Entrepreneurs and CPT: Powering the future of health care from ideation to implementation

Webinar takeaways, additional resources and more!

Challenge: Staying Ahead of Health Care Technology

In today's technology-driven health care ecosystem, it's critical to ensure that physicians can make use of health care technology as soon as it becomes available. The AMA has established multiple channels to facilitate partnerships between physicians and innovators, foster solution development, and enable physician adoption.

More on early-stage support

Learn how the AMA is supporting innovation with clinical perspective and expertise at the early stages of ideation, design, development, and validation in the CPT Webinar "Entrepreneurs and CPT."

AMA Digital Health Strategy

The AMA's goal is to make technology an asset and not a burden to physicians. The first step is understanding the factors that influence technology adoption.

Physician Requirements for Technology Adoption

AMA Physician Innovation Network (PIN)

Connecting innovators and physicians for health care technology solutions based on clinical evidence and superior user experience (UX).

The screenshot shows the AMA Physician Innovation Network (PIN) website. The header includes the AMA logo, 'Physician Innovation Network', and navigation links: Newsfeed, Opportunities, Discussions, Collaborators, Search & Connect, and a profile icon. The main content area features a large heading 'AMA Physician Innovation Network' and a subheading 'A platform built for the community bringing better healthcare solutions to market'. Below this are three icons with text: 'Get feedback on your solution', 'Connect with innovators and industry leaders', and 'Share your subject matter expertise'. There are also 'Join now' and 'Log in' buttons. The right sidebar displays a QR code and statistics: '18,600+ total PIN users to date', '7,000+ connections made to date', and '980+ opportunities for physician feedback created to date'. The central area shows a feed of posts from users like 'Marie Enchevra' and 'Danielle Davidson' discussing topics like 'telehealth, remote patient monitoring, and virtual communications during COVID-19 and beyond'.
