   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?

   Code 90480 is typically reported with an E/M service. Code 90480 is typically reported with an E/M service in the NF setting.

   See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The dominant provider for new CPT Code 90480 in the facility and non facility is not known at this time.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre Service CA007 Review patient clinical extant information and questionnaire Used for imaging service. 1 minute standard. Specialties are recommending 1 minute to account for the clinical staff time to review the patient immunization questionnaire. CA008 Perform regulatory mandated quality assurance activity (pre-service) Standard is 0 for XXX services. Specialties are recommending 1 minute to account for the clinical staff time to ensure the vaccine stock is viable. Service CA014 Confirm order, protocol exam Used for imaging service. 1 minute standard. Specialties are recommending 2 minutes to account for the clinical staff time to ensure the correct sequencing and vaccination.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA007: Confirming vaccine order/checking appropriateness for patient CA008: Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR

    b. Service period (includes pre, intra and post):

CA011: Giving Vaccine Information Sheet (VIS) to patient/family; getting informed consent and signature if applicable CA014: Going to laboratory and taking vaccine vials out of vaccine refrigerator; drawing up vaccine into syringe; going back to patient room and preparing patient/parent, confirming that this is correct patient-correct vaccine CA021: Actual administration of vaccine; bandage application CA022: Watching patient after vaccine is administered CA024: Disposal of vaccine-specific medical waste CA034: Charting administered immunizations in the patient chart and EMR; preparing patient record/immunization card

    c. Post-service period:

CA037: Contacting patient/parent to follow up on immunization administration

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CA021: RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or **No**.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

The specialty societies included the following equipment items:

EF049 refrigerator, vaccine medical grade, 2-data logger sngl glass door
ED043 refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates

The specialties used the 'default' equipment formula for both EF049 and ED043.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Equipment
ED043: While its description begins with "refrigerator, vaccine," it is the temperature monitor with alarm for the vaccine medical grade refrigerator. The specialties do not have two vaccine refrigerators included as part of the recommendations.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)
NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.
Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2025

Scalp Cooling Services (PE Only) – Tab 19

At the September 2024 CPT Editorial Panel meeting three new Category I codes were created to report medical scalp cooling services to address chemotherapy induced alopecia. Two existing Category III codes, 0662T and 0663T, were deleted. The new codes were surveyed for the January 2025 RUC meeting, however, the RUC determined that the code family requires no physician work and are practice expense (PE) only services.

97007 ***Mechanical scalp cooling, including individual cap supply with head measurement, fitting, and patient education***
The RUC reviewed the survey results from 35 oncologists and determined that this code requires no physician work and is a PE only service that requires an L056A *RN/OCN* to perform the clinical tasks. This service requires 2 minutes of CA009 *Greet patient, provide gowning, ensure appropriate medical records are available* rather than the 3-minute standard because the patient is not wearing a gown. Five minutes of CA011 *Patient education/obtain consent* comprises education on how to affix the cap, hair and scalp care, maintenance of supply items, cleaning instructions, and storage instructions. Further, during the intra-service portion of the service period, 5 minutes for CA021 *Perform procedure/service—not directly related to physician work time* is required to examine the scalp and select a cap for the patient with accompanying instructions on the scalp cooling process, how it works with the infusion session, time expectations, and potential adverse events. Two minutes are required for CA024 *Clean room/equipment by clinical staff* which is below the 3-minute standard.

The PE Subcommittee acknowledged the new high-cost supply input, *Scalp Cooling Cap/Kit,* as recommended for CPT code 97007. The specialty societies clarified that the patient uses one cap for their chemotherapy treatment plan, so it is reusable for the one patient, after which it is considered medical waste due to the close skin contact and extended period of exposure to the chemotherapy during the time the cap is worn. **The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes. Further, the RUC was not certain if the item is provided directly to the patient (rather than the practice) and if this might impact whether the cap would be considered Durable Medical Equipment by CMS. The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

97008 ***Mechanical scalp cooling; including hair preparation, individual cap placement, therapy initiation, and pre-cooling period***
The RUC reviewed the survey results from 32 oncologists and determined that this code requires no physician work and is a PE only service. CPT code 97008 is typically reported with 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug,* 96415 *Chemotherapy administration, intravenous infusion technique; each additional hour (List separately in addition to code for primary procedure),* and family code 97009.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

This service requires 9 minutes total clinical staff time, 2 minutes of CA013 *Prepare room, equipment and supplies* and 7 minutes of CA021 *Perform procedure/service—not directly related to physician work time*. For CA021, activities include the preparation of hair for scalp cooling, fitting the individual cooling cap, thermal cover, and protective headband to the patient's head, and attaching the cap to the continuously monitored cooling system.

The RUC and PE Subcommittee determined that the recommended new equipment item, *Scalp Cooling System*, is leased equipment that may be used by more than one patient simultaneously. Therefore, the RUC does not have a mechanism to apply a cost-per-minute formula. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

97009 ***Mechanical scalp cooling; provided after discontinuation of chemotherapy, each 30 minutes (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 31 oncologists and determined that this code requires no physician work and is a PE only service. CPT code 97009 is typically reported with 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug,* 96415 *Chemotherapy administration, intravenous infusion technique; each additional hour (List separately in addition to code for primary procedure),* and family code 97008. Typically, three units of 97009 are reported per chemotherapy session.

The Practice Expense Subcommittee reviewed the direct practice expense inputs and reduced the 7 minutes of CA021 *Perform procedure/service—not directly related to physician work time* to 5 minutes because typical post-chemotherapy scalp cooling lasts 90 minutes for which 3 units of this add-on code would expect to be reported. The patient remains in the chemotherapy infusion chair post-infusion and is monitored throughout the remainder of scalp cooling. The post-service portion of the service period requires 1 minute of CA024 *Clean room/equipment by clinical staff* rather than the full 3 minute standard as the specialty divided the standard by three to account for the typical 3 episodes.

Similar to 97008, the recommended new equipment item, *Scalp Cooling System,* is a leased equipment that may be used by more than one patient simultaneously. Therefore, the RUC does not have a mechanism to apply a cost-per-minute formula. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology
CPT codes 97007, 97008, and 97009 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Special Dermatological Procedures

96999 Unlisted special dermatological service or procedure

Mechanical Scalp Cooling Services (Green)

Machine-based scalp cooling is used to address chemotherapy-induced alopecia. To report mechanical scalp cooling services, the device must be a medical device as defined by the FDA and ordered and performed by trained clinical staff under the supervision of a physician or other qualified health care professional. These devices are used in an office or facility setting and are not intended for home use.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Codes 97007, 97008, 97009 are not reported if the scalp cooling device is ordered by a physician or other qualified health care professional but self-administered by the patient during chemotherapy administration.

Code 97007 should be reported once per chemotherapy treatment period and involves a dedicated visit that includes the initial fitting and supply of the custom cap and patient education on hair and skin care, potential therapy side effects, and treatment outcomes. This may be performed independently by clinical staff after scalp cooling has been ordered by a physician or other qualified health care professional.

Mechanical scalp cooling is reported using 97008 once per chemotherapy session. Initiation of 97008 begins 30 minutes prior to each chemotherapy administration when scalp cooling is performed, and concludes when the chemotherapy administration session and post chemotherapy monitoring is completed. Periodic patient monitoring and management of scalp cooling during chemotherapy is included in the chemotherapy administration service and is not separately reported. Code 97009 may be reported for the continuation of scalp cooling provided after chemotherapy has been completed and will vary depending on the duration of the chemotherapy regimen. Code 97009 is reported once for each 30 minutes of scalp cooling provided upon discontinuation of the chemotherapy infusion. Do not report 97009 for scalp cooling of less than 16 minutes. Codes 97008, 97009 may be performed by clinical staff under the direct supervision of a physician or other qualified health care professional.

Definitions:

***Chemotherapy treatment period*:** the chemotherapy treatment prescribed may be administered over multiple chemotherapy sessions over a period of time on separate dates of service.

Chemotherapy session: is an individual chemotherapy session or treatment day.

●97007	CC1	Mechanical scalp cooling, including individual cap supply with head measurement, fitting, and patient education (Report 97007 once per chemotherapy treatment period) (Do not report 97007 for each chemotherapy session)	XXX	PE Only
●97008	CC2	Mechanical scalp cooling; including hair preparation, individual cap placement, therapy initiation, and pre-cooling period (Report 97008 once per chemotherapy session)	XXX	PE Only
●+97009	CC3	provided after discontinuation of chemotherapy, each 30 minutes (List separately in addition to code for primary procedure) (Use 97009 in conjunction with 97008) (Do not report 97009 for scalp cooling less than 16 minutes)	ZZZ	PE Only

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		(For selective head or total body hypothermia in the critically ill neonate, use 99184)		

Category III Codes

~~0662T Scalp cooling, mechanical; initial measurement and calibration of cap~~

CPT Code	Vignette
97007	A 40-year-old female with breast cancer requiring chemotherapy is prescribed scalp cooling for the prevention of chemotherapy induced alopecia.
97008	A 52-year-old female with breast cancer requiring chemotherapy was prescribed scalp cooling for chemotherapy-induced alopecia. Prior to the start of administration of chemotherapy, scalp cooling is initiated.
97009	A 52-year-old female with breast cancer requiring chemotherapy was prescribed scalp cooling for chemotherapy-induced alopecia. Prior to the start of administration of chemotherapy, scalp cooling is initiated.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 97007, 97008, 97009
SPECIALTY SOCIETY(IES): ASCO
PRESENTER(S): Elizabeth Blanchard, MD & Arturo Loaiza-Bonilla, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   ASCO convened a panel that included physicians who perform the procedure. The panel developed the direct practice expense recommendations for CPT Codes 97007-97009 based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   CPT Code 96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour* was used as a reference code on the PE spreadsheet for 97007 and 97008. CPT Code 96366 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); each additional hour* (List separately in addition to code for primary procedure) was used as a reference code on the PE spreadsheet for 97009.

   The reference codes selected are performed by hematology/oncology, are RUC reviewed and performed in the NF setting. CPT Codes 96365 and 96366 were selected as one of the top two reference service codes on the physician work surveys.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   CPT Codes 97007-97009 are new CPT codes. The predecessor Cat III codes had such low volumes, that billed together data is not noted in the RUC database. The specialty society believes that 97007 – 97009 would not typically reported with an E/M service (F nor NF).

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   CPT Codes 97007-97009 are new CPT codes. The predecessor Cat III codes had such low volumes, that billed together data is not noted in the RUC database. The specialty society believes that Hematology/Oncology will be the dominant provider in both the F and the NF.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 97007, 97008, 97009
SPECIALTY SOCIETY(IES): ASCO
PRESENTER(S): Elizabeth Blanchard, MD & Arturo Loaiza-Bonilla, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

97007 Greet patient Provide education Perform procedure not directly related to physician time Clean room

CPT CODE(S): 97007, 97008, 97009
SPECIALTY SOCIETY(IES): ASCO
PRESENTER(S): Elizabeth Blanchard, MD & Arturo Loaiza-Bonilla, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Note: 97007 *Mechanical scalp cooling, including individual cap supply with head measurement, fitting, and patient education*

The specialty reviewed the range of times assigned to CA011 provide education (0.08-85). The median is 3 min (for the codes that have been assigned times). The specialty is recommending 5 minutes for 97007. There are 58 other codes that have 5 minutes assigned for CA011.

97008
Prepare room
Perform procedure not directly related to physician time

97009
Perform procedure not directly related to physician time
Clean room

c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

97007
CA011: The following activities would be included, how to affix the cap, hair and scalp care, maintenance of the items, cleaning instructions, storage instructions.

CA021: The following activities would be included, the scalp is examined and a cap is selected for the patient. The patient is instructed on the scalp cooling process, how it will work with infusion session, time expectations, potential adverse events.

97008
On the day of chemotherapy infusion, the patient presents to the infusion suite. Hair is prepared for scalp cooling. The patient's individual cooling cap, thermal cover and protective headband is fitted on the patient's head and is attached to the continuously monitored cooling system. The cooling system is initiated 30 minutes prior to chemotherapy to gradually bring the temperature down to the appropriate level for therapy.

Note: The specialty used the following algorithm in 97008 to determine the recommended minutes for CA021 *perform procedure not directly related to physician work time:*
1st 3 mins: 1min/1min
Subsequent min: 7mins/1 min

97009

CPT CODE(S): 97007, 97008, 97009
SPECIALTY SOCIETY(IES): ASCO
PRESENTER(S): Elizabeth Blanchard, MD & Arturo Loaiza-Bonilla, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The patient remains in the chemotherapy infusion chair post-infusion. The patient is monitored throughout the scalp cooling session.

Note: The specialty used the following algorithm in 97009 to determine the recommended minutes for CA021 *perform procedure not directly related to physician work time:*
7mins/1 min

Clean Room
The RUC physician work survey indicated 97009 will be typically reported three times per chemotherapy session. The specialty divided the standard 3 minutes for CA024 *clean room* by three and is recommending 1 minutes for each 97009.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The specialty recommends time for "Perform procedure, not directly related to physician work". See Question 11.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

New Supply: Scalp Cooling Cap/Kit

There are currently two companies providing this medical scalp cooling service. Invoices attached from both companies. The two companies operationalize the pricing of the cap/kit differently,

however the price is ultimately similar. For example, one company invoices the total cost of the cap/kit upfront for $1800. The other company breaks down the total cost of the cap/kit over the time period a patient receives treatments. More specifically, they invoice $250 to get the actual cap/kit and then charge a rate ($265-$300) per treatment (what they refer to as a treatment card). For 6 sessions the cap/kit fee works out to be $1840-$2050. The specialty society inserted the lower of the two company costs, $1800, in the spreadsheet.

Note: A patient uses one cap for their set of chemotherapy infusions. The cap is not reuseable (by another patient) as the caps are considered medical waste after use by the patient. This is due to the close skin contact and extended period of exposure to the chemotherapy during the time the caps are worn.

Contents of the Scalp Cooling Cap/Kit:

- Cooling wrap (inner cap)
- Thermal cap (outer cap to insulate)
- Chin strap
- Headband (water resistant high tech material to protect skin from frostbite)
- Spray bottle for wetting hair
- Wet hairbrush

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

New Equipment Item: Scalp Cooling System

There are currently two companies providing this service. Invoices attached from both companies. Both companies lease the machines to practices. Invoices vary from $250-$300 a month. The specialties included $3000 on the PE spreadsheet. That represents the lower of the two monthly amounts ($250) times 12 (months) and recommend assigning a useful life of one year.

Contents of Scalp Cooling System:

- Machine
- Connector hoses

- Liquid Coolant

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

1 year useful life

Note: There are three other items in the CMS equipment list that have 1 year useful life EQ354, ER044, ER060

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

The "other equipment formula" was used for the chair and the cooling system.

The specialty societies are recommending 30 minutes for the chair and the scalp cap cooling system to align with the CPT guidelines.

New CPT Guidelines
Mechanical scalp cooling is reported using 97008 once per chemotherapy session. Initiation of 97008 begins 30 minutes prior to each chemotherapy administration when scalp cooling is performed and concludes when the chemotherapy administration session and post chemotherapy monitoring is completed. Periodic patient monitoring and management of scalp cooling during chemotherapy is included in the chemotherapy administration service and is not separately reported.

Code 97009 should be reported for the continuation of scalp cooling provided after chemotherapy has been completed and will vary depending on the duration of the chemotherapy regimen. Code 97009 is reported once for each 30 minutes of scalp cooling provided upon discontinuation of the chemotherapy infusion. Do not report 97009 for scalp cooling of less than 16 minutes.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

CPT CODE(S): 97007, 97008, 97009
SPECIALTY SOCIETY(IES): ASCO
PRESENTER(S): Elizabeth Blanchard, MD & Arturo Loaiza-Bonilla, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The specialty society recommended 2 minutes for CA009 "Greet patient, provide gowning, ensure appropriate medical records are available" because the patient does not change into a gown.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

The PE subcommittee removed 2 minutes from CA021 for 97009. The stated reason was that there would not be the first 3 minutes of 1:1 included in 97008 for 97009.

The PE subcommittee removed the equipment inputs from the recommendations. The stated reason was that any equipment leased would be captured under the indirect practice expense portion of CMS' current practice expense methodology.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: New Technology/New Services and Different Performing Specialty from Survey

January 2025

Remote Monitoring – Tab 20

In April 2022, the RUC identified code 99457 *Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes* as part of a Relativity Assessment Workgroup (RAW) screen for services that were surveyed by one specialty but are now typically performed by a different specialty. In September 2022, the RAW reviewed an action plan on this service and recommended the service be reviewed in two years (2021-2022 data) after utilization stabilized following the pandemic. In April 2024, the RAW noted that 99457, along with the codes 99453, 99454 and 99458 were on the new technology/new services list for review. The specialty societies indicated that a CPT code change application (CCA) was submitted for May 2024 to review remote physiologic monitoring (RPM) and remote therapeutic monitoring (RTM) codes (which may require surveying of these codes) and to refer this issue to CPT Assistant regarding correct coding of this family of services. The RAW recommended that this code family be reviewed at the next RAW meeting in September 2024, to summarize what has occurred at the CPT Editorial Panel. The RAW noted that if this family were not addressed via the upcoming CPT process, the RAW should discuss when it would be surveyed. In September 2024, the RAW noted that a CCA for remote monitoring was reviewed at the September 2024 CPT meeting, which included codes 99453-99458. The RUC noted that 99453-99458 needed to be surveyed because the utilization of 99457 significantly increased and the primary specialties who perform these services did not participate in the original survey.

In September 2024, the CPT Editorial Panel added one code and made code revisions to report RPM device supply for 2-15 days and 16-30 days within a 30-day period to report RPM parameters; created one new code and code revisions to report RPM treatment management services for the first 10 minutes, first 20 minutes, and each additional 20 minutes thereafter; added three RTM device supply codes to report respiratory, musculoskeletal and cognitive behavioral therapy for 2-15 days and 16-30 days within a 30-day period; created one new code and made code revisions to report RTM treatment management services for the first 10 minutes, first 20 minutes, and each additional 20 minutes thereafter; and revised the "Digitally Stored Data Services/Remote Physiologic Monitoring" guidelines, "Remote Physiologic Monitoring Treatment Management Services" guidelines, "Remote Therapeutic Monitoring Services" guidelines, and the "Remote Therapeutic Monitoring Treatment Management Services" guidelines.

Remote Physiologic Monitoring (RPM)

Remote physiologic monitoring (RPM) represents the remote monitoring of parameters such as weight, blood pressure and pulse oximetry for the purposes of monitoring a patient's condition to inform their management. CPT codes 99453, 99445 and 99454 are practice expense only codes that describe remote monitoring of physiologic parameters for the initial set up, daily recordings or programmed alerts transmissions for 2-15 days and 16-30 days. Additionally, CPT code 99473 is a practice expense only code for self-measured blood pressure using a validated device with patient education/training and device calibration.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT codes 99091, 99474, 99470, 99457 and 99458 are all services that require physician work. When these services were surveyed for the January 2025 RUC meeting, the survey response threshold was not met. CPT codes 99091 and 99474 are performed under 100,000 times in the Medicare population, therefore 30 responses are required and CPT codes 99470, 99457 and 99458 are performed over 1 million times in the Medicare population and at least 75 responses are required. The RUC's policy is that surveys below the established thresholds for services with Medicare claims greater than 100,000 will be reviewed as interim and specialty societies will need to resurvey for the next meeting. These minimum survey thresholds apply to both existing codes and any new codes with estimated Medicare claims of these amounts. However, the RUC discussed and agreed that conducting another survey immediately would most likely not produce a better result. Also, the dominant specialties continue to fluctuate. **The RUC recommends that CPT codes 99091, 99474, 99470, 99457 and 99458 be resurveyed after one year of utilization data is available for this CPT 2026 code structure. All RPM codes will be reviewed at the January 2028 RUC meeting.**

99091 ***Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days***
The RUC reviewed the survey results from 28 physicians and nurse practitioners and determined the survey 25th percentile work RVU of 0.70 appropriately accounts for the work typically required to perform this service. This code is a time-based code requiring a minimum of 30 minutes of physician or other qualified health care professional time over a 30-day period and may not be reported if 30 minutes is not met. The RUC agreed that the intra-service time for this code should be modified to be 30 minutes as the CPT descriptor clearly states that the physician must spend a minimum of 30 minutes to report this service. The RUC recommends 30 minutes of intra-service and total time.

The RUC compared the surveyed code to the top key reference code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30, 20 minutes intra-service time and 30 minutes total time) and determined although these services require the same amount of total time, the surveyed code is much less intense and complex to perform, therefore appropriately valued lower. The RUC compared the surveyed code to the second top key reference service 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70, 11 minutes intra-service time and 16 minutes total time) and determined these services require the same physician work to perform, thus are valued the same.

For additional support, the RUC referenced MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report (eg, Gibbons or double-J type)* (work RVU = 0.70, 15 minutes intra-service time and 20 minutes total time) and 93015 *ardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time and 26 minutes total time), both which require similar physician work and time to perform. The RUC determined that the survey 25th percentile work value of 0.70 appropriately places CPT code 99091 relative to other services in the Medicare Physician Payment Schedule (MFS) based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.70 for CPT code 99091.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99474 ***Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient***

The RUC reviewed the survey results from 28 physicians and nurse practitioners and determined the current value of 0.18 appropriately accounts for the work typically required to perform this service. The specialty societies indicated that the service has not changed and there was not compelling evidence that the physician work has increased. The RUC noted that the new survey times result in a negative IWPUT. Therefore, the RUC recommends the current time of 3 minutes pre-service evaluation time, 5 minutes intra-service time and 2 minutes immediate post-service time.

The RUC compared the surveyed code to MPC codes 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (work RVU = 0.17, 3 minutes intra-service time and 6 minutes total time) and 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVU = 0.18, 5 minutes intra-service time and 7 minutes total time), which require similar physician work and time to perform. The RUC determined that the current work value of 0.18 appropriately places CPT code 99474 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.18 for CPT code 99474.**

99470 ***Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring 1 real-time interactive communication with the patient/caregiver during the calendar month; first 10 minutes***

The RUC reviewed the survey results from 17 physicians and determined the survey 25th percentile work RVU of 0.39 appropriately accounts for the work required typically to perform this service. The RUC recommends 10 minutes intra-service and total time. The RUC noted that this time-based code is reported when the clinical staff, physician and/or QHP have collectively spent 10-19 minutes performing RPM treatment management services for a patient in a calendar month. This code may not be reported if the service is performed for less than 10 minutes in a calendar month. RPM treatment management services have distinct reporting rules from RTM treatment management services. RTM treatment management services are also time-based codes, however, unlike RPM, their reporting is only based on physician or QHP time. A separate question was included in the survey asking, "*How much CLINICAL STAFF time (ie RN, LPN, MTA) is required per patient treated for each of the following steps in patient care related to this service?"* For CPT code 99470 the median clinical staff time was 9 minutes. The physician/QHP time of 10 minutes, plus the 9 minutes of clinical staff time, totals 19 minutes, which appropriately fits in the coding structure for this code requiring less than 20 minutes. Whereas CPT code 99457 would be reported for RPM requiring 20-39 minutes.

The RUC compared the surveyed code to the top key reference code 99422 *Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes* (work RVU = 0.50, 15 minutes intra-service and total time) and determined that the surveyed code requires less physician time and therefore is appropriately valued lower. The RUC compared the surveyed code to the second top key reference service 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.39, 8 minutes intra-service and 15 minutes total time) and determined these services require the same physician work to perform, with the surveyed code requiring less total time but being slightly more intense and complex.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support the RUC referenced MPC codes 71111 *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (work RVU = 0.32, 7 minutes intra-service time and 9 minutes total time) and 92250 *Fundus photography with interpretation and report* (work RVU = 0.40, 10 minutes intra-service time and 12 minutes total time) both which bracket the surveyed code and is comparable for physician work and time. The RUC determined that the survey 25th percentile work RVU of 0.39 appropriately places CPT code 99470 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.39 for CPT code 99470.**

99457 ***Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring 1 real-time interactive communication with the patient/caregiver during the calendar month; first 20 minutes***
The RUC reviewed the survey results from 22 physicians and determined the survey 25th percentile work RVU of 0.45 appropriately accounts for the work typically required to perform this service. The RUC recommends 14 minutes intra-service and total time. The RUC noted that this time-based code is reported when the clinical staff, physician and/or QHP have collectively spent 20-39 minutes performing RPM treatment management services for a patient in a calendar month. This code may not be reported if the service is performed for less than 20 minutes in a calendar month. RPM treatment management services have distinct reporting rules from RTM treatment management services. RTM treatment management services are also time-based codes, however, unlike RPM, their reporting is only based on physician or QHP time. A separate question was included in the survey asking, "*How much CLINICAL STAFF time (ie RN, LPN, MTA) is required per patient treated for each of the following steps in patient care related to this service?"* For CPT code 99457 the median clinical staff time was 20 minutes. The physician/QHP time of 14 minutes, plus the 20 minutes of clinical staff time, totals 34 minutes, which appropriately fits in the coding structure requiring 20-39 minutes to report.

The RUC compared the surveyed code to the top key reference code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30, 20 minutes intra-service time and 30 minutes total time) and determined that the surveyed code requires less physician work and time and therefore is appropriately valued lower. The RUC compared the surveyed code to the second top key reference service 99422 *Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes* (work RVU = 0.50, 15 minutes intra-service and total time) and determined that the surveyed code requires similar physician work and time, thus is appropriately valued similarly.

For additional support the RUC referenced MPC codes 76857 *Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)* (work RVU = 0.50, 7 minutes intra-service time and 17 minutes total time), and 92250 *Fundus photography with interpretation and report* (work RVU = 0.40, 10 minutes intra-service time and 12 minutes total time) both of which bracket the surveyed code and are comparable for physician work and time. The RUC determined that the survey 25th percentile work RVU of 0.45 appropriately places CPT code 99457 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.45 for CPT code 99457.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

99458 ***Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring 1 real-time interactive communication with the patient/caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 18 physicians and determined the survey 25th percentile and current work RVU of 0.61 appropriately accounts for the work typically required to perform this service. The RUC recommends 16 minutes intra-service and total time. This code is a time-based code requiring a minimum of an additional 20 minutes and may not be reported if 20 minutes is not met. For example, the first unit of this add-on code cannot be reported until at least 40 minutes of RPM treatment management has been performed (99457 X 1 unit, 99458 X 1 unit). The RUC noted that this code includes the work of not only a physician and QHP but also clinical staff. A separate question was included in the survey asking, "*How much CLINICAL STAFF time (ie RN, LPN, MTA) is required per patient treated for each of the following steps in patient care related to this service?"* For CPT code 99458 the median clinical staff time was 19 minutes. The RUC also noted that the median reporting for this code is once per claim according to the 2023 Medicare claims data. The physician/QHP time of 16 minutes, plus the 19 minutes of clinical staff time, totals 35 minutes, which appropriately fits in the coding structure requiring an additional 20-39 minutes to report after the first 20 minutes (99457). The RUC agreed that this add-on code 99458 for each additional 20 minutes is slightly more intense and complex than the base code 99457 because these patients are more complex and have multiple co-morbidities requiring the physician/QHP typically to spend more time to manage.

The RUC compared the surveyed code to the top key reference code 99437 *Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 30 minutes by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)* (work RVU = 1.00, 30 minutes of intra-service and total time) and determined that the surveyed code requires less physician work and time and therefore appropriately valued lower. The RUC compared the surveyed code to the second top key reference service 99439 *Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)* (work RVU = 0.70, 20 minutes intra-service and total time) and determined that the surveyed code requires slightly less physician work to perform, thus appropriately valued lower.

For additional support the RUC referenced MPC codes 77002 *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)* (work RVU = 0.54, 15 minutes intra-service time and 17 minutes total time), and 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)* (work RVU = 0.80, 15 minutes intra-service time and total time) both of which bracket the surveyed code and are comparable for physician work. The RUC determined that the survey 25th percentile work RVU of 0.61 appropriately places CPT code 99458 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.61 for CPT code 99458.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

Practice Expense - RPM
The Practice Expense (PE) Subcommittee considered and approved compelling evidence for the existing RPM codes, such as CPT code 99454, based on changes in technology, given the proliferation of vendors, and change in specialty as internal medicine is now the primary provider.

The PE Subcommittee reviewed the direct practice expenses for the RPM services and made a single modification to CPT code 99445 to reduce the equipment minutes by half from 43,200 to 20,160, based on the number of days 99445 is performed (2 to 15 days, not a full 30 days as with code 99454). The PE Subcommittee agreed with renaming equipment package EQ392 ~~*heart failure*~~ *patient physiologic monitoring equipment package.* Additionally, for 99445 and 99454, a new supply item was added for *digital remote physiologic monitoring device app,* for which an invoice was submitted for $6.62 per patient. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

Work Neutrality for RPM
The RUC's recommendation for the remote physiologic monitoring codes 99453, 99445, 99454, 99091, 99473, 99474, 99470, 99457 and 99458 will result in overall work savings that should be redistributed back to the Medicare conversion factor.

New Technology/New Services - RPM
The use of RPM services continue to fluctuate in terms of the specialties who report and the monitoring that occurs. All the codes in this family would be considered new technology. Since CPT has split out the services it is unclear which technologies are used for each code based on the specific durations. It is also unclear who is predominantly providing these services. The RPM family of services will be placed on the New Technology list and resurveyed and reviewed by the RUC at the January 2028 meeting.

RUC Flag
The RUC notes that it will flag remote physiologic monitoring codes 99453, 99445, 99454, 99091, 99473, 99474, 99470, 99457 and 99458 as do not use to validate physician work in the RUC database due to the low survey response. These services will be resurveyed for the January 2028 RUC meeting.

Remote Therapeutic Monitoring (RTM)

Remote therapeutic monitoring (RTM) represents the monitoring of adherence to at-home therapeutic interventions. RTM can be provided for a variety of conditions, and there are distinct device supply codes which are PE only that have been created for three types of therapeutic monitoring currently respiratory system, cognitive behavioral therapy and musculoskeletal system monitoring.

CPT codes 98975, 98984, 98976, 98985 and 98977 are practice expense only codes that describe remote therapeutic monitoring for the initial setup and device supply for data access or data transmissions for 2-15 days and 16-30 days for monitoring both the respiratory system (98984 & 98876) and musculoskeletal system (98985 and 98977). Additionally, CPT codes 98986 and 98978 are practice expense only codes for device supply for data access or data transmissions for 2-15 days and 16-30 days for monitoring of cognitive behavioral therapy. Codes 98986 and 98978 are reported primarily by non-MD/DOs and, therefore, were reviewed separately by the Health Care Professionals Advisory Committee (HCPAC) Review Board.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT codes 98979, 98980 and 98981 are RTM treatment management services that describe physician or other qualified health care professional work for the first 10 minutes, first 20 minutes and each additional 20 minutes. These services were surveyed for January 2025, and each met the survey threshold of at least 30 responses. RTM treatment management services have distinct reporting rules from RPM treatment management services. RTM treatment management services are time-based codes, however, unlike RPM, their reporting is only based on physician or QHP time

RTM technology treatment data is collected and analyzed asynchronously by a physician or QHP and additional treatment decisions are provided through at least one real-time communication as an adjunct to in-person care. RTM is provided to patients who might need extra support and asynchronous oversight in between in-person physical therapy visits to progress their self-management program. The specialty societies noted that the application used for these services is not an exercise app, but a therapy delivery app providing data regarding how the therapy is progressing and the physician/QHP is making decisions about how to modify therapy based on that data**.**

Compelling Evidence
The specialty societies indicated compelling evidence that there has been a change in physician/QHP work due to a change in patient population resulting from a diffusion of technology of the procedure in physical therapy. It is supported by the change in the performance rate of the service between the 2021 survey and the 2024 survey, as well as the change in the vignette which is supported by the survey results.

Change in Population
When the RTM codes were originally surveyed in 2021, an asthmatic patient was described as the typical patient in the vignette, primarily connected to the codes for respiratory therapy monitoring. However, these vignettes were found to be typical by less than 50% of survey respondents in 2021. The vignettes for 98980 and 98981 were updated for the 2024 survey to reflect the typical patient being a musculoskeletal/osteoarthritis patient. 100% of survey respondents found these vignettes to be typical. The specialty societies noted that the low support for the vignettes in 2021 suggests an additional compelling argument that incorrect assumptions were made in the previous valuation of the service. The RUC noted that these services continue to change and fluctuate on the dominant providers shifting between physical therapy and family medicine/internal medicine. Additionally, the top diagnoses have changed and reflect musculoskeletal issues.

Diffusion of Technology
Since 2021, there has been a diffusion of RTM technology, primarily in physical therapy practice. In 2021, these codes were added to the new technology list, and since that time the service has been embraced by physical therapy as a result of the increased availability of the technology and a positive response by patients to incorporate this procedure into the rehabilitative process. Rates of experience for these services were very low in the 2021 survey, with the median performance rate of 1 for 98980 and the median rate of 0 for 98981. In the new survey, these performance rates increased to a median experience rate of 10 for 98980 and 4 for 98981. This suggests the services have been more widely adopted, primarily by physical therapy.

The RUC agreed with the specialty societies that there is compelling evidence that the patient population has changed and there has been a diffusion of technology for the RTM services.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

98979 ***Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month; first 10 minutes***
The RUC reviewed the survey results from 32 physical medicine and rehabilitation physicians and physical therapists and determined the survey 25th percentile work RVU of 0.66 appropriately accounts for the work required to perform this service. The RUC recommends 16 minutes intra-service and total time. The RUC noted that this time-based code is reported when the physician or QHP has spent 10-19 minutes performing RTM treatment management services for a patient in a calendar month. This code may not be reported if the service is performed for less than 10 minutes in a calendar month.

The RUC compared the surveyed code to the top key reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70, 11 minutes intra-service time and 16 minutes total time) and determined that the surveyed code requires slightly less physician work and thus is appropriately valued lower. The RUC compared the surveyed code to the second top key reference service 99451 *Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician or other qualified health care professional, including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 minutes or more of medical consultative time* (work RVU = 0.70, 15 minutes intra-service and 23 minutes total time) and determined that the surveyed code requires slightly less physician work and time to perform, thus is appropriately valued lower.

For additional support the RUC referenced MPC codes 85060 *Blood smear, peripheral, interpretation by physician with written report* (work RVU = 0.45, 12 minutes intra-service time and total time) and 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report (eg, Gibbons or double-J type)* (work RVU = 0.70, 15 minutes intra-service time and 20 minutes total time), both which bracket the surveyed code and is comparable for physician work and time. The RUC determined that the survey 25th percentile work RVU of 0.66 appropriately places CPT code 98979 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.66 for CPT code 98979.**

98980 ***Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month; first 20 minutes***
The RUC reviewed the survey results from 32 physical medicine and rehabilitation physicians and physical therapists and determined that survey 25th percentile work RVU of 0.78 appropriately accounts for the work required to perform this service. The RUC recommends 24 minutes intra-service and total time. The RUC noted that this time-based code is reported when the physician or QHP has spent 20-39 minutes performing RTM treatment management services for a patient in a calendar month.

The RUC compared the surveyed code to the top key reference code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30, 20 minutes intra-service time and 30 minutes total time) and determined that the surveyed code requires less physician work and time and therefore appropriately valued lower. The RUC

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

compared the surveyed code to the second top key reference service 99451 *Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician or other qualified health care professional, including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 minutes or more of medical consultative time* (work RVU = 0.70, 15 minutes intra-service and 23 minutes total time) and determined that the surveyed code requires slightly more physician work and time to perform, thus is appropriately valued higher.

For additional support the RUC referenced MPC codes 92083 *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (work RVU = 0.50, 10 minutes intra-service time and 13 minutes total time), and 95972 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional* (work RVU = 0.80, 23 minutes intra-service time and 36 minutes total time) both which bracket the surveyed code and is comparable for physician work and time. The RUC determined that the survey 25th percentile work RVU of 0.78 appropriately places CPT code 98980 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.78 for CPT code 98980.**

98981 ***Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 32 physical medicine and rehabilitation physicians and physical therapists and determined the survey 25th percentile work RVU of 0.70 appropriately accounts for the work required to perform this service. The RUC recommends 20 minutes intra-service and total time for this add-on code.

The specialty societies noted and the RUC agreed that the physician work for 98981 requires more work and is slightly more intense than the base code 98980, because the typical patient who needs this service is a more complicated patient or a patient who is not coming into the office as frequently for in-person care, therefore needs to have more remote communication with the provider to manage their conditions.

The RUC compared the surveyed code to the top key reference service 99439 *Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)* (work RVU = 0.70, 20 minutes intra-service and total time) and determined that these services require the same physician work and time to perform, thus are valued the same. Patients receiving 98981 have chronic conditions and comorbidities, management of providing 98981 includes consideration of those chronic conditions and comorbidities. The RUC compared the surveyed code to the second top key reference code 99437 *Chronic care management services with the following required elements:*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 30 minutes by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure) (work RVU = 1.00, 30 minutes of intra-service and total time) and determined that the surveyed code requires less physician work and time and therefore appropriately valued lower.

For additional support the RUC referenced MPC codes 77002 *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)* (work RVU = 0.54, 15 minutes intra-service time and 17 minutes total time), and 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)* (work RVU = 0.80, 15 minutes intra-service time and total time) both which bracket the surveyed code and is comparable for physician work. The RUC determined that the survey 25th percentile work RVU of 0.70 appropriately places CPT code 99458 relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 0.70 for CPT code 98981.**

Practice Expense - RTM
The Practice Expense (PE) Subcommittee considered and approved compelling evidence for the existing RTM codes based on change in technology (diffusion of knowledge) and change in patient population as evidenced by the updated vignette.

The PE Subcommittee reviewed the practice expense for the RTM codes and made several modifications. For CPT code 98975, the Subcommittee eliminated post-service clinical staff time CA037 *Conduct patient communications*. Additionally, CA037 was reduced by half to 10 minutes for 98979, 15 minutes for 98980 and 5 minutes for 98981. The patient communication inputs were reduced on the basis of the physical therapy sessions overlap with performing the RTM services. Supply item SJ056 *Thera-bands (6-in width)* was removed from CPT code 98975 because it is duplicative of the thera-bands available for the physical therapy sessions. Additionally, for CPT code 98975, based on the invoice provided, the specialty societies recommend a new supply item, *remote musculoskeletal therapy monitoring program enrollment fee*. This fee is a unique one-time fee per patient regardless of the duration on the RTM program. The fee is invoiced at $10 per patient. For 98985 and 98977, based on the invoice provided, the specialty societies recommend a new remote musculoskeletal therapy monitoring monthly supply fee of $45. This fee covers the use of the RTM technology per patient for 30 days. Finally, the PE Subcommittee recommends that 98984 and 98976 be contractor-priced as requested by the specialties. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology/New Services - RTM
The RTM services continue to fluctuate. All the codes in this family would be considered new technology (98975, 98984, 98976, 98985, 98977, 98979, 98979, 98980 and 98981). Since CPT has split out the services, it is unclear which technologies are used for each code based on the specific durations. It is also unclear who is predominantly providing these services. The RTM family of services will be placed on the New Technology list to be reviewed after three years of data are available (April 2030).

RUC Flag - RTM

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC indicated that it would flag the remote therapeutic monitoring codes 98975, 98984, 98976, 98985, 98977, 98979, 98979, 98980 and 98981 as do not use to validate physician work in the RUC database due to vignette issues due to the uncertainty on who is predominantly providing these services. These services will be reviewed for this flag and via the new technology/new services list after three years of data are available (April 2030).

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Non-Face-to-Face Services** **Digitally Stored Data Services/Remote Physiologic Monitoring** Codes 99453, 99445, ~~and~~ 99454 are used to report remote physiologic monitoring services (eg, weight, blood pressure, pulse oximetry) during a 30-day period. To report 99453, 99445, 99454, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Code 99453 may be used to report the set-up and patient education on use of the device(s). Codes 99445, 99454 may be used to report supply of the device for daily recording or programmed alert transmissions. Codes 99453, 99445 are not reported if monitoring is less than 2 days in a 30-day period. Code 99445 may be used to report supply of the device for daily recording or programmed alert transmissions from 2 days up to 15 days in a 30-day period. Code 99454 may be reported for device supply when monitoring services are provided for at least 16 days up to 30 days in a 30-day period. Code~~s 99453,~~99454 ~~are~~is not reported if monitoring is less than 16 days in a 30-day period. Do not report 99453, 99445, 99454 when these services are included in other codes for the duration of time of the physiologic monitoring service (eg, 95250 for continuous glucose monitoring requires a minimum of 72 hours of monitoring). Do not report 99091 for time in the same calendar month when used to meet the criteria for care plan oversight services (99374, 99375, 99377, 99378, 99379, 99380), remote physiologic monitoring services (99470, 99457, 99458), or personally performed chronic or principal care management (99424, 99425, 99426, 99427, 99437, 99491). Do not report 99091 if other more specific codes exist (eg, 93227, 93272 for cardiographic services; 95250 for continuous glucose monitoring). Do not report 99091 for transfer and interpretation of data from hospital or clinical laboratory computers. Code 99453 is reported for each episode of care. For coding remote monitoring of physiologic parameters, an episode of care is defined as beginning when the remote monitoring physiologic service is initiated, and ends with attainment of targeted treatment goals.				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Remote Physiologic Monitoring Treatment Management Services

Remote physiologic monitoring treatment management services are provided when clinical staff/physician/other qualified health care professional use(s) the results of remote physiological monitoring to manage a patient under a specific treatment plan. To report remote physiological monitoring, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Do not use 99470, 99457, 99458 for time that can be reported using codes for more specific monitoring services. Codes 99470, 99457, 99458 may be reported during the same service period as chronic care management services (99437, 99439, 99487, 99489, 99490, 99491), principal care management services (99424, 99425, 99426, 99427), transitional care management services (99495, 99496), and behavioral health integration services (99484, 99492, 99493, 99494). However, time spent performing these services should remain separate and no time should be counted twice toward the required time for any services in a single month. Codes 99470, 99457, 99458 requires one~~a live~~ real-time, interactive communication with the patient/caregiver. The interactive communication contributes to the total time, but it does not need to represent the entire cumulative reported time of the treatment management service. For the first completed 10~~20~~ minutes of clinical staff/physician/other qualified health care professional time in a calendar month report 99470~~99457.,~~For the first completed 20 minutes of clinical staff/physician/other qualified health care professional time in a calendar month report 99457 and report 99458 for each additional completed 20 minutes. Do not report 99470 for services of less than 10 minutes, 99457 for services less than 20 minutes or 99458 for additional services of less than 20 minutes. Report 99470 or 99457 one time regardless of the number of physiologic monitoring modalities performed in a given calendar month.

To report remote therapeutic monitoring treatment management services provided by physician or other qualified health care professional, see 98979, 98980, 98981.

Time Spent in a Calendar Month for Remote Physiologic Monitoring Treatment Management Services	**CPT Code(s) Reported**
0-9 minutes	Not reported separately
10-19 minutes	99470 X 1
20-39 minutes	99457 X 1
40-59 minutes	99457 X 1, 99458 X 1
60 minutes or more	99457 X 1, 99458 X 2 or more for each additional 20 minutes

Medicine
Cardiovascular
Cardiovascular Monitoring Services

#93241 *External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*

#93242 *recording (includes connection and initial recording)*

#93243 *scanning analysis with report*

#93244 *review and interpretation*

(Do not report 93241, 93242, 93243, 93244 in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93245, 93246, 93247, 93248, 93268, 93270, 93271, 93272, 99091, 99453, 99445, 99454, *0937T, 0938T, 0939T, 0940T,* for the same monitoring period)

#93245 *External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*

#93248 *review and interpretation*

(Do not report 93245, 93246, 93247, 93248 in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93241, 93242, 93243, 93244, 93268, 93270, 93271, 93272, 99091, 99453, 99445, 99454, *0937T, 0938T, 0939T, 0940T,* for the same monitoring period)

Implantable, Insertable, and Wearable Cardiac Device Evaluations

93297 *Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional*

(Do not report 93297 in conjunction with 93264, 93290, 93298, 99091, 99445, 99454)

93298 *subcutaneous cardiac rhythm monitor system, including analysis of recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional*

(Do not report 93298 in conjunction with 33285, 93291, 93297, 99091, 99445, 99454)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Health Behavior Assessment and Intervention

★◀*96156* *Health behavior assessment, or re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making)*

★◀✚*96159* *each additional 15 minutes (List separately in addition to code for primary service)*

(Do not report 96158, 96159 for service time reported in conjunction with 98975, 98986, 98978)

Non-Face-to-Face Nonphysician Services
Remote Therapeutic Monitoring Services

Remote therapeutic monitoring services (eg, musculoskeletal system status, respiratory system status, cognitive behavioral therapy, therapy adherence, therapy response) represent the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response. These data may represent objective device-generated integrated data or subjective inputs reported by a patient. These data are reflective of therapeutic responses that provide a functionally integrative representation of patient status.

Codes 98984, 98976, 98985, 98977, 98986, 98978 are used to report remote therapeutic monitoring services during a 30-day period. To report 98975, 98984, 98976, 98985, 98977, 98986, 98978, the service(s) must be ordered by a physician or other qualified health care professional. Code 98975 may be used to report the set-up and patient education on the use of any device(s) utilized for therapeutic data collection *generated through digital monitoring or digital therapy*. Codes 98984, 98976, 98985, 98977, 98986, 98978 may be used to report supply of the device(s) for *data access or data transmissions to support monitoring~~scheduled (eg, daily) recording(s) and/or programmed alert(s) transmissions~~*. To report 98975, 98984, 98976, 98985, 98977, 98986, 98978, the device used must be a medical device as defined by the FDA. *In addition to its monitoring functionality, the device may also provide a therapeutic intervention.* Codes 98975, 98984, 98985, 98986 are not reported if cumulative monitoring is less than 2 days in a 30-day period. Codes ~~98975,~~ 98976, 98977, 98978 are not reported if *cumulative* monitoring is less than 16 days in a 30-day period. Do not report 98975, 98984, 98976, 98985, 98977, 98986, 98978 with other physiologic monitoring services (eg, 95250 for continuous glucose monitoring requiring a minimum of 72 hours of monitoring or 99453, 99445, 99454 for remote monitoring of physiologic parameter[s]).

Code 98975 is reported for each episode of care. For reporting remote therapeutic monitoring parameters, an episode of care is defined as beginning when the remote therapeutic monitoring service is initiated and ends with attainment of targeted treatment goals.

▲98975	DD10	Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); initial set-up and patient education on use of equipment (Do not report 98975 more than once per episode of care) (Do not report 98975 for less than 2~~1~~6 days of cumulative monitoring during the 30-day period)	XXX	PE Only (2025 Work RVU = 0.00)

Remote Therapeutic Monitoring Treatment Management Services

Remote therapeutic monitoring treatment management services are provided when a physician or other qualified health care professional uses the results of remote therapeutic monitoring to manage a patient under a specific treatment plan. To report remote therapeutic monitoring, the service must be ordered by a physician or other qualified health care professional. To report 98979, 98980, 98981, any device used must be a medical device as defined by the FDA. Do not use 98979, 98980, 98981 for time that can be reported using codes for more specific monitoring services. Codes 98979, 98980, 98981 may be reported during the same service period as chronic care management services (99439, 99487, 99489, 99490, 99491), transitional care management services (99495, 99496), principal care management services (99424, 99425, 99426, 99427), behavioral health integration services (99484), psychotherapy services (90832-90853), health behavior assessment and intervention services (96156, 96158, 96159, 96160, 96161, 96164, 96165, 96167, 96168, 96170, 96171), and psychiatric collaborative care services (99492, 99493, 99494). However, time spent performing these services should remain separate and no time should be counted toward the required time for both services in a single month. Codes 98979, 98980, 98981 require at least one real-time interactive communication with the patient or caregiver. The interactive communication contributes to the total time, but it does not need to represent the entire cumulative reported time of the treatment management service. For the first completed 10~~20~~ minutes of physician or other qualified health care professional time in a calendar month, report 98979. For the first completed 20 minutes of physician or other qualified health care professional time in a calendar month, report 98980, and report 98981 for each additional completed 20 minutes. Do not report 98979 for services of less than 10 minutes. Do not report 98980, 98981 for services of less than 20 minutes. Report 98979, 98980 once, regardless of the number of therapeutic monitoring modalities performed in a given calendar month. Do not report 98979 if less than 10 minutes of professional time is spent in a calendar month.

Do not count any time on a day when the physician or other qualified health care professional reports an E/M service (office or other outpatient services [99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215], home or residence services [99341, 99342, 99344, 99345, 99347, 99348, 99349, 99350], inpatient or observation care services [99221, 99222, 99223, 99231, 99232, 99233, 99234, 99235, 99236], inpatient consultations [99252, 99253, 99254, 99255]).

Do not count any time directly related to other reported services (eg, psychotherapy services [90832, 90833, 90834, 90836, 90837, 90838], interrogation device evaluation services [93290], anticoagulant management services [93793], respiratory monitoring services [94774, 94775, 94776, 94777], health behavior assessment and intervention services [96156, 96158, 96159, 96160, 96161, 96164, 96165, 96167, 96168, 96170, 96171], therapeutic interventions that focus on cognitive function services [97129, 97130], adaptive behavior treatment services [97153, 97154, 97155, 97156, 97157, 97158], therapeutic procedures [97110, 97112, 97116, 97530, 97535], tests and measurements [97750, 97755], physical therapy evaluation services [97161, 97162, 97163, 97164], occupational therapy evaluations [97165, 97166, 97167, 97168], orthotic management and training and prosthetic training services [97760, 97761, 97763], medical nutrition therapy services [97802, 97803, 97804], medication therapy management services [99605, 99606, 99607], critical care services [99291, 99292], principal care management services [99424, 99425, 99426, 99427]) in the cumulative time of the remote therapeutic monitoring treatment management service during the calendar month of reporting.

▲98981	DD19	each additional 20 minutes (List separately in addition to code for primary procedure) (Use 98981 in conjunction with 98980) (Do not report 98981 for services of less than an additional increment of 20 minutes)	ZZZ	0.70 (2025 Work RVU = 0.61)

Category III Codes

0604T *Optical coherence tomography (OCT) of retina, remote, patient-initiated image capture and transmission to a remote surveillance center, unilateral or bilateral; initial device provision, set-up and patient education on use of equipment*

0606T *review, interpretation and report by the prescribing physician or other qualified health care professional of remote surveillance center data analyses, each 30 days*

(Do not report 0604T, 0605T, 0606T in conjunction with 99470, 99457, 99458)

0607T *Remote monitoring of an external continuous pulmonary fluid monitoring system, including measurement of radiofrequency-derived pulmonary fluid levels, heart rate, respiration rate, activity, posture, and cardiovascular rhythm (eg, ECG data), transmitted to a remote 24-hour attended surveillance center; set-up and patient education on use of equipment*

(Do not report 0607T in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93264, 93268, 93270,93271, 93272, 93297, 99453, for same monitoring period)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

0608T *analysis of data received and transmission of reports to the physician or other qualified health care professional*

(Do not report 0608T in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93264, 93268, 93270, 93271, 93272, 93297, 99445, 99454, for same monitoring period)

0740T *Remote autonomous algorithm-based recommendation system for insulin dose calculation and titration; initial set-up and patient education*

(Do not report 0740T in conjunction with 95249, 95250, 95251, 98975, 99453)

0741T *provision of software, data collection, transmission, and storage, each 30 days*

(Do not report 0741T in conjunction with 95249, 95250, 95251, 99091, 99445, 99454)

(Do not report 0741T for data collection less than 16 days)

Office-Based Measurement of Mechanomyography and Inertial Measurement Units

0778T *Surface mechanomyography (sMMG) with concurrent application of inertial measurement unit (IMU) sensors for measurement of multi-joint range of motion, posture, gait, and muscle function*

(Do not report 0778T in conjunction with 96000, 96004, 98985, 98975, 98977, 98979, 98980, 98981)

0811T *Remote multi-day complex uroflowmetry (eg, calibrated electronic equipment); set-up and patient education on use of equipment*

0812T *device supply with automated report generation, up to 10 days*

(Do not report 0811T, 0812T in conjunction with 51736, 51741, 99453, 99445, 99454)

●0937T External electrocardiographic recording for greater than 15 days up to 30 days by continuous rhythm recording and storage; including recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional

●0938T recording (including connection and initial recording)

●0939T scanning analysis with report

●0940T review and interpretation by a physician or other qualified health care professional

(Report 0937T, 0938T, 0939T, 0940T for each 30-day period of service)

(Do not report 0938T, 0939T, 0940T in conjunction with 0937T)

Chicago, IL 60611

Dr. Silva,

The American Occupational Therapy Association (AOTA) would like to thank the RVS Update committee (RUC) for the opportunity to offer written comments regarding Tab 20-Remote Monitoring. Remote Therapeutic Monitoring (RTM) services is an evolving technology that occupational therapy practitioners (OTPs), and other provider types, use to monitor therapy adherence and therapeutic response in order to make timely adjustments to treatment plans and reduce the risk of client injury or non-compliance between therapy sessions. It is still an emerging area of practice for OTPs, but one which is anticipated to continue to grow. As such, AOTA has a vested interest in the additions and revisions to the RTM code set and believe that the addition of new codes to represent shorter episodes of device use and qualified health care professional time opens up additional opportunities for adoption, especially for smaller clinics.

We appreciate the opportunity to offer written feedback in support of the developed values for CPT 98979, 98980, and 98981. A committee of our coding advisors, who also have experience with use of RTM services, met to review recommendations. Based on that review, we believe the values selected fit well within rank order and that the selected key reference services accurately reflect similar services currently provided. We support the values recommended by the surveying societies.

Sincerely,

Mary Walsh-Sterup
AOTA HCPAC advisor

Ezequiel Silva III, MD,
Chair, AMA Specialty Society RVS Update Committee
American Medical Association
330 N Wabash Avenue,
Suite 39300
Chicago, IL 60611

Subject: Tab 20 - Remote Monitoring Codes 99453, 99XX4, 99454, 99091, 99473, 99474, 99XX5, 99457, 99458, 98975, 98XX4, 98976, 98XX5, 98977, 98XX7, 98980, 98981

Dear Dr. Silva:

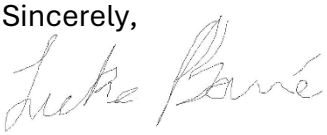
On behalf of the American College of Rheumatology (ACRh) representing over 10,000 rheumatologists and rheumatology interprofessional team members, we are writing in support of the summary of recommendation (SOR) presented to the RUC by the multi-specialty consensus panel based on the survey results. The ACRh Committee on Rheumatologic Care chair along with other members who perform remote therapeutic monitoring reviewed the recommendations and agree with the compelling evidence that meets the change in physician and qualifying health professional (QHP) work as more practices have embraced the utilization of these codes. We believe the recommended values accurately reflect the time, effort, and expertise required to correctly execute proper utilization of the remote monitoring services in daily practice activity and endorse the new values for the RTM codes which will further strengthen their viability and accessibility to providers.

Additionally, the updated family of codes will allow providers to monitor non-physiologic patient data but focuses on the musculoskeletal system status, respiratory system status, therapy adherence/therapy response, and represents the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response. These codes enable real-time tracking of patient progress and medication compliance as well as having patients actively participate in their care by reporting symptoms and/or medication use. This shared responsibility can lead to fostering timely interventions and optimizing treatment plans. The ACRh believes therapeutic monitoring has the potential to improve outcomes through a combination of the following concepts:

- Documenting and tracking of the individualized therapeutic goal for each patient treat to target (TTT)
- Utilization of patient reported outcome (PRO) data to help inform decision making
- Proactive intervention based on PRO data
- Triage based on real-time/real-world data
- Measurement of therapy (medication) adherence and therapy response
- Accurate quantification of PRO by employing validated measures such as disease activity index developed to assess and quantify disease activity in patients with osteoarthritis

Thank you for the opportunity to comment as we believe these codes, and the efficiency they bring, can play a role in mitigating the increasing supply/demand mismatch between provider capacity and patient care needs. By approving these values, the RUC will ensure fair compensation to deliver high-quality, technology driven care and encouraging enhanced patient care.

Sincerely,



Luke Barre, MD
RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99091 Tracking Number DD4 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX Current Work RVU: **1.10** RUC Recommended RVU: **0.70**

CPT Descriptor: Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female patient with poorly controlled hypertension undergoes remote physiologic data collection.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The pre-service period includes chart review regarding patient condition and prior treatment.

Description of Intra-Service Work: The intra-service period includes your review, interpretation, and report of the data digitally stored and/or transmitted by the patient. The intra-service period involves at least one communication (e.g. phone call or e-mail exchange) with the patient to provide medical management and monitoring recommendations.

Description of Post-Service Work: The post-service period includes documenting the service in the patient's medical record and arranging for further services.

Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	37%	50%	13%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	38%	37%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	63%	37%
Physical effort required	37%	38%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	38%	25%	37%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	20%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	60%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	60%	20%	20%
Physical effort required	60%	0%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	60%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

The AMA's Digital Medicine Payment Advisory Group (DMPAG) created the original code change applications (CCAs) for Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM). These codes were developed for physician work of monitoring patients over a month-long period. At the September 2024 CPT

meeting, a CCA was submitted to add to and revise this code set by DMPAG. The resulting changes to the RPM codes included the addition of 1 new physician work code (99470) for monitoring at least 10 minutes but less than 19 minutes; 1 new PE-only code (99445) for data reported 2-15 days by patients' monitoring equipment, and revisions to 99457 and 99458 amending them to address monitoring performed from 16-30 days.

The Relativity Assessment Workgroup (RAW) reviewed this family of codes at the September 2024 RUC meeting under the new technology screen. In preparing their action plan, the societies noticed significant growth in certain codes, notably 99457, which jumped from 55,028 in 2019 to over 1.5 million in 2022. The societies believed practitioners may be incorrectly billing some higher RVU codes when there more appropriate, yet lower RVU codes in existence. For example, while 99457 with a wRVU of 0.61 was billed over 1.5 million times in 2022; 99474 (self-measured blood pressure monitoring) with a wRVU of 0.18 was billed merely 3,436 times in 2022. The societies' action plan recommended education on correct billing of the codes in this family via a *CPT Assistant* article and for the RAW to re-review in 2027. However, the CPT revision to the code set requires the current survey.

Survey Responses Below Minimum Threshold:

The surveys for physician work of the RPM codes did not reach the required minimum threshold per RUC guidelines for any code. The volume-based thresholds, sample sizes, and responses are shown in the table below.

Prior to developing and launching the surveys for RPM, the societies discovered via CMS data that a high concentration of the utilization of these high-volume codes was performed by a relatively small number of practitioners/offices. The societies were concerned that it would potentially be difficult to reach the concentrated group of high utilizers with random samples. This would prove to be a valid concern.

The ACC, AAFP and ACP distributed surveys to random selections of their membership for codes 99470, 99457, and 99458. The ACC, ACP and ANA distributed surveys to random samples of their memberships for codes 99091 and 99474. During the survey period, the sample size was expanded, numerous reminder messages were sent and the deadline for completion was extended several times, up until less than a week before materials were due. The final sample sizes for each code are listed in the table below.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the RAW. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

The societies recommend the RUC make recommendations to CMS based on the collected data, flag the codes as *do not use to validate physician work* in the RUC database and review the codes in three years.

Code	Volume (2022)	Survey Requirement	Final Sample Size	Survey Responses
99470	N/A	30	14,376	17
99457	1,523,232	75	14,376	22
99458	914,988	50	14,376	18
99091	52,368	30	10,571	28
99474	3,532	30	10,571	28

99091:

Survey respondents identified E/M code 99213 as the 1st KRS and E/M code 99212 as the 2nd KRS. The survey

median intra-service time was 10 minutes, a significant reduction from the current intra-service time of 30 minutes. The pre-service survey time matched the current pre-service time of 5 minutes. The post-service survey time was one minute more than current post-service time at 6 minutes.

This time-base code requires a minimum of 30 minutes of physician/QHP time in order to report the service. Relying on median pre, intra, and post-service times produces only 21 minutes of total service time. **Therefore, we recommend the survey 25th percentile work RVU of 0.70 and the 75th percentile intra-service time of 20 minutes.** The 75th percentile time allows the total time for the service to maintain the minimum required time to bill the service of 30 minutes. This arrangement puts the IWPUT and WPUTs of 99091 at 0.023, which is in the same range of the code's current intensity values of 0.029 and 0.028 while accounting for the reduction in time. This recommendation can be further supported by comparison to codes 93015 for supervision and interpretation of a cardiovascular stress test (0.75 RVUs, 2/20/4 service times), 99451 for Interprofessional EHR assessment/consultation (0.70 RVUs, 0/15/8 service times), and 99447 for interprofessional consultation (0.70 RVUs, 3/15/5 service times).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99091

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Sometimes

Specialty Cardiology How often? Sometimes

Specialty Nurse Practitioner How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 211296
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 1/3 of national utilization. Estimate is equal to 3x the 2023 Medicare utlization of 99091.

Specialty Internal Medicine Frequency 64022 Percentage 30.29 %

Specialty Family Medicine Frequency 35920 Percentage 16.99 %

Specialty Cardiology Frequency 28736 Percentage 13.59 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 70,432 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate is equal to the 2023 Medicare utiliztion of 99091

Specialty Internal Medicine Frequency 21340 Percentage 30.29 %

Specialty Family Medicine Frequency 11973 Percentage 16.99 %

Specialty Cardiology Frequency 9578 Percentage 13.59 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99091

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:99474 Tracking Number DD6 Original Specialty Recommended RVU: **0.18**
Presented Recommended RVU: **0.18**
Global Period: XXX Current Work RVU: **0.18** RUC Recommended RVU: **0.18**

CPT Descriptor: Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with repeated office visit measurements of blood pressure (BP) greater than normal or goal. Self-measured BP is ordered.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Physician or qualified healthcare professional (QHP) accesses and reviews the patient's medical record.

Description of Intra-Service Work: Physician or QHP reviews the clinical staff-developed data and report with individual and mean systolic and diastolic blood pressures (BPs) from the recording period. Provides instructions to the clinical staff regarding care plan information to be communicated to the patient.

Description of Post-Service Work: Document analysis and interpretation of results.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

The AMA's Digital Medicine Payment Advisory Group (DMPAG) created the original code change applications (CCAs) for Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM). These codes were developed for physician work of monitoring patients over a month-long period. At the September 2024 CPT

meeting, a CCA was submitted to add to and revise this code set by DMPAG. The resulting changes to the RPM codes included the addition of 1 new physician work code (99470) for monitoring at least 10 minutes but less than 19 minutes; 1 new PE-only code (99445) for data reported 2-15 days by patients' monitoring equipment, and revisions to 99457 and 99458 amending them to address monitoring performed from 16-30 days.

The Relativity Assessment Workgroup (RAW) reviewed this family of codes at the September 2024 RUC meeting under the new technology screen. In preparing their action plan, the societies noticed significant growth in certain codes, notably 99457, which jumped from 55,028 in 2019 to over 1.5 million in 2022. The societies believed practitioners may be incorrectly billing some higher RVU codes when there more appropriate, yet lower RVU codes in existence. For example, while 99457 with a wRVU of 0.61 was billed over 1.5 million times in 2022; 99474 (self-measured blood pressure monitoring) with a wRVU of 0.18 was billed merely 3,436 times in 2022. The societies' action plan recommended education on correct billing of the codes in this family via a *CPT Assistant* article and for the RAW to re-review in 2027. However, the CPT revision to the code set requires the current survey.

Survey Responses Below Minimum Threshold:

The surveys for physician work of the RPM codes did not reach the required minimum threshold per RUC guidelines for any code. The volume-based thresholds, sample sizes, and responses are shown in the table below.

Prior to developing and launching the surveys for RPM, the societies discovered via CMS data that a high concentration of the utilization of these high-volume codes was performed by a relatively small number of practitioners/offices. The societies were concerned that it would potentially be difficult to reach the concentrated group of high utilizers with random samples. This would prove to be a valid concern.

The ACC, AAFP and ACP distributed surveys to random selections of their membership for codes 99470, 99457, and 99458. The ACC, ACP and ANA distributed surveys to random samples of their memberships for codes 99091 and 99474. During the survey period, the sample size was expanded, numerous reminder messages were sent and the deadline for completion was extended several times, up until less than a week before materials were due. The final sample sizes for each code are listed in the table below.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the RAW. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

The societies recommend the RUC make recommendations to CMS based on the collected data, flag the codes as *do not use to validate physician work* in the RUC database and review the codes in three years.

Code	Volume (2022)	Survey Requirement	Final Sample Size	Survey Responses
99470	N/A	30	14,376	17
99457	1,523,232	75	14,376	22
99458	914,988	50	14,376	18
99091	52,368	30	10,571	28
99474	3,532	30	10,571	28

99474:

Survey respondents identified electrocardiographic recording review, report and interpretation code 93224 as the 1st KRS with a wRUV of 0.39 and chronic care management code 99490 as the 2nd KRS with a wRVU of 1.00.

The survey 25th percentile wRVU was 0.47 and the lowest reported wRVU was 0.25. Each of these wRVUs is well above the 99474 current value of 0.18. We do not have a compelling evidence argument to raise the value of this code beyond its current value. **As such, we recommend maintaining the current work RVU of 0.18 with the survey times of 5 minutes pre-service, 10 minutes intra-service, and 5 minutes post-service.** This recommendation can be further supported by comparison to code 71046 for 2 view chest x-ray (0.22 RVUs, 1/4/1 service times) and 76376 for CT 3D rendering interpretation (0.20 RVUs, 3/10/4 service times).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99474

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Sometimes

Specialty Cardiology How often? Sometimes

Specialty Nurse Practitioner How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 12144
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 1/3 of national utilization. Estimate equals 3x the 2023 Medicare utilization of 99474

Specialty Internal Medicine Frequency 8513 Percentage 70.10 %

Specialty Cardiology Frequency 1275 Percentage 10.49 %

Specialty Family Medicine Frequency 1069 Percentage 8.80 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,048
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate equals the 2023 Medicare utilization of 99474

Specialty Internal Medicine Frequency 2838 Percentage 70.10 %

Specialty Cardiology Frequency 425 Percentage 10.49 %

Specialty Family Medicine Frequency 356 Percentage 8.79 %

Do many physicians perform this service across the United States? Yes

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	100%	0%	0%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	100%	0%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	67%	0%
Physical effort required	100%	0%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician	67%	33%	0%

• Estimated risk of malpractice suit with poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	100%	0%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	100%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	67%	0%
Physical effort required	33%	67%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	67%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

The AMA's Digital Medicine Payment Advisory Group (DMPAG) created the original code change applications (CCAs) for Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM). These codes were developed for physician work of monitoring patients over a month-long period. At the September 2024 CPT meeting, a CCA was submitted to add to and revise this code set by DMPAG. The resulting changes to the RPM codes included the addition of 1 new physician work code (99470) for monitoring at least 10 minutes but less than 19 minutes; 1 new PE-only code (99445) for data reported 2-15 days by patients' monitoring equipment, and revisions to 99457 and 99458 amending them to address monitoring performed from 16-30 days.

The Relativity Assessment Workgroup (RAW) reviewed this family of codes at the September 2024 RUC meeting under the new technology screen. In preparing their action plan, the societies noticed significant growth in certain codes, notably 99457, which jumped from 55,028 in 2019 to over 1.5 million in 2022. The societies believed practitioners may be incorrectly billing some higher RVU codes when there more appropriate, yet lower RVU codes in existence. For example, while 99457 with a wRVU of 0.61 was billed over 1.5 million times in 2022; 99474 (self-measured blood pressure monitoring) with a wRVU of 0.18 was billed merely 3,436 times in 2022. The societies' action plan recommended education on correct billing of the codes in this family via a *CPT Assistant* article and for the RAW to re-review in 2027. However, the CPT revision to the code set requires the current survey.

Survey Responses Below Minimum Threshold:

The surveys for physician work of the RPM codes did not reach the required minimum threshold per RUC guidelines for any code. The volume-based thresholds, sample sizes, and responses are shown in the table below.

Prior to developing and launching the surveys for RPM, the societies discovered via CMS data that a high concentration of the utilization of these high-volume codes was performed by a relatively small number of practitioners/offices. The societies were concerned that it would potentially be difficult to reach the concentrated group of high utilizers with random samples. This would prove to be a valid concern.

The ACC, AAFP and ACP distributed surveys to random selections of their membership for codes 99470, 99457, and 99458. The ACC, ACP and ANA distributed surveys to random samples of their memberships for codes 99091 and 99474. During the survey period, the sample size was expanded, numerous reminder messages were sent and the deadline for completion was extended several times, up until less than a week before materials were due. The final sample sizes for each code are listed in the table below.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the RAW. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

The societies recommend the RUC make recommendations to CMS based on the collected data, flag the codes as *do not use to validate physician work* in the RUC database and review the codes in three years.

Code	Volume (2022)	Survey Requirement	Final Sample Size	Survey Responses
99470	N/A	30	14,376	17
99457	1,523,232	75	14,376	22
99458	914,988	50	14,376	18
99091	52,368	30	10,571	28
99474	3,532	30	10,571	28

99470:

Survey respondents identified online E/M code 99422 and electrocardiographic recording review/report and interpretation code 93224 as the key reference services (KRS), each with the same number of respondents. 100% of respondents who chose 99422 noted that the service was less intense/complex than 99470. Meanwhile, 100% of respondents who chose 93224 as the key reference services noted that the service was identical in intensity/complexity to 99470. Similar trends followed for mental effort, physical effort and overall

psychological stress with the majority of respondents finding 99422 requiring less of each and the majority of respondents finding 93224 to be identical. Both KRS codes have total times of 15 minutes. However, 93224 has an intra-service time that is closer to the surveyed code of 8 minutes compared to 99470's 10 minutes of intra-service time.

We recommend the survey 25th percentile work RVU of 0.39 with the survey median of 10 minutes of intra-service time with no pre- or post-service time. The survey 25th percentile wRVU is identical to the wRVU of the KRS 93224 which the majority of respondents choosing noted identical intensity, complexity, mental and physical effort and psychological stress. This recommendation can be further supported by comparison to codes 99446 for a 5-10-minute interprofessional consultation (0.35 RVUs, 3/8/5 service times), 93291 for interrogation of an implantable loop recorder (0.37 RVUs, 5/7/5 service times), and 93227 for interpretation of a 48-hour ECG monitor (0.39 RVUs, 2/8/5 service times).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Cardiology How often? Commonly

Specialty Family Medicne How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 6090471
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represnts 1/3 of national utilization. Estimate is 3x the 2023 utilization for 99457, the 20 minute version of this new code.

Specialty Internal Medicine Frequency 1687060 Percentage 27.69 %

Specialty Cardiology Frequency 1419079 Percentage 23.29 %

Specialty Family Medicine Frequency 1011018 Percentage 16.59 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,030,157 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate is equal to the 2023 Medicare utilization of 99457, the 20 minute version of this new code.

Specialty Internal Medicine Frequency 562353 Percentage 27.69 %

Specialty Cardiology Frequency 473026 Percentage 23.29 %

Specialty Family Medicine Frequency 337006 Percentage 16.59 %

Do many physicians perform this service across the United States? Yes

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99213	XXX	1.30	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99422	XXX	0.50	**RUC Time**

CPT Descriptor Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
92250	XXX	0.40	**RUC Time**	3,262,549

CPT Descriptor 1 Fundus photography with interpretation and report

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
76857	XXX	0.50	**RUC Time**	192,721

CPT Descriptor 2 Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	40%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	60%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	60%	20%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	60%	40%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	50%	25%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	50%	25%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	50%	25%
Physical effort required	50%	25%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	25%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

The AMA's Digital Medicine Payment Advisory Group (DMPAG) created the original code change applications (CCAs) for Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM). These codes were developed for physician work of monitoring patients over a month-long period. At the September 2024 CPT

meeting, a CCA was submitted to add to and revise this code set by DMPAG. The resulting changes to the RPM codes included the addition of 1 new physician work code (99470) for monitoring at least 10 minutes but less than 19 minutes; 1 new PE-only code (99445) for data reported 2-15 days by patients' monitoring equipment, and revisions to 99457 and 99458 amending them to address monitoring performed from 16-30 days.

The Relativity Assessment Workgroup (RAW) reviewed this family of codes at the September 2024 RUC meeting under the new technology screen. In preparing their action plan, the societies noticed significant growth in certain codes, notably 99457, which jumped from 55,028 in 2019 to over 1.5 million in 2022. The societies believed practitioners may be incorrectly billing some higher RVU codes when there more appropriate, yet lower RVU codes in existence. For example, while 99457 with a wRVU of 0.61 was billed over 1.5 million times in 2022; 99474 (self-measured blood pressure monitoring) with a wRVU of 0.18 was billed merely 3,436 times in 2022. The societies' action plan recommended education on correct billing of the codes in this family via a *CPT Assistant* article and for the RAW to re-review in 2027. However, the CPT revision to the code set requires the current survey.

Survey Responses Below Minimum Threshold:

The surveys for physician work of the RPM codes did not reach the required minimum threshold per RUC guidelines for any code. The volume-based thresholds, sample sizes, and responses are shown in the table below.

Prior to developing and launching the surveys for RPM, the societies discovered via CMS data that a high concentration of the utilization of these high-volume codes was performed by a relatively small number of practitioners/offices. The societies were concerned that it would potentially be difficult to reach the concentrated group of high utilizers with random samples. This would prove to be a valid concern.

The ACC, AAFP and ACP distributed surveys to random selections of their membership for codes 99470, 99457, and 99458. The ACC, ACP and ANA distributed surveys to random samples of their memberships for codes 99091 and 99474. During the survey period, the sample size was expanded, numerous reminder messages were sent and the deadline for completion was extended several times, up until less than a week before materials were due. The final sample sizes for each code are listed in the table below.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the RAW. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

The societies recommend the RUC make recommendations to CMS based on the collected data, flag the codes as *do not use to validate physician work* in the RUC database and review the codes in three years.

Code	Volume (2022)	Survey Requirement	Final Sample Size	Survey Responses
99470	N/A	30	14,376	17
99457	1,523,232	75	14,376	22
99458	914,988	50	14,376	18
99091	52,368	30	10,571	28
99474	3,532	30	10,571	28

99457:

Survey respondents identified E/M code 99213 as the 1st KRS and online E/M code 99422 as the second KRS. The

survey median intra-service/total time for this code 14 minutes, a reduction from the current intra-service/total time of 20 minutes.

We recommend the survey 25th percentile work RVU of 0.45 with the survey median intra-service/total time of 14 minutes. The IWPUT and WPUT of the code with the survey 25th percentile of 0.45 wRVU and the intra-service/total time of 14 minutes equals 0.031. This is nearly identical to the IWPUT and WPUT of 0.031 with the current value of 0.61 wRVUs and intra-service/total time of 20 minutes. This recommendation can be further supported by comparison to codes 93244 for interpretation of 2-7 days of external ECG recording (0.50 RVUs, 5/10/5 service times).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99457

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Cardiology How often? Commonly

Specialty Family Medicine How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 6090471
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represnts 1/3 of national utilization. Estimate is 3x the 2023 medicare utilization of 99457.

Specialty Internal Medicine Frequency 1687060 Percentage 27.69 %

Specialty Cardiology Frequency 1419079 Percentage 23.29 %

Specialty Family Medicine Frequency 1011018 Percentage 16.59 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,030,157 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate is equal to the 2023 utilization for 99457

Specialty Internal Medicine Frequency 562353 Percentage 27.69 %

Specialty Cardiology Frequency 473026 Percentage 23.29 %

Specialty Family Medicine Frequency 337006 Percentage 16.59 %

Do many physicians perform this service across the United States? Yes

---

SUMMARY OF RECOMMENDATION

CPT Code:99458 Tracking Number DD9 Original Specialty Recommended RVU: **0.61**
Presented Recommended RVU: **0.61**
Global Period: ZZZ Current Work RVU: **0.61** RUC Recommended RVU: **0.61**

CPT Descriptor: Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring 1 real-time interactive communication with the patient/caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure) (Use 99458 in conjunction with 99457) (Do not report 99457, 99458 in conjunction with 99470) (For remote therapeutic monitoring treatment management services, see 98979, 98980, 98981) (Do not report 99458 for services of less than an additional increment of 20 minutes)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female patient with poorly controlledhypertension undergoes remote physiologic monitoring. [Note: This is anadd-on service. Only consider the additional work related to the additionalphysician or other qualified health care professional staff time beyond the20 minutes reported with code 99457.]

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other qualified health care professional (QHP) interprets the collected data. Based on the interpreted data, the physician or other QHP uses medical decision making to assess the patient's clinical stability, communicates the results to the patient, and oversees the management and/or coordination of services as needed.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

The AMA's Digital Medicine Payment Advisory Group (DMPAG) created the original code change applications (CCAs) for Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM). These codes were developed for physician work of monitoring patients over a month-long period. At the September 2024 CPT

meeting, a CCA was submitted to add to and revise this code set by DMPAG. The resulting changes to the RPM codes included the addition of 1 new physician work code (99470) for monitoring at least 10 minutes but less than 19 minutes; 1 new PE-only code (99445) for data reported 2-15 days by patients' monitoring equipment, and revisions to 99457 and 99458 amending them to address monitoring performed from 16-30 days.

The Relativity Assessment Workgroup (RAW) reviewed this family of codes at the September 2024 RUC meeting under the new technology screen. In preparing their action plan, the societies noticed significant growth in certain codes, notably 99457, which jumped from 55,028 in 2019 to over 1.5 million in 2022. The societies believed practitioners may be incorrectly billing some higher RVU codes when there more appropriate, yet lower RVU codes in existence. For example, while 99457 with a wRVU of 0.61 was billed over 1.5 million times in 2022; 99474 (self-measured blood pressure monitoring) with a wRVU of 0.18 was billed merely 3,436 times in 2022. The societies' action plan recommended education on correct billing of the codes in this family via a *CPT Assistant* article and for the RAW to re-review in 2027. However, the CPT revision to the code set requires the current survey.

Survey Responses Below Minimum Threshold:

The surveys for physician work of the RPM codes did not reach the required minimum threshold per RUC guidelines for any code. The volume-based thresholds, sample sizes, and responses are shown in the table below.

Prior to developing and launching the surveys for RPM, the societies discovered via CMS data that a high concentration of the utilization of these high-volume codes was performed by a relatively small number of practitioners/offices. The societies were concerned that it would potentially be difficult to reach the concentrated group of high utilizers with random samples. This would prove to be a valid concern.

The ACC, AAFP and ACP distributed surveys to random selections of their membership for codes 99470, 99457, and 99458. The ACC, ACP and ANA distributed surveys to random samples of their memberships for codes 99091 and 99474. During the survey period, the sample size was expanded, numerous reminder messages were sent and the deadline for completion was extended several times, up until less than a week before materials were due. The final sample sizes for each code are listed in the table below.

At the January 2018 RUC meeting, the Administrative Subcommittee reviewed the history of low survey responses and determined that the RUC should not automatically recommend contractor pricing for codes that have a low response rate (under 30) but continue its current process and review each unique code set individually. The Administrative Subcommittee recommended and the RUC approved that the RUC flag new Category I services with a survey response below 30 to be reviewed in three years by the RAW. Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision to a Category III code. Reference: AMA/Specialty Society RVS Update Process: Instructions for Specialty Societies Developing Work Value Recommendations

The societies recommend the RUC make recommendations to CMS based on the collected data, flag the codes as *do not use to validate physician work* in the RUC database and review the codes in three years.

Code	Volume (2022)	Survey Requirement	Final Sample Size	Survey Responses
99470	N/A	30	14,376	17
99457	1,523,232	75	14,376	22
99458	914,988	50	14,376	18
99091	52,368	30	10,571	28
99474	3,532	30	10,571	28

99458:

Survey respondents identified chronic care management codes 99437 and 99439 as the key reference services

with an equal number of responses for each. The survey median intra-service/total time for this code is 16 minutes, a reduction from the current intra-service/total time of 20 minutes.

We recommend the survey 25th percentile work RVU of 0.61 with the survey median intra-service/total time of 16 minutes. This wRVU and time produce an IWPUT and WPUT for 99458 of 0.038 which is slightly below the IWPUT and WPUT for KRS 99437 of 0.033. This comports with the fact that the majority of respondents who chose 99437 as the KRS considered 99458 somewhat more intense/complex than 99437. This recommendation can be further supported by comparison to codes 95940 for intraoperative neurophysiology monitoring (0.60 RVUs, 0/15/0 service times) and 77300 for radiation dosimetry calculation (0.62 RVUs, 0/15/0 service times).

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99458

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Cardiology How often? Commonly

Specialty Family Medicine How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 4474737
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represnts 1/3 of national utilization. Estimate is 3x the 2023 Medicare utilization of 99458.

Specialty Internal Medicine Frequency 1257401 Percentage 28.09 %

Specialty Cardiology Frequency 1047088 Percentage 23.39 %

Specialty Family Medicine Frequency 751755 Percentage 16.79 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,491,579 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate is equal to the 2023 Medicare utilization of 99458.

Specialty Internal Medicine Frequency 419133 Percentage 28.09 %

Specialty Cardiology Frequency 349029 Percentage 23.39 %

Specialty Family Medicine Frequency 250585 Percentage 16.79 %

Do many physicians perform this service across the United States? Yes

---

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	27%	55%	18%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	36%	46%	18%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	55%	27%
Physical effort required	46%	36%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	27%	55%	18%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	25%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	0%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	50%	25%
Physical effort required	25%	50%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	25%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

At the September 2024 CPT, the Panel approved a new code, 98979 to describe the first 10 minutes of remote therapeutic monitoring treatment management including at least one patient interaction in a calendar month. This code adds to the existing remote therapeutic monitoring treatment management codes, 98980 and 98981, which describe the first 20 minutes and each additional 20 minutes of treatment management respectively. The American Academy of Physical Medicine and Rehabilitation (AAPM&R) and the American Physical Therapy Association (APTA) both surveyed the code family.

Compelling Evidence

The societies assert that the data from our 2024 survey more accurately reflects how these procedures are currently being performed.

RVU Analysis
A total of 32 survey responses were received. Survey respondents indicated a 25th percentile RVU of 0.66 and a median RVU of 0.75. The key reference service codes selected both have an RVU of 0.70, which fits between the 25th percentile and median survey RVUs. Similarly, MPC code 95251 has an RVU of 0.70 and a similar intra service time of 15 minutes, compared to the surveyed code at 16 minutes.

Given the quality of the survey data, alignment with comparison codes, and rank order alignment with the 25th percentile values for the other two codes in the family, the societies agree the 25th percentile value is well supported and recommend an RVU of 0.66 for code 98979.

Time Analysis
The survey data shows a median intra-service time of 16 minutes with no pre- or post-service time. The societies support the median intra-service time as any treatment management service between 10-19 minutes would appropriately be billed using 98979 according to the chart below which is included in the revised CPT guidelines.

Time Spent in a Calendar Month for Remote Therapeutic Monitoring Treatment Management Services	CPT Code(s) Reported
0-9 minutes	Not reported separately
10-19 minutes	98979 X 1
20-39 minutes	98980 X 1
40-59 minutes	98980 X 1, 98981 X 1
60 minutes or more	98980 X 1, 98981 X 2 or more for each additional 20 minutes

Recommendation
For code 98979, the societies recommend the 25th percentile RVU of 0.66, survey pre-service time of 0 minutes, intra-service time of 16 minutes, post-service time of 0 minutes, for a total time of 16 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97799

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Physical Therapy How often? Sometimes

Specialty Family Medicine How often? Rarely

Specialty Physical Medicine and Rehabilitation How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 20000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate this service may be provided less frequently than the 20 minute code, 98980.

Specialty Physical Therapy Frequency 10000 Percentage 50.00 %

Specialty Family Medicine Frequency 4000 Percentage 20.00 %

Specialty Physical Medicine and Rehabilitation Frequency 3000 Percentage 15.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 97,630 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The societies estimate this service may be provided the same as the 20 minute code, 98980

Specialty Physical Therapy Frequency 24896 Percentage 25.50 %

Specialty Family Medicine Frequency 46277 Percentage 47.40 %

Specialty Physical Medicine and Rehabilitation Frequency 3808 Percentage 3.90 %

Do many physicians perform this service across the United States? No

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	25%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

At the September 2024 CPT, the Panel approved a new code, 98979 to describe the first 10 minutes of remote therapeutic monitoring treatment management including at least one patient interaction in a calendar month. Along with changes to PE-only codes, the addition of 98979 and modifications to codes 98980 and 98981, resulted in a resurvey of the code

family. The American Academy of Physical Medicine and Rehabilitation (AAPM&R) and the American Physical Therapy Association (APTA) both surveyed the code family.

Compelling Evidence

The societies are recommending an increase to the RVUs for codes 98980 and 98981, which necessitates a compelling evidence argument. The societies believe these codes meet the compelling evidence argument of a change in physician/QHP work due to a change in patient population resulting from a diffusion of knowledge of the procedure in physical therapy. It is supported by the change in performance rate of the service between the 2021 survey and the 2024 survey, as well as the change in vignette which is supported by the survey results.

Diffusion of Knowledge

Since 2021, there has been a diffusion of remote therapeutic monitoring technology, primarily in physical therapy practice. In 2021, these codes were added to the new technology list, and since that time the service has been embraced by physical therapy as a result of the increased availability of the technology and a positive response by patients to incorporating this procedure into the rehabilitative process. Rates of experience for these services were very low in the 2021 survey, with the median performance rate of 1 for 98980 and the median rate of 0 for 98981. In the new survey, these performance rates increased to a median experience rate of 10 for 98980 and 4 for 98981. This suggests the services have been more widely adopted, primarily by physical therapy.

Change in Population/Updated Vignette

When the RTM codes were originally surveyed in 2021, an asthmatic patient was described in the vignette, primarily connected to the codes for respiratory therapy monitoring. However, these vignettes were found to be typical by less than 50% of survey respondents in 2021. The vignettes for 98980 and 98981 were updated for the 2024 survey to reflect the typical patient being a musculoskeletal/osteoarthritis patient. 100% of survey respondents found these vignettes to be typical. We also note that the low support for the vignettes in 2021 suggest an additional compelling evidence argument that incorrect assumptions were made in the previous valuation of the service.

The societies assert that the data from our 2024 survey more accurately reflects how these procedures are currently being performed.

RVU Analysis

A total of 32 survey responses were received. Survey respondents indicated a 25th percentile RVU of 0.78 and a median RVU of 1.00. The survey 25th percentile reflects a increase of 0.16 RVU or a 26% increase to the current value of 0.62 RVU, which was established in 2021. We believe this increase is well supported by comparison to the key reference codes and MPC codes.

The 25th percentile value sits between the top two key reference service codes the survey respondents selected.

Code	Descriptor	RVU	Pre	Intra	Post	Total Time
99451	Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a written report to the patient's treating/requesting physician or other qualified health care pforessional, 5 minutes or more of medical consultative time	0.70	0	15	8	23
98980	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month, first 20 minutes	0.78	0	24	0	24
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	1.30	5	20	5	30

The 25th percentile value is also well supported by MPC codes.

Code	Descriptor	RVU	Pre	Intra	Post	Total Time

92083	Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)	0.50	3	10	0	13
98980	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month, first 20 minutes	0.78	0	24	0	24
95972	Electronic analysis of implated neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurstimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional/ with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimultory pulse generator/transmitter programming by physician or other qualified health care professional	0.80	8	23	5	36

Time Analysis
The survey data shows a median intra-service time of 24 minutes with no pre- or post-service time. The societies support the median intra-service time as any treatment management service 20-39 minutes is would appropriately be billed using 98980 according to the chart below which is included in the revised CPT guidelines.

Time Spent in a Calendar Month for Remote Therapeutic Monitoring Treatment Management Services	CPT Code(s) Reported
0-9 minutes	Not reported separately
10-19 minutes	98979 X 1
20-39 minutes	98980 X 1
40-59 minutes	98980 X 1, 98981 X 1
60 minutes or more	98980 X 1, 98981 X 2 or more for each additional 20 minutes

Recommendation
For code 98980, the societies recommend the 25th percentile RVU of 0.78, survey pre-service time of 0 minutes, intra-service time of 24 minutes, post-service time of 0 minutes, for a total time of 24 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 98980

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Physical Therapy How often? Sometimes

Specialty Family Medicine How often? Rarely

Specialty Cardiology How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 76000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based current utilization data (2022) in the AMA RUC Database multiplied times four.

Specialty Physical Therapy Frequency 31160 Percentage 41.00 %

Specialty Family Medicine Frequency 23560 Percentage 31.00 %

Specialty Cardiology Frequency 2584 Percentage 3.40 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 97,630 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on current utilization data (2023) in the AMA RUC database.

Specialty Physical Therapy Frequency 24896 Percentage 25.50 %

Specialty Family Medicine Frequency 46277 Percentage 47.40 %

Specialty Physical Med and Rehab Frequency 3808 Percentage 3.90 %

Do many physicians perform this service across the United States? No

SUMMARY OF RECOMMENDATION

CPT Code:98981 Tracking Number DD19 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: ZZZ Current Work RVU: **0.61** RUC Recommended RVU: **0.70**

CPT Descriptor: Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month, each additional 20 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old female, who has limited mobility caused by osteoarthritis of her knees, is enrolled in a remote therapeutic monitoring program to enable data collection and monitoring to support the therapeutic management of her musculoskeletal condition.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Physician or QHP analyzes and interprets the data. Analysis and interpretation of the data and all patient communications are documented in the patient record. Based on the interpreted data, the physician/QHP uses medical/clinical decision making to assess the patient's condition, communicate with the patient, and oversee, coordinate, and/or modify the patient's care through shared decision making in order to achieve established outcomes/goals of care. Additional time is needed due to the specific needs of the patient's medical condition(s). Any changes to the care plan are documented in the patient record.

Description of Post-Service Work: N/A

Physical effort required	0%	40%	60%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	40%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

At the September 2024 CPT, the Panel approved a new code, 98979 to describe the first 10 minutes of remote therapeutic monitoring treatment management including at least one patient interaction in a calendar month. Along with changes to PE-only codes, the addition of 98979 and modifications to codes 98980 and 98981, resulted in a resurvey of the code family. The American Academy of Physical Medicine and Rehabilitation (AAPM&R) and the American Physical Therapy Association (APTA) both surveyed the code family.

Compelling Evidence

The societies are recommending an increase to the RVUs for codes 98980 and 98981, which necessitates a compelling evidence argument. The societies believe these codes meet the compelling evidence argument of a change in physician/QHP work due to a change in patient population resulting from a diffusion of knowledge of the procedure in physical therapy. It is supported by the change in performance rate of the service between the 2021 survey and the 2024 survey, as well as the change in vignette which is supported by the survey results.

Diffusion of Knowledge

Since 2021, there has been a diffusion of remote therapeutic monitoring technology, primarily in physical therapy practice. In 2021, these codes were added to the new technology list, and since that time the service has been embraced by physical therapy as a result of the increased availability of the technology and a positive response by patients to incorporating this procedure into the rehabilitative process. Rates of experience for these services were very low in the 2021 survey, with the median performance rate of 1 for 98980 and the median rate of 0 for 98981. In the new survey, these performance rates increased to a median experience rate of 10 for 98980 and 4 for 98981. This suggests the services have been more widely adopted, primarily by physical therapy.

Change in Population/Updated Vignette

When the RTM codes were originally surveyed in 2021, an asthmatic patient was described in the vignette, primarily connected to the codes for respiratory therapy monitoring. However, these vignettes were found to be typical by less than 50% of survey respondents in 2021. The vignettes for 98980 and 98981 were updated for the 2024 survey to reflect the typical patient being a musculoskeletal/osteoarthritis patient. 100% of survey respondents found these vignettes to be typical. We also note that the low support for the vignettes in 2021 suggest an additional compelling evidence argument that incorrect assumptions were made in the previous valuation of the service.

The societies assert that the data from our 2024 survey more accurately reflects how these procedures are currently being performed.

RVU Analysis

A total of 32 survey responses were received. Survey respondents indicated a 25th percentile RVU of 0.70 and a median RVU of 0.93. These survey 25th percentile reflects an increase of 0.09 RVU or a 15% increase to the current value 0.61 RVU, which was established in 2021. We believe this increase is well supported by comparison to the key reference codes and MPC codes. As noted in our compelling evidence argument, we believe the current value does not reflect how the service is being performed now.

The 25th percentile value sits between the top two key reference service codes the survey respondents selected.

Code	Descriptor	RVU	Pre	Intra	Post	Total Time
99439	Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional	0.70	0	20	0	20
98981	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month, each additional 20 minutes	0.70	0	20	0	20
99437	Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of	1.00	0	30	0	30

	death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised or monitored; each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional					

The 25th percentile value is also well supported by MPC codes.

Code	Descriptor	RVU	Pre	Intra	Post	Total Time
77002	Fluoroscopic guidance for needle placement (eg, biopsy aspiration, injection, localization device)	0.54	2	15	0	17
98981	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month, each additional 20 minutes	0.70	0	20	0	20
51797	Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal)	0.80	0	15	0	15

Time Analysis
The survey data shows a median intra-service time of 20 minutes with no pre- or post-service time. The societies support the median intra-service time as it aligns with the intended use of 98981 as described in the chart below which is included in the revised CPT guidelines.

Time Spent in a Calendar Month for Remote Therapeutic Monitoring Treatment Management Services	CPT Code(s) Reported
0-9 minutes	Not reported separately
10-19 minutes	98979 X 1
20-39 minutes	98980 X 1
40-59 minutes	98980 X 1, 98981 X 1
60 minutes or more	98980 X 1, 98981 X 2 or more for each additional 20 minutes

Recommendation
For code 98981, the societies recommend the 25h percentile RVU of 0.70, survey pre-service time of 0 minutes, intra-service time of 24 minutes, post-service time of 0 minutes, for a total time of 20 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 98981

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Physical Therapy How often? Rarely

Specialty Nephrology How often? Rarely

Specialty Internal Medicine How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period? 24000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on current utilization data (2022) from the AMA RUC Database multiplied times four.

Specialty Physical Therapy Frequency 11760 Percentage 49.00 %

Specialty Nephrology Frequency 2400 Percentage 10.00 %

Specialty Internal Medicine Frequency 2160 Percentage 9.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 41,730 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on current utilization data (2023) from the AMA RUC Database.

Specialty Physical Therapy Frequency 13813 Percentage 33.10 %

Specialty Internal Medicine Frequency 5843 Percentage 14.00 %

Specialty Family Medicine Frequency 5842 Percentage 13.99 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 98981

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Tab 20 PE

December 10, 2024

Scott Manaker, MD

AMA/RVS Update PE Subcommittee

American Medical Association

330 N. Wabash Avenue

Chicago, IL 60611

Re: Tab 20 Remote Monitoring Codes (98984, 98976)

Dear Dr. Manaker:

The American Thoracic Society (ATS) and the American College of CHEST Physicians (CHEST) meet to discuss the PE inputs for 98984 and 98976. We strongly believe that there is currently not sufficient information by RUC standards to establish PE inputs. We recommend contractor pricing, and they should be left on the new technology list to review again, in 3 years. We can reassess in 3 years and provide further feedback at that time.

Best regards,

ATS and CHEST Advisors

Tab 20 PE Cover Memo

December 10, 2024

Scott Manaker, MD
AMA/RVS Update PE Subcommittee
American Medical Association
330 N. Wabash Avenue
Chicago, IL 60611

Re: Tab 20 Remote Monitoring Codes 99445, 99454

Dear Dr. Manaker:

The societies developing PE recommendations for these codes feel compelled to explain several difficulties in developing PE recommendations separately from the PE SOR.

Specifically, we have had difficulties obtaining paid invoices for certain elements of our supply and equipment recommendations for PE-only codes 99XX4 and 99454. Advisors who do not provide these services have inquired among colleagues to locate peers performing these services who could share invoices and pricing information, without success to date. Society staff corresponded with or spoke to several RPM vendors (Cadence, Myia, Cliexa, Heartbeat Health, HealthSnap, Validic) which was helpful to understand the landscape. None were willing/able to provide paid invoices, and only one was able to offer even a price sheet. Lengthy correspondence exchange and conversation with the manager of monitoring services at a large academic institution were also helpful, but did not produce cost documentation.

Accordingly, at the time of submission, we have included cost inputs for supplies and equipment as best we are able to estimate them now. We will continue seeking paid invoices that can be used by CMS to set rates for these services up to and even beyond the RUC meeting until their February 10 cutoff for materials to inform 2026 rulemaking.

Setting aside those documentation difficulties, we believe it remains the case that we have described a valid system of supply and equipment inputs used to provide RPM services. The specific costs of those inputs need not be firmly established by the PE Subcommittee in January, as it is CMS who will do that. It would be the same if we had multiple invoices for an input—neither the societies nor the RUC know what cost CMS will use to set rates.

Tab 20 PE Cover Memo

As best we can present it at this time, a package of monitoring equipment that has an acquisition cost is provided to the patient. That equipment has a certain cost and the patient possesses it for the entire 30-day period. Because we are not confident in the little information we've been able to obtain, as of submission, we express that cost using the existing package of monitoring equipment. In addition, the software digital remote physiologic monitoring device app platform used for transmission of data from patient to vendor and from vendor to physician practice with alerts for data outside parameters or for patient-activated alerts has a monthly fee. That new cost is represented as a consumable supply. Our estimates for this input is based on the included price sheet.

Thank you for considering this explanation as we prepare for the meeting. If you have questions or suggestions about how we can best present this tab in an efficient manner, please feel free to work with us through RUC staff.

Best regards,

ACC, ACP, AAFP Advisors

NON-FACILITY DIRECT PE INPUTS
CPT CODE(S): 99453, 99445, 99454, 99470, 99457, 99458, 99473, 99474, 99091
SPECIALTY SOCIETY(IES): ACC, ACP, AAFP, ANA
PRESENTER(S): Drs. Fox, Hamori, Wright, Tuohy, Van Keuren, DNP, Volpert, DNP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
99453	Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate); initial set-up and patient education on use of equipment	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99453	A 72-year-old female patient with poorly controlled hypertension undergoes remote physiologic monitoring.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   99453
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Internal Medicine. 27.4%. No.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

Clinical staff greet the patient and explain the monitoring system and protocols to the patient, then assist them in obtaining initial readings.

    c. Post-service period:

One 3-minute phone call takes place soon after training to ensure the patient understands the equipment.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Clinical staff train the patient on the monitoring system, explain protocols, the importance and meaning of the monitoring program and outputs, then assist them in obtaining initial readings.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(a) uncertain (b) 177,654 services were performed in Medicare in 2023

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

99453

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The societies did consider recommending shipping and logistics turnover costs as a supply cost for 99453, which would have produced an increase that would have required compelling evidence. However, we understand that CMS, and therefore, the RUC, does not recognize shipping such costs as direct inputs. That is unfortunate, as these costs are directly attributable to getting equipment into patients' position to provide the service.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

NON-FACILITY DIRECT PE INPUTS
CPT CODE(S): 99453, 99445, 99454, 99470, 99457, 99458, 99473, 99474, 99091
SPECIALTY SOCIETY(IES): ACC, ACP, AAFP, ANA
PRESENTER(S): Drs. Fox, Hamori, Wright, Tuohy, Van Keuren, DNP, Volpert, DNP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS
CPT CODE(S): 99453, 99445, 99454, 99470, 99457, 99458, 99473, 99474, 99091
SPECIALTY SOCIETY(IES): ACC, ACP, AAFP, ANA
PRESENTER(S): Drs. Fox, Hamori, Wright, Tuohy, Van Keuren, DNP, Volpert, DNP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
99445	Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate); device(s) supply with daily recording(s) or programmed alert(s) transmission, 2 to 15 days in a 30-day period	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99445	A 72-year-old female patient with poorly controlled hypertension undergoes remote physiologic monitoring.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   99454 is the same service but with data reported 16 or more times during a 30-day period. For both 99445 and 99454 the patient has the equipment for the entire 30-day period.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   This is a new code.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A. This is a new code for a newly defined service that was not previously reported/reportable.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

Clinical staff confirm data transmission, create reports, assist with device malfunctions, and re-educate patients.

    c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Clinical staff confirm data transmission, create reports, assist with device malfunctions, and re-educate patients. Clinical staff typically devote time to the troubleshooting and information flow activities described for CA021. There are phone calls between the clinical staff and vendor staff, and one vendor was able to quantify those activities as taking 11 minutes based on service logs, which are displayed below:

Clinical Staff Labor - Category	Clinical Staff	Description	Minutes per Typical Patient
Data Transmission	RN/LPN/MTA	Data Review: Monitor the frequency and regularity of patient data submissions. Reach out to patients who miss scheduled readings to support compliance.	0.4
Reporting	RN/LPN/MTA	Summary Reports: Create and transmit regular reports summarizing the patient's blood pressure data and any interventions with their provider. Generate trends for incoming patient readings for subsequent clinical review. Ensure transmission of reports to providers and respond to questions.	6.4
Device Troubleshooting	RN/LPN/MTA	Set up appointments for device re-education sessions.	2.2
Device Troubleshooting	RN/LPN/MTA	Provide assistance for any device malfunctions or transmission issues during the monitoring period.	1.8
Device Troubleshooting	RN/LPN/MTA	SMS communications providing assistance for any device malfunctions or transmission issues during the monitoring period.	0.5
TOTAL			11

13. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

14. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

15. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

16. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

17. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

18. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

NEW Digital Remote Physiologic Monitoring Device App: A monthly vendor service fee for use of software as a medical device for transmission of data from patient to vendor and from vendor to physician practice with alerts for data outside parameters or for patient-activated alerts. The societies considered how to reflect significant up-front costs for annual software licensing, but those costs have historically been deemed indirect.

19. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

20. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

21. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

EQ392 The current equipment package is called "heart failure patient physiologic monitoring equipment package." That name stemmed from the use case at the time of original valuation from the DMPAG being a remote heart failure clinic. However, the same components—connected blood pressure monitor, connected weight scale, connected pulse oximeter, and cellular tablet—are used for the typical hypertension patients. We recommend the package be renamed more generically as "patient physiologic monitoring equipment package."

22. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

23. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

24. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EQ392 - RENAMED patient physiologic monitoring equipment package: Other formula for equipment the patient possesses for 30 days.
[60 min/hour * 24 hrs/day = 1440 minutes/day * 30 days = 43,200 minutes.]

PE-ONLY CODES ADDITIONAL INFORMATION

25. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(a) Uncertain
(b) 1,757,512 services were provided in Medicare in 2023 claims data for 99454, which is the same service but with additional data points from the RPM patient.

26. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

99454

ADDITIONAL INFORMATION

27. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

In the 2018 recommendations for RPM services, the RUC noted that the equipment use assumption would be 525,600 minutes during a year rather than the typical 150,000. Only 7 other codes have equipment that follows this model. While the patient has the monitoring package every minute of the month/year, they are not in use every minute. Changing the equipment use assumption to the typical 150,000 minutes could ameliorate inequities in the PE formula—inability to cover logistics costs, inability to capture initial, capital software costs—that risk setting payment for these services to the point where they are not sustainable. We ask the PE Subcommittee—and CMS—to consider the impacts of a recommendation on equipment minutes per year and what solutions may be suitable.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Single amendment to reduce equipment minutes to 20,160 for EQ392 on line 116 for 99445.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
99454	Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate); device(s) supply with daily recording(s) or programmed alert(s) transmission, 16- to 30 days in a 30-day period	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99454	A 72-year-old female patient with poorly controlled hypertension undergoes remote physiologic monitoring.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   99454 is the existing code.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Internal Medicine. 29.4%. No.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   Evidence that there has been a change in equipment or practice expense cost: The marketplace for RPM supplies, equipment, services, and vendors has evolved since these codes were first valued in 2018. Updated inputs at the levels recommended in the submission would produce an increase in

aggregate costs for 99454. This could change depending on additional pricing information and decisions made the by PE Subcommittee. We continue to seek additional documentation on the cost of the equipment necessary to provide RPM services and will submit any additional pricing information we can locate for the RUC to share with CMS to determine rate setting.

Evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data. Claims data indicates primary specialties provide the bulk of RPM services, when the initial valuation was performed assuming cardiology groups monitoring heart failure patients as the use case. That may not necessarily support increased costs, but is a factor for considering compelling evidence.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

   N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

b. Service period (includes pre, intra and post):

Clinical staff confirm data transmission, create reports, assist with device malfunctions, and re-educate patients.

c. Post-service period:

11. We ask the PE Subcommittee—and CMS0—to consider the impacts of a recommendation on equipment minutes per year and what solutions may be suitable.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match

the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS
CPT CODE(S): 99453, 99445, 99454, 99470, 99457, 99458, 99473, 99474, 99091
SPECIALTY SOCIETY(IES): ACC, ACP, AAFP, ANA
PRESENTER(S): Drs. Fox, Hamori, Wright, Tuohy, Van Keuren, DNP, Volpert, DNP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
99470	Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring 1 real-time interactive communication with the patient/caregiver during the calendar month; first 10 minutes	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99470	A 72-year-old female patient with poorly controlled hypertension undergoes remote physiologic monitoring.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   99457 is the existing code that describes a slightly longer version of this service.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Unknown. New code.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

Clinical staff review data and discuss any readings outside normal parameters with the physician. Clinical staff typically call the patient 2 times a month to discuss transmitted data and manage the patient based on discussions with the physician or standing orders for management.

    c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The work survey included a question asking respondents to estimate clinical staff time. The median of that result from 17 respondents was 10 minutes. The recommendation here was adjusted down to 9 minutes. In alignment with the way this code is written, clinical staff time plus physician/QHP is summed to determine the time spent on this time-based code. The sum of those two individuals must be 10 or more minutes but would also be 19 or less minutes to fit this code. The recommendations here plus the physician time recommendations in the work SOR fit this model, with 9 minutes recommended for clinical staff time and 10 minutes for physician/QHP time.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

    N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:
    N/A

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:
    The work survey included a question asking respondents to estimate clinical staff time. The minutes in the PE spreadsheet are the median of that result. In alignment with the way this code is written, clinical staff time plus physician/QHP is summed to determine the time spent on this time-based code. The sum of those two individuals must be more 20 or more minutes but would also be 39 or less minutes to fit this code. The recommendations here plus the physician time recommendations in the work SOR fit this model, with 19 minutes for clinical staff time and 16 minutes for physician/QHP time.

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
99473	Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
99473	A 65-year-old male presents with repeated office visit measurements of blood pressure (BP) greater than normal or goal. Self-measured BP is ordered.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   99473 is the existing code
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Physicians Assistant. 38.0%. No.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A
   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

No

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

No

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Clinical staff greet the patient and prepare the room

    b. Service period (includes pre, intra and post):

Clinical staff educate and train the patient on the process of obtaining BP measurements, calibrate the device, and provide instructions for documenting data.

    c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Clinical staff educate and train the patient on the process of obtaining BP measurements, calibrate the device, and provide instructions for documenting data.

Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

    99091 is a physician/QHP-only service that has historically had no PE inputs. We are not recommending any PE inputs.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

PRESENTER(S): Milani and Pennisi

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
98975	Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); initial set-up and patient education on use of equipment	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
98975	A 66-year-old female, who has limited mobility caused by osteoarthritis of her knees, is enrolled in a remote therapeutic monitoring program to enable data collection and monitoring to support the therapeutic management of her musculoskeletal condition.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   98975
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Physical Therapy 53.4%
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The societies are recommending an increase in PE over the aggregate current cost, related to a change in clinical staff type and change in supplies which can be explained by an update to the typical patient.

The societies believe these codes meet the compelling evidence argument of a change in physician/QHP work due to a change in patient population resulting from a diffusion of knowledge of the procedure in physical therapy. It is supported by the change in performance rate of the service between the 2021 survey and the 2024 survey, as well as the change in vignette which is supported by the survey results.

Diffusion of Knowledge
Since 2021, there has been a diffusion of remote therapeutic monitoring technology, primarily in physical therapy practice. In 2021, these codes were added to the new technology list, and since that time the service has been embraced by physical therapy as a result of the increased availability of the technology and a positive response by patients to incorporating this procedure into the rehabilitative process. Rates of experience for these services were very low in the 2021 survey, with the median performance rate of 1 for 98980 and the median rate of 0 for 98981. In the new survey, these performance rates increased to a median experience rate of 10 for 98980 and 4 for 98981. This suggests the services have been more widely adopted, primarily by physical therapy.

Change in Population/Updated Vignette
When the RTM codes were originally surveyed in 2021, an asthmatic patient was described in the vignette, primarily connected to the codes for respiratory therapy monitoring. However, these vignettes were found to be typical by less than 50% of survey respondents in 2021. The vignettes for 98980 and 98981 were updated for the 2024 survey to reflect the typical patient being a musculoskeletal/osteoarthritis patient. 100% of survey respondents found these vignettes to be typical. We also note that the low support for the vignettes in 2021 suggest an additional compelling evidence argument that incorrect assumptions were made in the previous valuation of the service.

This change in typical patient suggests that the code inputs should be aligned with the needs of a musculoskeletal patient.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

Clinical staff prepares the room including printed RTM device instructions. Clinical staff greet the patient and explain the monitoring system and protocols to the patient, then train them in the use of the device/equipment and evaluate competency through return demonstration.

    c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Clinical staff walks the patient through set up of the therapeutic monitoring technology. The patient is educated regarding how to use the technology and related daily tasks. For musculoskeletal therapy monitoring, this includes set up of the device, review of the 3D motion capture technology, and review of the specific exercises as prescribed by the physician/QHP. Competency is assessed through return demonstration by the patient. The patient is given the opportunity to ask questions.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

Based on the invoice provided, the societies recommend a new supply item – remote musculoskeletal therapy monitoring program enrollment fee. This fee is a unique one-time fee per patient regardless of duration on the RTM program. The fee is invoiced at $10 per patient.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(a) uncertain (b) 31,765

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

98980

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Post-service time of 10 minutes was removed and updated to 0 minutes (CA037 on line 87). . The thera-band supply item, SJ056, was removed.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

   N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

    c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

    N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
98979	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month; first 10 minutes	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
98979	A 66-year-old female, who has limited mobility caused by osteoarthritis of her knees, is enrolled in a remote therapeutic monitoring program to enable data collection and monitoring to support the therapeutic management of her musculoskeletal condition.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The multi-society RVS Committee utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   98980 is the existing code that describes a longer version of this service.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   New code. Anticipated to be Physical Therapist based on other codes in the family.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

Clinical staff collects and reviews therapeutic monitoring data with the physician/QHP.

    c. Post-service period:

Clinical staff conducts patient communications throughout the month to improve therapy adherence, address lack of improvement/control of condition, and resolve any technology or data transmission concerns.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly*

related to physician work time or *Perform procedure/service---NOT directly related to physician work time:*

Clinical staff reviews therapeutic monitoring data with the physician/QHP. Areas in which the data reflect poor control of condition or deviation from expected treatment adherence are identified. This data review is typically done on every two or three days throughout the 30 day service period.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

CPT CODE(S): 98975, 98985, 98977, 98979, 98980, 98981, 98984, and 98976
SPECIALTY SOCIETY(IES): APTA and AAPM&R
PRESENTER(S): Milani and Pennisi

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The societies are recommending an increase in PE over the aggregate current cost, related to a change in clinical staff type and change in supplies which can be explained by an update to the typical patient.

The societies believe these codes meet the compelling evidence argument of a change in physician/QHP work due to a change in patient population resulting from a diffusion of knowledge of the procedure in physical therapy. It is supported by the change in performance rate of the service between the 2021 survey and the 2024 survey, as well as the change in vignette which is supported by the survey results.

Diffusion of Knowledge
Since 2021, there has been a diffusion of remote therapeutic monitoring technology, primarily in physical therapy practice. In 2021, these codes were added to the new technology list, and since that time the service has been embraced by physical therapy as a result of the increased availability of the technology and a positive response by patients to incorporating this procedure into the rehabilitative process. Rates of experience for these services were very low in the 2021 survey, with the median performance rate of 1 for 98980 and the median rate of 0 for 98981. In the new survey, these performance rates increased to a median experience rate of 10 for 98980 and 4 for 98981. This suggests the services have been more widely adopted, primarily by physical therapy.

Change in Population/Updated Vignette
When the RTM codes were originally surveyed in 2021, an asthmatic patient was described in the vignette, primarily connected to the codes for respiratory therapy monitoring. However, these vignettes were found to be typical by less than 50% of survey respondents in 2021. The vignettes for 98980 and 98981 were updated for the 2024 survey to reflect the typical patient being a musculoskeletal/osteoarthritis patient. 100% of survey respondents found these vignettes to be typical. We also note that the low support for the vignettes in 2021 suggest an additional compelling evidence argument that incorrect assumptions were made in the previous valuation of the service.

This change in typical patient suggests that the code inputs should be aligned with the needs of a musculoskeletal patient.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   98981
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No. No.
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Physical Therapist 48.4%. No.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The societies are recommending an increase in PE over the aggregate current cost, related to a change in clinical staff type and change in supplies which can be explained by an update to the typical patient.

The societies believe these codes meet the compelling evidence argument of a change in physician/QHP work due to a change in patient population resulting from a diffusion of knowledge of the procedure in physical therapy. It is supported by the change in performance rate of the service between the 2021 survey and the 2024 survey, as well as the change in vignette which is supported by the survey results.

Diffusion of Knowledge
Since 2021, there has been a diffusion of remote therapeutic monitoring technology, primarily in physical therapy practice. In 2021, these codes were added to the new technology list, and since that time the service has been embraced by physical therapy as a result of the increased availability of the technology and a positive response by patients to incorporating this procedure into the rehabilitative process. Rates of experience for these services were very low in the 2021 survey, with the median performance rate of 1 for 98980 and the median rate of 0 for 98981. In the new survey, these performance rates increased to a median experience rate of 10 for 98980 and 4 for 98981. This suggests the services have been more widely adopted, primarily by physical therapy.

Change in Population/Updated Vignette
When the RTM codes were originally surveyed in 2021, an asthmatic patient was described in the vignette, primarily connected to the codes for respiratory therapy monitoring. However, these vignettes were found to be typical by less than 50% of survey respondents in 2021. The vignettes for 98980 and 98981 were updated for the 2024 survey to reflect the typical patient being a musculoskeletal/osteoarthritis patient. 100% of survey respondents found these vignettes to be typical. We also note that the low support for the vignettes in 2021 suggest an additional compelling evidence argument that incorrect assumptions were made in the previous valuation of the service.

This change in typical patient suggests that the code inputs should be aligned with the needs of a musculoskeletal patient.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If

the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

    b. Service period (includes pre, intra and post):

Clinical staff collects and reviews therapeutic monitoring data with the physician/QHP.

    c. Post-service period:

Clinical staff conducts patient communications throughout the month to improve therapy adherence, address lack of improvement/control of condition, and resolve any technology or data transmission concerns.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Clinical staff reviews therapeutic monitoring data with the physician/QHP. Areas in which the data reflect poor control of condition or deviation from expected treatment adherence are identified. This data review is typically done on every two or three days throughout the 30 day service period.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).

b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Post-service work was reduced from 10 minutes to 5 minutes (CA037 on line 87).

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2025

CPT Code	Long Descriptor	Global Period
98984	Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); device(s) supply for data access or data transmissions to support monitoring of respiratory system, 2-15 days in a 30 -day period	XXX
98976	Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
98984	An 8-year-old female presents to the physicians or other qualified health care professionals (QHPs) office with an acute asthma exacerbation. Following the visit, the physician or other QHP initiates a short-term remote therapeutic monitoring program to enable data collection and monitoring to support the therapeutic management of her respiratory condition.
98976	An 8-year-old female presents to the physician's or other or other qualified health care professionals (QHPs) office with a cough and wheezing. She is diagnosed with a respiratory condition exacerbated by environmental factors. Following the visit, the physician or other QHP initiates a remote therapeutic monitoring program to enable data collection and monitoring to support the therapeutic management of her respiratory condition.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The society has elected to recommend contractor pricing for both respiratory therapeutic monitoring codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   See the *Billed Together* tab in the RUC Database.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: CMS Request – Proposed Rule for 2025

January 2025

Osteotomy of Spine – Tab 21

In the Proposed Rule for 2025, CPT codes 22210, 22212, 22214 and 22216 were nominated as potentially misvalued services for the following reasons (1) incorrect global period; (2) incorrect inpatient days; (3) incorrect intra-service work description; (4) overvalued intra-service times; (5) changed surgical practice; and (6) incorrect use of posterior osteotomy codes. CMS notes that these services were last reviewed in 1995 and all but CPT code 22216 lacks a description of work or vignettes describing the typical patient. CMS also noted that bundling of these services may be necessary, such as CPT code 22210 and 22600 *Arthrodesis, posterior or posterolateral technique, single interspace; cervical below C2 segment.* The nominator suggested two options to address this concern: (1) developing add-on codes to differentiate between the number of vertebral segments involved in the osteotomy procedure and whether it occurs in the cervical, thoracic, or lumbar regions; and (2) removing the current posterior osteotomy codes and incorporating osteotomies into new deformity fusion codes, both with and without osteotomy. CMS indicated in the Notice of Proposed Rulemaking for 2025 that this code family be considered as potentially misvalued.

The RUC considered these services at the January 2025 RUC meeting. The specialty societies submitted a detailed letter (attached) on why they disagreed with issues identified by the nominator. The specialties indicated that there is no evidence that these services have an incorrect global period. They also noted that the nominator did not provide a comprehensive list of literature to support the claim that incorrect inpatient days are represented in these services, provided no evidence that the intra-service time is incorrect or that these services have changed in adults.

The specialty societies did not conduct a survey of these codes and requested that the RUC refer this issue to the CPT Editorial Panel for revision. The specialties will consult with pediatric spine surgeons specializing in scoliosis surgery to submit a CPT Code Change Application (CCA). **The RUC recommends that CPT codes 22210-22216 be referred to the September 2025 CPT Editorial Panel meeting for the CPT 2027 cycle.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
22210	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; cervical	090	Refer to CPT September 2025 (2025 Work RVU = 25.38)
22212	thoracic	090	Refer to CPT September 2025 (2025 Work RVU = 20.99)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.
(f)=part of a code family s=Revised code I=New code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

22214	lumbar	090	Refer to CPT September 2025 (2025 Work RVU = 21.02)
:22216	each additional vertebral segment (List separately in addition to primary procedure) (Use 22216 in conjunction with 22210, 22212, 22214)	ZZZ	Refer to CPT September 2025 (2025 Work RVU = 6.03)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Subject: Tab 21 Spine Osteotomy

Dear Dr. Silva:

The American Academy of Orthopaedic Surgeons, American Association of Neurological Surgeons, Congress of Neurological Surgeons, International Society for the Advancement of Spine Surgery, and the North American Spine Society are writing regarding Tab 21, spine osteotomy codes (22210, 22212, 22214, 22216) up for review at the January 2025 RUC Meeting. These codes were nominated as potentially misvalued via the Medicare Physician Fee Schedule proposed rule. We did not conduct a survey of these codes and disagree with the nominator's claims about this family of codes.

Incorrect Global Period
The nominator stated that these posterior osteotomies are always performed as an optional addition to a spinal fusion and should be valued as add-on services and not as 90-day global services. After review of the CMS claims data, we found that a significant majority of claims for codes 22210-22214 are reported without a modifier indicating these codes are the primary or index procedure and not add-on services. This data in combination with the fact that no references were provided by the nominator to support the statement that the service is always performed as an optional addition to a spinal fusion, shows that there is no evidence to support this claim.

Incorrect Inpatient Days
The nominator stated that the average hospital stay for scoliosis fusion with osteotomy is less than the currently included inpatient days. In the proposed rule CMS noted that the majority of literature submitted by the nominator presented outcome information on adolescent patients, which may be different from the Medicare population. We agree with the Agency that literature was selectively provided to only include information about pediatric patients. The nominator failed to submit a comprehensive list of literature to support this claim and therefore is unreasonable.

Incorrect Intraservice Work Description
The nominator stated that the intraservice work description for code 22216 describes removal of the pedicle, which is not a typical part of a Ponte/Schwab II osteotomy. The original description of work from the 22210-22214 family notes that a portion of the pedicle may be removed. These descriptors do not report that the entire pedicle is removed, only enough bone to provide adequate decompression of the nerve roots at the level where the osteotomy is being formed. Complete resection of the involved vertebral body's pedicle would not be routine in performing a posterior element osteotomy. However, complete resection of the pedicle is not included in the original DOW for these codes; this operative procedure has not changed.

Overvalued Intraservice Times

The nominator asserted that intraservice times were too high, particularly for these osteotomy services furnished with scoliosis fusion procedures. Again, the literature cited by the nominator referred to pediatric deformity procedures which may not be reflective of adult spinal surgery practice. After review of the data referenced in the letter, we find that the average time of 3.6 minutes cited for performing an osteotomy in the nominator's letter is ridiculously low. Several studies indicated that non-randomization allowed surgeon-specific factors to potentially confound the results as one reason for not observing longer surgical times in patients who underwent Ponte osteotomies. The nominator provided no studies to support a typical scoliosis fusion time in adults. Therefore, we believe the nominator's claim is unsupported.

Changed Surgical Practice

We also disagree with the nominator's assertion that surgical practice for these procedures has evolved, indicating that 30 years ago, osteotomies were infrequently performed and usually reserved for addressing completely ankylosed or fused spinal segments. The nominator further asserted that contemporary surgical techniques often involve posterior osteotomies to release multiple stiff vertebral segments, thereby enhancing coronal correction and reducing thoracic hypokyphosis, resulting in notable shifts in the trends regarding the utilization of osteotomies. Once again, the nominator chose select articles that are related to adolescent idiopathic scoliosis. For example, the study sample in one article indicated over 60% were aged 7-12. When looking at the Medicare aged claims, we do not find an unexpected increase in utilization. With better understanding of spinal alignment parameters and with growth of the Medicare patient population, more osteotomy procedures are being performed, but not at a significant rate of change. In fact, Medicare utilization has flattened over the past eight years. Again, the nominator's claims are not supported.

Incorrect use of Posterior Osteotomy Codes

Lastly, the nominator suggested incorrect usage of posterior osteotomy codes, noting instances where facet/soft tissue releases, such as Schwab type I osteotomies, are inaccurately reported with this family of codes. According to the nominator, isolated partial facetectomy and soft tissue release are already included in spinal fusion procedures and should not be separately billed with an osteotomy code.

The societies acknowledge that previously, osteotomy codes may have been inappropriately reported concurrent with interbody fusion procedures (22630/22633) after CMS restricted the ability to report decompression (63047) at the same level as a lumbar interbody fusion. To remedy this and to improve coding accuracy, new codes were created specifically for decompression when performed at the same level as an interbody fusion (63052-63053). Implementation of these new codes has been difficult due to an erroneous NCCI edit that precluded use of the code 63052 with 22630/22633. This error by NCCI has been corrected, but this may have slowed implementation of the new codes. We anticipate that with correct coding (using 63052) there will be a decrease in use of osteotomy codes at the same level as interbody fusions which will decrease use of the lumbar osteotomy codes overall.

Lastly, CMS has noted that code 22210 is reported with code 22600 (Arthrodesis, posterior or posterolateral technique, single interspace; cervical below C2 segment) approximately 83% of the time and questions whether there should be consideration of consolidating individual services into bundled codes. Code 22210 is a very low volume code (< 400) and utilization has been stable over time, and although this low volume code may be reported often with 22600, the reverse view is that only 1.6% of

code 22600 procedures also involve 22210. Code 22210 still needs to be maintained as a stand-alone code.

For these reasons, the undersigned societies will not be conducting a survey of these codes and request that the RUC maintain the values for this code family until we are able to consult with all stakeholders, including spine surgeons specializing in scoliosis surgery, regarding a CPT Code Change Application (CCA).

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Different Performing Specialty from Survey

January 2025

Arthrodesis – Great Toe – Tab 22

In April 2024, the Relativity Assessment Workgroup (RAW) identified CPT code 28750 on the different performing specialty from survey screen, where the top specialty performing over 50% of the Medicare claims did not survey the service or the top two specialties did not survey the service. The RAW noted that when this service was last valued in 1995, podiatry, which now performs 57% of this service was not involved in the survey. The RUC recommended that 28750 be surveyed for January 2025 with the applicable family of services. Code 28755 was added as part of the code family, which was valued by the Harvard Studies and never RUC surveyed.

Compelling Evidence
The specialty societies provided evidence that incorrect assumptions were made in the previous valuation of the service, as documented: a previous valuation excluded a specialty that currently provides a plurality of the service. For CPT code 28750, the RAW confirmed the survey conducted in 1995 did not include podiatry, currently the dominant provider of the procedure. For CPT code 28755, the Harvard study did not include podiatrists and was reviewed by only nine general orthopaedic surgeons. Additionally, there is evidence that incorrect assumptions were made in the previous valuation of the service, as documented: a flawed mechanism or methodology used in the previous valuation. For CPT code 28750, the survey used for the first Five-Year Review in 1995 did not specify the different components of preservice time (evaluation, positioning, scrub/dress/wait) and therefore underestimated pre-service work and time as documented by the current survey. The 1995 survey instrument also did not accurately capture post-operative work (discharge management and specific levels of office visits but instead asked only for total post-operative time). For CPT code 28755, the Harvard study did not survey pre- or post-service work or time and instead estimated time based on an algorithm. Additionally, no positioning time was assigned, and post-operative work was underestimated based on this methodology. **The RUC determined there was compelling evidence that incorrect assumptions were made in the previous valuation of these services because a specialty that currently provides the plurality of these services was not included in the survey. Further, a flawed methodology for valuation was used.**

28750 ***Arthrodesis, great toe; metatarsophalangeal joint***
The RUC reviewed the survey results from 166 orthopaedic surgeons and podiatrists and determined that the survey 25th percentile work RVU of 8.75 appropriately accounts for the work required to perform this service. The RUC recommends 33 minutes pre-service evaluation time, 10 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 60 minutes intra-service time, 15 minutes immediate post-service time, 0.5-99238, 1-99212, 2-99213 and 1-99214, which totals 249 minutes. The pre-service positioning was increased above the standard 3 minutes to 10 minutes to account for padding of bony prominences, positing and bolstering the patient's leg to allow for surgical exposure and manipulation of the limb and imaging equipment during surgery. Seven to 10 days after surgery, the first postoperative office visit would involve a moderate level of medical decision making (99214). The problem addressed (moderate) at the encounter is side effects of treatment (big toe arthrodesis) for a chronic illness (severe arthritis) where the patient is not at the treatment goal of a fused stable joint that allows pain-free weight-

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

bearing ambulation, return to wearing shoes, and return to activities of daily living. There is moderate risk for patient management that involves medication management, including multi-modal pain medications (ie, narcotic and nonnarcotic) and assessment of continued need for DVT prophylaxis. Treatment risk also involves assessment of when and how the patient can begin weight-bearing (ie, appropriate DME). The next two post-operative office visits involve a low level of medical decision making (99213). The patient is still not at treatment goal and decisions about nonnarcotic paid management and techniques for mitigation of pain and swelling are addressed. Ambulation DME is assessed and changed as needed. There is minimal data to review and treatment risk is low. The last postoperative office visit in the 90-day global period involves straightforward medical decision making as the patient is assessed for progress of joint fusion and advancement of pain-free and weight-bearing ambulation. *For more information, all post-operative visits and levels are outlined in specific detail in the summary of recommendation (SOR) form attached.*

Although the survey intra-service time has decreased slightly by 15 minutes, the total time increased by 12 minutes due to the prior underestimation of pre-and post-operative work. In addition, the pre-service time was previously underestimated and the value of the post-operative work has significantly increased since the last review. The RUC noted that 28750 requires more physician time and work to perform because the metatarsophalangeal joint is larger, more complex anatomically, and often involves more extensive soft tissue manipulation due to its location at the base of the big toe, where greater forces are exerted during walking compared to the smaller more peripheral joints such as with 28755 and the interphalangeal joint.

The RUC compared the surveyed code to the top key reference code 28297 *Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with first metatarsal and medial cuneiform joint arthrodesis, any method* (work RVU = 9.29, 75 minutes intra-service time and 256 minutes total time). The RUC noted that this reference code chosen by almost 60% of the respondents required 15 minutes more intra-service time and 7 minutes more total time and was appropriately valued higher than the survey code even though a majority of the respondents indicated that the intensity, complexity, and work of both procedures was the same. The RUC compared the surveyed code to the second top key reference service 28295 *Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with proximal metatarsal osteotomy, any method* (work RVU = 8.57, 60 minutes intra-service time and 241 minutes total time). The RUC noted that both codes require the same intra-service time, but that the intra-service intensity related to fusing a joint was greater and the post-operative work to treat the patient following the fusion was greater. The RUC agreed that the slightly higher work RVU for the surveyed code appropriately accounted for this difference.. The RUC also compared the surveyed code to CPT code 27792 *Open treatment of distal fibular fracture (lateral malleolus), includes internal fixation, when performed* (work RVU = 8.75, 60 minute intra-service time and 245 minutes total time) noting that these services require the same intra-service time, number of post-operative visits and nearly the same total time, thus should be valued the same.

For additional support, the RUC referenced MPC code 21556 *Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm* (work RVU = 7.66, 60 minutes intra-service time and minutes 234 minutes total time), which requires less total time and post-operative visits and 50590 *Lithotripsy, extracorporeal shock wave* (work RVU = 9.77, 60 minutes intra-service time and minutes 207 minutes total time), which is somewhat more intense but requires less post-operative visits. These codes appropriately bracket the recommendation for the survey code. The RUC determined that the survey 25th percentile work value of 8.75 appropriately places CPT code 28750 relative to other services in the Medicare Physician Payment Schedule (MFS) based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 8.75 for CPT code 28750.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

28755 ***Arthrodesis, great toe; interphalangeal joint***
The RUC reviewed the survey results from 160 orthopaedic surgeons and podiatrists and determined that the survey 25th percentile work RVU of 7.50 appropriately accounts for the work required to perform this service. The RUC recommends 33 minutes pre-service evaluation time, 10 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 45 minutes intra-service time, 15 minutes immediate post-service time, 0.5-99238, 1-99212, 2-99213 and 1-99214, which totals 234 minutes. The pre-service positioning was increased above the standard 3 minutes to 10 minutes to account for padding of bony prominences, positing and bolstering the patient's leg to allow for surgical exposure and manipulation of the limb and imaging equipment during surgery. The RUC noted that the survey intra-service time has increased by 1 minute from the Harvard study estimate; however, the total time has increased by over 60 minutes supporting the compelling evidence of a flawed methodology for this service during the Harvard study . Seven to 10 days after surgery, the first post-operative office visit would involve a moderate level of medical decision making (99214). The problem addressed (moderate) at the encounter is side effects of treatment (big toe arthrodesis) for a chronic illness (severe arthritis) where the patient is not at the treatment goal of a fused stable joint that allows pain-free weight-bearing ambulation, return to wearing shoes, and return to activities of daily living. There is moderate risk for patient management that involves medication management, including multi-modal pain medications (ie, narcotics and nonnarcotic) and assessment of continued need for DVT prophylaxis. Treatment risk also involves assessment of when and how the patient can begin weight-bearing (ie, appropriate DME). The next two post-operative office visits involve a low level of medical decision making (99213). The patient is still not at treatment goal and decisions about nonnarcotic paid management and techniques for mitigation of pain and swelling are addressed. Ambulation DME is assessed and changed as needed. There is minimal data to review and treatment risk is low. The last post-operative office visit in the 090-day global period is straightforward medical decision making as the patient is assessed for progress of joint fusion and advancement of pain-free and weight-bearing ambulation. *For more information, all post-operative visits and levels are outlined in specific detail in the summary of recommendation (SOR) form attached.*

The RUC compared the surveyed code to the top key reference code 28298 *Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with proximal phalanx osteotomy, any method* (work RVU = 7.75, 60 minutes intra-service time and 225 minutes total time) and the second top key reference service 28291 *Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; with implant* (work RVU = 8.01, 50 minutes intra-service time and 215 minutes total time) and determined that the surveyed service requires slightly less physician work even though the total times for all three codes were similar.

For additional support, the RUC referenced MPC code 15823 *Blepharoplasty, upper eyelid; with excessive skin weighting down lid* (work RVU = 6.81, 45 minutes intra-service time and minutes 161 minutes total time), which requires less total time and less intense post-operative work, thus valued lower and 54530 *Orchiectomy, radical, for tumor; inguinal approach* (work RVU = 8.46, 60 minutes intra-service time and minutes 246.5 minutes total time), which is somewhat more intense but requires less post-operative visits, thus valued higher than 28755. The RUC determined that the survey 25th percentile work value of 7.50 appropriately places CPT code 28755 relative to other services in the Medicare Physician Payment Schedule (MFS) based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 7.50 for CPT code 28755.**

Practice Expense
The Practice Expense (PE) Subcommittee concurred that there is compelling evidence to support an increase over the aggregate current cost for clinical staff time, supplies and equipment as podiatry is the dominant specialty but was not included in the prior RUC survey or Harvard study. Moreover, several supply and equipment items were missing that are necessary for these procedures. For example, no drills, saws, or screws were included. Similarly, although a suction machine was included, there were no suction machine supplies. A mobile C-arm was also not included, but is standard to confirm bone alignment and fusion work throughout the procedure as described in the description of work. Compelling evidence was accepted based on change in specialty and errors in prior evaluation.

The PE Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. In response to an inquiry on whether a power table or power chair is used for the procedure, the specialties confirmed that EF031 *table, power* is typical. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
28750	Arthrodesis, great toe; metatarsophalangeal joint	090	8.75 (2025 Work RVU = 8.57)
(f)28755	interphalangeal joint	090	7.50 (2025 Work RVU = 4.88)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:28750 Tracking Number Original Specialty Recommended RVU: **8.75**
Presented Recommended RVU: **8.75**
Global Period: 090 Current Work RVU: **8.57** RUC Recommended RVU: **8.75**

CPT Descriptor: Arthrodesis, great toe; metatarsophalangeal joint

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female with severe arthritis of the big toe metatarsophalangeal joint undergoes arthrodesis of this joint.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 34% , In the ASC 64%, In the office 1%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Results of preadmission testing are reviewed, including laboratory tests and imaging with special attention to radiographs used to determine the amount of correction in the transverse plane and potential for shortening in first ray length. The patient is re-examined to make sure that physical findings have not changed, including careful assessment of skin to ensure there are no open wounds or signs of infection. Neurovascular status is assessed. The history and physical are updated in the medical record. The appropriate antibiotic(s) and DVT prevention medication are selected and ordered, and timing and administration are confirmed with anesthesia staff. Local anesthetic is ordered, communicating with the circulating nurse. The plan for anesthesia and case duration is reviewed with the anesthesi staff. The planned procedure and postoperative expectations and management plan are reviewed with the patient. Questions and concerns are addressed and informed consent is reviewed. The surgeon will confirm that all required instruments and supplies are available, including intraoperative imaging/fluoroscopy for guidance and documentation of implant(s); that an array of plates and screws are available for fixation; and that prior X-rays utilized in the decision for surgery are available on a view box or on the PACS in the operating room. Patient positioning and padding of bony prominences are monitored and/or assistance is provided. The position of the extremities are assessed and adjusted as needed. Positioning of fluoroscopic equipment is supervised. A tourniquet is placed at the ankle or the calf as appropriate. TQ settings are checked for pressure and time. A surgical timeout is conducted with the team. The correct local anesthetic is confirmed and prepared for infiltration and a field block is performed by the surgeon. A bolster/bump is placed under the calf of the operative side to position the foot for a circumferential skin prep. Sterile draping of the extremity and thermal regulation drapes are placed. The bolster is removed and the operative extremity is stabilized. The surgeon scrubs and gowns. Surgical incisions are marked. The limb is elevated and exsanguinated and the tourniquet is inflated.

Description of Intra-Service Work: A longitudinal incision is made along the dorsal aspect of the first ray and carried through the subcutaneous tissue. Layered dissection is performed. The joint capsule of the first metatarsophalangeal joint and the periosteum of the first metatarsal and the proximal phalanx are incised and separated from the bone and retractors placed. The joint surfaces are prepared using a power saw along with a rotary bur or joint reamer as needed to remove all cartilage and a layer of subchondral bone from the head of the first metatarsal and the base of the proximal phalanx. A guidepin is placed down the center of the shaft of the metatarsal and a concave reamer is used to contour the head of the metatarsal . The reamer and guidepin are removed from the metatarsal. A guidepin is then placed through the shaft of the proximal phalanx and the convex reamer is used to contour the base of the proximal phalanx. Once the joint surfaces have

been prepared, a Steinman pin is used to fenestrate the metatarsal and phalanx bones with use of the power equipment placing multiple perforations extending into and through the level of medullary bone. With the articular surfaces fully decorticated and fenestrated in preparation for arthrodesis, the toe is positioned on the metatarsal, correcting the deformity in all cardinal planes. Temporary fixation with a guidepin is placed. Position is confirmed with fluoroscopy and fixation is performed with a dorsal plate and screws plus an interfragmentary lag screw or crossed lag interfragmentary screws or (less commonly) Steinman pins. Placement of the fixation is confirmed with fluoroscopy. Temporary fixation is removed. The surgical wound is irrigated. The deep layers of capsule and periosteum are closed with absorbable suture. The tourniquet is deflated. Reperfusion of the digits is evaluated. The skin is closed with sutures. Supplemental local anesthetic is infiltrated as appropriate.

Description of Post-Service Work:
Facility: A sterile dressing is applied. A cast or splint is applied as appropriate. Assist in transfer of the patient from the OR table to a stretcher or bed; monitor patient stabilization in the recovery room; complete a careful neurologic and vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff; enter a brief operative note and a full operative report in the medical record; send a copy of the operative note to the PCP and/or referring physician; write comprehensive orders for PACU and discharge to home. Complete medication reconciliation; order and review postoperative radiographs; enter procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, local registry); and discuss procedure and outcome with patient and family. Ensure patient has the proper DME for safe discharge with a cast shoe and crutches or walker and is cleared for discharge to home.

Office: The patient is interviewed and data obtained by clinical staff are reviewed. The findings at surgery and details of the procedure are reviewed with the patient/family. The postoperative dressings are removed and assessment performed of wound status (drainage, hematoma, signs of infection). The circulation, sensation, and motor function of the operated extremity is assessed. The wounds are cleaned and redressed. Sutures are removed when appropriate. As healing progresses, the foot is assessed for prominent, loosening, or painful hardware and also the anticipated absence of motion at the arthrodesis site. Adequacy of analgesia is assessed, the PDMP is checked and orders are made for narcotic and nonnarcotic pain medication as needed. The patient will be counseled on appropriate multi-modal pain management (ie, narcotic, nonnarcotic). DVT prophylaxis medication is reviewed and the order adjusted as appropriate. DME issues are addressed and the patient is counselled on consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). When appropriate, weight bearing orders will be changed from non-weight bearing to weight bearing with decision making a result of the clinical exam and radiographic interpretation. Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider. Note that patient care will continue after the 90- day global period to follow the progress of fusion across the arthrodesis site and the return to shoegear and ADLs which can take up to 6 months.

28295	090	8.57	**RUC Time**

CPT Descriptor Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with proximal metatarsal osteotomy, any method

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
21556	090	7.66	**RUC Time**	1806

CPT Descriptor 1 Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
50590	090	9.77	**RUC Time**	38936

CPT Descriptor 2 Lithotripsy, extracorporeal shock wave

Other Reference CPT Code	Global	Work RVU	Time Source
27792	090	8.75	**RUC Time**

CPT Descriptor Open treatment of distal fibular fracture (lateral malleolus), includes internal fixation, when performed

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 95 **% of respondents:** 57.2 **%**

Number of respondents who choose 2nd Key Reference Code: 29 **% of respondents:** 17.4 **%**

TIME ESTIMATES (Median)

	CPT Code: 28750	Top Key Reference CPT Code: 28297	2nd Key Reference CPT Code: **28295**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	14%	61%	23%	2%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	61%	22%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	60%	21%
Physical effort required	7%	77%	16%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	12%	57%	32%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	52%	38%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	45%	48%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	38%	55%
Physical effort required	7%	45%	48%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	38%	41%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In April 2024, the RUC identified code 28750 with 2022 Medicare utilization over 10,000 where the top specialty performing over 50% of the Medicare claims did not survey the service. The Workgroup noted that this service was last valued in 1995, podiatry performs 57% of this service and was not involved in the survey. Code 28755 was added as a family code for review.

Compelling Evidence for 28750 and 28755

- *Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as: a previous valuation excluded a specialty that currently provides a plurality of the service.*

28750: The RAW identified that a survey was conducted in 1995 that did not include the dominant provider of the procedure.

28755: The Harvard study did not include podiatrists. Code 28755 was reviewed by 9 general orthopaedic surgeons.

- *Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as: a flawed mechanism or methodology used in the previous valuation*

28750: The survey used for the first 5YR in 1995 did not specify the different components of preservice time (evaluation, positioning, SDW) and therefore underestimated preservice work and time as documented by the current survey. The 1995 survey instrument also did not accurately capture postoperative work (discharge management and specific levels of office visits, but instead asked for total postoperative time).

28755: The Harvard study did not survey pre- or post-service work or time and instead estimated time based on an algorithm. No positioning time was assigned and postoperative work was significantly underestimated based on this methodology.

Recommendation for 28750
The survey 25th percentile work RVU of 8.75 is recommended.

Pre-time
Package 3 is selected with the following modifications:
Evaluation time: No change to package time of 33 minutes.
Positioning time: Total of 10 minutes that includes 7 additional minutes above the standard package time to account for padding of bony prominences, positing and bolstering patient leg to allow for surgical exposure and manipulation of the limb and imaging equipment during surgery.
Scrub, dress, wait time: Package time is reduced to 10 minutes to be consistent with survey median.

Immediate Post-time through discharge from recovery
Package 9b: Package time is reduced to 15 minutes to be consistent with survey median.

Postoperative Office Visits

28750 Summary of Postop E/M	Selected Visit Level CPT Code	MDM			
		Problem	Data	Treatment / Risk	Overall
POV #1	**99214**	Mod[1]	Minimal	Mod[2]	Mod
POV #2	**99213**	Mod[1]	Minimal	Low[2]	Low
POV #3	**99213**	Mod[1]	Minimal	Low[2]	Low
POV #4	**99212**	Mod[1]	Minimal	Minimal	SF

1. *1 or more chronic illnesses with exacerbation, progression, or side effects of treatment*. Patient has severe arthritis of the big toe metatarsophalangeal joint and is not at treatment goal of pain free weight bearing joint fusion. Patient care will continue after the 90-day global period to follow the progress of fusion across the arthrodesis site and the return to shoe gear and ADLs which can take up to 6 months or longer.
2. Although prescription drug management may continue through the third visit, including management of pain medication and DVT prophylaxis, this intensive management is only typical for more than 50% of patients at the first visit.

POV#1 (99214): The patient / family is interviewed and data obtained by clinical staff is reviewed. The findings at surgery and details of the procedure are reviewed with the patient/family. The postoperative dressings and splint/cast are removed and assessment performed of wound status (drainage, hematoma, signs of infection). The circulation, sensation, and motor function of the operated extremity is assessed. The wounds are cleaned and redressed. Adequacy of analgesia is assessed, the PDMP is checked and orders are made for narcotic and nonnarcotic pain medication as needed. The patient will be counseled on appropriate multi-modal pain management (ie, narcotic, nonnarcotic). DVT prophylaxis medication is

reviewed and the order adjusted as appropriate. DME issues are addressed and the patient is counselled on consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider.

POV#2 (99213): The patient is interviewed and data obtained by clinical staff are reviewed. Interval chart notes, including calls from the patient or pharmacy are reviewed. The postoperative dressings are removed and assessment performed of wound status, drainage, assessing for any evidence of hematoma or signs of infection. The circulation, sensation, and motor function of the operated extremity is assessed. Sutures are removed and wounds are cleaned and redressed as needed. Adequacy of analgesia is assessed, the PDMP is checked for patient compliance, and the patient is counseled about OTC medication as appropriate. DVT prophylaxis medication is reviewed and the order adjusted or discontinued as appropriate. The patient is counseled on expectations of pain, edema, and techniques for mitigation. DME issues are addressed regarding consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. Medical record progress notes are entered in the EMR, reviewed, and signed. An update is provided to the PCP and/or referring provider.

POV#3 (99213): The patient is interviewed and data obtained by clinical staff are reviewed. Interval chart notes, including calls from the patient or pharmacy are reviewed. If present, postoperative dressings are removed and assessment performed of the foot, specifically assessing for prominent, loosening, or painful hardware and also the anticipated absence of motion at the arthrodesis site. The patient is counseled on appropriate multi-modal techniques to address edema and pain. DME issues are addressed regarding consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. The 3rd visit generally coincides with an activity and weight bearing status change (eg, from non-weight bearing to weight bearing) with decision making a result of the clinical exam and radiographs. Medical record progress notes are entered in the EMR, reviewed, and signed. An update is provided to the PCP and/or referring provider. Continued disability, FMLA, out of work/ other related forms are completed.

POV#4 (99212): The patient is interviewed and data obtained by clinical staff are reviewed. Interval chart notes, including calls from the patient or pharmacy are reviewed. The foot is assessed for prominent, loosening, or painful hardware and also the anticipated absence of motion at the arthrodesis site. The patient is counseled on appropriate multi-modal techniques to address edema and pain. DME issues are addressed regarding consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. Medical record progress notes are entered in the EMR, reviewed, and signed. An update is provided to the PCP and/or referring provider. Continued disability, FMLA, out of work/ other related forms are completed.

Note that patient care will continue after the 90- day global period to follow the progress of fusion across the arthrodesis site and the return to shoegear and ADLs which can take up to 6 months.

Key Reference Code Comparison

For both reference codes, the respondents indicated the intensity and complexity of the survey code to be the same or more than the reference codes. Unfortunately, when estimating the total work for the survey code, the respondents underestimated the work and value of the postoperative office visits resulting in a lower intraoperative intensity.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99238	99214	99213	99212

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 28750

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
13,589 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.
Please explain the rationale for this estimate. RUC database 2023 claims

Specialty podiatry Frequency 8050 Percentage 59.23 %

Specialty orthopaedic surgery Frequency 5450 Percentage 40.10 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Arthrodesis, great toe; interphalangeal joint

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old female with severe arthritis of the big toe interphalangeal joint undergoes arthrodesis of this joint.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 33% , In the ASC 66%, In the office 1%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Results of preadmission testing are reviewed, including laboratory tests and imaging with special attention to radiographs used to determine the amount of correction in all cardinal planes. The patient is re-examined to make sure that physical findings have not changed, including careful assessment of skin to ensure there are no open wounds or signs of infection. Neurovascular status is assessed. The history and physical are updated in the medical record. The appropriate antibiotic(s) and DVT prevention medication are selected and ordered, and timing and administration are confirmed with anesthesia staff. Local anesthetic is ordered, communicating with the circulating nurse. The plan for anesthesia and case duration is reviewed with the anesthesia staff. The planned procedure and postoperative expectations and management plan are reviewed with the patient. Questions and concerns are addressed and informed consent is reviewed. The surgeon will confirm that all required instruments and supplies are available, including intraoperative imaging/fluoroscopy for guidance and documentation of implant(s); that an array of plates and screws are available for fixation; and that prior X-rays utilized in the decision for surgery are available on a view box or on the PACS in the operating room. Patient positioning and padding of bony prominences are monitored and/or assistance is provided. The position of the extremities are assessed and adjusted as needed. Positioning of fluoroscopic equipment is supervised. A tourniquet is placed at the ankle or the calf as appropriate. TQ settings are checked for pressure and time. A surgical timeout is conducted with the team. The correct local anesthetic is confirmed and prepared for infiltration and a field block is performed by the surgeon. A bolster/bump is placed under the calf of the operative side to position the foot for a circumferential skin prep. Sterile draping of the extremity and thermal regulation drapes are placed. The bolster is removed and the operative extremity is stabilized. The surgeon scrubs and gowns. Surgical incisions are marked. The limb is elevated and exsanguinated and the tourniquet is inflated.

Description of Intra-Service Work: A dorsal incision is made at the hallux coursing over the level of the IP joint and carried through the subcutaneous tissue. Layered dissection is performed. The joint capsule of the IP joint and the periosteum of the head of the proximal phalanx and base of the distal phalanx are incised and separated from the bone and retractors placed. The joint surfaces are prepared using a power saw and a rotary bur to remove all cartilage and a layer of subchondral bone from the head of the proximal phalanx and the base of the distal phalanx. Once the joint surfaces have been prepared, a K-wire/Steinman pin is used to fenestrate the phalanx bones with use of the power equipment placing multiple perforations extending into and through the level of medullary bone. With the articular surfaces fully decorticated and fenestrated in preparation for arthrodesis, the toe is positioned, correcting the deformity in all cardinal planes.

Temporary fixation with a guidepin is placed. Position is confirmed with fluoroscopy and fixation as appropriate is performed using K-wires, dorsal staples, or a single screw from distal to proximal through a separate incision at the distal tip of the toe for insertion of the screw. Placement of the fixation is confirmed with fluoroscopy. Temporary fixation is removed. The surgical wound is irrigated. The deep layers of capsule and periosteum are closed with absorbable suture. The tourniquet is deflated. Reperfusion of the digit is evaluated. The skin is closed with sutures. Supplemental local anesthetic is infiltrated as appropriate.

Description of Post-Service Work:
Facility: A sterile dressing is applied. A cast or splint is applied as appropriate. Assist in transfer of the patient from the OR table to a stretcher or bed; monitor patient stabilization in the recovery room; complete a careful neurologic and vascular examination of the extremity; discuss postoperative recovery care with anesthesia and nursing staff; enter a brief operative note and a full operative report in the medical record; send a copy of the operative note to the PCP and/or referring physician; write comprehensive orders for PACU and discharge to home. Complete medication reconciliation; order and review postoperative radiographs; enter procedure data, including implant details, into longitudinal outcome registries (eg, NSQIP, local registry); and discuss procedure and outcome with patient and family. Ensure patient has the proper DME for safe discharge with a cast shoe and crutches or walker and is cleared for discharge to home.

Office: The patient is interviewed and data obtained by clinical staff are reviewed. The findings at surgery and details of the procedure are reviewed with the patient/family. The postoperative dressings are removed and assessment performed of wound status (drainage, hematoma, signs of infection). The circulation, sensation, and motor function of the operated extremity is assessed. The wounds are cleaned and redressed. Sutures are removed when appropriate. As healing progresses, the foot is assessed for prominent, loosening, or painful hardware and also the anticipated absence of motion at the arthrodesis site. Adequacy of analgesia is assessed, the PDMP is checked and orders are made for narcotic and nonnarcotic pain medication as needed. The patient will be counseled on appropriate multi-modal pain management (ie, narcotic, nonnarcotic). DVT prophylaxis medication is reviewed and the order adjusted as appropriate. DME issues are addressed and the patient is counselled on consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). When appropriate, weight bearing orders will be changed from non-weight bearing to weight bearing with decision making a result of the clinical exam and radiographic interpretation. Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider. Note that patient care will continue after the 90- day global period to follow the progress of fusion across the arthrodesis site and the return to shoegear and ADLs which can take up to 6 months.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	47%	31%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	48%	31%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	16%	52%	33%
Physical effort required	14%	64%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with	14%	52%	34%

poor outcome

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	33%	42%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	54%	38%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	46%	38%
Physical effort required	8%	63%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	50%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In April 2024, the RUC identified code 28750 with 2022 Medicare utilization over 10,000 where the top specialty performing over 50% of the Medicare claims did not survey the service. The Workgroup noted that this service was last valued in 1995, podiatry performs 57% of this service and was not involved in the survey. Code 28755 was added as a family code for review.

Compelling Evidence for 28750 and 28755

- *Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as: a previous valuation excluded a specialty that currently provides a plurality of the service.*

28750: The RAW identified that a survey was conducted in 1995 that did not include the dominant provider of the procedure.

28755: The Harvard study did not include podiatrists. Code 28755 was reviewed by 9 general orthopaedic surgeons.

- *Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as: a flawed mechanism or methodology used in the previous valuation*

28750: The survey used for the first 5YR in 1995 did not specify the different components of preservice time (evaluation, positioning, SDW) and therefore underestimated preservice work and time as documented by the current survey. The 1995 survey instrument also did not accurately capture postoperative work (discharge management and specific levels of office visits, but instead asked for total postoperative time).

28755: The Harvard study did not survey pre- or post-service work or time and instead estimated time based on an algorithm. No positioning time was assigned and postoperative work was significantly underestimated based on this methodology.

Recommendation for 28755
The survey 25th percentile work RVU of 7.50 is recommended.

Pre-time
Package 3 is selected with the following modifications:
Evaluation time: No change to package time of 33 minutes.
Positioning time: Total of 10 minutes that includes 7 additional minutes above the standard package time to account for padding of bony prominences, positing and bolstering patient leg to allow for surgical exposure and manipulation of the limb and imaging equipment during surgery.
Scrub, dress, wait time: Package time is reduced to 10 minutes to be consistent with survey median.

Immediate Post-time through discharge from recovery
Package 9b: Package time is reduced to 15 minutes to be consistent with survey median.

Postoperative Office Visits

28750 Summary of Postop E/M	Selected Visit Level CPT Code	MDM			
		Problem	Data	Treatment / Risk	Overall
POV #1	**99214**	Mod[1]	Minimal	Mod[2]	Mod
POV #2	**99213**	Mod[1]	Minimal	Low[2]	Low
POV #3	**99213**	Mod[1]	Minimal	Low[2]	Low
POV #4	**99212**	Mod[1]	Minimal	Minimal	SF

1. *1 or more chronic illnesses with exacerbation, progression, or side effects of treatment*. Patient has severe arthritis of the big toe metatarsophalangeal joint and is not at treatment goal of pain free weight bearing joint fusion. Patient care will continue after the 90-day global period to follow the progress of fusion across the arthrodesis site and the return to shoe gear and ADLs which can take up to 6 months or longer.
2. Although prescription drug management may continue through the third visit, including management of pain medication and DVT prophylaxis, this intensive management is only typical for more than 50% of patients at the first visit.

POV#1 (99214): The patient / family is interviewed and data obtained by clinical staff is reviewed. The findings at surgery and details of the procedure are reviewed with the patient/family. The postoperative dressings and splint/cast are removed and assessment performed of wound status (drainage, hematoma, signs of infection). The circulation, sensation, and motor function of the operated extremity is assessed. The wounds are cleaned and redressed. Adequacy of analgesia is assessed, the PDMP is checked and orders are made for narcotic and nonnarcotic pain medication as needed. The patient will be counseled on appropriate multi-modal pain management (ie, narcotic, nonnarcotic). DVT prophylaxis medication is

reviewed and the order adjusted as appropriate. DME issues are addressed and the patient is counselled on consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider.

POV#2 (99213): The patient is interviewed and data obtained by clinical staff are reviewed. Interval chart notes, including calls from the patient or pharmacy are reviewed. The postoperative dressings are removed and assessment performed of wound status, drainage, assessing for any evidence of hematoma or signs of infection. The circulation, sensation, and motor function of the operated extremity is assessed. Sutures are removed and wounds are cleaned and redressed as needed. Adequacy of analgesia is assessed, the PDMP is checked for patient compliance, and the patient is counseled about OTC medication as appropriate. DVT prophylaxis medication is reviewed and the order adjusted or discontinued as appropriate. The patient is counseled on expectations of pain, edema, and techniques for mitigation. DME issues are addressed regarding consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. Medical record progress notes are entered in the EMR, reviewed, and signed. An update is provided to the PCP and/or referring provider.

POV#3 (99213): The patient is interviewed and data obtained by clinical staff are reviewed. Interval chart notes, including calls from the patient or pharmacy are reviewed. If present, postoperative dressings are removed and assessment performed of the foot, specifically assessing for prominent, loosening, or painful hardware and also the anticipated absence of motion at the arthrodesis site. The patient is counseled on appropriate multi-modal techniques to address edema and pain. DME issues are addressed regarding consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. The 3rd visit generally coincides with an activity and weight bearing status change (eg, from non-weight bearing to weight bearing) with decision making a result of the clinical exam and radiographs. Medical record progress notes are entered in the EMR, reviewed, and signed. An update is provided to the PCP and/or referring provider. Continued disability, FMLA, out of work/ other related forms are completed.

POV#4 (99212): The patient is interviewed and data obtained by clinical staff are reviewed. Interval chart notes, including calls from the patient or pharmacy are reviewed. The foot is assessed for prominent, loosening, or painful hardware and also the anticipated absence of motion at the arthrodesis site. The patient is counseled on appropriate multi-modal techniques to address edema and pain. DME issues are addressed regarding consistent use, fit, and safety. Activity limitations (weight bearing status, ambulation, bathing, etc.) are discussed with the patient and questions answered. Medical record progress notes are entered in the EMR, reviewed, and signed. An update is provided to the PCP and/or referring provider. Continued disability, FMLA, out of work/ other related forms are completed.

Note that patient care will continue after the 90- day global period to follow the progress of fusion across the arthrodesis site and the return to shoegear and ADLs which can take up to 6 months.

Key Reference Code Comparison

For both reference codes, the respondents indicated the intensity and complexity of the survey code to be the same or more than the reference codes. Unfortunately, when estimating the total work for the survey code, the respondents underestimated the work and value of the postoperative office visits resulting in a lower intraoperative intensity.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99238	99214	99213	99212
28298	Correction, hallux valgus with bunionectomy, with sesamoidectomy when performed; with proximal phalanx osteotomy, any method	**7.75**	**0.047**	**225**	53	60	15	0.5		2	2

Other Code Comparison

Below are codes reviewed by the RUC in the past 10 years that have 45 minutes of intraservice time, are typically performed as an outpatient, and have similar work RVUs. Many of these codes have significantly less total time because

they are minor procedures and do not require extensive followup. However, they have similar work RVUs and support the recommended value of 7.50 for 28755.

CPT	DESCRIPTOR	Global	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99238	99214	99213	99212

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 28755

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty podiatry How often? Sometimes

Specialty orthopaedic surgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,924
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database 2023 claims

Specialty podiatry Frequency 1275 Percentage 66.26 %

Specialty orthopaedic surgery Frequency 650 Percentage 33.78 %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Orthopedic - other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 28755

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
28750	Arthrodesis, great toe; metatarsophalangeal joint	090
28755	Arthrodesis, great toe; interphalangeal joint	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
28750	A 50-year-old female with severe arthritis of the big toe metatarsophalangeal joint undergoes arthrodesis of this joint.
28755	A 50-year-old female with severe arthritis of the big toe interphalangeal joint undergoes arthrodesis of this joint.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The society advisors reviewed the current PE details to determine if any changes were needed.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   28750, 28755
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   no
   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   n/a
   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

no

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

n/a

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

n/a

8. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA001: Reviews the diagnostic pre-service and referral forms to ensure they are complete and submitted appropriately. CA002: Collects and coordinates the request from referring physician and ensures all appropriate preoperative imaging has been performed. In addition, the staff is arranges a preoperative medical clearance to ensure the medical fitness for procedure. CA003: Schedule availability in the OR and confirm availability of the procedure specific equipment and supplies. CA004: Education is provided to the patient and patient's family/caregiver(s) to prepare for the arthrodesis and for care after procedure. Questions and concerns are addressed and informed consent is reviewed. CA005: Complete phone calls to patient about pre-procedure restrictions in diet and/or medications and contacts a patient's pharmacy for any needed medications post-procedure.

    b. Service period (includes pre, intra and post):

CA036: Clinical staff will arrange for transfer of all operative details, recovery details, discharge forms and orders from the facility patient records to the patient's office records.

    c. Post-service period:

CA039: Staff will work with the physician over the course of the post operative period and as part of the visits to collect necessary information for the physician, review current status and vitals of the patient and communicate these with the physician and assist in documenting within the medical record.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

n/a

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

no

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Office Visits	
EQ168	light, exam	Other Formula – first two POVs only	

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

FACILITY DIRECT PE INPUTS

CPT CODE(S): 28750, 28755
SPECIALTY SOCIETY(IES): APMA, AOFAS, AAOS
PRESENTER(S): Susan M. Walsh, DPM; Andrew Pavelescu, DPM; William Creevy, MD; Hussein Elkousy, MD; Jonathan Feibel, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 28750, 28755
SPECIALTY SOCIETY(IES): APMA, AOFAS, AAOS
PRESENTER(S): Susan M. Walsh, DPM; Andrew Pavelescu, DPM; William Creevy, MD; Hussein Elkousy, MD; Jonathan Feibel, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
28750	Arthrodesis, great toe; metatarsophalangeal joint	090
28755	Arthrodesis, great toe; interphalangeal joint	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
28750	A 50-year-old female with severe arthritis of the big toe metatarsophalangeal joint undergoes arthrodesis of this joint.
28755	A 50-year-old female with severe arthritis of the big toe interphalangeal joint undergoes arthrodesis of this joint.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The society advisors reviewed the current PE details to determine if any changes were needed.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   28750, 28755
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service? **NO**
   Is this code(s) typically reported with the E/M service in the non-facility? **NO**
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   28750 and 28755: Podiatry is dominant in the NF and global
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 28750, 28755
SPECIALTY SOCIETY(IES): APMA, AOFAS, AAOS
PRESENTER(S): Susan M. Walsh, DPM; Andrew Pavelescu, DPM; William Creevy, MD; Hussein Elkousy, MD; Jonathan Feibel, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Codes 28750 and 28755 were reviewed with a large number of foot and ankle procedures in 2003. Several supply and equipment items were missing that are necessary for these procedures. For example, no drills, saws, or screws were included. Similarly, although a suction machine was included, there were no suction machine supplies. A mobile C-arm is standard to confirm work throughout the procedure as described in the DOW. The advisors reviewed the current inputs and added and deleted items as appropriate for these two codes.

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

no

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

CA013 standard is 2 min, recommendation is 5 minutes. The standard 2 minutes is based on prepping a room for an E/M service. This procedure requires several pieces of equipment and related supplies that need to be set up in the room and tested for function (eg, tourniquet system, suction machine, cautery, drill systems, c-arm). An additional 3 minutes over standard time for this work is conservative.

CA022: Patient will be monitored for a minimum of 10 minutes prior to attempt to ambulate in a non-weightbearing fashion. During the 10 minutes, the clinical staff will be able to multitask (eg cleaning off the equipment). Therefore, 2.5 minutes is recommended (1:4 or 2.5:10)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

CA029 and CA035 previously were a single activity at 3 minutes. The recommendation is to split the 3 minutes into the standards for these activities as 2 min for CA029 and 1 min for CA035.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

5 min was previously assigned. However, the recommendation 3 minutes for temp, bp, and pulse.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA001: Reviews the diagnostic pre-service and referral forms to ensure they are complete and submitted appropriately.

CA002: Collects and coordinates the request from referring physician and ensures all appropriate preoperative imaging has been performed. In addition, the staff is arranges a preoperative medical clearance to ensure the medical fitness for procedure.

CA004: Education is provided to the patient and patient's family/caregiver(s) to prepare for the arthrodesis and for care after procedure. Questions and concerns are addressed and informed consent is reviewed.

CA005: Complete phone calls to patient about pre-procedure restrictions in diet and/or medications and contacts a patient's pharmacy for any needed medications post-procedure.

    b. Service period (includes pre, intra and post):

CA009: Greet the patient, providing gowning, ensure appropriate medical records are available.

CA010: Obtain vital signs of weight and obtain heart rate, temperature and blood pressure.

CA013: Prepare room, supplies (including surgical instruments) and the many pieces of equipment that need to be confirmed to be operating properly, loading patient information when necessary, and attaching supplies where needed (eg, suction, cautery, drill, tourniquet).

CA016: Assist with initial positioning and monitoring of patient and stabilizing extremity

CA017: Assist physician during administration of block and local anesthetic

CA018: Assist Physician - This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the procedure from incision to close. This staff person directly works with the physician to complete the procedure and handles equipment and supplies and maintains their sterility.

CA023: Monitor patient for a minimum of 10 minutes while cleaning the many pieces of equipment used during the procedure (1:4 multitask)

CA024: Dispose used supplies and fluids from irrigation, restock anesthetics, and clean room surfaces

CA026: Clean surgical instrument pack per protocol established by the PEAC

CA029: Clinical staff will spend time checking the dressings to confirm no excessive bleeding and that wraps are not too tight from swelling once the patient is no longer supine

CA035: Review home care instructions, activity limitations, and mobility instructions

    c. Post-service period:

CA039: Staff will work with the physician over the course of the post operative period and as part of the visits to collect necessary information for the physician, review current status and vitals of the patient and communicate these to the physician and assist in documenting within the medical record.

NON-FACILITY DIRECT PE INPUTS

CPT CODE(S): 28750, 28755
SPECIALTY SOCIETY(IES): APMA, AOFAS, AAOS
PRESENTER(S): Susan M. Walsh, DPM; Andrew Pavelescu, DPM; William Creevy, MD; Hussein Elkousy, MD; Jonathan Feibel, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the procedure from puncture to close. This staff person directly works with the physician to complete the procedure and handles equipment and supplies and maintains their sterility. For example, irrigation, cautery, handing instruments.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

n/a

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

n/a

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

n/a

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

n/a

18. Are you recommending a PE supply pack for this recommendation? **Yes**
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

SA083 pack, protective, ortho, large SA080 pack, drapes, ortho, large SA088 tray, surgical skin prep, sterile SA043 pack, cleaning, surgical instruments

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: CMS Request – Proposed Rule for 2025

January 2025

Temporary Female Intraurethral Valve-Pump – Tab 23

In the CMS Medicare Physician Payment Schedule (MFS) Proposed Rule for 2025, under the Valuation of Specific Codes section II.E., CMS indicated that an interested party nominated two Category III CPT codes 0596T and 0597T as potentially misvalued. The nominator expressed concern about variability and inadequate Medicare Administrative Contractor (MAC) pricing for the contractor-priced services. This year, the nominator newly informed CMS that their analysis of national payment rates showed that in most CMS jurisdictions, not only are these codes misvalued, but in most cases, they are not valued at all, with payment schedule amounts in most CMS jurisdictions at or near zero dollars. CMS noted that the Agency continues to hear concerns about these payment inconsistencies for CPT codes 0596T and 0597T. As a result, CMS is recommending that the MACs establish more consistency in pricing, enabling the appropriate inclusion of the Vesiflo system in the code's PE valuation. Therefore, for CY 2025, CMS encouraged interested parties to provide more accurate and appropriate cost data, along with additional information regarding work RVU, work time, indicators, and utilization estimates for the MACs.

In the Final Rule for 2025, CMS indicated that they would add pricing for three new supplies related to these services: 1) inFlow Measuring Device priced at $140 (SD370), 2) inFlow Valve-Pump Device priced at $495 (SD371) and 3) inflow Activator Kit priced at $1,250 (SD372). **The RUC recommends that CMS change the device names to be generic descriptions, rather than brand names.**

The specialty societies noted that they conducted a targeted survey of American Urological Association members and those from a vendor list. Even with the targeted survey only 19 responses each were received for both 0596T and 0597T. The RUC noted that it will flag these services for review by the Relativity Assessment Workgroup after three years of data are available.

0596T ***Temporary female intraurethral valve-pump (ie, voiding prosthesis); initial insertion, including urethral measurement***
The RUC reviewed the survey results from 19 urogynecologists and determined that the survey 25th percentile work RVU of 2.43 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes pre-service evaluation time, 5 minutes pre-service positioning time, 5 minutes pre-service scrub/dress/wait time, 20 minutes intra-service time and 10 minutes immediate post-service time. An additional 8 minutes of pre-evaluation time over the pre-time package is necessary for the physician to instruct the patient on the use of the activation device and ask the patient to demonstrate the ability to manipulate the device. Urine culture results are reviewed to ensure the procedure can safely be performed. Urodynamic results are reviewed to ensure the patient is appropriate for placement of the device. This device is typically used in medically complex patients with severe voiding dysfunction necessitating an increase in pre-service evaluation time compared to the package time. Positioning time is 5 minutes as indicated by the survey respondents and consistent with the additional time for positioning in dorsal lithotomy or urological procedures pre-service package.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The intraurethral valve pump is indicated for women with urinary retention. The device consists of an intraurethral valve pump housed in a silicone biocompatible housing. When the device is in place, it completely obstructs the urethra. The patient or patient's caregiver must then use a battery-operated magnet-activated remote control held over the pubis to activate the device and empty the bladder. If the device malfunctions or the patient does not use the device appropriately, the patient will remain in urinary retention with the concomitant risks associated with high volume retention, including the development of hydronephrosis and renal dysfunction. During initial placement, a catheter is placed into the bladder, and the bladder is filled. The physician then places a sizing device to determine which of the nine different size options for urethral valve pumps should be placed, based on the patient's urethral length. Following measurement, the appropriate valve pump is selected and placed. The pump has prongs that secure the device at the bladder neck to prevent device loss from the urethra and a tab that sits outside the urethra to prevent device migration into the bladder. The device must then be adjusted for comfort to avoid pain within the bladder and introitus. The activator device is then used to verify that the device empties the bladder appropriately.

The RUC compared the surveyed code to the top key reference code 51102 *Aspiration of bladder; with insertion of suprapubic catheter* (work RVU = 2.70, 20 minutes intra-service time and 60 minutes total time) and determined that the surveyed code is slightly less intense and complex to perform, therefore appropriately valued lower. The RUC compared the surveyed code to the second top key reference service 52287 *Cystourethroscopy, with injection(s) for chemodenervation of the bladder* (work RVU = 3.20, 21 minutes intra-service time and 58 minutes total time) and determined that the surveyed service is much less intense and complex to perform, thus valued lower. For additional support, the RUC referenced MPC code 52332 *Cystourethroscopy, with insertion of indwelling ureteral stent (eg, Gibbons or double-J type)* (work RVU = 2.82, 25 minutes intra-service time and 56 minutes total time), which is more intense and complex, thus valued higher and 36514 *Therapeutic apheresis; for plasma pheresis* (work RVU = 1.81, 20 minutes intra-service time and 64 minutes total time), which is less intense and complex, thus valued lower.

The RUC also referenced other supportive services such as 31572 *Laryngoscopy, flexible; with ablation or destruction of lesion(s) with laser, unilateral* (work RVU = 3.01, 20 minutes intra-service time and 60 minutes total time) and 32556 *Pleural drainage, percutaneous, with insertion of indwelling catheter; without imaging guidance* (work RVU = 2.50, 20 minutes intra-service time and 60 minutes total time), both which require the same intra-service time and similar total time. The RUC determined that the survey 25th percentile work value of 2.43 appropriately places CPT code 0596T relative to other services in the MFS based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 2.43 for CPT code 0596T.**

0597T *Temporary female intraurethral valve-pump (ie, voiding prosthesis); replacement*

The RUC reviewed the survey results from 19 urogynecologists and determined that the survey 25th percentile work RVU of 1.33 was slightly high in relation to the initial insertion, and recommends a work RVU of 1.05 for 0597T. The RUC recommends 10 minutes pre-service evaluation time, 5 minutes pre-service positioning time, 5 minutes pre-service scrub/dress/wait time, 10 minutes intra-service time and 6 minutes immediate post-service time. Positioning time is 5 minutes as indicated by the survey respondents and consistent with the additional time for positioning in dorsal lithotomy or urological procedures pre-service package. The RUC recommends a crosswalk to CPT code 11730 (work RVU=1.05, 10 minutes intra-service time and 33 minutes total time).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

This procedure describes the work of replacing the female urethral valve that was inserted with 0596T. The valve requires replacement every 29 days. After the patient is positioned in dorsal lithotomy and local anesthesia is provided, the device is firmly grasped and removed, and the new intraurethral valve pump is placed through the urethra, securing the device tines at the bladder neck and the prong outside the urethra to keep the device comfortably in place.

The RUC compared the surveyed code to the top key reference code 51710 *Change of cystostomy tube; complicated* (work RVU = 1.35, 15 minutes intra-service time and 42 minutes total time) and determined that the surveyed code requires less time to perform, therefore appropriately valued lower. The RUC compared the surveyed code to the second top key reference service 51705 *Change of cystostomy tube; simple* (work RVU = 0.90, 10 minutes intra-service time and 32 minutes total time) and determined that the surveyed service is more intense and complex to perform, requires slightly more total time, thus is valued higher. For additional support, the RUC referenced MPC codes 20552 *Injection(s); single or multiple trigger point(s), 1 or 2 muscle(s)* (work RVU = 0.66, 5 minutes intra-service time and 21 minutes total time), which requires less time, intensity and complexity to perform, thus valued lower and 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 10 minutes intra-service time and 27 minutes total time) which is more intensity and complexity to perform, thus valued higher.

The RUC also referenced other supportive services such as 64420 *Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level* (work RVU = 1.08, 10 minutes intra-service time and 34 minutes total time) and 64486 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)* (work RVU = 1.20, 10 minutes intra-service time and 32 minutes total time) both which require the same intra-service time and similar total time. The RUC determined that the survey a work value of 1.05 appropriately places CPT code 0597T relative to other services in the Medicare Physician Payment Schedule (MFS) based on time, work, intensity, and complexity. **The RUC recommends a work RVU of 1.05 for CPT code 0597T.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct practice expense inputs and made a single modification to remove supply SD372 *inFlow Activator Kit* from the replacement code 0597T because this kit is only used for the initial insertion. The PE Subcommittee also acknowledged that the pre-service clinical staff time for 000- and 010-day global codes is presumed to be zero and agreed with the specialty's use of the pre-service time package for "Use of Clinical Staff for Endoscopy".

The PE Subcommittee acknowledged the recently priced (for 2025) high-cost supply input, SD372 *inFlow Activator Kit,* as recommended for code 0596T. The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology
Although the technology to perform these services has been available for a decade, very few physicians perform these services. These services will be placed on the New Technology/New Services list and be re-reviewed by the RUC after three years of data are available (April 2030).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RUC Flag
The RUC will flag codes 0596T and 0597T as Do Not Use to Validate Physician Work - Low survey response, since the survey responses of 19 were below the 30 response threshold. The Relativity Assessment Workgroup will review these services after three years of data are available (April 2030). Specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for deletion or revision.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
0596T	Temporary female intraurethral valve-pump (ie, voiding prosthesis); initial insertion, including urethral measurement	~~YYY~~ 000	2.43
0597T	replacement (Do not report 0596T, 0597T in conjunction with 51610, 51700, 51701, 51702, 51703, 51705)	~~YYY~~ 000	1.05

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

crosswalk to CPT code 15275. Additionally, we are finalizing an increase in the supply price to $770.83, based on twelve submitted invoices.

(33) Temporary Female Intraurethral Valve-Pump (CPT codes 0596T and 0597T)

In the CY 2024 PFS proposed rule, an interested party nominated two Category III CPT codes, CPT codes 0596T (*Initial insertion of temporary valve-pump in female urethra*) and 0597T (*Replacement of temporary valve-pump in female urethra*), as potentially misvalued. The nominator expressed concern about variability in MAC pricing for the contractor-priced service. Additionally, the nominator highlighted that the payment amounts determined by MACs were inadequately low and did not account for the time and effort required to furnish the services. In their submission, the nominator discussed their anticipated inputs for both codes. For CPT code 0596T, the nominator stated that a physician typically spends 60 minutes inserting the Vesiflo inFlow System. The nominator stated that CPT code 0596T included various supplies, equipment, and clinical labor time totaling $1,902.76, with the inflow supply items making up about 99 percent of the total cost of supplies. For CPT code 0597T, the nominator stated that a physician spends 25 minutes replacing the Vesiflo inFlow System and PE items were similar, with supplies, equipment and clinical labor time costing $505.30, with the inflow supply items making up about 98 percent of the total cost of supplies. We direct interested parties to the CY 2024 PFS final rule (88 FR 78850) for more detailed submission information regarding CPT codes 0596T and 0597T. After reviewing, we concluded that these codes were not potentially misvalued because they are Category III codes describing relatively new and low-volume services. Category III codes are contractor priced under the PFS, meaning that each MAC can establish pricing for the code within its jurisdiction, resulting in variability in payments.

This year, the nominator newly informed CMS that their analysis of national payment rates showed that in most CMS jurisdictions, not only are these codes misvalued, but in most cases, they are not valued at all, with fee schedule amounts in most CMS jurisdictions at or near zero dollars. The nominator further emphasized that three physician experts, all employed in

major university medical centers, have highlighted the challenges posed by the combination of high supply costs and inadequate fee schedule payments, which have hindered their ability to provide services covered by these codes over several years. According to the nominator, these selected physicians also expressed frustration with the reluctance of MACs to address or discuss this issue. Moreover, the nominator highlighted high access barriers as a significant concern. These barriers primarily affect Medicare's most vulnerable beneficiaries, particularly women experiencing permanent urinary retention (PUR), although we note that no quantifiable evidence was provided to support these statements. We acknowledge and appreciate the nominator's efforts in reaching out to experts in the field and patients who rely on these services to elucidate their significant needs.

Since these two Category III CPT codes were not identified as potentially misvalued and were consequently priced by contractors, each MAC can set pricing for the code within its jurisdiction. This could result in inevitable variability in MAC pricings until they receive a higher number of claims, as stated by the nominator. Through our engagement with MACs, we found that claims for the two Category III CPT codes are reviewed on a case-by-case basis for medical necessity. If the claim is payable, the price will be determined at that time by the MAC. Additionally, these codes were a topic of discussion within the MAC pricing workgroup, and we observed that there was not a significant difference among the MACs in terms of allowances based on the proposed pricing methodologies. However, there is variance in how MACs load pricing for Category III codes. For instance, some MACs publish the price for the service before they receive any claims, while others set the price only after they receive claims that help determine the appropriate pricing. If a MAC does not load a price for a code before receiving any claims, the service can still be paid, but the allowance has not been published.

We continue to hear concerns about these payment inconsistencies for CPT codes 0596T and 0597T. As a result, we recommended that the MACs establish more consistency in pricing, enabling the appropriate inclusion of the Vesiflo system in the code's PE valuation. Therefore,

for CY 2025, we encouraged interested parties to provide more accurate and appropriate cost data, along with additional information regarding work RVU, work time, indicators, and utilization estimates for the MACs. This should complement the information provided by the nominator in the CY 2024 final rule (88 FR 78850) and will facilitate the process. To aid in this process, we are adding three new supplies to our direct PE database based on invoices submitted by interested parties: the inFlow Measuring Device at a price of $140 (SD370), the inFlow Valve-Pump Device at a price of $495 (SD371), and the inFlow Activator Kit at a price of $1,250 (SD372). Although we did not propose national pricing for these two Category III codes, we did note for the benefit of the MACs that CPT code 0596T will typically include one of each of these supplies, whereas CPT code 0597T will typically include only one of the supplies (SD371).

We encouraged the MACs to continue to engage with interested parties by providing information on how they price these services. We welcomed additional comments from the broader medical community regarding the usage of this service, particularly concerning its safety and effectiveness, as well as potential factors contributing to its low utilization.

Comment: Commenters supported the establishment of new supply codes (SD370, SD371, and SD372) for the inFlow™ female voiding prosthesis system (the inFlow System), which addresses the needs of women with permanent urinary retention (PUR). According to the commenters, the inFlow System offers a critical alternative to traditional intermittent catheterization, providing significant improvements in both health outcomes and quality of life for women with neurological conditions that limit their ability to self-catheterize. They stated that creating three new supply codes would standardize and improve payment rates by Medicare Administrative Contractors (MACs), thereby reducing access barriers and increasing the utilization of the inFlow system. They emphasized that finalizing appropriate pricing for these device-intensive procedures, as proposed, is essential to ensuring that Medicare beneficiaries have access to this important, life-enhancing technology.

Response: We thank commenters for their overwhelming support for our proposal. After consideration of public comments, we are finalizing creation of three new supply codes in the PE database to facilitate appropriate pricing by the MACs: the inFlow Measuring Device at a price of $140 (SD370), the inFlow Valve-Pump Device at a price of $495 (SD371), and the inFlow Activator Kit at a price of $1,250 (SD372) as proposed.

(34) PE-only replacement code for Heart Failure System

Interested parties have expressed concern about the lack of coding and a billing mechanism when practitioners incur costs replacing identified components of the CardioMEMS™ Heart Failure System used in the physician service described by CPT code 33289 (*Transcatheter implantation of wireless pulmonary artery pressure sensor for long-term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed*).

The CardioMEMS™ Heart Failure System furnished during this service allows practitioners treating heart failure patients to wirelessly monitor and measure pulmonary artery pressure and heart rate in patients with heart failure and transmit the information to the physician to inform the treatment plan for the patient. The system includes two critical components: first, a miniaturized, wireless monitor, which is implanted into a patient's pulmonary artery, and second, a smart pillow (the CardioMEMS™ Patient Electronics System), which captures and transmits readings via safe radio frequency from the patient's implanted CardioMEMS™ Heart Failure System. Overall, the CardioMEMS™ Heart Failure System enables patients to transmit critical heart failure status information to clinicians regularly, potentially eliminating the need for frequent clinic or hospital visits.

Interested parties have highlighted the critical importance of the device for heart failure patients who require close monitoring of weight and blood pressure to prevent fluid buildup around the heart and have requested that CMS establish coding to describe when practitioners

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:0596T Tracking Number Original Specialty Recommended RVU: **2.43**
Presented Recommended RVU: **2.43**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **2.43**

CPT Descriptor: Temporary female intraurethral valve-pump (ie, voiding prosthesis); initial insertion, including urethral measurement

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old woman has a medical disorder causing inability to void spontaneously. She lacks manual dexterity to perform self-catheterization. She wishes to avoid the infection risk associated with an indwelling catheter. A temporary intraurethral valve-pump is inserted.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 15% , In the ASC 10.53%, In the office 73.68%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Select and order the appropriate antibiotic(s). Confirm timing and administration. Explain procedure, its purpose and possible complications. Review post-procedure management with the patient and/or family and answer any questions. Train patient, family, and/or caregiver, in operation of the urinary prosthesis. Review and obtain informed consent. Verify availability of all required instruments and supplies. Provide assistance in placing the patient in dorsal-lithotomy position. Set up the implant deployment device. Prep and drape the vaginal and perineal area. Scrub and dress for the procedure. Perform a procedural time-out with the team.

Description of Intra-Service Work: Inject the urethra with topical anesthetic jelly. Initiate the measurement of urethral length, using a sterilize single-use sizing device. Lubricate the sizing device, place it per urethral meatus and into the urethra. Assess the urethral length size. Remove the sizing device and select an intraurethral valve-pump prosthetic device length closest to, but not less than the largest number recorded. Insert a filling urethral catheter. Instill approxiamtely 200cc of saline into the patient's bladder and note patient responses during and after filling. Apply an analgesic medical lubricant to the sterile prosthetic device and insert it into the patient's urethra using the disposable introducer. Insert the device into the urethra until its outer tab (flange) touches the edge of the meatus. Depress the introducer's pusher until the device is released. The intravesical portion has flexible fins that open and hold the device in a fixed position at the bladder neck. Do not pull on the introducer until the device is completely released. Discard the introducer. Check for leakage and appropriate use of the activator for urination. The activator is held against the lower pubic area, just above the urethral meatus and its button is pressed continuously to create a urinary stream. Observe the patient voiding to confirm her ability to appropriately operate the urinary prosthesis.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal-lithotomy to sitting position. Discuss the outcome of the procedure with the patient. Document a procedure report and complete medical record documentation. Discuss aftercare treatment with the patient, family, and/or caregiver. Review precautions with the device including ensuring the patient has an extra intraurethral valve-pump prosthetic device available and an alternative bladder management strategy available any time, as the device may be not work, be expelled, and/or be removed. Education includes review of timed voiding q3-4 hours.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	50%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	33%	0%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	67%	33%
Physical effort required	17%	67%	16%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	67%	17%	16%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	50%	25%	25%
Physical effort required	25%	75%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	25%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The intraurethral valve-pump prosthetic device is utilized for women suffering with urinary retention. 0596T is a Category III CPT code describing the initial sizing and placement of this urinary prosthesis. Due to significant variation in payment from the MACs, CMS requested additional information regarding the physician work and practice expense for this category III code.

Recommendation:
We recommend an RVW of 2.43, at the 25th percentile of the survey. Given the relatively low utilization of the procedure, and the category III code, we had a robust survey response with 19 respondents. Overall, median experience was 0 but the vendor list survey did result in 4 responses with a median experience of 4 procedures. Median intra-service time was 20 minutes, with 30 minutes of pre-service time, and ten minutes of post-service time.

Pre-service package 6 and post-service package 7A are selected. Pre-service evaluation time is increased based on survey results. During the pre-service period, the patient is instructed on the use of the activation device and the patient is asked to

demonstrate the ability to manipulate the device. Urine culture results are reviewed to ensure the procedure can safely be performed. Urodynamic results are review to ensure the patient is appropriate for placement of the device. This device is typically used in medically complex patients with severe voiding dysfunction necessitating an increase in pre-service evaluation time compared to the package time. Positioning time is increased to account for positioning in dorsal lithotomy. Post-service time is decreased based on the survey.

Results of a RUC database search are included below. The parameters were RUC review yes, RUC review >/= to 2014, global 000, Intra-service time = 20 minutes, total time between 60 and 70 minutes.

CPT	DESC	GLOBAL	WORK RVU	TIME SOURCE	PRE TIME	INTRA TIME	POST TIME	TOTAL TIME	IWPUT	RUC DATE	MPC	UTILIZATION
31605	INCISION OF WINDPIPE	000	6.45	RUC	23	20	21	64	0.2768	2016-04		224
31572	LARGSC W/LASER DSTRJ LES	000	3.01	RUC	30	20	10	60	0.1121	2015-10		1,423
28001	DRAINAGE OF BURSA OF FOOT	000	2.00	RUC	25	20	15	60	0.0588	2020-10		2,308
36514	APHERESIS PLASMA	000	1.81	RUC	29	20	15	64	0.0412	2017-01	Yes	21,488

At the 25th percentile recommendation of 2.43, 0596T would fit well within the fee schedule of RUC reviewed codes with similar times.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0596T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

CPT Descriptor: Temporary female intraurethral valve-pump (ie, voiding prosthesis); replacement

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old woman has a medical disorder causing inability to void spontaneously. She underwent temporary intraurethral valve-pump insertion 29 days ago. She presents for replacement of the device.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 15% , In the ASC 10%, In the office 73%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Interview the patient on her experience with intraurethral valve-pump prosthetic device and update her medical record. Select and order the appropriate antibiotic(s). Confirm timing and administration. Explain procedure, its purpose and possible complications. Review post-procedure management with the patient and/or family and answer any questions. Review and obtain informed consent. Verify availability of all required instruments and supplies. Provide assistance in placing the patient in dorsal-lithotomy position. With the patient in the lithotomy position, gently pull the indwelling device straight out of the urethra. Set up the implant deployment device. Prep and drape the vaginal and perineal area. Scrub and dress for the procedure. Perform a procedural time-out with the team.

Description of Intra-Service Work: Inject the urethra with topical anesthetic jelly. Apply an analgesic medical lubricant to the sterile prosthetic device and insert it into the patient's urethra using the disposable introducer. Insert the device into the urethra until its outer tab (flange) touches the edge of the meatus. Depress the introducer's pusher until the device is released and the intravesical fins that open and hold the device at the bladder neck. Do not pull on the introducer until the device is completely released. Discard the introducer. Check for leakage and appropriate use of the activator for urination. The activator is held against the lower pubic area, just above the urethral meatus and its button is pressed continuously to create a urinary stream. Observe the patient voiding to confirm her ability to appropriately operate the urinary prosthesis.

Description of Post-Service Work: Remove drapes and assist with transitioning the patient from dorsal-lithotomy to sitting position. Discuss the outcome of the procedure with the patient. Document a procedure report and complete medical record documentation. Discuss aftercare treatment with the patient, family, and/or caregiver.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	67%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	56%	33%
Physical effort required	0%	78%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	56%	33%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	67%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	67%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	100%	0%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The intraurethral valve-pump prosthetic device is utilized for women suffering with urinary retention. 0597T is a Category III CPT code describing the removal and replacement of this urinary prosthesis. Due to significant variation in payment from the MACs, CMS requested additional information regarding the physician work and practice expense for this category III code.

Recommendation:
We recommend an RVW of 1.33, at the 25th percentile of the survey. Given the relatively low utilization of the procedure, and the category III code, we had a robust survey response with 19 respondents. Overall, median experience was 0 but the vendor list survey did result in 4 responses with a median experience of 6 procedures. Median survey time for all respondents was 10 intra-service minutes, 20 minutes pre-service time, 6 minutes post-service time.

Pre-service package 6 and post-service package 7A are selected. Evaluation time is reduced to match survey median. Positioning time is increased based on RUC standards for dorsal lithotomy and based on survey results.

Results of a RUC database search are included below. The parameters were RUC review yes, RUC review >/= to 2014, global 000, Intraservice time = 10 minutes, total time between 30 and 40 minutes.

CPT	DESC	GLOBAL	WORK RVU	TIME SOURCE	PRE TIME	INTRA TIME	POST TIME	TOTAL TIME	IWPUT	RUC DATE	MPC	UTILIZATION
31500	INSERT EMERGENCY AIRWAY	000	3.00	RUC	12	10	10	32	0.2522	2016-01	Yes	218,803

64415	NJX AA&/STRD BRCH PLXS IMG	000	1.50	RUC	18	10	7	35	0.0997	2021-10		192,508
11982	REMOVE DRUG IMPLANT DEVICE	000	1.34	RUC	18	10	5	33	0.0882	2018-10		2,137
64417	NJX AA&/STRD AX NERVE IMG	000	1.31	RUC	18	10	10	38	0.0740	2021-10		15,886
64486	TAP BLOCK UNIL BY INJECTION	000	1.27	RUC	15	10	10	35	0.0782	2014-04		7,647
64418	NJX AA&/STRD SPRSCAP NRV	000	1.10	RUC	12	10	10	32	0.0650	2016-04		28,406
64420	NJX AA&/STRD NTRCOST NRV 1	000	1.08	RUC	19	10	5	34	0.0614	2018-10		22,533
11730	REMOVAL OF NAIL PLATE	000	1.05	RUC	18	10	5	33	0.0606	2016-01		257,294
45300	PROCTOSIGMOIDOSCOPY DX	000	0.80	RUC	10	10	10	30	0.0381	2017-04	Yes	15,380

Given the inherent difficulties of surveying a low volume, catgeory III code we feel the 25th percentile recommendation of 1.33 based on procedural intensity, intraservice and total time, and the current fee schedule.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0597T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1800
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. based on knowledge of current utilization

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,200
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. based on knowledge of current utilization

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 0597T

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SS Rec Summary

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
0596T	Temporary female intraurethral valve-pump (ie, voiding prosthesis); initial insertion, including urethral measurement	000
0597T	Temporary female intraurethral valve-pump (ie, voiding prosthesis); replacement	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
0596T	A 65-year-old woman has a medical disorder causing inability to void spontaneously. She lacks manual dexterity to perform self-catheterization. She wishes to avoid the infection risk associated with an indwelling catheter. A temporary intraurethral valve-pump is inserted.
0597T	A 65-year-old woman has a medical disorder causing inability to void spontaneously. She underwent temporary intraurethral valve-pump insertion 29 days ago. She presents for replacement of the device.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The AUA's RUC Expert Panel discussed the inputs for procedures 0596T and 0597T to determine appropriate PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   51703
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   No
   See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   N/A
   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and

has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

0596T: Clinical staff complete pre-service forms and coordinate pre-surgery services, schedule space in the facility to perform the procedure, provide pre-procedural education about the implanted device, and complete pre-procedure phone calls and prescriptions. 0597T: Clinical staff complete pre-service forms and coordinate pre-surgery services, schedule space in the facility to perform the procedure, provide pre-procedural education about the implanted device, and complete pre-procedure phone calls and prescriptions.

   b. Service period (includes pre, intra and post):

N/A

   c. Post-service period:

N/A

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

	SA063	tray, catheter insertion (w-o catheter)	1.27	tray	1

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EF031	table, power	Default
EQ168	light, exam	Default

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
0596T	Temporary female intraurethral valve-pump (ie, voiding prosthesis); initial insertion, including urethral measurement	000
0597T	Temporary female intraurethral valve-pump (ie, voiding prosthesis); replacement	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
0596T	A 65-year-old woman has a medical disorder causing inability to void spontaneously. She lacks manual dexterity to perform self-catheterization. She wishes to avoid the infection risk associated with an indwelling catheter. A temporary intraurethral valve-pump is inserted.
0597T	A 65-year-old woman has a medical disorder causing inability to void spontaneously. She underwent temporary intraurethral valve-pump insertion 29 days ago. She presents for replacement of the device.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   The AUA's RUC Expert Panel discussed the inputs for procedures 0596T and 0597T to determine appropriate PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   51703
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?
   No
   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   Urology, 73.68% In-Office setting

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

3 Minutes

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

0596T: Clinical staff complete pre-service forms and coordinate pre-surgery services including necessary urine testing and complete pre-procedure phone calls and prescriptions.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

0597T:
Clinical staff complete pre-service forms and coordinate pre-surgery services including necessary urine testing and complete pre-procedure phone calls and prescriptions.

b. Service period (includes pre, intra and post):

0596T:
Clinical staff greet patient, provide gown and ensure medical records are up to date. Staff obtain patient vital signs, provide education on procedure and obtain consent. Staff will also prepare room, equipment, supplies, prepare and start IV, position and monitor patient, and sedate patient. Clinical staff provide assistance to physician during procedure and then monitor patient, clean room and equipment, and check patient's dressings, catheters, and wound.

0597T:
Clinical staff greet patient, provide gown and ensure medical records are up to date. Staff obtain patient vital signs, provide education on procedure and obtain consent. Staff will also prepare room, equipment, supplies, prepare and start IV, position and monitor patient, and sedate patient. Clinical staff provide assistance to physician during procedure and then monitor patient, clean room and equipment, and check patient's dressings, catheters, and wound.

c. Post-service period:

0596T:
Clinical staff conduct necessary patient communications to confirm the device is functioning appropriately.

0597T:
Clinical staff conduct necessary patient communications to confirm the device is functioning appropriately.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

During the intra-service period the clinical staff assist the surgeon with all steps of the procedure. The sizing device is prepared and given to the surgeon. The catheter is prepared and fluid to fill the bladder is given to the surgeon. The appropriate intra-urethral prosthetic device is prepared. The clinical staff also act as chaperone throughout the procedure and their presence is mandatory throughout the entirety of the intra-service time.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

	SA063	tray, catheter insertion (w-o catheter)	1.27	tray	1

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EF031	table, power	Default
EQ168	light, exam	Default

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Supply item SD372 inFlow Activation Kit was removed from code 0597T as the inFlow Activation Kit is not typical in the non-facility setting for the replacement code. This kit is only used for the initial insertion code 0596T.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2024

Respiratory Syncytial Virus (RSV) Monoclonal Antibody Administration – Tab 07

In September 2023, the CPT Editorial Panel created two codes to report administration of respiratory syncytial virus (RSV), monoclonal antibody and seasonal dose, with and without counseling. These two administration codes were created following FDA approval of Nirsevimab to protect against severe disease caused by RSV, which is common throughout the fall and winter seasons and highly contagious, sometimes deadly, for infants. CPT codes 96380 and 96381 were effective October 6, 2023, for immediate use. CPT codes 96380 and 96381 were reviewed and valued with interim recommendations to CMS the following week at the September 28-30, 2023, RUC meeting. Following that expedited review, CPT codes 96380 and 96381 were surveyed for the April 2024 RUC meeting after more widespread use occurred. These codes are not subject to compelling evidence since the September RUC recommendations were interim.

96380 ***Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional***
The RUC reviewed the survey results from 112 pediatricians and nurse practitioners and determined the survey median work RVU of 0.28 appropriately accounts for the work required to perform this service. The RUC recommends 8 minutes intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an Evaluation and Management (E/M) office visit.

The RUC compared code 96380 to the top key reference service CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24- and 7-minutes intra-service and total time). The RUC agreed that the surveyed code requires slightly more physician work and time than CPT code 90460. The counseling associated with administering the RSV monoclonal antibodies is distinct in that, beyond discussing whether the infant/child should receive the product, counseling also needs to address how this product differs from traditional pediatric vaccines and optimal product administration timing. Therefore, an additional minute of intra-service time for that additional discussion beyond that of what is included in CPT code 90460 is justified. However, infants born to mothers who are administered RSV monoclonal antibodies at least two weeks before delivery will have protection and, in most cases, should not also need RSV monoclonal antibodies directly.

The RUC noted that although the vignette described a 6-month-old, the specialty societies and the RUC believe that the typical patient receiving the RSV monoclonal antibody will be much younger than a 6-month-old. Additionally, the specialty societies indicated that currently, this monoclonal antibody is not typical for patients over 8 months old unless they are in a specific high-risk category, which is less than 2% of infants nationally. Further, it is typical that patients will only receive this antibody once in their lifetime.

For additional support, the RUC referenced MPC code 96413 *Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug* (work RVW = 0.28, 7 minutes intra-service time and 13 minutes total time), CPT code 77073 *Bone length studies*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(orthoroentgenogram, scanogram) (work RVU = 0.26, 5 minutes intra-service time and 7 minutes total time), CPT code 71110 *Radiologic examination, ribs, bilateral; 3 views* (work RVU = 0.29, 6 minutes intra-service and 8 minutes total time), and MPC code 71111 *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (work RVW = 0.32, 7 minutes intra-service time and 9 minutes total time). The RUC determined that the median work value of 0.28 appropriately places CPT code 96380 relative to other services in the MFS based on time, work, intensity and complexity. **The RUC recommends a work RVU of 0.28 for CPT code 96380.**

96381 ***Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection***
The RUC reviewed the survey results from 97 pediatricians and nurse practitioners and determined that the survey 25th percentile work RVU of 0.17 appropriately accounts for the work required to perform this service. The RUC recommends 3 minutes intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an Evaluation and Management (E/M) office visit.

The RUC compared the surveyed code to the top key reference service CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* (work RVU = 0.17, 7 minutes intra-service and total time) and determined that the physician work required to perform these services are the same. The RUC noted when 90471 was last surveyed, the specialties survey time data was disparate, based on the specialty completing the survey. After much discussion, the RUC agreed that the time and work for 90471 and 96381 are comparable.

For additional support, the RUC referenced CPT code 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular (*work RVW = 0.17, 3 minutes intra-service time and 7 minutes total time). CPT code 96372 was recently valued by the RUC in 2017 and is the code that would have been used to report this service before the creation of this new code. The RUC also referenced CPT code 73080 (work RVU = 0.17, 3 minutes intra-service time and 5 minutes total time), MPC code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVW = 0.18, 5 minutes intra-service time and 7 minutes total time), and CPT code 90970 *End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older* (work RVU = 0.18, 3.2 minutes intra-service and total time). The RUC determined that the survey 25th percentile work RVU of 0.17 appropriately places CPT code 96381 relative to other services in the MFS based on time, work, intensity and complexity. **The RUC recommends a work RVU of 0.17 for CPT code 96381.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct inputs for CPT codes 96380 and 96381 and made one modification. Clinical staff activity CA005 *Complete pre-procedure phone calls and prescription* was removed as this time is already captured in the typically associated E/M service. The Subcommittee accepted 5 minutes for CA007 *Review patient clinical extant information and questionnaire*. Four additional minutes of clinical staff time were recommended by the surveying societies to complete the monoclonal antibody pre-check eligibility process (see attachment Nirsevimab Visual Guide). The PE Subcommittee agreed that the time required to check the mother's RSV immunization status and timing of dose in the typical patient is a minimum of 5 minutes. Clinical staff have the expertise and access to non-patient (i.e., the mother) information. This activity requires looking up the mother's records at the birthing hospital or physician office as it is not typical for this information to be sent to the state immunization registry. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

New Technology/New Services List
CPT codes 96380 and 96381 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions. The RUC noted that the Relativity Assessment Workgroup may want to examine the typical patient since the specialty societies and RUC agreed that the typical patient receiving the RSV monoclonal antibody to be much younger than 6 months old.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Category I
Evaluation and Management Services
Preventive Medicine Services

The following codes are used to report the preventive medicine evaluation and management of infants, children, adolescents, and adults.

The extent and focus of the services will largely depend on the age of the patient.

Immunization/vaccine/toxoid products, immunization administrations, ancillary studies involving laboratory, radiology, other procedures, or screening tests (eg, vision, hearing, developmental) identified with a specific CPT code are reported separately. For immunization administration and ~~vaccine~~ immunization risk/benefit counseling, see 90460, 90461, 90471-90474, *90480*, 96380, 96381 ~~, *0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A*~~. For immunization/vaccine/toxoid products, see *91304, 91318, 91319, 91320, 91321, 91322,* 90380, 90381, 90476-90759~~, *91300-91317*~~.

Medicine
Immune Globulins, Serum or Recombinant Products

Codes 90281-90399 identify the serum globulins . . .

In recognition of public health interest in immune globulin products, the CPT Editorial Panel has chosen to publish new immune globulin product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ✓ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approved, the ✓ symbol will be removed. CPT code users should refer to the AMA CPT website (ama-assn.org/cpt-cat-i-immunization-codes) for the most up-to-date information on codes with the ✓ symbol.

90378		*Respiratory syncytial virus, monoclonal antibody, recombinant, for intramuscular use, 50 mg, each*		
90380		*Respiratory syncytial virus, monoclonal antibody, seasonal dose; 0.5 mL dosage, for intramuscular use*		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt *=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code **f**=Family Code **e**=Editorial **D**=Deleted

90381 *1 mL dosage, for intramuscular use*

(Do not report 90380, 90381 in conjunction with 96372)

(For administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, see 96380, 96381)

90384 *Rho(D) immune globulin (RhIg), human, full-dose, for intramuscular use*

Immunization Administration for Vaccines/Toxoids

Report vaccine immunization . . .

. . .

A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. Combination vaccines are those vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.

For immune globulins and monoclonal antibodies immunizations, see 90281-90399. For administration of immune globulins and monoclonal antibodies immunizations, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96372, 96374, 96380, 96381.

(For allergy testing, see 95004 et seq)

(For skin testing of bacterial, viral, fungal extracts, see 86485-86580)

(For therapeutic or diagnostic injections, see 96372- 96379)

Vaccines, Toxoids

To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website (ama-assn.org/ cpt-cat-i-immunization-codes), which features updates of CPT Editorial Panel actions regarding these products. See the Introduction section of the CPT code set for a complete list of the dates of release and implementation.

The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ↗symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approval, the ↗symbol will be removed. CPT users should refer to the AMA CPT website (ama-assn.org/cpt-cat-i-immunization-codes) for the most up-to-date information on codes with the ↗symbol.

[…]

Separate codes are available for combination vaccines (eg, Hib-HepB, DTap-IPV/Hib). It is inappropriate to code each component of a combination vaccine separately. If a specific vaccine code is not available, the unlisted procedure code should be reported, until a new code becomes available.

The immunization/vaccine/toxoid abbreviations listed in codes 90380, 90381, 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 ~~91300-91317~~ reflect the most recent US vaccine abbreviation references used in the Advisory Committee on Immunization Practices (ACIP) recommendations at the time of CPT code set publication. Interim updates to vaccine code descriptors will be made following abbreviation approval

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

by the ACIP on a timely basis via the AMA CPT website (ama-assn.org/cpt-cat-i-immunization-codes). The accuracy of the ACIP vaccine abbreviation designations in the CPT code set does not affect the validity of the vaccine code and its reporting function.

~~*For the purposes of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccinations, codes 0003A, 0013A, 0053A, 0073A, 0083A, 0093A, 0113A, and 0173A represent the administration of a third dose in the primary series (eg, patient with immunocompromising condition or patient age 6 months through 4 years). In contrast, the booster or additional dose codes 0004A, 0034A, 0044A, 0054A, 0064A, 0074A, 0094A, 0104A, 0124A, 0134A, 0144A, 0154A, 0164A, and 0174A represent the administration of a dose of vaccine when the initial immune response to a primary vaccine series was sufficient, but has likely waned over time.*~~

(For immune globulins and monoclonal antibodies immunizations, see 90281-90399)

(For administration of immune globulins and monoclonal antibodies immunizations, with the exception of respiratory syncytial virus, monoclonal antibody, seasonal product, see 96365-96375)

(For administration of respiratory syncytial virus, monoclonal antibody, seasonal product, see 96380, 96381)

(91303 has been deleted. To report severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine product immunization, see 91318, 91319, 91320, 91321, 91322)

#91304 *Severe acute respiratory syndrome coronavirus 2 (SARSCoV-2) (coronavirus disease [COVID-19]) vaccine, recombinant spike protein nanoparticle, saponin-based adjuvant, 5 mcg/0.5 mL dosage, for intramuscular use*

(Report 91304 with administration codes 90480)

90683 *Respiratory syncytial virus vaccine, mRNA lipid nanoparticles, for intramuscular use*

(For seasonal respiratory syncytial virus [RSV] monoclonal antibodies immunization codes, see 90380, 90381. For administration of seasonal RSV monoclonal antibodies immunizations, ~~use 96372~~ see 96380, 96381)

90680 *Rotovirus vaccine, pentavalent*

Hydration, Therapeutic, Prophylactic, Diagnostic Injections and Infusions, and Chemotherapy and Other Highly Complex Drug or Highly Complex Biologic Agent Administration

Therapeutic, Prophylactic, and Diagnostic Injections and Infusions (Excludes Chemotherapy and Other Highly Complex Drug or Highly Complex Biologic Agent Administration)

A therapeutic, prophylactic, or diagnostic IV infusion or injection (other than hydration) is for the administration of substances/drugs. When fluids are used to administer the drug(s), the administration of the fluid is considered incidental hydration and is not separately reportable. These services typically require direct supervision for any or all purposes of patient assessment, provision of consent, safety oversight, and intra-service supervision of staff. Typically, such infusions require special consideration to prepare, dose or dispose of, require practice training and competency for staff who administer the infusions, and require periodic patient assessment with vital sign monitoring during the infusion. These codes are not intended to be reported by the physician or other qualified health care professional in the facility setting.

Passive immunizations, such as an immune globulin or monoclonal antibody, provide long-term passive immunization to the patient.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

See codes 96401-96549 for the administration of chemotherapy or other highly complex drug or highly complex biologic agent services. These highly complex services require advanced practice training and competency for staff who provide these services; special considerations for preparation, dosage or disposal; and commonly, these services entail significant patient risk and frequent monitoring. Examples are frequent changes in the infusion rate, prolonged presence of nurse administering the solution for patient monitoring and infusion adjustments, and frequent conferring with the physician or other qualified health care professional about these issues.

(Do not report 96365-96379 with codes for which IV push or infusion is an inherent part of the procedure [eg, administration of contrast material for a diagnostic imaging study])

(For mechanical scalp cooling, see 0662T, 0663T)

96365 *Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour*

96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*

(For administration of vaccines/toxoids, see 90460, 90461, 90471, 90472, 90473, 90474, 90480 ~~0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A~~)

(Report 96372 for non-antineoplastic hormonal therapy injections)

(Report 96401 for anti-neoplastic nonhormonal injection therapy)

(Report 96402 for anti-neoplastic hormonal injection therapy)

(For intradermal cancer immunotherapy injection, see 0708T, 0709T)

(Do not report 96372 for injections given without direct physician or other qualified health care professional supervision. To report, use 99211. Hospitals may report 96372 when the physician or other qualified health care professional is not present)

(96372 does not include injections for allergen immunotherapy. For allergen immunotherapy injections, see 95115-95117)

96377 *Application of on-body injector (includes cannula insertion) for timed subcutaneous injection*

●96380	E1	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional (Report 96380 for administration of respiratory syncytial virus, monoclonal antibody, seasonal dose [90380, 90381])	XXX	0.28

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96380 Tracking Number E1 Original Specialty Recommended RVU: **0.28**
Presented Recommended RVU: **0.28**
Global Period: XXX Current Work RVU: **0.24** RUC Recommended RVU: **0.28**

CPT Descriptor: Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 6-month-old female presents during the fall season. The physician or other qualified healthcare professional provides benefit and risk counseling on immunization for the seasonal respiratory syncytial virus to the parents and answers all their questions. The parent agrees to have their child receive the product.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The physician or qualified health care professional recommends passive immunization with the respiratory syncytial virus (RSV) immune globulin seasonal product for protection against RSV during the infant's vulnerable first year. The physician or QHP provides benefit and risk counseling to the parents and answers all their questions. Consent is obtained from the parent or guardian. Following the administration of the injection the patient is monitored for any adverse reaction. The physician or QHP then discusses the care plan for the child in the days to follow specific to the anticipated or possible side effects (eg, soreness and pain at the injection site, fever) and reviews the signs or symptoms that warrant a call back.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	2%	0%	25%	59%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	32%	66%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	1%	83%	16%
Physical effort required	2%	83%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	36%	59%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	33%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	50%	42%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	75%	8%
Physical effort required	8%	75%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	25%	75%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

New CPT codes for an immune globulin product protecting against respiratory syncytial virus for seasonal duration, Nirsevimab, were approved during the May 2023 CPT meeting. There was discussion surrounding the fact that the current administration code used for intramuscular injection of an immune globulin product, 96372, was not sufficient for this product, which will be administered to all infants prophylactically as a passive immunization. Subsequent to the May 2023 CPT meeting, the Food and Drug

Administration (FDA) and the FDA's Pediatric Advisory Committee approved Nirsevimab via their Fast Track process and the CDC's Advisory Committee on Immunization Practices (ACIP) recommended single dose of Nirsevimab for all infants younger than 8 months born during or entering their first RSV season and infants and for children aged 8 through 19 months who are at increased risk of severe RSV disease and entering their second RSV season.

At the September 2023 meeting, the CPT Editorial Panel created two new CPT codes to report the passive immunization administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, with and without counseling. The new administration codes were developed for this product to support the increased physician and other qualified healthcare provider (QHP) work involved in parent/caretaker counseling regarding this novel vaccine-like product as well as address efforts that are commonly associated with the administration of an immunization (in this case, a passive immunization) in a preventive care setting and practice expenses associated with product storage and entry into the state immunization registry. These codes fell under the CPT Panel's Early Release Policy and became effective on October 6, 2023. This expedited process was to protect against severe disease caused by RSV, which is common, highly contagious, and sometimes deadly. RSV is one of the leading causes of death for otherwise healthy young infants and for young and older infants with underlying medical concerns, creating the urgency to get this countermeasure approved.

Interim Valuation at the September 2023 RUC Meeting
Based on the urgent need for the RUC to value these passive immunization administration codes and forward recommendations to CMS so children could immediately begin to receive this potentially life-saving intervention, at the September 2023 meeting, the AAP proposed, and the RUC agreed to assign interim work and time valuations to the two new CPT codes (96380, 96381) using crosswalk methodology.

For CPT code 96380, the RUC recommended a work RVU of 0.24 based on a direct crosswalk to CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24 and 7 minutes intra-service and total time), which maintained relativity within the Medicare Physician Payment Schedule. The RUC recommended 7 minutes intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an Evaluation and Management (E/M) office visit.

For additional support, the RUC compared code 96380 to MPC code 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service time and total time), code 88311 *Decalcification procedure (List separately in addition to code for surgical pathology examination*) (work RVU = 0.24, 5 minutes intra-service time and 7 minutes total time), 77073 *Bone length studies (orthoroentgenogram, scanogram)* (work RVU = 0.26, 5 minutes intra-service time and 7 minutes total time) and 92202 *Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral* (work RVU = 0.26, 5 minutes intra-service time and 7 minutes total time).

The RUC determined that an interim work value of 0.24 appropriately placed 96380 relative to other services based on the anticipated time, work, intensity, and complexity for this new service. The specialty societies agreed to survey this service for the April 2024 RUC meeting after more widespread use had occurred.

The RUC also noted at this time that since interim values were established at the September 2023 RUC meeting, compelling evidence would NOT be required if the society recommended a value higher than the interim value at the April 2024 RUC meeting.

The societies found that gaining experience with the service during this period was extremely informative in developing recommendations for the April 2024 meeting. The societies found that the impact of the documented growth in vaccine hesitancy, a legacy of the COVID-19 pandemic, impacts the administration of this vaccine. Providers must spend time communicating the needs and benefits to patients. Another factor that came to light is that unique to this vaccine is the need to confirm if the mother has received the vaccine during the window (at least two weeks before delivery), which would negate the need for the infant to receive the vaccine. Confirming these details takes additional time especially since mothers typically do not present with their immunization records.

Survey Process
In late February/early March, ANA and AAP conducted a survey to value CPT code 96380, with 112 survey respondents. Both societies used a random sample of applicable subsets of their members. The societies established an expert panel to review the survey results. The vignette of the typical patient used for the survey was provided by the CPT Editorial Panel. 90% of respondents found the vignette to be typical.

Recommendations
Based on the review of the survey data, the specialties recommend the survey median of 0.28 work RVUs and the survey median of 8 minutes intra-service time, which also serves as the total time.

Intensity Measures
The median RVUs of 0.28 is supported by the intensity/complexity measures, where 73% of survey respondents indicated the service overall was more intense/complex than the top key reference service code, 90460, Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid, which has an RVW of 0.24.

Comparison Codes
CPT code 90460: CPT code 90460 is valued at 0.24 work RVUs and has an intra service time of 7 minutes. The specialties believed that the higher work valuation and time for surveyed code 96380 is justified based on the need to address ongoing vaccine hesitancy that has intensified with COVID-19. Surveys on the impact of the COVID-19 pandemic on vaccine confidence indicate vaccine hesitancy overall has increased (CDC's State of Vaccine Confidence Insights Report, KFF COVID-19 Vaccine Monitor, American Academy of Family Physicians, American College Health Association, Pediatrics, Journal of Community Health).

The counseling associated with administering the RSV monoclonal antibodies is unique in that, beyond discussing whether the infant/child should receive the product, counseling also needs to address optimal product administration timing. Babies born to mothers who get RSV vaccine at least 2 weeks before delivery will have protection and, in most cases, should not need an RSV vaccine. Therefore, an additional minute of intra-service time for that additional discussion beyond that of the KRS is justified.

CPT code 96413: The recommended valuation is also supported by MPC code 96413 Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug (work RVW = 0.28; 7 minutes intra-service time and 13 minutes total time) and 71111 Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views (work RVW = 0.31; 7 minutes intra-service time and 9 minutes total time). The recommended time is supported by the primary key reference service, 90460, Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid, which has an intra-service time of 7 minutes.

Other comparison codes: There are multiple other RUC-reviewed services with an XXX global period that have comparable times and work RVUs:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered	XXX	0.24	0	7	0	7
77073	Bone length studies (orthoroentgenogram, scanogram)	XXX	0.26	1	5	1	7
92202	Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral)	XXX	0.26	1	5	1	7
96380	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional	XXX	0.28	0	8	0	8
71110	Radiologic examination, ribs, bilateral; 3 views	XXX	0.29	1	6	1	8

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
73523	Radiologic examination, hips, bilateral, with pelvis when performed; minimum of 5 views	XXX	0.31	1	6	1	8

These examples illustrate that the recommended value and time for code 96380 are properly positioned in the resource-based relative value scale compared to services of other specialties.

Conclusion
For code 96380, Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional, **the societies recommend the survey median, an RVU of 0.28 and intra-service time of 8 minutes**.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) Code 96380 is typically reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time
3.	99213	XXX	1.30	5	20	5
4.	96380	XXX	0.28	0	8	0
5.	Total		1.58	5	28	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) New service

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatricians How often? Commonly

Specialty Nurse Practitioners How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2025000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. There are 3.6 million births in the US annually; we estimated that 900,000 or 25% of

these parents either refused early immunizations or the mother received the RSV shot during the appropriate time period, and the infant did not need to be separately immunized. This leaves us with 2,700,000 births; we estimated that 75% of these, or 2,025,000, will provide immunization with counseling, and 25%, or 675,000, will not provide counseling with immunization. Of those provided with counseling, 85%, or 1,721,250, will be provided by Pediatricians, and 15%, or 303,750, will be provided by Nurse Practitioners.

Specialty Pediatricians Frequency 1721250 Percentage 85.00 %

Specialty Nurse Practitioners Frequency 303750 Percentage 15.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 30 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate was derived from a crosswalked to the 2022 utilization for CPT code 90461, Immunization through 18 years of age with counseling.

Specialty Pediatricians Frequency 26 Percentage 86.66 %

Specialty Nurse Practitioners Frequency 4 Percentage 13.33 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 6-month-old female presents during the fall season for immunization against seasonal respiratory syncytial virus. The parent is offered and accepts an intramuscular injection of the RSV monoclonal antibody for their child.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 000, 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure for the typical patient; In the hospital 0% , In the ASC 0%, In the office 0%

Of those survey respondents that stated they perform this procedure for the typical patient in the hospital, the percent of respondents who stated the patient is discharged: Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Of those survey respondents that keep the typical patient overnight, the percent who stated they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The physician or qualified health care professional recommends passive immunization with the respiratory syncytial virus (RSV) immune globulin seasonal product for protection against RSV during the infant's vulnerable first year. Consent is obtained from the parent or guardian. Following the administration of the injection the patient is monitored for any adverse reaction. The physician or QHP then discusses the care plan for the child in the days to follow specific to the anticipated or possible side effects (eg, soreness and pain at the injection site, fever) and reviews the signs or symptoms that warrant a call back.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

New CPT codes for an immune globulin product protecting against respiratory syncytial virus for seasonal duration, Nirsevimab, were approved during the May 2023 CPT meeting. There was discussion surrounding the fact that the current administration code used for intramuscular injection of an immune globulin product, 96372, was not sufficient for this product, which will be administered to all infants prophylactically as a passive immunization. Subsequent to the May 2023 CPT meeting, the Food and Drug

Administration (FDA) and the FDA's Pediatric Advisory Committee approved Nirsevimab via their Fast Track process and the CDC's Advisory Committee on Immunization Practices (ACIP) recommended single dose of Nirsevimab for all infants younger than 8 months born during or entering their first RSV season and infants and for children aged 8 through 19 months who are at increased risk of severe RSV disease and entering their second RSV season.

At the September 2023 meeting, the CPT Editorial Panel created two new CPT codes to report the passive immunization administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, with and without counseling. The new administration codes were developed for this product to support the increased physician and other qualified healthcare provider (QHP) work involved in parent/caretaker counseling regarding this novel vaccine-like product as well as address efforts that are commonly associated with the administration of an immunization (in this case, a passive immunization) in a preventive care setting and practice expenses associated with product storage and entry into the state immunization registry. These codes fell under the CPT Panel's Early Release Policy and became effective on October 6, 2023. This expedited process was to protect against severe disease caused by RSV, which is common, highly contagious, and sometimes deadly. RSV is one of the leading causes of death for otherwise healthy young infants and for young and older infants with underlying medical concerns, creating the urgency to get this countermeasure approved.

Interim Valuation at the September 2023 RUC Meeting
Based on the urgent need for the RUC to value these passive immunization administration codes and forward recommendations to CMS so children could immediately begin to receive this potentially life-saving intervention, at the September 2023 meeting the AAP proposed, and the RUC agreed to assign interim work and time valuations to the two new CPT codes (96380, 96381) using crosswalk methodology.

For CPT code 96381, the RUC recommended a work RVU of 0.17 based on a direct crosswalk to CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* (work RVU = 0.17, 7 minutes intra-service and total time), which maintained relativity within Medicare Physician Payment Schedule. The RUC recommended 7 minutes intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an Evaluation and Management (E/M) office visit.

For additional support, the RUC compared code 96381 to MPC code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVU = 0.18 and 5 minutes intra-service time and 7 minutes total time) and code 90970 *End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older* (work RVU = 0.18, 3.2 minutes intra-service and total time).

The RUC determined that an interim work value of 0.17 appropriately placed 96381 relative to other services based on the anticipated time, work, intensity, and complexity for this new service. The specialty societies agreed to survey this service for the April 2024 RUC meeting after more widespread use had occurred.

It was also noted at this time that since the values established at the September 2023 meeting were interim values, compelling evidence would NOT be required if the society recommended a value higher than the interim value at the April 2024 meeting.

Survey Process
In late February/early March, ANA and AAP conducted a survey to value CPT code 96381, with 97 survey respondents. Both societies used a random sample of applicable subsets of their members. The societies established an expert panel to review the survey results. The CPT Editorial Panel provided the vignette of the typical patient used for the survey. 87% of respondents found the vignette to be typical. Most respondents indicated that the vignette was not typical and noted that it was unusual not to provide counseling as part of the service.

Recommendations
Based on the review of the survey data, the specialties recommend the survey 25th percentile of 0.17 work RVUs and the survey median of 3 minutes intra-service time, which also serves as the total time.

Comparison Codes
CPT code 96372: These values are supported by CPT code 96372 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular (*work RVW = 0.17; 3 minutes intra-service time and 7 minutes total time). CPT code 96372 was recently valued by the RUC (2017) and is the code that would have been used to report this service before the creation of this new code.

CPT code 90471: The recommended work RVW is supported by the top key reference service code, 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid*), which has a work RVW of 0.17.

CPT codes 99211 and 99212: It is also supported by MPC codes 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVW = 0.18) and 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded* (work RVW= 0.70; 11 minutes intra-service time and 16 minutes total time). The specialties' recommended values for CPT code 96381 align well by taking ¼ of the work RVW and time values of the latter MPC code.

Other comparison codes: The expert panel also looked at other RUC-reviewed services with an XXX global period that have comparable times and work RVUs:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
72020	Radiologic examination, spine, single view, specify level	XXX	0.16	1	3	1	5
73080	Radiologic examination elbow; complete, minimum of 3 views	XXX	0.17	1	3	1	5
96381	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection	XXX	0.17	0	3	0	3
96372	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular	XXX	0.17	2	3	2	7
74018	Radiologic examination, abdomen; 1 view	XXX	0.18	1	3	1	5
72070	Radiologic examination, spine; thoracic, 2 views	XXX	0.20	1	3	1	5

These examples illustrate that the recommended value and time for code 96381 are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Conclusion

For code 96381 Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, **the societies recommend the survey 25th percentile, an RVU of 0.17 and intra-service time of 3 minutes.**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) Code 96381 is typically reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

		Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time
3.	3.	99213	XXX	1.30	5	20	5
4.	4.	96381	XXX	0.17	0	7	0
5.	5. Total			1.47	5	27	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) New service

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty Nurse Practitioners How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 675000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. There are 3.6 million births in the US annually; we estimated that 900,000 or 25% of these parents either refused early immunizations or the mother received the shot during the appropriate time period. This leaves us with 2,700,000 births; we estimate that 75% of these, or 2,025,000, will provide immunization with counseling, and 25%, or 675,000, will not provide counseling. Of those provided without counseling, 85%, or 573,750, will be provided by Pediatricians, and 15%, or 101,250, will be provided by Nurse Practitioners.

Specialty Pediatricians Frequency 573750 Percentage 85.00 %

Specialty Nurse Practitioner Frequency 101250 Percentage 15.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This estimate was derived from a crosswalked to the 2022 utilization for CPT code 90461, Immunization through 18 years of age with counseling. We estimate the volume of 96381 to be 25% of the volume of 90461.

Specialty Pediatricians Frequency 6 Percentage 75.00 %

Specialty Nurse Practitioner Frequency 2 Percentage 25.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Other

BETOS Sub-classification:
Immunizations/Vaccinations

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90471

NON-FACILITY DIRECT PE INPUTS **CPT CODE(S): 96380-96381**

SPECIALTY SOCIETY(IES): AAP, ANA

PRESENTER(S): Steven Krug, MD (AAP), Suzanne Berman, MD (AAP) , Korinne Van Keuren, DNP, APRN, NP-BC, RNFA (ANA)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2024

CPT Code	Long Descriptor	Global Period
96380	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional	XXX
96381	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
96380	A 6-month-old female presents during the fall season. The physician or other qualified healthcare professional provides benefit and risk counseling on immunization for the seasonal respiratory syncytial virus to the parents and answers all their questions. The parent agrees to have their child receive the product.
96381	A 6-month-old female presents during the fall season for immunization against seasonal respiratory syncytial virus. The parent is offered and accepts an intramuscular injection of the RSV monoclonal antibody for their child.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   RUC Advisors from AAP and ANA and several AAP members from large pediatric practices with expertise in immunization administration acted as an expert panel and communicated via email to develop the recommended PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   We are utilizing CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other QHP; first or only component of each vaccine or toxoid administered* as our base reference code for 96380 due to the inherent similarity between the service described by 90460 and this new service. Code 90460 is a recently PE reviewed IA service. To the base of 90460 direct PE inputs, we are recommending incremental direct PE inputs as established by manufacturers and the CDC Advisory Committee on Immunization Practices for administering the Nirsevemab vaccine and Expert Panel input.

   We are utilizing CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* as our base reference code for 96381 due to the inherent similarity between the service described by 90471 and this new service. Code 90471 is a recently PE reviewed IA service. To the base of 90471 direct PE inputs, we are recommending incremental direct PE inputs as

established by manufacturers and the CDC Advisory Committee on Immunization Practices for administering the Nirsevemab vaccine and Expert Panel input.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the non-facility?

   Codes 96380 and 96381 are typically reported with an E/M service. Codes 96380 and 96381 are typically reported with an E/M service in the NF setting.

   See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   The dominant provider for new CPT Codes 96380 and 96381 in the facility and nonfacility is not known at this time.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre Service
CA005 Complete pre-procedure phone calls and prescription.
Specialties are recommending 3 minutes (standard time for phone calls) to account for the clinical staff time spent calling parent of eligible infant/child to schedule appointment for E/M visit and product administration when stock of RSV monoclonal antibody product is available from the manufacturer and at the practice. Activity requires expertise of clinical staff to review patient waiting list for the product to determine specific patient eligibility for the size of the dose available (50 mg vs 100 mg) and answering parent questions.

CA007 Review patient clinical extant information and questionnaire
Used for imaging service. 1 minute standard.
Specialties are recommending 5 minutes to account for the clinical staff time to review the patient immunization questionnaire and complete the required pre-check eligibility process (see attachment Nirsevemab Visual Guide). Expert Panel members experienced with administering this product report that the time required to check the mother's RSV immunization status and timing of dose in the typical patient is a minimum of 5 minutes. Clinical staff have the expertise and access to non-patient (i.e., the mother) information. This activity requires looking up the mother's records at the birthing hospital as it is not typical for this information to be sent to the state immunization registry.

CA008
Perform regulatory mandated quality assurance activity (pre-service)
Standard is 0 for XXX services.
Specialties are recommending 1 minute to account for the clinical staff time to ensure the vaccine stock is viable.

Service
CA014 Confirm order, protocol exam
Used for imaging service. 1 minute standard.
Specialties are recommending 2 minutes to account for the clinical staff time to compute the correct dose based on patient's age and weight. Additional calculation complexity based on the "If baby is under X kg or over age Y" component of formula.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA005: Determining appropriateness of available vaccine for patient. Calling parent to notify them of availability of product and scheduling appointment for E/M visit and product administration. Answering parent questions.

CA007: Confirming vaccine order/checking appropriateness for patient. Complete vaccine pre-check eligibility process (see attachment Nirsevemab Visual Guide).

CA008: Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR

    b. Service period (includes pre, intra and post):

CA011: Giving Vaccine Information Sheet (VIS) to patient/family; getting informed consent and signature if applicable

CA014: Going to laboratory and taking vaccine vials out of vaccine refrigerator; computing dose based on patient's age and weight; drawing up vaccine into syringe; going back to patient room and preparing patient/parent, confirming that this is correct patient-correct vaccine

CA021: Actual administration of vaccine; bandage application

CA022: Watching patient after vaccine is administered

CA024: Disposal of vaccine-specific medical waste

CA034: Charting administered immunizations in the patient chart and EMR; preparing patient record/immunization card

    c. Post-service period:

CA037: Contacting patient/parent to follow up on immunization administration

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

CA021: RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
    N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:
    N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?

a. If yes, please explain how the computer is used for this service(s).
b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

The specialty societies included the following equipment items:

EF049 refrigerator, vaccine medical grade, 2-data logger single glass door
ED043 refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates

The specialties used the 'default' equipment formula for both EF049 and ED043.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Equipment
ED043: While its description begins with "refrigerator, vaccine," it is the temperature monitor with alarm for the vaccine medical grade refrigerator. The specialties do not have two vaccine refrigerators included as part of the recommendations.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

Nirsevimab Administration Visual Guide

American Academy of Pediatrics
DEDICATED TO THE HEALTH OF ALL CHILDREN®

Is it RSV season?
October 1 through March 31st or otherwise declared by regional experts.

- **No** → Not Eligible
- **Yes** → **Is the patient < 8 months of age today?**
  - **No** → **Is the patient 8–19 months old today and meet the high risk criteria[a]?**
    - **No** → Not Eligible
    - **Yes** → Eligible
      Nirsevimab 200 mg
        - **Yes** → **Did the mother of this patient receive the RSV vaccine while pregnant?**
    - **Yes** → **Was the infant born prior to 34 weeks gestations OR within 14 days of maternal RSV vaccine administration?**
      - **No** → Not Eligible[b]
      - **Yes** → **What is the patient's current weight (today)?**
    - **No or Unknown** → **Has the patient received a previous dose of nirsevimb in the current RSV season (eg. in the newborn nursery)?**
      - **Yes** → Not Eligible
      - **No** → **Has the patient received 1 or more doses of palivizumab in the current RSV season?**
        - **No** → **What is the patient's current weight (today)?**
        - **Yes** → **Has 30 days elapsed since the last dose?**
          - **No** → **Wait until 30 days elapse.** → **What is the patient's current weight (today)?**
          - **Yes** → **What is the patient's current weight (today)?**

What is the patient's current weight (today)?

- **< 5 kg**
  Nirsevimab 50 mg/0.5 mL

- **≥ 5 kg**
  Nirsevimab 100 mg/mL

---

a. Children 8 through 19 months of age who are recommended to receive nirsevimab when entering their second RSV season because of increased risk of severe disease.
- Children with chronic lung disease of prematurity who required medical support (chronic corticosteroid therapy, diuretic therapy, or supplemental oxygen) any time during the 6-month period before the start of the second RSV season.
- Children who are severely immunocompromised.
- Children with cystic fibrosis who have manifestations of severe lung disease (previous hospitalization for pulmonary exacerbation in the first year of life or abnormalities on chest imaging that persist when stable) or have weight-for-length that is <10th percentile.
- American Indian and Alaska Native children (note that this is a new group for whom second-season prophylaxis is recommended in contrast to the current palivizumab recommendations).

b. Nirsevimab can be considered in rare circumstances when, per the clinical judgment of the healthcare provider, the potential incremental benefit of administration is warranted:
- Infants born to pregnant people who may not mount an adequate immune response to vaccination or have conditions associated with reduced transplacental antibody transfer
- Infants who have undergone cardiopulmonary bypass, leading to loss of maternal antibodies
- Infants with substantial increased risk for severe RSV disease (eg, hemodynamically significant congenital heart disease, intensive care admission, and requiring oxygen at discharge).

Nirsevimab Administration Visual Guide (continued)

American Academy of Pediatrics
DEDICATED TO THE HEALTH OF ALL CHILDREN®

At the time of administration, affirm the 7 rights to reduce errors:

1. Right patient
2. Right time (age, in RSV season)
3. Right immunization (correct medication)
4. The right dosage (based on weight)
5. The right route, needle length, and technique
6. Right site

Intramuscular (IM) injection
Use a 22–25 gauge needle. Choose the injection site and needle length that is appropriate to the person's age and body mass.

Age	Needle length	Injection site
Newborns (1st 28 days)	⅝"[c]	Anterolateral thigh muscle
Infants (1–12 months)	1"	Anterolateral thigh muscle
Toddlers (1–2 years)	1–1¼"	Anterolateral thigh muscle[e]
	⅝[d]–1"	Deltoid muscle of arm

7. The right documentation

c. If skin is stretched tightly and subcutaneous tissues are not bunched.

d. Alternate needle lengths may be used if the skin is stretched tightly and subcutaneous tissues are not bunched, as follows: a) a ⅝" needle in toddlers, children, and patients weighing less than 130 lbs (less than 60 kg) for IM injection in the deltoid muscle only, or b) a 1" needle for administration in the thigh muscle for adults of any weight.

e. Preferred site

NOTE: Always refer to the package insert included with each biologic for complete vaccine administraation information. CDC's Advisory Committee on Immunization Practices (ACIP) recommendations for the particular vaccine should be reviewed as well. Access the ACIP recommendations at www.immunize.org/acip.

Baltimore, MD 21244-1850

Subject: HCPAC Review Board Recommendations

Dear Ms. Baldwin:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendation to the Centers for Medicare and Medicaid Services (CMS). At the January 16, 2025 meeting, the following issue was reviewed by the HCPAC:

- Remote Monitoring (98XX6, 98978)

The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2026 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Katlyn Palmer (ph: 312-464-5576; email: Katlyn.Palmer@ama-assn.org) at the AMA for clarification regarding these recommendations.

Sincerely,

Peter Hollmann, MD
HCPAC Chair

Richard Rausch, DPT, MBA
HCPAC Co-Chair

AMA/Specialty Society RVS Update Committee
Health Care Professional Advisory Committee Summary of Recommendations
Screen: New Technology/New Services and Different Performing Specialty from Survey

January 2025

Remote Monitoring (Device Supply for Cognitive Behavioral Therapy) – Tab 25

In April 2022, the Relativity Assessment Workgroup (RAW) identified code 99457 as part of a screen for codes that were surveyed by one specialty but are now typically performed by a different specialty. In September 2022, the RAW reviewed an action plan on this service and recommended it be reviewed in two years (2021-2022 data) after utilization has stabilized after the pandemic. In April 2024, the RAW noted that 99457, along with the codes 99453, 99454 and 99458 were on the new technology/new services list for review. The specialty societies indicated that a CPT code change application (CCA) was submitted for May 2024 to review the Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM) codes (which may require surveying of these codes) and to refer this issue to CPT Assistant regarding correct coding of this family of services. The RAW recommended that this code family be reviewed at the next RAW meeting in September 2024 to summarize what has occurred at the CPT Editorial Panel. The RAW noted that if this family was not addressed via the upcoming CPT process the RAW should discuss when it would be surveyed. In September 2024, the RAW noted that a CCA for remote monitoring was reviewed at the September 2024 CPT meeting, which included codes 99453-99458. The RUC noted that 99453-99458 needed to be surveyed because the utilization of 99457 increased and the primary specialties who perform these services did not participate in the survey.

In September 2024, the CPT Editorial Panel added one code and made code revisions to report remote physiologic monitoring device supply for 2-15 days and 16-30 days within a 30-day period to report remote physiologic monitoring parameters; created one new code and code revisions to report remote physiologic monitoring treatment management services for the first 10 minutes, first 20 minutes, and each additional 20 minutes thereafter; added three remote therapeutic monitoring device supply codes to report respiratory, musculoskeletal and cognitive behavioral therapy for 2-15 days and 16-30 days within a 30-day period; created one new code and made code revisions to report remote therapeutic monitoring treatment management services for the first 10 minutes, first 20 minutes, and each additional 20 minutes thereafter; and revised the "Digitally Stored Data Services/Remote Physiologic Monitoring" guidelines, "Remote Physiologic Monitoring Treatment Management Services" guidelines, "Remote Therapeutic Monitoring Services" guidelines, and the "Remote Therapeutic Monitoring Treatment Management Services" guidelines. **The RUC HCPAC Review Board will submit practice expense recommendations for CPT codes 98986 and 98978.**

98986 ***Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); device(s) supply for data access or data transmissions to support monitoring of cognitive behavioral therapy, 2-15 days in a 30-day period***
98978 ***Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); device(s) supply for data access or data transmissions to support monitoring of cognitive behavioral therapy, 16-30 days in a 30-day period***
Codes 98986 and 98978 describe remote therapeutic monitoring for cognitive behavior therapy. The RUC HCPAC agreed with the specialty societies request for no clinical staff time and one new input for a digital therapeutic device. The RUC HCPAC recommended that a digital therapeutic device be added to the CMS direct PE medical supplies listing. The digital therapeutic device is an FDA-authorized product that helps

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

healthcare providers conduct remote therapeutic monitoring to track patients' therapeutic progress and symptom status. These services and related digital therapeutic devices are for monitoring only. It is a $50 monthly fee, per patient. This is supported by the invoices submitted. **The RUC HCPAC and Practice Expense Subcommittee recommend the input of a supply as submitted by the professional organization and will forward the invoices to CMS for pricing.**

New Technology/New Services
CPT codes 98986 and 98978 will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Non-Face-to-Face Services** **Digitally Stored Data Services/Remote Physiologic Monitoring** Codes 99453, 99445, ~~and~~ 99454 are used to report remote physiologic monitoring services (eg, weight, blood pressure, pulse oximetry) during a 30-day period. To report 99453, 99445, 99454, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Code 99453 may be used to report the set-up and patient education on use of the device(s). Codes 99445, 99454 may be used to report supply of the device for daily recording or programmed alert transmissions. Codes 99453, 99445 are not reported if monitoring is less than 2 days in a 30-day period. Code 99445 may be used to report supply of the device for daily recording or programmed alert transmissions from 2 up to 15 days in a 30-day period. Code 99454 may be reported for device supply when monitoring services are provided for at least 16 days up to 30 days in a 30-day period. Codes ~~99453,~~99454 ~~are~~is not reported if monitoring is less than 16 days in a 30-day period. Do not report 99453, 99445, 99454 when these services are included in other codes for the duration of time of the physiologic monitoring service (eg, 95250 for continuous glucose monitoring requires a minimum of 72 hours of monitoring). Do not report 99091 for time in the same calendar month when used to meet the criteria for care plan oversight services (99374, 99375, 99377, 99378, 99379, 99380), remote physiologic monitoring services (99470, 99457, 99458), or personally performed chronic or principal care management (99424, 99425, 99426, 99427, 99437, 99491). Do not report 99091 if other more specific codes exist (eg, 93227, 93272 for cardiographic services; 95250 for continuous glucose monitoring). Do not report 99091 for transfer and interpretation of data from hospital or clinical laboratory computers. Code 99453 is reported for each episode of care. For coding remote monitoring of physiologic parameters, an episode of care is defined as beginning when the remote monitoring physiologic service is initiated, and ends with attainment of targeted treatment goals.

(f)99473	DD5	Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration (Do not report 99473 more than once per device) (For ambulatory blood pressure monitoring, see 93784, 93786, 93788, 93790)	XXX	PE Only (2025 Work RVU = 0.00) RUC Recommendation
(f)99474	DD6	separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient (Do not report 99473, 99474 in the same calendar month as 93784, 93786, 93788, 93790, 99091, 99424, 99425, 99426, 99427, 99437, 99439, 99453, 99445, 99454, 99470, 99457, 99487, 99489, 99490, 99491) (Do not report 99474 more than once per calendar month)	XXX	0.18 (2025 Work RVU = 0.18) RUC Recommendation

Remote Physiologic Monitoring Treatment Management Services

Remote physiologic monitoring treatment management services are provided when clinical staff/physician/other qualified health care professional use(s) the results of remote physiological monitoring to manage a patient under a specific treatment plan. To report remote physiological monitoring, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

other qualified health care professional. Do not use 99470, 99457, 99458 for time that can be reported using codes for more specific monitoring services. Codes 99470, 99457, 99458 may be reported during the same service period as chronic care management services (99437, 99439, 99487, 99489, 99490, 99491), principal care management services (99424, 99425, 99426, 99427), transitional care management services (99495, 99496), and behavioral health integration services (99484, 99492, 99493, 99494). However, time spent performing these services should remain separate and no time should be counted twice toward the required time for any services in a single month. Codes 99470, 99457, 99458 requires one~~a live~~ real-time, interactive communication with the patient/caregiver. The interactive communication contributes to the total time, but it does not need to represent the entire cumulative reported time of the treatment management service. For the first completed 10~~20~~ minutes of clinical staff/physician/other qualified health care professional time in a calendar month report 9947099457~~99457~~.,For the first completed 20 minutes of clinical staff/physician/other qualified health care professional time in a calendar month report 99457 and report 99458 for each additional completed 20 minutes. Do not report 99470 for services of less than 10 minutes, 99457 for services less than 20 minutes or 99458 for additional services of less than 20 minutes. Report 99470 or 99457 one time regardless of the number of physiologic monitoring modalities performed in a given calendar month.

To report remote therapeutic monitoring treatment management services provided by physician or other qualified health care professional, see 98979, 98980, 98981.

Time Spent in a Calendar Month for Remote Physiologic Monitoring Treatment Management Services	**CPT Code(s) Reported**
0-9 minutes	Not reported separately
10-19 minutes	99470 X 1
20-39 minutes	99457 X 1
40-59 minutes	99457 X 1, 99458 X 1
60 minutes or more	99457 X 1, 99458 X 2 or more for each additional 20 minutes

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(Do not report 93241, 93242, 93243, 93244 in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93245, 93246, 93247, 93248, 93268, 93270, 93271, 93272, 99091, 99453, 99445, 99454, *XX51T, XX52T, XX53T, XX54T,* for the same monitoring period)

#93245 *External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*

#93248 *review and interpretation*

(Do not report 93245, 93246, 93247, 93248 in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93241, 93242, 93243, 93244, 93268, 93270, 93271, 93272, 99091, 99453, 99445, 99454, *XX51T, XX52T, XX53T, XX54T,* for the same monitoring period)

Implantable, Insertable, and Wearable Cardiac Device Evaluations

93297 *Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional*

(Do not report 93297 in conjunction with 93264, 93290, 93298, 99091, 99445, 99454)

93298 *subcutaneous cardiac rhythm monitor system, including analysis of recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional*

(Do not report 93298 in conjunction with 33285, 93291, 93297, 99091, 99445, 99454)

Health Behavior Assessment and Intervention

★◀*96156* *Health behavior assessment, or re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making)*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

★◀✚*96159* *each additional 15 minutes (List separately in addition to code for primary service)*

(Do not report 96158, 96159 for service time reported in conjunction with 98975, 98986, 98978)

Non-Face-to-Face Nonphysician Services
Remote Therapeutic Monitoring Services

Remote therapeutic monitoring services (eg, musculoskeletal system status, respiratory system status, cognitive behavioral therapy, therapy adherence, therapy response) represent the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response. These data may represent objective device-generated integrated data or subjective inputs reported by a patient. These data are reflective of therapeutic responses that provide a functionally integrative representation of patient status.

Codes 98984, 98976, 98985, 98977, 98986, 98978 are used to report remote therapeutic monitoring services during a 30-day period. To report 98975, 98984, 98976, 98985, 98977, 98986, 98978, the service(s) must be ordered by a physician or other qualified health care professional. Code 98975 may be used to report the set-up and patient education on the use of any device(s) utilized for therapeutic data collection *generated through digital monitoring or digital therapy*. Codes 98984, 98976, 98985, 98977, 98986, 98978 may be used to report supply of the device(s) for *data access or data transmissions to support monitoring*~~*scheduled (eg, daily) recording(s) and/or programmed alert(s) transmissions*~~. To report 98975, 98984, 98976, 98985, 98977, 98986, 98978, the device used must be a medical device as defined by the FDA. *In addition to its monitoring functionality, the device may also provide a therapeutic intervention.* Codes 98975, 98984, 98985, 98986 are not reported if cumulative monitoring is less than 2 days in a 30-day period. Codes ~~98975,~~ 98976, 98977, 98978 are not reported if *cumulative* monitoring is less than 16 days in a 30-day period. Do not report 98975, 98984, 98976, 98985, 98977, 98986, 98978 with other physiologic monitoring services (eg, 95250 for continuous glucose monitoring requiring a minimum of 72 hours of monitoring or 99453, 98984, 99454 for remote monitoring of physiologic parameter[s]).

Code 98975 is reported for each episode of care. For reporting remote therapeutic monitoring parameters, an episode of care is defined as beginning when the remote therapeutic monitoring service is initiated and ends with attainment of targeted treatment goals.

▲98975	DD10	Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); initial set-up and patient education on use of equipment (Do not report 98975 more than once per episode of care) (Do not report 98975 for less than 2~~1~~6 days of cumulative monitoring during the 30-day period)	XXX	PE Only (2025 Work RVU = 0.00) RUC Recommendation

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

●98984	DD11	device(s) supply for data access or data transmissions to support monitoring of respiratory system, 2-15 days in a 30-day period (Do not report 98984 in conjunction with 98976) (Do not report 98984 for less than 2 days of cumulative monitoring during the 30-day period)	XXX	PE Only RUC Recommendation
▲98976	DD12	device(s) supply for data access or data transmissions to support monitoring of respiratory system, ~~each 30 days~~ 16-30 days in a 30-day period (Do not report 98976 for less than 16 days of cumulative monitoring during the 30-day period. For monitoring of less than 16 days, use 98984)	XXX	PE Only (2025 Work RVU = 0.00) RUC Recommendation
●98985	DD13	device(s) supply for data access or data transmissions to support monitoring of musculoskeletal system, 2-15 days in a 30-day period (Do not report 98985 in conjunction with 98977) (Do not report 98985 for less than 2 days of cumulative monitoring during the 30-day period)	XXX	PE Only RUC Recommendation
▲98977	DD14	device(s) supply for data access or data transmissions to support monitoring of musculoskeletal system, ~~each 30 days~~ 16-30 days in a 30-day period (Do not report 98977 for less than 16 days of cumulative monitoring during the 30-day period. For monitoring of less than 16 days, use 98985)	XXX	PE Only (2025 Work RVU = 0.00) RUC Recommendation

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

●98986	DD15	device(s) supply for data access or data transmissions to support monitoring of cognitive behavioral therapy, 2-15 days in a 30-day period (Do not report 98986 in conjunction with 98978) (Do not report 98986 for less than 2 days of cumulative monitoring during the 30-day period)	XXX	**PE Only** **HCPAC Review Board Recommendation**
▲98978	DD16	device(s) supply for data access or data transmissions to support monitoring of cognitive behavioral therapy, ~~each 30 days~~ 16-30 days in a 30-day period ~~(Do not report 98976, 98977, 98978 for cumulative monitoring of less than 16 days)~~ (Do not report 98978 for less than 16 days of cumulative monitoring during the 30-day period. For monitoring of less than 16 days, use 98986) (Do not report 98975, 98984, 98976, 98985, 98977, 98986, 98978 in conjunction with codes for more specific physiologic parameters [93296, 94760, 95250, 99453, 99445, 99454]) (For therapeutic monitoring treatment management services, see~~use~~98979, 98980) (For remote physiologic monitoring, see 99453, 99454, 99445) (For physiologic monitoring treatment management services, ~~use~~ see 99470, 99457) (For self-measured blood pressure monitoring, see 99473, 99474)	XXX	**PE Only** **(2025 Work RVU = 0.00)** **HCPAC Review Board Recommendation**

Remote Therapeutic Monitoring Treatment Management Services

Remote therapeutic monitoring treatment management services are provided when a physician or other qualified health care professional uses the results of remote therapeutic monitoring to manage a patient under a specific treatment plan. To report remote therapeutic monitoring, the service must be ordered by a physician or other qualified health care professional. To report 98979, 98980, 98981, any device used must be a medical device as defined by the FDA. Do not use 98979, 98980, 98981 for time that can be reported using codes for more specific monitoring services. Codes 98979, 98980, 98981 may be reported during the same service period as chronic care management services (99439, 99487,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

99489, 99490, 99491), transitional care management services (99495, 99496), principal care management services (99424, 99425, 99426, 99427), behavioral health integration services (99484), psychotherapy services (90832-90853), health behavior assessment and intervention services (96156, 96158, 96159, 96160, 96161, 96164, 96165, 96167, 96168, 96170, 96171), and psychiatric collaborative care services (99492, 99493, 99494). However, time spent performing these services should remain separate and no time should be counted toward the required time for both services in a single month. Codes 98979, 98980, 98981 require at least one real-time interactive communication with the patient or caregiver. The interactive communication contributes to the total time, but it does not need to represent the entire cumulative reported time of the treatment management service. For the first completed 10~~20~~ minutes of physician or other qualified health care professional time in a calendar month, report 98979. For the first completed 20 minutes of physician or other qualified health care professional time in a calendar month, report 98980, and report 98981 for each additional completed 20 minutes. Do not report 98979 for services of less than 10 minutes. Do not report 98980, 98981 for services of less than 20 minutes. Report 98979, 98980 once, regardless of the number of therapeutic monitoring modalities performed in a given calendar month. Do not report 98979 if less than 10 minutes of professional time is spent in a calendar month.

Do not count any time on a day when the physician or other qualified health care professional reports an E/M service (office or other outpatient services [99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215], home or residence services [99341, 99342, 99344, 99345, 99347, 99348, 99349, 99350], inpatient or observation care services [99221, 99222, 99223, 99231, 99232, 99233, 99234, 99235, 99236], inpatient consultations [99252, 99253, 99254, 99255]).

Do not count any time directly related to other reported services (eg, psychotherapy services [90832, 90833, 90834, 90836, 90837, 90838], interrogation device evaluation services [93290], anticoagulant management services [93793], respiratory monitoring services [94774, 94775, 94776, 94777], health behavior assessment and intervention services [96156, 96158, 96159, 96160, 96161, 96164, 96165, 96167, 96168, 96170, 96171], therapeutic interventions that focus on cognitive function services [97129, 97130], adaptive behavior treatment services [97153, 97154, 97155, 97156, 97157, 97158], therapeutic procedures [97110, 97112, 97116, 97530, 97535], tests and measurements [97750, 97755], physical therapy evaluation services [97161, 97162, 97163, 97164], occupational therapy evaluations [97165, 97166, 97167, 97168], orthotic management and training and prosthetic training services [97760, 97761, 97763], medical nutrition therapy services [97802, 97803, 97804], medication therapy management services [99605, 99606, 99607], critical care services [99291, 99292], principal care management services [99424, 99425, 99426, 99427]) in the cumulative time of the remote therapeutic monitoring treatment management service during the calendar month of reporting.

Time Spent in a Calendar Month for Remote Therapeutic Monitoring Treatment Management Services	**CPT Code(s) Reported**
0-9 minutes	Not reported separately
10-19 minutes	98979 X 1
20-39 minutes	98980 X 1

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		40-59 minutes	98980 X 1, 98981 X1	
		60 minutes or more	98980 X 1, 98981 X 2 or more for each additional 20 minutes	
●98979	DD17	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least 1 real-time interactive communication with the patient or caregiver during the calendar month; first 10 minutes (Do not report 98979 in conjunction with 98980, 98981) (Do not report 98979 for services of less than 10 minutes or more than 19 minutes)	XXX	0.66 RUC Recommendation
▲98980	DD18	~~Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month;~~ first 20 minutes (Report 98979, 98980 once each calendar month ~~30 days~~, regardless of the number of therapeutic parameters monitored) (Do not report 98979, 98980 in conjunction with 93264, 99091, 99470, 99457, 99458) (Do not report 98979, 98980 in the same calendar month as 99473, 99474) (Do not report 98980 for services of less than 20 minutes)	XXX	0.78 (2025 Work RVU = 0.62) RUC Recommendation
▲98981	DD19	each additional 20 minutes (List separately in addition to code for primary procedure) (Use 98981 in conjunction with 98980) (Do not report 98981 for services of less than an additional increment of 20 minutes)	ZZZ	0.70 (2025 Work RVU = 0.61) RUC Recommendation

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Category III Codes

0604T *Optical coherence tomography (OCT) of retina, remote, patient-initiated image capture and transmission to a remote surveillance center, unilateral or bilateral; initial device provision, set-up and patient education on use of equipment*

0606T *review, interpretation and report by the prescribing physician or other qualified health care professional of remote surveillance center data analyses, each 30 days*

(Do not report 0604T, 0605T, 0606T in conjunction with 99470, 99457, 99458)

0607T *Remote monitoring of an external continuous pulmonary fluid monitoring system, including measurement of radiofrequency-derived pulmonary fluid levels, heart rate, respiration rate, activity, posture, and cardiovascular rhythm (eg, ECG data), transmitted to a remote 24-hour attended surveillance center; set-up and patient education on use of equipment*

(Do not report 0607T in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93264, 93268, 93270,93271, 93272, 93297, 99453, for same monitoring period)

0608T *analysis of data received and transmission of reports to the physician or other qualified health care professional*

(Do not report 0608T in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93264, 93268, 93270, 93271, 93272, 93297, 99445, 99454, for same monitoring period)

0740T *Remote autonomous algorithm-based recommendation system for insulin dose calculation and titration; initial set-up and patient education*

(Do not report 0740T in conjunction with 95249, 95250, 95251, 98975, 99453)

0741T *provision of software, data collection, transmission, and storage, each 30 days*

(Do not report 0741T in conjunction with 95249, 95250, 95251, 99091, 99445, 99454)

(Do not report 0741T for data collection less than 16 days)

Office-Based Measurement of Mechanomyography and Inertial Measurement Units

0778T *Surface mechanomyography (sMMG) with concurrent application of inertial measurement unit (IMU) sensors for measurement of multi-joint range of motion, posture, gait, and muscle function*

(Do not report 0778T in conjunction with 96000, 96004, 98985, 98975, 98977, 98979, 98980, 98981)

0811T *Remote multi-day complex uroflowmetry (eg, calibrated electronic equipment); set-up and patient education on use of equipment*

0812T *device supply with automated report generation, up to 10 days*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

	(Do not report 0811T, 0812T in conjunction with 51736, 51741, 99453, 99445, 99454)
●XX51T	External electrocardiographic recording for greater than 15 days up to 30 days by continuous rhythm recording and storage; including recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional
●XX52T	recording (including connection and initial recording)
●XX53T	scanning analysis with report
●XX54T	review and interpretation by a physician or other qualified health care professional
	(Report XX51T, XX52T, XX53T, XX54T for each 30-day period of service)
	(Do not report XX52T, XX53T, XX54T in conjunction with XX51T)
	(Do not report XX51T, XX52T, XX53T, XX54T in conjunction with 93224, 93225, 93226, 93227, 93228, 93229, 93241, 93242, 93243, 93244, 93245, 93246, 93247, 93248, 93268, 93270, 93271, 93272, 99091, 99453, 99445, 99454, for the same monitoring period)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

NON-FACILITY DIRECT PE INPUTS

SPECIALTY SOCIETY(IES): APA
PRESENTER(S): Scott Sperling, PsyD, Stephen Gillaspy,PhD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2025

CPT Code	Long Descriptor	Global Period
98986	Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); device(s) supply for data access or data transmissions to support monitoring of cognitive behavioral therapy, 2-15 days in a 30-day period	XXX
98978	Remote therapeutic monitoring (eg, therapy adherence, therapy response, digital therapeutic intervention); device(s) supply for data access or data transmissions to support monitoring of cognitive behavioral therapy, 16-30 days in a 30-day period	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
98986	A 43-year-old female with a substance use disorder is enrolled in a remote therapeutic monitoring program to enable data collection and monitoring to support the therapeutic management of her cognitive behavioral therapy.
98978	A 43-year-old female with a substance use disorder is enrolled in a remote therapeutic monitoring program to enable data collection and monitoring to support the therapeutic management of her cognitive behavioral therapy.

If there is a significantly different patient population in the non-facility setting, a vignette should be provided for the non-facility setting in the PE SOR.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The specialty society developed the direct practice expense recommendations for the digital therapeutic remote therapeutic monitoring CPT Codes based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The specialty society included CPT Code 99407 *Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes* on the spreadsheet as a reference code. CPT Code 99407 is an MPC code, with NF practice expense inputs. Like 98986 and 98978, CPT Code 99407 has only a supply in the direct practice expense inputs (no clinical labor or equipment). The specialties believe 99407 serves as a good comparator for 98986 and 98978.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

CPT CODE(S): 98986, 98978
SPECIALTY SOCIETY(IES): APA
PRESENTER(S): Scott Sperling, PsyD, Stephen Gillaspy,PhD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Is this code(s) typically reported with the E/M service in the non-facility?

CPT Codes 98986 and 98978 are not typically reported with an E/M service (F, NF).

See the *Billed Together* tab in the RUC Database.

4. A. What specialty is the dominant provider *in the non-facility?* What percent of the time does the dominant provider provide the service(s) in the non-facility? Is the dominant provider in the non-facility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   No current utilization data is available for CPT Code 98978. The specialty societies anticipate clinical psychology will be the dominant provider for CPT Codes 98986 and 98978.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* under PE Reference Materials on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

   N/A

CPT CODE(S): 98986, 98978
SPECIALTY SOCIETY(IES): APA
PRESENTER(S): Scott Sperling, PsyD, Stephen Gillaspy,PhD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

N/A

    c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

N/A

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

SPECIALTY SOCIETY(IES): APA
PRESENTER(S): Scott Sperling, PsyD, Stephen Gillaspy,PhD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

The specialty societies are recommending a digital therapeutic device be added to the CMS direct PE medical supplies listing. The digital therapeutic device is an FDA-authorized product that helps healthcare providers conduct remote therapeutic monitoring to track clients' therapeutic progress and symptom status. $50 is the monthly fee, per patient. Several invoices have been included on the invoice summary spreadsheet.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

N/A

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?

CPT CODE(S): 98986, 98978
SPECIALTY SOCIETY(IES): APA
PRESENTER(S): Scott Sperling, PsyD, Stephen Gillaspy,PhD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(a)(b) An estimate of the number of times these services might be provided nationally in a one-year period (Medicare/non-Medicare) is not available.

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

The specialty society recommends CPT Code 96156 *Health behavior assessment, or re-assessment (ie, health-focused clinical interview, behavioral observations, clinical decision making)* as a PLI crosswalk.

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.

Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

RUC Practice Expense Subcommittee
Packs Workgroup
June 2023

Workgroup Report

Workgroup Members Present: Donald Selzer, MD (Chair), Michael Booker, MD, Dheeraj Mahajan, MD, Richard Rausch, DPT, MBA, Edward Vates, MD

At the April 2023 meeting, the PE Subcommittee formed a workgroup to review the content of the packs to assess if they are still typical and revise as necessary. This was a result of discrepancies found with the packs pricing at the January 2023 RUC meeting.

The purpose of the packs is to simplify the process of identifying and recommending PE supply direct inputs. One would expect the pack price to be identical to the total cost of its individual contents. The price of the individual components should be consistent across the supply packs and match the standalone prices of supplies. However, the RUC noted a discrepancy with the SA051 *pack, pelvic exam* while reviewing CPT code 9X036 *Pelvic exam (List separately in addition to code for primary procedure)*. The SA051 pack is priced at $20.16 while the four individual items therein total $2.81 according to the 2023 CMS Direct PE Inputs Medical Supplies Listing.

AMA Staff prepared a document with the 23 deconstructed packs for consideration by the PE Subcommittee at its April 2023 meeting. Review of the pack pricing uncovered numerous discrepancies between the aggregated cost of a pack and the individual item components. Prior to the meeting, staff reached out to inquire about this issue to the Centers for Medicare & Medicaid Services (CMS) and received the following response:

"We agree that this is an issue that should be fixed, as the price of the individual components should be consistent across the supply packs and match the standalone prices of supplies (like gloves and sterile gauze and such). However, it needs to be tackled in comprehensive fashion to ensure consistency across the dozens of supply packs which will be a sizable undertaking. Resolving these pricing discrepancies in the supply packs is something that we will consider addressing in future rulemaking."

The RUC shared the deconstructed packs document and volume analysis with CMS as part of its May 2023 RUC recommendations stating, **"The RUC strongly recommends that CMS resolve these pricing discrepancies in the supply packs during CY2024 rulemaking."**

The Packs Workgroup convened a Teams meeting on June 28, 2023, and completed the following tasks to be included with the RUC comments on the CY2024 Proposed Rule:

I. Incomplete Packs Review

When the 23 supply packs were deconstructed, four packs stood out as containing items that did not have assigned supply codes and were no longer included on the CMS Direct PE Inputs Medical Supplies Listing. The pricing of these packs was clearly incorrect because the individual components could not be properly accounted for or summed. The Workgroup reviewed the contents of these four incomplete packs (SA045, SA046, SA049 and SA082) to ensure they are complete for submission to CMS with the RUC comment letter in August 2023.

AMA Staff searched the RUC database for the codes that used each of the four incomplete supply packs and contacted the specialties who are the dominant providers for one or more of these services. The specialties involved were requested to review the contents of the respective packs to ensure they are correct and to provide invoices for any missing supply items. The attached spreadsheet accounts for all

the packs and details the recommended modifications for the packs as explained below. Invoices are also attached for new supply items.

SA045 – All the items listed in SA045 *pack, drapes, cystoscopy* were no longer available in the current CMS Direct PE Inputs Medical Supplies Listing, thus the specialties rebuilt the pack to include two new supply items:

- *drape, surgical, legging*
- *drape, surgical, split, impervious, absorbent*.

The specialty clarified that two leggings are typical, one for each leg. They explained that there are three components to the pack, a legging on each leg and the drape in the center. A one piece drape is considerably more expensive and not typical. The Workgroup carefully reviewed the invoices and clarified that the leggings invoice is for a single legging drape (2 cases of 20), thus a quantity of two is appropriate.

SA046 – The specialties examined the codes which include SA046 *pack, drapes, laparotomy (chest-abdomen)* and recommended alternative supply items to replace the pack as detailed in the attached spreadsheet.

The Workgroup agreed that pack SA046 should be removed for the six CPT codes 19020, 19101, 19110, 19112, 20102, 20101 and replaced with supply item SB011 *drape, sterile, fenestrated 16in x 29in* as recommended by the surgical specialties. The specialties explained that a laparotomy drape-pack is not a typical supply in a surgeon's office. In addition, SA046 duplicates a few items that are separately identified for these codes (eg, SB012 drape, sterile, for Mayo stand). For these 6 procedures, it would be more typical to use a fenestrated drape which is an item commonly stocked in a surgeon's office and not included in the current PE details.

For CPT codes 19000, 60300, 22510, 22511, 22513, 22514, the Workgroup did not immediately accept the recommendation to substitute existing supply items SB014 *drape, sterile, three-quarter sheet* and SB019 *drape, towel, sterile 18in x 26in* for a longer drape but instead requested a brief rationale of what is typically used for the procedures and why, whether it be the existing supplies or a new supply item.

For CPT codes 22510, 22511, 22513, 22514, the specialties submitted a revised recommendation and invoice for a new supply item, *Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in),* along with existing supply item SB019. They explained that "A laparotomy drape-pack is not a typical supply in a surgeon's office and that SA046 also includes several items which are unnecessary (e.g., fan-folded drape sheets, Mayo stand cover, suture bag) for these procedures. For these four procedures, it would be more typical to use sterile drape towels (4) and a fenestrated drape, which is an item commonly stocked in a surgeon's office but not included in the current CMS list of PE supply inputs."

The specialties submitted a revised recommendation for CPT code 19000 with rationale to recommend replacing pack SA046 with existing supply items SB014 and SB019. They explained that "A laparotomy drape-pack is not a typical supply item for this procedure and contains duplicate items. It would be more typical to use a three-quarter sheet drape to cover the patient's lower chest and abdomen, and two sterile towels folded into triangles to create a sterile field surrounding the targeted area on the breast for puncture. These supply items are currently on the CMS list of PE supply inputs."

Finally, the specialties submitted a revised recommendation for CPT code 60300 also with rationale to recommend replacing pack SA046 with existing supply items SB014 and SB019. They explained that "A laparotomy drape-pack is not a typical supply item for this procedure and contains duplicate items. It would be more typical to use a three-quarter sheet drape to cover the patient, and two sterile towels folded

into triangles to create a sterile field surrounding the targeted area for puncture on the neck. These supply items are currently on the CMS list of PE supply inputs."

The Workgroup recommends that pack SA046 be eliminated and replaced with the supply items as specified in the attached spreadsheet.

SA049 – Several items in the existing SA049 p*ack, ocular photodynamic therapy* were no longer included on the CMS Direct PE Inputs Medical Supplies Listing, thus the specialty submitted modifications to correct the pack. The Workgroup discussed the specialty recommendation for SA049 and modified it further to include only two items as detailed in the attached spreadsheet. The Workgroup thoroughly discussed the contents of the ocular photodynamic therapy (PDT) kit and noted that a significant portion of the supply items in the existing pack are included in the kit. The specialty confirmed that the kit is correct, and the only additional item needed is the Y-adapter cap. Invoices are attached and include a picture to identify the contents of the kit.

SA082 – For SA082 *pack, ophthalmology visit (w-dilation),* the specialty recommended that all the items in the existing pack remain, except for one (rev-eyes 0.5% ophth). They submitted the missing invoice for post-mydriatic spectacles, and the Workgroup clarified that the invoice includes 25 spectacles per box for a total of $0.328 per item as noted on the attached spreadsheet.

II. Review of One Supply Item in SA042 *pack, cleaning and disinfecting, endoscope*

The unit of measurement and price for SM018 *glutaraldehyde 3.4% (Cidex, Maxicide, Wavicide)* were highlighted for review by the Packs Workgroup. AMA Staff contacted CMS to inquire about what size bottle was used for pricing SM018. CMS did not have any information on the unit size (bottle or otherwise) which was used to price the SM018 supply during the last supply/equipment pricing update. Given that the old price was 17 cents per ounce and now it is $3.44 per ounce, there may have been a unit quantity error that took place somewhere during the process.

According to the RUC database, there are 306 codes that utilize SA042 *pack, cleaning and disinfecting, endoscope* in the Non-Facility or the Facility setting. AMA Staff contacted the specialties who are the dominant providers for one or more of these services. The specialties involved were requested to provide invoices for SM018 to ensure that quantity and pricing of this supply item is accurate. Invoices shared by the specialties will be forwarded to CMS.

The specialties were further asked if there were any other discrepancies in the contents of SA042 including alternative scope disinfectants. The specialties determined, and the Workgroup agreed, that glutaraldehyde use is no longer typical. Thus, a non-glutaraldehyde disinfectant, ortho-phthalaldehyde 0.55% (eg, Cidex OPA), is recommended as a new supply item. A specialty explained that Cidex OPA is what is used in the office setting as a replacement to the old version of Cidex (glutaraldehyde). Cidex OPA replaced Cidex several years ago to respond to glutaraldehyde-resistant mycobacteria (eg, M.chelonae). Another specialty confirmed that glutaraldehyde has been replaced by safer less toxic alternatives in most centers. The Workgroup clarified the unit of measurement for the new supply item is ounces with the quantity for the pack equal to 32 oz. which is what was used previously with SM018.

In addition, an additional new supply item is recommended to replace SM019 *glutaraldehyde test strips (Cidex, Metrex)* in pack SA042. Invoices were requested for ortho-phthalaldehyde test strips to complete the pack and are shared in the attachments.

III. Supply Pack Affirmation – CMS Mathematical Correction Needed

There are 18 packs in the attached spreadsheet where all content is complete. **The Workgroup affirmed the contents of the complete packs for submission to CMS with the RUC request to ensure accurate packs pricing.** The Workgroup concurred that these packs should be rectified as soon as possible by CMS to ensure that the sum totals from the individual items.

The PE Subcommittee Packs Workgroup recommends that:

1. **The RUC request that the Centers for Medicare & Medicaid Services (CMS) revise packs SA042, SA045, SA046, SA049 and SA082 according to the attached spreadsheet.**

2. **The RUC request that the Centers for Medicare & Medicaid Services (CMS) immediately initiate correction of the packs pricing such that the sum of the individual components match the price of the corresponding pack.**

Practice Expense Subcommittee
January 15-16, 2025

Members Present: Scott Manaker, MD, PhD, (Chair), Amy Aronsky, DO, Gregory Barkley, MD, Michael Booker, MD, Eileen Brewer, MD, Joseph Cleveland, MD, Neal Cohen, MD, David Han, MD, Mollie MacCormack, MD, Bradley Marple, MD, Tye Ouzounian, MD, Richard Rausch, DPT, Donald Selzer, MD, Thomas Weida, MD, Adam Weinstein, MD, and Lawrence Simon, MD (CPT Resource)

I. High-Cost Supplies

A joint CPT and RUC workgroup to address the issue of high-cost disposable supplies and their impact on coding and valuation was created after the September 2024 RUC meeting. Comprised of four CPT Editorial Panel members and four RUC members, the Workgroup on Coding and Valuation Issues Related to High-Cost Disposable Supplies was charged with identifying potential solutions and alternatives to present to the Centers for Medicare & Medicaid Services (CMS).

The CY 2025 Medicare Physician Payment Schedule includes 85 medical supply items currently embedded in codes with a purchase price of more than $500. These high-cost medical supplies represent $1.32 billion dollars in direct costs for the 2025 Medicare Physician Payment Schedule and 19 percent of all direct practice expense medical supply costs in the non-facility setting.

The Workgroup drafted a letter to CMS to reframe the high-cost disposable supply issue, including the importance of verifying the cost of these supplies on an annual basis, and convened an open virtual meeting on December 16, 2024, to review and provide comment on the draft. Almost 150 participants were on the call to discuss the issue of high-cost supplies in the Medicare Physician Payment Schedule.

The Practice Expense (PE) Subcommittee supported the letter as drafted by the CPT/RUC Joint Workgroup on Coding and Valuation Issues Related to High-Cost Disposable Supplies which continues to call on **CMS to separately identify and pay for high-cost disposable supplies priced more than $500 using Healthcare Common Procedure Coding System (HCPCS) supply codes. Additionally, the letter encourages CMS to review and re-price high-cost medical supplies on an annual basis.**

The PE Subcommittee recommends that the RUC and CPT Editorial Panel review and approve the draft letter at their respective upcoming meetings to submit to CMS by its February 10, 2025, deadline.

II. Other Business

The PE Subcommittee considered Tab 6 *Lower Extremity Revascularization* and a request from the specialties to create a new pack for angiography services. As described in the PE SOR, the specialty societies are recommending the PE Subcommittee consider creating an angio pack with the following components:

Angio Pack Contents		**Corresponding Supply list components**				**$ 68.26**
10 cc syringe	SC051	syringe 10-12ml	item	0.21	4	$ 0.84
Bowl, sterile	SJ079	basin, sterile 500cc	item	3.51	2	$ 7.02
gauze	SG055	gauze, sterile 4in x 4in	item	0.19	20	$ 3.80
marker, regular tip	SK075	skin marking pen, sterile (Skin Skribe)	item	1.62	1	$ 1.62
dome cover	SB008	drape, sterile, c-arm, fluoro	item	5.38	1	$ 5.38
blue towels	SB019	drape-towel, sterile 18in x 26in	item	0.47	4	$ 1.88
scalpel	SF007	blade, surgical (Bard-Parker)	item	0.68	1	$ 0.68
back table cover	SB014	drape, sterile, three-quarter sheet	item	3.46	1	$ 3.46
20cc syringe	SC053	syringe 20ml	item	0.83	4	$ 3.32
drape, femoral	SB009	drape, sterile, femoral	item	9.15	1	$ 9.15
medicine cup	SL157	cup, sterile, 8 oz	item	0.58	1	$ 0.58
label sheet	SL198	label, vial	item	0.02	9	$ 0.18
control syringe (lidocaine)	SC051	syringe 10-12ml	item	0.21	1	$ 0.21
scissor	SA027	kit, scissors and clamp	kit	0.82	1	$ 0.82
surgical gowns x 2	SB028	gown, surgical, sterile	item	5.13	2	$ 10.26
18 G needle	SC027	needle, 18-19g, filter	item	0.21	1	$ 0.21
25 G needle	SC028	needle, 18-26g 1.5-3.5in, spinal	item	9.96	1	$ 9.96
needle counter	SD120	styrofoam block, high density (3in-12in-12in)	item	1.86	1	$ 1.86
towel clamps (plastic disposable)	SD208	towel clamp, plastic	item	0.76	4	$ 3.04
Guidewire bowl	SD171	guidewire bowl w-lid, sterile	Item	3.99	1	$ 3.99

The PE Subcommittee agrees that an angio pack would facilitate the PE process and ensure consistency within the vascular/interventional procedures. The Subcommittee recommends that the RUC approve the creation of a new Angio Pack, as detailed above, for submission to the CMS.

III. Practice Expense Recommendations for CPT 2026

The table below corresponds to the final PE spreadsheets as adopted at the meeting. Please refer to the specific spreadsheets for details on the practice expense input recommendations for each tab.

Tab	Title	PE Input Changes	Consent Calendar
4	Hip and Pelvis Arthrodesis Revisions	No Survey	X
5	Thoracic Branch Endograft Services	(1) Modification	
6	Lower Extremity Revascularization	Modifications	
7	Endoscopic Sleeve Gastroplasty	Standard 90-day global inputs recommended	X
8	Irreversible Electroporation of Tumors	No Changes	
9	Cystourethroscopy	No Changes	
10	Percutaneous Interlaminar Lumbar Decompression	Standard 90-day global inputs recommended	X
11	Laminotomy – Repair of Disc Defect	No Direct PE Inputs recommended – Facility-only services	X
12	Baroreflex Activation Therapy	No Changes	
13	Percutaneous Electrical Nerve Field Stimulation	No Changes	
14	Percutaneous Decompression of Median Nerve	Modifications	
15	Coronary Atherosclerotic Plaque Assessment	(1) Modification	
16	Radiation Oncology Treatment Delivery	No Changes	
17	Superficial Radiation Therapy	(1) Modification	

Tab	Title	PE Input Changes	Consent Calendar
18	Combination COVID-19 Vaccine Administration	Affirming Sept. 2023 RUC Recommendations (90480) No Direct PE Inputs recommended (90481)	X
19	Scalp Cooling Services	Modifications	
20	Remote Monitoring	Modifications	
21	Osteotomy of Spine	Referral to the CPT Editorial Panel	X
22	Arthrodesis – Great Toe	No Changes	
23	Temporary Female Intraurethral Valve-Pump	(1) Modification	
28	HCPAC Review Board – Remote Monitoring	No Changes	

AMA/Specialty Society RVS Update Committee **Tab 13**
Practice Expense Subcommittee
September 26, 2024

Members Present: Scott Manaker, MD, PhD, (Chair), Amy Aronsky, DO, Gregory Barkley, MD, Michael Booker, MD, Eileen Brewer, MD, Joseph Cleveland, MD, Neal Cohen, MD, David Han, MD, Katie Jordan, OTD, OTR/L, Mollie MacCormack, MD, Dheeraj Mahajan, MD, Bradley Marple, MD, Tye Ouzounian, MD, Richard Rausch, DPT, Donald Selzer, MD, Elisabeth Volpert, DNP, APRN, Thomas Weida, MD, Adam Weinstein, MD, and Tim Swan, MD (CPT Resource)

I. High-Cost Supplies

At the January 2024 meeting, the Practice Expense (PE) Subcommittee expressed its continued concern with the issue of high-cost supplies and the need to address the outsized impact that high-cost disposable supplies have within the current practice expense RVU methodology. At the same meeting, a RUC member suggested that codes with high-cost disposable supplies be flagged for PE re-review.

In April 2024, the PE Subcommittee continued to examine this issue, noting that the 2024 Medicare Physician Payment Schedule includes 82 supply items with a purchase price of more than $500. These high-cost supplies represent $1.26 billion in direct costs for 2024 and 18 percent of all practice expense supply costs in the non-facility setting. Moreover, the Subcommittee noted the significant scaling factors that are applied for budget neutrality as part of the PE methodology, which may result in payments that are lower than the cost to provide a service. At the same meeting, the Relativity Assessment Workgroup (RAW) discussed this issue to determine if a useful screen should be developed to identify any potentially misvalued services.

For the September 2024 meeting, the discussion and analysis of the high-cost supplies issue was referred to the RAW meeting (Tab 14). AMA staff provided data which show:

- There are 69 services in which the total practice expense payment does not cover the total direct supply expense for the code.
- There are 53 of these 69 services in which a high cost disposable supply is over $500.
- For 6 of these 53 services, the practice expense payment does not even cover the cost of a single high-cost supply utilized in the provision of the service.

The RAW examined the data and considered whether codes with high-cost disposable supplies should be flagged for PE re-review through development of a High-Cost Disposable Supplies Screen. The Workgroup indicated that it would be part of existing precedent to identify services for PE review only. The Workgroup also discussed whether new invoices should be required for supplies over $500 for the RUC to submit to CMS. Staff emphasized that for over ten years, **the RUC has called on CMS to separately identify and pay for high-cost disposable supplies priced more than $500 using appropriate HCPCS codes. The RAW requested formation of a joint CPT and RUC workgroup to address the issue of high-cost disposable supplies.**

II. Radiology-specific Clinical Activities

At the April 2024 RUC meeting, the PE Subcommittee considered the use of Clinical Activity (CA) code CA014 *Confirm order, protocol exam*. The guidelines for this clinical activity specify "For use in imaging services only. 1 minute standard." It was noted that CA014 has been repeatedly requested for non-imaging procedures despite the instructions which state that the task is only for imaging. Further, protocoling exams has a very specific meaning in CT and MRI that describes the work of choosing which

imaging sequences or contrast phases to perform. The task of verifying the correct patient and procedure or medication happens in nearly every procedure (aka the "time out") or medication administration, and is not intended to receive additional time in a relative system. After considering a database search that showed over 20 of the 66 codes with CA014 greater than 0 minutes are non-imaging, **the PE Subcommittee agreed that the CA014 minutes could be allocated in the non-radiology codes.** The Subcommittee discussed how the work being described in the injection and immunization codes, for example, is broadly performed across the code set and is not strictly protocoling.

For the September 2024 meeting, the PE Subcommittee discussed examples for CA014 to include in the *Practice Expense Direct Input Benchmarks* document. For example, CA010 *Obtain vital signs* specifies different levels and vital signs for consistency:

5. The obtaining of vital signs, standardized into 3 levels of service with the following times: Level 0 (no vital signs taken) = 0 minutes, Level 1 (1-3 vitals) = 3 minutes, Level 2 (4-6 vitals) = 5 minutes. (Approved April 2000).

The PE Subcommittee determined updates to the Benchmarks for CA014 to read as follows:

7. **Confirm order, protocol exam, standardized to 1 minute.<u>, e.g., selecting which imaging sequences or contrast phases to perform in CT and MRI. 0 minutes for verifying the correct patient and procedure/ medication (aka the "time out").</u>**

The PE Subcommittee further determined that for the six codes below which state "For use in imaging services," the statement should be removed such that the specialties can justify the 1 or 2 minute standard for each procedure as needed.

CA006	Confirm availability of prior images/studies	General Activity	For use in imaging services. 2 minute standard.
CA007	Review patient clinical extant information and questionnaire	General Activity	For use in imaging services. 1 minute standard.
CA014	Confirm order, protocol exam	General Activity	For use in imaging services. 1 minute standard.
CA030	Technologist QC's images in PACS, checking for all images, reformats, and dose page	General Activity	For use in imaging services, Baseline time for this activity is 2 minutes.
CA031	Review examination with interpreting MD/DO	General Activity	For use in imaging services, Standard time for this activity is 2 minutes.
CA032	Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.	General Activity	For use in imaging services, Standard time for this activity is 1 minute.

The PE Subcommittee determined updates to CA006, CA007, CA014, CA030, CA031, and CA032 to simply state: "2 minute standard" or "1 minute standard".

In addition, the Subcommittee specifically discussed the 2 minute standard for CA006. This standard was developed in 2014, and members acknowledged that the review of images using PACS is much quicker, yet the number of images has greatly increased. Thus, two minutes was still found to be appropriate for confirming the availability of prior images/studies.

III. Equipment Inputs Less than $500

CMS definition and rule related to direct medical equipment is that it must be at least $500 and all equipment inputs under $500 are considered indirect expense. The PE Subcommittee discussed that there are eleven equipment items in the current equipment database that are less than the $500 threshold that CMS has established for equipment, as listed below.

Equipment Description	CMS Code	Useful Life	Purchase Price
camera, digital (6 mexapixel)	ED004	5	152.50
Diabetes Educator Curriculum	EQ306	5	200.00
endoscope, ultrasound radial probe	ES045	7	0.00
Injector, Provis (for angiography room)	EL049		0.00
kit, vision	ES058	10	410.00
pulse oxymetry recording software (prolonged monitoring)	EQ212	5	387.00
Respiratory Impedance Plethysmography Belts (pair)	EQ337	5	87.00
Respiratory impedance Plethysmography Belts (pair) (Pediatric)	EQ349	5	199.75
slide warmer	EP051	7	425.59
ultrasound digital scope, endoscopic ultrasound	ES091		0.00
work samples, small tools (Valpar 1)	EQ267	7	361.20

It was surmised that this could be an artifact of the medical supply and equipment repricing project. CY 2022 marked the final year of the 4-year market-based transition for supply and equipment pricing. When the items above were repriced, they should have been removed from the equipment listing when the repricing brought them under the threshold. These items would not be considered supplies as they are reusable. The PE Subcommittee agreed that the equipment inputs listed above should be considered indirect expense like all other equipment under $500.

CMS indicated that it would be open to comments and suggestions for future rulemaking if there is an interest in addressing these equipment items. The Agency noted that "the small number of equipment items with costs under $500 have very low inclusion in CPT codes, aside from ED004, and their costs are so low that they have little effect on the rate setting."

Considering the CMS definition that medical equipment must be at least $500 and all equipment inputs under $500 are considered indirect expense, the PE Subcommittee agreed that the 11 inputs (above) should no longer be listed as equipment as they are less than $500. The RUC should ask CMS to remove these items from its equipment list and from the specific codes to conform to the definition of direct medical equipment and to ensure that the rule remains consistently applied.

IV. Practice Expense Recommendations for CPT 2026

The table below corresponds to the final PE spreadsheets as adopted at the meeting. Please refer to the specific spreadsheets for details on the practice expense input recommendations for each tab.

Tab	Title	PE Input Changes	Consent Calendar
4	Limb Lengthening/Shortening-Femur	No Changes	
5	Limb Lengthening/Shortening-Tibia	No Changes	

6	Laparoscopic Prostatectomy	Standard 90-day global inputs. Oct 2016 & Sept 2014 RUC Recs (38570, 38571, 38572, 38573) – Reviewed & made no changes.	X
7	Transurethral Robotic-assisted Resection of Prostate	No Changes	
8	Prostate Biopsy Services	Modifications	
9	Cerebral Perfusion & CT Angiography – Head & Neck	Modifications	
10	Colon Motility Services	Modifications	
11	Immunization Counseling	Modifications	

AMA/Specialty Society RVS Update Committee

Other Relativity Assessment Workgroup Related Recommendations – January 2025

1. Chemical Cauterization of Granulation Tissue (17250)

In 2021, CPT code 17250 *Chemical cauterization of granulation tissue (ie, proud flesh)* was identified via the high volume growth screen with total Medicare utilization of 10,000 or more that increase by at least 100% from 2008 through 2013. The Relativity Assessment Workgroup reviewed CPT code 17250 and noted that the dominant Medicare provider is Family Medicine in the nursing facility and skilled nursing facility. The specialty societies indicated that the increase in CPT code 17250 reporting is due to this service's absence from the consolidated billing list of codes for nursing facilities. In February 2022, the RUC notified CMS that perhaps CPT code 17250 should be added to the consolidated billing list of codes for nursing facilities to curb the misreporting for work that is paid to the facility**. The RUC reexamined CPT code 17250 at the January 2025 Relativity Assessment Workgroup meeting and again requests that CPT code 17250 be added to the consolidated billing list of codes for nursing facilities to curb the misreporting for work that is paid to the facility.**

2. Work Neutrality (CPT 2018) Home INR Monitoring (93792, 93793 & G0250)

In October 2019, the RUC identified this family as having more than a 10% increase (311%) in work RVUs for 2018 than what was projected. In January 2020, the Workgroup noted that CMS created G0250 to describe these services before 93792 and 93793 were developed. The Workgroup noted that 93792 and 93793 were new codes and an increase was expected as these services were not specifically described before. The Workgroup also noted that the RUC recommended that CMS delete G0250 for 2018. The Workgroup recommended reviewing in two years and continued to recommend that CMS delete the G code.

In January 2022, the Workgroup reviewed this family of services. The specialty societies indicated that these services were never projected as work neutral. CMS created the G codes to report home INR testing and interpretation when it issued a national coverage determination (NCD) covering home INR services. G0248 is the initial training of home INR with some supplies and equipment and staff time. G0249 is resupply for another month of home INR. G0250 is interpretation/management of one month of home INR, or **four** tests. When these G codes appeared on the RUC high volume growth screen, the societies approached CPT to create CPT codes that capture those three elements, but also capture the broader work of anticoagulation management for any INR test wherever it is obtained. G0248 is basically equal to 93792. CPT did not want to create an equivalent, PE-only re-supply code equivalent to G0249. In the new code construct, G0250 would be the same as **four** individual 93793s. In addition, 93793 could be reported if a patient went to a lab to get an INR test or had one done in the clinician's office, although it is not reportable the same day as an E/M. A revised neutrality calculation in the spreadsheet demonstrated that if source utilization of G0250 is multiplied by 4, as was the original intent of the societies, budget neutrality was within 3% in 2018. The specialty societies continue to request that CMS delete G0248, G0249 and G0250, and note that these services will soon become obsolete. Fewer patients have the associated mechanical valves and warfarin use will diminish as a management option. **In February 2022, the RUC recommended CMS delete G0248, G0249 and G0250 and review the Relativity Assessment Workgroup review this issue again in three years.**

In January 2025, the Workgroup reviewed the action plan for CPT codes 93792 and 93793 and agreed with the specialty societies to remove from work neutrality screen. Incorrect assumptions were made initially and these services were budget neutral. Additionally, Medicare utilization continues to decrease. **The Workgroup requests CMS delete G0248, G0249 and G0250.**

3. Hyperbaric Oxygen Under Pressure

CPT code 99183 *Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session* was first identified in April 2013 via the CMS/Other - Utilization over 250,000 screen. It was surveyed and reviewed by the RUC in January 2014. The RUC subsequently submitted work and direct PE input recommendations based on a typical treatment time of 120 minutes. For CY 2015, CMS accepted the RUC's work recommendation though decided to assign 99183 no direct PE inputs. Instead, CMS opted to make 99183 a professional component only code and created a separate time-based G code to report the technical component for hyperbaric oxygen therapy (PE-only code G0277 *Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval*). To value G0277, CMS used the RUC recommended direct PE inputs for 99183 and adjusted them to align with the 30-minute treatment interval. In the Final Rule for 2015, CMS commented that prior to 2015, CPT code 99183 was used for both professional attendance and supervision and the actual treatment delivery. Stakeholders had pointed out that although CMS included the PE inputs for treatment delivery in CPT code 99183 prior to 2015, the code descriptor described only attendance and supervision. CMS noted that under the Outpatient Prospective Payment System (OPPS), the treatment used to be reported using separate treatment code C1300 *Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval*. Therefore, CMS created code G0277 to report the treatment delivery and to maintain consistency with the OPPS coding. CMS used a timed 30-minute code, which can be used across settings. When G0277 is reported in the facility setting, the HOPPS uses Ambulatory Payment Classifications (APC) code 5061 *Hyperbaric Oxygen Therapy*.

In April 2022, the Relativity Assessment Workgroup identified G0277 via the high volume growth screen, with Medicare utilization of 10,000 or more that increased by at least 100% from 2015 through 2020. In September 2022, the Workgroup reviewed an action plan from the specialty societies and the RUC recommended that the practice expense be reviewed at the January 2023 RUC Meeting. The RUC made recommendations on the direct practice expense inputs for G0277 and recommended that CPT code 99183 be referred to CPT by the June 2023 deadline for the September 2023 CPT meeting, for revision to be time-based as well as modified to appropriately describe the treatment delivery, attendance and supervision. Then, subsequently, allow for the deletion of G0277.

In September 2023, the specialties indicated they did not intend to submit a CCA. Therefore, this issue was placed on the January 2024 Relativity Assessment Workgroup agenda to address. In January 2024, the specialty societies indicated that they believe the current separate coding of the G code and the CPT code are clear and work appropriately. The Workgroup indicated that one clear and consistent coding structure should exist and the specialty society should submit a CPT code change application. The specialties should revise 99183 to be time-based well as modified to appropriately describe the treatment delivery, attendance and supervision or develop a coding change creating a practice expense only code to capture the service appropriately and eliminate the need for G0277.

In September 2024, the specialty societies submitted a CCA to address the RUC's concerns. The specialty societies withdrew the application because it was apparent that the RUC referral to CPT was not going to provide a solution or align with CPT nomenclature/criteria. The CPT Editorial Panel does not split codes in the manner the RUC suggested. HCPCS code G0277 was not necessary as the sessions are uniform, with the 25th, median and 75th all indicating that 4 units or a two hour session is typical, which is what the RUC assumed for CPT code 99183.

The January 2023 RUC recommended inputs for G0277 are correct to crosswalk for CPT code 99183 if multiplied by 4, to account for four 30-minute units or 2 hours typical per session. **The Workgroup recommends that the RUC recommend that CMS crosswalk the recent January 2023 direct practice expense inputs for G0277, multiplying them by a factor of 4 for code 99183, and subsequently deleting G0277. This is consistent with affirming the RUC's original recommendation and assumption that this service is typically 120 minutes.**

High Volume Growth

CPT Code	Long	Work RVU	Global	RUC Review Date	2008 Medicare Util	2009 Medicare Util	2010 Medicare Util	2011 Medicare Util	2012 Medicare Util	2013 Medicare Util	2014 Medicare Util	2015 Medicare Util	2016 Medicare Util	2017 Medicare Util	2018 Medicare Util	2019 Medicare Util	2020 Medicare Util	2021 Medicare Util	2022 Medicare Util	2008-2013 Increase	2017-2022 Increase	Specialty Society	SS Recommendation

Screen: High Volume Growth

Background/History
In October 2015, AMA Staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013.

In January 2016, the Relativity Assessment Workgroup (RAW) recommended referring this code to CPT to revise the descriptor or include a parenthetical regarding appropriately reporting 17250 or 97597 and 97598. It was referred to *CPT Assistant* to describe when to appropriately report 17250 or 97597 and 97598. The Workgroup noted it would review utilization data and who is providing this service in October 2019.

In September 2016, the CPT Editorial Panel editorially revised this code and additional guidelines for reporting chemical cauterization.

In October 2019, the Workgroup recommended to review again in two years (January 2022).

In January 2022, the Workgroup reviewed CPT code 17250 and noted that the dominant Medicare provider is Family Medicine in the nursing facility and skilled nursing facility. The specialty societies indicated that the increase in CPT code 17250 reporting was due to this service's absence from the consolidated billing list of codes for nursing facilities. The specialty societies recommended that the American Academy of Family Physicians (AAFP) publish a membership educational article and that this service be re-reviewed. The Workgroup recommended that CPT code 17250 be re-reviewed in 3 years (January 2025) following publication of an AAFP membership educational article and additional utilization data is obtained. The Workgroup recommended that the RUC notify CMS that CPT code 17250 should be added to the consolidated billing list of codes for nursing facilities to curb the misreporting for work that is paid to the facility.

AAFP published a coding educational article in May 2022 in the *FPM* journal.

☒ **Other Action (please describe):**

- Monitor Medicare utilization and review again in January 2027
- Recommend CMS add 17250 to consolidated billing for nursing facility services

Rationale for Recommended Action:

As noted in the background above, there is significant history associated with this code, and the RAW has considered three previous action plans for it (i.e., in 2016, 2019, and 2022). Copies of those previous action plans are attached for information. As recommended by the RAW in January 2022, the AAFP published a coding education article on this issue in May 2022. Utilization of code 17250 under Medicare decreased, going from 248,217 services in 2021 to 241,862 services in 2022.

Given that:

- this code was originally identified via the High-Volume Growth screen
- the action recommended by the RAW in 2022 was taken in May 2022
- Medicare volume decreased between 2021 and 2022

The specialties recommend the RAW continue to monitor utilization of code 17250 to determine whether the decrease observed in 2022 is the beginning of a trend and that the RAW review the situation further in January 2027. A re-review in January 2027 will also give us time to observe the impact of the May 2022 coding article on utilization.

As noted in the Action Plan the RAW considered in 2022, there is reason to believe that volume growth for this service is connected to the fact it was not included in Medicare's consolidated billing for skilled nursing facility (SNF) services. Code 17250 continues to be excluded from consolidated billing. The specialties reiterate their prior recommendation that the RUC recommend to CMS adding code 17250 to the consolidated billing list for skilled nursing facilities.

Timeline (please list expected CPT/RUC meetings as applicable):

January 2027 – Further review by the RAW

Action Plan for Review of Potentially Misvalued Services
January 2022

CPT	Long Descriptor	RVW	global
17250	Chemical cauterization of granulation tissue (ie, proud flesh)	0.50	000

Screen: **High Volume Growth**
This service was identified via the high volume growth screen with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. In January 2016, the Relativity Assessment Workgroup recommended refer to CPT to revise the descriptor or include a parenthetical regarding appropriately reporting 17250 or 97597 and 97598. Also, to refer to CPT Assistant to describe when to appropriately report 17250 or 97597 and 97598. The Workgroup should review utilization data and who is providing this service in October 2019. In September 2016 the CPT Editorial Panel editorially revised this code and additional guidelines for reporting chemical cauterization. In October 2019, the Workgroup recommended to review the utilization again in two years (January 2022).

Include codes from family (please list all): N/A

Please check all recommended actions that apply:
(If necessary, please clearly mark and attach all supplemental information)
❑ **Survey**
❑ **Refer to CPT/CPT Assistant**
☒ **Maintain**
☒ **Other Action (please describe):** Request that the RUC send a recommendation to CMS to add code 17250 to the consolidated billing list of codes for nursing facilities. AAFP will write an education article about correct reporting of 17250 for their members.

Rationale for Recommended Action:

In the Balanced Budget Act of 1997, Congress mandated that payment for the majority of services provided to beneficiaries in a Medicare covered SNF stay be included in a bundled prospective payment made through the Part A Medicare Administrative Contractor (MAC) to the SNF. These bundled services had to be billed by the SNF to the Part A MAC in a consolidated bill. No longer would entities that provided these services to beneficiaries in a SNF stay be able to bill separately for those services. Medicare beneficiaries can either be in a Part A covered SNF stay which includes medical services as well as room and board, or they can be in a Part B non-covered SNF stay in which the Part A benefits are exhausted, but certain medical services are still covered though room and board is not.

Prior to 2011, physicians reported codes **11040** *Debridement; skin, partial thickness* and **11041** *Debridement; skin, full thickness* for skin debridement. Payment was allowed for any site of service, including skilled nursing facilities (SNF). These codes were not subject to SNF consolidated billing for Medicare beneficiaries for a SNF Part A covered stay.[1] Codes 11040 and 11041 were submitted to the Part B Medicare carrier for payment.

In 2011 codes 11040 and 11041 were deleted and the work for debridement of skin and was referred[2] to codes **97597** *Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors,*

[1] https://www.cms.gov/Medicare/Billing/SNFConsolidatedBilling/index.html

[2] (For debridement of skin, ie, epidermis and/or dermis only, see 97597, 97598) (For active wound care management, see 97597, 97598)

scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less and **97598** *each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)*. Codes 97597 and 97598 are subject to SNF consolidated billing for Medicare beneficiaries in a SNF Part B stay. The Part B Medicare carrier will always deny these codes for Medicare beneficiaries in a SNF Part B stay. When provided, these services must be provided and billed under arrangement with the SNF.[3]

In 2016, we presented 2008-2014 data that showed there was a shift in specialty and place of service for 17250 Medicare claims. We indicated that the increased utilization and shifts in dominant specialty, site of service, and dominant diagnosis may correspond to the 2011 coding changes and that miscoding may be occurring with respect to reporting code 17250 versus codes 97597/97598 and changes in reimbursement for codes included in nursing facility consolidated billing. We also noted that the same increased utilization and shift in site of service was also evident in the Medicaid 2009 versus 2012 data. **The RAW agreed to refer this issue to CPT to revise the descriptor for 17250 or include a parenthetical regarding appropriately reporting of 17250 or 97597 and 97598.**

At the October 2016 CPT Panel meeting, the Panel approved an editorial revision of the code descriptor for 17250 and the addition of guidelines for reporting chemical cauterization to be effective for CPT 2018, as shown below:

CPT 2017
17250 Chemical cauterization of granulation tissue (proud flesh, sinus or fistula)
(17250 is not to be used with removal or excision codes for the same lesion)

CPT 2018
17250 Chemical cauterization of granulation tissue (ie, proud flesh)
(Do not report 17250 with removal or excision codes for the same lesion)
(Do not report 17250 when chemical cauterization is used to achieve wound hemostasis)
(Do not report 17250 in conjunction with 97597, 97598, 97602 for the same lesion)

Information about these changes were included in:
The AMA's *CPT Changes: An Insider's View 2018*, and
The *Bulletin* of the American College of Surgeons (http://bulletin.facs.org/2018/01/2018-cpt-coding-changes/).

In October 2019, we advised the RUC to recommend to CMS that code 17250 should be added to the consolidated billing list of codes for nursing facilities to curb the misreporting for work that is paid to the facility. The RUC did not send a recommendation to CMS about this code and instead decided to review the service again in 2 years after the CPT changes and educational articles.

January 2022 - We once again recommend that the RUC provide CMS with the utilization details about this issue and recommend adding code 17250 to consolidated billing for nursing facilities. In addition, the AAFP has agreed to write an education article for their membership about correct reporting of 17250.

Timeline (please list expected CPT/RUC meetings as applicable):

Re-review after publication of AAFP membership educational article and additional utilization data is obtained.

Action Plan for Review of Potentially Misvalued Services
January 2016

CPT	Long Descriptor	RVW	global
17250	Chemical cauterization of granulation tissue (proud flesh, sinus or fistula)	0.50	000

Screen: **High Volume**
Services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013.

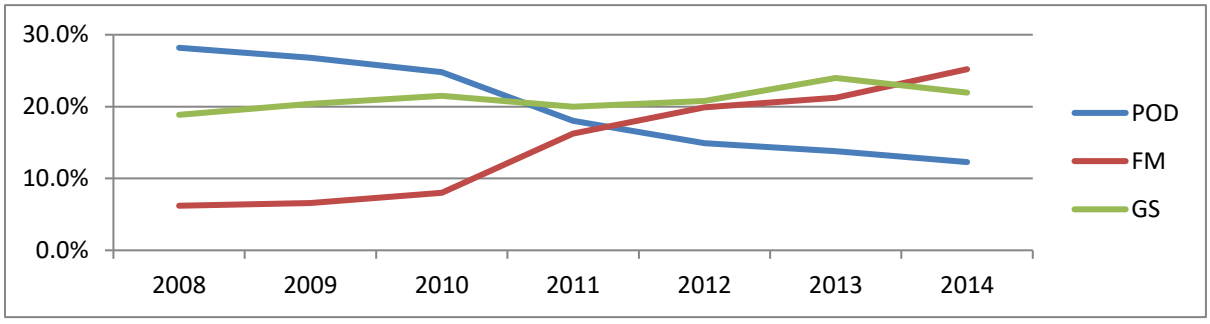
Include codes from family (please list all): N/A

Please check all recommended actions that apply:
(If necessary, please clearly mark and attach all supplemental information)
❑ **Survey**
❑ **Refer to CPT/CPT Assistant**
☒ **Maintain**
❑ **Other Action (please describe):**

Rationale for Recommended Action:

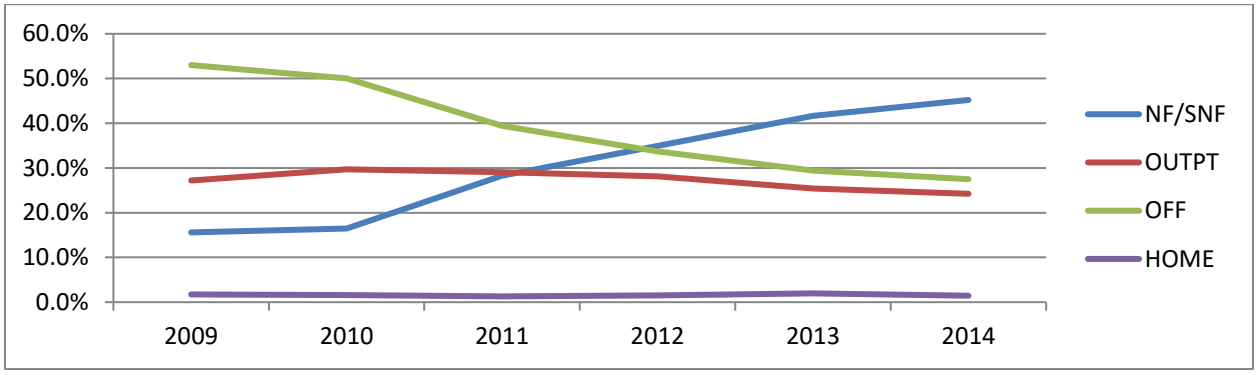
Over time there has been a shift in the dominant specialty:

	2008	2009	2010	2011	2012	2013	2014
family medicine	6.2%	6.6%	8.0%	16.2%	19.9%	21.2%	25.2%
general surgery	18.9%	20.4%	21.5%	20.0%	20.8%	24.0%	21.9%
podiatry	28.2%	26.8%	24.8%	18.0%	14.9%	13.8%	12.3%



There has also been a shift in site of service:

	2009	2010	2011	2012	2013	2014
NF/SNF	15.6%	16.5%	28.3%	34.9%	41.6%	45.2%
OFF	53.0%	50.0%	39.4%	33.7%	29.4%	27.5%
OUTPT	27.2%	29.7%	29.1%	28.1%	25.4%	24.2%
HOME	1.7%	1.6%	1.3%	1.5%	2.0%	1.5%



The dominant diagnosis has shifted to chronic ulcer of skin.

Diagnosis	2008	2014
OTHER HYPERTROPHIC CONDIT SKIN	23%	19%
CHRONIC ULCER OF SKIN	20%	33%

To date, we have not been able to determine the cause of these shifts. We are investigating if there is a correlation for the change in utilization and site of service with deletion of codes 11040 and 11041 which occured in 2011.

Timeline (please list expected CPT/RUC meetings as applicable):

As the dominant specialty, the AAFP is continuing its investigation of the utilization by its members and will attempt to have more information prior to the RAW meeting.

Action Plan for Review of Potentially Misvalued Services
October 2019

CPT	Long Descriptor	RVW	global
17250	Chemical cauterization of granulation tissue (ie, proud flesh)	0.50	000

Screen: **High Volume Growth**
This service was identified via the high volume growth screen with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2008 through 2013. In January 2016, the RAW recommended referral to CPT to revise the descriptor or include a parenthetical regarding appropriately reporting 17250 or 97597 and 97598. In September 2016, the CPT Editorial Panel editorially revised this code and additional guidelines for reporting chemical cauterization. The Workgroup should review utilization data and who is providing this service in October 2019.

Include codes from family (please list all): N/A

Please check all recommended actions that apply:
(If necessary, please clearly mark and attach all supplemental information)
❑ **Survey**
❑ **Refer to CPT/CPT Assistant**
☒ **Maintain**
☒ **Other Action (please describe):** Request that the RUC send a recommendation to CMS to add code 17250 to the consolidated billing list of codes for nursing facilities.

Rationale for Recommended Action:

In the Balanced Budget Act of 1997, Congress mandated that payment for the majority of services provided to beneficiaries in a Medicare covered SNF stay be included in a bundled prospective payment made through the Part A Medicare Administrative Contractor (MAC) to the SNF. These bundled services had to be billed by the SNF to the Part A MAC in a consolidated bill. No longer would entities that provided these services to beneficiaries in a SNF stay be able to bill separately for those services. Medicare beneficiaries can either be in a Part A covered SNF stay which includes medical services as well as room and board, or they can be in a Part B non-covered SNF stay in which the Part A benefits are exhausted, but certain medical services are still covered though room and board is not.

Prior to 2011, physicians reported codes **11040** *Debridement; skin, partial thickness* and **11041** *Debridement; skin, full thickness* for skin debridement. Payment was allowed for any site of service, including skilled nursing facilities (SNF). These codes were not subject to SNF consolidated billing for Medicare beneficiaries for a SNF Part A covered stay.[1] Codes 11040 and 11041 were submitted to the Part B Medicare carrier for payment.

In 2011 codes 11040 and 11041 were deleted and the work for debridement of skin and was referred[2] to codes **97597** *Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for*

[1] https://www.cms.gov/Medicare/Billing/SNFConsolidatedBilling/index.html

[2] (For debridement of skin, ie, epidermis and/or dermis only, see 97597, 97598) (For active wound care management, see 97597, 97598)

ongoing care, per session, total wound(s) surface area; first 20 sq cm or less and **97598** *each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)*. Codes 97597 and 97598 are subject to SNF consolidated billing for Medicare beneficiaries in a SNF Part B stay. The Part B Medicare carrier will always deny these codes for Medicare beneficiaries in a SNF Part B stay. When provided, these services must be provided and billed under arrangement with the SNF.[3]

In 2016, we presented 2008-2014 data that showed there was a shift in specialty and place of service for 17250 Medicare claims. We indicated that the increased utilization and shifts in dominant specialty, site of service, and dominant diagnosis may correspond to the 2011 coding changes and that miscoding may be occurring with respect to reporting code 17250 versus codes 97597/97598 and changes in reimbursement for codes included in nursing facility consolidated billing. We also noted at that time that the same increased utilization and shift in site of service was also evident in the Medicaid 2009 versus 2012 data. **The RAW agreed to refer this issue to CPT to revise the descriptor for 17250 or include a parenthetical regarding appropriately reporting of 17250 or 97597 and 97598.**

At the October 2016 CPT Panel meeting, the Panel approved an editorial revision of the code descriptor for 17250 and the addition of guidelines for reporting chemical cauterization to be effective for CPT 2018, as shown below:

CPT 2017
17250 Chemical cauterization of granulation tissue (proud flesh, sinus or fistula)
(17250 is not to be used with removal or excision codes for the same lesion)

CPT 2018
17250 Chemical cauterization of granulation tissue (ie, proud flesh)
(Do not report 17250 with removal or excision codes for the same lesion)
(Do not report 17250 when chemical cauterization is used to achieve wound hemostasis)
(Do not report 17250 in conjunction with 97597, 97598, 97602 for the same lesion)

Discussion of these changes was included in the American Medical Association's *CPT Changes: An Insider's View 2018* and in the Bulletin of the American College of Surgeons (http://bulletin.facs.org/2018/01/2018-cpt-coding-changes/).

Despite the work to clarify correct coding of 17250, it appears there continues to be a shift in the dominant specialty, dominant site of service, and dominant diagnosis as shown in the data on the next page.

We believe that a survey would not change the times or value for this code when correctly reported. The current vignettes represent appropriate reporting of this service.

We advise the RUC to recommend to CMS that code 17250 should be added to the consolidated billing list of codes for nursing facilities to curb the misreporting for work that is paid to the facility.

Timeline (please list expected CPT/RUC meetings as applicable):

Submit the recommendation to CMS and discuss this issue again at the RAW after CMS publication of its determination about this RUC recommendation.

Screen: *Work Neutrality (CPT 2018)*

Please check all recommended actions that apply:
(If necessary, please clearly mark and attach all supplemental information)
❑ **Survey**
❑ **Refer to CPT Editorial Panel**
❑ **Refer to CPT Assistant (specify article *or* Q&A)**
☒ **Maintain**
❑ **Other Action (please describe):**

Rationale for Recommended Action:

Summarizing the prior two action plans and RAW discussions of these codes (attached), these codes were once flagged for review under a budget neutrality screen in 2019. The RAW noted in January 2020 that these are new codes and an increase was expected. However, the RAW asked for re-review in two years to reiterate points to CMS about deletion of confounding G codes and to see what happened with utilization, which was expected to decline as warfarin becomes less common. In January 2022, trends were not yet clear based on 2018, 2019, and 2020 data with the impact of the pandemic. The RAW asked for another re-review in three years. With three more years of data, it finally seems some conclusions can be drawn.

	2017	2018	2019	2020	2021	2022	2023
93792	NA	1,567	1,742	1,880	1,208	890	595
93793	NA	991,643	1,555,390	1,680,440	1,643,960	1,483,382	1,375,628
G0248	32,948	31,559	23,312	32,580	20,817	17,910	13,867
G0249	1,282,929	1,273,274	1,211,830	1,211,300	1,046,142	967,209	891,988
G0250	241,231	213,366	185,069	160,760	146,366	124,192	102,272

Societies note several trends and offer a recommendation to remove this topic from the budget neutrality screen as it seems incorrect assumptions were made from the outset, and CMS's decision to leave G codes in place complicates use in the field. First, utilization of every service is declining. New anticoagulation management code 93793 began declining after reaching a peak in 2020. That makes sense, as more people grew familiar with the service in the initial years, and as patients are increasingly on NOACs rather than warfarin. Second, utilization of G0250 continues to decline. It is not a linear correlation with the volume of 93793, but it is probably at least somewhat related. Third, trends that may have been disrupted by the COVID-19 pandemic seem to have settled. Finally, and to reiterate, it was always the case that these new codes were going to result in increased work RVUs. The new code can be billed for ALL anticoagulation management using INR regardless of where the test is performed.

Therefore, the societies recommend removing these codes from the budget neutrality screen and monitoring in the future for trigger of other RAW screens.

Timeline (please list expected CPT/RUC meetings as applicable):

AMA/Specialty Society RVS Update Committee **Tab 20**
Relativity Assessment Workgroup
January 13, 2022

Members: Doctors John Proctor (Chair), Kathy Cain (Vice Chair), Jennifer Aloff, Sergio Bartakian, William Donovan, Dawn Francis, Matthew Grierson, Gregory Harris, John Heiner, Gwenn Jackson, Katie Jordan, OTD, Peter Manes, Eileen Moynihan, Dee Adams Nikjeh, PhD, Stephen Sentovich, Norm Smith, Holly Stanley, Michael Sutherland, and David Wilkinson.

EXCERPT (93792-93793)

I. Re-review of Services – Review Action Plans

Work Neutrality (CPT 2018)

Home INR Monitoring (93792, 93793 & G0250)

In October 2019, the RUC identified this family as having more than a 10% increase (311%) in work RVUs for 2018 than what was projected. In January 2020, the Workgroup noted CMS created G0250 to describe these services before 93792 and 93793 were developed. The Workgroup noted that 93792 and 93793 were new codes and an increase was expected as these services were not specifically described before. The Workgroup also noted that the RUC recommended that CMS delete G0250 at that time. CMS did not delete these G codes as they describe different tests. The Workgroup recommended reviewing in 2 years and continued to support the specialty societies' recommendation that CMS delete the G code.

In January 2022, the Workgroup reviewed this family of services. The specialty societies indicated that these services were never projected as work neutral. CMS created the G codes to report home INR testing and interpretation when it issued a national coverage determination (NCD) covering home INR services. G0248 is the initial training of home INR with some supplies and equipment and staff time. G0249 is resupply for another month of home INR. G0250 is interpretation/management of one month of home INR, or **four** tests. When these G codes appeared on the RUC high volume growth screen, the societies approached CPT to create CPT codes that capture those three elements, but also capture the broader work of anticoagulation management for any INR test wherever it is obtained. G0248 is basically equal to 93792. CPT did not want to create an equivalent, PE-only re-supply code equivalent to G0249. In the new code construct, G0250 would be the same as **four** individual 93793s. In addition, 93793 could be billed if a patient went to a lab to get an INR test or had one done in the clinician's office, although it is not reportable the same day as an E/M. A revised neutrality calculation in the spreadsheet demonstrates that if source utilization of G0250 is multiplied by 4, as was the original intent of the societies, budget neutrality was within 3% in 2018.

The specialty societies continue to request that CMS delete G0248, G0249 and G0250, however, note that these services will soon become obsolete. Fewer patients have the associated mechanical valves and warfarin use will diminish as a management option.

The Workgroup recommends that CMS delete G0248, G0249 and G0250 and CPT codes 93792 and 93793 be maintained and reviewed by the Relativity Assessment Workgroup in 3 years (January 2025).

Specialty: _ACC, ACP, ANA___

Action Plan for Review of Potentially Misvalued Services
January 2022

Code	Global	Work RVU	CPT Descriptor:
G0248	XXX	0.00	Demonstration, prior to initiation of home INR monitoring, for patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets Medicare coverage criteria, under the direction of a physician; includes: face-to-face demonstration of use and care of the INR monitor, obtaining at least one blood sample, provision of instructions for reporting home INR test results, and documentation of patient's ability to perform testing and report results
G0249	XXX	0.00	Provision of test materials and equipment for home INR monitoring of patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets Medicare coverage criteria; includes: provision of materials for use in the home and reporting of test results to physician; testing not occurring more frequently than once a week; testing materials, billing units of service include 4 tests
G0250	XXX	0.18	Physician review, interpretation, and patient management of home INR testing for patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets Medicare coverage criteria; testing not occurring more frequently than once a week; billing units of service include 4 tests
93792	XXX	0.00	Patient/caregiver training for initiation of home international normalized ratio (INR) monitoring under the direction of a physician or other qualified health care professional, face-to-face, including use and care of the INR monitor, obtaining blood sample, instructions for reporting home INR test results, and documentation of patient's/caregiver's ability to perform testing and report results
93793	XXX	0.18	Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed

(If necessary, please clearly mark and attach all supplemental information)
❑ **Survey**
❑ **Refer to CPT/CPT Assistant**
☒ **Maintain**
❑ **Other Action (please describe):**

Rationale for Recommended Action:

In October 2019, the RUC identified this family as having more than 10% increase (311%) in work RVUs for 2018 than what was projected. In January 2020, the Workgroup noted CMS created G0250 to describe these services before 93792 and 93793 were developed. The Workgroup noted that 93792 and 93793 were new codes and an increase was expected as these services were not specifically described before. The Workgroup also noted that the RUC recommended that CMS delete G0250 at that time. CMS did not delete these G0250 codes as they describe different tests. The Workgroup recommended reviewing in 2 years and continued to support recommendation that CMS delete the G code. The January 2020 Action Plan is included and has additional background on the creation of G codes to support a Medicare NCD and the RUC's prior work with these codes.

In the intervening time, utilization grew modestly for 93792 and still significantly for 93793 as shown in the table below and in the attached spreadsheet prepared by RUC and society staff.

	2017	2018	2019	2020
93792	NA	1,567	1,742	1,880
93793	NA	991,643	1,555,390	1,680,440
G0248	32,948	31,559	23,312	32,580
G0249	1,282,929	1,273,274	1,211,830	1,211,300
G0250	241,231	213,366	185,069	160,760

It remains the case that these codes were never expected to be budget neutral. CMS created the G codes to report home INR testing and interpretation when it issued an NCD covering home INR services. G0248 is the initial training of home INR with some supplies and equipment and staff time. G0249 is resupply for another month of home INR. G0250 is interpretation/management of one month of home INR, or four tests. When these codes triggered a RAW screen for G codes with significant volume, the societies went to CPT to try to create CPT codes that capture those three elements, but also capture the broader work of anticoagulation management for any INR test wherever it is obtained. G0248 is basically equal to 93792. CPT did not want to create an equivalent, PE-only re-supply code equivalent to G0249. In the new code construct, G0250 would be the same as four individual 93793s. In addition, 93793 could be billed if a patient went to a lab to get an INR test or had one done in the clinician's office. (Though it's not billable the same day as an E/M.) A revised neutrality calculation in the spreadsheet shows that if source utilization of G0250 is multiplied by 4, as was the original intent of the societies, budget neutrality was within 3% in 2018.

Societies note several trends and offer a recommendation to remove this from the budget neutrality screen as it seems incorrect assumptions were made from the outset, and CMS's decision to leave G codes in place complicates use in the field. First, utilization of new anticoagulation management code 93793 grew in 2019 and may have begun leveling off in 2020. That makes sense, as more people grew familiar with the service. Second, utilization of G0250 continues to decline. It is not a one-to-one correlation with 93793, but it is probably at least somewhat related. Third, the new code for home INR initiation, 93792, grew modestly while the longstanding G code, G0248, fell markedly from 2018 to 2019 and then bounced back in 2020. We have no explanation for this, but have previously noted that in general, use of INR should be decreasing in this decade as NOACs are increasingly incorporated into care. Fourth, that trend may have been disrupted by the COVID-19 pandemic. Finally, and to reiterate, it was always the case that these new codes were going to result in increased work RVUs. The new code can be billed for ALL anticoagulation management using INR regardless of where the test is performed.

Therefore, the societies recommend removing these codes from the budget neutrality screen and monitoring in the future for trigger of other RAW screens.

EXCERPT (93792-93793)

VIII. Work Neutrality (CPT 2018)

The Workgroup reviewed the action plans for three code families reviewed in the CPT 2018 cycle (April 2016, October 2016 and January 2017 RUC meetings) that have more than 10% increase in work RVUs from what was projected.

2) INR Monitoring (CPT codes 93792 and 93793) shows a 314% increase in work RVUs for 2018. CMS created G0250 to describe these services before 93792 and 93793 were developed. The Workgroup noted that 93792 and 93793 were new codes and an increase was expected as these services were not specifically described before. The Workgroup also noted that the RUC recommended that CMS delete G0250 at that time. CMS did not delete these G0250 codes as they describe different tests. **The Workgroup recommends reviewing in 2 years and continues to support recommendation that CMS delete the G codes.**

☒ **Maintain**

❑ **Other Action (please describe):**

Rationale for Recommended Action:

G0250 was flagged by the RAW in 2015 as a service with Medicare utilization of more than 10,000 or more that increased by at least 100% from 2008 to 2013. This code was created in 2002 in coordination with a 2002 CMS NCD that covered use of "home PT INR monitoring for OAC management for patients with mechanical heart valves on Warfarin." Additional indications for "chronic AF or venous thromboembolism" were added in a 2008 NCD reconsideration.

Believing the G0250 code to be unnecessarily limited to patients that fall within the NCD regarding home INR monitoring because it does not account for other uses of INRs, ACC, ACP, and AAFP submitted a CCP to create 93793 to report each INR reading, no matter where it is obtained. 93793 describes the work of anticoagulation management when reading a single INR test result, provision of patient instructions, dosage adjustment (as needed), and scheduling of additional test(s) when performed.

As part of the CCA that created 93793, existing CPT codes for management of INR (99363-99364) were deleted. CMS had designated codes 99363-99364 as bundled services that did not have separate payment, and they were not reported at meaningful levels by physicians. Because the new codes were going to capture work that was already being performed when INRs are interpreted and patients are managed but not separately paid, it was never expected that creation of 93792 and 93793 would be budget neutral. Though it should be noted that 93793 cannot be reported on the same day as an E/M, when it is presumed to be part of that E/M service. 93793 is only capturing instances when an INR is interpreted, and the patient is managed separately from an E/M.

The RUC recommended to CMS that codes G0248-G0250 be deleted, thinking they would be redundant to the new INR codes. CMS chose not to delete those codes, believing them to be necessary for alignment with the home INR NCD. CMS noted in the 2018 final rule, "Because HCPCS codes G0248, G0249 and G0250 are used to report related services under a Medicare National Coverage Determination, we did not propose to delete the G-codes." ACC commented at the time, "Nothing in the NCD requires construction of a code in the style of G0250 that mentions specific clinical aspects or bundles management into bundles of four test interpretations." Again, because it was the expectation of societies and the RUC that as many as four units of 93793 would be billed instead of one unit of G0250, a significant increase in utilization was expected. It was also the expectation that INR interpretation and management that occurred when a patient obtained INR readings at home, at a separate lab, or at a different provider's office would be billed using 93793, capturing work that was already performed but not previously identifiable. With more time, it is possible we would see relationships between services in billed-together data that may be addressed through coding education if, for example, 93793 is being billed with E/M services.

Finally, utilization of INR monitoring should decrease in the coming years because of greater use of NOACs. Studies are encouraging for their expanded use in patients with renal disease or dialysis patients. Studies like the AUGUSTUS trial showed NOACs to be superior to vitamin K antagonists in patient with AF after acute coronary syndrome or PCI (attached). A recent meta-analysis supported use of DOAC with clopidogrel over warfarin (attached).

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

January 2023

Hyperbaric Oxygen Under Pressure (PE Only) – Tab 16

Code G0277 *Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval* was identified via the high volume growth screen for codes with Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2022. At the September 2022 Relativity Assessment Workgroup meeting, the specialty societies proposed to review the direct practice expense inputs for the January 2023 RUC meeting.

In January 2023, the Practice Expense Subcommittee reviewed G0277 and had no modifications to the direct practice expense inputs submitted by the specialty societies. The PE Subcommittee accepted compelling evidence there has been a change in the dominant specialty providing this service and a change in clinical staff type. Previously this service was primarily performed by general surgery, internal medicine, and undersea and hyperbaric medicine, whereas now family medicine is the top specialty. It is now typical for a single staff person (L047C *RN/respiratory therapist*) to perform all tasks rather than divide activities among two staff (an RN/LPN/MA and an RN/respiratory therapist). Additionally, as of 2016, the National Board of Diving and Hyperbaric Medical Technology no longer allows certified nursing assistants and certified medical assistants to be eligible to take the certified hyperbaric technologist examination, and as such, there has been a change in the clinical staff type. The PE Subcommittee agreed with the specialty societies to update the clinical staff type to reflect solely L047C *RN/Respiratory Therapist.*

The PE Subcommittee reviewed how hyperbaric oxygen therapy is administered. Typically, there is one patient in one hyperbaric chamber for two hours. There are no patients who utilize the chamber for only 30 minutes; two hours is typical, and it is relatively uncommon to use it for longer. Therefore, the direct practice expense inputs reflect that typical service. All the inputs submitted are prorated for four units typically being performed (30 minutes each, totaling 2 hours). For example, the supplies have all been divided into quarters such as SM025 *specula tips, otoscope,* which is listed as 0.50 and equates to two specula tips that are used before and after treatment. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

RUC Referral to CPT
The RUC noted that CMS created G0277 in 2015 to describe the direct practice expense inputs associated with CPT code 99183 *Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session.* In the Final Rule for 2015, CMS commented that CPT code 99183 is used for both professional attendance and supervision and the actual treatment delivery. Stakeholders pointed out that although CMS included the PE inputs for treatment delivery in CPT code 99183, the descriptor describes only attendance and supervision. CMS noted that under the Outpatient Prospective Payment System (OPPS), the treatment is reported using separate treatment code C1300 *Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval*. Therefore, CMS created code G0277 to report the treatment delivery and to maintain consistency with the OPPS coding. CMS used a timed 30-minute code, which can be used across settings. To value G0277, CMS used the RUC recommended direct PE inputs for 99183 and adjusted them to align with the 30-minute treatment interval.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC recommends that CPT code 99183 be referred to CPT by the June 2023 deadline for the September 2023 CPT meeting, for revision to be time-based as well as modified to appropriately describe the treatment delivery, attendance and supervision. Then, subsequently, allow for the deletion of G0277.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2023

CPT Code	Long Descriptor	Global Period
G0277	Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
G0277	A patient with longstanding hypertension and insulin-dependent diabetes develops a deep-to-bone foot ulcer that has not improved after 30 consecutive days of standard wound therapy. The patient is referred for adjunctive hyperbaric oxygen therapy.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Acting as an expert panel, the specialty societies' advisors used the current, CMS direct practice expense inputs as a basis for their recommendation. The expert committee noted that four units of code G0277 are typically provided to the same patient on the same date, reflecting the fact that hyperbaric oxygen therapy typically takes two hours. The expert committee accounted for this utilization in its recommendations. For example, the RUC standard for clinical active CA009 (Greet patient etc.) is 3 minutes; spread over 4 units, this translates to 0.75 minutes per unit.

Most of the changes related to clinical staff time are simply an attempt to reflect that the specialties now believe it is typical for a single staff person (RN/respiratory therapist) to do everything rather than divide activities among two staff (an RN/LPN/MA and an RN/respiratory therapist). This change is driven, in part, by the fact that, in 2016, the National Board of Diving & Hyperbaric Medical Technology (NBDHMT) discontinued certified nursing assistants and certified medical assistants as eligible to sit for the certified hyperbaric technologist examination. (See attached memo from NBDHMT.)

The most significant change in the amount of clinical staff time concerns clinical activity CA018 (Assist physician or other qualified healthcare professional---directly related to physician work time (100%)). The specialties' understanding is that CMS originally assumed two patients received treatment at the same time; the specialties now believe it's typical for only one patient to receive treatment. Since G0277 is a 30-minute interval and line of sight must be maintained at all times, the specialties believe the clinical staff time in the intra-service of the service period should be 30 minutes rather than 15 minutes. Additionally, since this time is not directly tied to physician time, the specialties believe it's more appropriately labeled as clinical activity CA021 (Perform procedure/service---NOT directly related to physician work time).

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

The specialties are using the current direct PE inputs for code G0277 as the point of reference.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   This code is **not** typically reported with an E/M service, either in the non-facility setting or more generally.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see the *Billed Together* tab in the RUC Database)

   Family medicine is the primary specialty in the non-facility setting and provides the service 17% of the time in that setting. This is **not** different than for the global.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

   When hyperbaric oxygen therapy was presented to the RUC in 2014, it was presented by emergency medicine, internal medicine, general surgery, and undersea/hyperbaric medicine. As noted above, family medicine is the primary specialty providing G0277 in the non-facility setting today. Accordingly, there is evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data. This fulfills one of the practice expense compelling evidence guidelines.

   Additionally, as noted above, in 2016, the NBDHMT discontinued certified nursing assistants and certified medical assistants as eligible to sit for the certified hyperbaric technologist examination. This has necessitated a change in the clinical staff type for some activities, which is another practice expense compelling evidence guideline.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   The RUC standard for clinical activity CA024 (Clean room/equipment by clinical staff) is 3 minutes. The specialties are effectively recommending 12 minutes (3 minutes x 4 units of G0277). Cleaning a

hyperbaric oxygen chamber is more extensive than cleaning the typical room/equipment for the following reasons:

- All bedding is removed.
- All surfaces inside and outside the chamber are cleaned; this includes inserting a staff person into the chamber for cleaning.
- Gases within the chamber are exchanged.
- Air break assembly is exchanged.
- New bedding is applied.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

(not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

CMS currently allocates 1 minute for clinical activity, *obtain vital signs* (CA010), for this code, which translates to 4 minutes for the typical session, since the median units of service billed on the same date is 4. G0277 typically involves obtaining the patient's temperature, blood pressure, pulse, and respiration as well as a pain score and blood sugar reading (since the typical patient has insulin dependent diabetes). The RUC standard for 4-6 vital signs is 5 minutes; spread over four units of G0277, that translates to 1.25 minutes per unit.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

(not applicable)

    b. Service period (includes pre, intra and post):

The technician escorts the patient from the front to get a change of clothing, takes vital signs, grounds the patient, closes the door, and starts the treatment; line of sight must be maintained at all times. Post-end of treatment, the reverse takes place.

    c. Post-service period:

(not applicable)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

After vital signs/blood sugars are taken, the patient is positioned on the stretcher, the grounding cable is applied, and the circuit tested. The patient's positioning is checked to ensure proper offloading of affected areas. Hearing aids, dentures, any external devices such as insulin pumps or NPWT are removed and capped. Water bottle is given to help clear ears during compression as well as a urinal/bedpan if needed. Socks that are given to protect feet between bathroom and stretcher are

removed. The patient is pushed into the chamber and the door is closed. TV or other entertainment is started, and volume is adjusted to comfort. Compression starts. During the treatment, the chamber operator monitors the patient for confinement anxiety, ease of breathing/pain, and patient comfort. The operator must be available chamber-side to monitor the compression of the chamber to deal with issues such as otic barotrauma. If there is a problem clearing, the compression must stop, maneuvers instituted, and an attempt to continue made. If this is successful, the treatment continues, if not, then the physician is informed to make a clinical decision. Once the patient gets to pressure, observation must be maintained to monitor for complications associated with oxygen toxicity, such as seizures or flash pulmonary edema. Air breaks, which are typically given every 20 – 30 minutes during the treatment for 5 minutes, must start and stop on time, and the air supply must be started and stopped at each interval with free-flowing masks in order not to decrease the ambient oxygen concentration. The technician is responsible for informing the patient of the impending air break, as well as starting the flow of air, and then shutting the air off at the air break. Documentation in real time of the start and stop times is done throughout the treatment. During the ascent (the end of the treatment), the patient needs to be closely monitored for any complications of expanding gas such as pneumothorax. Once the patient reaches surface, the door is opened, the water bottle/urinal etc. are extracted and the patient is assisted into the upright position for final vital signs and a period of observation to monitor for oxygen toxicity. The clinical staff must be chamber-side with a line of sight during the entire treatment.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
(not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):
(not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
(not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:
(not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, we are recommending inclusion of a minimum multi-specialty visit pack (SA048).

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**5.02**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

(not applicable)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

(not applicable)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time)*. If you have selected "other formula" for any of the equipment please explain here:

EQ362 HBOT air break breathing apparatus demand system (hoses, masks, penetrator, and demand valve) – Default formula

EQ131 hyperbaric chamber – Default formula

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

G0277

ADDITIONAL INFORMATION

25. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

According to the final rule on the 2015 Medicare physician fee schedule (see attached), CMS valued G0277 using the RUC recommended direct PE inputs for CPT code 99183 and adjusted them to align with the 30-minute treatment interval specified in the code descriptor. Per the RUC database, CMS has assigned 36 minutes of equipment time to both pieces of equipment. The specialties are applying the default equipment time formula to both pieces of equipment, which increases the time in each case from 36 minutes to 39.75.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).
