Because the CCM codes are in the same family as the new PCM codes, the entire code family, CCM, CCCM and PCM, were surveyed. We note that the CCM codes were due to be surveyed in 2019 because they were identified as high growth services but, in consultation with the Research Subcommittee, the surveys were delayed until this cycle so the CCM, CCCM and PCM codes could be surveyed at the same time. The surveying societies were the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Society (AGS), the American Academy of Pediatrics (AAP), the American Osteopathic Association (AOA), the American Nurses Association (ANA), the American College of Rheumatology (ACR), the American Academy of Neurology (AAN), the American Association of Hospice and Palliative Care Medicine (AAHPM), and the Society for Post-Acute and Long-Term Care Medicine (AMDA). The surveying societies met with the Research Subcommittee and obtained approval of the survey tool, making the vignettes more general (i.e., similar to those used for the office visit codes), the RSL codes, and combining the XXX and ZZZ codes in a single RSL that did not include the office visit codes.

Background

The CCM survey was randomly distributed to members of the ACP, AAFP, AGS, AOA, ANA AAHPM, AAP, AMDA, and ACR. The PCM survey was randomly distributed to members of AAN and all the above societies except for AAFP. In other words, all societies except for AAFP and AAN surveyed both sets of codes.

The surveying societies convened an expert panel to review the summary data. The panel noted that it was important not only for the CCM and the PCM code sets to be ranked correctly internally, but that the CCM and PCM codes must be ranked correctly to each other. Therefore, the panel looked very closely at the sub analysis survey responses from respondents who responded to both sets of codes in the survey.

The panel noted the low response rates. The panel believes this was mostly due to COVID-19-19 surges across the US. While the response rates were low, the panel agreed that the survey data appeared valid in terms of the spread of times and work RVUs and did not show any indication of confusion on the part of the respondents.

Compelling Evidence

The panel considered whether there was compelling evidence for an increase in work RVUs for the CCM codes. The panel reviewed a number of articles on how medical care is shifting from the office to the home.

As evidenced by the included literature:

CCM has significantly increased in complexity because complex medical conditions can now more often be managed while the patient is at home instead of during face-to-face services. For example, services to patients with heart failure, diabetes, and autoimmune disorders can be provided by, or under the supervision of, QHP while the patient is at home in order to decrease emergency department visits, hospitalizations, and placement in nursing homes and to improve quality of life. This shift occurred before COVID-19, was accelerated by COVID-19, and will continue after COVID-19.

The shift to caring for sicker, more complex patients began a little more than ten years ago, shortly before the CCM codes were established. The rapid evolution of sophisticated tools such as remote monitoring apps, self-management apps, ability for patients to transmit complex data (e.g., high resolution photographs) in real time has increased the ability to care for patients remotely. Development of robust remote monitoring technologies (e.g., measurement of pulmonary artery pressures via permanently

implanted sensors, continuous monitoring of vital signs by sensors that are able to transmit data over the internet in real-time) also enables clinicians to make diagnoses and alter treatment regimens without needing to see a patient face-to-face.

Clinicians can now often stratify patients according to risk remotely so that they have time to properly care for those patients who require office visits. This can mean that some patients are now contacted daily instead of weekly. The need to recognize and treat mental health issues has also increased as more and more evidence demonstrates that psychosocial issues play a major role in the treatment of chronic disease and contact with family members and caregivers is essential to help keep these patients functional and able to live at home.

The COVID-19 pandemic has accelerated this transformation and increased the number and complexity of patients needing CCM in order to keep them out of the hospital and to identify those patients who are deteriorating and need admission. COVID-19 has also highlighted the need for physicians to continually counsel patients on lifestyle choices that go far beyond the usual advice regarding exercise and diet. While the need to counsel on socially distancing and wearing a mask may be temporary, the heightened awareness of how all our patients' choices can influence disease management is a permanent addition to the matters in which QHPs and their clinical staff interact with patients.

In summary, the complexity of CCM has significantly increased since the codes were established.

Specifically, the CCM codes meet the following RUC criterion for compelling evidence:

> Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following:
> ▪ technique
> ▪ **knowledge/technology**
> ▪ **patient populations**
> ▪ site-of-service
> ▪ length of hospital stay
> ▪ physician time

Literature:

1.) Hospital at home: feasibility and outcomes of a program to provide hospital-level care at home for acutely ill older patients, Bruce Leff 1, Lynda Burton, Scott L Mader, Bruce Naughton, Jeffrey Burl, Sharon K Inouye, William B Greenough 3rd, Susan Guido, Christopher Langston, Kevin D Frick, Donald Steinwachs, John R Burton Affiliations expand

- PMID: 16330791
- DOI: 10.7326/0003-4819-143-11-200512060-00008

Background: Acutely ill older persons often experience adverse events when cared for in the acute care hospital.
Objective: To assess the clinical feasibility and efficacy of providing acute hospital-level care in a patient's home in a hospital at home.
Participants: 455 community-dwelling elderly patients who required admission to an acute care hospital for community-acquired pneumonia, exacerbation of chronic heart failure, exacerbation of chronic obstructive pulmonary disease, or cellulitis.
Intervention: Treatment in a hospital-at-home model of care that substitutes for treatment in an acute care hospital.
Measurements: Clinical process measures, standards of care, clinical complications, satisfaction with care, functional status, and costs of care.
Results: Hospital-at-home care was feasible and efficacious in delivering hospital-level care to patients at home. In 2 of 3 sites studied, 69% of patients who were offered hospital-at-home care chose it over acute hospital care; in the third site, 29% of patients chose hospital-at-home care. Although less procedurally oriented than acute hospital care, hospital-at-home care met quality standards at rates similar to those of acute hospital care. On an intention-to-treat basis, patients treated in hospital-at-home had a shorter length of stay (3.2 vs. 4.9 days) ($P = 0.004$), and there was some evidence that they also had fewer complications. The mean cost was lower for hospital-at-home care than for acute hospital care (5081 dollars vs. 7480 dollars) ($P < 0.001$).
Conclusions: The hospital-at-home care model is feasible, safe, and efficacious for certain older patients with selected acute medical illnesses who require acute hospital-level care. Successful management of the highly complex (high-need, high-cost) patients requires team based care that is in addition t

2.) Impact of complex care management on spending and utilization for high-need, high-cost Medicaid patients. Am J Manag Care. 2020 Feb 1;26(2):e57-e63. doi: 10.37765/ajmc.2020.42402.

3.) The Common Attributes of Successful Care Manager Programs for High-Need, High-Cost Persons: A Cross-Case Analysis. Ambul Care Manage. 2019 Oct/Dec;42(4):230-241. doi:0.1097/JAC.0000000000000305.PMID: 31449160

https://pubmed.ncbi.nlm.nih.gov/31449160/

4.) Attributes Common to Programs That Successfully Treat High-Need, High-Cost Individuals. November 10, 2015. The American Journal of Managed Care, November 2015, Volume 21, Issue 11

https://pubmed.ncbi.nlm.nih.gov/26735292/" https://pubmed.ncbi.nlm.nih.gov/26735292/

Summary: Successful management of the highly complex (high-need, high-cost) patients requires team based care that is in addition to outside of traditional face-to-face office visits.

Therefore, the panel believes that compelling evidence has been met.

Discussion 99487

The expert panel reviewed 99487, *Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.*; and 99489, *Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*.

The survey for 99487 had 51 respondents, 92% of whom found the vignette to be typical and the survey for 99489 also had 51 respondents of whom 96% found the vignette to be typical.

The current time (all intra) and work RVU for 99487 are 26 minutes and 1.00 which are the 25th percentile values from the 2012 survey. The median and 25th percentile current survey times were 45 and 30 minutes, and the median and 25th percentile current survey work RVUs were 2.10 and 1.81. The two key reference services were G0181 and 99226, *Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit*. G0181 has times 10/32/15/57 and work RVU 1.73 and 99226 has times 10/30/15/55 and work RVU of 2.00.
The panel noted that the median survey time of 45 minutes placed it in proper rank order with the median survey time of 99490 which is 25 minutes and that the work value of 99487 should reflect that difference. The panel also noted that 99490 and 99487 are reported based on staff time (not QHP time) and that there did not appear to be any overlap between staff and QHP time. The higher time also reflected the more complex patient population for whom 99487 is furnished.

Therefore, the expert panel agreed that the 25th percentile work RVU of 1.81 was appropriate. This also places 99487 in proper rank order with the two key reference services. G0181 describes a similar but less intensive service in that the patient is under the care of a home health agency, which shares responsibility for patient management with the physician and does not require interaction with caregivers or a moderate level of QHP medical decision making. Therefore, even though the survey median time of 47 minutes is less than the total time for G0181and the survey 25th percentile work RVU of 1.81 is higher than that of G0181, it places the two codes in proper rank order. Similarly, 99226, which is for subsequent observation care has 22% longer total time than the 99487 but 67% less intraservice time then the median survey time for 99487 and its work RVU (2.00) is 10% higher than the survey 25th percentile work RVU for 99487 which places the two in proper rank order - 99226 has long total time and a higher work RVU but also has less intra time than 99487 which means the work RVU of 99487 should reflect the lower total time but much higher intra time. The resultant IWPUT of 0.040 is slightly higher than the current IWPUT.

Therefore, the expert panel recommends the median time of 45 minutes and the 25th percentile work RVU of 1.81 for 99487.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99487

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

CPT Descriptor: Complex chronic care management services, with the following required elements:

• multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,
• chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,
• comprehensive care plan established, implemented, revised, or monitored,
• moderate or high complexity medical decision making;

each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey:
(Adult) An 83-year-old woman with congestive heart failure and early cognitive dysfunction, who has been hospitalized twice in the prior 12 months, is becoming increasingly confused and refuses an office visit. She has a certified nursing assistant supervised by a home care agency, participates in a remote weight and vital signs monitoring program and sees a cardiologist and neurologist.

[Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 99487.]

(Child) A 6-year-old boy present with spastic quadriplegia, gastrostomy tube dependence, gastroesophageal reflux with recurrent bouts of aspiration pneumonia, reactive airway disease, chronic seizure disorder, failure to thrive and severe neurodevelopmental delay. He has already received 89 minutes of clinical staff complex care management services during the calendar month and requires additional clinical staff complex care management services during the same calendar month.

[Note: This is an add-on service. Only consider the additional physician/QHP work beyond the work separately reported with base code 99487.]

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Complex chronic care coordination services are patient centered management and support services provided by physicians, other qualified health care professionals, and clinical staff to an individual who resides at home or in a domiciliary, rest home, assisted living facility, or nursing home. This service typically involves 30

additional minutes of clinical staff time implementing a care plan directed by the physician or other qualified health care professional, per calendar month. This service addresses the coordination of care by multiple disciplines and community service agencies. The reporting individual provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs, and activities of daily living. Patients who require complex chronic care coordination services may be identified by algorithms that utilize reported conditions and services (e.g. predictive modeling risk score or repeat admissions or emergency department use) or by clinician judgment. Typical patients have two or more chronic continuous or episodic health conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute exacerbation or decompensation or functional decline. Because of the complex nature of their diseases and morbidities, these patients commonly require the coordination of a number of specialties and services. Patients may have medical and psychiatric behavioral co-morbidities (e.g. dementia and chronic obstructive pulmonary disease or substance abuse and diabetes) that complicate their care. Social support weaknesses or access to care difficulties may cause a need for these services. Medical, functional, and/or psychosocial problems that require medical decision making of moderate or high complexity and extensive clinical staff support are expected. Medical decision making as defined in the Evaluation and Management (E/M) guidelines is not only applied to the face-to-face services but is determined by the nature of the problems addressed by the reporting individual during the month. A plan of care should be documented and shared with the patient and/or caregiver.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Introduction

CPT created four new codes for principal care management (PCM) at the September 2020 CPT meeting. Two of the codes describe principal care management performed by clinical staff under the supervision of a qualified health professional (QHP) and the other two describe principal care management performed by the QHP herself. The PCM codes differ from the chronic care management (CCM) codes in that they are to be reported by QHPs when that professional is responsible for managing a patient's single chronic illness as opposed to being responsible for managing the entire care of a patient with two or more chronic illnesses. Therefore, it is possible that a PCM code will be reported during the same month as a CCM code - albeit by different QHPs.

Because the CCM codes are in the same family as the new PCM codes, the entire code family, CCM, CCCM and PCM, were surveyed. We note that the CCM codes were due to be surveyed in 2019 because they were identified as high growth services but, in consultation with the Research Subcommittee, the surveys were delayed until this cycle so the CCM, CCCM and PCM codes could be surveyed at the same time. The surveying societies were the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Society (AGS), the American Academy of Pediatrics (AAP), the American Osteopathic Association (AOA), the American Nurses Association (ANA), the American College of Rheumatology (ACR), the American Academy of Neurology (AAN), the American Association of Hospice and Palliative Care Medicine (AAHPM), and the Society for Post-Acute and Long-Term Care Medicine (AMDA). The surveying societies met with the Research Subcommittee and obtained approval of the survey tool, making the vignettes more general (i.e., similar to those used for the office visit codes), the RSL codes, and combining the XXX and ZZZ codes in a single RSL that did not include the office visit codes.

Background

The CCM survey was randomly distributed to members of the ACP, AAFP, AGS, AOA, ANA AAHPM, AAP, AMDA, and ACR. The PCM survey was randomly distributed to members of AAN and all the above societies except for AAFP. In other words, all societies except for AAFP and AAN surveyed both sets of codes.

The surveying societies convened an expert panel to review the summary data. The panel noted that it was important not only for the CCM and the PCM code sets to be ranked correctly internally, but that the CCM and PCM codes must be ranked correctly to each other. Therefore, the panel looked very closely at the sub analysis survey responses from respondents who responded to both sets of codes in the survey.

The panel noted the low response rates. The panel believes this was mostly due to COVID-19-19 surges across the US. While the response rates were low, the panel agreed that the survey data appeared valid in terms of the spread of times and work RVUs and did not show any indication of confusion on the part of the respondents.

Compelling Evidence

The panel considered whether there was compelling evidence for an increase in work RVUs for the CCM codes. The panel reviewed a number of articles on how medical care is shifting from the office to the home.

As evidenced by the included literature:

CCM has significantly increased in complexity because complex medical conditions can now more often be managed while the patient is at home instead of during face-to-face services. For example, services to patients with heart failure, diabetes, and autoimmune disorders can be provided by, or under the supervision of, QHP while the patient is at home in order to decrease emergency department visits, hospitalizations, and placement in nursing homes and to improve quality of life. This shift occurred before COVID-19, was accelerated by COVID-19, and will continue after COVID-19.

The shift to caring for sicker, more complex patients began a little more than ten years ago, shortly before the CCM codes were established. The rapid evolution of sophisticated tools such as remote monitoring apps, self-management apps, ability for patients to transmit complex data (e.g., high resolution photographs) in real time has increased the ability to care for patients remotely. Development of robust remote monitoring technologies (e.g., measurement of pulmonary artery pressures via permanently

implanted sensors, continuous monitoring of vital signs by sensors that are able to transmit data over the internet in real-time) also enables clinicians to make diagnoses and alter treatment regimens without needing to see a patient face-to-face.

Clinicians can now often stratify patients according to risk remotely so that they have time to properly care for those patients who require office visits. This can mean that some patients are now contacted daily instead of weekly. The need to recognize and treat mental health issues has also increased as more and more evidence demonstrates that psychosocial issues play a major role in the treatment of chronic disease and contact with family members and caregivers is essential to help keep these patients functional and able to live at home.

The COVID-19 pandemic has accelerated this transformation and increased the number and complexity of patients needing CCM in order to keep them out of the hospital and to identify those patients who are deteriorating and need admission. COVID-19 has also highlighted the need for physicians to continually counsel patients on lifestyle choices that go far beyond the usual advice regarding exercise and diet. While the need to counsel on socially distancing and wearing a mask may be temporary, the heightened awareness of how all our patients' choices can influence disease management is a permanent addition to the matters in which QHPs and their clinical staff interact with patients.

In summary, the complexity of CCM has significantly increased since the codes were established.

Specifically, the CCM codes meet the following RUC criterion for compelling evidence:

> Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following:
> ▪ technique
> ▪ **knowledge/technology**
> ▪ **patient populations**
> ▪ site-of-service
> ▪ length of hospital stay
> ▪ physician time

Literature:

1.) Hospital at home: feasibility and outcomes of a program to provide hospital-level care at home for acutely ill older patients, Bruce Leff 1, Lynda Burton, Scott L Mader, Bruce Naughton, Jeffrey Burl, Sharon K Inouye, William B Greenough 3rd, Susan Guido, Christopher Langston, Kevin D Frick, Donald Steinwachs, John R Burton Affiliations expand

- PMID: 16330791
- DOI: 10.7326/0003-4819-143-11-200512060-00008

Background: Acutely ill older persons often experience adverse events when cared for in the acute care hospital.
Objective: To assess the clinical feasibility and efficacy of providing acute hospital-level care in a patient's home in a hospital at home.
Participants: 455 community-dwelling elderly patients who required admission to an acute care hospital for community-acquired pneumonia, exacerbation of chronic heart failure, exacerbation of chronic obstructive pulmonary disease, or cellulitis.
Intervention: Treatment in a hospital-at-home model of care that substitutes for treatment in an acute care hospital.
Measurements: Clinical process measures, standards of care, clinical complications, satisfaction with care, functional status, and costs of care.
Results: Hospital-at-home care was feasible and efficacious in delivering hospital-level care to patients at home. In 2 of 3 sites studied, 69% of patients who were offered hospital-at-home care chose it over acute hospital care; in the third site, 29% of patients chose hospital-at-home care. Although less procedurally oriented than acute hospital care, hospital-at-home care met quality standards at rates similar to those of acute hospital care. On an intention-to-treat basis, patients treated in hospital-at-home had a shorter length of stay (3.2 vs. 4.9 days) ($P = 0.004$), and there was some evidence that they also had fewer complications. The mean cost was lower for hospital-at-home care than for acute hospital care (5081 dollars vs. 7480 dollars) ($P < 0.001$).
Conclusions: The hospital-at-home care model is feasible, safe, and efficacious for certain older patients with selected acute medical illnesses who require acute hospital-level care. Successful management of the highly complex (high-need, high-cost) patients requires team based care that is in addition t

2.) Impact of complex care management on spending and utilization for high-need, high-cost Medicaid patients. Am J Manag Care. 2020 Feb 1;26(2):e57-e63. doi: 10.37765/ajmc.2020.42402.

https://pubmed.ncbi.nlm.nih.gov/32059101/

3.) The Common Attributes of Successful Care Manager Programs for High-Need, High-Cost Persons: A Cross-Case Analysis. Ambul Care Manage. 2019 Oct/Dec;42(4):230-241. doi:0.1097/JAC.0000000000000305.PMID: 31449160

https://pubmed.ncbi.nlm.nih.gov/31449160/

4.) Attributes Common to Programs That Successfully Treat High-Need, High-Cost Individuals. November 10, 2015. The American Journal of Managed Care, November 2015, Volume 21, Issue 11

https://pubmed.ncbi.nlm.nih.gov/26735292/" https://pubmed.ncbi.nlm.nih.gov/26735292/

Summary: Successful management of the highly complex (high-need, high-cost) patients requires team based care that is in addition to outside of traditional face-to-face office visits.

Therefore, the panel believes that compelling evidence has been met.

Discussion 99489
The panel reviewed 99489 which has a total time of 13 minutes (all intra) and a work RVU of 0.50. The survey had 25th percentile and median survey times of 20 and 30, and 25th percentile and median work RVUs of 1.00 and 1.20. The two key reference services were G0181 and 99457, *Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes*. G0181 has times 10/32/15/57 and work RVUs of 1.73 and 99457 has times 0/20/0/20 and work RVUs of 0.61. The expert panel agreed that the survey median time of 30 minutes was appropriate because patients who require the provision of such extensive CCM services are sicker and more complex than patients who do not require the extra time. In addition, 30 minutes is 66% of 45 minutes, the survey median time for 99487 which the panel agreed was appropriate. The panel then agreed that the survey 25th percentile work RVU of 1.00 was appropriate and it is 55% of the recommended work RVU for 99487 (1.81). In addition, the resulting IWPUT 0.033, which is lower than the current IWPUT of 0.038, is on the low side for E/M services but appropriate given the survey results. The 25th percentile work RVU of 1.00 is 64%% higher than the work RVU for 99457 which is consistent with the 30 minutes of total (intra) time which is 50% higher than that of 99457.

Lastly the panel compared the recommendations for 99487 and 99489 with those for 99490 and 99439. The panel agreed that the recommendations for these four codes placed them in proper rank order.

Therefore, the expert panel recommends the survey median time of 30 minutes and the survey 25th percentile work RVU of 1.00.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 3.

3. Code Global Work RVU Pre-Time Intra-Time Post-Time

SUMMARY OF RECOMMENDATION

CPT Code:99424 Tracking Number BB1 Original Specialty Recommended RVU: **1.45**
Presented Recommended RVU: **1.45**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.45**

CPT Descriptor: Principal care management services, for a single high-risk disease, with the following required elements:
•one complex chronic condition expected to last at least 3 months,
•the condition places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death,
• the condition requires development or revision of disease-specific care plan,
•the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities,
•ongoing communication and care coordination between all practitioners furnishing care;
first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient with a single complex chronic condition that places the patient at significant risk of decompensation.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Principal care management represents services which focus on the medical and/or psychological needs manifested by a single complex chronic condition expected to last at least three months and includes establishing, implementing, revising, or monitoring a care plan specific to that single disease. Code 99424 is reported for at least 30 minutes of physician or other qualified health care professional personal time in care management activities during a calendar month. Principal care management services are disease specific management services. A patient may have multiple chronic conditions of sufficient severity to warrant complex chronic care management but may receive principal care management if the reporting physician or other qualified health care professional is providing single disease rather than comprehensive care management. Services include establishing, implementing, revising, or monitoring the care plan, coordinating the care of other professionals and agencies, and educating the patient or caregiver about the patient's condition, care plan, and prognosis.
A physician or other qualified health care professional personally provides these principal care management (PCM) services, which are management and support services, to a patient with a single high-risk disease residing at home or in a domiciliary, rest home, or assisted living facility.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Introduction

CPT created four new codes for principal care management (PCM) at the September 2020 CPT meeting. Two of the codes describe principal care management performed by clinical staff under the supervision of a qualified health professional (QHP) and the other two describe principal care management performed by the QHP herself. The PCM codes differ from the chronic care management (CCM) codes in that they are to be reported by QHPs when that professional is responsible for managing a patient's single chronic illness as opposed to being responsible for managing the entire care of a patient with two or more chronic illnesses. Therefore, it is possible that a PCM code will be reported during the same month as a CCM code - albeit by different QHPs.

Because the CCM codes are in the same family as the new PCM codes, the entire code family, CCM, CCCM and PCM, were surveyed. We note that the CCM codes were due to be surveyed in 2019 because they were identified as high growth services but, in consultation with the Research Subcommittee, the surveys were delayed until this cycle so the CCM, CCCM and PCM codes could be surveyed at the same time. The surveying societies were the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Society (AGS), the American Academy of Pediatrics (AAP), the American Osteopathic Association (AOA), the American Nurses Association (ANA), the American College of Rheumatology (ACR), the American Academy of Neurology (AAN), the American Association of Hospice and Palliative Care Medicine (AAHPM), and the Society for Post-Acute and Long-Term Care Medicine (AMDA). The surveying societies met with the Research Subcommittee and obtained approval of the survey tool, making the vignettes more general (i.e., similar to those used for the office visit codes), the RSL codes, and combining the XXX and ZZZ codes in a single RSL that did not include the office visit codes.

Background

The CCM survey was randomly distributed to members of the ACP, AAFP, AGS, AOA, ANA AAHPM, AAP, AMDA, and ACR. The PCM survey was randomly distributed to members of AAN and all the above societies except for AAFP. In other words, all societies except for AAFP and AAN surveyed both sets of codes.

The surveying societies convened an expert panel to review the summary data. The panel noted that it was important not only for the CCM and the PCM code sets to be ranked correctly internally, but that the CCM and PCM codes must be ranked correctly to each other. Therefore, the panel looked very closely at the sub analysis survey responses from respondents who responded to both sets of codes in the survey.

The panel noted the low response rates. The panel believes this was mostly due to COVID-19 surges across the US. While the response rates were low, the panel agreed that the survey data appeared valid in terms of the spread of times and work RVUs and did not show any indication of confusion on the part of the respondents.

Principal Care Management (PCM)

The expert panel reviewed the four new PCM codes.

As with CCM, two of the codes are reported based on clinical staff time spent on PCM under QHP supervision, one for the first 30 minutes of clinical staff time (99426) and a second for additional 30 minutes of clinical staff time (99427); the other two codes are based on QHP time spent performing PCM, one for the first 30 minutes of QHP time (99424) and a second for each additional 30 minutes of QHP time (99425).

The codes for the initial 30 minutes of time (one for clinical staff time spent under QHP supervision and the other for QHP time) are duplicates of two G codes CMS created (G2064 and 20265) and which became effective on January 1, 2020. In this connection, the panel noted that CMS valued these two G codes based on crosswalks to existing CCM codes.

G2064, the code for QHP PCM, first thirty minutes per calendar month has a time of 30 minutes (all intra) and a work RVU of 1.45 which are crosswalks from 99491. This will become 99424.

G2065, the code for clinical staff PCM performed under QHP supervision, first 30 minutes per calendar month, has a time of 30 minutes (which is not a crosswalk because the code requirement is for 30 minutes of clinical staff time) and a work RVU of 0.61 which is a crosswalk from 99490. This will become 99426.

99424
The panel reviewed 99424. There were 53 respondents, 92% of whom found the vignette to be typical. The survey median time was 32 minutes and the median work RVU was 1.73 while the 25th percentile work RVU was 1.45. The two key reference services were G0181 and 99226, *Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit*. G0181 has times 10/32/15/57 and work RVU of 1.73 and 99226 has times 10/30/15/55 and work RVU of 2.00. The panel also considered its recommendations for 99491, the QHP code for CCM services which are a time of 33 minutes and a work RVU of 1.50.

The panel agreed that the survey median time of 32 minutes was appropriate given that 30 minutes of time are required to report the code and that the 25th percentile for work of 1.45 was also reasonable as it was also slightly less than 25th percentile work RVU for 99491. In other words, the median time of 32 minutes and the 25th percentile work RVU of 1.45 place 99424 in proper rank order with the recommended time and work RVU for 99491. Furthermore, the expert panel reviewed survey data from the 30 respondents to 99424 who also responded to the CCM codes supports these values by noting that the survey median time and survey 25th percentile work RVU from this subset was almost identical to that of the total survey respondents.

More specifically, the survey 25th percentile work RVU for 99424 is 94% of the recommended work RVU for 99491 and the survey median time of 32 minutes is 97% of the survey median time for 99491. This results in an IWPUT of 0.045 which is remarkably similar to that of 99491. The expert panel also looked at the key reference services and agreed that because the intra-service times of those services were similar to the survey median time for 99424, that 1.45 was an appropriate work RVU because it takes into account the lack of pre and post service time in 99424.

Therefore, the expert panel recommends the median survey time of 32 minutes and the 25th percentile work RVU of 1.45.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G2064

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Rheumatology How often? Commonly

Specialty Neurology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 118479
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticiate 3 times the Medicare utilization estimates.

Specialty Internal Medicine Frequency 39493 Percentage 33.33 %

Specialty Rheumatology Frequency 39493 Percentage 33.33 %

Specialty Neurology Frequency 39493 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 39,493 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The recommendation is based on the Medicare utilization estimates for the 2021 NPRM; data is taken from the 2019 utilization file (code G2064).

Specialty Internal Medicine Frequency 13164 Percentage 33.33 %

Specialty Rheumatology Frequency 13164 Percentage 33.33 %

Specialty Neurology Frequency 13164 Percentage 33.33 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G2064

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99425 Tracking Number BB2 Original Specialty Recommended RVU: **1.00**
Presented Recommended RVU: **1.00**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **1.00**

CPT Descriptor: Principal care management services, for a single high-risk disease, with the following required elements:
•one complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death,
•the condition requires development, monitoring, or revision of diseasespecific care plan,
•the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities
•ongoing communication and care coordination between relevant practitioners furnishing care; additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient with a single complex chronic condition that places the patient at significant risk of decompensation.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Principal care management represents services which focus on the medical and/or psychological needs manifested by a single complex chronic condition expected to last at least three months and includes establishing, implementing, revising, or monitoring a care plan specific to that single disease. Code 99425 is reported in conjunction with 99424 when at least an additional 30 minutes of physician or other qualified health care professional personal time is spent in care management activities during the calendar month. Principal care management services are disease specific management services. A patient may have multiple chronic conditions of sufficient severity to warrant complex chronic care management but may receive principal care management if the reporting physician or other qualified health care professional is providing single disease rather than comprehensive care management. Services include establishing, implementing, revising, or monitoring the care plan, coordinating the care of other professionals and agencies, and educating the patient or caregiver about the patient's condition, care plan, and prognosis.
A physician or other qualified health care professional personally provides these principal care management (PCM) services, which are management and support services, to a patient with a single high-risk disease residing at home or in a domiciliary, rest home, or assisted living facility

Description of Post-Service Work: N/A

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
G0181	XXX	1.73	**CMS Time File**

CPT Descriptor Physician supervision of a patient receiving medicare-covered services provided by a participating home health agency (patient not present) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of laboratory and other studies, communication (including telephone calls) with other health care professionals involved in the patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month, 30 minutes or more.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99498	ZZZ	1.40	**RUC Time**

CPT Descriptor Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; each additional 30 minutes (List separately in addition to code for primary procedure).

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99231	XXX	0.76	**RUC Time**	6,736,945

CPT Descriptor 1 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

Most Recent

MPC CPT Code 2	Global	Work RVU	Time Source	Medicare Utilization
99308	XXX	1.16	**RUC Time**	11,302,104

CPT Descriptor 2 Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Introduction

CPT created four new codes for principal care management (PCM) at the September 2020 CPT meeting. Two of the codes describe principal care management performed by clinical staff under the supervision of a qualified health professional (QHP) and the other two describe principal care management performed by the QHP herself. The PCM codes differ from the chronic care management (CCM) codes in that they are to be reported by QHPs when that professional is responsible for managing a patient's single chronic illness as opposed to being responsible for managing the entire care of a patient with two or more chronic illnesses. Therefore, it is possible that a PCM code will be reported during the same month as a CCM code - albeit by different QHPs.

Because the CCM codes are in the same family as the new PCM codes, the entire code family, CCM, CCCM and PCM, were surveyed. We note that the CCM codes were due to be surveyed in 2019 because they were identified as high growth services but, in consultation with the Research Subcommittee, the surveys were delayed until this cycle so the CCM, CCCM and PCM codes could be surveyed at the same time. The surveying societies were the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Society (AGS), the American Academy of Pediatrics (AAP), the American Osteopathic Association (AOA), the American Nurses Association (ANA), the American College of Rheumatology (ACR), the American Academy of Neurology (AAN), the American Association of Hospice and Palliative Care Medicine (AAHPM), and the Society for Post-Acute and Long-Term Care Medicine (AMDA). The surveying societies met with the Research Subcommittee and obtained approval of the survey tool, making the vignettes more general (i.e., similar to those used for the office visit codes), the RSL codes, and combining the XXX and ZZZ codes in a single RSL that did not include the office visit codes.

Background

The CCM survey was randomly distributed to members of the ACP, AAFP, AGS, AOA, ANA AAHPM, AAP, AMDA, and ACR. The PCM survey was randomly distributed to members of AAN and all the above societies except for AAFP. In other words, all societies except for AAFP and AAN surveyed both sets of codes.

The surveying societies convened an expert panel to review the summary data. The panel noted that it was important not only for the CCM and the PCM code sets to be ranked correctly internally, but that the CCM and PCM codes must be ranked correctly to each other. Therefore, the panel looked very closely at the sub analysis survey responses from respondents who responded to both sets of codes in the survey.

The panel noted the low response rates. The panel believes this was mostly due to COVID-19 surges across the US. While the response rates were low, the panel agreed that the survey data appeared valid in terms of the spread of times and work RVUs and did not show any indication of confusion on the part of the respondents.

Principle Care Management (PCM)
The expert panel reviewed the four new PCM codes.

As with CCM, two of the codes are reported based on clinical staff time spent on PCM under QHP supervision, one for the first 30 minutes of clinical staff time (99426) and a second for additional 30 minutes of clinical staff time (99427); the other two codes are based on QHP time spent performing PCM, one for the first 30 minutes of QHP time (99424) and a second for each additional 30 minutes of QHP time (99425).

The codes for the initial 30 minutes of time (one for clinical staff time spent under QHP supervision and the other for QHP time) are duplicates of two G codes CMS created (G2064 and 20265) and which became effective on January 1, 2020. In this connection, the panel noted that CMS valued these two G codes based on crosswalks to existing CCM codes.

G2064, the code for QHP PCM, first thirty minutes per calendar month has a time of 30 minutes (all intra) and a work RVU of 1.45 which are crosswalks from 99491. This will become 99424.

G2065, the code for clinical staff PCM performed under QHP supervision, first 30 minutes per calendar month, has a time of 30 minutes (which is not a crosswalk because the code requirement is for 30 minutes of clinical staff time) and a work RVU of 0.61 which is a crosswalk from 99490. This will become 99426.

99425

The panel reviewed the survey for 99425 which had 47 respondents, 96% of whom agreed the vignette was typical. The survey median time was 30 minutes which was appropriate for a code that requires 30 minutes of time to report and the survey median work RVU was 1.50 and the survey 25th percentile work RVU was 1.00.

The two key reference services were G0181 and 99498, *Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; each additional 30 minutes (List separately in addition to code for primary procedure)*.

G0181 has times 10/32/15/57 and work RVU of 1.73 and 99498 has times 0/30/0/30 and a work RVU of 1.40.

The panel agreed that 99425 is a less intense service than 99424 and that it is less intense than 99498 which is an add-on code that describes advance care planning, each additional 30 minutes. The panel also agreed that the intensity of 99425 is not higher than 99437 which is the comparable add-on code for QHP CCM. Therefore, considering that the survey median times of 30 minutes for 99425 and 99437 were identical, the expert panel agreed the survey 25th percentile of 1.00 is appropriate and places 99425 in proper rank order to 99424, 99437, and the two key reference services.

Lastly, the panel reviewed the survey results from the 30 respondents who completed the surveys for all the codes and noted that the survey results from this subset were similar to that of the total survey. Please note that the panel did consider cross walking the recommended work RVU for 99437 of 0.99 to 99425 but decided to recommend the survey results as they were virtually identical.

Therefore, the expert panel recommends the median survey time of 30 minutes and the 25th percentile work RVU of 1.00.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G2064

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Cardiology How often? Commonly

Specialty Neurology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 29619
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticiate 3 times the Medicare utilization estimates.

Specialty Internal Medicine Frequency 9873 Percentage 33.33 %

Specialty Cardiology Frequency 9873 Percentage 33.33 %

Specialty Neurology Frequency 9873 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,873
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate 25% of the instances of principle care servives will extend beyond the 30 minute threshold of base code 99424, and require reporting 99425. 9,873 is 25% of estimated utilization of base code 99424.

Specialty Internal Medicine Frequency 3291 Percentage 33.33 %

Specialty Cardiology Frequency 3291 Percentage 33.33 %

Specialty Neurology Frequency 3291 Percentage 33.33 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. G2064

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99426 Tracking Number BB3 Original Specialty Recommended RVU: **1.00**
Presented Recommended RVU: **1.00**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.00**

CPT Descriptor: Principal care management services, for a single high-risk disease, with the following required elements;
•one complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death,
•the condition requires development, monitoring, or revision of disease-specific care plan,
•the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities,
•ongoing communication and care coordination between relevant practitioners furnishing care; first 30 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient with a single complex chronic condition that places the patient at significant risk of decompensation.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Principal care management represents services which focus on the medical and/or psychological needs manifested by a single complex chronic condition expected to last at least three months and includes establishing, implementing, revising, or monitoring a care plan specific to that single disease. Code 99426 is reported for the first 30 minutes of clinical staff time spent in care management activities during the calendar month. Principal care management services are disease specific management services. A patient may have multiple chronic conditions of sufficient severity to warrant complex chronic care management but may receive principal care management if the reporting physician or other qualified health care professional is providing single disease rather than comprehensive care management.
Management and support services are provided by clinical staff, under the direction of a physician or other qualified health care professional, to a patient with a single high-risk disease residing at home or in a domiciliary, rest home, or assisted living facility. These services typically include clinical staff implementing the care plan, coordinating the care of other professionals and agencies, and educating the patient or caregiver about the patient's condition, care plan, and prognosis directed by the physician or other qualified health care professional.

Description of Post-Service Work: N/A

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99226	XXX	2.00	**RUC Time**

CPT Descriptor Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99091	XXX	1.10	**RUC Time**

CPT Descriptor Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99282	XXX	0.93	**RUC Time**	352,496

CPT Descriptor 1 Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity.

Most Recent

MPC CPT Code 2	Global	Work RVU	Time Source	Medicare Utilization
99308	XXX	1.16	**RUC Time**	11,302,104

CPT Descriptor 2 Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**

Overall intensity/complexity	0%	0%	25%	38%	37%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	25%	75%
Physical effort required	0%	38%	62%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	38%	62%

2nd Key Reference Code

	Much Less	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	12%	13%	38%	25%	12%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	63%	12%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	37%	50%	13%
Physical effort required	63%	12%	25%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	50%	37%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Introduction

CPT created four new codes for principal care management (PCM) at the September 2020 CPT meeting. Two of the codes describe principal care management performed by clinical staff under the supervision of a qualified health professional (QHP) and the other two describe principal care management performed by the QHP herself. The PCM codes differ from the chronic care management (CCM) codes in that they are to be reported by QHPs when that professional is responsible for managing a patient's single chronic illness as opposed to being responsible for managing the entire care of a patient with two or more chronic illnesses. Therefore, it is possible that a PCM code will be reported during the same month as a CCM code - albeit by different QHPs.

Because the CCM codes are in the same family as the new PCM codes, the entire code family, CCM, CCCM and PCM, were surveyed. We note that the CCM codes were due to be surveyed in 2019 because they were identified as high growth services but, in consultation with the Research Subcommittee, the surveys were delayed until this cycle so the CCM, CCCM and PCM codes could be surveyed at the same time. The surveying societies were the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Society (AGS), the American Academy of Pediatrics (AAP), the American Osteopathic Association (AOA), the American Nurses Association (ANA), the American College of Rheumatology (ACR), the American Academy of Neurology (AAN), the American Association of Hospice and Palliative Care Medicine (AAHPM), and the Society for Post-Acute and Long-Term Care Medicine (AMDA). The surveying societies met with the Research Subcommittee and obtained approval of the survey tool, making the vignettes more general (i.e., similar to those used for the office visit codes), the RSL codes, and combining the XXX and ZZZ codes in a single RSL that did not include the office visit codes.

Background

The CCM survey was randomly distributed to members of the ACP, AAFP, AGS, AOA, ANA AAHPM, AAP, AMDA, and ACR. The PCM survey was randomly distributed to members of AAN and all the above societies except for AAFP. In other words, all societies except for AAFP and AAN surveyed both sets of codes.

The surveying societies convened an expert panel to review the summary data. The panel noted that it was important not only for the CCM and the PCM code sets to be ranked correctly internally, but that the CCM and PCM codes must be ranked correctly to each other. Therefore, the panel looked very closely at the sub analysis survey responses from respondents who responded to both sets of codes in the survey.

The panel noted the low response rates. The panel believes this was mostly due to COVID-19 surges across the US. While the response rates were low, the panel agreed that the survey data appeared valid in terms of the spread of times and work RVUs and did not show any indication of confusion on the part of the respondents.

Principal Care Management (PCM)
The expert panel reviewed the four new PCM codes.

As with CCM, two of the codes are reported based on clinical staff time spent on PCM under QHP supervision, one for the first 30 minutes of clinical staff time (99426) and a second for additional 30 minutes of clinical staff time (99427); the other two codes are based on QHP time spent performing PCM, one for the first 30 minutes of QHP time (99424) and a second for each additional 30 minutes of QHP time (99425).

The codes for the initial 30 minutes of time (one for clinical staff time spent under QHP supervision and the other for QHP time) are duplicates of two G codes CMS created (G2064 and 20265) and which became effective on January 1, 2020. In this connection, the panel noted that CMS valued these two G codes based on crosswalks to existing CCM codes.

G2064, the code for QHP PCM, first thirty minutes per calendar month has a time of 30 minutes (all intra) and a work RVU of 1.45 which are crosswalks from 99491. This will become 99424.

G2065, the code for clinical staff PCM performed under QHP supervision, first 30 minutes per calendar month, has a time of 30 minutes (which is not a crosswalk because the code requirement is for 30 minutes of clinical staff time) and a work RVU of 0.61 which is a crosswalk from 99490. This will become 99426.

99426

The expert panel then reviewed the survey data for 99426, PCM delivered by clinical staff under QHP supervision, first 30 minutes per calendar month (what is now G02065) and 99427, PCM delivered by clinical staff under QHP supervision, each additional 30 minutes per calendar month.

The survey for 99426 had 53 respondents, 94% of whom found the vignette typical and the survey for 99427 had 51 respondents, 94% of whom found the vignette to be typical. The survey for 99426 had a median time of 30 minutes and a median work RVU of 1.56 and a 25th percentile RVU of 1.10.

The key reference services for 99426 were 99091, *Collection and interpretation of physiologic data (e.g. ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days*, and 99226. 99091 has times 5/30/5/40 and work RVUs of 1.10 and 99226 has times 10/30/15/55 and work RVUs of 2.00.

The expert panel also considered its recommendations for 99490, the CCM code comparable to 99426, which are the survey median of 25 minutes of time and the survey work RVU of 1.00.

The panel agreed that the survey median time of 30 minutes was appropriate and required by the code descriptor and that the survey 25th percentile work RVU was supported by comparison to 99091 because 99091 has more total time but is less intense than 99426 which involves direct patient care for patients with a deteriorating medical condition over a period of one month. However, the panel also agreed that a work RVU of 1.10 (survey 25th percentile) was too high and would place it out of rank order with 99490 and 99487 in terms of intensity and 99426 should not have a higher work RVU than 99490.

Therefore, the panel agreed that an RVU crosswalk from its recommendation for 99490 of 1.00 work RVU would place 99426 in correct rank order with the key reference services, the clinical staff CCM codes and 99424 which has a QHP time of 32 minutes and work RVU of 1.45. Consistent with this, the resultant IWPUT of 0.040 is less than the IWPUT of 99424 (0.045) and the same as the recommended IWPUT for 99490 (0.040).

Therefore, for CPT 99426 the expert panel recommends a time of 30 minutes which is the survey median and time required by the code and a work RVU of 1.00 which is a crosswalk from the recommendation for 99490.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G2065

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Family Medicine How often? Commonly

Specialty Nurse Practitioner How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 716559
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3 times the Medicare utilization estimates

Specialty Internal Medicine Frequency 238853 Percentage 33.33 %

Specialty Family Medicine Frequency 238853 Percentage 33.33 %

Specialty Nurse Practitioner Frequency 238853 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 238,853 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The recommendation is based on the Medicare utilization estimates for the 2021 NPRM; data is taken from the 2019 utilization file (code G2065).

Specialty Internal Medicine Frequency 79617 Percentage 33.33 %

Specialty Family Medicine Frequency 79617 Percentage 33.33 %

Specialty Nurse Practitioner Frequency 79617 Percentage 33.33 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99427 Tracking Number BB4 Original Specialty Recommended RVU: **0.62**
Presented Recommended RVU: **0.70**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.71**

CPT Descriptor: Principal care management services, for a single high-risk disease, with the following required elements;
•one complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death,
•the condition requires development, monitoring, or revision of disease-specific care plan,
•the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities,
•ongoing communication and care coordination between relevant practitioners furnishing care; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient with a single complex chronic condition that places the patient at significant risk of decompensation.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Principal care management represents services which focus on the medical and/or psychological needs manifested by a single complex chronic condition expected to last at least three months and includes establishing, implementing, revising, or monitoring a care plan specific to that single disease. Code 99427 is reported in conjunction with 99X24 when at least an additional 30 minutes of clinical staff time is spent in care management activities during the calendar month. Principal care management services are disease specific management services. A patient may have multiple chronic conditions of sufficient severity to warrant complex chronic care management but may receive principal care management if the reporting physician or other qualified health care professional is providing single disease rather than comprehensive care management.
Management and support services are provided by clinical staff, under the direction of a physician or other qualified health care professional, to a patient with a single high-risk disease residing at home or in a domiciliary, rest home, or assisted living facility. These services typically include clinical staff implementing the care plan, coordinating the care of other professionals and agencies, and educating the patient or caregiver about the patient's condition, care plan, and prognosis directed by the physician or other qualified health care professional

Description of Post-Service Work: N/A

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
G0181	XXX	1.73	**CMS Time File**

CPT Descriptor Physician supervision of a patient receiving medicare-covered services provided by a participating home health agency (patient not present) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of laboratory and other studies, communication (including telephone calls) with other health care professionals involved in the patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month, 30 minutes or more.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99091	XXX	1.10	**RUC Time**

CPT Descriptor Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99407	XXX	0.50	**RUC Time**	83,194

CPT Descriptor 1 Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99231	XXX	0.76	**RUC Time**	6,736,945

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Introduction

CPT created four new codes for principal care management (PCM) at the September 2020 CPT meeting. Two of the codes describe principal care management performed by clinical staff under the supervision of a qualified health professional (QHP) and the other two describe principal care management performed by the QHP herself. The PCM codes differ from the chronic care management (CCM) codes in that they are to be reported by QHPs when that professional is responsible for managing a patient's single chronic illness as opposed to being responsible for managing the entire care of a patient with two or more chronic illnesses. Therefore, it is possible that a PCM code will be reported during the same month as a CCM code - albeit by different QHPs.

Because the CCM codes are in the same family as the new PCM codes, the entire code family, CCM, CCCM and PCM, were surveyed. We note that the CCM codes were due to be surveyed in 2019 because they were identified as high growth services but, in consultation with the Research Subcommittee, the surveys were delayed until this cycle so the CCM, CCCM and PCM codes could be surveyed at the same time. The surveying societies were the American College of Physicians (ACP), the American Academy of Family Physicians (AAFP), the American Geriatrics Society (AGS), the American Academy of Pediatrics (AAP), the American Osteopathic Association (AOA), the American Nurses Association (ANA), the American College of Rheumatology (ACR), the American Academy of Neurology (AAN), the American Association of Hospice and Palliative Care Medicine (AAHPM), and the Society for Post-Acute and Long-Term Care Medicine (AMDA). The surveying societies met with the Research Subcommittee and obtained approval of the survey tool, making the vignettes more general (i.e., similar to those used for the office visit codes), the RSL codes, and combining the XXX and ZZZ codes in a single RSL that did not include the office visit codes.

Background

The CCM survey was randomly distributed to members of the ACP, AAFP, AGS, AOA, ANA AAHPM, AAP, AMDA, and ACR. The PCM survey was randomly distributed to members of AAN and all the above societies except for AAFP. In other words, all societies except for AAFP and AAN surveyed both sets of codes.

The surveying societies convened an expert panel to review the summary data. The panel noted that it was important not only for the CCM and the PCM code sets to be ranked correctly internally, but that the CCM and PCM codes must be ranked correctly to each other. Therefore, the panel looked very closely at the sub analysis survey responses from respondents who responded to both sets of codes in the survey.

The panel noted the low response rates. The panel believes this was mostly due to COVID-19 surges across the US. While the response rates were low, the panel agreed that the survey data appeared valid in terms of the spread of times and work RVUs and did not show any indication of confusion on the part of the respondents.

Principal Care Management (PCM)
The expert panel reviewed the four new PCM codes.

As with CCM, two of the codes are reported based on clinical staff time spent on PCM under QHP supervision, one for the first 30 minutes of clinical staff time (99426) and a second for additional 30 minutes of clinical staff time (99427); the other two codes are based on QHP time spent performing PCM, one for the first 30 minutes of QHP time (99424) and a second for each additional 30 minutes of QHP time (99425).

The codes for the initial 30 minutes of time (one for clinical staff time spent under QHP supervision and the other for QHP time) are duplicates of two G codes CMS created (G2064 and 20265) and which became effective on January 1, 2020. In this connection, the panel noted that CMS valued these two G codes based on crosswalks to existing CCM codes.

G2064, the code for QHP PCM, first thirty minutes per calendar month has a time of 30 minutes (all intra) and a work RVU of 1.45 which are crosswalks from 99491. This will become 99424.

G2065, the code for clinical staff PCM performed under QHP supervision, first 30 minutes per calendar month, has a time of 30 minutes (which is not a crosswalk because the code requirement is for 30 minutes of clinical staff time) and a work RVU of 0.61 which is a crosswalk from 99490. This will become 99426.

99427

The panel reviewed 99427. The two key reference services were 99091, which has times 5/30/5/40 and work RVU of 1.10, and G0181 which has times 10/32/15/57 and a work RVU of 1.73. Although the comparison to 99091 supported the survey median time and 25th percentile work RVU, the expert panel agreed that would create a rank order anomaly because 99427 has a similar intensity to 99439 (currently G2058) the add-on code to 99490.

The panel reviewed the survey RVU data for 99427 and agreed that the survey data for work RVU was too high (median 1.20 and 25th percentile 0.91) and accepting these would put the services out of appropriate ranking with 99439, the comparable CCM code to 99427. Therefore, the expert panel considered a crosswalk to 99439 at 0.70 RVU and 20 minutes of time.

Then panel looked at the survey sub analysis responses to 99427 from the 30 respondents who responded to all the survey codes including 99490. The survey responses from this subset for 99427 were a median time of 21 minutes and a 25th percentile work RVU of 0.62. These values are similar to those from the survey for 99439.

After much consideration, the panel decided to recommend crosswalks for time and work RVU from its recommendations for 99439 which are based on the survey data for 99439.

Therefore, for CPT 99427 the expert panel recommends a time of 20 minutes and a work RVU of 0.70.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G2065

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine	How often? Commonly
Specialty Family Medicine	How often? Commonly
Specialty Nurse Practitioner	How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 179139
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticiate 3 times the Medicare utilization estimates

Specialty Internal Medicine	Frequency 59713	Percentage 33.33 %
Specialty Family Medicine	Frequency 59713	Percentage 33.33 %
Specialty Nurse Practitioner	Frequency 59713	Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 59,713 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate 25% of the instances of principle care servives will extend beyond the 30 minute threshold of base code 99X24, and require reporting 99427. 59,713 is 25% of estimated utilization of base code 99X24

Specialty Internal Medicine	Frequency 19904	Percentage 33.33 %
Specialty Family Medicine	Frequency 19904	Percentage 33.33 %
Specialty Nurse Practitioner	Frequency 19904	Percentage 33.33 %

Do many physicians perform this service across the United States? Yes

---

Hospital at Home: Feasibility and Outcomes of a Program To Provide Hospital-Level Care at Home for Acutely Ill Older Patients

Bruce Leff, MD; Lynda Burton, ScD; Scott L. Mader, MD; Bruce Naughton, MD; Jeffrey Burl, MD; Sharon K. Inouye, MD, MPH; William B. Greenough III, MD; Susan Guido, RN; Christopher Langston, PhD; Kevin D. Frick, PhD; Donald Steinwachs, PhD; and John R. Burton, MD

Background: **Acutely ill older persons often experience adverse events when cared for in the acute care hospital.**

Objective: **To assess the clinical feasibility and efficacy of providing acute hospital-level care in a patient's home in a hospital at home.**

Design: **Prospective quasi-experiment.**

Setting: **3 Medicare-managed care (Medicare + Choice) health systems at 2 sites and a Veterans Administration medical center.**

Participants: **455 community-dwelling elderly patients who required admission to an acute care hospital for community-acquired pneumonia, exacerbation of chronic heart failure, exacerbation of chronic obstructive pulmonary disease, or cellulitis.**

Intervention: **Treatment in a hospital-at-home model of care that substitutes for treatment in an acute care hospital.**

Measurements: **Clinical process measures, standards of care, clinical complications, satisfaction with care, functional status, and costs of care.**

Results: **Hospital-at-home care was feasible and efficacious in delivering hospital-level care to patients at home. In 2 of 3 sites studied, 69% of patients who were offered hospital-at-home care chose it over acute hospital care; in the third site, 29% of patients chose hospital-at-home care. Although less procedurally oriented than acute hospital care, hospital-at-home care met quality standards at rates similar to those of acute hospital care. On an intention-to-treat basis, patients treated in hospital-at-home had a shorter length of stay (3.2 vs. 4.9 days) ($P = 0.004$), and there was some evidence that they also had fewer complications. The mean cost was lower for hospital-at-home care than for acute hospital care ($5081 vs. $7480) ($P < 0.001$).**

Limitations: **Possible selection bias because of the quasi-experimental design and missing data, modest sample size, and study site differences.**

Conclusions: **The hospital-at-home care model is feasible, safe, and efficacious for certain older patients with selected acute medical illnesses who require acute hospital-level care.**

Ann Intern Med. 2005;143:798-808. www.annals.org

For author affiliations, see end of text.

Although the acute care hospital is the standard venue for providing acute medical care, it is expensive and may be hazardous for older persons, who commonly experience functional decline, iatrogenic illness, and other adverse events during care (1–3). Providing acute hospital-level care in a patient's home is an alternative to hospital care (4, 5). Although several hospital-at-home models have been studied, there is controversy regarding the effectiveness of this method. In part, this reflects heterogeneity among hospital-at-home models (6). A recent Cochrane review examined surgical and medical early hospital discharge models, terminal care, and admission avoidance, that is, substitutive models. Overall, no differences were found in health outcomes. Patients, but not caregivers, had increased satisfaction with hospital-at-home care, and there was some evidence that substitutive models may be cost-effective (7). However, with some exceptions (8), most of these models would be difficult to distinguish from augmented skilled nursing services, community-based long-term care, or home-based primary care services in the United States. In addition, most studies have been done in countries with single-payer national health insurance systems (7–14).

Previous research in the United States has been limited to a pilot study of a physician-led substitutive hospital-at-home model for older persons with acute medical illness (15). The aim of our study was to evaluate the safety, efficacy, clinical and functional outcomes, patient and caregiver satisfaction, and costs of providing acute hospital-level care in a hospital at home that substituted entirely for admission to an acute care hospital for older persons.

Methods

Patients

The target sample was community-dwelling persons, age 65 years and older, who lived in a catchment area and who, in the opinion of a physician not involved in the

 © 2005 American College of Physicians

study, required admission to an acute care hospital for 1 of 4 target illnesses: community-acquired pneumonia, exacerbation of chronic heart failure, exacerbation of chronic obstructive pulmonary disease, or cellulitis. Patients were required to meet validated criteria of medical eligibility for hospital-at-home care (16), which were designed to identify patients who would be medically suitable for this type of treatment. The most common reasons for medical ineligibility were uncorrectable hypoxemia (oxygen saturation <90%), suspected myocardial ischemia, and presence of an acute illness, other than the target illness, for which the patient was required to be hospitalized.

Study Design

This study was a prospective quasi-experiment conducted in 2 consecutive 11-month phases. During the acute care hospital observation phase (1 November 1990 to 30 September 2001), eligible patients were identified and followed through usual hospital care. Study coordinators verified the patient's eligibility for hospital-at-home care using a standard protocol at the time of enrollment. During this observation phase of the study, most patients were identified the morning after admission. These patients made up the acute hospital observation comparison group. During the intervention phase (1 November 2001 to 30 September 2002), eligible patients were identified at the time of admission and were offered the option of receiving their care in hospital at home rather than in the acute care hospital. Patients who chose hospital-at-home treatment were never admitted to the acute care hospital but received treatment, after initial evaluation (usually in the emergency department), in their home. The intervention group comprised all patients eligible for hospital-at-home care, irrespective of where they were treated.

Approval

The institutional review boards from each study site, the coordinating center, and officials at the Center for Health Plans and Providers at the Centers for Medicare & Medicaid Services (CMS) gave their approval for the study. All participants provided informed written consent.

Study Sites

The study was conducted in 3 Medicare managed care (Medicare + Choice) plans at 2 sites and at a Veterans Administration medical center. Univera Health and Independent Health, in Buffalo, New York, are Medicare + Choice plans that operate in an independent practice association model. These 2 plans collaborated to provide hospital-at-home care and made up 1 study site (site 1). The Fallon Health Care System (site 2), in Worcester, Massachusetts, operates a not-for-profit Medicare + Choice plan, and the Fallon Clinic, a for-profit multispecialty physician group, provides care on a capitated basis to Medicare + Choice beneficiaries. The Portland, Oregon, Veterans Administration Medical Center (site 3) is a quaternary care and teaching facility.

Context

Hospital care for older people often means iatrogenic complications and a decline in function. Home hospital care might reduce these adverse outcomes.

Content

Patients were 65 years of age or older and required hospital care for pneumonia, heart failure, chronic obstructive pulmonary disease, or cellulitis. In phase I, they were hospitalized. In phase II, they could choose home hospital care (continuous nursing care followed by at least daily visits from a nurse and a physician). Sixty percent of patients chose home hospital care. Patients who received this type of care had shorter stays; fewer procedures, consultations, and indwelling devices; less delirium; greater satisfaction; and similar functional outcomes.

Cautions

The study was nonrandomized, and data were missing.

Conclusion

Home hospital care may be a good alternative for selected patients.

—The Editors

Assessments

Age, gender, and primary diagnosis were obtained for all eligible patients. Informed written consent was required for all additional data collection: medical record review, cost data review, and interviews. Staff trained at the coordinating center used standard procedures outlined in a detailed training manual to conduct all interviews, assessments, and medical record reviews. At baseline, interrater reliability was verified among the staff. Quality checks of medical record reviews were done midway through the study. Interrater reliability for ratings on the components of the daily patient interview was confirmed in 13 paired observations ($\kappa = 0.91$). Interrater reliability among study sites was similar.

Medical Record Reviews

Medical records were abstracted by using a standardized instrument that captured illness acuity, health status, medication use, results of laboratory tests, treatments, the hospital course and complications, health outcomes, and whether treatment standards were met. Illness acuity was determined by using the Acute Physiology and Chronic Health Evaluation II (APACHE II) score (17). Health status was measured by using clinical indicators appropriate to the diagnoses, a checklist of chronic medical conditions, and the Charlson comorbidity index (18). Medication use was defined as the number of prescribed medications taken on a daily basis at the time of admission. Diagnostic and therapeutic interventions were categorized as potentially "difficult" or "not difficult" to do in the home. The patient's clinical course was characterized according to

whether emergency situations (those that required physician evaluation within 30 minutes, such as the development of acute shortness of breath) or critical complications (death, transfer to intensive care setting, intubation, or myocardial infarction) occurred. Clinical care was examined with regard to completion of illness-specific standards of care (19–21).

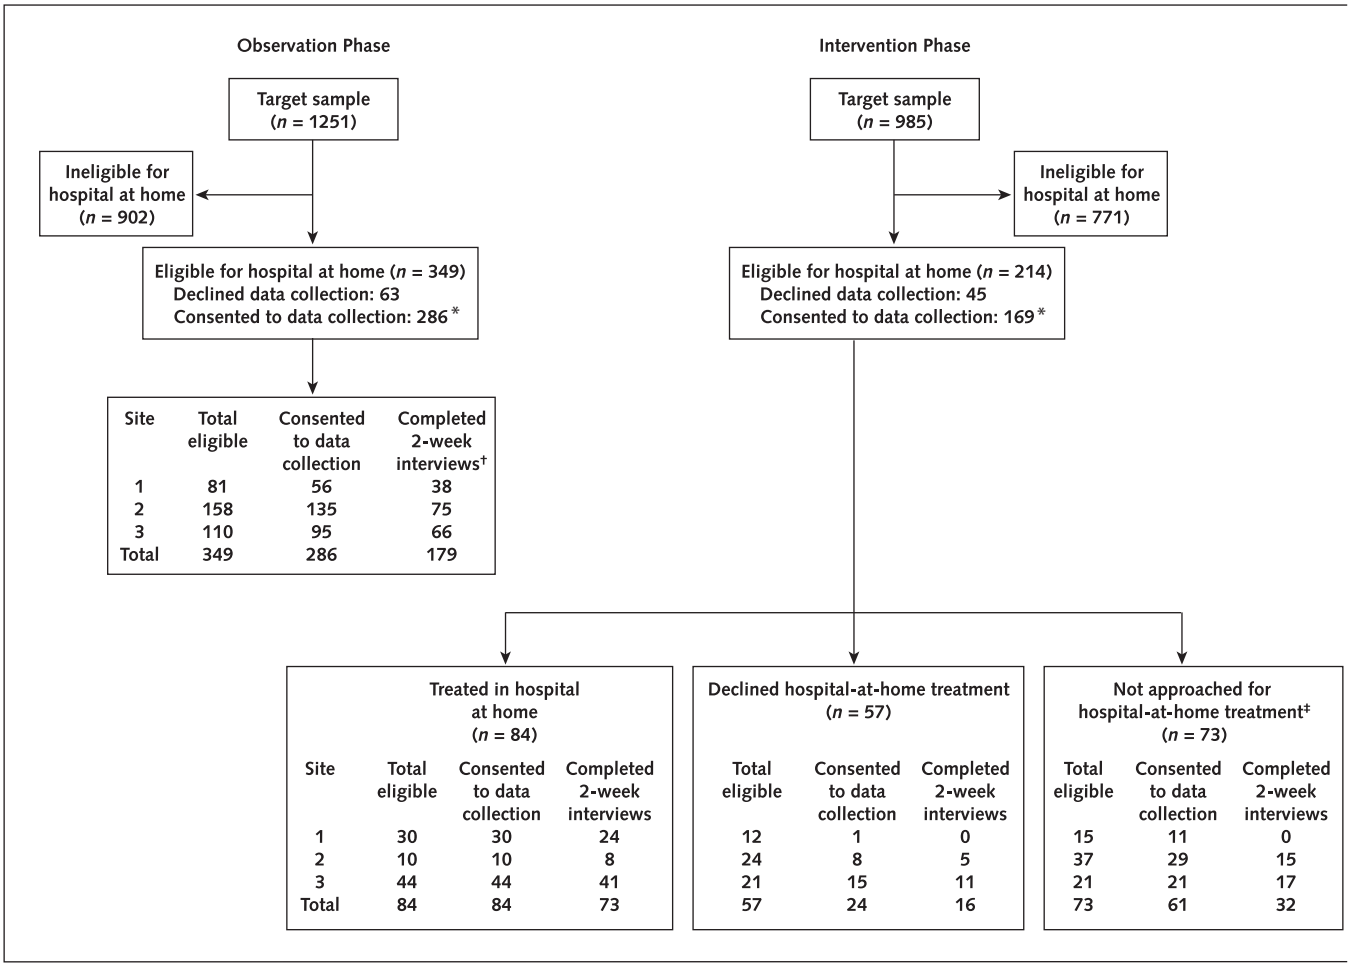
Eligible patients who consented to participate completed a baseline interview that included demographic information, self-reported health status, assessment of sleep, Katz activities (22), Lawton instrumental activities of daily living (23), continence, mobility, the Geriatric Depression Scale (24), Jaeger vision test, the Mini-Mental State Examination (MMSE) (25), the Digit Span Test (26), and evaluation by the Confusion Assessment Method (CAM) (27). Subsequently, patients were evaluated daily until discharge by using a structured interview consisting of the MMSE, Digit Span Test, and CAM rating. A family member, caregiver, or person who knew the patient well was interviewed at the time of admission to complete the modified Blessed Dementia Rating Scale (28). At 2 weeks after admission, patients and family members were interviewed by telephone to obtain the patient's current functional status and to assess his or her satisfaction with care.

Intervention: The Hospital-at-Home Model of Care

The hospital-at-home model of care has been described previously (15). Briefly, a patient requiring admission to the acute care hospital for a target illness was identified in an emergency department or ambulatory site and his or her eligibility status was determined. Nonstudy medical personnel, usually emergency department physicians, made the decision to hospitalize the patient. All patients who were offered but who declined hospital-at-home care were admitted to the acute care hospital.

After informed consent was obtained, the patient was transported home by an ambulance. Patients were evaluated by the hospital-at-home physician either in the emergency department or shortly after arriving at home. Patients who required oxygen therapy were sent home with a portable oxygen apparatus pending delivery of home oxygen therapy. The hospital-at-home nurse met the ambulance at the patient's home. The patient had subsequent direct one-on-one nursing supervision for an initial period of at least 8 hours at site 3 and for a period of 24 hours at sites 1 and 2.

When direct nursing supervision was no longer required, the patient had intermittent nursing visits at least daily. The hospital-at-home physician made at least daily home visits and was available 24 hours a day for urgent or emergent visits. Nursing and other care components, such as durable medical equipment, oxygen therapy, skilled therapies, and pharmacy support, were provided by a partner Medicare-certified home health agency, and for some services, such as home radiology, support was provided by independent contractors. A Lifeline device (Lifeline Systems Inc., Framingham, Massachusetts) was placed in the home of any patient who did not have a family member present. Diagnostic studies, such as electrocardiography and radiography; intravenous fluids, intravenous antimicrobial agents, and other medications; and oxygen and other respiratory therapies were provided at home. Illness-specific hospital-at-home care maps, clinical outcome evaluations, and specific discharge criteria were developed and provided a pathway for care. The patient was followed by the same hospital-at-home physician until his or her condition was stable enough for discharge, at which time care reverted to the primary care physician.



Outcomes

Process-of-care measures included time to first physician visit in the home, arrival of the nurse, and delivery of oxygen or medications. Additional process outcomes included hours of one-on-one nursing supervision, mean number of physician and intermittent nursing visits, treatments received, use of consultative services, and whether illness-specific standards of care were met.

Clinical outcomes included emergency situations and critical complications and various complications, including incident delirium. Incident delirium was defined as the acute onset and fluctuating course of symptoms of delirium, inattention, and either disorganized thinking or an altered level of consciousness according to the CAM criteria (27). Subsyndromal delirium was defined as the acute onset and fluctuating course of symptoms of delirium and either inattention or disorganized thinking or an altered level of consciousness (29). Each CAM feature was rated by study nurses on the basis of observations made during daily interviews. Incident delirium was defined as present or absent. Adjudication of delirium ratings was done by 2 independent reviewers who were unaware of the participant's study group. Satisfaction with care was measured by using a modified Picker Hospital Survey (30). A summary score was derived based on satisfaction with admission and discharge processes; relations with physician, nurses, and staff; and safety, comfort, and pain control (patients only). Possible scores ranged from 0 to 9 and 0 to 8 for patients and family members, respectively. Functional status was measured by using a summary score for activities of daily living (range, 0 to 5) and for instrumental activities of daily living (range, 0 to 7).

Costs of care were calculated. In the Medicare + Choice settings, we obtained data from the managed care organizations on the total amounts paid by the plan and by the patients during the index hospitalization in either the acute care hospital or the hospital-at-home setting. For the Veterans Administration medical center, we obtained an estimate of the costs of each patient's care based on a step-down approach that allocates overhead charges in addition to the costs of care directly associated with the patient. We chose to use these amounts to focus on the cost for which

Figure. **Patient flow and data availability by study phase and site.**

* Consented at least to medical record review and review of cost data. † Consented to review of medical records and cost data and completed baseline interview and 2-week follow-up interview. ‡ Not approached for hospital-at-home treatment because hospital at home was not open for admissions between 10:00 p.m. and 6:00 a.m.

each payer in the current financing system was responsible. For hospital-at-home care, the costs of staff were included.

Safety Monitoring

Each of the study sites convened a patient safety committee that reviewed hospital-at-home cases. A Coordinating Center Data Safety Monitoring Board met 3 times during the intervention phase.

Statistical Analysis

We conducted exploratory analyses to examine all baseline demographic and health status characteristics at each study site. A priori, we conducted a pooled analysis of participants from the 3 study sites. In addition, we calculated the results from individual study sites.

All analyses were done on an intention-to-treat basis, in which participants from the observation group who were treated in the acute care hospital were compared with participants in the intervention group, regardless of whether they were treated in hospital at home or in the acute care hospital. A complete-case analysis was conducted and assumed that data were missing completely at random. The respective proportion of participants in the observation and intervention groups across study sites who consented to review of costs and medical records (82% vs. 78%), who consented to the baseline interview (66% vs. 67%), and who completed a 2-week follow-up telephone interview (51% vs. 57%) were similar. Thus, this assumption seemed reasonable, although for end points with substantial amounts of missing data, such as incident delirium, satisfaction with care, and function, bias cannot be ruled out and results must be interpreted cautiously.

We evaluated the effect of the intervention on clinical complications by using logistic regression for dichotomous variables with sufficient numbers of events; otherwise, the Fisher exact test is reported. We dichotomized a variable for site comparing site 2 versus sites 1 and 3. This was justified because relatively few participants in the intervention phase received actual hospital-at-home care at site 2. The unadjusted model examines the effect of the interven-

tion. We then controlled for study phase and the interaction between site and study phase. The interaction term was never statistically significant and thereafter was not included as a covariate. In the adjusted model, the following covariates were added on the basis of differences in participant characteristics and factors that we postulated could influence clinical outcomes: age, gender, APACHE II score, and study site.

The analysis of incident delirium was limited to participants who did not have prevalent delirium at the time of admission and who had 2 or more CAM assessments: 173 patients in the observation group and 127 in the intervention group. There were no differences in delirium risk factor profiles between patients with 2 or more CAM assessments and those with only 1 CAM assessment. A proportional hazards model, as well as Kaplan–Meier analysis and the log-rank test, were used to compare the cumulative incidence of delirium, which was defined as the probability that delirium would develop by a specified time. Assumptions of the proportional hazards model were tested and were met. A similar approach was taken for covariate selection as for other outcomes, except for the inclusion of additional specific delirium risk factors of visual impairment, cognitive impairment, and dehydration.

Satisfaction data were explored. Differences in the median number of domains in which patients or caregivers were satisfied were examined by study phase by using Wilcoxon rank-sum tests. To test for the effect of covariates, scores were dichotomized as at or above versus below the median and were controlled for in the logistic regression analysis. Covariates for patient satisfaction were Geriatric Depression Scale score, more than 1 limitation in activities or instrumental activities of daily living, primary diagnosis, a caregiver who was limited in at least 1 activity or instrumental activity of daily living, or a low MMSE score; covariates for family member satisfaction were patient living at the poverty level, primary diagnosis, having a child as a caregiver, or number of prescription medications being taken.

The change in scores for activities of daily living and instrumental activities of daily living was computed by taking the difference in scores between the baseline interview that assessed functional status 2 weeks before admission and the interview done 2 weeks after admission. Linear regression was used to control for covariates.

To compare costs, the mean amount paid by treatment method was combined across all 3 sites. We adjusted for inflation to September 2002 levels by using separate monthly consumer price index indicators for hospital and professional costs, including the costs of hospital-at-home staff. Because of the non-normal distribution, the statistical significance of differences in amount paid was tested by using nonparametric bootstrapping (1000 repetitions) with bias-corrected 95% CIs. Target accrual for the study was pragmatic.

All analyses were conducted using SAS, version 8.2 (SAS Institute, Inc., Cary, North Carolina), or Stata, version 8.0 (Stata Corp., College Station, Texas).

Role of the Funding Sources

The funding sources had no role in the design, conduct, or reporting of the study or in the decision to submit the manuscript for publication.

RESULTS

The **Figure** shows patient groups by study phase and by site. During the observation phase, there were 1251 patients in the target sample. Three hundred forty-nine (28%) were medically eligible for the study, of whom 286 (82%) consented to data collection; these made up the acute care hospital observation group. During the intervention phase of the study, there were 985 patients in the target sample, of whom 214 (22%) were medically eligible for the study. Of these patients, 141 were approached about receiving their care in hospital at home. Eighty-four received their care in this setting (overall, 60% of those approached—71% at site 1, 29% at site 2, and 68% at site 3), 57 patients declined hospital-at-home care, and 73 pa-

¶ $P \leq 0.050$ comparing the observation phase with the intervention phase at the site.

tients were not approached to enroll in hospital-at-home during the intervention phase of the study because hospital at home was not open for admissions between 10:00 p.m. and 6:00 a.m. Treatment status in the intervention phase and data availability by study phase and site are described in **Table 1**. The consent and complete case rates probably reflect the relatively low incentive to participate in a study with a relatively high interview burden for patients in the observation group as a whole and for patients in the intervention group who were treated in the acute care hospital. Other operative factors may have included a more amenable research sample at the Veterans Administration medical center (site 3) and a higher proportion of African-American patients at site 1 who were less willing to participate in the research. Neither death nor active withdrawal from the study contributed to these rates. In addition, an analysis of characteristics of participants who completed all data collection through the 2-week follow-up interviews showed that they did not differ substantially from the characteristics of participants who declined any type of data collection at the site level or in the aggregate in each study phase.

Characteristics of the study samples are shown in **Table 2**. Overall, patients were elderly, white, and had a high burden of functional impairments and comorbid illnesses. Patients in the observation group and those in the intervention group were similar, but patients in the intervention phase were more likely to live in poverty, live alone, take more prescription medication on a daily basis as an outpatient, and have a lower illness acuity score. Aggregate differences among participants at sites 1, 2, and 3, respectively, were limited to age (76.2 years vs. 78.9 years vs. 76.1 years; $P < 0.001$), proportion of male participants (39% vs. 40% vs. 94%; $P < 0.001$), proportion of white participants (80% vs. 94% vs. 87%; $P = 0.002$), number of comorbid conditions (5.5 vs. 5.3 vs. 6.6; $P < 0.001$), and number of prescription medications used (6.4 vs. 6.1 vs. 9.0; $P < 0.001$). Within-site differences between the observation and intervention phases are described in **Table 2**.

‡ Applies only to the 84 patients in the intervention group who received hospital-at-home treatment.
§ Includes values of 0 for patients seen in the emergency department by a hospital-at-home physician.
‖ Includes values of 0 for patients who declined continuous nursing care.
¶ P value by Wilcoxon rank-sum, for median length of stay.
** $P \leq 0.050$ comparing the observation phase with the intervention phase at the site.
†† Excluding patients with a primary diagnosis of chronic heart failure.
‡‡ "Difficult" procedures to accomplish at home: continuous cardiac telemetry; radiologic studies, such as computed tomography, magnetic resonance imaging, echocardiography, or ultrasonography; exercise stress test; ventilation–perfusion scan; Holter monitor; endoscopic procedure; thoracentesis; paracentesis; blood product transfusion; and medications, such as intravenous heparin or intravenous nitroglycerin, that are difficult to administer in the home.

at-home feasibility, are shown in **Table 3**. Process outcomes for patients who received hospital-at-home care in the aggregate and at the site level show that this model was feasible: Nurses and physicians arrived promptly, and systems to deliver oxygen and medications functioned well and met standards established by the investigators. The mean and median lengths of stay for patients who received hospital-at-home care were substantially shorter than those for patients who were treated in the acute care hospital, with the shortest hospital-at-home length of stay at site 3. Care processes usually associated with hospital-level care, such as oxygen therapy, intravenous antibiotics, and nebulized bronchodilators, were used at similar rates. However, patients treated in the hospital at home were less likely to receive intravenous fluids, have a urinary catheter, have a "difficult" procedure performed, or have a consultation of any sort. At the site level, these differences were seen at sites 1 and 3 but not at site 2, where few patients received actual hospital-at-home care. At site 2, there were no statistically significant differences between the observation and intervention groups, except for the increased use of intravenous fluids in patients in the intervention group. This may have been related to the increased proportion of patients in the intervention group with community-acquired pneumonia who were treated at site 2. Illness-specific standards of care were met in similar proportions in both study groups at the aggregate and site levels (**Table 4**).

Complications experienced by patients in each of the

study groups are described in **Table 5**. The rate of incident delirium, including subsyndromal delirium, was 9% in the intervention group and 24% in the observation group. This difference remained significant in survival analyses (adjusted hazard ratio, 0.26 [95% CI, 0.12 to 0.57]). These results should be interpreted cautiously because data on delirium were not available for 42% of the sample. In addition, patients in the intervention group were less likely to have a sedative medication prescribed (adjusted odds ratio, 0.49 [CI, 0.30 to 0.81]). The small number of several outcomes precluded adjusted analyses. However, in the intervention group, there was a reduction in the use of chemical restraints, a trend toward reduction in the use of physical restraints, fewer critical complications, and a lower death rate. Again, at the site level, these differences were most apparent at sites 1 and 3. Two patients who initially received hospital-at-home care completed their treatment in the acute care hospital. One patient with chronic obstructive pulmonary disease had an episode of oxygen desaturation that did not respond initially to intensive bronchodilator treatment. Another patient with pneumonia insisted on using the bathroom alone, despite the presence of a nursing assistant. He fell and sustained a thoracic vertebral burst fracture, from which he recovered well.

Satisfaction of patients (median, 7 vs. 6 domains; $P < 0.001$) and family members (median, 6 vs. 5 domains; $P < 0.001$) was greater in the intervention group and remained statistically significant when controlled for covariates. In unadjusted and adjusted analyses, there were no differences in change in activities of daily living (0.04 vs. 0.09; $P = 0.711$) or in status of instrumental activities of daily living scores between the observation and intervention groups at 2 weeks (−0.07 vs. 0.14; $P = 0.280$). Given that satisfaction and functional outcomes were missing for 47% of participants, these results should be interpreted with caution because of the potential for bias.

The mean amounts paid for the index hospitalization for patients in the observation group and those in the intervention group were $7480 (SD, $8112) and $5081 (SD, $4427), respectively. Use of a nonparametric bootstrapping (31) approach to test for differences showed a difference in the amount paid for the index hospitalization at all 3 study sites (mean, $2398 [CI, $1376 to $3631]). The results from the bootstrapping approach did not differ from those of the parametric tests.

Eight weeks after admission, there were no differences in use of health services between the patients in the observation and intervention groups regarding mean number of emergency department visits (0.23 vs. 0.22; $P = 0.846$), mean number of inpatient hospital readmissions (0.28 vs. 0.27; $P = 0.892$), mean number of admissions to skilled nursing facilities (0.15 vs. 0.18; $P = 0.511$), or mean number of home health visits (1.80 vs. 1.78; $P = 0.971$).

Table 4. **Comparison of Illness-Specific Standards of Care in the Observation and Intervention Groups***

Variable	Observation Group ($n = 286$)	Intervention Group ($n = 169$)	Site 1		Site 2		Site 3	
			Observation Group	Intervention Group	Observation Group	Intervention Group	Observation Group	Intervention Group
Community-acquired pneumonia ($n = 143$), *n*	89	54	24	9	39	22	26	23
Antibiotics within 8 hours of admission, *% (n)*	96 (85)	93 (50)	100	89	97	91	89	96
Blood cultures obtained before administration of antibiotics, *% (n)*	61 (54)	52 (28)	63	56	56	36	65	65
Chronic heart failure ($n = 108$), *n*	71	37	14	11	27	7	30	19
Documentation of left ventricular function, *% (n)*	65 (46)	57 (21)	36	9	41	57	100	84
Use or consideration of use of angiotensin-converting enzyme inhibitor or angiotensin-receptor blocker, *% (n)*	68 (48)	78 (29)	50	73	48	43	93	95
Use or consideration of use of β-blocker, *% (n)*	66 (47)	78 (29)	43	73	52	71	90	84
COPD ($n = 140$), *n*	92	48	9	14	51	14	32	20
Use of corticosteroids, *% (n)*	88 (81)	85 (41)	89	93	90	79	84	85
Use of nebulized bronchodilators, *% (n)*	82 (75)	85 (41)	89	100	90	79	66	80
Use of antibiotics, *% (n)*	72 (66)	79 (38)	67	86	78	93	63	65
Cellulitis ($n = 64$), *n*	34	30	9	8	18	4	7	18
Antibiotics within 8 hours of admission, *%(n)*	100 (34)	97 (29)	100	100	100	75	100	100
Blood cultures obtained before administration of antibiotics, *% (n)*	50 (17)	47 (14)	67	38	44	50	43	50

* The illness-specific standards of care examined were as follows: for community-acquired pneumonia, administration of antibiotics within 8 hours of admission and whether blood culture specimens were obtained before antibiotics were administered (28); for chronic heart failure, documentation of left ventricular function, use or consideration of use of angiotensin-converting enzyme inhibitor or angiotensin-receptor blocker for patients with systolic dysfunction, and use or consideration of use of β-blocker (27); for COPD, use of corticosteroids, use of nebulized bronchodilators, and the use of antibiotics (26); for cellulitis, administration of antibiotics within 8 hours of admission and whether blood culture specimens were obtained before antibiotics were administered. COPD = chronic obstructive pulmonary disease.

DISCUSSION

To our knowledge, this is the first study of a hospital-at-home model in the United States that substitutes entirely for acute hospital care. The data suggest that this model is feasible and efficacious. In 2 of 3 sites studied, 69% of acutely ill older persons who were medically eligible and who were offered hospital-at-home care opted for this type of treatment. Patients received timely hospital-level care at home that met quality standards. Compared with patients treated in the acute care hospital, those treated in the hospital at home had fewer important clinical complications, including use of sedative medications, use of chemical restraints, and incident delirium. Patient and family member satisfaction was higher in the hospital-at-home setting. In addition, the average amount paid for patients who received hospital-at-home care was lower than the amount paid for those who received care in the acute hospital setting.

In the literature, the definition of *hospital at home* is controversial (32). Most studies focus on outpatient intravenous infusion models and early hospital discharge schemes (5, 7). There have been fewer studies of substitutive hospital-at-home models in which patients avoid admission to an acute care hospital (5, 7–10, 13, 15). Compared with previous studies and models of substitutive hospital at home, our study is unique in several respects. First, our hospital-at-home model provided greater medical supervision than reported in previous studies. In most models, physician evaluation of patients in their homes is uncommon. For example, a recent systematic review of hospital-at-home care for patients with chronic obstructive pulmonary disease examined 7 studies, none of which provided substantial physician involvement (33). In the current model, the patients had at least daily physician visits at home. Studies suggest that physician involvement may be crucial in ensuring patient acceptance of hospital-at-home–type care in the United States (34, 35). In addition, patients had initial one-on-one nursing care for an extended period (mean, 16.9 hours), followed by at least daily home visits by a nurse, and 24-hour physician coverage for urgent clinical situations. Overall, substantial medical supervision was appropriate because of the nature of the patients and their illnesses and could not have been provided in a timely manner with standard community-based home care services. Second, the current model provided an intensive level of medical services not offered in many studies of hospital-at-home care. For example, 78% of patients who were treated at hospital at home received oxygen therapy, whereas previous studies would have excluded patients who required oxygen (13) and another study would have excluded patients who required intravenous therapy or full-time nursing care (9). Third, we reported on a wide range of outcomes, including clinical outcomes, satisfaction, function, and costs. Fourth, we demonstrated lower rates of complications, including incident delirium. An Australian study of patients who received hospital-at-home care reported a statistically significant decrease in delirium by reviewing medical records for evidence of "confusion" (13). In our study, the more rigorous assessment of the delirium outcome using the CAM probably better reflects the true rates of incident delirium and suggests that the care environment and process play a role in causing delirium (36). In addition, data for other clinical complications showed reduced odds ratios, although many were not statistically

significant in adjusted analyses. This may reflect a true lack of differences in these outcomes or a lack of power to detect such differences. Fifth, we examined process measures, use of hospital procedures and consultations, and standards of care to understand how the process of hospital-at-home care differs from acute hospital care and to demonstrate that the former type of care is less procedurally oriented while still maintaining appropriate care standards. Finally, our hospital-at-home model was implemented simultaneously in several types of health systems.

The study has important limitations. Patients were not randomly assigned to treatment, and differences between study groups may be attributable to selection bias. However, we used a highly conservative intention-to-treat analysis, which may have attenuated reported effects of the hospital at home, and adjusted clinical outcomes for differences in patient characteristics. In addition, although approximately 80% of participants consented to review of medical records and cost data, smaller proportions consented to interviews and contributed data to the analysis of outcomes, such as incident delirium, satisfaction, and function. This may have introduced additional bias into the results, although patients with complete and missing data were similar according to known characteristics.

The study experience at site 2 is instructive. The recruitment experience at site 2 differed from that of the other study sites, with a lower rate of patients treated in hospital at home and a higher rate of patients not approached for this type of treatment. There are several possible explanations for this, including the development of disease management programs launched in that health system during the study, a local nursing shortage that precluded that site's ability to coordinate the one-on-one nursing care required to start a hospital-at-home admission, and other unmeasurable organizational factors. We do not believe that the staff model–type arrangements at site 2 were a factor and, in fact, submit that such an integrated health care delivery system may be ideal for implementation of hospital-at-home care.

Temporal trends may have affected the study. This is reflected in the decline in the target sample between the 2 study phases, which may have been attributable to a mild influenza season during the intervention phase (37), the implementation of case management interventions at some study sites that may have effectively reduced the need for hospital admissions, or both. Because the hospital-at-home model we studied was limited to patients with 4 diagnoses and was done at several Medicare + Choice plans and a Veterans Administration medical center, the results may not be generalizable to the treatment of patients with other illnesses, other samples of older persons, or other health systems.

Despite these limitations and the need for continued rigorous research in this area, our study shows that an innovative substitutive hospital-at-home model for selected older patients with common acute medical conditions is feasible and efficacious in selected health care systems. As the U.S. population ages and the burden of chronic disease and demand for acute hospital services increase, we believe that hospital at home, as a hospital-based unit, can play an important role in the health care system of the future.

Impact of Complex Care Management on Spending and Utilization for High-Need, High-Cost Medicaid Patients

Brian W. Powers, MD, MBA; Farhad Modarai, DO; Sandeep Palakodeti, MD, MPH; Manisha Sharma, MD; Nupur Mehta, MD; Sachin H. Jain, MD, MBA; and Vivek Garg, MD, MBA

ABSTRACT

OBJECTIVES: Complex care management programs have emerged as a promising model to better care for high-need, high-cost patients. Despite their widespread use, relatively little is known about the impact of these programs in Medicaid populations. This study evaluated the impact of a complex care management program on spending and utilization for high-need, high-cost Medicaid patients.

STUDY DESIGN: Randomized quality improvement trial conducted at CareMore Health in Memphis, Tennessee. A total of 253 high-need, high-cost Medicaid patients were randomized in a 1:2 ratio to complex care management or usual care.

METHODS: Intention-to-treat analysis compared regression-adjusted rates of spending and utilization between patients randomized to the complex care program (n = 71) and those randomized to usual care (n = 127) over the 12 months following randomization. Primary outcomes included total medical expenditures (TME) and inpatient (IP) days. Secondary outcomes included IP admission, emergency department (ED) visits, care center visits, and specialist visits.

RESULTS: Compared with patients randomized to usual care, patients randomized to complex care management had lower TME (adjusted difference, –$7732 per member per year [PMPY]; 95% CI, –$14,914 to –$550; *P* = .036), fewer IP bed days (adjusted difference, –3.46 PMPY; 95% CI, –4.03 to –2.89; *P* <.001), fewer IP admissions (adjusted difference, –0.32 PMPY; 95% CI, –0.54 to –0.11; *P* = .014), and fewer specialist visits (adjusted difference, –1.35 PMPY; 95% CI, –1.98 to –0.73; *P* <.001). There was no significant impact on care center or ED visits.

CONCLUSIONS: Carefully designed and targeted complex care management programs may be an effective approach to caring for high-need, high-cost Medicaid patients.

Am J Manag Care. 2020;26(2):e57-e63

High-need, high-cost patients—those with chronic medical conditions and co-occurring social and behavioral complexity—experience poor health outcomes and high rates of potentially preventable spending.[1-8] Improving care quality and lowering spending for this population have become a focus for policy makers, clinicians, payers, and health systems.[3,4,8]

Complex care management programs—broadly defined as efforts to coordinate medical and social services, assist patients and caregivers in managing medical and behavioral health conditions, and address the psychosocial drivers of poor health—have emerged as a promising model to improve care for high-need, high-cost patients.[8-13] In recent years, complex care management programs have been widely adopted by health systems and delivery organizations entering into value-based payment arrangements. A 2018 survey found that 96% of accountable care organizations had implemented complex care management programs for high-need, high-cost patients.[14]

AJMC
Copyright © Managed Care & Healthcare Communications, LLC

The impact of complex care management has been uneven. Systematic reviews and large-scale program evaluations have not demonstrated a consistent impact on health outcomes, spending, or acute care utilization.[15-17] Some individual programs, however, have led to improvements in patient-reported health and decreases in acute care utilization and total spending.[11,15,16,18,19] Program heterogeneity (eg, practice setting, patient characteristics, care models, staffing) may explain these varied results.

Complex care management programs have traditionally been developed and implemented among Medicare populations.[11,12,15,16,20] Increasingly, these models are being adopted in Medicaid.[14,21-24] Similar to the Medicare population, high-need, high-cost Medicaid patients have high rates of chronic conditions[25] and preventable acute care utilization,[6,26,27] both attributes well suited to complex care management.[13] High-need, high-cost Medicaid patients also have high rates of behavioral health disorders and unmet social needs,[6,21,28,29] attributes less common among Medicare patients and areas in which the impact of complex care management is uncertain.

Despite the proliferation of complex care management for Medicaid patients, there have been very few rigorous program

TAKEAWAY POINTS

A complex care management program for high-need, high-cost Medicaid patients reduced total medical expenditures by 37% and inpatient utilization by 59%. Based on the design of the program, these results suggest that:

- Carefully designed and targeted complex care management can be effective among high-need, high-cost Medicaid patients.
- Community health workers and other nontraditional healthcare workers can help engage and activate patients, build trust, and better understand and manage the nonmedical drivers of poor health and avoidable spending.
- Targeted interventions focused on modifiable risk factors are an effective and efficient approach for reducing unnecessary utilization.

evaluations, and the overall effect of these programs is unclear. This paper presents the results of a randomized quality improvement trial to evaluate the impact of complex care management on spending and utilization for high-need, high-cost Medicaid patients with complex health and social needs.

METHODS

Design and Setting

This was a randomized quality improvement trial to evaluate the impact of a complex care management program on spending and utilization for high-need, high-cost Medicaid patients. The design and implementation of the program, detailed in the following paragraphs, incorporated attributes of successful complex care management programs in other populations.[8,11,13,20,30] The program was implemented at CareMore Health (CareMore) in Memphis, Tennessee, where CareMore provides comprehensive primary care services for Medicaid patients enrolled in TennCare plans administered by Amerigroup. The program was operated out of a single CareMore care center.

Population

Participants were drawn from adult Medicaid patients attributed to CareMore primary care physicians (PCPs). Program eligibility criteria were aimed at identifying patients at risk for poor outcomes and unnecessary spending, as well as those most likely to benefit from complex care management. The criteria drew from analyses suggesting that combining predictive models, historical claims, and clinician judgment is the most effective approach to identifying patients for complex care management.[13,31-34]

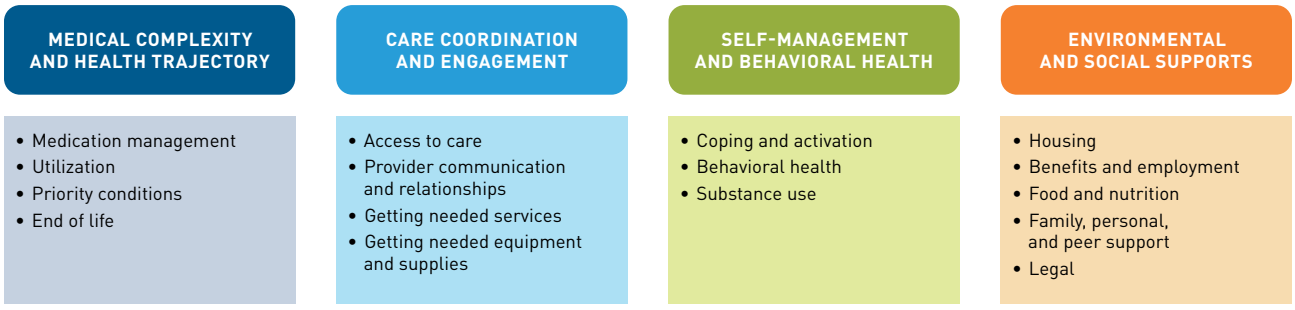
Eligible patients were first required to meet at least 1 of the following criteria: top 5% of total medical expenditures (TME) in the prior 12 months, top 5% of Chronic Illness Intensity Index (CI3) score, or care team member nomination. The CI3 score is a predictive model developed by Amerigroup that uses demographic, clinical, and pharmacy claims data to estimate a patient's predicted cost in the subsequent 12 months compared with the average Amerigroup Medicaid patient.

Patients meeting 1 of the above criteria were then required to meet at least 1 of the following criteria: 2 or more inpatient (IP) admissions in the prior 12 months, 3 or more emergency department (ED) visits in the prior 12 months, or 2 or more chronic conditions.

Patients less likely to benefit from complex care management because of specific comorbidities (cognitive impairment, severe mental illness without medical comorbidity, active malignancy, pregnancy) or current residence in a long-term care facility were excluded.

Given limited resources, eligible patients were randomized in a 1:2 ratio to complex care management or usual care. Patients not continuously attributed to CareMore over the 12-month period following randomization were considered lost to follow-up. This could occur for several reasons: loss of Medicaid eligibility, enrollment in another TennCare plan, or transfer of care to a non-CareMore PCP.

Program Description



The program was staffed by a multidisciplinary care team consisting of a community health worker (CHW), a social worker (SW), and a PCP. CHWs and other nontraditional healthcare workers have become increasingly common components of complex care management programs.[35] CHWs, drawn from local communities, build longitudinal relationships with patients, provide context-specific activation and engagement, assist with care coordination, and help patients navigate the complexities of health systems and social programs.[35] CHW interventions have been shown to improve health outcomes and reduce spending, especially among urban, underserved populations.[22,36-41]

With guidance and support from the SW and the PCP, the CHW was responsible for patient outreach, engagement, activation, and accompaniment. The SW was responsible for counseling and brief interventions for patients with behavioral health needs and for coordinating referrals to social service agencies and other medical providers. The PCP was responsible for providing comprehensive care for acute and chronic conditions and for coordinating with specialists and inpatient providers.

Patients randomized to the complex care management program were contacted by the CHW via telephone and invited to enroll in the program. The CHW attempted to contact patients on 3 separate occasions, after which no additional attempts at contact were made.

Program activities were designed around a conceptual model of the drivers of poor outcomes and avoidable spending for high-need, high-cost Medicaid patients. Drawing on existing frameworks,[42] these drivers were grouped into 4 intersectional domains: (1) medical complexity and health trajectory, (2) care coordination and engagement, (3) self-management and behavioral health, and (4) environmental and social supports. Within each domain, specific drivers of poor health and high costs were identified. For example, unstable housing was a driver within the environmental and social supports domain, and medication management was a driver within

FIGURE 1. Conceptual Model of the Domains and Drivers of Poor Outcomes and Avoidable Spending for High-Need, High-Cost Medicaid Patients

the medical complexity and health trajectory domain (see **Figure 1** for a complete list of domains and drivers).

Patients who enrolled in the program were scheduled for a 60-minute in-person intake visit within 7 days of enrollment. During the intake visit, the entire care team (ie, CHW, SW, and PCP) conducted a comprehensive assessment of the patient's medical, behavioral, and social risk factors. The results of this assessment were used to identify and prioritize the most impactful and impactable drivers of poor outcomes and avoidable spending for each patient. Finally, the patient and the care team codeveloped a tailored care plan that outlined interventions, roles, and responsibilities for addressing each of the prioritized drivers. For example, the SW may be responsible for providing counseling and brief interventions for depression and for coordinating referrals to psychiatry. The PCP may be responsible for rapidly addressing poorly controlled diabetes or congestive heart failure. The CHW may be responsible for contacting patients to identify barriers to adherence and self-management. The patient may be responsible for applying for temporary housing assistance, logging physical activity, or checking in daily with the CHW/PCP to provide blood pressure or blood sugar readings.

After the intake visit, there was frequent, structured follow-up. The CHW called patients at least weekly to assess progress and identify and troubleshoot barriers. The care team met formally every week to review and update care plans. Patients were scheduled for monthly, in-person follow-up visits to review and revise the care plan. Patients admitted to an IP or skilled nursing facility were visited by a member of the care team, if possible. The CHW accompanied patients to specialist, social service, and other appointments as needed.

The program launched on March 1, 2017, and ran until February 28, 2018, at which point patients returned to usual care.

Data Sources and Measures

The primary outcomes were TME and IP bed days. Secondary outcomes included ED visits, IP admissions, care center visits, and specialist visits. The ED visit outcome measure excluded visits that resulted in an IP admission. The care center visit measure included any in-person visit for medical or behavioral health services at one of CareMore's outpatient facilities. All outcomes were assessed over the 12-month period following randomization (March 1, 2017, to February 28, 2018).

The following covariates were assessed for each patient: age at randomization, gender, CI3 score at randomization, and rates of each outcome measure over the 12 months prior to randomization (March 1, 2016, to February 28, 2017). Spending and utilization rates were calculated from claims data provided by Amerigroup. CI3 scores were provided by Amerigroup. Demographic data were extracted from the CareMore electronic data warehouse.

Statistical Analysis

Baseline characteristics for patients randomized to complex care management and those randomized to usual care were compared using standardized mean differences (SMDs).[43] Proposed cutoffs vary, but SMDs greater than 0.1 or 0.25 are generally considered to represent an important difference between groups.[44,45]

The effect of the program on the primary and secondary outcomes was analyzed through an intention-to-treat approach based on random assignment. Count-based utilization outcomes (IP admissions, IP bed days, ED visits, care center visits, and specialist visits) were modeled with Poisson regression, and the spending outcome (TME) was modeled with ordinary least squares regression. Both adjusted and unadjusted analyses were performed. Adjusted models included age at randomization, gender, CI3 score at randomization, and the corresponding outcome measure over the 12-month period prior to randomization (eg, the model for IP days included IP days from March 1, 2016, to February 28, 2017, as a covariate). Adjusted and unadjusted results were similar. Results from the adjusted models are presented below, with unadjusted results available in the **eAppendix** (available at **ajmc.com**). A *P* value of .05 was considered to indicate statistical significance. *P* values were adjusted for multiple comparison using the Holm-Bonferroni method.[46] All analyses were performed using R version 3.5.1. The evaluation was implemented as a randomized quality improvement trial without institutional review board approval or waiver.

FIGURE 2. Flow of Patients Through the Trial

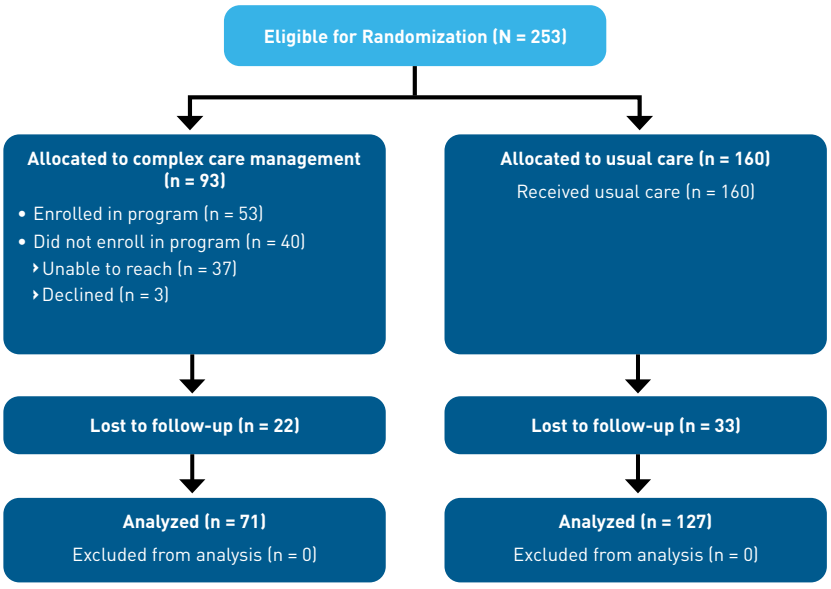


TABLE 1. Baseline Characteristics for Patients by Study Group[44,45,a]

	Complex Care Management (n = 71)	Usual Care (n = 127)	SMD[b]
Age in years,[c] mean (SD)	43.8 (15.6)	45.9 (14.5)	−0.139
Sex, % male	43.7	42.5	0.023
CI3 score,[d] mean (SD)	8.56 (6.87)	9.99 (8.46)	−0.180
TME in prior 12 months ($), mean (SD)	21,429 (33,859)	23,432 (29,723)	−0.064
IP admissions in prior 12 months, mean (SD)	1.28 (2.64)	1.17 (2.25)	0.045
IP days in prior 12 months, mean (SD)	6.90 (15.80)	6.77 (13.67)	0.009
ED visits in prior 12 months, mean (SD)	3.82 (6.62)	3.01 (4.70)	0.148
Care center visits in prior 12 months, mean (SD)	4.14 (6.22)	4.07 (5.12)	0.013
Specialist visits in prior 12 months, mean (SD)	5.55 (6.61)	6.38 (9.18)	−0.099

CI3 indicates Chronic Illness Intensity Index; ED, emergency department; IP, inpatient; SMD, standardized mean difference; TME, total medical expenditures.

[a]Baseline spending and utilization rates were calculated over the 12-month period prior to randomization (March 1, 2016, to February 28, 2017).

[b]SMD is calculated by taking the mean of each group, divided by the standard deviation of the entire population.[44] Proposed cutoffs vary, but SMDs greater than 0.1 or 0.25 are generally considered to represent an important difference between groups.[44,45]

[c]Age at randomization.

[d]CI3 is a predictive score that estimates a patient's relative predicted cost in the subsequent 12 months compared with the average patient. See Methods for more details.

RESULTS

Randomization, Enrollment, and Follow-up

Figure 2 depicts the flow of patients through the trial. A total of 253 patients met eligibility criteria and were randomized in a 1:2 ratio to complex care management (n = 93) or usual care (n = 160). More than half (56.9%) of the patients randomized to complex care management ultimately enrolled in the program. The most common reason for not enrolling was an inability for the CHW to reach the patient via telephone (37 of 40 patients). A small number of patients were reached but declined to participate in the program (3 of 40 patients). Across both groups, roughly 20% of patients were lost to follow-up in the 12 months after randomization. The intention-to-treat analysis included 71 patients in the complex care management group and 127 patients in the usual care group. Information on appointment-kept rates is provided in the eAppendix.

Baseline Characteristics

Baseline rates of spending and utilization were high. The average patient incurred TME of $22,714, spent 6.81 days in an IP facility, and visited the ED 3.30 times during the 12-month period prior to randomization. Table 1[44,45] compares baseline characteristics between patients randomized to complex care management and those randomized to usual care. Compared with patients in the usual care group, patients in the complex care management group were slightly younger (mean age of 43.8 vs 45.9 years), had lower predicted future costs (mean CI3 score of 8.56 vs 9.99), and visited the ED more frequently (3.82 vs 3.01 mean visits).

Spending and Utilization Outcomes

Table 2 compares adjusted rates of utilization and spending between patients randomized to complex care management and those randomized to usual care over the 12 months following randomization. The complex care management program was associated with lower TME (adjusted difference, −$7732 per member per year [PMPY]; 95% CI, −$14,914 to −$550; $P = .036$), fewer IP bed days (adjusted difference, −3.46 PMPY; 95% CI, −4.03 to −2.89; $P < .001$), fewer IP admissions (adjusted difference, −0.32 PMPY; 95% CI, −0.54 to −0.11; $P = .014$), and fewer specialist visits (adjusted difference, −1.35 PMPY; 95% CI, −1.98 to 0.73; $P < .001$). There was no significant impact on ED or care center visits.

Patient Vignettes

The eAppendix includes summary vignettes for selected patients enrolled in complex care management. These are intended to

supplement the quantitative findings from the primary analysis and offer additional detail on the implementation of complex care planning.

DISCUSSION

A complex care management program reduced spending and inpatient utilization among high-need, high-cost Medicaid patients. Patients randomized to complex care management had TME that were 37% lower than those randomized to usual care, an absolute reduction of $7732 per patient per year. This spending reduction appeared to be driven primarily by decreases in inpatient utilization—bed days were reduced by 59% and admissions by 44%.

Several potential mechanisms could explain the observed decreases in utilization and spending. Improved management of medical, social, and behavioral risk factors may have prevented acute exacerbations of chronic disease. Patient engagement and activation may have led to improved self-management and adherence. Finally, social and behavioral stabilization may have facilitated safe discharge planning, reducing the need for, or duration of, inpatient admissions.

TABLE 2. Adjusted Rates of Spending and Utilization for Patients Randomly Assigned to Complex Care Management Versus Usual Care[a]

	Complex Care Management	Usual Care	Difference (95% CI)	P[b]
Primary outcomes				
TME ($/patient/year)	13,091	20,823	−7732 (−14,914 to −550)	.036
IP days (patient/year)	2.41	5.87	−3.46 (−4.04 to −2.89)	<.001
Secondary outcomes				
IP admissions (patient/year)	0.41	0.73	−0.32 (−0.54 to −0.11)	.014
ED visits (patient/year)	2.77	2.79	−0.02 (−0.51 to 0.47)	1.00
Care center visits (patient/year)	4.80	4.33	0.47 (−0.16 to 1.11)	.576
Specialist visits (patient/year)	4.08	5.43	−1.35 (−1.98 to −0.73)	<.001

ED indicates emergency department; IP, inpatient; TME, total medical expenditures.

[a]Spending and utilization rates are adjusted for age at randomization, gender, Chronic Illness Intensity Index score at randomization, and the corresponding outcome measure over the 12-month period prior to randomization (eg, IP days are adjusted for IP days from March 1, 2016, to February 28, 2017).

[b]Adjusted for multiple comparisons (Holm-Bonferroni).

Complex care management led to a small but significant decrease in specialist visits. Although prior studies of complex care management have not examined specialist use, data from primary care improvement initiatives suggest that enhanced primary care services can reduce downstream specialist utilization.[47,48] In this study, specialist utilization could have been decreased by increased engagement with primary care, better management of chronic medical conditions in the primary care setting, or better communication and coordination between the PCP and specialists. Because there were no additional financial or nonfinancial incentives to reduce utilization in the complex care management group, it is less likely that the reduction in specialist utilization was due to restricted access.

Complex care management had no impact on ED utilization. This contrasts with findings from some programs targeting Medicare patients[18,19] and may be explained by a differential approach to ED utilization between Medicare and Medicaid patients. Research suggests that even with access to primary care, Medicaid patients use the ED at high rates.[49,50] Additional research is needed to better understand the drivers of ED utilization among high-need, high-cost Medicaid patients.

Despite a focus on structured engagement and follow-up, patients randomized to complex care management did not visit CareMore care centers more frequently than patients randomized to usual care. This suggests that the character of outpatient visits (eg, social and behavioral risk assessments, structured care planning, patient engagement and activation) may be more important than the quantity of those visits. It is also possible that telephonic or virtual contact with care team members, which occurred frequently for patients enrolled in the complex care program, can be an effective substitute for in-person visits among engaged patients.

Taken together, the results of this study have several important implications for the design and implementation of complex care management programs for high-need, high-cost patients.

First, these findings add to an emerging evidence base suggesting that carefully designed and targeted care management programs can reduce spending and utilization in Medicaid populations.[22,36,38] The magnitude of utilization and spending reductions observed in this study were similar to those reported in recent evaluations of complex care management and CHW programs for Medicaid populations[22,36,38] and substantially larger than those reported from programs targeting Medicare patients.[15,16,18,19] Although additional evaluations of programs targeting both populations are needed, these findings suggest that high-need, high-cost Medicaid patients may be better suited for complex care management.

Second, patterns of utilization in the 2 study groups underscore the importance of precise patient targeting. To be most effective, complex care management programs should target patients at risk of persistently high spending and those whose spending and health outcomes are amenable to complex care planning and engagement. Many complex care management programs use claims data and historical utilization patterns to identify eligible patients. Recent research has highlighted the limitations of this approach—historically high-cost patients often return to normal patterns or spending, or they have drivers of high spending not amenable to complex care management.[34,51,52] The eligibility criteria in this study made use

of a hybrid strategy that integrated historical claims data, predictive models, and clinician judgment. The persistently high rates of utilization observed in the usual care group and the decrease in utilization observed in the complex care management group suggest that these criteria successfully identified patients at risk of persistently high spending that was modifiable by complex care management.

Third, engagement via telephonic outreach failed to reach many patients. About 40% of the patients randomized to complex care management could not be contacted by telephone. Medicaid patients often have missing or outdated contact information because of numerous structural barriers including poverty and housing insecurity.[53,54] Strategies that incorporate alternative forms of outreach (eg, in-person, text message, email) and partnerships with community organizations could improve engagement among this population.

Finally, the design and implementation of the program incorporated attributes of successful complex care management programs in other populations.[11,13,20,21,30] These included identifying patients at high risk of poor outcomes and avoidable spending; conducting comprehensive assessments of medical, social, and behavioral risk; care planning and routine follow-up; interdisciplinary, team-based care; and the use of CHWs to engage and activate patients, build trust, and better understand and manage the nonmedical drivers of poor outcomes. The results of this study confirm the importance of these attributes, but it remains unclear which attributes are more or less responsible for the observed reductions in spending and utilization. Larger evaluations, with factorial designs or well-powered subgroup analyses, could help clarify which attributes are most effective.

Limitations

This study has several limitations. First, as it was a pragmatic quality improvement trial, the scope was limited to a relatively small population (n = 198). Second, patients with cognitive impairment, severe mental illness without medical comorbidity, active malignancy, or pregnancy, as well as those residing in long-term care facilities, were excluded from the study population. As a result, the findings may not be generalizable to other high-need, high-cost Medicaid populations, and larger replication studies are warranted. Third, many patients were lost to follow-up. Although the rates were similar across both study groups (roughly 20%), if the patients lost to follow-up in each group were systematically different, the results may be biased. Fourth, the analysis was limited to 12-month spending and utilization outcomes. We were unable to evaluate the impact of the program on health-related outcomes or longer-term spending and utilization trends. Future research is needed to better understand the impact of complex care management on morbidity, mortality, measures of disease control, and the durability of spending and utilization reductions. Finally, we did not collect detailed information on processes outcomes or program fidelity. This limited our ability to understand which program attributes were most responsible for the observed spending and utilization reductions.

CONCLUSIONS

Complex care management programs have proliferated in recent years, but little is known about their impact in high-need, high-cost Medicaid populations. The results of this study suggest that complex care management can reduce spending and acute care utilization. Precise patient targeting, the use of nontraditional healthcare workers such as CHWs, and in-person engagement strategies may improve the efficacy and efficiency of complex care management programs for Medicaid patients. ■

Acknowledgments

This study was presented in part at the AcademyHealth Annual Research Meeting; June 3, 2019; Washington, DC. The authors would like to acknowledge Brisa Samudio (formerly of CareMore Health) and Yolanda Sutton (CareMore Health) for their tireless work on behalf of CareMore's high-need, high-cost patients, and Caroline Hagan (CareMore Health) and Paula Ma (CareMore Health) for their assistance with data preparation.

(2) Appointment Kept Rates
(3) Patient Vignettes

(1) Unadjusted Spending and Utilization Outcomes

	Complex Care Management	Usual Care	Difference (95% CI)	P Value[a]
Primary Outcomes				
TME ($/patient/yr)	11,567	21,674	-10,108 (-18,071, -2,143)	0.013
IP Days (#/patient/yr)	2.13	6.25	-4.13 (-4.68, -3.57)	<0.001
Secondary Outcomes				
IP Admissions (#/patient/yr)	0.38	0.76	-0.38 (-0.59, -0.17)	0.001
ED Visits (#/patient/yr)	2.69	2.83	-0.14 (-0.63, 0.34)	1.000
Care Center Visits (#/patient/yr)	4.55	4.46	0.09 (-0.52, 0.71)	1.000
Specialist Visits (#/patient/yr)	3.92	5.55	-1.64 (-2.25, -1.02)	<0.001

[a] Adjusted for multiple comparisons (Holm-Bonferroni)

Abbreviations: TME = total medical expenditures; IP = inpatient; ED = emergency department.

(2) Selected Appointment Kept Rates

Appointment	Kept Rate
Intake Visit	87%
30 Day Visit	87%
60 Day Visit	100%
90 Day Visit	95%

NOTE: Due to changes in information systems, monthly appointment kept rates were not routinely tracked after 90 days.

(3) Patient Vignettes

Ms. T

- *History:* 58-year-old woman with hypertension, diabetes, anxiety, post-traumatic stress disorder, domestic violence, and substance use disorder. Frequent ED visits for substance use and behavioral health needs.
- *Intervention:* Discovered extensive prior trauma from domestic violence. Built trust with patient through a trauma-informed approach, which ultimately led to re-engagement with psychiatry and enrollment in a substance use disorder treatment program.
- *Impact*: ED visits fell from 11 to 1. Total medical expenditures decreased by $72,367.

Mr. R

- *History:* 59-year-old man with congestive heart failure, hypertension, diabetes, chronic pain, and depression. Frequent hospitalizations for heart failure exacerbations.
- *Intervention:* Screening uncovered he was living in his friend's garage due to an inability to pay utility bills. He had been unable to prioritize attending cardiology appointments given housing instability. CHW arranged for utility bill payments through a combination of donations and a payment plan, and he was able to move back into his home.
- *Impact:* Cardiology visits increased from 1 to 8. Inpatient bed days decreased from 41 to 9

Mr. S

- *History:* 45-year-old man with bilateral above the knee amputations and multiple, chronic, high-risk wounds. Frequent inpatient admissions for wound care and infections.
- *Intervention:* Discovered home health nurses would not see patient due to concerns for gang-related activity in the home and risk of violence in the neighborhood. Arranged for transportation and wound-care visits at the care center.
- *Impact:* Inpatient bed days fell from 51 to 0. Total medical expenditures decreased by $28,723

COMMENTARY

Attributes Common to Programs That Successfully Treat High-Need, High-Cost Individuals

Gerard F. Anderson, PhD; Jeromie Ballreich, MHS; Sara Bleich, PhD; Cynthia Boyd, MD; Eva DuGoff, PhD; Bruce Leff, MD; Claudia Salzburg, PhD; and Jennifer Wolff, PhD

ABSTRACT

Using literature review and interviews, we have identified 8 attributes of programs, such as accountable care organizations, readmission initiatives, special needs plans, care transition programs, and patient-centered medical homes, that successfully treat high-need, high-cost patients. These 8 attributes—illustrated here with specific examples—are specific ways to target these types of individuals, promote leadership at various levels, emphasize interaction with the care coordinator, use data strategically to refine the program, update the program periodically, allow physicians to spend more time with patients, and promote interaction among clinicians and high-need, high cost patients and their families.

Am J Manag Care. 2015;21(11):e597-e600

The United States has tried, and continues to experiment with, many different programs designed to provide better care for people with high needs and high costs. These programs include accountable care organizations, readmission initiatives, special needs plans, care transition programs, patient-centered medical homes, and many others. These programs have been evolving over the past 20 years with many of the initiatives based loosely on the Chronic Care Model developed by Ed Wagner and his colleagues.[1] We wanted to identify specific attributes of successful programs for this population.

ajmc.com © Managed Care & Healthcare Communications, LLC

Common Attributes of Successful Programs

In order to identify the attributes that successful programs have in common, we began by reviewing the peer-reviewed literature evaluating the various programs and subsequently identified over 1000 articles that were written about programs designed to treat adults with high costs and/or high needs in the United States. To be included in the review, the study had to involve 2 or more chronic conditions or a chronic condition and a disability.

However, we quickly realized that many programs being used to guide policy are not in the peer-reviewed literature. These include programs sponsored by the Medicare and Medicaid, Veterans Administration, private insurers or health plans, and doctors or hospitals. We used the information from both the peer-reviewed literature and the gray literature to: 1) identify specific programs that focus on high-need, high-cost individuals that were successful on at least 1 of the 3 triple aims (spending, satisfaction, clinical outcomes), and 2) to identify commonalities of success in these programs.

We became especially interested in why certain programs had varying levels of success in different settings and populations. We created a semi-structured interview guide and interviewed 45 programs that the peer-reviewed literature and/or gray literature identified as successful on at least 1 of the triple aims.

Take-Away Points

Many of the attempts to design programs for high-need, high-cost patients have been unable to achieve even 1 of the triple aims. In this article, we examine the published literature, government reports, and reports by managed care organizations, hospitals, and physician groups to identify the commonalities of successful programs. The 8 attributes of successful programs we identified are: appropriate targeting of high-risk patients, inclusive leadership, appropriate sizing of program, adapting to local conditions, providing helpful feedback to clinicians, promoting interaction with patients and family members, fostering successful care transitions, and reducing the workload of clinicians. This article will allow policy makers to:

- Compare their programs to the attributes of successful programs.
- Assess if modifications to their programs are needed.
- Determine if they should partner with certain existing programs.
- Design the next generation of programs.

Commonalities of Successful Programs

Based on the literature review and the interviews, we identified 8 attributes that many successful programs shared. An example of each specific program that typifies each attribute is provided in the Table.

Targeting

Many successful programs use 2 steps to identify which individuals to include in the program and who should receive special attention. Many unsuccessful programs enroll a high percentage of people who are unlikely to benefit from the intervention; for example, the enrollment of people with only a single chronic disease.[2] Second, some programs provide the same services to all people enrolled in the program; however, the more successful programs typically stratify program enrollees and provide additional services to certain high-need, high-cost individuals.[3]

Nevertheless, simply being high-need/high-cost is not always sufficient.[4] Many patients have conditions that are not amenable to change. For example, some cancer patients may require expensive drugs and the drug use is appropriate for their condition. An intervention will not necessarily lower the spending for that person. Other patients are unwilling to comply with treatment protocols. Being able to identify those who are most likely to benefit from an intervention is an understudied area and may be responsible for the lack of success in many programs. The key is to identify those patients most amenable to change.

Leadership

Most successful programs have leadership at varying levels of the organization, not simply at the top. It is important that the leadership team span a wide range of clinical and operational disciplines, including physicians, nurses, social workers, pharmacy, and operations. Finding successful care managers and facilitating their relationship with other clinical practitioners and non-clinical professionals, such as community health workers, is a critical role for leadership. The care managers must have the skills to be assertive when necessary, to understand the practice culture in the setting, and to maintain good relationships with physicians, other clinicians, and administrators caring for the patient.[5] With this in mind, some programs have developed their own training programs for care managers.[6]

Interaction With the Care Coordinator

Some programs involve teams of nurses and social workers working remotely, primarily using the telephone or e-mail. Although some of these programs are successful, most are not, probably because they have not developed close relationships with the clinicians treating the patient, the patient and the family members.[2] Although the initial expense is greater, successful programs are more likely to have care coordinators located in the physician's office. Physical proximity is only a first step, however; it may be necessary for all clinicians, including specialists, to personally know each other. Developing an ongoing working relationship is important, and often this requires frequent face-to-face interactions about a specific patient, especially with specialty physicians.[4] It was often more difficult to develop these personal relationships in large fee-for-service organizations, like academic medical centers or large hospitals, where there were a multitude of people treating the patient[7]; it was much easier in smaller multidisciplinary physician groups, where a care coordinator was embedded in the office, as well as in larger organizations like Kaiser Permanente, where teams of clinicians routinely worked together as a group.

Strategic Use of Data

Both electronic medical records (EMRs) and claims data have been utilized successfully in the treatment of high-need, high-cost individuals. The advantage of relying on EMRs is that the data is available in real time, which is often when the information is most actionable. However, EMRs are often not interoperable and, therefore, it is difficult to assemble a complete picture of the patient if the patient is receiving care at multiple sites. Claims data is often more complete, and the Medicare program has begun to provide claims data to programs on a monthly basis.

Providing timely data to the care team is vital.[8] However, it is unclear how timely the data needs to be or exactly which data elements are the most critical. Many clinicians do not respond to cost information about individual pa-

tients or know how to respond to information about readmission rates. In addition, finding relevant data for high-need, high-cost patients is problematic because determining the appropriate care for them is challenging—most quality metrics focus on a single disease, not the ability to coordinate care for complex patients.[9] Data customization for specific types of patients also presents a challenge. For example, people near the end of their life require a different data set from those with psychological or social issues, and a different data set from those undergoing a transition from one setting to another.

Interaction With Patients and Families

Successful programs seem to be more facile at interacting with patients and their families.[10] In most successful programs, the care coordinator is located in the doctor's office and has a wide range of clinical and social service responsibilities.[11] They often: 1) see the patient when he or she arrives to see the doctor and ask about their priorities for care, 2) make periodic home visits, 3) occasionally interact with the patient's family, and 4) to some extent, interact with the specialists caring for the patient. Interaction with patients is especially critical during and following the hospital stay. A patient's medications can change following physician and hospital visits, so it is often necessary for the care coordinator to explain the change in medications directly to the patient.

Also important are ongoing interactions with the social service programs since many high-need, high-cost high patients have disabilities that make it difficult for them to undertake routine activities of daily living. Both nurses and social workers seem to be successful care coordinators. In general, more in-person interaction between the patient and the care coordinator results in better outcomes and lower overall spending.[12] Remote monitoring programs are less likely to achieve the triple aim.[2] A paper synthesizing the evaluations of Medicare programs that treat the high-need, high-cost population found that 1 contact per month with the care coordinator is the minimum necessary for a successful program.[4]

Table. Successful Attributes and Program Examples

Attribute	Program Example
Ability to target high-cost, high-need patients	**Medicare Coordinated Care Demonstration, the Washington University School of Medicine in St. Louis** After a change in practice, care management efforts focused on patients deemed at greatest risk of hospitalization.
Create environment for successful leadership at all levels	**Medicare Care Management for High-Cost Beneficiaries (CMHCB) Demonstration: Mass General Hospital** This program employed physician champions that advocated the program. In addition, every two weeks, the team spends 2 hours together for a case review.
Structure the size of program to facilitate communication	**Guided Care** Guided care was more successful in Kaiser Permanente than it was at Johns Hopkins community-based ambulatory practices.
Adapt the program to reflect local and changing circumstances	**Medicare Coordinated Care Demonstration** Sites were able to adapt and revise during the demonstration process to improve process of care and targeting techniques.
Provide important feedback to clinicians and care coordinators	**Baptist ACE** The score card, which was developed by physicians, contained over 40 aggregate scores on quality measures which represented 10 domains (each domain had 3 or 4 measures). Physicians received their report cards monthly, with detailed information at both the patient and diagnosis-related group level.
Foster effective interactions with patients	**Care Oregon** The health plan changed its relationship with the network to make the care point-of-service–based, whereas historically, care management has been outside of the delivery system (eg, through phones).
Focus on care transitions	**Arkansas Pediatric Hospital** Program targeted medically complex children and made a strong effort for the coordinating team to be an "anchor" and ensure continuity of care.
Develop programs that reduce workload of physicians	**Medicare Care Management for High-Cost Beneficiaries (CMHCB) Demonstration: Mass General Hospital** While MDs did not necessarily gain financially from participating in the program, they benefited from a reduced workload that allowed them to spend less time caring for a panel of patients.

Periodic Updates

Most successful programs evolve over time.[13] The challenge here is periodically updating the program to reflect new information about what is working, and responding adequately to the changing mix of high-need, high-cost

individuals participating in the program. It appears to be important for care managers and clinicians to have enough flexibility to initiate program innovations at certain internals, but there does not seem to be a standard timeline for updating the program. It is clear that many programs treating high-need, high-cost individuals require a long period of sustained funding before the program becomes cost-saving.

More Time With Patients

There are a multitude of programs with different financial incentives for physicians. Many of them provide rather modest financial incentives for the physicians and may represent a relatively small portion of the physicians' total patients. As a result, changing the financial incentives is frequently an unsuccessful strategy. Instead of dollars, an appeal to the physician's work-life balance is often more effective.[5] Care coordinators are able to simplify the work of clinicians by facilitating the interaction with other physicians treating the patient, meeting with family members, explaining changes to treatment protocols with patients, interacting with social service agencies to make sure the patient has necessary services, and many other roles that the physicians frequently perform. This allows the physician to spend more time with their patients and to perhaps leave the office earlier in the day.

Summary and Recommendations

Governments, health plans, and clinicians will soon be developing the next generation of programs designed to treat high-need, high-cost individuals. The reasons are clear: they are the most costly individuals who often have the worst clinical outcomes. The problem is, most of the interventions that have been attempted have not yet been able to achieve 1 or more of the triple aims, and many of those that have been reported in the peer-reviewed literature as being successful in this were not operational a few years later. The current evidence suggests that programs that share certain attributes are more likely to be successful and sustainable. These attributes are shown in the Table. These attributes are meant as guidelines for governments, health plans, and clinicians to consider as they develop the next generation of programs. Whereas all are important, perhaps the most important is identifying the patients most likely to benefit from the program and then targeting the program around these individuals.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 14, 2021
Revised 1-13-2021 during PE meeting

CPT Code	Long Descriptor	Global Period
99490	Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.	XXX
99439	Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored. Each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)	ZZZ
99491	Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.	XXX
99437	Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored; each additional 30 minutes by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)	ZZZ
99487	Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the	XXX

	patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.	
99489	Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99490	**Typical Adult Patient** The patient is a 75-year-old man with diabetes, claudication, and mild congestive heart failure, status post myocardial infarction with mild dementia who had a peripheral arterial stent placed six weeks ago during a hospitalization for treatment of a foot ulcer. He lives with his daughter, participates in remote monitoring programs, and is being treated by two specialists in addition to his primary care physician. **Typical Child Patient** A 3-year-old former 26-week preterm child presents with bronchopulmonary dysplasia, chronic lung disease, status post tracheostomy, and cerebral palsy. Patient receives physical, occupational and speech therapy services and requires chronic care management services.
99439	**Typical Patient** During the month of chronic care management services, a 78-year-old female or 3 year old who has just received 39 minutes of clinical staff time, requires additional care management services.
99491	**Typical Adult Patient** An 83-year-old female with congestive heart failure and early cognitive dysfunction, who has been hospitalized twice in the prior 12 months, is becoming increasingly confused and refuses an office visit. She has a certified nursing assistant supervised by a home care agency, participates in a remote weight and vital signs monitoring program, and sees a cardiologist and neurologist. **Typical Child Patient** A 6-year-old child with spastic quadriplegia, gastrostomy, gastroesophageal reflux with recurrent bouts of aspiration pneumonia and reactive

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	airway disease, chronic seizure disorder, failure to thrive, and severe neurodevelopment delay. He receives home occupational, physical, and speech therapy services.
99437	**Typical Adult Patient** An 80-year-old male who has already received 59 minutes of physician or qualified healthcare professional chronic care management services during the calendar month requires additional care management services during the same calendar month. **Typical Child Patient** An 11-year-old female with past medical history of meconium aspiration at birth resulting in anoxic brain injury with cerebral palsy, asthma, allergic rhinitis and global development delay who has already received 59 minutes of physician or qualified healthcare professional chronic care management services during the calendar month and requires additional care management services during the same calendar month.
99487	**Typical Child Patient** A 6-year-old child with spastic quadriplegia, gastrostomy, gastroesophageal reflux with recurrent bouts of aspiration pneumonia and reactive airway disease, chronic seizure disorder, failure to thrive and severe neurodevelopment delay. He receives home occupational, physical and speech therapy services. Typical patient (99487) (Adult) An 83-year-old woman with congestive heart failure and early cognitive dysfunction, who has been hospitalized twice in the prior 12 months, is becoming increasingly confused and refuses an office visit. She has a certified nursing assistant supervised by a home care agency, participates in a remote weight and vital signs monitoring program and sees a cardiologist and neurologist.
99489	**Typical Adult Patient** A 92-year-old man living an assisted living facility with Parkinson's disease, mild dementia, depression and diabetes mellitus continues to lose weight and remains withdrawn. The patient's family resides out of state and an attendant sees the patient for 3 hours daily. The clinical staff has already spent 74 minutes in the month performing care coordination services and now spends additional time.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC advisors from the surveying societies acted as an expert panel and met by video conferencing, phone, and email to develop the inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We choose to compare to similar service for CPT codes 99439 and 99437 which have no current codes to compare to. The rest 99490, 99491, 99487, and 99489 all use current codes.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Reference Code 99458 was used as the reference code for both 99439 and 99437: Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (List separately in addition to code for primary procedure)

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   N/A

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   From RUC database 2019 varying top percentages based on the CPT code. Internal Medicine, Family Medicine, Nurse Practitioners, Cardiology, Pediatrics, Physicians Assistant

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   After considering all the comments and questions from our pre-facilitation committee we think it may be best to focus on a few key points to clarify how the CCM codes meet the PE criterion for compelling evidence that **technology and patient and provider knowledge** has changed in recent years: We would point out that for PE we are not asking for changes to the total times to the CCCM codes 99487 and 99489. Our compelling evidence is for the CCM CPT codes. As we have all experienced in the team-based care of patients, the amount of data to review has increased dramatically in the last several years. Just 10 years ago, patient communications were mostly limited to phone, email, fax, regular mail and the occasional text. With the introduction of patient portals, the 24/7 ability to communicate with the practices has increased the # of interactions per patient. Technology has evolved to allow patients to include attachments of spreadsheets, photos and documents to review. Additionally, the evolving sophistication of

smartphones and wearables, along with a proliferation of apps have increased the amount health information access for our patients and in turn data they are sharing with their physicians/QHP. In addition to patient portals, home care agencies/pharmacies/insurances have their own portals which sometimes communicate with our own EHR, but often require separate access to address alerts and questions related to patient care. So while the traditional phone, email, fax and mail communications continue we now have patient portals, secure messaging apps, outside portals, and texts providing information for which we are responsible to review and respond.
For concrete data regarding the increase in adoption of this technology, we obtained information from Dr. Michele Thomas, CMIO of the BJC Medical Group, which is the physician component of BJC HealthCare / Washington University School of Medicine in St Louis. Tracking portal use over 4 years indicates that the number of users and logins annually has increased dramatically. In 2017, they reported just over 403,000 logins from over 44,000 users. Just 2 years later in 2019 the logins had increased by 17 fold with over 6.8 MILLION logins and individual users increased more than 6 times to 297K. Average log-in per user **more than doubled** from 9 to 22 during that same time period. This translates to dramatically increased data entry and information to review for each patient.

2017 - 403,631 logins; 44,434 users
2018 - 3,198,251 logins; 182,000 users
2019 - 6,845,781 logins; 297,963 users
2020 - 13,397,634 logins; 498,931 users

This data is consistent with what I and the other presenters have seen in our practices. Some examples of the information shared through portals and other electronic means of communication:

- Case managers, family members, caregivers or patients submit information related to organizational chaos in the home, financial barriers to care, needs for DME, medication confusion, new or previously unrecognized cognitive issues.
- We have more data to review through this technology-
    - Interoperable medical records provide us with much more data to review. In the past, we simply did not have this data.
    - Through the portal, patients/proxies now have easy access to review their labs, studies, and even visit notes. Questions related to something written in a note or values slightly out of the reported range require response- from incidental nodules/cysts on CT scans, insignificant laboratory results, and consultations that were not even ordered by us still require a response and may impact care plan.
- Use monitoring apps with health information obtained via wearables, external devices and patient report– some are useful for care management, but all require response and coordination when presented has increased the work of the clinical team/staff to

organize, interpret and manage (these are data, that would NOT meet the criteria for reporting of the remote monitoring CPT codes) For example, we are now receiving data re:

Cardiac monitoring apps- patient sending ekgs, information on rhythms like afib
Genetic Testing- 23&Me, Ancestory
Diabetes self-management- home glucose monitoring
Mental Health- review of PHQ9
Monitoring of respiratory status (pulse ox) and sleep patterns.

In SUMMARY

- More complex medical conditions can now be managed while the patient is at home instead of during face-to-face services. These CCM and CCCM codes allow us to help keep patients at home and avert disease exacerbations and unnecessary ER/Hospital admissions. This shift occurred before COVID-19, was accelerated during, and will continue after.
- The increased portal use and the rapid evolution of sophisticated tools such as remote monitoring apps, self-management apps, ability for patients to transmit both simple and complex data (e.g., high resolution photographs) in real time has increased the ability to care for patients at home but with an unprecedented about of information to review and increased work for physician and staff.

Therefore, we believe the technology and data are what is easiest to understand for why we believe we meet compelling evidence. Our staff are just are not able to complete all task in the historical times.

Therefore, the panel believes that compelling evidence for PE for CCM services has been met.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 99490, 99439, 99491, 99437, 99487, 99489,**

SPECIALTY SOCIETY(IES): _ANA, ANFP, AGS, AAN, AAP, ACP,AAHPM, AOA, ACR, ACRh

PRESENTER(S):_ Megan Adamson, MD, Audrey Chun, MD, Chuck Crecelius, MD, PhD, CMD, Tanvir Hussain, MD, MBA, MHS, MSc, FACP, Steven Krug, MD, FAAP, Phillip E. Rodgers, MD, FAAHPM, Joseph Schlecht, DO, Fredrica Smith, MD, Korinne Van Keuren, DNP, MS, RN, CPNP-AC, APRN-BC, RNFA

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

None

b. Service period (includes pre, intra and post):

Communication and engagement with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals regarding aspects of care;

Communication with home health agencies, other healthcare providers, and other community services utilized by the patient;

Collection of health outcomes data and registry documents;

Patient and/or family/caregiver education to support self-management, independent living, and activities of daily living

Assessment and support for treatment regimen adherence and medication management;

Identification of available community and health resources;

Facilitating access to care and services needed by the patient and/or family;

Management of care transitions not reported as part of the transitional care management (99495, 99496)

Ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M, noted above;

Development, communication, and maintenance of ava comprehensive care plan.

When above are personally performed by physician or QHP, CPT 99491, 99437 the below are the clinical staff activities in addition to the 30 minutes by the physician or QHP:

Calls in or email prescription(s)

Communicate with the patient or caregiver if the physician/QHP is unavailable

Receive, review and send tests results and other clinical information to and from other care givers

Schedule appointment(s) with other healthcare providers and outside agencies

Take call(s) from patient or contact patient when physician/QHP is available for call

c. Post-service period:

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 99490, 99439, 99491, 99437, 99487, 99489,**

None

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

These are not directly related to physician work:
Five minutes per month in relaying/communicating patient messages,

Five minutes in communication with patient and/or pharmacy for prescription refills, prior authorizations or clarifications (assisting physician with paperwork for DME may be included here, or separately)

Five minutes for coordination with outside agencies or other providers (i.e. Obtaining referral forms, tracking down documentation of care received outside the primary care office or tracking down results on tests ordered by provider other that the PCP

Five minutes scheduling appointments and taking calls from patient or contacting patient when physician/QHP is available.

For each code, final approved time for the individual code, divide the approved total time by 4 equally for the above, the above is an example of 20 minutes broken up.

Total 25 minutes for 99490 and 99439, 18 minutes for 99491, 99437 60 minutes for 99487 and 30 minutes for 99498.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

19. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

20. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

N/A

21. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Compelling Evidence was met for CCM services. **Final approved times CA021** Total 25 minutes for 99490, 99439, 18 minutes for 99491, 99437, 60 minutes for 99487 and 30 minutes for 99498. This was considering a 25% increase from the current times for clinical staff. CA021 We reduced code 99490 from 30 minutes to 25 minutes We reduced code 99439 from from 30 minutes to 25 minutes We reduced code 99491 from 20 minutes to 18 minutes We reduced code 99437 from 20 minutes to 18 minutes

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 99424, 99425, 99426, 99427**

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 14, 2021
Revised 1-13-2021

CPT Code	Long Descriptor	Global Period
99424	Principal care management services, for a single high-risk disease, with the following required elements: one complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to the comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; first 30 minutes provided personally be a physician or other qualified health care professional, per calendar month	XXX
99425	Principal care management services, for a single high-risk disease, with the following required elements: one complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; Additional 30 minutes provided personally by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)	ZZZ
99426	Principal care management services, for a single high-risk disease, with the following required elements: one complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to the comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; first 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month	XXX
99427	Principal care management services, for a single high-risk disease, with the following required elements: one complex chronic condition expected to last at least 3 months, and which places the patient at significant risk of hospitalization, acute exacerbation/decompensation, functional decline, or death; the condition requires development, monitoring, or revision of disease-specific care plan; the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to the comorbidities; ongoing communication and care coordination between relevant practitioners furnishing care; each additional 30 minutes of clinical staff time directed by a	ZZZ

	physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)	

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99424	A patient with a single complex chronic condition that places the patient at significant risk of decompensation.
99425	A patient with a single complex chronic condition that places the patient at significant risk of decompensation.
99426	A patient with a single complex chronic condition that places the patient at significant risk of decompensation.
99427	A patient with a single complex chronic condition that places the patient at significant risk of decompensation.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC advisors from the surveying societies acted as an expert panel and met by email to develop the inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We choose to compare to similar service with varying time as the reference code in CPT code 99457 and CPT code 99458 but also included the current G code for codes 99424, 99425, 99426, 99427.

   99457 was used as the reference code for 99424 and 99426: Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes

   99458 was used as the reference code for both 99425 and 99427: Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (List separately in addition to code for primary procedure)

   G2064 for 99424: Comprehensive care management services for a single high-risk disease, e.g. principle care management of at least 30 minutes of physician or other qualified health care professional time per calendar month with the following elements: one complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been the cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent

adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities.

G2065 for 99426: Comprehensive care management services for a single high-risk disease, e.g. principle care management of at least 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month with the following elements: one complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   N/A

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   There is no utilization data for G2064 or G2065 and therefore no previous utilization for new codes 99424, 99425, 99426, 99427

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

   N/A

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

None

   b. Service period (includes pre, intra and post):

Establishing, implementing, revising, or monitoring the care plan

Coordinating the care of other professionals and agencies

Educating the patient or caregiver about the patients condition, care plan, and prognosis

When above are personally performed by physician or QHP, CPT 99424 and 99425 the below are the clinical staff activities in addition to the 30 minutes by the physician or QHP:

Calls in or email prescription(s)

Communicate with the patient or caregiver if the physician/QHP is unavailable

Receive, review and send tests results and other clinical information to and from other care givers

Schedule appointment(s) with other healthcare providers and outside agencies

Take call(s) from patient or contact patient when physician/QHP is available for call

   c. Post-service period:

None

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

These are not directly related to physician work: for each code divide equally the total time by 4 to get the time for each of the granular activity.
7.5 Minutes for Establishing, implementing, revising, or monitoring the care plan
X Minutes for Coordinating the care of other professionals and agencies, scheduling appointments
7.5 Minutes for Communication with patient and/or pharmacy for prescription refills, prior authorizations or clarifications

7.5 Minutes for Educating the patient or caregiver about the patients condition, care plan and prognosis

Total 25 minutes for 99424 and 99425, 15 minutes for 99426, 99427 30 minutes. Example above is for 30 total minutes. 3.75 minutes for each above for 15 total minutes.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
N/A

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
N/A

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
N/A

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.
N/A

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
N/A

19. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

N/A

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

N/A

22. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

N/A

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

23. If this is a PE only code please select a crosswalk based on a similar specialty mix:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2020

Chronic Care Management Services – Tab 20

In September 2019, the CPT Editorial Panel revised CPT code 99490 to describe the first 20 minutes of clinical staff time and created a new add-on code to describe each additional 20 minutes of clinical staff time for chronic care management (CCM) services. The Panel also revised codes 99487 and 99489 to eliminate the requirement to establish a care plan and revised the chronic care management services guidelines.

During the process of the societies preparing to survey, CMS published its Final Rule for CY2020, which included the creation of several new care management HCPCS codes. These included two codes for principal care management and code G2058, which has a descriptor identical to that of 99439. When these codes were released, the specialty societies decided to submit a code change proposal to CPT for the May 2020 meeting. This proposal would establish new principal care management codes, like those in the Final Rule. Because these new codes would potentially be part of the CCM family, the entire CCM family would need to be surveyed after the codes were approved by CPT. Specifically, assuming the new principal care management codes are approved at the May 2020 CPT meeting, the entire CCM family will need to be surveyed for the October 2020 RUC meeting. Therefore, if the specialty societies surveyed the CCM family for the January 2020 RUC meeting because of new code 99439, the exact same family of codes would need to be surveyed again for the October 2020 RUC meeting.

Since CMS had already established payment for the new codes for CY 2020 (including G2058), the specialty societies met with the Research Subcommittee and requested to make a presentation to the RUC requesting a temporary crosswalk to value 99439 on an interim basis for 2021 before it is surveyed in 2020 as part of the 2022 CPT and Medicare Physician Payment Schedule. The specialty societies also requested to recommend maintaining the current value of the existing CCM codes until the entire family is surveyed later in 2020.

99439 ***Chronic care management services, with the following required elements:***

- ***multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,***
- ***chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,***
- ***comprehensive care plan established, implemented, revised, or monitored;***

each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the recommended interim crosswalk of 0.54 work RVUs and 15 minutes intra-service time for CPT code 99439. The RUC agreed with the specialty societies to crosswalk the work value and time for CPT code 99439 to CPT code 11107 *Incisional biopsy of skin (eg, wedge) (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure)* (work RVU = 0.54 and 15 minutes intra-service time). The specialty societies also indicated CPT code 96171 *Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)* (work RVU = 0.54 and 15 minutes intra-service time), which the RUC agreed is also an appropriate interim crosswalk for the physician work and time required to perform 99439. The RUC notes that the recommended 15 minutes of intra-service and the work RVU are the same as that of G2058 *Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)* (work RVU = 0.54 and 15 minutes intra-service time) as assigned by CMS. **The RUC recommends an interim work RVU of 0.54 for CPT code 99439.**

Practice Expense

The RUC recommends crosswalking the clinical staff time of 20 minutes CA021 *Perform procedure/service—NOT directly related to physician work time* L037D *RN/LPN/MTA* to CPT code 99490 *Chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.* **The RUC recommends the direct practice expense inputs as submitted by the specialty society for 99439. The RUC affirmed the direct practice expense inputs for 99490, 99491, 99487 and 99489.**

Refer to CPT

The specialty societies are developing a CPT coding change application (CCA) to establish two principal care management codes for the May 2020 CPT Editorial Panel meeting. CPT codes 99490, 99439, 99491, 99487 and 99489 will be resurveyed as part of this family of services.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Prolonged Services** **Prolonged Service Without Direct Patient Contact** Do not report 99358, 99359 for time ~~*spent*~~ *without direct patient contact reported* in *other services such as* care plan oversight services (99339, 99340, 99374-99380), *chronic care management by a physician or other qualified health care profession (99491),* home and outpatient INR monitoring (93792, 93793), medical team conferences (99366-99368), *interprofessional telephone/internet/electronic health record consultations (99446-99452)* or *online digital evaluation and management services* (*99421, 99422, 99423*).				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99358 ***Prolonged evaluation and management service*** *before and/or after direct patient care; first hour*

99359 *each additional 30 minutes (List separately in addition to code for prolonged procedure)*

(Use 99359 in conjunction with 99358)

(Do not report 99358, 99359 on the same date of service as 99417)

~~(Do not report 99358, 99359 during the same month with 99484, 99487-99489, 99490, 99491, 99492, 99493, 99494)~~

(Do not report 99358, 99359 when performed during the same service time of codes 99495 or 99496, if reporting 99495 or 99496)

Non-Face-to-Face Services
Digitally Stored Data Services/Remote Physiologic Monitoring

Codes 99453 and 99454 are used to report remote…

Code 99091 should be reported no more than once…

If the services described by 99091…

Do not report 99091 for time in the same calendar month ~~as~~ when used to meet the criteria for care plan oversight services (99374, 99375, 99377, 99378, 99379, 99380), home, domiciliary, or rest home care plan oversight services (99339, 99340), ~~and~~ remote physiologic monitoring services (99457), or personally performed chronic care management (99491). Do not report 99091 if other more specific codes exist (eg, 93227, 93272 for cardiographic services; 95250 for continuous glucose monitoring). Do not report 99091 for transfer and interpretation of data from hospital or clinical laboratory computers.

Code 99453 is reported for each episode…

#99091 *Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days*

(Do not report 99091 in conjunction with 99457)

(Do not report 99091 ~~if it occurs within 30 days of~~ for time in a calendar month when used to meet the criteria for 99339, 99340, 99374, 99375, 99377, 99378, 99379, 99380, 99457, 99491)

●*99473* *Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration*

(Do not report 99473 more than once per device)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(For ambulatory blood pressure monitoring, see 93784, 93786, 93788, 93790)

●*99474* *separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient*

(Do not report 99473, 99474 in the same calendar month as 93784, 93786, 93788, 93790, 99091, 99453, 99454, 99457, 99487, 99489, 99490, 99491, 99439*)*

(Do not report 99474 more than once per calendar month)

Remote Physiologic Monitoring Treatment Management Services

Remote physiologic monitoring treatment management services are provided when clinical staff/physician/other qualified health care professional use the results of remote physiological monitoring to manage a patient under a specific treatment plan. To report remote physiological monitoring, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. *Do not u*se 99457, *99458* for *time that can be* report*ed using* more specific *monitoring services. (eg, for the patient that requires reevaluation of medication regimen and/or changes in treatment).* Code*s* 99457*, 99458* may be reported during the same service period as chronic care management services (99487, 99489, 99490, 99491, 99439), transitional care management services (99495, 99496), and behavioral health integration services (99484, 99492, 99493, 99494). *however*, time spent performing these services should remain separate and no time should be counted toward the required time for both services in a single month. Code*s* 99457*, 99458* require a live, interactive communication with the patient/caregiver. *For the first 20 minutes and 20 minutes or more* of clinical staff/physician/other qualified health care professional time in a calendar month *report 99457, and report 99458 for each additional 20 minutes. Do not report services of less than 20 minutes*. Report 99457 one time regardless of the number of physiologic monitoring modalities performed in a given calendar month.

Do not count any time on a day when the physician or other qualified health care professional reports an E/M service (office or other outpatient services 99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, domiciliary, rest home services 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, home services 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350, inpatient services 99221, 99222, 99223, 99231, 99232, 99233, 99251, 99252, 99253, 99254, 99255). Do not count any time related to other reported services (eg, 93290, 93793, 99291, 99292).

Care Management Services

Care management services are management and support services...

A plan of care must be documented and shared with the patient and/or caregiver. A care plan is based on a physical, mental, cognitive, social, functional, and environmental assessment. It is a comprehensive plan of care for all health problems. It typically includes, but is not limited to, the following elements: problem list, expected outcome and prognosis, measurable treatment goals, symptom management, planned interventions, medication management, community/social services ordered, how the services of agencies and specialists unconnected to the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

~~practice will be directed/coordinated, identification of the individuals responsible for each intervention, requirements for periodic review, and, when applicable, revision of the care plan.~~

A comprehensive plan of care for health problems is based on a physical, mental, cognitive, social, functional, and environmental evaluation. It is intended to provide a simple and concise overview of the patient and be a useful resource for patients, caregivers, and providers.

A typical plan of care is not limited to, but may include:

- Problem list
- Expected outcome and prognosis
- Measurable treatment goals
- Cognitive assessment
- Functional assessment
- Symptom management
- Planned interventions
- Medical management
- Environmental evaluation
- Caregiver assessment
- Interaction and coordination with outside resources and other healthcare professionals and providers
- Summary of advance directives

The above elements are intended to be a guide for creating a meaningful plan of care rather than a strict set of requirements, so should be addressed only as appropriate for the individual.

The plan of care should include specific and achievable goals for each condition and relevant to the patient's well-being and lifestyle. When possible, the treatment goals should also be measurable and time bound. The plan should be updated periodically based on status or goals changes. The entire care plan should be reviewed at least annually.

An electronic and/or printed plan of care must be documented and shared with the patient and/or caregiver.

Codes 99487, 99489, 99490, 99491 are reported only once per calendar month and 99439 is reported no more than twice per calendar month. Codes 99487, 99489, 99490, 99491, 99439 may only be reported by the single physician or other qualified health care professional who assumes the care management role with a particular patient for the calendar month.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For 99487, 99489, 99490, 99439, the face-to-face and non-face-to-face time spent by the clinical staff in communicating with the patient and/or family, caregivers, other professionals, and agencies; creating, revising, documenting, and implementing the care plan; or teaching self-management is used in determining the care management clinical staff time for the month. Only the time of the clinical staff of the reporting professional is counted. Only count the time of one clinical staff member when two or more clinical staff members are meeting about the patient. For 99491, only count the time personally spent by the physician or other qualified health care professional. Do not count any of the clinical staff time spent on the day of an initiating visit (the creation of the care plan, initial explanation to the patient and/or caregiver, and obtaining consent).

Care management activities performed by clinical staff, or personally by the physician or other qualified health care professional, typically include:

- *communication and engagement with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals regarding aspects of care;*
- *communication with home health agencies and other community services utilized by the patient;*
- *collection of health outcomes data and registry documentation;*
- *patient and/or family/caregiver education to support self-management, independent living, and activities of daily living;*
- *assessment and support for treatment regimen adherence and medication management;*
- *identification of available community and health resources;*
- *facilitating access to care and services needed by the patient and/or family;*
- *management of care transitions not reported as part of transitional care management (99495, 99496);*
- *ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M service, noted above;*
- *development, communication, and maintenance of a comprehensive care plan.*

The care management office/practice must have the following capabilities:

- *provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients/caregivers with a means to make contact with health care professionals in the practice to address urgent needs regardless of the time of day or day of week;*
- *provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments;*
- *provide timely access and management for follow-up after an emergency department visit or facility discharge;*
- *utilize an electronic health record system so that care providers have timely access to clinical information;*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

- *use a standardized methodology to identify patients who require care management services;*
- *have an internal care management process/function whereby a patient identified as meeting the requirements for these services starts receiving them in a timely manner;*
- *use a form and format in the medical record that is standardized within the practice;*
- be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient~~.~~;
- reporting physician or other qualified health care professional oversees activities of the care team;
- all care team members providing services are clinically integrated.

~~E/M services may be reported separately by the same physician or other qualified health care professional during the same calendar month.~~ Each minute of service time is counted toward only one service. Do not count any time and activities used to meet criteria for another reported service. However, time of clinical staff and time of a physician or other qualified health care professional are distinct when each provides a distinct, separately reportable service to the same patient during the same period of time (eg, calendar month). ~~A physician or other qualified health care professional who reports codes 99487, 99489, 99490 may not report care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), home and outpatient INR monitoring (93792, 93793), medical team conferences (99366, 99367, 99368), education and training (98960, 98961, 98962, 99071, 99078), telephone services (*99366, 99367, 99368, 99441*, 99442, 99443), *on-line medical evaluation (98969, 99444),* preparation of special reports (99080), analysis of data (99091), transitional care management services (99495, 99496), medication therapy management services (99605, 99606, 99607) and, if performed, these services may not be reported separately during the month for which 99487, 99489, 99490 are reported.~~ A list of services not reported in the same calendar month as 99487, 99489, 99490, 99439 is provided in the parenthetical instructions following 99489, 99439. See the parenthetical instruction below 99491 for a list of services not separately reported in the same calendar month that 99491 is reported. ~~All other services may be reported.~~ Do not report 99487, 99489, 99490, 99439 when reporting 99491 for the same calendar month. ~~Do not report 99487, 99489, 99490, 99491 if reporting ESRD services (90951-90970) during the same month.~~ If the care management services are performed within the postoperative period of a reported surgery, the same individual may not report 99487, 99489, 99490, 99491, 99439 ~~when reporting~~. For service time used for ~~*reporting 99487, 99489, 99490,*~~ 99491, 99439, *do not* also include service time used to *report 99421, 99422, 99423.*

Care management may be reported in any calendar month during which the clinical staff time or physician or other qualified health care professional personal time requirements are met. If care management resumes after a discharge during a new month, start a new period or report transitional care management services (99495, 99496) as appropriate. If discharge occurs in the same month, continue the reporting period or report Transitional Care Management Services. Do not report 99487, 99489, 99490, 99491, 99439 for any post-discharge care management services for any days within 30 days of discharge, if reporting 99495, 99496.

When behavioral or psychiatric collaborative care management services are also provided, 99484, 99492, 99493, 99494 may be reported in addition.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Chronic Care Management Services

Chronic care management services are provided when medical and/or psychosocial needs of the patient require establishing, implementing, revising, or monitoring the care plan. Patients who receive chronic care management services have two or more chronic continuous or episodic health conditions that are expected to last at least 12 months, or until the death of the patient, and that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Code 99490 is reported when, during the calendar month, at least 20 minutes of clinical staff time is spent in care management activities. Code 99439 is reported in conjunction with 99490 for each additional 20 minutes of clinical staff time spent in care management activities during the calendar month up to a maximum of 60 minutes total time (ie, 99439 may only be reported twice per calendar month). Code 99491 is reported when 30 minutes of physician or other qualified health care professional personal time is spent in care management activities. Do not report 99490, 99439 in the same calendar month as 99491. If reporting 99491, do not count any physician or other qualified health care professional time on the date of a face-to-face E/M encounter towards the time used in reporting 99491.

▲99490	V1	Chronic care management services, ~~at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month,~~ with the following required elements: ▪ multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient~~;~~, ▪ chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline~~;~~, ▪ comprehensive care plan established, implemented, revised, or monitored~~.~~; ▪ first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month. ~~(Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately)~~ ~~(Do not report 99490 in the same calendar month as 99487, 99489, 99491)~~	XXX	0.61 (Affirmed and Referred to CPT May 2020)

General Behavioral Health Integration Care Management

General behavioral health integration care management services (99484) are reported by the supervising physician or other qualified health care professional. The services are performed by clinical staff for a patient with a behavioral health (including substance use) condition that requires care management services (face-to-face or non-face-to-face) of 20 or more minutes in a calendar month. A treatment plan as well as the specified elements of the service description is required. The assessment and treatment plan is not required to be comprehensive and the office/practice is not required to have all the functions of chronic care management (99487, 99489, 99490, 99439). Code 99484 may be used in any outpatient setting, as long as the reporting professional has an ongoing relationship with the patient and clinical staff and as long as the clinical staff is available for face-to-face services with the patient.

The reporting professional must be able to perform the evaluation and management…

#99484 *Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required elements:*

- *initial assessment or follow-up monitoring, including the use of applicable validated rating scales;*
- *behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes;*
- *facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling, and/or psychiatric consultation; and*
- *continuity of care with a designed member of the care team.*

(Do not report 99484 in conjunction with 99492, 99493, 99494 in the same calendar month)

(E/M services, including care management services [99487, 99489, 99490, 99439, 99495, 99496], and psychiatric services [90785-90899] may be reported separately by the same physician or other qualified health care professional on the same day or during the same calendar month, but time and activities used to meet criteria for another reported service do not count toward meeting criteria for 99484)

Medicine
Cardiovascular
Home and Outpatient International Normalized Ratio (INR) Monitoring Services

Home and outpatient international normalized ratio…

If significantly, separately identifiable evaluation and management (E/M)…

Do not report 93793 on the same day…

Do not report 93792, 93793 in conjunction with 98966, 98967, 98968, 98X00, 98X01, 98X02, *9X0X1, 9X0X2, 9X0X3,* 99441, 99442, 99443 when telephone or online *digital evaluation and management* services address home and outpatient INR monitoring.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Do not report 93792, 93793 when performed during the service ~~time~~ period of ~~99487, 99489, 99490,~~ 99495, 99496. Do not count time spent in 93792, 93793 in the time of 99487, 99489, 99490, 99439, 99491 when reported in the same calendar month.

93792 Patient/caregiver training for initiation of home international normalized ratio (INR) monitoring under the direction of a physician or other qualified health care professional, face-to-face, including use and care of the INR monitor, obtaining blood sample, instructions for reporting home INR test results, and documentation of patient's/caregiver's ability to perform testing and report results

(For provision of test materials and equipment for home INR monitoring, see 99070 or the appropriate supply code)

93793 Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed

(Do not report 93793 in conjunction with ~~99201,~~ 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, 99241, 99242, 99243, 99244, 99245)

(Report 93793 no more than once per day, regardless of the number of tests reviewed)

AMA/SPECIALTY SOCIETY RVS UPDATE COMMITTEE
Research Subcommittee Conference Call Report

Tuesday, November 5th

Members Present: Ezequiel Silva III, MD (Chair), Jimmy Clark, MD (Vice Chair), Dale Blasier, MD, Gregory DeMeo, MD, Peter Hollmann, MD, Omar Hussain, MD, Katie Jordan, OTD, OTR/L, M. Douglas Leahy, MD, Daniel McQuillen, MD, Guy Orangio, MD, Marc Raphaelson, MD, David Slotwiner, MD, Michael Sutherland, MD, Timothy Tillo, DPM, Robert Zwolak, MD

I. Chronic Care Management Services (CCM) (99490, 99439, 99491, 99487, 99489)

American Academy of Family Physicians
American College of Physicians
American Geriatrics Society
American Nurses Association
American Osteopathic Association

The original agenda for this conference call was to review proposed custom RUC survey templates on physician work and clinical labor and also two proposed reference service lists. However, at the beginning of the call, the presenting specialties explained that coding and policy changes related to care management services finalized by CMS in the CY2020 Medicare Physician Payment Schedule Final Rule, released on November 1, would necessitate the delay of surveying CCM codes 99490, 99439, 99491, 99487 and 99489 until the CPT 2022 cycle.

The specialties noted that two new G codes created by CMS for Principal Care Management (PCM) services (G2064 and G2065) should be reviewed concurrently with the CCM codes as they are part of the same family. The specialties stated their intent to submit a CCA for the PCM/CCM codes to address material changes across the family in the CY2020 MPFS Final Rule, as further discussed below.

The specialty societies explained the relevant changes from the CY2020 MPFS Final Rule in detail:

- *Principal Management Services:* The Agency created two new G codes, (G2064 and G2065) to make separate payment for care management for patients with one serious chronic condition. Principal care management services are similar to CCM services, however CCM services are furnished for care management of patients with two or more chronic conditions. A serious chronic condition would be a condition lasting 3 months to 1 year, may have led to a hospitalization, placed the patient at significant risk of death, the condition may have been exacerbated or caused significant functional decline. G2064 is reported when at least 30 minutes in 30 calendar days is spent by the physician or other qualified health care provider and G2065 is reported when at least 30 minutes of clinical staff time is spent within 30 calendar days.
- CMS will interpret the code descriptor "establishment or substantial revision of a comprehensive care plan" in 99487 and 99489 to mean that a comprehensive care plan is established, implemented, revised, or monitored identical to the descriptor of 99490. CMS stated that it would allow for consistency in the care planning service element of complex CCM and non-complex CCM services provided by clinical staff.
- CMS also created an add-on code for 99490 for additional 20-minute increments of non-complex CCM clinical staff time. This add-on code, HCPCS code G2058, will be reportable a maximum of two times within a given service period for a given beneficiary.

AMA RUC staff noted that the CCM section was revised extensively by the CPT Editorial Panel for CPT 2021, including the creation of new add-on code 99439 and the revision of several existing codes, and that the January 2020 RUC meeting is the last RUC meeting of the CPT 2021 cycle. The Subcommittee

inquired whether the specialties workplan was to propose to delay the CPT coding changes until CPT 2022 or if they had a plan for how to handle the new and revised codes in the CCM section of CPT. The specialties suggested that the values for the revised codes for CY2020 (99490, 99491, 99487, 99489) could also be maintained for CY2021 and the value of the new code (99439) could come from a RUC-approved crosswalk. Once this code family has gone through the CPT Editorial Panel process, then all the impacted care management codes could be surveyed for the CPT 2022 cycle. The Subcommittee members agreed that this workplan for the multispecialty advisory committee's recommendation to the RUC seems reasonable given the time constraints for the CPT 2021 cycle and changes that were just finalized in the CY2020 Final Rule.

The Research Subcommittee recommends that the RUC approve the specialty approved work plan for these codes:

- **Maintaining the work values and direct practice expense inputs for codes 99490, 99491, 99487 and 99489 for CPT 2021 on an interim basis**
- **Propose an appropriate interim crosswalk for 99439 for CPT 2021**
- **After the anticipated CPT EP action on the existing CCM codes, the entire family including the new Principal Management Services codes, will be surveyed in calendar year 2020 for the CPT 2022 cycle (for the RUC meeting immediately following the CPT panel action).**
- **By the December 17, 2019 submission deadline, the specialty will:**
    - **Submit an Summary of Recommendation (SOR) for code 99439 with a proposed crosswalk for CPT 2021**
    - **Submit a PE spreadsheet with all existing inputs and a PE SOR for code 99439**
    - **Submit a RUC summary spreadsheet for codes 99490, 99491, 99487, 99489 and 99439**
    - **Provide a letter explaining the background for this code family and their recommendations for CPT 2021 and their intentions for CPT 2022 (including the information in the first three bullets described above).**

The Chair of the RUC noted that this recommendation by the Subcommittee would be circulated to the full RUC electronically for the RUC's consideration shortly after the call.

Dear Dr. Smith

The undersigned specialty societies are writing to provide additional background as to why we are recommending an interim crosswalk for new CPT code 99439 instead of doing a survey for the January 2020 RUC meeting.

At its September 2019 meeting, the CPT Editorial Panel established a new add-on code 99439, Chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month to be used with 99490, Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.

This new code is part of the chronic care management (CCM) family, and several societies, including the American College of Physicians, the American Academy of Family Physicians, the American Geriatrics Society, the American Osteopathic Association, and the American Nurses Association, submitted LOI's of 1 to survey the family. During the process of the societies preparing for the survey, CMS published its final rule for CY 2020, which included the creation of several new care management HCPCS codes. These included two codes for principal care management and code G2058, which has a descriptor identical to that of 99439.

When these codes came out, the specialty society advisors met by conference call and decided to submit a code change proposal to CPT for the May 2020 meeting. This proposal would establish new principal care management codes (like those in the final rule). Because these new codes also would potentially be part of the CCM family, the entire CCM family would need to be surveyed after the codes were approved by CPT. Specifically, assuming the new principal care management codes are approved at the May 2020 CPT meeting, the entire CCM family will need to be surveyed for the October 2020 RUC meeting. Therefore, if the undersigned specialties surveyed the CCM family for the January 2020 RUC meeting because of new code 99439, that would mean the exact same family of codes would be surveyed for both the January and October RUC meetings in 2020. For many reasons, the undersigned specialty society do not think that is a good idea (e.g., the work is unlikely to change in such a short period of time, any differences in the results may cast on the validity of both surveys, respondents completing both surveys may be confused by the request to resurvey the same codes).

Given that CMS had already established payment for the new codes for CY 2020 (including G2058), the undersigned specialties met with the Research Subcommittee and requested that we be allowed to make a presentation to the RUC requesting a temporary crosswalk to value 99439 on an interim basis for 2021 before it is surveyed next year as part of the 2022 CPT and Medicare physician fee schedule cycles. The specialties also requested that we be allowed to recommend maintaining the current value of the existing CCM codes until the entire family is surveyed later in 2020. The Research subcommittee listened to our proposal, asked several helpful questions, and expressed its support for the proposed plan. The SoR we submitted for

99439 contains a more detailed discussion of the process and our recommendations for a crosswalk.

Thanks to you and the RUC for your time and consideration of this matter. We look forward to discussing it with the RUC in January.

Sincerely,

American Academy of Family Physicians
American College of Physicians
American Geriatrics Society
American Nurses Association
American Osteopathic Association

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99439 Tracking Number V2 Original Specialty Recommended RVU: **0.54**
Presented Recommended RVU: **0.54**
Global Period: ZZZ Current Work RVU: **N/A** RUC Recommended RVU: **0.54**

CPT Descriptor: Chronic care management services, with the following required elements:

multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,
chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,
comprehensive care plan established, implemented, revised, or monitored;

each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)
(Use 99439 in conjunction with 99490)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: (not applicable)

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: (not applicable)

Description of Intra-Service Work: Chronic care management services are management and support services provided by clinical staff, under the direction of a physician or other qualified health care professional, to a patient residing at home or in a domiciliary, rest home, or assisted living facility. These services typically involve clinical staff implementing a care plan directed by the physician or other qualified health care professional when medical and/or psychosocial needs of the patient require establishing and implementing, revising, or monitoring the care plan. Services typically include establishing, implementing, revising, or monitoring the care plan; coordinating the care of other professionals and agencies; and educating the patient or caregiver about the patient's condition, care plan, and prognosis. The physician or other qualified health care professional provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs, and activities of daily living.

A plan of care must be documented and shared with the patient and/or caregiver. A care plan is based on a physical, mental, cognitive, social, functional, and environmental assessment. It is a comprehensive plan of care for all health problems. It typically includes, but is not limited to, the following elements: problem list, expected outcome and prognosis, measurable treatment goals, symptom management, planned interventions, medication management, community and social services ordered, how the services of agencies and specialists unconnected to the practice will be directed and coordinated, identification of the individuals responsible for each intervention, requirements for periodic review, and, when applicable, revision of the care plan.

The care management office/practice must have the following capabilities:
Provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients and caregivers with a means to make contact with health care professionals in the practice to address urgent needs

regardless of the time of day or day of week; provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments; provide timely access and management for follow up after an emergency department visit or facility discharge; utilize an electronic health record system so that care providers have timely access to clinical information; use a standardized methodology to identify patients who require care management services; have an internal care management process/function whereby a patient identified as meeting the requirements for these services starts receiving them in a timely manner; use a form and format in the medical record that is standardized within the practice; be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT established a new add-on code 99439, Chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month to be used with 99490,

Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.

This new code is part of the chronic care management (CCM) family and several societies, including the American College of Physicians, the American Academy of Family Physicians, the American Geriatrics Society, the American Osteopathic Association, and the American Nurses Association, submitted LOI's of 1 to survey the family. During the process of preparing for the survey, CMS published it final rule for CY 2020, which included the creation of several new CCM codes. These included two codes for principal care management and a G2058 which has a descriptor identical to that of 99439. When these came out, the specialty society advisors decided to submit a coding change proposal to CPT to establish new principal care management codes. Those codes also would be part of the CCM family and would necessitate surveying the entire CCM family. Because the soonest the new codes could be created was for the CY 2022 CPT cycle, that meant the entire CCM family would have to be reviewed 2 years in row if the proposed survey for 99439 was done.

Given that CMS had already established payment for the new codes for CY 2020 (including G2058), the specialties met with the Research Subcommittee and requested that they be allowed to make a presentation to the RUC requesting a temporary crosswalk to value 99439 on an interim basis before it was surveyed next year. The Research subcommittee agreed with this plan. Therefore, specialty societies convened an expert panel of their RUC advisors, which met by conference call to discuss an appropriate crosswalk. They noted that CMS assigned 0.54 work RVUs and 15 minutes of total (all intra-service) time to G2058. The expert panel also reviewed the RVUs of other RUC-reviewed, ZZZ global codes with total time of 10-20 minutes and work RVUs between 0.30 and 0.70. Within that group of codes, there were 15 codes that had 15 minutes of total time (all intra-service), including two codes for acupuncture reviewed by the HCPAC. Several of those codes support the recommended value of 0.54:

11045, Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure) with 0.50 work RVUs

11107, Incisional biopsy of skin (eg, wedge) (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure) with 0.54 work RVUs

90913, Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry, when performed; each additional 15 minutes of one-on-one physician or other qualified health care professional contact with the patient (List separately in addition to code for primary procedure) with 0.50 work RVUs

96159, Health behavior intervention, individual, face-to-face; each additional 15 minutes (List separately in addition to code for primary service) with 0.50 work RVUs

96168, Health behavior intervention, family (with the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) with 0.55 work RVUs

96171, Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) with 0.54 work RVUs

96571, Photodynamic therapy by endoscopic application of light to ablate abnormal tissue via activation of photosensitive drug(s); each additional 15 minutes (List separately in addition to code for endoscopy or bronchoscopy procedures of lung and gastrointestinal tract) with 0.55 work RVUs

97811, Acupuncture, 1 or more needles; without electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure) with 0.50 work RVUs

97814, Acupuncture, 1 or more needles; with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure) with 0.55 work RVUs

The expert panel also noted that 99489, Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; establishment or substantial revision of a comprehensive care plan; moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care

professional, per calendar month (List separately in addition to code for primary procedure) has 13 total minutes, all intra-service, and a work RVU of 0.5. The panel also noted that the base complex CCM code, 99487, Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; establishment or substantial revision of a comprehensive care plan; moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month has a total time of 45 minutes and a work RVU of 1.00.

In order to maintain the work relativity of 99487, 99489, 99490, and 99439, given the time for each code, the expert panel believes that the most appropriate crosswalks are 11107 and 96171, because the amount of work required for the add-on code should be less than the base code and within the range of other ZZZ global codes with 15 minutes of total time, all intra-service.

Therefore, the specialty societies are recommending 0.54 work RVUs and 15 minutes to total time, all intra-service for CPT code 99439 as interim values until the entire CCM family is surveyed next year.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre Time	Intra Time	Post Time
3.	99490	XXX	0.61	0	15	0
4.	99439	ZZZ	0.54	0	15	0
5.	Totals>		1.15	0	30	0

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99490

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family medicine How often? Commonly

Specialty Internal medicine How often? Commonly

Specialty Geriatrics How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1216342

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Same as estimated Medicare frequency; most private payers are not paying for CCM, and most non-Medicare patients don't qualify.

Specialty Family medicine Frequency 383148 Percentage 31.50 %

Specialty Internal medicine Frequency 490672 Percentage 40.33 %

Specialty Geriatrics Frequency 12163 Percentage 0.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,216,342 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CMS estimate of utilization for G2058; 30% of 2018 utilization of 99490

Specialty Family medicine Frequency 383148 Percentage 31.50 %

Specialty Internal medicine Frequency 490672 Percentage 40.33 %

Specialty Geriatrics Frequency 12163 Percentage 0.99 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99490

SS Rec Summary

INSTRUCTIONS

Insert information and data into all applicable cells except IWPUT and TOTAL TIME. These cells will automatically calculate.

Hide columns and rows that do not contain data.

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2020

CPT Code	Long Descriptor	Global Period
99490	Chronic care management services, with the following required elements: ▪ multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient~~,~~; ▪ chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline~~,~~; ▪ comprehensive care plan established, implemented, revised, or monitored~~.~~; ▪ first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.	XXX
99439	each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)	ZZZ
99491(f)	*Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements:* ▪ *multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient;* ▪ *chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline;* ▪ *comprehensive care plan established, implemented, revised, or monitored.*	XXX
99487	Complex chronic care management services, with the following required elements: ▪ multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, ▪ chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, ▪ comprehensive care plan established, implemented, revised, or monitored, ▪ moderate or high complexity medical decision making;	XXX

	▪ 60 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month.	
99489	each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99490	The patient is a 75-year-old female with diabetes, hypertension, and mild congestive heart failure. She requires chronic care management services.
99439	During a month of chronic care management services, a 78-year-old female who has just received 39 minutes of clinical staff time, requires additional care management services. **Note**: This is an add-on service. Only consider the additional work related to additional clinical staff time.
99491(f)	**Typical Patient (RUC Database) (99491) Child** A 6-year-old child with spastic quadriplegia, gastrostomy, gastroesophageal reflux with recurrent bouts of aspiration pneumonia and reactive airway disease, chronic seizure disorder, failure to thrive, and severe neurodevelopment delay. He receives home occupational, physical, and speech therapy services. **Typical Patient (RUC Database) (99491) Adult** An 83-year-old female with congestive heart failure and early cognitive dysfunction, who has been hospitalized twice in the prior 12 months, is becoming increasingly confused and refuses an office visit. She has a certified nursing assistant supervised by a home care agency, participates in a remote weight and vital signs monitoring program, and sees a cardiologist and neurologist.
99487	**Typical Patient (99487) Child** A 6-year-old child with spastic quadriplegia, gastrostomy, gastroesophageal reflux with recurrent bouts of aspiration pneumonia and reactive airway disease, chronic seizure disorder, failure to thrive and severe neurodevelopment delay. He receives home occupational, physical and speech therapy services. **Typical Patient (99487) Adult** An 83-year-old female with congestive heart failure, early cognitive dysfunction, and takes four medications. She has decompensated and requires ongoing management aimed at avoiding further decompensation.
99489	**Typical Patient (99489) Adult** During a month of complex chronic care management services, a 92-year-old male with congestive heart failure, diabetes, and dementia and who has already received 89 minutes of complex care management services requires additional clinical staff time and ongoing care management

	activities. **Note**: This is an add-on service. Only consider the additional work related to complex chronic care management beyond the first 89 minutes.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC advisors from all the participating specialty societies acted as an expert panel and met by email and conference call to arrive at the recommendations for direct practice expense inputs. Prior final submissions for each service serviced as the basis with no modifications other than to make consistent with the current PE forms and the new code language.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   Current CMS time per the 2020 final rule. In some codes we moved the minutes from CA002 and CA035 to **CA021** as we believe placing time in those line items are likely typo mistakes and we do not believe the time should be in pre or post service for this code family.
   For 99439 as there is no current, we selected the code time.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   From RUC data base 2019 version 2 in varying top percentages based on the CPT code.
   Internal Medicine, Family Medicine, Nurse Practitioner, Physician Assistant, Cardiology, Pediatrics

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling*

evidence guidelines) Please explain if the increase can be entirely accounted for because of an increase in physician time:

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:
   b. Service period (includes pre, intra and post):

From CPT directly:
Care management activities performed by clinical staff, or personally by the physician or other qualified health care professional, typically include:

- communication and engagement with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals regarding aspects of care;
- communication with home health agencies and other community services utilized by the patient;
- collection of health outcomes data and registry documentation;
- patient and/or family/caregiver education to support self-management, independent living, and activities of daily living;
- assessment and support for treatment regimen adherence and medication management;
- identification of available community and health resources;
- facilitating access to care and services needed by the patient and/or family;
- management of care transitions not reported as part of transitional care management (99495, 99496);
- ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M service, noted above;
- development, communication, and maintenance of a comprehensive care plan.

When above are personally performed by physician or QHP, CPT 99491, the below are the clinical staff activities in addition to the 30 minutes by the physician or QHP:
The clinical staff perform the following tasks over the month the service is furnished:

- Call(s) in or email prescription(s)
- communicate with the patient or caregiver if the physician is not available

- receive, review and send tests results and other clinical information to and from other care givers
- schedule appointment(s) with other healthcare providers and outside agencies
- take call(s) from patient or contact patient when MD available for call

c. Post-service period:

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

For 99491 only
Detail breakout of Intra-service Clinical Staff:
Five minutes per month in relaying/communicating patient messages,
five minutes in communication with patient and/or pharmacy for prescription refills, prior authorizations or clarifications (assisting physician with paperwork for DME may be included here, or separately)
and five minutes for coordination with outside agencies or other providers (i.e. Obtaining referral forms, tracking down documentation of care received outside the primary care office or tracking down results on tests ordered by provider other that the PCP for a total time of 15 minutes.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

19. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

20. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

21. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

22. If this is a PE only code please select a crosswalk based on a similar specialty mix:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2014

Chronic Care Management

In May 2012, the CPT Editorial Panel created three new codes to describe complex chronic care management services that are patient-centered management and support services. These CPT codes were designed to describe a complex patient who requires changes in the care plan and significant clinical staff resources (i.e., typically 60 minutes of nurse care coordination in a calendar month). In the MPFS Final Rule for 2014, CMS broadened the proposal to capture all patients receiving 20 minutes or more of clinical staff management time to address two or more chronic conditions, expected to last at least 12 months or until the death of the patient, that place the patient at significant risk of death, acute exacerbation or decompensation, or functional decline.

A number of specialty societies submitted a coding change proposal to the CPT Editorial Panel to establish one new CPT code for chronic care management (CCM). The proposed code for CCM has the same descriptor as the G code proposed by CMS. In February 2014, the CPT Editorial Panel created a new code to describe chronic care management and new introductory language. CPT decided to retain CPT codes 99487 and 99489 and to delete CPT code 99488, *Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with one face-to-face visit, per calendar month* (the complex chronic care management (CCCM) code that included a face-to-face visit). The CPT coding structure starting in January 2015 will be as follows: 99487 and 99489 will exist as a family of two codes that, when appropriate, will be used together to describe *complex* chronic care management per calendar month for 60 minutes of clinical staff time and add-on for 30 minutes of clinical staff time; 99490 will exist as a separate stand-alone code to describe chronic care management per calendar month with at least 20 minutes of clinical staff time.

The RUC noted it was important that 99490 be surveyed on its own, with only the new CPT instructions for 99490 available to respondents. The specialty societies indicated that codes 99487 and 99489 were not included on the reference service list, so the respondents would not confuse the new code with CPT codes 99487 and 99489. The specialty societies noted that the clinical staff time for the other non-face-to-face chronic care management code, 99487, was not surveyed back in 2012 because the descriptor specified "60 minutes" of clinical staff time was required to report 99487. However, the descriptor for 99490 says "*at least 20 minutes of clinical staff time*." Therefore, the actual staff time is not specified, so the specialty societies determined it was important to survey for "typical" clinical staff time in order to make sure the code was accurately valued. Two questions regarding the amount of clinical staff time were added to the survey: one for the amount of time spent by clinical staff performing clinical staff activities and a second question asking how much physician time was spent performing clinical staff activities. It is important to note that the standard questions for physician work and physician time spent on supervision were also asked. Therefore, the survey asked three questions regarding time in this survey: (2a) asked about physician time spent supervising, (2b) asked about clinical staff activities

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

performed by clinical staff and (2c) asked about clinical staff activities performed by the physician. *Please see the attached document and spreadsheet providing this additional information on clinical staff time further breakdown.*

99490 ***Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements:***

- ***multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,***
- ***chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,***
- ***comprehensive care plan established, implemented, revised, or monitored***

(Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately)

The RUC reviewed the survey results from 338 physicians for CPT code 99490 and determined that the survey 25th percentile work RVU of 1.00 and 30 minutes intra-service time appropriately accounted for the work required to perform this service. The specialty societies indicated and the RUC agreed that the physician work of supervising chronic care management required for 99490 is the same as 99487 *Complex chronic care management* (RUC recommended work RVU = 1.00), which also includes 60 minutes of clinical staff time. The RUC noted that the survey median work RVU of 1.50 would cause a rank order anomaly. The RUC also compared 99490 to the key reference service 99214 and determined that the work and physician time required to perform 99490 is less, therefore is appropriately valued lower. The RUC confirmed the proper rank order with the following Evaluation and Management services: 99367 *Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by physician* (work RVU = 1.10), 99339 *Individual physician supervision of a patient (patient not present) in home, domiciliary or rest home (eg, assisted living facility) requiring complex and multidisciplinary care modalities…15-29 minutes* (work RVU = 1.25), 99203 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU = 1.42) and 99340 *Individual physician supervision of a patient (patient not present) in home, domiciliary or rest home (eg, assisted living facility) requiring complex and multidisciplinary care modalities…30 minutes or more* (work RVU = 1.80). For additional support the RUC referenced MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report* (work RVU = 0.85). **The RUC recommends a work RVU of 1.00 for CPT code 99490.**

New Technology/New Services List:
The specialty societies requested and the RUC agrees that CPT code 99490 be added to the new technology/new services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The Practice Expense Subcommittee noted that typical clinical staff type providing the service is an RN (L051A) not an RN/LPN/MTA (L037D) blend for 60 minutes of clinical staff time. The PE Subcommittee recognized that, under certain circumstances, other individuals with less than an RN degree may be performing components of these services up to the extent allowable by their states' scope of practice. However, the PE Subcommittee valued this service as the typical scenario as an RN performing this service. The RN is assessing a patient with multiple chronic conditions and of all the physicians queried in providing these services over the last decade, all indicated they have worked only with an RN. **The RUC recommends 60 minutes of clinical labor time performed by an RN (L051A) as recommended by the Practice Expense Subcommittee.**

CPT Code (●New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
~~Complex Chronic~~ Care ~~Coordination~~Management Services ~~Complex chronic care coordination~~Care management services are ~~patient centered~~ management and support services provided by ~~physicians~~clinical staff, under the direction of a physician or other qualified health care professionals~~, and clinical staff~~ to a~~n individual who resides~~ patient residing at home or in a domiciliary, rest home, or assisted living facility. ~~These services typically involve clinical staff developing~~Services may include establishing, ~~substantially~~implementing, revising, ~~and implementing a care plan under direction of the physician~~ or ~~other qualified health care professional. Substantial revision to a~~monitoring the care plan ~~typically occurs when~~, coordinating the ~~patient's clinical condition changes sufficiently (eg, identification of a new problem requiring additional interventions, introduction of new interventions because existing interventions are deemed ineffective, exacerbation~~care of ~~an existing problem requiring new interventions) to require more intensive staff monitoring, changes in the treatment regimen~~other professionals and agencies, and ~~additional time to educate~~educating the patient ~~and/~~or caregiver about the patient's condition ~~and/or change in treatment~~, care plan, and prognosis. The~~se services address the coordination of care by multiple professionals, disciplines, and/~~ physician or ~~community service agencies. The reporting individual~~other qualified health care professional provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs, ~~and instrumental~~ and ~~basic~~ activities of daily living ~~(IADL/ADL)~~. ~~Patients who require complex chronic care coordination services may be identified by practice-specific or other published algorithms that recognize multiple illnesses, multiple medication use, inability to perform activities of daily living, requirement for a caregiver, and/or repeat admissions or emergency department visits. Typical adult patients take or receive three or more prescription medications and may also be receiving other types of therapeutic interventions (eg, physical therapy, occupational therapy) and have two or more chronic continuous or~~

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

episodic health conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline.

Typical pediatric patients receive three or more therapeutic interventions (eg, medications, nutritional support, respiratory therapy) and have two or more chronic continuous or episodic health conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Because of the complex nature of their diseases and morbidities, these patients commonly require the coordination of a number of specialties and services. In some cases, due to inability to perform IADL/ADL and/ or cognitive impairment the patient is unable to adhere to the treatment plan without substantial assistance from a caregiver. For example, patients may have medical and psychiatric behavioral co-morbidities (eg, dementia and chronic obstructive pulmonary disease or substance abuse and diabetes) that complicate their care. Social support requirements or access to care difficulties may cause a need for these services. Medical, functional, and/or psychosocial problems that require medical decision making of moderate or high complexity and extensive clinical staff support are required. Medical decision making as defined in the Evaluation and Management (E/M) guidelines is not only applied to the face-to-face services, but is determined by the nature of the problems addressed by the reporting individual during the month.

A plan of care must be documented and shared with the patient and/or caregiver. A care plan is based on a physical, mental, cognitive, social, functional, and environmental (re)assessment and an inventory of resources and supports. It is a comprehensive plan of care for all health problems. It typically includes, but is not limited to, the following elements: problem list, expected outcome and prognosis, measurable treatment goals, symptom management, planned interventions, medication management, community/social services ordered, how the services of agencies and specialists unconnected to the practice will be directed/coordinated, identification of the individuals responsible for each intervention, requirements for periodic review, and, when applicable, revision of the care plan.

Codes 99487-9948999487, 99489, 99490 are reported only **once**once per calendar month and include all non-face-to-face complex chronic care coordination services and none or 1 face-to-face office or other outpatient, home, or domiciliary visit. Physicians or other qualified health care professionals may not report care coordination services if the care plan is unchanged or requires minimal change (eg, only a medication is changed or an adjustment in a treatment modality is ordered). Codes 99487-99489 may only be reported by the single physician or other qualified health care professional who assumes the care coordinationmanagement role with a particular patient for the calendar month.

Code selection is as follows:

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

~~Code 99487 is reported when, during the calendar month, there is no face-to-face visit with the physician or other qualified health care professional and at least 31 minutes of clinical staff time is spent in care coordination activities. 99488 is reported when, during the calendar month, there is a face-to-face visit with the physician or other qualified health care professional and at least 31 minutes of clinical staff time is spent in care coordination activities.~~

The face-to-face and non-face-to-face time spent by the clinical staff in communicating with the patient and/or family, caregivers, other professionals and agencies; revising, documenting and implementing the care plan; or teaching self-management is used in determining the ~~complex chronic~~ care ~~coordination~~management clinical staff time for the month. Only the time of the clinical staff of the reporting professional is counted. Only count the time of one clinical staff member when two or more clinical staff members are meeting about the patient. **Note:** Do not count any clinical staff time ~~on the date of the first visit or~~ on a day when the physician or qualified health care professional reports an E/M service (office or other outpatient services ~~99211-99215~~99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, domiciliary, rest home services ~~99334-99337~~99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, home services ~~99347-99350~~99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350).

Care ~~coordination~~management activities performed by clinical staff typically include:

- communication and engagement with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals regarding aspects of care;
- communication with home health agencies and other community services utilized by the patient;
- collection of health outcomes data and registry documentation;
- patient and/or family/~~caretaker~~caregiver education to support self-management, independent living, and activities of daily living;
- assessment and support for treatment regimen adherence and medication management;
- identification of available community and health resources;
- facilitating access to care and services needed by the patient and/or family;
- management of care transitions not reported as part of transitional care management (99495, 99496);
- ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M service, noted above;

development, communication, and maintenance of a comprehensive care plan.

The care ~~coordination~~management office/practice must have the following capabilities:

- provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients/caregivers with a means to make contact with health care professionals in the practice to address urgent needs regardless of the time of day or day of

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

week;

- provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments;
- provide timely access and management for follow-up after an emergency department visit or facility discharge;
- utilize an electronic health record system so that care providers have timely access to clinical information;
- ~~use~~ use a standardized methodology to identify patients who require ~~chronic complex~~ care ~~coordination~~management services;
- have an internal care ~~coordination~~management process/function whereby a patient identified as meeting the requirements for these services starts receiving them in a timely manner;
- use a form and format in the medical record that is standardized within the practice; be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient.

~~If a face-to-face visit was provided during the month by the physician or other qualified health care professional, report 99488. Additional~~ E/M services ~~beyond the first visit~~ may be reported separately by the same physician or other qualified health care professional during the same calendar month. ~~Complex care coordination~~Care management services include care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), anticoagulant management (99363, 99364), medical team conferences (~~99366-9936899366, 99367, 99368~~), education and training (~~98960-9896298960, 98961, 98962~~, 99071, 99078), telephone services (~~98966-9896899366, 99367, 99368~~, ~~99441-9944399441, 99442, 99443~~), on-line medical evaluation (98969, 99444), preparation of special reports (99080), analysis of data (99090, 99091), transitional care management services (99495, 99496), medication therapy management services (~~99605-9960799605, 99606, 99607~~) and, if performed, these services may not be reported separately during the month for which ~~99487-9948999487, 99489~~ are reported. All other services may be reported. Do not report ~~99487-9948999487, 99489, 99490~~ if reporting ESRD services (90951-90970) during the same month. If the ~~complex chronic~~ care ~~coordination~~management services are performed within the postoperative period of a reported surgery, the same individual may not report ~~99487-9948999487, 99489, 99490~~.

~~Complex chronic care coordination can~~Care management may be reported in any calendar month during which the clinical staff time requirements are met. If care ~~coordination~~management resumes after a discharge during a new month, start a new period or report transitional care management services (99495, 99496) as appropriate. If discharge occurs in the same month, continue the reporting period or report Transitional Care Management Services. Do not report ~~99487-9948999487, 99489, 99490~~ for any post-discharge ~~complex chronic~~ care ~~coordination~~management services for any days within 30 days of discharge, if reporting 99495, 99496.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Chronic Care Management Services

Chronic care management services are provided when medical and/or psychosocial needs of the patient require establishing, implementing, revising, or monitoring the care plan. Patients who receive chronic care management services have two or more chronic continuous or episodic health conditions that are expected to last at least 12 months, or until the death of the patient, and that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Code 99490 is reported when, during the calendar month, at least 20 minutes of clinical staff time is spent in care management activities.

●99490	PP1	Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: ▪ multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, ▪ chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, ▪ comprehensive care plan established, implemented, revised, or	XXX	1.00

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
		monitored. (Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately		

Complex Chronic Care Management Services

Complex chronic care management services are provided during a calendar month that includes criteria for chronic care management services as well as establishment or substantial revision of a comprehensive care plan; medical, functional, and/or psychosocial problems requiring medical decision making of moderate or high complexity; and clinical staff care management services for at least 60 minutes, under the direction of a physician or other qualified health care professional. Physicians or other qualified health care professionals may not report complex chronic care management services if the care plan is unchanged or requires minimal change (eg, only a medication is changed or an adjustment in a treatment modality is ordered). Medical decision making as defined in the Evaluation and Management (E/M) guidelines is determined by the problems addressed by the reporting individual during the month.

Patients who require complex chronic care management services may be identified by practice-specific or other published algorithms that recognize multiple illnesses, multiple medication use, inability to perform activities of daily living, requirement for a caregiver, and/or repeat admissions or emergency department visits.Typical adult patients who receive complex chronic care management services are treated with three or more prescription medications and may be receiving other types of therapeutic interventions (eg, physical therapy, occupational therapy). Typical pediatric patients receive three or more therapeutic interventions (eg, medications, nutritional support, respiratory therapy). All patients have two or more chronic continuous or episodic health conditions that are expected to last at least 12 months, or until the death of the patient, and that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Typical patients have complex diseases and morbidities and, as a result, demonstrate one or more of the following:

- need for the coordination of a number of specialties and services;
- inability to perform activities of daily living and/or cognitive impairment resulting in poor adherence to the treatment plan without substantial assistance from a caregiver;
- psychiatric and other medical co-morbidities (eg, dementia and chronic obstructive pulmonary disease or substance abuse and diabetes) that complicate their care; and/or
- social support requirements or difficulty with access to care.

Global Period: XXX RUC Recommended RVU: **1.00**

CPT Descriptor:
Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, Comprehensive care plan established, implemented, revised, or monitored. (Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75 year old man with diabetes, claudication and mild congestive heart failure, status post myocardial infarction with mild dementia who had a peripheral arterial stent placed six weeks ago during a hospitalization for treatment of a foot ulcer. He lives with his daughter, participates in remote monitoring programs and is being treated by two specialists in addition to his primary care physician.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting?
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting?
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Chronic care management services are management and support services provided by clinical staff, under the direction of a physician or other qualified health care professional, to a patient residing at home or in a domiciliary, rest home, or assisted living facility. These services typically involve clinical staff implementing a care plan directed by the physician or other qualified health care professional when medical and/or psychosocial needs of the patient require establishing and implementing, revising or monitoring the care plan. Services typically include establishing, implementing, revising, or monitoring the care plan, coordinating the care of other professionals and agencies, and educating the patient or caregiver about the patient's condition, care plan, and prognosis. The physician or other qualified health care professional provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs and activities of daily living.
A plan of care must be documented and shared with the patient and/or caregiver. A care plan is based on a physical, mental, cognitive, social, functional, and environmental assessment. It is a comprehensive plan of care for all health problems. It typically includes, but is not limited to, the following elements: problem list, expected outcome and prognosis, measurable treatment goals, symptom management, planned interventions, medication management, community/social

services ordered, how the services of agencies and specialists unconnected to the practice will be directed/coordinated, identification of the individuals responsible for each intervention, requirements for periodic review, and, when applicable, revision of the care plan.

The care management office/practice must have the following capabilities:
Provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients/caregivers with a means to make contact with health care professionals in the practice to address urgent needs regardless of the time of day or day of week; provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments; provide timely access and management for follow-up after an emergency department visit or facility discharge; utilize an electronic health record system so that care providers have timely access to clinical information; use a standardized methodology to identify patients who require care management services; have an internal care management process/function whereby a patient identified as meeting the requirements for these services starts receiving them in a timely manner; use a form and format in the medical record that is standardized within the practice; be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient..

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

There were 338 responses to the survey request. The following societies participated in distributing the survey: American Geriatrics Society (AGS), American Academy of Family Physicians (AAFP), American Academy of Neurology (AAN), American Thoracic Society (ATS), American College of Physicians (ACP), American Osteopathic Association (AOA), American College of Chest Physicians (ACCP), American Gastroenterological Association (AGA), the American Society of Gastrointestinal Endoscopy (ASGE), the American College of Gastroenterology (ACG), and the American Society for Blood and Marrow Transplantation (ASBMT). These societies represent allopathic and osteopathic physicians, nurse practitioners, and physician assistants. The summary tables included with the material submitted by the specialty societies contain total and breakout survey results. With the approval of the Research Subcommittee, the specialty societies modified the survey tool for the purpose of surveying the clinical staff time for the service and the amount of physician time spent performing clinical staff activities.

Background

A multi-specialty and multi-discipline expert panel ("panel") reviewed the survey results and developed the following rationale for the recommended work value for this Chronic Care Management (CCM) code, 99490.

Code 99490 is conceptually similar to code 99487, *Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with no face-to-face visit, per calendar month*. On November 27, 2013 in the Medicare Physician Fee Schedule Final Rule for Calendar Year 2014, CMS announced that it had decided to create a CCM service effective January 1, 2015, and finalized a proposal to establish a G code to describe the service. In response to this, announcement, a number of specialty societies submitted a coding change proposal to establish a new CPT code for CCM. The proposed code for CCM had the same descriptor as the G code established by CMS. In addition to creating the new CPT code, the CPT Editorial Panel, at their February 2014 meeting, created new introductory language specifically for the new CCM code. CPT decided to retain 99487 and 99489 and to delete 99488, *Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with one face-to-face visit, per calendar month* (the complex chronic care coordination (CCCC) code that included a face-to-face visit). Most importantly, the CPT structure starting in January 2015 will be as follows: 99487 and 99489 will exist as a family of two codes that, when appropriate, will be used together; 99490 will exist as a separate stand-alone code, in part because CMS declined to establish an add-on code (like 99489) for 99490. Physicians are likely to choose to use 99487/99489 OR 99490 depending on individual payer requirements and policy.
Therefore, it was critically important that 99490 be surveyed on its own, with only the new CPT instructions for 99490 available to respondents. Additionally, codes 99487 and 99489 were not included on the RSL, so the respondents would not confuse the new code with 99487/99489. This is why only the new CPT guideline language for 99490 was included in the survey - and not the guideline language for 99487.

CCM describes non-face-to-face management of a patient, over a calendar month, and requires at least 20 minutes of clinical staff time under the direction of a physician or other qualified health care professional. Because the code requires

"at least 20 minutes of clinical staff time," the surveying specialties decided to survey clinical staff time in addition to physician time and work. Importantly, the specialties heard that, in some cases, physicians are not only directing the service but also acting as clinical staff. Therefore, the specialties also surveyed physician time spent performing clinical staff activities and asked the respondents to separate the time spent directing the service from the time spent performing clinical staff activities (if the respondent performed clinical staff activities). Lastly, the survey specifically requested that the work RVU be based only on the time spent directing CCM - and not on the time spent performing clinical staff activities. Adding these questions allowed the specialties to address some of the concerns raised by the RUC about the survey for 99487, and to make recommendations for: (1) physician time spent directing CCM, (2) physician work spent directing CCM and (3) total clinical staff time (i.e., the sum of clinical staff time as reported in question 2b and physician time spent performing clinical staff activities as reported in question 2c).

In reviewing the survey results, the expert panel kept in mind that 99490 is a stand-alone code that is reported only once no matter how much physician and staff time is spent performing the service, after the minimum of 20 minutes of clinical staff time has been reached. This is not akin to 99487 which had to be valued relative to 99489. The panel agreed that Code 99490 should be valued relative to the combination of 99487/99489, as it is a stand-alone alternative to those codes.
The panel also acknowledged that 99490 does not include physician or clinical staff time or work performed for unrelated activities.

All physician time in the CCM and CCCC codes is considered intra-service time, because it includes all time spent during a calendar month.

Reference Services

For 99490, the key reference service was 99214:

- 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family* with a work RVU of 1.5 and total time of 40 minutes (5/25/10).

The survey median RVU for 99490 was 1.50 with a total physician time of 30 minutes to direct the service; the survey 25th percentile for work was 1.00 and the 25th percentile for time was 20 minutes to direct the service.

Recommendation and Rationale

The multi-specialty expert panel reviewed the survey data and considered the placement of 99490 into proper rank order with 99487 and other non-face-to-face E/M codes.

Code	Description	Work RVU	Intra-service Time	Total Time
99339	Individual physician supervision of a patient (patient not present) in home, domiciliary or rest home (eg, assisted living facility) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of related laboratory and other studies, communication (including telephone calls) for purposes of assessment or care decisions with health care professional(s), family member(s), surrogate decision maker(s) (eg, legal guardian) and/or key caregiver(s) involved in patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month; 15-29 minutes	1.25	20	40
99340	Individual physician supervision of a patient	1.80	30	60

	(patient not present) in home, domiciliary or rest home (eg, assisted living facility) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of related laboratory and other studies, communication (including telephone calls) for purposes of assessment or care decisions with health care professional(s), family member(s), surrogate decision maker(s) (eg, legal guardian) and/or key caregiver(s) involved in patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month; 30 minutes or more			
99367	Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by physician	1.10	30	40
90832	Psychotherapy, 30 minutes with patient and/or family member	1.50	30	45
99203	New Patient Visit	1.42	20	29

The care plan oversight codes 99339 and 99340 are reported for patients who are clinically less complex than patients who receive CCM services. Specifically, there is oversight and management of only a portion of the patient's care, namely the problems that make the patient eligible for home care or hospice care. Care plan oversight entails 30 min of physician time over the course of a month generally limited to the focus of the home or hospice care episode; for example, overseeing the nursing or therapist functions by following patient progress, as reported by those caregivers, and ensuring that the care plan is followed. The oversight includes conversations between healthcare, not family members. Oversight does not include issues such as social support, resolution of psychosocial issues and active management of functional needs. Thus, because family members and caregivers are not part of the service, the work is less stressful and more straightforward.
The team conference codes 99366, 99367 and 99368 are reported for the subset of patient problems that require care coordination - not for all their problems. Team conferences focus on those medical issues being attended to by the team members who attend the conference (e.g., physical therapy, primary care, cardiology, etc.).

The expert panel reviewed 99203 and agreed that 99490 was less intense than 99203 but that the total work was similar given that 99490 has 10 more minutes of intraservice time. The panel noted that 90832 is a focused time limited visit while 99490 addresses many medical, psychosocial and functional activity issues over an entire month.

With respect to the physician work, we believe that 99490, which has a higher intraservice time but lower total service time than code 99214 should have an identical work RVU because the total work is the same even though the total time is less. We also note that the total time spent in directing the clinical staff is in an appropriate ratio to the total clinical staff time (30/60).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) (To Be Determined)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? see attachment If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99214

Additional Information on Clinical Staff Time for CCM Code 99490

Below is additional information clarifying the amount of time that is spent performing clinical staff activities for 99490. Please review the attached table after reading the below.

The clinical staff time for the other non-face-to-face chronic care management code, 99487, was not surveyed back in 2012 because the descriptor specified "60 minutes" of clinical staff time was required to report 99487. However, the descriptor for 99490 says "***at least 20 minutes of clinical staff time.***" Therefore, the actual staff time is not specified so it was important to survey for "typical" clinical staff time in order to make sure the code was accurately valued for clinical staff time. Two questions regarding the amount of clinical staff time were added to the survey: one for the amount time spent by clinical staff performing clinical staff activities and a second question asking how much physician time was spent performing clinical staff activities. It is important to note that the standard questions for physician work and physician time spent on supervision (which was the time upon which the work RVU was based) were also asked; therefore there were three questions regarding time in this survey: (2 a) asked about physician time spent supervising, (2 b) asked about clinical staff activities performed by clinical staff and (2 c) asked about clinical staff activities performed by the physician.

If you look at the yellow line tracking number PP1 on the *attached table* - that is the response from the entire survey - you can see the median clinical staff time spent by clinical staff is 45 minutes while the median clinical staff time spent by a physician or other mid-level practitioner is 15 minutes. If you add these amounts you get a total of 60 minutes of time spent performing clinical staff activities and this was the request from the specialty societies and the recommendation of the RUC. The RUC heavily considered the subgroup analysis, also included on the attached table, when developing its recommendation.

As support the specialty societies also offered a sub analysis of the data, the green row, titled tracking # 11 which contains only data from 61 physicians who responded that **they did not perform any clinical staff work** (i.e., all clinical staff work was spent by clinical staff meaning that question 2 c was answered as "0"). The median clinical staff time for this group of physicians was 60 minutes, supporting our recommendation for 60 minutes of clinical staff time. If you look at the red row, titled tracking # 12 which contains the responses from those physicians who responded that 1 or more minutes of clinical staff time was performed by a physician or mid-level practitioner, the total time for clinical staff activities is 65 minutes - the sum of the medians of the time spent by clinical staff, 45 minutes, and the time spent by the physician, 20 minutes.

In summary, the survey data, whether analyzed in total or by the pertinent subgroups, supports assignment of 60 minutes of clinical staff time to 99490.

Specialty Society('s)_AAFP, AAN, ACCP, ACG, ACP, AGA, AGS, AOA, ASBMT, ATS__

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements:

- multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,
- chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,
- comprehensive care plan established, implemented, revised, or monitored

(Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately)

Global Period:_XXX_ Meeting Date: _April 2014____
NOTE: Services are per patient, per calendar month.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

A consensus panel of experts from the surveying societies met by phone and email to develop the inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code **99487**
Rationale:

We believe this service will utilize a case manager that is an RN, rather than the RN/LPN mix as outlined in the 2014 final rule practice requirement for the CMS "G" code, which is most similar to 99490. The 2014 final rule is correct to identify that the work of the case manager is, at a minimum, at the RN level or higher.

Code 99487 (*Complex chronic care management services with the following required elements;*

- multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient,
- chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline,
- establishment or substantial revision of a comprehensive care plan,
- moderate or high complexity medical decision making;
- 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month

(Complex chronic care management services of less than 60 minutes duration, in a calendar month, are not reported separately)

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

None

Intra-Service Clinical Labor Activities:

Chronic care management activities performed by clinical staff typically include:

- communication and engagement with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals regarding aspects of care;
- communication with home health agencies and other community services utilized by the patient;
- collection of health outcomes data and registry documentation;
- patient and/or family/caregiver education to support self-management, independent living, and activities of daily living;
- assessment and support for treatment regimen adherence and medication management;
- identification of available community and health resources;
- facilitating access to care and services needed by the patient and/or family;
- management of care transitions not reported as part of transitional care management (99495, 99496);
- ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M, noted above;
- development, communication, and maintenance of a comprehensive care plan.

Post-Service Clinical Labor Activities:

None

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2017

Chronic Care Management Services

In February 2017, the CPT Editorial Panel created a new code to describe at least 30 minutes of chronic care management services performed personally by the physician or qualified health care professional over one calendar month. This service is different than existing chronic care management services 99490 *Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month…*(work RVU = 0.61) and 99487 *Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month* (work RVU = 1.00) which are performed by clinical staff under the supervision of a physician. The patient acuity criteria for all these services are the same but the physician work is different and more intense for 99491. CPT code 99491 cannot be reported with 99490 or 99487 and must capture all the work for the month.

The RUC reviewed the survey results from 153 physicians for CPT code 99491 and determined that the survey 25th percentile of 1.45 work RVUs appropriately accounts for the work required to perform this service. The RUC recommends 30 minutes of intra-service time for 99491. The RUC compared the surveyed code to the top key reference service 99214 (work RVU = 1.50, 25 minutes intra-service time and 40 minutes total time) and determined that the physician work and time for 99491 is slightly less as this is a non face-to-face service. For additional support, the RUC referenced similar service 99203 *Office or other outpatient visit for the evaluation and management of a new patient* (work RVU= 1.42 and 29 minutes total time). **The RUC recommends a work RVU of 1.45 for CPT code 99491.**

Practice Expense
There is a single clinical staff time input for this service, 15 minutes to *Perform procedure/service---NOT directly related to physician work time* and no supplies or equipment. The 15 minutes of time is distributed throughout the month and the clinical staff will typically perform the following tasks during this time:

- Relaying/communicating patient messages,
- Communication with patient and/or pharmacy for prescription refills, prior authorizations or clarifications (assisting physician with paperwork for DME may be included here, or separately)
- Coordination with outside agencies or other providers (i.e. Obtaining referral forms, tracking down documentation of care received outside the primary care office or tracking down results on tests ordered by provider other that the PCP)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

An observer from CMS questioned why the clinical labor staff time is half that of the physician time. The specialty societies indicated that the clinical staff services would include patient maintenance activities such as answering questions, refilling prescriptions and calling home care agencies, that would extend beyond any activities included in other Evaluation and Management services. An additional concern that the description of clinical labor staff work may overlap with the physician work was addressed during the review. The specialty societies indicated that it is possible that in rare cases the requirements for 99490 (20 minutes clinical staff time) and 99491 (30 minutes of physician time) could both be met. However, this would not be the typical case and this situation would only arise if both the physician time and the clinical staff were tracked and documented. If both are tracked and documented then the physician would have the choice as to which code to report. **The RUC recommends that the specialties work with the AMA to develop a CPT Assistant article to clarify the proper reporting of code 99491 versus 99490. The RUC recommends the direct practice expense inputs without modification as submitted by the specialty societies and approved by the Practice Expense Subcommittee.**

New Technology/New Services
This service will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Care Management Services** Care management services are management and support services provided by clinical staff, under the direction of a physician or other qualified health care professional, or may be provided personally by a physician or qualified health care professional to a patient residing at home or in a domiciliary, rest home, or assisted living facility. Services may include establishing, implementing, revising, or monitoring the care plan, coordinating the care of other professionals and agencies, and educating the patient or caregiver about the patient's condition, care plan, and prognosis. The physician or other qualified health care professional provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs, and activities of daily living. *A plan of care must be documented and shared with the patient and/or caregiver. A care plan is based on a physical, mental, cognitive, social, functional, and environmental assessment. It is a comprehensive plan of care for all health problems. It typically includes, but is not limited to, the following elements: problem list, expected outcome and prognosis, measurable treatment goals, symptom management, planned interventions, medication management, community/social services ordered, how the services of agencies and specialists unconnected to the practice will be directed/coordinated, identification of the individuals responsible for each intervention, requirements for periodic review, and, when applicable, revision of the care plan.*				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Codes 99487, 99489, 99490, 99491 are reported only once per calendar month and may only be reported by the single physician or other qualified health care professional who assumes the care management role with a particular patient for the calendar month.

For 99490, 99487, and 99489 ~~T~~the face-to-face and non-face-to-face time spent by the clinical staff in communicating with the patient and/or family, caregivers, other professionals, and agencies; revising, documenting, and implementing the care plan; or teaching self-management is used in determining the care management clinical staff time for the month. Only the time of the clinical staff of the reporting professional is counted. Only count the time of one clinical staff member when two or more clinical staff members are meeting about the patient. For 99491, only count the time personally performed by the physician. Do not count any time of the clinical staff on the day of an initiating visit (the creation of the care plan, initial explanation to patient, and/or caregiver and obtaining consent) ***Note:*** *Do not count any clinical staff time on a day when the physician or qualified health care professional reports an E/M service (office or other outpatient services 99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, domiciliary, rest home services 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, home services 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350).*

Care management activities performed by clinical staff, or personally by the physician or other qualified health care professional typically include:

- *communication and engagement with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals regarding aspects of care;*
- *communication with home health agencies and other community services utilized by the patient;*
- *collection of health outcomes data and registry documentation;*
- *patient and/or family/caregiver education to support self-management, independent living, and activities of daily living;*
- *assessment and support for treatment regimen adherence and medication management;*
- *identification of available community and health resources;*
- *facilitating access to care and services needed by the patient and/or family;*
- *management of care transitions not reported as part of transitional care management (99495, 99496);*
- *ongoing review of patient status, including review of laboratory and other studies not reported as part of an E/M service, noted above;*
- *development, communication, and maintenance of a comprehensive care plan.*

The care management office/practice must have the following capabilities:

- *provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients/caregivers with a means to make contact with health care professionals in the practice to address urgent needs regardless of the time of day or day of week;*
- *provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments;*
- *provide timely access and management for follow-up after an emergency department visit or facility discharge;*
- *utilize an electronic health record system so that care providers have timely access to clinical information;*
- *use a standardized methodology to identify patients who require care management services;*
- *have an internal care management process/function whereby a patient identified as meeting the requirements for these services starts*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

receiving them in a timely manner;
- *use a form and format in the medical record that is standardized within the practice;*
- *be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient.*

E/M services may be reported separately by the same physician or other qualified health care professional during the same calendar month. Care management services include care plan oversight services (99339, 99340, 99374-99380), prolonged services without direct patient contact (99358, 99359), anticoagulant management (99363, 99364), medical team conferences (99366, 99367, 99368), education and training (98960, 98961, 98962, 99071, 99078), telephone services (99366, 99367, 99368, 99441, 99442, 99443), on-line medical evaluation (98969, 99444), preparation of special reports (99080), analysis of data (99090, 99091), transitional care management services (99495, 99496), medication therapy management services (99605, 99606, 99607) and, if performed, these services may not be reported separately during the month for which 99487, 99489, 99490 are reported. All other services may be reported. Do not report 99487, 99489, 99490, 99491 if reporting ESRD services (90951-90970) during the same month. If the care management services are performed within the postoperative period of a reported surgery, the same individual may not report 99487, 99489, 99490, 99491.

Care management may be reported in any calendar month during which the clinical staff time or physician/other qualified health care professional personal time requirements are met. If care management resumes after a discharge during a new month, start a new period or report transitional care management services (99495, 99496) as appropriate. If discharge occurs in the same month, continue the reporting period or report Transitional Care Management Services. Do not report 99487, 99489, 99490 for any post-discharge care management services for any days within 30 days of discharge, if reporting 99495, 99496.

Chronic Care Management Services

Chronic care management services are provided when medical and/or psychosocial needs of the patient require establishing, implementing, revising, or monitoring the care plan. Patients who receive chronic care management services have two or more chronic continuous or episodic health conditions that are expected to last at least 12 months, or until the death of the patient, and that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Code 99490 is reported when, during the calendar month, at least 20 minutes of clinical staff time is spent in care management activities. Code 99491 is reported when 30 minutes of physician or other qualified health care professional personal time is spent in care management activities. Do not report 99490 in the same month as 99491.

#99490 *Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements:*
- *multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient;*
- *chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline;*
- *comprehensive care plan established, implemented, revised, or monitored.*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately)
(Do not report 99490 in the same calendar month as 99487, 99489, 99491)

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
●99491	F1	Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored (Do not report 99491 in the same calendar month as 99487, 99489, or 99490) (Do not report 99340, 99339 with 99491)	XXX	1.45

CPT Descriptor: Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored / / (Do not report 99491 in the same calendar month as 99487, 99489, or 99490) / (Do not report 99340, 99339 with 994X7)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey:
(adult) An 83-year-old woman with congestive heart failure and early cognitive dysfunction, who has been hospitalized twice in the prior 12 months, is becoming increasingly confused and refuses an office visit. She has a certified nursing assistant supervised by a home care agency, participates in a remote weight and vital signs monitoring program and sees a cardiologist and neurologist.

(child) A 6-year-old child with spastic quadriplegia, gastrostomy, gastroesophageal reflux with recurrent bouts of aspiration pneumonia and reactive airway disease, chronic seizure disorder, failure to thrive and severe neurodevelopment delay. He receives home occupational, physical and speech therapy services.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: These chronic care management services are management (CCM) and support services personally provided by a physician or other qualified health care professional, to a patient residing at home or in a domiciliary, rest home, or assisted living facility. Services typically include establishing, implementing, revising, or monitoring the care plan; coordinating the care of other professionals and agencies; and educating the patient or caregiver about the patient's condition, care plan, and prognosis. The physician or other qualified health care professional provides and or oversees the coordination of services, as needed, for all medical conditions, psychosocial needs, and activities of daily living.
A plan of care must be documented and shared with the patient and/or caregiver. A care plan is based on a physical, mental, cognitive, social, functional, and environmental assessment. It is a comprehensive plan of care for all health problems. It typically includes, but is not limited to, the following elements: problem list, expected outcome and prognosis, measurable treatment goals, symptom management, planned interventions, medication management, community and social services ordered, how the services of agencies and specialists unconnected to the practice will be directed and coordinated, identification of the individuals responsible for each intervention, requirements for periodic review, and, when applicable, revision of the care plan.

The care management office/practice must have the following capabilities:

Provide 24/7 access to physicians or other qualified health care professionals or clinical staff including providing patients and caregivers with a means to make contact with health care professionals in the practice to address urgent needs regardless of the time of day or day of week; provide continuity of care with a designated member of the care team with whom the patient is able to schedule successive routine appointments; provide timely access and management for follow up after an emergency department visit or facility discharge; utilize an electronic health record system so that care providers have timely access to clinical information; use a standardized methodology to identify patients who require care management services; have an internal care management process/function whereby a patient identified as meeting the requirements for these services starts receiving them in a timely manner; use a form and format in the medical record that is standardized within the practice; be able to engage and educate patients and caregivers as well as coordinate care among all service professionals, as appropriate for each patient.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99214	XXX	1.50	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99215	XXX	2.11	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99214	XXX	1.50	**RUC Time**	95,554,488

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99215	XXX	2.11	**RUC Time**	9,446,476

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

Other Reference CPT Code	Global	Work RVU	Time Source
99495	XXX	2.11	**RUC Time**

CPT Descriptor Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of at least moderate complexity during the service period Face-to-face visit, within 14 calendar days of discharge

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 36 **% of respondents:** 23.5 **%**

Number of respondents who choose 2nd Key Reference Code: 35 **% of respondents:** 22.8 **%**

TIME ESTIMATES (Median)

	CPT Code: 99491	**Top Key Reference CPT Code:** 99214	**2nd Key Reference CPT Code:** **99215**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**

Overall intensity/complexity	0%	6%	36%	50%	8%

Mental Effort and Judgment	**Less**	**Identical**	**More**
The number of possible diagnosis and/or the number of management options that must be considered	22%	36%	42%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	6%	33%	61%
Urgency of medical decision making	31%	47%	22%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	11%	67%	22%
Physical effort required	8%	72%	19%

Psychological Stress	**Less**	**Identical**	**More**
The risk of significant complications, morbidity and/or mortality	3%	44%	53%
Outcome depends on the skill and judgment of physician	3%	56%	42%
Estimated risk of malpractice suit with poor outcome	31%	50%	19%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	11%	31%	49%	9%

Mental Effort and Judgment	**Less**	**Identical**	**More**
The number of possible diagnosis and/or the number of management options that must be considered	14%	40%	46%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	6%	51%	43%
Urgency of medical decision making	23%	43%	34%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	6%	60%	34%
Physical effort required	3%	63%	34%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	9%	29%	63%
Outcome depends on the skill and judgment of physician	3%	46%	51%
Estimated risk of malpractice suit with poor outcome	0%	40%	37%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The American Geriatrics Society (AGS), American College of Physicians (ACP), American Academy of Family Physicians (AAFP), and the American Academy of Neurology (AAN) conducted joint random surveys of their memberships in March 2017 for CPT code 99491. A joint AGS, ACP, AAFP, and AAN RVS expert panel ("joint panel") consisting of physician advisors reviewed the survey work and time data and developed recommendations through participation in conference calls and e-mail discussions.
There were 153 responses (65 geriatricians, 24 internists, 10 family physicians, 50 neurologists, 4 other identified in other, as pediatric, endocrinologists or cardiologists) to the survey request with a median performance rate of 10; 93% of the survey respondents found the vignette to be typical. The RUC summary contains a breakout of medical specialty self-identified by the respondents. The number of responses meet RUC criteria and the majority of respondents perform this service.
The two key reference services were 99214 (36 responses) and 99215 (35 responses). The joint panel agreed that this even split in the two most common reference services chosen indicates that the recommended RVW for 99491 should be in-between that of 99214 and 99215. In addition, while 99487 was not one of the most commonly chosen reference services, the joint panel kept in mind that 99491 is the physician work equivalent of 99487 (Complex chronic care management services with clinical staff time of 60 minutes) and that it is important that the physician time and RVW for 99491 and 99487 also be in proper rank order. The joint panel also kept in mind the required elements for 99491 which are:

> multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored

The joint panel also noted that this service does not include any pre and post service time, because it describes care furnished over a calendar month. Therefore, the reliability of the intra-service time data is critical to appropriately valuing the service.
After agreeing on these initial considerations, the joint panel reviewed the survey results, the times and RVWs of the two major reference services and other related E/M services.

First, the joint panel reviewed the survey results. The median times for all specialties was similar and among the three specialties with the most respondents was 28, 30, and 31 minutes. For respondents who chose 99214 as the key reference service, the median survey code time was 30 minutes and for respondents who chose 99215, the median survey code times was 35 minutes. The distribution was normal across all specialties. The joint panel concluded that the time data was reliable.

The median work RVW varied among specialties but the distribution was normal for each specialty and for the aggregate. The panel then looked at the data for respondents who chose 99214 as the key reference service. Those respondents had a median RVW of 1.51 and the 25th percentile RVW was 1.50. For respondents who chose 99215 as the key reference service, the median RVW was 2.11 and the 25th percentile RVW was 2.05. The panel noted this very tight distribution felt that the survey median of 1.85 fell almost exactly in the middle of these two groups and had significant face validity.

The joint panel then reviewed the times and RVWs of 99214 and 99215. 99214 has an RVW of 1.5 and times of 5/25/10/40 and 99215 has an RVW of 2.11 and times of 5/35/15/55. In connection with comparing 99491 to 99214 and 99215, the joint panel noted that while 994X7 has no specific requirement for level of medical decision-making, 99214 requires moderate complexity medical decision making and 99215 requires high complexity medical decision making. Based on the survey data and the split choice of 99214 and 99215 as key reference services, the joint panel believes it likely that half the services described by 994X7 require highly complex medical decision making and half require moderately complex medical decision making and that this is clearly reflected by the survey median RVW of 1.85.

The joint panel also noted the survey median intensity/complexity measures indicate that the respondents believe that 99491 is more intense/complex than both 99214 and 99215. The joint panel agreed that even though the total time for 99491 is less than the total times for 99214 and 99215, that all the time is intra-service, that the median time for 99491 is 5 minutes longer than the intra-service time for 99214 and the higher intensity/complexity measures support the median survey RVW. Furthermore, the median RVWs for respondents who chose 99214 or 99215 as the key reference service was practically identical to the reference service chosen and the survey median RVW of 1.85 is almost exactly between the 99214 and 99215 RVWs of 1.5 and 2.11. In addition, the joint panel agreed that the 25th percentile RVW of 1.45 was too low and undervalued the service.

In addition, the panel reviewed 99487 which has 26 minutes of intra-time and an RVW of 1.0 and is much less intense than 994X7 because the physician work for 99487 is entirely supervision of clinical staff and the work of 99491 is entirely direct patient care.

The joint panel also reviewed a number of other services:

- The transitions of care management (TCM) codes, 99495, RVW 2.11 with an intra-service (and total) time of 40 minutes, and 99496, RVW 3.05 and intra-service (and total) time of 50 minutes and agreed that the shorter median time of 30 minutes and the median RVW of 1.85 place 99491 in proper rank order with those codes
- 70496 (CTA Head) and 70498 (CTA Neck) both with times of 5/20/5/30 and an RVW of 1.75 that were RUC reviewed in 2014
- 70552 (MRI Brain Stem w contrast) with times of 5/20/7/32 and an RVW of1.78 that was RUC reviewed in 2013
- 74176 (CT Abdomen and Pelvis w/o contrast) that has times of 5/22/5 and an RVW of 1.74 that is an MPC code and RUC reviewed in 2010.

The joint panel agreed that the greater intensity of 994X7 as compared to the imaging services supported the survey median RVW.

Recommendations

In summary, for 99491 tracking number F1 **we recommend the median RVW of 1.85 of and the median intra-service time of 30 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Family Practice How often? Sometimes

Specialty Geriatrcians How often? Sometimes

Specialty GP/Internal Medicine How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 400000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. In terms of utilization – Medicare utilization for the new code is expected to be 10% of 99490 and that total utilization will be double that. The total 2016 utilization for 99490 was 2,260,521 (according to the RUC database). Therefore we estimate a total of 200,000 Medicare and 400,000 all payers.

Specialty Family Practice Frequency 100000 Percentage 25.00 %

Specialty Geriatrcians Frequency 100000 Percentage 25.00 %

Specialty GP/Internal Medicine Frequency 100000 Percentage 25.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 200,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. In terms of utilization – Medicare utilization for the new code is expected to be 10% of 99490 and that total utilization will be double that. The total 2016 utilization for 99490 was 2,260,521 (according to the RUC database). Therefore we estimate a total of 200,000 Medicare and 400,000 all payers.

Specialty Family Practice Frequency 50000 Percentage 25.00 %

Specialty Geriatrcians Frequency 50000 Percentage 25.00 %

Specialty GP/Internal Medicine Frequency 50000 Percentage 25.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:
99491 Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored / / (Do not report 994X7 in the same calendar month as 99487, 99489, or 99490) / (Do not report 99340, 99339 with 994X7)

Global Period: XXX Meeting Date: April 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
RUC advisors from all of the participating specialty societies acted as an expert panel and met by conference call to arrive at the recommendations for direct practice expense inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

We chose to compare to similar services with varying times, the major difference is that the new code 994X7 is unlike the three below in that a major portion of the work is done by the physician. This does not mean that all work is done by physician, there is still work necessary by clinical staff.

99490 Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.

99487 Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.;

99489 Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

4. Please provide rationale for the minutes you are recommending for clinical activities that do not have PE Subcommittee standards:

5. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Spreadsheet Update Workgroup and listed in tab 2, please explain the difference here:

7. Please describe in detail the clinical activities of your staff below:

Pre-Service Period Clinical Activities:

Service Period Clinical Activities:

Intra-Service (of Service Period): ***(Service Period is Calendar Month for this 994X7)***

The clinical staff perform the following tasks over the month the service is furnished:

- Call(s) in or email prescription(s)
- communicate with the patient or caregiver if the physician is not available
- receive, review and send tests results and other clinical information to and from other care givers
- schedule appointment(s) with other healthcare providers and outside agencies
- take call(s) from patient or contact patient when MD available for call

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Detail breakout of Intra-service Clinical Staff:

Five minutes per month in relaying/communicating patient messages,
five minutes in communication with patient and/or pharmacy for prescription refills, prior authorizations or clarifications (assisting physician with paperwork for DME may be included here, or separately)
and five minutes for coordination with outside agencies or other providers (i.e. Obtaining referral forms, tracking down documentation of care received outside the primary care office or tracking down results on tests ordered by provider other that the PCP for a total time of 15 minutes.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:
99491 Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored / / (Do not report 994X7 in the same calendar month as 99487, 99489, or 99490) / (Do not report 99340, 99339 with 994X7)

Global Period: XXX Meeting Date: April 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
RUC advisors from all the participating specialty societies acted as an expert panel and met by conference call to arrive at the recommendations for direct practice expense inputs.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

We chose to compare to similar services with varying times, the major difference is that the new code 994X7 is unlike the three below in that a major portion of the work is done by the physician. This does not mean that all work is done by physician, there is still work necessary by clinical staff.

99490 Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.

99487 Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.;

99489 Complex chronic care management services, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

4. Please provide rationale for the minutes you are recommending for clinical activities that do not have PE Subcommittee standards:

5. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Spreadsheet Update Workgroup and listed in tab 2, please explain the difference here:

7. Please describe in detail the clinical activities of your staff below:

Intra-Service (of Service Period): ***(Service Period is Calendar Month for this 994X7)***

The clinical staff perform the following tasks over the month the service is furnished:

- Call(s) in or email prescription(s)
- communicate with the patient or caregiver if the physician is not available
- receive, review and send tests results and other clinical information to and from other care givers
- schedule appointment(s) with other healthcare providers and outside agencies
- take call(s) from patient or contact patient when MD available for call

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Detail breakout of Intra-service Clinical Staff:

Five minutes per month in relaying/communicating patient messages,
five minutes in communication with patient and/or pharmacy for prescription refills, prior authorizations or clarifications (assisting physician with paperwork for DME may be included here, or separately)
and five minutes for coordination with outside agencies or other providers (i.e. Obtaining referral forms, tracking down documentation of care received outside the primary care office or tracking down results on tests ordered by provider other that the PCP for a total time of 15 minutes.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

October 2012

Complex Chronic Care Coordination Services

In response to the July 2011 Notice of Proposed Rulemaking, the CPT Editorial Panel and the AMA/Specialty Society RVS Update Committee created the Chronic Care Coordination Workgroup (C3W) to specifically address the Centers for Medicare and Medicaid Services request to ensure that care coordination services were described and valued within the Evaluation and Management services. The C3W requested that CPT consider creation of codes to describe transitional care management and monthly complex chronic care coordination services. In May 2012, the CPT Editorial Panel created three new codes to describe complex chronic care coordination services that are patient centered management and support services. These services are provided by physicians and, other qualified health care professionals to an individual who resides at home or in a domiciliary, rest home or assisted living facility, per calendar month.

Complex chronic care coordination (CCCC) services are provided to patients who typically have multiple co-morbidities and frequently, multiple medications requiring ongoing non face-to-face care coordination, the choice of code is driven by the clinical staff time over the period of a calendar month. Unlike transitional care management (TCM) services, a recent hospital discharge is not required, but the typical patient has several chronic conditions, sees multiple care providers, requires a variety of therapeutic and diagnostic services and has a management plan that requires frequent revisions. While the goal of TCM is to prevent re-hospitalization, the goal of CCCC is broader. The goals are to efficiently integrate care, maximize the patient's potential function and well-being and prevent hospitalization.

CPT code 99487 is reported for CCCC when there is no face-to-face visit during the calendar month. CPT Code 99488 is reported for CCCC when there is a face-to-face visit during the calendar month. Both CPT codes 99487 and 99488 specify 60 minutes of clinical staff time in the descriptor. Lastly, CPT code 99489 is an add-on code for each additional 30 minutes of clinical staff time for non face-to-face CCCC, which is reported with either codes 99487 or 99488.

CCCC codes 99487, 99488 and 99489 have an XXX global period. All physician and staff time appear in the intra-service time because any services provided during the 30 day service period are, by definition intra-service time. The CPT introductory language specifically describes the physician and clinical staff activities included in these services.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99487 Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with no face-to-face visit, per calendar month

The RUC reviewed the survey results from 147 multi-specialty physicians and other qualified health care professionals for CPT code 99487. In order to maintain the proper rank order in relation to 99488 (described below), the specialty society indicated and the RUC agreed that the survey 25th percentile work RVU of 1.00 and 25th percentile time of 26 minutes are more accurate than the median survey results. The 25th percentile time also placed this service in the proper ratio compared to the clinical staff time of 60 minutes. The RUC compared 99487 to 99367 *Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by physician* (work RVU = 1.10 and 40 minutes total time) and determined that 99487 is slightly more intense to perform. The RUC compared 99487 to GXXXX3 *Coordination of care across all of a patient's healthcare needs, provided in a Tier 3 medical home, per month* (RUC Recommended work RVU = 0.35 for 9.2 minutes of service; or a weighted work RVU per minute of .0382) and determined that the work, time and intensity are almost identical, therefore computing a work RVU of 1.00. **The RUC recommends a work RVU of 1.00 and 26 minutes intra-service time for CPT code 99487.**

99488 Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with one face-to-face visit, per calendar month

The RUC reviewed the survey results from 147 multi-specialty physicians and other qualified health care professionals for CPT code 99488. The RUC agreed with the survey respondents that the Evaluation and Management service that is most similar to the face-to-face portion of the CCCC service is 99215 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 2.11, 35 minutes intra-time, 55 minutes total time). CPT Code 99215 is used as a proxy to understand the complexity of the patient receiving the service. The RUC understands that the time of the face-to-face portion of this service may be different from that of a typical 99215. The RUC agreed that the survey median work RVU of 2.50 and 60 minutes of intra-service time appropriately accounts for the work required to perform this office visit and the 30 days of complex chronic care coordination services of CPT code 99488.

The RUC compared CPT code 99488 to the key reference service 99350 *Home visit for the evaluation and management of an established patient* (work RVU = 3.28 and 75 minutes intra-service time) and determined that the work and time required to perform the reference service is higher due to higher intra-service time. The RUC compared the service to 99496 *Transitional Care Management services with high medical decision complexity; face-to-face visit within 7 days* (RUC recommended work RVU = 3.05 and 60 minutes intra-service time), also reviewed at this meeting. The RUC determined that the physician work required to perform 99488 is less intense than 99496 for two reasons: (1) the CCCC codes require moderate or highly complex medical decision making, whereas 99496 TCM, 7 days only requires highly complex medical decision making and (2) the patient's condition is well known to the physician due to ongoing CCCC. In the case of TCM codes, the patient's condition post-discharge is not known to the physician, making the patient similar to a new patient.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared the 60 minutes median intra-service time in relation to the 107 minutes of total clinical staff time and determined that was appropriate. The RUC assumed the face-to-face portion of this service requires approximately 35 minutes, the same as 99215, which allows 25 minutes to perform the non face-to-face care over the calendar month.

To support the median work RVU of 2.50 and intra-service time of 60 minutes, the RUC compared 99488 to the services listed below, which require similar work, time and intensity. The relativity between code 99488 and these services is appropriate. **The RUC recommends a work RVU of 2.50 and 60 minutes of intra-service time for CPT code 99488.**

CPT Code	Descriptor	Pre-time	Intra-time	Post-time	Work RVU
74262	Computed tomographic (CT) colonography, diagnostic, including image postprocessing; with contrast material(s) including non-contrast images, if performed	5	45	7	2.50
95954	Pharmacological or physical activation requiring physician attendance during EEG recording of activation phase (eg, thiopental activation test)	5	60	5	2.45
99326	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components	15	45	17	2.63
90947	Dialysis procedure other than hemodialysis (eg, peritoneal dialysis, hemofiltration, or other continuous renal replacement therapies) requiring repeated physician evaluations, with or without substantial revision of dialysis prescription	10	50	10	2.52
99488	**CCCC services; first hour of clinical staff time one face-to-face visit, per calendar month**		**60**		**2.50**

99489 Complex chronic care coordination services; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 147 multi-specialty physicians and other qualified health care professionals for CPT code 99489. In order to maintain the proper rank order in relation to 99487, the specialty society indicated, and the RUC agreed, that 99489 is half of the physician work and time. A work RVU of 0.50 and 13 minutes intra-service time place this service in the proper ratio compared to the clinical staff time of 30 minutes. The RUC compared 99489 to GXXXX3 *Coordination of care across all of a patient's healthcare needs, provided in a Tier 3 medical home, per month* (RUC Recommended work RVU = 0.35 for 9.2 minutes of service; or a weighted work RVU per minute of .0382) and determined that the work, time and intensity are almost identical, therefore computing a work RVU of 0.50. The RUC also compared 99489 to 99212 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 0.48 and 10 minutes intra-service time) and determined that the work, time and intensity maintain the appropriate relativity. **The RUC recommends a work RVU of 0.50 and 13 minutes intra-service time for CPT code 99489.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

2013 Utilization Estimates:
The specialty societies indicated that the estimated utilization for these services will be approximately 9 million per year, representing 10% of all moderate to high complexity established office visits (99214 and 99215). The specialties also estimate that 55% of the CCCC services will be managed without a face-to-face visit using the code 99487. The estimates are projected to be: CPT code 99487 = 5,003,744, code 99488 = 3,730,064, and code 99489 = 363,909. It is estimated that fewer than 5% of patients will require in excess of 60 minutes of nurse manager non face-to-face time in one calendar month. The attached spreadsheet explains the methodology used by the specialty societies to arrive at these assumptions.

New Technology/New Services List:
The specialty society requests and the RUC agrees that CPT codes 99487, 99488, 99489 should be added to the new technology/new services list.

Practice Expense:
The RUC reviewed the direct practice expense inputs and accepted the changes as modified by the Practice Expense Subcommittee. Specifically, any duplication between the clinical staff pre and post service time of the Evaluation/Management Service and the care coordination time was removed from the recommendations. The RUC also understands that electronic medical record systems are considered to be indirect costs and, therefore, these costs are not included in the direct cost recommendations.

Complex Chronic Care Coordination Services

Complex chronic care coordination services are patient centered management and support services provided by physicians, other qualified health care professionals and clinical staff to an individual who resides at home or in a domiciliary, rest home or assisted living facility. These services typically involve clinical staff implementing a care plan directed by the physician or other qualified health care professional. These services address the coordination of care by multiple disciplines and community service agencies. The reporting individual provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs and activities of daily living.

Patients who require complex chronic care coordination services may be identified by algorithms that utilize reported conditions and services (eg, predictive modeling risk score or repeat admissions or emergency department use) or by clinician judgment. Typical patients have 1 or more chronic continuous or episodic health conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute exacerbation/decompensation or functional decline. Because of the complex nature of their diseases and morbidities, these patients commonly require the coordination of a number of specialties and services. Patients may have medical and psychiatric behavioral co-morbidities (eg, dementia and chronic obstructive pulmonary disease or substance abuse and diabetes) that complicate their care. Social support weaknesses or access to care difficulties may cause a need for these services. Medical, functional, and/or psychosocial problems that require medical decision making of moderate or high complexity and extensive clinical staff support are expected. Medical decision making as defined in the Evaluation and Management (E/M) guidelines is not only applied to the face-to-face services, but is determined by the nature of the problems addressed by the reporting individual during the month. A plan of care should be documented and shared with the patient and/or caregiver.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Codes 99487-99489 are reported only **once** per calendar month and include all non-face-to-face complex chronic care coordination services and none or 1 face-to-face office or other outpatient, home, or domiciliary visit. Codes 99487-99489 may only be reported by the single physician or other qualified health care professional who assumes the care coordination role with a particular patient for the calendar month.

Code selection is as follows:

99487 is reported when, during the calendar month, there is no face-to-face visit with the physician or other qualified health care professional and at least 31 minutes of clinical staff time is spent in care coordination activities. Code 99488 is reported when, during the calendar month, there is a face-to-face visit with the physician or other qualified health care professional and at least 31 minutes of clinical staff time is spent in care coordination activities.

The face-to-face and non-face-to-face time spent by the clinical staff in communicating with the patient and/or family, caregivers, other professionals and agencies; revising, documenting and implementing the care plan; or teaching self management is used in determining the complex chronic care coordination clinical staff time for the month. **Note**: Do not count any clinical staff time on the date of the first visit or on a day when the physician or qualified health care professional reports an E/M service (office or other outpatient services 99211-99215, domiciliary, rest home services 99334-99337, home services 99347-99350).
Care coordination activities performed by clinical staff may include:

- communication (with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals) regarding aspects of care;
- communication with home health agencies and other community services utilized by the patient;
- collection of health outcomes data and registry documentation;
- patient and/or family/caretaker education to support self-management, independent living, and activities of daily living;
- assessment and support for treatment regimen adherence and medication management;
- identification of available community and health resources;
- facilitating access to care and services needed by the patient and/or family;
- development and maintenance of a comprehensive care plan.

If a face-to-face visit was provided during the month by the physician or other qualified health care professional, report 99488. Additional E/M services beyond the first visit may be reported separately by the same physician or other qualified health care professional during the same calendar month. Complex care coordination services include care plan oversight services (99339, 99340, 99374-99378), prolonged services without direct patient contact (99358, 99359), anticoagulant management (99363, 99364), medical team conferences (99366-99368), education and training (98960-98962, 99071, 99078), telephone services (98966-98968, 99441-99443), on-line medical evaluation (98969, 99444), preparation of special reports (99080), analysis of data (99090, 99091), transitional care management services (99495, 99496), medication therapy management services (99605-99607), and if performed, these services may not be reported separately during the month for which 99487-99489 are reported. All other services may be reported. Do not report 99487-99489 if reporting ESRD services (90951-90970) during the same month. If the complex chronic care coordination services are performed within the postoperative period of a reported surgery, the same individual may not report 99487-99489.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Complex chronic care coordination can be reported in any calendar month during which the clinical staff time requirements are met. If care coordination resumes after a discharge during a new month, start a new period or report transitional care management services (99495, 99496) as appropriate. If discharge occurs in the same month, continue the reporting period or report transitional care management services. Do not report 99487-99489 for any post-discharge complex chronic care coordination services for any days within 30 days of discharge, if reporting 99495, 99496.

Total Duration of Staff Care Coordination Services	**Code(s)**
Less than 30 minutes	Not reported separately
31 to 74 minutes (31 minutes-1 hr. 14 min)	99487 or 99488 X 1
75-104 minutes (1 hr. 15 min- 1 hr. 44 min)	99487 or 99488 X 1 and 99489 X 1
105 minutes or more (1 hr. 45 min. or more)	99487 or 99488 X 1 and 99489 X 2 or more for each additional 30 minutes

SUMMARY OF RECOMMENDATION

CPT Code:99487 Tracking Number F1 Original Specialty Recommended RVU: **1.50**
Presented Recommended RVU: **1.00**
Global Period: XXX RUC Recommended RVU: **1.00**

CPT Descriptor:
Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with no face-to-face visit, per calendar month

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey:
Typical Patient (99487) (Child)
A 6-year-old child with spastic quadriplegia, gastrostomy, gastroesophageal reflux with recurrent bouts of aspiration pneumonia and reactive airway disease, chronic seizure disorder, failure to thrive and severe neurodevelopment delay. He receives home occupational, physical and speech therapy services.
Typical patient (99487) (Adult)
An 83-year-old woman with congestive heart failure and early cognitive dysfunction, who has been hospitalized twice in the prior 12 months, is becoming increasingly confused and refuses an office visit. She has a certified nursing assistant supervised by a home care agency, participates in a remote weight and vital signs monitoring program and sees a cardiologist and neurologist.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work:

Description of Intra-Service Work:
Complex chronic care coordination services are patient centered management and support services provided by physicians, other qualified health care professionals and clinical staff to an individual who resides at home or in a domiciliary, rest home or assisted living facility. These services typically involve clinical staff implementing a care plan directed by the physician or other qualified health care professional. These services address the coordination of care by multiple disciplines and community service agencies. The reporting individual provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs and activities of daily living.
Patients who require complex chronic care coordination services may be identified by algorithms that utilize reported conditions and services (eg, predictive modeling risk score or repeat admissions or emergency department use) or by clinician judgment. Typical patients have 1 or more chronic continuous or episodic health conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute

exacerbation/decompensation or functional decline. Because of the complex nature of their diseases and morbidities, these patients commonly require the coordination of a number of specialties and services. Patients may have medical and psychiatric behavioral co-morbidities (eg, dementia and chronic obstructive pulmonary disease or substance abuse and diabetes) that complicate their care. Social support weaknesses or access to care difficulties may cause a need for these services. Medical, functional, and/or psychosocial problems that require medical decision making of moderate or high complexity and extensive clinical staff support are expected. Medical decision making as defined in the Evaluation and Management (E/M) guidelines is not only applied to the face-to-face services, but is determined by the nature of the problems addressed by the reporting individual during the month. A plan of care should be documented and shared with the patient and/or caregiver.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Complex Chronic Care Coordination Codes (CCCC)

There were 147 responses to the survey request. The following societies participated in distributing the survey; American Geriatrics Society (AGS), American Academy of Pediatrics (AAP), American College of Cardiologists (ACC), American Academy of Family Physicians (AAFP), American Academy of Neurology (AAN), American Thoracic Society (ATS), American Association of Clinical Endocrinologists (AACE), American College of Rheumatology (ACR), American College of Physicians (ACP), American Osteopathic Association (AOA), American College of Chest Physicians (ACCP), American Association of Nurse Practitioners (AANP), American Nursing Association (ANA), American Gastroenterological Association (AGA), The Endocrine Society (TES) and the American Society of Gastrointestinal Endoscopy (ASGE). These societies represent, physicians including MDs and DOs, physician assistants and nurse practitioners. The summary tables included contain total, as well as, breakout survey results. The survey tools were modified adding emphasis for clarifying time in terms of clinical staff and physician time; the modified survey tool was approved by the research subcommittee.

Background

A multi-specialty and multi-discipline expert panel ("panel") reviewed the surveys and developed the following rationale for the recommended work values for the Transitional Care Management (TCM) and complex chronic care coordination (CCCC) codes.

The TCM and CCCC codes are conceptually new services and have not previously been surveyed. These are services provided to patients with multiple conditions who require coordination of care that is provided by clinical staff under the supervision of a physician, as well as care provided directly by the physician. The care is predominantly non-face-to-face (NFTF) but, in some cases, also includes face-to-face (FTF) care. The panel kept in mind that any FTF visit included in these services was not a traditional E/M service and that the E/M documentations guidelines for history, physical and medical decision making would not apply. As an example, a FTF visit included in a TCM or CCCC service might consist largely of evaluating functional and cognitive status, adverse reactions to medications, medication reconciliation and education rather than performing a traditional history or physical exam.

The panel also kept in mind that the TCM and CCCC codes do not include physician or clinical staff time or work performed for unrelated activities. For example, NFTF and FTF care provided for an acute respiratory infection or abdominal pain that occurs during the month a TCM or CCCC code is reported are not included in the TCM or CCCC code and are reported separately.

There is one major difference between the CCCC and TCM codes - the reporting criteria for the CCCC codes are based on clinical staff time - not physician time. Therefore, the CCCC codes should only be billed for the most complex patients who require a case manager to coordinate care for all the patient's medical problems. Codes 99487 and 99489 do not include any FTF services. If a patient is seen during a calendar month when the code can be reported (i.e., sufficient clinical staff time is spent on NFTF care), then 99488 is reported. Most of the physician work for 99487 and 99489 is spent in supervising clinical staff, although some may be for direct patient care.

Similar to the TCM codes, all physician time in the CCCC codes is considered intraservice time, because it includes all time spent in a calendar month.

The panel also noted that the respondents have never valued codes that involve care coordination and oversight of staff services that are essential components to these types of care. Because of this, and as described in more detail below, the expert panel believes the surveys are flawed in some aspects. First, respondents had to estimate both physician time and staff time for each TCM and CCCC service. Even though many respondents reported that they provide these services, it appeared that they did not properly account for the amount of clinical staff time required for each service and that they did not account for all of the physician time or work involved in NFTF supervision.

Reference Services

For 99487, the key reference services were codes:

- 99374, *Physician supervision of a patient under care of home health agency (patient not present) in home, domiciliary or equivalent environment (eg, Alzheimer's facility) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of related laboratory and other studies, communication (including telephone calls) for purposes of assessment or care decisions with health care professional(s), family member(s), surrogate decision maker(s) (eg, legal guardian) and/or key caregiver(s) involved in patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month; 15-29 minutes* with a work RVU of 1.1 and total time of 34 minutes (5/20/9) and
- 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family* with a work RVU of 1.5 and total time of 40 minutes (5/25/10).

The survey median RVU for 99487 was 1.50 with a total time of 45 minutes and with a survey 25th percentile work 1.00 and total time 26 minutes.

For 99489, the key reference services were code 99367 *Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more* with an RVU of 1.10 and total time of 40 minutes (5/30/5) and code 99214 with a work RVU of 1.50 and total time of 40 minutes (5/25/10). The survey median RVU for 99489 was 1.10 with a total time of 30 minutes.

For 99488, which include a FTF visit, the key reference service was code 99350, *Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Physicians typically spend 60 minutes face-to-face with the patient and/or family* with an RVU of 3.28 and total time of 110 minutes (15/75/20).

The FTF service chosen as most similar to the FTF service included in 99488 was code 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family* with an RVU of 2.11 and total time of 65 minutes (15/35/15).

The survey median RVU for 99488 was 2.50 with a total time of 60 minutes.

Recommendation and Rationale

The expert panel determined that the first service to value in this family was 99488, so it could be placed in the proper rank order with the TCM codes, both of which also have FTF visits included. Once this was accomplished, then 99487 and 99489 could be valued relative to 99488.

Our expert panel reviewed the data and tried to place 99488 into proper rank order with the two TCM codes just reviewed. However, this was difficult to do because the survey median physician time for 99488 of 60 minutes was only 5 minutes more than the total time of 99215, the E/M selected as most like the face to face portion of 99488 - seemingly leaving little time for non face to face supervision of the clinical staff. Moreover, the total time was identical to the total median survey time for 99496 which had a median RVU of 3.05. In addition, our expert panel believed that the respondents overestimated physician time and work for the two non face to face codes.

After much discussion, we are making the recommendations contained in the attachments. For 99488, we are recommending the survey median physician time and work. The recommended physician time of 60 minutes places it in proper ratio with the total clinical staff time of 107 minutes. Even if the face to face portion of 99488 takes 35 minutes, the same as 99215, that still leaves 25 minutes for non-face to face care over the calendar month.

With respect to the physician work, we believe the service is less intense than 99496 for two reasons: (1) the CCCC codes require moderate OR highly complex medical decision making, whereas 99496 only requires highly complex medical decision making and (2) because the patient's condition is well known to the physician due to ongoing CCCC. In the case of TCM codes, the patient's condition post-discharge is not known to the physician, making the patient similar to a new patient.

In order to maintain proper rank order, for 99487, the survey 25th percentiles for time and physician work - 26 minutes and 1.0 RVUs are a more accurate estimate than the medians and result in the proper ratio of physician to clinical staff time of 26/60. In

order to maintain these ratios, the physician time for 99489 should be 13 minutes - for a ratio of 13/30 and the physician work for 99489 should be 0.5 RVUS which is half the amount for 99487.

The most pertinent comparison services for 99487 are codes:

CPT	Description	wRVU	Total Time (Pre/intra/post)
99374	*Physician supervision of a patient under care of home health agency (patient not present) in home, domiciliary or equivalent environment (eg, Alzheimer's facility) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of related laboratory and other studies, communication (including telephone calls) for purposes of assessment or care decisions with health care professional(s), family member(s), surrogate decision maker(s) (eg, legal guardian) and/or key caregiver(s) involved in patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month; 15-29 minutes*	1.10	34 minutes (5/20/9)
99367	*Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more; participation by physician*	1.10	40 minutes (5/30/5)
GXXXX3	*Medical Home Project Tier 3 (times 3)*	1.05	27.6 minutes (all Intra-time)
93281	*Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with physician analysis, review and report; multiple lead pacemaker system*	0.90	30 minutes (5/20/5)
76813	*Ultrasound, pregnant uterus, real time with image documentation, first trimester fetal nuchal translucency measurement, transabdominal or transvaginal approach; single or first gestation*	1.18	35 minutes (5/20/10)

99487 CCCC, first hour CST, no F2F visit

In summary, the expert panel recommends the 25th percentile survey work RVU of 1.00 and 25th service survey time totaling 26 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The CCCC codes are conceptually new services, see attached spreadsheet for details.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Family Practice How often? Commonly

Specialty Geriatrics How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimated that less than 10 percent of the 99214 and 99215 visits might qualify to bill the service, second we estimated that even if the service qualified, 50 percent of less might actually receive the service. We then split that total amoung the three codes assuming the 99487 would have slightly more volume than the 99488 code and much less common would a provider qualify to bill the 99489.

Specialty Internal Medicine Frequency 0 Percentage 0.00 %

Specialty Family Practice Frequency 0 Percentage 0.00 %

Specialty Geriatrics Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,003,744 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. For Medicare we assume 1/3 of the total population.

Specialty Internal Medicine Frequency 0 Percentage 0.00 %

Specialty Family Practice Frequency 0 Percentage 0.00 %

Specialty Geriatrics Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 99374

Additional Information

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99489 Tracking Number F3 Original Specialty Recommended RVU: **0.75**
Presented Recommended RVU: **0.50**
Global Period: ZZZ RUC Recommended RVU: **0.50**

CPT Descriptor: Complex chronic care coordination services; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month
(List separately in addition to code for primary procedure)
(Report 99489 in conjunction with 99487, 99488)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey:
Typical patient (99489) (Adult)
A 92-year-old man living an assisted living facility with Parkinson's disease, mild dementia, depression and diabetes mellitus continues to lose weight and remains withdrawn. The patient's family resides out of state and an attendant sees the patient for 3 hours daily. The clinical staff has already spent 74 minutes in the month performing care coordination services and now spends additional time.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Complex chronic care coordination services are patient centered management and support services provided by physicians, other qualified health care professionals and clinical staff to an individual who resides at home or in a domiciliary, rest home or assisted living facility. These services typically involve clinical staff implementing a care plan directed by the physician or other qualified health care professional. These services address the coordination of care by multiple disciplines and community service agencies. The reporting individual provides or oversees the management and/or coordination of services, as needed, for all medical conditions, psychosocial needs and activities of daily living.
Patients who require complex chronic care coordination services may be identified by algorithms that utilize reported conditions and services (eg, predictive modeling risk score or repeat admissions or emergency department use) or by clinician judgment. Typical patients have 1 or more chronic continuous or episodic health conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute exacerbation/decompensation or functional decline. Because of the complex nature of their diseases and morbidities, these patients commonly require the coordination of a number of specialties and services. Patients may have medical and psychiatric behavioral co-morbidities (eg, dementia and chronic obstructive pulmonary disease or substance abuse and

diabetes) that complicate their care. Social support weaknesses or access to care difficulties may cause a need for these services. Medical, functional, and/or psychosocial problems that require medical decision making of moderate or high complexity and extensive clinical staff support are expected. Medical decision making as defined in the Evaluation and Management (E/M) guidelines is not only applied to the face-to-face services, but is determined by the nature of the problems addressed by the reporting individual during the month. A plan of care should be documented and shared with the patient and/or caregiver.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Complex Chronic Care Coordination Codes (CCCC)

There were 147 responses to the survey request. The following societies participated in distributing the survey; American Geriatrics Society (AGS), American Academy of Pediatrics (AAP), American College of Cardiologists (ACC), American Academy of Family Physicians (AAFP), American Academy of Neurology (AAN), American Thoracic Society (ATS), American Association of Clinical Endocrinologists (AACE), American College of Rheumatology (ACR), American College of Physicians (ACP), American Osteopathic Association (AOA), American College of Chest Physicians (ACCP), American Association of Nurse Practitioners (AANP), American Nursing Association (ANA), American Gastroenterological Association (AGA), The Endocrine Society (TES) and the American Society of Gastrointestinal Endoscopy (ASGE). These societies represent, physicians including MDs and DOs, physician assistants and nurse practitioners. The summary tables included contain total, as well as, breakout survey results. The survey tools were modified adding emphasis for clarifying time in terms of clinical staff and physician time; the modified survey tool was approved by the research subcommittee.

Background

A multi-specialty and multi-discipline expert panel ("panel") reviewed the surveys and developed the following rationale for the recommended work values for the Transitional Care Management (TCM) and complex chronic care coordination (CCCC) codes.

The TCM and CCCC codes are conceptually new services and have not previously been surveyed. These are services provided to patients with multiple conditions who require coordination of care that is provided by clinical staff under the supervision of a physician, as well as care provided directly by the physician. The care is predominantly non-face-to-face (NFTF) but, in some cases, also includes face-to-face (FTF) care. The panel kept in mind that any FTF visit included in these services was not a traditional E/M service and that the E/M documentations guidelines for history, physical and medical decision making would not apply. As an example, a FTF visit included in a TCM or CCCC service might consist largely of evaluating functional and cognitive status, adverse reactions to medications, medication reconciliation and education rather than performing a traditional history or physical exam.

The panel also kept in mind that the TCM and CCCC codes do not include physician or clinical staff time or work performed for unrelated activities. For example, NFTF and FTF care provided for an acute respiratory infection or abdominal pain that occurs during the month a TCM or CCCC code is reported are not included in the TCM or CCCC code and are reported separately.

There is one major difference between the CCCC and TCM codes - the reporting criteria for the CCCC codes are based on clinical staff time - not physician time. Therefore, the CCCC codes should only be billed for the most complex patients who require a case manager to coordinate care for all the patient's medical problems. Codes 99487 and 99489 do not include any FTF services. If a patient is seen during a calendar month when the code can be reported (i.e., sufficient clinical staff time is spent on NFTF care), then 99488 is reported. Most of the physician work for 99487 and 99489 is spent in supervising clinical staff, although some may be for direct patient care.

Similar to the TCM codes, all physician time in the CCCC codes is considered intraservice time, because it includes all time spent in a calendar month.

The panel also noted that the respondents have never valued codes that involve care coordination and oversight of staff services that are essential components to these types of care. Because of this, and as described in more detail below, the expert panel believes the surveys are flawed in some aspects. First, respondents had to estimate both physician time and staff time for each TCM and CCCC service. Even though many respondents reported that they provide these services, it appeared that they did not properly account for the amount of clinical staff time required for each service and that they did not account for all of the physician time or work involved in NFTF supervision.

Reference Services

For 99487, the key reference services were codes:

- 99374, *Physician supervision of a patient under care of home health agency (patient not present) in home, domiciliary or equivalent environment (eg, Alzheimer's facility) requiring complex and multidisciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, review of related laboratory and other studies, communication (including telephone calls) for purposes of assessment or care decisions with health care professional(s), family member(s), surrogate decision maker(s) (eg, legal guardian) and/or key caregiver(s) involved in patient's care, integration of new information into the medical treatment plan and/or adjustment of medical therapy, within a calendar month; 15-29 minutes* with a work RVU of 1.1 and total time of 34 minutes (5/20/9) and
- 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family* with a work RVU of 1.5 and total time of 40 minutes (5/25/10).

The survey median RVU for 99487 was 1.50 with a total time of 45 minutes and with a survey 25th percentile work 1.00 and total time 26 minutes.

For 99489, the key reference services were code 99367 *Medical team conference with interdisciplinary team of health care professionals, patient and/or family not present, 30 minutes or more* with an RVU of 1.10 and total time of 40 minutes (5/30/5) and code 99214 with a work RVU of 1.50 and total time of 40 minutes (5/25/10). The survey median RVU for 99489 was 1.10 with a total time of 30 minutes.

For 99488, which include a FTF visit, the key reference service was code 99350, *Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Physicians typically spend 60 minutes face-to-face with the patient and/or family* with an RVU of 3.28 and total time of 110 minutes (15/75/20).

The FTF service chosen as most similar to the FTF service included in 99488 was code 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family* with an RVU of 2.11 and total time of 65 minutes (15/35/15).

Recommendation and Rationale

The expert panel determined that the first service to value in this family was 99488, so it could be placed in the proper rank order with the TCM codes, both of which also have FTF visits included. Once this was accomplished, then 99487 and 99489 could be valued relative to 99488.

Our expert panel reviewed the data and tried to place 99488 into proper rank order with the two TCM codes just reviewed. However, this was difficult to do because the survey median physician time for 99488 of 60 minutes was only 5 minutes more than the total time of 99215, the E/M selected as most like the face to face portion of 99488 - seemingly leaving little time for non-face to face supervision of the clinical staff. Moreover, the total time was identical to the total median survey time for 99496 which had a median RVU of 3.05. In addition, our expert panel believed that the respondents overestimated physician time and work for the two non-faces to face codes.

After much discussion, we are making the recommendations contained in the attachments. For 99488, we are recommending the survey median physician time and work. The recommended physician time of 60 minutes places it in proper ratio with the total clinical staff time of 107 minutes. Even if the face to face portion of 99488 takes 35 minutes, the same as 99215, that still leaves 25 minutes for non-face to face care over the calendar month.

With respect to the physician work, we believe the service is less intense than 99496 for two reasons: (1) the CCCC codes require moderate OR highly complex medical decision making, whereas 99496 only requires highly complex medical decision making and (2) because the patient's condition is well known to the physician due to ongoing CCCC. In the case of TCM codes, the patient's condition post-discharge is not known to the physician, making the patient similar to a new patient.

In order to maintain proper rank order, for 99487, the survey 25th percentiles for time and physician work - 26 minutes and 1.0 RVUs are a more accurate estimate than the medians and result in the proper ratio of physician to clinical staff time of 26/60. In order to maintain these ratios, the physician time for 99489 should be 13 minutes - for a ratio of 13/30 and the physician work for 99489 should be 0.5 RVUS which is half the amount for 99487.

The most pertinent comparison services for 99489 are codes:

CPT	Description	wRVU	Total Time (Pre/intra/post)
99212	*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self-limited or minor. Physicians typically spend 10 minutes face-to-face with the patient and/or family.*	0.48	16 minutes (2/10/4 minutes)
GXXXX3	*Medical Home Project Tier 3 (times 1.5)*	0.53	13.8 minutes (all intra-time)
11045	*Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)*	0.50	15 minutes (all intra-time)
15276	*Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure)*	0.50	10 minutes (all intra-time)

99489 CCCC, each additional 30 minutes (add-on code)

In summary, the expert panel recommends ½ the value and time of 99487 to preserve rank order with a work RVU of 0.50 and 13 minutes total time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) The CCCC codes are conceptually new services, see attached spreadshet for details.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Sometimes

Specialty Family Practice How often? Sometimes

Specialty Geriatrics How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimated that less than 10 percent of the 99214 and 99215 visits might qualify to bill the service, second we estimated that even if the service qualified, 50 percent of less might actually receive the service. We then split that total amoung the three codes assuming the 99487 would have slightly more volume than the 99488 code and much less common would a provider qualify to bill the 99489.

Specialty Internal Medicine Frequency 0 Percentage 0.00 %

Specialty Family Practice Frequency 0 Percentage 0.00 %

Specialty Geriatrics Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 363,909 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. For Medicare we estiamted 1/3 of the total population.

Specialty Internal Medicine Frequency 0 Percentage 0.00 %

Specialty Family Practice Frequency 0 Percentage 0.00 %

Specialty Geriatrics Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:
99487 Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with **no** face-to-face visit, per calendar month
99488 Complex chronic care coordination services; first hour of clinical staff time directed by a physician or other qualified health care professional with **one** face-to-face visit, per calendar month
99489 Complex chronic care coordination services; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)

Global Period: 99487 and 99488: XXX, 99489: ZZZ Meeting Date: October 2012

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

A consensus panel of experts from the surveying societies, including physicians, nurses, and physician assistants, met by phone and email to develop the inputs.

A reference code must be provided for comparison to the practice expense inputs on your spreadsheet. Please provide a rationale for the selection of reference codes. Comparison Code Rationale:
99488: The reference code for the face-to-face visit portion of the visit is 99214.

Please describe in detail the clinical activities of your staff:
99488 only, activities for face-to-face visit:

Pre-Service Clinical Labor Activities:

Review/read X-ray, lab, pathology reports, care plan
Service Clinical Labor Activities:
Activities face-to-face during visit:

- Greet patient/provide gowning
- Obtain vital signs
- Prep and position patient
- Review history, systems, and medications
- Prepare room, equipment, supplies
- Assist physician during exam
- Education/instruction/counseling
- Coordinate home or outpatient care
- Clean room/equipment

Post-Service Clinical Labor Activities:

Activities associated with face-to-face visit:

- Phone calls between visits with patient, family, pharmacy

For 99487, 99488 & 99489, activities NOT associated with the-face-to-face visit:

Pre-Service Clinical Labor Activities:
Service Clinical Labor Activities:
Care coordination activities performed by clinical staff may include:

- communication (with patient, family members, guardian or caretaker, surrogate decision makers, and/or other professionals) regarding aspects of care,
- communication with home health agencies and other community services utilized by the patient,
- collection of health outcomes data and registry documentation,
- patient and/or family/caretaker education to support self-management, independent living, and activities of daily living,
- assessment and support for treatment regimen adherence and medication management,
- identification of available community and health resources,
- facilitating access to care and services needed by the patient and/or family, development and maintenance of a comprehensive care plan

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS Request – Final Rule for 2021

January 2021

Insertion of Interlaminar/Interspinous Device – Tab 26

22867 ***Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level***
In May 2015, the CPT Editorial Panel converted two Category III codes to Category I and added two Category III codes to describe the insertion of the interlaminar-interspinous process stability device. At the October 2015 RUC meeting, the RUC agreed that the specialty societies should present CPT codes 22840, 22867 and 22868 at the January 2016 RUC meeting concurrently with the new CPT codes for insertion of spinal stability distraction device without decompression. At the January 2016 RUC meeting, CPT codes 22867 and 22868 were reviewed concurrently with the new CPT codes for insertion of spinal stability distraction device without decompression. CMS did not accept the RUC recommendations for CPT codes 22867 and 22869 at that time. In the NPRM for 2021, CMS received public nomination that code 22867 is potentially misvalued.

In their request, the submitters suggested that the physician work assigned to CPT code 22867 significantly undervalues the procedure relative to the value of CPT code 63047 *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar* (work RVU=15.37, 90 minutes intra-service time and 362 minutes total time). The submitters stated that the work performed during the surgical steps to perform a laminectomy for both procedures is generally similar except for the additional intensity and complexity involved in code 22867 to implant the interspinous stabilization device. After considering the information provided by the submitter, which suggests that the current valuation for the service may not reflect the level of intensity inherent in furnishing the service relative to other similar services with inputs that exceed those for the nominated service, CMS proposed to nominate CPT code 22867 as potentially misvalued and welcomed public comment on this code**.** The RUC reviewed this service at the January 2021 RUC meeting and supports CMS' analysis that the code is misvalued.

In January 2016, the RUC determined an appropriate work value for code 22867 based on a direct crosswalk to CPT code 29915 *Arthroscopy, hip, surgical; with acetabuloplasty (ie, treatment of pincer lesion)* (work RVU=15.00, 90 minutes intra-service time and 270 minutes total time) and noted that both services have similar physician work, identical intra-service time and nearly identical total time. Given these similarities, the RUC recommended a work RVU of 15.00 and further justified this value by comparing 22867 to CPT code 29916 *Arthroscopy, hip, surgical; with labral repair* (work RVU=15.00, 90 minutes intra-service time and 270 minutes total time). The RUC recommended a work RVU of 15.00 for CPT code 22867. This RUC recommended value considered and accounted for the higher intraoperative intensity of 22867 when compared with similar code 63047 as noted above. However, in the Final Rule for CY 2017, CMS did not accept the RUC recommended work RVU and instead assigned a work RVU of 13.50 based on a crosswalk to CPT code 36832 *Revision, open, arteriovenous fistula; without thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)* (work RVU=13.50, 90 minutes intra-service time and 276 minutes total time).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC restates its strong support for the initial crosswalk to CPT code 29915. It notes that utilization for code 22867 has been stable the past three years and that the procedure, patient, and technology has not changed since the 2016 valuation. **Therefore, the RUC agrees with the stakeholder societies and recommends that the work RVU recommendation of 15.00 for CPT code 22867 as presented in 2016 be affirmed.**

Affirm RUC Recommendations
The RUC affirms its January 2016 work RVU recommendation of 15.00 for CPT code 22867.

Practice Expense
The Practice Expense Subcommittee reviewed and affirmed the direct practice inputs from January 2016 without modification. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
22867	Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level	090	15.00 (Affirmed January 2016 RUC recommendation)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

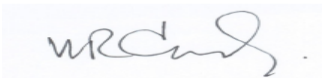
December 14, 2020

Peter K. Smith, MD
Chair, AMA/Specialty Society RVS Update Committee
AMA Plaza
330 N Wabash Avenue, Suite 39300
Chicago, IL 60611-5885

Dear Dr. Smith,

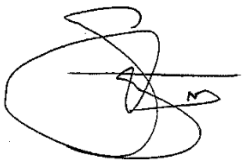
Code 22867, *Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level,* was identified by CMS as potentially misvalued in the CY 2021 Medicare Physician Fee Schedule proposed rule published in August 2020. The RUC requested review of the code at the January 2021 meeting.

The American Academy of Orthopaedic Surgeons (AAOS), the American Association of Neurosurgeons (AANS), the Congress of Neurological Surgeons (CNS), the North American Spine Society (NASS) and the International Society for Advancement of Spine Surgery (ISASS) have reviewed the history of the code's RUC surveys and valuation and support CMS' analysis that the code is misvalued.



At the January 2016 RUC meeting, the RUC reviewed the survey results from two separate surveys of code 22867 by 85 and by 58 orthopaedic surgeons, neurosurgeons and spine surgeons and agreed that the specialties' recommendation of the survey 25th percentile physician work value of 16.47 (the lower of the two sets of survey data) overvalued the work involved in performing this service. To determine an appropriate work value for 22867, the RUC reviewed code 29915 *Arthroscopy, hip, surgical; with acetabuloplasty (ie, treatment of pincer lesion)* (work RVU=15.00, intra-service time of 90 minutes, total time of 270 minutes) and noted that both services have similar physician work, identical intra-service time and nearly identical total time. Given these similarities, the RUC recommended a work RVU of 15.00, which is a direct crosswalk to code 29915. To further justify this value, the RUC also compared 22867 to code 29916 *Arthroscopy, hip, surgical; with labral repair* (work RVU=15.00, intra-service time of 90 minutes, total time of 270 minutes) and noted that both services have similar physician work, identical intra-service time and nearly identical total times. However, in the final rule for CY 2017, CMS did not accept the RUC recommended work RVU and instead assigned a work RVU of 13.50 based on a crosswalk to code 36832 *Revision, open, arteriovenous fistula; without thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)*.

We note that (1) a majority of the RUC survey respondents indicated procedure experience in the 12 months prior to the RUC survey, (2) utilization has been stable the past three years, and (3) the procedure, patient, and technology has not changed. This code was surveyed twice and had the exact same time and visit results. The expense and time for a third survey of this low



volume code is not justified. Therefore, the stakeholder societies recommend that the RUC reaffirm the survey time and visit data presented in 2016 and re-affirm the RUC 2016 work RVU recommendation of 15.00 for code 22867. This RUC recommended value considered and accounted for the higher intraoperative intensity of 22867 when compared with similar code 63047, *Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; lumbar*.

Thank you for your consideration of this request.

Sincerely,

William R. Creevy, MD

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2016

Insertion of Spinal Stability Distractive Device

At the May 2015 CPT meeting, the CPT Editorial Panel converted two Category III codes to Category I and added two Category III codes to describe the insertion of the interlaminar/interspinous process stability device. The specialty societies noted that, during their survey process, they learned that a CPT code change proposal to create Category I codes for insertion of spinal stability distraction device without decompression was submitted for consideration for the October 2015 CPT Editorial Panel meeting. The societies noted the codes in this new CPT proposal are closely related to those that were surveyed for the October 2015 RUC meeting , and therefore, requested for postponing consideration of CPT codes 22840, 22867 and 22868 until the January 2016 RUC meeting so both code sets could be reviewed simultaneously. The RUC agreed that the specialty societies should present CPT codes 22840, 22867 and 22868 at the January 2016 RUC meeting concurrently with the new CPT codes for insertion of spinal stability distraction device without decompression. At the October 2015 CPT meeting, the CPT Editorial Panel converted two Category III codes to Category I codes to report insertion of spinous distraction device(s) without concurrent performance of open decompression.

22840 ***Posterior non-segmental instrumentation (eg, Harrington rod technique, pedicle fixation across 1 interspace, atlantoaxial transarticular screw fixation, sublaminar wiring at C1, facet screw fixation) (List separately in addition to code for primary procedure)***
The specialty societies noted and the RUC agreed that CPT code 22840 is not part of the same code family as the new spinal stability distraction device codes. CPT code 22840 is part of a different family of rigid fixation codes intended to be used for spinal fusion and with additional fusion codes. This service is commonly performed with minimal open exposure, often on an outpatient basis, and has little in common with the technique of transarticular screw fixation, which is an open procedure performed on an inpatient basis.

22867 ***Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level***
The RUC reviewed the survey results from 58 orthopaedic surgeons, neurosurgeons and spine surgeons and agreed on the following physician time components: pre-service time of 63 minutes (pre-time package of 3 with 12 minutes added to the standard package for positioning), intra-service time of 90 minutes and immediate post-service time of 30 minutes (post-service package 9B with 3 minutes removed from the standard package). The median survey immediate post-operative time was 20 minutes, though the CMS' 23-hour stay rule was also applied to this outpatient service. To apply CMS' rule, the intra-service time was reallocated from the same-day Evaluation and Management (E/M) code 99231 to the immediate post-service time (adding 10 minutes from the intra-service time). A majority of respondents (87%) indicated that the typical patient will stay overnight or be admitted. Of the survey respondents that indicated the patient was kept overnight, the majority indicated that the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

typical patient will require an E/M visit later the same day. The RUC agreed with the specialty that a ½ day discharge visit (99238) is appropriate for this procedure that is typically performed in a facility. The RUC also concurred with the specialty that three 99213 office visits during the 090-day global period are typical.

The RUC reviewed the survey 25th percentile physician work value and agreed that the survey respondents overvalued the work involved in performing this service. To determine an appropriate work value for 22867, the RUC reviewed CPT code 29915 *Arthroscopy, hip, surgical; with acetabuloplasty (ie, treatment of pincer lesion)* (work RVU=15.00, intra-service time of 90 minutes, total time of 270 minutes) and noted that both services have similar physician work, identical intra-service time and nearly identical total time. Given these similarities, the RUC recommends a work RVU of 15.00, which is a direct crosswalk to CPT code 29915. To justify this value, the RUC compared 22867 to CPT code 29916 *Arthroscopy, hip, surgical; with labral repair* (work RVU=15.00, intra-service time of 90 minutes, total time of 270 minutes) and noted that both services have similar physician work, identical intra-service time and nearly identical total times. **The RUC recommends a work RVU of 15.00 for CPT code 22867.**

22868 ***Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; second level (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 49 orthopaedic surgeons, neurosurgeons and spine surgeons and agreed on the following physician time components: intra-service time of 45 minutes.

The RUC reviewed the surveyed 25th percentile work RVU of 4.00 and agreed with the specialties that this value appropriately accounts for the physician work involved. To justify a work RVU of 4.00, the RUC compared the survey code to MPC code 57267 *Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (List separately in addition to code for primary procedure)* (work RVU=4.88, intra-service time of 45 minutes) and noted that both services have identical intra-service time and total time, supporting the proposed work RVU for the survey code. The RUC also reviewed CPT code 37237 *Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; each additional artery (List separately in addition to code for primary procedure)* (work RVU= 4.25, intra-service time of 45 minutes, total time of 47 minutes) and noted that both services have similar physician work, identical intra-service times and similar total times. **The RUC recommends a work RVU of 4.00 for CPT code 22868.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

22869 ***Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level***
The RUC reviewed the survey results from 58 orthopaedic surgeons, neurosurgeons and spine surgeons and agreed on the following physician time components: pre-service time of 63 minutes (pre-time package of 3 with 12 minutes added to the standard package for positioning), intra-service time of 43 minutes and immediate post-service time of 30 minutes (post-service package 9B with 3 minutes removed from the standard package). The median survey immediate post-operative time was 20 minutes, though the CMS' 23-hour stay rule was also applied to this outpatient service. To apply CMS' rule, the intra-service time was reallocated from the same-day E/M code 99231 to the immediate post-service time (adding 10 minutes from the intra-service time). A majority of respondents (71%) indicated that the typical patient will stay overnight or be admitted. Of the survey respondents that indicated the patient was kept overnight, the majority indicated that the typical patient will require an E/M visit later the same day. The RUC agreed with the specialty that a ½ day discharge visit (99238) is appropriate for this procedure that is typically performed in a facility. The RUC also concurred with the specialty that one 99213 office visit and one 99212 office visit during the 090-day global period are typical.

The RUC reviewed the survey 25th percentile physician work value and agreed that the survey respondents overvalued the work involved in performing this service. To determine an appropriate work value for 22869, the RUC reviewed CPT code 29880 *Arthroscopy, knee, surgical; with meniscectomy (medial AND lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed* (work RVU= 7.39, intra-service time of 45 minutes, total time of 199 minutes) and noted that both services have similar physician work, near identical intra-service times, though the survey code has more total time. Given these similarities, the RUC recommends a work RVU of 7.39, which is a direct crosswalk to CPT code 29880. To justify this value, the RUC compared 22869 to CPT code 22511 *Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral* (work RVU= 7.58, intra-service time of 45 minutes, total time of 160 minutes) and noted that both services have similar physician work, near identical intra-service times, though the survey code has more total time. **The RUC recommends a work RVU of 7.39 for CPT code 22869.**

22870 ***Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 49 orthopaedic surgeons, neurosurgeons and spine surgeons and agreed on the following physician time components: intra-service time of 30 minutes.

The RUC reviewed the survey 25th percentile physician work value and agreed that the survey respondents overvalued the work involved in performing this service. To determine an appropriate work value for 22870, the RUC reviewed CPT code 22103 *Partial excision of posterior vertebral component (eg, spinous process, lamina or facet) for intrinsic bony lesion, single vertebral segment; each additional segment (List separately in addition to code for primary procedure)* (work RVU= 2.34, intra-service time of 30 minutes) and noted that both services have

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

similar physician work, identical intra-service and total times. Given these similarities, the RUC recommends a work RVU of 2.34, which is a direct crosswalk to CPT code 22103. To justify this value, the RUC compared 22870 to MPC code 99292 *Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)* (work RVU= 2.25, intra-service time of 30 minutes) and note that both services have identical intra-service times and total times, whereas the survey code involves somewhat more intensity. **The RUC recommends a work RVU of 2.34 for CPT code 22870.**

New Technology
These services will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Practice Expense
The RUC reviewed and approved the direct practice expense inputs with the minor modifications as approved by the Practice Expense Subcommittee.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:22867 Tracking Number A2 Original Specialty Recommended RVU: **16.47**
Presented Recommended RVU: **16.47**
Global Period: 090 RUC Recommended RVU: **15.00**

CPT Descriptor: Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old woman presents with a 6-month history of progressive low back pain and leg pain unresponsive to conservative treatments including physical therapy, oral medications and an epidural steroid injection. MRI demonstrates severe spinal stenosis at the L4-5 level. Patient is scheduled for an L4-5 lumbar decompression and implantation of an interlaminar/interspinous process stabilization/distraction device.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 95% , In the ASC 5%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 13% , Overnight stay-less than 24 hours 51% , Overnight stay-more than 24 hours 36%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 54%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Perform a targeted H&P. Write orders for preoperative medications and performance standards. Review the surgical procedure, postoperative recovery in and out of the hospital, and expected outcome(s) with the patient and family. Sign and mark the operative site. Obtain informed consent. Verify that all necessary surgical instruments, supplies, and devices are available in the operative suite. Review imaging, and select and display appropriate pictures. Review the length and type of anesthesia with the anesthesiologist. Monitor initial patient positioning for induction of anesthesia. Following induction of anesthesia, assist with repositioning of patient prone with the lumbar spine in flexion. Verify and/or assist with padding of patient to prevent pressure on neurovascular structures. Supervise prepping/draping of the patient. Scrub and gown. Perform a time out to confirm patient and procedure with the OR staff.

Description of Intra-Service Work: Intraoperative imaging is used to identify the correct level and plan the surgical incision. A posterior lumbar incision is made through the skin, subcutaneous tissue, and lumbosacral fascia. Markers are placed and intraoperative imaging is utilized to again confirm the correct level of surgery. A complete decompression of the spinal stenosis removing any obstructing soft or bony tissue is performed. The lamina and spinous processes of the involved segment are fashioned and prepared to allow for the neutral stabilization of the affected vertebral levels. A measuring device is used to determine the size of the interlaminar stabilization device. The implant is selected and the size is verified. The implant is inserted and fixed into place. Final imaging (AP and lateral fluoroscopy) is obtained to confirm proper implant position. Copious irrigation is used and the wound is closed in layers.

Description of Post-Service Work:

Hospital: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Write orders for transferring to surgical floor and discuss ongoing care with floor nurses.

Later same day and on each day patient is in the facility, monitor and document patient progress. Assess pain scores and adequacy of analgesia. Review nursing/other staff patient chart notes. Write orders for labs, imaging, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Next day or several days later. Write orders for follow-up, post-discharge labs, imaging, home care, and physical therapy. Write prescriptions for medications needed post-discharge. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Office: Write orders for medications and follow-up films. Review post-discharge films. Examine patient, performing periodic neurological exams. Monitor wounds and remove sutures. Review use and proper fit of brace with patient. Review physical therapy progress and revise orders as needed. Dictate patient progress notes for the medical chart. Answer questions (oral and written) from patient, family and insurance staff. Discuss patient progress with referring physician.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2016		
Presenter(s):	John Ratlilff, MD; Alexander Mason, MD; Henry Woo, MD; Charles Mick, MD; Karin Swartz, MD; Morgan Lorio, MD; William Creevy, MD; John Heiner, MD		
Specialty(s):	AANS/CNS, NASS, ISASS, AAOS

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	**2nd Key Ref Code**
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.71	0.38
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.53	0.23
Urgency of medical decision making	0.24	0.00

Technical Skill/Physical Effort (Mean)

Technical skill required	0.82	0.54
Physical effort required	0.65	0.31

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.65	0.15
Outcome depends on the skill and judgment of physician	0.53	0.46
Estimated risk of malpractice suit with poor outcome	0.47	0.31

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.94	0.62

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the June 2006 CPT Panel meeting, the Panel approved two Category III codes to report insertion of posterior lumbar spinous process distraction devices.

0171T Insertion of posterior spinous process distraction device (including necessary removal of bone or ligament for insertion and imaging guidance), lumbar; single level

0172T each additional level (List separately in addition to code for primary procedure)

At the May 2015 CPT Panel meeting, two new Category I codes (22867 and 22868) were approved for reporting the insertion of an interlaminar stabilization device to stabilize the spine following open decompression for the treatment of lumbar spinal stenosis at one or two levels. At this same meeting, the Panel established two Category III codes to report interlaminar stabilization insertion without open decompression.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

043XT Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

043XT second level (List separately in addition to code for primary procedure)

During the process of conducting a RUC survey of the two new codes in July 2015, the AANS/CNS, NASS, and AAOS were informed that a coding change proposal was submitted by individual practitioners to convert the new Category III

codes for interlaminar stabilization insertion **without** open decompression to Category I status. The RUC Advisors from AANS/CNS, NASS, and AAOS petitioned the RUC to delay presentation of the survey data collected for 22867 and 22868 until after the October 2015 CPT meeting so that data for all four codes could be presented together. The RUC approved this request, but with the caveat that 22867 and 22868 would have to be resurveyed (ie, the RUC wanted all four codes surveyed together).

At the October 2015 CPT Panel meeting, the Category III codes were converted to Category I codes (22869 and 22870). These two new codes describe interlaminar stabilization insertion **without** open decompression in contrast to the two codes (22867 and 22868) approved previously that describe interlaminar stabilization insertion **with** open decompression. None of the four codes include fusion.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

22869 Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

22870 second level (List separately in addition to code for primary procedure)

Discuss of Survey Process and Respondent Experience

All four codes were included on one survey instrument. For codes 22867 and 22869, the question for site of service and E/M on the same day that is standard in the 10 and 90 day global survey was added. The survey request was sent to a random selection from the AAOS membership database. In addition, targeted samples within the AANS/CNS, NASS, and ISASS membership databases were approved by Research Subcommittee: A random selection from the AANS/CNS Section on Disorders of the Spine and Peripheral Nerves. A random selection of only "surgeon" members of NASS (ie, there are also non-surgeon members). A random selection of only U.S. surgeon members of ISASS (ie, this is an international society that includes non U.S. members).

For the first two codes 22867 and 22868, the selection of respondents was random as described above and without consideration of any possible overlap from the previous survey. In addition, for this current survey, a new society (ISASS) also surveyed its members. Therefore, the survey data from the two separate surveys of codes 22867 and 22868 were not combined. However, on the RUC Summary Excel file, we show the summary data from the previous survey of codes 22867 and 22868 in the rows above the current survey data. In addition, we note that we are using the current survey data from the survey of all four codes on one instrument for our recommendations. We also note that three of the four codes have a median experience of zero. This issue will be discussed individually for each code where it applies.

Recommendation – 22867

We recommend the survey 25th percentile work RVU of 16.47 for code 22867.

Pre-Time Package 4

Evaluation: No change in package time of 40 minutes.
Positioning: Add 12 minutes (total = 15 minutes) to position the patient prone with the lumbar spine in flexion.
Scrub, dress, wait: Subtract 5 minutes (total = 15 minutes) to be consistent with the median survey time.

Immediate Postoperative Time and Post-time Package 9b

The median survey immediate post-operative time was 20 minutes. A majority of respondents (87%) indicated that the typical patient will stay overnight or be admitted. The respondents also indicated that the typical patient will require a E/M visit later the same day. Because CMS does not allow reporting inpatient E/M codes for procedures that will have a facility status of outpatient, we have added 10 minutes (total = 30 minutes) to the survey immediate post-time to reflect time for a visit later on the same day. We note that 30 minutes is less than the time for the recommended post-time package.

Key Reference Comparison

Code 22867 is more intense and complex than key reference code 63047, especially with respect to the technical skill required.

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	33	38	13	12

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0171T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 500
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. specialty estimate

Specialty neurosurgery Frequency 250 Percentage 50.00 %

Specialty orthopaedic surgery Frequency 250 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 22610

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:22868 Tracking Number A3 Original Specialty Recommended RVU: **4.00**
Presented Recommended RVU: **4.00**
Global Period: ZZZ RUC Recommended RVU: **4.00**

CPT Descriptor: Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; second level (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old woman presents with a 6-month history of progressive low back pain and leg pain unresponsive to conservative treatments including physical therapy, oral medications and an epidural steroid injection. MRI demonstrates severe spinal stenosis at the L3-4 and L4-5 levels. Patient is scheduled for an L3-4 and L4-5 lumbar decompression and implantation of interlaminar/interspinous process stabilization/distraction devices. The L4-5 level has just been completed and now the L3-4 level is addressed.
[Note: CPT code 228XB is an add-on service. Only consider the additional physician work related to the second level.]

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: After insertion of the initial lumbar interlaminar/interspinous process stabilization/distraction device with decompression (reported separately), the incision is extended to expose the adjacent level. A complete decompression of the spinal stenosis removing any obstructing soft or bony tissue is performed at this second level. The lamina and spinous processes of the involved segment are fashioned and prepared to allow for the neutral stabilization of the affected vertebral levels. A measuring device is used to determine the size of the interlaminar stabilization device. The implant is selected and the size is verified. The implant is inserted and fixed into place. Final imaging (AP and lateral fluoroscopy) is obtained to confirm proper implant position. Copious irrigation is used and the wound is closed in layers.

Description of Post-Service Work: n/a

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the June 2006 CPT Panel meeting, the Panel approved two Category III codes to report insertion of posterior lumbar spinous process distraction devices.

0171T Insertion of posterior spinous process distraction device (including necessary removal of bone or ligament for insertion and imaging guidance), lumbar; single level

0172T each additional level (List separately in addition to code for primary procedure)

At the May 2015 CPT Panel meeting, two new Category I codes (22867 and 22868) were approved for reporting the insertion of an interlaminar stabilization device to stabilize the spine following open decompression for the treatment of lumbar spinal stenosis at one or two levels. At this same meeting, the Panel established two Category III codes to report interlaminar stabilization insertion without open decompression.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

043XT Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

043XT second level (List separately in addition to code for primary procedure)

During the process of conducting a RUC survey of the two new codes in July 2015, the AANS/CNS, NASS, and AAOS were informed that a coding change proposal was submitted by individual practitioners to convert the new Category III codes for interlaminar stabilization insertion **without** open decompression to Category I status. The RUC Advisors from AANS/CNS, NASS, and AAOS petitioned the RUC to delay presentation of the survey data collected for 22867 and 22868 until after the October 2015 CPT meeting so that data for all four codes could be presented together. The RUC approved this request, but with the caveat that 22867 and 22868 would have to be resurveyed (ie, the RUC wanted all four codes surveyed together).

At the October 2015 CPT Panel meeting, the Category III codes were converted to Category I codes (22869 and 22870). These two new codes describe interlaminar stabilization insertion **without** open decompression in contrast to the two codes (22867 and 22868) approved previously that describe interlaminar stabilization insertion **with** open decompression. None of the four codes include fusion.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

22869 Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

22870 second level (List separately in addition to code for primary procedure)

Discuss of Survey Process and Respondent Experience

All four codes were included on one survey instrument. For codes 22867 and 22869, the question for site of service and E/M on the same day that is standard in the 10 and 90 day global survey was added. The survey request was sent to a random selection from the AAOS membership database. In addition, targeted samples within the AANS/CNS, NASS, and ISASS membership databases were approved by Research Subcommittee: A random selection from the AANS/CNS Section on Disorders of the Spine and Peripheral Nerves. A random selection of only "surgeon" members of NASS (ie, there are also non-surgeon members). A random selection of only U.S. surgeon members of ISASS (ie, this is an international society that includes non U.S. members).

For the first two codes 22867 and 22868, the selection of respondents was random as described above and without consideration of any possible overlap from the previous survey. In addition, for this current survey, a new society (ISASS) also surveyed its members. Therefore, the survey data from the two separate surveys of codes 22867 and 22868 were not combined. However, on the RUC Summary Excel file, we show the summary data from the previous survey of codes 22867 and 22868 in the rows above the current survey data. In addition, we note that we are using the current survey data from the survey of all four codes on one instrument for our recommendations. We also note that three of the four codes have a median experience of zero. This issue will be discussed individually for each code where it applies.

Recommendation – 22868

Although the first survey (07/15) for code 22868 had a median experience of 2, the second survey (10/15) resulted in a median experience of zero.

Time. Our expert panel agree that the current survey median additional intraoperative time of 45 minutes correctly reflects the time required for this this add-on service. We also note that 45 minutes is the same median time in the 07/15 survey data and the same median time for those respondents with experience in the current survey. **We therefore recommend a median intraoperative time of 45 minutes.**

Work RVU. The median and 25th percentile work RVU for the current survey is less than the statistics from the 07/15 survey which had more respondents with experience. We also note that the work RVU statistics in the current survey from respondents with experience are higher than the same data points from those without experience. Our expert panel agrees that the complexity and intensity of 22868 is greater than 63048 and the work RVU should be higher. **We therefore recommend the (current) survey 25th percentile work RVU of 4.00 for code 22868.**

We also recommend that this code be tagged in the RUC database as "Do not use to validate physician work" until such time that a RUC survey is conducted that results in a majority of respondents that have experience in the past 12 months.

Key Reference Comparison

Code 22868 is more intense and complex than key reference code 63048, especially with respect to the technical skill required.

MPC and Other Code Comparison

There are very few ZZZ MPC codes and only one that corresponds to intraoperative time (57267). However, there are other recently reviewed ZZZ codes with similar intensity/complexity that support the recommended work RVU.

CPT	Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST
22868	Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; second level (List separately in addition to code for primary procedure)	**4.00**	0.089	45	0	**45**	0
57267 MPC	Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (List separately in addition to code for primary procedure)	**4.88**	0.108	45	0	**45**	0
37233 (2010)	Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)	**4.25**	0.093	47	1	**45**	1
37237 (2013)	Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; each additional artery (List separately in addition to code for primary procedure)	**4.25**	0.093	47	1	**45**	1
61651 (2015)	Endovascular intracranial prolonged administration of pharmacologic agent(s) other than for thrombolysis, arterial, including catheter placement, diagnostic angiography, and imaging guidance; each additional vascular territory (List separately in addition to code for primary procedure)	**4.25**	0.094	45	0	**45**	0

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. reported with 228XX

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0172T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 150
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. specialty estimate

Specialty neurosurgery Frequency 75 Percentage 50.00 %

Specialty orthopaedic surgery Frequency 75 Percentage 50.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:22869 Tracking Number A4 Original Specialty Recommended RVU: **7.58**
Presented Recommended RVU: **7.39**
Global Period: 090 RUC Recommended RVU: **7.39**

CPT Descriptor: Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A skeletally mature adult with progressive low back pain and leg pain due to a history of neurogenic claudication is unresponsive to conservative treatments. The patient achieves some relief from symptoms in flexion. Imaging confirms mild-moderate spinal stenosis at the L4-5 level, with approximately 50% reduction in spinal canal area. The implantation of a posterior interspinous process distraction device at one level without an open decompression or a fusion is recommended.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 88% , In the ASC 12%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 29% , Overnight stay-less than 24 hours 47% , Overnight stay-more than 24 hours 24%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 53%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: Perform a targeted H&P. Write orders for preoperative medications and performance standards. Review the surgical procedure, postoperative recovery in and out of the hospital, and expected outcome(s) with the patient and family. Sign and mark the operative site. Obtain informed consent. Verify that all necessary surgical instruments, supplies, and devices are available in the operative suite Review imaging, and select and display appropriate pictures. Review the length and type of anesthesia with the anesthesiologist. Monitor initial patient positioning for induction of anesthesia. Following induction of anesthesia, assist with repositioning of patient prone with the lumbar spine in flexion. Verify and/or assist with padding of patient to prevent pressure on neurovascular structures and placement of chin straps and arm traction devices to facilitate intraoperative imaging. Supervise prepping/draping of the patient. Scrub and gown. Perform a time out to confirm patient and procedure with the OR staff.

Description of Intra-Service Work: Intraoperative imaging is used to identify the correct level and plan the surgical incision. A posterior lumbar incision is made through the skin, subcutaneous tissue, and lumbosacral fascia. A dilator is inserted through the incision and advanced between the spinous processes and into the interspinous process space under fluoroscopic guidance to confirm levels, position and depth. Additional larger dilators are inserted until the space is distracted to the correct degree. A gauge is used to determine the distance between the two spinous processes, and determine the appropriate implant size. The implant is selected and size verified. The implant is inserted and fixed into place. Final imaging (AP and lateral fluoroscopy) is obtained to confirm proper implant position. Copious irrigation is used and the wound is closed in layers.

Description of Post-Service Work:
Hospital: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note in chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Write orders for transferring to surgical floor and discuss ongoing care with floor nurses.

Later same day and on each day patient is in the facility, monitor and document patient progress. Assess pain scores and adequacy of analgesia. Review nursing/other staff patient chart notes. Write orders for labs, imaging, medications, diet, and patient activity. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Next day or several days later. Write orders for follow-up, post-discharge labs, imaging, home care, and physical therapy. Write prescriptions for medications needed post-discharge. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Postoperative Work - In Office: Write orders for medications and follow-up films. Review post-discharge films. Examine patient, performing periodic neurological exams. Monitor wounds and remove sutures. Review use and proper fit of brace with patient. Review physical therapy progress and revise orders as needed. Dictate patient progress notes for the medical chart. Answer questions (oral and written) from patient, family and insurance staff. Discuss patient progress with referring physician.

Technical skill required	0.35	0.14
Physical effort required	0.27	0.07

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.12	0.00
Outcome depends on the skill and judgment of physician	0.46	0.29
Estimated risk of malpractice suit with poor outcome	0.35	0.21

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.27	0.29

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the June 2006 CPT Panel meeting, the Panel approved two Category III codes to report insertion of posterior lumbar spinous process distraction devices.

0171T Insertion of posterior spinous process distraction device (including necessary removal of bone or ligament for insertion and imaging guidance), lumbar; single level

0172T each additional level (List separately in addition to code for primary procedure)

At the May 2015 CPT Panel meeting, two new Category I codes (22867 and 22868) were approved for reporting the insertion of an interlaminar stabilization device to stabilize the spine following open decompression for the treatment of lumbar spinal stenosis at one or two levels. At this same meeting, the Panel established two Category III codes to report interlaminar stabilization insertion without open decompression.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

043XT Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

043XT second level (List separately in addition to code for primary procedure)

During the process of conducting a RUC survey of the two new codes in July 2015, the AANS/CNS, NASS, and AAOS were informed that a coding change proposal was submitted by individual practitioners to convert the new Category III

codes for interlaminar stabilization insertion **without** open decompression to Category I status. The RUC Advisors from AANS/CNS, NASS, and AAOS petitioned the RUC to delay presentation of the survey data collected for 22867 and 22868 until after the October 2015 CPT meeting so that data for all four codes could be presented together. The RUC approved this request, but with the caveat that 22867 and 22868 would have to be resurveyed (ie, the RUC wanted all four codes surveyed together).

At the October 2015 CPT Panel meeting, the Category III codes were converted to Category I codes (22869 and 22870). These two new codes describe interlaminar stabilization insertion **without** open decompression in contrast to the two codes (22867 and 22868) approved previously that describe interlaminar stabilization insertion **with** open decompression. None of the four codes include fusion.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

22869 Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

22870 second level (List separately in addition to code for primary procedure)

Discuss of Survey Process and Respondent Experience

All four codes were included on one survey instrument. For codes 22867 and 22869, the question for site of service and E/M on the same day that is standard in the 10 and 90 day global survey was added. The survey request was sent to a random selection from the AAOS membership database. In addition, targeted samples within the AANS/CNS, NASS, and ISASS membership databases were approved by Research Subcommittee: A random selection from the AANS/CNS Section on Disorders of the Spine and Peripheral Nerves. A random selection of only "surgeon" members of NASS (ie, there are also non-surgeon members). A random selection of only U.S. surgeon members of ISASS (ie, this is an international society that includes non U.S. members).

For the first two codes 22867 and 22868, the selection of respondents was random as described above and without consideration of any possible overlap from the previous survey. In addition, for this current survey, a new society (ISASS) also surveyed its members. Therefore, the survey data from the two separate surveys of codes 22867 and 22868 were not combined. However, on the RUC Summary Excel file, we show the summary data from the previous survey of codes 22867 and 22868 in the rows above the current survey data. In addition, we note that we are using the current survey data from the survey of all four codes on one instrument for our recommendations. We also note that three of the four codes have a median experience of zero. This issue will be discussed individually for each code where it applies.

Recommendation – 22869

The survey for 22869 resulted in a median experience of zero.

Time. Our expert panel agree that code 22869 will take considerably less intra-operative time than 22867 and that the survey median time of 43 minutes is reasonable. This is based on a review literature including the results of a randomized controlled FDA-IDE pivotal trial. **We therefore recommend a median intraoperative time of 43 minutes.**

Work RVU. With respect to the work RVU, we are not confident that the survey respondents accurately estimated the physician work and believe the median and 25th percentile work RVUs overstate the physician work. Our expert panel agrees that it is important to assign a work RVU for 22869 to establish correct relativity with 22867. We have determined that code 22511, *Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral* has similar total physician work when considering intensity, complexity, and time. **We therefore recommend that the work RVU for 22511 of 7.58 be crosswalked to code 22869.**

We also recommend that this code be tagged in the RUC database as "Do not use to validate physician work" until such time that a RUC survey is conducted that results in a majority of respondents that have experience in the past 12 months.

Crosswalk Comparison

CPT	Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	38	13	12
22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	**7.58**	0.084	194	63	**43**	30	0.5	1	1
22511	Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral	**7.58**	0.98	160	53	**45**	20	0.5	1	

Pre-Time Package 4

Evaluation: No change in package time of 40 minutes.
Positioning: Add 12 minutes (total = 15 minutes) to position the patient prone with the lumbar spine in flexion.
Scrub, dress, wait: Subtract 5 minutes (total = 15 minutes) to be consistent with the median survey time.

Immediate Postoperative Time and Post-time Package 9b

The median survey immediate post-operative time was 20 minutes. A majority of respondents (71%) indicated that the typical patient will stay overnight or be admitted. The respondents also indicated that the typical patient will require a E/M visit later the same day. Although most respondents did not indicate recent experience with this procedure, our expert panel's review of the literature indicates these survey data are correct. Because CMS does not allow reporting inpatient E/M codes for procedures that will have a facility status of outpatient, we have added 10 minutes (total = 30 minutes) to the survey immediate post-time to reflect time for a visit later on the same day. We note that 30 minutes is less than the time for the recommended post-time package.

MPC Comparison

CPT	Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST	38	13	12

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0171T

SUMMARY OF RECOMMENDATION

CPT Code:22870 Tracking Number A5 Original Specialty Recommended RVU: **2.34**
Presented Recommended RVU: **2.34**
Global Period: ZZZ RUC Recommended RVU: **2.34**

CPT Descriptor: Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A skeletally mature adult with progressive low back pain and leg pain due to a history of neurogenic claudication is unresponsive to conservative treatments. The patient achieves some relief from symptoms in flexion. Imaging confirms mild-moderate spinal stenosis at the L3-L4 with 25% reduction in canal area and at L4-5 with a 50% reduction. The implantation of a posterior interspinous process distraction device without an open decompression or a fusion at both levels is recommended.
[Note: CPT code 228XD is an add-on service. Only consider the additional physician work related to the second level.]

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Description of Pre-Service Work: n/a

Description of Intra-Service Work: After insertion of the initial lumbar interlaminar/interspinous process stabilization/distraction device with decompression (reported separately), the incision is extended to expose the adjacent level. A dilator is inserted through the incision and advanced between the spinous processes and into the interspinous process space under fluoroscopic guidance to confirm position and depth. Additional larger dilators are inserted until the space is distracted to the correct degree. A gauge is used to determine the distance between the two spinous processes, and determine the appropriate implant size. The implant is selected and size verified. The implant is inserted and fixed into place. Final imaging (AP and lateral fluoroscopy) is obtained to confirm proper implant position. Copious irrigation is used and the wound is closed in layers.

Description of Post-Service Work: n/a

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	0.14	0.22
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.14	0.00
Urgency of medical decision making	-0.04	0.11

Technical Skill/Physical Effort (Mean)

Technical skill required	0.21	0.22
Physical effort required	0.32	0.11

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.18	0.11
Outcome depends on the skill and judgment of physician	0.43	0.33
Estimated risk of malpractice suit with poor outcome	0.18	0.33

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.36	0.33

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the June 2006 CPT Panel meeting, the Panel approved two Category III codes to report insertion of posterior lumbar spinous process distraction devices.

0171T Insertion of posterior spinous process distraction device (including necessary removal of bone or ligament for insertion and imaging guidance), lumbar; single level

0172T each additional level (List separately in addition to code for primary procedure)

At the May 2015 CPT Panel meeting, two new Category I codes (22867 and 22868) were approved for reporting the insertion of an interlaminar stabilization device to stabilize the spine following open decompression for the treatment of lumbar spinal stenosis at one or two levels. At this same meeting, the Panel established two Category III codes to report interlaminar stabilization insertion without open decompression.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

043XT Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

043XT second level (List separately in addition to code for primary procedure)

During the process of conducting a RUC survey of the two new codes in July 2015, the AANS/CNS, NASS, and AAOS were informed that a coding change proposal was submitted by individual practitioners to convert the new Category III

codes for interlaminar stabilization insertion **without** open decompression to Category I status. The RUC Advisors from AANS/CNS, NASS, and AAOS petitioned the RUC to delay presentation of the survey data collected for 22867 and 22868 until after the October 2015 CPT meeting so that data for all four codes could be presented together. The RUC approved this request, but with the caveat that 22867 and 22868 would have to be resurveyed (ie, the RUC wanted all four codes surveyed together).

At the October 2015 CPT Panel meeting, the Category III codes were converted to Category I codes (22869 and 22870). These two new codes describe interlaminar stabilization insertion **without** open decompression in contrast to the two codes (22867 and 22868) approved previously that describe interlaminar stabilization insertion **with** open decompression. None of the four codes include fusion.

22867 Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level

22868 second level (List separately in addition to code for primary procedure)

22869 Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level

22870 second level (List separately in addition to code for primary procedure)

Discuss of Survey Process and Respondent Experience

All four codes were included on one survey instrument. For codes 22867 and 22869, the question for site of service and E/M on the same day that is standard in the 10 and 90 day global survey was added. The survey request was sent to a random selection from the AAOS membership database. In addition, targeted samples within the AANS/CNS, NASS, and ISASS membership databases were approved by Research Subcommittee: A random selection from the AANS/CNS Section on Disorders of the Spine and Peripheral Nerves. A random selection of only "surgeon" members of NASS (ie, there are also non-surgeon members). A random selection of only U.S. surgeon members of ISASS (ie, this is an international society that includes non U.S. members).

For the first two codes 22867 and 22868, the selection of respondents was random as described above and without consideration of any possible overlap from the previous survey. In addition, for this current survey, a new society (ISASS) also surveyed its members. Therefore, the survey data from the two separate surveys of codes 22867 and 22868 were not combined. However, on the RUC Summary Excel file, we show the summary data from the previous survey of codes 22867 and 22868 in the rows above the current survey data. In addition, we note that we are using the current survey data from the survey of all four codes on one instrument for our recommendations. We also note that three of the four codes have a median experience of zero. This issue will be discussed individually for each code where it applies.

Recommendation – 22870

The survey for 22870 resulted in a median experience of zero.

Time. Our expert panel agrees that code 22870 will take considerably less intra-operative time than 22868 and that the survey median time of 30 minutes is reasonable. **We therefore recommend a median intraoperative time of 30 minutes.**

Work RVU. With respect to the work RVU, we are not confident that the survey respondents accurately estimated the physician work and believe the median and 25th percentile work RVUs overstate the physician work. Our expert panel agrees that it is important to assign a work RVU for 22870 to establish correct relativity with 22868. We have determined that key reference code 22103, *Partial excision of posterior vertebral component (eg, spinous process, lamina or facet) for intrinsic bony lesion, single vertebral segment; each additional segment (List separately in addition to code for primary procedure)* has the same total physician work when considering intensity, complexity, and time. **We therefore recommend that the work RVU for 22103 of 2.34 be crosswalked to code 22870.**

We also recommend that this code be tagged in the RUC database as "Do not use to validate physician work" until such time that a RUC survey is conducted that results in a majority of respondents that have experience in the past 12 months.

MPC and Other Code Comparison

There are very few ZZZ MPC codes and only one that corresponds to intraoperative time (99292). However, there are other recently reviewed ZZZ codes with similar intensity/complexity that support the recommended work RVU.

CPT	Descriptor	RVW	IWPUT	Total	PRE	INTRA	POST
22870	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; second level (List separately in addition to code for primary procedure)	**2.34**	0.078	30	0	**30**	0

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Facility Direct Inputs

CPT Long Descriptor:

22867	Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level	090
22868	second level (List separately in addition to code for primary procedure)	ZZZ
22869	Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level	090
22870	second level (List separately in addition to code for primary procedure)	ZZZ

Meeting Date: January 2016

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: The Advisors from the participating specialties reviewed the standards for 90-day global and ZZZ global procedures.

2. You must provide reference code(s) for comparison on your spreadsheet. Current inputs for 63047 and 63048 are used as reference. These were key reference codes.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: N/A

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:
22867 and 22869 (090): The typical patients requiring these services will have a long standing history of low back pain. These procedures will be performed on an elective basis and all aspects of pre-service clinical staff work that is typical of 90-day global procedures will apply to codes 22867 and 22869: complete pre-service diagnostic & referral forms, coordinate pre-surgery services, schedule space and equipment in facility, provide pre-service education/obtain consent, and follow-up phone calls & prescriptions.
22868 and 22870 (ZZZ): N/A. These are add-on codes.

Service Clinical Labor Activities:
22867 and 22869 (090): Clinical staff will assist the surgeon with discharge management, including arrangements for post-discharge imaging, home care, and responding to patient and family questions.
22868 and 22870 (ZZZ): N/A. These are add-on codes.

Post-Service Clinical Labor Activities:
22867 and 22869 (090): Clinical staff will assist the surgeon at post-op office visits.
22868 and 22870 (ZZZ): N/A. These are add-on codes.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Site of Service Anomaly*

January 2021

Knee Arthroplasty – Tab 27

In October 2020, the Relativity Assessment Workgroup identified CPT code 27446 *Arthroplasty, knee, condyle and plateau; medial OR lateral compartment* with Medicare data from 2017-2019e that was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period and 2019e Medicare utilization over 10,000. The Workgroup reviewed hospital outpatient claims data to confirm that this service is typically performed in the outpatient setting without any observation or overnight stay. Of 414 carrier line items (from the 5% physician claim files) for CPT code 27446 that were matched to a hospital outpatient claim, just 44 (11 percent) appear to have involved observation care with an overnight stay. The Workgroup noted that CPT code 27446 is a site of service anomaly and visits are currently included in this service that are not typical of what is occurring. The RUC recommended that CPT code 27446 be surveyed for January 2021 with the appropriate code family.

At the January 2021 meeting, the specialty societies submitted a request to defer survey until April 2021 due to logistical reasons including timing and a desire to be placed on the Research Subcommittee agenda "to review a proposed revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work." It is the RUC's understanding that the specialty societies will survey the code family and develop recommendations for presentation at the April 2021 RUC meeting. The RUC notes that the family of services should be identified on the level of interest (LOI). **The RUC recommends that CPT code 27446 be surveyed for April 2021 with the appropriate code family.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
27446	Arthroplasty, knee, condyle and plateau; medial OR lateral compartment	090	Request to Survey April 2021 RUC Meeting

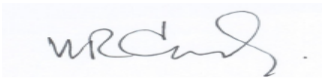
December 14, 2020

Peter K. Smith, MD
Chair, AMA Relative Value Update Committee
AMA Plaza
330 N Wabash Avenue, Suite 3930
Chicago, IL 60611-5885

Dear Dr. Smith,



The RUC placed CPT code 27446, Arthroplasty, knee, condyle and plateau; medial OR lateral compartment on the CMS/RAW Level of Interest form for the January 2021 RUC meeting (Tab 27). 27446 was flagged by the RAW in the October 2020 RUC cycle for a site-of-service anomaly with more than 50% of current Medicare utilization outpatient . The RAW report to the full RUC automatically elevated the code to survey, without an action plan, for the January 2021 meeting.

The AAOS and AAHKS have responded to the LOI and indicated we will develop recommendations for the RUC for the code. At this time, our societies recommend survey for presentation at the April 2021 RUC meeting.

We also request at this time that CPT code 27446 be placed on the Research Committee agenda to review a proposed revised survey instrument to ask about additional pre-operative time and resources spent on pre-optimization patient work.

Thank you for your time and attention and please let us know if you have any questions.

Sincerely,

William R. Creevy, MD
AAOS RUC Advisor

Adolph Yates, MD
AAHKS RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations

AstraZeneca and Janssen SARS-CoV-2-Immunization Administration

On November 5, 2020, the CPT Editorial Panel created four codes to describe immunization administration (IA) by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccines. CPT codes 0001A and 0002A are used to report the first and second dose administration of the Pfizer-BioNTech COVID-19 vaccine (ie 30 mcg/0.3mL dosage, diluent reconstituted). CPT codes 0011A and 0012A are used to report the first and second dose administration of the Moderna COVID-19 vaccine (ie 100 mcg/0.5mL dosage.

On December 14, 2020, the CPT Editorial Panel created two codes to describe immunization administration (IA) by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccines. Codes 0021A and 0022A are used to report the first and second dose administration of the AstraZeneca vaccine. Subsequently on January 14, 2021, the CPT Editorial Panel created one new code to describe immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine. Code 0031A is used to report the administration of the Janssen vaccine.

These CPT codes, developed based on extensive collaboration with CMS and the Centers for Disease Control and Prevention (CDC), are unique for each of the four coronavirus vaccines as well as administration codes unique to each corresponding vaccine and dose. The new CPT codes clinically distinguish each COVID-19 vaccine for better tracking, reporting and analysis that supports data-driven planning and allocation. In addition, CPT Appendix Q was created to facilitate an easy guide for proper reporting of all SARS-CoV-2 vaccine CPT codes.

In January 2021, the RUC reviewed the two AstraZeneca SARS-CoV-2 immunization administration codes and in February 2021, the RUC reviewed the Janssen SARS-CoV-2 immunization administration code. The specialty societies provided background on the previous valuation of CPT code 90470 *H1N1 immunization administration (intramuscular, intranasal), including counseling when performed.*

Background on Immunization Administration Valuation

During the October 2009 meeting, the RUC provided recommendations for CPT code 90640 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.20; 7 minutes intra-service time) and direct practice expense (PE) inputs. During the same meeting, the RUC reviewed recommendations for CPT code 90470 which was fast-tracked to address the immediate need to vaccinate against the 2009 H1N1 pandemic.

In 2009, at the request of the Department of Health and Human Services, the CPT Editorial Panel created new CPT code 90470 to assist the public health effort to immediately vaccinate for H1N1. CMS requested that the RUC immediately review the new service and provide recommendations on the estimated physician work and direct practice expense inputs necessary to provide the immunization. The RUC recommended the same work

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RVU of 0.20 and 7 minutes of intra-service time for H1N1 code 90470 as it did for CPT code 90460. Additionally, the RUC recommended the direct PE inputs for CPT code 90470 be equivalent to CPT code 90460 with two primary exceptions. First, an additional two minutes of staff time were added to capture the additional work of identifying and contacting patients as the vaccine is provided by the state. In addition, the standard greet patient time of 3 minutes was added since an evaluation and management code is not additionally reported as part of the typical patient encounter for vaccinating during a pandemic.

CMS accepted the RUC recommendations for CPT code 90470, publishing a work RVU 0.20 and PE RVU of 0.42 on the 2010 Medicare Physician Payment Schedule (MFS), representing the resources utilized in vaccinating the public during a pandemic. CPT code 90470 was sunset at the end of the H1N1 pandemic.

CMS crosswalked CPT code 90460 to CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid*) (work RVU = 0.17) which, in turn, was hard coded to CPT code 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular* (work RVU = 0.17).

In the Proposed Rule for 2021, CMS noted that the IA payment rates resulting from the CPT code 96372 hard coding were substantially lower than the CDC regional maximum charges. CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services, as it is critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. The RUC will review all non-COVID related immunization codes at the April 2021 RUC meeting.

AstraZeneca and Janssen SARS-CoV-2 (COVID-19) Immunization Administration

The RUC reviewed the specialty society recommendations and agreed that 0021A, 0022A and 0031A should be crosswalked to the 2009 RUC recommendation for CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (2009 recommended work RVU = 0.20 and 7 minutes of intra-service time). This is also the same work RVU established for 90470 during the H1N1 pandemic.

For additional support the RUC referenced codes 96411 *Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.20 and 7 minutes total time), 99188 *Application of topical fluoride varnish by a physician or other qualified health care professional* (work RVU = 0.20 and 9 minutes total time) and 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 9 minutes total time).

In the case of some COVID-19 vaccine requiring two doses, the total physician work resources required for the first dose should be equivalent to those required for the second dose to account for the possibility that a patient may not return to the same physician or even the same physician group for the second dose administration. Valuation must account for any necessary physician work to confirm the details of a patient's first dose. The specialty societies indicated, and the RUC agreed, that the first and second dose both require 7 minutes of physician time. Data from the Phase III clinical trials indicate that patients receiving the second dose are more likely to experience adverse effects and the physician involvement

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

addressing such questions are the same for both doses. The RUC agreed that there is no difference in physician work between the administration of the first and second dose, nor is there any difference in physician work or time to administer the Pfizer-BioNTech, Moderna or AstraZeneca immunizations. The RUC recommends the AstraZeneca and Janssen COVID-19 IA codes be crosswalked to the 2009 RUC recommendations for CPT code 90460 with respect to work and intra-service time. **The RUC recommends a work RVU of 0.20 and intra-service time of 7 minutes for CPT codes 0021A,0022A and 0031A.**

Practice Expense

The Practice Expense (PE) Subcommittee thoroughly and extensively discussed the practice expense inputs involved with the SARS-CoV-2 immunization administration codes in the physician office setting in its December 2020 review of the Pfizer and Modera IA codes and determined the same direct inputs apply to the AstraZeneca and Janssen IA codes. The Subcommittee compared the direct PE inputs for the new IA codes with reference code 90460 and former CPT code 90470 and determined that the clinical staff times approved for code 90470 during the 2009 pandemic were appropriate. The inputs mirror the clinical staff times that had been in place for CPT code 90470. The Subcommittee also determined that new CPT code 99072 *Additional supplies, materials, and clinical staff time over and above those usually included in an office visit or other non-facility service(s), when performed during a Public Health Emergency, as defined by law, due to respiratory-transmitted infectious disease* would be utilized with these codes and confirmed that there is no overlap in clinical staff times, with what is already included in CPT code 99072. **The RUC strongly recommends that CMS approve payment for CPT code 99072 during the PHE.**

The specialty societies emphasized that though the clinical staff activities may be similar to other vaccination codes, the typical amount of clinical staff time is higher due to the requirements inherent in a public health emergency and due to these services not being typically reported with an evaluation and management service during a PHE. There was significant discussion regarding the considerable documentation requirements that accompany these immunization administration codes. There was agreement that 2 minutes was appropriate for the first dose of both vaccines to identify and contact appropriate patients and schedule immunization. The recommendation for CA033 *Perform regulatory mandated quality assurance activity (service period)* was maintained the same as was recommended for the Pfizer and Moderna IA codes, as L026A *Medical/Technical Assistant* is appropriate for this type of registry. A lesser amount of clinical staff time was allotted for CA034 *Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)* with L037D *RN/LPN/MTA,* recognizing that more than baseline medical knowledge is required for this activity. There was also recognition that the initial data entry would require more time and the minutes for CA033 and CA034 in the subsequent codes were reduced accordingly. The CDC recommends 15 minutes of monitoring the patient following the administration of each dose for both vaccines. The PE Subcommittee agreed that the standard of 1 minute of clinical staff time to every 4 minutes of patient monitoring is appropriate, leading to 4 minutes of clinical staff monitoring time. A follow-up phone call from the patient to the practice to discuss symptoms or address questions was accepted as typical.

The PE Subcommittee extensively discussed the supply and equipment inputs associated with the initial Pfizer and Moderna immunization administration codes. The same supplies are recommended for the AstraZeneca and Janssen IA codes with an adjustment to increase to the quantity to *SK057 paper, laser printing (each sheet)* from 1 to 3 sheets. The typical CDC Vaccine Information Statement (VIS) is two pages (i.e., one sheet of laser paper, printed double sided). However, the emergency use authorization (EUA) for the Pfizer COVID VIS is 6 pages and the EUA for the Moderna COVID VIS is 5 pages. It is anticipated that the AstraZeneca COVID VIS (and future COVID VIS) will follow suit.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Therefore, the Practice Subcommittee amends the recommendation for SK057 accordingly (i.e., 3 sheets of laser paper, printed double sided) for all COVID IA codes (0001A, 0002A, 0011A, 0012A, 0021A, 0022A and 0031A). The remaining supplies recommended are: SB022 *gloves, non-sterile* to reflect a full pair and exclude any COVID-19 cleaning supplies including additional quantities of hand sanitizer and disinfecting wipes/sprays/cleansers as these are included in CPT code 99072. The PE Subcommittee excluded any supplies that are included in the ancillary supply kit supplied by the Federal Government at no cost to enrolled COVID-19 vaccine providers.

The PE Subcommittee recommends new equipment item *refrigerator, vaccine medical grade, w-data logger sngl glass door,* the same equipment included in the Moderna IA codes (0011A and 0012A). In 2019, there was significant discussion about the existing equipment ED043 *refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates* and whether it was a direct or indirect expense. ED043 is the monitoring system and was retained as a direct expense in accordance with the spreadsheet. The medication-grade refrigerator is used solely to store highly expensive and fragile biologics for use at the time they are needed. Although the medications are stored for longer than the length of the service, it would be extremely difficult to determine typical length of storage as this varies across local sites. The RUC and CMS have a precedent of including refrigerators in direct expense costs and using the total clinical staff time for the equipment minutes, as was done for vaccination codes, including codes 90471, 90472, 90473, and 90474, where the equipment time for the refrigerator is equal to the total clinical staff time. The RUC recommends that the same refrigerator and monitor would be typical medical equipment for the AstraZeneca, Moderna and Janssen vaccines. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology/New Services
The RUC recommends that all COVID Immunization Administration codes (0001A, 0002A, 0011A, 0012A, 0021A, 0022A and 0031A) be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Modifier -51 Exempt
The RUC acknowledges that vaccines and immunizations are inherently precluded from the modifier -51 application and note that the revisions to the CPT guidelines are already in place, which include COVID immunizations.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine Vaccines				
		*(91300-*91303 *Codes are out of numerical sequence. See 90472-90581*)		
Immunization Administration for Vaccines/Toxoids				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Report vaccine immunization administration codes (90460, 90461, 90471-90474, *0001A, 0002A, 0011A, 0012A*, *0021A, 0022A*, 0031A) in addition to the vaccine and toxoid code(s) (90476-90749, *91300, 91301*, *91302,* 91303).

Report codes 90460 and 90461 only when the physician or qualified health care professional provides face-to-face counseling of the patient/family during the administration of a vaccine *other than when performed for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccines. For immunization administration of any vaccine, other than (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccines*, that is not accompanied by face-to-face physician or qualified health care professional counseling to the patient/family/*guardian* or for administration of vaccines to patients over 18 years of age, report codes 90471-90474. (See also **Instructions for Use of the CPT Codebook** for definition of reporting qualifications.)

Report codes 0001A, 0002A, 0011A, 0012A, 0021A, 0022A, 0031A for immunization administration of SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines only. Each administration code is specific to each individual vaccine product (eg, 91300, 91301, 91302, 91303) the dosage schedule (eg, first dose, second dose) and counseling, when performed. The appropriate administration code is chosen based on the type of vaccine and the specific dose number the patient receives in the schedule. For example, code 0012A is be reported for the second dose of vaccine 91301. Do not report codes 90460-90474 for the administration of SARS-CoV-2 (coronavirus disease [COVID-19]) vaccines. Codes related to SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine administration are listed in Appendix Q, with their associated vaccine code descriptors, vaccine administration codes, vaccine manufacturer, vaccine name(s), National Drug Code (NDC) Labeler Product ID, and interval between doses. In order to report these codes, the vaccine must fulfill the code descriptor and must be the vaccine represented by the manufacturer and vaccine name listed in Appendix Q.

If a significant separately identifiable Evaluation and Management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99241-99245], emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. Combination vaccines are those vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.

(For allergy testing, see 95004 et seq)

(For skin testing of bacterial, viral, fungal extracts, see 86485-86580)

(For therapeutic or diagnostic injections, see 96372-96379)

90460	*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*
+90461	*each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

	(Use 90460 for each vaccine administered. For vaccines with multiple components [combination vaccines], report 90460 in conjunction with 90461 for each additional component in a given vaccine)
	(Do not report 90460, 90461 in conjunction with 91300, 91301, 91302, 91303 *unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90749 are administered at the same encounter)*
90471	*Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)*
	(Do not report 90471 in conjunction with 90473)
+90472	*each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)*
	(Use 90472 in conjunction with 90460, 90471, 90473)
	(Do not report 90471, 90472 in conjunction with 91300, 91301, 91302, 91303, *unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476- 90749 are administered at the same encounter)*
	(For immune globulins, see 90281-90399. For administration of immune globulins, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96374)
	(For intravesical administration of BCG vaccine, see 51720, 90586)
90473	*Immunization administration by intranasal or oral route; 1 vaccine (single or combination vaccine/toxoid)*
	(Do not report 90473 in conjunction with 90471)
+90474	*each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)*
	(Use 90474 in conjunction with 90460, 90471, 90473)
	(Do not report 90473, 90474 in conjunction with 91300, 91301, 91302, 91303, *unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476- 90749 are administered at the same encounter)*
●0001A	*Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 mcg/0.3mL dosage, diluent reconstituted; first dose*

CPT Descriptor: Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, chimpanzee adenovirus Oxford 1 (ChAdOx1) vector, preservative free, 5x1010 viral particles/0.5mL dosage; first dose

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 33-year-old individual seeks immunization against SARS-CoV-2 to decrease the risk of contracting this disease, consistent with evidence-supported guidelines. The individual is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified health care professional reviews the patient's chart to confirm that vaccination to decrease the risk of COVID-19 is indicated. The patient is counseled on the benefits and risks of vaccination to decrease the risk of COVID-19 and consent is obtained. The first dose of the COVID-19 vaccine is administered by intramuscular injection in the upper arm. The patient is monitored for any adverse reaction. The patient's immunization record (and registry when applicable) are updated to reflect the vaccine administered.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In response to the COVID-19 pandemic and public health need for rapid deployment of COVID-19 vaccines, RUC was asked to provide resource-based information for immunization administration (IA) for the administration codes specific to these vaccines. This occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based

recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. The value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic; however, the source for the CPT code 90470 wRVU remains in the RUC database for CPT code 90460. This expert panel therefore believes that the physician work for the COVID IA is the same as the RUC recommended work for CPT code 90460 (and CPT code 90470).

For CPT code 0021A, we recommend a crosswalk to December 2020 RUC-recommended work relative value units (0.20 wRVUs) and intraservice time (7 minutes) for CPT code 0011A (Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; first dose), which was crosswalked from October 2009 RUC-recommended work relative value units (0.20 wRVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A; this is a new service

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90460

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:0022A Tracking Number AA2 Original Specialty Recommended RVU: **0.20**
Presented Recommended RVU: **0.20**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.20**

CPT Descriptor: Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, chimpanzee adenovirus Oxford 1 (ChAdOx1) vector, preservative free, 5x1010 viral particles/0.5mL dosage; second dose

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 33-year-old individual seeks immunization against SARS-CoV-2 to decrease the risk of contracting this disease, consistent with evidence-supported guidelines. The individual is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified health care professional reviews the patient's chart to confirm that vaccination to decrease the risk of COVID-19 is indicated. The patient is counseled on the benefits and risks of vaccination to decrease the risk of COVID-19 and consent is obtained. The second dose of the COVID-19 vaccine is administered by intramuscular injection in the upper arm. The patient is monitored for any adverse reaction. The patient's immunization record (and registry when applicable) are updated to reflect the vaccine administered.

Description of Post-Service Work:

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In response to the COVID-19 pandemic and public health need for rapid deployment of COVID-19 vaccines, RUC was asked to provide resource-based information for immunization administration (IA) for the administration codes specific to these vaccines. This occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based

recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. The value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic; however, the source for the CPT code 90470 wRVU remains in the RUC database for CPT code 90460. This expert panel therefore believes that the physician work for the COVID IA is the same as the RUC recommended work for CPT code 90460 (and CPT code 90470).

For CPT code 0022A, we recommend a crosswalk to December 2020 RUC-recommended work relative value units (0.20 wRVUs) and intraservice time (7 minutes) for CPT code 0012A (Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; second dose), which was crosswalked from October 2009 RUC-recommended work relative value units (0.20 wRVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity					

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required			
Physical effort required			

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity					

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making			

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required			
Physical effort required			

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In response to the COVID-19 pandemic and public health need for rapid deployment of COVID-19 vaccines, RUC was asked to provide resource-based information for immunization administration (IA) for the administration codes specific to these vaccines. This occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based

recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. The value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic; however, the source for the CPT code 90470 wRVU remains in the RUC database for CPT code 90460. This expert panel therefore believes that the physician work for the COVID IA is the same as the RUC recommended work for CPT code 90460 (and CPT code 90470).

For CPT code 0031A, we recommend a crosswalk to the January 2021 RUC-recommended work relative value units (0.20 wRVUs) and intraservice time (7 minutes) for CPT code 0021A (Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, chimpanzee adenovirus Oxford 1 (ChAdOx1) vector, preservative free, $5x10^{10}$ viral particles/0.5mL dosage; first dose
NOTE: CPT code 0021A was crosswalked from the December 2020 RUC-recommended work relative value units (0.20 wRVUs) and intraservice time (7 minutes) for CPT code 0011A (Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; first dose)
NOTE: CPT code 0011A was crosswalked from the October 2009 RUC-recommended work relative value units (0.20 wRVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered)

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A; this is a new service

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty	How often?
Specialty	How often?
Specialty	How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Other

BETOS Sub-classification:
Immunizations/Vaccinations

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90460

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2021

CPT Code	Long Descriptor	Global Period
0021A	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, chimpanzee adenovirus Oxford 1 (ChAdOx1) vector, preservative free, $5x10^{10}$ viral particles/0.5mL dosage; first dose	XXX
0022A	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, chimpanzee adenovirus Oxford 1 (ChAdOx1) vector, preservative free, $5x10^{10}$ viral particles/0.5mL dosage; second dose	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
0021A	A 33-year-old individual seeks immunization against SARS-CoV-2 to decrease the risk of contracting this disease consistent with evidence supported guidelines. The individual is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.
0022A	A 33-year-old individual seeks immunization against SARS-CoV-2 to decrease the risk of contracting this disease consistent with evidence supported guidelines. The individual is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC Advisors from AAFP, ACOG, ACP, ANA, and AAP acted as an expert panel and met by video conferencing, phone, and email to develop the recommended direct PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We are utilizing CPT codes 0011A (Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; first dose) and 0012A (Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100

mcg/0.5mL dosage; second dose) as our crosswalk codes, which utilize CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered) as their base reference code due to the inherent similarity between the service described by 90460 and the COVID Immunization Administration (IA) codes. To the base of 90460 direct PE inputs, we are recommending incremental direct PE inputs as required by public health emergency (PHE) regulations for administering the pandemic COVID vaccine.
Additionally, to the December 2020 RUC direct PE inputs for 0001A-0002A and 0011A-0012A (and, accordingly, 0021A-0022A), we are recommending one amendment: 3 sheets of laser printer paper (SK057) instead of 1 sheet of laser printer paper.
Rationale: The typical CDC Vaccine Information Sheet (VIS) is two pages (ie, one sheet of laser paper, printed double sided). However, the EUA for the Pfizer COVID VIS is 6 pages and the EUA for the Moderna COVID VIS is 5 pages (please see: https://www.fda.gov/media/144414/download and https://www.fda.gov/media/144638/download**). It is anticipated that the AstraZeneca COVID VIS (and future COVID VIS) will follow suit. Therefore, we are amending our recommendation for SK057 accordingly (ie, three sheets of laser paper, printed double sided).**

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   No and no. The typical patient will not be seen for an E/M service as the COVID vaccine is being administered in response to its pandemic status.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   CPT code 90460: Family Medicine; 46%; no.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   CA033: The additional minutes (7 minutes for 0021A; 5 minutes for 0022A) reflect 1 minute for manually filling out the vaccine card required to be given to the patient plus another 6 minutes (for 0021A) or 4 minutes (for 0022A) of logging required information into the registry (eg, IIS, VAMS) and maintaining vaccine refrigerator/freezer temperature logs. The typical patient is an adult who will need new record creation in IIS for 0021A, which typically takes 2 minutes to create and enter demographic information. New record creation will not be needed for the second dose given 21-28 days later (0022A). Therefore, the 6 minutes for 0021A reflects patient record creation and demographic entry (2 minutes) plus the actual vaccine information logging time and maintenance of vaccine refrigerator/freezer temperature logs (4 minutes). The 4 minutes for 0022A reflects only the actual vaccine information logging time and maintenance of vaccine refrigerator/freezer temperature logs (4 minutes).
   CA034: The individual (RN/LPN/MTA) who performs the actual vaccine administration must be the person who documents the procedure in the patient's medical record (ie, "the person who did it documents it, and

the person who documented it did it"). The 3 minutes is the same for both dose one (0021A) and dose two (0022A).

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

As a result of the COVID pandemic and vaccine emergency use authorization (EUA) status, administration of the COVID vaccine has direct PE inputs over and above those required for "regular" immunization administration, which cannot be entirely accounted for due to an increase in physician time:

- Vaccine inventory specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports) (1 minute to CA008)
- Identify and contact appropriate patients and schedule immunization (2 minutes for 0021A only to CA005)
- Due to risk of anaphylaxis with COVID vaccine, post-procedure monitoring multitasking 1:4 (4 minutes to CA022)
- Providing patient with paper vaccine card (1 minute to CA033)
- Enter additional data into immunization information system (IIS) as required by state and federal regulations (6 minutes for 0021A and 4 minutes for 0022A to CA033)
- Use of a **vaccine medical grade refrigerator (NEW, line 111)** (100% of IS CST for 0021A and 0022A)
- Each refrigerator requires a **temperature monitor with alarm (ED043, line 107)**, which is accounted for in the total minutes for the vaccine medical grade refrigerator (NEW, line 111)

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

Prepare patient chart with appropriate CDC VIS: Rolled into CA001
Provide patient/parent with appropriate CDC VIS: Rolled into CA012
Clinical staff (RN/LPN/MTA) enters vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law. A final check of the patient is done to confirm that there are no serious immediate reactions and final questions are answered.: Rolled into CA034
Clinical staff (Medical/Technical Assistant) enters data into the state online immunization information system (IIS) (registry) and maintains the vaccine refrigerator/freezer temperature logs.: Rolled into CA033

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We allocated 0 minutes to obtain vital signs and, therefore, are requesting no CST.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Complete pre-service diagnostic and referral forms (ie, prepare patient chart with appropriate CDC VIS); Complete pre-procedure phone calls and prescription (ie, identify and contact appropriate patients and schedule immunization (0021A only)); Perform regulatory mandated quality assurance activity (ie, vaccine inventory specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports).

b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records; Provide education and obtain consent; Review requisition, assess for special needs (ie, provide patient/parent with appropriate CDC VIS); Prepare room, equipment, and supplies; Monitor patient following procedure; Clean room/equipment; Enter vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law; Enter additional data as required by state and federal regulations into the state online immunization information system (IIS) (registry); Maintain the vaccine refrigerator/freezer temperature log; Provide required paper card and information sheet to patient.

c. Post-service period:

Conduct patient communication.

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

While *identify and contact appropriate patients and schedule immunization* was originally assigned to Row 26 NEW, it was subsequently moved to CA005 during the December 2020 RUC/PE Subcommittee meeting. This is required by the CDC and local public health as the COVID vaccine will be delivered in tiers (2 minutes for 0021A only).

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

McKesson redacted invoice attached, includes estimate for refrigerator, vaccine medical grade, w-data logger sngl glass door ($7,674.43) (NEW, line 111)

19. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

10 years

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Formula: Default Refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates (SD043) Refrigerator, vaccine medical grade, w-data logger sngl glass door (NEW) ($7,674.43)

22. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

Please note under Medical Equipment: Line 107 (SD043): While its description begins with "refrigerator, vaccine," it is the **temperature monitor with alarm** for the vaccine medical grade refrigerator (NEW, line 111).

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC Advisors from AAFP, ACOG, ACP, and AAP acted as an expert panel and met by video conferencing, phone, and email to develop the recommended direct PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We are utilizing CPT code 0021A (Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, chimpanzee adenovirus Oxford 1 (ChAdOx1) vector, preservative free, $5x10^{10}$ viral particles/0.5mL dosage; first dose) as our crosswalk code, which utilizes CPT code 0011A (Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; first dose) as its crosswalk code, with one exception: CPT code 0021A includes 3 sheets of laser printer paper (SK057) instead of 1 sheet of laser printer paper.
   Rationale: The typical CDC Vaccine Information Sheet (VIS) is two pages (ie, one sheet of laser paper, printed double sided). However, the EUA for the Pfizer COVID VIS is 6 pages and the EUA for the Moderna COVID VIS is 5 pages (please see: https://www.fda.gov/media/144414/download and https://www.fda.gov/media/144638/download). It is anticipated that the AstraZeneca COVID VIS (and future COVID VIS) will follow suit. Therefore, we are amending our recommendation for SK057 accordingly (ie, three sheets of laser paper, printed double sided).
   The base reference code to all COVID Immunization Administration (IA) codes (0001A-0002A, 0011A-0012A, 0021A-0022A, 0031A) is CPT code 90460 (Immunization administration through 18 years of age

via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered) as its base reference code due to the inherent similarity between the service described by 90460 and the COVID IA codes. To the base of 90460 direct PE inputs, we are recommending incremental direct PE inputs as required by public health emergency (PHE) regulations for administering the pandemic COVID vaccine.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   No and no. The typical patient will not be seen for an E/M service as the COVID vaccine is being administered in response to its pandemic status.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   CPT code 90460: Family Medicine; 46%; no.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   CA033: The additional minutes (7 minutes for 0031A) reflect 1 minute for manually filling out the vaccine card required to be given to the patient plus another 6 minutes of logging required information into the registry (eg, IIS, VAMS) and maintaining vaccine refrigerator/freezer temperature logs. The typical patient is an adult who will need new record creation in IIS for 0031A, which typically takes 2 minutes to create and enter demographic information. Therefore, the 6 minutes for 0031A reflects patient record creation and demographic entry (2 minutes) plus the actual vaccine information logging time and maintenance of vaccine refrigerator/freezer temperature logs (4 minutes).
   CA034: The individual (RN/LPN/MTA) who performs the actual vaccine administration must be the person who documents the procedure in the patient's medical record (ie, "the person who did it documents it, and the person who documented it did it") (3 minutes for 0031A).

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   As a result of the COVID pandemic and vaccine emergency use authorization (EUA) status, administration of the COVID vaccine has direct PE inputs over and above those required for "regular" immunization administration, which cannot be entirely accounted for due to an increase in physician time:
   - Vaccine inventory specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports) (1 minute to CA008)
   - Identify and contact appropriate patients and schedule immunization (2 minutes for 0031A to CA005)

- Due to risk of anaphylaxis with COVID vaccine, post-procedure monitoring multitasking 1:4 (4 minutes to CA022)
- Providing patient with paper vaccine card (1 minute to CA033)
- Enter additional data into immunization information system (IIS) as required by state and federal regulations (6 minutes for 0031A to CA033)
- Use of a **vaccine medical grade refrigerator (NEW, line 111)** (100% of IS CST for 0031A)
- Each refrigerator requires a **temperature monitor with alarm (ED043, line 107)**, which is accounted for in the total minutes for the vaccine medical grade refrigerator (NEW, line 111)

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

Prepare patient chart with appropriate CDC VIS: Rolled into CA001
Provide patient/parent with appropriate CDC VIS: Rolled into CA012
Clinical staff (RN/LPN/MTA) enters vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law. A final check of the patient is done to confirm that there are no serious immediate reactions and final questions are answered.: Rolled into CA034
Clinical staff (Medical/Technical Assistant) enters data into the state online immunization information system (IIS) (registry) and maintains the vaccine refrigerator/freezer temperature logs.: Rolled into CA033

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We allocated 0 minutes to obtain vital signs and, therefore, are requesting no CST.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms (ie, prepare patient chart with appropriate CDC VIS); Complete pre-procedure phone calls and prescription (ie, identify and contact appropriate patients and schedule immunization); Perform regulatory mandated quality assurance activity (ie, vaccine inventory specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports).

   b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records; Provide education and obtain consent; Review requisition, assess for special needs (ie, provide patient/parent with appropriate CDC VIS); Prepare room, equipment, and supplies; Monitor patient following procedure; Clean room/equipment; Enter vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law; Enter additional data as required by state and federal regulations into the state online immunization information system (IIS) (registry); Maintain the vaccine refrigerator/freezer temperature log; Provide required paper card and information sheet to patient.

   c. Post-service period:

Conduct patient communication.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

While *identify and contact appropriate patients and schedule immunization* was originally assigned to Row 26 NEW, it was subsequently moved to CA005 during the December 2020 RUC/PE Subcommittee meeting. This is required by the CDC and local public health as the COVID vaccine will be delivered in tiers (2 minutes for 0031A).

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

McKesson redacted invoice attached, includes estimate for refrigerator, vaccine medical grade, w-data logger sngl glass door ($7,674.43) (NEW, line 111)

19. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

10 years

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Formula: Default
Refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates (SD043)
Refrigerator, vaccine medical grade, w-data logger sngl glass door (NEW) ($7,674.43)

22. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

Please note under Medical Equipment:
Line 107 (SD043): While its description begins with "refrigerator, vaccine," it is the **temperature monitor with alarm** for the vaccine medical grade refrigerator (NEW, line 111).

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

23. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet

during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Appendix Q: Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) Vaccines

This table links the individual severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine product codes (91300, 91301, 91302, 91303) to their associated immunization administration codes (0001A, 0002A, 0011A, 0012A, 0021A, 0022A, 0031A), manufacturer name, vaccine name(s), 10 and 11-digit National Drug Code (NDC) Labeler Product ID, and interval between doses. These codes are also located in the Medicine section of the CPT code set.

Additional introductory and instructional information for codes 0001A, 0002A, 0011A, 0012A, 0021A, 0022A, 0031A, 91300, 91301, 91302, and 91303 can be found in the Immunization Administration for Vaccines/Toxoids and Vaccines, Toxoids guidelines in the Medicine section of the CPT code set.

Vaccine Code	Vaccine Code Descriptor	Vaccine Administration Code(s)	Vaccine Manufacturer	Vaccine Name(s)	NDC 10/NDC 11 Labeler Product ID (Vial)	Dosing Interval

Attention: CMS-9912-IFC

Subject: RUC Recommendations on COVID-19 Immunization Administration

Dear Administrator Verma:

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) appreciates the opportunity to submit the enclosed recommendations for work relative values and direct practice expense inputs to the Centers for Medicare & Medicaid Services (CMS). These recommendations relate the four new codes created (0001A, 0002A, 0011A and 0012A) that describe immunization administration (IA) by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccines.

The RUC intends to review all other immunization administration codes (90460, 90461, 90471, 90472, 90473, 90474, G0008, G0009 and G0010) in April 2021. Please note that the direct inputs for CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid*) are incorrect in the *CY 2021 PFS Final Rule Direct PE Inputs* and should instead reflect the direct practice expense inputs that are listed for 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*. Currently, CPT code 90471 has **no supply inputs** listed and only 4 minutes clinical staff time.

We appreciate your consideration of these RUC recommendations. If you have any questions regarding the attached materials, please contact Sherry Smith at (312) 464-5604.

Sincerely,

Peter K. Smith, MD

AMA/Specialty Society RVS Update Committee Summary of Recommendations

December 2020

SARS-CoV-2-Immunization Administration for Vaccines/Toxoids

On November 5, 2020, the CPT Editorial Panel created four codes to describe immunization administration (IA) by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccines. CPT codes 0001A and 0002A are used to report the first and second dose administration of the Pfizer-BioNTech COVID-19 vaccine (ie 30 mcg/0.3mL dosage, diluent reconstituted). CPT codes 0011A and 0012A are used to report the first and second dose administration of the Moderna COVID-19 vaccine (ie 100 mcg/0.5mL dosage). These CPT codes, developed based on extensive collaboration with CMS and the CDC, are unique for each of two coronavirus vaccines as well as administration codes unique to each such vaccine and dose. The new CPT codes clinically distinguish each COVID-19 vaccine for better tracking, reporting and analysis that supports data-driven planning and allocation. In addition, Appendix Q was created to facilitate an easy guide for proper reporting of all SARS-CoV-2 vaccine CPT codes.

In December 2020, the RUC convened a special meeting to review these four SARS-CoV-2 immunization administration codes. The specialty societies provided background on the previous valuation of CPT code 90470 *H1N1 immunization administration (intramuscular, intranasal), including counseling when performed.*

During the October 2009 meeting, the RUC provided recommendations for CPT code 90640 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.20 and 7 minutes intra-service time) and direct practice expense (PE) inputs. During the same meeting, the RUC reviewed recommendations for CPT code 90470 *H1N1 immunization administration (intramuscular, intranasal), including counseling when performed*, which was fast-tracked to address the immediate need to vaccinate against the 2009 pandemic.

In 2009, at the request of the Department of Health and Human Services, the CPT Editorial Panel created new CPT code 90470 to assist the public health effort to immediately vaccinate for H1N1. CMS requested that the RUC immediately review the new service and provide recommendations on the estimated physician work and direct practice expense inputs necessary to provide the immunization. The RUC recommended the same work RVU of 0.20 and 7 minutes of intra-service time for H1N1 code 90470 as it did for CPT code 90460. Additionally, the RUC recommended the direct PE inputs for CPT code 90470 be equivalent to CPT code 90460 with two primary exceptions. First, an additional two minutes of staff time were added to capture the additional work of identifying and contacting patients as the vaccine is provided by the state. In addition, the standard greet patient time of 3 minutes was added since an evaluation and management code is not additionally reported as part of the typical patient encounter for vaccinating during a pandemic.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CMS accepted the RUC recommendations for CPT code 90470, publishing a work RVU 0.20 and PE RVU of 0.42 on the 2010 Medicare Physician Payment Schedule (MFS), representing the resources utilized in vaccinating the public during a pandemic.

However, CMS crosswalked CPT code 90460 to CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid*) (work RVU = 0.17), which, in turn, was hard coded to CPT code 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular* (work RVU = 0.17). CPT code 90470 was sunset at the end of the H1N1 pandemic.

In the Proposed Rule for 2021, CMS noted that the IA payment rates resulting from the CPT code 96372 hard coding were substantially lower than the Centers for Disease Control and Prevention (CDC) regional maximum charges. CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services, as it is critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks.

SARS-CoV-2 (COVID-19) Immunization Administration

The RUC reviewed the specialty society recommendation and agreed that 0001A, 0002A, 0011A and 0012A should be crosswalked to the 2009 RUC recommendation for CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (2009 recommended work RVU = 0.20 and 7 minutes of intra-service time).

For additional support the RUC referenced codes 96411 *Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)* (work RVU = 0.20 and 7 minutes total time), 99188 *Application of topical fluoride varnish by a physician or other qualified health care professional* (work RVU = 0.20 and 9 minutes total time) and 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* (work RVU = 0.21 and 9 minutes total time).

In the case of the COVID-19 vaccine requiring two doses, the total physician work resources required for the first dose should be equivalent to those required for the second dose to account for the possibility that a patient may not return to the same physician or even the same physician group for the second dose administration. Valuation must account for any necessary physician work to confirm the details of a patient's first dose. The specialty societies indicated, and the RUC agreed that the first and second dose both require 7 minutes of physician time. Data from the Phase III clinical trials involving these two mRNA COVID-19 vaccines indicate that patients receiving the second dose are more likely to experience adverse effects and the physician involvement addressing such questions are the same for both doses. The RUC agreed that there is no difference in physician work between the administration of the first and second dose, nor is there any difference in physician work or time to administer the Pfizer-BioNTech and Moderna immunizations. Therefore, the RUC recommends all four COVID-19 IA codes be crosswalked from the 2009 RUC recommendations for CPT code 90460 with respect to work and intra-service time. **The RUC recommends a work RVU of 0.20 and intra-service time of 7 minutes for CPT codes 0001A, 0002A, 0011A and 0012A.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The Practice Expense (PE) Subcommittee thoroughly and extensively discussed the practice expense inputs involved with the SARS-CoV-2 immunization administration codes in the physician office setting. The Subcommittee compared the direct PE inputs for the new IA codes with reference code 90460 and former CPT code 90470 and determined that the clinical staff times approved for code 90470 during the 2009 pandemic were appropriate. The inputs were modified to mirror the clinical staff times that had been in place for CPT code 90470. The Subcommittee also determined that new CPT code 99072 *Additional supplies, materials, and clinical staff time over and above those usually included in an office visit or other non-facility service(s), when performed during a Public Health Emergency, as defined by law, due to respiratory-transmitted infectious disease* would be utilized with these codes and thus removed the clinical staff times that would overlap with those in 99072. **The RUC strongly recommends that CMS approve payment for CPT code 99072 during the PHE.**

The specialty societies emphasized that though the clinical staff activities may be similar to other vaccination codes, the typical amount of clinical staff time is higher due to the requirements inherent in a public health emergency. There was significant discussion regarding the considerable documentation requirements that accompany these immunization administration codes. There was agreement that 2 minutes was appropriate for the first dose of both vaccines to identify and contact appropriate patients and schedule immunization. Concern was expressed, however, that the RN/LPN/MTA blend was not appropriate for registry entry, thus the staff labor type was modified for CA033 *Perform regulatory mandated quality assurance activity (service period)* to L026A *Medical/Technical Assistant*. A lesser amount of clinical staff time was allotted for CA034 *Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)* with L037D *RN/LPN/MTA,* recognizing that more than baseline medical knowledge is required for this activity. There was also recognition that the initial data entry would require more time and the minutes for CA033 and CA034 in the subsequent codes were reduced accordingly. The CDC recommends 15 minutes of monitoring the patient following the administration of each dose for both vaccines. The PE Subcommittee agreed that the standard of 1 minute of clinical staff time to every 4 minutes of patient monitoring is appropriate, leading to 4 minutes of clinical staff monitoring time. A follow-up phone call from the patient to the practice to discuss symptoms or address questions was accepted as typical.

The PE Subcommittee also extensively discussed the supply and equipment inputs associated with the immunization administration codes. Supplies were modified to increase SB022 *gloves, non-sterile* to reflect a full pair and to remove the COVID-19 cleaning supplies including additional quantities of hand sanitizer and disinfecting wipes/sprays/cleansers as these are included in CPT code 99072. The PE Subcommittee excluded any supplies that are included in the ancillary supply kit supplied by the Federal Government at no cost to enrolled COVID-19 vaccine providers.

The equipment discussion focused on the definition and utilization of refrigeration, cooling devices and alarm systems. The utilization of two new additional pieces of equipment *(refrigerator, vaccine medical grade, w-data logger sngl glass door* and *freezer, under counter, ultra-cold 3.7 cu ft.)* were proposed and accepted. In 2019, there was significant discussion about the existing equipment ED043 *refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates* and whether it was a direct or indirect expense. At that time, ED043 was retained as a direct expense in accordance with the spreadsheet. The medication-grade refrigerator is used solely to store highly expensive and fragile biologics for use at the time they are needed. Although the medications are stored for longer than the length of the service, it would be extremely difficult to determine typical length of storage as this varies across local sites. The RUC and CMS have a precedent of including refrigerators in

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

direct expense costs and using the total clinical staff time for the equipment minutes, as was done for vaccination codes, including codes 90471, 90472, 90473, and 90474, where the equipment time for the refrigerator is equal to the total clinical staff time. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Preventive Medicine Services** *The following codes are used to report . . .* . . . Vaccine/toxoid products, immunization administrations, ancillary studies involving laboratory, radiology, other procedures, or screening tests (eg, vision, hearing, developmental) identified with a specific CPT code are reported separately. For immunization administration and vaccine risk/benefit counseling, see 90460, 90461, 90471-90474, 0001A, 0002A, 0011A, 0012A. For vaccine/toxoid products, see 90476-90749, 91300, 91301. **Medicine** 91300 Codes are out of numerical sequence. See 90472-90581 91301 Codes are out of numerical sequence. See 90472-90581 **Immunization Administration for Vaccines/Toxoids** Report vaccine immunization administration codes (90460, 90461, 90471-90474, 0001A, 0002A, 0011A, 0012A) in addition to the vaccine and toxoid code(s) (90476-90749, 91300, 91301). Report codes 90460 and 90461 only when the physician or qualified health care professional provides face-to-face counseling of the patient/family during the administration of a vaccine other than when performed for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccines. For immunization administration of any vaccine, other than SARS-CoV-2 (Coronavirus disease [COVID-19]) vaccines, that is not accompanied by face-to-face physician or qualified health care professional counseling to the patient/family/guardian or for administration of vaccines to patients over 18 years of age, report 90471-90474. (See also **Instructions for Use of the CPT Codebook** for definition of reporting qualifications.) Report 0001A, 0002A, 0011A, 0012A for immunization administration of SARS-CoV-2 (Coronavirus disease [COVID-19]) vaccines only. Each administration code is specific to each individual vaccine product (eg, 91300, 91301), the dosage schedule (eg, first dose, second dose), and counseling, when performed. The appropriate administration code is chosen based on the type of vaccine and the specific dose number the patient receives in the				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

schedule. For example, 0012A is reported for the second dose of vaccine 91301. Do not report 90460-90474 for the administration of SARS-CoV-2 (Coronavirus disease [COVID-19]) vaccines. Codes related to SARS-CoV-2 (Coronavirus disease [COVID-19]) vaccine administration are listed in Appendix Q, with their associated vaccine code descriptors, vaccine administration codes, vaccine manufacturer, vaccine name(s), National Drug Code (NDC) Labeler Product ID, and interval between doses. In order to report these codes, the vaccine must fulfill the code descriptor and must be the vaccine represented by the manufacturer and vaccine name listed in Appendix Q.

If a significant separately identifiable Evaluation and Management service (eg, new or established patient office or other outpatient services [99202-99215], office or other outpatient consultations [99241-99245],emergency department services [99281-99285], preventive medicine services [99381-99429]) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. Combination vaccines are those vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.

(For allergy testing, see 95004 et seq)

(For skin testing of bacterial, viral, fungal extracts, see 86485-86580)

(For therapeutic or diagnostic injections, see 96372-96379)

90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*

+90461 *each additional vaccine or toxoid component administered (List separately in addition to code for primary procedure)*

(Use 90460 for each vaccine administered. For vaccines with multiple components [combination vaccines], report 90460 in conjunction with 90461 for each additional component in a given vaccine)

(Do not report 90460, 90461 in conjunction with 91300, 91301, unless both a severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [Coronavirus disease {COVID-19}] vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90749 are administered at the same encounter)

90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)*

(Do not report 90471 in conjunction with 90473)

+90472 *each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)*

(Use 90472 in conjunction with 90460, 90471, 90473)

Chicago, IL 60611

Re: COVID-19 Immunization Administration Codes (0001A, 0002A, 0011A, 0012A)

Dear Doctor Smith:

The American Academy of Family Physicians (AAFP), American College of Obstetricians and Gynecologists (ACOG), American College of Physicians (ACP), and American Academy of Pediatrics (AAP) respectfully submit recommendations for the COVID-19 Immunization Administration codes as follows:

0001A Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 mcg/0.3mL dosage, diluent reconstituted; first dose
Recommendation:
•Crosswalk to October 2009 RUC-recommended work relative value units (RVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered)
•Utilize October 2009 RUC-recommended direct practice expense inputs for CPT code 90460 as a template with incremental direct practice expense inputs required for administering the COVID-19 vaccine

0002A Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 mcg/0.3mL dosage, diluent reconstituted; second dose
Recommendation:
•Crosswalk to October 2009 RUC-recommended work relative value units (RVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered)
•Utilize October 2009 RUC-recommended direct practice expense inputs for CPT code 90460 as a template with incremental direct practice expense inputs required for administering the COVID-19 vaccine

0011A Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; first dose
Recommendation:
•Crosswalk to October 2009 RUC-recommended work relative value units (RVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered)

•Utilize October 2009 RUC-recommended direct practice expense inputs for CPT code 90460 as a template with incremental direct practice expense inputs required for administering the COVID-19 vaccine

0012A Immunization administration by intramuscular injection of Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; second dose

Recommendation:

•Crosswalk to October 2009 RUC-recommended work relative value units (RVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered)

•Utilize October 2009 RUC-recommended direct practice expense inputs for CPT code 90460 as a template with incremental direct practice expense inputs required for administering the COVID-19 vaccine

Research Subcommittee Approval

The Research Subcommittee approved our request to submit COVID-19 immunization administration (IA) recommendations using a crosswalk methodology:

- *The Research Subcommittee approves for the use of a crosswalk methodology in general to value (0001A, 0002A, 0011A, 0012A). A couple of members expressed concern that future Covid-19 immunization administration codes may present unforeseen costs and questioned whether there should be a blanket recommendation about future codes. The Subcommittee notes it is the purview of the RUC to determine the specific crosswalk code.*

Background

During the October 2009 meeting, the RUC approved 0.20 wRVU, 7 minutes intraservice time, and direct practice expense (PE) inputs for CPT code 90460. During the same meeting, the RUC reviewed recommendations for CPT code 90470 (H1N1 immunization administration (intramuscular, intranasal), including counseling when performed) which was fast tracked to address the immediate need to vaccinate against the 2009 pandemic.

At the request of the Department of Health and Human Services, the CPT Editorial Panel created new CPT code 90470 to assist the public health effort to immediately vaccinate for H1N1. CMS asked the RUC to immediately review the new service and provide recommendations on the estimated physician work and direct practice expense inputs anticipated to be required to provide the immunization. The RUC recommended the same wRVU (0.20) and intraservice time (7 minutes) for 90470 as it did for CPT code 90460. Additionally, the RUC recommended the direct PE inputs for CPT code 90470 be equivalent to CPT code 90460 with two primary exceptions. First, an additional two minutes of staff time was added to capture the additional work of identifying and contacting patients as the vaccine is provided by the state. In addition, the standard greet patient time of 3 minutes was added since an evaluation and management code is not additionally reported as part of the typical patient encounter for vaccinating during a pandemic.

CMS accepted the RUC recommendations for CPT code 90470, publishing 0.20 wRVU and 0.42 PE RVUs on the 2010 Medicare Physician Fee Schedule (MPFS), representing the resources utilized in vaccinating the public during a pandemic.

CPT code 90460, however, was crosswalked by CMS to CPT code 90471 (Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or

combination vaccine/toxoid), which, in turn, was hard coded to CPT code 96372 (Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular).

In the 2021 MPFS proposed rule, CMS noted that the IA payment rates resulting from the 96372 hard coding were substantially lower than the Centers for Disease Control and Prevention (CDC) regional maximum charges. CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services, as it is critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. (Source: CMS 1734-P (page 268))

With the exception of CPT code 90470, CMS has never accepted RUC survey-based recommendations for IA codes. This holds true even though the RUC recommendations for CPT code 90460 formed the basis of CMS' valuation of CPT code 90470. CPT code 90470 was sunset at the end of the pandemic.

Rationale

1) The October 2009 RUC-recommended wRVU and intraservice time for CPT code 90460 are the appropriate crosswalks for the COVID IA codes. The October 2009 RUC-recommended direct PE inputs for CPT code 90460 form the appropriate template for the COVID IA codes.

2) As resource expenditure is equivalent among all four COVID-19 IA codes, there should be no payment differential between the first dose administration and second/subsequent dose administration in a multidose COVID-19 vaccine schedule.

	First Dose Administration	Second/Subsequent Dose Administration	Equivalent?
Work (ie, Counseling)	•Vaccine hesitancy (rising rates in general population coupled with trend toward lack of trust in CDC/public health) •Enhanced consent required to administer new vaccine in unlicensed patient population (eg, pediatric patients)	•Ongoing or new vaccine hesitancy •Patient questions on ability to intermix vaccine products; uncertain patient vaccine history; patient confusion about minimum interval requirement for receiving second/subsequent dose; side effects from first/prior dose	Yes
Administrative Staff Time (Indirect PE)	•Schedule follow-up appointment for next dose compliant with the vaccine's minimum interval requirement	•Patient reminder/recall to comply with 21/28-day minimum interval requirement •Schedule follow-up appointment for next dose compliant with the vaccine's minimum interval requirement	Yes

Clinical Staff Time Clinical Staff Time (continued)	•Identify and contact appropriate patients and schedule immunization •Prepare patient chart with appropriate CDC vaccine information sheet (VIS) •Inventory vaccines specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports) •Greet patient, provide gowning, ensure appropriate medical records •Provide pre-service education (eg, what to expect, what to do afterwards, signs/symptoms that merit a call to the office) and obtain consent •Provide patient/parent with appropriate CDC VIS •Obtain vital signs •Prepare room/equipment/supplies •Administer vaccine •Clean room/equipment •Check on patient before discharge and answer final questions •Provide required paper form to patient •Enter vaccine information into the patient medical record •Conduct expanded immunization information system (IIS) reporting •Maintain vaccine refrigerator/freezer temperature log	•Identify and contact appropriate patients and schedule immunization •Prepare patient chart with appropriate CDC VIS •Inventory vaccines specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports) •Greet patient, provide gowning, ensure appropriate medical records •Provide pre-service education (eg, what to expect, what to do afterwards, signs/symptoms that merit a call to the office) and obtain consent •Confirm appropriate interval from prior dose •Provide patient/parent with appropriate CDC VIS •Obtain vital signs •Prepare room/equipment/supplies •Administer vaccine •Clean room/equipment •Check on patient before discharge and answer final questions •Provide required paper form to patient •Enter vaccine information into the patient medical record •Conduct expanded IIS reporting •Maintain vaccine refrigerator/freezer temperature log	Yes Expanded IIS reporting: Please see example of Texas' expanded IIS reporting
Medical Supplies	•Gloves •OSHA compliant syringe w-needle	•Gloves •OSHA compliant syringe w-needle	Yes

	•Alcohol swab •Bandage •CDC VIS •PPE (CPT code 99072)	•Alcohol swab •Bandage •CDC VIS •PPE (CPT code 99072)	
Medical Equipment	•Refrigerator, vaccine medical grade, w-data logger •Refrigerator, vaccine, temperature monitor w/alarm •Freezer, under counter, ultra cold 3.7 cu ft (0001A only)	•Refrigerator, vaccine medical grade, w-data logger •Refrigerator, vaccine, temperature monitor w/alarm •Freezer, under counter, ultra cold 3.7 cu ft (0002A only)	Yes
PLI			Yes

Additionally, in the case of the COVID-19 vaccine requiring two doses, the total resources required for the first dose should be at least equivalent to those required for the second dose to account for the possibility a patient may not return to the same physician or even same physician group for the second dose administration. Valuation must account for any necessary physician work to confirm the details of a patient's first dose.

Therefore, we believe all four COVID-19 IA codes listed above should be crosswalked from the RUC recommendations for CPT code 90460 with respect to work and intraservice time. Additionally, the RUC-recommended direct PE inputs for code 90460 should be utilized as the template for the COVID IA codes, adding the incremental direct practice expense inputs required for administering the COVID-19 vaccine.

Sincerely,

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:0001A Tracking Number Original Specialty Recommended RVU: **0.20**
Presented Recommended RVU: **0.20**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.20**

CPT Descriptor: Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 mcg/0.3mL dosage, diluent reconstituted; first dose

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 33-year-old individual seeks immunization against SARS-CoV-2 to decrease the risk of contracting this disease consistent with evidence supported guidelines. The individual is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified health care professional reviews the patient's chart to confirm that vaccination to decrease the risk of COVID-19 is indicated. The patient is counseled on the benefits and risks of vaccination to decrease the risk of COVID-19 and consent is obtained. The first dose of the COVID-19 vaccine is administered by intramuscular injection in the upper arm. The patient is monitored for any adverse reaction. The patient's immunization record (and registry when applicable) are updated to reflect the vaccine administered.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In response to the COVID-19 pandemic and public health need for rapid deployment of COVID-19 vaccines, RUC was asked to provide resource-based information for immunization administration (IA) for the administration codes specific to these vaccines. This occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based

recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. The value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic; however, the source for the CPT code 90470 wRVU remains in the RUC database for CPT code 90460. This expert panel therefore believes that the physician work for the COVID IA is the same as the RUC recommended work for CPT code 90460 (and CPT code 90470).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A; this is a new service

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In response to the COVID-19 pandemic and public health need for rapid deployment of COVID-19 vaccines, RUC was asked to provide resource-based information for immunization administration (IA) for the administration codes specific to these vaccines. This occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based

recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. The value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic; however, the source for the CPT code 90470 wRVU remains in the RUC database for CPT code 90460. This expert panel therefore believes that the physician work for the COVID IA is the same as the RUC recommended work for CPT code 90460 (and CPT code 90470).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In response to the COVID-19 pandemic and public health need for rapid deployment of COVID-19 vaccines, RUC was asked to provide resource-based information for immunization administration (IA) for the administration codes specific to these vaccines. This occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based

recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. The value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic; however, the source for the CPT code 90470 wRVU remains in the RUC database for CPT code 90460. This expert panel therefore believes that the physician work for the COVID IA is the same as the RUC recommended work for CPT code 90460 (and CPT code 90470).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A; this is a new service

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:0012A Tracking Number Original Specialty Recommended RVU: **0.20**
Presented Recommended RVU: **0.20**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.20**

CPT Descriptor: Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5mL dosage; second dose

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 33-year-old individual seeks immunization against SARS-CoV-2 to decrease the risk of contracting this disease consistent with evidence supported guidelines. The individual is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified health care professional reviews the patient's chart to confirm that vaccination to decrease the risk of COVID-19 is indicated. The patient is counseled on the benefits and risks of vaccination to decrease the risk of COVID-19 and consent is obtained. The first dose of the COVID-19 vaccine is administered by intramuscular injection in the upper arm. The patient is monitored for any adverse reaction. The patient's immunization record (and registry when applicable) are updated to reflect the vaccine administered.

Description of Post-Service Work:

Physical effort required			

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome			

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In response to the COVID-19 pandemic and public health need for rapid deployment of COVID-19 vaccines, RUC was asked to provide resource-based information for immunization administration (IA) for the administration codes specific to these vaccines. This occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based

recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. The value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic; however, the source for the CPT code 90470 wRVU remains in the RUC database for CPT code 90460. This expert panel therefore believes that the physician work for the COVID IA is the same as the RUC recommended work for CPT code 90460 (and CPT code 90470).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC Advisors from AAFP, ACOG, ACP, and AAP acted as an expert panel and met by video conferencing, phone, and email to develop the recommended direct PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   We are utilizing CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered) as our base reference code due to the inherent similarity between the service described by 90460 and the COVID Immunization Administration (IA) codes. To the base of 90460 direct PE inputs, we are recommending incremental direct PE inputs as required by public health emergency (PHE) regulations for administering the pandemic COVID-19 vaccine.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   No and no. The typical patient will not be seen for an E/M service as the COVID-19 vaccine is being administered in response to its pandemic status.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   CPT code 90460: Family Medicine; 46%; no.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   CA033: The additional minutes (7 minutes for 0001A and 0011A; 5 minutes for 0002A and 0012A) reflect 1 minute for manually filling out the vaccine card required to be given to the patient plus another 6 minutes (for 0001A and 0011A) or 4 minutes (for 0002A and 0012A) of logging required information into the registry (eg, IIS, VAMS) and maintaining vaccine refrigerator/freezer temperature logs. The typical patient is an adult who will need new record creation in IIS for 0001A and 0011A, which typically takes 2 minutes to create and enter demographic information. New record creation will not be needed for the second dose given 21-28 days later (0002A and 0012A). Therefore, the 6 minutes for 0001A and 0011A reflects patient record creation and demographic entry (2 minutes) plus the actual vaccine information logging time and maintenance of vaccine refrigerator/freezer temperature logs (4 minutes). The 4 minutes for 0002A and 0012A reflects only

the actual vaccine information logging time and maintenance of vaccine refrigerator/freezer temperature logs (4 minutes).
CA034: The individual (RN/LPN/MTA) who performs the actual vaccine administration must be the person who documents the procedure in the patient's medical record (ie, "the person who did it documents it, and the person who documented it did it"). The 3 minutes is the same for both dose one (0001A and 0011A) and dose two (0002A and 0012A).

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

As a result of the COVID-19 pandemic and vaccine emergency use authorization (EUA) status, administration of the COVID-19 vaccine has direct PE inputs over and above those required for "regular" immunization administration, which cannot be entirely accounted for due to an increase in physician time:

- Vaccine inventory specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports) (1 minute to CA008)
- Identify and contact appropriate patients and schedule immunization (2 minutes for 0001A and 0011A only) (originally assigned to Row 26 NEW but subsequently moved to CA005)
- Due to risk of anaphylaxis with COVID-19 vaccine, post-procedure monitoring multitasking 1:4 (4 minutes to CA022)
- Providing patient with paper vaccine card (1 minute to CA033)
- Enter additional data into immunization information system (IIS) as required by state and federal regulations (6 minutes for 0001A and 0011A and 4 minutes for 0002A and 0012A to CA033)
- Use of an ultra cold freezer for storing vaccine (NEW, line 113) (93% of IS CST for 0001A-0002A (only))
- Use of a medical grade vaccine refrigerator (NEW, line 112) (100% of IS CST for 0011A-00012A; 7% of IS CST for 0001A-0002A)
- Each refrigerator requires a temperature monitor with alarm (ED043), which is accounted for in the total minutes for combined use of ultra cold freezer and medical grade vaccine refrigerator (eg, Row 108: 37 minutes =3 minutes +34 minutes for 0001A)

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

Prepare patient chart with appropriate CDC VIS: Rolled into CA001
Provide patient/parent with appropriate CDC VIS: Rolled into CA012
Clinical staff (RN/LPN/MTA) enters vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law. A final check of the patient is done to confirm that there are no serious immediate reactions and final questions are answered.: Rolled into CA034
Clinical staff (Medical/Technical Assistant) enters data into the state online immunization information system (IIS) (registry) and maintains the vaccine refrigerator/freezer temperature logs.: Rolled into CA033

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We allocated 0 minutes to obtain vital signs and, therefore, are requesting no CST.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

Complete pre-service diagnostic and referral forms (ie, prepare patient chart with appropriate CDC VIS); Complete pre-procedure phone calls and prescription (ie, identify and contact appropriate patients and schedule immunization (0001A and 0011A only)); Perform regulatory mandated quality assurance activity (ie, vaccine inventory specific to limited distribution of COVID vaccine (ie, account for every dose given, wastage and spoilage reports).

   b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records; Provide education and obtain consent; Review requisition, assess for special needs (ie, provide patient/parent with appropriate CDC VIS); Prepare room, equipment, and supplies; Monitor patient following procedure; Clean room/equipment; Enter vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law; Enter additional data as required by state and federal regulations into the state online immunization information system (IIS) (registry); Maintain the vaccine refrigerator/freezer temperature log; Provide required paper card and information sheet to patient.

   c. Post-service period:

Conduct patient communication.

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

While *identify and contact appropriate patients and schedule immunization* was originally assigned to Row 26 NEW, it was subsequently moved to CA005. This is required by the CDC and local public health as the COVID-19 vaccine will be delivered in tiers (2 minutes for 0001A and 0011A only).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

14. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

McKesson redacted invoice attached, includes estimates for refrigerator, vaccine medical grade, w-data logger sngl glass door ($7,674.43) and freezer, under counter, ultra cold 3.7 cu ft ($16,516.36). Please note that the latter is only applied to CPT codes 0001A-0002A.

19. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

10 years

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Removed 3 minutes for CA005 *Complete pre-procedure phone calls and prescription* Removed 2 minutes for NEW *Identify and contact appropriate patients and schedule immunization* for codes 0002A and 0012A only Moved *Identify and contact appropriate patients and schedule immunization* (2 minutes for 0001A and 0011A only) originally assigned to Row 26 NEW to CA005 Removed 1 minute for CA010 *Obtain vital signs* Added 4 minutes for CA022 *Post-procedure monitoring multitasking 1:4* Reduced from 5 minutes to 3 minutes CA024 *Clean room/equipment by clinical staff* Added 7 minutes (0001A and 0011A) and 5 minutes (0002A and 0012A) for CA033 *Perform regulatory mandated quality assurance activity* Changed staff type from L037D to L026D for CA033 *Perform regulatory mandated quality assurance activity* Added 3 minutes for *CA034 Document procedure (nonPACS) (eg, mandated reporting, registry logs, EEG file, etc.)*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Removed 3 minutes for OLD *Clinical staff enters vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law. A final check of the patient is done to confirm that there are no serious immediate reactions and final questions are answered.*
Removed 4 minutes for OLD *Clinical staff enters data into the state online immunization information system (IIS) (registry) and maintains the vaccine refrigerator/freezer temperature log.*
CA037 *Conduct patient communications*: Removed 1 minute from all Facility settings; Added 2 minutes to all Non-Facility settings
Removed 3 SB033 *Mask, surgical*
Removed 1 SC058 *Syringe w-needle, OSHA compliant (SafetyGlide)*
Removed 1 SJ053 *Swab-pad, alcohol*
Increased SB022 *Gloves, non-sterile* from 0.5 to 1
Removed SK012 *CDC Information Sheet*
Added 1 SK057 *Paper, laser printing (each sheet)*
Removed 1 NEW *Covid-19 Cleaning Supplies including additional quantities of hand sanitizer and disinfecting wipes/sprays/cleansers*
Revised time for ED043 *Refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates* for total CST (ie, 37 for 0001A and 0011A and 33 for 0002A and 0012A)
Added NEW *Refrigerator, vaccine medical grade, w-data logger sngl glass door:* Assigned IS CST for 0011A (37) and 0012A (33); Assigned 7% of IS CST for 0001A (3) and 0002A (2)
Added NEW *Freezer, under counter, ultra cold 3.7 cu ft:* Assigned 93% of IS CST for 0001A (34) and 0002A (31) only
Please see below for 0001A-0002A refrigerator/freezer allocation calculation.

0001A-0002A Refrigerator/Freezer Allocation Calculation
Source:https://www.cdc.gov/vaccines/imz-managers/downloads/COVID-19-Vaccination-Program-Interim_Playbook.pdf (page 55)

If we are keeping vaccine in the ultra cold freezer, we can assume an average carrying time of 2 weeks (between receipt date and administration date). This is based around CDC expectation that only large sites that can give the vaccine quickly will get the vaccine (ie, 2x faster than normal carrying time of "standard vaccine," which is 3.5-4 weeks).

You may only use thawed vaccine (ie, not frozen but not yet diluted and kept in fridge) for 5 days. You may only use reconstituted vaccine (thawed and diluted and kept in fridge) for 6 hours.

Typically, only the last carrying day will be spent in the fridge (ie, you don't want to thaw it until you're pretty sure you can use it). So, even though it's acceptable to leave it in the fridge for up to 5 days, most won't try to do this because of the risk of ending up on day 6 with vaccine you don't need.

Therefore, for a total of 14 days carrying time:
13 days in ultra code freezer
1 day in refrigerator

Ultra cold freezer = 13/14 = 93% of total CST for 0001A and 0002A

Refrigerator = 1/14 = 7% of total CST for 0001A and 0002A

AMA/Specialty Society RVS Update Committee
Summary of Recommendations

October 2009

Immunization Administration

The CPT Editorial Panel revised the reporting of immunization administration in the pediatric population in order to better align the service with the evolving best practice model of delivering combination vaccines. This revision in the reporting of immunization administration will then permit a more accurate reflection of the physician work involved, reducing barriers to the spread of technology and allowing positive change in the practice of medicine. The CPT nomenclature needs to be kept up-to-date with the reporting of services associated with vaccine delivery, which has changed due to the licensure of additional combination vaccines as well as those with more components. The two new immunization administration codes will more accurately reflect the service as currently delivered.

The specialty society presented compelling evidence that the physician time has changed in performing these services by providing rationale for an increasing frequency of counseling necessary to convince parents to 1) immunize their children at all; and 2) to persuade them of the safety and efficacy of component vaccines. Increased attention to vaccine safety on the Internet and in other media has driven anxiety and have necessitated additional physician involvement and discussion with parents. The RUC agreed that this increased physician work should be recognized.

The specialty society presented that the typical patient receives two vaccinations in one visit. However, based upon the age of the patient and specific vaccines available, some visits require only 90460, some visits require one or more units of 90460 and one or more units of 90461. It was noted that higher multiples of reporting of these codes would occur at infrequent visits (primarily 2 month, 6 months, and 4 years of age) and any payor concern regarding coding and valuation with these outlier visits may be addressed with a limit on the number of 90461 units allowed.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

90460 Immunization Administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care profession; first vaccine/toxoid component

The RUC recommends that the survey intra-service time of 7 minutes should be reflected as the total time. Pre-service time, as described in the original SOR, is described in the preventive medicine services and the post-service descriptions reflect activities performed by clinical staff. The RUC agreed that the valuation for this service falls between the range of a 99211 (Work RVU=0.17) and the survey median of 0.25, and determined that considering that more than one unit is often coded, a value of 0.20 would be appropriate. 99401 *Preventive Counseling, 15 minutes* (work RVU = 0.48) is a reasonable comparison. Using the ratio of time of 7 minutes/15 minutes, a value of 0.20 is reasonable. In addition, the committee considered that they typical patient may receive two units of this service 0.40 total with 14 minutes of counseling, which is comparable to a 99212 (work RVU = 0.48 and 16 minutes of total time). **The RUC recommends a work value of 0.20 and physician intra-service time of 7 minutes for 90460.**

90461 – Immunization Administration through 18 years of age via any route of administration, with counseling by physician or other qualified health profession; each additional vaccine/toxoid component (List separately in addition to code for primary procedure)

The RUC understands that additional counseling is required to describe the additional vaccines and to address concern related to media reports of component vaccines. The survey indicated that this additional counseling requires 5 minutes of physician time. The RUC determined that the survey's 25th percentile work RVU of 0.16 is appropriate and reflects a proper rank order relationship with 99401 *Preventive Counseling* as described above and also in relationship to other counseling services, such as 99407 *Smoking Cessation (5/15 or 1/3 of 0.50).* **The RUC recommends a work value of 0.16 and a physician intra-service time of 5 minutes for 90461.**

Practice Expense – The RUC recommends the direct expense inputs of18 minutes clinical staff time, supplies and equipment for 90460 and no direct inputs for 90461 The individual inputs are described in the attached handout.

PLI Crosswalk – The new codes could be crosswalked to the existing immunization and administration codes, 90471 and 90472.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code (•New)	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Codes 90465-490460 and 90461 must be reported in addition to the vaccine and toxoid code(s) 90476-90749. Report codes 90460 and 90461 only when the physician or qualified health care professional provides face-to-face counseling of the patient and family during the administration of a vaccine. For immunization administration of any vaccine that is not accompanied by face-to-face physician or qualified health care professional counseling to the patient/family or for administration of vaccines to patients over 18 years of age, report codes 90471-90474. If a significant separately identifiable Evaluation and Management service (eg, office or other outpatient services, preventive medicine services) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes. A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (see codes 90460 and 90461). Combination vaccines are those vaccines that contain multiple vaccine components. (For allergy testing, see 95004 et seq) (For skin testing of bacterial, viral, fungal extracts, see 86485-86580) (90465-90468 have been deleted. To report, see 90460, 90461)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:90460 Tracking Number E1 Specialty Society Recommended RVU: **0.25**
Global Period: XXX RUC Recommended RVU: **0.20**

CPT Descriptor: Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first vaccine/toxoid component

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 15-year-old patient receives the Human Papilloma virus (HPV) vaccine from her physician. The ordering physician discusses the risks of the vaccine and the disease for which it provides protection. The parent/guardian is given the CDC vaccine information statement (VIS). The parent/guardian consents and the nurse prepares the vaccine. The patient receives the vaccine by a single injection, and the nurse charts the required information and accesses and enters the vaccine data into the statewide immunization registry. The patient is discharged home after the nurse confirms that there are no serious immediate reactions.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)? No
Is moderate sedation inherent in your reference code (Hospital/ASC setting)? No

Description of Pre-Service Work:

Description of Intra-Service Work: The physician discusses the specific risks/benefits of the first vaccine component including the risks associated with this component and the risk of not receiving it to include both health risk from the preventable disease and the social concerns related to school mandates for vaccines. The physician then discusses the benefit of being immunized for this disease. The parent ‘s questions regarding the safety of the inactive ingredients in the vaccine such as preservatives and the likelihood of this vaccine causing injury, including brain damage, and/or the disease for which it is providing protection against are addressed. After further discussion, the parent then agrees with need for immunization. The physician then discusses the care plan for the child in the days to follow specific to the anticipated or possible side effects of the first vaccine component: soreness and pain at the injection site, fever, and other side effects. The physician reviews the signs or symptoms that warrant a call back.

Description of Post-Service Work:

Time Segments (Mean)		
Pre-Service intensity/complexity	1.44	1.31
Intra-Service intensity/complexity	3.69	3.03
Post-Service intensity/complexity	1.90	1.92

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The American Academy of Pediatrics (AAP) Committee on Coding and Nomenclature reviewed the 90460 survey results. Given the robustness and validity of the data, the AAP recommends the survey median work relative value units of 0.25 and the pre-, intra-, and post-service times of 3 minutes, 7 minutes, and 2 minutes, respectively.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Immunizations are typically administered during the same patient encounter as a separately reported Preventive Medicine Service

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A 15-year old patient receives the Human Papilloma virus (HPV) vaccine from her physician. The ordering physician discusses the risks of the vaccine and the disease for which it provides protection. The parent/guardian is given the CDC vaccine information sheet (VIS).The parent/guardian consents and the nurse prepares the vaccine. The patient receives the vaccine by a single injection, and the nurse charts the required information and accesses and enters the vaccine data into the statewide immunization registry. The patient is discharged home after the nurse confirms that there are no serious immediate reactions. This service is typically provided in conjunction with a separately reported Preventive Medicine Service.

6.	90460	Imm admin; first component	XXX	0.25	3	7	2

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 90465-90468

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 52232422
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. This estimate is based on a birth cohort managed by pediatricians of 2,843,045 patients and adherence to the ACIP/AAP/AAFP Recommended Immunization Schedule.

Specialty Pediatrics Frequency 52232422 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,033 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Source: 2007 Medicare claims data for code 90465. NOTE: This is a pediatric service not typically provided to Medicare patients.

Specialty Pediatrics Frequency 1033 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? (ie. similar work RVU, and specialty) No

If no, please select another crosswalk and provide a brief rationale. 90471 the exisitng immunization administration code

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:90461 Tracking Number E2 Specialty Society Recommended RVU: **0.18**
Global Period: ZZZ RUC Recommended RVU: **0.16**

CPT Descriptor: Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine/toxoid component (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A four-month-old patient receives the diphtheria, tetanus, pertussis, Hemophilus influenza type b, inactivated polio (DTaP-Hib-IPV) combination vaccine from her physician. The ordering physician discusses the risks of each additional vaccine component (eg, tetanus) and the diseases for which each additional vaccine component provides protection. The parent/guardian is given the CDC vaccine information statement (VIS) for each additional vaccine component. The parent/guardian consents for each of the additional vaccine components. The nurse charts the required information and enters data into the statewide immunization registry for each additional vaccine component.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Kept overnight (less than 24 hours) 0% , Admitted (more than 24 hours) 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 0%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 0%

Is moderate sedation inherent in your reference code (Office setting)? No
Is moderate sedation inherent in your reference code (Hospital/ASC setting)? No

Description of Pre-Service Work: .

Description of Intra-Service Work: The physician discusses the specific risks/benefits of each additional vaccine component including the risks associated with each additional component and the risk of not receiving each one to include both health risk from the preventable disease and the social concerns related to school mandates for vaccines. The physician then discusses the benefit of being immunized for each disease and the absence of evidence for risk of brain damage associated with each additional component. The parent's questions regarding the safety and efficacy of giving multiple antigens at one time versus giving the vaccine in single components are addressed. After further discussion, the parent then agrees with need for immunization against each additional disease component. The physician then discusses the care plan for the child in the days to follow specific to the anticipated or possible side effects of each vaccine component.

Description of Post-Service Work: .

Intra-Service intensity/complexity	3.57	2.80
Post-Service intensity/complexity	1.89	2.00

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The American Academy of Pediatrics (AAP) Committee on Coding and Nomenclature reviewed the 90461 survey results. Given the robustness and validity of the data, the AAP recommends the survey median work relative value units of 0.18 and the intra-service time of 5 minutes. The AAP recommends the 25th percentiles for the pre- and post-service work times of 1 minute each. Although 9046X2 is a "ZZZ" code (and "ZZZ" codes do not typically

include pre- or post-service times), the AAP recommends pre- and post-service times of 1 minute each due to the additional pre- and post-service associated with each additional (ie, unique) vaccine component administered.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Immunizations are typically administered during the same patient encounter as a separately reported Preventive Medicine Service

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. A four-month old patient receives the diphtheria, tetanus, pertussis, Hemophilus influenza type b, inactivated polio (DTaP-Hib-IPV) combination vaccine from her physician. The ordering physician discusses the risks of each additional vaccine component (eg, tetanus) and the diseases for which each additional vaccine component provides protection. The parent/guardian is given the CDC vaccine information sheet (VIS) for each additional vaccine component. The parent/guardian consents for each of the additional vaccine components. The nurse charts the required information and enters data into the statewide immunization registry for each additional vaccine component.

CPT Long Descriptor:
Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first vaccine/toxoid component

Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:
The American Academy of Pediatrics (AAP) Committee on Coding and Nomenclature developed the direct practice expense input recommendations for code 90460 using the February 2005 and February 2008 RUC-approved recommendations for code 90465.

Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Clinical staff prepares patient chart with appropriate CDC vaccine information statement (VIS)

Intra-Service Clinical Labor Activities:

- **Clinical staff provides patient/parent with appropriate VIS**
- **Clinical staff follows up on physician's vaccine counseling session with patient/parent and obtains actual consent signature**
- **Clinical staff prepares vaccine, instructs the parent on proper positioning of the patient, selects and prepares the injection site, and administers the vaccine**
- **Clinical staff comforts the patient and directs the patient/parent to remain in the office after the service for about 20 minutes to watch for immediate reactions**
- **Clinical staff cleans room/equipment**
- **Clinical staff enters vaccine information into the patient medical record to include the vaccine type, lot number, site, date of administration, and date of VIS as required by federal law. A final check of the patient is done to confirm that there are no serious immediate reactions and final questions are answered.**
- **Clinical staff enters data into the state online immunization information system (registry) and maintains the vaccine refrigerator/freezer temperature log**

Post-Service Clinical Labor Activities:

There is a phone call to answer questions/concerns that arise concerning vaccine component reactions that may appear within a few days of the administration

AMA/Specialty Society RVS Update Committee
Summary of Recommendations
October 2009

H1N1 Immunization Administration

At the request of the Department of Health and Human Services, the CPT Editorial Panel created a new code 90470 *H1N1 immunization administration (intramuscular, intranasal), including counseling when performed* to assist the public health effort to immediately vaccinate for H1N1. The Centers for Medicare and Medicaid Services (CMS) asked the RUC to immediately review the new service and provide recommendations on the estimated physician work and direct practice expense inputs anticipated to be required to provide the immunization. The American Academy of Family Physicians, American Academy Pediatrics, American College of Obstetricians and Gynecologists, and American College of Physicians provided information for the RUC to review on October 3.

The RUC reviewed newly described immunization services for children at the October meeting and was persuaded that physician efforts related to counseling for immunization has increased. The RUC agreed that increased attention to vaccine safety on the Internet and other media has driven anxiety and have necessitated additional physician involvement and discussion with parents. The RUC recommends that the same level of physician work, for many adults and children, will also be necessary as the H1N1 vaccine becomes available. The RUC agreed that immunization administration for H1N1 should be valued higher than the routine immunization administration code 90471 (0.17) as high risk individuals must first be identified and patients are more likely to have questions about this vaccine and the H1N1 epidemic. **The RUC recommends a physician work value of 0.20 and intra-service time of 7 minutes for 90470 *H1N1 immunization administration.***

Practice Expense: The RUC recommends that the practice expense inputs for H1N1 be equivalent to the pediatric immunization codes reviewed at the October 2009 meeting and 90471 with two primary exceptions. First, an additional two minutes of staff time should be added to capture the additional work of identifying and contacting patients as the vaccine is provided by the State. In addition, these patients may come to this service only, and therefore, the standard greet patient time of 3 minutes should also be added. The total clinical staff time should be 23 minutes.

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:90470 Tracking Number Specialty Society Recommended RVU: **0.20**
Global Period: XXX RUC Recommended RVU: **0.20**

CPT Descriptor: H1N1 immunization administration (intramuscular, intranasal), including counseling when performed

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A patient, who has been identified by the CDC guidelines as being appropriate for H1N1, is notified that their condition requires prophylactic vaccination for H1N1, and presents at the physician office.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No Percent of survey respondents who stated it is typical in the Hospital/ASC setting?

Is moderate sedation inherent to this procedure in the office setting? No Percent of survey respondents who stated it is typical in the office setting?

Is moderate sedation inherent in your reference code (Office setting)? No

Is moderate sedation inherent in your reference code (Hospital/ASC setting)? No

Description of Pre-Service Work:

Description of Intra-Service Work: A patient, who has been identified by the CDC guidelines as being appropriate for H1N1, is notified that their condition requires prophylactic vaccination for H1N1, and presents at the physician office. In accordance with national recommendations for immunizations, the physician determines that the patient should receive a novel H1N1 influenza vaccination. The patient/parent/guardian is asked about any previous immunization reactions and is given the CDC vaccine information sheet (VIS) on novel H1N1 influenza. The physician reviews the benefits and risks of providing the novel H1N1 influenza vaccination with the patient/parent/guardian. After consent, the physician directs the nurse to give the patient the novel H1N1 influenza immunization as an injection or intranasally. The immunization tracking number is entered into a computerized statewide registry and other federal tracking and other requirements are followed by the physician office.

Description of Post-Service Work:

Other time if appropriate		

INTENSITY/COMPLEXITY MEASURES (Mean)

Mental Effort and Judgment (Mean)

The number of possible diagnosis and/or the number of management options that must be considered		
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed		
Urgency of medical decision making		

Technical Skill/Physical Effort (Mean)

Technical skill required		
Physical effort required		

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality		
Outcome depends on the skill and judgment of physician		
Estimated risk of malpractice suit with poor outcome		

INTENSITY/COMPLEXITY MEASURES	**CPT Code**	**Reference Service 1**

Time Segments (Mean)

Pre-Service intensity/complexity		
Intra-Service intensity/complexity		
Post-Service intensity/complexity		

Additional Rationale

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Please see the attachments.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) not applicable -- this is a new service

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? CDC estimates that 40 million doses may be given during the 2009-2010 flu season.
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States?

Professional Liability Insurance Information (PLI)

Does the reference CPT code selected for physician work serve as a reasonable reference for PLI crosswalk? No

If no, please select another crosswalk and provide a brief rationale. 90471

Indicate what risk factor the new/revised code should be assigned to determine PLI relative value. Non-Surgical

Rationale:

This recommendation is the result of an urgent request for an expedited RUC review.

At the request of the United States Department of Health and Human Services (see attached), the CPT Editorial Panel reviewed an urgent request to create specific CPT codes for the H1N1 immunization administration and vaccine. The Panel approved this request today. CMS has requested that the RUC conduct an expedited review of this service and submit recommendations to the agency immediately following the RUC meeting next week. CMS will consider the RUC's recommendation and publish the final valuation in the Final Rule for the 2010 Medicare Physician Payment Schedule, expected to be published in the Federal Register in early November.

On September 24, 2009, prior to any written documentation, Sherry Smith of AMA staff personally contacted each of the affected specialty societies (ACP, AAFP, AAP, and ACOG) by telephone, requesting quick action on a Level of Interest form. She explained that the CPT Editorial Panel had just approved new codes for reporting services related to novel H1N1 in the upcoming influenza season.

CMS has already released G codes and payment policy for H1N1 immunization administration and it is not yet determined whether the RUC's recommendations related to the new CPT code will impact this existing policy. (For your reference, please see the attached letters between Dr. Maves and Secretary Sebelius with several AMA recommendations regarding payment policy for the H1N1 vaccine administration.)

RUC staff notified ACP, AAFP, AAP, and ACoG via e-mail to request our individual levels of interest in developing work relative value recommendations and direct practice expense inputs for new CPT code 90470 to be provided to the AMA RUC staff by Thursday, October 1. The RUC was scheduled to review the recommendations the following week.

Staff at each society immediately marshaled their RUC Advisors into the activity of deciding how to handle this expedited RUC review. Because there was insufficient time to conduct a formal RUC survey, the societies decided – independently – that it would be most efficient if each society's RUC Advisors and other physician advisory panel members would review and discuss the code proposal and related documents, arrive at a recommended value, and then coordinate among all the affected societies to determine a joint recommendation.

We jointly recommend a crosswalk from the 9046X1 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first vaccine/toxoid component* recommended relative physician work RVU (0.20). This is an appropriate code to reference, due to 9046X1's and 90470's similarity in physician work. 9046X1 was surveyed by the American Academy of Pediatrics for presentation at the October 2009 RUC meeting; we believe that its survey results are reflective of what would have been obtained for 90470, if a survey for the H1N1 administration code had been possible.

Overall and Medicare utilization of CPT code 90470 is unknown at this time, but we expect that the code usage will be in the millions, as the US Department of Health and Human Services and the Centers for Disease Control estimates that 40 million doses will be needed for the 2009-2010 influenza season.
