arbitration should have the authority to select neutral arbitrators or an arbitration panel.
    c. All conflicts of interest of arbitrators must be disclosed and safeguards developed to minimize actual and potential conflicts of interest to ensure that they do not undermine the integrity and legitimacy of the arbitration process.
    d. The arbitration process should be informed by comparative effectiveness research and cost-effectiveness analysis addressing the drug in question.
    e. The arbitration process should include the submission of a value-based price for the drug in question to inform the arbitrator's decision.
    f. The arbitrator should be required to choose either the bid of the pharmaceutical manufacturer or the bid of the payer.
    g. The arbitration process should be used for pharmaceuticals that have insufficient competition; have high list prices; or have experienced unjustifiable price increases.
    h. The arbitration process should include a mechanism for either party to appeal the arbitrator's decision.
    i. The arbitration process should include a mechanism to revisit the arbitrator's decision due to new evidence or data.
2. Our AMA will advocate that any use of international price indices and averages in determining the price of and payment for drugs should abide by the following principles:
    a. Any international drug price index or average should not be used to determine or set a drug's price, or determine whether a drug's price is excessive, in isolation.
    b. The use of any international drug price index or average should preserve patient access to necessary medications.
    c. The use of any international drug price index or average should limit burdens on physician practices <u>by:</u>
        1. <u>Ensuring reimbursement at or above acquisition cost for physician-administered drugs.</u>
        2. <u>Protecting patient access to in-office treatments.</u>
        3. <u>Avoiding shifting care to higher-cost settings.</u>
        4. <u>Minimizing administrative and financial burdens on physician practices.</u>
    d. Any data used to determine an international price index or average to guide prescription drug pricing should be transparent and updated regularly.
3. Our AMA supports the use of contingent exclusivity periods for pharmaceuticals, which would tie the length of the exclusivity period of the drug product to its cost-effectiveness at its list price at the time of market introduction. (Modify Current HOD Policy)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/21/26

RELEVANT AMA POLICY

Additional Mechanisms to Address High and Escalating Pharmaceutical Prices H-110.980

1. Our American Medical Association will advocate that the use of arbitration in determining the price of prescription drugs meet the following standards to lower the cost of prescription drugs without stifling innovation:
    a. The arbitration process should be overseen by objective, independent entities.
    b. The objective, independent entity overseeing arbitration should have the authority to select neutral arbitrators or an arbitration panel.
    c. All conflicts of interest of arbitrators must be disclosed and safeguards developed to minimize actual and potential conflicts of interest to ensure that they do not undermine the integrity and legitimacy of the arbitration process.
    d. The arbitration process should be informed by comparative effectiveness research and cost-effectiveness analysis addressing the drug in question.
    e. The arbitration process should include the submission of a value-based price for the drug in question to inform the arbitrator's decision.
    f. The arbitrator should be required to choose either the bid of the pharmaceutical manufacturer or the bid of the payer.
    g. The arbitration process should be used for pharmaceuticals that have insufficient competition; have high list prices; or have experienced unjustifiable price increases.
    h. The arbitration process should include a mechanism for either party to appeal the arbitrator's decision.
    i. The arbitration process should include a mechanism to revisit the arbitrator's decision due to new evidence or data.
2. Our AMA will advocate that any use of international price indices and averages in determining the price of and payment for drugs should abide by the following principles:
    a. Any international drug price index or average should not be used to determine or set a drug's price, or determine whether a drug's price is excessive, in isolation.
    b. The use of any international drug price index or average should preserve patient access to necessary medications.
    c. The use of any international drug price index or average should limit burdens on physician practices.
    d. Any data used to determine an international price index or average to guide prescription drug pricing should be transparent and updated regularly.
3. Our AMA supports the use of contingent exclusivity periods for pharmaceuticals, which would tie the length of the exclusivity period of the drug product to its cost-effectiveness at its list price at the time of market introduction.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 08-A-26

Subject: Council on Legislation Sunset Review of 2016 House Policies

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. Policy G-600.010 reads as follows, laying out the parameters for review and specifying the procedures to follow:

1. As the House of Delegates (HOD) adopts policies, a maximum 10-year time horizon shall exist. A policy will typically sunset after 10 years unless action is taken by the HOD to retain it. Any action of our AMA HOD that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the HOD identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification; or (f) The Speakers shall determine the best way for the HOD to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the HOD should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA HOD Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Board of Trustees recommends that the House of Delegates policies that are listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

APPENDIX – Recommended Actions

Policy Number	Title	Text	Recommendation
D-125.993	Medicare Part D Guidelines	Our AMA will continue to advocate to CMS, and if appropriate, to the United States Pharmacopeia, our AMA's Principles of a Sound Drug Formulary System (as described in BOT Rep. 28, I-00) with respect to drug categories and classes to be covered under Medicare Part D.	Retain – this policy remains relevant.
D-140.968	Standardized Advance Directives	Our AMA will endorse the "Uniform Health-Care Decisions Act," which was drafted and adopted by the National Conference of Commissioners on Uniform State Laws (NCCUSL) in 1993, and work with our state medical societies to advocate for its adoption in the states.	Sunset this policy. The 1993 Uniform Health-Care Decisions Act from the Uniform Law Commission has been withdrawn and replaced with a more recent version. Also see Board of Trustees Report 12-A-26, which discusses this topic.
D-165.989	Managed Care Organization Reimbursement Formulas	Our AMA will continue to assist states medical associations in their efforts to enact meaningful legislation that protects patients and patient access through network adequacy provisions.	Retain – this policy remains relevant.
D-185.982	Health Coverage for Nutritional Products for Inborn Errors of Metabolism	Our AMA: (1) will support legislation mandating insurance coverage with minimal deductible or copays for specialized medical food products used to treat inborn errors of metabolism; and (2) will advocate with the Department of Health and Human Services and members of Congress for the regulation of specialized nutritional products for the medical treatment of inborn errors of metabolism as drugs.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
D-185.993	Advocacy for Repeal of the Uniform Individual Accident and Sickness Policy Provision Law (UPPL)	Our AMA will support state and specialty medical societies and the public health associations in their efforts to secure repeal of laws and state insurance codes which allow for the denial of insurance payments for the treatment of injuries sustained as a consequence of the insured person being intoxicated due to alcohol or under the influence of narcotics.	Retain – this policy remains relevant.
D-190.977	Insurance Reimbursements	Our AMA will: (1) seek legislation requiring managed care companies and any third party carrier including Medicare to request a refund from physicians in the same time period they give physicians to file a claim in the contract; and (2) seek legislation that managed care companies and any third party carrier including Medicare in no case be allowed more than 180 days to request a refund from a physician.	Retain – this policy remains relevant.
D-270.990	Diagnosis of Disease and Diagnostic Interpretation of Tests Constitutes Practice of Medicine to be Performed by or Under the Supervision of Licensed Physicians	Our AMA will pursue all appropriate legislative, regulatory and legal actions to counter expansions of the scope of work by PhD clinical lab scientists and other non-physician laboratory personnel to authorize the independent practice of medicine by any individual who has not completed the state's requirements for licensure to engage in the practice of medicine.	Retain – this policy remains relevant.
D-290.998	Medicare/Medicaid Dual Eligibles	Our AMA will pursue all appropriate measures including, but not limited to, the development and passage by Congress of legislation to require the federal government to directly provide or mandate that states provide full reimbursement for Medicare deductibles and co-	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		payments for all patients who are Medicare/Medicaid dual eligible.	
D-305.972	Title VII Funding	Our AMA will (1) partner with all relevant stakeholders to petition Congress to reinstate funding for Title VII to at least fiscal year 2005 levels of $300 million and (2) endeavor to educate legislators in Congress about how Title VII-supported programs address health professional shortages, increase the diversity of the workforce, equip health professions students to work in health centers and underserved communities, and ensure that health professionals are ready to address health-related emerging issues.	Retain – this policy remains relevant.
D-330.904	Opposition to the CMS Medicare Policies That Undermine Access to the Best Course of Treatment ~~Part B Drug Payment Model~~	~~1. Our AMA will request that the Centers for Medicare & Medicaid Services (CMS) withdraw the proposed Part B Drug Payment Model.~~ ~~2. Our AMA will support and actively work to advance Congressional action to block the proposed Part B Drug Payment Model if CMS proceeds with the proposal.~~ ~~3~~1. Our AMA will advocate against policies that are likely to undermine access to the best course of treatment for individual patients and oppose demonstration programs that could lead to lower quality of care and do not contain mechanisms for safeguarding patients. ~~4~~2. Our AMA will advocate for ensuring that CMS solicits and takes into consideration feedback from patients, physicians, advocates, or other stakeholders in a way that allows for meaningful input on any Medicare coverage or reimbursement policy that	Retain in part and modify the title. Sunset clauses 1 and 2; retain clauses 3 and 4. The AMA submitted a letter to Centers for Medicare & Medicaid Services (CMS) in May 2016 on the proposed Part B Drug Payment Model. Due to strong opposition, CMS did not finalize this model in 2016.

Policy Number	Title	Text	Recommendation
		impacts patient access to medical therapies, including policies on coverage and reimbursement.	
D-330.905	Expedited Review for Clerical Errors on Medicare Enrollment Applications	1. Our AMA will urge the Centers for Medicare & Medicaid Services (CMS) to create an expedited process to review minor clerical errors on enrollment applications that result in CMS deactivating the physician's billing privileges. 2. Our AMA will urge CMS to remove a physician from a potential fraud and abuse review if there is proof that the error is only related to a clerical mistake. 3. Our AMA will urge CMS to create a process that not only reactivates a physician's billing privileges but also retroactively applies the effective date to the initial date when the minor clerical error occurred and applies no penalty to payments due for care provided to Medicare beneficiaries during this time frame.	Retain – this policy remains relevant.
D-330.906	Minimize Provider Burden for Meaningful Use Audit	1. Our AMA will advocate for all audit programs to have a "look back period" of no more than two years. 2. Our AMA will advocate against the "zero tolerance" policy of the current "Meaningful Use" audit program and any similar programs proposed by the Centers for Medicare and Medicaid Services, whereby physicians lose their total incentive payment rather than receive a payment proportional to their success. 3. Our AMA will advocate to reform the Centers for Medicare and Medicaid Services "Meaningful Use" audit program.	Sunset this policy. This policy is tied to the Centers for Medicare & Medicaid Services "Meaningful Use" program, which no longer exists in its original form. The Meaningful Use incentive program for physicians ended years ago and was folded into the Merit-based Incentive Payment System under MACRA.
D-335.982	Statute of Limitations for	Our AMA will work with Medicare to reduce the	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
	Medicare and RAC "Lookbacks"	"Lookback" period to be no longer than the length of time allowed to submit a claim for consideration.	
D-35.979	Opposition to the Department of Veterans Affairs Proposed Rulemaking on APRN Practices	1. Our AMA will express to the U.S. Department of Veterans Affairs (VA) that the plan to substitute physicians by using Advanced Practice Registered Nurses (APRNs) in independent practice, not in physician-led teams, is antithetical to multiple established policies of our AMA and thus should not be implemented. 2. Our AMA staff will assess the feasibility of seeking federal legislation that prevents the VA from enacting regulations for veterans' medical care that is not consistent with physician-led health care teams or to mandate that the VA adopt policy regarding the same. 3. Our AMA will call upon Congress and the Administration to disapprove or otherwise overturn rules and regulations at the federal level that would expand the scope of practice of APRNs, and other non-physicians in unsupervised practice. ~~comment to the Director of Regulation Management within the Department of Veterans Affairs of this position during the current comment period.~~ 4. Our AMA will collaborate with other medical professional organizations to vigorously oppose the ~~final adoption~~ of the VA's ~~proposed rulemaking~~ expanding the role of APRNs and other non-physicians within the VA in unsupervised practice.	Retain this policy with amendments. Clauses 3 and 4 should be amended.
D-355.996	Limitations on Reports by Insurance Carriers to	1. Our AMA will seek legislation and/or regulation that would require the Health Resources and	Retain in part.

Policy Number	Title	Text	Recommendation
	the National Practitioner Data Bank Unrelated to Patient Care	Services Administration (HRSA) to clarify that reports to the National Practitioner Data Bank (NPDB) of medical malpractice settlements by physicians be limited to those cases in which the named physician was directly involved in the provision of or failure to provide healthcare services. 2. Our AMA will seek legislation and/or regulation that would require HRSA to audit the NPDB for reports on physicians who were not involved in the treatment of a plaintiff, but were reported as a result of a healthcare entity's settlement of a claim that included the names of those physicians in their administrative roles at the entity. 3. Our AMA will seek legislation and/or regulation that would require HRSA to remove reports from the NPDB of any physician who was reported as the result of the settlement of a claim by a healthcare entity where the physician was not involved in the treatment of the plaintiff. ~~4. Our AMA will provide a report to the House of Delegates at the 2017 Interim Meeting regarding our AMA's interactions with HRSA and detailing the actions taken or planned by HRSA to eliminate inappropriate reporting of physicians to the NPDB.~~	Clause 4 has been accomplished and can be deleted. Board of Trustees Report 04-I-17 on this subject was included in the 2017 Interim Meeting House of Delegates Handbook. Clauses 1-3 remain relevant.
D-390.951	CMS Revalidation of Medicare Billing Privileges	Our AMA will advocate for the Centers for Medicare & Medicaid Services (CMS) to adopt the practice of sending revalidation notices to physicians using certified mail with return receipt, thus ensuring that such notices are actually sent by CMS and received by the physician.	Sunset this policy. The Centers for Medicare & Medicaid Services has moved toward an electronic, self-service model. Notices are now sent by email in addition to U.S. mail, due dates are posted publicly months in

Policy Number	Title	Text	Recommendation
			advance, and PECOS is the primary mechanism for managing enrollment. Advocating specifically for certified mail with return receipt does not align with CMS' current direction and would likely be viewed as inconsistent with the agency's push toward modernization and paperless processes.
D-440.929	Nominations for and Improvement of the Position of the United States Surgeon General	Our AMA will convey to the Presidential Transition Team support for an enhanced role for the Surgeon General in addressing important matters of public health.	Sunset this policy. This directive has been accomplished. In 2016, the AMA met with presidential transition teams of both major party candidates to discuss their positions on a wide range of health policy issues, including public health issues that could be affected by the Surgeon General. After the election, our AMA resumed discussions with the president-elect's transition team. As part of these discussions, AMA advocated for an enhanced role for the Surgeon General that includes more resources to address matters of public health.
D-450.955	Remove Pain Scores from Quality Metrics	Our AMA will work with the Centers for Medicare & Medicaid Services to remove uncontrolled pain scores from quality metrics that impact reimbursement for services rendered in the nursing facilities and from the five-star rating system for nursing facilities.	Retain – this policy remains relevant.
D-478.982	Redefine "Meaningful Use"	1. Our AMA will work with the federal government and the Department of Health and Human	Sunset this policy.

Policy Number	Title	Text	Recommendation
	of Electronic Health Records	Services to: (A) set realistic targets for meaningful use of electronic health records such as percentage of computerized order entry, electronic prescribing, and percentage of inclusion of laboratory values; and (B) improve the electronic health records incentive program requirements to maximize physician participation. 2. Our AMA will continue to advocate that, within existing AMA policies, the Centers for Medicare & Medicaid Services suspend penalties to physicians and health care facilities for failure to meet Meaningful Use criteria.	"Meaningful Use" has been replaced by the Promoting Interoperability (PI) Program for hospitals and, for clinicians, it is now a core component of the Merit-based Incentive Payment System (MIPS) under the Quality Payment Program (QPP).
D-480.967	Integration of Mobile Health Applications and Devices into Practice	Our AMA will: (1) assess the potential liability risks to physicians for using, recommending, or prescribing mHealth apps, including risk under federal and state medical liability, privacy, and security laws; and (2) assess the feasibility of state and federal legislation, as well as other innovative alternatives, in an effort to mitigate the physician's potential risk of liability from the use or recommendation of mHealth apps.	Retain – this policy remains relevant.
D-480.968	Telemedicine Encounters by Third Party Vendors	1. Our AMA ~~will develop model legislation and/or regulations~~ supports requiring telemedicine services or vendors to coordinate care with the patient's medical home and/or existing treating physicians, which includes at a minimum identifying the patient's existing medical home and/or treating physicians and providing to the treating physician a copy of the medical record, with the patient's consent. 2. ~~The model legislation and/or~~	Retain with amendments.

Policy Number	Title	Text	Recommendation
		~~regulations will also~~ Our AMA also supports require~~d~~ing the vendor to abide by laws addressing the privacy and security of patients' medical information 3. Our AMA ~~will include in that model state legislation~~ supports the following concepts based on AMA policy: (a) A valid patient-physician relationship must be established before the provision of telemedicine services; (b) Physicians and other health practitioners delivering telemedicine services must be licensed in the state where the patient receives services, or be providing these services as otherwise authorized by that state's medical board; and (c) The standards and scope of telemedicine services should be consistent with related in-person services. 4. Our AMA will educate and advocate to AMA members on the use and implementation of telemedicine and other related technology in their practices to improve access, convenience, and continuity of care for their patients.	
D-505.998	International Trade Agreements	Our AMA will: (1) monitor developments on US international trade agreements that involve the provision of medical services and the distribution and advertising of alcohol and tobacco; (2) in collaboration with interested members of the Federation and other professional organizations, advise the US Trade Representative on trade issues that could affect physicians or the provision of medical services, and advocate applicable	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		AMA policy; (3) in collaboration with interested members of the Federation and other professional organizations, advise the US Trade Representative on trade issues that involve the distribution and advertising of alcohol and tobacco, and other pertinent public health issues, and advocate applicable AMA policy; and (4) continue to strongly advocate for US ratification of the Framework Convention on Tobacco Control.	
D-95.973	Fraudulent Use of Prescriptions	Our AMA: (1) will promote the efforts for state run electronic Prescription Monitoring Programs to allow individual physicians to access records of their prescribing of opioids, for their entire panel of patients, including patient names and prescription information; and (2) will study current pathways that physicians have available to report possible fraudulent use of their prescriptions and disseminate this information throughout organized medicine.	Retain – this policy remains relevant.
H-100.966	Tracking and Punishing Distributors of Counterfeit Pharmaceuticals	Our AMA supports legislation making the production and distribution of counterfeit pharmaceuticals a felony.	Retain – this policy remains relevant.
H-110.989	Pay for Delay Arrangements by Pharmaceutical Companies	Our AMA supports: (1) the Federal Trade Commission in its efforts to stop "pay for delay" arrangements by pharmaceutical companies and (2) federal legislation that makes tactics delaying conversion of medications to generic status, also known as "pay for delay," illegal in the United States.	Retain – this policy remains relevant.
H-120.929	Protect Individualized Compounding in	Our American Medical Association ~~will advocate that~~ supports the US Food and Drug	Retain with amendments.

Policy Number	Title	Text	Recommendation
	Physicians' Offices as Practice of Medicine	Administration ~~remove~~ in excluding physician offices and ambulatory surgery centers from its definition of a compounding facility.	
H-120.934	Appropriate Use of Compounded Medications in Medical Offices	Our American Medical Association supports regulatory changes to improve access to (1) the compounding and repackaging of manufactured FDA-approved drugs and substances usually prepared in the office-based setting and (2) purchasing from compounding pharmacies of FDA-approved drugs, repackaged or compounded for the purpose of in-office use.	Retain – this policy remains relevant.
H-175.986	Bounty Hunter Provision of the Health Insurance Portability and Accountability Act of 1996	The AMA will work toward amending the Health Insurance Portability and Accountability Act of 1996 by imposing civil monetary penalties for fraudulently and falsely reporting physician fraud or abuse.	Sunset this policy. The intent of this policy—to protect physicians from malicious or unfounded fraud allegations—is comprehensively achieved through several AMA policies requiring a knowing and willful intent standard, preserving the government's burden of proof, and ensuring robust due process protections during fraud and abuse investigations. See AMA Policies H-175.981 Fraud and Abuse Within the Medicare System; H-175.985 - Kennedy-Kassebaum: Fraud and Abuse; H-235.965 - Physician Involvement in Hospital or Health Care Corporate Compliance Committees Concerning Fraud and Abuse; H-175.982 - Due Process for Physicians; H-330.943 - Physicians' Rights;

Policy Number	Title	Text	Recommendation
			H-175.973 - Medicare Investigation Search and Seizure Process.
H-270.953	Tax Exemptions for Feminine Hygiene Products	Our AMA supports legislation to remove all sales tax on feminine hygiene products.	Retain – this policy remains relevant.
H-270.966	Disclosure of Drug Use and Addiction Treatment History in Public Assistance Programs	Our AMA opposes: a) requiring that housing applicants consent to the disclosure of medical information about alcohol and other drug abuse treatment as a condition of renting or receiving Section 8 assistance; and b) requiring applicants and/or beneficiaries of Temporary Assistance for Needy Families (TANF, "welfare") and/or the Supplemental Nutrition Assistance Program (SNAP, "food stamps") to disclose medical information, including alcohol and other drug use or treatment for addiction, or to deny assistance from these programs based on substance use status.	Retain – this policy remains relevant.
H-270.968	Preservation of Political Advocacy by Nonprofit Organizations	The AMA continues to oppose a federal initiative that would impose restrictions on advocacy activities of federal grantees that preclude them from both utilizing private funds for advocacy activities as well as delivering government-funded services.	Retain – this policy remains relevant.
H-290.964	CMS Audits and Clawbacks	Our AMA will undertake advocacy efforts to: 1) Persuade CMS to redefine "primary care provider" for purposes of the regulations governing the enhanced payments to primary care physicians mandated by section 1202 of the Health Care and Education Reconciliation Act of 2010 ("Section 1202"). Such definition should include the current providers board certified in a specialty considered primary care;	Sunset this policy. The temporary Medicaid "fee bump" paid to primary care providers under the ACA expired at the end of 2014. Medicaid RAC audits typically look back at payments for 3-5 years, and therefore the time period for such audits related to the ACA primary care bump has passed. For RAC audit issues unrelated to the

Policy Number	Title	Text	Recommendation
		or providers attesting to the 60% threshold under the same methodology as used in the parallel statutory formula in Section 5501(a) of PPACA; or, in states utilizing managed care organizations, providers who are, or have been held out by such MCOs as primary care providers by having patients assigned to such primary care providers and holding such providers out to the public as primary care providers; and the 60% Threshold formula previously utilized in attestation. 2) Persuade CMS to order that the audits conducted, or to be conducted, of the enhanced payments to primary care physicians, by state Medicaid agencies or their agents be conducted pursuant to the amended flexible formula redefining "primary care provider." 3) Persuade CMS to order that state Medicaid agencies, or their agents, immediately cease recoupments, or hold amounts of funds already recouped in trust, until a new audit using the redefined formula can be completed.	ACA Medicaid primary care fee bump, the AMA continues to engage in advocacy to improve the RAC audit process under Policies D-320.991 - Creating a Fair and Balanced Medicare and Medicaid RAC Program, and D-330.915 - RAC Audits of E&M Codes.
H-290.978	Medicare/Medicaid Dual Eligible Reimbursement	Our AMA seeks the repeal of Section 4714 of the Balanced Budget Act of 1997 and restore the requirement that states pay the deductible, copayment and coinsurance amounts for Medicare/Medicaid dual-eligible patients.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-330.995	Amendments to the Medicare Civil Penalties Section of the Social Security Act	The AMA supports amendment of the Social Security Act to permit trial de novo for a physician who so requests when the sum of the penalties levied is greater than $10,000 and/or when a suspension from the Medicare program is applied.	Retain – this policy remains relevant.
H-355.974	National Practitioner Data Bank	1. Our AMA will advocate to the Health Resources and Services Administration that a physician's surrender of clinical privileges or failure to renew clinical privileges while under investigation should not be reported to the National Practitioner Data Bank unless the physician has been notified that an investigation is underway.	Retain – this policy remains relevant.
H-370.968	Endorsement of the Uniform Anatomical Gift Act (2006)	Our AMA endorses the Uniform Anatomical Gift Act of 2006, and urges all constituent state medical societies to work with donation stakeholders, including organ procurement organizations, eye banks, tissue banks, and other donation-related organizations, toward persuading their state legislatures to adopt UAGA (2006) in place of earlier versions of the UAGA.	Retain – this policy remains relevant.
H-383.987	Restrictive Covenants in Physician Contracts	Our AMA will provide guidance, consultation, and model legislation concerning the application of restrictive covenants to physicians upon request of state medical associations and national medical specialty societies.	Retain – this policy remains relevant.
H-390.853	Protecting Patient Access to High Quality Imaging Services	Our AMA actively supports repeal or delay of the provision under Section 5102 of the Deficit Reduction Omnibus Reconciliation Act of 2005 that reduces the technical component payment (including the technical component of the global payment) for an imaging service under the physician payment	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		schedule if it exceeds (without regard to geographic wage adjustment factor) the outpatient department payment schedule amount for the service established under the Medicare prospective payment system for hospital outpatient departments.	
H-390.898	Equity in Medicare Payment Levels	Our AMA: (1) adopts as a major legislative priority the adequate funding of the Medicare program; and (2) supports the initiation of legislation to prevent any further reduction of the current Medicare limiting charges.	Sunset this policy. This policy has been superseded by AMA Efforts on Medicare Payment Reform D-400.982; Health System Reform Legislation H-165.838; Physician Payment Reform H-400.972; Sequestration D-390.946; Preventing Imminent Payment Cuts and Ensuring the Sustainability of the Medicare Program D-390.921; and Saving Traditional Medicare H-390.832.
H-40.970	The Uniformed Services University of the Health Sciences	The AMA fully supports the continuation of the Uniformed Services University of the Health Sciences as an institution and urges the Executive and Legislative Branches of the United States Government to fulfill their responsibility to our armed forces by fully funding the Uniformed Services University of the Health Sciences.	Retain – this policy remains relevant.
H-400.989	Physician Negotiations	The AMA supports federal legislation that would allow the AMA and state medical associations, on behalf of physicians, to negotiate payment schedules on federal and state policies, respectively, impacting on physician reimbursement.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-410.949	Dry Needling is an Invasive Procedure	Our AMA recognizes dry needling as an invasive procedure and maintains that dry needling should only be performed by practitioners with standard training and familiarity with routine use of needles in their practice, such as licensed medical physicians and licensed acupuncturists.	Retain – this policy remains relevant.
H-435.952	Savings Accounts for Extended Reporting Endorsement Policies and Other Liability Insurance Costs	Our AMA supports changes to the Internal Revenue Code to allow a pre-tax Extended Reporting Endorsement Savings Account whereby the amount of money contributed before taxes and interest on earnings from those monies be allowed to grow tax free until such time as an extended reporting endorsement must be purchased and that the balance of any remaining funds would return to the physician without IRS penalty and be subject to taxation at that time.	Retain – this policy remains relevant.
H-435.958	Immunity from Professional Liability Tort for Volunteer Services During State or National Emergencies	The policy of the AMA is to formulate and support federal legislation granting legal immunity, including medical liability immunity, for volunteer medical services arising from declared state or national emergencies.	Retain – this policy remains relevant.
H-435.960	Physician Relief from Product Class Actions	Our AMA: (1) asks Congress to pass legislation which prevents naming the treating physician as a party to product liability lawsuits when the treating physician has used a Food and Drug Administration-approved drug or device; and (2) promotes the introduction of legislation which would exempt physicians who have properly prescribed usage of Food and Drug Administration-approved medications from liability in class action suits	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		against pharmaceutical companies.	
H-435.967	Report of the Special Task Force and the Advisory Panel on Professional Liability	1. It is the policy of the AMA that effective medical liability reform, based on the California Medical Injury Compensation Reform Act (MICRA) model, is integral to health system reform. The AMA's MICRA-based federal tort reform provisions include: (a) a $250,000 ceiling on non-economic damages, (b) the offset of collateral sources of plaintiff compensation, (c) decreasing incremental or sliding scale attorney contingency fees, (d) periodic payment of future awards of damages, and (e) a limitation on the period for suspending the application of state statutes of limitations for minors to no more than six years after birth.	Retain – this policy remains relevant.
H-435.976	Liability Protection for Medical Volunteers	It is the policy of the AMA to endorse the concept of liability protection for medical volunteer services and to promote legislative efforts to achieve that goal.	Retain – this policy remains relevant.
H-478.985	Patient Safety Incidents Related to Use of Electronic Health Records	Our AMA supports the Office of the National Coordinator for Health IT (ONC) efforts to implement a Health IT Safety Center to minimize EHR-related patient safety risks through collection, aggregation and analysis of data reported from EHR-related adverse patient safety events and near misses.	Sunset this policy. The Office of the National Coordinator for Health IT (ONC) efforts to implement the "Health IT Safety Center" never materialized. Instead of a centralized, independent center, ONC shifted to a collaborative approach to safety, which included SAFER (Safety Assurance Factors for Electronic Health Record Resilience) Guides, voluntary reporting, integrating safety into certification, and industry collaboration.

Policy Number	Title	Text	Recommendation
H-478.986	Merit-Based Incentive Programs	Our AMA will advocate to make the certified vendor-based EHRs accountable for the provision of reports in a format suitable to satisfy physician reporting requirements.	Retain – this policy remains relevant.
H-95.927	Universal Prescriber Access to Prescription Drug Monitoring Programs	Our AMA supports legislation and regulatory action that would authorize all prescribers of controlled substances, including residents, to have access to their state prescription drug monitoring program.	Retain – this policy remains relevant.
H-95.928	Model State Legislation Promoting the Use of Electronic Tools to Mitigate Risk with Prescription Opioid Prescribing	1. Our AMA supports the ability of prescription drug monitoring programs (PDMPs) to have the capability for physicians to know when their patients have received a prescription for controlled substances from multiple prescribers or multiple pharmacies within a short time frame. 2. Our AMA will advocate to key stakeholders, including the National Association of State Controlled Substances Authorities, the National Association of Boards of Pharmacy, and the National Governors Association, to ensure that efforts to reduce Multiple Provider Events (MPEs) are done in a manner that supports continuity of care. 3. Our AMA will work with the Centers for Disease Control and Prevention (CDC), Substance Abuse and Mental Health Services Administration (SAMHSA) and other relevant federal agencies, to better understand the factors that lead to MPEs and develop medically and ethically appropriate strategies for reducing them. 4. Our AMA will advocate for the interoperability of state PDMPs	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		with electronic health records (EHRs). 5. Our AMA will advocate for the Centers for Medicaid and Medicare Services (CMS) and Office of the National Coordinator for Health Information Technology (ONC) to better incorporate feedback from physicians to focus on outcomes and focusing ONC certification on testing for product safety, security, usability, and interoperability.	
H-95.929	Support for Prescription Drug Monitoring Programs	Our AMA will: (1) continue to encourage Congress to assure that the National All Schedules Prescription Electronic Reporting Act (NASPER) and/or similar programs be fully funded to allow state prescription drug monitoring programs (PDMPs) to remain viable and active; and (2) work to assure that interstate operability of PDMPs in a manner that allows data to be easily accessed by physicians and does not place an onerous burden on their practices.	Sunset this policy. PDMPs are largely ubiquitous in states, and interstate interoperability, while not universal, is common. This policy is also covered by H-95.939 - Development and Promotion of Single National Prescription Drug Monitoring Program.
H-95.939	Development and Promotion of Single National Prescription Drug Monitoring Program	Our American Medical Association (1) supports the voluntary use of state-based prescription drug monitoring programs (PDMP) when clinically appropriate; (2) encourages states to implement modernized PDMPs that are seamlessly integrated into the physician's normal workflow, and provide clinically relevant, reliable information at the point of care; (3) supports the ability of physicians to designate a delegate to perform a check of the PDMP, where allowed by state law; (4) encourage states to foster increased PDMP use through a seamless registration process; (5)	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		encourages all states to determine how to use a PDMP to enhance treatment for substance use disorder and pain management; (6) encourages states to share access to PDMP data across state lines, within the safeguards applicable to protected health information; and (7) encourages state PDMPs to adopt uniform data standards to facilitate the sharing of information across state lines.	
H-95.986	State Legislation to Monitor Prescription of Schedule II Drugs	The AMA believes that it is important for each state to assess its own drug diversion problem and, taking into consideration the strengths of various available programs, to tailor remedial action to the specific problems of the state involved.	Sunset this policy. Each state has robust policies that accomplish this. The AMA also has multiple policies addressing the need for multifaceted state and national efforts. These include: H-95.896 - Calling for a Multifaceted Approach to the Illicit Fentanyl Crisis; and H-95.940 - Addressing Emerging Trends in Illicit Drug Use.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 12-A-26

Subject: The Uniform Health-Care Decisions Act (Resolution 250-A-24)

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

This American Medical Association (AMA) Board of Trustees (Board) report responds to the referral of Board Report 13-A-25, "The Uniform Health-Care Decisions Act," which arose from Resolution 250-A-24, "Endorsement of the Uniform Health-Care Decisions Act," introduced by the Michigan Delegation which was also referred. Resolution 250-A-24 proposed amending Policy D-140.968, "Standardized Advance Directives," as follows:

> Our AMA will endorse the "Uniform Health-Care Decisions Act," which was drafted and adopted by the National Conference of Commissioners on Uniform State Laws (NCCUSL) in ~~1993~~ 2023, and work with our state medical societies to advocate for its adoption in the states.

Testimony in support of Resolution 250-A-24 emphasized that AMA had endorsed the 1993 version of the Uniform Health-Care Decisions Act (UHCDA), that a new and updated version of the UHCDA had been approved in 2023, and that endorsement of the 2023 version was a needed update to AMA policy. Supportive testimony also praised the UHCDA's new provisions related to end-of-life care. On the other hand, other testimony voiced concern about the UHCDA provisions related to mental health and expressed that the UHCDA inadequately addressed complex issues that would negatively impact medical practice.

Board Report 13-A-25 examined the binary question of whether the AMA should endorse the 2023 UHCDA as adopted by the Uniform Law Commission (ULC) and did not seek or recommend changes to the UHCDA or address broader policy issues. The report recommended against endorsement of the 2023 UHCDA and recommended rescinding Policy D-140.968 as outdated.

At the 2025 Annual Meeting, testimony requested that Board Report 13-A-25 be referred back to the Board for further study rather than proceeding with the recommendation to rescind AMA Policy D-140.968. Testimony expressed concerns that rescinding the policy would leave the AMA without guidance on standardized advance directives and urged the Board to develop affirmative policy addressing advance care planning.

This report responds to the referral by clarifying the scope and intent of the Board's prior recommendations, acknowledging the concerns raised, and reaffirming the extensive body of existing AMA policy that already addresses advance care planning, advance directives, surrogate decision making, and related ethical and clinical issues.

BACKGROUND

The ULC is a nonpartisan, non-profit association comprised of state commissions on uniform laws from each state. Members of the ULC are licensed attorneys. The ULC's purpose is "to study and review the law of the states to determine which areas of law should be uniform [and] promote the principle of uniformity by drafting and proposing specific statutes in areas of the law where uniformity between the states is desirable."[1] Importantly, the ULC drafts model legislation, but the legislation must be enacted by a state legislature to be effective.

In 1993, the ULC, then known as the National Conference of Commissioners on Uniform State Laws, promulgated the UHCDA, a third-generation model bill that addressed advance health care directives and health care decision-making on behalf of patients lacking capacity. Subsequently, the AMA adopted policy to endorse the 1993 UHCDA. Six states (AK, HI, ME, MS, NM, and WY) enacted the 1993 UHCDA. In 2020, the ULC appointed a drafting committee to modernize and expand the UHCDA, and in 2023, the ULC approved the 2023 UHCDA.

The 2023 UHCDA governs powers of attorney for health care, advance directives, and other forms of health care instructions intended to inform health care professionals and agents about a patient's wishes, priorities, and values regarding health care decisions made for them when they are unable to make such decisions themselves. The UHCDA also governs determination of capacity, judicial review, and appointment of surrogate decisionmakers when there is no advance directive. In addition, the UHCDA establishes certain duties and powers of agents and health care professionals and shields them from liability when they act reasonably and in good faith.

Among the changes in the 2023 UHCDA is the authorization of advance directives specifically for mental health care. These directives enable individuals to provide specific instructions reflecting their preferences for mental health care and/or to authorize an agent to make mental health care decisions on their behalf. The provisions also allow an individual to limit their own ability to revoke an advance mental health care directive when experiencing an acute mental health event.

To date, two states (DE and NV) have enacted the 2023 UHCDA.

AMA POLICY

As noted, AMA Policy D-140.968, "Standardized Advance Directives," is narrowly focused on endorsement of the 1993 UHCDA and urges state medical societies to advocate for its adoption. Beyond policy on the UHCDA, the AMA maintains a robust and comprehensive set of policies that address advance care planning across clinical, ethical, and public policy dimensions.

Policy H-85.957, "Encouraging Standardized Advance Directives Forms Within States," encourages state medical societies to develop a template advance directive form for use by physicians and other health care providers to discuss end-of-life care with their patients.

Policy H-140.845, "Encouraging the Use of Advance Directives and Health Care Powers of Attorney," outlines the AMA's commitment to encouraging the use and awareness of advance directives and Durable Powers of Attorney for Health Care. The policy urges health care providers to educate young adults, nursing home residents, physicians, and medical students about advance directives and designating health care proxies. It promotes ensuring care plans, including advance directives, are on file and accompany patients when transferred between facilities. The policy encourages states and specialty societies to address technical issues with these documents and for medical offices to make related information easily accessible. The policy calls for collaboration

with insurers, states, Congress, and federal agencies to expand public education, include materials during Medicare enrollment and driver's license renewal, and provide incentives for advance directive completion. Additionally, it supports ongoing efforts to help physicians educate patients about advance directives and advocates for the secure electronic storage of these documents.

Policy H-85.956, "Educating Physicians About Advance Care Planning," supports efforts to increase the prevalence and quality of meaningful advance care planning, including the use of advance directives, to improve recognition of and adherence to a patient's advance care decisions, the development of materials to educate physicians, patients and others about advance care planning and the requirements and implications of the Patient Self-Determination Act, and patient education resources. The Policy also encourages medical schools and residency programs to increase awareness of advance care planning and educate trainees about the use of such tools.

Policy H-140.970, "Decisions to Forgo Life-Sustaining Treatment for Incompetent Patients," outlines best practices for making decisions about life-sustaining treatment for incompetent patients, emphasizing the importance of advance directives, such as living wills and designated proxies, to ensure a patient's wishes are respected. If no directive exists, family or close associates serve as surrogate decisionmakers, guided by the patient's known preferences or best interests; physicians must provide all relevant information. The policy instructs that institutional ethics committees with diverse representation should support sound decision-making, especially in contentious cases requiring review. Judicial intervention should be a last resort, focused on assigning decision makers rather than making treatment choices. When the patient's wishes are unknown, surrogates' genuine concern should guide decisions. Special consideration and support are advised for cases involving permanently unconscious patients or seriously ill newborns, including parental counseling and ethics consultations. Hospitals must have protocols to guide capacity assessment, surrogate identification, and dispute resolution in line with these principles.

Policy H-85.952, "Advance Directives During Pregnancy," affirms the patient-physician relationship as the appropriate locus of decision making and the independence and integrity of that relationship, promotes awareness and understanding of the ethical responsibilities of physicians with respect to advance care planning, the use of advance directives, and surrogate decision making, regardless of gender or pregnancy status, set out in the AMA *Code of Medical Ethics*, and recognizes that there may be extenuating circumstances which may benefit from institutional ethics committee review, or review by another body where appropriate.

Finally, AMA Policy H-140.826, "Use of Psychiatric Advance Directives," recognizes the potential for advance care planning to promote the autonomy of patients with mental illness and urges the mental health community to continue to study the role of advance care planning in therapeutic relationships and the use of psychiatric advance directives to promote the interests and well-being of patients, and support efforts to increase awareness and appropriate utilization of psychiatric advance directives.

DISCUSSION

Advance care planning is an important aspect of ensuring patient treatment preferences are respected in the event the patient is unable to communicate their wishes. Central to respecting patient autonomy at the end of life or during incapacity is the use of advance directives, a health care power of attorney, and other advance care planning instruments. However, laws governing these instruments may vary across states and this inconsistency can create confusion, complexity, and barriers to effective health care decision-making, ultimately undermining the very goals of advance care planning. A uniform approach among state laws could help minimize confusion and

inconsistency and promote high-quality patient care and effective communication and decision-making between patients, families, and health care professionals, particularly in cases when medical decision-making may occur across state lines, amidst conflict between family members or when a patients' preferences have not been made clear. The 2023 UHCDA provides a framework for the creation, execution, and recognition of advance care planning tools, the delegation of health care decision-making, and the relevant duties of agents and health care providers. Indeed, existing AMA policy aligns with the goals of the 2023 UHCDA. However, inconsistencies between the 2023 UHCDA, AMA policy, and clinical practice raise concerns about AMA endorsement of the 2023 UHCDA.

One key criticism of the 2023 UHCDA centers around determinations of patient capacity to make health care decisions, and the lack of clear guidelines for complex medical scenarios. Specifically, under the 2023 UHCDA, the determination of capacity requires consideration of two criteria: (1) whether an individual is willing and able to communicate a decision and (2) whether the individual understands the nature and consequences of making or revoking a decision or instruction. In contrast, the widely accepted assessment of decisional capacity in clinical practice, which has been incorporated into state laws, assesses four skills: whether the individual is able to understand relevant information; appreciate the clinical circumstances; exhibit a rational process of decision making; and communicate a consistent choice.[2] While the approaches are not necessarily in conflict in all cases, the 2023 UHCDA approach could, particularly with regard to psychiatric care, conflict with the accepted medical standard for assessing capacity. This could lead to confusion among health care professionals and in application in the courts.

Additionally, there are 2023 UHCDA provisions that directly conflict with existing AMA policy. AMA Policy H-140.970, "Decisions to Forgo Life-Sustaining Treatment for Incompetent Patients," states that, in the absence of an advance directive, the patient's family should become the surrogate decisionmaker regarding decisions to forgo life-sustaining treatment, whereas the 2023 UHCDA first prioritizes "an adult the individual has identified, other than in a power of attorney for health care, to make a health-care decision for the individual if the individual cannot make the decision" before family. AMA policy also identifies when decisions to forgo life-sustaining treatment warrant institutional or judicial review, including when there is a dispute among family members and no designated decisionmaker, and when there is no available family willing to be the patient's surrogate decisionmaker. In contrast, the 2023 UHCDA instructs health care providers to comply with the decision of a majority of the family members when there is a dispute and authorizes non-family members to function as surrogate decision makers according to a priority list. AMA policy also advocates for institutional ethics committees, whereas the 2023 UHCDA makes no mention of ethics committees. The 2023 UHCDA also authorizes and promotes mental health advance directives, whereas AMA policy merely recognizes the potential benefit of such directives and urges further study.

The 2023 UHCDA also conflicts with AMA policies that vigorously support and advocate for appropriate physician supervision of non-physician clinical staff in all areas of medicine. Specifically, the 2023 UHCDA authorizes a "responsible health-care professional" to determine whether a patient lacks capacity when a physician, psychologist, physician assistant, advanced practice registered nurse, or social worker is unavailable, and a prompt decision is necessary to avoid loss of life or serious harm. The 2023 UHCDA does not require the "responsible health-care professional" to have any specific training, expertise, or license. AMA Policy H-160.949, "Practicing Medicine by Non-Physicians," expressly opposes state legislation allowing non-physician groups to engage in the practice of medicine without physician training or appropriate physician supervision.

It is critical to note that AMA does not endorse the actions of other organizations with which it does not completely and wholly agree. Though individuals may disagree about the appropriate weight to be given to the concerns and conflicts discussed in this report, the Board finds the lack of perfect alignment determinative. Therefore, the Board continues to recommend against endorsement of the 2023 UHCDA.

The Board appreciates the thoughtful testimony provided at the 2025 Annual Meeting and recognizes the importance of advance care planning in ensuring that patients' treatment preferences are respected. The Board acknowledges that concerns were expressed that rescinding Policy D-140.968 would leave the AMA without direction on advance care planning and standardized advance directives. It is important to clarify, however, the scope of Policy D-140.968 and the breadth of the AMA's existing policy framework. Policy D-140.968 addresses only the AMA's endorsement of the 1993 UHCDA model act. Since the 1993 model act has been replaced by the 2023 version, Policy D-140.968 has become obsolete and should be sunset (as recommended in Board Report 8 being presented at 2026 Annual Meeting). However, sunsetting this policy would not leave the AMA without direction on advance care planning. The AMA maintains extensive and robust policy addressing advance directives, advance care planning, powers of attorney for health care, surrogate decision-making, and related issues, as detailed in the AMA Policy section of this report and Board Report 13-A-25.

The Board recognizes the desire expressed in testimony for the AMA to take a leadership role in crafting an alternative to the 2023 UHCDA. However, the Board must note that the ULC's development of the 2023 UHCDA reflects the culmination of an intensive, multi-year process led by ULC involving extensive stakeholder engagement, legal expertise, and multiple iterations of drafting and revision and consideration of complex legal, ethical, and clinical issues across diverse practice settings and state regulatory environments. Attempting to replicate or improve upon such a comprehensive effort is beyond the scope of a Board report.

Moreover, large-scale changes to AMA policy, particularly those that would establish new substantive positions or reconcile complex legal, ethical, and clinical issues, are most appropriately initiated by the House of Delegates through resolutions or by Councils reports that allow for thorough vetting, stakeholder input, and deliberative consideration. The Board respectfully submits that it would be inappropriate for a Board report to attempt to craft new comprehensive policy on these issues, as this would bypass the deliberative processes of the House of Delegates that are designed to ensure thoughtful policy development with appropriate input from the Federation.

In this context, the Board believes it is important to reaffirm the AMA's existing comprehensive policy framework on advance care planning, which already provides substantial guidance for the AMA's advocacy work and for physicians' clinical practice. These policies address the core concerns raised in testimony regarding standardized advance directives, mental health advance directives, surrogate decision-making, and capacity determination, and demonstrate the AMA's longstanding commitment to promoting advance care planning, respecting patient autonomy, and ensuring appropriate surrogate decision-making. Reaffirmation of existing policy underscores that the AMA already has extensive guidance to inform its work, while preserving the ability of the House of Delegates or AMA councils to propose and consider new or revised policy in the future through established processes.

RECOMMENDATIONS

The Board recommends that the following be adopted in lieu of Resolution 250-A-24 and the remainder of the report be filed.

1. That Policy H-85.957, "Encouraging Standardized Advance Directives Forms Within States," be reaffirmed. (Reaffirm HOD Policy)

2. That Policy H-140.845, "Encouraging the Use of Advance Directives and Health Care Powers of Attorney," be reaffirmed. (Reaffirm HOD Policy)

3. That Policy H-85.956, "Educating Physicians About Advance Care Planning," be reaffirmed. (Reaffirm HOD Policy)

4. That Policy H-140.970, "Decisions to Forgo Life-Sustaining Treatment for Incompetent Patients," be reaffirmed. (Reaffirm HOD Policy)

5. That Policy H-140.826, "Use of Psychiatric Advance Directives," be reaffirmed. (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 13-A-26

Subject:	Reducing Risk of Federal Investigation or Prosecution for Prescribing Controlled Substances for Legitimate Medicaid Purposes
Presented by:	David H. Aizuss, MD, Chair
Referred to:	Reference Committee B

At the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD) Resolution 209, "Reducing Risk of Federal Investigation or Prosecution for Prescribing Controlled Substances for Legitimate Medical Purposes," was introduced by the American Society of Addiction Medicine and the American Academy of Hospice and Palliative Medicine. The first item in the resolve of Resolution 209-A-25 was adopted and became Policy H-95.894 and calls for the AMA to "support legislative, regulatory, and other advocacy efforts that advance the adoption of a conjunctive standard in the context of legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice" under the federal Controlled Substances Act and implementing regulations."

The second item in the resolve of Resolution 209-A-25 was referred. This item asked the AMA to:

> address relevant federal regulations to clarify that "legitimate medical purpose" means "for the purpose of preventing, treating, or managing a patient's health-related condition."

This report studies the issues raised by providing relevant background, discussing issues raised by the resolution, citing AMA policy, and making recommendations.

BACKGROUND

The term, "legitimate medical purpose," appears multiple times in the Controlled Substances Act (CSA), but the CSA does not provide a specific definition for "legitimate medical purpose."[1] Regulations implementing the CSA, which are supposed to guide the U.S. Drug Enforcement Administration (DEA), also do not specifically define the term.[2] For example, Section 1306.04 of the CSA provides, in part, that "A prescription for a controlled substance to be effective must be issued for a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice."[3] Multiple provisions in Section 1300 (and elsewhere) in the CSA use essentially the same language with respect to electronic prescriptions, prescriptions obtained via a telemedicine encounter, and other situations.[4] The CSA, however, does not actually define what constitutes a "legitimate medical purpose." Examples within the CSA's regulatory framework that mirror the CSA include:

- A "valid prescription" means a prescription that is issued for a legitimate medical purpose by an individual practitioner licensed by law to administer and prescribe the drugs concerned and acting in the usual course of the practitioner's professional practice."[5]

© 2026 American Medical Association. All rights reserved.

- "A prescription for a controlled substance to be effective must be issued for a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice."[6]

Despite the lack of a clear definition, the term, "legitimate medical purpose," is commonly used by the DEA and the courts to identify situations that are contrary to a legitimate medical purpose. Representative examples include:

- "[T]he Agency concludes that Respondent issued multiple controlled substance prescriptions other than for a legitimate medical purpose while acting in the usual course of professional practice, prescribed controlled substances without an appropriate prior examination and a medical indication, and failed to maintain adequate and accurate records relating to the provision of services, thus committing multiple violations of California law and, therefore, of federal law."[7]
- "Respondent issued prescriptions for his own personal use to feed his addiction, not for a legitimate medical use."[8]
- "[T]hese prescriptions were issued without a legitimate medical purpose, outside the usual course of professional practice, and beneath the standard of care because Respondent failed to appropriately establish or document a medical indication."[9]

One of the purposes of the DEA Practitioner's Manual is to provide guidance to practitioners, but the manual similarly does not clarify what is—and is not—a "legitimate medical purpose." For example, the manual states that, "There is a legitimate need for controlled substances, and DEA does not want to hinder their legitimate prescribing, administering, and dispensing."[10] The DEA additionally tells practitioners that,

> Federal controlled substance laws are designed to function in tandem with state-controlled substance laws. DEA works in cooperation with state professional licensing boards and state and local law enforcement officials to make certain that pharmaceutical controlled substances are prescribed, administered, and dispensed for a legitimate medical purpose in the usual course of professional practice.[11]

The "tandem" nature cited by DEA also is not clearly defined, but as described in more detail below, highlights the essential role that state medical boards play in regulating the practice of medicine.

The lack of clarity in federal law, however, has not stopped the DEA from prosecuting physicians for the alleged failure to meet the "legitimate medical purpose" standard. In *City and County of San Francisco v. Purdue Pharma*,[12] for example, the court said that "An illegitimate prescription is one that is not written by a prescriber or not filled by a patient for the purpose of medical treatment." In *Akhtar-Zaidi v. DEA*,[13] the court said that the physician's "prescriptions were not issued for a legitimate medical purpose because his medical diagnoses were unsupported by the nature and extent of the examinations he conducted and the limited information received from the undercover officers." In *Ruan v. United States*,[14] the U.S. Supreme Court said that "medically legitimate" means "treating the relevant disease or injury." In another example, in *United States v. Feingold*, the court sought, among other things, to distinguish legitimate from illegitimate by explaining that the standard of care helps define when a practitioner acts like a doctor; that malpractice is when a the practitioner acted like a "bad doctor" and a drug "pusher" is one "whose conduct is without a legitimate medical justification." Notably, in *Feingold*,[15] the defendant prescribed opioids to patients who he did not examine, in exchange for painting his house, in excessive quantities, and even after the state revoked his authority to prescribe narcotics.

Just as it is highly challenging to identify a specific definition for "legitimate medical practice," there does not appear to be a reliable, comprehensive source to try and understand how often physicians may be subject to investigations or sanctions where "legitimate medical purpose" is used. Several sources, recent and historical, provide some limited insight. The U.S. Department of Justice Criminal Division, for example, reports that its "Strike Force Operations" have resulted in hundreds of indictments, many of which involve charges relating to alleged inappropriate prescribing of opioid analgesics and other controlled substances.[16] Between 2006 and 2016, the National Association of Attorneys General (NAAG) studied the cases of 378 physicians who, since 2006, had been charged and whose cases were resolved and/or sentences rendered by Dec. 31, 2016.[17] More than 300 physicians pled guilty, and of the 69 who pled "not guilty," and chose a trial, only one was acquitted. While some of those cases involved allegations concerning controlled substances, a definitive number was not reported.

The standard used to evaluate and/or investigate physicians' actions at the state level typically comes from how the state medical board defines and regulates the practice of medicine. In a review of the definition of "practice of medicine" from 44 states, DC, Guam, and the Northern Mariana Islands, the term "legitimate medical purpose" does not appear.[18] (See Appendix A, "Practice of Medicine—Location Defined.") Common terms in state definitions, however, include treat or treatment; prescribe, prescribing or prescription; diagnose or diagnosis; disease, condition, prevent and prevention; and other terms. The U.S. Code of Federal Regulations generally defers to state law in lieu of providing a specific definition for the practice of medicine.

Similar to not knowing precisely how many physicians are investigated at the federal level for allegedly failing to meet the "legitimate medical purpose" standard, it is not clear how many state investigations occur because investigations are not necessarily publicly reported. With respect to sanctions at the medical board level, the Federation of State Medical Boards (FSMB) report that there was an average of 3,167 physicians disciplined per year between 2021 to 2024.[19] The FSMB information reviewed does not detail the reasons for the discipline, but one reason boards investigate and discipline physician includes "prescribing drugs in excessive amounts without legitimate reason."[20] A cross-sectional study of 3,128 disciplinary proceedings across five states (CA, FL, NY, PA, and TX) found that, "the top 5 reasons for physician discipline across all 5 states were practitioner negligence (1911 [28.7 percentage]), other (1102 [16.6 percentage]), problematic record-keeping (990 [14.9 percentage]), inappropriate prescribing (901 [13.5 percentage]), and criminal activity (599 [9.0 percentage])."[21] This data, however, do not account for investigations that closed without a charge, sanction or other action.

DISCUSSION

For investigations that do occur, the DEA may choose to inspect records, gain entry to the practice, conduct interviews and take other actions, which are extremely disruptive to a practice. This broad authority under the CSA often occurs through the use of administrative subpoenas or warrants, or criminal warrants. [22] [23] These investigations by law enforcement (or medical boards) have significant adverse effects on physicians. Researchers describe that investigations create "feelings of anger, depression, anxiety, shame, powerlessness, isolation, being betrayed, less confidence in clinical decision-making."[24] Even the mere threat of an investigation being initiated can have a chilling effect on a physician's practice. Physicians also face practical effects, including the potential for temporary or long-term suspension of practice, considerable financial expense, disruption to providing care due to inspections and records review, and the time and legal costs to properly respond to the investigation. In addition, when an investigation becomes public, whether it leads to formal charges or not, there is an immediate, adverse effect on the physician's reputation in the community, including among colleagues. To be clear, the AMA does not support illegal

prescribing or other similar actions by physicians, but the Board of Trustees (the Board) points out that the adverse effects cited above occur whether or not the investigation leads to formal charges. These are some of the reasons why physicians fear the DEA and other law enforcement.

While DEA and law enforcement accurately say that they do not regulate the practice of medicine, the threat of investigation is real for many physicians, particularly those who prescribe controlled substances. One qualitative survey found that such fear resulted in reductions of prescribers willing to provide opioid therapy, patients being removed from practices, and patients turning to illicit substances if their physician no longer provided care.[25] It is not surprising that law enforcement investigations—because they require a higher standard of proof for conviction than how a medical board determines if the standard of care was met—are invasive, complicated, and time consuming for all involved. Physicians describe decisions whether to prescribe opioids and other controlled substances as putting them "between a rock and a hard place," with researchers noting that physicians acutely understand that, "An investigation alone can be devastating, and a finding of liability can trigger a cascade of consequences that make it impossible to practice medicine."[26]

In the prosecutions cited above, the main question ultimately was a binary one: Did the physician meet the "legitimate medical purpose" standard? The DEA, for its part, has said that it "does not define or regulate the practice of medicine; instruct practitioners on what type, or what strength of a Schedule II-V Controlled Substance they can or must prescribe; dictate how frequently a practitioner must see a patient; [or] dictate what tests a practitioner must conduct."[27] The DEA has further explained that, "the types of cases in which physicians have been found to have dispensed controlled substances improperly under Federal law generally involve facts where the physician's conduct is not merely of questionable legality, but instead is a glaring example of illegal activity."[28] The DEA and courts, moreover, make their determinations on a case-by-case basis.[29] [30] A review of the types of cases where a DEA registrant was found to be acting outside the course of usual professional practice and where a prescription was not for a legitimate medical purpose typically included multiple factors, which might include one or more of the following: high doses/quantities of opioid analgesics; combination prescriptions for opioids, benzodiazepines and muscle relaxants; patients who receive multiple prescriptions for controlled substances from multiple providers; and unusual geographic distances.

The above factors are analyzed by the courts for determining whether to convict an individual under the CSA. As noted in *Feingold* and exemplified in the NAAG data cited and other cases—the facts are typically so extreme that acquittals are rare if a case is brought to trial. While there is a lack of data as to how often criminal investigations occur, it is reasonable to suggest that there are a far greater number of such investigations. That is, prosecutors tend to strongly prefer winnable cases versus those where it was questionable that there was a deviation from "legitimate medical purpose." The U.S. Supreme Court, in *Gonzalez v. Oregon*, analyzed the relationship between the CSA and a state's authority to regulate the practice of medicine, and stated that,

> The statute and our case law amply support the conclusion that Congress regulates medical practice insofar as it bars doctors from using their prescription-writing powers as a means to engage in illicit drug dealing and trafficking as conventionally understood. Beyond this, however, the statute manifests no intent to regulate the practice of medicine generally."[31] In Gonzalez, the Court found that the federal government must give extraordinary deference to a state's authority to regulate the practice of medicine, including that the U.S. Attorney General "is not authorized to make a rule declaring illegitimate a medical standard for care and treatment of patients that is specifically authorized under state law.[32]

The AMA strongly supports the practice of medicine being regulated at the state level. It follows that interpreting whether an act is consistent with the practice of medicine or "legitimate," should be based on state definition. This approach has several clear benefits from the vague, non-defined approach used for investigations under the CSA. First, nearly every state specifically defines the practice of medicine—and has a medical board with the expertise and experience to determine whether the standard of care has been met.[33] (See Appendix A, "Practice of Medicine – Location Defined") Second, while there are slight differences between how states specifically define "the practice of medicine," there are common themes across all of the definitions. This includes treating injury or disease, whether physical or mental; examining patients as well as managing disease; interpreting tests and providing medical opinions; and performing surgery and other procedures. While some definitions are more expansive than others, all contain much more substance than simply "legitimate medical purpose."

This is not to say that a medical board investigation is any less intrusive or burdensome than one conducted by law enforcement. Rather, within the scope of this report, state regulation provides a more well-defined starting point to guide investigations rather than what currently is used under the CSA. Even though the Board recognizes that there are differences in how states define the practice of medicine, having law enforcement use state definitions would help provide a clearer distinction to help law enforcement distinguish between practices by clinicians that do not have a "legitimate medical purpose" from clinicians whose practices may treat patients with different levels of complexity, and who may require different treatments. Notably this includes addiction medicine physicians who may prescribe medications for opioid use disorder (MOUD) at higher rates than other specialists; pain medicine, oncologists, hospice or palliative care physicians who may prescribe opioids at higher rates than other specialists; or psychiatrists who may prescribe benzodiazepines or stimulants at higher rates than other specialists.

In addition to the physicians who face an investigation that yields no charges—or when a physician's office is closed temporarily or a conviction leads to permanent closure—there is always massive disruption to the practice and patients. For example, if a physician's DEA registration is suspended, every patient receiving controlled substances still requires a physician's care.[34] And if a pharmacy no longer is authorized to dispense buprenorphine, for example, in a rural area, hundreds of patients will be affected.[35] To try and help mitigate the harms associated with the sudden closure of a clinic or pharmacy, the U.S. Centers for Disease Control and Prevention (CDC) operate the "Opioid Rapid Response Program" (ORRP) to help mitigate patient harm and work with state health officials when physicians are no longer authorized to provide care due a law enforcement or similar action against them.[36] The ORRP has worked in 40 states since 2021 and "received over 240 notifications from federal law enforcement about potential disruptions to healthcare for patients receiving controlled substance medications." Finally, the Association of State and Territorial Health Officials published a 2021 guide that provides further information for states.[37]

AMA POLICY

The AMA broadly recognizes that the nation's overdose epidemic is complicated. (H-95.981, Federal Drug Policy in the United States) AMA policy addresses the need for protections for patients with pain (D-120.932, Inappropriate Use of CDC Guidelines for Prescribing Opioids) as well as for individuals with an opioid use disorder. (D-95.972, Expanding Access to Buprenorphine for the Treatment of Opioid Use Disorder) AMA policy also emphasizes the need for balance by the DEA to support patients with pain while taking steps to reduce misuse and diversion of controlled substances. (D-120.971, Promoting Pain Relief and Preventing Abuse of Controlled Substances) AMA policy also highlights the need for working with law enforcement on educational outreach with respect to "appropriate" prescribing practices, as well as efforts to help prevent

misuse and diversion. (H-95.990, Drug Abuse Related to Prescribing Practices) Finally, the AMA does not have specific policy on what constitutes a "legitimate medical purpose," although AMA policy strongly supports state regulation of the practice of medicine. (H-275.978, Medical Licensure)

CONCLUSION

The AMA cannot prevent physicians from being investigated by law enforcement. Violations of the CSA for prescribing medication without a legitimate medical purpose, outside the usual course of professional practice, are not to be tolerated because such violations do not represent the practice of medicine. However, the AMA also does not support investigations that serve as so-called fishing expeditions that ensnare physicians—often those who provide care to the most vulnerable patients—in years of emotional, financial, and professional turmoil. The Board does not believe that law enforcement regularly engages in wanton or specious activities against physicians, but we do believe that increased guidance for law enforcement and physicians is warranted. Specifically, the Board recommends that federal law enforcement activities use state medical practice acts as their guide as to what is a "legitimate medical purpose." Every state defines the practice of medicine with greater clarity than federal regulations or statute. If a federal law enforcement agency seeks to investigate a physician in a particular state, the Board recommends that law enforcement start with understanding how a state defines the practice of medicine. This is not meant to hinder appropriate investigations, but to help guide law enforcement and physicians alike.

The Board, therefore, recommends that the HOD adopt new policy that advocates for the U.S. Department of Justice (DOJ) to rely on state medical board definitions of "the practice of medicine" to guide investigations into whether a practitioner has acted without a "legitimate medical purpose." The Board also recommends that the HOD adopt policy directing the AMA and its interested medical association partners to work more closely with the DOJ to clearly identify the factors that the DOJ uses during an investigation. The Board further recommends that the HOD adopt policy directing the AMA to support the CDC's Opioid Rapid Response Program and similar state-based efforts to reduce disruptions to care caused by law enforcement or other actions.

RECOMMENDATIONS

The Board of Trustees recommends the following be adopted and the remainder of the report be filed.

1. That the referred clause from Resolution 209-A-25, "Reducing Risk of Federal Investigation or Prosecution for Prescribing Controlled Substances for Legitimate Medical Purposes," not be adopted.

2. That our American Medical Association advocate to the U.S. Department of Justice to rely on state medical board definitions of "the practice of medicine" to guide investigations into whether a practitioner has acted without a legitimate medical purpose. (Directive to Take Action)

3. That our AMA advocate to the U.S. Department of Justice to work more closely with the AMA and its interested medical association partners to more clearly identify the factors it uses during an investigation to minimize disruptions to patient care. (Directive to Take Action)

4. That our AMA support the U.S. Centers for Disease Control and Prevention Opioid Rapid Response Program and similar state-based efforts that seek to ensure continuity of care when

patients lose access to care due to a law enforcement or other action that results in the closure of a physician's practice. (New AMA Policy)

Fiscal Note: Less than $500.

APPENDIX A

Practice of Medicine – Location Defined

Summary

- 44 states, DC, Guam, and the Northern Mariana Islands generally define the practice of medicine
- 6 states explicitly defines that the practice of medicine occurs where the patient is located
- 37 states, DC, and Guam are Members of the Interstate Medical Licensure Compact, which adopts the prevailing standard for licensure and affirms that the practice of medicine occurs where the patient is located at the time of the physician-patient encounter, and therefore, requires the physician to be under the jurisdiction of the state medical board where the patient is located.

	Statutes and/or regulations explicitly defines that the practice of medicine occurs where the patient is located	Member of IMLC and affirms practice of medicine occurs where the patient is located	Definition & Statute/Regulation Citation
AL		X	**Medical Practice Act Ala. Code 34-24-50, et. Seq. "Practice of medicine or osteopathy" defined.** "The 'practice of medicine or osteopathy' means: (1) To diagnose, treat, correct, advise, or prescribe for any human disease, ailment, injury, infirmity, deformity, pain, or other condition, physical or mental, real or imaginary, by any means or instrumentality; **(2)** To maintain an office or place of business for the purpose of doing acts described in subdivision (1), whether for compensation or not…"

			mental, by any means, methods, devices, or instrumentalities, including electronic and technological means such as telemedicine. If a person who does not possess a license to practice medicine in this state under this chapter and who is not exempt from the licensing requirements of this chapter performs acts constituting the practice of medicine, the person is practicing medicine in violation of this chapter.
NC			**Chapter 90 Medicine and Allied Occupations. Article 1. Practice of Medicine. Sect 90-1.1. Definitions.** The practice of medicine or surgery. - Except as otherwise provided by this subdivision, the practice of medicine or surgery, for purposes of this Article, includes any of the following acts: a. Advertising, holding out to the public, or representing in any manner that the individual is authorized to practice medicine in this State. b. Offering or undertaking to prescribe, order, give, or administer any drug or medicine for the use of any other individual. c. Offering or undertaking to prevent or diagnose, correct, prescribe for, administer to, or treat in any manner or by any means, methods, or devices any disease, illness, pain, wound, fracture, infirmity, defect, or abnormal physical or mental condition of any individual, including the management of pregnancy or parturition. d. Offering or undertaking to perform any surgical procedure on any individual. f. The performance of any act, within or without this State, described in this subdivision by use of any electronic or other means, including the Internet or telephone.
ND		X	**Chapter 43-17 Physicians and Surgeons. 43-17-01. Definitions.** 5. "Practice of medicine" includes the practice of medicine, surgery, and obstetrics. The following persons are regarded as practicing medicine: a. A person that holds out to the public as being engaged within this state in the diagnosis or treatment of diseases or injuries of human beings. b. A person that suggests, recommends, or prescribes any form of treatment for the intended relief or cure of any physical or mental ailment of any individual, with the intention of receiving, directly or indirectly, any fee, gift, or compensation. c. A person that maintains an office for the examination or treatment of individuals afflicted with disease or injury of the body or mind.
NE		X	**Nebraska Revised Statute 38-2024 Practice of Medicine and Surgery, defined.** Persons who are physically located in another state but who, through the use of any medium, including an electronic medium, perform for compensation any service which constitutes the healing arts that would affect the diagnosis or treatment of an individual located in this state.
NH		X	**Title XXX Occupations and Professions. Chapter 329 Physicians and Surgeons. Section 329:1-d Telemedicine.** II. An out-of-state physician providing services by means of telemedicine shall be deemed to be in the practice of medicine and shall be required to be licensed under this chapter.
NJ		X	**NJ State Board of Medical Examiners Law. Article 1 Practice of Medicine and Surgery in General. 45:9-5.1. Definitions.**

	Statutes and/or regulations explicitly defines that the practice of medicine occurs where the patient is located	Member of IMLC and affirms practice of medicine occurs where the patient is located	Definition & Statute/Regulation Citation
			"the practice of medicine or surgery" and the phrase "the practice of medicine and surgery" shall include the practice of any branch of medicine and/or surgery, and any method of treatment of human ailment, disease, pain, injury, deformity, mental or physical condition
NM			**NM Statutes Annotated. Sec. 61-6-6-(K).** "The practice of medicine across state lines means the rendering of a written or otherwise documented medical opinion concerning diagnosis or treatment of a patient within this state, by a physician located outside this state, as a result of transmission of individual patient data by electronic, telephonic or other means from within this state, to the physician or the physician's agent, OR the rendering of treatment to a patient within this state, by a physician located outside this state, as a result of transmission of individual patient data by electronic, telephonic or other means from within this state to the physician or the physician's agent."
NV		X	**NRS 630.020 "Practice of medicine" defined.** "Practice of medicine" means: 1. To diagnose, treat, correct, prevent or prescribe for any human disease, ailment, injury, infirmity, deformity or other condition, physical or mental, by any means or instrumentality, including, but not limited to, the performance of an autopsy. 2. To apply principles or techniques of medical science in the diagnosis or the prevention of any such conditions. 3. To perform any of the acts described in subsections 1 and 2 by using equipment that transfers information concerning the medical condition of the patient electronically, telephonically or by fiber optics, including, without limitation, through telehealth, from within or outside this State or the United States. **NRS 629.515** Except as otherwise provided in this subsection, before a provider of health care who is located at a distant site may use telehealth to direct or manage the care or render a diagnosis of a patient who is located at an originating site in this State or write a treatment order or prescription for such a patient, the provider must hold a valid license or certificate to practice his or her profession in this State
NY			**NY Education Law Article 131, Medicine. Sect 6521. Definition of practice of medicine.** The practice of the profession of medicine is defined as diagnosing, treating, operating or prescribing for any human disease, pain, injury, deformity or physical condition.
OH		X	**State medical Board of Ohio Position Statement on Telemedicine** The "practice of telemedicine" is defined in Ohio as the practice of medicine in this state through the use of any communication, including oral, written or electronic communication, by a physician located outside this state.
OK		X	**Oklahoma Allopathic Medical and Surgical Licensure and Supervision Act. Tite 59 O.S., Sect. 492. Practice of Medicine and Surgery – Title - Hospital** C. The definition of the practice of medicine and surgery shall include, but is not limited to: b. Except as provided in subsection D of this section, performance by a person within or outside of this state, through an ongoing regular arrangement, of diagnostic or treatment services, including but not limited to, stroke prevention

	Statutes and/or regulations explicitly defines that the practice of medicine occurs where the patient is located	Member of IMLC and affirms practice of medicine occurs where the patient is located	Definition & Statute/Regulation Citation
			and treatment, through electronic communications for any patient whose condition is being diagnosed or treated within this state. A person who performs any of the functions covered by this subparagraph submits himself or herself to the jurisdiction of the courts of this state for the purposes of any cause of action resulting from the functions performed.
OR			**Chapter 677 – Regulation of Medicine, Podiatry and Acupuncture. Sect. 677.085** What constitutes practice of medicine. A person is practicing medicine if the person does one or more of the following: (1) Advertise, hold out to the public or represent in any manner that the person is authorized to practice medicine in this state. (2) For compensation directly or indirectly received or to be received, offer or undertake to prescribe, give or administer any drug or medicine for the use of any other person. (3) Offer or undertake to perform any surgical operation upon any person. (4) Offer or undertake to diagnose, cure or treat in any manner, or by any means, methods, devices or instrumentalities, any disease, illness, pain, wound, fracture, infirmity, deformity, defect or abnormal physical or mental condition of any person. (5) Except as provided in ORS 677.060, append the letters "M.D." or "D.O." to the name of the person, or use the words "Doctor," "Physician," "Surgeon," or any abbreviation or combination thereof, or any letters or words of similar import in connection with the name of the person, or any trade name in which the person is interested, in the conduct of any occupation or profession pertaining to the diagnosis or treatment of human diseases or conditions mentioned in this section. **Chapter 677 – Regulation of Medicine, Podiatry and Acupuncture. Sect. 677.135** "Practice of medicine across state lines" defined (1) The rendering directly to a person of a written or otherwise documented medical opinion concerning the diagnosis or treatment of that person located within this state for the purpose of patient care by a physician or physician assistant located outside this state as a result of the transmission of individual patient data by electronic or other means from within this state to that physician, the physician's agent or a physician assistant; or (2) The rendering of medical treatment directly to a person located within this state by a physician or a physician assistant located outside this state as a result of the outward transmission of individual patient data by electronic or other means from within this state to that physician, the physician's agent or a physician assistant.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 14-A-26

Subject: Binding Arbitration in Health Insurance Contracts (Resolution 208-A-25)

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), the HOD adopted Policy D-435.967 "Binding Arbitration in Health Insurance Contracts," which directs the following:

> That our American Medical Association will study the effects of binding arbitration in health insurance contracts with physicians.

Testimony received by the HOD regarding Policy D-435-967expressed concerns that binding arbitration clauses in health insurance contracts limit physicians' legal recourse, reduce transparency, and can disproportionately favor insurers.

DISCUSSION

General Differences Between Binding Arbitration and Litigation

Binding arbitration is an alternative to litigation as a means of resolving disputes. Arbitration agreements are typically included in participation agreements between physicians and health insurers. Arbitration agreements usually state that proceedings will be conducted according to rules adopted by the American Arbitration Association, the American Health Law Association, or JAMS.

Arbitration is less formal than litigation, and the specific procedures of any given arbitration proceeding can vary widely based on the choices the parties make in their arbitration agreement. Arbitration agreements often forgo the application of the formal rules of civil procedure, discovery, and the admissibility of evidence that would otherwise apply in litigation.

Court proceedings are generally open to the public and court filings are usually publicly available. Arbitrations are typically private, where the parties agree to keep the proceedings and arbitration award confidential.

Court cases are often assigned at random to generalist judges, but in arbitration the parties may have a direct role in choosing the arbitrator who will adjudicate the dispute. Parties are often able to select experienced arbitrators with specialized knowledge.

Finally, while trial courts' judgments are subject to review by an appellate court with authority to correct erroneous rulings, arbitration awards are usually not reviewable by courts except on very narrow grounds that focus on arbitrator misconduct rather than legal or factual errors.

Commonly Discussed Pros and Cons of Arbitration

The effects of binding arbitration in physician contracts with health insurers can be studied by examining the commonly discussed pros and cons of arbitration vis-à-vis litigation.

Potential Advantages of Arbitration

Arbitration may have several advantages when compared with litigation. However, some advantages may not be fully realized when the parties to arbitration agreements differ significantly in bargaining power, which can be the case when physicians and health insurers are the negotiating parties. Unequal bargaining power may enable health insurers to impose on physicians mandatory binding arbitration agreements that favor insurers.

As noted above, arbitration proceedings are usually less formal and complex than those involved in litigation, which can make arbitration less expensive and a faster way to resolve disputes. For example, physicians and health insurers may agree to limit discovery, e.g., restrict the number of depositions, interrogatories, document requests, etc. Arbitration may also settle disputes more efficiently because physicians and health insurers may be able to schedule hearings more quickly than in judicial proceedings, where a judge must fit hearing dates in among many other cases.

Another advantage frequently cited is the ability to retain arbitrators with specialized knowledge. If the dispute between a physician practice and a health insurer concerns reimbursement, the parties may be able to select an arbitrator who is familiar with coding, payment rules, fee schedules, etc., about which a judge may know very little. In such cases, the arbitrator's expertise could result in a fairer, timelier, and less costly resolution because the parties will not need to educate a judge and jury about the technical aspects of disputes that frequently occur between physicians and health insurers.

The finality of the arbitrator's decision may make arbitration cheaper and more efficient than judicial proceedings. Only in very limited circumstances may a party disagreeing with an arbitrator's decision appeal that decision to a court. Consequently, parties do not spend money or prolong the dispute process by subsequent appeals that are available in litigation.

Potential Disadvantages of Arbitration

Arbitration may not always be less expensive than litigation. Filing fees can be much higher than they are in judicial proceedings. Unlike judges, arbitrators charge hourly fees for their services, and it is not unusual for arbitration agreements between physicians and health insurers to call for three arbitrators to hear disputes above a specific threshold, e.g., $2,000,000. Thus, arbitrator fees can end up being quite costly. And physicians still must pay for attorneys just as they would in litigation.

The limited ability to appeal an arbitration decision is a potential drawback of arbitration just as it may potentially be advantageous, since a physician will not be able to have a court review an adverse arbitration decision.

Confidentiality may have its advantages, but it also may give rise to a lack of transparency that can be disadvantageous. If arbitration decisions are confidential, a physician will not be able to find out how an arbitrator has ruled in past disputes, e.g., whether the arbitrator has a reputation for competency and fairness. Not having this kind of information can make it more difficult for a physician to request, from his or her perspective, the best arbitrator to hear any given dispute.

Finally, in cases where a health insurer may have significantly more bargaining power than the physician, the arbitration agreement may require the physician to waive rights that would apply in litigation or otherwise agree to unfavorable terms. For example, the arbitration agreement may restrict the statute of limitations within which the physician must file a dispute, limit the damages that an arbitrator may award, waive pre-judgment interest, waive the right to join with other physicians to resolve similar disputes, including but not limited to class actions or class arbitrations. The arbitration agreement may require the physician to arbitrate the dispute in person at a location, e.g., the health insurer's offices, which may not be convenient. The agreement may state that the party losing the arbitration must pay the winner's costs, and it is highly likely that a physician cannot risk incurring such costs to the extent a health insurer can.

The Federal Arbitration Act and State Arbitration Laws

Enacting legislation is the obvious strategy to address unfavorable aspects of binding arbitration agreements. State legislatures and state courts have attempted to place conditions on binding arbitration clauses to deal with situations where one party to the agreement may have more bargaining power than the other party. Such efforts are, however, usually preempted by the Federal Arbitration Act (FAA).

Congress passed the FAA in 1925 to ensure that arbitration agreements were enforced, in part to address growing concerns about the costliness and delays of litigation. Section 2 of the FAA states in part that:

> [a] written provision in any maritime transaction or a contract evidencing a transaction involving commerce to settle by arbitration a controversy thereafter arising out of such contract or transaction…shall be valid, irrevocable, and enforceable, save upon such grounds as exist at law or in equity for the revocation of any contract.

According to the U.S. Supreme Court (Court), in enacting Section 2 of the FAA Congress "declared a national policy favoring arbitration and withdrew the power of the states to require a judicial forum for the resolution of claims which the contracting parties agreed to resolve by arbitration."[1] The Court has also determined that the FAA preempts state laws that treat arbitration agreements differently than other contracts. So, state laws that "single out" arbitration agreements for special treatment are preempted by the FAA. Based on these and other pronouncements, courts regularly rule that the FAA preempts state laws that interfere with, or place conditions on, arbitration agreements.

The Court has in numerous cases decided that the FAA preempts a particular state statute or state court ruling. For example, in *Southland Corp. v. Keating*, 465 U.S. 1, 10 (1984), the Court held that the FAA preempted a state law that forced disputes to be heard in court. In *Doctor's Assocs., Inc. v. Casarotto*, 517 U.S. 681, 687 (1996), the FAA preempted a Montana law dictating that an arbitration agreement could only be enforced if the agreement on its first page stated that the agreement was subject to arbitration in underlined and capital letters. The *Court in Preston v. Ferrer*, 552 U.S. 346 (2008), ruled that the FAA preempted a state law that required disputes to be first heard by a state administrative agency before parties could arbitrate. *In Kindred Nursing Centers Limited Partnership v. Clark*, 581 U.S. 246 (2017) the FAA preempted a Kentucky rule stating that a person holding a power of attorney could not enter into an arbitration agreement for someone else unless the power of attorney specifically said so.[2] The Court found that the Kentucky rule failed "to put arbitration agreements on an equal plane with other contacts" and that the FAA also "displaces any rule that covertly accomplishes the same objective by

disfavoring contracts that (oh so coincidentally) have the defining features of arbitration agreements."[3]

Thus, as things stand today, a state legislative strategy to place conditions on arbitration agreements between physicians and health insurers is not likely to be successful unless the FAA is significantly amended.

Amending the Federal Arbitration Act

The FAA would have to be amended so that conditions or restrictions could be placed on binding arbitration agreements between physicians and health insurers. Since its enactment over one hundred years ago, Congress has made only a few, very specific, amendments to the FAA.[4] Bills introduced in Congress proposing to make more significant changes to the FAA have not been successful. Presently, it is unlikely that Congress will make the kinds of changes to the FAA necessary to alter the current status of binding arbitration agreements between physicians and health insurers.

The AMA Should Provide Resources to Physicians

The Board of Trustees fully understands that unequal bargaining power between a health insurer and a physician may result in a physician being bound by an arbitration agreement that disproportionally favors the insurer, and that physicians need assistance. Even though a legislative approach to addressing concerns that physicians can have about binding arbitration is not likely to succeed at this time, the AMA can create resources to support physicians who are being asked to sign binding arbitration agreements. These resources could help physicians understand the possible advantages and disadvantages of binding arbitration and the extent to which those advantages and disadvantages are reflected in arbitration agreements offered to them. This information will be designed to help physicians negotiate more favorable arbitration agreements when they have the power to do so. But even if physicians cannot negotiate, resources will help physicians evaluate the arbitration agreements offered to them so that they can fully understand how to exercise the rights they do possess.

CONCLUSION

The Board, therefore, recommends that the HOD modify policy D-435.967, "Binding Arbitration in Health Insurance Contracts" by adding a new directive to D-435.967 requiring that our AMA create resources to help physicians evaluate binding arbitration agreements with health insurers so that physicians can identify the advantages and disadvantages that may be present in those agreements. The Board also recommends modifying D-435.967 by rescinding language calling on the American Medical Association to study the effects of binding arbitration in health insurance contracts with physicians, since this report constitutes the required study.

RECOMMENDATION

The Board of Trustees recommends that the following be adopted, and the remainder of the report be filed:

1. That our American Medical Association Policy D-435.967, "Binding Arbitration in Health Insurance Contracts," be rescinded having been accomplished by this report. (Rescind HOD Policy)
2. That our AMA create resources to help physicians evaluate binding arbitration agreements with health insurers so that physicians can identify the advantages and disadvantages that may be present in those agreements. Resources shall include, but not be limited to: (1) developing model arbitration language that protects physicians when such clauses are used; (2) establishing fairness principles or standards for arbitration provisions in physician-insurer contracts; (3) identifying specific contract red flags such as venue restrictions that physicians should be aware of when reviewing arbitration clauses; and (4) encouraging greater transparency or reporting around arbitration outcomes. (New HOD Policy)
3. That our AMA (1) opposes requiring mandatory binding arbitration as a condition of participation in an insurance company's provider network; (2) supports a physician's right to choose between arbitration and the public court system after a dispute arises, rather than being forced to waive their right to a jury trial; (3) believes that no physician should be required to participate in an arbitration or mediation process that is not the result of meaningful mutual agreement between the physician and health insurer; (4) advocates that all arbitration awards involving physician-payer disputes be reported to a centralized de-identified database to ensure transparency and to identify patterns of frequent bad-faith claims settlement practices by insurers. (New HOD Policy)

Fiscal Note: Less than $500.

REPORT 15 OF THE BOARD OF TRUSTEES (A-26)
Protecting the Prescriptive Authority of Plenary Licensed Physicians
Reference Committee B

EXECUTIVE SUMMARY

At the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 204-A-25, "Protecting the Prescriptive Authority of Plenary Licensed Physicians," was adopted. This resolution resulted in Policy D-120.920, "Preserving Patients' Ability to Have Legally Valid Prescriptions Filled," which directed the AMA" to study the national prevalence and patterns of pharmacists refusing to fill valid prescriptions from plenary licensed physicians, including impact on patient outcomes and prescriber autonomy."

This report provides background on legal and clinical requirements for valid prescriptions, examines the shared responsibilities of physicians and pharmacists, provides available data and related information, and outlines relevant AMA policy.

While pharmacists play an essential role on physician-led care teams, particularly in ensuring medication safety, concerns arise when pharmacists refuse to dispense prescriptions based on judgments outside their education and training. Such refusals can contribute to patient harm, including uncontrolled symptoms, relapses or debilitation, and additional harm. At the same time, this report affirms the pharmacist's legal and ethical obligations and their "corresponding responsibility" to verify prescription validity, including resolving technical errors and addressing safety concerns or so-called "red flags."

This report also highlights how corporate policies and pharmacy benefit management company requirements can also compel pharmacists to refuse to fill legitimate prescriptions, effectively overriding individual professional judgment.

Finally, this report emphasizes the need for improved communication between physicians and pharmacists and renewed engagement with national pharmacy organizations. This report highlights that existing AMA policy strongly supports physician-led teams, recognizes the important role of pharmacists, and opposes inappropriate pharmacy intrusion into medical practice.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 15-A-26

Subject: Protecting the Prescriptive Authority of Plenary Licensed Physicians

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 204-A-25, "Protecting the Prescriptive Authority of Plenary Licensed Physicians," was adopted. This resolution resulted in Policy D-120.920, "Preserving Patients' Ability to Have Legally Valid Prescriptions Filled." Item one of this policy directs the AMA to do the following:

1. Our AMA will study the national prevalence and patterns of pharmacists refusing to fill valid prescriptions from plenary licensed physicians, including impact on patient outcomes and prescriber autonomy.

Testimony universally acknowledged that pharmacists play an important role as part of a physician-led team. Testimony further highlighted physicians' appreciation for their pharmacy colleagues to assist with medication safety. Questions and concerns arise, however, when pharmacists make determinations that go beyond their education and training, including making decisions to withhold medication from patients after it has been prescribed by a physician for a legitimate medical purpose in the usual course of professional practice. This report studies the national prevalence and patterns of pharmacists refusing to fill valid prescriptions from plenary licensed physicians, including impact on patient outcomes and prescriber autonomy. It provides relevant background, discusses issues raised by the resolution, cites AMA policy, and makes recommendations.

BACKGROUND

In determining whether a prescription is "valid," there are multiple technical, clinical, and legal considerations that must be considered. These technical and legal considerations, which may vary slightly by state, generally require the physician to include multiple elements on the prescription, including:

- Name, address, phone number of the prescribing physician;
- Full name and address of the patient (also known as the "ultimate user");
- The drug name and strength;
- Specific directions for use, including number of times per day and number of days total;
- Quantity of the drug to be dispensed;
- Number of refills authorized by the prescriber;
- Whether the prescriber allows for substitutions, including generic versions, or whether the prescription shall be dispensed as written;
- The prescriber's signature, which may be required to be manually written, or for electronic prescriptions, additional requirements that help protect against fraud or forgery;

© 2026 American Medical Association. All rights reserved.

- Other information, such as diagnostic codes, may be required by a state;[1]
- Prescriptions for controlled substances have additional requirements, including the prescriber's DEA number;[2] and
- Electronic prescriptions for controlled substances also have additional requirements.[3]

For Medicaid claims, federal law requires physicians to include their National Provider Identifier (NPI) on the prescription.[4] It is important for the purposes of this report to note that the NPI, by itself, does not have information about a provider's specialty.[5] The NPI can be used, however, to identify a physician's specialty if a pharmacist, for example, used the National Plan and Provider Enumeration System to input a physician's name or NPI. A physician's specialty also may be evident from the name of the practice on the prescription (e.g., "John Smith, MD, Columbia Pediatric Associates," or a Google search.

In terms of the "clinical" or additional legal considerations for what constitutes a valid prescription, general guidance comes from the Controlled Substances Act (CSA). The CSA, which the Board of Trustees (the Board) acknowledges only technically applies to controlled substances, provides guidance that:

> A prescription for a controlled substance to be effective must be issued for a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice. The responsibility for the proper prescribing and dispensing of controlled substances is upon the prescribing practitioner, but a corresponding responsibility rests with the pharmacist who fills the prescription. An order purporting to be a prescription issued not in the usual course of professional treatment or in legitimate and authorized research is not a prescription within the meaning and intent of section 309 of the Act (21 U.S.C. 829) and the person knowingly filling such a purported prescription, as well as the person issuing it, shall be subject to the penalties provided for violations of the provisions of law relating to controlled substances.

For the purposes of this report, the Board considers an "effective prescription" to carry equivalent weight and meaning as when discussing a "valid prescription." The CSA makes clear that there are mutual, complementary roles for the physician and the pharmacist. While the physician carries the primary responsibility for ensuring a prescription's validity, the pharmacist has a corresponding responsibility to ensure the prescription's validity. In fulfilling the corresponding responsibility, as physicians commonly experience, the pharmacist may ask questions of the patient and the physician to help ensure the medication prescribed meets the necessary safety requirements per the pharmacist's education and training. Per the CSA, the ultimate decision whether to fill and dispense a prescription, rests with the pharmacist.

DISCUSSION

The AMA believes that all qualified health care professionals play an integral role in the delivery of health care in the United States. Efficient delivery of care requires a team-based approach, which cannot exist without inter-professional collaboration between physicians, pharmacists, nurses, and other health care professionals. When each member of the health care team plays his or her optimal and unique role—a role that should be clearly defined by one's education and training, the AMA believes patients reap the benefits. The AMA defines "physician-led" in the context of team-based health care as the consistent use by a physician of the leadership knowledge, skills and expertise necessary to identify, engage and elicit from each team member

the unique set of training, experience, and qualifications needed to help patients achieve their care goals, and to supervise the application of these skills.[6]

Potential Conflicts that Arise

If a pharmacist does not believe that a prescription presented by a patient or a patient surrogate has all the required technical information, the pharmacist has a professional and legal responsibility to not fill or dispense that prescription until the legal requirements are met. Similarly, if a pharmacist has cause to question other aspects about a prescription, the pharmacist generally has a legal and ethical obligation to resolve questions before filling or dispensing the prescription. There also are legal obligations put upon pharmacists who are employed by pharmacies subject to the national, multistate opioid litigation settlement agreements for pharmacists to resolve so-called "red flags."[7] Pharmacists who fill or dispense invalid prescriptions, or those for which all "red flags" have not been resolved, bear the professional and legal penalties that result. Despite this pressure, the Board continues to encourage cordial, professional interactions between physicians and pharmacists to resolve any outstanding questions and to help ensure the physician-pharmacist-patient therapeutic triad works for the benefit of patients' health and safety.[8]

The Board acknowledges that conflicts may arise, however, when a pharmacist determines that it is not within a physician's scope of practice to treat a particular medical condition. The AMA is aware of many examples of this happening across different medical specialties, including ophthalmology, dermatology, oncology, physiatry, hospice and palliative medicine, addiction medicine, obstetrics and gynecology, and surgery, to name a few. While the Board will not go into the unique circumstances of each situation, the Board remains steadfast in its support of patients retaining the ability to have legitimate prescriptions filled and dispensed. The AMA opposes pharmacists deciding on their own, to invalidate a prescription solely because of a determination that it is outside the prescribing physician's scope of practice. The AMA also opposes actions by corporations to issue corporate blocks on physicians without due process or an understanding of the unique situation/circumstances of the physician's practice.[9]

When a pharmacist refuses to fill a legitimate prescription issued in the usual course of professional practice, there is the potential for multiple negative outcomes. For a patient with an irritating skin condition, for example, the result could be worsening of symptoms and an increased chance of debilitation. For a patient with opioid use disorder (OUD), the result could be relapse and return to use of illegally made fentanyl or other substances.[10] For a patient with cancer or chronic pain, the result could be increased suffering and seeking out illicit, toxic forms of pain relief.[11,12] These are but a few examples where a pharmacist's refusal could lead to unnecessary pain and suffering.

At the same time, if a pharmacist identifies a potential drug safety issue, the outreach to the prescribing physician can be the difference between life and death. The Board does not want to put a chill into the pharmacist's essential role to help ensure drug safety and education by suggesting—let alone demanding—that a pharmacist fill and dispense any prescription transmitted by a physician. In such cases where a medication dosage was inadvertently transcribed as 100mg 2x/day instead of 10mg 2x/day, for example, ensuring the correct dose is essential. Physicians value pharmacists acting as a secondary check for technical errors, typos or potentially harmful drug-drug interactions. A resilient, productive relationship with pharmacists should be thought of as a key component of the "Swiss cheese model" of adverse event prevention.[13] This might also include automated pharmacy system alerts when certain medications are prescribed or ordered for concurrent administration.

Similarly, if a pharmacist contacts the physician to alert the physician that the patient has multiple prescriptions for the same medication from different prescribers, the Board sees this as an opportunity to improve continuity of care and support patient safety. Even though the Board opposes inappropriate pharmacy intrusions into the practice of medicine, we also know that beneficial physician-pharmacist communication occurs on a regular basis. Moreover, if a pharmacist determines—based on the pharmacist's education and training, combined with additional information from the prescriber and patient—that the prescription is not for a legitimate medical purpose issued in the usual course of professional practice, the Board acknowledges that the pharmacist may legally refuse to dispense that medication.

Satisfactorily determining legitimacy of the prescription from the pharmacist's point of view raises other issues, as well. As noted above, communicating with prescribers can be essential in ascertaining the legitimacy of a controlled substance prescription, although simply phoning a prescriber and inquiring if the prescription is legitimate may not be satisfactory. In the case of prescribers who may be involved in illicit prescribing practices, for example, it is highly unlikely that the response to an inquiry from the pharmacist concerning the legitimacy of the prescription would be for the prescriber to affirm that the prescription is not legitimate. This is clearly different from a situation where, for example, pharmacists refuse to fill and dispense a prescription for an eye rash because they believe only dermatologists are trained to know when it is safe to prescribe a cream for an eye rash.

A different issue arises, however, when the pharmacist's own professional judgment is effectively made null and void by an employer's policy. This may occur when a payor, pharmacy corporation, or pharmacy benefit manager impose policies that either directly or effectively force the pharmacist to refuse to fill and dispense a prescription. This is common for opioid prescriptions or treatment of OUD but also arises with stimulants and other controlled substances. In many cases, the corporate entity has essentially told their state-licensed pharmacists that any prescriptions written by specific health care professionals shall not be filled under any circumstance. The AMA would like to believe that a pharmacist's professional and ethical obligations would rise past the boundaries of a corporate edict, but we believe that it must be acknowledged that that has not been the case in far too many situations. While these situations are not those that gave rise to the underpinnings of this report, the Board would be remiss to ignore the conflicts that pharmacists often face.

National Prevalence and Patterns of Pharmacists Refusing to Fill Valid Prescriptions

How often does a pharmacist's inquiry about a patient's prescription or decision to reject a physician's prescription occur? Data regarding national prevalence or patterns is sparse, but there are a limited number of studies providing at least some insight. In one study,[14] researchers found that pharmacists were willing to refuse to dispense prescriptions that were deemed unsafe, even if they contacted the prescriber. The same study found that in other situations, even if the prescription was deemed unsafe, 75 percent of pharmacists responding said that they filled the prescription because they "felt the prescriber knew the medical history or clinical situation better than they did." The study also presented respondents with five hypothetical medication scenarios to test pharmacists' decision-making. The researchers concluded that, "Pharmacists appeared more aligned with a patient counseling and prescriber consulting role than with withholding likely dangerous prescriptions which have been verified by the prescriber."

There also is limited data with respect to specific medical conditions. A 2022 American Society of Addiction Medicine study, for example, found that 45 percent of respondents said that a "pharmacy or pharmacist declined to fill the prescription for buprenorphine."[15] Among the

reasons given for the denial: (1) concern that the prescription was clinically inappropriate; (2) corporate policy limiting or prohibiting dispensing of medication; or (3) belief that the Drug Enforcement Administration (DEA) has a cap on the quantity of buprenorphine that can be dispensed. While most patients were able to ultimately have their prescription filled at a different pharmacy, 14 percent could not get their prescription filled. The outcome for those patients is unclear.

This issue has been particularly nettlesome with respect to filling and dispensing prescriptions for opioid analgesics. The Board will not delve too deeply into this issue as it has been covered many times before, but for the purposes of this report, there are several relevant points that we would like to make. First, as detailed above, there are studies showing that patients with cancer and/or chronic pain have been denied access to the medication recommended by their physician. Even Walmart, which operates more than 5,000 pharmacies[16] at its Walmart and Sam's Club locations, acknowledges that complaints have been filed against it for refusing to dispense medication in 40 states.[17] Further, a small Texas study found that, "Patients with cancer perceived difficulties when filling their opioid prescriptions, and the results suggest that negative interactions with the pharmacy and/or pharmacist contribute to their perceived difficulty."[18]

While these studies show that inappropriate actions by pharmacists do occur, the limited number makes it challenging to identify specific patterns or national prevalence of such actions. There is certainly anecdotal information concerning refusals to fill medications for pain or OUD because of a physician's scope of practice—and the AMA has been clear in its opposition, including drafting model state legislation to help prevent corporate pharmacy interference in the practice of medicine. The AMA has shared this model state legislation with multiple medical societies, and the AMA Advocacy Resource Center is available to support any state interested in pursuing such legislation.

To effectively identify national patterns and prevalence, however, we believe that we need more than anecdotes or secret shopper surveys. At a minimum, we need specific data sources of refusals, and reasons for such refusals. One place where such data might exist is from the parties subject to the national opioid litigation settlement agreement.[19] Provisions within the agreement require pharmacies, wholesalers, and distributors to create processes to monitor such occurrences and document actions when a prescription is "rejected pursuant to Red Flags identified by the pharmacist."[20] It is not clear, however, whether this data is publicly accessible. The Board believes that a review of such data would help illuminate the issues raised by the resolution and identified in this report.

A brief review of prominent data sources highlights other challenges with identifying relevant data. Prescription drug monitoring programs (PDMPs) are a comprehensive source of data for the prescribing and dispensing of controlled substances, but they only contain information about prescriptions dispensed. Specifically, they do not capture data on prescriptions refused. Electronic health records also would have information about patients' prescription history, but it is not likely such history includes refusals to fill. This is to say that while the Board agrees that knowing national patterns and prevalence of pharmacists refusing to fill valid prescriptions could provide actionable insight, the challenges in creating such a data set and performing the necessary retrospective analysis would be considerable. The Board, therefore, recommends that the AMA Advocacy team continue to strongly support physician-led teams, work with national pharmacy organizations in support of those teams, and encourage physicians and pharmacists to rely on each other's unique education and training to the benefit of their patients.

The Board also notes the related, but distinct issue of pharmacist refusals to dispense valid prescriptions based on personal belief. Reports of refusals to dispense contraception, emergency contraception, abortifacients, or other reproductive health medications have surfaced in at least 26 states, indicating that the issue is geographically widespread.[21] Survey data also suggest that conscience-based refusals, while not predominant, are not negligible. In one survey of community pharmacists conducted in 2010, nearly six percent indicated they would refuse to dispense and decline to transfer at least one controversial medication, including emergency contraception or abortifacients.[22] These refusals can delay or foreclose timely access to prescribed care, particularly in rural or underserved areas where alternative pharmacies may not be readily available.

Additionally, conscience refusals have been bolstered in recent years by a growing number of state legislatures that have enacted statutory "conscience clause" protections allowing pharmacists and other healthcare professionals to decline to provide certain healthcare services on moral or religious grounds.

AMA POLICY

AMA policy supports developing and building strong relationships with our pharmacy colleagues while simultaneously "protect[ing] patients' ability to have valid prescriptions filled." (D-120.975, "Preserving Patients' Ability to Have Legally Valid Prescriptions Filled"). AMA policy also guides the AMA in efforts at the state and federal levels "to protect the authority of plenary licensed physicians to prescribe all legal medications in accordance with their training and medical judgment." (D-120.920, "Protecting the Prescriptive Authority of Plenary Licensed Physicians"). AMA policy further "opposes pharmacists being given the authority to initiate or modify prescription drug treatment except on a case-by-case basis at the specific direction of a physician." (H-160.928, "Drug Initiation or Modification by Pharmacists").

AMA policy recognizes "the contribution of pharmacy as an independent profession in assisting physicians toward the constant goal of improved patient care is recognized and commended." (H-35.999, "Medicine and Pharmacy Relations"). The AMA "urges physicians to encourage and support the continued growth of pharmacy as a valuable and necessary member of the health team. (H-35.999, "Medicine and Pharmacy Relations"). AMA policy strongly supports a physician-led health care team that includes pharmacists for their role in support of preventing medication errors (H-120.965, "Medication Errors"), as well as for consultations with patients. (H-120.932, "Pharmacy Review of First Dose Medication").

Finally, while the AMA strongly supports pharmacists playing an integral role as part of a physician-led health care team, AMA policy "deems inappropriate inquiries from pharmacies to verify the medical rationale behind prescriptions, diagnoses, and treatment plans to be an interference with the practice of medicine and unwarranted. (H-35.961, "AMA Response to Pharmacy Intrusion into Medical Practice").

CONCLUSION

Refusing to fill a valid prescription issued in the usual course of professional practice for a legitimate medical purpose risks patient harm. If a pharmacist has a question to help ensure the accuracy and safety of a prescription, it is important for pharmacists to feel confident in reaching out to the prescribing physician. This does not mean, however, that pharmacists should seek information that is beyond their education and training. Nor does it mean that pharmacists have a right to refuse to fill and dispense a prescription solely because pharmacists do not agree that a

physician's specialty matches what the pharmacist expects for a given prescription. Physician-pharmacist conflicts are rare, but the Board understands that they occur—and that it is incumbent upon all of us to work together for our patients' health and safety.

Given the high degree of interprofessional respect that occurs daily between physicians and pharmacists—combined with the clarity of AMA policy that simultaneously highlights the benefits of pharmacists on the health care team while opposing interference in medical practice—the Board does not believe that additional policy is required. Rather, the Board supports renewed efforts to proactively engage with our pharmacy colleagues to explore additional avenues in which the issues raised in this report might be addressed in a collaborative fashion between the two professions.

The Board, therefore, recommends that the HOD adopt new policy that focuses on convening national pharmacy organizations to identify solutions to address the issues raised in this report and to urge pharmacies subject to the national opioid litigation settlements to provide data on refusals to fill and dispense medications, including the reasons for such refusals. The Board also recommends the HOD reaffirm of Policy H-120.947, "Preserving Patients' Ability to Have Legally Valid Prescriptions Filled" as it is directly on point in terms of the issues raised by this report. Finally, the Board recommends that the HOD rescind the first item of Policy D-120.920 as this report has accomplished the directive to study the national prevalence and patterns of pharmacists refusing to fill valid prescriptions from plenary licensed physicians, including impact on patient outcomes and prescriber autonomy.

RECOMMENDATIONS

The Board of Trustees recommends that the following be adopted, and the remainder of the report be filed.

1. That our American Medical Association convene a meeting with the National Association of Boards of Pharmacy and other national pharmacy organizations to identify ways to improve communications between physicians and pharmacists about physicians' and pharmacists' corresponding responsibility and related areas. (Directive to Take Action)

2. That our AMA urge pharmacies subject to the national opioid litigation settlements to provide data on refusals to fill and dispense medications, including the reasons for such refusals. (Directive to Take Action).

3. That our AMA Policy H-120.947, "Preserving Patients' Ability to Have Legally Valid Prescriptions Filled," be reaffirmed. (Reaffirm HOD Policy)

4. That Policy D-120.920 "Preserving Patients' Ability to Have Legally Valid Prescriptions Filled," be amended by deletion of the first item to read as follows:

   ~~1. Our American Medical Association will study the national prevalence and patterns of pharmacists refusing to fill valid prescriptions from plenary licensed physicians, including impact on patient outcomes and prescriber autonomy.~~

   1.1. Our AMA will work with state medical boards, pharmacy boards, and appropriate federal agencies to protect the authority of plenary licensed physicians to prescribe all legal medications in accordance with their training and medical judgment.

3.2. Our AMA will reaffirm and publicize existing policy opposing unauthorized medication substitution, inappropriate pharmacy inquiries, and unauthorized treatment modification by pharmacists.

4.3. Our AMA supports legislation or regulatory action requiring pharmacists and pharmacy chains to either fill a valid prescription or immediately refer the patient to an alternative dispensing pharmacy, with notification to the prescribing physician.

5.4. Our AMA encourages interprofessional collaboration to clarify scope-of-practice boundaries, educate interested parties on the legal authority of plenary licensure, and promote policies that ensure timely patient access to physician led care. (Modify Current HOD Policy)

Fiscal note: Less than $500.

REPORT 19 OF THE BOARD OF TRUSTEES (A-26)
Root Cause Analysis of the Causes of the Decline of Private Medical Practice

EXECUTIVE SUMMARY

At the 2025 Annual Meeting, Policy D-405.965, "Root Cause Analysis of the Causes of the Decline of Private Medical Practice" was adopted by the House of Delegates (HOD). This policy directs the American Medical Association (AMA) to study and report back on the root cause of the decline in private practice (including but not limited to: the declining inflation-adjusted Medicare rates, Stark laws, the permitted consolidation of insurers and hospitals, hospital-insurer agreements that are minimal for physicians who are in-network compared with out-of-network, increased government influence by insurers and hospitals and decreased influence by doctors, inadequate formal education on the business of medicine, educational debt of early career physicians, evolving lifestyle preference of early career physicians, overhead expenditures, and hospital-based facility fees). This report examines contributing factors in the decline of private practice—organized into four categories: economic pressures, market consolidation, administrative and regulatory burden, and generational workforce factors.

Economic pressures were divided into two categories: (1) those that reduce practice revenue such as declining inflation-adjusted Medicare reimbursement and (2) those that increase practice costs such as overhead expenditures (e.g., EHRs, personnel, and administrative costs). The report highlights how consolidation among hospitals and commercial insurers affects the sustainability of independent physician-owned practices, including hospital-insurer agreements with minimal in-network fee requirements, conditions such as high hospital technical fees, and insurance plans without out-of-network benefits. The report notes that, as consolidation increases, resulting shifts in alignment and influence may further dilute the voice of physicians in private practice.

The report further examines how increased market consolidation can amplify the disproportionate impact of administrative and regulatory burdens on smaller and independent practices, as physicians in larger systems may have dedicated compliance infrastructure to manage these requirements (e.g., EHR interoperability, value-based payment reporting, and billing code changes). Additionally, it addresses generational workforce factors contributing to the decline of private practice, such as increasing retirement rates of "baby-boomer" physicians, younger physicians' lifestyle preferences and stronger focus on work-life balance, personal financial considerations, and limited business education. Finally, an analysis is provided of how several of these factors dynamically interact, contributing to a reinforcing feedback loop.

In addition to categorizing and analyzing factors driving the decline of private medical practice, this report also lists relevant AMA efforts including Medicare payment reform advocacy, educational resources and programs, research, and policy.

Given the AMA's substantial efforts in advocating for and developing resources concerning the preservation of private medical practice, the AMA recommends that (1) several existing policies be reaffirmed (Reaffirm HOD Policy), (2) the AMA identify stakeholders to expand physician awareness of and engagement with AMA private practice resources and solutions (New HOD Policy), (3) Policy D-405.965 be rescinded (Rescind HOD Policy), and (4) the remainder of the report be filed.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 19-A-26

Subject: Root Cause Analysis of the Causes of the Decline of Private Medical Practice

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Annual Meeting, Policy D-405.965, "Root Cause Analysis of the Causes of the Decline of Private Medical Practice," was adopted by the House of Delegates (HOD). This policy directs the American Medical Association (AMA) to do the following:

Our AMA will study and report back on the root cause of the decline in private practice to include consideration of at least the following factors:

1. The declining inflation-adjusted Medicare rates.
2. Stark laws, which allow hospitals, but not private physicians, to self-refer.
3. The development of insurance plans that had no out-of-network benefits.
4. The permitted consolidation of insurers and hospitals.
5. Hospital-insurer agreements with minimal in-network fee requirement and other conditions such as the requirement for high hospital technical fees.
6. Increased government influence by insurers and hospitals and decreased influence by doctors.
7. Inadequate formal education on the business of medicine.
8. Educational debt of early career physicians.
9. Evolving lifestyle preference of early career physicians.
10. Overhead expenditures such as Electronic Health Records (EHRs), personnel, and administrative costs.
11. Provider based facility fees charged by hospital employers but not by private practitioners.

This report includes detailed information about the root causes of the decline of private medical practice, organizing contributing factors into four categories—economic pressures, market consolidation, administrative and regulatory burden, and generational workforce factors—to better contextualize and understand their interaction. It also highlights the AMA's efforts to address these issues and recommends strengthened communication and engagement so that available AMA resources and solutions more effectively reach physicians in private practice and those considering transitioning to private practice.

BACKGROUND

Private practice can be defined as a medical practice wholly owned by one or more physicians. There has been an overall decline in physician ownership of medical practices over the past four decades, dropping especially precipitously from 61 percent physician owners in 2008 to 35.4 percent in 2024. Similarly, the proportion of physicians working in private practice as employees or owners has fallen from 60.1 percent in 2012 to 42.2 percent in 2024, as described in the AMA Physician Practice Benchmark Surveys.[1]

Private practice was a cornerstone of American medicine in the 20th century, representing a distinct health care delivery model with specific advantages and disadvantages. Despite evidence that suggests physician-owned practices are slower to adopt innovations such as health information technology[2] and care management processes[3], they are equivalent or better than other models of practice in total spending and quality measures such as preventable hospital admissions, readmissions, and emergency department visits.[4] Additionally, the autonomy associated with being a practice owner may contribute to physician well-being.[5]

The U.S. health care system overall has undergone significant change in the last several decades, including rising health care costs, continued downward pressure on payment, wide adoption of EHRs and other technology, the rise of chronic disease burden and more complex care, and more recently, the downstream effects of a global pandemic. During this period, many private practices have been acquired by hospitals and health systems. Drivers of this shift were recorded by the 2022 AMA Physician Practice Benchmark Survey, where 80 percent of physicians whose practices were acquired indicated that the need to better negotiate favorable (higher) payment rates with payers was a very important (46.1 percent) or important (33.4 percent) reason as to why their practice was sold to or acquired by a hospital or health system. The need to better manage payers' regulatory and administrative requirements and improve access to costly resources were both reported by approximately 70 percent of physicians as a very important or important reason for selling their practice.[6]

While it is difficult to establish clear causal relationships between the factors delineated in the resolution and the decrease of the number of physicians in private practice, this report will use the general framework of a root cause analysis and describe the role that each factor plays, discuss the interrelations between the factors, and summarize relevant AMA policy and activity.

DISCUSSION

For the purpose of this discussion, a basic root cause analysis fishbone diagram[7] was used to categorize the delineated factors in Policy D-405.965 into overarching themes. This diagram can be viewed in the appendix section at the end of this report (Figure 1). Although other potential factors were not included in the analysis, this categorical framework can be used to include other causes in the future.

Each category will be discussed in turn, including the associated potentially causative factors. Understanding that potential causes may overlap categories, they are discussed with the most pertinent themes.

Economic Pressures

Economic pressures may be divided into two main forces: (1) those which decrease practice revenues typified by the decrease in inflation-adjusted Medicare reimbursement rates, and (2) those that increase practice costs. The convergence of these forces contributes to the compression of the margin required to operate all medical practices. However, increasing overhead costs can have amplified consequences for private medical practices since they are typically small and unable to gain economies of scale or the leverage to negotiate for better payment rates. Asymmetries in federal payment systems and misaligned regulatory incentives, such as the Medicare Outpatient Prospective Payment System (OPPS) which tends to favor hospital-based ambulatory services, can also disadvantage physicians in private practice compared to their system-employed colleagues.

Declining Inflation-Adjusted Medicare Rates

Adjusted for inflation in practice costs, Medicare physician payment declined 33 percent from 2001 to 2026.[8] Furthermore, reimbursement systems for commercial health insurance plans tend to be based upon the Medicare system, albeit generally at higher rates. While the decline in these rates affect physicians in all practice settings, it may disproportionately affect those in private practice given that a larger percentage of revenue may be generated through the fee-for-service payments driven by the Medicare Physician Fee Schedule (MPFS).

Overhead Expenditures such as EHRs, Personnel, and Administrative Costs

During the same time period from 2001 to 2026, practice expenditures rose by 63 percent, with rapid acceleration beginning in 2021.[8] In addition to inflationary pressures on rents, personnel, and supplies, medical practices were also subject to increased costs associated with the acquisition of technology (e.g., EHRs to fulfill meaningful-use requirements, telehealth during the Covid-19 pandemic, digital systems to fulfill quality reporting requirements).[9] These practice costs can potentially be mitigated through economies of scale, which small private practices may not have.

Provider-Based Facility Fees Charged by Hospital Employers but not by Private Practitioners

Under the standard reimbursement system for traditional fee-for-service Medicare, in addition to physician payment through the MPFS "facility" rates, hospital outpatient departments (HOPDs) (with some exclusions) receive payment for ambulatory services under the OPPS. Clinicians rendering services in freestanding physician-owned offices receive payment through the MPFS "non-facility" rates, and the private practices do not receive payment through OPPS. This is the so-called "site-of-service differential." For example, in 2023, an initial preventative exam was reimbursed at a 51 percent higher rate in an existing HOPD than in a freestanding physician-owned office.[10] Another study addressing the commercial insurance market in 2022 found that on average, total payment for an ambulatory service in a HOPD was 145 percent more than in a physician office.[11] The "site-of-service differential" can advantage hospital-based outpatient services compared to those in free-standing physician offices.

Additionally, current implementation of the 340B Drug Pricing Program has been criticized for advantaging hospitals because it allows them to buy drugs at discounted rates while receiving full reimbursement—creating revenue streams unavailable to many private practice physicians—contributing to hospital acquisition of physician practices and care consolidation.[12] This has especially impacted private practice physicians in the oncology, rheumatology, and gastroenterology specialties.[13,14] The program has also been critiqued for incentivizing hospitals to shift care from underserved areas to wealthier communities to increase revenue.[12] AMA Policy H-110.985, "340B Drug Discount Program" recognizes that the 340B program does not support the extent of care provided by ineligible physician practices to the medically indigent or underserved, and commits to working with HRSA to establish 340B eligibility for all practices demonstrating a commitment to serving low-income and underserved patients.

Market Consolidation

Horizontal consolidation pertains to the situation when organizations in a common market, delivering the same services, combine. For example, this happens when two hospitals in the same city merge, or when one large health insurer buys out a smaller insurer that covers the same

population. This type of consolidation decreases competition and leads to the increased pricing power of the dominant entities.

Vertical consolidation happens when organizations in a common market, contributing different services along the delivery chain, combine. The classic example is a health system buying one or more physician practices. While this type of integration may have benefits in streamlining care coordination, there may also be the downside consequence of decreasing competition. Both situations can adversely affect the financial sustainability of physicians in private practice as their market power diminishes.

The Permitted Consolidation of Insurers and Hospitals

There has been continued consolidation in the health care market as it pertains to both hospitals and commercial insurers. For instance in 2023, one or two health systems controlled the entire market for inpatient hospital care in almost half of metropolitan statistical areas (MSAs), and nearly all (97 percent) had highly concentrated markets for inpatient hospital care.[15] Similarly, the insurers are also consolidating, leading to a highly concentrated health insurance market. A recent study from the AMA reveals that 97 percent of MSA-level commercial markets in 2023 were highly concentrated according to the Herfindal-Hirschman Indices (HHI) and Department of Justice (DOJ)/Federal Trade Commission (FTC) merger guidelines.[16]

There are many detrimental effects of health care consolidation on the sustainability of smaller independent physician-owned practices. In highly concentrated markets, small independent practices do not have much leverage in negotiations of reimbursement rates from commercial payers. Smaller independent practices may also have a difficult time negotiating competitive pricing for resources and human capital if located in a market with a dominant hospital/health system with similar needs. Smaller practices are also disproportionately impacted when payors or hospitals/health systems enter exclusivity contracts. In a consolidated market, practices excluded from these agreements lose access to most patients and are unable to survive. These effects are further magnified when payors or health systems directly or indirectly employ physicians.

Hospital-Insurer Agreements with Minimal In-Network Fee Requirement and Other Conditions Such as the Requirement for High Hospital Technical Fees

Given the market leverage that dominant health systems possess, they can negotiate terms with commercial payers which allow them to gain advantage. The so-called “anti-steering clause” (or “anti-incentive clause”) is a requirement that the insurer places the health system at the lowest cost-sharing rate to avoid steering patients away from the health system’s network. Other contract clauses which insurers and some hospital systems can employ to gain advantage are the following[17]:

- Most Favored Nation (MFN) Clause
- Non-compete Clause
- All-or-nothing Clause
- Anti-tiering/Anti-steering Clause
- Gag Clause (Price Secrecy Provision)
- Exclusive Contracting Clause[17]

While each contracting strategy will not be detailed in this report, any or all the above may be used by payers or health systems to disadvantage small private practice.

The Development of Insurance Plans That had No Out-of-Network Benefits

Traditionally, preferred provider organization (PPO) and point of service health plans have out-of-network benefits, while health maintenance organization (HMO) and exclusive provider organization (EPO) plans do not. While all these health plan types have existed for decades, the relative adoption of these plans has changed with time. PPO plans remain common in employer-sponsored plans. However, the individual marketplace has shifted dramatically in favor of HMO and EPO plans, with some states having no PPO plans in the marketplace.[18] Given the transition to these options, the negotiating power of dominant health systems to include all-or-nothing clauses in their payer contracts can amplify exclusion of private practices in payer networks.

Increased Government Influence by Insurers and Hospitals and Decreased Influence by Doctors

As health care markets continue to consolidate, it follows that these larger entities may exert increased influence on local, state and federal governments, both directly and through affiliated societies and umbrella organizations. Physicians continue to have a strong voice through organized medicine. However, as ever more complex organizations are formed, there are new shifts in alignment and influence that may dilute the voice of physicians in private practice.

Administrative & Regulatory Burdens

Burdens related to compliance are felt by physicians in all practice settings. However, physicians affiliated with larger systems may be more sheltered from these burdens as they may have dedicated compliance infrastructures in place. Furthermore, additional regulations regarding physician ownership, including Stark and anti-kickback laws, may disadvantage physicians in private practice.

The Physician Self-Referral (Stark) Law

In Policy D-385.940, "Stark Law Self-Referral Ban", the AMA recognizes the challenges the Stark law may pose to many physician practices and that restrictions on self-referral may be a contributing factor to market consolidation. However, the Stark law does not provide a blanket ban on self-referral practices. Rather, it contains numerous exceptions, which if met, allow physicians to self-refer (e.g., when physicians self-refer to risk bearing arrangements). Most importantly for the purposes of this report, the Stark law has a broad exception for both ownership interests and compensation arrangements that applies specifically to physician practices—the in-office ancillary services exception. That said, the increased costs of legal and administrative work required to form and maintain the structures necessary to comply with these Stark law exceptions may be significant.

Administrative Burdens

Private practice physicians face substantial administrative and regulatory burdens, often exceeding those experienced by physicians employed by larger systems with dedicated compliance infrastructure. These burdens include requirements for quality reporting, prior authorizations, payer contracting and credentialing, regulatory compliance for privacy and security (e.g., HIPAA), and maintenance of licensure and certification.

The cumulative time devoted to administrative tasks not directly related to patient care has been a major contributor to physician dissatisfaction and burnout.[19] In smaller practices, physicians often personally handle or oversee these requirements, whereas larger organizations are able to delegate

to specialized administrative personnel. The increasing complexity of federal, state, and payer requirements—especially regarding EHR interoperability, value-based payment reporting[20], and frequent changes to billing codes—has raised the cost of compliance and further strained private practice viability.

Generational Workforce Factors

As the "baby-boom" generation continues to age out of the physician workforce, factors affecting the younger generations, including lifestyle preferences, personal finances, and lack of business education, may contribute significantly to decreasing numbers of graduating trainees and early career physicians choosing to enter private practice. Trainees' limited exposure to the professional satisfaction associated with private practice may also lead them to select other models of practice.

Inadequate Formal Education on Business Skills

In 2023, the AMA conducted a study investigating physician career transitions in which 35 physicians who changed jobs between health care organization employment, private practice, or non-clinical roles were interviewed. Although the main objective of this research was to identify drivers of these transitions, the potential avenues of support for the physician career journey were also studied. One of the key unmet needs that these physicians identified was that "physicians across experience levels benefit from exposure to business and other skills." These skills are not typically taught in medical education and training due to the time and rigor necessary to achieve clinical competence. However, business knowledge is vitally important to the sustainability of a private medical practice given the necessary decisions which need to be made by the physician owners. Young physicians who feel uncomfortable due to poor exposure to the basic skills necessary to run an independent practice may perceive employment as a more stable alternative.

Evolving Lifestyle Preference of Early Career Physicians

A 2017 AMA and M3 Global Research survey found that 92 percent of physicians aged 35 and younger rated work-life balance as a priority. Nearly four out of five said they eventually hoped to seek out fields beyond patient care, including entrepreneurship, health care consultancy, hospital/health system executive management, and academic research.[21] These findings were echoed by the younger physicians in the 2023 AMA "Illuminating the Physician Practice Transition Journey" study, wherein participants reported that "being a physician is no longer the only way they define themselves." Although private practice is constantly evolving, the perception that private practice offers "little separation between work and life" and no opportunities beyond patient care persists. These changing life priorities and fixed perception of private practice may contribute to younger physicians choosing employment.

Educational Debt of Early Career Physicians

The average medical school debt balance rose from about $180,000 in 2015 to $216,659 in 2025, with 70 percent of 2025 graduates taking on student loan debt.[22] While there is more extensive literature describing the amount of educational debt driving decisions regarding specialty and location (i.e., rural practices), it logically follows that an increased debt load may drive a physician to the perceived relative financial stability of a salaried employment arrangement and away from the potential financial instability of private practice. Additionally, some larger organizations offer loan repayment as a potential recruiting tool to make employment more attractive.

Another concrete decision point of physicians with education debt was the opportunity to pursue debt forgiveness through the federal public service loan forgiveness program, which is only available to those employed by not-for-profit, government, or public health care organizations. This serves as an additional deterrent to those who would otherwise have chosen to pursue private practice.

Interplay of Factors

The factors discussed likely do not affect the decline of private medical practice independently. Rather, the factors most likely interact in a dynamic fashion. It is important that policymakers and stakeholders understand the interplay between these factors to identify and prioritize effective interventions such as AMA-recommended reforms to promote site-neutral payment policies that base reimbursement on the cost of a service rather than its location, modernize physician payment through increased rates and inflation-based annual updates, and greater transparency of facility fees at HOPDs. The following discussion outlines how most of the factors may contribute to a reinforcing feedback loop, either directly, or as an accelerant.

Private Practice Margins are Compressed by Economic Pressures

Most private, independent physician-owned practices are small, so efficiencies gained from economies of scale are not available to decrease overhead costs. Therefore, the effects of decreasing reimbursement rates and loss of revenue streams to larger consolidated health care organizations are causing a continued loss of the margin required to financially sustain practice. Innovative mitigation of financial risk is hindered by regulatory burdens as costs associated with compliance are significant and burdensome. In addition, the lack of formal business education also hampers physicians from finding solutions to these economic stressors although even formal business education would not negate the realities of the economic imbalance, decreasing revenues, increasing costs, and restrictive structural barriers (e.g., increasing administrative and regulatory burdens).

Physicians' Concern about Private Practice Viability Accelerates the Move to Employment or Retirement

These unmitigated economic pressures coupled with increasing administrative burdens decrease the attractiveness of private practice to physicians as compared to the perceived economic stability (including additional revenue generated from the site-of-service differential) and decreased administrative burden promised by other practice modes. This is accentuated by limited exposure to private practice in training and the changes in generational preferences in lifestyle as well as a high educational debt load. Many physicians have sought financial stability and decreased administrative burden by retiring or becoming employed by—or selling their practices to—large health systems.

Health Care Market Becomes More Consolidated, Exacerbating and Compounding the Cycle

As health care delivery and payment policy has become more complex, consolidation among hospitals, health systems and physician practices has occurred. Dominant health insurers also limit independent physicians' ability to negotiate, furthering a relative decrease in reimbursement rates and loss of revenue streams as compared to health systems in dominant positions. This exacerbates financial pressures on independent practices, further compounding the cycle that drives consolidation.

AMA RESOURCES AND ACTIVITIES

With all the above factors, the AMA has made significant efforts to address the issues called out in Policy D-405.965 regarding education, advocacy, and other activities.

Medicare payment reform advocacy

The AMA has identified Medicare physician payment reform as a top advocacy priority.[23] Through sustained advocacy such as the "Fix Medicare Now" campaign—which in 2025 generated over 100,000 contacts to Congress and experienced a 36 percent increase in visitors to the site—AMA and its partners have raised awareness among policymakers about the growing gap between the cost of delivering care and Medicare reimbursement. Federal advisory bodies have echoed these concerns. For instance, in its June 2025 report to Congress, MedPAC warned that the gap between what Medicare pays and physicians' practice costs could threaten patient access to care, and the Medicare Trustees similarly projected that access to Medicare-participating physicians could become a significant long-term issue if this gap persists. In response to these pressures, Congress recently provided a one-time 2.5 percent Medicare payment update for 2026 in the One Big Beautiful Bill Act (H.R. 1), while MedPAC recommended an additional 0.5 percent payment update for 2027 on top of updates already specified in law.[24]

Recent AMA efforts also comprise several advocacy measures concerning the site-of-service differential. For example, in 2024, AMA authored an issue brief on this payment differential between physician offices and ambulatory surgical centers versus HOPDs. The brief highlighted that while physician Medicare pay rose eight percent (declined 29 percent when adjusted for inflation) between 2001 and 2024, hospital Medicare pay rose over 70 percent over that same period—despite CMS attempts at site neutrality since 2017. The brief presented several key points for reform including payment based on the cost of a service rather than its location, increasing physician payments (as opposed to just cutting hospital payment), adding inflation-based annual updates, and encouraging care in lower-cost settings.[25]

Additionally, in Section 6225 of the Consolidated Appropriations Act, 2026—a government bill recently signed into law—Congress included a provision that's consistent with AMA Policy D-330.891, "Transparency of Facility Fees for Hospital Outpatient Department Visits" which advocates for (1) legislation or regulation that mandates the proactive transparency of the added costs to the consumer for health care services rendered at HOPD designated clinics and (2) the additional costs of facility fees over professional services be stated upon scheduling of such services, noting the two are separate and additive charges, as well as prominently displayed at the point of service. Section 6225 requires all off-campus outpatient departments to obtain separate, unique National Provider Identifiers and submit an attestation confirming compliance with provider-based regulations by January 1st, 2028, or otherwise face the loss of OPPS payments.[26]

Further, in 2025, CMS proposed and finalized the expansion of its policy of paying the MPFS equivalent site neutral rate (40 percent of the OPPS rate) for drug administration services furnished in excepted, off-campus HOPDs. The AMA provided their comments to CMS in September 2025, supporting site-neutral outpatient policies in principle, but not if they reduce total Medicare funding or ignore inadequate physician payment and resulting patient access risks. Rather, the AMA clarified its support of competition in health care so patients have choices for where to receive care but argued that true site neutrality requires raising and modernizing physician payment, not cutting payments overall or shifting financial and other access-related burdens onto patients and physicians.[27]

Monitoring of market dynamics

At the 2024 Annual meeting, Council on Medical Service Report 4: "Health System Consolidation" summarized main findings from the AMA's Policy Research Perspective, "Competition in Hospital Markets, 2013–2021", developed in response to Policy D-160.907 which directed the AMA to assess nationwide health system consolidation. Overall, the findings indicated that nearly all U.S. hospital markets are highly concentrated, with consolidation trends continuing to increase market concentration.[28]

Additionally, the AMA's Division of Economic and Health Policy Research conducts independent analyses of competition in health insurance, pharmacy benefit manager, and hospital markets. One of the Division's most significant efforts is its annually updated Competition in Health Insurance (CHI) study—the only publication of its kind. This study uses comprehensive national enrollment data to assess insurer market dynamics.[29] The 2025 update of this study examined market concentration across 384 MSAs, all 50 states, and the District of Columbia using 2024 enrollment data and the HHI. The study found that U.S. health insurance markets remain overwhelmingly concentrated—97 percent of MSA-level commercial markets were highly concentrated in 2024, with an average HHI of 3486, and in nearly half of markets a single insurer held at least a 50 percent market share. Market concentration has generally increased between 2014 and 2024, and Medicare Advantage markets also remain highly concentrated.[16]

Decreasing administrative and regulatory burdens

The AMA also provides physicians, care teams and health care leadership with resources designed to promote professional satisfaction, efficient use of digital health technology, practice sustainability, and quality patient care through its STEPS Forward® Innovation Academy. Resources are offered in the form of playbooks, toolkits, webinars, podcasts, and bootcamps on topics such as private practice, physician burnout, and time-saving strategies.[30]

Further, the AMA's Debunking Regulatory Myths series provides physicians and care teams with regulatory clarification to reduce guesswork and administrative burden in their day-to-day practice, helping streamline clinical workflows, improve patient outcomes, and enhance physician satisfaction. The series focuses on topics such as billing/coding, documentation, EHR interoperability, Joint Commission and CMS guidance, and scope of practice laws.[31]

Support of Private Practice

The High-Performing Private Practice Initiative launched in 2021 to enhance the AMA's efforts to address a concerning trend—a decline in physician practice ownership from 54 percent in 2018 to 49.1 percent in 2020.[32] A 2021 AMA-Mathematica study of 25 high-performing practices identified critical barriers, including professional isolation and insufficient business management education among recent graduates.[33]

The AMA initiative created essential resources to support private practice. Between 2021 and 2022, the team developed the Private Practice web toolkit, the Simple Solutions educational series, the Thriving in Private Practice podcast, and the Private Practice Playbook. The Navigating Practice series introduced medical students to independent practice as a viable career path. By 2023-2024, programming expanded with the STEPS Forward Attending to Business podcast. The June 2024 workshop addressing business skills in private practice represented a pivotal evolution from passive resources to active business education. As part of this program, educational modules were curated so physicians could become exposed to introductory level business skills and

concepts. These efforts were guided by an Advisory Council consisting of physician leaders and directors of physician-specific MBA programs at well-known business schools. A more formal curriculum is currently under development.

These early efforts revealed that physicians lacked comprehensive support for launching independent practices. The Independent Practice Incubator pilot filled this gap as a first-of-its-kind 12-month immersion program covering essential competencies for independent practice. The first cohort received education to adopt innovative private practice models, including several that were designed to serve underrepresented and underserved communities.

Based on learnings from the Incubator pilot, the AMA is now scaling this program and, in the fall of 2026, the Independent Practice Forum—a two-day intensive workshop distilling essential competencies through expert sessions, case studies, and peer networking—will launch. This accessible format will provide physicians exploring or beginning independent practice with foundational knowledge in strategic planning, obtaining capital, business fundamentals, revenue cycle management, operations, leadership, and marketing.

The AMA will now offer a complete ecosystem—foundational resources, community building, and education spanning from medical school through practice launch. This multi-tiered approach—combining ongoing education, immersion programs, and intensive workshops—establishes the AMA as the primary resource for independent practice physicians. By preserving physician choice and practice model diversity, the program ensures that AMA's core mission of removing obstacles to patient care and ensuring high-quality care delivery remains accessible despite increasing health care consolidation.

AMA POLICY

The following emphasizes the breadth of AMA policies aimed at addressing the factors contributing to the decline of private practice including: Medicare reimbursement, the site-of-service differential, inflation-based physician payment, health system and insurance consolidation, the preservation of private practice, and administrative burden.

Medicare Reimbursement

Regarding the importance of improved Medicare and Medicaid reimbursement, the AMA (1) continues to oppose payment cuts in the Medicare and Medicaid budgets that may reduce patient access to care and undermine the quality of care provided to patients; (2) supports the concept that the Medicare and Medicaid budgets need to expand adequately to adjust for factors such as cost of living, the growing size of the Medicare population, and the cost of new technology; (3) aggressively encourages CMS to affirm the patient's and the physician's constitutional right to privately contract for medical services; notes that (4) if the reimbursement is not improved, our AMA declares the Medicare reimbursement unworkable and intolerable, and seek immediate legislation to allow the physician to balance bill the patient according to their usual and customary fee; and (5) supports a mandatory annual "cost-of-living" or COLA increase in Medicaid, Medicare, and other appropriate health care reimbursement programs, in addition to other needed payment increases (Policy H-330.932, “Cuts in Medicare and Medicaid Reimbursement”).

The AMA will also (1) encourage CMS to expand the extent and amount of reimbursement for procedures performed in the physician's office, to shift more procedures from the hospital to the office setting, which is more cost effective; (2) seek to have the RBRVS practice expense RVUs reflect the true cost of performing office procedures; (3) work with CMS to develop consistent

regulations to be followed by carriers that include reimbursement for the costs of disposable supplies and surgical tray fees incurred with office-based procedures and surgery; (4) support the Current Procedural Terminology (CPT®) Editorial Panel / RVS Update Committee (RUC) recommendation to the Centers for Medicare & Medicaid Services (CMS) to separately pay for high-cost supplies priced more than $500; and (5) work with the federal government to address flaws in the Medicare Physician Fee Schedule practice expense methodology resulting in reimbursement being less than direct costs for hundreds of services in the office-based setting (Policy H-400.957, "Medicare Reimbursement of Office-Based Procedures").

Further, the AMA urges CMS to permit separate reimbursement for medically necessary multiple visit services rendered to Medicare patients on the same day by the same physician regardless of the setting in which those services were provided (Policy H-390.879, "Medicare Reimbursement for Multiple Physician's Visits on the Same Day Regardless of the Place of Service").

Site-of-Service Differential

Concerning the site-of-service differential, AMA (1) supports Medicare payment policies for outpatient services that are site-neutral without lowering total Medicare payments and Medicare payments for the same service routinely and safely provided in multiple outpatient settings (e.g., physician offices, HOPDs, and ASCs) that are based on sufficient and accurate data regarding the actual costs of providing the service in each setting; (2) will urge the CMS to update the data used to calculate the practice expense component of the Medicare physician fee schedule by administering a physician practice survey (similar to the Physician Practice Information Survey administered in 2007-2008) every five years, and that this survey collect data to ensure that all physician practice costs are captured; (3) encourages CMS to both: base disproportionate share hospital payments and uncompensated care payments to hospitals on actual uncompensated care data; and study the costs to independent physician practices of providing uncompensated care; (4) will collect data and conduct research to both: document the role that physicians have played in reducing Medicare spending; and facilitate adjustments to the portion of the Medicare budget allocated to physician services that more accurately reflects practice costs and changes in health care delivery; and (5) will disseminate educational materials and graphics and promote awareness that the site-of-service payment differential is not based on the quality of care provided across outpatient care settings (Policy D-330.902, "The Site-of-Service Differential").

Further, AMA will advocate to prohibit insurers from denying or reducing payment for a procedure based solely on the site of service in which was performed, provided that the procedure is medically necessary and can safely be performed in that location (Policy H-240.958, "Prohibiting Insurers from Denying Payment for Procedures Based on Site of Service").

AMA will also work with states to advocate that third party payers be required to: a. Assess equal or lower facility coinsurance for lower-cost sites of service (hospital outpatient department, ambulatory surgical center, or office-based facility); b. Publish and routinely update pertinent information related to patient cost-sharing; and c. Allow their plan's participating physicians to perform outpatient procedures at an appropriate site of service as chosen by the physician and the patient (Policy D-240.994, "Payment Variations Across Outpatient Sites of Service").

Further, the AMA encourages CMS to: (A) define Medicare services consistently across settings and, in particular, to avoid the use of diagnosis codes in determining Medicare payments to hospital outpatient departments and other ambulatory settings; and (B) adopt payment methodology for hospital outpatient departments and ambulatory surgical centers that will assist in leveling the playing field across all sites-of-service. If necessary, the AMA should consider seeking a

legislative remedy to the payment disparities between hospital outpatient departments and ambulatory surgical centers. AMA will continue to encourage the CMS to collect data on the frequency, type and cost of services furnished in off-campus, provider-based departments (Policy D-330.997, "Appropriate Payment Level Differences by Place and Type of Service").

Inflation-Based Physician Payment

On the topic of inflation-adjusted physician payment rates, AMA policy states that it shall use every means available to convince health insurance companies and managed care organizations to immediately uncouple fee schedules from the Medicare Physician Payment Schedule and to maintain a level of payment that is sustainable, reflects the full cost of practice, and the value of the care provided, and includes inflation-based updates; and AMA will seek legislation and/or regulation to prevent managed care companies from utilizing a physician payment schedule below the updated Medicare Physician Payment Schedule (Policy D-400.990, "Uncoupling Commercial Fee Schedules from the Medicare Physician Payment Schedule").

Additionally, AMA supports policy that increases and maintains access to health care for all, payment for physicians under Medicaid, TRICARE, and any other publicly funded insurance plan must be sustainable, reflect the full cost of practice and the value of the care provided, include inflation-based updates, and pay no less than 100 percent of RBRVS Medicare allowable (Policy H-385.921, "Health Care Access for Medicaid Patients).

Health System & Insurance Consolidation

AMA has numerous policies regarding health system and insurance consolidation. For instance, the AMA (1) will assess and report annually on nationwide health system and hospital consolidation, as well as payer consolidation, to assist policymakers and the federal government; and this AMA annual report on nationwide hospital consolidation will be modeled after the "Competition in health insurance: A comprehensive study of U.S. Markets" in its thoroughness to include for example data and analyses as: (a) a review of the current level of hospital and/or health system consolidation at the level of all metropolitan statistical areas, state, and national markets; (b) a list of all mergers and acquisition transactions valued above a set threshold amount resulting in hospital and/or health system consolidation; (c) analyses of how each transaction has changed or is expected to change the level of competition in the affected service and geographic markets; and (d) analyses of healthcare costs and prices have changes in affected markets after a large consolidation transaction has taken place. AMA will report the initial findings of this study to the House of Delegates by Annual 2024 and the findings of this study to its members and stakeholders, including policymakers and legislators, to inform future healthcare policy (Policy D-160.907, "Health System Consolidation").

The AMA will also study nationwide health system and hospital consolidation in order to assist policymakers and the federal government in assessing healthcare consolidation for the benefit of patients and physicians who face an existential threat from healthcare consolidation; and will regularly review and report back on these issues to keep the House of Delegates apprised on relevant changes that may impact the practice of medicine, with the first report no later than the 2023 Annual Meeting (Policy D-215.984, "Health System Consolidation").

Further, the AMA opposes consolidation in the health insurance industry that may result in anticompetitive markets (Policy H-180.947, "Maintaining Freedom of Choice with Insurance Products).

Furthermore, AMA advocates to adequately resource competition policy authorities such as the FTC and DOJ Antitrust Division to perform oversight of health care markets (Policy D-160.906, "Strengthening Efforts Against Horizontal & Vertical Consolidation").

Likewise, the AMA advocates against anticompetitive business practices that have the potential to adversely affect the physician patient relationship, to result in higher costs or decreased quality of care, or are not in the best interest of patients, the public and/or physicians; and also supports efforts to increase transparency, review, and enforcement of laws with respect to vertical mergers that have the potential to negatively impact the health care industry. AMA will work with all appropriate stakeholders to create model legislation to prohibit anticompetitive business practices within the health care sector (Policy D-160.908, "Vertical Consolidation in Health Care – Markets or Monopolies").

The AMA also (1) recognizes the substantial impact of the Stark law's unequal restrictions on independent physicians, contributing to the growing trend of hospital consolidation, which has led to negative consequences of restricted access to care and inflated costs; (2) supports comprehensive Stark law reform aimed at rectifying the disparities that disadvantage independent physician practices while preserving the intent of AMA Code of Ethics Policy 9.6.9, "Physician Self-Referral"; and (3) supports equitable and balanced Stark law reform that fosters fair competition, incentivizes innovation, and facilitates the delivery of high-quality, patient-centered care (Policy D-385.940, "Stark Law Self-Referral Ban").

Further, the AMA affirms that: (a) health care entity mergers should be examined individually, taking into account case-specific variables of market power and patient needs; (b) strongly supports and encourages competition in all health care markets; (c) supports rigorous review and scrutiny of proposed mergers to determine their effects on patients and providers; and antitrust relief for physicians remains a top AMA priority. AMA will continue to support actions that promote competition and choice, including: (a) eliminating state certificate of need laws; (b) repealing the ban on physician-owned hospitals; (c) reducing administrative burdens that make it difficult for physician practices to compete; and (d) achieving meaningful price transparency. AMA will work with interested state medical associations to monitor hospital markets, including rural, state, and regional markets, and review the impact of horizontal and vertical health system integration on patients, physicians and hospital prices (Policy H-215.960, "Hospital Consolidation").

It is the policy of the AMA that, in the event of a hospital merger, acquisition, consolidation, or affiliation, a joint committee with merging medical staffs should be established to resolve at least the following issues: (a) medical staff representation on the board of directors; (b)clinical services to be offered by the institutions; (c) process for approving and amending medical staff bylaws; (d) selection of the medical staff officers, medical executive committee, and clinical department chairs; (e) credentialing and recredentialing of physicians and limited licensed providers; (f) quality improvement; (g) utilization and peer review activities; (h) presence of exclusive contracts for physician services and their impact on physicians' clinical privileges; (i) conflict resolution mechanisms; (j) the role, if any, of medical directors and physicians in joint ventures; (k) control of medical staff funds; (l) successor-in-interest rights; and (m) that the medical staff bylaws be viewed as binding contracts between the medical staffs and the hospitals. AMA will also work to ensure, through appropriate state oversight agencies, that where hospital mergers and acquisitions may lead to restrictions on reproductive health care services, the merging entity shall be responsible for ensuring continuing community access to these services (Policy H-215.969, "Hospital Merger Study").

Similarly, AMA will: (1) urge its AMA Commissioners to The Joint Commission to seek the inclusion of a standard in The Joint Commission hospital accreditation program requiring a medical staff successor-in-interest standard in the hospital medical staff bylaws; (2) seek inclusion of medical staff bylaw successor-in-interest provisions in the Medicare Conditions of Participation and in the rules and regulations of other public and private hospital accreditation agencies; and (3) continue to monitor and report on current numbers of mergers and break-ups of mergers of hospitals in this country (Policy D-225.995, "Hospital Merger Study").

Further, AMA will: (1) pursue the elimination of or physician exemption from anti-trust provisions that serve as a barrier to negotiating adequate physician payment; (2) work to establish tools to enable physicians to consolidate in a manner to insure a viable governance structure and equitable distribution of equity, as well as pursuing the elimination of anti-trust provisions that inhibited collective bargaining; and (3) find and improve business models for physicians to improve their ability to maintain a viable economic environment to support community access to high quality comprehensive healthcare (Policy H-383.988, "Physicians' Ability to Negotiate and Undergo Practice Consolidation").

In addition, AMA will (1) continue to monitor the impact of hospital-physician practice and hospital-hospital mergers and acquisitions on health care prices and spending, patient access to care, potential changes in patient quality outcomes, and physician wages and labor; (2) continue to monitor how provider mix may change following mergers and acquisitions and how non-compete clauses may impact patients and physicians; (3) support efforts to collect relevant information regarding hospital-physician practice and hospital-hospital mergers and acquisitions in states or regions that may fall below the FTC/DOJ review threshold; (4) encourage state and local medical associations, state specialty societies, and physicians to contact their state attorney general with concerns of anticompetitive behavior; and (5)encourage physicians to share their experiences with mergers and acquisitions, such as those between hospitals and/or those between hospitals and physician practices, with the FTC via their online submission form (Policy H-160.885, "Impact of Integration and Consolidation on Patients and Physicians").

It is also AMA policy that when a private medical practice is purchased by corporate entities, patients going to that practice shall be informed of this ownership arrangement by the corporate entities and/or by the physician (Policy H-160.960, "Corporate Ownership of Established Private Medical Practices").

Preservation of Private Practices

Concerning the preservation of private practice, AMA policy states that the AMA (1) supports preserving the value of the private practice of medicine and its benefit to patients; (2) will utilize its resources to protect and support the continued existence of solo and small group medical practice, and to protect and support the ability of these practices to provide quality care; (3) will advocate in Congress to ensure adequate payment for services rendered by private practicing physicians; (4) will work through the appropriate channels to preserve choices and opportunities, including the private practice of medicine, for new physicians whose choices and opportunities may be limited due to their significant medical education debt; (5) will work through the appropriate channels to ensure that medical students and residents during their training are educated in all of medicine's career choices, including the private practice of medicine; (6) will create, maintain, and make accessible to medical students, residents and fellows, and physicians, resources to enhance satisfaction and practice sustainability for physicians in private practice; (7) will create and maintain a reference document establishing principles for entering into and sustaining a private practice, and encourage medical schools and residency programs to present physicians in training

with information regarding private practice as a viable option; and (8) will issue a report in collaboration with the Private Practice Physicians Section at least every two years communicating their efforts to support independent medical practices (Policy D-405.988, "The Preservation of the Private Practice of Medicine").

Additionally, our AMA will (1) inform corporate efforts about the value of private practices to successfully participate in new "value-based" models; (2) identify and work with a corporate entity that is advancing these models to explore a two year pilot among independent private practices in which our AMA will: (a) convene physician practices in a community; (b) provide educational resources and technical assistance to practices to support their participation with the corporate entity; (c) formally evaluate the pilot for outcomes; and (3) will advocate with commercial payers and health plans and federal and state payers and policymakers to support private practice through policies and models that provide adequate payment, infrastructure and data to succeed in "value-based" models (Policy D-160.909, "Advocacy of Private Practice Options for Healthcare Operations in Large Corporations").

Administrative Burdens

Also of importance to discuss are AMA policies on administrative burden. Such policy states that the AMA will perform or commission an analysis of the direct and indirect costs and documented benefits associated with significant administrative and regulatory requirements imposed by the CMS, including but not limited to face-to-face documentation requirements, the Physician Quality Reporting System, and the Meaningful Use program (Policy D-330.909, "Study the Costs of Administrative and Regulatory Burdens").

Furthermore, AMA supports accurate calculations of the administrative costs of government programs (Medicare, Medicaid, TRICARE, etc.) and private health insurance plans. It is the policy of the AMA: (1) to begin immediately to seek comprehensive reforms to reduce the administrative inefficiencies, burdens and expenses involved in paying for health care services and to urge that proposals to increase access to health care also address the need to reduce administrative costs and burdens; (2) that state and county medical societies and national medical specialty societies be urged to utilize the joint Guidelines for Health Benefits Administration in discussions with health care payers directed toward improving the efficiency of utilization management programs and minimizing the administrative burdens they impose on physicians and hospitals; (3) that the AMA strongly encourage further study of the cost-effectiveness of all types of utilization management systems and programs and report further results of such study to the Federation as they become available; (4) that state medical societies be urged to work for enactment of the AMA model state legislation governing: (a) clarity and readability of contract language and uniform policy provisions; (b) liability of review entities for injury to beneficiaries; (c) physician involvement in the review process; and (d) confidentiality of medical information requested by review entities; and (5) that this information be conveyed to the American public through appropriate mechanisms (Policy H-155.976, "Administrative Costs and Access to Health Care").

CONCLUSION

This root cause analysis concerning the causes of the decline of private medical practice is a helpful reexamination that can serve as a catalyst for continued and enhanced action. The framing of potential causes into the four categories of economic pressures, market consolidation, administrative and regulatory burden, and generational workforce factors can help contextualize the factors delineated in the resolution as well as any other newly identified potential factors.

Understanding the interplay between the factors is also helpful in identifying and prioritizing effective interventions.

The AMA has dedicated significant resources and other efforts in this area as specified in this report. To more effectively leverage this body of work, AMA should enhance its communication and engagement efforts to ensure private practice and AMA solutions are widely available to all physicians. The findings of this report can potentially guide a more comprehensive strategy in this communication and engagement so that these resources and efforts are not implemented in silos but are mutually reinforcing to produce a more effective result.

RECOMMENDATIONS

The Board of Trustees recommends the following be adopted and the remainder of this report be filed:

1. That our AMA reaffirm the following policies:
    a. H-330.932, “Cuts in Medicare and Medicaid Reimbursement”;
    b. H-400.957, “Medicare Reimbursement of Office-Based Procedures”;
    c. H-390.879, “Medicare Reimbursement for Multiple Physician's Visits on the Same Day Regardless of the Place of Service”;
    d. D-330.902, “The Site-of-Service Differential”;
    e. H-240.958, “Prohibiting Insurers from Denying Payment for Procedures Based on Site of Service”;
    f. D-240.994, “Payment Variations Across Outpatient Sites of Service”; D-330.997, “Appropriate Payment Level Differences by Place and Type of Service”;
    g. D-400.990, “Uncoupling Commercial Fee Schedules from the Medicare Physician Payment Schedule”;
    h. H-385.921, “Health Care Access for Medicaid Patients”;
    i. D-160.907, “Health System Consolidation”;
    j. D-215.984, “Health System Consolidation”;
    k. H-180.947, “Maintaining Freedom of Choice with Insurance Products”;
    l. D-160.906, “Strengthening Efforts Against Horizontal & Vertical Consolidation”;
    m. D-160.908, “Vertical Consolidation in Health Care – Markets or Monopolies”;
    n. D-385.940, “Stark Law Self-Referral Ban”;
    o. H-215.960, “Hospital Consolidation”;
    p. H-215.969, “Hospital Merger Study”;
    q. D-225.995, “Hospital Merger Study”;
    r. H-383.988, “Physicians' Ability to Negotiate and Undergo Practice Consolidation”;
    s. H-160.885, “Impact of Integration and Consolidation on Patients and Physicians”;
    t. H-160.960, “Corporate Ownership of Established Private Medical Practices”;
    u. D-405.988, “The Preservation of the Private Practice of Medicine”;
    v. D-160.909, “Advocacy of Private Practice Options for Healthcare Operations in Large Corporations”;
    w. D-330.909, “Study the Costs of Administrative and Regulatory Burdens”;
    x. H-110.985, "340B Drug Discount Program"; and
    y. H-155.976, “Administrative Costs and Access to Health Care” (Reaffirm HOD Policy)
2. Our AMA will identify stakeholders to expand physician awareness of and engagement with AMA private practice resources and solutions. (New HOD Policy)
3. That Policy D-405.965, “Root Cause Analysis of the Causes of the Decline of Private Medical Practice” be rescinded as being accomplished by this report. (Rescind HOD Policy)

Fiscal Note: Minimal

REPORT OF THE BOARD OF TRUSTEES

BOT Report 21-A-26

Subject: Abolishing Venue Shopping
(Resolution 207-A-25)

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), the HOD adopted Policy D-435.968, "Abolishing Venue Shopping" which asked the following:

1. That our American Medical Association oppose venue shopping in medical professional liability actions; and be it further

2. That our AMA study avenues to most effectively combat venue shopping in state and federal medical professional liability actions with report back at A-26.

Policy D-435.968 was adopted following mixed testimony. Testimony noted that venue shopping was a complicated issue involving varying state and federal rules, statutes, cases, and constitutional issues. Testimony also noted that having the AMA advocate for specific venue requirements may have unintended consequences for physicians who are defending allegations of medical liability. Significant testimony was offered highlighting the problems that can arise for physicians when venue shopping is utilized in medical liability cases. During testimony, the authors of the original resolutions offered alternative language which the HOD adopted. It is noteworthy that while Policy D-435.968 called for a study, overwhelming testimony supported action being taken on venue shopping immediately.

BACKGROUND

Medical liability reform has long been one of the AMA's advocacy priorities. Although physicians and patients are not yet experiencing the kind of national medical liability insurance crisis that occurred in the early 2000s, over the last few years there has been a significant increase in the size of medical liability awards. In fact, the U.S. has seen an increase of "nuclear verdicts" in medical liability cases, i.e., cases where the jury awarded $10 million or more, some exceeding $25 million. This is worrisome to the Board of Trustees (the Board) because such awards are often influenced by factors that have nothing to do with a physician's alleged negligence or patient injury. Oftentimes they are the product of "social inflation," such as eroding trust in the U.S. health care system and the perceived corporatization of medicine. There also appears to be a return of hard medical liability insurance markets in parts of the country.

© 2026 American Medical Association. All rights reserved.

In addition to what has been described above, the Board knows that venue shopping, also known as forum shopping, can be a major contributor to increasing medical liability exposure. Venue shopping occurs when a plaintiff's attorney can file medical liability lawsuits in a county where juries are known for awarding large medical liability awards, even if the county has no connection to underlying facts of the lawsuit. Venue shopping is an abuse of the judicial process, as it leads to outsized awards that must be absorbed by physicians in the form of increased medical liability insurance premiums, ultimately to the detriment of patient access.

Based on the above, the Board understands that the need to enact medical liability reform is urgent in some states.

State Medical Liability Lawsuits and Forum Shopping: The Pennsylvania Example

After evaluating state environments across the country, it is clear that Pennsylvania physicians have suffered the most harm from venue shopping in medical liability cases. Notably, in the early 2000s, Pennsylvania experienced a severe medical liability crisis. Much of the crisis was the result of plaintiffs' attorneys filing medical liability cases in Philadelphia County and Allegheny County, where juries were notoriously plaintiff friendly.

Because Pennsylvania has been ground zero of venue shopping abuse and has led the way in efforts to combat venue shopping, the Board believes that closely analyzing the Pennsylvania experience is the best way to conduct the study called for by Policy D-435.968.

During its medical liability crisis, Pennsylvania pursued at least two strategies to combat venue shopping. First, Pennsylvania enacted 42 Pa.C.S.A. § 5101.1. This statute required medical liability cases to be filed "only in a county in which the cause of action arose." This statute was, however, declared unconstitutional in *North-Central Pennsylvania Trial Lawyers Association v. Weaver*, 827 A.2d 550 (Pa. Cmmwth. 2003) on the grounds that Pennsylvania's judicial branch of government, rather than the Pennsylvania General Assembly, was constitutionally authorized to set venue rules.

Second, in 2002, Pennsylvania enacted the Medical Care Availability and Reduction of Error Act (the MCARE Act). The MCARE Act established the Interbranch Commission on Venue (the Commission), comprised of representatives from the legislative, judicial, and executive branches of the Commonwealth of Pennsylvania, and others. In 2003, on recommendations from the Commission, the Supreme Court of Pennsylvania adopted a civil procedure rule, Rule 1006(a)(1), requiring medical liability cases to be filed in the county in which the cause of action arose. Rule 1006(a)(1) was instrumental in stabilizing the medical liability insurance market in Pennsylvania.

Notably, on August 25, 2022, however, the Supreme Court of Pennsylvania, following recommendations of the Civil Procedural Rules Committee (Civil Rules Committee), whose members are appointed by the Supreme Court of Pennsylvania, issued an order amending Rule 1006. The amendments eliminated the requirement that medical liability lawsuits had to be filed in the county where the cause of action arose. Due to this decision, like other lawsuits, medical liability lawsuits in Pennsylvania may now, once again, be forum shopped since lawsuits may be filed where a defendant may be served, the cause of action arose, or a transaction or occurrence took place out of which the cause of action arose. After the amendments to Rule 1006 were adopted, the Board would like to note that there was a four-fold increase in the number of malpractice lawsuits filed in Philadelphia County. Moreover, between January 2023 and April

2023, 43 percent of 657 medical malpractice complaints that were initiated in Philadelphia County were based on care provided outside the city.[1]

The Board believes that it is likely that restoring plaintiffs' attorneys' ability to venue shop medical liability cases in Pennsylvania will undermine the stability of the medical liability insurance market in the state.

Venue Shopping and Resourced-Based Standards of Care

Venue shopping may hit physicians that practice in rural or underserved communities and their patients particularly hard, since these physicians often have fewer resources, limited staff, and less advanced medical equipment compared to those within larger health care systems. It may be logistically impossible for rural physicians to perform certain procedures or make needed referrals due to lack of availability within the community. These and similar resource constraints must be considered when determining the standard of care relevant to any medical liability allegations. Juries in some parts of a state, e.g., a well-resourced city with four Level-1 trauma centers, may know nothing about the resource limitations under which rural physicians must practice, and thus apply a standard of care that is appropriate to physicians practicing in that city but wholly inappropriate to a rural practice setting. Rural physicians whose liability is determined by juries having no appreciation for their unique practice environments are likely to be held responsible for harm resulting from factors far outstripping their control or even influence. To ensure fairness, AMA policy should state that the AMA opposes venue shopping resulting in the application of a standard of care that is not specifically linked to the physical resources, technology and specialty support available at the site of patient care delivery.

Federal Medical Professional Liability Actions and Venue Shopping

Federal medical professional liability actions are brought under the Federal Tort Claims Act (FTCA).[2] A medical liability lawsuit under the FTCA may be commenced only in the judicial district where the plaintiff resides or wherein the act or omission complained of occurred.[3] Thus, it does not appear that federal medical professional liability actions raise the kinds of venue shopping concerns that may exist in state law. This does not mean, however, that attempts might be made in the future to alter the FTCA to permit venue shopping. The AMA would vehemently oppose such efforts.

Given that current venues for federal medical professional liability actions under the FTCA appear to provide little opportunity for venue shopping, the remainder of this report will focus on state venue issues.

DISCUSSION

Policy D-435.968 asks that the AMA study avenues to most effectively combat venue shopping in state and federal medical professional liability actions. At this point there appear to be at least three strategies that might be used to combat venue shopping in states, all based on knowledge of and insights taken from the Pennsylvania experience.

First, enacting a statute that restricts where medical professional liability lawsuits may be filed is one strategy to combat venue shopping. As the *Weaver* case illustrates, however, such statutes may be subject to constitutional challenges. Importantly, the Board notes that while this is what happened to Pennsylvania's statute, the situation may be different in other states. For example, in 2005, Missouri enacted R.S,Mo. § 508.010, as part of a comprehensive

medical liability reform package. Section 508.010 establishes venue under different scenarios for both non-tort and tort claims (e.g., medical professional liability lawsuits). Section 508.010 states in part that, "Notwithstanding any other provision of law, in all actions in which there is any count alleging a tort and in which the plaintiff was first injured in the state of Missouri, venue shall be in the county where the plaintiff was first injured by the acts or conduct alleged in the action."

In Missouri, venue is fixed in the county where the plaintiff was first injured by the alleged negligence. While the meaning and application of § 508.010 has been litigated many times, there appear to be no reported cases ruling that § 508.010 is unconstitutional. One cannot simply assume that the courts of any given state would decide that a statute like 42 Pa.C.S.A. § 5101.1 would be unconstitutional. In fact, in some states, enacting state laws prohibiting venue shopping might be a viable option to combat venue shopping.

Second, if there are concerns about the constitutionality of a statutory approach, one could follow the Pennsylvania example and advocate for a law that would convene members of the legislative, judicial, and executive branches of government and other interested parties to see if the judicial branch would address venue shopping through court rules. While this approach succeeded in Pennsylvania, the Board warns that this strategy might not be as promising as a legislative solution since the decision of whether to implement (or implement and then repeal) such rules would lie entirely within the judicial branch's discretion.

A recent Pennsylvania court decision, *Somerlot v. Jung*, 343 A.3d 324, 333 (Pa. Super. 2025), suggests a third way to combat venue shopping. In this case, the plaintiff, Ms. Somerlot fell and injured one of her fingers. Due to pain and decreased range of motion she sought pain treatment from the defendant, Dr. Jung, whose office was in Bucks County Pennsylvania. Dr. Jung ultimately determined that Ms. Somerlot needed spinal cord surgery. Ms. Somerlot alleged to have received injuries during the surgery and filed a medical liability lawsuit against Dr. Jung in Philadelphia County, notwithstanding the fact that the Court of Common Pleas of Bucks County was less than two miles from Ms. Somerlot's home.

Notably, the facts showed that prior to surgery, Ms. Somerlot signed a "Consent to Operate, Administration of Anesthetics and Rendering of Medical Services." This document included a venue selection clause stating in part that, "Any legal claims or civil actions, including, but not limited to, a claim for medical malpractice in any way related to this admission/procedure, and medical services shall be brought solely in the Courts of Bucks County, in the Commonwealth of Pennsylvania."

Because Ms. Somerlot signed the venue selection clause, Dr. Jung argued that Ms. Somerlot had to file her lawsuit in Bucks County, not Philadelphia County. Ultimately, the court agreed with Dr. Jung, stating that:

> Critically, the Civil Rules Committee omitted language or a Note to Rule 1006 reflecting the fact that Pennsylvania law has long recognized a contract-based exception to all Rule 1006 on venue. The Supreme Court of Pennsylvania has made clear that parties may freely contract to limit venue to one of several available venues. The Supreme Court first recognized such an exception in *Central Contracting Co. v. C. E. Youngdahl & Co*., 418 Pa. 122, 209 A.2d 810 (Pa. 1965).

Thus, based on Pennsylvania Supreme Court precedent and the fact that Ms. Somerlot consented to venue in Bucks County by signing the venue selection clause, the court transferred the case from

Philadelphia County to Bucks County. Based on this case, the Board believes that this contractual approach is a strategy to combat venue shopping that may also be available in other states.

CONCLUSION

The Board is greatly concerned about recent, disturbing trends in medical liability, and this includes venue shopping. The Board recognizes that advocacy efforts to combat venue shopping may raise complicated issues. Regardless of issues raised, the Board believes that the AMA, alongside its medical society partners, must do everything it can to enact effective medical liability reforms at the state level, and this includes combating venue shopping.

The Board, therefore, recommends that the HOD modify existing policy D-435.968, "Abolishing Venue Shopping," and by adopting new policy focused on the AMA working with interested medical societies in combating venue shopping in medical liability lawsuits. The Board also recommends that the HOD modify D-435.968 "Abolishing Venue Shopping" by rescinding language in the second resolve requiring that the AMA study avenues to most effectively combat venue shopping in state and federal medical professional liability actions with report back at A-26, since this report constitutes the required study.

RECOMMENDATION

The Board of Trustees recommends that the following recommendations be adopted, and the remainder of the report be filed:

1. That our American Medical Association amend Policy D-438.968, "Abolishing Venue Shopping" by deletion of clause 2 as it has been accomplished by this report:

    1. Our American Medical Association (AMA) opposes venue shopping in medical professional liability actions.

    ~~2. Our AMA will study avenues to most effectively combat venue shopping in state and federal medical professional liability actions with report back at A-26.~~ (Modify Current Policy)

2. <u>That our AMA will work with interested medical society partners, to combat venue shopping in medical liability lawsuits.</u> (New HOD Policy)

3. That our AMA opposes any efforts to move venue to jurisdictions that may apply a standard of care not reflecting specific resource constraints, available technology/equipment and community standards of the location where the patient's clinical care was actually delivered. (New HOD Policy)

Fiscal Note: Less than $500.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 24-A-26

Subject: AMA Advocacy to Mitigate Medicaid Cuts

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Interim Meeting, the American Medical Association (AMA) House of Delegates adopted Policy D-290-970, "Call for Action by the AMA to Reverse or Mitigate Medicaid Cuts," which directs the AMA to:

1. Publicly denounce cuts to Medicaid in Public Law 119-21 (known as the "One Big Beautiful Bill Act of 2025");
2. Through, but not limited to, press releases, position statements, op-eds in major outlets, press conferences and lobbying, work to reverse or mitigate Public Law 119-21 as it relates to Medicaid;
3. Continue working with state medical societies, specialty societies, patient advocacy groups, hospital systems and safety net organizations to advocate for the reversal or mitigation of Medicaid-related cuts in Public Law 119-21;
4. Report back to the AMA's House of Delegates at A-26.

The Board of Trustees is pleased to report that the AMA has taken prompt and sustained action consistent with this directive, including public condemnation of the Medicaid cuts, extensive collaboration with Federation partners and other stakeholders, and ongoing policy, advocacy, and technical assistance to the Federation of Medicine in an effort to mitigate the impact of these changes on patients and physicians. (Note: Because of approval deadlines, this informational report was prepared in February 2026 and does not include more recent developments. For more information on the AMA's up-to-date advocacy to mitigate or reverse the Medicaid cuts, please visit www.ama-assn.org/OB3.)

BACKGROUND

Summary of Medicaid Cuts

The One Big Beautiful Bill Act of 2025 (Public Law 119-21 or OBBBA) enacted sweeping changes to the Medicaid program and broader federal health care financing. The legislation reduced federal Medicaid spending through a combination of structural financing changes, new eligibility and administrative requirements, and limits on other long-standing program features. Collectively, these provisions represent one of the most significant retrenchments of Medicaid funding in the program's history.

Key Medicaid-related provisions of the law include reductions to allowable Medicaid provider taxes and state-directed payments, new Medicaid work requirements for certain adult beneficiaries, and more frequent eligibility checks, among other things. These changes shift increased financial and administrative responsibility to states while constraining their ability to generate non-federal Medicaid revenue, placing pressure on state budgets, provider reimbursement, and patient access to care.

The law's rollback of provider tax arrangements has particular implications for state Medicaid programs, as these mechanisms have long been used, within federal parameters, to support states' share of Medicaid financing and stabilize physician and hospital payment rates. Reductions in provider tax authority may require states to reduce Medicaid expenditures, including eligibility, benefits, or provider payments, absent alternative revenue sources.

In addition, the law authorizes Medicaid work requirements and requires more frequent eligibility verification processes, which introduce new administrative barriers for beneficiaries and state agencies. Past experience with similar policies has demonstrated a high risk of coverage loss among eligible individuals due to reporting burdens, confusion, and administrative churn. These provisions also increase administrative complexity for physicians and health care systems caring for patients on Medicaid.

The law also established a new source of federal funding, the Rural Health Transformation Program, intended to offset impacts of reduced Medicaid spending in rural areas. However, the $50 billion program is time limited and falls short of fully replacing lost funding from OBBBA. As a result, many states will still face significant challenges maintaining access to care, supporting physician practices, and sustaining safety-net health care infrastructure.

Impact and Response

Most of OBBBA's changes have not taken effect yet and many of the law's provisions will not become effective until 2027 or later. However, the law's impacts on Medicaid are already being felt and states and other interested parties are responding:

- **State responses to financing constraints.** If states are unable to continue financing their Medicaid programs at pre-OBBBA levels due to the loss of revenue from provider taxes and new restrictions on state-directed payments, they will be forced to make difficult budgetary decisions. As provider taxes and state-directed payments are frequently used to finance enhanced reimbursement rates or expansions in services, it is probable that states will respond by cutting provider rates or rolling back services, in addition to other cuts to state spending on Medicaid. In some states, Medicaid funding cuts have already been announced for 2026.
- **Patient impacts.** Major changes to Medicaid eligibility (work requirements and more frequent eligibility checks for certain adult beneficiaries, narrowing eligibility for legally present non-citizens) will take effect in the coming months. These changes, which present an extreme challenge for states to implement in a short timeframe, will disqualify many patients and could result in many more eligible patients losing coverage due to difficulties in navigating new procedures.
- **Provider impacts.** If, as expected, states reduce spending on Medicaid reimbursement rates and services and patients lose coverage, providers will be affected. Negative impacts will be felt most acutely in rural areas and other underserved communities where patients disproportionately rely on Medicaid. Some physician practices have already reported closures or consolidations in response to OBBBA's cuts.

PUBLIC DENUNCIATION OF MEDICAID CUTS

Immediately following congressional action of Public Law 119-21, the AMA publicly denounced the legislation's Medicaid provisions through public statements and media engagements. On July 1, and July 3, 2025, the AMA issued national press statements following Senate and final congressional passage of the reconciliation bill, explicitly opposing the Medicaid and CHIP cuts and warning of coverage losses, cost shifting to states and providers, and harm to rural and underserved communities. AMA statements also underscored that reduced access to preventive and primary care would likely result in worsening health outcomes and higher long-term costs, as treatable conditions progress into more serious and costly illnesses. These statements were issued by AMA leadership and disseminated nationally through the AMA's press and media channels.

In addition, AMA published multiple AMA News Wire articles and policy analyses explaining the provisions of the law, outlining anticipated impacts on patients and physicians, and reinforcing the AMA's longstanding position that Medicaid is a critical source of coverage for low-income patients and an essential component of the nation's health care safety net.[1] Altogether, these actions constituted a clear, public denunciation of the Medicaid cuts enacted in OBBBA and communicated the AMA's opposition to policymakers, physicians, and the public.

In addition to press statements and media engagement, the AMA has developed and disseminated policy analyses, issue briefs, educational resources, and other advocacy materials regarding the Medicaid provisions of Public Law 119-21. As implementation proceeds, the AMA will continue to evaluate and deploy, as appropriate, the range of public-facing communications tools contemplated by Policy D-290.970, including formal position statements, opinion pieces, and other communications that elevate physician and patient concerns.

ENGAGEMENT WITH STATE MEDICAL ASSOCIATIONS AND NATIONAL MEDICAL SPECIALTY SOCIETIES

Convening the Federation of Medicine

The AMA has served as a central convener for the Federation of Medicine to facilitate coordinated state responses to the Medicaid provisions of Public Law 119-21. Through regular national coordination calls, targeted small-group discussions, webinars, and active listservs, the AMA has connected state medical association and national medical specialty society government affairs leaders to share strategies, resources, and early insights into emerging implementation challenges. At the request of its Federation partners, the AMA created and maintains a centralized repository for advocacy materials, enabling medical association staff to exchange analyses, draft letters, and talking points and reduce the need for duplicative work. This convening role has strengthened cross-state collaboration and improved the ability of physician advocates across the country to anticipate and respond to policy developments affecting Medicaid financing and access to care.

The AMA also convened multiple national webinars and briefing calls for state medical associations and national medical specialty societies focused on the Medicaid provisions in OBBBA. These sessions provided timely analysis of statutory changes, implementation timelines, and state-level decision points. Specifically, in August, the AMA convened state and specialty medical association staff at the AMA State Advocacy Roundtable for a focused discussion on approaches to implementing the law's Medicaid provisions and identifying shared priorities across the Federation. During the fall, the AMA hosted two national calls for state medical associations and specialty societies on the Rural Health Transformation Program, with particular attention to its interaction with state scope of practice laws. The AMA also hosted a publicly available Advocacy

Insights webinar in November, attended by nearly 800 participants, which examined the effects of the law on patients and physicians and identified key points of influence for the AMA and other medical organizations. In December, the AMA conducted a Federation-wide webinar on Medicaid provider taxes, examining the details of provider tax rollbacks and outlining state policy options to mitigate funding losses. Additional briefings and educational sessions were held for state medical association audiences, AMA Sections, and allied organizations. Medicaid policy and implementation challenges were also a central focus of strategy discussions at the 2026 AMA State Advocacy Summit, including engagement with Medicaid officials regarding state-level implementation considerations.

Development and Dissemination of Policy Tools and Resources

In parallel with its convening efforts, the AMA has developed and disseminated a suite of policy tools and expert resources to support state advocacy and implementation efforts. These include issue briefs, policy summaries, and analyses addressing Medicaid work requirements, changes to Medicaid financing, and modifications to eligibility and enrollment processes. The AMA also produced detailed analyses, data tables, and slide decks to inform Rural Health Transformation Program applications.

The AMA has also produced detailed toolkits for state and national medical specialty association staff with specific recommendations for engaging lawmakers and Medicaid officials on medical frailty exemptions and hardship exemptions. To ensure accuracy and credibility, the AMA has engaged former Medicaid officials, tax experts, current state policymakers, think tanks, and advocacy partners in the development of these materials and more. In addition to evolving our suite of materials for our Federation partners, the AMA is in the process of producing communication materials for physicians and patients to help explain upcoming Medicaid changes and coverage risks, supporting continuity of care and informed patient decision-making.

Individualized State-Level Technical Assistance

Beyond broad-based education and advocacy, the AMA has provided individualized, one-on-one consultation to state medical associations tailored to state-specific circumstances. This support has included reviewing legislation, assessing options to mitigate impact of provider tax rollbacks, advising on Medicaid work-requirement exemptions, and supporting engagement with state legislatures and Medicaid agencies. In addition, the AMA provided extensive individualized assistance, including state-specific funding estimations, to state medical associations as they collaborated with state officials on Rural Health Transformation Program applications, particularly as related to incentives in the program for state policymakers to expand scope of practice laws for non-physician providers. Importantly, these efforts were highly successful, with only one-fifth of states signaling intent to pursue scope of practice expansions in their program applications.

The AMA Advocacy Resource Center has also launched a new State Advocacy Accelerator Grant Program to provide targeted, short-term funding to support high-priority state legislative or regulatory campaigns. Grants, typically ranging from $25,000 to $50,000, are intended to support discrete advocacy activities at critical moments, including contract lobbying, targeted communications, physician grassroots engagement, coalition development, and rapid-response research, and can be used to support Medicaid advocacy, as well as other issues.

COLLABORATION WITH STATE AND NATIONAL STAKEHOLDERS

The AMA has also actively engaged Medicaid officials, patient advocacy organizations, hospital groups, safety-net providers, and policy experts to exchange information and track the real-world impact of Medicaid cuts. Through webinars, coalition calls, and ongoing consultation, the AMA has facilitated cross-sector dialogue on implementation challenges, mitigation strategies, and opportunities for policy adjustments. This collaborative approach has supported more informed advocacy and helped ensure that physician and patient perspectives are incorporated into ongoing implementation discussions.

FEDERAL ADVOCACY AND REGULATORY ENGAGEMENT

In addition to the above, the AMA has engaged in robust advocacy efforts at the federal level. During congressional consideration of Public Law 119-21, the AMA strongly opposed the Medicaid cuts, among other policies, through vigorous lobbying, letters to the House and Senate, and in public statements.

With OBBBA now law, the AMA has redirected its efforts towards advocating to federal policymakers as they begin implementing OBBBA's Medicaid provisions. The AMA is particularly focused on the Centers for Medicare & Medicaid Services (CMS), the primary federal agency responsible for overseeing Medicaid. The AMA has made recommendations to CMS regarding the implementation of new restrictions on Medicaid provider taxes, the requirement that certain beneficiaries verify their Medicaid eligibility on a more frequent, biannual basis, and the requirement that states establish community engagement requirements (also known as "work requirements") for certain beneficiaries as a condition of Medicaid coverage. The AMA's recommendations to CMS include maximizing automatic, data-driven eligibility and renewal processes that do not burden patients or physicians with administrative tasks, providing flexibility and technical support to state Medicaid agencies, and communicating with states and interested parties about OBBBA implementation in a timely, transparent, and thorough fashion. Through all of these efforts, the AMA's central aim is to ensure that OBBBA's provisions are implemented in a manner that minimizes harms to patients and disruptions to care.

Although opportunities for federal legislative action to reverse or mitigate OBBBA's impacts are limited, the AMA is encouraging Congress to provide strong oversight of OBBBA's implementation to ensure patient access is not compromised, support state flexibility and requests for technical assistance, and monitor patient and provider impacts, especially in rural and safety net settings.

ONGOING EFFORTS

The AMA's work to reverse or mitigate Medicaid cuts is ongoing. The AMA continues to monitor and inform federal and state implementation of Public Law 119-21, as well as provide coordinated, operational support to state and specialty medical associations. This includes ongoing national and issue-specific calls, targeted strategy meetings, and in-person convenings to support information-sharing and coordinated advocacy on Medicaid eligibility and redeterminations, work requirements, provider taxes and other financing issues, and the Rural Health Transformation Program. These forums will continue to be used to identify emerging implementation issues, share legislative and regulatory approaches, and elevate physician concerns to state and federal policymakers to mitigate the harm of the enacted federal Medicaid cuts.

In addition, the AMA will continue delivering individualized technical assistance and advocacy resources to support state and specialty advocacy efforts. This includes one-on-one consultation with medical associations, review of state legislation, development and dissemination of advocacy toolkits, and timely briefings as federal guidance and state implementation evolve. As implementation proceeds, the AMA will continue to refine its resources and advocacy strategies in response to emerging challenges and state-specific developments.

STRATEGIC PRIORITIES GOING FORWARD

As implementation of Public Law 119-21 proceeds, the AMA's Medicaid advocacy strategy will continue to operate on both federal and state tracks. Federal priorities include minimizing coverage loss and administrative churn, maximizing automatic and data-driven renewal processes, protecting patient access, preserving state flexibility, and ensuring strong federal oversight of implementation. State priorities include supporting medical associations and physician advocates on provider taxes and other financing issues, eligibility and redeterminations, work requirements, reimbursement and access concerns, and the Rural Health Transformation Program. The AMA will pursue these priorities through direct lobbying and regulatory engagement, public-facing communications, coordinated convenings, one-on-one technical assistance, and development of advocacy resources for state and specialty medical associations.

CONCLUSION

Through prompt public condemnation of Medicaid cuts, sustained collaboration with the Federation and other stakeholders, and targeted advocacy efforts, the AMA has acted consistently with the directives of Policy D-290.970. The Board of Trustees remains committed to opposing policies that undermine Medicaid and to working with partners at all levels to protect patients, physicians, and the health care safety net.

RECOMMENDATION

The Board of Trustees recommends that the fourth item of Policy D-290.970, "Call for Action by the AMA to Reverse or Mitigate Medicaid Cuts," be rescinded as having been accomplished by this report and the remainder of the report be filed.

1. Publicly denounce cuts to Medicaid in Public Law 119-21 (known as the "One Big Beautiful Bill Act of 2025");
2. Through, but not limited to, press releases, position statements, op-eds in major outlets, press conferences and lobbying, work to reverse or mitigate Public Law 119-21 as it relates to Medicaid;
3. Continue working with state medical societies, specialty societies, patient advocacy groups, hospital systems and safety net organizations to advocate for the reversal or mitigation of Medicaid-related cuts in Public Law 119-21~~;~~.
4. ~~Report back to the AMA's House of Delegates at A-26.~~ (Modify Current Policy)

Fiscal note: Less than $500.

REPORT 25 OF THE BOARD OF TRUSTEES (A-26)
Federal Legislation to Prohibit the Corporate Practice of Medicine
(Reference Committee B)

EXECUTIVE SUMMARY

Resolution 225, which was referred at the 2025 Interim Meeting, would support federal legislation banning the corporate practice of medicine (CPOM), provided it does not weaken existing state laws, and would seek to prohibit non-physician-owned entities from participating in federal health care payment programs.

The CPOM doctrine provides a legal framework to protect physicians from undue corporate influence in the delivery of health care. CPOM laws are variable and historically implemented at the state level, but a lack of enforcement activity combined with regulatory loopholes has limited the impact of state CPOM laws. However, there is momentum in state legislatures to reinvigorate the doctrine, and AMA supports state medical associations seeking to modernize CPOM legislation at the state level.

A federal CPOM prohibition is attractive insofar as it would clarify the doctrine and create a uniform set of baseline requirements, assuming that courts apply the doctrine of federal preemption to establish the desired federal floor. However, it is unclear whether a single uniform set of federal standards around CPOM would appropriately address the variable needs of each state. Moreover, the federal government may not be optimally equipped to enforce CPOM laws, whose violations tend to be granular and local in nature. Finally, the law's preemptive effect would be litigated, and it is difficult to predict what courts will find in the context of a particular state requirement. Absent statutory mechanisms that bolster enforcement, a federal CPOM bill could thereby result in ineffectual legislation that disrupts local health care markets, without the desired preemptive effect.

Banning non-physician-owned entities from participating in payment programs such as Medicare may disproportionately impact physicians over corporate owners, decrease access to care, and harm competition in health care markets. As a tool to increase leverage over violators of a CPOM prohibition, it creates a high degree of risk.

Ultimately, a categorical ban on CPOM is unlikely to achieve the intended effect without careful calibration. A more stable path for a federal CPOM prohibition might protect core elements of clinical independence and include specific, carefully crafted language reflecting the intent to preserve state flexibility to enact and enforce stricter requirements. This would likely limit federal preemption, which would protect physician autonomy without creating a rigid national standard around ownership structure that may be unevenly enforced or misaligned with local realities of care delivery. Additionally, a whistleblower program for violations of such a provision could strengthen enforcement efforts.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 25-A-26

Subject: Federal Legislation to Prohibit the Corporate Practice of Medicine
Resolution 225-I-25

Presented by: David Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Interim Meeting of the American Medical Association (AMA), Resolution 225, "Federal Legislation to Prohibit the Corporate Practice of Medicine," was introduced by the American Academy of Emergency Medicine and was referred. The Resolution as introduced, proffered new policy and sought to amend existing policy as follows:

> RESOLVED, That our American Medical Association advocate for federal legislation that prohibits lay corporations, including insurance companies, private equity firms, and other non-physician-owned entities, from owning or controlling medical practices and healthcare decision-making, and prohibits such entities from participation in federal healthcare payment programs, in order to protect physician autonomy and strengthen the physician-patient relationship (Directive to Take Action); and be it further
>
> RESOLVED, That our AMA amend Policy H-215.981 – Corporate Practice of Medicine under items #1 and #2 by addition and deletion as follows:
>
> 1. Our American Medical Association ~~vigorously opposes any effort to pass federal legislation or regulation preempting state laws~~ supports the passage of federal legislation prohibiting the corporate practice of medicine.
>
> 2. Our American Medical Association vigorously opposes any effort to pass state or federal legislation or regulation that removes or weakens existing state laws prohibiting the corporate practice of medicine.

Resolution 225-I-25 endorses a federal ban on the corporate practice of medicine (CPOM) with the caveat that such legislation must not weaken existing state laws. It also seeks to prohibit all non-physician-owned entities from participating in federal health care payment programs, which would include Medicare. Testimony on Resolution 225-I-25 overwhelmingly agreed that patient care is threatened where non-physicians may influence a physician's health care decision-making. The concerns prompting referral of Resolution 225-I-25 centered on two issues: (1) uncertainty around whether it is appropriate for the AMA to seek a CPOM ban at the federal level and (2) potential consequences of prohibiting non-physician-owned entities from participating in federal health care payment programs.[1] This report addresses these concerns and the questions underlying them.

© 2026 American Medical Association. All rights reserved.

BACKGROUND

This section offers background on the CPOM doctrine and its implementation, considers legal and practical implications of a federal CPOM ban, discusses the impact of provisions that would prohibit non-physician-owned entities from participating in federal payment programs, and shares how the AMA supports physicians in preventing corporate influence at the practice level.

Corporate Involvement in Physician Practices

Over the last two decades, corporations and private equity or hedge fund-backed entities have increasingly entered health care delivery. The consumerization of health care has fostered opportunities for corporations not traditionally involved in health care delivery to enter these spaces, purporting to offer greater convenience at a lower cost.[2] Occurring alongside this trend is the acquisition of independent physician practices by large corporations, hospitals, and payers. According to one estimate, corporate entities acquired over 30,000 physician practices between 2019 and 2021.[3]

Some see corporate entry into health care as positive, believing it will make health care more sustainable and grant physicians greater access to capital and the latest technology. In the optimal scenario, private sector investment in physician practices may be helpful in providing infrastructure. Owners of private practices increasingly seek to remain independent, and some have argued that corporate investment can provide them with the agency and revenue to do so.[4] However, accepting corporate investment does not necessarily mean that physicians must allow corporations to own or influence their operations or clinical autonomy—it can be a transactional financial arrangement.

Without guardrails, corporate investment may disrupt high-quality, coordinated care delivered by a physician-led team, and many believe it decreases access and competition.[5] Corporate investment in health care is also thought to accelerate consolidation in medical specialties, which changes the practice landscape for physicians and can drive down physician wages while increasing health care costs for patients.[6]

In any case, when a corporate investor acquires a physician practice, the investor and the physicians often have divided loyalties: physicians tend to value providing the highest quality care and feel a deep sense of responsibility to their patients, while private equity firms and other corporate investors, who are primarily accountable to shareholders and not patients, are likely to pursue profit maximization. To this end, corporate investors may implement policies that prioritize dividends at the expense of physician and patient interests. Physicians working in corporate-owned practices note that corporate involvement can interfere with their ability to make decisions around governance, care delivery, or practice operations. When there is a conflict between providing appropriate care and the need for corporate investors for monetary return, not only can moral injury result, but there also a potential conflict of interest for physicians that is exacerbated if the corporation can terminate employment of the physician without cause. Accordingly, when a corporate entity invests in a physician practice, there is a need to ensure that corporate influence does not dictate decisions around care delivery and that physicians maintain not only clinical autonomy but operational authority of their practices. Laws banning CPOM provide one such tool.

The CPOM Doctrine

The CPOM doctrine refers to a long-standing legal precept intended to preserve the independent clinical judgment of physicians and safeguard patient care from undue corporate influence. At

present, CPOM laws are enacted, implemented, and enforced by states. While specific provisions vary, CPOM laws generally limit the ability of lay (i.e., non-physician) corporations to intervene with the practice of medicine or own physician practices. Broadly, CPOM restrictions aim to (1) avoid the commercialization of medical practice that might result when corporations own practices or perform activities that constitute the practice of medicine; (2) address any lack of alignment between a corporation's obligation to its shareholders and a physician's obligation to their patients; and (3) ensure that a physician's exercise of independent medical judgment is not threatened because they are employed by a corporate entity.

Specific provisions in a CPOM law may include rules to protect a physician's independent exercise of clinical decision-making, practice ownership restrictions which may include requirements around how many shareholders or directors must be physicians, requirements around what entities may employ physicians, bans on fee-splitting arrangements, provisions around auditing and enforcement, and a range of exemptions. More recently, novel provisions have emerged in state legislatures that impose requirements on the structural relationship between a physician practice and a management services organization (MSO).[7]

Regulation of CPOM

States have long regulated the practice of medicine in light of local needs and in the context of state health care markets—in many states, CPOM laws date back centuries. The CPOM doctrine in each state has evolved over time, not only through legislation but also through judicial decisions, Attorney General opinions, and medical board policy. As a result, there is variation in how the doctrine has developed across the country. For example, while some states simply ban the unlicensed practice of medicine, others broadly prohibit all corporate entities from employing physicians, and still others have specific rules around what constitutes a permissible ownership structure for a medical practice.[8] Exceptions to CPOM bans also vary, with many states allowing hospitals, health maintenance organizations, or other entities to employ physicians.

Scholars have questioned the impact and effectiveness of the CPOM doctrine as it currently stands,[9] with two primary factors driving this skepticism. First, enforcement of CPOM bans is functionally dormant in many states. Second, CPOM laws often leave room for structural workarounds that enable corporations to influence the practice of medicine, most commonly through MSOs, often in combination with a "friendly physician" who may facilitate corporate influence over care delivery.[10]

A handful of states do have enforcement mechanisms for CPOM prohibitions in place. Still, there is room to modernize and strengthen state corporate practice restrictions, and recent growth in corporate investment in health care has spurred a renewed groundswell of interest in the potential of CPOM prohibitions, prompting state legislative action in this area. About a dozen bills implicating CPOM were introduced in state legislatures last year, with Oregon and California enacting particularly notable legislation.[11]. Notably, several bills have also been introduced for consideration during the 2026 legislative session.[12]

Frequently, these state bills aim to strengthen CPOM provisions by setting discrete parameters for what constitutes corporate interference with medical practice and clearly establishing oversight. Many would also implement provisions to address the MSO loophole, for example by requiring that physicians who contract with an MSO retain meaningful control over clinical decisions or prohibiting certain types of dual affiliation between the leadership of an MSO and a practice with which the MSO contracts. Indeed, both California and Oregon recently enacted legislation that limits MSOs from controlling physicians' clinical or operational decisions, and novel provisions in

Oregon's bill impose requirements that erode "friendly physician" arrangements.[13] Related state legislation, including bills in Massachusetts and California,[14] among other states, would promote transparency around corporate involvement in health care by authorizing designated state agencies to review or approve health care transactions involving corporate entities—these bills bolster existing CPOM bans by shining light on transactions that may pose a threat to physician autonomy and providing a clear basis for the exercise of state enforcement authority.

The CPOM doctrine has not reached its full potential in the states, but state CPOM laws provide a long-standing legal framework to protect the practice of medicine from undue corporate influence in a manner that is responsive to the specific needs that arise in local health care markets. The AMA tracks state legislation that would restrict the corporate practice of medicine and provides support and resources to state medical associations aiming to limit corporate influence on the delivery of care.[15]

The Option for a Federal CPOM Ban

Those enthusiastic about a federal approach posit that a uniform set of federal CPOM requirements would bring clarity to the doctrine, provide an opportunity to create a strong baseline prohibition that would override weaker state laws (i.e., establish a "federal floor"), and reinvigorate enforcement of CPOM bans. However, questions surrounding the practical and legal considerations of a federal ban prompted the referral of Resolution 225-I-25 and required review.

A One-Size-Fits-All Standard

A federal CPOM ban would establish a single, easily understood law nationwide, which would consolidate the doctrine and reduce legal complexity. However, uniformity risks destabilizing health care markets. Because variations in state laws governing CPOM reflect the unique characteristics of local health care economies, a single federal CPOM standard is unlikely to address the specific needs of physicians in every state. Pursuit of a workable standard would require careful, nuanced distinctions between arrangements that support physician autonomy and those that factually undermine it, which may prove more aspirational than practical. A federal rule risks interference with existing state-tailored solutions, potentially harming physician autonomy, patient access to care, and the stability of health care markets that have evolved to meet local needs.

The risk of destabilizing health care practices and the markets in which they operate would be especially pronounced should federal law displace state laws that impose requirements around ownership structures for physician practices or around the relationship between physician practices and MSOs. Some states strictly limit practice ownership to physicians, while others allow more flexibility, such as majority physician shareholders or carefully regulated, but variable, MSO structures. These and their related exceptions reflect deeply rooted local practices and regulatory approaches. If a federal ban were to impose a one-size-fits-all standard, it could render existing practice arrangements unlawful, possibly undermining some practices and requiring a degree of unwinding.[16] Thus, should a federal standard be imposed, there may need to be a transition period to allow unentangling of practice agreements. Even still, the impact of federal CPOM policy, especially where it implicates practice structure, is likely to be felt unevenly across states, disrupting some markets more dramatically than others.

Federal Preemption

Underlying the policy proposed in Resolution 225-I-25 is an expectation that the desired federal CPOM ban will supplant state laws deemed weaker than the federal standard yet allow state laws that impose stricter requirements to remain in force. Principles of federal preemption inform the validity of this assumption. Rooted in the Supremacy Clause of the United States Constitution, the doctrine of federal preemption establishes that federal law prevails when compliance with both federal and state law is impossible, or when state law otherwise conflicts with federal objectives.[17] Because preemption is highly context specific, the doctrine determines whether and to what extent federal law displaces state law in a given regulatory scheme.

The federal CPOM ban envisioned here would operate as a form of floor preemption. Under this model, federal law establishes a minimum set of requirements within a particular regulatory domain, but permits states to enact and enforce laws that impose more stringent standards in that same area.[18] Floor preemption may be express, implied, or both: it is express when the federal statute includes explicit language related to preemption, and implied when there is no preemptive language but a court infers Congressional intent to preempt state law.[19] Express preemptive language is typically specific and crafted to apply uniquely to the subject matter being regulated.[20] A CPOM law's preemptive effect would likely be determined via comparative assessment of the relative stringency of the respective state and federal provisions at issue, or a similar analysis. Courts must decide whether a state provision is genuinely stricter than the federal baseline or simply different in structure or scope. Ultimately it will need to be determined whether a specific state CPOM provision augments a federal floor or conflicts with it, but comparing multiple diverse frameworks to a single federal standard will require nuanced interpretive work. Given the wide variety in existing state CPOM laws, the preemptive effect of the federal standard may be evaluated in several different jurisdictions.

The preemption analysis is fact-specific and interpretively complex, making it difficult to predict.[21] Complicating this, once a bill is introduced in Congress, large scale amendments are often made, some of which fundamentally change the nature of the original text. The likelihood of state authority being preserved increases if the final federal statute includes an explicit clause permitting stricter state laws, but the actual preemptive effect will depend on judicial interpretation of specific statutory provisions and the extent to which Congress intended to occupy the field or restrict supplemental state regulations. The floor envisioned by Resolution 225-I-25 is certainly possible with careful drafting; however, it is also possible that a federal CPOM ban could result in state laws being preempted and replaced with a federal standard that may be less protective than existing requirements.

Federal Enforcement of a CPOM Ban

A federal CPOM prohibition would likely delegate enforcement power to a federal agency such as the Department of Justice (DOJ) or the Federal Trade Commission. Yet effective enforcement of CPOM violations requires a detailed understanding of state-level licensing, local market conditions, and complex corporate structural agreements. Unlike state regulators, who operate within these jurisdictions and have direct access to relevant records and personnel, federal authorities generally lack the local presence and specialized expertise needed to assess these arrangements. If oversight of CPOM violations is left strictly to the federal government, it could create enforcement gaps that only state regulators—who operate on the ground and understand local practices—can address. In that case, a federal CPOM ban would likely operate more as a deterrent than as a consistently enforced constraint.

There is little precedent for federal enforcement activity around intrastate, practice-level matters. Medical licensing violations, corporate structuring issues, and day-to-day operational practices are traditionally enforced by state regulators. Federal agencies typically focus enforcement efforts on matters with broad interstate impact, such as antitrust issues or major fraud. The DOJ's robust enforcement of The Physician Self-Referral Law (also known as The Stark Law) and the Anti-Kickback Statutes (AKS) do provide some exceptions. However, fraud is a top federal priority,[22] Medicare is of national interest, fraudulent transactions are detectable through analysis of Medicare claims data,[23] and even still, most violations are discovered through civilian-initiated *qui tam* actions rather than investigations initiated by the DOJ.[24] Further, these violations trigger False Claims Act liability and AKS includes criminal penalties, both of which strengthen enforcement leverage.

Federal enforcement of a CPOM ban may not be similarly robust. The federal government has failed to strongly enforce laws that impose a broad substantive mandate similar to the restriction of corporate control over clinical decision-making.[25] Regulators enforcing a CPOM ban must detect non-quantitative violations within complex contractual and financial arrangements—enforcement demands examination of management services agreements, equity structures, compensation models, and de facto control rights. Unlike fraud and abuse violations, CPOM violations are not connected to a federal payment program. Finally, enforcing CPOM bans is challenging because violations are difficult to detect. Data analytics will not expose CPOM violations, which are qualitative in nature, and most transactions that raise CPOM concerns (e.g., the acquisition of a medical practice by private equity) fall well below the threshold that triggers review under federal antitrust laws.[26]

All this notwithstanding, a whistleblower program has the potential to increase visibility and therefore enforcement of CPOM violations and create a threat of exposure that may provide meaningful incentive for compliance. For example, the DOJ implemented a whistleblower program for antitrust violations in 2024 that specifically targets health care enforcement.[27] It is modeled after a program implemented by the Securities Exchange Commission which has significantly increased enforcement of anti-retaliation laws.[28] A similar program may be feasible here.

Banning Non-Physician-Owned Entities from Participating in Federal Payment Programs

Resolution 225-I-25 seeks policy banning all non-physician entities—which may include hospitals and integrated health systems in addition to many private-equity backed groups and other corporate investors—from participating in federal health care payment programs like Medicare. The Board of Trustees (the Board) infers that the intent behind this proposal is to add leverage to enforcement of CPOM provisions, given precedent set by the Anti-Kickback Statutes, which grant the Office of the Inspector General (OIG) authority to bar individuals found guilty of violating the statute from participating in Medicare and state health care payment programs.[29]

In the context of CPOM, the Board notes that this policy would have significant and probably unintended consequences. Conditioning Medicare payment on CPOM compliance could suspend Medicare billing for an entire practice; however, depending on the practice agreement it is possible that it would to disproportionately punish physicians over corporate owners. Where physician payment arrangements are based on Relative Value Unit or salary/bonus models, physicians may be shielded and the corporate entity would be penalized. However, Medicare privileges generally sit with the individual physician, not the upstream practice owners, thus targeting financial penalties would be preferable to Medicare participation/privilege. Thus, this policy could disrupt physician income streams while penalizing clinicians who may not control or even have clear

knowledge of their practice's specific ownership structure or the details of any agreements in place that may violate CPOM provisions.

Finally, lack of clarity around what constitutes "ownership" would need to be addressed as state laws vary widely—once this is done, the consequences described here may be disproportionately severe in some states. As previously debated in the HOD, the litmus test could be operational authority at the most basic level.

While in theory, conditioning Medicare participation on CPOM compliance would create leverage for enforcers, it also risks harm to physicians and patients, uneven enforcement, and destabilization of practice infrastructure. In addition, the Board is concerned that proposing a broad-stroke federal CPOM prohibition may have some risk of unintended consequences, especially of jeopardizing existing state regulations and laws that may be stricter than what can be realistically passed federally. Thus, any proposal would need to account for a phase-in period and the need for carefully calibrated policies that address the concern of preemption and appropriately targeted penalties.

AMA's Support of Private Practice Physicians

While legislation provides one avenue for protecting physicians from corporate influence in their practice, and AMA actively supports states seeking to enact strong CPOM laws, action can also be taken at the practice level, for example in careful contracting with any corporate partners. Because many corporate investments in independent practice have not been positive, the AMA has offered guidance to assist physicians with required due diligence in any contractual arrangement with private equity firms, venture capital, and hedge funds.

The High-Performing Private Practice Initiative (the Initiative) was launched in 2021 to enhance the AMA's efforts to address a concerning downward trend in physician practice ownership. The Initiative created essential resources to support private practice. Between 2021 and 2022, the Initiative developed the Private Practice Web Toolkit, the Simple Solutions educational series, the Thriving in Private Practice podcast, and the Private Practice Playbook v1.0. Further, the Navigating Practice program introduced medical students to independent practice as a viable career path. By 2023-2024, programming expanded with the STEPS Forward® Attending to Business podcast and an updated Private Practice Playbook v2.0. The June 2024 Business of Medicine Workshop represented a pivotal evolution from passive resources to active business education. Resources to support physician practices in matters related to CPOM include a series on venture capital and private equity investment, one component of which is a contracting toolkit for physicians entering arrangements with corporate investors.[30]

Notably, in the fall of 2026, the AMA will launch the Independent Practice Accelerator—a two-day intensive workshop distilling essential competencies through expert sessions, case studies, and peer networking. This accessible format will provide physicians exploring or beginning independent practice with foundational knowledge in strategic planning, obtaining capital, business fundamentals, revenue cycle management, operations, leadership, and marketing. By preserving physician choice and practice model diversity, the program advances the AMA's core mission of removing obstacles to patient care and ensuring high-quality care delivery.

DISCUSSION

Well-founded concerns about erosion of clinical autonomy underscore the desire for a federal CPOM prohibition that creates a uniform federal standard upon which state law may build.

However, a categorical ban on CPOM is unlikely to achieve the intended effect without careful calibration, because uniform structural requirements around physician ownership could require the unwinding of existing physician practice arrangements that may be working. However, if it is working, it is possible that an arrangement would still work under an appropriately tailored CPOM law that would be beneficial to both parties. Further, broad substantive requirements are difficult for federal agencies to enforce, and a federal prohibition raises preemption concerns. In addition, conditioning participation in federal health care payment programs on CPOM compliance would have consequences that disproportionately impact physicians and patients rather than corporate owners. Existing AMA policy opposes the corporate practice of medicine and tends to support AMA engagement on this issue.

AMA POLICY

Current AMA policy opposes the corporate practice of medicine as well as efforts to weaken or remove existing laws or regulations prohibiting CPOM, acknowledging that the corporate practice of medicine can erode the patient-physician relationship. It offers guidance to physicians seeking relationships with corporate entities, including examples of activities that constitute clinical decisions that must remain under the control of the physician.

AMA Policy H-215.981, "Corporate Practice of Medicine" states that:

1. Our AMA vigorously opposes any effort to pass federal legislation or regulation preempting state laws prohibiting the corporate practice of medicine.
2. Our AMA vigorously opposes any effort to pass legislation or regulation that removes or weakens state laws prohibiting the corporate practice of medicine.
3. Our AMA opposes the corporate practice of medicine and supports the restriction of ownership and operational authority of physician medical practices to physicians or physician-owned groups.
4. Our AMA, at the request of state medical associations, will provide guidance, consultation, and model legislation regarding the corporate practice of medicine, to ensure the autonomy of hospital medical staffs, employed physicians in non-hospital settings, and physicians contracting with corporately owned management service organizations.
5. Our AMA will continue to monitor the evolving corporate practice of medicine with respect to its effect on the patient-physician relationship, financial conflicts of interest, patient centered care and other relevant issues.
6. Our AMA will work with interested state medical associations, the federal government, and other interested parties to develop and advocate for regulations and appropriate legislation pertaining to corporate control of practices in the healthcare sector such that physician clinical autonomy and operational authority are preserved and protected.
7. Our AMA will create a state corporate practice of medicine template to assist state medical associations and national medical specialty societies as they navigate the intricacies of corporate investment in physician practices and health care generally at the state level and develop the most effective means of prohibiting the corporate practice of medicine in ways that are not detrimental to the sustainability of physician practices.
8. Our AMA supports enforcement of existing regulations and legislation pertaining to corporate control of practices in the health care sector to ensure that physician clinical autonomy and operational authority is preserved and protected.
9. Our AMA supports capital reserve requirements and leverage standards that preserve access to care for patients and fulfillment of contractual obligations to physicians and trainees by providing stable financing for hospitals, clinics, and other health care facilities.

Policy H-160.887, "Corporate Practice of Medicine," acknowledges that the corporate practice of medicine has the potential to erode the patient-physician relationship and may create a conflict of interest between profit and best practices in residency and fellowship training.

Policy H-160.891, "Corporate Investors and Other Corporate Entities," offers the following guidelines for physicians contemplating corporate entity relationships:

1. Our AMA encourages physicians who are contemplating corporate investor partnerships or corporate entity relationships, including those under "friendly" physician professional corporation (PC) arrangements with Management Service Organizations (MSOs), to consider the following guidelines:
    a. Physicians should consider how the practice's current mission, vision, and long-term goals align with those of the corporate investor/entity.
    b. Due diligence should be conducted that includes, at minimum, review of the corporate investor/entity's business model, strategic plan, leadership and governance, and culture.
    c. External legal, accounting and/or business counsels should be obtained to advise during the exploration and negotiation of corporate investor/entity transactions.
    d. Retaining negotiators to advocate for best interests of the practice and its employees should be considered.
    e. Physicians should consider whether and how corporate relationships may require physicians to cede varying degrees of control over practice decision-making and day-to-day management.
    f. Physicians should consider the potential impact of corporate relationships on physician and practice employee satisfaction and future physician recruitment.
    g. Physicians should have a clear understanding of compensation agreements, mechanisms for conflict resolution, processes for exiting corporate relationships, and application of restrictive covenants, including any changes in the scope or implementation of any current or proposed restrictive covenants based on the corporate relationship.
    h. Physicians should consider corporate procedures for medical staff representation on the board of directors and medical staff leadership selection as well as processes for resolution of conflict between medical staff leadership and the corporate entity.
    i. Physicians should retain responsibility for clinical governance, patient welfare and outcomes, physician clinical autonomy, and physician due process under corporate relationships.
    j. Prior to entering into a relationship with a corporate entity, physicians and the corporate entity should explicitly identify the types of clinical and business decisions that should remain in the ultimate control of the physician, including but not limited to:
        i. Determining which diagnostic tests are appropriate;
        ii. Determining the need for referrals to, or consultation with another physician or licensed health professional;
        iii. Being responsible for the ultimate overall care of the patient, including treatment options available to the patient;
        iv. Determining how many patients a physician shall see in a given period of time or how many hours a physician should work;
        v. Determining the content of patient medical records;
        vi. Selecting, hiring, or firing physicians, other licensed health care professionals, and/or other medical staff based on clinical competency or proficiency;
        vii. Setting the parameters under which a physician or physician practice shall enter into contractual relationships with third-party entities;

viii. Making decisions regarding coding and billing procedures for patient care services; and
ix. Approving the selection of medical equipment and medical supplies.

k. Each individual physician should have the ultimate decision for medical judgment in patient care and medical care processes, including supervision of non- physician practitioners.
l. Clear protection and dispute resolution processes for physicians advocating on patient care and quality issues should be incorporated into an agreement between physicians and corporate entities.
m. Physicians should retain primary and final responsibility for structured medical education inclusive of undergraduate medical education including the structure of the program, program curriculum, selection of faculty and trainees, as well as education and disciplinary issues related to these programs.

2. Our AMA supports improved transparency regarding corporate investments in and/or relationships to physician practices, subsidiaries and/or related organizations that interact with the physician group and/or patients of the physicians, and subsequent changes in health care prices, quality, access, utilization, and physician payment.
3. Our AMA encourages national medical specialty societies to research and develop tools and resources on the impact of corporate investor relationships on patients and the physicians in practicing in that specialty.
4. Our AMA supports consideration of options for gathering information on the impact of private equity and corporate investors/entities on the practice of medicine.
5. Our AMA supports meaningful physician representation in any corporate governance structure (e.g., seats on the board of directors, and/or other relevant leadership bodies) of any entity with which a physician practice, hospital, or other health care organization establishes a corporate relationship.

CONCLUSION

The Board understands the urgency with which corporate intrusion on the practice of medicine needs to be addressed, and appreciates that at present, state enforcement of CPOM bans is largely lacking. At the same time, we acknowledge certain risks and limitations associated with a federal approach. However, given the importance of this issue, we support the notion that the AMA should take an active stance against corporate intrusion on the delivery of care at both the state and federal level. A more stable path for federal engagement on CPOM might pursue a narrowly tailored federal law to protect core elements of clinical independence, and craft it carefully to include language reflecting an intent to preserve state authority to enact and enforce related and more stringent laws. Especially if associated with a whistleblower program to add leverage to federal enforcement activity, this model would protect physician autonomy without risking destabilization of state health care markets, while leaving room for states to implement and enforce related provisions.

RECOMMENDATIONS

The Board recommends that the following be adopted in lieu of Resolution 225-I-25 and that the remainder of this report be filed:

1. That the American Medical Association, in order to protect physician autonomy and strengthen the physician-patient relationship, support federal legislation prohibiting lay entities, including but not limited to insurance companies, private equity firms, non-physician individual licensed health care professionals and other non-physician-owned

entities or individuals, from interfering with, controlling, or otherwise directing 1) the independent professional judgment or clinical decisions of a physician, or 2) the operational authority of physicians within their practices, provided that any such legislation include a specific saving clause clarifying an intent to preserve the right of states to enact and enforce more stringent state laws. (New HOD Policy)

2. That the AMA support whistleblower programs that allow individuals to report knowledge of violations of a law prohibiting lay entities from interfering with, controlling, or otherwise directing the professional judgment, clinical decisions, or operational authority of a physician to the appropriate enforcement agency. (New HOD Policy)

3. That the AMA support the implementation and enforcement of strong state laws or regulations that prohibit the corporate practice of medicine (New HOD Policy)

4. That Policy H-215.981, "Corporate Practice of Medicine," be amended by addition and deletion as follows:

~~1. Our American Medical Association vigorously opposes any effort to pass federal legislation or regulation preempting state laws prohibiting the corporate practice of medicine.~~

1.~~2.~~ Our AMA vigorously opposes any effort to pass legislation or regulation that removes or weakens state or federal laws prohibiting the corporate practice of medicine.

2.~~3.~~ Our AMA opposes the corporate practice of medicine and supports the restriction of ownership and operational authority of physician medical practices to physicians or physician-owned groups.

3. Our AMA, at the request of state medical associations, will provide guidance, consultation, and model legislation regarding the corporate practice of medicine, to ensure the autonomy of hospital medical staffs, employed physicians in non-hospital settings, and physicians contracting with corporately owned management service organizations.

4.~~5.~~ Our AMA will continue to monitor the evolving corporate practice of medicine with respect to its effect on the patient-physician relationship, financial conflicts of interest, patient centered care and other relevant issues.

5.~~6.~~ Our AMA will work with interested state medical associations, the federal government, and other interested parties to develop and advocate for regulations and appropriate legislation pertaining to corporate control of practices in the health care sector such that physician clinical autonomy and operational authority are preserved and protected.

6.~~7.~~ Our AMA will create a state corporate practice of medicine template to assist state medical associations and national medical specialty societies as they navigate the intricacies of corporate investment in physician practices and health care generally at the state level and develop the most effective means of prohibiting the corporate practice of medicine in ways that are not detrimental to the sustainability of physician practices.

7.~~8.~~ Our AMA supports enforcement of existing regulations and legislation pertaining to corporate control of practices in the health care sector to ensure that physician clinical autonomy and operational authority is preserved and protected.

8.~~9.~~ Our AMA supports capital reserve requirements and leverage standards that preserve access to care for patients and fulfillment of contractual obligations to

physicians and trainees by providing stable financing for hospitals, clinics, and other health care facilities. (Modify Current HOD Policy)

Fiscal Note: Less than $500.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 27-A-26

Subject: Update the Status of Virtual Credit Card Policy, EFT Fees, and Lack of Enforcement of Administrative Simplification Requirements by CMS (Res. 819-I-25)

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Interim Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 819, "Update the Status of Virtual Credit Card Policy, Electronic Funds Transfer (EFT) Fees, and Lack of Enforcement of Administrative Simplification Requirements by the Centers for Medicare & Medicaid Services (CMS)," was adopted as amended and became Policy D-190.965. It asked the following:

> Our American Medical Association report at the Annual 2026 Meeting on the progress of, and action items for implementation of AMA Policies D-190.970, H-190.955, and D-190.968. (Directive to Take Action)

Testimony before the Reference Committee was limited but uniformly supportive. Delegates expressed continued concern that, despite sustained AMA advocacy, the financial burden associated with virtual credit card (VCC) payments and EFT processing fees persists and, in some cases, has intensified. Testimony highlighted the cumulative impact of these fees on physician practices, particularly small and rural practices operating on narrow margins. An amendment was offered to require that the progress report be delivered one year earlier than originally proposed and to specify that the report include concrete "action items" outlining the AMA's regulatory and legislative strategy. Delegates emphasized the urgency of the issue and the need for visible enforcement of existing Administrative Simplification requirements by CMS. The Reference Committee recommended adoption of the resolution as amended, and the House concurred.

BACKGROUND

To reduce paperwork and streamline business processes across the health care system, the Health Insurance Portability and Accountability Act (HIPAA) of 1996 and subsequent policies adopted certain national standard transactions for the electronic exchange of health care data. These transactions included EFT payments and electronic remittance advice. Beginning in the early 2000s, health plans began transitioning from issuing paper checks to using electronic payment methods for physicians.

This shift was significantly accelerated by the Patient Protection and Affordable Care Act (ACA) of 2010, which included provisions aimed at increasing administrative efficiency, notably the establishment of a standard for EFT. Under this requirement, health plans had to offer physician practices the option to receive payments via the Automated Clearing House (ACH) Network. Health plans may use clearinghouses and other vendors to meet their obligation to offer standard

© 2026 American Medical Association. All rights reserved.

electronic transactions. Health plans and their vendors have sought alternatives to the ACH EFT standard since its adoption, which compete with and deter adoption of electronic transactions as envisioned by the ACA. Health plans or their vendors have leveraged flexibility in the EFT final rule, which permits nonstandard electronic payments using VCCs. VCCs are often promoted as the easiest and quickest form of payment, despite significant processing fees. Alternatively, plans or their vendors force physicians to accept additional "value-added services" and associated percentage-based fees with EFT payments. The fees that health plans and their vendors charge practices for simply receiving electronic payments create significant administrative burdens and divert funds that could otherwise support patient care.

Challenges around electronic transactions from health plans and clearinghouses were further exacerbated by the Change Healthcare cyberattack in February 2024 and the subsequent service outage. The Board of Trustees is well aware of the financial and administrative burdens that this unprecedented cyber event placed on physician practices and patients nationwide. The AMA was actively engaged with Optum and Change Healthcare to address ongoing issues related to the disruption and requested increased flexibility in the recoupment of payments on loans to practices, as well as in meeting timely claim-filing deadlines for the period when Change Healthcare's systems were non-functional, and practices were unable to file claims.

Unfortunately, the cyberattack and outage also compromised existing electronic transaction enrollments with vendors and clearinghouses, requiring re-enrollment to protect patient and physician data. Issues with the timing, costs, and other obstacles facing practices in re-enrolling to receive electronic transactions, such as EFT, hampered the recovery from the cyberattack. When EFT enrollments expired, many health plans and their vendors did not contact physician practices in advance to facilitate swift re-enrollment; instead, they automatically defaulted to VCC or fee-based EFT payments. Overall, the cyberattack and its aftermath only compounded the challenges and burdens that physician practices have long faced with electronic transaction fees.

AMA POLICY

The AMA has longstanding policy on VCCs and EFT electronic processing fees. First, the Board of Trustees notes three policies that are particularly relevant to the discussion that focus on increasing education around the use of VCCs in physician practices, as well as advocacy that promotes advance disclosure by payers of transaction fees and physician access to no-fee EFT options as an alternative to VCCs:

Policy H-190.955, "Virtual Credit Card Payments"

1. Our American Medical Association will educate its members about the use of virtual credit cards by third party payers, including the costs of accepting virtual credit card payments from third party payers, the beneficiaries of the administrative fees paid by the physician practice inherent in accepting such payments and the lower cost alternative of electronic funds transfer via the Automated Clearing House.
2. Our AMA will advocate for advance disclosure by third-party payers of transaction fees associated with virtual credit cards and any rebates or other incentives awarded to payers for utilizing virtual credit cards.
3. Our AMA supports transparency, fairness, and provider choice in payers' use of virtual credit card payments, including: advanced physician consent to acceptance of this form of payment; disclosure of transaction fees; clear information about how the provider can opt out of this payment method at any time; and prohibition of payer contracts requiring acceptance of virtual credit card payments for network inclusion.

Policy D-190.970, "CMS Administrative Requirements"

1. Our American Medical Association will forcefully advocate that the Centers for Medicare and Medicaid Services (CMS) investigate all valid allegations of HIPAA Administrative simplification requirements thoroughly and offers transparency in its processes and decisions as required by the Administrative Procedure Act (APA).
2. Our AMA will forcefully advocate that the CMS resolve all complaints related to the non-compliant payment methods including opt-out virtual credit cards, charging processing fees for electronic claims and other illegal electronic funds transfer (EFT) fees.
3. Our AMA will communicate its strong disapproval of the failure by the CMS Office of Burden Reduction to effectively enforce the HIPAA administrative simplification requirements as required by the law and its failure to impose financial penalties for non-compliance by health plans.
4. Our AMA will through legislation, regulation or other appropriate means, advocate for the prohibition of health insurers charging physicians and other providers to process claims and make payment.

Policy D-190.968, "Amend Virtual Credit Card and Electronic Funds Transfer Fee"

1. Our American Medical Association will advocate for legislation or regulation that would prohibit the use of virtual credit cards (VCCs) for electronic health care payments.
2. Our AMA will advocate on behalf of physicians and plainly state that it is not advisable or beneficial for medical practices to get paid by VCCs.
3. Our AMA will engage in legislative and regulatory advocacy efforts to address the growing and excessive electronic funds transfer (EFT) add-on service fees charged by payers when paying physicians, including advocacy efforts directed at:
    a. The issuance of Centers for Medicare & Medicaid Services (CMS) regulatory guidance affirming physicians' right to choose and receive timely basic EFT payments without paying for additional services.
    b. CMS enforcement activities related to this issue.
    c. Physician access to a timely no fee EFT option as an alternative to VCCs.

AMA policy provides a clear and longstanding framework for addressing virtual VCC payments EFT fees, and enforcement of Administrative Simplification requirements. In 2015, the House of Delegates adopted Policy H-190.955, which commits the AMA to educating physicians about the costs and mechanics of VCC payments, promoting advance disclosure of transaction fees and payer incentives, and protecting physician choice through an initial opt-in model, meaningful opt-out rights and opposition to contractual provisions that require acceptance of VCCs as a condition of network participation.

In 2022, the AMA adopted Policy D-190.970, directing the AMA to advocate that CMS investigate and resolve violations of HIPAA Administrative Simplification requirements, ensure transparency in enforcement processes, and oppose improper payment practices, including illegal EFT fees and failure to provide compliant payment options.

In 2023, the AMA adopted Policy D-190.968, which strengthens this framework by promoting physician access to a timely, no-fee EFT option, opposing excessive EFT add-on service fees, urging CMS to clarify physicians' right to receive basic EFT payments without additional charges, and supporting robust enforcement of existing regulatory standards.

Together, these policies, adopted in 2015, 2022, and 2023, establish a comprehensive advocacy foundation centered on transparency, physician autonomy, regulatory enforcement, and protection against improper transaction fees. They provide the basis for the AMA's ongoing regulatory and legislative efforts to ensure physicians can receive timely electronic payments without coercive practices or unnecessary financial loss.

DISCUSSION

The Board of Trustees understands the concerns that prompted Resolution 819 and recognizes the challenges that VCCs and electronic processing fees pose for physician practices. AMA advocacy is squarely focused on addressing these issues from both the regulatory and legislative perspectives.

For example, in June 2025 and July 2025 letters to Department of Health and Human Services (HHS) and CMS, the AMA emphasized how VCCs and fee-based EFT payments continue to pose significant problems for physicians, as these payment methods impose fees (up to five percent of the claim amount) that can add up to substantial financial losses to practices that are already struggling. Physician practices that lose up to five percent of claims payments due to EFT fees are less able to invest in the additional staff, medical equipment, data analytics, and information technology that could improve care access and quality. This is an especially salient issue for rural physician practices operating on thin margins, which are already struggling to provide timely care without having to factor in the greater administrative burdens and fees that come with receiving electronic payments. The AMA has continued to raise these concerns in subsequent federal discussions and stakeholder engagement.

In addition, these fees represent a reduction in the negotiated rate the health plan has agreed to pay the physician for a rendered service. Moreover, VCC and EFT fee programs are often opaque, with many physicians unaware of the associated financial losses until months after being unwittingly charged these fees. To compound these issues, the process of reversing and reissuing payments via a preferred method is often so tedious and time-consuming that physicians simply cannot afford to spend the time to request corrections. The lack of transparency, in part, results from coercive business practices, with most plans and vendors defaulting to fee-based transactions and forcing physician practices to "opt out" of VCCs or fee-based EFT. We have heard from many practices that this "opt out" process can be extremely time-consuming and administratively burdensome. Taken together, these negative factors have led to suboptimal EFT utilization: the most recently available data from the 2024 CAQH Index shows EFT adoption at only 77 percent, compared with 98 percent for electronic claims.

To address these concerns with HHS and CMS and ensure that EFT standard transactions reap their intended benefits, the AMA has recommended that the agencies vigorously enforce existing guidance regarding health plans' use of VCC or EFT fee-based programs.

The AMA has also urged the agencies to issue additional guidance that will protect physicians from unfair business practices by:

- Clarifying that health plans and their contracted vendors cannot require a physician to agree to additional services and/or fees as a condition of receiving payments using the EFT standard;
- Requiring health plans and their vendors to prominently offer an ACH EFT option with no associated fees;

- Requiring health plans and their vendors to offer VCC or fee-based EFT strictly using an opt-in model, under which physicians receive clear and full information about the additional costs involved and proactively agree to using this method before any payments are issued; and
- Requiring all health plans and their vendors to contact physicians in advance of any expiration of EFT enrollment and facilitate swift reenrollment vs. automatically defaulting to VCC or fee-based EFT payments.

Ultimately, AMA wants the agencies to support the EFT regulation's underlying goals and create the much-needed transparency that physicians and other providers need to make informed, independent choices about the appropriate payment method for their practices.

Legislative Action

In addition, the AMA is proceeding with advocacy before Congress to act on behalf of physicians. The AMA helped introduce the "No Fees for EFTs Act" (H.R. 6487) introduced by Representative Greg Murphy, MD (R-NC) in November 2023 and companion legislation in the Senate (S. 3805), led by Senators Bill Cassidy, MD (R-LA) and Maria Cantwell (D-WA). These bills, which received bipartisan support, would prohibit health plans from "imposing fees on providers for EFTs and health care payment and remittance advice transactions." During that Congress, AMA staff worked with Congressional champions to address proposed legislative language changes and to preserve provisions aligned with AMA policy objectives. Although negotiations ultimately stalled and the legislation was not advanced before the close of the 118th Congress, the issue remains a priority. The AMA continues to work with Congressional champions to reintroduce the "No Fees for EFTs Act" this Congress. Progress was slowed by staff transitions within key Congressional offices; however, AMA staff have met with the bill sponsors and their teams and understand that the legislation remains a priority. The AMA anticipates continued engagement aimed at securing reintroduction in the near term.

State legislatures are also increasingly examining the use of VCCs by health plans and their contracted vendors. The AMA has supported state-level efforts consistent with existing AMA policy and has worked with state medical societies and coalition partners to advance legislation that promotes transparency, voluntary physician choice, and access to no-fee EFT options. Several states, including Alabama, Arizona, Georgia, and New York, have enacted legislation designed to increase transparency in electronic payment practices, clarify physician choice, and limit the imposition of excessive transaction fees. These laws generally require clearer disclosure of payment methods and associated fees, prohibit default enrollment into VCC programs without affirmative consent, and, in some cases, restrict the ability of plans or vendors to condition participation on acceptance of fee-based payment mechanisms. Going forward, the AMA will continue to collaborate with interested state medical associations, monitor emerging legislative proposals, and support state initiatives that address coercive payment practices, enhance disclosure requirements, and reinforce physicians' right to timely, no-fee electronic payment options.

State efforts reflect growing recognition that VCC practices can erode negotiated payment rates and impose avoidable administrative burden on physician practices. While statutory approaches vary by state, the common themes include strengthening opt-in protections, enhancing transparency around fees and incentives, and reinforcing the availability of lower-cost ACH EFT options. The AMA continues to monitor these developments and support state medical associations as they pursue reforms consistent with AMA policy.

ACTION ITEMS

The Board of Trustees recommends that, consistent with Resolution 819 and existing AMA policy, the AMA pursue the following implementation priorities over the coming year:

1. The AMA will engagement with HHS and CMS to press for stronger enforcement of existing HIPAA Administrative Simplification requirements related to electronic payment standards.
2. The AMA will request that CMS issue clarifying guidance affirming physicians' right to receive timely ACH EFT payments without being required to purchase additional services or incur add-on processing fees and reinforcing that nonstandard payment options must not undermine the intent of the EFT standard.
3. The AMA will work with congressional champions to reintroduce and advance the "No Fees for EFTs Act" in the 119th Congress
4. The AMA will support state medical societies in state legislative and regulatory efforts that increase transparency around VCC use, limit coercive opt-out structures, or restrict excessive electronic payment fees, consistent with existing AMA policy.
5. The AMA will communicate with physicians regarding the financial implications of VCC and fee-based EFT programs and reinforce available information about compliant ACH EFT options and physician rights under existing standards.

CONCLUSION

The financial and administrative burdens associated with VCC payments and fee-based EFT programs remain significant and persistent. Despite longstanding statutory standards under HIPAA Administrative Simplification and the Affordable Care Act's EFT requirements, many health plans and their vendors continue to default physicians into payment methods that impose avoidable fees, reduce negotiated reimbursement, and create unnecessary administrative burden. The Change Healthcare cyberattack further exposed vulnerabilities in electronic payment systems and highlighted the consequences of inadequate enforcement and oversight.

Through regulatory advocacy, legislative engagement, and state-level collaboration, the AMA has continued to advance policies designed to protect physician autonomy, support transparency, and secure access to timely, no-fee electronic payments. However, relief will require stronger enforcement by CMS, clear regulatory guidance, and Congressional action to eliminate improper transaction fees. The Board of Trustees will continue to pursue a coordinated legislative and regulatory strategy consistent with Policies H-190.955, D-190.968, and D-190.970. The recommendations below also include rescission of Policy D-190.965, as its reporting directive has been fulfilled through submission of this report.

RECOMMENDATIONS

The Board of Trustees recommends the following be adopted and the remainder of the report be filed.

1. That Policy D-190.965 be amended to read as follows:

   Our American Medical Association report at the Annual 202~~6~~7 Meeting on the progress of, and action items for implementation of AMA Policies D-190.970, H-190.955, and D-190.968. (Update HOD Policy)

2. That our AMA reaffirm Policies H-190.955, “Virtual Credit Card Payments;” D-190.968, “Amend Virtual Credit Card and Electronic Funds Transfer Fee;” and D-190.970, “CMS Administrative Requirements.” (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

REPORT 28 OF THE BOARD OF TRUSTEES (A-26)
Accountability in the Use of Augmented Intelligence for Prior Authorization
(Reference Committee B)

EXECUTIVE SUMMARY

At the 2025 Interim Meeting, the American Medical Association (AMA) House of Delegates adopted amended Resolution 823, which strengthened Policy D-480.956, "Use of Augmented Intelligence for Prior Authorization," and directed the Board of Trustees to report back to the 2026 Annual Meeting on actions taken. This report responds to that directive while also recognizing that more recent legislative and regulatory developments may not be fully reflected due to report preparation timelines.

The rapid expansion of insurer use of augmented intelligence (AI) in prior authorization (PA) and claims review presents significant risks to patient access, clinical autonomy, and administrative burden. When deployed without comprehensive oversight, transparency, and clinician involvement, AI-enabled tools can accelerate denials, undermine individualized patient assessment, and scale opaque decision-making processes that are difficult for patients and physicians to challenge. Testimony in support of Resolution 823 emphasized that clear guardrails are necessary for AI to enhance administrative efficiency without replacing independent clinical judgment or creating new barriers to medically necessary care.

Consistent with Policy D-480.956 and related policy H-480.931, the AMA has advanced a comprehensive advocacy strategy at the federal and state levels. The AMA has supported federal legislation, including the "Improving Seniors' Timely Access to Care Act of 2025" (H.R. 3514/S. 1816), which would require Medicare Advantage plans to publicly report their use of AI and related technologies in PA decisions. The AMA has also engaged Congress, the Office of Science and Technology Policy, and the Centers for Medicare & Medicaid Services to promote requirements that insurer AI use be grounded in evidence-based clinical guidelines; that adverse determinations informed by AI be reviewed by qualified, specialty-appropriate clinicians who are not incentivized to deny coverage for care; and that patients and physicians have access to the criteria and information underlying coverage decisions.

At the state level, the AMA has supported enactment of guardrails limiting insurer reliance of AI in utilization management, including requirements for individualized clinical review, audit authority, public reporting, and prohibitions on automated systems serving as the sole basis for medical necessity denials. In parallel, the AMA has worked within national AI technical standards processes to improve transparency regarding whether human review occurred and to facilitate identification of reviewer specialty.

The AMA has also emphasized safeguards to protect continuity of care, including requiring direct clinician review of patient records before any AI-flagged denial of previously approved medications, strengthening appeals processes, and advancing protections against algorithmic discrimination to ensure equitable access to care.

While progress has been made, insurer use of AI in coverage determinations continues to expand, often without sufficient visibility or enforceable safeguards. The AMA will continue to advocate for legislative and regulatory reforms that ensure AI-supported PA processes remain transparent, clinically grounded, equitable, and accountable to qualified physicians. This ongoing work advances the goals of Policy D-480.956 and reinforces the AMA's leadership in protecting patients and physicians as AI becomes more deeply embedded in health care coverage decisions.

REPORT OF THE BOARD OF TRUSTEES

BOT Report 28-A-26

Subject: Accountability in the Use of Augmented Intelligence for Prior Authorization (Res. 823-I-25)

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee B

At the 2025 Interim Meeting, the House of Delegates (HOD) adopted Resolution 823, "Accountability in the Use of Augmented Intelligence for Prior Authorization," which modified existing AMA Policy D-480.956, "Use of Augmented Intelligence for Prior Authorization" to read as follows:

1. Our American Medical Association will work with stakeholders to advocate for legislative and/or regulatory action for greater regulatory oversight related to the use of augmented intelligence for review of patient claims and prior authorization requests, including whether insurers and/or contracted third parties are using a thorough and fair process that:
    a. is based on accurate and up-to-date clinical criteria derived from national medical specialty societies' evidence-based guidelines and peer-reviewed clinical literature.
    b. includes reviews by physicians and other health care professionals who are not incentivized to deny care and with expertise for the service under review.
    c. provides for transparency and accountability over the use of augmented intelligence for all medical service denials, to include a direct review of patient records by a qualified clinician.
    d. requires direct review of the patient record by a qualified clinician of all medications flagged for denial by augmented intelligence platforms that were previously approved by payers.
    e. provides robust appeals processes and guardrails to prevent algorithmic discrimination and ensure equitable access to care.
2. Our AMA will report on actions taken by the 2026 Annual Meeting of the AMA House of Delegates.

Resolution 823 amended Policy D-480.956 to more clearly articulate that insurer use of augmented intelligence in claims review and PA must be subject to meaningful regulatory oversight and grounded in a thorough and fair process. As amended, the policy specifies that such processes must be based on accurate and up-to-date clinical criteria derived from national medical specialty societies' evidence-based guidelines and peer-reviewed literature; include review by physicians and other health care professionals who are not incentivized to deny care and who have expertise in the service under review; provide transparency and accountability for all medical service denials; require direct review of patient records by a qualified clinician, including for medications previously approved by payers; and include robust appeals processes and guardrails to prevent algorithmic discrimination and ensure equitable access to care.

The AMA is actively pursuing legislative and regulatory strategies to advance these guardrails at both the federal and state levels. This report outlines the actions taken before and after adoption of Resolution 823-I-25 to implement the amended policy and fulfill the reporting requirement.

AMA POLICY

Policy D-480.956, "Use of Augmented Intelligence for Prior Authorization" (See above)

Policy H-480.931, "Assessing the Intersection Between AI and Health Care"

(9) Payor Use of Augmented Intelligence and Automated Decision-Making Systems

a. Use of automated decision-making systems that determine coverage limits, make claim determinations, and engage in benefit design should be publicly reported, based on easily accessible evidence-based clinical guidelines (as opposed to proprietary payor criteria), and disclosed to both patients and their physician in a way that is easy to understand.
b. Payors should only use automated decision-making systems to improve or enhance efficiencies in coverage and payment automation, facilitate administrative simplification, and reduce workflow burdens. Automated decision-making systems should never create or exacerbate overall or disparate access barriers to needed benefits by increasing denials, coverage limitations, or limiting benefit offerings. Use of automated decision-making systems should not replace the individualized assessment of a patient's specific medical and social circumstances and payors' use of such systems should allow for flexibility to override automated decisions. Payors should always make determinations based on particular patient care needs and not base decisions on algorithms developed on "similar" or "like" patients.
c. Payors using automated decision-making systems should disclose information about any algorithm training and reference data, including where data were sourced and attributes about individuals contained within the training data set (e.g., age, race, gender). Payors should provide clear evidence that their systems do not discriminate, increase inequities, and that protections are in place to mitigate bias.
d. Payors using automated decision-making systems should identify and cite peer-reviewed studies assessing the system's accuracy measured against the outcomes of patients and the validity of the system's predictions.
e. Any automated decision-making system recommendation that indicates limitations or denials of care, at both the initial review and appeal levels, should be automatically referred for review to a physician: (a) possessing a current and valid non-restricted license to practice medicine in the state in which the proposed services would be provided if authorized, and (b) be of the same specialty as the physician who typically manages the medical condition or disease or provides the health care service involved in the request prior to issuance of any final determination. Prior to issuing an adverse determination, the treating physician must have the opportunity to discuss the medical necessity of the care directly with the physician who will be responsible for determining if the care is authorized.
f. Individuals impacted by a payor's automated decision-making system, including patients and their physicians, must have access to all relevant information (including the coverage criteria, results that led to the coverage determination, and clinical guidelines used).
g. Payors using automated decision-making systems should be required to engage in regular system audits to ensure use of the system is not increasing overall or disparate claims denials or coverage limitations, or otherwise decreasing access to care. Payors using automated decision-making systems should make statistics regarding systems' approval, denial, and appeal rates available on their website (or another publicly available website) in a readily accessible format with patient population demographics to report and contextualize equity implications of automated decisions. Insurance regulators should consider requiring reporting of payor use of automated decision-making systems so that they can be monitored for negative and disparate impacts on access to care. Payor use of automated decision-making systems must conform to all relevant state and federal laws.

DISCUSSION

The AMA's strategy to address the growing use of AI by payers in claims review and PA includes strong advocacy efforts to pursue legislative and regulatory solutions that ensure meaningful oversight of these tools and the processes surrounding them. Specifically, we support standards requiring that AI-informed determinations be grounded in current, evidence-based clinical guidelines; incorporate independent review by qualified clinicians with relevant expertise; and provide clear transparency, accountability, and robust appeals protections. Together, these reforms are intended to safeguard patient access to medically necessary care and prevent inappropriate, biased, or financially driven denials. The following section includes the steps taken between now and the previous meeting directed at this issue:

Insurer use of AI should be based on accurate and up-to-date clinical criteria derived from national medical specialty societies' evidence-based guidelines and peer-reviewed clinical literature.

The AMA is establishing and advancing a clear set of federal guardrails for insurer use of AI in coverage decisions. AI-driven automation is increasingly being used to accelerate denials and coverage limitations, with significant downstream burdens for physicians and clinically harmful delays for patients. AMA policy and congressional facing advocacy emphasize that, absent stronger guardrails, AI-enabled processes can undermine individualized patient assessment and contribute to inappropriate denials that patients and physicians struggle to understand and overturn.
Consistent with the resolution's core requirement, AMA policy states that insurer AI used to determine coverage limits, make claim determinations, or engage in benefit design must be based on easily accessible, evidence-based clinical guidelines (not proprietary payer criteria) and disclosed to patients and physicians in an understandable way. The AMA is reinforcing this position in congressional advocacy, urging policymakers to require public reporting and disclosure of AI use and to ensure that the basis for coverage decisions is transparent and clinically grounded rather than opaque or proprietary. In addition, the AMA supports state-based advocacy efforts to advance these guardrails and collaborates with state medical associations and patient advocacy organizations to promote transparency, clinician oversight, and equitable access to care. The AMA has engaged with national organizations, including the National Association of Insurance Commissioners (NAIC), on broader PA and UM reforms that intersect with oversight of automated decision-making tools.

The AMA is advocating that insurer AI coverage criteria must be accountable to the medical evidence base, requiring payers to identify and cite peer-reviewed studies evaluating system accuracy and the validity of predictions, and to provide affected patients and physicians access to the relevant coverage criteria, results, and clinical guidelines used in the determination. Despite these established guardrails and repeated engagement with policymakers, including communication to the Senate Committee on Health, Education, Labor and Pensions and the Office of Science and Technology Policy, AMA's advocacy underscores that insurer noncompliance and continued opaque AI-driven denials necessitate stronger oversight expectations to ensure AI is used only in ways that reduce administrative burden without restricting medically necessary care.

Insurer AI use must include reviews by physicians and other health care professionals who are not incentivized to deny care and with expertise for the service under review.

The AMA advocates that insurer use of AI in coverage determinations must not substitute for independent clinical judgment, particularly given the real-world pattern of AI enabled automation being used to accelerate denials and compound administrative burden and delays in care. The AMA has therefore advanced guardrails that center on two complementary requirements: (1) case level clinician review that is clinically meaningful and specialty appropriate before an adverse determination is finalized; and (2)

structural protections to reduce conflicts of interest and ensure decisions reflect independent medical judgment rather than denial-driven incentives.

At the case level, AMA policy states that when AI is used for payer coverage limits, claim determinations, or benefit design, payers should be required to ensure that decisions are reviewed by physicians and other health care professionals who are not incentivized to deny care and who have expertise for the service under review, a standard that directly aligns with this resolution's requirement for specialty appropriate clinician oversight. With the AMA's support, California enacted Senate Bill 1120 (2024 Cal. Stat. ch. 879 (S.B. 1120)) in 2024 which mandates that AI tools used for utilization review or UM decisions comply with a variety of requirements, including that the tool: does not supplant individualized health care provider decision-making; does not directly or indirectly discriminate; be fairly and equitably applied; and be open to audit for compliance. California's new law also specifies that an AI tool cannot deny, delay, or modify health care services based on medical necessity and that such decisions shall only be made by a physician or health care professional competent to evaluate the specific clinical issues involved. At the federal level, Centers for Medicare and Medicaid Services (CMS) is testing technology-enabled review processes through the Wasteful and Inappropriate Service Reduction (WISeR) model, developed by the Center for Medicare & Medicaid Innovation. The model incorporates the use of advanced analytics, including AI-supported tools, to assist in reviewing certain services within Medicare fee-for-service. CMS has indicated that the model will include safeguards such as clinician review of determinations and documentation regarding the role of AI tools in coverage decisions. The AMA is closely monitoring implementation of the model and engaging CMS to promote transparency, accountability, meaningful physician oversight, robust guardrails, streamlined administrative processes, patient access to timely care, and greater use of evidence-based clinical guidelines consistent with AMA policy governing the use of AI in coverage determinations.

The AMA is reinforcing the need for meaningful clinician review in congressional advocacy by pressing for requirements that adverse AI recommendations be subject to physician review before finalization and that coverage decisions be grounded in independent clinical judgment rather than opaque automated workflows. To facilitate and track human review of payer AI use, the AMA was successful in modifying national AI technical standards that indicate whether a human was involved in the coverage decisions and an optional code to allow for sending the reviewer's specialty information.

At the structural level, the AMA is emphasizing that insurer review processes and UM governance must be designed to prevent conflicts of interest from shaping clinical outcomes. In its 2026 Medicare Advantage comment letter, the AMA urged strengthening UM committee composition and independence, recommending that these committees include practicing physicians, and that independent physician participation be increased to a majority to ensure that coverage criteria and adverse determinations are informed by practicing clinician expertise and insulated from incentives that could compromise independent clinical judgment.

Despite these established guardrails, AMA's ongoing advocacy reflects that insurer AI use continues to undermine independent clinical review in practice, reinforcing the need for stronger oversight expectations to ensure that AI-supported coverage decisions remain accountable to qualified, specialty-appropriate clinicians and do not become a vehicle for inappropriate denials and avoidable care delays.

Insurers provide transparency and accountability over the use of AI for all medical service denials, to include a direct review of patient records by a qualified clinician.

The AMA advocates that insurer use of AI-driven automated decision-making in coverage determinations must be subject to clear transparency and real accountability. Opaque AI-enabled denials can scale quickly, exacerbate PA burdens, and create avoidable delays in medically necessary care. AMA's policy

and congressional-facing advocacy underscore that patients and physicians must be informed and empowered to question AI-supported coverage decisions, and that stronger oversight expectations are warranted when insurers use these systems for coverage, claims determinations, and benefit design.

At the point of denial, the AMA is advancing clear transparency expectations. AMA policy calls for insurer use of automated decision-making systems to be publicly reported and disclosed to patients and physicians in an easy-to-understand manner, including clear communication that AI was used when it was part of the denial decision-making. The AMA further specifies that individuals impacted by an insurer's automated decision-making system, including patients and their physicians, must have access to all relevant information underpinning the coverage determination, including the coverage criteria, the results that led to the determination, and the clinical guidelines used. In parallel, the AMA warns that a core failure mode of insurer automation is the absence of individualized review, where denials are made without patient specific assessment and, in some cases, without opening or reviewing the patient's medical record, underscoring why transparency must be paired with meaningful clinical accountability whenever AI is used to recommend or trigger a denial.

On accountability, the AMA is urging routine auditing and public reporting to detect and correct harmful patterns. AMA policy calls for insurers using automated decision-making systems to conduct regular system audits to ensure AI use is not increasing overall or disparate denials/coverage limits or otherwise reducing access to care, and to make approval, denial, and appeal rate statistics publicly available in a readily accessible format with patient population demographics to contextualize equity implications. Notably, the AMA has vigorously advocated for passage of H.R. 3514/S. 1816, the "Improving Seniors' Timely Access to Care Act of 2025," which would make important reforms in Medicare Advantage PA programs. The bill would require Medicare Advantage plans to publicly disclose the percentage and number of PA requests that were denied in the previous plan year "through the utilization of decision support technology, artificial intelligence technology, machine-learning technology, clinical decision-making technology, or any other technology specified by the Secretary," as well as disclose and describe the technology utilized in evaluating PA requests. In December 2025, the AMA led over 120 physician organizations in a sign-on letter to congressional leadership expressing long-standing support for this bill and the improved transparency it would bring to Medicare Advantage PA programs, including this critical public reporting of plans' use of AI in coverage determinations.

AMA efforts have supported several states that have now enacted laws that establish guardrails that directly constrain insurer use of AI and automated tools in UM and adverse determinations. In Maryland (H.B. 820), plans must report quarterly to the Insurance Commissioner whether an "artificial intelligence, algorithm, or other software tool" was used in an adverse decision, and they must ensure that any such tool is applied to the patient's individual medical history and clinical circumstances, does not replace provider judgment, avoids discrimination, is regularly evaluated for accuracy and reliability, and does not use patient data beyond its stated purpose. In Arizona (H.B. 2175), a claim denial based on medical necessity requires individual review by the plan's medical director, exercising independent medical judgment and not relying solely on recommendations from other sources. Nebraska (LB 77) bars an AI algorithm from being the sole basis for denying, delaying, or modifying services based on medical necessity, and requires disclosure when AI is used in UM. Texas (S.B. 815) prohibits the use of automated decision systems to make adverse determinations, while allowing such tools for administrative support or fraud detection, and clarifies the Insurance Commissioner's authority to audit and inspect these tools.

The NAIC Big Data and Artificial Intelligence Working Group has made insurer use of AI a sustained regulatory priority and is encouraging state insurance regulators to apply consistent governance expectations. In December 2023, NAIC issued a model bulletin for states to adopt, reminding insurers that AI-enabled decisions affecting consumers remain subject to existing state laws (including unfair trade

practice and other consumer protection requirements), and outlining baseline governance expectations and the types of information regulators may request during examinations or investigations. To date, 25 states have adopted the bulletin. NAIC has also released data describing how health plans report using AI across functions such as contracting, fraud detection, pricing, plan design, risk adjustment, risk management, marketing, data processing, and claims determinations—information that can inform ongoing evaluation of state proposals addressing payer use of clinical algorithms and AI in medical necessity decision-making. AMA contributed suggestions for the NAIC survey of health insurers inquiring how they are using AI, including in PA and other UM. AMA provided significant input on the recently released NAIC PA white paper. AMA shared perspectives on and has been monitoring implementation of the NAIC model AI bulletin that covers all insurance.

At its 2025 Summer Meeting, the National Council of Insurance Legislators (NCOIL) Financial Services & Multi-Lines Issues Committee considered draft legislation on insurers' use of AI and specifically in the claims process. The Committee heard from stakeholders including the AMA, who supported guardrails around health plans' use of AI in the claims determination process, while representatives from the insurance industry discouraged the committee from developing any model, calling it premature. It seems likely that the committee will continue to discuss potential model legislation at upcoming meetings.

The AMA's broader advocacy also emphasizes that current protections remain insufficient and that AI-driven denials continue to occur without adequate visibility and individualized review, reinforcing the need for stronger oversight expectations to ensure AI improves administrative efficiency without becoming a mechanism for inappropriate denials and delayed care.

Insurers require direct review of the patient record by a qualified clinician of all medications flagged for denial by AI platforms that were previously approved by payers.

The AMA is advancing clear guardrails across its policy and federal advocacy to ensure that insurer use of AI does not create new pathways to interrupt medically necessary medications that have already been approved and initiated. In the AMA's view, AI may be used to flag cases for review, but it must never be used to automatically deny, terminate, or disrupt a previously approved medication, particularly in continuation or renewal scenarios where patients are clinically stable and interruptions can cause harm and compound administrative burden. The AMA has consistently emphasized that PA related disruptions already undermine continuity of care, and that deploying AI in these workflows without strong safeguards risks scaling inappropriate denials and worsening care delays.

AMA policy requires that any automated recommendation indicating a denial or limitation of care be automatically referred for physician review prior to any final determination, with the reviewer possessing appropriate licensure and specialty alignment, and with a meaningful opportunity for clinical discussion before an adverse decision is issued. This "AI flags, clinicians decide" construct is the factual backbone for requiring direct review of the patient record by a qualified clinician before any AI-triggered medication denial is finalized. The AMA is advancing the same principle in congressional-facing advocacy, warning that automated decision-making must not replace individualized assessment of patient specific needs, must allow flexibility to override automated outputs, and must not be based on generalized "similar patient" logic.

The AMA is taking these guardrails directly to federal policymakers. In engagement with Congress, the AMA is urging stronger transparency and oversight when payers use automated decision-making for coverage and benefit determinations, emphasizing that patients and physicians must be empowered to question automated decisions and that these systems must not override clinical judgment. In related congressional advocacy, the AMA is highlighting patterns showing inadequate individualized review and

is calling for guardrails that include physician oversight for adverse AI-driven determinations and a pathway to ensure the treating physician can meaningfully engage before a denial is finalized.

In parallel, the AMA is pressing CMS to ensure coverage criteria and medical necessity determinations, particularly for prescription drugs, are grounded in sound clinical validity and transparency, noting the importance of protections for beneficiaries who rely on medications to maintain health and wellbeing. The AMA is supporting prohibitions on reopening favorable medical necessity decisions absent good cause, reinforcing the core reliance interest that patients and physicians should be able to depend on prior approvals without fear of subsequent reversal, an essential principle when AI is introduced into renewal/continuation workflows.

Insurers must provide robust appeals processes and guardrails to prevent algorithmic discrimination and ensure equitable access to care.

The AMA has consistently advocated that insurer use of AI in UM must be paired with practical, patient-centered safeguards. When automated systems accelerate denials or restrict coverage without meaningful checks, patients experience harmful delays and physicians face escalating administrative burden. The AMA is emphasizing that robust, workable appeals processes are not optional; they are a necessary backstop to ensure that inappropriate or erroneous AI-influenced denials can be promptly corrected and that patients are not deprived of medically necessary care.

Consistent with this resolution, AMA policy calls for insurer automated decision-making that recommends a denial or limitation to be referred for physician review before a final determination, and for that same clinician-centered safeguard to apply across the review continuum, including at the appeals level. The AMA's advocacy highlights that appeals processes frequently function poorly in practice, even when denials are inappropriate: available evidence shows that only a small fraction of Medicare Advantage PA denials are appealed (11.5 percent in 2024), yet a substantial share of appealed denials are overturned (80.7 percent in 2024), underscoring that many patients may forgo medically necessary care because the appeals pathway is too burdensome, too slow, or too opaque to navigate. This pattern reinforces why appeals must be designed to work in real world clinical settings: timely, accessible, and capable of meaningful review by qualified clinicians.

In addition, the AMA is urging that safeguards against algorithmic discrimination be built into insurer AI use so that automated decision-making does not systematically disadvantage certain patients or reduce equitable access to care. AMA policy calls for payers to demonstrate that automated systems do not discriminate and to implement protections to mitigate bias that could affect coverage determinations.

CONCLUSION

The AMA has taken substantial and coordinated action across federal and state advocacy channels to advance oversight, transparency, and accountability in the use of AI in PA and coverage determinations. Through comment letters, congressional engagement, technical standards development, support of federal legislation, and state-level policy advancement, the AMA has reinforced the core guardrails articulated in policy D-480.956 and H-480.931.

Specifically, the AMA has advanced requirements that insurer AI use be grounded in evidence-based clinical guidelines; that adverse determinations informed by AI be subject to review by qualified, specialty-appropriate clinicians who are not incentivized to deny care; that patients and physicians receive clear disclosure when AI is used and have access to the criteria and data underlying determinations; that previously approved medications not be disrupted without individualized clinician review; and that appeals processes and anti-discrimination safeguards function effectively in practice.

Despite these efforts, insurer use of AI in UM continues to expand in ways that risk accelerating inappropriate denials, increasing administrative burden, and delaying medically necessary care. The AMA's advocacy therefore remains ongoing and focused on strengthening enforceable guardrails, improving transparency, and ensuring that AI enhances administrative efficiency without supplanting individualized clinical judgment or compromising patient access.

The Board of Trustees will continue to monitor legislative, regulatory, and market developments related to payer use of AI and will report back to the House of Delegates as appropriate.

RECOMMENDATIONS

The Board of Trustees recommends that the following be adopted, and the remainder of the report be filed.

1. Our American Medical Association (AMA) will:
    1) Advance federal advocacy to ensure that insurer use of AI in prior authorization and claims review is grounded in accurate, up-to-date, evidence-based clinical guidelines derived from national medical specialty societies and peer-reviewed literature.
    2) Engage Congress, CMS, and other federal policymakers to strengthen requirements that AI-informed adverse determinations be subject to review by qualified, specialty-appropriate clinicians who are not incentivized to deny coverage for care, and to ensure that automated systems do not supplant individualized clinical judgment.
    3) Support and seek advancement of federal legislation to promote transparency in Medicare Advantage prior authorization programs, including public reporting of AI and automated decision-making use.
    4) Advocate for enhanced transparency and accountability in insurer use of AI, including clear disclosure when AI is used in coverage determinations and meaningful access for patients and physicians to the criteria, clinical guidelines, and data underlying those determinations.
    5) Press for safeguards protecting continuity of care, including requirements that previously approved medications not be denied or disrupted based solely on AI-generated recommendations without direct review of the patient record by a qualified clinician.
    6) Support development and adoption of state-level guardrails that limit reliance on automated systems as the sole basis for medical necessity denials and promote clinician oversight, audit authority, and protections against algorithmic discrimination.
    7) Engage in national AI technical standards discussions to strengthen transparency regarding whether human review occurred in coverage determinations and to facilitate identification of reviewer specialty. (Directive to Take Action)

2. That item two of Policy D-480.956, "Use of Augmented Intelligence for Prior Authorization," be rescinded as having been accomplished by this report. (Modify Current HOD Policy)

Fiscal Note: Less than $500.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 201
(A-26)

Introduced by: Oklahoma, Mississippi

Subject: Prohibit and Regulate 7-Hydroxymitragynine (7-OH) Kratom Products to Protect Public Health and Youth Safety

Referred to: Reference Committee B

Whereas, newer kratom products concentrated with 7-hydroxymitragynine (7-OH), a potent opioid-like compound far stronger than traditional kratom leaf, pose heightened risks of addiction, overdose, and other harms, prompting regulatory concerns due to threats to American consumers[1,2]; and

Whereas, these 7-OH products are often marketed in child-appealing forms such as flavored shapes and brightly colored packaging, contributing to rising pediatric exposures reported to U.S. poison centers and increased access by minors[3,4]; and

Whereas, national survey data from the Substance Abuse and Mental Health Services Administration indicate that tens of thousands of U.S. adolescents aged 12–17 have used kratom, based on estimated prevalence rates[3,5]; and

Whereas, published studies report that kratom is used for perceived stimulant and mood-enhancing effects, including for focus, studying, and recreational purposes[3,5]; and

Whereas, data from U.S. poison control centers demonstrate that approximately 10% of reported kratom exposures involve individuals under 20 years of age, including children under 13[3]; and

Whereas, high-potency and concentrated kratom products, including those containing 7-hydroxymitragynine (7-OH), may deliver unpredictable and excessive doses, increasing the risk of toxicity[3 5]; and

Whereas, reported outcomes from kratom exposures include moderate to severe adverse effects requiring medical evaluation and hospitalization, with documented risks of dependence and substance use disorder[3 5]; and

Whereas, cases of neonatal abstinence syndrome mimicking opioid withdrawal have been documented in infants born to mothers using kratom chronically during pregnancy, underscoring risks to the youngest and most vulnerable children[6]; and

Whereas, public health officials and physicians warn that high-potency kratom products are expanding rapidly in commercial markets and disproportionately appealing to youth, while no adequate and well-controlled clinical trials demonstrate kratom’s safety or efficacy for any medical use, leading medical organizations to advise clinicians to counsel patients against use[2,7]; and

Whereas, the American Medical Association (AMA) recommends that kratom be regulated by the Food and Drug Administration, that its safety and efficacy be established through rigorous clinical trials prior to marketing or over-the-counter sales, and that unregulated kratom products constitute a serious public health concern (AMA Policy H-95.903)[8]; therefore be it

RESOLVED, that our American Medical Association our AMA amend policy H-95.903 by addition, Regulate Kratom and Ban Over-The-Counter Sales, to read:

1. Our American Medical Association recommends the safety and efficacy of kratom, and its derivatives, should be determined through research and clinical trials and subsequently evaluated by the relevant regulatory entities for its appropriateness for sale and potential oversight via the Controlled Substances Act, before it can be marketed, purchased, or prescribed.
2. Our AMA recommends individuals who are currently using kratom for pain management or other conditions should have access to appropriate medical care to manage their conditions and withdrawal symptoms, if needed.
3. Our AMA recommends individuals who are using kratom only for personal use should not face criminal consequences.
4. Our AMA recommends kratom, and its derivatives, should be regulated by the FDA, and its safety and efficacy should be determined through clinical trials before it can be marketed or prescribed as treatment for any condition;

(Modify Current HOD Policy); and be it further

RESOLVED, that our AMA adopt a policy to ban the sale, distribution, or marketing of 7-hydroxymitragynine (7-OH) concentrated kratom products (New HOD Policy); and be it further

RESOLVED, that our AMA urges the FDA and state legislatures to classify 7-OH kratom products as adulterated or misbranded when sold in child-appealing forms, prohibit their availability in physical retail stores and online platforms accessible to minors (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for public education campaigns by physicians warning parents and youth of 7-OH kratom risks, and support research into pediatric exposures and optimal regulatory frameworks. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 202
(A-26)

Introduced by: Florida, Texas, Oklahoma

Subject: Using and Defining “Unsupervised Practice of Medicine”

Referred to: Reference Committee B

Whereas, the American Association of Nurse Practitioners (AANP) is advocating for “Full practice authority (FPA)” or “Independent practice” to practice without physician supervision or a collaborative practice agreement; and

Whereas, FPA is not a legal or regulatory category but a political term used by nursing organizations to describe the removal of physician supervision; and

Whereas, scope-of-practice laws vary widely, and no state grants complete authority equivalent to physician licensure; and

Whereas, the AMA believes non-physicians should be supervised under the physician led care team model with direct on-site supervision of non-physician practitioners as the gold standard; and

Whereas, having a standard terminology would help define our goal of supervised practice in all medical settings; and

Whereas, nurse practitioners assert that they practice advanced nursing rather than the practice of medicine; yet their day-to-day activities—diagnosing disease, ordering and interpreting diagnostic tests, performing medical procedures, and prescribing medications, including controlled substances—are universally recognized as core components of the practice of medicine as defined in state medical practice acts; and

Whereas, the practice of medicine is legally distinct from the practice of nursing, with medicine defined as the independent evaluation and treatment of human illness, injury, and disease while nursing is defined as the promotion of health, the prevention of illness, and the management of human responses to health problems within a nursing framework; and

Whereas, by performing medical diagnostic and therapeutic activities outside the physician-led model, nurse practitioners functionally engage in the practice of medicine while holding a nursing license, creating regulatory inconsistency and patient confusion regarding the level of training associated with these medical acts; therefore be it

RESOLVED, that our American Medical Association use the term “Unsupervised Practice of Medicine” (UPM) when describing statutory or regulatory efforts that allow nonphysician practitioners to diagnose, treat, and prescribe without physician oversight, and reaffirm that physician-led, team-based care with appropriate physician supervision remains the gold standard for patient safety and quality care (New HOD Policy); and be it further

RESOLVED, that our AMA incorporate the term “Unsupervised Practice of Medicine” in its advocacy materials, public communications, testimony, and educational resources, where appropriate, to clarify the distinction between physician licensure and nonphysician scope expansion (Directive to Take Action); and be it further

RESOLVED, that our AMA continue to advocate for truth in advertising, transparency in professional identification, and clear communication to patients regarding differences in education, training, and licensure between physicians and nonphysician practitioners. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 203
(A-26)

Introduced by: Florida, Texas, Oklahoma

Subject: Support for Independent Evaluation of Outcomes Associated with Unsupervised Nurse Practitioner Practice

Referred to: Reference Committee B

Whereas, the American Medical Association has longstanding policy supporting physician-led, team-based care as the model most consistent with patient safety and quality; and

Whereas, 27 states currently permit unsupervised practice of medicine (UPM) by nurse practitioners, and some states have allowed UPM for decades; and

Whereas, many scope-of-practice expansions have occurred without prospective, randomized, or methodologically rigorous comparative studies evaluating patient outcomes when physician supervision is removed; and

Whereas, existing studies frequently cited in support of expanded scope of practice often examine care delivered within physician-led teams, protocol-based environments, or limited patient populations, rather than independent clinical decision-making; and

Whereas, objective, high-quality evidence is essential to inform legislators, regulators, physicians, and patients regarding the safety, quality, and appropriate role of unsupervised NP practice; therefore be it

RESOLVED, that our American Medical Association advocate for and support funding of independent, academically rigorous studies comparing patient outcomes between unsupervised nurse practitioner care and physician-led team-based care, including measures of patient safety, quality, utilization, access, and health outcomes, with a goal of publication in peer-reviewed literature. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/9/26

RELEVANT AMA POLICY

To Study the Cost and Quality Impact of Non-Physician Provider Employment in the United States of America D-200.973
Our American Medical Association encourages and supports studies to determine the cost and quality impact of non-physician unsupervised practice on all patients.
Our AMA will develop model state legislation that opposes enactment of legislation and supports reversal of such legislation, if present, that would authorize the independent practice of medicine by any individual who is not a physician.

AMA Support for States in Their Development of Legislation to Support Physician-Led, Team Based Care D-35.982
1. Our AMA will continue to assist states in opposing legislation that would allow for the independent practice of certified registered nurse practitioners.
2. Our AMA will assist state medical societies and specialty organizations that seek to enact legislation that would define the valued role of mid-level and other health care professionals within a physician-led team based model structured to efficiently deliver optimal quality patient care and to assure patient safety.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 204
(A-26)

Introduced by: Florida, New York, Texas, Oklahoma

Subject: D-400.982 Revision

Referred to: Reference Committee B

Whereas, Medicare physician fee schedule payment reform is a top priority of the American medical Association and policy D-400.982 was passed in 2024; and

Whereas, the House of Delegates should received regular updates regarding the AMA's progress on this issue; therefore be it

RESOLVED, that our American Medical Association reaffirm D-400.982:

1. Our American medical Association will increase media awareness around the 2024 AMA Annual Meeting about the need for Medicare payment reform eliminating budget neutrality reductions, and instituting annual cost of living increases.
2. Our AMA will step up it's public relations campaign to get more buy-in from the general public about the need for Medicare payment reform.
3. Our AMA will increase awareness to all physicians about the efforts of our AMA on Medicare payment reform.
4. Our AMA will advocate for abolition of all MIPS penalties in light of current inadequacies of Medicare payments.

(Reaffirm HOD Policy); and be it further

RESOLVED, that our AMA will report back quarterly to the House of Delegates via open forum on these Medicare Payment Reform initiatives. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 205
(A-26)

Introduced by: Florida, New York, Texas, Oklahoma

Subject: Repeal of the Merit-Based Incentive Payment System (MIPS)

Referred to: Reference Committee B

Whereas, the Merit-Based Incentive Payment System (MIPS) has disproportionately harmed rural physician practices[1], clinicians serving minority and socioeconomically disadvantaged populations[2]. CMS data shows that rural clinicians are 30–40% more likely to receive negative or neutral payment adjustments1. Clinicians treating high-social-risk patients score up to 20 points lower on average, resulting in higher penalty rates[2]; and

Whereas, private, small, and solo practices face significant structural disadvantages under MIPS, with Health Affairs estimating that such practices spend $12,800–$40,000 per clinician annually on MIPS participation and 84% reporting “substantial or extreme” burden—threatening practice viability and accelerating consolidation[3]; and

Whereas, MIPS has not demonstrated meaningful improvement in patient outcomes or reductions in healthcare cost, with the Medicare Payment Advisory Commission (MedPAC) concluding in its 2022 Report to Congress that MIPS is “fundamentally flawed,” “not evidence-based,” and “unlikely to improve quality or efficiency,” and with studies showing MIPS scores are not correlated with validated outcome measures[4]; and

Whereas, physicians spend 200+ hours per year on MIPS-related documentation reducing clinical availability and continuity of care[5]; and

Whereas, MIPS contributes significantly to physician burnout, with the 2023 AMA/Stanford/Press Ganey burnout study identifying federal reporting programs as a top regulatory driver; physicians subjected to high administrative burden are 2.6 times more likely to report intent to leave practice within two years, threatening workforce stability[6]; and

Whereas, MIPS-related administrative costs and penalties accelerate early physician retirement, particularly among older physicians and those in independent practice, with physicians over age 60 being twice as likely to retire early under high regulatory load, while nearly one in five independent physicians report considering closing or selling their practice due to reporting mandates—exacerbating the projected national shortfall of over 100,000 physicians by 2034[7]; and

Whereas, HOD Policy D-400.982, asks our AMA to advocate for abolition of all MIPS penalties in light of the current inadequacies of Medicare payments; therefore be it

RESOLVED, that our American Medical Association support full repeal of the Merit-Based Incentive Payment System (MIPS) (New HOD Policy); and be it further

RESOLVED, that our AMA advocates for immediate administrative relief in MIPS, including expanded low-volume and hardship exemptions for rural and small practices,

shortened/streamlined reporting requirements, and reduction of reporting complexity until MIPS is repealed. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

RELEVANT AMA POLICY

400.982 AMA Efforts on Medicare Payment Reform D-400.982
Our American Medical Association will increase media awareness around the 2024 AMA Annual meeting about the need for Medicare Payment Reform, eliminating budget neutrality reductions, and instituting annual cost of living increases.
Our AMA will step up its public relations campaign to get more buy-in from the general public about the need for Medicare payment reform.
Our AMA will increase awareness to all physicians about the efforts of our AMA on Medicare Payment Reform.
Our AMA will advocate for abolition of all MIPS penalties in light of the current inadequacies of Medicare payments.
BOT Rep. 12, A-24Reaffirmed: Res. 220, I-24

Merit-based Incentive Payment System (MIPS) Update H-385.905
Our American Medical Association supports legislation that ensures Medicare physician payment is sufficient to safeguard beneficiary access to care, replaces or supplements budget neutrality in MIPS with incentive payments, or implements positive annual physician payment updates.
BOT Rep. 13, I-20 Reaffirmed: Res. 212, I-21 Reaffirmed: Res. 220, I-24

MIPS and MACRA Exemption H-390.838
Our American Medical Association will advocate for an exemption from the Merit-Based Incentive Payment System (MIPS) and Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) for small practices. Res. 208, I-16 Reaffirmation: A-17 Reaffirmation: I-17 Reaffirmation: A-18 Reaffirmed: BOT Rep. 13, I-20 Reaffirmed: Res. 212, I-21

Merit-Based Incentive Programs H-478.986
Our AMA will advocate to make the certified vendor-based EHRs accountable for the provision of reports in a format suitable to satisfy physician reporting requirements.
Res. 213, A-16

Preserving Patient Access to Small Practices Under MACRA D-390.949
1. Our AMA will urge the Centers for Medicare and Medicaid Services to protect access to care by significantly increasing the low volume threshold to expand the MACRA MIPS exemptions for small practices (on a voluntary basis), and to further reduce the MACRA requirements for ALL physicians' practices to provide additional flexibility, reduce the reporting burdens and administrative hassles and costs.
2. Our AMA will advocate for additional exemptions or flexibilities for physicians who practice in health professional shortage areas.
3. Our AMA will determine if there are other fragile practices that are threatened by MACRA and seek additional exemptions or flexibilities for those practices.
Res. 243, A-16 Reaffirmation: I-17 Reaffirmation: A-18 Reaffirmed: BOT Rep. 13, I-20

Reducing MIPS Reporting Burden D-395.999
Our American Medical Association will work with the Centers for Medicare and Medicaid Services (CMS) to advocate for improvements to Merit-Based Incentive Payment System (MIPS) that have significant input from practicing physicians and reduce regulatory and paperwork burdens on physicians. In the interim, our AMA will work with CMS to shorten the yearly MIPS data reporting period from one-year to a minimum of 90-days (of the physician’s choosing) within the calendar year.
Res. 236, A-18 Reaffirmation: A-19 Reaffirmed: BOT Rep. 13, I-20 Reaffirmed: Res. 220, I-24

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 206
(A-26)

Introduced by: American Association of Clinical Urologists

Subject: Overall Hospital Quality Star Ratings / CMS Star Ratings

Referred to: Reference Committee B

Whereas, the Overall Hospital Quality Star Rating (CMS Star Rating) summarizes a variety of measures across 5 areas of quality into a single star rating for each hospital; and

Whereas, the Overall Star Rating includes 5 measure groups: *Mortality, Safety of Care, Readmission, Patient Experience, and Timely & Effective Care*; and

Whereas, according to our AMA, the most effective way to maximize the complementary skill sets of all health care professionals is to work as part of a physician-led team; and

Whereas, according to our AMA, physician expertise is widely recognized as integral to quality medical care in the United States. With 7 years or more of postgraduate education and at least 10,000 hours of clinical experience through training, physicians are the natural leaders in the overall delivery of health care; and

Whereas, patients are asked to qualitatively assess hospital quality via patient surveys; and

Whereas, physicians have the unique position as leaders of the health care team to qualitatively assess how hospitals embrace quality in the delivery of patient care; therefore be it

RESOLVED, that our American Medical Association advocate to CMS that the Overall Hospital Quality Star Ratings (CMS Star Ratings) include a 6th measured group defined as *Physician Experience* which would include those physicians who have membership on the hospital medical staff. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 207
(A-26)

Introduced by: American College of Obstetricians and Gynecologists, The American Association of Gynecologic Laparoscopists

Subject: Addressing Rural Maternity Care Deserts Through the Conrad 30 Waiver Program

Referred to: Reference Committee B

Whereas, national hospital data show that in 2022, 52.4% of rural hospitals did not offer obstetric care, reflecting a sustained decline in hospital-based obstetric services; and analyses of rural labor-and-delivery service lines report continued closures since 2020 associated with financial losses and workforce constraints;[1, 2] and

Whereas, rural hospital financial viability and emergency transfer capacity may be affected by workforce migration, liability exposure, and service line limitations; and

Whereas, 64% of foreign-trained physicians practice in medically underserved areas or health professions shortage areas[3]; and

Whereas, nearly 21 million Americans live in areas where foreign-trained physicians account for at least half of physicians[4]; and

Whereas, changes in systems granting J-1 Visas for physicians and other federal administrative or regulatory disruptions can reduce or delay the potential physician workforce in rural areas; and

Whereas, The Conrad 30 Waiver Program (also known as the Conrad State 30 Program) is a federal initiative in the United States designed to address doctor shortages in underserved communities;[5] and

Whereas, the Conrad 30 Waiver program is an essential component for rural health care recruitment, yet the limit of 30 waivers per state has remained stagnant since Congress increased the cap to 30 per state per year in 2003; and

Whereas, there is substantial state-level variation in use of Conrad 30 waivers, with some states filling all 30 slots rapidly while other states do not use their full allotment; therefore be it

RESOLVED, that our American Medical Association update existing policy D 255.985 ”Conrad 30- J1 Visa Waivers” to address current challenges and modernize the program by addition as follows:

- advocate for the redistribution (or recapture) of unused waiver capacity to high-need states; and
- advocate for the streamlining of administrative requirements to shorten timelines for employers and physicians, such as establishing a medical national interest exception and implementing mandatory expedited processing for physician and medical trainee applicants.

(Modify Current HOD Policy)

Fiscal Note: Minimal – less than $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 208
(A-26)

Introduced by: Virginia

Subject: Incorporating Critical Medical Treatment Planning into Emergency/Disaster Preparedness

Referred to: Reference Committee B

Whereas, our American Medical Association encourages hospitals to incorporate disaster plans that address barriers to staff responses during disasters, as stated in H-225.941; and

Whereas, critical medical treatments such as dialysis, chronic oxygen therapy, chemotherapy, and radiation therapy are essential for patient survival and require coordinated planning during emergencies; and

Whereas, interdisciplinary models of cooperative planning involving city/regional authorities, hospitals, physicians, medical equipment providers, and transportation companies can enhance disaster preparedness and response; therefore be it

RESOLVED, that our American Medical Association develop model state legislation and guidelines for incorporating critical medical treatment planning into emergency/disaster preparedness plans (Directive to Take Action); and be it further

RESOLVED, that our AMA support interdisciplinary cooperative planning agreements to ensure continuity of critical medical treatments during emergencies. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/13/26

RELEVANT AMA POLICY

Hospital Disaster Plans and Medical Staffs H-225.941

1. Our AMA encourages: (1) appropriate stakeholders to examine the barriers and facilitators that medical staffs will encounter following a natural or other disaster; and (2) hospitals to incorporate, within their hospital disaster plans, workplace and personal preparedness efforts that reduce barriers to staff responses during a natural or other disaster, both within their institutions and across the community.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 209
(A-26)

Introduced by: Virginia

Subject: Protecting Mental Health Treatment Privacy in Legal Proceedings

Referred to: Reference Committee B

Whereas, the Medical Society of Virginia's SafeHaven program was established in 2020 and provides a confidential resource for healthcare professionals to seek mental health treatment without fear of professional repercussions; and

Whereas, the confidentiality of mental health treatment is essential to encourage healthcare professionals to seek necessary care; and

Whereas, the discoverability of mental health treatment records in civil and criminal trials may deter individuals from seeking treatment due to concerns about privacy and legal exposure; and

Whereas, the American Medical Association has previously adopted a multitude of policies supporting efforts to address issues related to career fatigue and wellness in healthcare professionals and students; therefore be it

RESOLVED, that our American Medical Association develop model state legislation ensuring that mental health treatment records are protected from discoverability in civil and criminal trials, thereby fostering a safe and supportive environment for healthcare professionals to seek necessary mental health care. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/13/26

RELEVANT AMA POLICY

Physician and Medical Student Burnout D-310.968

1. Our American Medical Association recognizes that burnout, defined as emotional exhaustion, depersonalization, and a reduced sense of personal accomplishment or effectiveness, is a problem among residents, fellows, and medical students.
2. Our AMA will work with other interested groups to regularly inform the appropriate designated institutional officials, program directors, resident physicians, and attending faculty about resident, fellow, and medical student burnout (including recognition, treatment, and prevention of burnout) through appropriate media outlets.
3. Our AMA will encourage partnerships and collaborations with accrediting bodies (e.g., the Accreditation Council for Graduate Medical Education and the Liaison Committee on Medical Education) and other major medical organizations to address the recognition, treatment, and prevention of burnout among residents, fellows, and medical students and faculty.
4. Our AMA will encourage further studies and disseminate the results of studies on physician and medical student burnout to the medical education and physician community.
5. Our AMA will continue to monitor this issue and track its progress, including publication of peer-reviewed research and changes in accreditation requirements.

6. Our AMA encourages the utilization of mindfulness education as an effective intervention to address the problem of medical student and physician burnout.
7. Our AMA will encourage medical staffs and/or organizational leadership to anonymously survey physicians to identify local factors that may lead to physician demoralization.
8. Our AMA will continue to offer burnout assessment resources and develop guidance to help organizations and medical staffs implement organizational strategies that will help reduce the sources of physician demoralization and promote overall medical staff well-being.
9. Our AMA will continue to:
    a. address the institutional causes of physician demoralization and burnout, such as the burden of documentation requirements, inefficient work flows and regulatory oversight.
    b. develop and promote mechanisms by which physicians in all practices settings can reduce the risk and effects of demoralization and burnout, including implementing targeted practice transformation interventions, validated assessment tools and promoting a culture of well-being.
10. Our AMA supports physicians who are caregivers to alleviate physician burnout.

Factors Causing Burnout H-405.948

1. Our American Medical Association recognizes that medical students, resident physicians, and fellows face unique challenges that contribute to burnout during medical school and residency training, such as debt burden, inequitable compensation, discrimination, limited organizational or institutional support, stress, depression, suicide, childcare needs, mistreatment, long work and study hours, among others, and that such factors be included as metrics when measuring physician well-being, particularly for this population of physicians.

Programs on Managing Physician Stress and Burnout H-405.957

1. Our American Medical Association supports existing programs to assist physicians in early identification and management of stress and the programs supported by the AMA to assist physicians in early identification and management of stress will concentrate on the physical, emotional and psychological aspects of responding to and handling stress in physicians' professional and personal lives, and when to seek professional assistance for stress-related difficulties.
2. Our AMA will review relevant modules of the STEPs Forward Program and also identify validated student-focused, high quality resources for professional well-being, and will encourage the Medical Student Section and Academic Physicians Section to promote these resources to medical students.

Physician Health Programs H-405.961

1. Our AMA affirms the importance of physician health and the need for ongoing education of all physicians and medical students regarding physician health and wellness.
2. Our AMA encourages state medical societies to collaborate with the state medical boards to: (a) develop strategies to destigmatize physician burnout; and (b) encourage physicians to participate in the state’s physician health program without fear of loss of license or employment.

Physician Burnout D-405.972

1. Our American Medical Association will work with Centers for Medicare and Medicaid Services (CMS), The Joint Commission, and other accrediting bodies and interested stakeholders to add an institutional focus on physician wellbeing as an accreditation standard for hospitals, focusing on system-wide interventions that do not add additional burden to physicians.
2. Our AMA will work with hospitals and other stakeholders to determine areas of focus on physician wellbeing, to include the removal of intrusive questions regarding physician physical or mental health or related treatments on initial or renewal hospital credentialing applications.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 210
(A-26)

Introduced by: Mississippi

Subject: Eliminating Prescription Drug Adherence (PDA) as a Quality Metric Tied to Physician Ratings or Compensation

Referred to: Reference Committee B

Whereas, multiple studies show the tremendous financial and human resource burden imposed upon physician practices by health insurance companies; and

Whereas, while filling medications is foundational to PDA, it does not guarantee that a patient will take the medication; and

Whereas, PDA metrics cause physicians to assume more than a reasonable amount of responsibility for patient behavior; and

Whereas, patient behavior regarding adherence to treatment plans is poorly controlled by physicians; and

Whereas, it is unfair, burdensome, and unrealistic to continue associating PDA with physician rating and compensation; therefore be it

RESOLVED, that our American Medical Association advocate against the use of patient Prescription Drug Adherence (PDA) as a quality metric tied in any manner to physician ratings or compensation. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/13/26

RELEVANT AMA POLICY

D-450.958 Pain Medicine and Patient Adherence in Quality Care Assessment

1. Our AMA continues to advocate that the Centers for Medicare & Medicaid Services not incorporate items linked to pain scores and adherence to physician recommendations as part of the Consumer Assessment of Healthcare Providers and Systems Clinician and Group Surveys and the Hospital Consumer Assessment of Healthcare Providers and Systems scores in future surveys.
2. Our AMA encourages hospitals, clinics, health plans, health systems, and academic medical centers not to link physician compensation, employment retention or promotion, faculty retention or promotion, and provider network participation to patient satisfaction scores relating to the evaluation and management of pain and better adherence to physician recommendations. [BOT Rep. 5, I-15 Modified: CMS Rep. 07, A-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 211
(A-26)

Introduced by: Mississippi

Subject: Preventing Hospital-Based 340B Programs from Unfairly Competing with Independent Physicians

Referred to: Reference Committee B

Whereas, patients can receive expensive medications much cheaper when those medications are prescribed by a provider employed by a covered entity under the 340B program; and

Whereas, independent physicians are not covered entities; and

Whereas, it is favorable for patients have access to expensive medications for lower costs but unfavorable that patients of independent physicians are excluded from the lower cost medications; and

Whereas, this practice unfairly punishes patients of independent physicians; and

Whereas, this practice incentivizes patients to seek care from physicians and non-physician prescribers employed by covered entities in lieu of independent physicians; and

Whereas, this practice unfairly places independent physicians at a disadvantage regarding building and maintaining a medical practice; therefore be it

Resolved, that our American Medical Association advocate for the patients of any physician practicing in the same county (or equivalent region) that contains a covered 340B entity to receive reduced cost medications under the 340b program through the covered entity's contracted pharmacy. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/13/26

RELEVANT AMA POLICY

H-110.985 340 B Drug Discount Program
Our AMA: (1) will advocate for 340B Drug Discount Program (340B program) transparency, including an accounting of covered entities' 340B savings and the percentage of 340B savings used directly to care for underinsured patients and patients living on low-incomes; (2) will support recommendations to equip the Health Resources and Services Administration (HRSA) with more authority, resources and staff to conduct needed 340B program oversight; (3) recognizes the 340B program does not support the extent of care provided by ineligible physician practices to the medically indigent or underserved, and work with HRSA to establish 340B eligibility for all practices demonstrating a commitment to serving low-income and underserved patients; (4) will support a revised 340B drug discount program covered entity eligibility formula, which appropriately captures the level of outpatient charity care provided by hospitals, as well as standalone community practices; and (5) will confer with national medical specialty societies on providing policymakers with specific recommended covered entity criteria for the 340B drug discount program. [Res. 255, A-18 Appended: BOT Rep. 08, I-18]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 212
(A-26)

Introduced by: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Subject: Protecting Patient Access to Clinical Trials and Mitigating Administrative Disruptions to NIH Funding

Referred to: Reference Committee B

Whereas, The National Institutes of Health (NIH) supports medical investigations that translate into life-saving treatments, providing the foundation for 99.4% of new treatments approved by the Food and Drug Administration between 2010 and 2019, and directly impacting patient care, clinical practice, and public health nationwide;[1] and

Whereas, our American Medical Association (AMA) has continuously championed the necessity of robust NIH funding;[2] and

Whereas, the AMA has engaged in strong federal advocacy to protect this enterprise, including sending a July 2025 letter to Congressional leadership warning that proposed funding cuts and radical reorganizations of the NIH would have serious consequences for the health of the American people and local economies;[2] and

Whereas, a new administrative framework termed "Gold Standard Science" has been utilized to abruptly terminate hundreds of active grants deemed misaligned with newly defined agency priorities;[3] and

Whereas, between February 28 and April 8, 2025, the NIH terminated 694 active grants cumulatively valued at $1.81 billion, and the NIH Director has indicated that previously reinstated grants will face non-renewal during the 2026 cycle if they do not conform to these ideological priorities;[4] and

Whereas, these abrupt mid-project terminations disrupted approximately 1 in 30 active clinical trials nationwide, halting 383 clinical studies (3.5% of actively recruiting trials) and directly affecting more than 74,000 participants;[5] and

Whereas, canceling active clinical trials for political or ideological reasons leaves enrolled patients facing delayed treatments, lost access to experimental medications, or unmonitored medical device implants, thereby profoundly breaching bioethical obligations to human subjects and eroding public trust; and

Whereas, the federally-funded research ecosystem is facing severe liquidity constraints because the White House Office of Management and Budget (OMB) missed the deadline to authorize release of FY 2026 funds to the NIH, preventing spending on essential expenses (e.g., salaries) and preventing disbursement of newly appropriated research capital;[6] and

Whereas, in the 12-month period ending in June 2025, U.S. academic institutions were awarded nearly $5 billion less in NIH research grants compared to the prior year as a result of systemic disruptions and slowdowns in the federal grant awarding process;[7] and

Whereas, these disruptions have persisted into the current cycle, with the NIH awarding only 1,189 new and competitive renewal grants this fiscal year through early March 2026, a drastic reduction from the 2,322 grants awarded during the same period last year, and 74% fewer grants than in FY 2021-2024, despite Congress enacting increased funding for the NIH;[8,9] and

Whereas, administrative mandates forcing the "forward-funding" or "front-loading" of multi-year NIH grants, a practice requiring the agency to distribute the entire multi-year grant value upfront out of a single year's appropriation, mathematically starve the pipeline of new clinical trials, resulting in 5,564 fewer grants funded in FY 2025 and driving down overall grant success rate to a historic low of ~17%;[10] and

Whereas, the AMA joined over 40 physician organizations in an March 2025 letter sounding the alarm that the unilateral implementation of a strict 15% cap on indirect (Facilities and Administrative) costs will inflict "profound and generational" damage on scientific progress by severely underfunding the essential infrastructure, equipment, and compliance personnel necessary to responsibly conduct medical studies;[11] and

Whereas, this arbitrary cap, which replaces actual historical averages of 38% to 39%, is projected to reduce federal funding to academic institutions by $5.24 billion annually, causing an estimated $6.1 billion decrease in the United States Gross Domestic Product (GDP) and creating massive operational deficits that threaten active clinical trials;[1] therefore be it

RESOLVED, that our American Medical Association amend Policy D-460.960 by addition and deletion to read as follows:
2. Our AMA advocates against reorganization, consolidation or re-prioritization of the NIH when such action:

a. lacks transparency or is implemented without meaningful input from the biomedical research and physician communities; and
b. results in a reduction of funding that jeopardizes ongoing or long-term research through premature cancellation of grants, contracts, or programs essential to public health, biomedical innovation, or patient care; and
c. is driven by frameworks that bypass validated, merit-based scientific peer-review processes or violate ethical obligations to human subjects. (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA advocate for the immediate approval of the NIH spend plan and the full apportionment of congressionally appropriated funds by the Office of Management and Budget (OMB), and advocate against any future use of administrative apportionment delays to artificially restrict or impound biomedical research funding (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate against the mandatory "forward-funding" or "front-loading" of multi-year NIH grants, which is the practice of distributing the entire multi-year total value of a grant upfront out of a single fiscal year's limited appropriation rather than the historical practice of disbursing annual grant allowances from the appropriations of those individual years, to prevent drastic reductions to the total number of potential new grants and clinical trials that can be awarded (Directive to Take Action); and be it further

RESOLVED, that our AMA reaffirm Policy D-460.961, which opposes arbitrary and unilateral caps on indirect costs in federal grants. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/14/26

RELEVANT AMA POLICY

H-460.930 Importance of Clinical Research
(1) Given the profound importance of clinical research as the transition between basic science discoveries and standard medical practice of the future, the AMA will a) be an advocate for clinical research; and b) promote the importance of this science and of well-trained researchers to conduct it.
(2) Our AMA continues to advocate vigorously for a stable, continuing base of funding and support for all aspects of clinical research within the research programs of all relevant federal agencies, including the National Institutes of Health, the Agency for Healthcare Research and Quality, the Centers for Medicare & Medicaid Services, the Department of Veterans Affairs and the Department of Defense.
(3) The AMA believes it is an inherent obligation of capitation programs and managed care organizations to invest in broad-based clinical research (as well as in health care delivery and outcomes research) to assure continued transition of new developments from the research bench to medical practice. The AMA strongly encourages these groups to make significant financial contributions to support such research.
(4) Our AMA continues to encourage medical schools a) to support clinical research; b) to train and develop clinical researchers; c) to recognize the contribution of clinical researchers to academic medicine; d) to assure the highest quality of clinical research; and e) to explore innovative ways in which clinical researchers in academic health centers can actively involve practicing physicians in clinical research.
(5) Our AMA encourages and supports development of community and practice-based clinical research networks. [CSA Rep. 2, I-96 Reaffirmed: CSA Rep. 13, I-99 Reaffirmation A-00 Reaffirmed: CME Rep. 4, I-08 Modified: CSAPH Rep. 01, A-18]

D-460.960 Opposing Unwarranted National Institutes of Health Research Institute Restructuring
1. Our American Medical Association advocates for an independent NIH reorganization advisory commission composed of interested parties, including physicians, scientists, researchers, academics, and patient advocacy organizations, to ensure that any proposed restructuring of the NIH is guided by medical, scientific, and public health expertise and serves the best interests of patients and the scientific community
2. Our AMA advocates against reorganization or consolidation of the NIH when such action:
    a. lacks transparency or is implemented without meaningful input from the biomedical research and physician communities; and
    b. results in a reduction of funding that jeopardizes ongoing or long-term research through premature cancellation of grants, contracts, or programs essential to public health, biomedical innovation, or patient care.
3. Our AMA supports study of the short- and long-term impacts of federal biomedical research funding reductions, including medical innovation, the healthcare workforce, medical education, public health and local economies and communities.
4. Our AMA publicly opposes the reduction of research funding and funding opportunities from the NIH. [Res. 219, A-25]

D-460.961 NIH Grant Funding for Medical Research

1. H-460.973 Protection of Scientific Freedom from Special Interest Groups Our AMA will work with the National Institutes of Health (NIH), other governmental funding agencies, and relevant stakeholders to oppose arbitrary and unilateral caps on indirect costs, including facilities and administrative reimbursements, in federal grants (including NIH grants and other governmental funding agencies) or any funding policy that restricts critical early-stage and independent research as well as grant-funded training programs.
2. Our AMA will work with the National Institutes of Health (NIH), other governmental funding agencies, and relevant stakeholders to protect the ability of research institutions to negotiate indirect cost rates to ensure the sustainability of federally funded biomedical research.
3. Our AMA will advocate for targeted reforms to streamline administrative and regulatory requirements in order to achieve sustainable cost reductions while preserving essential research infrastructure. [Res. 502, A-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 213
(A-26)

Introduced by: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont

Subject: Prohibiting Pharmacy Benefit Managers from Owning Pharmacies

Referred to: Reference Committee B

Whereas, pharmacy benefit manager (PBM) practices harm patients by raising patient costs, limiting access to necessary medications, and threatening the viability of independent pharmacies, increasing pharmacy deserts[1, 2]; and

Whereas, PBMs steer patients toward pricier drugs and charge steep markups on what would otherwise be inexpensive medicines. and extract billions of dollars in hidden fees from patients, pharmacists, and health systems[1]; and

Whereas, PBMs frequently push higher-priced medications even when an inexpensive generic of a drug is available. PBMs sometimes have a financial reason to push patients to take a more expensive brand-name product. The higher the original sticker price, the larger the discounts the PBMs can demand, even if the ultimate discounted price of the brand-name drug remains higher than the cost of the generic[3]; and

Whereas, mergers and buyouts have concentrated 80 percent of the industry into the hands of three major players: CVS Caremark, owned by CVS Health; Express Scripts, owned by Cigna; and Optum Rx of United Health Group, minimizing any competition[4]; and

Whereas, in 2025, Arkansas passed legislation placing limits on PBMs' ability to own, manage, or control pharmacies[5] and Louisiana passed legislation increasing regulations on how PBMs operate[6]; and currently, Arizona, Tennessee, and Oklahoma are considering legislation that would prohibit PBMs from owning or holding, directly or indirectly, pharmacy permits in the states[7]; therefore be it

RESOLVED, that our American Medical Association develop model state legislation empowering state insurance regulating bodies to regulate pharmacy benefits managers (PBMs) and prevent PBMs from owning or operating pharmacies**.** (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

D-120.919 Pharmacy Benefit Manager (PBM) Divestiture and Transparency

1. Our American Medical Association will work with appropriate parties to support and lobby for divestment of Pharmacy Benefit Managers (PBMs) from ownership by insurance companies.

2. Our AMA will work with appropriate parties to support and lobby for divestment of PBMs from owning affiliate pharmacies and infusion centers. [Res. 210, I-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 214
(A-26)

Introduced by: New York

Subject: Medical Student Loans Should Not Be Capped

Referred to: Reference Committee B

Whereas, the H. R. 1 - One Big Beautiful Bill Act restricts medical school debt starting July 1, 2026, capping unsubsidized loans at $50,000 annually with a cap of $200,000, ending the unlimited Grad PLUS program, and imposing a new lifetime cap of $257,500 across all higher education; and

Whereas, costs of attending medical school can exceed $300,000, and the lack of federal loans will force students to rely on private loans with higher interest rates and less flexible terms; and

Whereas, these changes will disproportionately affect minority and low-income students and worsen physician shortages; and

Whereas, these restrictions come in addition to new conditions on the Public Service Loan Forgiveness program, which enables healthcare workers to work in high-need areas to erase debt over a decade; and

Whereas, the default rate for physicians is very low, approximately 5%; therefore be it

RESOLVED, that our American Medical Association oppose the caps on medical student debt as a result of the H. R. 1 - One Big Beautiful Bill Act. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 215
(A-26)

Introduced by: New York

Subject: Oppose Medicare Efficiency Adjustments

Referred to: Reference Committee B

Whereas, the Centers for Medicare & Medicaid Services (CMS) released its 2026 Medicare Physician Payment Schedule (PFS) and included a new number called an efficiency adjustment; and

Whereas, CMS applied this efficiency adjustment of a 2.5 percent decrease to work RVUs and physician intra-service time for most services on the assumption that physicians have gained efficiency in providing them, excluding time-based services such as E/M; and

Whereas, CMS claims to use the Medicare Economic Index (MEI) to determine this number, yet physicians do not receive MEI-based updates; and

Whereas, CMS ignores extensive data collection that could be used, instead relying on flawed physician surveys to estimate physician time; therefore be it

RESOLVED, that the American Medical Association support all efforts, whether by legislation or regulation, to restrict the use of arbitrary new factors such as the efficiency adjustment used in the 2026 Medicare Physician Payment Schedule. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 216
(A-26)

Introduced by: New York

Subject: Protecting Healthcare as a Sensitive Location

Referred to: Reference Committee B

Whereas, the Medical Society of the State of New York (MSSNY) and the American Medical Association (AMA) have aligned policy on healthcare as sensitive locations and protected areas for everyone, including immigrants (MSSNY policy207.299; AMA policyD-160.921); and

Whereas, AMA policy opposes criminalization of medical care provided to undocumented immigrant patients, including collection and reporting of immigration status or withholding of federal funds (H-440.876); opposes use of medical information by immigration authorities (H-7315.966); and opposes mass deportation and targeting of health care workers and medically vulnerable patients based on immigration status (H-440.793); and

Whereas, there exists limited New York State guidance and limited national accreditation standards for health care facilities on immigration enforcement; and

Whereas, federal immigration enforcement is increasingly undermining patient care by entering health care facilities and accessing health information, and patients fearing immigration enforcement's presence in healthcare facilities are less likely to go there for routine healthcare, preventive care, or emergencies which leads to them presenting later and sicker and having worse health outcomes; therefore be it

RESOLVED, that our American Medical Association reaffirm its policies Presence and Enforcement Actions of Immigration and Customs Enforcement (ICE) in Healthcare (D-160.921), Opposition to Criminalization of Medical Care Provided to Undocumented Immigrant Patients (H-440.876), Mass Deportation as a Public Health Issue (H-440.793), and Patient and Physician Rights Regarding Immigration Status (H-315.966) (Reaffirm HOD Policy); and be it further

RESOLVED that our AMA collaborate with state societies where immigration enforcement in health care facility guidance has been developed, and with the AMA Advocacy Resource Center, to develop model legislation and regulation for states to adopt to better protect patients and health care workers from inappropriate intrusion of federal immigration agents in health care facilities (Directive to Take Action); and be it further

RESOLVED, that our AMA collaborate with relevant stakeholders, including accrediting bodies, to develop health care facility standards related to immigration enforcement. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/14/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 217
(A-26)

Introduced by: Michigan

Subject: Ensuring Proportional Accountability for Hospital Expenditures Attributed to Medicare ACOs

Referred to: Reference Committee B

Whereas, in traditional Medicare fee-for-service, hospital care accounts for approximately 41–43 percent of total Medicare spending, while physician and clinical services account for approximately 22–24 percent; and

Whereas, inpatient and outpatient hospital facility expenditures represent the largest single driver of total cost performance within the Medicare Shared Savings Program (MSSP) and materially affect shared savings and downside risk reconciliation; and

Whereas, hospital outpatient services have been among the fastest-growing components of Medicare spending over the past decade, in part due to site-of-service payment differentials that allow hospital outpatient departments to bill higher rates than independent physician offices for comparable services; and

Whereas, under the Medicare Shard Savings Program (MSSP), total cost of care calculations for an Accountable Care Organization (ACO) include all Medicare expenditures incurred by ACO-assigned beneficiaries, including hospital inpatient and outpatient facility spending, regardless of whether the hospital maintains a participation or financial accountability agreement with the ACO contracting entity; and

Whereas, physicians participating in ACO contracting entities may be exposed to shared savings reductions or downside financial risk based on hospital expenditures over which they do not have direct operational or financial control; and

Whereas, hospitals that receive substantial volumes of ACO-attributed Medicare beneficiaries benefit from patient flow generated through ACO care coordination efforts yet, are not uniformly required to assume proportionate financial accountability for total cost performance; therefore be it

RESOLVED, that our American Medical Association advocate that the Centers for Medicare & Medicaid Services establish policies requiring hospitals that receive substantial expenditures attributable to ACO-assigned beneficiaries to enter defined participation and financial accountability agreements with the relevant ACO contracting entity (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate that, absent such defined participation and accountability agreements, hospital expenditures for ACO-assigned beneficiaries not be included in total cost of care reconciliation calculations under the Medicare Shared Savings Program or other advanced alternative payment models (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for enhanced transparency of hospital facility spending attributable to ACO-assigned beneficiaries within benchmarking and reconciliation methodologies (Directive to Take Action); and be it further

RESOLVED, that our AMA to study and report on policy mechanisms to ensure equitable financial accountability for hospital expenditures attributed to Medicare ACOs, including mechanisms addressing site-of-service payment differentials and facility fee impacts. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 218
(A-26)

Introduced by: Kansas

Subject: Opposing the Practice of Jury Anchoring in Medical Liability Cases

Referred to: Reference Committee B

Whereas, medical professional liability costs are increasing for physicians across the country; and

Whereas, from 2013 to 2023, there was approximately a 67 percent increase in the number of medical liability awards of $10 million or more; and in 2023, 57 verdicts of $10 million or more were awarded, with more than half of these verdicts exceeding $25 million[1]; and

Whereas, these increased liability claim costs and resulting premium increases stem in part from new trial tactics such as jury anchoring, in which plaintiffs' attorneys take advantage of a phenomenon known as "anchor bias," whereby individuals give disproportionate weight to the initial information they receive when making decisions; and

Whereas, plaintiffs' attorneys in medical liability litigation employ anchoring bias to obtain outsized non-economic damage awards by requesting amounts that are not based on objective evidence; and

Whereas, outsized damage awards are a major driver of medical professional liability insurance claims, which in turn drive premium increases, contribute to physician shortages, and threaten patient access to care; therefore be it

RESOLVED, that our American Medical Association opposes the practice of jury anchoring in medical liability litigation, specifically as it related to non-economic damages. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 219
(A-26)

Introduced by: American College of Lifestyle Medicine

Subject: Incorporating Evidence-Based Lifestyle Medicine into Rural Health Transformation Programs

Referred to: Reference Committee B

Whereas, rural health in the United States is in crisis per decades of hospital closures, clinician shortages and losses of essential services that have left millions of people without reliable access to care and worsened health outcomes; and

Whereas, chronic challenges to providing adequate rural health were compounded by the newly $1 trillion cuts to Federal health care funding; and

Whereas, the Congress established the Rural Health Transformation Program (RHTP) as a partial remedy for those cuts by providing $50 billion in awards to rebuild and reshape states' health care systems, not backfill…operating budgets; and

Whereas, the RHTP's primary objective is to "Make Rural America Healthy Again" by strategies that will support rural health innovations and new access points to promote preventative health and address root causes of diseases via Projects that will use evidence-based, outcomes driven interventions to improve disease prevention, chronic disease management, behavioral health, and prenatal care; and

Whereas, fifty percent of the $50 billion must be divided equally among states with approved applications ($100 million per state per year; and the remaining 50% will be distributed by CMS ($5 billion per year) based on factors identified in the Notice of Funding Opportunity (NOFO); and

Whereas, this funding structure ensures a minimum level of support for every participating state along with a substantial discretion for the CMS to further support states whose project priorities align with Federal interests; and

Whereas, within the NOFO, states are required to implement at least three of the ten activity categories described in Section 71401. Three of these categories closely align with the principles and practice of Lifestyle Medicine: (a) promoting evidence-based, measurable interventions to enhance prevention and chronic disease management; (b) advancing consumer-facing, technology-driven solutions for chronic disease prevention and management; and (c) providing payments to health care providers for covered health care items and services; and

Whereas, additional delineation of these categories highlights collaborative strategies for rural health facilities, including: (a) advancing sustainable access through initiatives that enhance practitioner efficiency, operational sustainability, and shared coordination of technology and clinical services across primary, specialty, and emergency care; and (b) promoting innovative care models that aim to improve health outcomes, optimize care coordination, and enable

flexible delivery structures, supported by payment mechanisms that align provider and Accountable Care Organizations' incentives with cost reduction, quality improvement, and care delivery in lower-cost settings; and

Whereas, some aspects of the current Administration's preferred policies may be acceptable to healthcare systems, such as including nutrition training in continuing medical education; and

Whereas, the principles and practice of Lifestyle Medicine are grounded in evidence-based, reproducible, and measurable health care, emphasizing the identification and treatment of underlying drivers of chronic disease through a collaborative physician–patient partnership; and

Whereas, the principles and practices of Lifestyle Medicine seek to reduce the long-term costs of care for chronic diseases through reduction of the need for medications and repetitive therapies; therefore be it

RESOLVED, that our American Medical Association encourage State Constituent Medical Associations to work collaboratively with their respective State Departments of Health to incorporate implementation of the principles and practices of lifestyle medicine within the design of their respective State's Rural Health Transformation Program, thereby satisfying some of the scored requirements/categories of the Rural Health Transformation Program application (New HOD Policy); and be it further

RESOLVED, that our AMA encourage State Constituent Medical Associations to work collaboratively with their respective State Departments of Health to include nutrition continuing medical education as an effective strategy to satisfy one of the scored requirements/categories of the Rural Health Transformation Program application. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

H-465.994 Improving Rural Health

1. Our American Medical Association:
- supports continued and intensified efforts to develop and implement proposals for improving rural health care and public health,
- urges physicians practicing in rural areas to be actively involved in these efforts, and
- advocates widely publicizing AMA's policies and proposals for improving rural health care and public health to the profession, other concerned groups, and the public.

2. Our AMA will work with other entities and organizations interested in public health to:
- Encourage more research to identify the unique needs and models for delivering public health

and health care services in rural communities.
- Identify and disseminate concrete examples of administrative leadership and funding structures that support and optimize local, community-based rural public health.
- Develop an actionable advocacy plan to positively impact local, community-based rural public health including but not limited to the development of rural public health networks, training of current and future rural physicians and public health professionals in core public health techniques and novel funding mechanisms to support public health initiatives that are led and managed by local public health authorities.
- Advocate for adequate and sustained funding for public health staffing and programs

3. Our American Medical Association will work with relevant stakeholders to develop a national strategy to eliminate rural cancer disparities in screening, treatment, and outcomes and achieve health equity in cancer outcomes across all geographic regions.
4. Our AMA calls for increased federal and state funding to support research on rural cancer disparities and equity in care, access, and outcomes and development of interventions to address those disparities.
5. Our AMA advocates for evidence-based collaborative models for innovative telementoring/ teleconsultation between health care systems, academic medical centers, and community physicians to improve access to cancer screening, diagnosis, treatment, rehabilitation, and patient services in rural areas. [Sub. Res. 72, I-88 Reaffirmed: Sunset Report, I-98 Reaffirmed: CLRPD Rep. 1, A-08 Reaffirmed: CEJA Rep. 06, A-18 Appended: Res. 433, A-19 Modified: CSAPH Rep. 2, A-22 Reaffirmed: CMS Rep. 09, A-23 Reaffirmed: Res. 724, A-23 Appended: Res. 919, I-24 Reaffirmed: Res. 237, I-25 Reaffirmed: CMS Rep. 03, I-25]

H-465.997 Access to and Quality of Rural Health Care
1. Our American Medical Association believes that solutions to access problems in rural areas should be developed through the efforts of voluntary local health planning groups, coordinated at the regional or state level by a similar voluntary health planning entity. Regional or statewide coordination of local efforts will not only help to remedy a particular community's problems, but will also help to avoid and, if necessary, resolve existing duplication of health care resources.
2. In addition to local solutions, our AMA believes that on a national level, the implementation of Association policy for providing the uninsured and underinsured with adequate protection against health care expense would be an effective way to help maintain and improve access to care for residents of economically depressed rural areas who lack adequate health insurance coverage. Efforts to place National Health Service Corps physicians in underserved areas of the country should also be continued.[CMS Rep. G, A-87 Modified: Sunset Report, I-97 Reaffirmation A-01 Reaffirmed: CMS Rep. 7, A-11 Reaffirmed: CMS Rep. 1, A-21 Reaffirmed: BOT Rep. 07, I-24 Reaffirmed: CMS Rep. 03, I-25]

H-465.972 Payment Models to Sustain Rural Hospitals
1. Our American Medical Association believes that rural hospitals are essential to the communities they serve. To ensure that these hospitals have adequate support to remain open and financially viable, our AMA will continue to work with interested national medical specialty societies and state medical associations to:
- support and monitor novel payment models for rural hospitals and encourage uniform reporting; and
- support educating patients, physicians, and non-physician practitioners on alternative payment models for rural hospitals.

2. Our AMA supports that funds allocated for rural hospitals be used to enhance or maintain rural health care.
3. Our AMA will work to vigorously oppose Medicaid cuts as they significantly impact at-risk rural hospitals. [CMS Rep. 03, I-25]

H-170.995 Healthful Lifestyles
The AMA believes that consumers should be encouraged and assisted to learn healthful practices by: (1) educating and motivating the consumers to adopt more healthful lifestyles; (2) exploring methods of utilizing public communication more effectively in health education efforts directed towards motivating consumers to adopt healthful lifestyles; (3) encouraging consumers, in appropriate risk groups, to utilize professional preventive health care services which would permit the early detection and treatment, or the prevention, of illness; and physicians demonstrating these practices through personal examples of health

lifestyles.[BOT Rep. A, NCCMC Rec. 48, A-78 Reaffirmed: CLRPD Rep. C, A-89 Res. 402, I-94 Reaffirmed: CSA Rep. 6, A-04 Reaffirmed: BOT Rep. 8, I-06 Reaffirmed: CSAPH Rep. 01, A-16]

H-425.972 Healthy Lifestyles

1. Our AMA: (A) recognizes the 15 competencies of lifestyle medicine as defined by a blue ribbon panel of experts convened in 2009 whose consensus statement was published in the Journal of the American Medical Association in 2010; (B) will urge physicians to acquire and apply the 15 clinical competencies of lifestyle medicine, and offer evidence-based lifestyle interventions as the first and primary mode of preventing and, when appropriate, treating chronic disease within clinical medicine; and (C) will work with appropriate federal agencies, medical specialty societies, and public health organizations to educate and assist physicians to routinely address physical activity and nutrition, tobacco cessation and other lifestyle factors with their patients as the primary strategy for chronic disease prevention and management.
2. Our AMA supports policies and mechanisms that incentivize and/or provide funding for the inclusion of lifestyle medicine education and social determinants of health in undergraduate, graduate and continuing medical education.[Res. 423, A-12 Appended: Res. 959, I-17 Reaffirmed: Res. 302, A-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 220
(A-26)

Introduced by: Ohio

Subject: Reverse CMS Cuts to Facility-Based Practice Expense Payments for Physicians

Referred to: Reference Committee B

Whereas, effective 01/01/2026, The CY 2026 Physician Fee Schedule final rule (CMS-1832-F) significantly reduced the practice expense portion of physician payments for services provided in the facility setting; and

Whereas, cuts to practice expense will be destabilizing to the healthcare system, causing significant disruption in access to healthcare services, particularly for those in rural and underserved areas, by removing urgently needed resources from physicians; and

Whereas, many specialists are classified as “facility-based” but work as independent practices or professional corporations and are not directly salaried by a hospital, as the rule suggests. As a result, they incur rent for their own office space and utility expenses, employ and train administrative and clinical support staff, and shoulder ongoing costs for equipment, information technology, quality improvement programs, biosafety and compliance infrastructure, which should be adequately compensated by CMS; and

Whereas, independent physician groups operate around the country, tending to be smaller local, rural or regional groups. Groups like these are reliant on their expected venue for services provided, and certainly expend significant practice expense. These physician groups do not have the ability to absorb significant cuts to payments the way a large health system may be able. These cuts will force many independent physician groups to sell their practices to hospitals, health systems, or larger entities – in direct contradiction to CMS’ states goals[1]; and

Whereas, these practice expense cuts will negatively impact all medical specialties that perform services in the hospital-based setting, causing across-the-board harm to our patients and our communities; therefore be it

RESOLVED, that our American Medical Association write and promote federal legislation to reverse CY 2026 Physician Fee Schedule (CME-1832-F) reductions to facility-based practice expenses payments for physicians – retroactive to 01/01/2026 – and codify future payment updates by linking these payments to the Medicare Economic Index (MEI). (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 221
(A-26)

Introduced by: American Academy of Otolaryngology – Head and Neck Surgery, American Academy of Pediatrics, Minnesota Medical Association

Subject: Universal Newborn Congenital Cytomegalovirus Screening

Referred to: Reference Committee B

Whereas, congenital Cytomegalovirus (cCMV) is the leading cause of non-genetic birth defects in the United States, and can cause sensorineural hearing loss, lasting seizure disorders, and other developmental disorders; and

Whereas, roughly one in every 200 United States newborns have cCMV, most are asymptomatic at birth, and 2,230 infants develop sensorineural hearing loss annually; and

Whereas, cCMV must be diagnosed within the first 21 days of life to distinguish it from postnatal CMV infection, which is not associated with hearing loss or other developmental disorders; and

Whereas, the American Academy of Otolaryngology – Head and Neck Surgery supports universal newborn cCMV screening;[1] and

Whereas, Minnesota and Connecticut have adopted universal newborn cCMV screening; and

Whereas, many cCMV positive newborns who are asymptomatic at birth develop late-onset hearing loss;[2 3] and

Whereas, children with late-onset hearing loss have a mean age of detection of 27 months; and

Whereas, the critical age for intervention in childhood hearing loss, including speech and language services and amplification, is prior to age 18-20 months; and

Whereas, after Minnesota implemented universal cCMV screening, the time of first audiology visit dropped from 8.5 months of age to roughly 25 days of age on average, and the number of diagnoses jumped from about 3 per year to 61 per year;[4] and

Whereas, early detection of cCMV offers the option of antiviral therapy, which has been associated with a decrease in severity and a delay in the progression of hearing loss; therefore be it

RESOLVED, that our American Medical Association support state legislation and policies requiring universal newborn screening for congenital cytomegalovirus (cCMV) (New HOD Policy); and be it further

RESOLVED, that our AMA support federal legislation and policies that expand newborn screening for congenital cytomegalovirus (cCMV) and increase funding for public awareness, prevention, and research related to congenital cytomegalovirus infection. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/15/26

RELEVANT AMA POLICY

H-245.970 Early Hearing Detection and Intervention

1. Our AMA supports early hearing detection and intervention to ensure that every infant receives proper hearing screening, diagnostic evaluation, intervention, and follow-up in a timely manner.

2. Our AMA supports federal legislation that provides for the development and monitoring of statewide programs and systems for hearing screening of newborns and infants, prompt evaluation and diagnosis of children referred from screening programs, and appropriate medical, educational, and audiological interventions and follow-up for children identified with hearing loss.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 222
(A-26)

Introduced by: Georgia

Subject: Advocating for a Centralized Medicare Enrollment Platform to Preserve Patient Choice Between Traditional Medicare and Medicare Advantage

Referred to: Reference Committee B

Whereas, Medicare is a critical federal program that provides health insurance coverage to over 60 million Americans, including seniors and individuals with disabilities; and

Whereas, beneficiaries currently have the option to enroll in either Traditional Medicare (Parts A and B) or a Medicare (Dis)Advantage (Part C) plan offered by private insurers, allowing them to choose the coverage that best meets their individual health and financial needs; and

Whereas, the right of beneficiaries to choose between Traditional Medicare and Medicare Advantage should be preserved; and

Whereas, the right of beneficiaries to change their coverage from time to time should be more seamless, readily identifiable, and flexible; and

Whereas, any efforts to limit or restrict access to either form of coverage—Traditional Medicare or Medicare Advantage—may undermine the principles of patient autonomy, equity, and access to care; and

Whereas, both Traditional Medicare and Medicare Advantage have unique benefits and limitations, and no single option is perfect for each patient; and

Whereas, AMA Policy H-330.878 supports Medicare plans that provide at a minimum all part A and B original services and advocates for better regulation and transparency on websites as well as maintaining publicly valuable databases of doctors in network; and

Whereas, AMA Policy H-285.902 urges CMS to ensure directory accuracy yearly and any significant changes as well as conduct reviews and reports to Medicare plan finder with penalty for failure to do so as well as adequacy of network both in ration of members to specialty and subspecialty as well as distances to specialty as CMS currently uses; and

Whereas, AMA Policy H-330.913 opposes bait and switch tactics of Medicare advantage plans whereby patients' and physicians' participation is based on a payment schedule (that often changes) which may result in physicians leaving the network while continuing to capture covered patients, thereby necessitating their identification of new in-network physicians; and

Whereas, AMA Policy D-330.930 acknowledges that Medicare Advantage plans may be misleading in their marketing and advertising concerning the lack of secondary coverages (Medigap policy) with Medicare Advantage plans and supports ongoing outreach and education efforts to raise public awareness and ensure equitable access; and

Whereas, the current Medicare enrollment process is fragmented across multiple platforms, private brokers, and marketing channels, creating confusion for beneficiaries attempting to compare coverage options; and

Whereas, unlike the Affordable Care Act marketplace administered through HealthCare.gov, Medicare lacks a single, unified, official online platform that presents standardized, neutral, and easily understandable plan comparisons[1]; and

Whereas, Medicare beneficiaries—particularly seniors and individuals with disabilities—are frequently targeted by aggressive telemarketing and third-party marketing organizations that may present biased or incomplete information[2]; and

Whereas, Medicare.gov currently operates the "Medicare Plan Finder" which allows beneficiaries to compare and shop for private Medicare Advantage plans and stand-alone Part D plans, however the most recent update in 2025 frequently produced erroneous and conflicting information about which providers were in network[3]; and

Whereas, the collection and dissemination of beneficiary data by third-party marketing entities raises significant concerns regarding privacy, security, and unauthorized solicitation, and equitable access to Medicare information requires robust outreach and education for rural, underserved, elderly, disabled, and technologically disadvantaged populations; therefore be it

RESOLVED, that our American Medical Association advocate for the development and maintenance overseen by the Centers for Medicare & Medicaid Services of a centralized, official Medicare enrollment platform that provides clear, neutral, accurate, and easily understandable comparisons of coverage options under Traditional Medicare, Medicare Advantage, and supplemental coverage, including information on provider networks, prior authorization requirements, benefits, and out-of-pocket costs (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for ongoing oversight and evaluation of such platform to ensure the accuracy of plan and directory information, neutrality, usability, accessibility, and protection of beneficiaries from deceptive or coercive practices (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for federal policies that prohibit telemarketing firms and third-party marketing organizations from directly enrolling Medicare beneficiaries, and instead require that beneficiaries be directed to the official Medicare enrollment platform for plan enrollment (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for robust privacy and data security safeguards, including disclosure of data breaches, within any official Medicare enrollment platform, including protections against unauthorized access, misuse, or commercial exploitation of beneficiary information and prohibitions on the sale, transfer, or sharing of beneficiary enrollment data with third parties for commercial purposes (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for comprehensive outreach, education, and accessibility initiatives to ensure that beneficiaries and physicians, including those in rural, elderly, disabled, underserved, and technologically disadvantaged populations, can effectively use the official Medicare enrollment platform (Directive to Take Action); and be it further

RESOLVED, that our AMA oppose legislative, regulatory, or administrative actions that would reduce access to, limit funding for, or otherwise disadvantage either Traditional Medicare or Medicare Advantage. (New HOD Policy)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/15/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 223
(A-26)

Introduced by: Georgia

Subject: Ensuring Due Process, Transparency, and Human Clinical Oversight in the Use of Artificial Intelligence for Health Insurance Coverage and Eligibility Determinations

Referred to: Reference Committee B

Whereas, the use of artificial intelligence (AI), algorithms, and predictive analytics by health insurers and utilization review entities is rapidly expanding in both coverage determinations (including prior authorization and claims adjudication) and health insurance eligibility and underwriting decisions affecting applicants; and

Whereas, emerging state frameworks, including Georgia Senate Bill 444 (2026) recently passed by the Georgia Legislature, recognize that AI may serve as a clinical decision-support tool but must not replace independent human clinical judgment; and

Whereas, reliance on AI as the sole basis for adverse determinations—including denial of coverage, limitation of benefits, or denial or restriction of health insurance eligibility for applicants—risks inappropriate, non-individualized decision-making and may exacerbate inequities; and

Whereas, health insurance applicants and insured patients are frequently unaware when AI tools are used in eligibility, underwriting, or coverage determinations and are not provided meaningful explanations of how such tools influence decisions; and

Whereas, current processes often lack timely access to qualified human review, including physician review when clinical issues are implicated, particularly by professionals in the same specialty; and

Whereas, AI systems used in insurance eligibility, underwriting, and coverage determinations may introduce or perpetuate bias, opacity (“black box” decision-making), and variability in performance, without standardized requirements for auditability, validation, or regulatory oversight; and

Whereas, the absence of clear national standards for AI-assisted eligibility and coverage determinations creates inconsistent protections across states, markets, and payer types, including individual market applicants, employer-sponsored plans, and Medicare Advantage; and

Whereas, while AMA Policy H-480.940 establishes broad principles for augmented intelligence in health care, it does not specifically address payer use of artificial intelligence in insurance underwriting, eligibility determinations, applicant denial processes, required human review, applicant appeal rights, or regulatory safeguards governing adverse insurance decisions generated by AI systems; and

Whereas, physicians are ethically obligated to advocate for patients' access to medically necessary care and to oppose barriers created by non-transparent utilization management or underwriting practices; and

Whereas, due process protections—including transparency, explanation of decisions, and meaningful opportunities for appeal or reconsideration—are essential to safeguard both patients' access to medically necessary care and applicants' fair access to health insurance coverage; therefore be it

RESOLVED, that our American Medical Association oppose the use of artificial intelligence, algorithms, or automated decision-making systems as the sole basis for any adverse health insurance determination, including denials, delays, or limitations of coverage and adverse eligibility, underwriting, or enrollment determinations affecting health insurance applicants or insured patients (New HOD Policy); and be it further

RESOLVED, that our AMA advocate that when artificial intelligence or automated decision-making systems are used in adverse health insurance determinations, any required human review must be conducted through the independent judgment of a licensed physician in accordance with existing AMA peer review policy, and must not be overridden, dictated, or unduly influenced by the output of such systems (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for policies requiring that patients and physicians be provided a clear and accessible explanation when artificial intelligence or automated decision-making systems materially contributed to an adverse health insurance determination, including an explanation of the role of the system in the decision, in both coverage determinations and eligibility, underwriting, or enrollment decisions (Directive to Take Action); and be it further

RESOLVED, that our AMA support and advocate for payer-specific regulatory standards governing the use of artificial intelligence and automated decision-making systems in adverse health insurance determinations, including requirements for auditable records of AI-assisted decisions, independent validation, regular testing for accuracy, bias, and clinical validity, and oversight by appropriate regulatory bodies (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for the uniform application of safeguards governing artificial intelligence and automated decision-making systems across all payer types and markets, including commercial insurance, individual and small-group markets, employer-sponsored coverage, and government insurance, with particular attention to applicant-facing eligibility, underwriting, and enrollment decisions. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/15/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 224
(A-26)

Introduced by: Indiana

Subject: Clarity of Signage: Distinguishing Urgent Cares From Emergency Rooms

Referred to: Reference Committee B

Whereas, Indiana law defines an "urgent care facility"[1] as a freestanding facility that provides walk-in, episodic care for acute but non-life-threatening conditions, and specifically excludes hospital emergency departments from being classified as urgent care facilities under Indiana Code § 16-24.5-1-1; and

Whereas, there is currently no Indiana statute or Indiana Department of Health regulation requiring urgent care centers to post signage stating that they are not emergency rooms, which may contribute to patient confusion, particularly during urgent medical situations[1]; and

Whereas, the absence of clear signage distinguishing urgent care clinics from emergency departments may lead patients experiencing medical emergencies to mistakenly seek care at an urgent care center, potentially delaying necessary emergency treatment[3]; and

Whereas, several other states, including Texas and Colorado[2, 3, 4, 5, 6, 7], have adopted laws requiring freestanding emergency departments to post explicit signage identifying their emergency status and prohibiting the misuse of the term "emergency" by non-emergency providers; and

Whereas, Indiana's current transparency law for urgent care centers, enacted in 2020, requires disclosure of service prices on websites but does not address physical signage or language use that distinguishes urgent care centers from emergency departments; and

Whereas, greater signage transparency would empower patients to make informed decisions about where to seek care and reduce the risk of inappropriate facility use during a medical emergency; therefore be it

RESOLVED, that our American Medical Association advocate for federal regulatory or legislative action that would require clear and standardized signage for urgent care centers to distinguish them from hospital emergency departments. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 225
(A-26)

Introduced by: Indiana

Subject: Requiring Periodic Face-to-Face Visits By Board-Certified Specialists Who Delegate Visits to Non-Physician Practitioners for Nursing Home Patients

Referred to: Reference Committee B

Whereas, patients residing in nursing homes often present with complex, chronic medical conditions requiring specialized care beyond primary services; and

Whereas, nonphysician practitioners (NPPs), such as nurse practitioners and physician assistants, play a critical role in extending access to care in long-term care settings; and

Whereas, the delegation of care to NPPs without appropriate physician oversight may result in variability in the quality, accuracy, and complexity of care provided to medically fragile patients; and

Whereas, the involvement of a board-certified medical specialist in a patient's ongoing care plan ensures alignment with evidence-based practices, appropriate diagnostic assessments, and continuity of specialty care; and

Whereas, current CMS guidelines require primary care physicians to alternate face-to-face visits with non-physician practitioners for nursing home patients, yet no such requirement exists for medical specialists overseeing similar care; therefore be it

RESOLVED, that our American Medical Association support federal legislation or regulation to require a minimal standard for specialist care for patients in nursing homes, such that, when a board-certified medical specialist delegates visits to nonphysician practitioners in a nursing home setting, the physician specialist must personally conduct a face-to-face evaluation of the patient either in person or via telehealth no less than every third visit. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/15/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 226
(A-26)

Introduced by: Academic Physicians Section

Subject: Impact of a Proposed $100,000 H-1B Visa Fee on the NRMP Match, the Physician Workforce, and the U.S. Health Care System

Referred to: Reference Committee B

Whereas, International Medical Graduates (IMGs) constitute twenty-five percent of the United State's physician workforce[1], representing a significant and essential component, particularly in specialties with critical shortages (e.g., Internal Medicine, Family Medicine, Psychiatry, Pathology, and Neurology) [6,7,] and other shortage specialties; and

Whereas, federally designated undeserved areas and rural areas are more likely to be served by IMGs, catering to 46 to 66 million Americans [2,3,] and

Whereas, IMGs serve vital roles in medical education and research [4], developing our nation's future physicians and health professionals as faculty members, researchers and preceptors in medical schools and training programs across the country; and

Whereas, many non-U.S. physicians who graduated from international and U.S. medical schools rely on non-immigrant employment-based visa programs in order to participate in graduate medical education [5,] and subsequently practice medicine in the undeserved areas; and

Whereas, proposals to substantially increase employment-based visa fees, as high as $100,000, has posed an unprecedented financial barrier for institutions;[1,2] sponsoring visa for these individuals; and

Whereas, employment-based visa fees could disproportionately limit access to residency training opportunities for qualified applicants; and

Whereas, employment-based visa fees could sharply increase the vacancy rate within residency programs and undermine teaching hospitals' capacity [7,] for providing clinical training and safety-net care to underserved populations**;** and

Whereas, the 2026 National Resident Matching Program (NRMP) Match cycle and the following waiver employment cycle would be the first major residency recruitment cycle, and the underserved area physician employment cycles potentially affected by implementation of such a visa fee; and

Whereas, no formal national analysis has been conducted to evaluate the potential impact of such a fee on IMGs participation in the Match, residency program recruitment, or physician workforce supply in underserved areas [11,12]; therefore be it

RESOLVED, that our American Medical Association, in conjunction with other key organizations, study the potential impact of a proposed $100,000 employment-based visa fee on:

- International Medical Graduates participation in the National Resident Matching Program (NRMP) Match; and
- Graduate medical education programs; and
- Critical access hospitals; and
- Waiver and non-waiver recruitment into all specialties; and
- Physician workforce development and access to care in communities across all 50 states and U.S. territories.

(Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

RELEVANT AMA POLICY

AMA Principles on International Medical Graduates H-255.988

1. Our AMA supports current U.S. visa and immigration requirements applicable to foreign national physicians who are graduates of medical schools other than those in the United States and Canada.
2. Our AMA supports current regulations governing the issuance of exchange visitor visas to foreign national IMGs, including the requirements for successful completion of the USMLE.
3. Our AMA reaffirms its policy that the U.S. and Canada medical schools be accredited by a nongovernmental accrediting body.
4. Our AMA supports cooperation in the collection and analysis of information on medical schools in nations other than the U.S. and Canada.
5. Our AMA supports continued cooperation with the ECFMG and other appropriate organizations to disseminate information to prospective and current students in foreign medical schools. An AMA member, who is an IMG, should be appointed regularly as one of the AMA's representatives to the ECFMG Board of Trustees.

6. Our AMA supports working with the Accreditation Council for Graduate Medical Education (ACGME) and the Federation of State Medical Boards (FSMB) to assure that institutions offering accredited residencies, residency program directors, and U.S. licensing authorities do not deviate from established standards when evaluating graduates of foreign medical schools.
7. In cooperation with the ACGME and the FSMB, our AMA supports only those modifications in established graduate medical education or licensing standards designed to enhance the quality of medical education and patient care.
8. Our AMA continues to support the activities of the ECFMG related to verification of education credentials and testing of IMGs.
9. Our AMA supports that special consideration be given to the limited number of IMGs who are refugees from foreign governments that refuse to provide pertinent information usually required to establish eligibility for residency training or licensure.
10. Our AMA supports that accreditation standards enhance the quality of patient care and medical education and not be used for purposes of regulating physician manpower.
11. Our AMA representatives to the ACGME, residency review committees and to the ECFMG should support AMA policy opposing discrimination. Medical school admissions officers and directors of residency programs should select applicants on the basis of merit, without considering status as an IMG or an ethnic name as a negative factor.
12. Our AMA supports the requirement that all medical school graduates complete at least one year of graduate medical education in an accredited U.S. program in order to qualify for full and unrestricted licensure. State medical licensing boards are encouraged to allow an alternate set of criteria for granting licensure in lieu of this requirement:
    a. completion of medical school and residency training outside the U.S.;
    b. extensive U.S. medical practice; and
    c. evidence of good standing within the local medical community.
13. Our AMA supports publicizing existing policy concerning the granting of staff and clinical privileges in hospitals and other health facilities.
14. Our AMA supports the participation of all physicians, including graduates of foreign as well as U.S. and Canadian medical schools, in organized medicine. Our AMA offers encouragement and assistance to state, county, and specialty medical societies in fostering greater membership among IMGs and their participation in leadership positions at all levels of organized medicine, including AMA committees and councils, the Accreditation Council for Graduate Medical Education and its review committees, the American Board of Medical Specialties and its specialty boards, and state boards of medicine, by providing guidelines and non-financial incentives, such as recognition for outstanding achievements by either individuals or organizations in promoting leadership among IMGs.
15. Our AMA supports studying the feasibility of conducting peer-to-peer membership recruitment efforts aimed at IMGs who are not AMA members.
16. Our AMA membership outreach to IMGs to include
    a. using its existing publications to highlight policies and activities of interest to IMGs, stressing the common concerns of all physicians;
    b. publicizing its many relevant resources to all physicians, especially to nonmember IMGs;
    c. identifying and publicizing AMA resources to respond to inquiries from IMGs; and
    d. expansion of its efforts to prepare and disseminate information about requirements for admission to accredited residency programs, the availability of positions, and the problems of becoming licensed and entering full and unrestricted medical practice in the U.S. that face IMGs. This information should be addressed to college students, high school and college advisors, and students in foreign medical schools.
17. Our AMA supports recognition of the common aims and goals of all physicians, particularly those practicing in the U.S., and support for including all physicians who are permanent residents of the U.S. in the mainstream of American medicine.
18. Our AMA supports its leadership role to promote the international exchange of medical knowledge as well as cultural understanding between the U.S. and other nations.
19. Our AMA supports institutions that sponsor exchange visitor programs in medical education, clinical medicine and public health to tailor programs for the individual visiting scholar that will meet the needs of the scholar, the institution, and the nation to which he will return.
20. Our AMA supports informing foreign national IMGs that the availability of training and practice opportunities in the U.S. is limited by the availability of fiscal and human resources to maintain the

quality of medical education and patient care in the U.S., and that those IMGs who plan to return to their country of origin have the opportunity to obtain GME in the United States.
21. Our AMA supports U.S. medical schools offering admission with advanced standing, within the capabilities determined by each institution, to international medical students who satisfy the requirements of the institution for matriculation.
22. Our AMA supports the Federation of State Medical Boards, its member boards, and the ECFMG in their willingness to adjust their administrative procedures in processing IMG applications so that original documents do not have to be recertified in home countries when physicians apply for licenses in a second state.
23. Our AMA supports continued efforts to protect the rights and privileges of all physicians duly licensed in the U.S. regardless of ethnic or educational background and opposes any legislative efforts to discriminate against duly licensed physicians on the basis of ethnic or educational background.
24. Our AMA supports continued study of challenges and issues pertinent to IMGs as they affect our country's health care system and our physician workforce.
25. Our AMA supports advocacy to Congress to fund studies through appropriate agencies, such as the Department of Health and Human Services, to examine issues and experiences of IMGs and make recommendations for improvements.
26. Our AMA will uphold its commitment to opposing discrimination against IMGs in all aspects of medical education and training. [BOT Rep. Z, A-86; Reaffirmed: Res. 312, I-93; Modified: CME Rep. 2, A-03; Reaffirmation I-11; Reaffirmed: CME Rep. 1, I-13; Modified: BOT Rep. 25, A-15; Modified: CME Rep. 01, A-16; Appended: Res. 304, A-17; Modified: CME Rep. 01, I-17; Reaffirmation: A-19; Modified: CME Rep. 2, A-21; Modified: CME Rep. 1, A-22; Modified: CCB/CLRPD Rep. 1, A-22; Reaffirmed: CME Rep. 03, A-23; Reaffirmed: Res. 312, A-25; Reaffirmed in lieu of the first resolve: Res. 234, A-25]

Impact of Immigration Barriers on the Nation's Health D-255.980
1. Our American Medical Association recognizes the valuable contributions and affirms our support of international medical students and international medical graduates and their participation in U.S. medical schools, residency and fellowship training programs and in the practice of medicine.
2. Our AMA will oppose laws and regulations that would broadly deny entry or re-entry to the United States of persons who currently have legal visas, including permanent resident status (green card) and student visas, based on their country of origin and/or religion.
3. Our AMA will oppose policies that would broadly deny issuance of legal visas to persons based on their country of origin and/or religion.
4. Our AMA will advocate for the immediate reinstatement of premium processing of H-1B visas for physicians and trainees to prevent any negative impact on patient care.
5. Our AMA will advocate for the timely processing of visas for all physicians, including residents, fellows, and physicians in independent practice.
6. Our AMA will work with other stakeholders to study the current impact of immigration reform efforts on residency and fellowship programs, physician supply, and timely access of patients to health care throughout the U.S. [Alt. Res. 308, A-17; Modified: CME Rep. 01, A-18; Reaffirmation: A-19; Reaffirmed: CME Rep. 4, A-21; Reaffirmed: Res. 234, A-22; Reaffirmed: Res. 210, A-23

Protection for International Medical Graduates H-255.960
Our American Medical Association supports relevant interested parties in developing a confidential mechanism through which physicians can report workplace immigration related interviews, in order to identify and address potential instances of unfair treatment or targeting of international medical graduate physicians. [Res. 234, A-25]

Physician Visa Protection and Pathway to U.S. Permanent Residency D-255.967
1. Our American Medical Association advocates for a viable, expedited, and separate pathway for physicians to obtain permanent residence in the United States.
2. Our AMA advocates for the federal government to work to ensure physicians are exempt from unreasonable increases in H-1B visa fees.
3. Our AMA advocates for the creation of a dedicated visa pathway specifically for physicians. [Res. 213, I-25]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 227
(A-26)

Introduced by: California, Hawaii, Idaho, Oregon, Washington, Wyoming

Subject: Standby Capacity Payments and Health IT for Hospitals in Rural Areas

Referred to: Reference Committee B

Whereas, rural communities already suffering from physician shortages, hospitals closures, less health insurance coverage, and thus, higher rates of chronic disease and age-adjusted mortality are at even greater risk with the significant $1 trillion in Medicaid and Affordable Care Act (ACA) funding cuts (CBO) recently imposed by Congress through the passage of H.R. 1; and

Whereas, to mitigate some of these cuts, Congress enacted the Rural Health Transformation Program that provides $50 billion to states to address rural health care challenges; and

Whereas, given that more than half of rural adults and children are either on Medicaid, the ACA 10 or uninsured, and up to 14 million Medicaid and ACA enrollees could lose coverage nationwide under HR 1 (CBO), the need for AMA to provide leadership and assistance to rural physicians and communities is even greater; and

Whereas, while the AMA has extensive policy on improving rural health provider shortages infrastructure, health care disparities, and access to care, this resolution includes additional specific policies that are warranted to augment AMA's rural health advocacy; and

Whereas, 54% of rural residents report that access to medical specialists is a problem in their 19 community and telehealth has helped to address some physician shortages, provide access to specialty care, and reduce patient burden of traveling long distances to receive care; and

Whereas, rural hospitals that have difficulty retaining subspecialists have developed telehealth programs in coordination with larger urban hospitals that allow them to consult on patient care as needed and treat complex patients at local facilities - helping patients avoid the cost and time associated with traveling long distances to larger medical centers; and

Whereas, a GAO analysis found that the availability of health care providers in counties with rural hospital closures was lower and declined more over time when compared to counties without rural hospital closures and a Health Affairs study found that the availability of physicians and the viability of hospitals are related which makes the argument that more should be done to sustain rural physician practices to protect the entire health care system in rural areas; and

Whereas, there is evidence that administrative requirements, which are a challenge for physicians regardless of setting, can impose additional challenges for physicians in rural areas such as a 2018 GAO study of Medicare quality improvement programs that found small and rural practices were more likely to receive a negative payment adjustment citing lack of technology, financial resources to hire staff to manage the programs, and limited capacity to monitor program requirements which ultimately led to 18% of rural physician practices being penalized in the Medicare quality payment program in 2022; and

for example, a California Department of Health Services study found that providers in rural areas don't have access to basic health information technology or networks to engage in data exchange and while there is wide adoption of EHRs among physicians, physicians who had not adopted EHRs were more likely to be in rural or solo practice; and

Whereas, more than half of current rural hospitals in the United States lack a maternity ward and according to the Center for Healthcare Quality and Payment Reform (CHQPR), more than 700 rural hospitals in 2025 were at risk of closure due to financial problems; and

Whereas, hospital administrators cite a number of reasons for the closures, including high costs, labor shortages, low public and private reimbursement, and declining birth rates. Labor and delivery units are one of the most expensive departments for hospitals to maintain, second only to emergency departments; and

Whereas, a study by the American Journal of Public Health that looked at adverse maternal outcomes in rural and urban areas across the country found that pregnant individuals residing in rural areas experienced slightly increased rates of Intensive Care Unit admissions and maternal mortality rates almost twice the rate of individuals in urban areas; and

Whereas, a CHQPR study shows that half of the patients in rural hospitals have private insurance and in most cases it is the amount that private insurance pays, not Medicaid that determines whether a rural hospital loses money. To preserve and enhance essential hospital services in rural areas, CHQPR recommends that small rural hospitals receive Standby Capacity Payments from both public and private payers to cover the hospital's fixed costs for maintaining essential services and access to necessary care; therefore be it

RESOLVED, that our American Medical Association assist state medical associations, specialty societies and physician practices with the implementation of H.R. 1, to mitigate the negative impact of the Medicaid, ACA and student loan cuts to physicians and patients, particularly in rural areas (Directive to Take Action); and be it further

RESOLVED, that our AMA support the provision and payment of physician-to-physician virtual telehealth consultations as an option to increase access to primary and specialty care in rural communities, acknowledging that significant investments in rural telehealth broadband must be made in order to effectively deliver telehealth services (New HOD Policy); and be it further

RESOLVED, that our AMA encourage the development of programs and financial assistance models for rural physician practices in need of health information technology and other technological modernization and security, as well as access to specialty equipment to provide quality care (New HOD Policy); and be it further

RESOLVED, that our AMA urge the Centers for Medicare and Medicaid Services and others to provide funding for standby capacity payments to sustain obstetric services at hospitals at risk of closing access to maternity care. (New HOD Policy)

RELEVANT AMA POLICY

D-190-969 Rural Hospital Payment Models

1. Our American Medical Association supports and encourages efforts to develop and implement proposals for improving payment models to rural hospitals.
2. Our AMA will report back no later than the 2026 Annual Meeting on data analysis and appropriate recommendations for improved rural hospital payments based on innovative payment models such as the Pennsylvania Rural Health Model (PARHM).

D-465.994 New Reimbursement System Needed for Rural Hospital Survival

Our AMA will study the issue and report back the best options for achieving a new reimbursement system for rural hospital survival in our country.

H-200.972 Primary Care Providers in Underserved Areas

1. Our American Medical Association should pursue the following plan to improve the recruitment and retention of physicians in underserved areas:

a. encourage the creation and pilot-testing of school-based, faith-based, and community-based urban/rural family health clinics, with an emphasis on health education, prevention, primary care,and prenatal care;

b. encourage the affiliation of these family health clinics with local medical schools and teaching hospitals;

c. advocate for the implementation of AMA policy that supports extension of the rural health clinic concept to urban areas with appropriate federal agencies;

d. encourage the AMA Senior Physicians Section to consider the involvement of retired physicians in underserved settings, with appropriate mechanisms to ensure their competence;

e. urge hospitals and medical societies to develop opportunities for physicians to work part-time to staff health clinics that help meet the needs of underserved patient populations;

f. encourage the AMA and state medical associations to incorporate into state and federal health system reform legislative relief or immunity from professional liability for senior, part-time, or other physicians who help meet the needs of underserved patient populations and
g. urge hospitals and medical centers to seek out the use of available military health care resources and personnel, which can be used to help meet the needs of underserved patient populations.
2. Our AMA supports efforts to:
a. expand opportunities to retain international medical graduates after the expiration of allocated periods under current law; and
b. increase the recruitment and retention of physicians practicing in federally designated health professional shortage areas.

H-420.946 Advancing Evidence-Based Strategies to Improve Rural Obstetrical Health Care and Access
8. Our American Medical Association strongly supports federal legislation that provides funding for the creation and implementation of a national obstetric emergency training program for rural health care facilities with and without a dedicated labor and delivery unit.
9. Our AMA supports the expansion and implementation of innovative obstetric telementoring/teleconsultation models to address perinatal health disparities and improve access to evidence-informed perinatal care in rural communities.
10. Our AMA encourages academic medical centers and health systems to actively participate in obstetric telementoring/teleconsultation models to support rural physicians and nonphysician practitioners who provide obstetric care as part of a physician-led team and improve perinatal health outcomes in rural communities.
11. Our AMA supports ongoing research to evaluate the effectiveness of national implementation of obstetric telementoring/teleconsultation models to improve rural perinatal health outcomes and reduce rural-urban health disparities.

H-465.997 Access to Quality Rural Health Care
1. Our American Medical Association believes that solutions to access problems in rural areas should be developed through the efforts of voluntary local health planning groups, coordinated at the regional or state level by a similar voluntary health planning entity. Regional or statewide coordination of local efforts will not only help to remedy a particular community's problems, but will also help to avoid and, if necessary, resolve existing duplication of health care resources.
2. In addition to local solutions, our AMA believes that on a national level, the implementation of Association policy for providing the uninsured and underinsured with adequate protection against health care expense would be an effective way to help maintain and improve access to care for residents of economically depressed rural areas who lack adequate health insurance coverage. Efforts to place National Health Service Corps physicians in underserved areas of the country should also be continued.

H-465.998 Addressing Payment & Delivery in Rural Hospitals
1. Our American Medical Association will advocate that public and private payers take the following actions to ensure payment to rural hospitals is adequate and appropriate:
a. Create a capacity payment to support the minimum fixed costs of essential services, including surge capacity, regardless of volume.
b. Provide adequate service-based payments to cover the costs of services delivered in small communities.
c. Adequately compensate physicians for standby and on-call time to enable very small rural hospitals to deliver quality services in a timely manner.
d. Use only relevant quality measures for rural hospitals and set minimum volume thresholds for measures to ensure statistical reliability.
e. Hold rural hospitals harmless from financial penalties for quality metrics that cannot be assessed due to low statistical reliability.
f. Create voluntary monthly payments for primary care that would give physicians the flexibility to deliver services in the most effective manner with an expectation that some services will be provided via telehealth or telephone.
2. Our AMA encourages transparency among rural hospitals regarding their costs and quality outcomes.
3. Our AMA supports better coordination of care between rural hospitals and networks of providers where services are not able to be appropriately provided at a particular rural hospital.

4. Our AMA encourages employers and rural residents to choose health plans that adequately and appropriately reimburse rural hospitals and physicians.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 228
(A-26)

Introduced by: California, Hawaii, Oregon, Washington, Wyoming

Subject: Department of Defense Health Care Investment at Military Bases in Maternity Care Health Professional Shortage Areas

Referred to: Reference Committee B

Whereas, according to a 2024 National Public Radio (NPR) investigation, half of the active duty U.S. military installations are located in federally designated health professional shortage areas (HPSAs), including maternal care deserts and as the military has downsized and outsourced health care over the last decade to private physicians and hospitals, military personnel and their families cannot find physicians accepting new patients, exacerbating the health care demands and access to care problems in rural areas; and

Whereas, the military is also contracting with more people to provide services on military bases, such as janitorial cleaning staff, rather than hiring them as employees and many of these people are low-income, uninsured women who need maternal health care but can't obtain it on or near the base; and

Whereas, many states have examples of successful maternal care models, such as the California Maternal Quality Care Collaborative (CMQCC) created by Stanford University School of Medicine in partnership with the State of California and multiple stakeholder organizations that used research, data, toolkits and outreach to reduce maternal mortality by 65% from 2006-2016; and

Whereas, there is a need to creatively engage in efforts to ensure that women have access to comprehensive reproductive health care and pregnant patients in rural regions have access to the care necessary to ensure healthy outcomes for both baby and mother; therefore be it

RESOLVED, that our American Medical Association urge the Department of Defense to provide comprehensive reproductive health care coverage, funding and improved access to labor and delivery services for military personnel, military families, and non-military individuals working on military bases in maternity care health professional shortages areas (Directive to Take Action); and be it further

RESOLVED, that our AMA continue to research and distribute successful state and specialty society models that have improved access to comprehensive reproductive care and maternal care in rural areas and reduced maternal mortality rates. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/15/26

RELEVANT AMA POLICY

D-190-969 Rural Hospital Payment Models

1. Our American Medical Association supports and encourages efforts to develop and implement proposals for improving payment models to rural hospitals.
2. Our AMA will report back no later than the 2026 Annual Meeting on data analysis and appropriate recommendations for improved rural hospital payments based on innovative payment models such as the Pennsylvania Rural Health Model (PARHM).

D-465.994 New Reimbursement System Needed for Rural Hospital Survival

Our AMA will study the issue and report back the best options for achieving a new reimbursement system for rural hospital survival in our country.

H-130-954 Non-Emergent Patient Transportation Systems

Our AMA: (1) supports the education of physicians, first responders, and the public about the costs associated with inappropriate use of emergency patient transportation systems; and (2) encourages the development of non-emergency patient transportation systems that are affordable to the patient, thereby ensuring cost effective and accessible health care for all patients.

H-200.972 Primary Care Providers in Underserved Areas

1. Our American Medical Association should pursue the following plan to improve the recruitment and retention of physicians in underserved areas:
a. encourage the creation and pilot-testing of school-based, faith-based, and community-based urban/rural family health clinics, with an emphasis on health education, prevention, primary care,and prenatal care;
b. encourage the affiliation of these family health clinics with local medical schools and teaching hospitals;
c. advocate for the implementation of AMA policy that supports extension of the rural health clinic concept to urban areas with appropriate federal agencies;
d. encourage the AMA Senior Physicians Section to consider the involvement of retired physicians in underserved settings, with appropriate mechanisms to ensure their competence;
e. urge hospitals and medical societies to develop opportunities for physicians to work part-time to staff health clinics that help meet the needs of underserved patient populations;
f. encourage the AMA and state medical associations to incorporate into state and federal health system reform legislative relief or immunity from professional liability for senior, part-time, or other physicians who help meet the needs of underserved patient populations and

g. urge hospitals and medical centers to seek out the use of available military health care resources and personnel, which can be used to help meet the needs of underserved patient populations.
2. Our AMA supports efforts to:
a. expand opportunities to retain international medical graduates after the expiration of allocated periods under current law; and
b. increase the recruitment and retention of physicians practicing in federally designated health professional shortage areas.

H-215.960 Hospital Consolidation
1. Our American Medical Association affirms that:
a. Health care entity mergers should be examined individually, taking into account case-specific variables of market power and patient needs.
b. The AMA strongly supports and encourages competition in all health care markets.
c. The AMA supports rigorous review and scrutiny of proposed mergers to determine their
d. Antitrust relief for physicians remains a top AMA priority.
2. Our AMA will continue to support actions that promote competition and choice, including:
a. Eliminating state certificate of need laws.
b. Repealing the ban on physician-owned hospitals.
c. Reducing administrative burdens that make it difficult for physician practices to compete.
d. Achieving meaningful price transparency.
3. Our AMA will work with interested state medical associations to monitor hospital markets, including rural, state, and regional markets, and review the impact of horizontal and vertical health system integration on patients, physicians and hospital prices.

H-465-981 Enhancing Rural Physician Practices
1. Our American Medical Association supports legislation to extend the 10% Medicare payment bonus to physicians practicing in rural counties and other areas where the poverty rate exceeds a certain threshold, regardless of the areas' Health Professional Shortage Area (HPSA) status.
2. Our AMA encourages federal and state governments to make available low interest loans and other financial assistance to assist physicians with shortage area practices in defraying their costs of compliance with requirements of the Occupational Safety and Health Administration, Americans with Disabilities Act and other national or state regulatory requirements.
3. Our AMA will explore the feasibility of supporting the legislative and/or regulatory changes necessary to establish a waiver process through which shortage area practices can seek exemption from specific elements of regulatory requirements when improved access, without significant detriment to quality, will result.
4. Our AMA supports legislation that would allow shortage area physician practices to qualify as Rural Health Clinics without the need to employ one or more physician extenders.
5. Our AMA will undertake a study of structural urbanism, federal payment polices, and the impact on rural workforce disparities.

H-465.998 Addressing Payment & Delivery in Rural Hospitals
1. Our American Medical Association will advocate that public and private payers take the following actions to ensure payment to rural hospitals is adequate and appropriate:
a. Create a capacity payment to support the minimum fixed costs of essential services, including surge capacity, regardless of volume.
b. Provide adequate service-based payments to cover the costs of services delivered in small communities.
c. Adequately compensate physicians for standby and on-call time to enable very small rural hospitals to deliver quality services in a timely manner.
d. Use only relevant quality measures for rural hospitals and set minimum volume thresholds for measures to ensure statistical reliability.
e. Hold rural hospitals harmless from financial penalties for quality metrics that cannot be assessed due to low statistical reliability.
f. Create voluntary monthly payments for primary care that would give physicians the flexibility to deliver services in the most effective manner with an expectation that some services will be provided via telehealth or telephone.
2. Our AMA encourages transparency among rural hospitals regarding their costs and quality outcomes.

3. Our AMA supports better coordination of care between rural hospitals and networks of providers where services are not able to be appropriately provided at a particular rural hospital.
4. Our AMA encourages employers and rural residents to choose health plans that adequately and appropriately reimburse rural hospitals and physicians.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 229
(A-26)

Introduced by: Colorado, Arizona, Idaho, Utah, Washington, Wyoming

Subject: Physicians are not Providers

Referred to: Reference Committee B

Whereas, the term Provider has increasingly been used more broadly to include physicians; and

Whereas, the term Provider is too inclusive and confuses the Physician Patient relationship; and

Whereas, the term Provider has been utilized as an ambiguous term that inappropriately conflates the credentials, training and experience of separate groups of healthcare professionals; and

Whereas, the American Medical Association has increasing Concerns with scope of practice and has joined lawsuits to preserve the physician role in medicine; and

Whereas, the AMA has existing policy H-405.968 stating that Our American Medical Association supports requiring that health care entities, when using the term “provider” in contracts, advertising and other communications, specify the type of provider being referred to by using the provider’s recognized title which details education, training, license status and other recognized qualifications; and supports this concept in state and federal health system reform; and

Whereas, the action items associated with H-405-968 directed our AMA to
1. Consider the generic terms “health care providers” or “provider” as inadequate to describe the extensive education and qualifications of physicians licensed to practice medicine in all its branches.
2. Institute an editorial policy prohibiting the use of the term “provider” in lieu of “physician’ or other health professionals for all AMA publications not otherwise covered by the existing JAMA Editorial Governance Plan, which protects editorial independence of the Editor in Chief of JAMA and the JAMA Network Journals.
3. Forward to the editorial board of JAMA the recommendation that the term “physician” be use in lieu of “provider” when referring to MD’s and DO’s; and

Whereas, the term provider continues to be the standard term for physicians in healthcare entities; therefore be it

RESOLVED, that our American Medical Association take further advocacy actions to implement Policy H-405.968 which prioritizes the use of the term “physician” when discussing those with an MD or DO, and either “clinician” or “health care professional” as appropriate to describe those with other varying credentials (Directive to Take Action); and be it further

RESOLVED, that our AMA Oppose the use of the term “provider” when used to include physicians (New HOD Policy); and be it further

RESOLVED, that our AMA evaluate the issue of overbroad terminology using Provider for Physician and others be evaluated for effect on patient education/awareness, transparency and ethical responsibilities of physicians to patient safety and professionalism (Directive to Take Action); and be it further

RESOLVED, that our AMA refer the issue of “Physicians are not Providers” to the board for study and report back including possible consideration by the American Medical Association’s Council on Ethical and Judicial Affairs (CEJA). (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/16/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 230
(A-26)

Introduced by: International Medical Graduates Section

Subject: Exemption of International Medical Graduates from Presidential Proclamations Restricting Entry into the United States

Referred to: Reference Committee B

Whereas, International Medical Graduates (IMGs) constitute a critical component of the United States physician workforce and play an essential role in providing care, particularly in underserved and rural communities[1]; and

Whereas, non-U.S. citizen IMGs frequently rely on non-immigrant visas, including J-1 and H-1B programs, to participate in U.S. graduate medical education and subsequently serve in areas of greatest physician and patient care need[2]; and

Whereas, recent federal actions, including presidential proclamations, have suspended or limited visa issuance and entry for nationals of multiple countries, thereby affecting physicians seeking to enter the United States for residency and fellowship training[3]; and

Whereas, these proclamations apply broadly to individuals outside the United States without valid visas, including fully vetted physicians who have successfully matched into accredited U.S. residency programs and satisfied rigorous screening, credentialing, and licensure requirements[2]; and

Whereas, IMGs undergo extensive vetting through credential verification, standardized examinations, background checks, and institutional review before entering U.S. training programs[4]; and

Whereas, restricting the entry of qualified physicians may disrupt residency training pipelines and adversely affect patient care, particularly in hospitals and communities dependent on IMGs[5]; and

Whereas, the absence or delay of incoming resident physicians may compromise staffing at teaching hospitals, reduce access to care, and exacerbate existing physician shortages[6]; and

Whereas, current proclamations allow for limited case-by-case national interest exceptions but lack clear, consistent, and categorical exemptions for physicians entering the United States to provide essential medical care[3]; and

Whereas, future presidential proclamations or similar federal actions may continue to impose broad entry restrictions without explicit consideration of the essential role of physicians in safeguarding public health[3]; therefore be it

RESOLVED, that our American Medical Association advocate for policies that ensure appropriate consideration and avoidance of undue delays in visa processing, issuance, and entry into the United States for fully vetted international medical graduates entering to

participate in accredited graduate medical education or provide patient care, while maintaining necessary security and vetting procedures (Directive to Take Action); and be it further

RESOLVED, that our AMA monitor and report on the impact of such policies on International Medical Graduate participation, physician workforce supply, patient access to care; and develop recommendations for ongoing advocacy. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/16/26

RELEVANT AMA POLICY

Urgent Advocacy to Restore J-1 Visa Processing for International Medical Graduate Physicians D-255.969

1. Our American Medical Association publicly advocates to resume the scheduling of new J-1 visa appointments affecting International Medical Graduates.
2. Our AMA will issue urgent advocacy communications to Congress, the Department of Homeland Security, the Department of State, and other relevant agencies, calling for the immediate resumption of J-1 visa processing for International Medical Graduates.
3. Our AME will collaborate with key parties, including program directors, Designated Institutional Officers, medical schools, and healthcare organizations to monitor the impact of visa appointment suspensions on patient care and physician workforce stability.
4. Our AMA will work proactively and transparently to reverse policies harmful to IMGs and mitigate future disruptions, emphasizing the essential contributions of International Medical Graduates to healthcare delivery in the United States.

Res. 237, A-25

Impact of Immigration Barriers on the Nation's Health D-255.980

1. Our American Medical Association recognizes the valuable contributions and affirms our support of international medical students and international medical graduates and their participation in U.S. medical schools, residency and fellowship training programs and in the practice of medicine.
2. Our AMA will oppose laws and regulations that would broadly deny entry or re-entry to the United States of persons who currently have legal visas, including permanent resident status (green card) and student visas, based on their country of origin and/or religion.
3. Our AMA will oppose policies that would broadly deny issuance of legal visas to persons based on their country of origin and/or religion.
4. Our AMA will advocate for the immediate reinstatement of premium processing of H-1B visas for physicians and trainees to prevent any negative impact on patient care.
5. Our AMA will advocate for the timely processing of visas for all physicians, including residents, fellows, and physicians in independent practice.

6. Our AMA will work with other stakeholders to study the current impact of immigration reform efforts on residency and fellowship programs, physician supply, and timely access of patients to health care throughout the U.S.

Alt. Res. 308, A-17 Modified: CME Rep. 01, A-18 Reaffirmation: A-19 Reaffirmed: CME Rep. 4, A-21 Reaffirmed: Res. 234, A-22 Reaffirmed: Res. 210, A-23

Visa Complications for IMGs in GME D-255.991

1. Our American Medical Association will
    a. work with the ECFMG to minimize delays in the **visa** process for International Medical Graduates applying for visas to enter the US for postgraduate medical training and/or medical practice.
    b. promote regular communication between the Department of Homeland Security and AMA IMG representatives to address and discuss existing and evolving issues related to the immigration and registration process required for International Medical Graduates.
    c. work through the appropriate channels to assist residency program directors, as a group or individually, to establish effective contacts with the State Department and the Department of Homeland Security, in order to prioritize and expedite the necessary procedures for qualified residency applicants to reduce the uncertainty associated with considering a non-citizen or permanent resident IMG for a residency position.
2. Our AMA International Medical Graduates Section will continue to monitor any H-1B **visa** denials as they relate to IMGs? inability to complete accredited GME programs.
3. Our AMA will study, in collaboration with the Educational Commission on Foreign Medical Graduates and the Accreditation Council for Graduate Medical Education, the frequency of such J-1 Visa reentry denials and its impact on patient care and residency training.
4. Our AMA will, in collaboration with other stakeholders, advocate for unfettered travel for IMGs for the duration of their legal stay in the US in order to complete their residency or fellowship training to prevent disruption of patient care.

Res. 844, I-03 Reaffirmation: A-09 Reaffirmation: I-10 Appended: CME Rep. 10, A-11 Appended: Res. 323, A-12 Reaffirmation: A-19 Reaffirmed: Res. 234, A-22 Reaffirmed: Res. 312, A-25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 231
(A-26)

Introduced by: Senior Physicians Section

Subject: Protecting and Promoting Long Term Care Workforce Amidst Immigration Challenges

Referred to: Reference Committee B

Whereas, the United States is experiencing a demographic rise in older persons that is creating massive demand for long-term services and supports [LTSS] within the next 10-15 years ["peak demand']; and

Whereas, long-term care, including home- and community-based services (HCBS), are essential to the health and quality of life of older adults and persons with disabilities; and

Whereas, the long-term care workforce has experienced chronic shortages that was markedly exacerbated subsequent to the COVID-19 pandemic; and

Whereas, immigrants represent a substantial share of the direct care workforce in long term care settings, and are disproportionately represented in rural and underserved communities; and

Whereas, in communities where there is a higher proportion of immigrants, there is significant decrease in mortality amongst older people[1,2]; and

Whereas, recent administrative actions affecting immigration enforcement priorities including loss of Temporary Protected Status will significantly adversely affect staffing levels, predictably leading to lower quality of care and excess deaths; and

Whereas, the American Medical Association has long recognized the importance of long-term care, workforce sustainability, and immigration policies that support the health care system [H-280.951]; therefore be it

RESOLVED, that our American Medical Association oppose administrative or regulatory actions that exacerbate staffing shortages or threaten access to long term care when such actions are not accompanied by adequate workforce supply and training, immigration pathways, and funding support (New HOD Policy); and be it further

RESOLVED, that our AMA support immigration policies that protect, retain, and expand the long-term care workforce, including timely work authorization, efficient visa processing, and protections against abrupt workforce disruptions for immigrant health care workers. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

H-440.793 Mass Deportation as a Public Health Issue
1. Our American Medical Association recognizes mass deportation of immigrants, asylum seekers, refugees, and others with or seeking an immigration benefit as a public health issue, and recognizes the long-term mental and physical health implications of deportation on individuals, families, and communities.
2. Our AMA opposes deportation of health care workers and medically vulnerable patients solely based on their documentation status.
3. Our AMA opposes the large-scale internment of individuals targeted for deportation efforts.

[Res. 931, I-24]

H-65.932 Reducing the Harmful Impacts of Immigration Status on Health
1. Our AMA supports protecting the human right to seek asylum.
2. Our AMA supports pathways to citizenship for undocumented immigrants who entered the US as minors, including Deferred Action for Childhood Arrivals (DACA), temporary protected status (TPS) recipients, and Dreamers.
2. Our AMA supports family reunification pathways for children and adult immigrants from other countries if their parent/guardian, spouse, or child/dependent has documented status in the U.S.
3. Our AMA supports deferral of deportation (and if applicable, employment authorization, driver's licenses, and identification documents) for people with disabilities and significantly limiting chronic illness, people who work in healthcare and social care, and relatives of people with documented or DACA status, and people without violent felonies.
4. Our AMA supports federal and state efforts to remove immigration enforcement from workplaces and employment consideration, including the removal of E-Verify mandates.

[Res. 004, A-25]

H-280.951 Quality of Care and Staffing in Nursing Homes
Our AMA will support the policy that staffing levels in nursing homes should appropriately address: (1) the acuity of the patient population; (2) the functional level of the patient and the services provided; (3) the existence of shortages for certain types of staff in some geographic locations and temporary shortages due to events such as employee illness or termination; and (4) the quality, education, and training of staff.
[Sub. Res.109, A-06; Modified: CMS Rep. 01, A-16]

H-280.945 Financing of Long-Term Services and Supports
1. Our American Medical Association supports policies and incentives that standardize and simplify private Long Term Care Insurance (LTCI) to achieve increased coverage and improved affordability for all Americans.
2. Our AMA supports adding transferable and portable LTCI coverage as part of workplace automatic enrollment with an opt-out provision potentially available to both current employees and retirees.
3. Our AMA supports allowing employer-based retirement savings to be used for LTCI premiums and LTSS expenses, including supporting penalty-free withdrawals from retirement savings accounts for purchase of private LTCI.
4. Our AMA supports innovations in LTCI product design, including the insurance of home and community-based services, and the marketing of long-term care products with health insurance, life insurance, and annuities.
5. Our AMA supports permitting Medigap plans to offer a limited LTSS benefit as an optional supplemental benefit or as separate insurance policy.
6. Our AMA supports Medicare Advantage plans offering LTSS in their benefit packages.
7. Our AMA supports permitting Medigap and Medicare Advantage plans to offer a respite care benefit as an optional benefit.
8. Our AMA supports a back-end public catastrophic long-term care insurance program.

9. Our AMA supports incentivizing states to expand the availability of and access to home and community-based services; and
10. Our AMA supports better integration of health and social services and supports, including the Program of All-Inclusive Care for the Elderly.

[CMS Rep.05, A-18; Reaffirmed: I-18; Reaffirmed: CMS Rep. 10, A-19; Reaffirmed: CMS Rep. 4, I-21; Reaffirmed A-23; Modified: Res. 815, I-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 232
(A-26)

Introduced by: Illinois

Subject: Banning Flavored Cannabis E-Cigarettes

Referred to: Reference Committee B

Whereas, vaping e-cigarettes has been a popular form of nicotine and cannabis delivery for approximately twenty years; and

Whereas, on April 2, 2025, the Supreme Court unanimously ruled that the U.S. Food and Drug Administration (FDA) lawfully denied marketing authorization for certain flavored e-liquids used in electronic nicotine delivery systems (ENDS), otherwise known as e-cigarettes (ECIG) or “vapes;” and

Whereas, a recent analysis revealed five clusters of reasons for flavored ECIG use including Increased Satisfaction/Enjoyment, Better Feel/Taste than Cigarettes, Variety/Customization, Food Craving Suppression, and Social Impacts; and

Whereas, flavors may make ECIG use more satisfying and may increase abuse potential, product appeal, and/or reinforcing effects; and

Whereas, cannabis can have a strong, earthy, or even bitter taste, which some users find unpalatable; and

Whereas, flavored cartridges offer a way to mask the unpleasant taste of cannabis, making the vaping experience more pleasant to the user; and

Whereas, flavors in both nicotine and cannabis vape products increased adolescents’ willingness to try them; and

Whereas, cannabis vape products can readily be brought into schools where their use can be very hard to detect; and

Whereas, marijuana vapes use increased by 10.1 percent for 12th grade students, between 2017 and 2023, with just under 20 percent of 12th grade students reported vaping marijuana in 2023; and

Whereas, use of marijuana increased by 5 and 3.5 percent for 10th grade and 8th grade students, respectively, between 2017 and 2023; and

Whereas, approximately one-third (34.5%) of U.S. 12th-grade students who consumed cannabis in 2018 did so by vaping, compared to 19.8 % in 2016; and

Whereas, median maximum concentrations (Cmax) for the cannabis metabolite THCCOOH were qualitatively higher after administration of vaporized cannabis compared to equal doses of smoked cannabis; and

Whereas, National Poison Data System (NPDS) statistics from 2016 through 2023 noted of the 4122 total e-cigarette calls, 1816 (44.1%) were treated at health care facilities (HCF); by comparison, there were 37,971 total tobacco e-cigarette calls of which 7401 (19.5%) were treated at HCF (Chi square with Yates correction two-tailed P value is < 0.0001); and

Whereas, there was an adolescent preponderance of both the flavored (57 adolescents versus 27 adults) and the unflavored calls (44 adolescents versus 33 adult calls); and

Whereas, in the same analysis, toddlers (39.8%) and adolescents (33.4%) trended to be much more prevalent than adults (17.9%) throughout all categories of single exposure cannabis e-cigarette encounters with national poison centers; and

Whereas, a recent meta-analysis which included youth and adult studies reported that among individuals who used cannabis, 22% met criteria for Cannabis Use Disorder (CUD) (95% CI 18%–26%. CUD was most prevalent in young adults, there being among the cohort of cannabis-using 21-year-old emerging adults a very high risk of CUD (41.1%, 95% CI 38.4%–43.8%); and

Whereas, prospective evidence suggests higher potency cannabis which is now exceedingly common (THC content averaging >=12.3%), increases risk for onset of first cannabis use disorder symptom by almost five-fold within the first year of use; and

Whereas, cannabis is a drug with high potential for abuse, particularly in young adults, with use potentially leading to severe psychological or physical dependence and is not a drug with a moderate to low potential for physical and psychological dependence; therefore be it

RESOLVED, that our American Medical Association advocate and support a complete ban on the production, marketing, and sale of Cannabis based ECIG flavored devices and cartridges throughout all regulated cannabis dispensaries (medical and adult-use) along with any outlet selling hemp products and public health entities (Directive to Take Action); and be it further

RESOLVED, that our AMA pursue legislative changes concerning a comprehensive ban on the production, marketing and sale of cannabis-based ECIG flavored devices and cartridges in the United States. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

Cannabis Legalization for Adult Use (commonly referred to as recreational use) H-95.924

Our American Medical Association believes that cannabis is a dangerous drug and as such is a serious public health concern.

Our AMA believes that the sale of cannabis for adult use should not be legalized (with adult defined for these purposes as age 21 and older.

Our AMA discourages cannabis use, especially by persons vulnerable to the drug's effects and in high-risk populations such as youth, pregnant people, and people who are breastfeeding.

Our AMA believes states that have already legalized cannabis (for medical or adult use or both) should be required to take steps to regulate the product effectively in order to protect public health and safety including but not limited to: regulating retail sales, marketing, and promotion intended to encourage use; limiting the potency of cannabis extracts and concentrates; requiring packaging to convey meaningful and easily understood units of consumption, and requiring that for commercially available edibles, packaging must be child-resistant and come with messaging about the hazards about unintentional ingestion in children and youth.

Our AMA believes laws and regulations related to legalized cannabis use should consistently be evaluated to determine their effectiveness.

Our AMA encourages local, state, and federal public health agencies to improve surveillance efforts to ensure data is available on the short- and long-term health effects of cannabis, especially emergency

department visits and hospitalizations, impaired driving, workplace impairment and worker-related injury and safety, and prevalence of psychiatric and addictive disorders, including cannabis use disorder.
Our AMA supports public health based strategies, rather than incarceration, in the handling of individuals possessing cannabis for personal use.
Our AMA encourages research on the impact of legalization and decriminalization of cannabis in an effort to promote public health and public safety.
Our AMA encourages dissemination of information on the public health impact of legalization and decriminalization of cannabis.
Our AMA will advocate for stronger public health messaging on the health effects of cannabis and cannabinoid inhalation and ingestion, with an emphasis on reducing initiation and frequency of cannabis use among adolescents, especially high potency products; use among people who are pregnant or contemplating pregnancy; and avoiding cannabis-impaired driving.
Our AMA supports social equity programs to address the impacts of cannabis prohibition and enforcement policies that have disproportionately impacted marginalized and minoritized communities.
Our AMA will coordinate with other health organizations to develop resources on the impact of cannabis on human health and on methods for counseling and educating patients on the use cannabis and cannabinoids.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 233
(A-26)

Introduced by: Illinois Delegation

Subject: Banning Synthesized, Purified or Derivative Products from Kratom

Referred to: Reference Committee B

Whereas, kratom (Mitragyna speciosa) is a plant indigenous to Southeast Asia, typically consumed by tea or powder, with physiologic effects like opioids, as well as stimulants. There is an increasing prevalence of kratom use, raising concern for possible dependence, addiction, and toxicity; and

Whereas, an estimated 1.7 million Americans aged 12 and older used kratom in 2021, according to the Substance Abuse and Mental Health Services Administration; and

Whereas, a recent cross-sectional survey utilizing a non-probabilistic nationally representative sampling with a total of 11,545 respondents of which 1,049 reported current kratom use, indicating a 9.1% prevalence. The most common kratom products used in the past 30 days were pills, gummies and powder formulations. A higher incidence of adverse effects was reported as the amount of kratom per dose increased with gummies/capsules/tablets/pills; and

Whereas, in a recent study of secret shopper visits were conducted at 100 San Antonio and Austin, Texas smoke shops. kratom (94%) was routinely stocked by smoke shops. When specifically asked about adverse effects, 24% of smoke shop employees did not disclose any risks about kratom; most others provided minimal information; and

Whereas, kratom has only four known pharmacologically active compounds. Of these active compounds, mitragynine is the most prevalent, but 7-OH-mitragynine is more pharmacologically active; and

Whereas, mitragynine toxicity can cause a range of adverse effects, including organ damage, seizures, and respiratory depression, particularly at high doses. The risk is significantly heightened when mitragynine, a major psychoactive compound in kratom, is taken in combination with other drugs; and

Whereas, a study by the National Poison Data system (NPDS) in 2019 found that the most common presenting symptoms after kratom ingestion included agitation, tachycardia, drowsiness, and confusion; and

Whereas, mitragynine poses a risk to recreational users and those using it as a natural remedy or nutritional supplement due to lack of medical supervision or oversight/regulation; and

Whereas, although the alkaloid content naturally ranges from 2 to 6% in native leaf material, it can be up to 60% in concentrated extracts; and

Whereas, 7-hydroxymitragynine (7-OH) is a naturally occurring alkaloid in the kratom plant, but only a minor constituent that comprises less than 2% of the total alkaloid content in natural

kratom leaves. However, 7-OH demonstrates substantially greater mu-opioid receptor potency (a compound 5–20 times more potent than mitragynine and an estimated 13 times more potent than morphine) than kratom's primary alkaloid constituent mitragynine; and

Whereas, in the current marketplace in the U.S., 7-OH is increasingly being marketed over the counter and online, in concentrated forms or sufficient doses to cause harms to those individuals engaging, knowingly or unknowingly, in use of 7-OH; and

Whereas, the availability of 7-OH products is a major concern to the FDA, as consumers can easily purchase products with concentrated levels of 7-OH online and in gas stations, corner stores and vape shops. The FDA is particularly concerned with the growing market for 7-OH products that may be especially appealing to children and teenagers, such as fruit-flavored gummies and ice cream cones. These products may not be clearly or accurately labeled as to their 7-OH content and are sometimes disguised or marketed as kratom; and

Whereas, there are no FDA-approved products containing 7-OH; and

Whereas, in June 2025, the FDA issued warning letters to seven companies for illegally distributing products containing 7-OH, including tablets, gummies, drink mixes and shots; and

Whereas, in 2021, the NPDS included 1,524 kratom case mentions. Of those, 948 were single exposure reports, of which 67 were associated with major medical outcomes and four associated deaths; and

Whereas, according to recent NPDS data (reporting period: 2/1/2025-4/30/2025); there were a total of 53 exposure cases involving 7-OH during this period, the majority of which involved abuse related reasons for use (i.e., "intentional abuse"). Most single-substance 7-OH exposure cases resulted in minor or moderate clinical outcomes, with several documented having major clinical outcomes; and

Whereas, forty cases of death by mitragynine were identified from the Medical Examiners in Florida over a five-year period while the L.A. County medical examiner has reported six overdose deaths in LA County residents between the ages of 18 to 40 years old in the first ten months of 2025 as involving 7-OH; and

Whereas, analysis of kratom and its analogues (particularly mitragynine and 7-OH-mitragynine) in urine or blood are not available at any hospital based clinical chemistry laboratory; and

Whereas, kratom products do not meet basic quality control standards for purity analysis, product constituent levels, standard labeling and accurate warnings to ensure public education and safety; and

Whereas, among the southeast Asian countries, Malaysia, Myanmar, and Singapore consider the kratom plant, mitragynine, and 7-hydroxymitragynine (7-OH) as prohibited from consumption, possession, and trade; and

Whereas, medicinal chemistry efforts have led to synthetic 7-OH derivatives such as MGM-15, where stereospecific saturation of the imine N (1)–C (2) double bond increases opioid receptor affinity and activity. Despite its higher in vitro opioid potency, MGM-15 is currently sold in the US for human consumption as a "research chemical" in tablet form, even though there is an absence of this being studied in humans and obviously no FDA approval. MGM-15 shows

greater opioid receptor binding affinities than 7-OH, indicating the potential for higher opioid effects and risks; and

Whereas, these unregulated products are packaged in a way to market themselves to minors; these products have no minimum purchase age, nor do they require an ID check for age verification. In addition, many of these retailers have shops that are close to school grounds, playgrounds, and other public places that are widely accessible to minors; therefore be it

RESOLVED, that our American Medical Association pursue legislation banning synthesized, purified or derivative products from kratom for marketing, distribution, promotion and sale including but not limited to the unregulated mitragynine along with the 7-hydroxymitragynine and MGM-15 market. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

Regulate Kratom and Ban Over-the-Counter Sales H-95.903

1. Our American Medical Association recommends the safety and efficacy of kratom should be determined through research and clinical trials, and subsequently evaluated by the relevant regulatory entities for its appropriateness for sale and potential oversight via the Controlled Substances Act, before it can be marketed, purchased, or prescribed.

2. Our AMA recommends individuals who are currently using kratom for pain management or other conditions should have access to appropriate medical care to manage their conditions and withdrawal symptoms, if needed.
3. Our AMA recommends individuals who are using kratom only for personal use should not face criminal consequences.
4. Our AMA recommends Kratom should be regulated by the FDA, and its safety and efficacy should be determined through clinical trials before it can be marketed or prescribed as a treatment for any condition.

Res. 515, A-23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 234
(A-26)

Introduced by: International College of Surgeons

Subject: Physician Unity in Advocacy Regarding Physician Reimbursement

Referred to: Reference Committee B

Whereas, the American Medical Association (AMA) House of Delegates serves as the principal policy-making body representing physicians across specialties and practice settings in the United States; and

Whereas, physician payment systems under the Medicare Physician Fee Schedule operate under statutory budget neutrality requirements, which often result in reductions in reimbursement to some physician services when increases occur elsewhere; and

Whereas, AMA policy D-400.982, “AMA Efforts on Physician Payment Reform,” recognizes that instability and reductions in physician reimbursement threaten the sustainability of medical practice and patient access to care; and; AMA policy H-400.972, “Physician Payment Reform,” supports stable and predictable payment updates to protect physician practices and maintain patient access to physician services; and

Whereas, AMA policy H-390.849, “Principles for Physician Payment Reform,” affirms that physician payment systems should ensure adequate reimbursement for physician services and promote access to high-quality care; and; AMA policy H-450.947, “Pay-for-Performance Principles and Guidelines,” emphasizes that physician payment reforms should avoid unintended consequences that undermine the delivery of patient care; and Advocacy by one physician specialty or physician organization for reductions in reimbursement directed toward another physician specialty risks undermining physician unity and may contribute to policies that weaken the physician workforce and reduce patient access to care; therefore be it

RESOLVED, that our American Medical Association reaffirm that physician payment reform should prioritize the sustainability of the entire physician workforce and the protection of patient access to care (New Hod Policy); and be it further

RESOLVED, that our AMA adopt policy stating that physicians and physician organizations should refrain from advocating for reductions in reimbursement specifically targeted at other physician specialties or physician groups (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage physician organizations to pursue payment reform through approaches that improve overall fairness, adequacy, and stability of physician reimbursement rather than redistribution among physician specialties (Directive to Take Action); and be it further

RESOLVED, that our AMA affirm that physicians should advocate collectively against reimbursement cuts affecting any group of physicians and support efforts to protect the financial sustainability of all physician practices in order to preserve patient access to care. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

D-400.982 AMA Efforts on Medicare Payment Reform
Our American Medical Association will increase media awareness around the 2024 AMA Annual meeting about the need for Medicare Payment Reform, eliminating budget neutrality reductions, and instituting annual cost of living increases. BOT Rep. 12, A-24Reaffirmed: Res. 220, I-24

H-400.972 Physician Payment Reform
It is the policy of our American Medical Assoication to take all necessary legal, legislative, and other action to redress the inequities in the implementation of the RBRVS Sub. Res. 109, A-92Reaffirmed: I-92Reaffirmed by CMS Rep. 8, A-95 and Sub. Res. 124, A-95Reaffirmation A-99 and Reaffirmed: Res. 127, A-99Reaffirmation A-02Reaffirmation A-06Reaffirmation I-07Reaffirmed: BOT Rep. 14, A-08Reaffirmation A-09Reaffirmed: CMS Rep. 01, A-19Reaffirmed: Res. 212, I-21Reaffirmed: Res. 802, I-24

H-390.849 Physician Payment Reform
Our American Medical Association will advocate for the development and adoption of physician payment reforms that adhere to the following principles: Promote improved patient access to high-quality, cost-effective care. Be designed with input from the physician community. Ensure that physicians have an appropriate level of decision-making authority over bonus or shared-savings distributions. Not require budget neutrality within Medicare Part B. Be based on payment rates that are sufficient to cover the full cost of sustainable medical practice. CMS Rep. 6, A-09Reaffirmation A-10Appended: Res. 829, I-10Appended: CMS Rep. 1, A-11Appended: CMS Rep. 4, A-11Reaffirmed in lieu of Res. 119, A-12Reaffirmed in lieu of Res. 122, A-12Modified: CMS Rep. 6, A-13Reaffirmation I-15Reaffirmation: A-16Reaffirmed in lieu of: Res. 712, A-17Reaffirmed: BOT Action in response to referred for decision: Res. 237, I-17Reaffirmation: A-19Reaffirmed: BOT Action in response to referred for decision Res. 111, A-19Reaffirmed: BOT Action in response to referred for decision Res. 132, A-19Reaffirmed: Res. 212, I-21Reaffirmed: Res. 240, A-22Reaffirmation: A-22Modified: CMS Rep. 04, A-23Reaffirmed: Res. 214, A-23Reaffirmation: A-23Reaffirmed in lieu of: Res. 225, A-25Reaffirmed: Res. 226, A-25

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 235
(A-26)

Introduced by: Medical Student Section, Underrepresented in Medicine Advocacy Section

Subject: Establishing Healthcare Monitoring and Accountability in Immigration Detention Facilities

Referred to: Reference Committee B

Whereas, United States Immigration and Customs Enforcement's (ICE) Enforcement and Removal Operations (ERO) officers are given the authority to enforce immigration laws within the interior through the arrest, detention, and removal of undocumented individuals with the stated purpose of protecting national security and public safety;[1] and

Whereas, immigration detention is civil custody, not criminal incarceration, yet ICE and contract facilities use criminal detention infrastructures, despite 41,589 out of 58,766, (70.8%) of detainees at immigration detention centers holding no criminal convictions, creating gray areas that allow facilities to bypass health protections;[2,3] and

Whereas, the number of people detained by ICE rose from 39,587 on January 19, 2025, to 58,766 on September 7, 2025, nationwide reflecting a rapid escalation in immigration detention practices;[4,5] and

Whereas, immigration detention centers comprise a variety of facilities in order to detain noncitizens of the United States, including county jails, state and federal prisons, private detention centers, hotels, and even federal office buildings but most individuals detained by ICE are imprisoned in facilities that are either owned or run by private or for-profit prison companies;[6-8] and

Whereas, the National Standards on Transport, Escort, Detention, and Search (TEDS) has created guidelines to ensure individuals in immigration detention centers receive basic necessities, such as hygiene, food and water, and medical care; however, individuals have experienced poor conditions such as cold temperatures, lack of medical care, and inadequate food with minimal religious dietary accommodations;[6] and

Whereas, 42.5% of individuals in immigration detention centers have at least one chronic medical condition, underscoring the elevated need for continuous care, particularly given the average detention stay of 421 days; yet, many detainees report significant disruptions in care, including delays in treatment, medication interruptions, denial of language interpretation services, and lack of follow-up for chronic illnesses;[9-10] and

Whereas, between 2018 and 2019, nearly 900 detainees across 57 ICE detention facilities in 19 states were infected during a mumps outbreak, illustrating inadequate infection control measures;[11] and

Whereas, independent reviews of 52 deaths in ICE custody between 2017 and 2021 found that 95% were preventable with adequate medical care, underscoring systemic failures in clinical oversight, chronic disease management, and emergency response protocols;[12] and

Whereas, during investigations of deaths during ICE detainment, ICE allowed facilities to destroy evidence, omit inculpatory facts, fail to interview key witnesses, and lack a standardized criteria for autopsies;[12] and

Whereas, there has been a documented elevenfold increase in suicide rates and preventable deaths in ICE custody, with the death rate in immigration facilities within the first six months of 2025 being the highest rate of any publicly available year, attributed to systemic failures in mental health care, solitary confinement practices, and inadequate medical evaluation protocols;[9,13-15] and

Whereas, oversight mechanisms remain inadequate as the Office of Detention Oversight (ODO) only conducts 25% of inspections, with other inspections done privately or as self-assessments, and private entities identify less than half of the deficiencies identified by (ODO), are criticized as superficial and ineffective, and ICE personnel report that inspectors frequently conduct only perfunctory reviews of standards;[17, 19-21] and

Whereas, comprehensive inspections conducted by ODO occur only once every three years on average, allowing documented violations, such as inadequate medical care, suicide risk, mismanagement, and unreported abuse, to persist without timely corrective action;[20,22-24] and

Whereas, ICE facilities continue to rely on pre-announced inspections, often only every three years, and are frequently granted waivers that allow facilities to bypass critical health and safety standards outlined by the National Detention Standards, ranging from waivers allowing strip searches to those exempting facilities from complying with fire prevention standards;[21-24] and

Whereas, when faced with knowledge of over 14,000 deficiencies in adherence to procedures at 106 contract facilities, including those that put the health and safety of detainees at risk, ICE only imposed financial penalties on two instances and issued waivers at other facilities;[17] and

Whereas, ICE has no formal policies or procedures in place to guide the waiver process and has allowed Enforcement and Removal Operations (ERO) officers to grant waivers without clear authority to do so, causing only 3 waivers in a sample of 65 to have an expiration date, meaning many facilities may permanently avoid compliance;[17,22] and

Whereas, in light of the persistent use of detention facilities, it remains an ethical and public health imperative to ensure that detained individuals receive humane, timely, and appropriate medical and mental health care, to the fullest extent possible, as an interim measure of health accountability;[23-25] and

Whereas, evidence from carceral health systems shows that independent, transparent, and frequent reporting of health metrics, particularly when conducted by external monitors and publicly disclosed, can improve care quality, and that carefully structured financial incentives tied to health outcomes may further encourage high standards of care in immigration detention facilities;[26-28] therefore be it

RESOLVED, that our American Medical Association support independent, transparent, unannounced inspections of all ICE detention facilities, with anti-retaliation protections for detainees and health staff who participate (New HOD Policy); and be it further

RESOLVED, that our AMA supports efforts to reform ICE’s waiver system by requiring that all waivers include clear expiration dates, transparent public reporting, and standardized criteria that limit their use to cases of demonstrated necessity. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 04/20/2026

RELEVANT AMA POLICY

D-350.983 Improving Medical Care in Immigrant Detention Centers
Our AMA will: (1) issue a public statement urging U.S. Immigrations and Customs Enforcement Office of Detention Oversight to (a) revise its medical standards governing the conditions of confinement at detention facilities to meet those set by the National Commission on Correctional Health Care, (b) take necessary steps to achieve full compliance with these standards, and (c) track complaints related to substandard healthcare quality; (2) recommend the U.S. Immigrations and Customs Enforcement refrain from partnerships with private institutions whose facilities do not meet the standards of medical, mental, and dental care as guided by the National Commission on Correctional Health Care; and (3) advocate for access to health care for individuals in immigration detention. [Res. 017, A-17]

H-350.957 Addressing immigrant health disparities
1. Our American Medical Association recognizes the unique health needs of refugees and encourages the exploration of issues related to refugee health, and supports legislation and policies that address the unique health needs of refugees. 2. Our AMA: (A) urges federal and state government agencies to ensure standard public health screening and indicated prevention and treatment for immigrant children, regardless of legal status, based on medical evidence and disease epidemiology; (B) advocates for and publicizes medically accurate information to reduce anxiety, fear, and marginalization of specific populations; and (C) advocates for policies to make available and effectively deploy resources needed to eliminate health disparities affecting immigrants, refugees or asylees. 3. Our AMA calls for asylum seekers to receive medically-appropriate care, including vaccinations, in a patient-centered, language and culturally appropriate way upon presentation for asylum, regardless of country of origin. 4. Our AMA supports efforts to train physicians to conduct medical and psychiatric forensic evaluations for asylum seekers. 5. Our AMA supports medical education that addresses the challenges of life-altering events experienced by asylum seekers. 6. Our AMA urges physicians to provide medically appropriate care for asylum seekers. 7. Our AMA encourages physicians to seek out organizations or agencies in need of physicians to provide these services. 8. Our AMA encourages the provision of resources to assist people seeking asylum, including social and legal services. [Res. 804, I-09Appended: Res. 409, A-Reaffirmation: A-19Appended: Res. 423, A-19 Reaffirmation: I-19Modified: BOT Rep. 08, I-24]

H-65.934 Opposition to the Deceptive Relocation of Migrants and Asylum Seekers
1. Our American Medical Association opposes the relocation of migrants and asylum-seekers by state or federal authorities without timely and appropriate resources to meet travelers' needs, especially when deceptive or coercive practices are used.
2. Our AMA supports state and federal efforts to protect the health and safety of traveling migrants and asylum-seekers and investigate possible abuse and human rights violations.

[Res. 006, I-24]

H-65.938 Guiding principles for the health care of migrants
1. Our American Medical Association advocates for the development of adequate policies and / or legislation to address the healthcare needs of migrants and asylum seekers in cooperation with relevant legislators and stakeholders based on the following guiding principles, adapted from the High-level meeting of the Global Consultation on Migrant Health, i.e. the “Colombo Statement.”
2. Our AMA recognizes that migration status is a social determinant of health.
3. Our AMA affirms the importance of multi-sectoral coordination and inter-country engagement and partnership in enhancing the means of addressing health aspects of migration.
4. Our AMA recognizes that the enhancement of migrants’ health status relies on an equitable and non-discriminatory access to and coverage of health care and cross-border continuity of care at an affordable cost avoiding severe financial consequences for migrants, as well as for their families.
5. Our AMA recognizes that investment in migrant health provides positive dividends compared to public health costs due to exclusion and neglect, and therefore underscore the need for financing

mechanisms that mobilize different sectors of society, innovation, identification and sharing of good practices in this regard.

6. Our AMA recognizes that the promotion of the physical and mental health of migrants as defined by the following select objectives from the World Health Organization's 72nd World Health Assembly, Global action plan on promoting the health of refugees and migrants, 2019-2023, is accomplished by
    a. Ensuring that essential components, such as vaccination of children and adults and the provision of health promotion, disease prevention, timely diagnosis and treatment, rehabilitation and palliative services for acute, chronic and infectious diseases, injuries, mental and behavioral disorders, and sexual and reproductive health care for women, are addressed.
    b. Improving the quality, acceptability, availability and accessibility of health care services, for instance by overcoming physical, financial, information, linguistic and other cultural barriers, with particular attention to services for chronic conditions and mental health, which are often inadequately addressed or followed up during the migration and displacement process, and by working to prevent occupational and work-related diseases and injuries among migrant workers and their families by improving the coverage, accessibility and quality of occupational and primary health care services and social protection systems.
    c. Ensuring that the social determinants of migrants' health are addressed through joint, coherent multisectoral actions in all public health policy responses, especially ensuring promotion of well-being for all at all ages, and facilitating orderly, safe, and responsible migration and mobility of people, including through implementation of planned and well-managed migration policies, as defined in the Sustainable Development Goals of the United Nations.
    d. Ensuring that information and disaggregated data at global, regional and country levels are generated and that adequate, standardized, comparable records on the health of migrants are available to support policy-makers and decision-makers to develop more evidence-based policies, plans and interventions.
    e. Providing accurate information and dispelling fears and misperceptions among migrant and host populations about the health impacts of migration and displacement on migrant populations and on the health of local communities and health systems.

[Res. 016, A-24]

H-406.987 Medical Information and its uses

Our AMA seeks to help physicians improve the quality reporting of patient care data and adapt to new payment and delivery models to transform our health care system. One means of accomplishing this goal is to increase the transparency of health care data. The principles outlined below ensure that physicians, practices, care systems, physician-led organizations, patients, and other relevant stakeholders can access and proactively use meaningful, actionable health care information to achieve care improvements and innovations. These principles do not replace but build upon existing AMA policies H-406.990, H-406.989, H-406.991, and H-406.996 that address safeguards for the release of physician data and physician profiles, expanding these guidelines to reflect the new opportunities and potential uses of this information.

Engaging Physicians - Our AMA encourages greater physician engagement in transparency efforts, including the development of physician-led quality measures to ensure that gaps in measures are minimized and that analyses reflect the knowledge and expertise of physicians.

Promoting New Payment and Delivery Models - Our AMA supports appropriate funding and other support to ensure that the data that are used to inform new payment and delivery models are readily available and do not impose a new cost or additional burden on model participants.

Improving Care Choices and Decisions - Our AMA promotes efforts to present data appropriately depending on the objective and the relevant end-user, including transparently identifying what information is being provided, for what purpose, and how the information can or cannot be used to influence care choices. Informing Physicians - Our AMA encourages the development of user interfaces that allow physicians or their staff to structure simple queries to obtain and track actionable reports related to specific patients, peer comparisons, provider-level resource use, practice patterns, and other relevant information. Informing Patients - Our AMA encourages patients to consult with physicians to understand and navigate health care transparency and data efforts. Informing Other Consumers - Our AMA seeks opportunities to engage with other stakeholders to facilitate physician involvement and more proactive

use of health care data. Data Availability - Our AMA supports removing barriers to accessing additional information from other payers and care settings, focusing on data that is valid, reliable, and complete. Access to Timely Data - While some datasets will require more frequent updates than others, our AMA encourages the use of the most current information and that governmental reports are made available, at a minimum, from the previous quarter. Accurate Data - Our AMA supports proper oversight of entities accessing and using health care data, and more stringent safeguards for public reporting, so that information is accurate, transparent, and appropriately used. Use of Quality Data - Our AMA supports definitions of quality based on evidence-based guidelines, measures developed and supported by specialty societies, and physician-developed metrics that focus on patient outcomes and engagement. Increasing Data Utility - Our AMA promotes efforts by clinical data registries, regional collaborations, Qualified Entities, and specialty societies to develop reliable and valid performance measures, increase data utility, and reduce barriers that currently limit access to and use of the health care data. Standardization - Our AMA supports improvements in electronic health records (EHRs) and other technology to capture and access data in uniform formats. Mitigating Administrative Burden - To reduce burdens, data reporting requirements imposed on physicians should be limited to the information proven to improve clinical practice. Collection, reporting, and review of all other data and information should be voluntary. Data Attribution - Our AMA seeks to ensure that those compiling and using the data avoid attribution errors by working to correctly assign services and patients to the appropriate provider(s), as well as allowing entities to verify who or where procedures, services, and items were performed, ordered, or otherwise provided. Until problems with the current state of episode of care and attribution methodologies are resolved, our AMA encourages public data and analyses primarily focused on the system-level instead of on individual physicians or providers. [BOT Rep. 6, A-15Reaffirmation: I-18Reaffirmed: CSAPH Rep. 2, I-19]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 236
(A-26)

Introduced by: LGBTQ+ Section, Medical Student Section, American College of Physicians

Subject: Extending and Expanding the AMA Task Force to Preserve the Patient-Physician Relationship to Ensure Access and Regulatory Clarity in Gender-Affirming Care

Referred to: Reference Committee B

Whereas, AMA Policy G-605.009 established the Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted to guide organized medicine's response to restrictions on evidence-based care and to create implementation-focused advocacy and practice resources; and

Whereas, Policy G-605.009 explicitly anticipates and prepares for bans on other appropriate health care, including gender-affirming care, and calls for identification of information and resource gaps and the creation of implementation blueprints to mitigate harm; and

Whereas, the Task Force has demonstrated effectiveness in developing implementation tools, including landscape analyses, litigation monitoring, partnership with legal defense networks, physician education, and creation of the Reproductive Health Resource Navigator as a centralized digital resource hub[1]; and

Whereas, restrictions on gender-affirming care have proliferated in multiple jurisdictions and across numerous levels of government and regulatory agencies, creating significant legal uncertainty, regulatory confusion, reimbursement barriers, institutional policy variability, and potential civil, criminal, and professional liability risk for physicians[2-4]; and

Whereas, medical students, residents, and fellows in states with restrictions face diminished training opportunities in gender-affirming care, threatening workforce preparedness and future access to appropriate and evidence-based care, with resultant decreased physician workforce in such restricted states[4-6]; and

Whereas, physicians require centralized, up-to-date, practical guidance addressing evolving statutory restrictions, shield laws, privacy protections, telehealth considerations, interstate licensure, documentation standards, payer policies, institutional risk mitigation, and medical liability concerns; and

Whereas, gender-affirming care is multi-specialty care, positioning the AMA as an effective convener of representatives across specialties to facilitate collaborative efforts[7]; and

Whereas, organized medicine has an ethical obligation to defend the patient-physician relationship and ensure that physicians can provide evidence-based, patient-centered care without undue interference; therefore be it

RESOLVED, that our American Medical Association extend and expand the work of the Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care

Is Banned or Restricted to include a formalized and sustained focus on legislative and regulatory actions to protect access to and education in gender-affirming care (Directive to Take Action); and be it further

RESOLVED, that our AMA direct the Task Force to develop, launch, and maintain a comprehensive, centralized digital resource hub—modeled on the Reproductive Health Resource Navigator—specifically dedicated to gender-affirming care no later than the 2026 Interim Meeting, including but not limited to:

1. State-specific legal summaries and regulatory guidance;
2. Shield law analyses and cross-state practice considerations;
3. Privacy and HIPAA compliance best practices;
4. Risk-mitigation guidance addressing civil, criminal, and professional liability;
5. Documentation and informed consent templates consistent with evolving legal standards;
6. Coding, billing, and reimbursement guidance;
7. Institutional policy templates and sample protocols;
8. Educational and training resources for undergraduate and graduate medical education;
9. Telehealth and interstate licensure guidance; and
10. Information regarding legal assistance and physician defense resources (Directive to Take Action); and be it further

RESOLVED, that our AMA strengthen its advocacy efforts at the federal and state levels to oppose criminalization and punitive actions against physicians providing evidence-based gender-affirming care and to support legal protections safeguarding the patient-physician relationship, with guidance by the Task Force (Directive to Take Action); and be it further

RESOLVED, that our AMA identify gaps in information and resources and develop a comprehensive advocacy and policy blueprint to prevent, counter, and mitigate restrictions on safe, evidence-based, and medically appropriate health care (Directive to Take Action); and be it further

RESOLVED, that our AMA report annually to the House of Delegates regarding progress on these deliverables, including metrics on resource utilization, physician engagement, and identified advocacy outcomes. (Directive to Take Action)

Fiscal Note: Major – To Be Determined

RELEVANT AMA POLICY

G-605.009 Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted

1. Our American Medical Association will convene a task force of appropriate AMA councils and interested state and medical specialty societies, in conjunction with the AMA Center for Health Equity, and in consultation with relevant organizations, practices, government bodies, and impacted communities for the purpose of preserving the patient-physician relationship.
2. This task force, which will serve at the direction of our AMA Board of Trustees, will inform the Board to help guide organized medicine's response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources on issues including but not limited to:
a. Health equity impact, including monitoring and evaluating the consequences of abortion bans and restrictions for public health and the physician workforce and including making actionable recommendations to mitigate harm, with a focus on the disproportionate impact on under-resourced, marginalized, and minoritized communities.
b. Practice management, including developing recommendations and educational materials for addressing reimbursement, uncompensated care, interstate licensure, and provision of care, including telehealth and care provided across state lines.
c. Training, including collaborating with interested medical schools, residency and fellowship programs, academic centers, and clinicians to mitigate radically diminished training opportunities.
d. Privacy protections, including best practice support for maintaining medical records privacy and confidentiality, including under HIPAA, for strengthening physician, patient, and clinic security measures, and countering law enforcement reporting requirements.
e. Patient triage and care coordination, including identifying and publicizing resources for physicians and patients to connect with referrals, practical support, and legal assistance.
f. Coordinating implementation of pertinent AMA policies, including any actions to protect against civil, criminal, and professional liability and retaliation, including criminalizing and penalizing physicians for referring patients to the care they need.
g. Anticipation and preparation, including assessing information and resource gaps and creating a blueprint for preventing or mitigating bans on other appropriate health care, such as gender affirming care, contraceptive care, sterilization, infertility care, and management of ectopic pregnancy and spontaneous pregnancy loss and pregnancy complications.
h. Work with interested parties to encourage the development of institution-level guidance and protection for physicians practicing in states with restrictions potentially interfering with the patient-physician relationship.
3. Our American Medical Association will appoint an ad hoc committee or task force, composed of physicians from specialties who routinely provide gender-affirming care, payers, community advocates, and state Medicaid directors and/or insurance commissioners, to identify issues with physician payment and reimbursement for gender-affirming care and recommend solutions to address these barriers to care.
[Res. 621, A-22 Appended: Res. 816, I-23 Appended: Res. 207, I-24]

D-605.982 Accountability for G-605.009: Requesting A Task Force to Preserve the Patient-Physician Relationship Task Force Update and Guidance
Our American Medical Association's Task Force, to Preserve the Patient-Physician Relationship, will present annual updates on their findings at AMA Annual Meetings until the objectives have been completed.
[Res. 207, I-24]

D-5.998 Support for Physicians Practicing Evidence-Based Medicine in a Post Dobbs Era
1. Our American Medical Association Task Force developed under HOD Policy G-605.009, "Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted," will publish a report with annual updates with recommendations including policies, strategies, and resources for physicians who are required by medical judgment and ethical standards of care to act against state and federal laws.
2. Our AMA will work to facilitate support, including legal support through the AMA Litigation Center, as may be appropriate, to physicians that are targeted for practicing in accordance with accepted standards of medical care and medical ethics in the face of legal constraint or any other disciplinary action.
3. Our AMA will advocate for affirmative protections for "conscientious provision" of care in accordance with accepted standards of medical care and medical ethics in hostile environments on par with protection of "conscientious objection."
[Res. 008, I-22 Reaffirmation: A-23]

H-275.937 Patient/Physician Relationship and Medical Licensing Boards
Our AMA encourages all state medical societies to advocate for inclusion of the following policy in their state medical licensing board regulations:
1. Without regard to whether an act or failure to act is entirely determined by a physician, or is the result of a contractual or other relationship with a health care entity, the relationship between a physician and a patient must be based on trust and must be considered inviolable. Included among the elements of such a relationship of trust are:
a. open and honest communication between the physician and the patient, including disclosure of all information necessary for the patient to be an informed participant in their care;
b. commitment of the physician to be an advocate for the patient and for what is best for the patient, without regard to the physician's personal interests;
c. provision by the physician of that care which is necessary and appropriate for the condition of the patient and neither more nor less; and
d. avoidance of any conflict of interest or inappropriate relationships outside of the therapeutic relationship.
2. The relationship between a physician and a patient is fundamental and is not to be constrained or adversely affected by any considerations other than what is best for the patient. The existence of other considerations, including financial or contractual concerns, is and must be secondary to the fundamental relationship.
3. Any act or failure by a physician that violates the trust upon which the relationship is based may place the physician at risk of being found in violation of the Medical Practice Act.
4. The following statement reflects the policy of the (name of state) Board of Medical Examiners regarding the physicians it licenses.
5. A (name of state) physician has both medical-legal and ethical obligations to their patients. These are well established in both law and professional tradition. Some models of medical practice may result in an inappropriate restriction of the physician's ability to practice quality medicine. This may create negative consequences for the public. It is incumbent that physicians take those actions they consider necessary to assure that medical practice models do not adversely affect the care that they render to their patients.
[BOT Rep. 30, I-98 Reaffirmed: CME Rep. 2, A-08 Modified: CME Rep. 01, A-18 Modified: Speakers Rep. 02, I-24]

D-275.942 Ensuring Equitable and Timely Medical Licensure for Physicians Providing Abortion and Gender-Affirming Care
1. Our American Medical Association advocates that no physician be disqualified from medical licensure or subject to unnecessary delay in the licensure process solely due to having provided abortion care or gender-affirming care in accordance with then-current standards of medical practice and/or while such care was legal in their jurisdiction.

2. Our AMA supports policies, legislation, and state medical society initiatives that prohibit discrimination by state medical boards or licensing authorities against applicants based on their provision of abortion or gender-affirming care.
3. Our AMA will work with relevant interested parties, including state medical boards and specialty societies, to support the development of guidance ensuring that physicians seeking licensure are evaluated in a timely manner, equitably and without bias relating to reproductive or gender-affirming. [Res. 231, I-25]

H-65.964 Access to Basic Human Services for Transgender Individuals
Our AMA: (1) opposes policies preventing transgender individuals from accessing basic human services and public facilities in line with one's gender identity, including, but not limited to, the use of restrooms; and (2) will advocate for the creation of policies that promote social equality and safe access to basic human services and public facilities for transgender individuals according to one's gender identity. [Res. 010, A-17]

H-160.991 Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations
1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.
5. Our AMA supports preservation and maintenance of federal and state public funding for physicians and institutions engaged in clinical care, research, and medical education regarding LGBTQ+ populations. AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 237
(A-26)

Introduced by: Texas

Subject: Guaranteed 30-Day Transition Fill of Currently Prescribed Insulin at the Beginning of Each Year Plan

Referred to: Reference Committee B

Whereas, the $35 cap on insulin copays only applies to specific brand or version on a plan's formulary; and

Whereas, although plan formularies are available online in real-time, accurate information can be delayed or unavailable, especially during a plan change; and

Whereas, timely access to insulin is required to prevent acute decompensation of diabetes; therefore be it

RESOLVED, that our American Medical Association adopt as policy and advocate that beneficiaries of ERISA-governed health plans be allowed a 30-day transition fill of insulin at the beginning of each plan year to allow time for the formulary preference to be determined by the patient and prescriber. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/20/26

RELEVANT AMA POLICY

H-100.964 Drug Issues in Health System Reform
1. Our American Medical Association consistent with AMA Policy H-165.925, supports coverage of prescription drugs, including insulin, in the AMA standard benefits package.
2. Our AMA supports consumer choice of at least two options for their pharmaceutical benefits program. This must include a fee-for-service option where restrictions on patient access and physician autonomy to prescribe any FDA-approved medication are prohibited.
3. Our AMA reaffirms AMA Policy H-110.997, supporting the freedom of physicians to use either generic or brand name pharmaceuticals in prescribing drugs for their patients and encourage physicians to supplement medical judgments with cost considerations in making these choices.
4. Our AMA supports a managed pharmaceutical benefits option with market-driven mechanisms to control costs, provided cost control strategies satisfy AMA criteria defined in AMA Policy H-110.997 and that drug formulary systems employed are consistent with standards defined in AMA Policy H-125.991.
5. Our aMA supports prospective and retrospective drug utilization review (DUR) as a quality assurance component of pharmaceutical benefits programs, provided the DUR program is consistent with Principles of Drug Use Review defined in AMA Policy H-120.978.
6. Our AMA encourages physicians to counsel their patients about their prescription medicines and when appropriate, to supplement with written information; and supports the physician's role as the "learned intermediary" about prescription drugs.
a. Our AMA encourages physicians to incorporate medication reviews, including discussions about drug interactions and side effects, as part of routine office-based practice, which may include the use of

medication cards to facilitate this process. Medication cards should be regarded as a supplement, and not a replacement, for other information provided by the physician to the patient via oral counseling and, as appropriate, other written information.
7. Our AMA reaffirms AMA Policy H-120.991, supporting the voluntary time-honored practice of physicians providing drug samples to selected patients at no charge, and to oppose legislation or regulation whose intent is to ban drug sampling.

H-110.984 Insulin Affordability

1. Our American Medical Association will encourage the Federal Trade Commission (FTC) and the Department of Justice to investigate insulin pricing and market competition and take enforcement actions as appropriate.
2. Our AMA supports initiatives, including those by national medical specialty societies, that provide physician education regarding the cost-effectiveness of insulin therapies.
3. Our AMA supports state and national efforts to limit the ultimate expenses incurred by insured patients for prescribed insulin.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 238
(A-26)

Introduced by: Texas

Subject: Prohibiting the Independent Practice of Medicine by Artificial Intelligence

Referred to: Reference Committee B

Whereas, artificial intelligence (AI) is a powerful tool in augmenting the delivery of high quality health care and in expanding access to care in rural and underserved areas; and

Whereas, AI can enhance diagnostic capabilities and help with remote patient monitoring and automation of administrative tasks; and

Whereas, AI can provide accessible health education to patients through online platforms and apps; and

Whereas, AI can assist primary care physicians by collecting data regarding rural care for analysis, and evaluating large datasets to enhance care approaching levels similar to urban centers; and

Whereas, the “Healthy Technology Act of 2025” (H.R. 238) has been introduced in the U.S. House of Representatives to explore the possibility of allowing FDA approved AI to prescribe drugs; and

Whereas, H.R. 238 asks that AI be authorized by state law; and

Whereas, the One Big Beautiful Bill House version approved a 10-year moratorium on state AI legislation that was not passed by the Senate; therefore be it

RESOLVED, that our American Medical Association advocate for legislation and regulation prohibiting the use of artificial intelligence (AI) as an independent diagnostic or prescriptive tool or as a care management substitute for a physician. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

RELEVANT AMA POLICY

Explainability of Artificial/Augmented Intelligence and Machine Learning Algorithms D-480.954

1. To maximize the impact and trustworthiness of augmented intelligence and machine-learning (AI/ML) tools in clinical settings, our AMA recognizes that:
    a. Explainable AI with safety and efficacy data should be the expected form of AI tools for clinical applications, and exceptions should be rare and justified and require at minimum safety and efficacy data prior to their adoption or regulatory approval;
    b. To be considered "explainable," an AI device's explanation of how it arrived at its output must be interpretable and actionable by a qualified human. Claims that an algorithm is explainable should be adjudicated only by independent third parties, such as regulatory agencies or appropriate specialty societies, rather than by declaration from its developer;
    c. Explainability should not be used as a substitute for other means of establishing safety and efficacy of AI tools, such as through randomized clinical trials; and
    d. Concerns of intellectual property (IP) infringement, when provided as rationale for not explaining how an AI device created its output, does not nullify a patient's right to transparency and autonomy in medical decision-making. While intellectual property should be afforded a certain level of protection, concerns of infringement should not outweigh the need for explainability for AI with medical applications.
2. Our AMA will collaborate with experts and interested parties to develop and disseminate a list of definitions for key concepts related to medical AI and its oversight.

Augmented Intelligence in Health Care H-480.939

Our American Medical Association supports the use and payment of augmented intelligence (AI) systems that advance the quadruple aim. AI systems should enhance the patient experience of care and outcomes, improve population health, reduce overall costs for the health care system while increasing value, and support the professional satisfaction of physicians and the health care team. To that end our AMA will advocate that:

1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
2. Payment and coverage for all health care AI systems must be conditioned on complying with all appropriate federal and state laws and regulations, including, but not limited to those governing patient safety, efficacy, equity, truthful claims, privacy, and security as well as state medical practice and licensure laws.
3. Payment and coverage for health care AI systems intended for clinical care must be conditioned on
    a. clinical validation.
    b. alignment with clinical decision-making that is familiar to physicians.
    c. high-quality clinical evidence.
4. Payment and coverage for health care AI systems must
    a. be informed by real world workflow and human-centered design principles.
    b. enable physicians to prepare for and transition to new care delivery models.
    c. support effective communication and engagement between patients, physicians, and the health care team.
    d. seamlessly integrate clinical, administrative, and population health management functions into workflow.
    e. seek end-user feedback to support iterative product improvement.
5. Payment and coverage policies must advance affordability and access to AI systems that are designed for small physician practices and patients and not limited to large practices and institutions. Government-conferred exclusivities and intellectual property laws are meant to foster innovation, but constitute interventions into the free market, and therefore, should be appropriately balanced with the need for competition, access, and affordability.

6. Physicians should not be penalized if they do not use AI systems while regulatory oversight, standards, clinical validation, clinical usefulness, and standards of care are in flux. Furthermore, our AMA opposes:
    a. Policies by payers, hospitals, health systems, or governmental entities that mandate use of health care AI systems as a condition of licensure, participation, payment, or coverage.
    b. The imposition of costs associated with acquisition, implementation, and maintenance of healthcare AI systems on physicians without sufficient payment.
7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. Our AMA will further advocate:
    a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
    b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
    c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.
8. Our AMA, national medical specialty societies, and state medical associations:
    a. Identify areas of medical practice where AI systems would advance the quadruple aim.
    b. Leverage existing expertise to ensure clinical validation and clinical assessment of clinical applications of AI systems by medical experts.
    c. Outline new professional roles and capacities required to aid and guide health care AI systems.
    d. Develop practice guidelines for clinical applications of AI systems.
9. There should be federal and state interagency collaboration with participation of the physician community and other stakeholders in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD Policy)
10. AI is designed to enhance human intelligence and the patient-physician relationship rather than replace it.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 239
(A-26)

Introduced by: American Academy of Physical Medicine and Rehabilitation, American Association of Neuromuscular & Electrodiagnostic Medicine

Subject: Medicare Administrative Contractor Policy Modification

Referred to: Reference Committee B

Whereas, recent Local Coverage Determination (LCD) proposals have called for drastic changes in Medicare coverage for botulinum toxin injections for spasticity and for peripheral nerve blocks; and

Whereas, the comment period for new or revised LCDs is only 45 days, which does not provide sufficient time to develop a robust response given the scope and breadth of most LCDs and Medicare Administrative Contractors (MACs) requests for detailed references and objective data to be submitted with any comments; and

Whereas, these LCDs are lengthy with tremendous breadth and include a variety of procedures, and a comprehensive literature review of potential impacts takes more time to assemble; and

Whereas, more time would allow specialty societies to engage their subject matter experts and work collaboratively; and

Whereas, the Billing and Coding Local Coverage Article (LCA) that accompanied a recent botulinum toxin LCD took effect despite concerns raised by specialty societies and inadvertently eliminated coverage for diagnostic codes including quadriplegia, paraplegia, and monoplegia because they did not contain the word "spastic" in the code's descriptor, and there was not a separate ICD10 code for spasticity (until a formal reconsideration resulted in a revised policy); and

Whereas, the MAC’s initial decision regarding botulinum toxin injections caused delays in care for patients with spasticity due to spinal cord injury which adversely affected their medical care and function; and

Whereas, the MAC’s proposed LCD on peripheral nerve blocks will adversely affect patients with chronic pain who get relief from the injections rather than chronic opioids; therefore be it

RESOLVED, that our American Medical Association amend Policy D-330.897, Stakeholder Engagement in Medicare Administrative Contractor Policy, by addition to read:

1. Our American Medical Association opposes Medicare Administrative Contractors (MACs) using Local Coverage Articles (LCAs) that could have the effect of restricting coverage or access without providing data and evidentiary review or without issuing associated Local Coverage Determinations (LCDs) and following required stakeholder processes.
2. Our AMA will advocate and work with the Centers for Medicare and Medicaid Services (CMS) to improve the instructions to MACs regarding development of local coverage policies in such a manner as to prevent LCAs that could have the effect of restricting coverage or access from

being adopted without the MAC providing public data, decision criteria, and evidentiary review and allowing comment, or without an associated LCD and the required LCD stakeholder review and input process.
3. Our AMA will work with specialty and state medical societies and other interested stakeholders to identify LCAs that potentially restrict coverage or access and that were issued without the MACs providing opportunities for stakeholder input, public data, decision criteria, and evidentiary review and advocate that CMS require MACs to revise the policies by taking any such proposed changes through an appropriate stakeholder engagement, public data, and evidentiary review.
4. Our AMA will advocate and work with CMS to require a minimum 90-day public comment period for new or revised LCDs.
5. Our AMA will advocate and work with CMS to require expedited reconsideration timelines for new or revised LCDs that involve patient access to an intervention that may preserve life and/or function.
6. Our AMA will advocate and work with CMS to require MACs to provide an explanation for the removal of diagnostic codes from the list of diagnoses included as medically necessary for any procedure in a proposed new or revised LCA (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA reaffirm policy D-330.918, Appropriateness of National Coverage Decisions (Reaffirm HOD Policy); and be it further

RESOLVED, that our AMA reaffirm policy D-330.908, Improving the Local Coverage Determination Process. (Reaffirm HOD Policy)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

RELEVANT AMA POLICY

D-330.918 Appropriateness of National Coverage Decisions
1. Our American Medical Association will work with the national medical specialty societies and the Centers for Medicare and Medicaid Services (CMS) and their intermediaries to identify outdated coverage decisions that create obstacles to clinically appropriate patient care.
2. Our AMA will work with CMS to suspend recovery actions for technologies and treatments for which sufficient comparative effectiveness research or other quality evidence exists to update a National Coverage Determination (NCD) or Local Coverage Determination (LCD) to reflect the available scientific evidence and contemporary practice.

D-330.897 Stakeholder Engagement in Medicare Administrative Contractor Policy Processes
1. Our American Medical Association opposes Medicare Administrative Contractors (MACs) using Local Coverage Articles (LCAs) that could have the effect of restricting coverage or access without providing data and evidentiary review or without issuing associated Local Coverage Determinations (LCDs) and following required stakeholder processes.
2. Our AMA will advocate and work with the Centers for Medicare and Medicaid Services (CMS) to improve the instructions to MACs regarding development of local coverage policies in such a manner as to prevent LCAs that could have the effect of restricting coverage or access from being adopted without the MAC providing public data, decision criteria, and evidentiary review and allowing comment, or without an associated LCD and the required LCD stakeholder review and input process.
3. Our AMA will work with specialty and state medical societies and other interested stakeholders to identify LCAs that potentially restrict coverage or access and that were issued without the MACs providing opportunities for stakeholder input, public data, decision criteria, and evidentiary review and

advocate that CMS require MACs to revise the policies by taking any such proposed changes through an appropriate stakeholder engagement, public data, and evidentiary review.

D-330.908 Improving the Local Coverage Determination Process
1. Our AMA will advocate through legislative and/or regulatory efforts as follows:
A. When Medicare Administrative Contractors (MACs) propose new or revised Local Coverage Determinations (LCDs) said Contractors must: (1) Ensure that Carrier Advisory Committee meeting minutes are recorded and posted to the Contractor's website; and (2) Disclose the rationale for the LCD, including the evidence upon which it is based when releasing an approved LCD;
B. That the Centers for Medicare and Medicaid Services adopt a new LCD reconsideration process that allows for an independent review of a MAC's payment policies by a third-party, with appropriate medical and specialty expertise, empowered to make recommendations to the Secretary of Health and Human Services that said policies should be withdrawn or revised; and C. That MACs shall be prohibited from adopting another MAC's LCD without first undertaking a full and independent review of the underlying science and necessity of such LCD in their jurisdiction.
2. Our AMA will work with interested state medical and national specialty societies to develop model legislation or regulations requiring commercial insurance companies, state Medicaid agencies, or third party payers to:
A. Publish all edits that are to be used in their claims processing in a manner that is freely accessible and downloadable to physicians; and B. Participate in a transparent process that allows for review, challenge, and deletion of unfair edits.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 240
(A-26)

Introduced by: American Academy of Emergency Medicine

Subject: Ending Private Equity Dividend Recapitalization in Healthcare

Referred to: Reference Committee B

Whereas, AMA Policy D-160.904, which states: “Our American Medical Association will propose appropriate guidelines for the use of private equity (PE) in health care, ensuring that physician autonomy and operational authority in clinical care are preserved and protected”; and

Whereas, “Private equity” is an asset class that invests capital directly into private companies not listed on public stock exchanges. PE firms typically raise, buy, restructure, and extract profit from acquired businesses, aiming to sell them for a profit after a limited number of years, such that profit generation becomes a higher priority than excellent service delivery; and

Whereas, increasing numbers of physician practices, hospitals, and other enterprises that provide health care are being purchased by PE corporations, such that within the past decade, PE corporations have invested more than $1 trillion into health care acquisitions, including at least 17% of Urgent Care Centers and between 25-40% of Emergency Departments[1]; and

Whereas, a key component of the business model which PE firms utilize when they extract profits from health care enterprises that they acquire involves the practice of “Dividend Recapitalization”, a financial strategy by which a PE company purposefully takes on new debt to enable payment of an immediate special dividend to its shareholders; and

Whereas, for Dividend Recapitalization to enable this special dividend, a PE corporation borrows funds, usually through a new loan issued from syndicated leveraged loan markets, or by the issuing of corporate bonds. Whether raised by a new loan or a bond issue, this source of funds is then used to pay the large, one-time dividend to shareholders noted above. This process simultaneously increases the acquired enterprise's debt and reduces its equity[2], posing new financial challenges to previously existing and ongoing health care clinical operations; and

Whereas, to issue a dividend upon acquisition of a corporation by a PE firm, as is done via “dividend recapitalization”, violates typical capitalistic practices, because in capitalist economies, dividends are typically declared only after a corporation generates profits from its operations; and

Whereas, to enable a PE-acquired health care enterprise to retire the debt acquired to enable the practice of Dividend Recapitalization, saddles the acquired enterprise with new debt, and this debt forces service cutbacks and staffing limitations after PE acquisition, direct consequences of reduced equity and increased debt imposed upon the acquired health care enterprise; and

Whereas, private equity acquisition of physician practices has been associated with increased physician turnover and workforce instability, reflecting reduced physician morale and burnout-related pressures[3], and has also been associated with increased health care spending and higher prices charged to patients following acquisition[4]; and

Whereas, typically PE firms cut staffing, equipment, and services, with these staff and service cutbacks associated with patient harms, such as increased death rates[5]; and

Whereas, these changes made consequent to a dividend recapitalization would not have been advocated by physicians working within the PE-acquired health care enterprise, demonstrating that the requirement to repay this dividend impairs physician autonomy and authority, in direct violation of AMA Policy D-160.904; therefore be it

RESOLVED, that our American Medical Association will advocate that the practice of Dividend Recapitalization must be banned in all acquisitions of health care enterprises by Private Equity firms or other investors (Directive to Take Action); and be it further

RESOLVED, that our AMA will develop model federal and state legislation that would prohibit the practice of Dividend Recapitalization when health care enterprises are acquired by PE and other corporations. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

RELEVANT AMA POLICY

AMA Policy D-160.904 The Regulation of Private Equity in the Healthcare Sector
Our American Medical Association will propose appropriate guidelines for the use of private equity in healthcare, ensuring that physician autonomy and operational authority in clinical care is preserved and protected.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 241
(A-26)

Introduced by: American Academy of Emergency Medicine, Florida

Subject: Strengthening Our AMA Efforts Toward CPOM Prohibition

Referred to: Reference Committee B

Whereas, AMA Policy H-215.981, Corporate Practice of Medicine, states that the AMA opposes the corporate practice of medicine, supports restriction of ownership and operational authority of physician medical practices to physicians or physician-owned groups, and supports model legislation to protect physician autonomy and patient-centered care; and

Whereas, AMA Policy H-160.887 recognizes that the corporate practice of medicine can erode the patient-physician relationship and create conflicts between investor profit motives and the ethical practice of medicine; and

Whereas, AMA Policy H-160.891, Corporate Investors and Other Corporate Entities, addresses physician relationships with corporate investors but does not clearly prohibit ownership and governance structures that allow non-licensed entities to exercise control over clinical practice; and

Whereas, AMA Code of Medical Ethics Opinion 11.2.3, Contracts to Deliver Health Care Services, states that contracts must not compromise physicians' professional judgment, clinical autonomy, or patient welfare, and that physicians must not enter agreements that prioritize financial interests over patient care; and

Whereas, Vermont House Bill H.583 (2026)[1] would strengthen restrictions on the corporate practice of medicine by prohibiting unlicensed entities from owning medical practices, requiring that licensed physicians hold majority ownership and voting control of professional medical corporations, and barring corporate interference in clinical decision making; and

Whereas, Oregon Senate Bill 951 (2025)[2] strengthens the prohibition against the corporate practice of medicine doctrine by restricting management service organizations and their affiliates from owning or exercising de facto control over physician practice entities, and by prohibiting interference with physician clinical judgment, staffing, compensation, coding, billing, contracting, and other operational decisions that affect patient care; and

Whereas, these legislative efforts reflect a growing recognition that corporate ownership models and management structures can undermine physician autonomy, distort clinical priorities, and compromise patient trust; and

Whereas, stronger and more precise AMA policy guidance is needed to align with emerging state laws and to clearly define and restrict corporate practice arrangements that allow non-licensed entities to control or influence medical decision making; therefore be it

RESOLVED, that our American Medical Association amend AMA Policy H-160.891 by deletion and addition in section 1 as follows:

"1. Our American Medical Association ~~encourages physicians who are contemplating corporate investor partnerships or corporate entity relationships, including those under 'friendly' physician professional corporation (PC) arrangements with Management Service Organizations (MSOs), to consider the following guidelines:~~ supports policies that preserve physician ownership, governance, and independent medical judgment in physician practices and opposes corporate ownership or contractual arrangements that permit non-licensed entities to exercise control over the practice of medicine." (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend Policy H-160.891 by deletion and addition in the introductory clause preceding subsections (a)–(c) as follows:
"~~Physicians who are contemplating corporate investor partnerships or corporate entity relationships~~ Physicians and policymakers evaluating corporate investment in physician practices should consider the following principles to ensure that any such relationships remain subordinate to physician ownership, governance, and professional medical judgment" (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend Policy H-160.891 by deletion and addition in subsection (d) as follows:
"(d) ~~Physicians should ensure that contractual arrangements preserve physician autonomy in clinical decision making.~~Physician practices delivering medical care should be majority owned by licensed physicians who are actively practicing in the entity, and those licensed physicians must retain final authority over clinical decision making and over operational and administrative decisions that affect patient care, including clinical staffing, scope of services, clinical policies and standards, compensation structures tied to clinical services, coding and billing policies, payer contracting, and practice governance." (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend Policy H-160.891 by deletion and addition in subsection (e) as follows:
"(e) ~~Physicians should carefully review contractual provisions governing governance structures, compensation arrangements, and management responsibilities when entering relationships with corporate investors.~~ Our AMA opposes stock transfer restriction agreements, "friendly PC" arrangements, succession rights, compelled sale provisions, management agreements, or other contractual mechanisms that permit non-licensed entities to exercise direct or de facto control over physician practices or over physicians' professional medical judgment. Physicians should review contractual provisions governing governance structures, compensation arrangements, and management responsibilities to ensure that such arrangements do not transfer control of clinical decision making, physician employment conditions affecting patient care, or other core professional functions to non-licensed entities." (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend Policy H-160.891 by addition by inserting a new subsection (f) to read as follows, and renumbering the subsequent subsections accordingly:
"(f) Our AMA opposes management services organizations, private equity firms, and other non-licensed entities, and their owners, officers, directors, employees, or agents, from exercising governance authority or management control within a professional medical entity in a manner that directs, controls, or unduly influences clinical decision making, physician employment conditions affecting patient care, or other decisions reserved to licensed physicians." (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend Policy H-160.891 by addition by inserting a new subsection (g) to read as follows, and renumbering the subsequent subsections accordingly:
"(g) Our AMA opposes noncompetition, nondisclosure, non-disparagement, and non-interference clauses that restrict a physician's ability to exercise independent professional

judgment, advocate for patients, report unsafe or unethical conditions, or continue caring for patients consistent with ethical and legal obligations." (Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend Policy H-160.891 by deletion and addition in subsection (h) as follows:
"(h) ~~Physicians should seek transparency regarding the financial and ownership structures associated with corporate investors and related entities.~~ Our AMA supports clear disclosure of physician practice ownership, governance, management agreements, and contractual control rights so that physicians, patients, regulators, and policymakers can identify who holds financial and operational control over the practice entity." (Modify Current HOD Policy); and be it further

RESOLVED, that our American Medical Association amend AMA Policy H-160.891 by deletion and addition in item 2 as follows:
"2. Physicians should understand and evaluate the financial and governance implications of corporate investment in medical practices ~~before entering such arrangements~~ and ensure that any such arrangements do not transfer ownership, governance authority, or operational control over clinical decision making to non-licensed entities." (Modify Current HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

AMA Policy H-215.981, Corporate Practice of Medicine

1. Our AMA vigorously opposes any effort to pass federal legislation or regulation preempting state laws prohibiting the corporate practice of medicine.
2. Our AMA vigorously opposes any effort to pass legislation or regulation that removes or weakens state laws prohibiting the corporate practice of medicine.
3. Our AMA opposes the corporate practice of medicine and supports the restriction of ownership and operational authority of physician medical practices to physicians or physician-owned groups.
4. Our AMA, at the request of state medical associations, will provide guidance, consultation, and model legislation regarding the corporate practice of medicine, to ensure the autonomy of hospital medical staffs, employed physicians in non-hospital settings, and physicians contracting with corporately owned management service organizations.
5. Our AMA will continue to monitor the evolving corporate practice of medicine with respect to its effect on the patient-physician relationship, financial conflicts ofinterest, patient centered care and other relevant issues.
6. Our AMA will work with interested state medical associations, the federal government, and other interested parties to develop and advocate for regulations and appropriate legislation pertaining to corporate control of practices in the healthcare sector such that physician clinical autonomy and operational authority are preserved and protected.
7. Our AMA will create a state corporate practice of medicine template to assist state medical associations and national medical specialty societies as they navigate the intricacies of corporate investment in physician practices and health care generally at the state level and develop the most effective means of prohibiting the corporate practice of medicine in ways that are not detrimental to the sustainability of physician practices.

8. Our AMA supports enforcement of existing regulations and legislation pertaining to corporate control of practices in the health care sector to ensure that physician clinical autonomy and operational authority is preserved and protected.
9. Our AMA supports capital reserve requirements and leverage standards that preserve access to care for patients and fulfillment of contractual obligations to physicians and trainees by providing stable financing for hospitals, clinics, and other health care facilities.

AMA Policy H-160.891 Corporate Investors and Other Corporate Entities

1. Our AMA encourages physicians who are contemplating corporate investor partnerships or corporate entity relationships, including those under "friendly" physician professional corporation (PC) arrangements with Management Service Organizations (MSOs), to consider the following guidelines:
    a. Physicians should consider how the practice's current mission, vision, and long-term goals align with those of the corporate investor/entity.
    b. Due diligence should be conducted that includes, at minimum, review of the corporate investor/entity's business model, strategic plan, leadership and governance, and culture.
    c. External legal, accounting and/or business counsels should be obtained to advise during the exploration and negotiation of corporate investor/entity transactions.
    d. Retaining negotiators to advocate for the best interests of the practice and its employees should be considered.
    e. Physicians should consider whether and how corporate relationships may require physicians to cede varying degrees of control over practice decision-making and day-to-day management.
    f. Physicians should consider the potential impact of corporate relationships on physician and practice employee satisfaction and future physician recruitment.
    g. Physicians should have a clear understanding of compensation agreements, mechanisms for conflict resolution, processes for exiting corporate relationships, and application of restrictive covenants, including any changes in the scope or implementation of any current or proposed restrictive covenants based on the corporate relationship.
    h. Physicians should consider corporate procedures for medical staff representation on the board of directors and medical staff leadership selection as well as processes for resolution of conflict between medical staff leadership and the corporate entity.
    i. Physicians should retain responsibility for clinical governance, patient welfare and outcomes, physician clinical autonomy, and physician due process under corporate relationships.
    j. Prior to entering into a relationship with a corporate entity, physicians and the corporate entity should explicitly identify the types of clinical and business decisions that should remain in the ultimate control of the physician, including but not limited to:
        i. Determining which diagnostic tests are appropriate;
        ii. Determining the need for referrals to, or consultation with another physician or licensed health professional;
        iii. Being responsible for the ultimate overall care of the patient, including treatment options available to the patient;
        iv. Determining how many patients a physician shall see in a given period of time or how many hours a physician should work;
        v. Determining the content of patient medical records;
        vi. Selecting, hiring, or firing physicians, other licensed health care professionals, and/or other medical staff based on clinical competency or proficiency;
        vii. Setting the parameters under which a physician or physician practice shall enter into contractual relationships with third-party entities;
        viii. Making decisions regarding coding and billing procedures for patient care services; and
        ix. Approving the selection of medical equipment and medical supplies.
    k. Each individual physician should have the ultimate decision for medical judgment in patient care and medical care processes, including supervision ofnon- physician practitioners.

l. Clear protection and dispute resolution processes for physicians advocating on patient care and quality issues should be incorporated into an agreement between physicians and corporate entities.
m. Physicians should retain primary and final responsibility for structured medical education inclusive of undergraduate medical education including the structure of the program, program curriculum, selection of faculty and trainees, as well as education and disciplinary issues related to these programs.

2. Our AMA supports improved transparency regarding corporate investments in and/or relationships to physician practices, subsidiaries and/or related organizations that interact with the physician group and/or patients of the physicians, and subsequent changes in health care prices, quality, access, utilization, and physician payment.
3. Our AMA encourages national medical specialty societies to research and develop tools and resources on the impact of corporate investor relationships on patients and the physicians in practicing in that specialty.
4. Our AMA supports consideration of options for gathering information on the impact of private equity and corporate investors/entities on the practice of medicine.
5. Our AMA supports meaningful physician representation in any corporate governance structure (e.g., seats on the board of directors, and/or other relevant leadership bodies) of any entity with which a physician practice, hospital, or other health care organization establishes a corporate relationship.

AMA Policy H-160.887 Corporate Practice of Medicine
Our American Medical Association acknowledges that the corporate practice of medicine:

1. has the potential to erode the patient-physician relationship.

2. may create a conflict of interest between profit and best practices in residency and fellowship training.

AMA Code of Medical Ethics 11.2.3 Contracts to Deliver Health Care Services
Prioritizing profits over patients is incompatible with physicians' ethical obligations. No part of the health care system that supports or delivers patient care should place profits over such care. Physicians have a fundamental ethical obligation to put the welfare of patients ahead of other considerations, including personal financial interests. This obligation requires that before entering into contracts to deliver health care services, physicians consider carefully the proposed contract to assure themselves that its terms and conditions do not create untenable conflicts of interest or compromise their ability to fulfill their ethical and professional obligations to patients. Those physicians who enter into contracts with corporate entities, such as private equity firms, management service organizations, professional services corporations, insurance companies, or pharmaceutical benefit managers, who act within their capacity as a physician, even as administrators or intermediaries, also have a duty to uphold the ethical obligations of the medical profession.
Ongoing evolution in the health care system continues to bring changes to medicine, including changes in reimbursement mechanisms, models for health care delivery, restrictions on referral and use of services, clinical practice guidelines, and limitations on benefits packages. While these changes are intended to enhance quality, efficiency, and safety in health care, they can also put at risk physicians' ability to uphold professional ethical standards and can impede physicians' freedom to exercise independent professional judgment and tailor care to meet the needs of individual patients.
As physicians seek capital to support their practices or enter into various differently structured contracts to deliver health care services—with group practices, hospitals, health plans, investment firms, or other entities—they should be mindful that while some arrangements have the potential to promote desired improvements in care, other arrangements have the potential to put patients' interests at risk and to interfere with physician autonomy.
When contracting with entities, or having a representative do so on their behalf, to provide health care services, physicians should:
(a) Carefully review the terms of proposed contracts, preferably with the advice of legal and ethics counsel to assure themselves that the arrangement:

(i) minimizes conflict of interest with respect to proposed reimbursement mechanisms, financial or performance incentives, restrictions on care, or other mechanisms intended to influence physicians' treatment recommendations or direct what care patients receive, in keeping with ethics guidance;
(ii) does not compromise the physician's own financial well-being or ability to provide high-quality care through unrealistic expectations regarding utilization of services or terms that expose the physician to excessive financial risk;
(iii) ensures the physician can appropriately exercise professional judgment;
(iv) includes a mechanism to address grievances and supports advocacy on behalf of individual patients;
(v) is transparent and permits disclosure to patients;
(vi) enables physicians to have significant influence on, or preferably outright control of, decisions that impact practice staffing;
(vii) prohibits the corporate practice of medicine.
(b) Negotiate modification or removal of any terms that unduly compromise physicians' ability to uphold ethical or professional standards.
When entering into contracts as employees, preferably with the advice of legal and ethics counsel, physicians should:
(c) Advocate for contract provisions to specifically address and uphold physician ethics and professionalism.
(d) Advocate that contract provisions affecting practice align with the professional and ethical obligations of physicians and negotiate to ensure that alignment.
(e) Advocate that contracts do not require the physician to practice beyond their professional capacity and provide contractual avenues for addressing concerns related togood practice, including burnout or related issues.
(f) Not enter into any contract that would require the physician to violate their professional ethical obligations.
When contracted by a corporate entity involved in the delivery of health care services, physicians should:
(g) Terminate any contract that requires the physician to violate their professional ethical obligations and report any known or suspected ethical violations through the appropriate oversight mechanisms.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 242
(A-26)

Introduced by: American Academy of Emergency Medicine

Subject: Reducing Emergency Department Boarding through Payment Reform

Referred to: Reference Committee B

Whereas, our AMA Policy D-130.957, Addressing and Reducing Patient Boarding in Emergency Departments, recognizes that boarding patients in the emergency department harms patient safety and quality of care but lacks strong mechanisms to support system change; and

Whereas, boarding of admitted patients in emergency departments delays definitive care, contributes to clinical deterioration, increases medical error risk, reduces throughput capacity, and worsens clinician burnout and system inefficiency; and national clinical guidance identifies boarding times beyond four hours as associated with adverse outcomes[1-4]; and

Whereas, from a systems perspective, emergency department boarding follows surges in inpatient demand, yet hospital leaders continue to manage their systems by using the emergency department as the system's only "surge absorber", even though other resources to dissipate surge have been described and advocated in peer-reviewed literature[5-7]; and

Whereas, the Centers for Medicare & Medicaid Services (CMS) released updated Hospital Outpatient Prospective Payment System quality reporting requirements that include emergency care abstracted clinical quality measures such as median time from ED arrival to departure, initially voluntary with planned transition to mandatory reporting, but do not currently include any payment consequence tied to prolonged boarding times; and reporting of these measures does not itself create financial incentives for hospitals to act[1]; and

Whereas, current reimbursement structures do not adequately incentivize hospitals to reduce boarding, despite evidence that operational inefficiencies and boarding increase costs and strain resources without improving care quality[2,3]; and

Whereas, aligning financial incentives with quality outcomes through payment reform is a proven strategy to motivate system improvement and hold institutions accountable for key safety and access metrics; therefore be it

RESOLVED, that our American Medical Association advocates for the Centers for Medicare & Medicaid Services (CMS) and other payors to tie admitted patients' hospital reimbursement to emergency department boarding performance, including payment reductions or creation of a lower-reimbursed status when boarding of admitted patients exceeds four hours (Directive to Take Action); and be it further

RESOLVED, that our AMA adopts policy and advocates for making emergency department boarding metrics mandatory quality measures incorporated into value-based payment programs, rather than reporting-only requirements without financial consequence. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/26

RELEVANT AMA POLICY

D-130.957 Addressing and Reducing Patient Boarding in Emergency Departments

1. Our American Medical Association will collaborate with interested parties, such as hospitals, insurance companies, the Centers for Medicare & Medicaid Services (CMS), and accrediting bodies such as the Joint Commission, to address and reduce emergency department boarding and overcrowding.
2. Our AMA supports appropriate staffing and standards of care for all patients admitted to the hospital or awaiting transfer, including emergency department patients and admitted patients physically located in the emergency department, to mitigate patient harm and physician burnout.
3. Our AMA advocates for increased state and federal assistance to address the systemic factors contributing to emergency department boarding.
4. Our AMA supports other medical societies, hospital associations, accrediting organizations, and patient advocacy groups to raise awareness of the impacts of emergency department boarding and to identify and propose solutions.
5. Our AMA will continue to monitor the development of CMS quality measures related to patient boarding and work in collaboration with relevant medical specialty associations to support improvements in quality standards related to emergency department care.
6. Our AMA will report back to the House of Delegates at the 2026 Interim Meeting on progress addressing and reducing patient boarding in emergency departments.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 243
(A-26)

Introduced by: Association for Clinical Oncology, American Society of Hematology

Subject: Standardizing Medical Frailty to Streamline Medicaid Community Engagement & Work Exemptions

Referred to: Reference Committee B

Whereas, federal mandates under Public Law No. 119-21 (the enacted version of H.R. 1) require the District of Columbia and the 40 states that have expanded Medicaid to implement community engagement or work requirements by January 1, 2027; and

Whereas, our American Medical Association's (AMA) Policy H-290.963 supports robust exemptions for individuals who are "medically frail" or have "serious or complex medical conditions," yet these terms lack a uniform clinical definition across the Centers for Medicare & Medicaid Services (CMS) and state Medicaid agencies; and

Whereas, our AMA has advocated for federal and state policies that protect vulnerable populations, specifically urging CMS to ensure that mandatory 'medical frailty' exemptions include individuals with cancer, heart disease, or other chronic and severe conditions to prevent them from falling through the cracks of new community engagement requirements; and

Whereas, Public Law No. 119-21 defines an individual who is "medically frail or otherwise has special medical needs (as defined by the Secretary)" as one who is "blind or disabled (as defined in section 1614); with a substance use disorder; with a disabling mental disorder; with a physical, intellectual, or developmental disability that significantly impairs their ability to perform 1 or more activities of daily living; or with a serious or complex medical condition"; and

Whereas, the absence of explicit exemption language across Medicaid programs creates administrative barriers that jeopardize coverage for patients in critical phases of care, such as diagnostic testing, active treatment, long-term surveillance or monitoring, and survivorship; and

Whereas, patients living with complex medical conditions—including but not limited to cancer, end-stage renal disease, advanced cardiovascular disease, and other conditions across medical, surgical, and psychiatric domains—face intense treatment regimens and physical limitations that make meeting work requirements both practically unfeasible and a risk to their health; and

Whereas, a patient's recovery and stability often rest on the shoulders of a primary caregiver, whose vital role is undermined when work mandates threaten the caregiver's own health coverage and the stability of the household; and

Whereas, moreover, the absence of clear, standardized exemption criteria may compel physicians to repeatedly justify medical frailty through burdensome documentation processes, adding uncompensated administrative workload; therefore be it

RESOLVED, that our American Medical Association advocate that the Centers for Medicare & Medicaid Services and state Medicaid agencies establish a standard with which to define "medical frailty" and "complex medical conditions" to be adopted by state Medicaid agencies; this definition shall explicitly include, at a minimum, any individual currently undergoing diagnostic testing for, receiving treatment for, or under active surveillance or monitoring for a life-threatening or complex chronic medical condition, as well as conditions in which the disease or its treatment results in functional limitation or an ongoing need for medical care, while preserving the authority of states to expand these protections to additional populations (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for federal and state Medicaid guidance to provide automatic exemptions from community engagement and work requirements for patients and primary caregivers of patients with complex medical conditions, utilizing evidence-based clinical data and claims-based algorithms to ensure treatment adherence and continuity of care (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate for streamlined Medicaid community engagement and work requirement exemption verification by minimizing administrative burden for patients and physicians. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

RELEVANT AMA POLICY

H-290.963 Federal Medicaid Funding
Our AMA will advocate that any Medicaid community engagement or work requirements include clear and robust processes to appropriately exempt individuals who are medically frail or have serious or complex medical conditions. [CMS Rep. 05, I-17; Reaffirmed: CMS Rep. 05, A-22]

H-290.965 Affordable Care Act Medicaid Expansion
Our AMA will advocate that CMS ensure that mechanisms are in place to provide robust access to specialty care for all Medicaid beneficiaries, including children and adolescents. [CMS Rep. 2, A-14; Reaffirmed: CMS Rep. 05, A-22]

H-55.969 Cancer Survivorship Care Plans
Our AMA (1) recognizes that cancer survivorship care is a distinct and vital component of the cancer care continuum and (2) supports the development and use of survivorship care plans to improve the quality of care for cancer survivors. [Res. 518, A-11; Reaffirmed: CSAPH Rep. 01, A-21]

D-290.979 Affordable Care Act Medicaid Expansion
Our AMA will support state efforts to expand Medicaid eligibility as authorized by the Affordable Care Act and will advocate for the maintenance of the vital safety net provided by the Medicaid program. [CMS Rep. 5, I-14; Reaffirmed: CMS Rep. 5, I-20]

AMERICAN MEDICAL ASSOCIATION PRIVATE PRACTICE PHYSICIANS SECTION

Resolution: 244
(A-26)

Introduced by: Private Practice Physicians Section

Subject: Eliminate Administrative Barriers to Appeal Wrongful Denials

Referred to: Reference Committee B

Whereas, health plans and insurance companies impose unreasonable burdens to appeal claim and services denials by requiring submission of redundant forms and fail to honor consent forms and authorizations signed by a patient; and

Whereas, for out-of-network providers in particular, many health plans demand that a separate "designation of authorized representative" form be filled out by a patient, long after the patient is gone, to appeal claim denials and when a patient switches a plan, a new form has to be filed even as patients expect, demand, and have previously authorized physicians to appeal on their behalf promptly and without imposing administrative burdens on patients; and

Whereas, health plans fail to honor previously signed generic "designation of authorized representative" forms; and

Whereas, the United States Department of Labor is authorized to regulate the claims procedure under Title 29 of the U.S. Code[1]; therefore be it

RESOLVED, that our American Medical Association advocates to the United States Department of Labor to issue regulations to require that health plans honor signed patients' designations to submit and appeal plans without requiring plan-specific forms (Directive to Take Action); and be it further

RESOLVED, that our AMA advocates that the US Department of Labor does not require additional and separate consent from the patient in order for a physician practice to file a complaint with the US Department of Labor against self-funded ERISA plans once the patient has assigned benefits to the physician. (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

Insurance Coverage Appeals D-320.993
Our AMA will:
(1) continue to support the development of more stringent state laws and regulations that provide compensation to physicians for the administrative burden and costs of the health plan documentation requirements, such as the appeal process;
(2) continue to advocate to ensure that physicians receive prompt, fair payment from health plans through educational products, seminars and advocacy efforts;
(3) continue to encourage health plans to implement online appeal processes to reduce the administrative burden and cost to physicians and their patients when claims are denied inappropriately;
(4) continue to encourage health plans to streamline, provide transparency, and lessen the administrative burdens and costs that are incurred by physicians through the health plans appeals processes;
(5) remain an active participant in the standards development activities of several standards development organizations and data content committees; and
(6) continue in its leadership role in the National Uniform Claims Committee and its work with the standards development organizations.
Citation: BOT Rep. 23, A-06; Modified: CMS Rep. 01, A-16; Reaffirmed: I-17

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 245
(A-26)

Introduced by: Private Practice Physicians Section

Subject: State Regulation of Non-Preempted "Non-Central Matters" of ERISA Plans—Rutledge v. PCMA

Referred to: Reference Committee (Assigned by HOD)

Whereas, AMA policy D-385.944, "ERISA Preemption of State Laws Regulating Pharmacy Benefit Managers"[1] seeks to support states in implementation of state-based regulation of ERISA plans to the extent allowed by the U.S. Supreme Court decision in *Rutledge v. PCMA*; and

Whereas, the Employee Retirement Income Security Act (ERISA) does not address interest payments on overdue "clean" health insurance claims and many states such as New York have laws in place that require health plans to pay interest[2]; and

Whereas, ERISA does not address timeliness of response to prior authorization requirements, duty to obtain data that is available to health plans from sources other than physicians that health plans may need for prior authorization (test results, list of current medications); and

Whereas, ERISA does not address payments for services based on the coordination of benefits, requiring a health plan to pay at the in-network level of benefits for covered services when it is secondary to Medicare and the provider is a Medicare-participating provider, and secondary Medicare payments are not regulated under Medicare; and

Whereas, AMA policy D-320.978, "Fair Reimbursement for Administrative Burdens"[3] states that physicians should be fairly compensated for administrative work related to prior authorization, appeals of prior authorization denials, and appealing wrongful pre- and post-service denials for administrative work reflecting the actual time expended by physician practices and their billing vendors advocating on behalf of patients, complying with insurer requirements, and successfully appealing wrongful service denials; despite AMA policy, ERISA does not address prior authorization or compensation for the administrative work associated with prior authorizations or compensation for various administrative burdens associated with prior authorizations; and

Whereas, ERISA does not address parity for telehealth-assisted services, which may also be delivered using virtual reality in the future, nor does it refer to the site of service or technology used for care delivery, likewise, it does not address compensation for treatment of conditions that are already covered and the same medical services for the same conditions are delivered when appropriate via telehealth and in-person; and

Whereas, ERISA requires a plan administrator to make a claims decision "within a reasonable period of time, but not later than 30 days after receipt of the claim," but there is no regulation of the timeliness of the payment for the claim[4]; further, states like New York require[5] health plans to pay claims within 30 days "when the insurer's obligation to pay the claim is reasonably clear" and applying similar requirements to ERISA plans would significantly improve the sustainability and financial viability of physician practices; and

ERISA does not address payment recovery or recoupment by health plans and IRS regulations are separate from ERISA and allow recoupment from any third party (participant, another plan, etc.) or the plan must pay in for its own mistakes; therefore be it

RESOLVED, that our American Medical Association will examine the strategic and operational opportunities physicians should consider under the U.S. Supreme Court holding in Rutledge v. PCMA as they pertain to the Employment Retirement Income Security Act (ERISA) with a report back at the Annual 2027 meeting with recommendations for operational best practices (Directive to Take Action); and be it further

RESOLVED, that our AMA will explore and, as appropriate, provide related educational programming at Interim and/or Annual Meetings and through other appropriate venues, including potential educational modules, regarding ERISA and its practical implications for private practice physicians (Directive to Take Action); and be it further

RESOLVED, that our AMA with appropriate stakeholders will explore the possibilities of amending the Employment Retirement Income Security Act (ERISA) to revise the law in ways that can eliminate problems that some independent physicians experience, including:

1. Interest payments on overdue "clean" health insurance claims not otherwise addressed by ERISA's statutory mandate;
2. Administrative issues surrounding prior authorization, including but not limited to timeliness of responses and duty to obtain date records available from sources other than the physician so as not to waste physician resources;
3. Payment for Medicare co-insurance and deductibles when Medicare is primary and another plan is secondary and the physician is a Medicare-participating physician but non-participating with the secondary plan;
4. Payment for the administrative burden of prior authorization and successful denial appeals;
5. Parity for telehealth-delivered services;
6. Timely payment of "clean claims" when the insurer's obligation to pay the claim is reasonably distinct from timely determination of claims;
7. Enforcement of evaluation & management modifier code 25 use/payments as articulated under AMA policies D-385.956 and D-70.971 as well as analogous state medical society policies;
8. Requiring that when health plan payment recovery or recoupment is due to coordination of benefit failure, the health plan shall seek recovery from the patient and/or the correct payor.

(Directive to Take Action)

Fiscal Note: Major – $127,219. Legal analysis, creation of educational programming/modules.

6. Opposition to Reduced Payment for the 25 Modifier (D-385.956). American Medical Association.

RELEVANT AMA POLICY

ERISA Preemption of State Laws Regulating Pharmacy Benefit Managers D-385.944
Our American Medical Association will study, and create resources for states, on the implication of *Rutledge, Attorney General Of Arkansas v. Pharmaceutical Care Management Association*, and any other relevant legal decisions from the last several years, in reference to potentially allowing more successful challenges to the actions of healthcare plans protected by the Employee Retirement Income Security Act of 1974 (ERISA) when the quality of care or healthcare outcomes are questioned.
Citation: Res. 224, I-23

Fair Reimbursement for Administrative Burdens D-320.978
1. Our American Medical Association will continue its strong state and federal legislative advocacy efforts to promote legislation that streamlines the prior authorization process and reduces the overall volume of prior authorizations for physician practices.
2. Our AMA will continue partnering with patient advocacy groups in prior authorization reform efforts to reduce patient harms, including care delays, treatment abandonment, and negative clinical outcomes.
3. Our AMA will oppose inappropriate payer policies and procedures that deny or delay medically necessary drugs and medical services.
4. Our AMA will advocate for fair reimbursement of established and future CPT codes for administrative burdens related to:
    a. the prior authorization process.
    b. appeals or denials of services (visits, tests, procedures, medications, devices, and claims), whether pre- or post-service denials.

Citation: Res. 701, A-22

Opposition to Reduced Payment for the 25 Modifier D-385.956
Our American Medical Association will aggressively and immediately advocate through any legal means possible, including direct payer negotiations, regulations, legislation, or litigation, to ensure when an evaluation and management (E&M) code is appropriately reported with a modifier 25, that both the procedure and E&M codes are paid at the non-reduced, allowable payment rate.
Citation: Res. 808, I-17; Reaffirmed: CMS Rep. 07, A-23

Uses and Abuses of CPT Modifier -25 D-70.971
1. Our American Medical Association Private Sector Advocacy Group will continue to collect information on the use and acceptance of CPT modifiers, particularly modifier -25, and that it continue to advocate for the acceptance of modifiers and the appropriate alteration of payment based on CPT modifiers.
2. The CPT Editorial Panel in coordination with the CPT/HCPAC Advisory Committee will continue to monitor the use and acceptance of CPT Modifiers by all payers and work to improve coding methods as appropriate.
3. Our AMA will collect information on the use and acceptance of modifier -25 among state Medicaid plans and use this information to advocate for consistent acceptance and appropriate payment adjustment for modifier -25 across all Medicaid plans.
4. Our AMA will encourage physicians to pursue, in their negotiations with third party payers, contract provisions that will require such payers to adhere to CPT rules concerning modifiers.
5. Our AMA will include in its model managed care contract, provisions that will require managed care plans to adhere to CPT rules concerning modifiers.
6. Our AMA will continue to educate physicians on the appropriate use of CPT rules concerning modifiers.
7. Our AMA will actively work with third party payers to encourage their disclosure to physician providers any exceptions by those payers to CPT guidelines, rules and conventions.
8. Our AMA will include in CPT educational publications (i.e. CPT Assistant) examples of commonly encountered situations where the -25 modifier would and would not apply.

Citation: BOT Rep. 10, I-03; Reaffirmed: A-10; Reaffirmed: A-19; Reaffirmed: CMS Rep. 07, A-23

Remuneration for Physician Services H-385.951

1. Our American Medical Association actively supports payment to physicians by contractors and third party payers for physician time and efforts in providing case management and supervisory services, including but not limited to coordination of care and office staff time spent to comply with third party payer protocols.
2. It is our AMA policy that insurers pay physicians fair compensation for work associated with prior authorizations, including pre-certifications and prior notifications, that reflects the actual time expended by physicians to comply with insurer requirements and that compensates physicians fully for the legal risks inherent in such work.
3. Our AMA urges insurers to adhere to the AMA's Health Insurer Code of Conduct Principles including specifically that requirements imposed on physicians to obtain prior authorizations, including pre-certifications and prior notifications, must be minimized and streamlined and health insurers must maintain sufficient staff to respond promptly.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 246
(A-26)

Introduced by: Private Practice Physicians Section

Subject: Artificial Intelligence Scope of Practice

Referred to: Reference Committee B

Whereas, artificial/augmented intelligence (AI) can assist with the transformation of healthcare by enhancing diagnostic capabilities through tools like remote patient monitoring and automated administrative tasks; and

Whereas, AI can provide accessible health education to patient through online platforms and apps; and

Whereas, AI can assist primary care physicians providing rural care for data analysis, leveraging large datasets to provide care similar to that available in urban centers; and

Whereas, the "Healthy Technology Act of 2025" (H.R. 238) has been introduced in the United State House of Representatives to explore the possibility of allowing Food and Drug Administration-approved AI to prescribe drugs; and

Whereas, Doctronic, a Utah technology company in partnership with the Utah Office of Artificial intelligence Policy, gained authority under a pilot project for artificial intelligence to renew prescriptions independently[1]; and

Whereas, Cicero, a policy entity in Austin, Texas, has created model legislation for an autonomous artificial intelligence provider[2]; and

Whereas, the One Big Beautiful Bill that passed the U.S. House of Representatives approved a 10-year moratorium on state AI legislation that was not included in the version passed by the U.S. Senate[3]; and

Whereas, Executive Order 14179 restores government control over artificial intelligence and imposing limitations on states' rights to develop and implement laws relating to artificial intelligence[4]; therefore be it

RESOLVED, that our American Medical Association will develop model legislation declaring that artificial intelligence will not be used as a prescriptive or care management substitute for a physician (Directive to Take Action); and be it further

RESOLVED, that our AMA will develop model legislation prohibiting the Federation of State Medical Boards from enabling independent licensure be granted to artificial intelligence "providers." (Directive to Take Action)

Fiscal Note: Moderate – between $10,000 - $50,000

Received: 4/20/26

RELEVANT AMA POLICY

Augmented Intelligence in Health Care H-480.940

As a leader in American medicine, our American Medical Association has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.
To that end our AMA will seek to:

1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians' professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
    a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
    b. is transparent;
    c. conforms to leading standards for reproducibility;
    d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
    e. safeguards patients' and other individuals' privacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.

Citation: BOT Rep. 41, A-18; Reaffirmed: CMS Rep. 07, A-24; Reaffirmed: CSAPH Rep. 08, A-25.

Augmented Intelligence in Health Care H-480.939

Our American Medical Association supports the use and payment of augmented intelligence (AI) systems that advance the quadruple aim. AI systems should enhance the patient experience of care and outcomes, improve population health, reduce overall costs for the health care system while increasing value, and support the professional satisfaction of physicians and the health care team. To that end our AMA will advocate that:

1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
2. Payment and coverage for all health care AI systems must be conditioned on complying with all appropriate federal and state laws and regulations, including, but not limited to those governing

patient safety, efficacy, equity, truthful claims, privacy, and security as well as state medical practice and licensure laws.

3. Payment and coverage for health care AI systems intended for clinical care must be conditioned on
    a. clinical validation.
    b. alignment with clinical decision-making that is familiar to physicians.
    c. high-quality clinical evidence.
4. Payment and coverage for health care AI systems must
    a. be informed by real world workflow and human-centered design principles.
    b. enable physicians to prepare for and transition to new care delivery models.
    c. support effective communication and engagement between patients, physicians, and the health care team.
    d. seamlessly integrate clinical, administrative, and population health management functions into workflow.
    e. seek end-user feedback to support iterative product improvement.
5. Payment and coverage policies must advance affordability and access to AI systems that are designed for small physician practices and patients and not limited to large practices and institutions. Government-conferred exclusivities and intellectual property laws are meant to foster innovation, but constitute interventions into the free market, and therefore, should be appropriately balanced with the need for competition, access, and affordability.
6. Physicians should not be penalized if they do not use AI systems while regulatory oversight, standards, clinical validation, clinical usefulness, and standards of care are in flux. Furthermore, our AMA opposes:
    a. Policies by payers, hospitals, health systems, or governmental entities that mandate use of health care AI systems as a condition of licensure, participation, payment, or coverage.
    b. The imposition of costs associated with acquisition, implementation, and maintenance of healthcare AI systems on physicians without sufficient payment.
7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. Our AMA will further advocate:
    a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
    b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
    c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.
8. Our AMA, national medical specialty societies, and state medical associations:
    a. Identify areas of medical practice where AI systems would advance the quadruple aim.
    b. Leverage existing expertise to ensure clinical validation and clinical assessment of clinical applications of AI systems by medical experts.
    c. Outline new professional roles and capacities required to aid and guide health care AI systems.
    d. Develop practice guidelines for clinical applications of AI systems.
9. There should be federal and state interagency collaboration with participation of the physician community and other stakeholders in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD Policy)
10. AI is designed to enhance human intelligence and the patient-physician relationship rather than replace it.

Assessing the Intersection Between AI and Health Care H-480.931

Augmented Intelligence Development, Deployment, and Use in Health Care

1. General Governance
    a. Health care AI must be designed, developed, and deployed in a manner which is ethical, equitable, responsible, accurate, transparent, and evidence-based.
    b. Use of AI in health care delivery requires clear national governance policies to regulate its adoption and utilization, ensuring patient safety, and mitigating inequities. Development of national governance policies should include interdepartmental and interagency collaboration.
    c. Compliance with national governance policies is necessary to develop AI in an ethical and responsible manner to ensure patient safety, quality, and continued access to care. Voluntary agreements or voluntary compliance is not sufficient.
    d. AI systems should be developed and evaluated with a specific focus on mitigating bias and promoting health equity, ensuring that the deployment of these technologies does not exacerbate existing disparities in health care access, treatment, or outcomes.
    e. Health care AI requires a risk-based approach where the level of scrutiny, validation, and oversight should be proportionate to the overall potential of disparate harm and consequences the AI system might introduce [See also Augmented Intelligence in Health Care H-480.939 at (1)]
    f. AI risk management should minimize potential negative impacts of health care AI systems while providing opportunities to maximize positive impacts.
    g. Clinical decisions influenced by AI must be made with specified qualified human intervention points during the decision-making process. A qualified human is defined as a licensed physician with the necessary qualifications and training to independently provide the same medical service without the aid of AI. As the potential for patient harm increases, the point in time when a physician should utilize their clinical judgment to interpret or act on an AI recommendation should occur earlier in the care plan. With few exceptions, there generally should be a qualified human in the loop when it comes to medical decision making capable of intervening or overriding the output of an AI model.
    h. Health care practices and institutions should not utilize AI systems or technologies that introduce overall or disparate risk that is beyond their capabilities to mitigate. Implementation and utilization of AI should avoid exacerbating clinician burden and should be designed and deployed in harmony with the clinical workflow and, in institutional settings, consistent with AMA Policy H-225.940 - Augmented Intelligence and Organized Medical Staff.
    i. Medical specialty societies, clinical experts, and informaticists are best positioned and should identify the most appropriate uses of AI-enabled technologies relevant to their clinical expertise and set the standards for AI use in their specific domain. [See Augmented Intelligence in Health Care H-480.940 at (2)]
2. When to Disclose: Transparency in Use of Augmented Intelligence-Enabled Systems and Technologies That Impact Medical Decision Making at the Point of Care
    a. Decisions regarding transparency and disclosure of the use of AI should be based upon a risk- and impact-based approach that considers the unique circumstance of AI and its use case. The need for transparency and disclosure is greater where the performance of an AI-enabled technology has a greater risk of causing harm to a patient.
        i. AI disclosure should align and meet ethical standards or norms.
        ii. Transparency requirements should be designed to meet the needs of the end users. Documentation and disclosure should enhance patient and physician knowledge without increasing administrative burden.
        iii. When AI is used in a manner which impacts access to care or impacts medical decision making at the point of care, that use of AI should be disclosed and documented to both physicians and/or patients in a culturally and linguistically appropriate manner. The opportunity for a patient or their caregiver to request

additional review from a licensed clinician should be made available upon request.

iv. When AI is used in a manner which directly impacts patient care, access to care, medical decision making, or the medical record, that use of AI should be documented in the medical record.

b. AI tools or systems cannot augment, create, or otherwise generate records, communications, or other content on behalf of a physician without that physician's consent and final review.

c. When AI or other algorithmic-based systems or programs are utilized in ways that impact patient access to care, such as by payors to make claims determinations or set coverage limitations, use of those systems or programs must be disclosed to impacted parties.

d. The use of AI-enabled technologies by hospitals, health systems, physician practices, or other entities, where patients engage directly with AI, should be clearly disclosed to patients at the beginning of the encounter or interaction with the AI-enabled technology. Where patient-facing content is generated by AI, the use of AI in generating that content should be disclosed or otherwise noted within the content.

3. What to Disclose: Required Disclosures by Health Care Augmented Intelligence-Enabled Systems and Technologies

a. When AI-enabled systems and technologies are utilized in health care, the following information should be disclosed by the AI developer to allow the purchaser and/or user (physician) to appropriately evaluate the system or technology prior to purchase or utilization:

i. Regulatory approval status.

ii. Applicable consensus standards and clinical guidelines utilized in design, development, deployment, and continued use of the technology.

iii. Clear description of problem formulation and intended use accompanied by clear and detailed instructions for use.

iv. Intended population and intended practice setting.

v. Clear description of any limitations or risks for use, including possible disparate impact.

vi. Description of how impacted populations were engaged during the AI lifecycle.

vii. Detailed information regarding data used to train the model:

1. Data provenance.
2. Data size and completeness.
3. Data timeframes.
4. Data diversity.
5. Data labeling accuracy.

viii. Validation Data/Information and evidence of:

1. Clinical expert validation in intended population and practice setting and intended clinical outcomes.
2. Constraint to evidence-based outcomes and mitigation of "hallucination"/"confabulation" or other output error.
3. Algorithmic validation.
4. External validation processes for ongoing evaluation of the model performance, e.g., accounting for AI model drift and degradation.
5. Comprehensiveness of data and steps taken to mitigate biased outcomes.
6. Other relevant performance characteristics, including but not limited to performance characteristics at peer institutions/similar practice settings.
7. Post-market surveillance activities aimed at ensuring continued safety, performance, and equity.

ix. Data Use Policy:

1. Privacy.
2. Security.
3. Special considerations for protected populations or groups put at increased risk.

x. Information regarding maintenance of the algorithm, including any use of active patient data for ongoing training.

xi. Disclosures regarding the composition of design and development team, including diversity and conflicts of interest, and points of physician involvement and review.

b. Purchasers and/or users (physicians) should carefully consider whether or not to engage with AI-enabled health care technologies if this information is not disclosed by the developer. As the risk of AI being incorrect increases risks to patients (such as with clinical applications of AI that impact medical decision making), disclosure of this information becomes increasingly important. [See also Augmented Intelligence in Health Care H-480.939]

4. Generative Augmented Intelligence
    a. Generative AI should: (a) only be used where appropriate policies are in place within the practice or other health care organization to govern its use and help mitigate associated risks; and (b) follow applicable state and federal laws and regulations (e.g., HIPAA-compliant Business Associate Agreement).
    b. Appropriate governance policies should be developed by health care organizations and account for and mitigate risks of:
        i. Incorrect or falsified responses; lack of ability to readily verify the accuracy of responses or the sources used to generate the response.
        ii. Training data set limitations that could result in responses that are out of date or otherwise incomplete or inaccurate for all patients or specific populations.
        iii. Lack of regulatory or clinical oversight to ensure performance of the tool.
        iv. Bias, discrimination, promotion of stereotypes, and disparate impacts on access or outcomes.
        v. Data privacy.
        vi. Cybersecurity.
        vii. Physician liability associated with the use of generative AI tools.
    c. Health care organizations should work with their AI and other health information technology (health IT) system developers to implement rigorous data validation and verification protocols to ensure that only accurate, comprehensive, and bias managed datasets inform generative AI models, thereby safeguarding equitable patient care and medical outcomes. [See Augmented Intelligence in Health Care H-480.940 at (3)(d)]
    d. Use of generative AI should incorporate physician and staff education about the appropriate use, risks, and benefits of engaging with generative AI. Additionally, physicians and healthcare organizations should engage with generative AI tools only when adequate information regarding the product is provided to physicians and other users by the developers of those tools.
    e. Clinicians should be aware of the risks of patients engaging with generative AI products that produce inaccurate or harmful medical information (g., patients asking chatbots about symptoms) and should be prepared to counsel patients on the limitations of AI-driven medical advice.
    f. Data and prompts contributed by users should primarily be used by developers to improve the user experience and AI tool quality and not simply increase the AI tool's market value or revenue generating potential.
5. Physician Liability for Use of Augmented Intelligence-Enabled Technologies
    a. Current AMA policy states that liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. [See Augmented Intelligence in Health Care H-480.939]
        i. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
        ii. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.

iii. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.

b. When physicians do not know or have reason to know that there are concerns about the quality and safety of an AI-enabled technology, they should not be held liable for the performance of the technology in question.

c. Liability protections for physicians using AI-enabled technologies should align with both current and future AMA medical liability reform policies.

6. Data Privacy and Augmented Intelligence
    a. Entity Responsibility:
        i. Entities, e.g., AI developers, should make information available about the intended use of generative AI in health care and identify the purpose of its use. Individuals should know how their data will be used or reused, and the potential risks and benefits.
        ii. Individuals should have the right to opt-out, update, or request deletion of their data from generative AI tools. These rights should encompass AI training data and disclosure to other users of the tool.
        iii. Generative AI tools should not reverse engineer, reconstruct, or reidentify an individual's originally identifiable data or use identifiable data for nonpermitted uses, e.g., when data are permitted to conduct quality and safety evaluations. Preventive measures should include both legal frameworks and data model protections, e.g., secure enclaves, federated learning, and differential privacy.
    b. User Education:
        i. Users should be provided with training specifically on generative AI. Education should address:
            1. Legal, ethical, and equity considerations.
            2. Risks such as data breaches and re-identification.
            3. Potential pitfalls of inputting sensitive and personal data.
            4. The importance of transparency with patients regarding the use of generative AI and their data.

[See H-480.940, Augmented Intelligence in Health Care, at (4) and (5)]

7. Augmented Intelligence Cybersecurity
    a. AI systems must have strong protections against input manipulation and malicious attacks.
    b. Entities developing or deploying health care AI should regularly monitor for anomalies or performance deviations, comparing AI outputs against known and normal behavior.
    c. Independent of an entity's legal responsibility to notify a health care provider or organization of a data breach, that entity should also act diligently in identifying and notifying the individuals themselves of breaches that impact their personal information.
    d. Users should be provided education on AI cybersecurity fundamentals, including specific cybersecurity risks that AI systems can face, evolving tactics of AI cyber attackers, and the user's role in mitigating threats and reporting suspicious AI behavior or outputs.

8. Mitigating Misinformation in AI-Enabled Technologies
    a. AI developers should ensure transparency and accountability by disclosing how their models are trained and the sources of their training dat Clear disclosures are necessary to build trust in the accuracy and reliability of the information produced by AI systems.
    b. Algorithms should be developed to detect and flag potentially false and misleading content before it is widely disseminated.
    c. Developers of AI should have mechanisms in place to allow for reporting of mis- and disinformation generated or propagated by AI-enabled systems.
    d. Developers of AI systems should be guided by policies that emphasize rigorous validation and accountability for the content their tools generate, and, consistent with AMA Policy H-480.939(7), are in the best position to manage issues of liability arising

directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.

e. Academic publications and journals should establish clear guidelines to regulate the use of AI in manuscript submissions. These guidelines should include requiring the disclosure that AI was used in research methods and data collection, requiring the exclusion of AI systems as authors, and should outline the responsibility of the authors to validate the veracity of any referenced content generated by AI.
f. Education programs are needed to enhance digital literacy, helping individuals critically assess the information they encounter online, particularly in the medical field where mis- and disinformation can have severe consequences.

9. Payor Use of Augmented Intelligence and Automated Decision-Making Systems
    a. Use of automated decision-making systems that determine coverage limits, make claim determinations, and engage in benefit design should be publicly reported, based on easily accessible evidence-based clinical guidelines (as opposed to proprietary payor criteria), and disclosed to both patients and their physician in a way that is easy to understand.
    b. Payors should only use automated decision-making systems to improve or enhance efficiencies in coverage and payment automation, facilitate administrative simplification, and reduce workflow burdens. Automated decision-making systems should never create or exacerbate overall or disparate access barriers to needed benefits by increasing denials, coverage limitations, or limiting benefit offerings. Use of automated decision-making systems should not replace the individualized assessment of a patient's specific medical and social circumstances and payors' use of such systems should allow for flexibility to override automated decisions. Payors should always make determinations based on particular patient care needs and not base decisions on algorithms developed on "similar" or "like" patients.
    c. Payors using automated decision-making systems should disclose information about any algorithm training and reference data, including where data were sourced and attributes about individuals contained within the training data set (e.g., age, race, gender). Payors should provide clear evidence that their systems do not discriminate, increase inequities, and that protections are in place to mitigate bias.
    d. Payors using automated decision-making systems should identify and cite peer-reviewed studies assessing the system's accuracy measured against the outcomes of patients and the validity of the system's predictions.
    e. Any automated decision-making system recommendation that indicates limitations or denials of care, at both the initial review and appeal levels, should be automatically referred for review to a physician (a) possessing a current and valid non-restricted license to practice medicine in the state in which the proposed services would be provided if authorized and (b) be of the same specialty as the physician who typically manages the medical condition or disease or provides the health care service involved in the request prior to issuance of any final determination. Prior to issuing an adverse determination, the treating physician must have the opportunity to discuss the medical necessity of the care directly with the physician who will be responsible for determining if the care is authorized.
    f. Individuals impacted by a payor's automated decision-making system, including patients and their physicians, must have access to all relevant information (including the coverage criteria, results that led to the coverage determination, and clinical guidelines used).
    g. Payors using automated decision-making systems should be required to engage in regular system audits to ensure use of the system is not increasing overall or disparate claims denials or coverage limitations, or otherwise decreasing access to care. Payors using automated decision-making systems should make statistics regarding systems' approval, denial, and appeal rates available on their website (or another publicly available website) in a readily accessible format with patient population demographics to report and contextualize equity implications of automated decisions. Insurance regulators should consider requiring reporting of payor use of automated decision-making systems

so that they can be monitored for negative and disparate impacts on access to care. Payor use of automated decision-making systems must conform to all relevant state and federal laws.

Citation: BOT Rep. 01, I-24; Reaffirmed: CSAPH Rep. 08, A-25; Reaffirmed in lieu of the first resolve: Res. 226, A-25.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 247
(A-26)

Introduced by: Texas

Subject: Comprehensive ERISA Reform

Referred to: Reference Committee B

Whereas, self-insured plans are regulated at the federal level by the Employee Retirement Income Security Act (ERISA) and are exempt from most state insurance laws, rules, and oversight; and

Whereas, according to a 2024 study by the Kaiser Family Foundation, approximately 63% of workers under the age of 65 are enrolled in self-insured health plans; and

Whereas, ERISA provides minimal federal regulatory protections for physicians and patients enrolled in self-insured plans from burdensome, inconsistent, or egregious payer policies; and

Whereas, while Texas enforced prompt pay regulations for fully insured (state regulated) health plans, there are few, if any, comparable federal prompt pay protections under ERISA for self-insured plans; and

Whereas, Texas law places limits on the timeframe during which insurers can request refunds or make payment recoupments under state-regulated plans, yet such consumer and provider protections are largely absent under ERISA for self-insured plans; and

Whereas, Texas imposes standards on prepayment claims audits for fully insured plans, but no equivalent federal standards exist under ERISA for self-insured plans; and

Whereas, Texas has implemented regulations regarding prior authorization processes and timelines for state-regulated plans, but these protections do not apply to self-insured plans governed by ERISA; and

Whereas, Title 29, Chapter 18, subchapter I, Part 5 of ERISA (29 US Code § 1144) broadly preempts “any and all State laws” insofar as they “relate to” employee benefit plans, and repeated efforts to eliminate or narrow this preemption have been unsuccessful; and

Whereas, among all states, Texas has implemented the most comprehensive laws addressing prompt payment requirements, refund and recoupment timeframes, prepayment claims audit standards, and prior authorization processes; therefore be it

RESOLVED, that our American Medical Association support federal regulation and/or legislation under ERISA to establish rules for prompt payment, refund and recoupment timelines, prepayment claims audits, penalties, and related matters, and that such be modeled after the Texas Prompt Pay laws and rules, requiring a report back at the following annual meeting. (New HOD Policy)

Fiscal Note: Moderate – between $10,000 - $50,000

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 1-A-26

Subject:	Council on Medical Education Sunset Review of 2016 House of Delegates' Policies
Presented by:	Kelly Caverzagie, MD, MPH, Chair
Referred to:	Reference Committee C

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another ten years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification; and (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its ten-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Medical Education recommends that the House of Delegates policies listed in the Appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

Fiscal Note: Minimal

APPENDIX: RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
D-275.953	Protection of Physicians' Personal Information	Our AMA will work with the Federation of State Medical Boards to standardize the publicly available data on the State Medical Boards' websites to protect the personal data of physicians to decrease the risk of identity theft. Policy Timeline: Res. 602, A-16	Rescind – accomplished. Update provided to HOD after A-16 stated that a letter was sent to the Federation of State Medical Boards (FSMB) to notify them of the House action. In part, the letter addressed the disclosure of multiple data elements about physicians on state medical board websites. The letter asked that state medical boards be encouraged to limit the personal information displayed on their websites to the minimum necessary to reduce the possibility of identity theft among physicians. The House action also was transmitted to medical school deans, residency program directors, directors of medical education at U.S. teaching hospitals, and those leading other interested groups via the AMA MedEd Update newsletter. There is currently no national standard for displaying physician information on websites. While states vary in their approaches given different priorities and state laws, there is convergence on not posting the most sensitive identifiers (e.g., full Social Security number, full date of birth, bank numbers, or tax numbers, etc.). These identifiers may be collected and stored in licensing records. FSMB does not collect comprehensive state-based data on this issue.
D-295.949	Criminal Background Checks for Medical Students	Our AMA will: (1) through relevant Councils and Sections, collaborate with other organizations working to develop policies and procedures for criminal background checks for applicants accepted to medical school and enrolled medical students, including the creation of guidelines for appropriate action related to individuals whose background checks raise concerns; (2) work to ensure that systems for criminal background checks for accepted applicants and medical students are standardized within and across institutions, as well as equitable, cost-	Retain clause 1 and amend by addition and deletion to read: Our AMA ~~will: (1) through relevant Councils and Sections, collaborate with other organizations working to develop policies and procedures for~~ encourages (1) criminal background checks for applicants accepted to medical school and enrolled medical students,~~ including the creation of~~ and (2) dissemination of guidelines for appropriate action related to individuals whose background checks raise concerns. Rescind clauses 2 and 3 – accomplished. Update provided to HOD after A-06 stated that the House action was transmitted to medical school deans, residency program

		effective, and consistent with the requirements for background checks being required of resident physicians and practicing physicians; and (3) continue to monitor the requirement for criminal background checks for accepted applicants and medical students by medical schools, hospitals/health systems, and state laws. Policy Timeline: CME Rep. 9, A-06; Reaffirmed: CME Rep. 01, A-16	director, and directors of medical education at U.S. teaching hospitals via the AMA Medical Education Bulletin; and that the Council on Medical Education would work with other AMA Councils and Sections as well as the Association of American Medical Colleges (AAMC) to develop guidelines. Related information provided on AAMC and American Association of Colleges of Osteopathic Medicine websites.
D-295.313	Telemedicine in Medical Education	1. Our AMA encourages appropriate stakeholders to study the most effective methods for the instruction of medical students, residents, fellows and practicing physicians in the use of telemedicine and its capabilities and limitations. 2. Our AMA will collaborate with appropriate stakeholders to reduce barriers to the incorporation of telemedicine into the education of physicians and other health care professionals. 3. Our AMA encourages the Liaison Committee on Medical Education and Accreditation Council for Graduate Medical Education to include core competencies in telemedicine in undergraduate medical education and graduate medical education training. Policy Timeline: CME Rep. 06, A-16	Retain – still relevant; amend clauses 1 and 2 by addition and deletion to read: 1. Our AMA encourages appropriate ~~stakeholders~~ interested parties to study the most effective methods for the instruction of medical students, residents, fellows and practicing physicians in the use of telemedicine and its capabilities and limitations. 2. Our AMA will collaborate with appropriate ~~stakeholders~~ interested parties to reduce barriers to the incorporation of telemedicine into the education of physicians and other health care professionals. Update provided to HOD after A-16 stated that the Association of American Medical Colleges, American Osteopathic Association, American Association of Colleges of Osteopathic Medicine, Liaison Committee on Medical Education. and Accreditation Council for Graduate Medical Education were notified of the House action. It was also transmitted to medical school deans, residency program directors, directors of medical education at U.S. teaching hospitals, and leaders of other interested groups via the AMA MedEd Update newsletter.
D-300.977	ACCME Proposed Changes in "Accreditation with Commendation" Continuing Medical Education Criteria Assessment Methodology	Our AMA will continue to monitor the proposed Accreditation Council for Continuing Medical Education (ACCME) "Accreditation with commendation" criteria, provide input to the ACCME Board of Directors, and report to the AMA HOD once the criteria are approved and implemented. Policy Timeline: Res. 313, A-16	Rescind – accomplished. Currently, a member of the AMA Council on Medical Education serves on the ACCME Board of Directors and provides updates to the Council. Update provided to HOD after A-16 stated that the Council on Medical Education prepared informational report CME 8-A-17 on this subject.

			ACCME's Accreditation with Commendation criteria were updated in 2016 and have been in effect for decisions made after November 2019. New Standards for Integrity and Independence in Accredited Continuing Education went into effect January 2022.
D-310.951	Mitigating Abusive Pre-Certification / Pre-Authorization Practices	Our AMA will work with the Accreditation Council for Graduate Medical Education to encourage residency programs to offer administrative resources to housestaff for practice-based support, including but not limited to pre-certification and pre-authorization of medications and services. Policy Timeline: Res. 716, A-16	Rescind – accomplished. Update provided to HOD after A-16 stated that the Accreditation Council for Graduate Medical Education was notified of the House action. It was also transmitted to medical school deans, residency program directors, directors of medical education at U.S. teaching hospitals, and leaders of other interested groups via the AMA MedEd Update newsletter.
H-275.936	Mechanisms to Measure Physician Competency	Our AMA: (1) continues to work with the American Board of Medical Specialties and other relevant organizations to explore alternative evidence-based methods of determining ongoing clinical competency; (2) reviews and proposes improvements for assuring continued physician competence, including but not limited to performance indicators, board certification and recertification, professional experience, continuing medical education, and teaching experience; and (3) opposes the development and/or use of "Medical Competency Examination" and establishment of oversight boards for current state medical boards as proposed in the fall 1998 Report on Professional Licensure of the Pew Health Professions Commission, as an additional measure of physician competency. Policy Timeline: Res. 320, I-98; Amended: Res. 817, A-99; Reaffirmed: CME Rep. 7, A-02; Reaffirmed: CME Rep. 7, A-07; Reaffirmed: CME Rep. 16, A-09; Reaffirmed in lieu of Res. 313, A-12; Modified: Res. 309, I-16	Rescind – addressed by H-275.916, H-295.862, H-275.924, D-275.954. Clause 3 is outdated. Update provided to HOD after A-16 stated that the American Board of Medical Specialties (ABMS) was notified of the House action. It was also transmitted to medical school deans, residency program directors, directors of medical education at U.S. teaching hospitals, and leaders of other interested groups via the AMA MedEd Update newsletter. The Council on Medical Education continues to engage with the ABMS on ways in which the continuing board certification (formerly maintenance of certification) process can be made more meaningful, relevant, and reflective of the ways that physicians actually practice.
H-275.979	Medicare Reporting of Adverse Incidents in Hospitals to State Agencies	The AMA opposes the sharing of information generated through the Medicare utilization process or other institutional review with state licensure bodies until hospital quality assurance committees have been notified and given a reasonable time to respond.	Retain – still relevant.

		Policy Timeline: Res. 118, I-86; Reaffirmed: Sunset Report, I-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	
H-275.980	Funding of State Medical Boards	(1) The AMA urges state medical associations to recommend to their respective state legislatures that all fees and charges collected by the state licensing/disciplinary board(s), or on its behalf, be specifically designated for use of the board(s) in fulfilling its duties under the state's medical practice act. (2) When such funds are inadequate to support such activities, state general funds should be used to support the board's effective fulfillment of its duties mandated by the state's medical practice act. Policy Timeline: Sub. Res. 23, I-86; Reaffirmed: Sunset Report, I-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	Retain – still relevant.
H-275.997	Licensure by Specialty	Experience with licensure by specialty is too limited to determine what the long-range effects will be in the provision of timely, safe and comprehensive medical care. However, the AMA does not consider licensure by specialty to be desirable even in unusual cases. Policy Timeline: CME Rep. F, A-80; Reaffirmed: CLRPD Rep. B, I-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CME Rep. 2, A-10; Reaffirmed: BOT Rep. 05, I-16	Rescind – addressed by H-275.978 clauses 2 and 16.
H-280.946	Policies on Intimacy and Sexual Behavior in Residential Aged Care Facilities	Our AMA urges long-term care facilities and other appropriate organizations to: (1) adopt policies and procedures on intimacy and sexual behavior that preserve residents' rights to pursue sexual relationships, while protecting them from unsafe, unwanted, or abusive situations; and (2) provide staff with in-service training to develop a framework to address intimacy in their patient population. Policy Timeline: Res. 403, A-16	Retain – still relevant. Notice provided to HOD after A-16 stated that the AMA Policy Database was updated.
H-295.912	Education of Medical Students and Residents about Domestic	Our American Medical Association will continue its support for the education of medical students and residents on domestic violence by advocating that medical schools and graduate medical	Retain – still relevant.

	Violence Screening	education programs educate students and resident physicians to sensitively inquire about family abuse with all patients, when appropriate and as part of a comprehensive history and physical examination, and provide information about the available community resources for the management of the patient. Policy Timeline: Res. 303, I-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	
H-295.915	Residency Program Responsibility for Resident Education	Our American Medical Association affirms that the basic skills and competencies for the practice of medicine and its specialties must be determined solely by the medical profession. Policy Timeline: Res. 313, A-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	Rescind – addressed by policies H-275.916 and Opinion 8.13.
H-295.969	Nondiscrimination Toward Residency Applicants	Our American Medical Association urges the Accreditation Council for Graduate Medical Education to amend its Institutional Requirements to read: "In assessing and selecting applicants for residency/fellowship programs, ACGME-accredited programs must not discriminate on the basis of sex, age, race, creed, national origin, gender identity, or sexual orientation." Policy Timeline: Res. 12, A-89; Reaffirmed: Sunset Report, A-00; Modified: BOT Rep. 11, A-07; Reaffirmed: CCB/CLRPD Rep. 1, A-14; Modified: CME Rep. 01, A-16	Retain; amend by addition and deletion to read: ~~Our American Medical Association urges the Accreditation Council for Graduate Medical Education to amend its Institutional Requirements to read: "In assessing and selecting applicants for residency/fellowship programs, ACGME-accredited programs must not discriminate on the basis of sex, age, race, creed, national origin, gender identity, or sexual orientation."~~ Our American Medical Association encourages that Accreditation Council for Graduate Medical Education-accredited programs should not discriminate on the basis of an individual's sex, age, race, creed, national origin, gender identity, or sexual orientation. Discrimination is addressed by the ACGME in the 2025 Institutional Requirements, specifically: ● (3.2.f.4) addresses all discrimination, while not articulating the types. ● (4.2) addresses recruitment, selection, eligibility, and appointment ● (4.9.e) directs institutional policies prohibiting discrimination in employment and in the learning and working environment.
H-295.981	Geriatric Medicine	1. Our AMA reaffirms its support for: (a) the incorporation of geriatric medicine	Retain – still relevant.

		into the curricula of medical school departments and its encouragement for further education and research on the problems of aging and health care of the aged at the medical school, graduate and continuing medical education levels; and (b) increased training in geriatric pharmacotherapy at the medical student and residency level for all relevant specialties and encourages the Accreditation Council for Graduate Medical Education and the appropriate Residency Review Committees to find ways to incorporate geriatric pharmacotherapy into their current programs. 2. Our AMA recognizes the critical need to ensure that all physicians who care for older adults, across all specialties, are competent in geriatric care, and encourages all appropriate specialty societies to identify and implement the most expedient and effective means to ensure adequate education in geriatrics at the medical school, graduate, and continuing medical education levels for all relevant specialties. Policy Timeline: Res. 137, A-85; Reaffirmed by CLRPD Rep. 2, I-95; Appended: CSA Rep. 5, A-02; Appended: Res. 301, A-10; Reaffirmed: BOT Rep. 05, I-16	
H-300.951	Credit for Reading Medical Journals	The AMA continues to support appropriate credit for medical journal study and make every effort to simplify the process by which this is accomplished. Policy Timeline: Res. 315, I-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	Rescind – accomplished. AMA Physician's Recognition Award and credit system booklet describes "journal-based CME" on page 4.
H-300.952	Dissemination of Information Regarding CME Activities	The AMA will continue to support the current system of Continuing Medical Education accreditation in which the Accreditation Council for Continuing Medical Education accredits sponsors whose mission and intended audience are on a regional or national level and state medical societies accredit sponsors whose mission and intended audience are physicians within state and contiguous states, following the guidelines enunciated by the ACCME.	Retain – still relevant.

		Policy Timeline: CME Rep. 7, I-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	
H-300.955	Restructuring of Continuing Medical Education Credits	The AMA encourages state licensing boards with CME reporting requirements to allow *AMA PRA Category 1 Credit*" and *AMA PRA Category 2 Credit*" toward reregistration of the license to practice medicine; and all state licensing boards be urged to accept a current and valid AMA Physician's Recognition Award as evidence of completion of these requirements. Policy Timeline: CME Rep. 7, A-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	Retain – still relevant.
H-310.906	Improving Residency Training in the Treatment of Opioid Dependence	Our AMA: (1) encourages the expansion of residency and fellowship training opportunities to provide clinical experience in the treatment of opioid use disorders, under the supervision of an appropriately trained physician; and (2) supports additional funding to overcome the financial barriers that exist for trainees seeking clinical experience in the treatment of opioid use disorders. Policy Timeline: Res. 301, I-16	Retain – still relevant. Notice provided to HOD after I-16 stated that the AMA Policy Database was updated.
H-310.982	Reevaluation of Residency Selection Process	Our American Medical Association supports continued cooperation with the Association of American Medical Colleges in the evaluation of the residency selection process, with emphasis on the reduction of pressures that induce premature specialty decisions within the undergraduate medical curriculum. Policy Timeline: Sub. Res. 112, I-86; Amended by Sunset Report, I-96; Modified and Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	Retain – still relevant.
H-310.983	Residency Positions for Sale	Our American Medical Association reaffirms its position that selection of residents should be based on the academic and personal qualifications of applicants and that monetary considerations should never compromise the selection process.	Retain – still relevant. Append to H-305.925; amend by addition and deletion to read: 27. ~~Our American Medical Association reaffirms its position~~ Upholds that selection of residents should be based on the academic and personal qualifications of applicants and

		Policy Timeline: CME Rep. A, A-86; Reaffirmed: Sunset Report, I-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	that monetary considerations should never compromise the selection process."
H-345.970	Improving Mental Health Services for Undergraduate and Graduate Students	Our AMA supports: (1) strategies that emphasize de-stigmatization and enable timely and affordable access to mental health services for undergraduate and graduate students, in order to improve the provision of care and increase its use by those in need; (2) colleges and universities in emphasizing to undergraduate and graduate students and parents the importance, availability, and efficacy of mental health resources; and (3) collaborations of university mental health specialists and local public or private practices and/or health centers in order to provide a larger pool of resources, such that any student is able to access care in a timely and affordable manner. Policy Timeline: Res. 904, I-16	Retain – still relevant. Notice provided to HOD after I-16 stated that the AMA Policy Database was updated.
H-345.973	Medical and Mental Health Services for Medical Students and Resident and Fellow Physicians	Our AMA promotes the availability of timely, confidential, accessible, and affordable medical and mental health services for medical students and resident and fellow physicians, to include needed diagnostic, preventive, and therapeutic services. Information on where and how to access these services should be readily available at all education/training sites, and these services should be provided at sites in reasonable proximity to the sites where the education/training takes place. Policy Timeline: Res. 915, I-15; Revised: CME Rep. 01, I-16	Retain – still relevant. Notice provided to HOD after I-15 stated that the AMA Policy Database was updated.
H-405.962	The Practice of Public Health by Physicians	Our AMA: (1) recognizes the practice of public health by physicians as the practice of medicine; (2) opposes specialty-specific license restrictions for American Board of Medical Specialties (ABMS)-recognized specialties; and (3) encourages the ABMS and the Federation of State Medical Boards to adopt similar policies recognizing the practice of public health by physicians as a legitimate practice of medicine and opposing specialty-specific license restrictions for ABMS-recognized specialties. Policy Timeline: Res. 815, I-06; Reaffirmed: CME Rep. 01, A-16	Retain clause 1 – still relevant. Rescind clauses 2 and 3 – accomplished. Public health is recognized by the ABMS: Specialties - The American Board of Preventive Medicine. All certifications offered by ABMS Member Boards are endorsed by the ABMS and require approval when they offer a new certification or focused practice designation. No state requires any certification (ABMS or otherwise) to obtain a license to practice medicine. ABMS and FSMB have long held that ABMS certification is voluntary and should not be tied to requirements to obtain a

			state medical license, which aligns with other AMA policy.
H-405.966	Resident Physician Licenses	Our American Medical Association supports the option of limited educational licenses in all states for resident physicians to provide care within their residency programs; and supports reduced licensure fees for resident physicians for participation solely in graduate medical education training programs when full medical licensure is required by a state. Policy Timeline: Sub. Res. 312, A-96; Reaffirmed: CME Rep. 2, A-06; Reaffirmed: CME Rep. 01, A-16	Retain – still relevant.

COUNCIL ON MEDICAL EDUCATION REPORT 2-A-26
Examining ABMS Processes for New Boards

EXECUTIVE SUMMARY

At the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates Policy D-275.943, "Examining ABMS Processed for New Boards," was adopted. The policy asks that the AMA "study and define principles for board certifying bodies including, but not limited to: education and training requirements, initial and ongoing assessment of physician competence in balance with patient safety, and best practices for promoting professional self-regulation, with report back to the HOD at annual 2026."

This report provides a brief history of specialty board formation and American Board of Medical Specialties (ABMS) approval as well as an overview of past and current ABMS requirements and criteria. It discusses input from the HOD and offers principles for board certifying bodies. Finally, the report lays out resources and related AMA policy and concludes with recommendations to the HOD.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 2-A-26

Subject: Examining ABMS Processes for New Boards

Presented by: Kelly Caverzagie, MD, MPH, Chair

Referred to: Reference Committee C

At the 2025 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 301 was co-sponsored by the American College of Cardiology, American Society of Echocardiography, American Society of Nuclear Cardiology, Heart Rhythm Society, Society for Cardiovascular Angiography & Interventions, Society of Cardiovascular Computed Tomography, and Society for Cardiovascular Magnetic Resonance. Their original resolution raised concern for established criteria of oversight bodies and American Board of Medical Specialties (ABMS) processes for new boards. It specifically referenced the application of a new American Board of Cardiovascular Medicine (ABCVM). Testimony addressed support for the belief that board certification is paramount in professional self-governance and that AMA should not interfere with the American Board of Medical Specialties (ABMS) process. Alternate Resolution 301 was adopted as amended in lieu of original Resolution 301 and is now AMA Policy D-275.943, "Examining ABMS Processes for New Boards," which asks the following:

> Our AMA will study and define principles for board certifying bodies including, but not limited to: education and training requirements, initial and ongoing assessment of physician competence in balance with patient safety, and best practices for promoting professional self-regulation, with report back to the HOD at annual 2026.

This report is written in response to its directive.

BACKGROUND

At the 2023 Interim Meeting, the AMA HOD adopted CME Report 4, "Recognizing Specialty Certifications for Physicians." It provided a detailed history of standardized certification, ABMS, Accreditation Council for Graduate Medical Education (ACGME) core competencies, governance of ABMS member boards, and ABMS board eligibility. The report also explained board eligibility for the American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS), and other entities such as the American Association of Neuromuscular & Electrodiagnostic Medicine, American Board of Cosmetic Surgery, American Board of Facial Plastic and Reconstructive Surgery, American Board of Oral & Maxillofacial Surgery, American Board of Physician Specialties, National Board of Physicians and Surgeons, and United Council for Neurologic Subspecialties. Further, it addressed the AMA's Truth in Advertising Campaign. A review of CME 4-I-23 provides historical information and useful context for this report.

History of specialty board formation and ABMS approval

The need for board certification can be traced back to the late 19th century when it was recognized that medical education and training varied widely. Given the lack of universal curricula and

© 2026 American Medical Association. All rights reserved.

evaluation methods, there were no standardized requirements or guidelines for physicians to demonstrate their specialty qualifications. The American Board of Ophthalmology was established in 1917 as the first board allowing ophthalmologists to distinguish themselves from other physicians. As other boards began to form, the AMA established the Advisory Board for Medical Specialties in 1933 to bring order to this growing arena and address conflicts.[1] This board established the first *Essentials for Approval of Examining Boards in Medical Specialties*, which was approved by the HOD in June 1934. The Essentials described "the standards and procedures by which applications for approval of new medical specialty boards are evaluated."[2] In 1942, the AMA Council on Medical Education and Advisory Board established the Liaison Committee for Specialty Boards (LCSB) to receive applications for approval as a medical specialty certifying board and evaluate applications. The Advisory Board was renamed the American Board of Medical Specialties (ABMS) in 1970.[3] As of June 2025, ABMS represents 24 certifying boards and just over one million active board-certified physicians.[4] Over time, other entities were established to provide board certification. For example, the AOA formed the Advisory Board for Osteopathic Specialists in 1939 to oversee the certification of osteopathic physicians; it eventually became the AOA Bureau of Osteopathic Specialists (AOA-BOS).[5]

The HOD approved the twelfth and final revision to the *Essentials*, and they became effective in November 2005. These *Essentials* were implemented until 2023 when ABMS updated their policy to change the process for approval of medical specialty boards. Effective October 27, 2023, the ABMS Board of Directors adopted new Policy 1.8 on Admission of New Medical Specialty Boards to Membership in ABMS[6], thereby establishing a new process for board approval and ending the LCSB. Similar to the *Essentials,* ABMS Policy 1.8 lays out eight sections that describe the plans and steps necessary for the creation of a new specialty board.

DISCUSSION

Current requirements and criteria per ABMS Policy 1.8

The current necessary requirements to be recognized as an independent board are described in "Section III. Required Content for Applications." This section states, "In order to be recommended for approval by the ABMS Advisory Body on Specialty Board Development ('Advisory Body' [see Section IV]), a new applicant specialty board must demonstrate that all of the following requirements have been satisfied.

1. The applicant board must demonstrate that it is primarily composed of Diplomates who hold a Doctor of Medicine (MD), Doctor of Osteopathic Medicine (DO), or foreign equivalent (e.g., Bachelor of Medicine, Bachelor of Surgery [MBBS]) degrees. The ABMS Board of Directors will determine whether this criterion has been satisfied in its sole and absolute discretion based on the unique circumstances of each applicant board.
2. The applicant board must define its objectives and function, including a scientific rationale demonstrating a substantial advancement in medicine or technology, evidence of a distinct and well-defined field of medical practice, and/or confirmation of an interdisciplinary practice field sufficiently distinct from existing fields of practice. The applicant board must present data on the field's core content/competencies and scope of practice based on a validated blueprint of the professional area, including present and projected future public needs and expected growth.
3. The applicant board must present a rationale for how this field of practice serves the patient/public interest, as well as supports candidates'/Diplomates' needs.
4. The applicant board must demonstrate how its training and evaluation methods satisfy ABMS' standards.

© 2026 American Medical Association. All rights reserved.

5. The applicant board must describe the training needed to meet requirements for certification and delineate how this training is sufficiently distinct from the training required for certification by existing ABMS medical specialty boards.
6. The applicant board must define standards for the requisite knowledge and skills in the field of practice. They must demonstrate that candidates for initial certification acquire and maintain these standards. A specific plan for development and validation of the requirements for initial and continuing certification must be presented, along with an outline of and rationale for the qualifications to be required of candidates for certification. The applicant board also must provide a detailed explanation of how the program will adhere to ABMS' initial, continuing, and organizational standards and provide a detailed plan for program review and evaluation.
7. Except as provided in this section, the applicant board must require all new Diplomates to successfully complete an ACGME-accredited residency or training program prior to becoming certified. If the applicant board is in the process of obtaining ACGME accreditation for the GME training program(s) for the field of practice at the time of application for admission to the ABMS (and if all other conditions are satisfied), the ABMS Board of Directors may conditionally approve the applicant board contingent upon ACGME accreditation of the program(s). Applicant boards may not issue new certificates under the ABMS imprimatur or use the ABMS seal until final approval as a medical specialty board has been granted by the ABMS.
8. A plan must be presented to accommodate the certification of individuals who complete their GME prior to the establishment of ACGME-accredited or other accredited programs in the specialty. A description of the practice requirements for Diplomates practicing in the field of practice without ACGME-accredited training must be provided. The description should include a summary of the qualifications, the examination(s) required, and the number of physicians or medical specialists to be certified in this manner. Applicant boards with existing certified diplomates at the time of application to membership in the ABMS must present a plan to accommodate the ABMS certification of individuals if such ABMS certification for existing diplomates is desired by the applicant board.
9. The applicant board must demonstrate broad support from the relevant field of medical practice and broad professional support. The applicant board must provide the communications used to notify the field of medical practice of the proposed application.
10. The applicant board must provide the total number, along with the complete list of institutions providing residency or other acceptable training programs in the field of practice; the total number of residency positions available; and the number of residency programs planned for creation within the next five years. This data should demonstrate the growth and sustainability of these training programs. The applicant board further must provide the following:
11. The official name of the proposed board, including the names and professional qualifications of its officials and the organization that each official represents (if applicable).
12. An operational plan, including sufficient detail for evaluation of the following areas:
    - MISSION AND OPERATIONS: The applicant board must have a mission that aligns with the mission of ABMS and articulates the purpose of board certification in the proposed field of medical practice. The applicant board will provide copies of existing policies and procedures that promote professionalism and excellence in operations and that strive to meet the needs of the public and the profession. The applicant board is expected to conduct periodic reviews of its operations as supported by principles of good governance.
    - GOVERNANCE STRUCTURE: The applicant board must demonstrate that its Board of Trustees/Directors follows best practices for governance and is able to

© 2026 American Medical Association. All rights reserved.

address the needs and concerns of its stakeholders. Board members should have sufficient professional expertise for effective board operation and management. The applicant board must specifically articulate how the perspectives of active clinician Diplomates, stakeholders in the field of medical practice, patients, and the public inform board governance, and must explain the presence or absence of any structural or process components related to equity.

- BUSINESS PLAN: The financial support for a valid, objective program of candidate and Diplomate assessment must be presented, and the applicant board must attest that adequate resources and revenue are available to support and sustain the applicant board. The data should include the approximate number of physicians or medical specialists currently engaged in the practice of the field of medical practice, as well as projected numbers of examinees for initial and continuing certification and projected certification fees. The applicant board must reflect appropriate, transparent financial stewardship in a manner befitting its non-profit status,

13. A copy of the Constitution (if applicable) and Bylaws;
14. A copy of the Articles of Incorporation;
15. A copy of the application form for candidates for initial and continuing certification; and
16. A non-refundable application fee."[6]

Notable differences between the former *Essentials* and new Policy 1.8 include: removal of language regarding the LCSB, reframing oversight and procedure for the recommendation of approval of new specialty boards as solely under ABMS purview, updating of terms (e.g., MOC now referred to as continuing board certification), change from "appeal" to "reapplication," and new reference to "conjoint" boards. Regarding the role of the AMA in this new process, Section IV of Policy 1.8 explains that the sitting Chair of the AMA Council on Medical Education or their designee is a participant in the Advisory Body without vote. Further, ABMS will inform the AMA of the general activities of the Advisory Body once convened, including notification of scheduled meetings, notices of public comment periods, and general timelines related to the work of the Advisory Body.

Input from the HOD

Comments are regularly submitted to the HOD via the "Forthcoming and Pending Reports for the House of Delegates" document to inform the drafting of forthcoming and pending reports. Three comments were submitted regarding Resolution 301/Policy D-275.943. They were reviewed and considered during the development of this report. One comment suggested that the AMA more formally acknowledge the optional drafting note stated in the AMA Truth in Advertising (TIA) campaign, as seen on page twelve of the TIA Campaign booklet. However, there remains an issue of consensus regarding the definition of board certification that will need to be addressed by the HOD.

Principles for board certifying bodies

Policy D-275.943 asks the AMA to develop principles for board certifying bodies with the goal of providing a clear foundation that guides optimal performance of such bodies and further strengthens a commitment to evidence-based lifelong learning. Principles for board certifying bodies should be broad and comprehensive assumptions in alignment with AMA policy. In the development of such principles, careful consideration was given to the policies and protocols of the ABMS and AOA-BOS, the interest expressed in the underlying resolution (to include addressing education and training requirements, initial and ongoing assessment of physician competence, patient safety, and professional self-regulation), testimony from the HOD, and other input from

© 2026 American Medical Association. All rights reserved.

interested parties. Principles are intended to be guiding concepts and not replace or supersede established policies and protocols. The Council on Medical Education offers the following principles.

Physician board certifying bodies should:

1. Serve the public interest by supporting high-quality evidence-based care, patient safety, professionalism, and ethical conduct of individual physicians.

2. Maintain independent governance, ensure equitable and transparent processes, engage relevant parties, and uphold fair pathways for transition or reapplication when establishing criteria for certification.

3. Align certification with recognized education and training, clearly define competencies, and use objective, standards-based assessments that reflect clinical practice.

4. Incorporate ongoing evaluation and improvement, supported by effective use of technology to enhance accessibility and efficiency.

5. Ensure representative physician leadership informed by diverse practice settings and provide opportunities for diplomates to participate in governance. *

* Principles created with author oversight by Microsoft Copilot, March 4, 2026.

Update on American Board of Cardiovascular Medicine (ABCVM)

On January 23, 2026, ABCVM issued an update on their status, noting that their "Board of Directors continues to evaluate partnerships with organizations, such as the National Board of Physician and Surgeons (NBPAS), the American Board of Physician Specialties (ABPS), and the American Osteopathic Association (AOA), to accelerate innovation. However, differences in scale, resources, recognition and philosophy limited these options."[7] NBPAS published commentary on this decision, stating that "differences in philosophy ultimately precluded a partnership at this time.[8] In addition, it noted, "From its founding, NBPAS has maintained a clear and consistent mission: to provide a credible, rigorous pathway and platform for lifelong learning without imposing unproven requirements such as point-in-time examinations or longitudinal testing models." ABPS and AOA had not published commentary at the time of the preparation of this report.

Resources

The ABMS website provides general information as well as the following resources:

- Standards for Initial Certification – Presents the standards and annotations for Initial Certification, requirements for each ABMS Member Board's program, and potential pathways to meet the requirements. Of note, ABMS announced on February 27, 2026, a call for comment on Draft Revised Standards for Initial Certification, due April 27. The Council on Medical Education intends to provide comments which will be after the deadline for submitting this report.
- The Recommendations of the Vision Initiative Commission – 2019 report by an independent commission containing fourteen recommendations that address current concerns and outline a path forward for ABMS' continuing certification programs.

© 2026 American Medical Association. All rights reserved.

- Standards for Continuing Certification – Effective January 2024, provides a comprehensive framework for Member Boards to design certification programs that meaningfully engage diplomates in activities relevant to their practice.
- ABMS Guide to Medical Specialties – Provides descriptions and contact information for the ABMS member board specialties and subspecialties.
- ABMS Board Certification Report – Released annually, it contains data on the specialty and subspecialty certificates approved by ABMS, the number of new specialty and subspecialty certificates issued in the last 10 years, and the distribution of board-certified diplomates by ABMS Member Board, specialty, and state.

Other board certification entities provide their own information. For example, the AOA website offers the "Handbook of the Bureau of Osteopathic Specialist," which includes AOA-BOS policies and new board processes.

RELEVANT AMA POLICY

AMA Policy H-275.926 "Medical Specialty Board Certification Standards" addresses board certified physicians, ABMS member boards, and ABMS/AOA-BOS board certification processes. Of note, the third clause states, "It is AMA policy that when the equivalency of board certification must be determined, the certification program must first meet accepted standards for certification that include both

a. a process for defining specialty-specific standards for knowledge and skills and
b. offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. In addition, accepted standards, such as those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination."

Given the *Essentials* are defunct, this reference should be removed from clause (3b) of the policy.

AMA Policy D-275.943 "Examining ABMS Processes for New Boards," is the policy resulting from adoption of Resolution 301 that calls for this report. This report fulfills that directive.

CONCLUSION

Board certification provides an ongoing independent evaluation of individual physicians to assure that the specialty physician workforce is clinically competent, skilled, participates in lifelong learning, and meets the standards of practice established by their peers. Further, there is public interest in seeking out board-certified physicians and specialists. The public seeks to trust their physicians with the significant responsibility of care and decision making when it comes to both personal and population health. Such trust exemplifies great public value. Contributing factors to the building of such trust include demonstrated quality care and patient safety as well as expertise and ongoing professional development – all of which are represented through board certification. Board certification also provides a process to ensure new boards meet the same foundational principles that guide certification itself including competency standards, training requirements, public accountability, and the ability to perform valid, independent assessments. Thorough, high-quality requirements and protocols for new boards are imperative. AMA's continued collaboration with its HOD, ABMS and its member boards, AOA-BOS, and other board certifying entities will ensure ongoing prioritization and review of board approval processes.

RECOMMENDATIONS

The Council on Medical Education recommends that the following be adopted in lieu of Resolution 301-A-25, and the remainder of the report be filed:

1. Policy H-275.926,"Medical Specialty Board Certification Standards," item 3b, be amended by deletion to read as follows:

   3b. offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. ~~In addition, accepted standards, such as those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination.~~ (Modify Current HOD Policy)

2. Our AMA supports the following principles to inform the development of new board certifying bodies:

   Principles for New Board Certifying Bodies

   1. Serve the public interest by supporting high-quality evidence-based care, patient safety, professionalism, and ethical conduct of individual physicians.
   2. Maintain independent governance, ensure impartial and transparent processes, engage relevant parties, and uphold fair pathways for transition or reapplication when establishing criteria for certification.
   3. Align certification with recognized education and training, clearly define competencies, and use objective, standards-based assessments that reflect clinical practice.
   4. Incorporate ongoing evaluation and improvement, supported by effective use of technology to enhance accessibility and efficiency.
   5. Ensure representative physician leadership informed by diverse practice settings and provide opportunities for diplomates to participate in governance.

   (New HOD Policy)

3. Policy D-275.943, "Examining ABMS Processes for New Boards," be rescinded as having been accomplished by this report. (Rescind HOD Policy)

Fiscal note: Minimal

RELEVANT AMA POLICY

Medical Specialty Board Certification Standards H-275.926

1. Our American Medical Association opposes any action, regardless of intent, that appears likely to confuse the public about the unique credentials of American Board of Medical Specialties (ABMS) or American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) board certified physicians in any medical specialty, or take advantage of the prestige of any medical specialty for purposes contrary to the public good and safety.
2. Our AMA opposes any action, regardless of intent, by organizations providing board certification for non-physicians that appears likely to confuse the public about the unique credentials of medical specialty board certification or take advantage of the prestige of medical specialty board certification for purposes contrary to the public good and safety.
3. Our AMA continues to work with other medical organizations to educate the profession and the public about the ABMS and AOA-BOS board certification process. It is AMA policy that when the equivalency of board certification must be determined, the certification program must first meet accepted standards for certification that include both
    a. a process for defining specialty-specific standards for knowledge and skills and
    b. offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. In addition, accepted standards, such as those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination.
4. Our AMA opposes discrimination against physicians based solely on lack of ABMS or equivalent AOA-BOS board certification, or where board certification is one of the criteria considered for purposes of measuring quality of care, determining eligibility to contract with managed care entities, eligibility to receive hospital staff or other clinical privileges, ascertaining competence to practice medicine, or for other purposes. Our AMA also opposes discrimination that may occur against physicians involved in the board certification process, including those who are in a clinical practice period for the specified minimum period of time that must be completed prior to taking the board certifying examination.
5. Our AMA advocates for nomenclature to better distinguish those physicians who are in the board certification pathway from those who are not.
6. Our AMA encourages member boards of the ABMS to adopt measures aimed at mitigating the financial burden on residents related to specialty board fees and fee procedures, including shorter preregistration periods, lower fees, and easier payment terms.
7. Our AMA encourages continued advocacy to federal and state legislatures, federal and state regulators, physician credentialing organizations, hospitals, and other interested parties to define physician board certification as the medical profession establishing specialty-specific standards for knowledge and skills, using an independent assessment process to determine the acquisition of knowledge and skills for initial certification and recertification.

Examining ABMS Processes for New Boards D-275.943

Our AMA will study and define principles for board certifying bodies including, but not limited to: education and training requirements, initial and ongoing assessment of physician competence in balance with patient safety, and best practices for promoting professional self-regulation, with report back to the HOD at annual 2026.

COUNCIL ON MEDICAL EDUCATION REPORT 3 – A-26
Support for the Establishment of Indigenous-Led Medical Schools in the United States

EXECUTIVE SUMMARY

Resolves 2 and 4 of Resolution 303-A-25, Support for the Establishment of Indigenous-Led Medical Schools in the United States, were referred for study on the following topics:

> RESOLVED (2), that our AMA work collaboratively with Tribal Nations, Indigenous-led organizations, academic institutions, and relevant governing bodies to explore the feasibility, infrastructure, and resource needs for such an institution (Directive to Take Action); and be it further
>
> RESOLVED (4), that our AMA advocate for funding and resource development, including through partnerships with academic, philanthropic, health system, and governmental stakeholders, to support sustainable development and operation of an Indigenous-led medical school. (Directive to Take Action)

This report reviews the history and context of physician workforce shortages in Indigenous communities, including the difficulties present early in the educational and other pathways leading up to medical school and the current absence of any Indigenous-led medical school. The report then summarizes the basic process to create a medical school and discusses unique challenges related to implementing this process on tribal land. Finally, the report explores activity in the wider medical education community related to tribally affiliated medical schools, a selection of other relevant Indigenous-focused programs, and AMA's current work related to Indigenous workforce and possible Indigenous medical schools.

The report recommends additional AMA policy in convening, collaboration, feasibility assessment, and advocacy spaces related to Indigenous medical schools as well as pathway and mentorship programs prior to undergraduate medical education.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 3-A-26

Subject:	Support for the Establishment of Indigenous-Led Medical Schools in the United States
Presented by:	Kelly Caverzagie, MD, MPH, Chair
Referred to:	Reference Committee C

Resolution 303-A-25, "Support for the Establishment of Indigenous-Led Medical Schools in the United States," was introduced by the Underrepresented in Medicine Advocacy Section (formerly the Minority Affairs Section), with resolves 2, 3, and 4 being referred. Resolve 3 will be studied in a separate report while the study of resolves 2 and 4 are the focus of this report. These resolves asked the following:

> RESOLVED (2), that our AMA work collaboratively with Tribal Nations, Indigenous-led organizations, academic institutions, and relevant governing bodies to explore the feasibility, infrastructure, and resource needs for such an institution (Directive to Take Action); and be it further
>
> RESOLVED (4), that our AMA advocate for funding and resource development, including through partnerships with academic, philanthropic, health system, and governmental stakeholders, to support sustainable development and operation of an Indigenous-led medical school. (Directive to Take Action)

"Such an institution" in resolve 2 refers to the original resolve 1 in the resolution, which became AMA Policy H-295.840, "Support for the Establishment of Indigenous-Led Medical Schools in the United States," and reads: "Our AMA supports efforts to establish Indigenous-governed medical schools in the United States, with governance and leadership structures grounded in tribal sovereignty and cultural integrity, and guided by principles of accountability to Indigenous Nations, inclusion of Indigenous leadership, and alignment with community-defined values and priorities."

BACKGROUND

Workforce Shortages

Tribal health care is in crisis, with disproportionately poor health outcomes for Indigenous people in the United States. One major basis of this crisis is a severe workforce shortage of Indigenous physicians who are more likely than their peers to serve Indigenous populations.[1,2] However, as discussed in Council on Medical Education Report 8-A-25, Disaggregation of Demographic Data for Indigenous Individuals: "AI/AN people experience significant challenges based on wider systemic oppression and difficulty in accessing education in general and, therefore, also are underrepresented in the number achieving high school and college degrees as well as in medical degrees.[3] According to the AAMC, in 2023, there were only 90 total AI/AN self-reported applicants to U.S. MD-granting medical schools, and 57 Native Hawaiian or Other Pacific Islander (though some Indigenous applicants may have been aggregated under other ethnic categories, such

© 2026 American Medical Association. All rights reserved.

as multiracial.)"[4] By contrast, in 2023, there were 3.3 million people in the country who identified solely as American Indian/Alaska Native (AI/AN), with 581,100 more identifying as Native Hawaiian/Pacific Islander.[5] This is about 1.5 percent of the U.S. population, but AI/AN individuals account for only 0.28 percent of medical school applicants, with even fewer being accepted and graduating.[6] Among active physicians, in 2018 there were 3,511 total physicians identifying as American Indian, Alaska Native, Native Hawaiian, or other Pacific Islander, in contrast to Indigenous patient populations in the multiple millions.[7]

Challenges related to AI/AN health outcomes, such as those connected to the Indian Health Service, also include inadequate funding, challenges associated with transitioning services from federal to Tribal control through contracting and compacting, evolving federal and state programs, the need for culturally sensitive services, and the promise and challenges of health technology. However, limited human resources are considered one of the top challenges.[8]

Given significant underrepresentation of AI/AN learners and physicians, it is critical to work directly with tribes on the creation of scholarships and programs to support the preparation of AI/AN individuals for medical school.[3] To support AI/AN access to medicine as a career, there are also significant needs that start as early as birth, pre-K, and K-16.[9,10,11] AMA currently has policy related to the importance of early childhood resources (Disparities in Public Education as a Crisis in Public Health and Civil Rights H-60.917), as well as pre-K-16 pathway pilot programs (AMA Support of U.S. Pathway Programs D-200.970), and is engaged in grant work in this area, which includes but is not specifically for Indigenous populations.

Tribal and Indigenous Sovereignty

The multiplicity of Indigenous communities have varying priorities, including 574 American Indian and Alaska Native tribes and villages formally recognized by the U.S. federal government. Each of these entities has "a government-to-government relationship with the United States, with the responsibilities, powers, limitations, and obligations attached to that designation, and is eligible for funding and services from the Bureau of Indian Affairs. Furthermore, federally recognized tribes are recognized as possessing certain inherent rights of self-government (i.e., tribal sovereignty) and are entitled to receive certain federal benefits, services, and protections because of their special relationship with the United States."[12] Solutions to severe Indigenous health disparities, such as an Indigenous medical school, may potentially involve direct ties to one or more tribal nations and must be driven by and for the unique needs and goals of those nations or communities.

Medical School Creation

A scoping review by Kirubakaran et al., published in 2024 in *Advances in Health Science Education*, reviewed the existing literature on the process for establishing new medical schools, noting that doing so is "a complex undertaking with high financial and political stakes." Though "the literature on new medical school establishment is empirically and theoretically under-developed, it is still useful and reveals a number of important considerations that could assist founding leaders and teams to maximize the outcomes and impact of their establishment efforts."[13] Generally speaking, plans for a new medical school must be both descriptive and substantive—a vision for what the values and purpose of a new medical school will be, in addition to specific plans related to both the creation and sustainability of the school.

The Liaison Committee on Medical Education (LCME) accredits allopathic medical schools in the United States. The LCME accreditation standards are included in the document "Functions and

Structure of a Medical School: Standards for Accreditation of Medical Education Programs Leading to the MD Degree," available on the LCME website.[14] A developing medical school must demonstrate its potential to meet the requirements in accreditation standards by providing specific information in the Data Collection Instrument for Preliminary Accreditation Surveys.[14] The American Osteopathic Association, specifically the Commission on Osteopathic College Accreditation (COCA), accredits osteopathic medical schools in the United States and provides accreditation guidelines and policies on their website.[15]

While the administrative processes, resources, and other requirements may be similar to any other medical school in regard to creating a school and seeking allopathic or osteopathic accreditation, a tribal medical school may potentially have differences due to a tribe's status as a sovereign nation. No literature currently exists in this area, given that no tribal medical schools currently exist.

The LCME accredits educational programs that lead to the MD degree; it does not accredit institutions. A medical school or its sponsoring institution, such as a university, must hold institutional accreditation from an accrediting body recognized by the U.S. Department of Education for Title IV purposes.[16] This institutional accreditation is what allows students to access federal financial aid, such as low-interest student loans under Title IV of the Higher Education Act. In contrast, the COCA accredits DO-granting colleges of osteopathic medicine and is recognized by the U.S. Department of Education as an institutional accreditor, meaning COCA accreditation can satisfy Title IV institutional eligibility requirements for osteopathic medical schools.

Resource Development to Open and Sustain a Medical School

According to LCME staff, funding for a prospective medical school may come from a variety of sources and specifically requires a feasible plan and evidence for financial sustainability. The resources a school has access to prior to opening may differ from those in place later but must be sustainable for a period of time: often a clear, specific, and realistic budget for the next six years. A new school needs to consider the revenue sources available at the beginning and how these will change but remain sufficient over time.

Characteristics of Tribally-Owned Higher Education Institutions

According to the American Indian Higher Education Consortium (AIHEC), "Tribal Colleges and Universities (TCUs) are chartered by their respective Tribal governments, including the ten Tribes within the largest reservations in the United States. The 35 accredited TCUs operate more than 90 campuses and sites in 15 states—covering most of Indian Country—and serve students from more than 250 federally recognized Indian Tribes. TCUs vary in enrollment (size), focus (liberal arts, sciences, workforce development/training), location (woodlands, desert, frozen tundra, rural reservation, urban), and student population (predominantly American Indian). However, Tribal identity is the core of every TCU, and they all share the mission of Tribal self-determination and service to their respective nations."[17] Though most students attending TCUs identify as Indigenous, all students are welcome, including international students.[18] Two additional institutions are not Title IV-eligible nor accredited by mainstream organizations[19] but are considered "developing" members of AIHEC.[20] It is possible that tribes, as sovereign nations, could have different educational priorities or hypothetically wish to develop differing accreditation standards. However, all current TCUs appear to be either accredited or in the process of obtaining accreditation, which ensures transferability of credits and access to federal financial aid for learners. An Indigenous medical school would need accreditation from a recognized institutional accreditor for it to be eligible for LCME programmatic accreditation. LCME or COCA accreditation currently is required

for the students/graduates to access medical licensing examinations and accredited graduate medical education.

Unique Resource Challenges for Tribal Land

Environmental injustice can result in infrastructure and transportation challenges on tribal lands. The same factors that create difficulties accessing basic needs such as food and health care also create difficult conditions for the development of schools. "For tribes, multiple and cumulative risks and impacts cannot be separated from the historical legacy of land loss. Indigenous nations in the United States have lost 98.9 percent of their historical land base since European settlers began colonizing the continent."[21] The General Allotment Act of 1887 often resulted in reservations placed on more difficult land, with more productive or "high-quality" land taken for non-Indigenous settlement.[22] In some cases, there are also significant location-based health risks from pollution on or near tribal lands, such as uranium exposure from toxic waste either improperly managed or dumped.[23,24]

However, Indigenous communities also have many stories of transcending the harms experienced: "… life on Native American reservations cannot be defined by hardship alone. It is complex, layered, and often misunderstood. While the challenges are real, ranging from poverty and health disparities to underfunded infrastructure, so too are the stories of cultural preservation, grassroots leadership, and community-driven progress."[25]

Creating Pathways to Support Sustainable Development and Operation of an Indigenous-Led Medical School

Below is a brief review of some of the active collaborations that exist between medical schools and tribal nations that could inform the sustainable development and operation of an Indigenous-led medical school. At the time of this writing in January 2026, there are no tribal medical schools (in contrast to tribally affiliated).[26]

Oklahoma State University College of Osteopathic Medicine at the Cherokee Nation. At the time of this writing (January 2026), Oklahoma State University College of Osteopathic Medicine at the Cherokee Nation (OSU-COM CN) is the only tribally affiliated medical campus in the nation. The OSU-COM's relationship with the Cherokee Nation deepened over 12 years, eventually leading to the creation of a new college of medicine campus: "In 2006, our medical students started completing clinical rotations at W.W. Hastings Hospital. In 2009, we established a family medicine residency program in Tahlequah. We now have the opportunity to take this partnership to the next level..."[27] Since 2021, the Cherokee Nation has invested more than $440 million to improve and grow the tribe's health care infrastructure in Oklahoma: "Most of the tribal nations have robust health centers… But they are in rural areas, so recruiting physicians can be difficult."[28] This is a persistent problem, and students from underrepresented populations are those most likely to work in those communities.[29],[30] OSU-COM has as high as 16 percent Native American medical school students, compared to the national average of 0.2 percent.[31]

Oregon Health & Science University Northwest Native American Center of Excellence. The Northwest Native American Center of Excellence (NNACoE) was founded in 2017 with an initial five-year grant from the Health Resources and Services Administration (HRSA). The center "works to sustainably address the health care needs of all people by increasing AI/AN representation in the health professions workforce via culturally informed, evidence-based health education programming and research interventions designed for Indigenous health care learners and professionals. NNACoE sits within the Department of Family Medicine and is an institution-

wide resource for AI/AN students and faculty. NNACoE's 12 study initiatives span five critical points along the education continuum, beginning in high school and continuing through early faculty development."[32] Initiatives for high school students were also created via funding from the Indian Health Service Indians into Medicine Program, foundation grants, and state-legislated funds for expanded partnerships with the University of California, Davis and Washington State University.[33]

AMA Collaborations and Wider Medical Education Work. What follows is a brief overview of current work related to the support for Indigenous medical schools, including but not limited to AMA dialogues with existing groups, such as Indigenous School of Medicine (ISOM, isomhealth.com) and the American Indian Higher Education Consortium's Indigenous Health, Education, and Resources Taskforce (IHEART).

Since the initiation of this report at the A-25 meeting, AMA adopted new policies or amended existing policies relevant to the important work of improving pathways for Indigenous physicians and communities and developing the physician workforce based on societal needs. This includes updates to Policy H-350.960, "Underrepresented Student Access to US Medical Schools" at the I-25 meeting, stating that "Our AMA will partner with relevant public and private sector organizations and relevant parties to advance restorative efforts that address the impact of the 1910 report Medical Education in the United States and Canada ("Flexner Report") and the resulting actions by state medical licensing boards and other groups including the AMA, by promoting and supporting the development, opening, and/or reopening of medical schools in historically marginalized and underserved communities, including those affiliated with Historically Black Colleges & Universities (HBCUs), Tribal Colleges & Universities (TCUs), and Minority-Serving Institutions (MSIs) through collaborative feasibility assessments, resource development partnerships, and community-guided planning processes, among others." This now guides further work by the AMA and will be reported on in future documents.

Some of AMA's work in this space also centers around the AMA's Truth, Reconciliation, and Healing Task Force (TRHT),[34] which advised the AMA Board of Trustees related to amelioration of past harms. AMA also has an Advisory Committee on American Indian and Alaska Native (AI/AN) Affairs which "provides guidance to the AMA Board of Trustees and AMA management on policy and advocacy initiatives impacting AI/AN medical students, physicians, and patients, while also contributing to broader AMA efforts aimed at improving health outcomes for this population."[35] This was created via Advisory Committee on Tribal Affairs D-615.976 and a report is expected at a future HOD meeting.

AMA Board of Trustees Report 31-A-24, The Morrill Act and Its Impact on the Diversity of the Physician Workforce, discussed the history of Indigenous lands appropriated for higher education institutions, called for additional AMA work in collaboration with other relevant organizations related to Indigenous health, and described recent AMA activity, including federal advocacy efforts.

The California Oregon Medical Partnership to Address Disparities in Rural Education and Health (COMPADRE) received a $1.8 million AMA grant through the Reimagining Residency initiative that started in 2019. This network of residency programs serving rural and underserved communities offers elective opportunities to existing medical students, including in tribal health.[36]

More recently, the AMA awarded an Innovation Grant to the University of Hawaii John A. Burns School of Medicine for "Evaluation of an Indigenous Approach to Professional Identity Formation through Coaching."[37] AMA staff and the AMA's TRHT task force also led the project planning

and implementation for convenings for Equity and Justice in Medical Education (EJME), with participants from nine organizations, including but not limited to the Association of American Indian Physicians (AAIP) and Association of Native American Medical Students (ANAMS). EJME's goals centered participatory trust building between organizations engaged in equitable workforce development strategies responsive to the June 2023 Supreme Court of the United States (SCOTUS) ruling against race as a consideration in holistic review of medical school applications. These convenings led to explorations of best practices for power sharing within collaborative work and a commitment to future collaboration.[38] AMA staff are also working to develop trainings related to population health as well as genocide remembrance and prevention, broad topics that in some areas include information related to Indigenous health for the AMA EdHub. AMA Excellence in Medical Education grants also aim to improve the pathway toward becoming a physician, including for underrepresented groups such as Indigenous learners.

The Robert Wood Johnson Foundation awarded a grant of $999,994 on September 12, 2025, to Indigenous School of Medicine for a timeframe of 8/31/2025 - 8/30/2027, titled "Redefining medical education by centering and incorporating Indigenous voices."[39] One of ISOM's leaders, Dr. Donald Warne, also a leader on the AMA's TRHT task force, emphasizes that current modern medicine is also Indigenous medicine, though often uncredited—citing examples of traditional Indigenous science and medicine like cranial surgery, aspirin, and the field of osteopathic medicine. Stated goals for ISOM include traditional Indigenous medicine men/women/elders on faculty, not just as advisers; incorporating traditional medicines, beliefs, and practices; and for the culture of medical education to be overhauled to be healing rather than traumatizing to the learner.[26] AMA has engaged in dialogues with ISOM leaders at several meetings and conferences, including the most recent Association of American Indian Physicians conference.

DISCUSSION

Although AMA has not historically founded medical schools directly, AMA does serve in a role developing the physician workforce. For instance, alongside the Association of American Medical Colleges (AAMC), AMA jointly sponsors the Liaison Committee for Medical Education (LCME), which accredits allopathic medical schools in the United States. When the resolution that initiated this report was discussed within the HOD, one area of conversation surrounded potential concerns regarding conflicts of interest if the AMA were to have a hand in any particular medical school or schools. Discussions with LCME staff emphasized the firewall between AMA and the LCME regarding accreditation: decisions about accreditation rest solely with the LCME, and no school is given special treatment, regardless of a connection or lack thereof to AMA, just as allopathic medical schools are members of AAMC, the other co-sponsor of the LCME, but AAMC also cannot and does not influence accreditation decisions. AMA is free to pursue any projects it feels would further its mission to promote the art and science of medicine and the betterment of public health and need not avoid collaborative work in this space. Anyone can apply for LCME accreditation, and the same standards are applied to all applicants.

As discussed in several examples above, AMA is engaged in work on Indigenous health and the possibility of Indigenous medical schools. Although the AMA is not an Indigenous-led organization and therefore cannot determine the best path forward for Indigenous-led work, work is in progress to partner with several organizations on "collaborative feasibility assessments, resource development partnerships, and community-guided planning processes" per Policy H-350.960, "Underrepresented Student Access to US Medical Schools." According to AMA Medical Education staff focused on workforce challenges and attending relevant discussions: Indigenous-governed higher education already in existence (i.e., TCUs, Tribal Colleges and Universities) may either be worthwhile models for new medical schools, or, with sufficient resources and if a priority

for respective tribes, may even be places where medical school(s) may form. Indigenous-led discussions center around where there may be greater potential for rotations as well as pathways into graduate medical education for students, an important component of undergraduate medical education. Three specific locations were discussed as possible areas where Indigenous schools of medicine may form, though these details are under development and currently not publicly available. AMA has also been in touch with Canadian Medical Association leadership on the topic of reconciliation and advancing Indigenous health, including discussions of schools.[40]

Beyond any hypothetical schools themselves, as noted above, significant challenges for Indigenous learners begin far before reaching medical school. Therefore, work must also focus earlier, even into early childhood.

RELEVANT AMA POLICY

AMA has several policies related to Indigenous communities and medical education. These are listed in Appendix A.

CONCLUSION

AMA is engaged with and will continue to engage with ways to support its mission to promote the art and science of medicine and the betterment of public health, including Indigenous health and medical education workforce. Though tribally-led medical education institutions must by definition be initiated by Indigenous communities according to their own priorities and needs, AMA continues to engage directly with those leading this work to provide guidance and support where appropriate.

RECOMMENDATIONS

The Council on Medical Education recommends that the following be adopted in lieu of Resolution 303-A-25, resolves 2 and 4, and the remainder of the report be filed:

1. Our AMA convenes a collaborative with Tribal Nations, Tribal Colleges and Universities (TCUs), Indigenous-led medical education organizations, and academic partners to conduct structured feasibility assessments that lead to the development of Indigenous-led medical schools, including infrastructure needs, accreditation pathways, financing models, and governance structures grounded in tribal sovereignty. (New HOD Policy)
2. Our AMA advocates for the development and funding of comprehensive mentorship and pathway programs connecting Indigenous pre-medical students with physician and other mentors, guiding academic preparation, MCAT preparation, the medical school application process, and career development. (New HOD Policy)
3. Our AMA encourages collaboration between our AMA, medical schools, TCUs, and community organizations to increase pathways and funding for Indigenous students in medicine. (New HOD Policy)
4. Reaffirm AMA policies H-60.917 “Disparities in Public Education as a Crisis in Public Health and Civil Rights,” H-295.840 “Support for the Establishment of Indigenous-Led Medical Schools in the United States,” and H-350.960 “Underrepresented Student Access to US Medical Schools.” (Reaffirm HOD Policy)

Fiscal note: Major

APPENDIX A: RELEVANT AMA POLICY

Disparities in Public Education as a Crisis in Public Health and Civil Rights H-60.917

1. Our American Medical Association:
    a. considers continued educational disparities based on ethnicity, race and economic status a detriment to the health of the nation.
    b. will issue a call to action to all educational private and public stakeholders to come together to organize and examine, and using any and all available scientific evidence, to propose strategies, regulation and/or legislation to further the access of all children to a quality public education, including early childhood education, as one of the great unmet health and civil rights challenges of the 21st century.
    c. acknowledges the role of early childhood brain development in persistent educational and health disparities and encourage public and private stakeholders to work to strengthen and expand programs to support optimal early childhood brain development and school readiness.
2. Our AMA will work with:
    a. the Health and Human Services Department (HHS) and Department of Education (DOE) to raise awareness about the health benefits of education.
    b. the Centers for Disease Control and Prevention and other stakeholders to promote a meaningful health curriculum (including nutrition) for grades kindergarten through 12.
3. Our AMA will encourage the U.S. Department of Education and Department of Labor to develop policies and initiatives in support of students from marginalized backgrounds that:
    a. Decrease the educational opportunity gap.
    b. Increase participation in high school Advanced Placement courses.
    c. Increase the high school graduation rate.
4. Our AMA will advocate for universal access to high-quality and affordable childcare and preschool.

Strategies for Enhancing Diversity in the Physician Workforce H-200.951

1. Our American Medical Association supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality.
2. Our AMA commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes.
3. Our AMA encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties.
4. Our AMA encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine.
5. Our AMA encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal.
6. Our AMA continues to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.

US Physician Shortage H-200.954

1. Our AMA explicitly recognizes the existing shortage of physicians in many specialties and areas of the US.
2. Our AMA supports efforts to quantify the geographic maldistribution and physician shortage in many specialties.
3. Our AMA supports current programs to alleviate the shortages in many specialties and the maldistribution of physicians in the US.
4. Our AMA encourages medical schools and residency programs to consider developing admissions policies and practices and targeted educational efforts aimed at attracting physicians to practice in underserved areas and to provide care to underserved populations.
5. Our AMA encourages medical schools and residency programs to continue to provide courses, clerkships, and longitudinal experiences in rural and other underserved areas as a means to support educational program objectives and to influence choice of graduates' practice locations.
6. Our AMA encourages medical schools to include criteria and processes in admission of medical students that are predictive of graduates' eventual practice in underserved areas and with underserved populations.
7. Our AMA will continue to advocate for funding from public and private payers for educational programs that provide experiences for medical students in rural and other underserved areas.
8. Our AMA will continue to advocate for funding from all payers (public and private sector) to increase the number of graduate medical education positions in specialties leading to first certification.
9. Our AMA will work with other groups to explore additional innovative strategies for funding graduate medical education positions, including positions tied to geographic or specialty need.
10. Our AMA continues to work with the Association of American Medical Colleges (AAMC) and other relevant groups to monitor the outcomes of the National Resident Matching Program; and
11. Our AMA continues to work with the AAMC and other relevant groups to develop strategies to address the current and potential shortages in clinical training sites for medical students.
12. Our AMA will:
    a. promote greater awareness and implementation of the Project ECHO (Extension for Community Healthcare Outcomes) and Child Psychiatry Access Project models among academic health centers and community-based primary care physicians;
    b. work with stakeholders to identify and mitigate barriers to broader implementation of these models in the United States; and
    c. monitor whether health care payers offer additional payment or incentive payments for physicians who engage in clinical practice improvement activities as a result of their participation in programs such as Project ECHO and the Child Psychiatry Access Project; and if confirmed, promote awareness of these benefits among physicians.
13. Our AMA will work to augment the impact of initiatives to address rural physician workforce shortages.
14. Our AMA supports opportunities to incentivize physicians to select specialties and practice settings which involve delivery of health services to populations experiencing a shortage of providers, such as women, LGBTQ+ patients, children, elder adults, and patients with disabilities, including populations of such patients who do not live in underserved geographic areas.

AMA Support of U.S. Pathway Programs D-200.970
Our American Medical Association supports development of pilot grant programs advised by a diverse body of AMA member physicians, trainees, staff, and allied organization representatives in medicine and public health (i.e., administration; grantee criteria and selection; periodic reporting) that will:

1. Support existing and new pre-K-16 pathway, Science, Technology, Engineering, Math, and Medicine (STEMM), and pre-med programs;
2. Include program goals of scaling organizational grantees' ability to expand their reach among youth, increasing diversity in medicine, achieving health equity, and improving medical education; and
3. Convene a summit among pathway and STEMM programs regarding best practices, collaboration, and strategic planning.

Support for the Establishment of Indigenous-Led Medical Schools in the United States H-295.840
Our AMA supports efforts to establish Indigenous-governed medical schools in the United States, with governance and leadership structures grounded in tribal sovereignty and cultural integrity, and guided by principles of accountability to Indigenous Nations, inclusion of Indigenous leadership, and alignment with community-defined values and priorities.

Enhancing the Cultural Competence of Physicians H-295.897

1. Our American Medical Association continues to inform medical schools and residency program directors about activities and resources related to assisting physicians in providing culturally competent care to patients throughout their life span and encourage them to include the topic of culturally effective health care in their curricula.
   2. Our AMA continues to support research into the need for and effectiveness of training in cultural competence and cultural humility, using existing mechanisms such as the annual medical education surveys.
   3. Our AMA will assist physicians in obtaining information about and/or training in culturally effective health care through dissemination of currently available resources from the AMA and other relevant organizations.
   4. Our AMA encourages training opportunities for students and residents, as members of the physician-led team, to learn cultural competency from community health workers, when this exposure can be integrated into existing rotation and service assignments.
   5. Our AMA supports initiatives for medical schools to incorporate diversity in their Standardized Patient programs as a means of combining knowledge of health disparities and practice of cultural competence with clinical skills.
   6. Our AMA will encourage the inclusion of peer-facilitated intergroup dialogue in medical education programs nationwide.
   7. Our AMA supports the development of national standards for cultural humility training in the medical school curricula.

Support Permanent Funding and Expansion of Native Hawaiian Healthcare H-350.933

1. Our American Medical Association supports federal policies that uphold the federal trust obligations to improve the health of Native Hawaiian communities by strengthening access to comprehensive, culturally informed, and physician-led health care.
2. Our AMA supports stable, long-term federal funding and infrastructure for Native Hawaiian health care programs to ensure continuity of care, workforce development, and equitable access to services across all islands.
3. Our AMA supports the expansion of Native Hawaiian Health Care Systems, including additional sites, mobile clinics, transportation support, workforce development, and

culturally grounded health services that integrate traditional Indigenous healing alongside physician-led care.

4. Our AMA encourages collaboration with Native Hawaiian organizations, leaders, and communities to ensure that federally supported health care initiatives are responsive to local needs, culturally respectful, and community-driven.

Underrepresented Student Access to US Medical Schools H-350.960

1. Our American Medical Association recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population.
2. Our AMA supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students.
3. Our AMA recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination.
4. Our AMA is committed to promoting truth and reconciliation in medical education as it relates to improving equity.
5. Our AMA recognizes the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations.
6. Our AMA will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine.
7. Our AMA will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school.
8. Our AMA will recommend that medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants.
9. Our AMA will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine.
10. Our AMA will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979, encouraging state and local governments to make quality elementary and secondary education available to all.
11. Our AMA will partner with relevant public and private sector organizations and relevant parties to advance restorative efforts that address the harms of the 1910 Flexner Report by promoting and supporting the development, opening, and/or reopening of medical schools in historically marginalized and underserved communities, including those affiliated with Historically Black Colleges & Universities (HBCUs), Tribal Colleges & Universities (TCUs), and Minority-Serving Institutions (MSIs) through collaborative feasibility assessments, resource development partnerships, and community-guided planning processes, among others.

Improving Health Care of American Indians and Alaska Natives H-350.976

1. Our American Medical Association recommends that all individuals, special interest groups, and levels of government recognize the American Indian and Alaska Native people as full citizens of the US, entitled to the same equal rights and privileges as other US citizens.
2. Our AMA recommends that the federal government provide sufficient funds to support needed health services for American Indians and Alaska Natives.

3. Our AMA recommends that state and local governments give special attention to the health and health-related needs of nonreservation American Indians and Alaska Natives in an effort to improve their quality of life.
4. Our AMA recommends that American Indian and Alaska Native religious and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
5. Our AMA recognizes practitioners of Indigenous medicine as an integral and culturally necessary individual in delivering health care to American Indians and Alaska Natives.
6. Our AMA monitors Medicaid Section 1115 waivers that recognize the value of traditional American Indian and Alaska Native healing services as a mechanism for improving patient-centered care and health equity among American Indian and Alaska Native populations when coordinated with physician-led care.
7. Our AMA supports consultation with Tribes to facilitate the development of best practices, including but not limited to culturally sensitive data collection, safety monitoring, the development of payment methodologies, healer credentialing, and tracking of traditional healing services utilization at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA recommends strong emphasis be given to mental health programs for American Indians and Alaska Natives in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
9. Our AMA recommends a team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
10. Our AMA will continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
11. Our AMA recommends that state and county medical associations establish liaisons with intertribal health councils in those states where American Indians and Alaska Natives reside.
12. Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian and Alaska Native health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians and Alaska Natives.
13. Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and Alaska Natives and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

Indian Health Service H-350.977

The policy of the American Medical Association is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. Our AMA specifically recommends:

1. Indian Population:
    a. In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently;
    b. Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care;

   c. Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and
   d. Improvement in transportation to make access to existing private care easier for the American Indian population.
2. Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
3. Personnel:
   a. Compensation scales for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service;
   b. Consideration should be given to increased compensation for specialty and primary care service in remote areas;
   c. In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers and other federal health agencies, thus increasing both the available staffing and the level of professional expertise available for consultation;
   d. Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served without detracting from physician compensation;
   e. Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation and burnout; and
   f. Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
4. Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
5. Our AMA also supports the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.
6. Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.
7. Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA will call for an immediate change in the Public Service Loan Forgiveness Program to allow physicians to receive immediate, but incremental, loan forgiveness when they practice in an Indian Health Service, Tribal, or Urban Indian Health Program.
9. Our AMA supports reform of the Indian Health Service (IHS) Loan Repayment Program eligibility for repayment with either a part-time or full-time employment commitment to IHS and Tribal Health Programs.

AMA Support of American Indian Health Career Opportunities H-350.981

Our American Medical Association policy on American Indian health career opportunities is as follows:

1. Our AMA, and other national, state, specialty, and county medical societies recommend special programs for the recruitment and training of American Indians in health careers at all levels and urge that these be expanded.
2. Our AMA supports the inclusion of American Indians in established medical training programs in numbers adequate to meet their needs. Such training programs for American Indians should be operated for a sufficient period of time to ensure a continuous supply of physicians and other health professionals, prioritize consideration of applicants who self-identify as American Indian or Alaska Native and can provide some form of affiliation with an American Indian or Alaska Native tribe in the United States, and support the successful advancement of these trainees.
3. Our AMA will utilize its resources to create a better awareness among physicians and other health providers of the special problems and needs of American Indians and particular emphasis will be placed on the need for stronger clinical exposure and a greater number of health professionals to work among the American Indian population.
4. Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs and recognize that enduring acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations to include training a workforce from and for these tribal nations.
5. Our AMA acknowledges long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect.
6. Our AMA acknowledges the significance of the Morrill Act of 1862, the resulting land-grant university system, and the federal trust responsibility related to tribal nations.

Advisory Committee on Tribal Affairs D-615.976

1. Our AMA will establish and report back at the 2025 Interim Meeting on the formation of a Task Force on Tribal Affairs composed of AMA members who themselves identify as American Indian and Alaska Native (AI/AN), close professional relationships with AI/AN communities (e.g., members of Association of Native American Medical Students and Association of American Indian Physicians), or have direct experience working with AI/AN communities at Indian Health Service federal direct-care, Tribally-operated and/or Urban Indian Health Programs (I/T/U) to advise the Board of Trustees on how to implement policy specific to AI/AN communities and that the Task Force report back at the 2026 Annual Meeting with recommendations for the establishment of an Advisory Committee to ensure sustained attention to tribal health equity and Indigenous physician representation.
2. Our AMA will promote and foster educational opportunities for AMA members and the medical community to better understand the contributions of AI/AN communities to medicine and public health, including cultivating a rich understanding and appreciation of AI/AN perspectives on health and wellness.

COUNCIL ON MEDICAL EDUCATION REPORT 4 – A-26
Reflecting the Values and Priorities of Tribal Communities in Indigenous-Led Medical Schools in the United States

EXECUTIVE SUMMARY

Resolve 3 of Resolution 303-A-25, Support for the Establishment of Indigenous-Led Medical Schools in the United States, was referred for study on the following topics:

> RESOLVED (3), that our AMA support initiatives to develop culturally centered medical curricula, recruit Indigenous faculty and leadership, and facilitate pathways to institutional accreditation that reflect the values and priorities of Tribal communities. (Directive to Take Action)

This report reviews the history and context of physician workforce shortages in Indigenous communities and explores activity and research in the wider medical education community related to culturally centered medical curricula, Indigenous-focused programs, and faculty and leadership recruitment and development. The report also discusses AMA's current work related to Indigenous workforce needs. Programmatic versus institutional accreditation is also defined and discussed, with resources related to both offered.

The report recommends additional AMA policy supporting the development of leadership training programs for Indigenous physicians, encouraging Indigenous faculty and leadership recruitment/retention, developing and disseminating an Indigenous-centered undergraduate medical education (UME) curricular resource with collaboration and guidance from tribal communities, convening an Indigenous Medical Education Design & Partnership Workshop, and advocating for sustainable funding and workforce policies.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 4-A-26

Subject: Reflecting the Values and Priorities of Tribal Communities in Indigenous-Led Medical Schools in the United States (Res 303-A-25, R3)

Presented by: Kelly Caverzagie, MD, MPH, Chair

Referred to: Reference Committee C

Resolution 303-A-25, "Support for the Establishment of Indigenous-Led Medical Schools in the United States," was introduced by the Underrepresented in Medicine Advocacy Section (formerly the Minority Affairs Section). The original resolve 1 was amended and adopted becoming Policy H-295.840, "Support for the Establishment of Indigenous-Led Medical Schools in the United States." Resolves 2, 3, and 4 were referred. Resolves 2 and 4 will be addressed in CME 3-A-26, with the study of resolve 3 as the focus of this report. This resolve asked the following:

> RESOLVED (3), that our AMA support initiatives to develop culturally centered medical curricula, recruit Indigenous faculty and leadership, and facilitate pathways to institutional accreditation that reflect the values and priorities of Tribal communities. (Directive to Take Action)

BACKGROUND

The contextual factors informing this report's analysis, namely, persistent physician workforce shortages affecting Indigenous communities and the foundational principles of tribal and Indigenous sovereignty as they relate to health professions education are addressed in detail in CME 3-A-26, Support for the Establishment of Indigenous-Led Medical Schools in the United States. That report provides a comprehensive review of historical, policy, and workforce dynamics that shape the need for Indigenous-led medical education pathways. To avoid duplicating that discussion, this report builds on the established background and focuses specifically on considerations unique to development of culturally centered medical curricula, recruitment of Indigenous faculty and leadership, and facilitation of pathways to institutional accreditation that reflect the values and priorities of Tribal communities.

Existing Activities

Below is a brief review of some of the active collaborations that exist between medical schools and tribal nations regarding culturally centered curricula and/or faculty and leadership development for Indigenous physicians.

Oklahoma State University College of Osteopathic Medicine at the Cherokee Nation. The Oklahoma State University College of Osteopathic Medicine at the Cherokee Nation (OSU-COM CN) is the only tribally affiliated medical school campus in the nation. This program offers the following: "The Tribal Medical Track prepares medical students for a primary care residency at tribal facilities and a successful practice in tribal, rural and underserved Oklahoma… [with] unique

© 2026 American Medical Association. All rights reserved.

learning opportunities for motivated students to fully develop their skills, knowledge and abilities to succeed in a challenging practice environment while learning about the rich cultures of American Indians."[1]

UC Davis PRIME Tribal Health Pathway. The UC Davis Programs in Medical Education (PRIME) Tribal Health Pathway focuses on recruiting new physicians to serve California's tribal, urban, and rural communities and reduce health inequities, as well as building partnerships with tribal communities, improving training in relevant determinants of health, and building a deeper understanding of self-determination and health advocacy.[2] Indigenous physicians are co-founders of the Huwighurruk post-baccalaureate pathway program, as well as co-directors of the PRIME Tribal Health Pathway,[3] which accepts up to 6 students per academic year.[4]

Oregon Health & Science University Northwest Native American Center of Excellence. The Northwest Native American Center of Excellence (NNACoE) was founded in 2017 with an initial five-year grant from the Health Resources and Services Administration (HRSA). The center "works to sustainably address the health care needs of all people by increasing AI/AN representation in the health professions workforce via culturally informed, evidence-based health education programming and research interventions designed for Indigenous healthcare learners and professionals. NNACoE sits within the Department of Family Medicine and is an institution-wide resource for AI/AN students and faculty. NNACoE's 12 study initiatives span five critical points along the education continuum, beginning in high school and continuing through early faculty development."[5] Initiatives for high school students were also created via funding from the Indian Health Service Indians Into Medicine Program, foundation grants, and state-legislated funds for expanded partnerships with University of California, Davis and Washington State University.[6]

AMA Efforts to Support the Development of an Indigenous Physician Workforce

What follows is a brief overview of current AMA work related to Indigenous health curricula and faculty development. AMA, though it does not play a role in creating specific medical school curricula, does have extensive policy in support of culturally appropriate and evidence-based curricula.

Since the initiation of this report at the A-25 meeting, AMA adopted new policies or amended existing policies relevant to the important work of improving pathways for Indigenous physicians and communities and developing the physician workforce based on societal needs. This includes updates to Underrepresented Student Access to US Medical Schools H-350.960 at the I-25 meeting, stating that "Our AMA will partner with relevant public and private sector organizations and relevant parties to advance restorative efforts that address the impact of the 1910 report Medical Education in the United States and Canada ("Flexner Report") and the resulting actions by state medical licensing boards and other groups including the AMA, by promoting and supporting the development, opening, and/or reopening of medical schools in historically marginalized and underserved communities, including those affiliated with Historically Black Colleges & Universities (HBCUs), Tribal Colleges & Universities (TCUs), and Minority-Serving Institutions (MSIs) through collaborative feasibility assessments, resource development partnerships, and community-guided planning processes, among others." This now guides further work by the AMA and will be reported on in future documents.

Some of AMA's work in this space also centers around the AMA's Truth, Reconciliation, and Healing Task Force (TRHT),[7] which advised the AMA Board of Trustees related to amelioration of past harms. AMA also has an Advisory Committee on American Indian and Alaska Native (AI/AN) Affairs which "provides guidance to the AMA Board of Trustees and AMA management

on policy and advocacy initiatives impacting AI/AN medical students, physicians, and patients, while also contributing to broader AMA efforts aimed at improving health outcomes for this population."[8] This was created via Advisory Committee on Tribal Affairs D-615.976 and will receive a report in a future HOD meeting.

The California Oregon Medical Partnership to Address Disparities in Rural Education and Health (COMPADRE) received a $1.8 million AMA grant through the Reimagining Residency Initiative that started in 2019. The program trained medical students and resident physicians in seven medical specialties, including internal medicine, family medicine, emergency medicine, general surgery, ob-gyn, pediatrics, and psychiatry at 10 health care systems, 16 hospitals, and a network of Federally Qualified Health Center partners throughout Northern California and Oregon. The goal of COMPADRE was to address health care workforce shortages in rural, tribal, urban, and other communities that lack resources; increase access to health care professionals; and improve the health of patients who are disproportionately affected by certain conditions.

More recently, the AMA awarded an Innovation Grant to the University of Hawaii John A. Burns School of Medicine for "Evaluation of an Indigenous Approach to Professional Identity Formation through Coaching."[9] AMA staff and the AMA's TRHT task force also led the project planning and implementation for convenings for Equity and Justice in Medical Education (EJME), with participants from nine organizations, including but not limited to the Association of American Indian Physicians (AAIP) and Association of Native American Medical Students (ANAMS). EJME's goals centered participatory trust building between organizations engaged in equitable workforce development strategies responsive to the June 2023 Supreme Court of the United States (SCOTUS) ruling against race as a consideration in holistic review of medical school applications. These convenings led to explorations of best practices for power sharing within collaborative work and a commitment to future collaboration.[10] AMA staff are also working to develop trainings related to population health as well as genocide remembrance and prevention, broad topics that in some areas include information related to Indigenous health for the AMA EdHub. AMA Excellence in Medical Education grants also hope to improve the pathway toward becoming a physician, including for underrepresented groups such as Indigenous learners. The AMA EdHub has other resources available to help faculty develop deeper cultural sensitivity when practicing with Indigenous populations on topics such as: Ethics Talk: Representation, Sovereignty, and Caring for Native American Patients[11] and Disparities in Telehealth Use for Mental Health Care Among American Indian/Alaska Native Veterans.[12] Similarly, JAMA Network hosts relevant resources to increase physician faculty understanding of Indigenous health issues, such as Feasibility of an Indigenous Food Is Medicine Program for Patients With Heart Failure in Rural Navajo Nation.[13]

The Robert Wood Johnson Foundation awarded a grant of $999,994 on September 12, 2025, to Indigenous School of Medicine (ISOM) for a timeframe of 8/31/2025 - 8/30/2027, titled "Redefining medical education by centering and incorporating Indigenous voices."[14] One of ISOM's leaders, Dr. Donald Warne, also a leader on the AMA's TRHT task force, emphasizes that current modern medicine is also Indigenous medicine, though often uncredited—citing examples of traditional Indigenous science and medicine like cranial surgery, aspirin, and the field of osteopathic medicine. Stated goals for ISOM include traditional Indigenous medicine men/women/elders on faculty, not just as advisers; incorporating traditional medicines, beliefs, and practices; and for the culture of medical education to be overhauled to be healing rather than traumatizing to the learner.[15] AMA has engaged in dialogues with ISOM leaders at several meetings and conferences, including the most recent Association of American Indian Physicians conference.

The American Indian Higher Education Consortium's Indigenous Health, Education, and Resources Taskforce (IHEART) is "a national collaborative, formed in 2021 to address the scarcity of American Indian and Alaska Native (AI/AN) communities in the health professions…led by the Association of American Indian Physicians, American Indian Higher Education Consortium, Association of Native American Medical Students, Association of American Medical Colleges, and the Indian Health Service."[16] One IHEART objective is "Develop regional infrastructure to identify educational pathways programs to support and encourage American Indian/Alaska Native students to enter into the health professions workforce." AMA has also been invited to attend and engage in these discussions.

AMA staff was also engaged with some work in this space with Johns Hopkins Center for Indigenous Health,[17] although as of January 14, 2026, five Indigenous health programs at this institution were ended due to federal budget cuts.[18]

Culturally Centered Indigenous Medical Curricula

The Association of American Medical Colleges (AAMC) offers a blueprint for overall cultural competence within medical school curricula, including a tool for assessing its effectiveness.[19] More specific to Indigenous health, AAMC also convenes the Indigenous Health Educators Alliance (IHEAL), a "national collective of scholars and leaders committed to advancing the contribution of Indigenous principles and practices in health professions education and training."[20] This includes publications and resources on how to develop and implement curricula, and is also related to the recruitment and development of Indigenous faculty. Other work has been done in this space, including guiding principles in the development of Indigenous health curricula[21] and research demonstrating the potentially harmful assumptions that must be understood prior to succeeding at truly incorporating Indigenous knowledge into curricula.[22] One study showed that first-year medical students of all identities had improved Indigenous health knowledge, cultural intelligence, ethnocultural empathy, and social justice beliefs immediately after a lecture series and six months later.[23]

In Canada, the National Consortium for Indigenous Medical Education published "Guidelines for the Development of Indigenous Studies, Cultural Safety & Antiracism Assessment in Medical Education" in 2024, and this may be useful within the context of the United States as well.[24]

Indigenous Faculty Recruitment, Development, and Retention

In one publication related to faculty recruitment best practices, the author emphasized, "Residency leadership can benefit from maintaining a mindset that they are always recruiting faculty, even when recruiting students, where mentorship and role modeling efforts can help expand students' imagination of what an academic career can look like."[25] To this point, recruitment and retention of Indigenous faculty can be especially challenging when there are already disproportionate challenges to Indigenous learners even before entering medical school: "American Indian and Alaska Native individuals had a 63% lower odds of applying to medical school… and 48% lower odds of holding a full-time faculty position… compared with their White counterparts, yet had 54% higher odds of working in a residency specialty deemed as a priority by the Indian Health Service."[26] Unfortunately this is a circular problem, as the lack of diverse faculty mentorship also serves as an obstacle for medical trainees who may otherwise be interested in pursuing a career in medicine.[26]

As keynote speaker for the 2024 National Diversity in STEM Conference, Dr. Donald Warne's vision for an Indigenous school of medicine included tribal medicine people as faculty—elders and

healers who are not necessarily exclusively physicians, though physicians would clearly also be important.[27] This corresponds with other research on the importance of respect for Indigenous elders' teachings within health professions education.[28] This may also increase the pool of appropriate mentors for Indigenous physicians. Pragmatic solutions[29] to existing issues—such as funding shortages and threatened layoffs to Indian Health Service physicians[30]—may also be helpful. Organized advocacy also can play a critical supporting role. The AMA conducts advocacy in the areas of GME funding and student loan forgiveness.[31]

Some initial research on best practices in developing existing faculty has been done, noting the importance of Indigenous-specific space, skill building, networking, and ongoing mentorship, "each of which were included to specifically mitigate isolation and tokenism that negatively affects promotion and advancement." Next steps in this research include longitudinal evaluation.[32]

Pathways to Accreditation

One area of the original resolution that was referred for study references facilitating "pathways to institutional accreditation."

AMA policy Preserving Accreditation Standards on Diversity, Equity, and Inclusion H-310.896 does oppose "any federal actions or executive orders that threaten the ability of accreditation bodies, including the Accreditation Council for Graduate Medical Education (ACGME), the Commission on Osteopathic College Accreditation (COCA), and the Liaison Committee on Medical Education (LCME), to enforce appropriate accreditation standards."

For the accreditation of allopathic medical schools in the United States (programmatic accreditation), the Liaison Committee on Medical Education (LCME) publishes a document called "Functions and Structure of a Medical School: Standards for Accreditation of Medical Education Programs Leading to the MD Degree," available on their website, describing what is required of a medical school for accreditation. LCME also publishes a Data Collection Instrument for Preliminary Accreditation Surveys, which details the types of questions a new medical school would need to answer in order to work toward preliminary accreditation.[33]

The American Osteopathic Association, specifically COCA, accredits osteopathic medical schools in the United States and also provides accreditation guidelines and policies on their website.[34]

While the administrative process for accreditation of an Indigenous medical school may be similar to any other medical school in regard to the requirements to create a school and seek allopathic or osteopathic accreditation, a tribal medical school may potentially have differences due to a tribe's status as a sovereign nation (see discussion in CME 3-A-26, Support for the Establishment of Indigenous-Led Medical Schools in the United States). Accreditation of medical education programs by the LCME does not grant access low-interest student loans via Title IV funding. Eligibility for this depends on institutional accreditation, which is via national accreditors and differs from specialized accreditation for a specific profession (such as medicine).[35] Many existing tribal colleges and universities (TCUs) already have institutional accreditation, though they do not currently have medical schools.

In terms of institutional accreditation, as of this writing (February 2026), only freestanding colleges of osteopathic medicine are eligible to seek COCA accreditation as a pathway to participation in Title IV programs[36] through one of the six institutional accreditors recognized by the United States Department of Education that covey Title IV eligibility.[36] COCA also provides guidance and resources for new and developing colleges of osteopathic medicine,[37] and the full 2026 COCA

accreditation standards for new and developing colleges of medicine are available on their website.[38]

DISCUSSION

Existing AMA policy and actions do support initiatives to develop culturally centered medical curricula and recruit Indigenous faculty and leadership. However, AMA does not facilitate specific pathways to institutional nor programmatic accreditation, although the AMA can participate in feasibility planning alongside other groups, as discussed above.

RELEVANT AMA POLICY

AMA has several policies related to Indigenous communities and medical education. These are listed in Appendix A.

CONCLUSION

AMA is engaged with and will continue to engage with ways to support its mission to promote the art and science of medicine and the betterment of public health, including Indigenous health and medical education workforce. AMA continues to engage directly with those leading this work to provide guidance and support where appropriate.

RECOMMENDATIONS

The Council on Medical Education recommends that the following be adopted in lieu of Resolution 303-A-25, resolve 3, and the remainder of the report be filed:

1. Our AMA supports the development of leadership training programs for Indigenous physicians, equipping them with the skills and knowledge to assume leadership roles in academic medicine, health care administration, and public health. (New HOD policy)
2. Our AMA encourages Indigenous faculty and leadership recruitment/retention through an Indigenous Faculty & Leadership Development Initiative in collaboration with AMA Ed Hub. (New HOD policy)
3. That our AMA develop and disseminate an Indigenous-centered undergraduate medical education curricular resource with collaboration and guidance from tribal communities.(Directive to Take Action)
4. That our AMA convene an Indigenous Medical Education Design & Partnership Workshop to advance Indigenous educational principles and partnerships. (Directive to Take Action)
5. That our AMA advocate for sustainable funding and workforce policies that support Indigenous learners, faculty, and clinical training partnerships. (New HOD policy)
6. Reaffirm AMA policies H-295.840 “Support for the Establishment of Indigenous-Led Medical Schools in the United States” and H-350.960 “Underrepresented Student Access to US Medical Schools.” (Reaffirm HOD Policy)

Fiscal note: Major

APPENDIX A: RELEVANT AMA POLICY

Strategies for Enhancing Diversity in the Physician Workforce H-200.951

1. Our American Medical Association supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality.
2. Our AMA commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes.
3. Our AMA encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties.
4. Our AMA encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine.
5. Our AMA encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal.
6. Our AMA continues to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.

US Physician Shortage H-200.954

1. Our AMA explicitly recognizes the existing shortage of physicians in many specialties and areas of the US.
2. Our AMA supports efforts to quantify the geographic maldistribution and physician shortage in many specialties.
3. Our AMA supports current programs to alleviate the shortages in many specialties and the maldistribution of physicians in the US.
4. Our AMA encourages medical schools and residency programs to consider developing admissions policies and practices and targeted educational efforts aimed at attracting physicians to practice in underserved areas and to provide care to underserved populations.
5. Our AMA encourages medical schools and residency programs to continue to provide courses, clerkships, and longitudinal experiences in rural and other underserved areas as a means to support educational program objectives and to influence choice of graduates' practice locations.
6. Our AMA encourages medical schools to include criteria and processes in admission of medical students that are predictive of graduates' eventual practice in underserved areas and with underserved populations.
7. Our AMA will continue to advocate for funding from public and private payers for educational programs that provide experiences for medical students in rural and other underserved areas.
8. Our AMA will continue to advocate for funding from all payers (public and private sector) to increase the number of graduate medical education positions in specialties leading to first certification.
9. Our AMA will work with other groups to explore additional innovative strategies for funding graduate medical education positions, including positions tied to geographic or specialty need.

10. Our AMA continues to work with the Association of American Medical Colleges (AAMC) and other relevant groups to monitor the outcomes of the National Resident Matching Program; and
11. Our AMA continues to work with the AAMC and other relevant groups to develop strategies to address the current and potential shortages in clinical training sites for medical students.
12. Our AMA will:
    a. promote greater awareness and implementation of the Project ECHO (Extension for Community Healthcare Outcomes) and Child Psychiatry Access Project models among academic health centers and community-based primary care physicians;
    b. work with stakeholders to identify and mitigate barriers to broader implementation of these models in the United States; and
    c. monitor whether health care payers offer additional payment or incentive payments for physicians who engage in clinical practice improvement activities as a result of their participation in programs such as Project ECHO and the Child Psychiatry Access Project; and if confirmed, promote awareness of these benefits among physicians.
13. Our AMA will work to augment the impact of initiatives to address rural physician workforce shortages.
14. Our AMA supports opportunities to incentivize physicians to select specialties and practice settings which involve delivery of health services to populations experiencing a shortage of providers, such as women, LGBTQ+ patients, children, elder adults, and patients with disabilities, including populations of such patients who do not live in underserved geographic areas.

Providing Transparent and Accurate Data Regarding Students and Faculty at Medical Schools D-295.306
Our American Medical Association will work with the Liaison Committee on Medical Education and Commission on Osteopathic College Accreditation to encourage their respective accredited medical schools to make publicly available without charge transparent and accurately reported race and ethnicity demographic data regarding students and faculty.

Support for the Establishment of Indigenous-Led Medical Schools in the United States H-295.840
Our AMA supports efforts to establish Indigenous-governed medical schools in the United States, with governance and leadership structures grounded in tribal sovereignty and cultural integrity, and guided by principles of accountability to Indigenous Nations, inclusion of Indigenous leadership, and alignment with community-defined values and priorities.

Enhancing the Cultural Competence of Physicians H-295.897
1. Our American Medical Association continues to inform medical schools and residency program directors about activities and resources related to assisting physicians in providing culturally competent care to patients throughout their life span and encourage them to include the topic of culturally effective health care in their curricula.
2. Our AMA continues to support research into the need for and effectiveness of training in cultural competence and cultural humility, using existing mechanisms such as the annual medical education surveys.
3. Our AMA will assist physicians in obtaining information about and/or training in culturally effective health care through dissemination of currently available resources from the AMA and other relevant organizations.
4. Our AMA encourages training opportunities for students and residents, as members of the physician-led team, to learn cultural competency from community health workers,

when this exposure can be integrated into existing rotation and service assignments.
5. Our AMA supports initiatives for medical schools to incorporate diversity in their Standardized Patient programs as a means of combining knowledge of health disparities and practice of cultural competence with clinical skills.
6. Our AMA will encourage the inclusion of peer-facilitated intergroup dialogue in medical education programs nationwide.
7. Our AMA supports the development of national standards for cultural humility training in the medical school curricula.

Preserving Accreditation Standards on Diversity, Equity, and Inclusion H-310.896

1. Our American Medical Association opposes any federal actions or executive orders that threaten the ability of accreditation bodies, including the Accreditation Council for Graduate Medical Education (ACGME), the Commission on Osteopathic College Accreditation (COCA), and the Liaison Committee on Medical Education (LCME), to enforce appropriate accreditation standards.
2. Our AMA supports ACGME, COCA, and LCME in advocating for their accreditation standards focused on diversity, equity, and inclusion for the betterment of patient care and public health.
3. Consistent with applicable laws, our AMA supports allopathic and osteopathic medical education accreditation bodies in strengthening accreditation standards focused on diversity, equity, and inclusion.

Support Permanent Funding and Expansion of Native Hawaiian Healthcare H-350.933

1. Our American Medical Association supports federal policies that uphold the federal trust obligations to improve the health of Native Hawaiian communities by strengthening access to comprehensive, culturally informed, and physician-led health care.
2. Our AMA supports stable, long-term federal funding and infrastructure for Native Hawaiian health care programs to ensure continuity of care, workforce development, and equitable access to services across all islands.
3. Our AMA supports the expansion of Native Hawaiian Health Care Systems, including additional sites, mobile clinics, transportation support, workforce development, and culturally grounded health services that integrate traditional Indigenous healing alongside physician-led care.
4. Our AMA encourages collaboration with Native Hawaiian organizations, leaders, and communities to ensure that federally supported health care initiatives are responsive to local needs, culturally respectful, and community-driven.

Underrepresented Student Access to US Medical Schools H-350.960

1. Our American Medical Association recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population.
2. Our AMA supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students.
3. Our AMA recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination.
4. Our AMA is committed to promoting truth and reconciliation in medical education as it relates to improving equity.

5. Our AMA recognizes the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations.
6. Our AMA will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine.
7. Our AMA will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school.
8. Our AMA will recommend that medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants.
9. Our AMA will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine.
10. Our AMA will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979, encouraging state and local governments to make quality elementary and secondary education available to all.
11. Our AMA will partner with relevant public and private sector organizations and relevant parties to advance restorative efforts that address the harms of the 1910 Flexner Report by promoting and supporting the development, opening, and/or reopening of medical schools in historically marginalized and underserved communities, including those affiliated with Historically Black Colleges & Universities (HBCUs), Tribal Colleges & Universities (TCUs), and Minority-Serving Institutions (MSIs) through collaborative feasibility assessments, resource development partnerships, and community-guided planning processes, among others.

<u>Improving Health Care of American Indians and Alaska Natives H-350.976</u>

1. Our American Medical Association recommends that all individuals, special interest groups, and levels of government recognize the American Indian and Alaska Native people as full citizens of the US, entitled to the same equal rights and privileges as other US citizens.
2. Our AMA recommends that the federal government provide sufficient funds to support needed health services for American Indians and Alaska Natives.
3. Our AMA recommends that state and local governments give special attention to the health and health-related needs of nonreservation American Indians and Alaska Natives in an effort to improve their quality of life.
4. Our AMA recommends that American Indian and Alaska Native religious and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
5. Our AMA recognizes practitioners of Indigenous medicine as an integral and culturally necessary individual in delivering health care to American Indians and Alaska Natives.
6. Our AMA monitors Medicaid Section 1115 waivers that recognize the value of traditional American Indian and Alaska Native healing services as a mechanism for improving patient-centered care and health equity among American Indian and Alaska Native populations when coordinated with physician-led care.
7. Our AMA supports consultation with Tribes to facilitate the development of best practices, including but not limited to culturally sensitive data collection, safety monitoring, the development of payment methodologies, healer credentialing, and tracking of traditional healing services utilization at Indian Health Service, Tribal, and Urban Indian Health Programs.

8. Our AMA recommends strong emphasis be given to mental health programs for American Indians and Alaska Natives in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
9. Our AMA recommends a team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
10. Our AMA will continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
11. Our AMA recommends that state and county medical associations establish liaisons with intertribal health councils in those states where American Indians and Alaska Natives reside.
12. Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian and Alaska Native health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians and Alaska Natives.
13. Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and Alaska Natives and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

Indian Health Service H-350.977

The policy of the American Medical Association is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. Our AMA specifically recommends:

1. Indian Population:
    a. In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently;
    b. Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care;
    c. Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and
    d. Improvement in transportation to make access to existing private care easier for the American Indian population.
2. Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
3. Personnel:
    a. Compensation scales for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service;
    b. Consideration should be given to increased compensation for specialty and primary care service in remote areas;
    c. In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers and other federal health agencies, thus

increasing both the available staffing and the level of professional expertise available for consultation;

d. Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served without detracting from physician compensation;
e. Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation and burnout; and
f. Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.

4. Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
5. Our AMA also supports the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.
6. Our AMA will advocate that the Indian Health Service (IHS) establish an Office of Academic Affiliations responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs.
7. Our AMA will encourage the development of funding streams to promote rotations and learning opportunities at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA will call for an immediate change in the Public Service Loan Forgiveness Program to allow physicians to receive immediate, but incremental, loan forgiveness when they practice in an Indian Health Service, Tribal, or Urban Indian Health Program.
9. Our AMA supports reform of the Indian Health Service (IHS) Loan Repayment Program eligibility for repayment with either a part-time or full-time employment commitment to IHS and Tribal Health Programs.

<u>AMA Support of American Indian Health Career Opportunities H-350.981</u>
Our American Medical Association policy on American Indian health career opportunities is as follows:

1. Our AMA, and other national, state, specialty, and county medical societies recommend special programs for the recruitment and training of American Indians in health careers at all levels and urge that these be expanded.
2. Our AMA supports the inclusion of American Indians in established medical training programs in numbers adequate to meet their needs. Such training programs for American Indians should be operated for a sufficient period of time to ensure a continuous supply of physicians and other health professionals, prioritize consideration of applicants who self-identify as American Indian or Alaska Native and can provide some form of affiliation with an American Indian or Alaska Native tribe in the United States, and support the successful advancement of these trainees.
3. Our AMA will utilize its resources to create a better awareness among physicians and other health providers of the special problems and needs of American Indians and particular emphasis will be placed on the need for stronger clinical exposure and a greater number of health professionals to work among the American Indian population.
4. Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs and recognize that enduring

acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations to include training a workforce from and for these tribal nations.

5. Our AMA acknowledges long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect.
6. Our AMA acknowledges the significance of the Morrill Act of 1862, the resulting land-grant university system, and the federal trust responsibility related to tribal nations.

Advisory Committee on Tribal Affairs D-615.976

1. Our AMA will establish and report back at the 2025 Interim Meeting on the formation of a Task Force on Tribal Affairs composed of AMA members who themselves identify as American Indian and Alaska Native (AI/AN), close professional relationships with AI/AN communities (e.g., members of Association of Native American Medical Students and Association of American Indian Physicians), or have direct experience working with AI/AN communities at Indian Health Service federal direct-care, Tribally-operated and/or Urban Indian Health Programs (I/T/U) to advise the Board of Trustees on how to implement policy specific to AI/AN communities and that the Task Force report back at the 2026 Annual Meeting with recommendations for the establishment of an Advisory Committee to ensure sustained attention to tribal health equity and Indigenous physician representation.
2. Our AMA will promote and foster educational opportunities for AMA members and the medical community to better understand the contributions of AI/AN communities to medicine and public health, including cultivating a rich understanding and appreciation of AI/AN perspectives on health and wellness.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 301
(A-26)

Introduced by: Pennsylvania

Subject: Expanding Resident and Fellow Exposure to Diverse Healthcare Practice Models to Fulfill ACGME Core Competencies

Referred to: Reference Committee C

Whereas, the ACGME requires all accredited residency and fellowship programs to ensure competency in six core areas: Patient Care, Medical Knowledge, Practice-Based Learning and Improvement, Systems-Based Practice, Professionalism, and Interpersonal and Communication Skills; and

Whereas, the core competency of Systems-Based Practice requires residents and fellows to demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal care; and

Whereas, the current healthcare system is increasingly shaped by corporate and employed practice models, which limits trainee exposure to the broader range of healthcare delivery systems, including conventional independent private practice, Direct Primary Care (DPC), Direct Specialty Care (DSC), and other innovative models that emphasize patient access, physician autonomy, and cost transparency; therefore be it

RESOLVED, that our American Medical Association will advocate to the ACGME and other relevant accrediting and educational bodies for the formal inclusion and recognition of diverse practice model exposure as a vital component of Systems-Based Practice training. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/9/26

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 302
(A-26)

Introduced by: Michigan

Subject: Excessive Cost of Multi-State DEA Licensure

Referred to: Reference Committee C

Whereas, many physicians seek licensure in multiple states due to locum tenens work, telehealth work, and/or coverage of patients who seek jobs or education in other states; and

Whereas, many physicians seek medical licensure and Drug Enforcement Administration (DEA) licensure in multiple states to legally provide these services across state lines; and

Whereas, a DEA license is a federal license; and

Whereas, DEA licensure requires a separate application and the full DEA licensure fee for each state in which licensure is desired; and

Whereas, obtaining a multi-state DEA licensure application is inconvenient and expensive despite DEA licensure being a federal (national) license; and

Whereas, the DEA has been encouraging improved access to controlled substances utilized as medications for opioid use disorder to reduce opioid-related overdoses as a federal concern; and

Whereas, the DEA has changed the educational requirements for obtaining an initial or a renewed DEA license to reflect this concern with a one-time attestation for this educational requirement at the federal level; and

Whereas, the time and monetary expense of obtaining DEA licensure in multiple states may limit access rather than encourage access to controlled substances utilized as medications for opioid use disorder; therefore be it

RESOLVED, that our American Medical Association continue its support of person-specific rather than site-specific Drug Enforcement Administration (DEA) registration numbers and a one-time DEA registration fee by reaffirming existing AMA policies, “One Fee One Number D-100.975” and “One Fee, One Number D-100.980.” (Reaffirm HOD Policy)

Fiscal Note: Minimal – less than $5,000

Received: 4/10/26

RELEVANT AMA POLICY

One Fee One Number D-100.975
1. Our AMA will work with the Drug Enforcement Administration (DEA) and Congress to move toward a system in which individual physician DEA registration numbers are person-specific rather than site-specific within a state. Additionally, the AMA will work with the DEA to ensure that the full DEA registration fee is paid only once, when the provider initially registers. Following the initial registration, provider should only pay a small re-registration fee every three years to fund the work of the Diversion Control Program.

2. Our AMA will work with the DEA, Congress and state licensing boards to explore changes to the DEA registration system so that a single DEA registration number can be used by physicians who prescribe, dispense, and/or administer controlled substances in multiple states. Our AMA will explore the possible development of a national DEA standard which would be greater than or equal to the most stringent state requirements for controlled substances. Providers could choose whether they would like to apply for the national DEA standard, or, more likely for those practicing in a single state, remain registered with the DEA under their single state requirements.

3. Our AMA continues to monitor implementation of the National Provider Identifier (NPI) system and work with physicians and payers to ensure proper and prompt payment for physician claims. Additionally, the AMA will monitor physician privacy concerns associated with the public consumption of the NPI database.

One Fee, One Number D-100.980
Our AMA will work with the appropriate agencies to require only one federal DEA number that would be physician-specific and not site-specific.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 303
(A-26)

Introduced by: Mississippi

Subject: Allowing Options for Certification Maintenance

Referred to: Reference Committee C

Whereas, it is estimated that 25% of physicians plan to leave medicine within 5 years, not necessarily due to retirement age but the burdens of practice; and

Whereas, the national physician shortage is well-known and growing, predicted to be 124,000 by 2034, and Mississippi is currently facing a physician shortage throughout the state; and

Whereas, problems of the current monopoly of Maintenance of Certification (MOC) are a significant emotional burden for the practicing physician and the problems with MOC are multifaceted and include financial burdens, time constraints, questionable clinical relevance, lack of evidence of improved outcomes, increased potential for burnout, and concerns of fairness and equity; and

Whereas, MOC requirements often overlap with state licensure and hospital Credentialing requirements, creating redundancy and unnecessary administrative burdens; and

Whereas, many argue that local hospital credentialing boards are better equipped to assess physician performance within their systems; and

Whereas, MOC requirements and expenses often chase out experienced and highly trained physicians who allow their certification to lapse, which eliminates quality physicians from clinical and hospital care; and

Whereas, burdensome Maintenance of Certification requirements can drive experienced physicians out of practice or out of hospital participation, only to have those physicians replaced in some settings by nurse practitioners and physician assistants whose training is far less extensive than physician training; and

Whereas, separate accreditation and certification systems for these nonphysician practitioners can create confusion and blur critical distinctions in education, clinical preparation, and qualifications; and

Whereas, the MOC monopoly and its associated burdens may therefore contribute to reduced quality of patient care, physician displacement and premature physician retirement; and

Whereas, there is an alternative MOC pathway for board certified physicians, which is the physician-led nonprofit National Board of Physicians and Surgeons (NBPAS), founded in 2015, which is 1) inexpensive 2) requires previous certification through an ABMS (American Board of Medical Specialties)/AOA (American Osteopathic Association) member board 3) requires an

active, valid, and unrestricted medical license 4) requires submission of substantial CME related to specialty 5) requires Active Hospital Privileges (for most specialties); and

Whereas, NBPAS meets national accreditation standards for hospitals and health plans, verifies physician credentials as required, and is accepted by a growing number of hospitals, health systems, telemedicine companies, and other physicians' employers; and

Whereas, two of the largest accreditors in the United States, The Joint Commission and the NCQA both officially acknowledge NBPAS as a "designated equivalent source agency" and "an acceptable source for board certification," respectively; and

Whereas, NBPAS has grown to over 11,000 physicians in all 50 states and provides physicians both competition and choice in continuing certification; therefore be it

RESOLVED, that our American Medical Association encourage all hospitals and insurance programs in the United States to end the monopoly of MOC and accept NBPAS to accomplish any MOC requirements (New HOD Policy); and be it further

RESOLVED, that our AMA request that the Accreditation Council for Graduate Medical Education (ACGME), the Liaison Committee on Medical Education (LCME), and the Commission on Osteopathic College Accreditation (COCA) accept this alternative route for MOC for all teachers of medical students and physicians in order to maintain quality and experienced instruction in residency programs and medical schools in this era of physician shortages. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/13/26

RELEVANT AMA POLICY

H-275.926 Medical Specialty Board Certification Standards

1. Our American Medical Association opposes any action, regardless of intent, that appears likely to confuse the public about the unique credentials of American Board of Medical Specialties (ABMS) or American Osteopathic Association Bureau of Osteopathic Specialists (AOA-BOS) board certified physicians in any medical specialty, or take advantage of the prestige of any medical specialty for purposes contrary to the public good and safety.
2. Our AMA opposes any action, regardless of intent, by organizations providing board certification for non-physicians that appears likely to confuse the public about the unique credentials of medical specialty board certification or take advantage of the prestige of medical specialty board certification for purposes contrary to the public good and safety.
3. Our AMA continues to work with other medical organizations to educate the profession and the public about the ABMS and AOA-BOS board certification process. It is AMA policy that when the equivalency of board certification must be determined, the certification program must first meet accepted standards for certification that include both
    a. a process for defining specialty-specific standards for knowledge and skills and
    b. offer an independent, external assessment of knowledge and skills for both initial certification and recertification or continuous certification in the medical specialty. In addition, accepted standards, such as those adopted by state medical boards or the Essentials for Approval of Examining Boards in Medical Specialties, will be utilized for that determination.

4. Our AMA opposes discrimination against physicians based solely on lack of ABMS or equivalent AOA-BOS board certification, or where board certification is one of the criteria considered for purposes of measuring quality of care, determining eligibility to contract with managed care entities, eligibility to receive hospital staff or other clinical privileges, ascertaining competence to practice medicine, or for other purposes. Our AMA also opposes discrimination that may occur against physicians involved in the board certification process, including those who are in a clinical practice period for the specified minimum period of time that must be completed prior to taking the board certifying examination.
5. Our AMA advocates for nomenclature to better distinguish those physicians who are in the board certification pathway from those who are not.
6. Our AMA encourages member boards of the ABMS to adopt measures aimed at mitigating the financial burden on residents related to specialty board fees and fee procedures, including shorter preregistration periods, lower fees and easier payment terms.
7. Our AMA encourages continued advocacy to federal and state legislatures, federal and state regulators, physician credentialing organizations, hospitals, and other interested parties to define physician board certification as the medical profession establishing specialty-specific standards for knowledge and skills, using an independent assessment process to determine the acquisition of knowledge and skills for initial certification and recertification. [Res. 318, A-07 Reaffirmation A-11 Modified: CME Rep. 2, I-15 Modified: Res. 215, I-19 Modified: Res. 316, I-22 Appended and Reaffirmed: CME Rep. 04, I-23 Reaffirmed in lieu of: Res. 302, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 304
(A-26)

Introduced by: Mississippi

Subject: Increasing the Use of Retired Physicians in Teaching Students and Residents

Referred to: Reference Committee C

Whereas, in the teaching of medical students and residents, experience plays a significant role in passing on important aspects of patient care and medical treatment; and

Whereas, when physicians retire from active or full practice, they often seek ways to continue to contribute to their communities and profession; and

Whereas, the teaching of medical students and residents is a critical place where retired physicians could continue to contribute their skills and experience to a new generation of physicians and patients; and

Whereas, throughout the country, especially in rural based programs, medical schools and residency programs struggle to find qualified and experienced faculty; and

Whereas, there are often administrative hurdles and roadblocks which prevent retired physicians from fully participating in teaching programs at schools and residencies; therefore be it

RESOLVED, that our American Medical Association explore with the appropriate stakeholders creative and innovative ways to increase opportunities and decrease hurdles for retired physicians to participate fully as medical faculty at medical schools and residency training programs. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/13/26

RELEVANT AMA POLICY

H-200.972 Primary Care Physicians in Underserved Areas

1. Our American Medical Association should pursue the following plan to improve the recruitment and retention of physicians in underserved areas:
    a. encourage the creation and pilot-testing of school-based, faith-based, and community-based urban/rural family health clinics, with an emphasis on health education, prevention, primary care, and prenatal care;
    b. encourage the affiliation of these family health clinics with local medical schools and teaching hospitals;
    c. advocate for the implementation of AMA policy that supports extension of the rural health clinic concept to urban areas with appropriate federal agencies;
    d. encourage the AMA Senior Physicians Section to consider the involvement of retired physicians in underserved settings, with appropriate mechanisms to ensure their competence;

e. urge hospitals and medical societies to develop opportunities for physicians to work part-time to staff health clinics that help meet the needs of underserved patient populations;
f. encourage the AMA and state medical associations to incorporate into state and federal health system reform legislative relief or immunity from professional liability for senior, part-time, or other physicians who help meet the needs of underserved patient populations and
g. urge hospitals and medical centers to seek out the use of available military health care resources and personnel, which can be used to help meet the needs of underserved patient populations.

2. Our AMA supports efforts to:
   a. expand opportunities to retain international medical graduates after the expiration of allocated periods under current law; and
   b. increase the recruitment and retention of physicians practicing in federally designated health professional shortage areas. [CMS Rep. I-93-2 Reaffirmation A-01 Reaffirmation I-03 Modified: CME Rep. 13, A-06 Reaffirmed: CMS Rep. 01, A-16 Modified: CME Rep. 04, I-18 Appended: Res. 206, I-19 Reaffirmation: I-22 Reaffirmed: BOT Rep. 11, A-23 Reaffirmed: Res. 724, A-23 Reaffirmed: BOT Rep. 07, I-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 305
(A-26)

Introduced by: Mississippi

Subject: Leadership by Physicians for Physicians in Graduate Medical Education (GME)

Referred to: Reference Committee C

Whereas, the Accreditation Council for Graduate Medical Education (ACGME) sets and monitors national standards for residency and fellowship programs, ensuring high-quality graduate medical education (GME) and clinical learning environments across the United States; and

Whereas, GME is a pivotal stage in physician development, shaping lifelong practice patterns, clinical judgment, and professional identity through supervised care, scholarship, and mentorship; and

Whereas, each ACGME-accredited Sponsoring Institution (SI) must designate a Designated Institutional Official (DIO) who serves as the institution's chief GME officer and is responsible for ensuring compliance with ACGME institutional and programmatic requirements; and

Whereas, the role of the DIO has expanded significantly beyond its original scope and now includes oversight of accreditation standards, resident wellness, faculty engagement, NRMP Match strategy, institutional GME policy, and direct interaction with hospital leadership; and

Whereas, unlike ACGME program director standards which require specialty board certification, clinical expertise, and years of documented education experience - the DIO position has no required baseline qualifications, protected time, or minimum FTE support explicitly defined in ACGME Institutional Requirements; and

Whereas, as of 2023, ACGME oversees more than 900 Sponsoring Institutions, and national data shows that approximately 85% of DIOs are physicians, leaving a significant minority filled by non-clinicians with no formal graduate medical education training; and

Whereas, a 2022 survey published in the Journal of Graduate Medical Education found that 92% of program directors and 88% of residents believe the DIO should be a physician with personal experience in graduate medical education, and that physician leadership is essential for institutional credibility, educational alignment, and learner protection; and

Whereas, large academic centers employ physicians as DIOs, but new and rural GME expansion sites, particularly in Mississippi are increasingly placing non-physician administrators into these roles without graduate medical education backgrounds; and

Whereas, national trends show a rising imbalance in healthcare leadership, with approximately 10 administrators per 1 physician in the United States; and

Whereas, physicians who have completed medical education and residency training are best

positioned to understand the complexity, duty, and scope of the training process, and should therefore lead, supervise, and structure medical education programs designed for physicians-in-training; therefore be it

RESOLVED, that our American Medical Association work with the ACGME to examine and strengthen minimum qualifications for Designated Institutional Officials to ensure physician leadership in the oversight of graduate medical education programs. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/13/26

RELEVANT AMA POLICY

H-310.912 Residents and Fellows' Bill of Rights

1. Our American Medical Association continues to advocate for improvements in the ACGME Institutional and Common Program Requirements that support AMA policies as follows:
    a. Adequate financial support for and guaranteed leave to attend professional meetings.
    b. Submission of training verification information to requesting agencies within 30 days of the request.
    c. Adequate compensation with consideration to local cost-of-living factors and years of training, and to include the orientation period.
    d. Health insurance benefits to include dental and vision services.
    e. Paid leave for all purposes (family, educational, vacation, sick) to be no less than six weeks per year.
    f. Stronger due process guidelines.
2. Our AMA encourages the ACGME to ensure access to educational programs and curricula as necessary to facilitate a deeper understanding by resident physicians of the US health care system and to increase their communication skills.
3. Our AMA regularly communicates to residency and fellowship programs and other GME stakeholders this Resident/Fellows Physicians' Bill of Rights.
4. Our AMA:
    a. will promote residency and fellowship training programs to evaluate their own institution's process for repayment and develop a leaner approach. This includes disbursement of funds by direct deposit as opposed to a paper check and an online system of applying for funds.
    b. encourages a system of expedited repayment for purchases of $200 or less (or an equivalent institutional threshold), for example through payment directly from their residency and fellowship programs (in contrast to following traditional workflow for reimbursement).
    c. encourages training programs to develop a budget and strategy for planned expenses versus unplanned expenses, where planned expenses should be estimated using historical data, and should include trainee reimbursements for items such as educational materials, attendance at conferences, and entertaining applicants. Payment in advance or within one month of document submission is strongly recommended.
5. Our AMA will partner with ACGME and other relevant stakeholders to encourage training programs to reduce financial burdens on residents and fellows by providing employee benefits including, but not limited to, on-call meal allowances, transportation support, relocation stipends, and childcare services.
6. Our AMA will work with the Accreditation Council for Graduate Medical Education (ACGME) and other relevant stakeholders to amend the ACGME Common Program Requirements to allow flexibility in the specialty-specific ACGME program requirements enabling specialties to require salary reimbursement or "protected time" for resident and fellow education by "core faculty," program directors, and assistant/associate program directors.

7. Our AMA encourages teaching institutions to offer retirement plan options, retirement plan matching, financial advising and personal finance education.
8. Our AMA adopts the following "Residents and Fellows' Bill of Rights" as applicable to all resident and fellow physicians in ACGME-accredited training programs:

RESIDENT/FELLOW PHYSICIANS' BILL OF RIGHTS
Residents and fellows have a right t

A. **An education that fosters professional development, takes priority over service, and leads to independent practice.**
   With regard to education, residents and fellows should expect:
   1. A graduate medical education experience that facilitates their professional and ethical development, to include regularly scheduled didactics for which they are released from clinical duties. Service obligations should not interfere with educational opportunities and clinical education should be given priority over service obligations;
   2. Faculty who devote sufficient time to the educational program to fulfill their teaching and supervisory responsibilities;
   3. Adequate clerical and clinical support services that minimize the extraneous, time-consuming work that draws attention from patient care issues and offers no educational value;
   4. 24-hour per day access to information resources to educate themselves further about appropriate patient care; and
   5. Resources that will allow them to pursue scholarly activities to include financial support and education leave to attend professional meetings.

B. **Appropriate supervision by qualified physician faculty with progressive resident responsibility toward independent practice.**
   With regard to supervision, residents and fellows must be ultimately supervised by physicians who are adequately qualified and allow them to assume progressive responsibility appropriate to their level of education, competence, and experience. In instances where clinical education is provided by non-physicians, there must be an identified physician supervisor providing indirect supervision, along with mechanisms for reporting inappropriate, non-physician supervision to the training program, sponsoring institution or ACGME as appropriate.

C. **Regular and timely feedback and evaluation based on valid assessments of resident performance.**
   With regard to evaluation and assessment processes, residents and fellows should expect:
   1. Timely and substantive evaluations during each rotation in which their competence is objectively assessed by faculty who have directly supervised their work;
   2. To evaluate the faculty and the program confidentially and in writing at least once annually and expect that the training program will address deficiencies revealed by these evaluations in a timely fashion;
   3. Access to their training file and to be made aware of the contents of their file on an annual basis; and
   4. Training programs to complete primary verification/credentialing forms and recredentialing forms, apply all required signatures to the forms, and then have the forms permanently secured in their educational files at the completion of training or a period of training and, when requested by any organization involved in credentialing process, ensure the submission of those documents to the requesting organization within thirty days of the request.

D. **A safe and supportive workplace with appropriate facilities.**
   With regard to the workplace, residents and fellows should have access to:
   1. A safe workplace that enables them to fulfill their clinical duties and educational obligations;
   2. Secure, clean, and comfortable on-call rooms and parking facilities which are secure and well-lit;
   3. Opportunities to participate on committees whose actions may affect their education, patient care, workplace, or contract.

E. **Adequate compensation and benefits that provide for resident well-being and health.**

1. With regard to contracts, residents and fellows should receive:
    a. Information about the interviewing residency or fellowship program including a copy of the currently used contract clearly outlining the conditions for (re)appointment, details of remuneration, specific responsibilities including call obligations, and a detailed protocol for handling any grievance.
    b. At least four months advance notice of contract non-renewal and the reason for non-renewal.
2. With regard to compensation, residents and fellows should receive:
    a. Compensation for time at orientation.
    b. Compensation, including salary and benefits, commensurate with their level of training and experience. Compensation should reflect cost of living differences based on local economic factors, such as housing, transportation, and energy costs (which affect the purchasing power of wages), and include appropriate adjustments for changes in the cost of living.
3. With regard to benefits, residents and fellows must be fully informed of and should receive:
    a. Quality and affordable comprehensive medical, mental health, dental, and vision care for residents and their families, as well as retirement plan options, professional liability insurance and disability insurance to all residents for disabilities resulting from activities that are part of the educational program.
    b. An institutional written policy on and education in the signs of excessive fatigue, clinical depression, substance abuse and dependence, and other physician impairment issues.
    c. Confidential access to mental health and substance abuse services.
    d. A guaranteed, predetermined amount of paid vacation leave, sick leave, family and medical leave and educational/professional leave during each year in their training program, the total amount of which should not be less than six weeks.
    e. Leave in compliance with the Family and Medical Leave Act.
    f. The conditions under which sleeping quarters, meals and laundry or their equivalent are to be provided.

F. **Clinical and educational work hours that protect patient safety and facilitate resident well-being and education.**
With regard to clinical and educational work hours, residents and fellows should experience:
    1. A reasonable work schedule that is in compliance with clinical and educational work hour requirements set forth by the ACGME.
    2. At-home call that is not so frequent or demanding such that rest periods are significantly diminished or that clinical and educational work hour requirements are effectively circumvented. Refer to AMA Policy H-310.907, “Resident/Fellow Clinical and Educational Work Hours,” for more information.

G. **Due process in cases of allegations of misconduct or poor performance.**
With regard to the complaints and appeals process, residents and fellows should have the opportunity to defend themselves against any allegations presented against them by a patient, health professional, or training program in accordance with the due process guidelines established by the AMA.

H. **Access to and protection by institutional and accreditation authorities when reporting violations**
With regard to reporting violations to the ACGME, residents and fellows should:
    1. Be informed by their program at the beginning of their training and again at each semi-annual review of the resources and processes available within the residency program for addressing resident concerns or complaints, including the program director, Residency Training Committee, and the designated institutional official.
    2. Be able to file a formal complaint with the ACGME to address program violations of residency training requirements without fear of recrimination and with the guarantee of due process.
    3. Have the opportunity to address their concerns about the training program through confidential channels, including the ACGME concern process and/or the annual ACGME Resident Survey.

9. Our AMA will work with the ACGME and other relevant stakeholders to advocate for ways to defray additional costs related to residency and fellowship training, including essential amenities and/or high cost specialty-specific equipment required to perform clinical duties.
10. Our AMA believes that healthcare trainee salary, benefits, and overall compensation should, at minimum, reflect length of pre-training education, hours worked, and level of independence and complexity of care allowed by an individual's training program (for example when comparing physicians in training and midlevel providers at equal postgraduate training levels).
11. The Residents and Fellows' Bill of Rights will be prominently published online on the AMA website and disseminated to residency and fellowship programs.
12. Our AMA will distribute and promote the Residents and Fellows' Bill of Rights online and individually to residency and fellowship training programs and encourage changes to institutional processes that embody these principles, including resident/fellow empowerment and peer-selected representation in institutional leadership.
13. Our AMA encourages development of accreditation standards and institutional policies designed to facilitate and protect residents/fellows who seek to exercise their rights.
14. Our AMA encourages the formation of peer-led resident/fellow organizations that can advocate for trainees' interests, as outlined by the AMA's Residents and Fellows' Bill of Rights, at sponsoring institutions. AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 306
(A-26)

Introduced by: Women Physicians Section

Subject: Competency-Based Portfolio Assessment of Medical Students, Interns, Residents, and Fellows

Referred to: Reference Committee C

Whereas, standardized evaluations in undergraduate and graduate medical education play a central role in determining learner advancement, residency and fellowship selection, remediation, and access to professional opportunities; and

Whereas, studies have demonstrated that narrative language and rating patterns in trainee evaluations may vary systematically by gender, race, ethnicity, socioeconomic status, and personal background, independent of measured clinical competence; and

Whereas, a systematic review of nine studies found that more than half of studies reported differences in evaluation outcomes attributed to gender, including gender-based differences in assessed traits, with female residents receiving more discordant feedback than male residents, particularly regarding assertiveness and receptivity to guidance;[1] and

Whereas, a qualitative analysis of 1,317 emergency medicine PGY-3 resident evaluations demonstrated significant gender-based differences in feedback, with female residents more frequently receiving inconsistent or discordant assessments in which behaviors related to assertiveness and autonomy were more likely to be characterized as aggression or resistance to feedback;[2] and

Whereas, a large retrospective study of approximately 90,000 third-year medical students identified 37 descriptive terms applied differently by gender and 53 terms applied differently by underrepresented-in-medicine (URM) status, with women and URM students more frequently described using personality-based descriptors such as “pleasant,” “nice,” and “lovely”;[3] and

Whereas, bias affecting URM physicians in evaluations was also identified among resident physicians in a large cohort study of 9,026 residents across 305 internal medicine residency programs;[4] and

Whereas, such variation in evaluations can undermine the validity, reliability, and fairness of assessment systems and may contribute to inequities in training outcomes, leadership selection, and workforce retention; and

Whereas, bias in high-stakes evaluations disproportionately affects groups underrepresented in medicine, with negative downstream consequences for the physician workforce pipeline; and

Whereas, the AMA has long supported evidence-based medical education, equitable training environments, and assessment systems that accurately reflect physician competence in order to

promote patient safety and high-quality care, yet a policy gap remains regarding competency-based evaluation practices for interns, residents, and fellows; therefore be it

RESOLVED, that our American Medical Association amend D-295.318 "Competency-Based Portfolio Assessment of Medical Students" by addition and deletion to read as follows:

1. Our American Medical Association will work with the Association of American Medical Colleges, the American Osteopathic Association, the American Association of Colleges of Osteopathic Medicine, and the Accreditation Council for Graduate Medical Education, and other organizations to examine new and emerging approaches to medical student and trainee evaluations, including competency-based portfolio assessment; and be it further

2. Our AMA will work with the NRMP, ACGME and ~~the 11 schools in the AMA's Accelerating Change in Medical Education consortium~~ medical schools to develop pilot projects to study the impact of competency-based frameworks on student graduation, the residency and fellowship match process ~~and off-cycle entry into residency programs,~~ and transitions across the UME-GME practice continuum; including off-cycle entry pathways.

(Modify Current HOD Policy); and be it further

RESOLVED, that our AMA amend H-65.951 "Healthcare and Organizational Policies and Cultural Changes to Prevent and Address Racism, Discrimination, Bias and Microaggressions" by addition to read as follows:

Our American Medical Association recognizes that implicit biases in evaluations, including those related to gender, race, ethnicity, socioeconomic status, and/or personal background, may influence learner assessment, advancement, and professional opportunities across the medical education continuum;

Our American Medical Association adopted the following guidelines for healthcare organizations and systems, including academic medical centers, to establish policies and an organizational culture to prevent and address systemic racism, explicit and implicit bias and microaggressions in the practice of medicine:

GUIDELINES TO PREVENT AND ADDRESS SYSTEMIC RACISM, EXPLICIT BIAS AND MICROAGGRESSIONS IN THE PRACTICE OF MEDICINE

Health care organizations and systems, including academic medical centers, should establish policies to prevent and address discrimination including systemic racism, explicit and **implicit bias** and microaggressions in their workplaces.

An effective healthcare anti-discrimination policy should:

- Clearly define discrimination, systemic racism, explicit and **implicit bias** and microaggressions in the healthcare setting.
- Ensure the policy is prominently displayed and easily accessible.
- Describe the management's commitment to providing a safe and healthy environment that actively seeks to prevent and address systemic racism, explicit and **implicit bias** and microaggressions.
- Establish training requirements for systemic racism, explicit and **implicit bias**, and microaggressions for all members of the healthcare system.

- Prioritize safety in both reporting and corrective actions as they relate to discrimination, systemic racism, explicit and **implicit bias** and microaggressions.
- Create anti-discrimination policies that:
- Specify to whom the policy applies (i.e., medical staff, students, trainees, administration, patients, employees, contractors, vendors, etc.).
- Define expected and prohibited behavior.
- Outline steps for individuals to take when they feel they have experienced discrimination, including racism, explicit and **implicit bias** and microaggressions.
- Ensure privacy and confidentiality to the reporter.
- Provide a confidential method for documenting and reporting incidents.
- Outline policies and procedures for investigating and addressing complaints and determining necessary interventions or action.

These policies should include:

- Taking every complaint seriously.
- Acting upon every complaint immediately.
- Developing appropriate resources to resolve complaints.
- Creating a procedure to ensure a healthy work environment is maintained for complainants and prohibit and penalize retaliation for reporting.
- Communicating decisions and actions taken by the organization following a complaint to all affected parties.
- Document training requirements to all the members of the healthcare system and establish clear expectations about the training objectives.

In addition to formal policies, organizations should promote a culture in which discrimination, including systemic racism, explicit and **implicit bias** and microaggressions are mitigated and prevented. Organized medical staff leaders should work with all stakeholders to ensure safe, discrimination-free work environments within their institutions.

Tactics to help create this type of organizational culture include:

- Surveying staff, trainees and medical students, anonymously and confidentially to assess:
- Perceptions of the workplace culture and prevalence of discrimination, systemic racism, explicit and **implicit bias** and microaggressions.
- Ideas about the impact of this behavior on themselves and patients.
- Integrating lessons learned from surveys into programs and policies.
- Encouraging safe, open discussions for staff and students to talk freely about problems and/or encounters with behavior that may constitute discrimination, including racism, **bias** or microaggressions.
- Establishing programs for staff, faculty, trainees and students, such as Employee Assistance Programs, Faculty Assistance Programs, and Student Assistance Programs, that provide a place to confidentially address personal experiences of discrimination, systemic racism, explicit or **implicit bias** or microaggressions.
- Providing designated support person to confidentially accompany the person reporting an event through the process.

(Modify Current HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

D-295.318 Competency-Based Portfolio Assessment of Medical Students

1. Our American Medical Association will work with the Association of American Medical Colleges, the American Osteopathic Association and the Accreditation Council for Graduate Medical Education, and other organizations to examine new and emerging approaches to medical student evaluation, including competency-based portfolio assessment.
2. Our AMA will work with the NRMP, ACGME and the 11 schools in the AMA's Accelerating Change in Medical Education consortium to develop pilot projects to study the impact of competency-based frameworks on student graduation, the residency match process and off-cycle entry into residency programs.
   [Res. 314, A-10; Appended: Res. 311, A-14; Reaffirmed: CME Rep. 04, A-23]

H-65.961 Principles for Advancing Gender Equity in Medicine

Our AMA:
1. declares it is opposed to any exploitation and discrimination in the workplace based on personal characteristics (i.e., gender);
2. affirms the concept of equal rights for all physicians and that the concept of equality of rights under the law shall not be denied or abridged by the U.S. Government or by any state on account of gender;
3. endorses the principle of equal opportunity of employment and practice in the medical field;
4. affirms its commitment to the full involvement of women in leadership roles throughout the federation, and encourages all components of the federation to vigorously continue their efforts to recruit women members into organized medicine;
5. acknowledges that mentorship and sponsorship are integral components of one’s career advancement, and encourages physicians to engage in such activities;
6. declares that compensation should be equitable and based on demonstrated competencies/expertise and not based on personal characteristics;
7. recognizes the importance of part-time work options, job sharing, flexible scheduling, re-entry, and contract negotiations as options for physicians to support work-life balance;
8. affirms that transparency in pay scale and promotion criteria is necessary to promote gender equity, and as such academic medical centers, medical schools, hospitals, group practices and other physician employers should conduct periodic reviews of compensation and promotion rates by gender and evaluate protocols for advancement to determine whether the criteria are discriminatory; and
9. affirms that medical schools, institutions and professional associations should provide training on leadership development, contract and salary negotiations and career advancement strategies that include an analysis of the influence of gender in these skill areas.

Our AMA encourages: (1) state and specialty societies, academic medical centers, medical schools, hospitals, group practices and other physician employers to adopt the AMA Principles for Advancing Gender Equity in Medicine; and (2) academic medical centers, medical schools, hospitals, group practices and other physician employers to: (a) adopt policies that prohibit harassment, discrimination and retaliation; (b) provide anti-harassment training; and (c) prescribe disciplinary and/or corrective action should violation of such policies occur.
[BOT Rep. 27, A-19; Reaffirmed: Res. 604, I-24; Reaffirmed: Res. 606, I-24]

AMERICAN MEDICAL ASSOCIATION ACADEMIC PHYSICIANS SECTION

Resolution: 307
(A-26)

Introduced by: Academic Physicians Section

Subject: Recognizing Advocacy as a Component of Faculty Appointment and Promotion in Academic Medicine

Referred to: Reference Committee C

Whereas, academic medicine has traditionally evaluated faculty for appointment, promotion, and tenure based on clinical excellence, teaching, scholarly activity, and service to institutions and professional organizations; and

Whereas, physician advocacy—including engagement in health policy, community partnerships, public health initiatives, and systems-level improvement—is increasingly recognized as essential to advancing patient care, health equity, and population health; and

Whereas, many medical school promotion and tenure guidelines do not explicitly recognize advocacy activities as a distinct and valued form of academic service, resulting in such efforts being pursued primarily through individual motivation rather than institutional support; and

Whereas, the absence of formal recognition for advocacy work may discourage faculty engagement, contribute to professional dissatisfaction, and undermine the broader mission of academic medicine; and

Whereas, emerging literature supports the importance of building faculty capacity for advocacy and aligning institutional structures to recognize and support these efforts as legitimate academic contributions; therefore be it

RESOLVED, that our American Medical Association reaffirm AMA Policy G-615.103, Improving Medical Student, Resident/Fellow and Academic Physician Engagement in Organized Medicine and Legislative Advocacy (Reaffirm HOD Policy); and be it further

RESOLVED, that our AMA encourage medical education institutions and academic medical centers to recognize physician advocacy activities as a component of faculty appointment, promotion, and tenure criteria (New HOD Policy); and be it further

RESOLVED, that our AMA collaborate with relevant organizations representing medical school leadership, to promote best practices for incorporating advocacy efforts into protected non-clinical faculty effort and academic productivity models. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Increasing Education on Physician-Led Care and Advocacy in Residency Training H-310.898

1. Our AMA will develop, provide, expand upon, and promote the educational resources in the AMA GME Competency Education Program, as well as toolkits and workshops that residency programs can implement to teach residents about physician-led care, advocacy strategies, and how to effectively engage with health care policymakers and organizations.
2. Our AMA encourages residency programs to promote opportunities for residents and trainees to engage in real-world advocacy efforts at the local, state, and national levels, in collaboration with state societies and other medical organizations. [Res. 309, A-25]

Improving Medical Student, Resident/Fellow and Academic Physician Engagement in Organized Medicine and Legislative Advocacy G-615.103

1. Our American Medical Association will study the participation of academic and teaching physicians, residents, fellows, and medical students in organized medicine and legislative advocacy.
2. Our AMA will study the participation of community-based faculty members of medical schools and graduate medical education programs in organized medicine and legislative advocacy.
3. Our AMA will identify successful, innovative and best practices to engage academic physicians (including community-based physicians), residents/fellows, and medical students in organized medicine and legislative advocacy.
4. Our AMA will study mechanisms to mitigate costs incurred by medical students, residents and fellows who participate at national, in person AMA conferences. [Res. 608, A-17; Appended: Res. 617, A-22]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 308
(A-26)

Introduced by: LGBTQ+ Section

Subject: Impact of Federal and State Restrictive Actions on Gender-Affirming Care on Medical Education and Physician Workforce Development

Referred to: Reference Committee C

Whereas, gender-affirming care (GAC) is recognized as evidence-based medical care by major professional medical organizations, including the American Medical Association[1–11]; and

Whereas, A growing number of states have enacted or proposed legislation restricting or prohibiting the provision of gender-affirming care to minors, and in some cases limiting training in or exposure to such care[12–16]; and

Whereas, recent federal actions, including executive orders, agency directives, regulatory proposals, or funding conditions, have sought to restrict access to or federal support for gender-affirming care, potentially affecting academic medical centers, federally funded training programs, and research institutions[17–20]; and

Whereas, medical education programs, including undergraduate medical education (UME), graduate medical education (GME), and continuing medical education (CME), are expected to provide comprehensive, evidence-based training across the spectrum of patient populations; and

Whereas, restrictions on the provision of gender-affirming care may limit clinical training opportunities for learners in affected states, potentially resulting in variability in competency, preparedness, and accreditation compliance[21–26]; and

Whereas, limitations on clinical exposure may affect recruitment and retention of medical students, residents, fellows, and faculty in states with restrictions on gender-affirming care[27–30]; and

Whereas, disruptions to training in gender-affirming care may have downstream effects on the physician workforce's ability to provide comprehensive care to transgender and gender-diverse patients nationally, which aligns with AMA priorities regarding physician workforce development and preservation; therefore be it

RESOLVED, that our American Medical Association study the impact of federal and state restrictive actions on gender-affirming care on undergraduate medical education (UME), graduate medical education (GME), and continuing medical education (CME), including effects on: (1) clinical training opportunities, (2) accreditation standards and compliance, (3) federal funding streams for medical education and research, (4) faculty recruitment and retention, (5) trainee recruitment, retention, and geographic distribution, (6) academic freedom and curricular integrity, and (7) physician workforce preparedness to provide comprehensive, evidence-based care (Directive to Take Action); and be it further

RESOLVED, that our AMA assess the implications of federal executive actions, agency guidance, regulatory changes, and funding conditions on academic medical centers and training programs that provide or teach gender-affirming care. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

Clarification of Evidence-Based Gender-Affirming Care H-185.927

1. Our American Medical Association recognizes that medical and surgical treatments for gender dysphoria and gender incongruence, as determined by shared decision making between the patient and physician, are medically necessary as outlined by generally-accepted standards of medical and surgical practice.
2. Our AMA will work with state and specialty societies and other interested stakeholders to:
    a. advocate for federal, state, and local laws and policies to protect access to evidence-based care for gender dysphoria and gender incongruence;
    b. oppose laws and policies that criminalize, prohibit or otherwise impede the provision of evidence-based, gender-affirming care, including laws and policies that penalize parents and guardians who support minors seeking and/or receiving gender-affirming care;
    c. support protections against violence and criminal, civil, and professional liability for physicians and institutions that provide evidence-based, genderaffirming care and patients who seek and/or receive such care, as well as their parents and guardians; and
    d. communicate with stakeholders and regulatory bodies about the importance of gender-affirming care for patients with gender dysphoria and gender incongruence.
3. Our AMA will advocate for equitable, evidence-based coverage of gender-affirming care by health insurance providers, including public and private insurers.

Medical Spectrum of Gender D-295.312

Given the medical spectrum of gender identity and sex, our AMA: (1) will work with appropriate medical organizations and community based organizations to inform and educate the medical community and the public on the medical spectrum of gender identity; (2) will educate state and federal policymakers and legislators on and advocate for policies addressing the medical spectrum of gender identity to ensure access to quality health care; and (3) affirms that an individual's genotypic sex, phenotypic sex, sexual orientation, gender and gender identity are not always aligned or indicative of the other, and that gender for many individuals may differ from the sex assigned at birth.

Eliminating Health Disparities - Promoting Awareness and Education of Sexual Orientation and Gender Identity Health Issues in Medical Education H-295.878

Our AMA: (1) supports the right of medical students and residents to form groups and meet on-site to further their medical education or enhance patient care without regard to their gender, gender identity, sexual orientation, race, religion, disability, ethnic origin, national origin or age; (2) supports students and residents who wish to conduct on-site educational seminars and workshops on health issues related to sexual orientation and gender identity; and (3) encourages medical education accreditation bodies to both continue to encourage and periodically reassess education on health issues related to sexual orientation and gender identity in the basic science, clinical care, and cultural competency curricula in undergraduate and graduate medical education.

Increasing Access to Gender-Affirming Care Through Expanded Training and Equitable Coverage H-295.847
Our American Medical Association will advocate for expanded structured training for gender-affirming procedures by working with relevant stakeholders including but not limited to the Accreditation Council for Graduate Medical Education.

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991

1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.
5. Our AMA supports preservation and maintenance of federal and state public funding for physicians and institutions engaged in clinical care, research, and medical education regarding LGBTQ+ populations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 309
(A-26)

Introduced by: American Association of Neurological Surgeons, Congress of Neurological Surgeons

Subject: Osteoporosis Education, Awareness, and Musculoskeletal Health Optimization

Referred to: Reference Committee C

Whereas, osteoporosis affects approximately 10 million Americans and contributes to over 2 million fragility fractures annually, resulting in substantial morbidity, mortality, disability, and health care expenditures; and

Whereas, osteoporosis and low bone mineral density are increasingly recognized as important contributors to frailty, impaired mobility, and surgical risk, particularly in spine surgery and other musculoskeletal procedures; and

Whereas, emerging evidence suggests bone health optimization may influence surgical outcomes, hardware stability, fracture risk, rehabilitation potential, and long-term functional outcomes; and

Whereas, current osteoporosis screening recommendations are primarily population-based and may not fully address the needs of patients at elevated risk for musculoskeletal deterioration, spinal deformity progression, or those being considered for complex spine surgery; and

Whereas**,** osteoporosis frequently coexists with sarcopenia and other age-related conditions that collectively contribute to frailty and loss of independence; and

Whereas**,** the American Medical Association House of Delegates has previously recognized the importance of musculoskeletal health through educational and awareness efforts related to sarcopenia and healthy aging; and

Whereas**,** opportunities may exist to further enhance physician and patient awareness regarding osteoporosis prevention, identification, and optimization strategies across specialties including primary care, endocrinology, geriatrics, orthopedics, neurosurgery, and rehabilitation medicine; and

Whereas, the AMA is well positioned to support physician education, interdisciplinary collaboration, and public health awareness efforts even though it does not establish clinical practice guidelines; and

Whereas, increasing awareness of bone health optimization strategies including nutrition, resistance exercise, fall prevention, and appropriate medical management may improve patient outcomes and reduce long-term health care costs; therefore be it

RESOLVED, that our American Medical Association study opportunities to enhance physician education regarding osteoporosis as a component of musculoskeletal health, frailty prevention, and surgical risk optimization (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage development or promotion of continuing medical education (CME), educational resources, or multidisciplinary programming highlighting the relevance of bone health to mobility preservation, healthy aging, and surgical outcomes (New HOD Policy); and be it further

RESOLVED, that our AMA support efforts to increase patient and physician awareness of evidence-based preventive strategies for osteoporosis including physical activity, nutrition, fall prevention, and appropriate screening consistent with existing recommendations (New HOD Policy); and be it further

RESOLVED, that our AMA encourage research examining the relationship between bone health and outcomes such as frailty, disability, surgical recovery, and health care utilization (New HOD Policy); and be it further

RESOLVED, that our AMA encourage physician education regarding the role of bone health optimization as part of comprehensive strategies to preserve mobility, reduce disability, and improve functional outcomes in aging populations (New HOD Policy); and be it further

RESOLVED, that our AMA advocate for insurance coverage of evidence-based osteoporosis screening tests and osteoporosis therapies (Directive to Take Action); and be it further

RESOLVED, that our AMA encourage physician awareness that clinical decision-making regarding osteoporosis screening and treatment may appropriately incorporate individualized risk assessment, including consideration of patients at elevated risk for musculoskeletal deterioration or those being considered for complex spine surgery, consistent with clinical judgment and existing evidence. (New HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

RELEVANT AMA POLICY

H-25.988 Community-Based Falls Prevention Programs
Our American Medical Association will work with relevant organizations to support community-based falls prevention programs [Res. 408, A-15Reaffirmed: CSAPH Rep. 01, A-25]

H-425.997 Preventive Services
1. Our AMA encourages the development of policies and mechanisms to assure the continuity, coordination and continuous availability of patient care, including professional preventive care and early-detection screening services, provided the services are cost effective.
2. It is the policy of the AMA that any preventive service that is being considered for inclusion in public or private sector insurance products have evidence-based data to demonstrate improved outcomes or quality of life and the cost effectiveness of the service.
3. Our AMA believes that preventive care should ideally be coordinated by a patient's physician [OT Rep. A, NCCMC Rec. 31, A-78Reaffirmed: CLRPD Rep. C, A-89Reaffirmed: Sunset Report and Reaffirmed and Appended: CMS Rep. 7, A-00, Reaffirmed in lieu of Res. 104, A-06Reaffirmation A-07Modified and Reaffirmed: Sub. Res. 101, A-08Reaffirmed: CMS Rep. 03, I-16Reaffirmed: CMS Rep. 03, I-17]

H-425.994 Medical Evaluations of Healthy Persons
The AMA supports the following principles of healthful living and proper medical care: (1) The periodic evaluation of healthy individuals is important for the early detection of disease and for the recognition and correction of certain risk factors that may presage disease. (2) The optimal frequency of the periodic evaluation and the procedures to be performed vary with the patient's age, socioeconomic status, heredity, and other individual factors. Nevertheless, the evaluation of a healthy person by a physician can serve as a convenient reference point for preventive services and for counseling about healthful living and known risk factors. (3) These recommendations should be modified as appropriate in terms of each person's age, sex, occupation and other characteristics. All recommendations are subject to modification, depending upon factors such as the sensitivity and specificity of available tests and the prevalence of the diseases being sought in the particular population group from which the person comes. (4) The testing of individuals and of population groups should be pursued only when adequate treatment and follow-up can be arranged for the abnormal conditions and risk factors that are identified. (5) Physicians need to improve their skills in fostering patients' good health, and in dealing with long recognized problems such as hypertension, obesity, anxiety and depression, to which could be added the excessive use of alcohol, tobacco and drugs. (6) Continued investigation is required to determine the usefulness of test procedures that may be of value in detecting disease among asymptomatic populations. [CSA Rep. D, A-82Reaffirmed: CLRPD Rep. A, I-92Reaffirmed: CSA Rep. 8, A-03Reaffirmed: CSAPH Rep. 1, A-13Reaffirmed: CMS Rep. 03, I-17]

D-25.997 Addressing Sarcopenia and its Impact on Quality of Life
1. Our American Medical Association supports educational awareness targeting healthcare professionals, caregivers, and at-risk populations to increase knowledge about sarcopenia, its risk factors and consequences, in order to facilitate prevention, early recognition and evidence-based management as a routine part of clinical practice.
2. Our AMA supports nutritional interventions aimed at optimizing protein intake, essential amino acids, and micronutrients.
3. Our AMA promotes regular physical activity, including resistance training, aerobic exercise, and balance exercises, tailored to individual capabilities and preferences.
4. Our AMA supports allocation of resources for research initiatives aimed at advancing our understanding of sarcopenia, its pathophysiology, risk factors, and treatment modalities.
5. Our AMA advocates for policy changes to support reimbursement for sarcopenia screening, diagnosis, and interventions.
6. Our AMA will collaborate with all stakeholders to integrate sarcopenia prevention and management into public health agendas and aging-related initiatives. [Res. 509, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 310
(A-26)

Introduced by: California, ACOG, Hawaii, Idaho, Oregon, Washington

Subject: Increasing Capacity and Access to Maternal Health Services in Rural Areas

Referred to: Reference Committee C

Whereas, rural communities already suffering from physician shortages, hospitals closures, less health insurance coverage, and thus, higher rates of chronic disease and age-adjusted mortality are at even greater risk with the significant $1 trillion in Medicaid and Affordable Care Act (ACA) funding cuts (CBO) recently imposed by Congress through the passage of HR 1; and

Whereas, to mitigate some of these cuts, Congress enacted the Rural Health Transformation Program that provides $50 billion to states to address rural health care challenges; and

Whereas, given that more than half of rural adults and children are either on Medicaid, the ACA or uninsured, and up to 14 million Medicaid and ACA enrollees could lose coverage nationwide under HR 1 (CBO), the need for AMA to provide leadership and assistance to rural physicians and communities is even greater; and

Whereas, while the AMA has extensive policy on improving rural health provider shortages, infrastructure, health care disparities, and access to care, this resolution includes additional specific policies that are warranted to augment AMA's rural health advocacy; and

Whereas, counties that lack maternity care resources, have no hospitals or birth centers offering obstetric care, or have no obstetric providers, are called maternity care deserts, or "OB deserts"; more than half of current rural hospitals in the United States lack a maternity ward and according to the Center for Healthcare Quality and Payment Reform (CHQPR), more than 700 rural hospitals in 2025 were at risk of closure due to financial problems; and

Whereas, hospital administrators cite a number of reasons for the closures, including high costs, labor shortages, low public and private reimbursement, and declining birth rates. Labor and delivery units are one of the most expensive departments for hospitals to maintain, second only to emergency departments; and

Whereas, a study by the American Journal of Public Health that looked at adverse maternal outcomes in rural and urban areas across the country found that pregnant individuals residing in rural areas experienced slightly increased rates of Intensive Care Unit admissions and maternal mortality rates almost twice the rate of individuals in urban areas; and

Whereas, even states with high numbers of OB-GYNs have a geographic maldistribution within states. One opportunity to expand the number of physicians providing maternity care in rural areas is to increase the number of family physicians who provide obstetric care as part of their family practice. Family physicians may complete a Family Practice Obstetrics fellowship and other requirements to become board certified in Family Medicine Obstetrics; and

Whereas, there is a need to creatively engage in efforts to ensure that pregnant patients in rural regions have access to the care necessary to ensure healthy outcomes for both baby and mother; therefore be it

RESOLVED, that our American Medical Association continue to address the nation's obstetrics and gynecology training and workforce needs, by evaluating additional ways to increase physicians providing OB-GYN services in shortage areas, including but not limited to increasing postgraduate positions in OB-GYN and family medicine OB fellowships, and increasing ACGME funding, (Directive to Take Action); and be it further

RESOLVED, that our AMA support board certification programs that offer family medicine physician training in obstetric care to expand access to maternal health care services in rural areas (New HOD Policy); and be it further

RESOLVED, that our AMA support expansion of Family Medicine obstetrical care provided by family physicians who are trained and privileged to deliver such services (New HOD Policy); and be it further

RESOLVED, that our AMA support increased funding and prioritization within the National Health Service Corps Rural Community Loan Repayment Program for OB-GYN and family medicine physicians providing obstetric care working in Maternity Care Target Areas (MCTAs). (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-420.946 Advancing Evidence-Based Strategies to Improve Rural Obstetrical Health Care and Access
8. Our American Medical Association strongly supports federal legislation that provides funding for the creation and implementation of a national obstetric emergency training program for rural health care facilities with and without a dedicated labor and delivery unit.
9. Our AMA supports the expansion and implementation of innovative obstetric telementoring/teleconsultation models to address perinatal health disparities and improve access to evidence-informed perinatal care in rural communities.
10. Our AMA encourages academic medical centers and health systems to actively participate in obstetric telementoring/teleconsultation models to support rural physicians and nonphysician practitioners who provide obstetric care as part of a physician-led team and improve perinatal health outcomes in rural communities.
11. Our AMA supports ongoing research to evaluate the effectiveness of national implementation of obstetric telementoring/teleconsultation models to improve rural perinatal health outcomes and reduce rural-urban health disparities.

H-200.954 U.S. Physician Shortages
1. Our AMA explicitly recognizes the existing shortage of physicians in many specialties and areas of the US.
2. Our AMA supports efforts to quantify the geographic maldistribution and physician shortage in many specialties.
3. Our AMA supports current programs to alleviate the shortages in many specialties and the maldistribution of physicians in the US.
4. Our AMA encourages medical schools and residency programs to consider developing admissions policies and practices and targeted educational efforts aimed at attracting physicians to practice in underserved areas and to provide care to underserved populations.
5. Our AMA encourages medical schools and residency programs to continue to provide courses, clerkships, and longitudinal experiences in rural and other underserved areas as a means to support educational program objectives and to influence choice of graduates' practice locations.
6. Our AMA encourages medical schools to include criteria and processes in admission of medical students that are predictive of graduates' eventual practice in underserved areas and with underserved populations.
7. Our AMA will continue to advocate for funding from public and private payers for educational programs that provide experiences for medical students in rural and other underserved areas.
8. Our AMA will continue to advocate for funding from all payers (public and private sector) to increase the number of graduate medical education positions in specialties leading to first certification.
9. Our AMA will work with other groups to explore additional innovative strategies for funding graduate medical education positions, including positions tied to geographic or specialty need.
10. Our AMA continues to work with the Association of American Medical Colleges (AAMC) and other relevant groups to monitor the outcomes of the National Resident Matching Program; and
11. Our AMA continues to work with the AAMC and other relevant groups to develop strategies to address the current and potential shortages in clinical training sites for medical students.
12. Our AMA will:
a. promote greater awareness and implementation of the Project ECHO (Extension for Community Healthcare Outcomes) and Child Psychiatry Access Project models among academic health centers and community-based primary care physicians;
b. work with stakeholders to identify and mitigate barriers to broader implementation of these models in the United States; and
c. monitor whether health care payers offer additional payment or incentive payments for physicians who engage in clinical practice improvement activities as a result of their participation in programs such as Project ECHO and the Child Psychiatry Access Project; and if confirmed, promote awareness of these benefits among physicians.
13. Our AMA will work to augment the impact of initiatives to address rural physician workforce shortages.
14. Our AMA supports opportunities to incentivize physicians to select specialties and practice settings which involve delivery of health services to populations experiencing a shortage of providers, such as

women, LGBTQ+ patients, children, elder adults, and patients with disabilities, including populations of such patients who do not live in underserved geographic areas.
a. promote greater awareness and implementation of the Project ECHO (Extension for Community Healthcare Outcomes) and Child Psychiatry Access Project models among academic health centers and community-based primary care physicians;
b. work with stakeholders to identify and mitigate barriers to broader implementation of these models in the United States; and
c. monitor whether health care payers offer additional payment or incentive payments for physicians who engage in clinical practice improvement activities as a result of their participation in programs such as Project ECHO and the Child Psychiatry Access Project; and if confirmed, promote awareness of these benefits among physicians.
13. Our AMA will work to augment the impact of initiatives to address rural physician workforce shortages.
14. Our AMA supports opportunities to incentivize physicians to select specialties and practice settings which involve delivery of health services to populations experiencing a shortage of providers, such as women, LGBTQ+ patients, children, elder adults, and patients with disabilities, including populations of such patients who do not live in underserved geographic areas.

H-465.988 Educational Strategies for Meetings Rural Health Physician Shortages
1. In light of the data available from the current literature as well as ongoing studies being conducted by staff, our American Medical Association recommends that:
a. Our AMA encourage medical schools and residency programs to develop educationally sound rural clinical preceptorships and rotations consistent with educational and training requirements, and to provide early and continuing exposure to those programs for medical students and residents.
b. Our AMA encourage medical schools to develop educationally sound primary care residencies in smaller communities with the goal of educating and recruiting more rural physicians.
c. Our AMA encourage state and county medical societies to support state legislative efforts toward developing scholarship and loan programs for future rural physicians.
d. Our AMA encourage state and county medical societies and local medical schools to develop outreach and recruitment programs in rural counties to attract promising high school and college students to medicine and the other health professions.
e. Our AMA urge continued federal and state legislative support for funding of Area Health Education Centers (AHECs) for rural and other underserved areas.
f. Our AMA continue to support full appropriation for the National Health Service Corps Scholarship Program, with the proviso that medical schools serving states with large rural underserved populations have a priority and significant voice in the selection of recipients for those scholarships.
g. Our AMA support full funding of the new federal National Health Service Corps loan repayment program.
h. Our AMA encourage continued legislative support of the research studies being conducted by the Rural Health Research Centers funded by the National Office of Rural Health in the Department of Health and Human Services.
i. Our AMA continue its research investigation into the impact of educational programs on the supply of rural physicians.
j. Our AMA continue to conduct research and monitor other progress in development of educational strategies for alleviating rural physician shortages.
k. Our AMA reaffirm its support for legislation making interest payments on student debt tax deductible.
l. Our AMA encourage state and county medical societies to develop programs to enhance work opportunities and social support systems for spouses of rural practitioners.
2. Our AMA will work with state and specialty societies, medical schools, teaching hospitals, the Accreditation Council for Graduate Medical Education (ACGME), the Centers for Medicare and Medicaid Services (CMS) and other interested stakeholders to identify, encourage and incentivize qualified rural physicians to serve as preceptors and volunteer faculty for rural rotations in residency.
3. Our AMA will:
m. work with interested stakeholders to identify strategies to increase residency training opportunities in rural areas with a report back to the House of Delegates; and
n. work with interested stakeholders to formulate an actionable plan of advocacy with the goal of increasing residency training in rural areas.

4. Our AMA will encourage ACGME review committees to consider adding exposure to rural medicine as appropriate, to encourage the development of rural program tracks in training programs and increase physician awareness of the conditions that pose challenges and lack of resources in rural areas.
5. Our AMA will encourage adding educational webinars, workshops and other didactics via remote learning formats to enhance the educational needs of smaller training programs.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 311
(A-26)

Introduced by: Senior Physicians Section

Subject: Changing the Paradigm of Medical Student Debt to address the Geriatric Physician Shortfall

Referred to: Reference Committee C

Whereas, rising medical student debt, averaging $212,000 and often over $300,000, places an undue burden financially disproportionately limiting access for medical students unable to assume this debt and thereby which influences specialty choice away from critical fields like geriatrics, pediatrics, internal medicine, and family medicine[1,2]; and

Whereas, a diverse physician workforce representative of society is essential, yet current debt burden hinders young physicians from considering and pursuing lower paying specialties because they are required to pay back large amounts of debt upon graduation; and

Whereas, the U.S. must begin looking at having an essential number of doctors to care for aging patients; and

Whereas, as the U.S. population of older adults rapidly increases with the aging of the baby boomer generation, it is crucial for the nation to swiftly tackle the shortage of physicians needed to provide care for this group; and

Whereas, recent studies show that three-year medical school programs immediately reduce student debt by 25% without compromising resident quality[3,4,5,6,7]; and

Whereas, only a few medical schools currently offer three-year programs, limiting the number of lower income students who can reasonably be expected to apply; and

Whereas, the One Big Beautiful Bill Act (OBBBA), will begin capping federal student loans for medical and professional students at $50,000 per year beginning in July 2026, with a maximum lifetime aggregate limit of $200,000; therefore be it

RESOLVED, that our American Medical Association (AMA) develop a platform supporting a 3-year medical school curriculum in order to help reduce medical student debt and reduce the coming physician shortage (Directive to Take Action); and be it further

RESOLVED, that our AMA, in order to advance equity in the medical profession, work to ensure all specialties—especially primary care—can compete fairly, reduce the looming physician shortage especially those providing care to older patients (Directive to Take Action); and be it further

RESOLVED, that our AMA advocate that the AAMC and Liaison Committee on Medical Education (LCME) begin steps to ensure that all medical schools offer a 3-year program by 2030 to help reduce student debt. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

RELEVANT AMA POLICY

H-200.949 Principles of and Actions to Address Primary Care Workforce
1. Our patients require a sufficient, well-trained supply of primary care physicians--family physicians, general internists, general pediatricians, and obstetricians/gynecologists--to meet the nation's current and projected demand for health care services.
2. To help accomplish this critical goal, our American Medical Association (AMA) will work with a variety of key stakeholders, to include federal and state legislators and regulatory bodies; national and state specialty societies and medical associations, including those representing primary care fields; and accreditation, certification, licensing, and regulatory bodies from across the continuum of medical education (undergraduate, graduate, and continuing medical education).
3. Through its work with these stakeholders, our AMA will encourage development and dissemination of innovative models to recruit medical students interested in primary care, train primary care physicians, and enhance both the perception and the reality of primary care practice, to encompass the following components: a) Changes to medical school admissions and recruitment of medical students to primary care specialties, including counseling of medical students as they develop their career plans; b) Curriculum changes throughout the medical education continuum; c) Expanded financial aid and debt relief options; d) Financial and logistical support for primary care practice, including adequate reimbursement, and enhancements to the practice environment to ensure professional satisfaction and practice sustainability; and e) Support for research and advocacy related to primary care.
4. Admissions and recruitment: The medical school admissions process should reflect the specific institution's mission. Those schools with missions that include primary care should consider those predictor variables among applicants that are associated with choice of these specialties.
5. Medical schools, through continued and expanded recruitment and outreach activities into secondary schools, colleges, and universities, should develop and increase the pool of applicants likely to practice primary care by seeking out those students whose profiles indicate a likelihood of practicing in primary care and underserved areas, while establishing strict guidelines to preclude discrimination.
6. Career counseling and exposure to primary care: Medical schools should provide to students career counseling related to the choice of a primary care specialty, and ensure that primary care physicians are well-represented as teachers, mentors, and role models to future physicians.
7. Financial assistance programs should be created to provide students with primary care experiences in ambulatory settings, especially in underserved areas. These could include funded preceptorships or summer work/study opportunities.

8. Curriculum: Voluntary efforts to develop and expand both undergraduate and graduate medical education programs to educate primary care physicians in increasing numbers should be continued. The establishment of appropriate administrative units for all primary care specialties should be encouraged.
9. Medical schools with an explicit commitment to primary care should structure the curriculum to support this objective. At the same time, all medical schools should be encouraged to continue to change their curriculum to put more emphasis on primary care.
10. All four years of the curriculum in every medical school should provide primary care experiences for all students, to feature increasing levels of student responsibility and use of ambulatory and community-based settings.
11. Federal funding, without coercive terms, should be available to institutions needing financial support to expand resources for both undergraduate and graduate medical education programs designed to increase the number of primary care physicians. Our AMA will advocate for public (federal and state) and private payers to a) develop enhanced funding and related incentives from all sources to provide education for medical students and resident/fellow physicians, respectively, in progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model) to enhance primary care as a career choice; b) fund and foster innovative pilot programs that change the current approaches to primary care in undergraduate and graduate medical education, especially in urban and rural underserved areas; and c) evaluate these efforts for their effectiveness in increasing the number of students choosing primary care careers and helping facilitate the elimination of geographic, racial, and other health care disparities.
12. Medical schools and teaching hospitals in underserved areas should promote medical student and resident/fellow physician rotations through local family health clinics for the underserved, with financial assistance to the clinics to compensate their teaching efforts.
13. The curriculum in primary care residency programs and training sites should be consistent with the objective of training generalist physicians. Our AMA will encourage the Accreditation Council for Graduate Medical Education to (a) support primary care residency programs, including community hospital-based programs, and (b) develop an accreditation environment and novel pathways that promote innovations in graduate medical education, using progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model).
14. The visibility of primary care faculty members should be enhanced within the medical school, and positive attitudes toward primary care among all faculty members should be encouraged.
15. Support for practicing primary care physicians: Administrative support mechanisms should be developed to assist primary care physicians in the logistics of their practices, along with enhanced efforts to reduce administrative activities unrelated to patient care, to help ensure professional satisfaction and practice sustainability.
16. There should be increased financial incentives for physicians practicing primary care, especially those in rural and urban underserved areas, to include scholarship or loan repayment programs, relief of professional liability burdens, and Medicaid case management programs, among others. Our AMA will advocate to state and federal legislative and regulatory bodies, among others, for development of public and/or private incentive programs, and expansion and increased funding for existing programs, to further encourage practice in underserved areas and decrease the debt load of primary care physicians. The imposition of specific outcome targets should be resisted, especially in the absence of additional support to the schools.
17. Our AMA will continue to advocate, in collaboration with relevant specialty societies, for the recommendations from the AMA/Specialty Society RVS Update Committee (RUC) related to reimbursement for E&M services and coverage of services related to care coordination, including patient education, counseling, team meetings and other functions; and work to ensure that private payers fully recognize the value of E&M services, incorporating the RUC-recommended increases adopted for the most current Medicare RBRVS.
18. Our AMA will advocate for public (federal and state) and private payers to develop physician reimbursement systems to promote primary care and specialty practices in progressive, community-based models of integrated care focused on quality and outcomes such as the patient-centered medical home and the chronic care model consistent with current AMA Policies H-160.918 and H-160.919.

19. There should be educational support systems for primary care physicians, especially those practicing in underserved areas.
20. Our AMA will urge urban hospitals, medical centers, state medical associations, and specialty societies to consider the expanded use of mobile health care capabilities.
21. Our AMA will encourage the Centers for Medicare & Medicaid Services to explore the use of telemedicine to improve access to and support for urban primary care practices in underserved settings.
22. Accredited continuing medical education providers should promote and establish continuing medical education courses in performing, prescribing, interpreting and reinforcing primary care services.
23. Practicing physicians in other specialties--particularly those practicing in underserved urban or rural areas--should be provided the opportunity to gain specific primary care competencies through short-term preceptorships or postgraduate fellowships offered by departments of family medicine, internal medicine, pediatrics, etc., at medical schools or teaching hospitals. In addition, part-time training should be encouraged, to allow physicians in these programs to practice concurrently, and further research into these concepts should be encouraged.
24. Our AMA supports continued funding of Public Health Service Act, Title VII, Section 747, and encourages advocacy in this regard by AMA members and the public.
25. Research: Analysis of state and federal financial assistance programs should be undertaken, to determine if these programs are having the desired workforce effects, particularly for students from disadvantaged groups and those that are underrepresented in medicine, and to gauge the impact of these programs on elimination of geographic, racial, and other health care disparities. Additional research should identify the factors that deter students and physicians from choosing and remaining in primary care disciplines. Further, our AMA should continue to monitor trends in the choice of a primary care specialty and the availability of primary care graduate medical education positions. The results of these and related research endeavors should support and further refine AMA policy to enhance primary care as a career choice.
[CME Rep.04, I-18; Reaffirmed: CMS Rep. 08, A-24; Reaffirmed: Res. 237, I-25]

H-305.925 Principles of and Actions to Address Medical Education Costs and Student Debt
The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will:

1. Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy.
2. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research.
3. Encourage the expansion of National Institutes of Health programs that provide loan repayment in exchange for a commitment to conduct targeted research.
4. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit:
    a. inclusion of all medical specialties in need, and
    b. service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas.
5. Encourage the National Health Service Corps to have repayment policies that are consistent with other federal loan forgiveness programs, thereby decreasing the amount of loans in default and increasing the number of physicians practicing in underserved areas.
6. Work to reinstate the economic hardship deferment qualification criterion known as the “20/220 pathway,” and support alternate mechanisms that better address the financial needs of trainees with educational debt.
7. Advocate for federal legislation to support the creation of student loan savings accounts that allow for pre-tax dollars to be used to pay for student loans.

8. Work with other concerned organizations to advocate for legislation and regulation that would result in favorable terms and conditions for borrowing and for loan repayment, and would permit 100% tax deductibility of interest on student loans and elimination of taxes on aid from service-based programs.
9. Encourage the creation of private-sector financial aid programs with favorable interest rates or service obligations (such as community- or institution-based loan repayment programs or state medical society loan programs).
10. Support stable funding for medical education programs to limit excessive tuition increases, and collect and disseminate information on medical school programs that cap medical education debt, including the types of debt management education that are provided.
11. Work with state medical societies to advocate for the creation of either tuition caps or, if caps are not feasible, pre-defined tuition increases, so that medical students will be aware of their tuition and fee costs for the total period of their enrollment.
12. Encourage medical schools to:
    a. study the costs and benefits associated with non-traditional instructional formats (such as online and distance learning, and combined baccalaureate/MD or DO programs) to determine if cost savings to medical schools and to medical students could be realized without jeopardizing the quality of medical education;
    b. engage in fundraising activities to increase the availability of scholarship support, with the support of the Federation, medical schools, and state and specialty medical societies, and develop or enhance financial aid opportunities for medical students, such as self-managed, low-interest loan programs;
    c. cooperate with postsecondary institutions to establish collaborative debt counseling for entering first-year medical students;
    d. allow for flexible scheduling for medical students who encounter financial difficulties that can be remedied only by employment, and consider creating opportunities for paid employment for medical students;
    e. counsel individual medical student borrowers on the status of their indebtedness and payment schedules prior to their graduation;
    f. inform students of all government loan opportunities and disclose the reasons that preferred lenders were chosen;
    g. ensure that all medical student fees are earmarked for specific and well-defined purposes, and avoid charging any overly broad and ill-defined fees, such as but not limited to professional fees;
    h. use their collective purchasing power to obtain discounts for their students on necessary medical equipment, textbooks, and other educational supplies;
    i. work to ensure stable funding, to eliminate the need for increases in tuition and fees to compensate for unanticipated decreases in other sources of revenue; mid-year and retroactive tuition increases should be opposed.
13. Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties.
14. Take an active advocacy role during reauthorization of the Higher Education Act and similar legislation, to achieve the following goals:
    a. Eliminating the single holder rule.
    b. Making the availability of loan deferment more flexible, including broadening the definition of economic hardship and expanding the period for loan deferment to include the entire length of residency and fellowship training.
    c. Retaining the option of loan forbearance for residents ineligible for loan deferment.
    d. Including, explicitly, dependent care expenses in the definition of the “cost of attendance”.
    e. Including room and board expenses in the definition of tax-exempt scholarship income.
    f. Continuing the federal Direct Loan Consolidation program, including the ability to “lock in” a fixed interest rate, and giving consideration to grace periods in renewals of federal loan programs.

g. Adding the ability to refinance Federal Consolidation Loans.
h. Eliminating the cap on the student loan interest deduction.
i. Increasing the income limits for taking the interest deduction.
j. Making permanent the education tax incentives that our AMA successfully lobbied for as part of Economic Growth and Tax Relief Reconciliation Act of 2001.
k. Ensuring that loan repayment programs do not place greater burdens upon married couples than for similarly situated couples who are cohabitating.
l. Increasing efforts to collect overdue debts from the present medical student loan programs in a manner that would not interfere with the provision of future loan funds to medical students.

15. Continue to work with state and county medical societies to advocate for adequate levels of medical school funding and to oppose legislative or regulatory provisions that would result in significant or unplanned tuition increases.
16. Continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden of medical students, and monitor the short-and long-term impact of the economic environment on the availability of institutional and external sources of financial aid for medical students, as well as on choice of specialty and practice location.
17. Collect and disseminate information on successful strategies used by medical schools to cap or reduce tuition.
18. Continue to monitor the availability of and encourage medical schools and residency/fellowship programs to:
    a. provide financial aid opportunities and financial planning/debt management counseling to medical students and resident/fellow physicians;
    b. work with key stakeholders to develop and disseminate standardized information on these topics for use by medical students, resident/fellow physicians, and young physicians; and
    c. share innovative approaches with the medical education community.
19. Seek federal legislation or rule changes that would stop Medicare and Medicaid decertification of physicians due to unpaid student loan debt. Our AMA believes that it is improper for physicians not to repay their educational loans, but assistance should be available to those physicians who are experiencing hardship in meeting their obligations.
20. Related to the Public Service Loan Forgiveness (PSLF) Program, our AMA supports increased medical student and physician participation in the program, and will:
    a. Advocate that all resident/fellow physicians have access to PSLF during their training years.
    b. Advocate against a monetary cap on PSLF and other federal loan forgiveness programs.
    c. Work with the United States Department of Education to ensure that any cap on loan forgiveness under PSLF be at least equal to the principal amount borrowed.
    d. Ask the United States Department of Education to include all terms of PSLF in the contractual obligations of the Master Promissory Note.
    e. Encourage the Accreditation Council for Graduate Medical Education (ACGME) to require residency/fellowship programs to include within the terms, conditions, and benefits of program appointment information on the employer's PSLF program qualifying status.
    f. Advocate that the profit status of a physician's training institution not be a factor for PSLF eligibility,
    g. Encourage medical school financial advisors to counsel wise borrowing by medical students, in the event that the PSLF program is eliminated or severely curtailed.
    h. Encourage medical school financial advisors to increase medical student engagement in service-based loan repayment options, and other federal and military programs, as an attractive alternative to the PSLF in terms of financial prospects as well as providing the opportunity to provide care in medically underserved areas.

i. Strongly advocate that the terms of the PSLF that existed at the time of the agreement remain unchanged for any program participant in the event of any future restrictive changes.
j. Monitor the denial rates for physician applicants to the PSLF.
k. Undertake expanded federal advocacy, in the event denial rates for physician applicants are unexpectedly high, to encourage release of information on the basis for the high denial rates, increased transparency and streamlining of program requirements, consistent and accurate communication between loan servicers and borrowers, and clear expectations regarding oversight and accountability of the loan servicers responsible for the program.
l. Work with the United States Department of Education to ensure that applicants to the PSLF and its supplemental extensions, such as Temporary Expanded Public Service Loan Forgiveness (TEPSLF), are provided with the necessary information to successfully complete the program(s) in a timely manner.
m. Work with the United States Department of Education to ensure that individuals who would otherwise qualify for PSLF and its supplemental extensions, such as TEPSLF, are not disqualified from the program(s).

21. Advocate for continued funding of programs including Income-Driven Repayment plans for the benefit of reducing medical student load burden.
22. Strongly advocate for the passage of legislation to allow medical students, residents and fellows who have education loans to qualify for interest-free deferment on their student loans while serving in a medical internship, residency, or fellowship program, as well as permitting the conversion of currently unsubsidized Stafford and Graduate Plus loans to interest free status for the duration of undergraduate and graduate medical education.
23. Continue to monitor opportunities to reduce additional expense burden upon medical students including reduced-cost or free programs for residency applications, virtual or hybrid interviews, and other cost-reduction initiatives aimed at reducing non-educational debt.
24. Encourage medical students, residents, fellows and physicians in practice to take advantage of available loan forgiveness programs and grants and scholarships that have been historically underutilized, as well as financial information and resources available through the Association of American Medical Colleges and American Association of Colleges of Osteopathic Medicine, as required by the Liaison Committee on Medical Education and Commission on Osteopathic College Accreditation, and resources available at the federal, state and local levels.
25. Support federal efforts to forgive debt incurred during medical school and other higher education by physicians and medical students, including educational and cost of attendance debt.
26. Support that residency and fellowship application services grant fee assistance to applicants who previously received fee assistance from medical school application services or are determined to have financial need through another formal mechanism.

[CME Rep. 05, I-18; Appended: Res. 953, I-18; Reaffirmation: A-19; Appended: Res. 316, A-19; Appended: Res. 226, A-21; Reaffirmed in lieu of : Res. 311, A-21; Modified: CME Rep. 4, I-21; Reaffirmation A-22; Appended: CME Rep. 02, A-23; Appended: Res. 311, A-23; Reaffirmed: Res. 314, A-24; Reaffirmed: Res. 215, I-24; Reaffirmed: BOT Rep. 07, I-24: Reaffirmed in lieu of Res. 224, A-25; Reaffirmed: Res. 308, I-25]

D-305.952 Medical Student Debt and Career Choice

1. Our American Medical Association encourages key stakeholders to collect and disseminate data on the impacts of medical education debt on career choice, especially with regard to the potentially intersecting impacts of race/ethnicity, socioeconomic status, and other key sociodemographic factors.
2. Our AMA will monitor new policies and novel approaches to influence career choice based on the key factors that affect the decision to enter a given specialty and subspecialty.

[CME Rep. 4, I-21; Reaffirmed: CME Rep. 02, A-23]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 312
(A-26)

Introduced by: American College of Legal Medicine

Subject: Advocating for Equitable Application Review in a Single Match System

Referred to: Reference Committee C

Whereas, both Doctors of Osteopathic Medicine (D.O.) and Doctors of Medicine (M.D.) are fully licensed physicians in the United States, completing rigorous, and necessary education and clinical training to practice medicine; and

Whereas, our American Medical Association (AMA) discourages discrimination against medical students, trainees and physicians based on their osteopathic or allopathic training; and

Whereas, our AMA supports equitable access to and fees associated with clinical electives for both osteopathic and allopathic medical students; and

Whereas, the Association of American Medical Colleges (AAMC) Visiting Student Learning Opportunities (VSLO) program provides tools that enable host institutions offering elective rotations to use applicant filters as a management tool that can discriminate by training institution; and

Whereas, in addition to the AAMC application service fees, host institutions can charge enormous fees for clinical rotations, with documented reports of great disparity in host institution fees for D.O. versus M.D. applicants; and

Whereas, a single, unified accreditation system for graduate medical education has been supported by our AMA and fully implemented, signifying that D.O. and M.D. graduates meet the same professional standards and compete for the same residency and fellowship positions; and

Whereas, the professional competence of a student, trainee or physician is determined by a wide array of factors, including academic performance, clinical skills, research, and interpersonal attributes; and

Whereas, the distinction between D.O. and M.D. is irrelevant to the vast majority of graduate medical education curricula and should therefore only be considered in the evaluation of an applicant if a program requires specific training in the osteopathic component (e.g., Osteopathic Manipulative Treatment or Osteopathic Neuromusculoskeletal Medicine); and

Whereas, application platforms, such as the Electronic Residency Application Service (ERAS), provide program directors with built-in software tools to apply filters that automatically screen, sort, or hide applications based on specific criteria, including the applicant's medical degree type; and

Whereas, this mechanism for easy differentiation with the filter allows for simplistic, initial screening and filtering of applicants that may inadvertently exclude highly qualified candidates by prematurely ending the review process based on a single data point; and

Whereas, reliance on the degree designation prevents institutions from conducting a comprehensive review of a candidate's full profile, thereby limiting their access to a diverse and highly qualified pool of physicians and inappropriately affects the osteopathic profession; and

Whereas, adopting equitable, competency-based selection criteria that value clinical excellence and broad professional experience over a single data point is in the best interest of all medical institutions and the patients they serve; therefore be it

RESOLVED, that our American Medical Association collaborate with its partners to advocate for and ensure the removal of filters within clinical elective application systems which differentiate between applicants' allopathic or osteopathic degree status (Directive to Take Action); and be it further

RESOLVED, that our AMA collaborate with its partners to advocate for and ensure the removal of all filters within the residency and fellowship application systems which differentiate between allopathic and osteopathic degree status (Directive to Take Action); and be it further

RESOLVED, that our AMA provide a report at A-28 on the status of filtering by degree status within clinical elective application, residency and fellowship application systems (Directive to Take Action); and be it further

RESOLVED, that our AMA reaffirm H-295.876: Equal Fees for Osteopathic and Allopathic Medical Students and H-295.848: Teaching and Assessing Osteopathic Manipulative Medicine and Osteopathic Principles and Practice. (Reaffirm HOD Policy)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/19/26

RELEVANT AMA POLICY

H-295.876: Equal Fees for Osteopathic and Allopathic Medical Students
H-295.848: Teaching and Assessing Osteopathic Manipulative Medicine and Osteopathic Principles and Practice
D-310.977: National Resident Matching Program Reform

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 313
(A-26)

Introduced by: Medical Student Section

Subject: Evaluation of Situational Judgement Tests in Medical School Admissions

Referred to: Reference Committee C

Whereas, medical school applicants face substantial barriers, and the application process itself is becoming increasingly inaccessible to students, being both monetarily and mentally taxing[1-2, 18-19]; and

Whereas, situational judgment tests (SJT) are video- and text-based examinations that evaluate an applicant's judgment and decision-making skills, interpersonal competencies, professionalism, ethics, and empathy[3]; and

Whereas, 64 medical schools require or recommend, two common SJTs in medical school admissions[4-5]; and

Whereas, despite medical students and applicants overwhelmingly calling for greater transparency in admissions processes, medical schools rarely elaborate on how these examinations are used in admissions[6]; and

Whereas, while SJTs may play a role in a holistic admissions process, they do not replace existing, more personal methods of interpersonal evaluations, such as multiple mini-interviews[7]; and

Whereas, holistic evaluation of a candidate is impossible to successfully conduct in a timed SJT[8]; and

Whereas, there is little to no correlation between performance on SJTs and both academic success and likelihood of disciplinary action[9,10]; and

Whereas, SJT scores show significant group differences by race, ethnicity, and gender, and provide only modest predictive value beyond traditional metrics such as MCAT and GPA, raising equity concerns[11-16]; and

Whereas, the AMA itself has encouraged caution when utilizing novel online personality assessments for admission and/or selection for residency and fellowship programs[17]; therefore be it

RESOLVED, that our American Medical Association work with the Association of American Medical Colleges, the American Association of Colleges of Osteopathic Medicine, and other relevant stakeholders to evaluate the utilization of situational judgment tests, and other similar online decision-making assessments in the medical school admissions process and determine whether or not this style of examination meets the AMA's stated goal of holistic applicant review, unbiased by non-modifiable factors. (Directive to Take Action)

Fiscal Note: Modest – between $5,000 - $10,000

Received: 4/20/2026

RELEVANT AMA POLICY

Medical Student Involvement and Validation of the Standardized Video Interview Implementation D-310.949

Our AMA: (1) will work with the Association of American Medical Colleges and its partners to advocate for medical students and residents to be recognized as equal stakeholders in any changes to the residency application process, including any future working groups related to the residency application process; (2) will advocate for delaying expansion of the Standardized Video Interview until data demonstrates the Association of American Medical Colleges' stated goal of predicting resident performance, and make timely recommendations regarding the efficacy and implications of the Standardized Video Interview as a mandatory residency application requirement; and (3) will, in collaboration with the Association of American Medical Colleges, study the potential implications and repercussions of expanding the Standardized Video Interview to all residency applicants.
Res. 960, I-17

Increasing Medical School Class Sizes D-295.938

Our AMA supports increasing the number of medical students, provided that such expansion would not jeopardize the quality of medical education.

Res. 309, A-08 Reaffirmed: CME Rep. 01, A-18

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

Our American Medical Association, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following:

Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school.

Diversity or minority affairs offices at medical schools.

Financial aid programs for students from groups that are underrepresented in medicine.

Financial support programs to recruit and develop faculty members from underrepresented groups.

Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.

Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.

Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.

Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.

Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.

Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.

Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.

Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.

Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).

Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.

Our AMA unequivocally opposes legislation that would dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population.

Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

CME Rep. 1, I-06 Reaffirmation I-10 Reaffirmation A-13 Modified: CCB/CLRPD Rep. 2, A-14 Reaffirmation: A-16 Appended: Res. 313, A-17 Appended: Res. 314, A-17 Modified: CME Rep. 01, A-18 Appended: Res. 207, I-18 Reaffirmation: A-19 Appended: Res. 304, A-19 Appended: Res. 319, A-19 Modified: CME Rep. 5, A-21 Modified: CME Rep. 02, I-22 Modified: Res. 320, A-23 Reaffirmed: CME Rep. 06, A-25

Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process D-310.945

Our AMA will encourage medical schools, medical honor societies, and residency/fellowship programs to work toward ethical, equitable, and transparent recruiting processes, which are made available to all applicants.

Our AMA will advocate for residency and fellowship programs to avoid using objective criteria available in the Electronic Residency Application Service (ERAS) application process as the sole determinant for deciding which applicants to offer interviews.

Our AMA will advocate to remove membership in medical honor societies as a mandated field of entry on the Electronic Residency Application Service (ERAS)—thereby limiting its use as an automated screening

mechanism—and encourage applicants to share this information within other aspects of the ERAS application.
Our AMA will advocate for and support innovation in the undergraduate medical education to graduate medical education transition, especially focusing on the efforts of the Accelerating Change in Medical Education initiative, to include pilot efforts to optimize the residency/fellowship application and matching process and encourage the study of the impact of using filters in the Electronic Residency Application Service (ERAS) by program directors on the diversity of entrants into residency.
Our AMA will encourage caution among medical schools and residency/fellowship programs when utilizing novel online assessments for sampling personal characteristics for the purpose of admissions or selection and monitor use and validity of these tools.
CME Rep. 02, I-22 Reaffirmed: CME Rep. 05, A-25

Ensuring Equity in Interview Processes for Entry to Undergraduate and Graduate Medical Education H-295.844
Our American Medical Association will encourage interested parties to study the impact of different interview formats on applicants, programs, and institutions.
Our AMA will continue to monitor the impact of different interview formats for medical school and graduate medical education programs and their effect upon equity, access, monetary cost, and time burden along with the potential downstream effects upon on applicants, programs, and institutions.
Our AMA recommends that individual medical schools use the same interview format for all applicants to the same class at their institution to promote equity and fairness while allowing for accommodations for individuals with disabilities.
Our AMA recommends that individual graduate medical education programs use the same interview format for all applicants to the same program to promote equity and fairness while allowing for accommodations for individuals with disabilities.
CME Rep. 03, I-23

Educating Competent and Caring Health Professionals H-295.975
(1) Programs of health professions education should foster educational strategies that encourage students to be independent learners and problem-solvers. Faculty of programs of education for the health professions should ensure that the mission statements of the institutions in which they teach include as an objective the education of practitioners who are both competent and compassionate.
(2) Admission to a program of health professions education should be based on more than grade point average and performance on admissions tests. Interviews, applicant essays, and references should continue to be part of the application process in spite of difficulties inherent in evaluating them. Admissions committees should review applicants' extra-curricular activities and employment records for indications of suitability for health professions education. Admissions committees should be carefully prepared for their responsibilities, and efforts should be made to standardize interview procedures and to evaluate the information gathered during interviews. Research should continue to focus on improving admissions procedures. Particular attention should be paid to improving evaluations of subjective personal qualities.
(3) Faculty of programs of education for the health professions must continue to emphasis than they have in the past on educating practitioners who are skilled in communications, interviewing and listening techniques, and who are compassionate and technically competent. Faculty of health professions education should be attentive to the environment in which education is provided; students should learn in a setting where respect and concern are demonstrated. The faculty and administration of programs of health professions education must ensure that students are provided with appropriate role models; whether a faculty member serves as an appropriate role model should be considered when review for promotion or tenure occurs. Efforts should be made by the faculty to evaluate the attitudes of students toward patients. Where these attitudes are found lacking, students should be counseled. Provisions for dismissing students who clearly indicate personality characteristics inappropriate to practice should be enforced.
(4) In spite of the high degree of specialization in health care, faculty of programs of education for the health professions must prepare students to provide integrated patient care; programs of education should promote an interdisciplinary experience for their students.
BOT Rep. NN, A-87 Modified: Sunset Report, I-97 Reaffirmed: CME Rep. 2, A-07 Reaffirmed: CME Rep. 01, A-17

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 314
(A-26)

Introduced by: Medical Student Section, LGBTQ+ Section

Subject: Promoting Sex- and Gender-Inclusive Diagnostic Practices, Language, and Patient Education

Referred to: Reference Committee C

Whereas, current medical literature demonstrates robust evidence of systemic disparities in diagnostic and treatment delays for female patients compared to their male counterparts across multiple areas of medicine; and

Whereas, in GI medicine, women with IBD have significantly longer diagnostic delays and higher rates of misdiagnosis compared to men despite similar clinical presentations associated with worse patient outcomes[1,2]; and

Whereas, in rheumatology, women have higher rates of misdiagnosis and diagnostic delays when presenting with spondyloarthritis associated with higher rates of disability and more advanced disease, with recent evidence suggesting clinician expectations and documentation biases may contribute to this disparity[3,4]; and

Whereas, in neurology, women hospitalized due to ischemic stroke were less likely to receive standard diagnostic testing/imaging and less likely to be evaluated by a stroke specialist[5]; and

Whereas, cardiology is the field with the most notable differences in diagnostic timeline and treatment interventions for women compared to men, with women more likely to have a missed angina diagnosis despite similar symptoms [8,9]; and

Whereas, women experiencing Acute coronary syndrome (ACS) are more likely to have delays in diagnosis after hospital presentation, are less likely to receive evidence based medication therapy, are less likely to be treated with cardiac catheterization and receive timely reperfusion, are more likely to experience prolonged “door-to-balloon” times, and have increased rates of in-hospital mortality, repeat MI, stroke, and major bleeding[10-14]; and

Whereas, despite coronary heart disease being a leading cause of morbidity and mortality amongst American women, common signs/symptoms that women present with are often described as ‘atypical’[15,16]; and

Whereas, multiple studies have found that describing common female presentations as ‘atypical’ likely contributes to diagnostic and treatment delays, suggesting that this term should be retired from medical education and literature[17-20]; therefore be it

RESOLVED, that our American Medical Association supports discontinuing use of the term ‘atypical’ to describe sex- and gender-based differences in symptomatic presentations in medical education curriculum and reference materials. (New HOD Policy)

RELEVANT AMA POLICY

H-410.946 Decreasing Sex and Gender Disparities in Health Outcomes

Our AMA: (1) supports the use of decision support tools that aim to mitigate gender bias in diagnosis and treatment; and (2) encourages the use of guidelines, treatment protocols, and decision support tools specific to biological sex for conditions in which physiologic and pathophysiologic differences exist between sexes. [Res. 005, A-18]

H-295.890 Medical Education and Training in Women's Health

1. Our American Medical Association encourages the coordination and synthesis of the knowledge, skills, and attitudinal objectives related to women's health/gender-based biology that have been developed for use in the medical school curriculum. Medical schools should include attention to women's health throughout the basic science and clinical phases of the curriculum.
2. Our AMA does not support the designation of women's health as a distinct new specialty.
3. Our AMA supports that each specialty should define objectives for residency training in women's health, based on the nature of practice and the characteristics of the patient population served.
4. Our AMA supports surveys of undergraduate and graduate medical education, conducted by the AMA and other groups, should periodically collect data on the inclusion of women's health in medical school and residency training.
5. Our AMA encourages the development of a curriculum inventory and database in women's health for use by medical schools and residency programs.
6. Our AMA encourages physicians to include continuing education in women's health/gender-based biology as part of their continuing professional development.
7. Our AMA encourages its representatives to the Liaison Committee on Medical Education, the Accreditation Council for Graduate Medical Education (ACGME), and the various ACGME Review Committees to promote attention to women's health in accreditation standards.
8. Our AMA will work with the ACGME to protect patient access to important reproductive health services by advocating for all family medicine residencies to provide comprehensive women's health, including training in contraceptive counseling, family planning, and counseling for unintended pregnancy.
9. Our AMA encourages the ACGME to ensure clarity when making revisions to the educational requirements and expectations of family medicine residents in comprehensive women's health topics.

[Jt. Rep. CME and CSA, A-99; Reaffirmed: CME Rep. 2, A-09; Reaffirmed: CME Rep. 01, A-19; Appended: CME Rep. 01, A-23]

H-180.944 Plan for Continued Progress Toward Health Equity

Health equity, defined as optimal health for all, is a goal toward which our American Medical Association will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity. [BOT Rep. 33, A-18; Reaffirmed: CMS Rep. 5, 1-21; Reaffirmed: CMS Rep. 1, 1-23; Reaffirmed: BOT Rep. 30, A-24]

H-525.988 Sex and Gender Differences in Medical Research,

Our AMA:

(1) reaffirms that gender and sex exclusion in broad medical studies questions the validity of the studies' impact on the health care of society at large;

(2) affirms the need to include people of all sexes and gender identities and expressions in studies that involve the health of society at large and publicize its policies;

(3) supports increased funding into areas of women's health and sexual and gender minority health research;

(4) supports increased research on women's health and sexual and gender minority health and the participation of women and sexual and gender minority communities in clinical trials, the results of which will permit development of evidence-based prevention and treatment strategies for all women and sexual and gender minority individuals from diverse cultural and ethnic groups, geographic locations, and socioeconomic status;

(5) recommends that all medical/scientific journal editors require, where appropriate, a sex-based and gender-based analysis of data, even if such comparisons are negative; and

(6) recommends that medical and scientific journals diversify their review processes to better represent women and sexual and gender minority individuals;

(7) supports the FDA's requirement of actionable clinical trial diversity action plans from drug and device sponsors that include women and sexual and gender minority populations;

(8) supports the FDA's efforts in conditioning drug and device approvals on post-marketing studies which evaluate the efficacy and safety of those products in women and sexual and gender minority populations when those groups were not adequately represented in clinical trials; and

(9) supports and encourages the National Institutes of Health and other grant-making entities to fund

post-market research investigating pharmacodynamics and pharmacokinetics for generic drugs that did not adequately enroll women and sexual and gender minority populations in their clinical trials, prioritizing instances when those populations represent a significant portion of patients or reported adverse drug events. [Res. 80, A-91Appended: CSA Rep. 4, I-00Modified: CSAPH Rep. 1, A-10Reaffirmed: CSAPH Rep. 05, A-16Modified: Res. 004, A-23Modified: CSAPH Rep. 04, A-24]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 315
(A-26)

Introduced by: Medical Student Section, Underrepresented in Medicine Advocacy Section, Hawaii, Washington, Oregon

Subject: Expanding the Native Hawaiian Health Scholarship Program Eligibility

Referred to: Reference Committee C

Whereas, the federal U.S. government has a legal trust obligation to provide quality health care to American Indian and Alaska Native (AI/AN) and Native Hawaiian (NH) populations, as affirmed through treaties, statutes, and executive orders [1-3]; and

Whereas, despite the federal obligation to improve NH health, NH continue to experience disproportionately high rates of chronic disease, including diabetes, cardiovascular disease, and cancer, requiring co-management across specialties, as well as significantly lower life expectancy compared to non-Native populations [4-20]; and

Whereas, data show that NH representation is declining across multiple medical specialties and there are current specialty gaps in Hawai'i's physician workforce [21-22]; and

Whereas, research indicates that racial/ethnic concordance between NH patients and their physicians has been associated with improvements in patient-physician communication, greater time spent with physicians, improved shared decision-making, improved patient understanding of disease risk, improved medication adherence, decreased wait times for treatment, improved preventive health screenings, and decreased implicit bias from clinicians [23-24]; and

Whereas, Native Hawaiian and Pacific Islanders (NHPI) are critically underrepresented in the medical workforce and among medical trainees, with NHPI medical students representing the smallest proportion of any racial/ethnic group in U.S. medical schools (0.4%)[8-9, 21, 25-28]; and

Whereas, to fulfill federal trust obligations and workforce shortages, the Native Hawaiian Health Scholarship Program (NHHSP) was implemented as a part of the Native Hawaiian Health Care System and has been effective in increasing the number of NH primary care health professionals serving NH communities in Hawai'i [29]; and

Whereas, the current eligibility for NHHSP and comparable service scholarships such as the IHS Scholarship exclude NH healthcare trainees planning to pursue primary care who serve diaspora NHs, as well as NH healthcare trainees pursuing specialized fields such as oncology, cardiology, nephrology, and psychiatry, who serve NH patients [10, 27, 29-30]; therefore be it

RESOLVED, that our American Medical Association support expanded funding and eligibility requirements for the Native Hawaiian Health Scholarship Program (NHHSP), or an equivalent program, to include Native Hawaiian trainees who provide specialized healthcare services. (New HOD Policy)

RELEVANT AMA POLICY

H-270.950 Indian Health Service Licensing Exemptions
Our American Medical Association will work with interested parties to evaluate existing regulatory and licensure opportunities and barriers to physician participation in health care services for Native Americans, Alaska Natives, and Native Hawaiians. [Res. 312, A-23.]

D-200.982 Diversity in the Physician Workforce and Access to Care
1. Our American Medical Association will continue to advocate for programs that promote diversity in the US medical workforce, such as pipeline programs to medical schools.
2. Our AMA will continue to advocate for adequate funding for federal and state programs that promote interest in practice in underserved areas, such as those under Title VII of the Public Health Service Act, scholarship and loan repayment programs under the National Health Services Corps and state programs, state Area Health Education Centers, and Conrad 30, and also encourage the development of a centralized database of scholarship and loan repayment programs.
3. Our AMA will continue to study the factors that support and those that act against the choice to practice in an underserved area, and report the findings and solutions at the 2008 Interim Meeting.

[CME Rep. 7, A-08Reaffirmation A-13Reaffirmation: A-16Reaffirmed: CME Rep. 5, A-21Reaffirmation: Res. 240, A-24Reaffirmed: Res. 308, I-25]

H-295.871 Accelerating Change in Medical Education: Strategies for Medical Education Reform
Our AMA continues to recognize the need for transformation of medical education across the continuum from premedical preparation through continuing physician professional development and the need to involve multiple stakeholders in the transformation process, while taking an appropriate leadership and coordinating role. [CME Rep. 13, A-07Reaffirmed: CME Rep. 01, A-17]

D-180.981 Plan for Continued Progress Toward Health Equity
Our AMA will develop an organizational unit, e.g., a Center or its equivalent, to facilitate, coordinate, initiate, and track AMA health equity activities. The Board will provide an annual report to the House of Delegates regarding AMA's health equity activities and achievements. [BOT Rep. 33, A-18]

H-305.925 Principles of and Actions to Address Medical Education Costs and Student Debt
The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will: Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit: inclusion of all medical specialties in need, and service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas...Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties...[CME Report 05, I-18; Appended: Res. 953, I-18; Reaffirmation: A-19; Appended: Res. 316, A-19; Appended: Res. 226, A-21; Reaffirmed in lieu of: Res. 311, A-21; Modified: CME Rep. 4, I-21; Reaffirmation: A-22; Appended: CME Rep. 02, A-23; Appended: Res. 311, A-23; Reaffirmed: Res. 314, A-24; Reaffirmed: Res. 215, I-24; Reaffirmed: BOT Rep. 07, I-24 Reaffirmed in lieu of: Res. 224, A-25Reaffirmed: Res. 308, I-25].

H-350.976 Improving Health Care of American Indians and Alaska Natives

1. Our American Medical Association recommends that all individuals, special interest groups, and levels of government recognize the American Indian and Alaska Native people as full citizens of the US, entitled to the same equal rights and privileges as other US citizens.
2. Our AMA recommends that the federal government provide sufficient funds to support needed health services for American Indians and Alaska Natives.
3. Our AMA recommends that state and local governments give special attention to the health and health-related needs of nonreservation American Indians and Alaska Natives in an effort to improve their quality of life.
4. Our AMA recommends that American Indian and Alaska Native religious and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
5. Our AMA recognizes practitioners of Indigenous medicine as an integral and culturally necessary individual in delivering health care to American Indians and Alaska Natives.
6. Our AMA monitors Medicaid Section 1115 waivers that recognize the value of traditional American Indian and Alaska Native healing services as a mechanism for improving patient-centered care and health equity among American Indian and Alaska Native populations when coordinated with physician-led care.
7. Our AMA supports consultation with Tribes to facilitate the development of best practices, including but not limited to culturally sensitive data collection, safety monitoring, the development of payment methodologies, healer credentialing, and tracking of traditional healing services utilization at Indian Health Service, Tribal, and Urban Indian Health Programs.
8. Our AMA recommends strong emphasis be given to mental health programs for American Indians and Alaska Natives in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
9. Our AMA recommends a team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
10. Our AMA will continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
11. Our AMA recommends that state and county medical associations establish liaisons with intertribal health councils in those states where American Indians and Alaska Natives reside.
12. Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian and Alaska Native health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians and Alaska Natives.
13. Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and Alaska Natives and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 316
(A-26)

Introduced by: Resident and Fellow Section

Subject: Addressing Transitions Within GME Regarding Orientation Standards

Referred to: Reference Committee C

Whereas, in 2025, thousands of new trainees entered categorical residency, started advanced residency, and started fellowship; and

Whereas, the official start date of most ACGME programs is July 1 or August 1; and

Whereas, sometimes residents and fellows are unable to start on the official start date including due to visa delays; and

Whereas, incoming fellows are often required to utilize vacation time to go to orientation at the end of their residency; and

Whereas, many incoming fellows are contractually obligated to provide coverage up until June 30th of their last day of residency; and

Whereas, these transitions in training often lead to gaps in salary and necessary benefits for trainees, including but not limited to health insurance; and

Whereas, students who enroll in the school-sponsored health insurance plan at medical colleges such as NYU Grossman School of Medicine, Northwestern University, Emory University School of Medicine and the University of Rochester extend health insurance coverage through the end of June or later of the respective graduate year to accommodate coverage gaps caused by transitions in training; and

Whereas, these logistical challenges create difficulty in transitioning in graduate medical education, especially for those who need to relocate for training; and

Whereas, creating a staggered start date to fellowship following the end of residency would lead to improved transitions between residency and fellowship by allowing incoming fellows adequate time to relocate and onboard at their new institution; therefore be it

RESOLVED, that our American Medical Association study mechanisms for training programs to provide residents and fellows with necessary benefits, including but not limited to health insurance, during transitions in undergraduate and graduate medical education (Directive to Take Action); and be it further

RESOLVED, that our AMA study the benefits of flexible start dates as it relates to reducing logistical and financial burdens on trainees, including but not limited to the following transitions: (1) from medical school to residency; (2) from a transitional or preliminary year to residency; and (3) from residency into fellowship. (Directive to Take Action)

Fiscal Note: Minimal – less than $5,000

Received: 4/21/26

RELEVANT AMA POLICY

Residents and Fellows' Bill of Rights H-310.912
1. Our American Medical Association continues to advocate for improvements in the ACGME Institutional and Common Program Requirements that support AMA policies as follows:

a. Adequate financial support for and guaranteed leave to attend professional meetings.
b. Submission of training verification information to requesting agencies within 30 days of the request.
c. Adequate compensation with consideration to local cost-of-living factors and years of training, and to include the orientation period.
d. Health insurance benefits to include dental and vision services.
e. Paid leave for all purposes (family, educational, vacation, sick) to be no less than six weeks per year.
f. Stronger due process guidelines. […]

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 317
(A-26)

Introduced by: Resident and Fellow Section

Subject: Support for Intern, Resident, and Fellow Jeopardy Pay and Additional Compensation for Gaps in Trainee Coverage

Referred to: Reference Committee C

Whereas, interns, residents, and fellows serve in frontline roles that are critical to patient care, including last-minute coverage of inpatient services, consults, rounding, clinics, overnight call, home call, and operating room time when colleagues are unavailable due to unexpected leave, illness, or emergencies; and

Whereas, this coverage system, often referred to as “jeopardy,” typically relies on interns, residents, and fellows from elective rotations to absorb colleagues’ clinical responsibilities, thereby adding significant unplanned workload and stress; and

Whereas, surgical trainees, in particular, may bear a disproportionate jeopardy burden compared to non-surgical trainees due to limited backup and operative coverage, often having to manage additional patients on service while simultaneously covering operative responsibilities, amplifying risk to both trainees and patients; and

Whereas, jeopardy coverage among interns, residents, and fellows may also be utilized to accommodate increased patient volume; and

Whereas, an analysis of 31 institutions found that hospital medicine jeopardy systems contribute to physician dissatisfaction due to their unpredictability, highlighting the potential of equitable compensation models as a solution[1]; and

Whereas, certain residency and fellowship programs require shift “payback” for jeopardy coverage (such as using days off and/or vacation to compensate for sick leave), a practice that exacerbates burnout by discouraging appropriate use of sick time, incentivizing physicians to work while ill, and risking violations of duty hour regulations, thereby undermining physician well-being and patient safety in direct conflict with Accreditation Council for Graduate Medical Education (ACGME) policy 6.14.b[2]; and

Whereas, jeopardy assignments impose additional burdens on interns, residents, and fellows, disrupting essential rest and recovery, limiting time for family and personal health needs, and undermining overall well-being and work-life integration due to unpredictability of call-ins; and

Whereas, there is precedent for jeopardy pay, such as at the University of California, San Francisco Department of Surgery, where jeopardized residents are compensated at the standard moonlighting rate, and at the Stanford Department of Medicine, where internal

medicine residents receive $2,500 for a day shift and $3,000 for a night shift related to patient-volume jeopardy;[3] and

Whereas, the ACGME has increasingly emphasized physician well-being, yet current compensation structures fail to recognize the additional professional, personal, and familial strain associated with jeopardy assignments;[2,4] and

Whereas, ACGME policy 6.14.a. states, "the program must have policies and procedures in place to ensure coverage of patient care and ensure continuity of patient care," but does not require equitable compensation; and

Whereas, a fair and equitable system would provide monetary compensation to interns, residents, and fellows for being "jeopardized" to cover essential shifts, recognizing that the costs of burnout, fatigue, and potential patient safety risks far outweigh the financial impact of jeopardy pay; therefore be it

RESOLVED, that our American Medical Association supports standardized compensation ("jeopardy pay"), provided in addition to base salary and benefits, for interns, residents, and fellows who are required to cover unscheduled ("jeopardy") shifts or additional duties, and encourages programs to adopt transparent and equitable compensation structures that account for specialty-specific burdens. (New HOD Policy)

Fiscal Note: Minimal – less than $5,000

REPORT OF THE BOARD OF TRUSTEES

BOT Report 17-A-26

Subject:	Supporting the Integration of Blood Pressure Variability Data in Electronic Medical Records Report
Presented by:	David H. Aizuss, MD, Chair
Referred to:	Reference Committee D

BACKGROUND

At the 2025 Annual Meeting, resolution 424, "Supporting the Integration of Blood Pressure Variability Date in Electronic Medical Records," was introduced by the Ohio delegation and was referred. It asks the following:

> RESOLVED that our AMA support the integration of blood pressure variability data into electronic medical records, emphasizing automated calculation capabilities similar to those established for body mass index; and be it further
>
> RESOLVED that our AMA support research efforts to establish pathological Blood Pressure Variability thresholds to guide dietary and exercise recommendations, sleep evaluation, risk stratification, and other evidence-based interventions by healthcare providers.

DISCUSSION

Blood pressure (BP) measurement is one of the most common procedures performed in the clinical setting and accurate BP measurement is essential to assess, diagnose, and treat hypertension. Hypertension is the most prevalent, modifiable cardiovascular disease risk factor and is the leading cause of death and disability worldwide.[1] According to the 2026 Heart Disease and Stroke Statistics, the prevalence of hypertension among US adults was 47.3 percent in 2021 to 2023.[2]

Blood pressure naturally varies throughout the day, from the time a person wakes up in the morning through sleeping overnight, due to factors including environmental circumstances, physical activity, and emotional stress. Blood pressure variability (BPV) refers to these changes in blood pressure that occur over different time periods.[3,4] Excessive long-term blood pressure variability is suggested to be defined as variation in measurements greater than 12 mm Hg, determined by deriving the standard deviation of ideally 6-7 or more clinic-based BP measurements, but this has been debated among scientific scholars.[5,6] Long term variability has

been defined as clinic visit-to-visit variability, over months or years, and can be influenced by factors such as time of year (seasonal variability) and vascular stiffness. Very short-term variability occurs beat-to-beat, short-term variability occurs over a 24-hour period, and mid-term variability is defined as variability seen day-to-day (or between days).[7,8] Blood pressure variability can be calculated using standard deviation, the coefficient of variation, or variance, independent of the mean. The coefficient of the mean can be calculated by dividing the standard deviation by the mean blood pressure.[9]

Multiple studies have shown that long term BPV is associated with cardiovascular events (including stroke, myocardial infarction, coronary heart disease, and heart failure) and mortality outcomes, independent of mean blood pressure. Both mid-term and short-term BPV are associated with mortality outcomes and with poor cardiovascular outcomes (noting the link to cardiovascular outcomes is suggested to be supported by limited data).[10]

There is growing recognition of blood pressure variability as an important cardiovascular risk factor and BPV can act as a predictor of cardiovascular risk independent of average blood pressure, however it is not currently included in standardized management guidelines as a therapeutic target.[11] It has been suggested that future research is needed to better understand the pathophysiology of target-organ damage and to define the physiological and pathological ranges of BPV.[12]

Electronic Health Record Integration of Blood Pressure Variability

Integration of blood pressure variability data into electronic health records would provide physicians and clinical teams with additional data to assess visit-to-visit BPV risk.[13] Automated calculation capabilities in the electronic health record (EHR) takes the burden off clinical teams to manually calculate and enter data into the system. Currently, there is no diagnosis code (ICD-10-CM) for blood pressure variability.

Lifestyle Approaches to Reduce Blood Pressure Variability

It has been proven that lifestyle modifications are critically important strategies to prevent or manage high blood pressure and hypertension. A meta-analysis conducted to assess the effectiveness of lifestyle and stress-reduction strategies for lowering BP found that the Dietary Approach to Stop Hypertension (DASH) eating plan was the most effective intervention followed by aerobic exercise, isometric resistance training, and low-sodium/high potassium salt interventions. The 2025 Guideline for the Prevention, Detection, Evaluation and Management of Hypertension outlines the approximate reduction in systolic blood pressure (SBP) for proven interventions for people with and without hypertension; for example, the DASH diet lowers SBP in patients with hypertension by approximately 5 to 8 mm Hg.[14]

The risk of adverse blood pressure variability-related outcomes may be reduced through lifestyle changes. The DASH diet, potassium supplements, reducing salt intake, engaging in moderate intensity and isometric exercises, managing stress, and quality sleep are associated with reducing BPV.[15]

Medication

As a note, several anti-hypertensive medication classes have been shown in trials to reduce blood pressure variability, such as angiotensin-converting enzyme inhibitors (ACEi) and angiotensin receptor blockers (ARBs) compared to other anti-hypertensive medications.[16]

AMA Commitment to Reducing the Burden of Chronic Diseases

The AMA MAP™ Hypertension clinical quality improvement program was designed to improve blood pressure control rates by addressing barriers to blood pressure measurement, treatment intensification, and patient engagement. The program is offered at no cost and has demonstrated effectiveness in a variety of health care settings from large health care organizations (HCO) to community health centers.

In 2024, the AMA was awarded multi-year funding as part of the Centers for Disease Control and Prevention's National Partners Cooperative Agreement. One of the initiatives is to prevent heart attacks and strokes, via improvement in blood pressure control and cholesterol management, in populations served by Community Health Centers/Federally Qualified Health Centers.

The AMA endorsed and participated in the writing and evidence-review committees for the 2025 Guideline for the Prevention, Detection, Evaluation and Management of High Blood Pressure in Adults: A Report of the American College of Cardiology/American Heart Association Joint Committee on Clinical Practice Guidelines. This guideline provides clinical teams with recommendations for patients who have or are at risk for developing cardiovascular disease.

The AMA currently devotes resources towards advancing the functionality of health information technology (HIT), including (EHRs, to support the use of average blood pressure, self-monitoring, and remote patient monitoring. In 2023, the AMA was successful in getting average blood pressure included in the US Core for Data Interoperability (USCDI). The USCDI is a federally mandated data set that EHR systems are required to support. The USCDI contains over 100 elements including patient demographic information, vital signs, problems, and procedures. The USCDI enables EHRs and other certified HIT to capture, exchange, and use standardized medical information. The Centers for Medicare and Medicaid Services also recognizes the USCDI in its physician and hospital reporting programs, e.g., the Quality Payment Program.

The examples above are not inclusive of all the work the AMA has done to improve hypertension control and reduce the burden of chronic disease. AMA's continued work and commitment support ongoing research and policy development to provide physicians and clinical teams with guidance to address BPV and improve patient outcomes.

Existing AMA Policy

Pharmacist in Hypertension Screening H-425.998
(1) Physicians should encourage the establishment of adequate training programs in blood pressure measurement, under the supervision of qualified physicians or other qualified personnel,

for pharmacists and other non-physicians in order to assure adequate personnel for hypertension screening programs. (2) The medical profession should participate in the development of programs which ensure an adequate system for monitoring blood pressure measurement and referring patients when indicated to physicians. (3) Community programs should be established to educate the public on the importance of participation in screening programs and adherence to subsequently prescribed courses of therapy, with periodic blood pressure measurement and evaluation of the effectiveness of the therapeutic regimen by licensed physicians. (4) The particular program to be implemented in any community should receive the full support of the medical profession and be built upon the existing community facilities and health personnel resources, taking into consideration applicable state legal restriction or requirements.

Genomics in Hypertension: Risk Prediction and Treatment H-460.901
Our American Medical Association encourages continued research on the genetic control of blood pressure, including in pediatric populations, and the development of genomic-based tools that may assist health professionals in better predicting risk and targeting therapy for hypertension, and supports the view that hypertension clinical trial designs should attempt to reduce phenotypic heterogeneity in order to improve the quality and interpretation of results.

Non-Physician Measurement of Body Functions H-35.990
In the public interest, the AMA recommends that non-physicians who perform tests such as blood pressure or blood sugar measurements advise the examinee to communicate these findings to their personal physician.

Medical Evaluation of Healthy Persons H-425.994
The AMA supports the following principles of healthful living and proper medical care: (1) The periodic evaluation of healthy individuals is important for the early detection of disease and for the recognition and correction of certain risk factors that may presage disease. (2) The optimal frequency of the periodic evaluation and the procedures to be performed vary with the patient's age, socioeconomic status, heredity, and other individual factors. Nevertheless, the evaluation of a healthy person by a physician can serve as a convenient reference point for preventive services and for counseling about healthful living and known risk factors. (3) These recommendations should be modified as appropriate in terms of each person's age, sex, occupation and other characteristics. All recommendations are subject to modification, depending upon factors such as the sensitivity and specificity of available tests and the prevalence of the diseases being sought in the particular population group from which the person comes. (4) The testing of individuals and of population groups should be pursued only when adequate treatment and follow-up can be arranged for the abnormal conditions and risk factors that are identified. (5) Physicians need to improve their skills in fostering patients' good health, and in dealing with long recognized problems such as hypertension, obesity, anxiety and depression, to which could be added the excessive use of alcohol, tobacco and drugs. (6) Continued investigation is required to determine the usefulness of test procedures that may be of value in detecting disease among asymptomatic populations.

CONCLUSION

This report highlights the current known association of blood pressure variability with

cardiovascular events and mortality outcomes. Future research is needed to standardize definitions, e.g. excessive BPV, measurement protocols, and establish pathological BPV thresholds and clinical pathways/protocols to guide physicians and clinical teams in providing evidence-based interventions to improve patient outcomes. AMA has existing policy on the importance of blood pressure measurement in multiple settings but currently has nothing specific to blood pressure variability.

RECOMMENDATION

The Board of Trustees recommends that Resolution 424-A-25 be amended by addition and the remainder of the report be filed.

> That our AMA support additional research efforts to establish pathological Blood Pressure Variability thresholds to guide dietary and exercise recommendations, sleep evaluation, risk stratification, and other evidence-based interventions by healthcare providers; and be it further (New HOD Policy)
>
> That our American Medical Association support the integration of blood pressure variability data into electronic medical records, emphasizing automated calculation capabilities similar to those established for body mass index once additional research has been published on this topic, including peer-reviewed evidence establishing clinical utility, reproducibility of blood pressure variability metrics, and such research has informed recommendations or guidance from relevant clinical and public health authorities. (New HOD Policy)

REPORT OF THE BOARD OF TRUSTEES

BOT Report 29-A-26

Subject: Educational Materials Regarding Ultra-processed Foods

Presented by: David H. Aizuss, MD, Chair

Referred to: Reference Committee D

At the 2025 Annual Meeting of the American Medical Association (AMA) House of the Delegates (HOD), the first Resolve of 601-A-25 was adopted while the second was referred, which asked that:

> Our AMA work with select organizations in the HOD to develop patient educational materials in English and Spanish with regards to the health impact of ultra processed foods as well as pathways for personal dietary options as alternatives to ultra processed foods; and, that such developed materials will be provided by the AMA to members who request them for distribution to their patients.

BACKGROUND

An overwhelming majority of food in our modern society has been 'processed' to some degree (e.g., through fermentation, pasteurization, milling, or refining) but ultra-processed foods (UPFs) represent a category of food that are produced almost entirely from industrially processed ingredients. UPF are generally considered foods that are made with "formulations of ingredients, mostly of exclusive industrial use, that result from a series of industrial processes."[1] While there is not a single standard definition of "ultra-processed," the NOVA classification system, a system created by Brazilian nutrition researchers in 2009 that defines foods as ultra-processed based on the level of industrial processing the foods are subjected to, is among one of the most influential (see Appendix to view the different categories of processed food under the NOVA classification system).[2]

UPFs do not represent a 'new' dietary product, but in fact have been a growing component of the food system since World War II. During the war, there were important advances made in food technology and packaging, which accelerated the distribution of processed food which helped prevent starvation for many at the time.[3] Following the war, UPFs were introduced and heavily advertised to the American public.[3] Almost immediately following the introduction of UPFs, there were concerns raised among some physicians about the nutritional quality of these foods and how they could impact health.[3] These concerns have grown over the last thirty years.[3] For example, the number of research papers mentioning UPFs published between 2021 to 2023 increased by over 300 percent compared to the period between 2017 and 2020.[3]

Public health concerns over UPFs are driven by the fact that they are made with little to no whole food ingredients and are produced through numerous industrial processes that can reduce the nutritional value of the product or introduce harmful elements.[4] UPFs also frequently contain large amounts of sodium, sugars, and saturated fats, which have negative health impacts in their own right, as well as artificial colors and other additives to make them more palatable and increase their shelf life.[5] Examples of UPFs include packaged snacks, mass-produced baked goods, breakfast

© 2026 American Medical Association. All rights reserved.

'cereals,' hot dogs, sausages, pre-prepared pasta and pizza dishes. The following discussion summarizes the evidence on health risks associated with UPF consumption, as well as challenges for research in this area, followed by an overview of available educational resources on UPFs for both patients and physicians.

DISCUSSION

Health Impacts of UPF Consumption

Currently, UPFs make up a substantial share of the American diet, and their consumption has grown over time. UPFs have gained prominence in the modern diet due to their affordability, extended shelf life, and convenience.[6] The consumption of ultra-processed foods has grown from 53.5 percent of calories since 2001-2002 to 57 percent in 2017-2018, while the consumption of whole foods has decreased by a similar percentage over the same period.[7] A study looking at data from August 2021–August 2023 found that 55 percent all calories consumed by Americans age one year and older are from UPFs (as defined under the NOVA system).[8] Among youth ages 1–18, the share of calories consumed from UPFs is even higher (61.9 percent).[8] Research has also shown that child-oriented marketing strategies, such as compelling graphic elements (i.e., bright colors); promotional, licensed, or cartoon characters; celebrity endorsers; sportspersons; graphic references to fun and play; and premium collectible offers with toys and child-friendly lettering, are commonly used on labels of UPFs, making them more desirable for young children.[9]

That UPFs constitute such a high proportion of the American diet is a serious concern given the growing evidence showing an association between UPFs and poor health. UPFs, as defined under the NOVA system, are associated with a wide range of health conditions.[10] A 2025 review of the available evidence on UPFs noted plausible mechanisms for adverse health impacts include "nutrient imbalances, overeating, reduced consumption of health-protective phytochemicals, toxic contaminants from processing or packaging, harmful additives and mixtures of additives, and subsequent inflammation, dysglycemia, dyslipidemia, microbiome dysbiosis, and renal or liver dysfunction."[4] Two recent systematic reviews have reported that consumption of UPFs across children and adults is associated with poor health outcomes, such as obesity, cardiovascular disease, and other diet-related diseases, as well as discrepancies across demographic groups that put certain Americans at an elevated risk of high intake and therefore chronic disease.[11,12] Additionally, several epidemiological studies have suggested that increased UPF intake increases the risk of developing chronic kidney disease and accelerates the disease progression.[5] A population based cohort study also found higher consumption of UPFs was associated with an increased risk of all-cause mortality, with greater consumption of certain food groups, such as processed meats and sugar sweetened beverages, demonstrating the strongest associations.[10,13]

Additionally, research has demonstrated an increased risk of certain cancers with increased UPF consumption. A meta-analysis and systematic review found that high UPF consumption, when compared to low UPF consumption, was associated with a significantly increased risk of certain site-specific cancers, particularly of the digestive tract and some hormone-related cancers, but there were differences in risks between genders.[14] More research is needed to better understand the potential causal pathways. Lastly, there is emerging research connecting greater UPF consumption to risks of cognitive decline and impairment as well as stroke.[15–17]

Research on UPFs has seen increased consistency in terms of defining UPFs since the introduction of the NOVA classification system in 2009, but challenges remain. Researchers have noted challenges with the NOVA classification system, including ambiguity, inconsistency in application, and the assignment of foods with nutritional value to the "ultra-processed" category.[18] For

example, a 2024 study found that higher intake of *certain* UPFs were consistently associated with higher all-cause mortality, particularly the UPF subgroups of meat/poultry/seafood based ready-to-eat products, sugar sweetened and artificially sweetened beverages, dairy based desserts, and ultra-processed breakfast foods.[13] However, there are foods, such as some yogurts made with fruit or granola, some milk alternatives, packaged whole grain bread, that are categorized as UPFs but still offer nutritional value.[19] This highlights that there may be important heterogeneity within different subgroups of foods categorized as UPFs in terms of their impact on health and some UPFs can s. Additionally, a recent review article noted the strength and credibility of evidence for many of UPF studies was either low and suggestive/weak.[10]

UPFs and the U.S. Dietary Guidelines

The 2025 Dietary Guidelines Advisory Committee's first print of their scientific report on the American Dietary Guidelines was the first time UPFs were included as a review topic and they stated there was limited evidence on the health impacts of UPFs to make definitive recommendations on its intake.[20] Instead, they recommended more research to inform future iterations of the guidelines. The new U.S. Dietary Guidelines for Americans, released in January 2026, makes a more definitive recommendation against eating highly processed foods, but avoids the term UPF. "Avoid highly processed packaged, prepared, ready-to-eat, or other foods that are salty or sweet, such as chips, cookies, and candy that have added sugars and sodium (salt)…Limit foods and beverages that include artificial flavors, petroleum-based dyes, artificial preservatives, and low-calorie non-nutritive sweeteners."[21] The U.S. Food and Drug Administration (FDA) and U.S. Department of Agriculture (USDA) released a Request for Information in the summer of 2025 to help develop a more unified and consistent definition of UPFs.[22]

Nutritional Literacy and Public Awareness of UPF Risks

In general, the U.S. population has low nutrition literacy, which is defined as "the degree to which individuals have the capacity to obtain, process, and understand nutrition information and skills needed in order to make appropriate nutrition decisions," with one estimate noting that just over one-third of adults have adequate nutrition literacy.[23,24] The Health Belief model suggests that the more people know about the risks of certain foods influences their eating behavior.[25] Having greater nutrition literacy has been correlated with better understanding of nutritional labels and healthier food decisions and thus improving nutritional literary in the general population has the potential to improve dietary choices and overall health.[24,26]

A literature search on U.S. public perceptions and knowledge on UPFs produced limited results. Outside of the U.S., studies on this issue have been largely limited to South American countries and more recently the United Kingdom (U.K.) and other countries in Europe. A study from the U.K. found that while most participants were aware of the term UPF, most could not accurately categorize whether foods were UPFs or not. There were important differences between participants with higher incomes and higher levels of education who were more likely to report both being aware of and avoid consuming UPFs.[27] A study on consumer perceptions and intake of UPFs found participants exposed to information on the negative health impacts of UPF reported increased concerns about consuming UPFs (relative to the control) but there was limited evidence that the acceptability of consuming UPFs was reduced.[26] In essence, while education on UPF increased concerns about UPFs, it didn't necessarily result in behavioral change in terms of UPF consumption. While public education on UPFs will likely affect consumer perceptions of UPFs, it may not impact immediate food intake.[26]

Additionally, physicians have historically lacked sufficient nutritional education or training to be able to provide high-quality, effective nutrition counseling despite recognition within the medical community about the importance of dietary behaviors for health.[28] However, awareness of the potential health risks associated with UPFs has grown and there has been increased attention from medical and public health organizations.[29,30] Additionally, the Make America Healthy Again 2025 report identifies poor diet and the growth of UPFs in the American diet as major concerns for childhood chronic disease.[31] The accompanying strategy document calls for the acceleration of federal efforts to address UPFs.[32] However, public awareness and understanding of UPFs may be exacerbated by the lack of clear labeling, regulatory standards, or educational resources to inform consumer choices with respect to UPFs.

Patient Information on UPFs

A scan of federal agency and health care organization websites as well as a search on PubMed for examples of educational materials on UPFs produced few results. While the USDA and the Department of Health and Human Services (HHS) both have repositories of nutrition-related printable materials and handouts, neither have resources specific to UPFs.[33] Most of these materials and handouts appear to only be available in English. While not specific to UPFs, the FDA has a social media toolkit for their Nutrition Facts Label Campaign, which is intended to help consumers make better informed decisions regarding food choices.[34] The FDA is also proposing to require a front-of-package nutrition label on most packaged foods to provide accessible, at-a-glance information on added sodium, sugar, and saturated fats to help consumers quickly and easily identify which foods are part of a healthy diet.[35] As UPFs generally contain a high amount of these three ingredients, this type of front-of-package label could be very helpful for consumers in identifying unhealthy UPFs.

One article addressed the development of UPF infographics for patients with chronic kidney disease, as UPFs can worsen blood pressure and glycemic control, and lead to constipation, hyperkalemia and hyperphosphatemia.[5] It is unknown whether the education materials referenced in this study have been widely distributed within or outside of this specific patient population. An example of one of the infographics from this paper is provided in Figure 1.

More commonly, health care systems and medical organizations have created dedicated webpages on UPFs. For example, the AMA, as part of their What Doctors Wish Patients Knew™ series, has published an informational page on UPFs.[36] Similarly, the American Heart Association has on their website, "Top Things to Know: Ultraprocessed Foods and Their Association with Cardiometabolic Health."[37] Health care organizations, like the Mayo Clinic and Massachusetts General Hospital (just to name a few), have also created webpages to improve patient education (See Figures 2 and 3).[38,39]

Physician Education and Resources on UPFs

Similar to patient resources, there are limited educational resources on UPFs for physicians. One of the leading organizations for physician education on nutrition is the Gaples Institute, an educational nonprofit dedicated to advancing the role of nutrition and lifestyle in medicine through education and advocacy.[40] While educational content from the Gaples Institute is featured and available on AMA's Ed Hub, they do not have educational content specifically on UPFs, even if some of their existing modules address them. As the Gaples Institute is a well-known provider of physician nutrition education, they could be an important organization to partner with on future clinician educational resources.

Although not specific to UPFs, available nutrition education on AMA's Ed Hub includes:

- Nutrition and Health – CME Course
- 2025 Update — Nutrition Science for Health and Longevity: What Every Physician Needs to Know from the Gaples Institute Nutrition and Lifestyle Education
- Heritage Diets: Adapting Nutrition Recommendations Across Cultures
- Talking to Patients About Using the Nutrition Facts Label to Make Healthy Food Choices (developed in collaboration with the FDA) – CME module

A scan of available nutrition education for physicians produced limited resources on UPFs but also included examples of 'Food is Medicine' courses or nutrition science courses. A few examples of nutritional education from other medical institutions and organizations are provided below:

- The Exam Room™ Podcast on processed foods featuring Dr. Neal Barnard, President of Physicians Committee for Responsible Medicine[41]
- The American Academy of Family Physicians has a publication entitled: Nutrition Myths and Healthy Dietary Advice in Clinical Practice[42]
- The American College of Lifestyle Medicine has multiple 'Food as Medicine' educational courses[43]
- The Stanford Center for Health Education has a Nutrition Science Online Short Course[44]

STATE AND FEDERAL LEGISLATION

Several states have adopted or are considering legislation that bans or prohibits UPFs, with California being the first to pass a law limiting UPFs from schools in October 2025.[45,46] As part of these efforts, the challenge of defining UPFs has been evident, and different states have taken different approaches to define unhealthy UPFs.[47] California's law is the first to create a statutory definition of UPFs, which is defined as:

An ultra-processed food contains one or more of the following:

- Surface-active agents
- Stabilizers and thickeners
- Propellents, aerating agents and gases
- Colors and coloring adjuncts
- Emulsifiers and emulsifier salts
- Flavoring agents and adjuvants
- Non-nutritive sweeteners [D-sorbitol, erythritol, hydrogenated starch hydrolysates, sucralose, isomal, lactitol, luo han fruit concentrate, maltitol, steviol glycosides, thaumatin, xylitol)

AND contains one or more of:

- Saturated fat at 10% or more of calories
- A ratio of mg sodium to calories of more than 1:1
- Sugars at 10% or more of calories[48]

There have also been a few pieces of legislation proposed at the federal level in 2025 and 2026. First introduced in December 2025 and reintroduced in January 2026, the Childhood Diabetes Reduction Act (H.R. 6294/S. 4195) is a bipartisan bill that would require the FDA to implement clear, front-of-package warning labels on foods high in sugar, salt, and saturated fat, or that are classified as a UPF.[49] The proposed bill also aims to restrict marketing of these products to children and directs the NIH to expand research on the harmful additives within them.[50] In the context of this bill, UPFs are defined as, "a food, including a beverage, containing one or more industrial

ingredients, including surface-active agents, stabilizers and thickeners, propellants, aerating agents and gases, color and coloring adjuncts, emulsifiers and emulsifier salts, flavoring agents and adjuvants, flavor enhancers, surface-finishing, non-sugar sweeteners, and other ingredients, as the Secretary [of HHS] determines appropriate."[50] Additionally, in April 2025, the Healthy Lunch for Healthy Kids Act (H.R. 2530) was introduced which aims to amend the National School Lunch Act to prohibit the serving of specific ultra-processed foods, including those containing artificial dyes, titanium dioxide, and other additives in school cafeterias.[51]

CURRENT AMA POLICY AND ACTIVITIES

In the past several years, the AMA has been actively engaged on the issue of UPFs. AMA Policy H-150.914, "Addressing the Health Impacts of Ultraprocessed Foods", directs the AMA to support and promote public health awareness and education about the differences between healthful and unhealthful UPFs, alluding to the existing tensions on defining UPF and whether all UPFs should be considered unhealthy and discouraged. In addition, AMA Policy G-630.140, "Lodging, Meeting Venues, and Social Functions," directed AMA to offer food options of minimally processed fiber-rich foods at AMA-sponsored receptions or meals.[52]

In a February 2025 letter commenting on the Scientific Report of the 2025 Dietary Guidelines Advisory Committee, the AMA urged the Agencies to include more concrete recommendations regarding UPFs.[53] In September 2025, the AMA sent a letter in response to an FDA Request for Information to help develop a uniform definition of UPFs for human food products in the U.S. food supply. In the letter, it was recommended that the definition of UPFs be developed with the primary goal of improving public health and reducing chronic disease.[54] Lastly, the AMA is in the process of organizing a four-part webinar series for 2026 that will engage physicians, residents and medical students in evidence-based education, aligned with HOD policy, on what constitutes a healthy diet, how different dietary patterns impact overall health and how to talk with patients about their dietary choices. As part of this series, at least one of the webinars will cover processed foods.

CONCLUSION

There is a dearth of available educational resources and materials on UPFs, for both patients and physicians. In some respects, this can be attributed to ongoing inconsistencies of how to define UPFs but there is growing evidence that increased UPF consumption has negative health outcomes. As there are current federal efforts underway to develop a more unified and consistent definition of UPFs, it may be prudent for the AMA to focus on lower cost educational options until there is more clarity on the UPF definition. However, as an organization, AMA should continue to support the development of patient materials that help them make healthier dietary choices and improve their health.

RECOMMENDATIONS

The Board of Trustees recommends:

(1) That the second resolve of Resolution 601-A-25 not be adopted; and

(2) That Policy H-150.914, "Addressing the Health Impacts of Ultraprocessed Foods" be amended by addition and deletion to read as follows:

1. Our AMA supports and promotes ~~public~~ awareness and education, among both the public and clinicians, about the differences between healthy~~ful~~ and unhealthy~~ful~~ ultraprocessed foods (UPF) and the benefits of minimally processed and unprocessed foods.

2. Our AMA supports the development of multi-lingual patient educational materials with regard to the health impact of UPFs and will help disseminate available materials through relevant AMA platforms.

~~2.~~ 3. Our AMA supports federal, state, and local policies that promote and incentivize the production and distribution of healthier, affordable, minimally-processed and unprocessed foods.

~~3.~~ 4. Our AMA encourages the integration of nutrition education into all levels of medical education to empower clinicians to best counsel patients efficiently and effectively on reducing unhealthful UPF consumption.

~~4.~~ 5. Our AMA supports increased funding ~~to the FDA~~ for research into the health impacts of ultraprocessed foods and strategies to mitigate their risks.

Fiscal Note: Between $1,000 - $5,000

APPENDIX

Table 1: NOVA Classification of Foods[1]

Category and Name	Definition
Group 1 – Unprocessed or minimally processed foods	Unprocessed foods or minimally processed foods that are altered by processes such as removal of inedible or unwanted parts, drying, crushing, grinding, fractioning, roasting, boiling, pasteurization, refrigeration, freezing, placing in containers, vacuum packaging or non-alcoholic fermentation. None of these processes add salt, sugar, oils or fats, or other food substances to the original food.
Group 2 – Processed culinary ingredients	These are ingredients obtained directly from group 1 foods or from nature, like oils and fats, sugar and salt. They are created by industrial processes such as pressing, centrifuging, refining, extracting or mining, and their use is in the preparation, seasoning and cooking of group 1 foods.
Group 3 – Processed foods	This category represents food products made by adding salt, sugar or other substance found in group 2 to group 1 foods, using preservation methods such as canning and bottling, and, in the case of breads and cheeses, using non-alcoholic fermentation. Food processing here aims to increase the durability of group 1 foods and make them more enjoyable by modifying or enhancing their sensory qualities.
Group 4 – Ultra-processed food and drink products	Food made from industrial formulations, typically with five or more and usually many ingredients. Such ingredients often include those also used in processed foods, such as sugar, oils, fats, salt, anti-oxidants, stabilizers, and preservatives. Ingredients only found in UPF products include substances not commonly used in culinary preparations, and additives whose purpose is to imitate sensory qualities of group 1 foods or of culinary preparations of these foods, or to disguise undesirable sensory qualities of the final product.

SPEAKING OF HEALTH | THURSDAY, JULY 25, 2024

What you should know about processed, ultra-processed foods

TOPICS IN THIS POST

Nutrition | Get Healthy Recipes And Tips

Processed, and especially ultra-processed, foods have been blamed for the national rise in obesity, high blood pressure and diabetes. But what exactly are these foods, and are they really all that bad for you?

Defining processed foods

According to the Department of Agriculture, processed foods are any raw agricultural commodities altered from their original state. This includes washing, cleaning, milling, cutting, chopping, heating, pasteurizing, blanching, cooking, canning, freezing, drying, dehydrating, mixing or packaging.
